WASHINGTON—Last night, House Committee on Oversight and Accountability Chairman James Comer (R-Ky.) and Ranking Member Jamie Raskin (D-Md.) introduced H.R. 7532, the **Federal AI Governance and Transparency Act**.

**This is the right approach to artificial intelligence (AI) policymaking, and NetChoice applauds Chairman Comer and Ranking Member Raskin for their work on this important issue.** While the bill still has some edges that need to be smoothed out, we look forward to working with the Committee to improve and advance this important legislation.

**“The Federal AI Governance and Transparency Act is a strong step forward in ensuring the federal government deploys AI in a responsible and ethical fashion, with appropriate visibility to the American public. The bill institutes needed safeguards and oversight without overly constraining innovation,”** said Carl Szabo, NetChoice Vice President & General Counsel. **“While there are still changes that need to be made to the bill, this is the right approach to AI governance.”**

This bill takes important steps to increase transparency and accountability around the federal government's use of AI systems. The requirement for agencies to maintain public AI governance charters is a critical provision. Independent

Inspector General evaluations of agency AI practices, as mandated in the bill, also provide a much-needed oversight mechanism.
