The narrow legal scope of this rulemaking renders many of the substantive issues raised in the comments irrelevant to NHTSA's reconsideration and repeal of the SAFE I Rule. Comments on both sides of the spectrum—both for and against the Proposal—fall outside of this narrow scope. The Agency carefully evaluated such comments, both to identify any nuances that may yet bear upon this rulemaking and to cultivate a greater understanding of how the public views broader issues associated with the CAFE program. Nevertheless, NHTSA does not consider such issues as informing the narrow legal focus of today's repeal of the SAFE I Rule. Several categories of such comments are identified below, along with an explanation of how they fail to intersect with the specific grounds that motivated this reconsideration.

Many commenters, both supportive of the Proposal and opposed to a repeal of the SAFE I Rule, advanced their views about the proper scope of EPCA preemption and, in particular, how “related to” in Section 32919 should be  substantively construed. Some of these commenters expressly recognized that such views fell outside of the Proposal, but nevertheless included them in the event the Agency elected to delve into substantive issues in another context, such as an interpretation or in a subsequent action after this rulemaking.<sup>[33]</sup> Likewise, many commenters supportive of the Proposal identified what they viewed as the SAFE I Rule's erroneous legal conclusions on the scope of EPCA preemption, as part of their broader support for any action that repealed the Rule.<sup>[34]</sup> Other comments mistook the Proposal as setting forth substantive views and welcomed the new positions the Agency was assumed to have adopted.<sup>[35]</sup> Moreover, multiple comments opposing the Proposal sought to defend the SAFE I Rule on substantive grounds, labeling the original rulemaking a correct interpretation of EPCA.<sup>[36]</sup> These comments tended to focus on the meaning of “related to” under Section 32919 and essentially tracked the reasoning of the SAFE I Rule in construing the phrase's substantive scope.<sup>[37]</sup>

Start Printed  
Page 74242

While all of these comments raise the important questions of how far EPCA's scope extends and which state programs may be affected by such a scope, as the Agency explained both in the Proposal and in today's final rule, those issues are distinct from the narrow legal considerations that factor into this rulemaking. NHTSA's statutory authority to codify standalone requirements for EPCA preemption is a separate question from whether the substance of those requirements exceeds the scope of Section 32919. Likewise, even if the Agency had authority for the SAFE I Rulemaking, it remains possible for NHTSA to have wielded this authority in an inappropriately broad or inattentive manner, irrespective of the ultimate substantive preemption scope propounded in such an action. Consequently, none of the grounds invoked in this rulemaking for a repeal of the SAFE I Rule depend upon a particular interpretation of EPCA's preemptive scope. As such, as NHTSA explained elsewhere in this notice, finalizing this rulemaking without delving into those issues presents the most responsible option, which best satisfies the need for a swift repeal of the SAFE I Rule while preserving space for an ongoing thoughtful consideration of these complex substantive issues.

In a similar vein, several comments opposing the NPRM argued that NHTSA's Proposal was inadequately justified because the proposed repeal of the SAFE I Rule was not accompanied by a detailed economic analysis, such as a regulatory impact statement. These commenters, such as the American Fuel and Petrochemical Manufacturers (AFPM), contended that NHTSA could not repeal the SAFE I Rule without “fully analyz[ing] the impacts” or “examin[ing] the relevant data” behind economic impacts from this

rulemaking.<sup>[38]</sup> For example, AFPM argued that such an analysis must undertake a detailed economic estimate of a litany of considerations, including “the foreseeable impacts” to “vehicle cost, jobs, low-income households, small businesses, etc.,” as well as an evaluation of how possible programs that may be initiated by states following a repeal affect other estimates, such as electric vehicle pricing or the stringency of subsequent CAFE standards.<sup>[39]</sup> Other commenters argued similarly, insisting that a repeal of the SAFE I Rule would “almost certainly lead to” more stringent fuel economy standards and inflated vehicle prices, thereby eroding consumer choice.<sup>[40]</sup> Additional commenters propounding this view submitted their own voluminous impacts analyses of a repeal of the SAFE I Rule, which included submissions of material such as declarations from academics, published journal articles analyzing particular regulatory programs, and past regulatory analyses conducted by EPA and CARB regarding specific regulatory programs.<sup>[41]</sup>

To the extent commenters articulated these positions as reasons NHTSA failed to satisfy various Executive Orders, the National Environmental Policy Act (NEPA), and other broadly applicable requirements, those aspects of the arguments are addressed in Section III (Rulemaking Analyses and Notices).<sup>[42]</sup> However, insofar as those comments suggest that the absence of a detailed economic analysis inadequately justifies a repeal, NHTSA rejects such arguments as misconstruing the nature of this rulemaking.

As explained throughout this final rule, NHTSA has concluded that the SAFE I Rule was legally flawed in a manner that legally necessitates a repeal. First, as Section II.B.i. of the final rule concludes, NHTSA issued the SAFE I Rule in excess of its authority. Accordingly, the Agency believes that the only legally appropriate course of action is to repeal the SAFE I Rule in order to undo the legally invalid action. Similarly, as Section II.B.ii. of this notice explains, NHTSA also ignored significant and legally relevant factors when promulgating the SAFE I Rule. Overlooking these considerations also renders the SAFE I Rule legally invalid and in need of repeal. Each of these grounds is governed by a legal determination, such as the legal standards and questions of statutory construction applicable to an agency's delegation of authority. These principles of law dictate a repeal of the SAFE I Rule irrespective of the policy concerns or impacts asserted by such commenters, which cannot cure the legal deficits in the SAFE I Rule. Therefore, the concerns raised by such commenters do not alter either the legal frameworks or the legally necessitated outcomes described in Sections II.B.ii. and II.B.iii. of this notice.

Moreover, such commenters also fail to account for the fact that, through this repeal, NHTSA's regulations are simply returning to the status quo as it existed prior to the legally invalid action of the SAFE I Rule. Thus, in this rulemaking, NHTSA is not taking a position on  whether any individual program is preempted or not. And, even after this final rule, the viability of individual state or local programs and any associated policy impacts from those programs will be dependent on a host of particularized and contingent variables. In light of this, it is difficult to project, even for illustrative purposes, the incremental impacts of this regulatory action.<sup>[43]</sup>

Start Printed  
Page 74243

In addition, because the Agency does not consider an analysis of those programs in the abstract or aggregate appropriate, doing so here for purposes of analyzing impacts would risk the same sort of sweeping and overly broad preemption conclusions characteristic of the SAFE I Rule. As described in Section II.B.ii., the Agency has determined that the SAFE I Rule was both far too broad and too restrictive and did not take into account a host of legally relevant considerations, such as reliance interests, the important reasons for the state and local laws it sought to preempt, and, most importantly, the actual details of those laws. Accordingly, hypothesizing about the substantive scope of EPCA preemption for purposes of a cost-benefit analysis would undermine one of the principal goals of this rulemaking, which seeks to defer assessments of programs until the times and places in which they can be more particularly and thoroughly considered. Moreover,

hypothesizing as such also further diminishes the extent to which the results of a cost-benefit analysis could inform this rulemaking because those programs are more appropriately and accurately considered in more particular contexts where it is not necessary to make abstract projections or theorize about programs or technologies that may not even exist yet.

Furthermore, in this repeal, the Agency is not declaring any particular program preempted or not preempted. Instead, this repeal simply makes the point that any such preemption analysis should be undertaken more narrowly and carefully and does not seek to alter the preemption landscape already established by Section 32919. In contrast, it was the SAFE I Rule that marked a departure from the Agency's longstanding practice of refraining from issuing EPCA preemption rules. In reality, as both the Proposal and this final rule have stressed, EPCA preemption is properly governed by the self-executing statutory language of Section 32919. That language remains in place, unchanged, irrespective of this rulemaking. The courts, of course, retain their usual authority to decide matters of EPCA preemption. In turn, the Agency may also at some point offer interpretations as guidance on its views on questions of EPCA preemption, though not through the mechanism of a legislative rule. Nevertheless, the preemption framework established by the statutory language in Section 32919 continues to govern the ultimate preemption analysis.

Moreover, it is worth noting that the SAFE I Rule itself did not include a quantitative analysis of the costs or benefits that these commenters now argue should accompany its repeal, but rather only provided a "qualitative discussion of the impacts" of the preemption regulations it promulgated.<sup>[44]</sup> This is despite the fact that the SAFE I Rule purported to preempt many state and local programs that were already in place, which would have had significant economic effects. This provides a clear contrast to this final rule, which takes no position on whether any particular programs are preempted.

Various commenters raised other issues that are clearly outside the scope of this rulemaking. A joint comment submitted by the State of Ohio along with several other states did not explicitly support or oppose the Proposal, but simply expressed the view that by permitting California to seek a waiver, Section 209 of the Clean Air Act unconstitutionally violates the equal sovereignty doctrine by affording preferential treatment to the State of California.<sup>[45]</sup> The comment thus concludes that "any agencies that issue such a waiver are therefore acting unconstitutionally."<sup>[46]</sup> NHTSA need not wade into the substance of the equal sovereignty doctrine in response to this comment. This rulemaking is conducted solely by NHTSA, and any EPA adjudication of a California waiver application under Section 209 constitutes a separate, independent proceeding.<sup>[47]</sup> Repealing the SAFE I Rule merely removes the impermissible layer of regulatory preemption from NHTSA's own regulations. The broad preemption framework codified by the SAFE I Rule applied equally to all states and repealing this framework likewise refreshes the preemption analysis for the entire country. Accordingly, repealing the SAFE I Rule does not extend differential treatment to any state or local jurisdiction.

In addition, several commenters raised a variety of issues relating to the administration of the CAFE program, which do not inform the legal bases pertinent to today's repeal of the SAFE I Rule. These range from comments advocating for a particular stringency of any fuel economy standards later promulgated by NHTSA<sup>[48]</sup> to requesting a new interpretation of 49 U.S.C. 32902 (<https://www.govinfo.gov/link/uscode/49/32902>) in order to more expansively consider electric vehicles in the standard setting analysis.<sup>[49]</sup> While such commenters are encouraged to raise such issues in connection with future NHTSA rulemakings setting CAFE standards, this particular rulemaking does not touch on the standard setting analysis.

Finally, NHTSA received over four hundred comments from individual commenters who expressed perspectives on the Proposal. The vast majority of these comments from individuals did not speak to the particular legal issues implicated in this rulemaking, but raised broader policy issues instead. A large number of these comments expressed opposition to the rulemaking. While submitted individually, by and large, these opposition comments appeared to be form comments or part of an unspecified letter writing campaign, as they frequently employed verbatim language. Specifically, an overwhelming number of the comments started with the exact same phrase: “California should not be deciding what kind of cars the rest of the country can buy, and here is why . . .”<sup>[50]</sup> While the reasons provided after this opening clause varied somewhat, they all pertained to substantive policy issues surrounding motor vehicle regulations rather than the narrow legal grounds necessitating a repeal of the SAFE I Rule. Frequent examples of the substantive policy concerns raised in these comments include: Skepticism towards climate change and related environmental issues; objections to vehicle electrification; concerns about consumer choice in the availability of motor vehicles; and vehicle price concerns. Most of these comments also appeared □ directed more to a restoration of California's waiver for the Advanced Clean Cars program under the Clean Air Act, which, as both NHTSA and EPA have explained, is a separate proceeding from this rulemaking.<sup>[51]</sup> Finally, quite a few comments failed to raise any substantive policy concerns at all, but simply expressed political hostility towards a variety of subjects, especially including the State of California and the EPA.<sup>[52]</sup>

□ Start Printed  
Page 74244

Apart from these form comments, several individual commenters expressed support for the Proposal. Their comments also focused on substantive policy issues or matters more connected to a California waiver under the Clean Air Act. Examples of such comments include expressions of hope that the Proposal would enable states to set stronger pollution control standards or beliefs that the proposed rule offered potential health-related benefits and opportunities to mitigate climate change.

