Subject: Cobalt non-delays

Carmen,

Here is the data Brian and I feel is needed in order to bring the issue forward:

1. List of confirmed/suspected cases where non-deploy is suspected to have occurred from ignition being shut off – Brian has this
2. Delphi information that shows dates that a new switch was substituted into production. The Delphi data that was provided to legal was of no value - it did not appear to involve information regarding the ignition switch change.
3. A copy of the information Subaiah presented to us during our recent conference call.

In order to move ahead, we need all three pieces of information to define the affected population, and tie this story together.

Doug
