October 18, 2019

Honorable Frank Pallone, Jr  
Chairman  
Committee on Energy and Commerce  
U.S. House of Representatives  
Washington, DC 20515-6115

Honorable Greg Walden  
Ranking Member  
Committee on Energy and Commerce  
U.S. House of Representatives  
Washington, DC 20515-6115

Dear Chairman Pallone and Ranking Member Walden:

On behalf of Governor Baker, thank you for the opportunity to highlight how federal funding has been utilized in Massachusetts to combat the opioid crisis. Massachusetts has utilized federal funding to support the expansion and enhancement of our prevention, intervention, treatment and recovery system through a data-driven approach that targets high-risk, high need priority populations. Attached please find detailed responses to the eight questions you asked.

We look forward to continuing a close collaboration with you as the committee considers additional legislative packages in 2020 and beyond.

Sincerely,

  
Marylou Sudders

Massachusetts response to Committee on Energy and Commerce

10.18.2019

1. Since 2016, how much federal funding for opioid use disorder prevention, treatment, and recovery has Massachusetts received?

Since 2016, the Massachusetts Department of Public Health (MDPH), which encompasses the Single State Authority and the State Opioid Treatment Authority, has been awarded **\$159,131,562** in federal grant funding specific to opioid use disorder prevention, treatment and recovery.

- a. What challenges, if any, exist in deploying federal funds to local communities in an expedited manner?

At MDPH we are fortunate to have a comprehensive and streamlined procurement process. MDPH expedites the deployment of funds through a competitive pre-award Notice of Intent and Application process wherein we post applications on our state procurement website Commbuys ([www.Commbuys.com](http://www.Commbuys.com)), to solicit entities to partner with the state on a given funding opportunity. After a review process at the state level, vendors are selected and included in the grant application and budget and upon award, move directly to the contracting and implementation phase.

- b. To date, how much of this federal funding has your state used or allocated?

Since 2016, MA has allocated **\$95,358,686.00** of funds that were awarded to date. The difference represents funds included in future project periods that are yet to be allocated, funds that have been allocated more recently by the federal funder and are still in the process of being procured at the state level, and funds in contracts that the state has awarded to sub-recipients that are not yet expended because implementation is currently underway and the project period is ongoing.

- c. Please provide a list of each funding recipient, the purpose for allocating money to them (e.g. prevention, treatment, etc.), and the amount that has been allocated to them.

Please see attached *Table 1: Sub-Recipients by Service Type*. Vendors are categorized on the Table by the focus of the funding mechanism; some federal grants awarded to MA have been specific to prevention funding, while others have been focused more broadly and could be utilized to support prevention, treatment and recovery initiatives.

- d. If your state has not used the entirety of federally allocated funding, please explain why.

There is significant demand in the Commonwealth for staff that specialize in addiction treatment, intervention and recovery services. The finite workforce resources ranging from board certified physicians and nurses with addiction specializations, DEA X waived prescribers, recovery coaches, and Licensed Alcohol and Drug Counselors (LADCs) can cause delays in program implementation. Additionally, programs can face delays as a result of local siting issues.

If MDPH is not able to expend the funds within the designated project period, it submits a request to the funder to carry funds into the next project period to allow more time for service delivery and to complete any required reporting.

- 2. Please describe how your state determines which local government entities (i.e. counties, cities, and towns) receive federal grant funding to address the opioid crisis. Specifically, please identify localities impacted most by the opioid epidemic in your state, and include the total amount allocated to each locality, as well as the factors your state considers in distributing these funds.**

In 2015, one of Governor Baker's first actions upon taking office was to appoint a 16-member working group tasked to identify ways to respond to the opioid crisis by holding public meetings, assessing the resources devoted to the problem, and submitting recommendations, which resulted in an Action Plan that serves as a blueprint for addressing the opioid crisis in the state (<https://www.mass.gov/lists/governors-opioid-addiction-working-group>). A key strategy outlined by the working group was to utilize data to identify hot spots and deploy appropriate resources.