Overall, the concerns expressed by these individual commenters were not about the merits of NHTSA returning to its longstanding approach to EPCA preemption, but rather about substantive issues connected to hypothetical state programs or policy goals which the commenters felt could possibly arise at some point in the future. For instance, a number of commenters suggested that a repeal of the SAFE I Rule would result in the proliferation of electric vehicles, and therefore expressed various concerns with vehicle electrification, such as an inability to satisfy unique or specific vehicle needs ( *e.g.*, work functions), poor performance, an insufficient electric grid, increased costs of electric vehicles, or misgivings about battery sourcing. Other commenters expressed broader policy concerns, such as advocating for carbon energy or arguing that air quality mitigation measures are matters of personal choice that should not be subject to regulation. Such substantive policy concerns, however, are beyond the scope of this rulemaking and NHTSA therefore does not address them here.<sup>[53]</sup> This rulemaking merely entails a narrow legal focus on the proper and prudent exercise of NHTSA's authority. The Agency's final rule neither promulgates Federal standards nor revives any standards of states or local jurisdictions. In fact, this final rule does not even change the scope of EPCA preemption under Section 32919, as NHTSA has repeatedly acknowledged that the self-executing statutory language controls such a scope and remains enacted, in full and unchanged, irrespective of the SAFE I Rule or this rulemaking.

Finally, even though many of the individual commenters expressly opposed the Proposal, NHTSA notes that many of these same comments frequently invoked reasons that actually support the rationale for the rulemaking. By far the most common theme developed in the individual comments opposing the Proposal was a concern for states' rights and skepticism of any approach that imposed an overgeneralized restriction on the ability of local jurisdictions to respond to the diverse needs of their respective communities.

These commentors opposed the Proposal based on a faulty assumption that NHTSA's rulemaking proposed to delegate the authority to California to set legally binding standards on the rest of the United States.<sup>[54]</sup> Of course, neither the Proposal nor today's repeal delegates any authority to California or elsewhere. This rulemaking does not even take a substantive position on the status of any individual program of a state or local jurisdiction. Instead, repealing the SAFE I Rule merely repeals an impermissible layer of prescriptive preemption requirements, which the Agency was not authorized to promulgate, and which improperly ignore legally relevant preemption considerations. Through such a repeal, NHTSA also removes unnecessary and inappropriate restrictions on potential policy flexibility and innovation at the state and local levels as it relates to motor vehicle emissions regulations. This additional flexibility at state and local levels may even address this theme expressed in many of these individual comments, which consistently opposed measures that applied an overbroad or one-size-fits-all approach to state and local concerns.

## **B. NHTSA Is Finalizing Its Repeal of the SAFE I Rule in Its Entirety**

After evaluating the public's input regarding the Proposal and further assessing the Agency's concerns regarding the SAFE I Rule, NHTSA is finalizing its proposed approach of repealing the SAFE I Rule in its entirety, including both the regulatory text and the other pronouncements that the Agency made in the document about EPCA preemption. The Agency concludes that this approach is both legally required and appropriate for several distinct reasons. First, as described further in Section II.B.i., the Agency lacked the authority to promulgate regulations on preemption, as the SAFE I Rule attempted to do. Second, as described in Section II.B.ii., regardless of whether NHTSA actually had authority for the SAFE I Rule, the Rule was still promulgated without regard for legally relevant and important considerations that should have informed the preemption analysis. Instead of accounting for those issues before fundamentally altering relied-upon federalism interests, the SAFE I Rule instituted a rigid and categorical preemption framework without regard for whether a narrower approach was available. Third, irrespective of a lack of authority or the Rule's overly broad scope, the SAFE I Rule still warrants repeal in order to mitigate the unnecessary complexity and potential confusion the SAFE I Rule injected into the EPCA preemption framework. By repealing this erroneous framework and refocusing the preemption analysis on the original statutory language, this final rule also provides space for the Agency to more carefully and appropriately  incorporate those considerations into any future action that may become necessary with respect to EPCA preemption.

Start Printed  
Page 74245

In all of these matters, the Agency remains mindful that EPCA does not require NHTSA to speak substantively on EPCA preemption, and certainly not through the promulgation of legislative rules. Under the unambiguous language of EPCA, the Agency could indefinitely remain silent as to Section 32919 without running afoul of any congressional directive or statutory mandate. As such, even if the SAFE I Rule's supporters have policy preferences for wanting the Rule to remain, there is indisputably no statutory requirement for the Rule. Thus, upon reconsideration, NHTSA concludes that a rule of this kind, which suffers from legal deficiencies and was imprudent for the Agency to issue, is particularly appropriate for repeal.

## **I. NHTSA IS FINALIZING ITS PROPOSAL TO REPEAL THE SAFE I RULE IN FULL DUE TO A LACK OF AUTHORITY FOR THE ORIGINAL RULEMAKING**

### **A. SECTION 32919 DID NOT AUTHORIZE NHTSA TO DICTATE PREEMPTION IN THE MANNER ATTEMPTED BY THE SAFE I RULE**

NHTSA concludes that a repeal of the SAFE I Rule is legally required because the Agency lacked the requisite authority to codify the standalone regulations promulgated by the SAFE I Rule. The Agency maintains the Proposal's view that in promulgating the SAFE I Rule, NHTSA attempted to exercise a legislative rulemaking function by establishing binding, express preemption requirements, which sought to control, rather than

advise, the public (including states and local jurisdictions). In order to set these regulatory mandates, Congress would have had to first provide authority to NHTSA to act in such a manner. However, the Agency has determined that Congress did not intend for Section 32919 to provide NHTSA authority to institute additional express preemption terms, or to codify the scope of EPCA preemption through legislative rulemaking.

## **1. THE SAFE I RULE CODIFIED LEGISLATIVE RULES, WHICH SOUGHT TO IMPOSE STANDALONE PREEMPTION REQUIREMENTS**

Before describing the limitations on NHTSA's authority, the Agency first confirms the Proposal's understanding of the SAFE I Rule as codifying legislative rules, which sought to institute binding preemption requirements. NHTSA recognizes that although numerous commenters agreed with the Proposal on this issue, several commenters opposing the Proposal contested either the legislative status of the SAFE I Rule or whether the distinction even matters for this reconsideration. To be clear, NHTSA considers a repeal of the SAFE I Rule both appropriate and necessary for the reasons described throughout this final rule, irrespective of whether one considers the Rule to be legislative, interpretative, or any other form of agency statement. Nevertheless, NHTSA still views the SAFE I Rule as displaying the hallmarks of a legislative regulatory action. As such, the Agency starts the authority discussion with this issue.

In this respect, the Agency distinguishes between a legislative rule, “which is a rule that is intended to have and does have the force of law,” and an interpretative rule, which “does not have the force of law and is not binding on anyone.”<sup>[55]</sup> For this reason, legal scholars have often noted that while interpretative rules may provide guidance to the public or “persuad[e a] court that the agency's interpretation is correct,”<sup>[56]</sup> they ultimately lack a binding effect, serving only to “advise the public.”<sup>[57]</sup> As such, an interpretative rule “does not contain new substance of its own” but is simply a conduit for understanding a pre-existing obligation already established by the statute under interpretation.<sup>[58]</sup> In contrast, legislative rules have long been understood as imposing binding obligations that “affect[ ] individual rights and obligations.”<sup>[59]</sup> Further, “the exercise of quasi-legislative authority by governmental departments and agencies must be rooted in a grant of such power by the Congress and subject to limitations which that body imposes.”<sup>[60]</sup> Consequently, for NHTSA to have validly promulgated legislative rules in the SAFE I Rule, Congress must have first provided the authority to the agency to do so.

Within this backdrop, NHTSA views the SAFE I Rule as clearly intending to establish binding preemption requirements, which affirmatively prohibited programs of states and local jurisdictions. As described further below, both the regulatory text and the manner in which NHTSA contemporaneously described its rulemaking lead to the conclusion that the SAFE I Rule was not an effort to inform, but an effort to issue binding, prescriptive requirements with the force and effect of law. This conclusion is supported by multiple facets of the rulemaking, many of which were illustrated through the comments.

Several commenters to the Proposal disagreed that the SAFE I Rule was a legislative rule or that the distinction between a legislative and interpretive rule mattered. Although the Agency responds more specifically to such detailed concerns below, NHTSA nevertheless considers the legislative status of the SAFE I Rule ultimately a straightforward outgrowth of the regulatory background and applicable law. While courts and legal scholars have set forth numerous multi-part tests or thresholds for trying to find the demarcation point between interpretative and legislative rules, they all overwhelmingly seek to answer a question much different, and frequently more complicated, than that presented in this rulemaking. In the typical fact pattern, encountered by many courts, an agency seeks to characterize its own action as interpretative and valid absent the undertaking of notice-and-comment procedures, while challengers (often the regulated

entities most affected by the action) argue that the rule alters their substantive obligations and necessitates notice-and-comment procedures before promulgation.<sup>[61]</sup> As such, these multifaceted judicial doctrines seek to aid a reviewing court in reconciling the contradictory positions between the regulators and the regulated, in order to accurately understand how extensively the agency's action actually attempted to affect the rights and obligations of the regulated parties.

None of these circumstances apply to the SAFE I Rule or this Proposal. In the Proposal, NHTSA, as the agency that promulgated the regulations in question in the SAFE I Rule (after notice-and-comment), expressed its *own* concern that it had issued legislative rules in excess of its authority, and acknowledged that the rules attempted □ to impose substantive restrictions on regulated entities—namely, states and local jurisdictions.<sup>[62]</sup> In turn, the state and local governments that submitted comments overwhelmingly agreed with the Agency's characterization of its own rule. This sentiment was exemplified by a comment from California's South Coast Air Quality Management District, which directly expressed that “[t]he Preemption Rule has every indicium of being a legislative rule, which purported to change the legal rights and obligations of states by its action.”<sup>[63]</sup> As described in greater detail in Section II.B.ii. of this final rule, these commenters provided tangible examples of actual hardships those states feared would ensue from the extent to which the SAFE I Rule disrupted their state regulatory agendas and curtailed their previously understood federalism rights. These concerns make clear that, by and large, states and local jurisdictions considered the SAFE I Rule as more than simply interpretative guidance on an EPCA preemption restriction that already applied to them, but as a new regulatory measure that would serve to invalidate existing state programs and ones those entities hoped to formulate in the future.<sup>[64]</sup>

□ Start Printed  
Page 74246

This is an understandable expectation, as both NHTSA and EPA also contemporaneously treated the SAFE I Rule as binding and effectuating change. The SAFE I Rule even expressly described the rulemaking action as “*effectuating* Congress's goal.”<sup>[65]</sup> Similarly, commenters emphasizing this point also referenced language from the final rule preamble of the SAFE I Rule, in which the Agencies recognized that “` certain States may need to work with EPA to revise their [State Implementation Plans] in light of this final action” to remove purportedly preempted standards.<sup>[66]</sup> In the SAFE I joint agency action, EPA also characterized NHTSA's preemption regulations as determinative, noting that “in light of NHTSA's determinations” on EPCA preemption, EPA's grant of a waiver for “California's program was invalid, null, and void.”<sup>[67]</sup> These characterizations help to demonstrate that the regulated community and the public could reasonably have expected that NHTSA's SAFE I Rule regulations presented mandatory and legally effective requirements.

This view was echoed by many other commenters who supported this Proposal.<sup>[68]</sup> Even commenters who opposed the current Proposal and argued that the SAFE I Rule was merely interpretative (or contended the distinction failed to matter), still treated the SAFE I Rule as a regulatory linchpin that was critical to keeping states and local jurisdictions from pursuing regulatory programs that they would otherwise undertake. For example, one commenter likened the repeal of the SAFE I Rule to a “dereliction” of NHTSA's duty, akin to permitting states to run amok in “lawlessness” in the absence of regulations and removing the sole bulwark to “California's impending balkanization,” all the while insisting that the “[t]he One National Program rules do not satisfy the intransitivity test for legislative rules” because their restrictions were present all along in Section 32919.<sup>[69]</sup> This concern, though, would only be valid if the SAFE I Rule were binding and not a mere interpretation. Thus, it becomes clear that, ultimately, all commenters—both supportive of and opposed to the Proposal—treat the SAFE I Rule as a sweeping measure, which was largely expected to bind regulated entities. In other words, as a legislative rule.

The SAFE I Rule, thus, was widely viewed as establishing new legal restrictions intended to broadly alter the pre-existing EPCA preemption landscape. As described in the Proposal, in the SAFE I Rule, NHTSA codified four provisions in the CFR, each of which purported to directly regulate the scope of preemption under EPCA. Specifically, NHTSA promulgated 49 CFR 531.7 (<https://www.ecfr.gov/current/title-49/section-531.7>) and 533.7 (<https://www.ecfr.gov/current/title-49/section-533.7>), both of which were nearly verbatim codifications of the statutory text, and an identical appendix B to both Parts 531 and 533, which included a description of certain state regulations also described as preempted. None of these provisions instituted any new compliance or enforcement standards relating to NHTSA's CAFE program. Instead, the provisions, by their own terms, solely sought to codify into NHTSA's regulations a binding framework to govern the scope of EPCA preemption.

