Chris Power is the Founder and CEO of Hadrian, a company transforming U.S. defense and aerospace manufacturing. Hadrian builds highly-automated precision machining factories that solve critical production bottlenecks for defense primes, new entrants, and commercial customers. The company's technology supercharges American workers, letting one person do the job of ten by using AI, machine learning, and robotics on a single platform. Hadrian's factories produce defense-critical components faster and more efficiently than traditional methods. Founded in 2020, Hadrian was recently named one of Forbes' next billion-dollar startups as the company expands its automated manufacturing capabilities across the defense industrial base. Before Hadrian, Power founded ADSC, a private equity firm focused on aerospace and defense supply chain acquisitions.