The Commonwealth has prioritized linking data sets across different government agencies (e.g. medical claims, death records, ambulance trips, post-mortem toxicology, prescription drug monitoring program, the Department of Mental Health, birth records, the Department of Correction, Houses of Correction, and the Department of Veteran's Services) to better understand the opioid epidemic, guide policy development, and help make programmatic decisions ([www.chapter55.digital.mass.gov](http://www.chapter55.digital.mass.gov); [www.mass.gov/public-health-data-warehouse-phd](http://www.mass.gov/public-health-data-warehouse-phd)). Additionally, MDPH produces quarterly opioid statistics on opioid overdose related deaths in the Commonwealth overall, by county, city/town, and based on population demographics. Localities most impacted by the opioid crisis in the state can be found on this website: [www.mass.gov/lists/current-opioid-statistics](http://www.mass.gov/lists/current-opioid-statistics). These resources allow tracking of current opioid morbidity and mortality trends, thereby allowing MDPH to 'hotspot' informing and guiding strategy to direct funding to the communities and populations of highest need across the Commonwealth. Please see attached *Table 2: Subrecipients by Locale* for a detailed list of opioid-related funding MDPH has directed to cities and towns across the state.

- 3. Please describe how your state determines which non-governmental organizations (i.e. non-profits, treatment centers, or other entities) receive federal grant funding to**

**address the opioid crisis. Specifically, please identify the non-governmental organizations that have received funds in your state, and include the total amount allocated to each entity, as well as the factors your state considers in distributing these funds.**

The state determines which entities will be funded by utilizing a competitive, public and transparent procurement process to select community-based entities, including non-governmental organizations, non-profits, treatment centers, and others, to serve as sub-recipient partners on federal grant awards. MDPH frames the details of the procurements and seeks vendors with characteristics based on the requirements of the funding opportunity (e.g., direct service provision, prevention, data collection, evaluation, etc.), and through the utilization of the data sources listed above, identifies the communities and populations of highest need and targets funding accordingly.

Detailed information about the procurement process is provided on the "Doing Business with DPH" website: <https://www.mass.gov/info-details/doing-business-with-dph>.

Specific entities that have been selected to partner with MDPH on federal opioid grant awards are listed on *Table 3: Sub-recipients by Appropriation*.

- 4. Do federally appropriated funds to address the opioid crisis provide your state with the flexibility to focus on the hardest hit regions or localities? Please describe how, if at all, this flexibility has helped Massachusetts in using funds to target vulnerable populations or at-risk areas. If no, please explain what additional flexibility should be considered in helping your state address the hardest hit regions or localities.**

The MDPH has been consistently refining the methodologies used to identify high-burden communities and expediting the release of opioid-related overdose data in order to inform and target prevention, intervention and treatment responses in a timely manner. Federal funds to address the opioid crisis have provided MA with the ability to fund a variety of opioid-related prevention, intervention, treatment and recovery support service initiatives, as well as addictions workforce development programming, and communication/media campaigns to inform and educate the general public and specific target audiences impacted by the epidemic, in rural and urban regions across the state.

However, when the requirements of a funding opportunity are restricted to addressing opioids, states are limited in flexibility to address the changing landscape of substance misuse and addiction by directing funds towards initiatives that are focused on substances beyond opioids. It would be beneficial if federal funding permitted states flexibility to support services and programming that was inclusive of opioids and other substances such as alcohol, cocaine and methamphetamine.

- 5. In what ways, specifically, have federal funds extended to Massachusetts helped**

**change your state's treatment system and/or led to a reduction in opioid overdoses?**

As outlined in the Governor's blue print, Massachusetts has utilized federal funding to support expansion and enhancement of our treatment system through a data-driven approach that targets high-risk, high need priority populations and disparities within each service system with the goal of reducing opioid overdose.