As both the Proposal and many commenters pointed out, the imperative and mandatory language of the SAFE I Rule illustrates the degree to which the SAFE I Rule imposed demands upon regulated entities (and expected compliance) rather than helpfully advised them of a possible construction of pre-existing statutory language. As the Preamble to the SAFE I Final Rule described, these provisions sought to “ma[ke] explicit that state programs to limit or prohibit tailpipe GHG emissions or establish ZEV mandates are preempted.”<sup>[70]</sup> In announcing the SAFE I Rule, NHTSA repeatedly described the final rules in terms that appeared to confer upon them legally binding connotations. For instance, the Agency noted that through the final rule, “NHTSA intends to assert preemption”<sup>[71]</sup> and characterized the regulations as “implementing”<sup>[72]</sup> a preemption requirement. Subpart “a” of each appendix B to parts 531 and 533 even labels the regulatory text as “Express Preemption” provisions, before proceeding to categorically assert, in mandatory terms, what types of state laws were preempted.<sup>[73]</sup>

A few commenters sought to diminish the importance of such mandatory language, contending, for instance, that “nothing” would have practically changed had the Agency employed more permissive or advisory language in the SAFE I Rule instead of the imperative language used throughout both the codified text and preamble.<sup>[74]</sup> This argument's supposition is undermined by the numerous comments □ from states and local jurisdictions—the entities to whom such language was primarily directed—who consistently made clear that they understood the Rule's regulations as constricting their activities rather than merely advising how Section 32919 may be applied at some indeterminate point in the future. Moreover, the Agency's own statements in the SAFE I Rule disprove this argument, as they reveal a definitive expectation that states would curb their actions in order to meet the newly demanded scope of preemption.<sup>[75]</sup>

□ Start Printed  
Page 74247

More fundamentally though, discounting the importance of the Agency's own language in the precise rulemaking record in question too narrowly focuses the legislative rule inquiry. Even the cases cited by opposing commenters on this issue, such as *American Mining Congress v. Mine Safety & Health Administration*, expressly recognized that all of the avenues and tests for distinguishing between legislative and interpretative rules are ultimately just different ways of asking whether “the agency intended to exercise” a delegated legislative power to promulgate rules that impose binding obligations with “legal effect.”<sup>[76]</sup> As noted above, this inquiry is much more straightforward in a situation, such as here, where the agency itself believes that this is the intent of the rule and undertook the notice-and-comment procedures required under the Administrative Procedure Act (APA) to issue legally binding regulations, without in any way implying that those steps were optional. For this reason, *American Mining Congress* underscored that despite any of the more complicated analyses that may apply when an agency disagrees on a rule's legislative status, the entire question is resolved if in the rulemaking the agency simply “choose[s] explicitly to invoke its general legislating authority.”<sup>[77]</sup> In such a case, the rule should be “presumably treat[ed] . . . as an attempted exercise of legislative power.”<sup>[78]</sup>

Here, the SAFE I Rule clearly—and explicitly—expressed an understanding that the new rules created legal obligations that would bind states and local jurisdictions, as described above. Moreover, even the mechanics of the SAFE I Rule's promulgation demonstrate NHTSA's awareness that it was codifying legislative rules that instituted legal requirements. Commenters defending the SAFE I Rule stressed that the rulemaking undertook all of the procedural steps required by the APA for a legislative (but not an interpretative) rule.<sup>[79]</sup> This procedural regularity only underscores the SAFE I Rule's intended legislative function, as it illustrates the lengths the Agency went to ensure that the regulations codified by the SAFE I Rule were procedurally defensible and binding.<sup>[80]</sup> Moreover, the SAFE I Rule was codified into NHTSA's own regulations in the Code of Federal Regulations (CFR)—a step that courts, including *American Mining Congress*, have often considered helpful in understanding the Agency's intent.<sup>[81]</sup> The Agency also does not view the requirements in the Appendices as somehow procedurally cured or automatically interpretations simply because they appear in appendices rather than separately numbered regulations. It is not uncommon for agencies, including NHTSA, to include regulatory requirements in appendices.<sup>[82]</sup> The appendices here continued that approach, with the facial language of the appendices codified in the CFR continuously invoking the same binding language described throughout this final rule.

Finally, a joint comment submitted by the Urban Air Initiative, among others, raised an issue that highlights one of the most telling aspects of the SAFE I Rule's legislative character.<sup>[83]</sup> Specifically, after arguing the Rule did not satisfy governing tests for legislative rules, the comment reached the ultimate conclusion that the legislative versus interpretative distinction was irrelevant to the SAFE I Rule's viability. The comment contended that, either way, the SAFE I Rule was a valid outgrowth of NHTSA's interpretative authority in administering EPCA and the CAFE program. To reach this conclusion, the comment focused at length on the concept of the “force of law” and the intransitivity test for legislative rulemaking, stressing that the SAFE I Rule embodied NHTSA's interpretative authority because it simply defined a pre-existing and already enforceable obligation set by Section 32919. And, in that sense, even if the SAFE I Rule's interpretation was binding, such a result was permissible as long as the APA's notice and comment procedures were followed. At least one other comment similarly remarked that whether the SAFE I Rule is legislative or interpretative “may not make much of a difference as a practical matter.”<sup>[84]</sup> The theme in such comments is a baseline assumption that the SAFE I Rule did not “itself impose[ ] federal regulatory preemption” because, they stress, Section 32919 already imposed a self-executing preemption requirement.<sup>[85]</sup>

Ultimately, the Agency believes such comments erroneously comingled the substantive question about the scope of EPCA's preemption requirements with the unrelated question of whether the SAFE I Rule's regulations sought to codify prescriptive requirements that implemented Section 32919 in a legislative manner. The Urban Air Initiative's joint comment characterized these questions as one and the same, arguing that as long as the substance of Section 32919 supported the preemption requirements promulgated in the SAFE I Rule, the legislative versus interpretative distinction was “irrelevant” because either way NHTSA was simply elucidating requirements that already existed under EPCA.<sup>86</sup> □ However, blending the substance and form in this way ignores a longstanding recognition that whether legislative rules validly prescribe conduct in a binding way is a distinct issue from whether the requirements those rules impose are consistent with either the underlying statute or regulation.

Rather than comparing the substantive scope of the underlying statute and the agency's subsequent action, the legislative rule inquiry instead looks to the degree to which the standard announced by the agency went “beyond a process reasonably described as interpretation” by turning the original statutory standard into a rigid threshold that prescribed specific conduct.<sup>[87]</sup> In this sense, an agency performs a “legislative function” by applying a “value judgement[ ]” to a broader statutory framework and turning that judgment into a static

requirement, which imposes a rigid threshold for compliance.<sup>[88]</sup> In such situations, the rule announced by the agency is legislative in that it forms a standalone requirement, which is no longer tied “to the animating standard” of the statute, but “stand[s] free of the standard” as it is “self-contained” and “unbending.”<sup>[89]</sup> Examples of these types of legislative rules span from a set of investment conditions fashioned from a general statutory standard of “reasonable costs”<sup>[90]</sup> to an agency’s mathematical analysis that turned a statutory standard into a requirement that a fence meet specific dimensions.<sup>[91]</sup> While the nature or type of rule resulting from the legislative undertaking may vary, the focus of the inquiry is on the transformation of a statutory standard into a set of specifically enumerated rules that prescribe conduct.

Importantly, this legislative rule inquiry is wholly distinct from the question about whether the legislative rules would be a permissible reading of the underlying statute or regulation. In fact, courts conducting these analyses often expressly make clear that the legislative rule determination does not require them to reach the question of whether those rules would have been subsumed within the respective scopes of the statutes or any other existing regulations that the agencies had already promulgated. For instance, through this legislative rule inquiry “[w]e may assume, without deciding, that the [requirements] are an extension” of the statute and “consistent” with existing regulatory provisions.<sup>[92]</sup> Even so, “neither assumption leads to the conclusion that the [requirements] represent an interpretation.”<sup>[93]</sup> Instead, what matters is whether the agency performs merely an act of interpretation or instead operates in an essentially legislative capacity by crystallizing a broader statutory standard into specific prescriptive requirements.

Applying this same framework, even assuming for purposes of discussion (like those courts) that the SAFE I Rule’s regulations imposed a substantive obligation that was consistent with the “related to” standard in Section 32919, the regulations still undeniably prescribed conduct in a way that was legislative rather than interpretative. Specifically, the SAFE I Rule’s regulations turned the baseline standard of Section 32919, “related to,” into an entire list of specifically enumerated conduct that created a prescriptive threshold for EPCA preemption.

Under Section 32919, “a State or a political subdivision of a State may not adopt or enforce a law or regulation related to fuel economy standards or average fuel economy standards for automobiles covered by an average fuel economy standard under [Chapter 329].”<sup>[94]</sup> This statutory framework contains a general standard by which to evaluate the application of EPCA preemption: “related to.” In the SAFE I Rule, NHTSA applied a “value judgment”<sup>[95]</sup> to this statutory standard by undertaking what the Rule called a “scientific” and “mathematical” evaluation of fuel economy and emissions concepts.<sup>[96]</sup> Through this endeavor, the SAFE I Rule fashioned a set of highly prescriptive requirements that precisely and rigidly dictated when a state or local jurisdiction’s program “related to” fuel economy standards for purposes of EPCA. For the question of whether the rule was legislative or interpretive, it is wholly irrelevant to determine whether those prescriptive requirements were reasonable understandings of the “related to” statutory standard. All that matters for the legislative rule analysis is that, once codified, the regulations from the SAFE I Rule served as standalone standards for EPCA preemption. The SAFE I Rule extrapolated from the original statutory standard and articulated express prohibitions which, once codified, were intended to and capable of fully controlling the preemption analysis in lieu of the original statutory language.<sup>[97]</sup>

For example, Appendix B to Parts 531 and 533 expressly declares the preemption of “any law or regulation of a State or a political subdivision of a State” *solely* based on the fact that the program in question “ha[s] the direct or substantial effect of regulating or prohibiting tailpipe carbon dioxide emissions from automobiles.”<sup>[98]</sup> A similar standard is repeated multiple times in the SAFE I Rule’s regulations, with subsection (a)(E)(2) also flatly preempting “any law or regulation” that “regulates or prohibits tailpipe carbon dioxide emissions

automobiles,”<sup>[99]</sup> and subsection (b) codifying identical categorical thresholds for “implied preemption.”<sup>[100]</sup> These categorical thresholds represent NHTSA’s “scientific” and “mathematical” judgment in the SAFE I Rule as to how EPCA’s animating “related to” standard would look as a prescriptive requirement. But in the SAFE I Rule, NHTSA went beyond just providing guidance about how NHTSA’s views on the subject should inform a state or local jurisdiction who wished to understand how their program might fit within EPCA’s “related to” standard. Instead, NHTSA announced those positions in the form of regulations of general applicability that formed their own regulatory standards. These new regulations were “self-contained” and “unbending” in that any programs that satisfied the strict regulatory text were now labeled as conclusively preempted by NHTSA. And, this approach prevented a more careful analysis of whether it is possible that any state or local standard that met the static preemption threshold imposed by these regulations may not actually “relate to” fuel economy for any particular reason (such as perhaps the fact-specific variables foreclosed from consideration as described below in Section II.B.ii.). In this sense, once in place, the SAFE I Rule’s regulations were intended to functionally replace the EPCA preemption language in any analysis of whether a particular program was preempted, without a need to reference □ the original statutory text or underlying caselaw.<sup>[101]</sup> The SAFE I Rule even acknowledges the standalone nature of the new regulations, explaining that the codified “regulations are *operable* without regard to any specific Federal standards and requirements . . . or other parts of the Code of Federal Regulations.”<sup>[102]</sup>

□ Start Printed  
Page 74249

While Section II.B.ii. below explains how this inflexible standard inappropriately precludes individualized considerations, the self-contained nature of the standard also demonstrates how the SAFE I Rule’s regulations operate as prohibitions that turn a broader statutory standard into a set of rules that states and local jurisdictions must follow. This process of fashioning a set of specific and prescriptive requirements out of an underlying statutory standard involves a legislative function of the agency and the rules that emerged from this process are legislative in nature. And the law is clear that an agency may prescribe conduct and issue such legislative rules only if provided the authority to do so by Congress.<sup>[103]</sup> EPCA provides NHTSA with no such authority.

