AMENDMENT TO H.R. 2898

OFFERED BY MR. LOWENTHAL OF CALIFORNIA

Page 4, line 7, after the period, insert the following: "According to a 2015 study published in the Proceedings of the National Academy of Sciences by scientists at Stanford University, anthropogenic warming has substantially increased the likelihood that an extremely warm year and a moderately dry year co-occur in California. This new climate increases the frequency of years with exceptional drought conditions that have significant impacts on humans and the environment.".