The Commonwealth partnered with subject matter experts and organizations that specialize in training to engage in capacity building and workforce development across the state to: a) increase the number of DEA-X waived prescribers of buprenorphine; b) increase the amount of certified addictions counselors and recovery coaches; c) improve the knowledge base on evidence-based addiction prevention and treatment practices; d) reduce the stigma associated with addiction disorders. MDPH strives to enhance existing capabilities and workforce skill sets in identified areas of need, including partnering with sister state agencies to address opioid overdose prevention training needs in their workforce.

With federal funds MDPH is supporting expansion and enhancements to the Massachusetts Prescription Drug Monitoring Program (PDMP) to ensure universal prescriber usage, including making PDMP information available in electronic health records so physicians and pharmacists can quickly check a patient's PDMP report before prescribing or dispensing medications. Massachusetts is also part of a national network of PDMPs that are linked which allows for more extensive tracking and monitoring of prescribing practices and patterns. (<https://www.mass.gov/guides/massachusetts-prescription-awareness-tool-masspat>). MDPH is expanding the development of the state's Population Health Information Tool, an online platform that provides information individuals and communities can leverage to inform best-practice interventions to better identify and address addiction and other health risks (<https://www.mass.gov/orgs/population-health-information-tool-phit>).

Support for addiction treatment and service providers in geographic settings that are of highest need include: a) expanding Office Based Opioid Treatment (OBOT) to high-risk priority populations including individuals experiencing homelessness, individuals with co-occurring SUD and mental health diagnoses, pregnant women, people of color, and people who identify as LGBTQ ; b) increasing the number of community-based Overdose Education and Naloxone Distribution (OEND) Programs; c) expanding community-based first-responder post-overdose follow-up programs in high-priority locations using a model of in-person, home-based outreach and support after a 911 call for an overdose, offering assistance to individuals and families who may not be accessing other available services; d) increasing capacity at Recovery Support Centers, e) engaging the population of people re-entering the community from correctional settings in receiving medication for opioid use disorder (MOUD) access to treatment and recovery supports, and retention in the

recovery process; f) expanding programming that targets pregnant and parenting women with OUD and their dependent children and families; g) improving capacity to identify and serve individuals with opioid use disorder and facilitate their access to treatment by implementing opioid treatment programming, including buprenorphine induction, in hospitals and community health centers; and h) expanding recovery programming that supports individuals who are stabilizing in their recovery to develop and maintain social connectedness, receive case management, gain access to housing support, and participate in job readiness programs.

The federal funds, combined with a significant increase in state funding, have allowed a comprehensive system change effort across the state to address the opioid crisis in a data-driven, evidence-based, and compassionate manner. MDPH is optimistic about the combined impact of new development, implementation and expansion of programming and interventions. In 2018, DPH estimates that there was a 1% decrease in the rate of opioid-related overdose deaths compared with 2017. This follows an estimated 3% decline in the rate of opioid-related overdose deaths from 2016 to 2017. Preliminary data for the first six months of 2019 indicate an 11 percent decline in opioid-related overdose deaths compared to the first six months of 2018.

[https://www.mass.gov/files/documents/2019/08/21/Opioid-related-Overdose-Deaths-among-MA-Residents-August-2019\\_0.pdf](https://www.mass.gov/files/documents/2019/08/21/Opioid-related-Overdose-Deaths-among-MA-Residents-August-2019_0.pdf).

**6. What performance measures is Massachusetts using to monitor the impact of federal funds for opioid use disorder and other substance use disorder treatment?**

The MDPH utilizes a variety of measures to track service utilization and other impacts of federal funding. All vendors procured to partner with the state on federally funded initiatives must adhere to the terms, conditions and requirements of that funding. Project performance is monitored through regular meetings and written communications where progress towards deliverables associated with the given initiative is discussed and tracked. Spending is monitored and tracked through the submission of regular monthly invoices in our Virtual Gateway system, and invoices are reviewed and approved by state employees who serve as designated contract managers overseeing the work associated with each project.