## **2. EPCA DID NOT AUTHORIZE NHTSA TO EXPRESSLY ESTABLISH NEW EPCA PREEMPTION REQUIREMENTS**

Once the SAFE I Rule’s regulations are properly understood as seeking to impose binding legal requirements, it becomes clear that the Rule is premised on the need for NHTSA to possess the requisite authority to validly set such mandates. The Proposal generated a number of comments on this authority issue. A large number of those comments agreed with the Proposal’s concerns about a lack of authority for the rulemaking, while several commenters defended the legitimacy of the Rule. But while these comments may have disagreed on the existence of authority or the extent to which NHTSA’s authorities extended, they did not generally dispute the Proposal’s recognition of the fundamental principle that an agency must possess authority to issue legislative rules.

As the Proposal explained, the regulatory authority of federal agencies extends only insofar as Congress permits.<sup>[104]</sup> Consequently, an agency “may act only when and how Congress lets [it].”<sup>[105]</sup> These restrictions extend to all aspects of an agency’s regulatory activity—including a rulemaking and ultimately derive from Congress.<sup>[106]</sup> As such, the matters upon which an agency may promulgate rules imbued with the force and effect of law depend upon the extent to which the Agency has the appropriate statutory authority.<sup>[107]</sup>

Ultimately, as the Proposal expressed, since an agency lacks plenary authority, the delegation of one power to an agency does not necessarily include other powers, even if they are related.<sup>[108]</sup> This applies even when the authority is analogous. For instance, the D.C. Circuit has rejected an agency’s argument “that it possesses

plenary authority,” holding instead “that the fact that the Board is empowered” in a particular circumstance does not “mean[ ] the Board therefore enjoys such power in every instance” in which a similar question arises.<sup>[109]</sup> Accordingly, construing an agency's authority requires a close examination of the precise power delegated by Congress and how such authority may differ, even if slightly, from other authority that Congress may reserve.

The need for sufficient authority does not fade when an agency seeks to promulgate regulations expressly dictating preemption. In fact, as the Proposal expressed, the legitimacy of an agency's exercise of preemption power through legislative rulemaking is principally a question of the extent of authority delegated to the agency. As such, “in a situation where state law is claimed to be pre-empted by Federal regulation, a narrow focus on Congress' intent to supersede state law [is] misdirected.”<sup>[110]</sup> Instead, when considering an agency's preemptive authority, “the inquiry becomes whether the federal agency has properly exercised its own delegated authority rather than simply whether Congress has properly exercised the legislative power.”<sup>[111]</sup> An agency must draw preemption authority from definitive sources, as the governing framework “does not create preemption authority out of thin air.”<sup>[112]</sup> As the Supreme Court has made clear:

a federal agency may pre-empt state law only when and if it is acting within the scope of its congressionally delegated authority. This is true for at least two reasons. First, an agency literally has no power to act, let alone pre-empt the validly enacted legislation of a sovereign State, unless and until Congress confers power upon it. Second, the best way of determining whether Congress intended the regulations of an administrative agency to displace state law is to examine the nature and scope of the authority granted by Congress to the agency.<sup>[113]</sup>

In response to the Proposal, many commenters repeatedly expressed a concern that NHTSA lacked the authority for the SAFE I Rule.<sup>[114]</sup> In most cases, these comments echoed rationales expressed in the Proposal for why such authority was lacking.<sup>[115]</sup> Accordingly, □ many of them also read Section 32919 as silent on any role for NHTSA in further dictating the scope of EPCA preemption,<sup>[116]</sup> understood Section 32919's self-executing nature as actually foreclosing regulations that dictate additional express preemption requirements,<sup>[117]</sup> and viewed general delegations of authority to the Secretary of Transportation insufficient to support such a sweeping act of preemption.<sup>[118]</sup>

□ Start Printed  
Page 74250

These comments reinforce the Proposal's substantial doubts about NHTSA's authority to promulgate the SAFE I Rules, which the Agency crystalizes in this final rule into a firm conclusion that the requisite authority does not exist. The lack of legal authority is most clearly illustrated by the inadequacy of the two grounds articulated by the SAFE I Rule (and comments who supported that position here) for the proposition that NHTSA enjoys authority to promulgate the regulations: (1) The general rulemaking authority of the Secretary of Transportation; and (2) more generalized inferences from the spirit of EPCA. The Agency finalizes its view that neither of these grounds suffices.

#### **A. NO DIRECT STATUTORY AUTHORITY ENABLES NHTSA TO PROMULGATE THE SAFE I RULE**

First, NHTSA finalizes the view expressed in the Proposal that no direct statutory source exists for the Agency to derive authority to conduct the SAFE I rulemaking. In this respect, NHTSA focuses, in particular, on the two statutory provisions that commenters supporting the SAFE I Rule especially relied upon to argue that such authority existed: 49 U.S.C. 322 (<https://www.govinfo.gov/link/uscode/49/322>) and 49 U.S.C. 32919 (<https://www.govinfo.gov/link/uscode/49/32919>). Neither of these provisions enables a legislative rulemaking action to establish new binding preemption requirements.

This analysis starts with Section 322 because that is the only source of statutory authority invoked in the SAFE I Rule. Notably, even though EPCA speaks directly to the fuel economy preemption issue in Section 32919, in the SAFE I rulemaking, NHTSA did not invoke Section 32919 to claim the authority to issue preemption regulations.<sup>[119]</sup> Instead, NHTSA claimed authority based on the Secretary of Transportation's "general powers" under Section 322 to "carry out" all responsibilities across the entire Department of Transportation. NHTSA argued at the time that this authority was sufficient because the Agency could not carry out its CAFE standard-setting responsibilities in the face of state regulation that undermined its authority.<sup>[120]</sup> In the SAFE I Final Rule's most direct discussion of the issue of authority to promulgate regulations concerning preemption, NHTSA linked the perceived conflict between EPCA's purposes and state regulation to the general delegation of authority to the Secretary to carry out his duties. Specifically, after describing Section 322 as an express authorization for the Secretary of Transportation "to prescribe regulations to carry out her duties and powers," and noting that Chapter 329 of Title 49 delegated the Secretary's authority to NHTSA for EPCA purposes, the Agency concluded in the SAFE I Rule that it "ha[d] clear authority to issue this regulation under 49 U.S.C. 32901 (<https://www.govinfo.gov/link/uscode/49/32901>) through 32903 (<https://www.govinfo.gov/link/uscode/49/32903>) to effectuate a national automobile fuel economy program unimpeded by prohibited State and local requirements."<sup>[121]</sup> This is because in the SAFE I Rule the Agency characterized that rulemaking as simply "carry[ing] out" the preemption scope of Section 32919.<sup>[122]</sup>

NHTSA concludes that the general authority for the Secretary to "carry out" his responsibilities across the entire Department of Transportation cannot supplant the otherwise strong indication that legally binding regulations on EPCA preemption exceed the scope of the Agency's authority. Nothing in the comments undermines the Proposal's straightforward recognition that Section 322 contains statutory language of broad applicability that extends well beyond the CAFE program and, indeed, well beyond NHTSA. It continues to seem especially peculiar to derive preemption authority from Section 322 when EPCA already contains an express preemption provision, which does not provide NHTSA with a role in further defining that preemption with the force and effect of law. Since Congress already crafted a specific provision to describe EPCA preemption in Section 32919, the more general terms of Section 322 would seem of much clearer applicability if Section 32919 had otherwise delegated NHTSA certain authorities or responsibilities to carry out. But as discussed below, Congress did not, in EPCA, appear to charge NHTSA with any authority or responsibility with respect to preemption regulations. Construing Section 322's general terms to independently provide NHTSA with the authority to issue legislative rules on EPCA preemption that override Section 32919's notable silence as to any role for NHTSA would require an extraordinarily expansive reading of Section 322, which neither Section 322 nor EPCA could support.

Moreover, inserting Section 322 into EPCA in such a manner would require a strained reading of EPCA, which contradicts the specific approach Congress consistently employed throughout EPCA to provide authority to the various agencies targeted by the statute. Unlike some other enactments, which are primarily aimed at enabling a particular agency or creating a specific program, EPCA sought to establish an interagency framework for energy independence, which spanned a host of agencies and their respective jurisdictions. For instance, at various points, Congress directs portions of EPCA to a variety of agencies, including but not limited to the Department of Transportation, the Environmental Protection Agency, the Department of Justice, the Federal Trade Commission, the Federal Maritime Commission,<sup>[123]</sup> and the Federal Power Commission.<sup>[124]</sup> Consistent with this approach, the facial language of EPCA tends to clearly state when and where Congress intended to galvanize an agency into acting on a particular provision. For instance, even just taking a few non-exhaustive examples from the original language of the specific section of EPCA dedicated to automotive fuel economy:

- Section 501(1) specifies that “[t]he Secretary may prescribe such rules as may be necessary to implement this paragraph,” which concerns the definitions of an automobile.<sup>[125]</sup>

□

□ Start Printed  
Page 74251

- Section 501(2) links the term passenger automobile to that “which the Secretary determines by rule.”<sup>[126]</sup>

- Section 502 describes the circumstances, in detail, by which “the Secretary shall prescribe, by rule, average fuel economy standards.”<sup>[127]</sup>

- Section 505(a)(3) requires that “the Secretary shall prescribe rules setting forth the form and content of the reports required under” the Section.<sup>[128]</sup>

- Section 505(b)(1) describes the specific actions that the Secretary of Transportation and the EPA Administrator may take, such as conducting hearings, “for the purpose of carrying out the provision of this part.”<sup>[129]</sup>

- Section 506(a)(3) requires that “the form and content” of labeling requirements “shall be prescribed by the EPA Administrator by rule.”<sup>[130]</sup>

- Section 508(a)(3)(D) permits that “the Secretary may prescribe rules for purposes of carrying the provisions of this paragraph,” which pertains to civil penalties.<sup>[131]</sup>

The remainder of EPCA is replete with similar examples of Congress specifically— *and expressly* —speaking to the ability or need for the agencies to implement its provisions through a variety of regulatory actions. In contrast, as noted by both the Proposal and certain commenters, Section 32919 (originally Section 509 of EPCA) is notably silent as to any role of the agency in administering—much less defining—a preemption scheme. This is despite other preemption provisions in EPCA continuing Congress' general trend throughout the statute of more specifically enumerating the role of the agency when contemplating further agency implementation. For instance, as the Proposal noted, the structures of other parts of EPCA expressly charge an agency to administer preemption through regulations, and no such charge exists for NHTSA. For example, a precursor to the Department of Energy, the Federal Energy Administration, was expressly directed elsewhere in EPCA to “prescribe . . . rule[s]” that preempt state and local appliance energy conservation standards.<sup>[132]</sup>

This is also consistent with the manner in which Congress has provided preemption authority to the Department of Transportation in other contexts. The Proposal identified several of such examples, recognizing that, other DOT statutes expressly provide a regulatory, or even adjudicatory, role for the Department in the preemption analysis. For instance, in the transportation of hazardous materials context, 49 U.S.C. 5125 (<https://www.govinfo.gov/link/uscode/49/5125>) directs the Secretary to adjudicate applications on whether a particular state standard is “substantially the same” as Federal law and, as such, exempted from statutory preemption.<sup>[133]</sup> Similarly, 49 U.S.C. 31141 (<https://www.govinfo.gov/link/uscode/49/31141>) establishes a very detailed role for DOT in reviewing and preempting state law pertaining to commercial motor vehicle safety.<sup>[134]</sup> Many of the seminal cases in the Supreme Court's preemption jurisprudence also concerned statutory schemes that expressly delegated preemption authorities to the agencies in question.<sup>[135]</sup>

A few comments disputed the salience of these other preemption examples, with a joint comment submitted by CEI especially delving into the particulars of these preemption schemes. After analyzing each of these preemption statutes in turn, CEI concluded that those statutory preemption provisions in which Congress explicitly prescribed an agency's role all "have one thing in common:" A limited preemption scope that necessitates an agency's subsequent involvement, oftentimes through adjudication, to "fine tune the scope of preemption."<sup>[136]</sup> CEI's joint comment stressed that, in contrast, Section 32919's silence as to any role for NHTSA was simply "a reflection of the preemption's absoluteness."<sup>[137]</sup> In doing so though, CEI's comment demonstrates a critical difference in Section 32919 and these other statutory preemption provisions. In those other statutory preemption provisions analyzed by CEI's comment, Congress indisputably enumerated a preemption framework in which the agency in question played an active role in legally determining how statutory preemption applied to particular states and programs. In contrast, Section 32919 enumerates no such role for DOT or NHTSA, nor does it even leave room for subsequent implementation by the Agency. Instead, the self-executing terms of Section 32919 demonstrate that Congress intended the provision to operate without any ensuing requirements or legal determinations imposed by the Agency. Through its codification of new prescriptive requirements on EPCA preemption, the SAFE I Rule involved NHTSA taking the type of subsequent agency action not intended by Congress. Reading Section 32919 to permit NHTSA to promulgate binding regulations on EPCA requires an acceptance that NHTSA may authoritatively determine the reach of the self-executing (and legally self-sufficient) obligations stemming from the statute. But as CEI's comment highlights, Section 32919 seems to clearly *not* want the Agency to "fine tune" the legal mechanics of EPCA's preemptive scope.<sup>[138]</sup> But that is exactly what the power to issue legislative rules under Section 32919 would allow.

