

Brian A. Abt

CEO, MID-ATLANTIC REGION

Brian Abt provides executive management for more than \$2 billion of construction operations in Maryland, Virginia, and Washington, DC. He is responsible for the Mid-Atlantic region's day-to-day operations, including overall client satisfaction, as well as the safety, quality, and timely completion of all projects.

During Brian's 33-year career, Clark has successfully delivered some of the Washington, D.C. area's most notable projects under his leadership, including the Walter Reed National Military Medical Center Renovation and Expansion, Nationals Park, the National Geospatial Agency (NGA) Campus East, DoD/BRAC 133 Project at Mark Center, the National Museum of African-American History & Culture, the National Museum of the American Indian, the U.S. Department of Transportation Headquarters, and Discovery Communications Headquarters.

Before assuming his executive management role, Brian previously lead Clark's Mid-Atlantic Region business acquisition efforts as a senior member of the Preconstruction Services Department, which grew to a 60-person team of dedicated professionals. Working with partners from a project's earliest stages enables a seamless transition from the design phase through project delivery, results in fewer construction-phase changes and schedule impacts, and provides certainty that the finished product matches the client's vision.

Brian earned a Bachelor of Science degree in Civil Engineering from Rensselaer Polytechnic Institute, and has also completed the Advanced Management Program at Harvard Business School. ■