A key implementation performance measure is enrolling an agreed upon target number of individuals in a particular service type that meets the requirements of the funder (e.g., 50 pregnant women with OUD per grant year, per project site).

At the state level, under the authority of Massachusetts General Law (Ch.111 Sections B and E), all SUD treatment providers are required to submit data to MDPH to carry out the responsibilities listed under the law. Substance addiction service providers collect and enter client enrollment, disenrollment, and assessment information into the MDPH Bureau of

Substance Addiction Services (BSAS) system. Data entry occurs at provider sites and is transmitted to BSAS monthly. BSAS can readily report data at the provider level, the enrollment level, and the client level. The Bureau collects data from providers along the continuum of care from acute treatment services (detox) to recovery support services. Service provider vendors funded under federal grant awards that are administered through MDPH, BSAS are required to enter data into this system (See here for information and forms: <https://www.mass.gov/lists/esm-assessment-forms-and-manuals>). MDPH tracks which vendors submit this data and conduct continuous quality improvement activities around data collection and submission as needed, including through regular meetings with vendors to discuss process and to track progress.

The Substance Abuse and Mental Health Services Administration (SAMHSA) typically requires that recipients of funds implementing direct treatment and recovery support services collect and submit Government Performance and Results Act (GPRA) data. GPRA data collection domains include demographics, substance use history, health services utilization, housing and employment status and social connectedness. The MDPH complies with GPRA data collection whenever it is been required. To facilitate GPRA data collection, procured data collection and evaluation vendors coordinate and manage day-to-day operations associated with GPRA collection at the program level, and upload to SAMHSA. MDPH works closely with the vendors to ensure data collection processes are performed as required, quality of data entry is of the highest standard possible, and continuous quality improvement is facilitated through regularly scheduled meetings where data collection reports are reviewed to track and monitor both progress towards achieving federal grant targets, and processes associated with collecting the data.

In addition, MDPH has developed “local” evaluation measures to track specific activities and report on outcomes. One example of this is the Overdose Education and Naloxone Distribution (OEND) data collection system where the distribution of naloxone kits is tracked and reported through an online data collection portal. This system facilitates reporting to federal funders on the number of naloxone kits purchased and distributed with grant funds. For more information, please review this data brief:

<https://www.mass.gov/files/documents/2019/08/21/OEND-Supplemental-Data-Brief.PDF>.

Further, Massachusetts is participating in a pilot to develop a public-facing quality measurement system that provides information about addiction treatment providers at the site level. The system will be a web and app-based platform that will allow the public searching for high-quality addiction treatment to locate and compare facilities, including trustworthy, standardized quality data on the services available and feedback on the services reported by patients.

Relative to performance measures pertaining to trainings, MDPH sets goals for the quantity and category of training(s) with each partnering organization. MDPH requires tracking of the type of training, when and where it was offered, how many people attended, professional discipline(s), and organizations. MDPH also offers attendees the

opportunity to provide feedback on a post-training evaluation. These steps allow for the provision of information to federal funders for reporting purposes, and also allows MDPH to track the quality, breadth and reach of the training programs to identify needs and gaps.

**7. According to the Substance Abuse and Mental Health Services Administration, State Targeted Response to the Opioid Crisis (STR) Grants provide funding to states to: (1) conduct needs assessments and strategic plans; (2) identify gaps and resources to build on existing substance use disorder prevention and treatment activities; (3) implement and expand access to clinically appropriate, evidence-based practices for treatment- particularly for the use of medication-assisted treatment (MAT) and recovery support services; and (4) advance coordination with other federal efforts for substance misuse prevention.**

**a. Has your state conducted a needs assessment and strategic plan? If yes, please describe that plan.** Yes, Massachusetts did conduct a needs assessment and strategic plan as required for STR funding. At around the same time, there was an effort underway at MDPH to revise the State Health Assessment (SHA), which included a comprehensive overview of the impact of addiction disorders in the Commonwealth (<https://www.mass.gov/lists/the-2017-massachusetts-state-health-assessment>).