CEI's comment also argues that the examples from those other statutory provisions cannot inform this rulemaking because in those enactments Congress contemplated an adjudicatory role for the agencies rather than the rulemaking action undertaken in the SAFE I Rule. NHTSA does not believe this distinction negates the comparative value of those provisions. Of course, the SAFE I Rule was a generally applicable rule, not an adjudication or even simply an administrative enforcement action against any particular party. Even so, the preemption statutes described both in the NPRM and herein remain relevant comparisons even when they provide adjudicatory rather than rulemaking roles for an agency. In either case, the Agency is still exercising a core administrative decision-making function to implement the preemption statute in a legally binding way—adjudication just does that on a case-by-case basis whereas a rulemaking does □ that all at once.<sup>[139]</sup> In both cases, the question remains whether Congress intended the agency to further implement the statutory preemption scheme through legally enforceable agency action. The other statutory examples demonstrate that when Congress so intends agency implementation, the statutes in question facially articulate that role clearly and discernably in the text.

To the extent the differences in rulemaking and adjudication are pertinent to today's rulemaking, such differences only further support NHTSA's conclusions. For instance, CEI's comment stresses that these other statutory examples only articulate a role for agencies because "subsequent regulatory adjudication" is needed to implement their preemption frameworks (in contrast to Section 32919, which CEI characterizes as "clear").<sup>[140]</sup> However, even assuming CEI's premise is true, this only further supports the Proposal's conclusion by suggesting that adjudication— *not rulemaking* —was Congress' preferred method to statutorily engraft an agency into the legal process of formulating the scope of an express preemption provision. If so, the SAFE I Rule's attempt to use rulemaking to legally affect EPCA's preemptive scope appears even further from the scheme intended by Congress. Ultimately, no matter how these provisions are read, it is undeniable that Section 32919 stands apart from other statutory preemption schemes in which the agency is charged with a more active role in setting the scope of preemption in a legally binding way.

□ Start Printed  
Page 74252

Commenters' other efforts to explain away Section 32919's silence are similarly unavailing. In particular, CEI's joint comment proffers two "alternative explanations" for the statute's silence. In the first, the comment argues that in enacting EPCA, Congress was simply naïve, unable "in 1975 to anticipate the brazenness of 21st century `climate ambition,'" so presumably unaware of what CEI deems an eventual need for NHTSA to legally intercede on EPCA preemption.<sup>[141]</sup> However, this fails to account for the fact that the preemption provision of EPCA has been the subject of litigation for decades and, thus, questions about its scope are not new, even if the specific aspects of this issue change over time. Despite this, Congress has not materially changed the statutory language governing EPCA preemption, with the current language in Section 32919 remaining substantially the same as the language originally enacted in Section 509 of EPCA. Further, even if the recent actions by California and other states are somehow different than earlier preemption questions, it would not change what authority EPCA, as it is currently enacted, provides NHTSA.

Moreover, CEI's comment suggests that Congress perhaps intentionally eschewed a more precise description of delegated authority, preferring instead to tacitly provide authority through silence to avoid "foster[ing] confusion and uncertainty." This position is both counterintuitive and disproved by EPCA's express text. First, it strains credulity to read EPCA's silence as Congress' concerted effort to still provide authority to the agency, but just in a more clear and unambiguous way than if it had done so expressly. As the rest of EPCA demonstrates, Congress understood how to carve out a legal role for an agency in a multitude of matters, including preemption, even when that role involved a complicated adjudicatory scheme. Moreover, since an agency's rulemaking actions must always fall within the scope of statutory authority, if Congress had any concerns about how that authority could be misapplied, it could have easily enacted language that set the parameters for any implementing agency regulations (as it did in Section 327 of EPCA).<sup>[142]</sup> As such, there is no reason to believe that Congress would have suddenly become wary of precisely describing such authority when it reached Section 32919. And a construction that requires such a leap does not offer the most reasonable reading of the statute.

Finally, at least one other commenter sought to diminish this contrast in statutory approaches by focusing not on the actual statutory language in question, but instead, on the legal doctrines underpinning administrative law. Specifically, a joint comment by the Urban Air Initiative argued at length that the Proposal's doubts about the delegation of statutory authority for the SAFE I Rule contradicted the Supreme Court's application of administrative law principles in *City of Arlington v. FCC*.<sup>[143]</sup> The comment presented *City of Arlington* for the proposition that since NHTSA administers the broader CAFE program and Section 32919 does not expressly prohibit the Agency from promulgating implementing regulations on EPCA preemption, the silence of Section 32919 should not serve as a barrier to NHTSA's SAFE I rulemaking authority.<sup>[144]</sup> As such, the comment concluded that the Proposal's approach would too finely parse an agency's authority on a provision-by-provision basis and undertake an unmanageably granular review of authority for federal administrative agencies.

NHTSA views this concern as unfounded and depending upon a protracted reading of *City of Arlington*. In *City of Arlington*, the Supreme Court reviewed a declaratory ruling by the Federal Communications Commission, which contained the agency's interpretation and subsequent implementation of its own regulatory jurisdiction under the Telecommunications Act of 1996.<sup>[145]</sup> The question presented in the case was "[w]hether . . . a court should apply *Chevron* to . . . an agency's determination of its own jurisdiction."<sup>[146]</sup> The Court ultimately held that *Chevron* deference should apply because, at their core, all agency constructions of a statute present jurisdictional issues.<sup>[147]</sup> This is because, the majority reasoned, agencies are always bound by statute, which renders any departure from a statute's intended scope or meaning also a transcendence of the agency's jurisdiction.<sup>[148]</sup>

The Urban Air Initiative's joint comment contends that, in light of *City of Arlington*, the Proposal's focus on whether Section 32919 confers rulemaking authority is an “empty distraction” and demonstrative of an overly burdensome undertaking that too narrowly searches for questions of authority or agency jurisdiction.<sup>[149]</sup> Read properly though, *City of Arlington* actually underscored the appropriateness of the Agency's concern about its own authority. The Urban Air Initiative's comment advances *City of Arlington* to argue that NHTSA need not worry about its statutory authority because no special class of jurisdictional questions exists. But the *City of Arlington* majority made clear that this is only because *all* questions about an agency's actions are jurisdictional. At base, *City of Arlington*'s holding illustrates the exact point repeated □ throughout this rulemaking: because agencies have no plenary jurisdiction, agencies' “power to act and how they are to act is authoritatively prescribed by Congress, so that when they act improperly, no less than when they act beyond their jurisdiction, what they do is ultra vires.”<sup>[150]</sup> As a result, any time the agency implements a statute the question “is always whether the agency has gone beyond what Congress has permitted it to do, there is no principled basis for carving out some arbitrary subset of such claims as ‘jurisdictional.’”<sup>[151]</sup> This is even apparent when the Court's phrase of “empty distraction” is read in its full context: “The [jurisdictional] label is an *empty distraction* because every new application of a broad statutory term can be reframed as a questionable extension of the agency's jurisdiction.”<sup>[152]</sup> Consequently, far from ignoring this precedent as the comment claims, NHTSA views this rulemaking as conducting the precise analysis contemplated by the Court—ensuring that its regulatory activities conform to their governing statutory authorities.<sup>[153]</sup>

□ Start Printed  
Page 74253

Moreover, even the broader holding of *City of Arlington* supports NHTSA's conclusions in this rulemaking. The Court's ultimate holding in the case is that, because all questions are essentially jurisdictional, an agency should be entitled to *Chevron* deference when construing the scope of its statutory authority, even when those questions concern the subjects on which an agency may regulate.<sup>[154]</sup> The *Chevron* doctrine is, of course, a multi-dimensional analysis, and thus deference to a reasonable interpretation only arises in the first place if the statutory language is ambiguous.<sup>[155]</sup> Here, NHTSA views the lack of rulemaking authority as a clear and unambiguous reading of Section 32919, for all of the reasons described herein. However, even if Section 32919 were considered to be ambiguous on the existence of authority, as several commenters contended, the *City of Arlington* framework stressed by those commenters still supports extending deference to NHTSA for its determination in this repeal that the Agency lacked authority to promulgate the SAFE I Rule. In fact, if such an ambiguity were deemed to exist, that is the precise type of determination for which *City of Arlington* made clear deference should apply: “[t]he question here is whether a court must defer under *Chevron* to an agency's interpretation of a statutory ambiguity that concerns the scope of the agency's statutory authority (that is, its jurisdiction).”<sup>[156]</sup>

Similarly, *Chevron* also does not support a claim that the SAFE I Rule was tacitly authorized in order “to fill any gap left” by Congress in Section 32919's statutory scheme.<sup>[157]</sup> *Chevron* and its progeny recognize that, in some instances, statutory ambiguities or “gaps” in statutory frameworks indicate that Congress contemplated an agency acting in order to resolve such ambiguities.<sup>[158]</sup> In these situations, an incomplete statutory scheme raises the possibility that Congress “implicitly or explicitly” intended the agency to step in and undertake rulemaking to provide the missing pieces and enable the statute's administration.<sup>[159]</sup> However, as described throughout this reconsideration, EPCA and Section 32919 clearly demonstrate that Congress did not intend for NHTSA to further implement or administer Section 32919.

This is evident because, as the Proposal recognized, both the Agency and courts have repeatedly understood Section 32919 as self-executing and capable of direct application to state regulatory activity.<sup>[160]</sup> Specifically, such a direct application involves the consideration of whether the state regulation in question “relate[s] to”

fuel economy standards established elsewhere in Chapter 329.<sup>[161]</sup> The statute does not require any supplemental agency regulations to implement this standard, nor does the text and structure of the statute appear to provide NHTSA any special legislative role in dictating the scope of Section 32919's preemption. This view is consistent with NHTSA's longstanding reading of Section 32919. For instance, even the Preamble to the SAFE I Final Rule acknowledged that the EPCA preemption provision of Section 32919 was "self-executing," asserting that "state or local requirements related to fuel economy standards are void ab initio"—by operation of statute not regulation.<sup>[162]</sup> Likewise, in the NEPA section of the SAFE I Rule, NHTSA expressly disclaimed any discretion to alter the preemption paradigm established by Section 32919 due to the self-sufficiency of the statute, stressing that "[a]ny preemptive effect resulting from this final action is not the result of the exercise of Agency discretion, but rather reflects the operation and application of the Federal statute."<sup>[163]</sup> As such, the Agency again characterized any "preempted standards [as] void ab initio" due to the non-discretionary and independent application of Section 32919.<sup>[164]</sup>

