

Michael Rosanoff, MPH, is a member of Autism Speaks science team and manages the organization's epidemiology and public health research projects focused on understanding the prevalence and causes of autism. Since joining the organization in 2007, Michael has been part of the development team of the Global Autism Public Health Initiative, an ambitious effort – now in over 50 countries – designed to increase awareness of autism and improve access to services through the collection of public health data and training of providers worldwide. He is also a member of Autism Speaks Grants Division, helping oversee the organization's grant-giving process for autism research, which has committed over \$200M to date. Prior to joining Autism Speaks, Michael conducted research at the Gertrude H. Sergievsky Center, a clinical, epidemiological and genetic research complex at Columbia University Medical Center focused on developmental disorders of the nervous system. His research background is in genetic and psychiatric epidemiology as well as behavioral neuroscience, with publications in the fields of epilepsy and depression. Michael earned his Master of Public Health degree in epidemiology from Columbia University's Mailman School of Public Health in 2007, and is a doctoral candidate in Columbia's Department of Epidemiology. He currently resides in Jersey City, NJ.