Rather than recreating or duplicating the extensive body of work encompassed in the SHA, it was utilized as a platform for identifying needs of communities and populations, and when applicable MDPH utilized findings in the SHA to inform initiatives implemented under federal grants, including but not limited to: Data-driven evidence-informed prevention programming in school and community settings; Person-centered, harm reduction approaches to keeping people who use drugs safe and alive and providing them with information and resources on how and where to access treatment services; Expanding access to medication for opioid use disorder by increasing the number of buprenorphine waived providers and providing funding for existing outpatient treatment programs to engage in outreach to high risk populations in their communities and increase the amount of people they can serve; Funding programming in recovery support centers to help people enter into and navigate systems of care, remove barriers to recovery, stay engaged in the recovery process, and live full lives in communities of their choice.

**b. Has your state identified gaps and resources to build on existing Substance Use Disorder prevention and treatment activities? If yes, please describe those findings.** While Massachusetts offers a range of treatment approaches to address the needs of individuals with substance use disorders, there are important disparities in the outcomes and effectiveness of substance use treatment for different populations. MA has engaged in extensive efforts to identify and address barriers pertaining to social

determinants of health in the context of addiction disorders. Gaps are identified through analysis of state data trends around service utilization (e.g., who is not seeking treatment in our system), and differences in service utilization between various segments of the population demography (e.g., race, ethnicity, gender). MDPH has found that treatment needs can differ across populations, suggesting that treatment interventions should be individually tailored and incorporate culturally competent and linguistically appropriate practices relevant to specific populations and subpopulation groups. MDPH also has identified geographic disparities in accessing substance use treatment services. Residents of rural regions face barriers such as available and affordable public transportation to accessing needed treatment, and there are fewer prescribers of medication for opioid use disorder in rural regions. Additionally, recent data have shown an overall decline in opioid-related overdose deaths in Massachusetts except for black non-Hispanic men, which increased by 45% from 2016 to 2017.

- c. **Has your state implemented and expanded access to clinically appropriate, evidence based practices for treatment, particularly for the use of MAT and recovery support services? If yes, please describe how you have done so.**

Massachusetts has established a comprehensive recovery-oriented system for individuals and families that range across the lifespan including prevention, intervention, treatment, and recovery support, aimed at engaging the client and supporting them in their ongoing recovery. Massachusetts' efforts to combat the opioid crisis have led to effective development and implementation of many innovative initiatives. MDPH asserts that these innovations have saved lives, reduced harm for victims of the crisis, increased the effectiveness of interventions, and helped individuals with SUD/OD find a path to recovery.

Massachusetts promotes through its commercial and Medicaid program, access to all MAT. In addition, DPH has substantially increased access to MAT through expansion of the Office Based Opioid Treatment (OBOT) with a focus on underserved areas, and initiated the Medication Assisted Treatment Re-entry initiative (MAT-RI) in multiple state houses of correction to curb the disproportionate overdose rate among those reentering the community from criminal justice involvement. DPH has also invested substantially in recovery support through its continuation of Access to Recovery, providing crucial wrap around support to individuals in early recovery.

Other examples of innovative initiatives include: a) making improvements to existing practices to make them more effective, like establishing a clearinghouse for prescription monitoring information; b) creating entirely new programs like the first-in-the-nation law limiting first-time opioid prescriptions to seven days; c) establishing public/private partnerships to provide additional support to communities and state agencies; d) establishing new programs to facilitate widespread increase in the use of

naloxone to reverse overdoses through bulk purchasing and outreach, efforts that have saved thousands of lives; e) creating Core Competencies in Medical and Dental Schools relating to SUD and pain management, and establishing new continuing education requirements for prescribers relating to opioid education and pain management training.