The self-executing nature of Section 32919 formed one of the most widely agreed-upon propositions in the Proposal. Commenters on all sides of the issue expressly confirmed their own understanding of Section 32919 as self-executing and capable of direct enforcement and application against preempted programs. For instance, commenters in support of the Proposal expressly agreed that "[i]n the absence of the Preemption Rule, any state law or regulation `relating to fuel economy standards' can be challenged in a proper case, allowing for full evaluation of both the state law and the express statutory preemption in Section 32919,"<sup>[165]</sup> that "implementing EPCA Section 32919" does not require any NHTSA regulations,<sup>[166]</sup> and that "[c]ourts have likewise treated the EPCA preemption language as self-executing as they have applied this language to particular circumstances to determine whether a □ state or local government action is or is not preempted."<sup>[167]</sup> Similarly, commenters that otherwise more neutrally commented on other aspects of the Proposal still explicitly endorsed Section 32919's self-executing status.<sup>[168]</sup> And commenters opposing the Proposal nonetheless still stressed that they "agree that the statute is self-executing and that any state regulation that is `related to fuel economy' is preempted and void ab initio."<sup>[169]</sup> For this reason, even opposition commenters stated that "[c]onsequently, the SAFE I Rule's regulatory language is not essential to effectuate" EPCA preemption.<sup>[170]</sup>

□ Start Printed  
Page 74254

Although commenters widely agreed on Section 32919's self-executing status, a small number of comments opposing the Proposal tried to argue that this status did not preclude the SAFE I Rule. For instance, a joint comment submitted by CEI argued that Section 32919 still "has no practical effect unless someone interprets and implements it."<sup>[171]</sup> This misses the central point of the issue though. Since Section 32919 is self-executing, a regulation is not needed to implement the preemption provision, and, moreover, nothing in Section 32919 provides any authority to issue a binding rule on the scope of preemption. In that respect, Section 32919 fundamentally differs from other EPCA statutory provisions, such as Section 32902, which sets a general CAFE framework that must be implemented by NHTSA periodically "prescrib[ing] by regulation" the actual CAFE standards that govern particular model years.<sup>[172]</sup> EPCA is replete with other examples of those types of statutes requiring regulatory implementation.<sup>[173]</sup> In contrast, Section 32919 contains all of the elements necessary for implementation within the four corners of its statutory language.<sup>[174]</sup> This is not just theoretical, but evident from the numerous times Section 32919 has directly supported a private right of action seeking to enforce its preemption provisions in Federal court.<sup>[175]</sup>

To the extent that CEI means that Section 32919 has no practical effect unless it is *enforced*, as explained further in the next section, by promulgating regulations of general applicability, the SAFE I Rule was an act of rulemaking not enforcement. As such, whether Section 32919 needs to be enforced in a particular case has no bearing on whether NHTSA enjoys rulemaking authority to codify a regulation of general applicability.

Ultimately, the self-executing nature of Section 32919 demonstrates that Congress did not establish a rulemaking role for NHTSA in EPCA preemption. Instead, Congress enacted a statutory provision that operates fully on its own, without any discernable responsibility for the Agency in further implementing the scope of Section 32919 through regulations.

## B. THE REQUISITE RULEMAKING AUTHORITY CANNOT BE GENERALLY INFERRED FROM EPCA

Both the SAFE I Rule and commenters to the Proposal defending that Rule also argued that the spirit of EPCA hints at the need for such rulemaking authority. NHTSA continues to find this argument unavailing and, as such, is finalizing the Proposal's view that generalized inferences drawn from EPCA cannot sustain the provisions codified in the SAFE I Rule. Moreover, NHTSA views many of the themes and inferences that commenters invoked for this proposition inapposite, as they mischaracterize the nature of the SAFE I Rule. As such, nothing from these purported inferences changes NHTSA's conclusion that the SAFE I Rule was an *ultra vires* rule that must be repealed.

The SAFE I Rule sought to justify the rulemaking on predominantly policy grounds, characterizing the express preemption measure as necessary to fulfill other CAFE responsibilities delegated to the Agency. In particular, the SAFE I Rule argued that the regulation was needed to resolve a perceived irreconcilable conflict between state GHG emissions regulations and ZEV mandates and EPCA's delegation of authority to NHTSA to set national fuel economy standards.<sup>[176]</sup> The SAFE I Rule thus rationalized the regulations by emphasizing that “Congress's intent to provide for uniform national fuel economy standards is frustrated when State and local actors regulate in this area.”<sup>[177]</sup>

In particular, the SAFE I Rule suggested that the rulemaking was essential to guard against states or local jurisdictions undermining the CAFE program. For instance, the Agency repeatedly expressed that the regulations targeted “State requirements that *impermissibly interfere* with [the Agency's] statutory role to set nationally applicable standards,”<sup>[178]</sup> that implementing the provisions was necessary to foreclose state and local requirements that “*conflict* with NHTSA's ability to set nationally applicable standards,”<sup>[179]</sup> and that the action was necessary because “Congress's intent to provide for uniform national fuel economy standards is *frustrated* when State and local actors regulate in this area.”<sup>[180]</sup>

A large number of the comments supporting the SAFE I Rule expressed this same idea. This theme is illustrated, for example, by a joint comment from CEI, which stresses that without the SAFE I Rule, California (through CARB) would be positioned to “balkanize auto markets unless it gets its way” in dictating motor vehicle emissions and fuel economy standards.<sup>[181]</sup> Like the SAFE I Rule, such commenters focused on the need for the provision “to avoid potential conflicts with EPCA's national fuel economy standards,”<sup>[182]</sup> and provided extensive analysis purporting to show how particular programs are poised to “undermine CAFE's flexible fleet-average standards” unless the SAFE I Rule's prohibitions remain in place.<sup>[183]</sup> Some commenters opposing a repeal even carried this theme to the point of describing the SAFE I Rule as □ akin to an enforcement action, necessary for NHTSA to police EPCA's congressional purpose in the face of “lawless” states and local jurisdictions.<sup>[184 185]</sup>

The idea that the SAFE I Rule is necessary to prevent states and local jurisdictions from frustrating EPCA or NHTSA's national CAFE program is inconsistent with a properly applied preemption framework. In the absence of the SAFE I Rule, two fundamental preemption mechanisms still exist to guard against state or local programs that sufficiently conflict with CAFE to render EPCA's purposes a nullity.<sup>[186]</sup> First, as described throughout this final rule, a repeal of the SAFE I Rule does not affect the statutory express preemption provision in Section 32919. This self-executing statutory provision is fully capable of

enforcement against offending state and local programs in the absence of any regulations purporting to further implement its scope. In fact, before the SAFE I Rule, this provision had provided this function for years without implementing regulations. Here, Section 32919's plain language illustrates how Congress' preemptive scheme is immediately executable upon NHTSA promulgating the *substantive law* (national fuel economy standards) rather than any express preemption provisions. At most, the statute merely refers to the substantive tasks of the agency to establish “fuel economy standard[s]” and “requirements” as set forth elsewhere in Chapter 329.<sup>[187]</sup> Such references only connote the core duties borne by the agency to administer the substance of the fuel economy program, such as by setting “maximum feasible average fuel economy” standards under Section 32902 or establishing fuel economy labeling requirements under Section 32908. These responsibilities are within the Agency's traditional substantive regulatory functions, which draw from NHTSA's technical automobile expertise rather than any special agency authority over federalism.

As such, it is not necessary for NHTSA to codify new express preemption provisions in order to “carry out” EPCA. All NHTSA needs to do is fulfill the substantive task enumerated in Section 32919: Ensuring “an average fuel economy standard prescribed under this chapter is in effect.”<sup>[188]</sup> Once such a standard is in place, Section 32919's self-executing standard is fully capable of safeguarding Congress' purpose in EPCA. Moreover, as explained in Section II.B.iii. of this final rule, the familiar “related to” standard in Section 32919 may even be clearer to apply and understand without the convoluted layer of the SAFE I Rule. Accordingly, even assuming the concerns raised by such commenters are accurate, they are fully redressable by the statutory express preemption language in Section 32919, which remains untouched by this rulemaking.

More fundamentally though, even after today's repeal of the SAFE I Rule, judicial concepts of implied preemption will remain available to perform their traditional function of guarding against state law that sufficiently interferes with the supremacy of federal law. In fact, the concepts used by the SAFE I Rule (and commenters defending it) to justify rulemaking authority were actually more appropriately applied to an implied preemption analysis instead.<sup>[189]</sup> The terminology repeatedly employed throughout the SAFE I Rule —“frustrates,”<sup>[190]</sup> “conflicts,”<sup>[191]</sup> and “interferes”<sup>[192]</sup> —mirrors the standards often arising in implied preemption. Implied preemption is a judicial doctrine principally applied by courts when adjudicating challenges to particular state programs.<sup>[193]</sup> The judicial standards for implied preemption remain available to presiding courts irrespective of the presence of the SAFE I Rule. Therefore, if state and local jurisdictions endanger EPCA to the degree claimed by those commenters, there is no reason to believe that Article III courts could not evaluate those claims through the lens of implied preemption, as has been the case throughout the long history of both EPCA and all other federal law.<sup>[194]</sup>

Moreover, as a judicial doctrine intended for application in a particular case, principles of implied preemption do not support NHTSA claiming authority to conduct a rulemaking of general applicability.<sup>[195]</sup> Instead, this rulemaking act of promulgating new prescriptive preemption requirements, which are expressly codified in law, involves a separate act of rulemaking authority to impose express preemption through regulations. NHTSA's rulemaking authority to do so is governed by the principles already discussed above in Section II.B.i.—not the judicial concepts that govern whether a Federal court should deem a state program impliedly preempted by the supremacy of existing federal law. Therefore, the concepts of implied preemption invoked by NHTSA to justify the SAFE I Rule were misapplied. They exist to enable a court to determine whether a state program conflicts with *existing federal law*, not □ to empower NHTSA to *make more federal law*, as the Agency claimed in the SAFE I Rule. Accordingly, since NHTSA has already applied the proper rulemaking authority framework in Section II.B.i. above and determined that such authority was

lacking for the SAFE I Rule, judicial concepts of implied preemption cannot cure this deficit of authority. Moreover, they do not need to, because an implied preemption review remains available irrespective of the fate of the SAFE I Rule.

## **II. NHTSA CONTINUES TO CONSIDER A REPEAL OF THE SAFE I RULE APPROPRIATE EVEN IF THE AGENCY HAD DISCRETION TO CONDUCT THE ORIGINAL RULEMAKING**

In addition, even if the Agency either had sufficient authority to issue the SAFE I Rule as a legislative rule or, alternatively, if the prior Rule was simply an interpretation, the Agency nevertheless continues to consider a repeal justified by other considerations as well. Specifically, the SAFE I Rule purported to preempt an entire segment of emissions regulations from state and local jurisdictions without fully considering a number of variables pertinent to the preemption determination. By ignoring these factors, the Rule was still legally flawed because it ignored legally relevant considerations that should have informed both the nature and scope of the Agency's preemption determination. Likewise, in overlooking such important considerations, the SAFE I Rule also improvidently imposed preemption in absolute terms when a more narrowly tailored approach was available instead.

### **A. THE CATEGORICAL SCOPE OF PREEMPTION IN THE SAFE I RULE INAPPROPRIATELY IGNORED IMPORTANT INTERESTS OF STATES AND LOCAL JURISDICTIONS**

In the Proposal, the Agency expressed a concern that the categorical preemption views announced in the SAFE I Rule were insufficiently tailored to account for state federalism interests because they labeled an entire segment of state and local regulation as preempted, irrespective of the precise contours of any particular programs, regulations, or technological developments that may arise. This alarm especially arose from the SAFE I Rule's declaration of preemption through terms that were incontrovertible or absolute in a way that would not account for the nuanced and careful consideration of program-specific facts called for in preemption analyses. The comments to this Proposal substantiated these concerns. In particular, the majority of states and local jurisdictions who commented on the Proposal provided tangible examples of the types of nuances and federalism hardships that the SAFE I Rule failed to consider.

NHTSA continues to consider the federalism concerns in this arena as constituting substantial interests of states and local jurisdictions, who oftentimes seek to address pivotal matters of public health and welfare through the programs impinged by the SAFE I Rule. In this respect, the Agency remains mindful that an “administrative interpretation [which] alters the federal-state framework by permitting federal encroachment upon a traditional state power” merits particularly careful consideration to fully account for the significant federalism interests of states.<sup>[196]</sup> Likewise, Executive Order 13132 (/executive-order/13132) underscores the importance of considering federalism interests, stressing that “[t]he national government should be deferential to the States when taking action that affects the policymaking discretion of the States and should act only with the greatest caution where State or local governments have identified uncertainties regarding the constitutional or statutory authority of the national government.”<sup>[197]</sup> Nevertheless, by imposing a categorical and rigid approach to preemption, the SAFE I Rule prematurely discarded such federalism considerations despite the potential for more narrowly tailored approaches instead. As such, the SAFE I Rule both impermissibly ignored legally relevant variables of state programs and imprudently adopted a broader approach than necessary in instituting immutable preemption requirements.