These and other activities have had a positive impact on fighting the epidemic and have become part of the arsenal the state can use to try to stem the crisis. Accordingly, notwithstanding the successes of innovative initiatives and responses already in effect, with the state still in the grip of the crisis, the continuing effort to combat this unprecedented, virulent epidemic will require additional responses, with new thinking and pioneering of initiatives that can help turn the tide.

**d. Has your state advanced coordination with other federal efforts for Substance Use Disorder prevention? If yes, please describe how.**

MDPH is fortunate to be the recipient of other federal grants from SAMHSA in recent years that address SUD prevention. These include the annual congressionally mandated *Substance Abuse Prevention and Treatment (SAPT) Block Grant*, which has a required 20% set aside for prevention. The SAPT Block grant funds community coalitions centered around prevention of opioid misuse and overdose, among other SUD prevention activities. MA was also the recipient of SAMHSA *State Pilot Grant Program for Treatment for Pregnant and Postpartum Women (PPW-PLT)* grant which funds a pilot day treatment program for women with SUD and their families that incorporates prevention education and peer recovery support as well as access to SUD treatment services.

**8. What additional resources would be most helpful to provide to communities struggling with opioid and other substance use disorders, including prevention and/or treatment options?**

The availability of federal funding that is flexible is important. Providing flexibility to address substance use disorder through prevention, intervention, treatment, recovery, coupled with funding for workforce development and capacity building, as well as supporting surveillance and research activities, comprehensively over time will provide states with necessary resources to strategically plan and execute initiatives. This will also allow states to study those initiatives in a manner that will allow mitigation of the risks and harms associated with substance misuse, develop and strengthen the evidence base of best practices for preventing and treating addiction disorders, and lead to healthier individuals, families and communities.

Naloxone is a lifesaving antidote that, if available and administered quickly, can reverse an opioid overdose while it is occurring. Outreach workers and first responders should have

the ability to provide naloxone to individuals who are using opioids as a harm reduction strategy. To further expand access to this lifesaving drug HHS should adopt emergency regulations that exempt naloxone from requiring a prescription if the state has authorized over the counter use.

Also, federal support to improve access to fentanyl testing would be helpful. Fentanyl, a synthetic opioid that is 50 to 100 times more potent than morphine, is being detected in an increasing proportion of postmortem toxicology screens for opioid-related overdose deaths. Among the 445 opioid-related overdose deaths in Massachusetts in 2019, where a toxicology screen was also available, 410 of them (92%) had a positive screen result for fentanyl. While these data indicate fentanyl availability and use is on the rise, most treatment providers cannot readily access rapid urine fentanyl tests due to the federal classification of the tests. With no current CLIA-waived fentanyl tests, health care and substance use disorder treatment providers that currently use similar tests to screen for other drugs at the point of care must send samples to offsite CLIA-certified laboratories for fentanyl testing. The federal government can fix this by designating rapid urine fentanyl tests as waived under the Clinical Laboratory Improvement Amendments of 1988 (CLIA).

Lastly, medication-assisted treatment (MAT) is a proven method of treating opioid use disorder by reducing overdose deaths, improving treatment outcomes, and preventing the spread of infectious disease. Medications utilized for treatment include methadone, buprenorphine, and naltrexone, which are prescribed and dispensed to patients through opioid treatment programs or clinical offices, in accordance with federal law and regulations. Federal barriers for methadone and buprenorphine should be removed, allowing MAT to be regulated more similarly to other chronic disease treatments and available within traditional health care settings in order to increase access and reduce stigma. Massachusetts continues to request that the requirement for medical providers to obtain a waiver from the Drug Enforcement Administration (DEA) to treat opioid use disorder with buprenorphine be eliminated. Federal law should also be amended to support the integration of methadone in the primary care setting.

**Table 1: List of Sub-recipients by Service Type**

Award Amount Sub-recipients by Service Type	Year					Grand Total
	2016	2017	2018	2019	2020