For instance, in the Proposal, the Agency expressed a concern that in a number of cases, the policies preempted by the SAFE I Rule also served as components of the states' compliance with air pollution mitigation requirements delegated to states under the Federal Clean Air Act.<sup>[198]</sup> This issue formed one of the more common refrains in comments from states and local jurisdictions subject to the SAFE I Rule's

preemption determination, who stressed that the prior rulemaking failed to consider—or even acknowledge—their reliance interests in motor vehicle emissions regulations as a critical component in achieving National Ambient Air Quality Standards (NAAQS). NAAQS levels are set by the EPA for six separate ubiquitous air pollutants, and states are required to achieve and maintain them under federal law. A survey of the comments indicates that feedback on the ways in which the SAFE I Rule could undermine compliance with the NAAQS was overwhelming. For example, a comment by the National Association of Clean Air Agencies, a group of 115 local air agencies spanning 41 states, the District of Columbia, and four territories, stressed that programs prohibited by the SAFE I Rule “enable long-term planning and yield critical emission reductions that will contribute significantly to states' abilities to meet their statutory obligations to attain and maintain the health-based [NAAQS] for criteria pollutants.”<sup>[199]</sup> Separate comments submitted by the Ozone Transport Commission Mobile Sources Committee, a body comprised of 12 states and the District of Columbia, as well as the Nevada Division of Environmental Protection, and the District of Columbia Department of Energy and Environment, reiterated this point as well.<sup>[200]</sup> Maine's Department of Environmental Protection likewise commented to reiterate that these particular reliance interests are not new but rather have existed since the inception of such state programs, noting that “the [California low emission vehicle] program was initially created to help attain and maintain the health-based [NAAQS] for criteria pollutants.”<sup>[201]</sup>

Commenters made clear that these reliance interests were tied to programs in place at the time of the SAFE I Rule's promulgation. For instance, California's South Coast Air Quality Management District described how the SAFE I Rule invalidated “state pollution control standards which have been previously approved into State Implementation Plans (SIPs).”<sup>[202]</sup> The State of California's comment described this reliance in depth, noting that California's preempted regulatory programs arose from what the State described as its longstanding □ understanding of EPCA prior to the SAFE I Rule, which resulted in “weighty state interests, developed over the course of decades of implementing these state laws.”<sup>[203]</sup> This prolonged reliance on the regulatory framework in place well before the SAFE I Rule led California to invest substantial resources in the development of affected state programs, as well as “base long-term state planning” on the continuation of these programs into the future.<sup>[204]</sup>

□ Start Printed  
Page 74257

In addition, states and local jurisdictions similarly feared that by losing the state regulatory programs on which they had relied, the jurisdictions faced substantial detrimental consequences if they failed to meet required NAAQS levels. For example, a comment from a collective of municipal entities stressed that “vehicle emissions impact air quality and a community's ability to meet required ozone levels. Falling outside of required ozone levels can have negative impacts on cities, potentially disqualifying them from federal funding opportunities for highway and transit infrastructure.”<sup>[205]</sup> The Connecticut Department of Transportation commented similarly, noting that undermining state programs in this area was particularly harmful to state interests, as satisfying NAAQS requirements was already a difficult endeavor, which only became harder after the SAFE I Rule.<sup>[206]</sup> The Agency also received comments about this issue from the electricity industry, which expressed unease that by undermining established frameworks for NAAQS compliance, the SAFE I Rule could disrupt regulatory schemes in other industries as well.<sup>[207]</sup>

In the SAFE I Rule, NHTSA expressly “reject[ed] the notion that California has valid reliance interests” in preexisting state regulations and programs, largely because the Rule labeled those programs broadly preempted under the framework announced in the rulemaking.<sup>[208]</sup> Upon reconsideration, the Agency views its original logic in this respect as circular, amounting to a conclusion that NHTSA need not consider whether the breadth of its new regulations adequately considered particular issues, such as federalism or reliance interests, because those interests were already preempted according to the scope articulated by the

SAFE I Rule. However, as the comments to the current proposal demonstrate, numerous states and local jurisdictions continue to harbor deep concerns about the SAFE I Rule's sweeping prohibition of programs on which they relied to accomplish important state regulatory priorities — required by federal law that was not altered in the SAFE I Rule—and promote the health and welfare of their citizens. Accordingly, NHTSA concludes that the SAFE I Rule inappropriately instituted an absolute preemption scheme that foreclosed any consideration for whether a more narrowly tailored approach was available instead.

A few commenters that objected to the Proposal touched upon federalism issues, which the Agency do not believe persuasively argue for continuing the approach in the SAFE I Rule. First, the American Fuel & Petrochemical Manufacturers (AFPM) stated that “it [was] impractical to provide informed comment” on the extent of federalism at stake in the Proposal because the Proposal spoke about preemption broadly rather than by reference to the status of specific state or local programs.<sup>[209]</sup> At base, this comment implies that NHTSA may not conduct an informed reconsideration of the SAFE I Rule without simultaneously announcing new substantive positions on how EPCA preemption applies to particular programs. However, the Agency already outlined the reasons such a view was unavailing in Section II.A. of this notice. Moreover, this comment illustrates the advantages of a more nuanced approach to the preemption issue than what had been taken in the SAFE I rulemaking, as the issue may vary based on the particular program at issue. In that respect, this comment underscores the exact point that NHTSA has raised throughout this rulemaking: The idea that a categorical and preemptive prohibition of state programs is not an opportune way to deal with EPCA preemption because the precise variables that inform the analysis likely differ for each case and potentially factor into the accuracy of the individual preemption analyses. AFPM's comment assumes such unknown variables and “vagaries” support retaining the SAFE I Rule, because absent specific context about a particular program it is impossible to conduct the full preemption analysis. But it was the SAFE I Rule that originally imposed preemption at a categorical level, without regard for the context-specific inquiries needed to conduct the full preemption analysis. As such, AFPM's emphasis on the need to understand the specifics of the programs affected by a preemption discussion only illustrates one of the critical deficiencies of the SAFE I Rule's preemption analysis, which this repeal rectifies.

AFPM's comment also concludes that states have a diminished federalism interests in this area because “Congress has clear authority to regulate mobile sources that move in interstate commerce” and “EPCA expressly and clearly establishes that federal law preempts state laws ‘related to’ fuel economy.”<sup>[210]</sup> However, this argument simply begs the substantive question of which programs Congress intended to preempt under EPCA. As explained throughout this final rule, the Agency believes that the categorical approach taken in the SAFE I Rule is flawed on this question, as it ignores the potentially varying characteristics of existing or even still-undefined future programs and the degree to which those diverse attributes may bear upon the EPCA preemption inquiry.

Similarly, comments such as AFPM's seek to minimize the SAFE I Rule's effect on federalism interests by stressing that the “SAFE I Rule has no impact on states' abilities to adopt emissions regulations that are not related to fuel economy, or to establish vehicle registration fees, taxes and other” such policies.<sup>[211]</sup> Even if true, this argument still presumes that the SAFE I Rule established a clear delineation between programs prohibited under its regulations and those that survived. However, as described further in Section II.B.iii. of this final rule, the SAFE I Rule did not so clearly define the contours of preemption. Instead, it only introduced new undefined standards into the preemption discourse. Beyond this, it is insufficient to say that a rulemaking that categorically forecloses some important federalism interests is acceptable because at least it did not eliminate all federalism interests. As evidenced by □ the comments (many of which are set forth above), commenting states and local jurisdictions almost uniformly emphasized the importance of the

regulatory agendas they believe were foreclosed by the SAFE I Rule's preemptive scope, including regulatory programs that helped jurisdictions attain the federal Clean Air Act's NAAQS. These are substantial and legitimate interests that should not be overbroadly discarded, particularly through categorical prohibitions that unnecessarily foreclose opportunities to more carefully account for those federalism interests in particularized contexts.

These federalism interests are especially illustrated by the degree to which many of the state and local programs in question seek to address critical matters of health and welfare within local communities. The Proposal outlined a concern that a categorical preemption scope inappropriately foreclosed potential opportunities to address localized health and safety hazards facing states and communities by preventing local governments from identifying solutions needed for their individual citizens. This concern arose from the Proposal's recognition that states have indicated that the standards at issue were developed to protect the states' residents from dangerous air pollution and the states' natural resources from the threats posed by climate change. The comments to this Proposal continued to reiterate a prevailing concern that the SAFE I Rule inappropriately and unnecessarily deprived states and local jurisdictions of an important regulatory tool to address hazards facing their local communities.

Commenters opposing a repeal contested this point, arguing instead that “the self-described purposes” of any individual state program are irrelevant to the EPCA preemption analysis, which is solely concerned with the relationship between the state regulation in question and fuel consumption.<sup>[212]</sup> However, the position of these commenters does not properly account for the full scope of the SAFE I Rule. These commenters direct their views to the individualized application of EPCA preemption to particular state or local programs, arguing that no single purpose of an individual program can override whether EPCA preempts that program. But the SAFE I Rule was a rule of general applicability, not an adjudication of an individual program. As such, the SAFE I Rule did not limit its analysis to the preemption of a particular state program or narrow band of state regulation. Instead, the SAFE I Rule grouped an entire segment of possible state regulation, motor vehicle greenhouse gas emissions, and codified a regulation of general applicability that preempted all possible initiatives currently regulating in this segment or which may be devised in the future. This is a much broader act and one not required by Section 32919, which does not command NHTSA to issue any regulations, much less anticipatory regulations that prospectively foreclose entire regulatory topics. When evaluating whether such an unnecessarily broad scope was an appropriate approach, it is both relevant and prudent to consider in the aggregate what possible other purposes those preempted measures may have pursued. And when this inquiry indicates, as it has here, that preemptively prohibited programs are likely aimed at protecting the health and welfare of state populations, the Agency is right to ask whether a more narrowly tailored approach could have left more room for those objectives or at least deferred the total foreclosure of them until those programs were ripe for consideration.

In contrast, the SAFE I Rule prohibited all state policies in a vacuum, without any knowledge of even the most fundamental questions about those policies, such as whose regulations are at issue, what motor vehicle technologies are being regulated, which compliance paths may be available, or what technological or policy breakthroughs may occur in the future to alter the preemption analysis. Comments to the Proposal indicate that, when a more thorough and nuanced consideration of preemption is permitted, programs enveloped by the sweeping scope of the SAFE I Rule potentially relate to important goals of protecting health and welfare of local populations.

For instance, the State of California commented, noting that affected state programs were originally devised as a means of mitigating unique environmental challenges facing the state: “California’s greenhouse gas standards were first adopted 16 years ago in response to the prospect of disruptions in the states’ water supply, increases in ‘catastrophic wildfires,’ damage to the State’s extensive coastline and ocean ecosystems, aggravation of existing and severe air quality problems and related adverse health impacts, and more.”<sup>[213]</sup> Even commenters opposing the Proposal acknowledged that the state programs at issue initially arose from an effort to enable states to address unique environmental challenges facing their communities.<sup>[214]</sup> Other commenters likewise raised concerns about localized health hazards from motor vehicle emissions, with a comment on behalf of a collective of medical associations stressing that local conditions from such emissions can “form unhealthy ozone and particle pollution, which can lead to premature death, hospitalizations, missed days of work and school, asthma attacks and a host of other health problems.”<sup>[215]</sup> Commenters also raised environmental justice concerns, describing these pollution hazards as not borne uniformly across the country, but instead particularly manifested in minority and low-income communities. For instance, the Bay Area Air Quality Management District commented to stress that the policy flexibility foreclosed by the SAFE I Rule was “critical to protecting communities that suffer more from localized air pollution than others” and especially essential “to address disparate air pollution impacts that can harm local communities, particularly low income and communities of color in the San Francisco Bay Area.”<sup>[216]</sup> Likewise, in summarizing health risks from enhanced motor vehicle emissions, the medical associations’ comment identified these problems as “disproportionately impact[ing] communities located near highways, ports, warehouses and other places where traffic is concentrated—which are □ more likely to be low-income or communities of color.”<sup>[217]</sup>

□ Start Printed  
Page 74259

Despite such a diverse array of challenges, commenting states and local jurisdictions consistently agreed that the inflexibility of the SAFE I Rule’s broad preemption determination foreclosed opportunities for them to develop innovative policy solutions to the unique issues they faced that were still consistent with Federal law. This need to allow for more innovative policy flexibility than permitted by the expansive terms in the SAFE I Rule but still potentially allowed under the more general terms of EPCA was echoed expressly by multiple commenters, such as the Connecticut Department of Transportation,<sup>[218]</sup> a collection of municipal entities,<sup>[219]</sup> and the National Coalition for Advanced Transportation, who feared that the SAFE I Rule “inappropriately and unnecessarily dampen[ed] policy innovation at the state and local levels and investments across the country.”<sup>[220]</sup> Several industry groups likewise commented to caution against unnecessarily restricting policy innovation at the present stage, in particular, as both the automotive and energy industries are in the midst of widespread transformations with the advent of new electrification technologies and approaches.<sup>[221]</sup> Precluding states from pursuing innovative opportunities to address such important matters of health and welfare demonstrates the degree to which the SAFE I Rule broadly undermined the federalism interests of such jurisdictions without regard for whether a more narrowly tailored consideration of EPCA preemption was available instead.

Finally, commenters that opposed the Proposal (and thus were supportive of the SAFE I Rule) argued that this latest rulemaking was a change in position by the Agency, in an effort to single it out as a departure from precedent. These commenters that opposed the Proposal, such as NADA and CEI, sought to minimize any significance of the SAFE I Rule’s unprecedented exertion of preemption authority, with CEI’s joint comment noting in particular that “unprecedented violations call for unprecedented corrections.”<sup>[222]</sup> These comments suggest that actions like the SAFE I Rule had never been necessary in the past because, they argue, no state or local jurisdiction had ever sought to contravene EPCA to the extent of California’s Advanced Clean Car program.<sup>[223]</sup> But although the preambles to the SAFE I rulemaking discussed California’s Advanced Clear Car Program at length, NHTSA’s portion of the notice, (unlike EPA’s portion) still was not an individualized adjudication of California’s Advanced Clean Car Program. Instead, it was a rulemaking action to establish

regulations that set a generally applicable definition of “related to” as it appears in Section 32919. The SAFE I Rule characterized this definition as binding not just on California's existing programs, but on any state and local efforts that fell within the text included in the appendices now or in the future. Moreover, unlike any other “non-regulatory preamble language”<sup>[224]</sup> NHTSA may have issued in the past, the SAFE I Rule codified the new preemption standards into regulatory text. In this respect, the SAFE I Rule far surpassed any of NHTSA's prior positions on EPCA preemption and introduced new codified requirements implementing statutory language that had been enacted nearly 50 years earlier.<sup>[225]</sup> The express preemption statute that the SAFE I Rule sought to define for the first time has existed for the entirety of the CAFE program, as EPCA's original enactment included text substantially similar to the current language in Section 32919. And California's Advanced Clean Car program was not the first time, over the course of EPCA's long history, that a state or local jurisdiction instituted a program that some challenged as preempted under EPCA. In fact, at least one of those other programs had even resulted in a Federal court order deeming it preempted by Section 32919.<sup>[226]</sup> Moreover, even California's initiatives were not new at the time of the SAFE I Rule. As California's comment to this Proposal explained, “California's zero-emission-vehicle standards [were] first adopted more than three decades ago” and its “greenhouse gas standards were first adopted 16 years ago.”<sup>[227]</sup>

Thus, until 2019, the self-executing express preemption provisions in the governing fuel economy statute, Section 32919, had always provided the sole codified language on CAFE preemption. Since this statutory language is self-executing, Federal courts, as well as Federal agencies, states, and local governments, had come to understand the fundamental operation of CAFE preemption and applied it on a case-by-case basis, resulting in the development of a significant body of case law, without the need for any corresponding regulations from NHTSA. As such, the SAFE I Rule was neither the natural evolution of NHTSA's prior positions nor an expected outgrowth of the regulatory landscape. Thus, to the extent this rulemaking is a change in position, it is simply a course correction that returns the Agency's regulations to □ the same state in which they existed for approximately 44 of the 46 years of EPCA's lifespan prior to the SAFE I Rule.

□ Start Printed  
Page 74260

Commenters that opposed the Proposal argued that this history of regulatory silence is irrelevant, pointing, for instance, to Supreme Court cases upholding agencies who promulgated regulations long after the enactment of the antecedent statutory language.<sup>[228]</sup> This argument, though, oversimplifies NHTSA's position and the applicable legal standards. The Agency agrees that a statute's long pendency does not foreclose the opportunity to promulgate otherwise appropriate regulations that seek to apply the statute for the first time. But that does not mean the SAFE I Rule's unprecedented departure from longstanding practice is, as commenters contend, “of little consequence.”<sup>[229]</sup> Such comments erroneously reduce the standard into an all-or-nothing proposition: Suggesting the lack of prior regulations must either independently sink the rulemaking or have no bearing on the analysis at all. However, the very same Supreme Court jurisprudence cited by these comments makes clear that the proper inquiry is more nuanced. In particular, the cases emphasize that although “the mere fact that an agency interpretation contradicts a prior agency position is not fatal,” such unprecedented diversions must still “take account of legitimate reliance” interests connected to the prior positions.<sup>[230]</sup> Within this more comprehensive framework, the problem with the SAFE I Rule was not simply that it sought to promulgate regulations on Section 32919 for the first time—but that it did so without regard for many of the legally relevant considerations, such as reliance interests, that should have informed whether the Agency should have taken such a broadly applicable view of preemption.

In the Proposal, the Agency expressed concern that the SAFE I Rule improperly neglected to consider the nuances of the federalism interests affected by the rule.<sup>[231]</sup> The commenting state and local governments subject to such preemption overwhelmingly agreed, commenting that this concern was particularly

illustrated by the failure of the SAFE I Rule to account for the state and local jurisdictions' reliance interests in the purportedly preempted programs. Their comments substantiated this claim, pointing to numerous important policy goals or Federal statutory obligations that relied upon those programs. These reliance interests are largely unsurprising, as NHTSA had never previously issued regulations on EPCA preemption for the entirety of the CAFE program up to the point of the SAFE I Rule or had otherwise itself attempted to preempt those programs. Nevertheless, the SAFE I Rule still failed to meaningfully discuss these reliance interests. Instead, the Rule instituted a sweeping prohibition that foreclosed opportunities to more narrowly consider programs in a particularized setting. Consequently, a full repeal of the SAFE I Rule addresses this legal deficit and thereby restores the proper foundation upon which the Agency may more appropriately consider this issue in any future settings.

Finally, NHTSA believes it is worth making clear that repealing the SAFE I Rule does not itself undermine any reliance interests. In this respect, the Agency is mindful that neither states, nor local jurisdictions, the entities potentially subject to any preemption, nor motor vehicle manufacturers, the entities producing the vehicles potentially subject to any state or local regulation, articulated a reliance interest in the SAFE I Rule in their comments to this Proposal.<sup>[232]</sup> To the contrary, numerous states and local jurisdictions supported the Proposal and expressly clarified that they have not relied on the framework of the SAFE I Rule due to its brief tenure and uncertainty surrounding its legal validity. For example, a comment submitted by the State of California along with a collection of other states and local jurisdictions emphasized that “no cognizable reliance interests in the Preemption Rule counsel against repeal. Besides being unclear, the Preemption Rule has faced litigation for all but a few hours of its 21-month existence, preventing any reasonable reliance interests from accruing during that time.”<sup>[233]</sup> Therefore, other than the reliance interests *restored* by repealing the SAFE I Rule,<sup>[234]</sup> NHTSA has not identified any reasonable reliance interests that may caution against this rulemaking.

## **B. THE RIGID FRAMEWORK OF THE SAFE I RULE ALSO LEFT NO ROOM TO ACCOUNT FOR OTHER IMPORTANT PREEMPTION VARIABLES**

The substantial federalism and reliance interests discussed above support a narrowly tailored preemption analysis that considers preemption on a particularized basis rather than through sweeping proclamations that categorically eliminate the interests. Addressing EPCA preemption in a more particularized setting also promotes a more thorough and informed preemption assessment of any specific state or local programs at issue. This is because the nature of the EPCA preemption analysis frequently requires an understanding of fact-specific variables or diverse characteristics of the programs in question, such as the relevant technologies, compliance paths, and particular activities pertinent to those programs. Forming abstract or generally applicable EPCA preemption conclusions precludes an understanding of those program-specific attributes and, like the SAFE I Rule, results in a sweeping proclamation that cannot possibly account for the diverse array of programs (some of which likely have not even been formulated yet) potentially affected by the analysis. For instance, in order to announce a generally applicable scope for EPCA preemption, the SAFE I Rule drew assumptions about compliance technologies and program characteristics that would regulate GHG emissions from motor vehicles or involve ZEV mandates in the near-term. In turn, the Rule extrapolated those assumptions to the entire realm of regulatory possibilities, both now and in the future. The SAFE I Rule's rigid and generally applicable scope foreclosed any opportunity to evaluate specific □ programs based on a comprehensive understanding of their actual characteristics rather than on generalized assumptions about how they operate. This left no space to defer a preemption assessment until the specific programs could be fully understood or consider whether actual differences in programs (both in the near-term or through technological developments that may occur in the future) could affect the application of EPCA's “related to” preemption standard.

Numerous commenters also identified multiple other considerations relating to potential state motor vehicle emissions regulations that would be foreclosed for consideration by the sweeping rigidity of the SAFE I Rule. By rigidly restricting policy developments and precluding avenues for innovation, the SAFE I Rule ultimately implemented a rigid and permanent prohibition based on, at most, a limited understanding of a particular snapshot of the regulatory landscape. Comments further underscored a concern that the regulatory landscape upon which the SAFE I Rule imposed is dynamic and evolving. This view was particularly developed in a comment from the South Coast Air Quality Management District, which criticized the SAFE I Rule for neglecting to “consider how pollution control technology changes over time,” “fail[ing] to acknowledge that some technologies may not have any measurable relationship with fuel economy standards at all,” and ignoring that “state-set standards may be met by means other than increasing fuel economy.”<sup>[235]</sup> Ultimately, such concerns echo the Proposal's misgivings that the SAFE I Rule rigidly applied preemption irrespective of the precise contours and legally relevant characteristics of any particular programs, regulations, or technological developments that may arise. In doing so, the SAFE I Rule instituted an inflexible preemption framework, which necessarily could not accommodate the litany of fact-specific variables and nuances that typically bear upon a preemption analysis, which, the Agency stresses, could still determine that any particular program is preempted. However, preempting all programs that fit within the broad categories established in the SAFE I Rule fails to acknowledge that the specific contours of any particular program remain crucial to the analysis.

A few comments that opposed the Proposal disagreed with this concern, such as a comment from NADA that argued the “physics and chemistry involved with fuel economy and GHG emissions standards” are intrinsically intertwined such that a regulation of one regulates the other.<sup>[236]</sup> In this respect, NADA's comment largely mirrors the reasoning of the SAFE I Rule in preempting all motor vehicle GHG standards. However, as discussed throughout this rulemaking, the Agency here is not taking a generally applicable position on this issue, as NHTSA continues to believe that such statements simply ignore the details of particular programs. Ultimately, such statements make factual determinations about detailed scientific and technical issues in the abstract—without any regard for the actual technical details of the particular programs or technologies that bear upon those specific conclusions. In doing so, such statements of general applicability cannot possibly account for whether variables, which are presently unknown (and some of which may depend upon programs or technologies not even in existence yet), may affect the relevant technical analysis or substantive accuracy of the preemption determination.

Ultimately, if NADA or any other parties oppose the state and local programs that the SAFE I Rule sought to preempt, they remain free to challenge those programs in Federal court, as they have been able to do since the inception of those programs. The repeal of the SAFE I Rule does not change that ability or the underlying “related to” standard in Section 32919. To the extent NADA considers this point a process flaw, NHTSA responds that NADA's focus is too narrow, as the Agency has explained above that there exists no need to replace its positions on preemption in the SAFE I Rule with new generally applicable positions. The SAFE I Rule sought to preempt, in a generally applicable manner, all state and local GHG emissions regulations for motor vehicles. Continuing this approach from the SAFE I Rule would improperly only focus upon a snapshot of the regulatory landscape: The *current* manner in which *currently* available technology reduces emissions based. This unduly limited perspective is evident even from the face of such comments, such as a joint comment from CEI asserting that “[t]he two types of standards will remain mathematically convertible *as long as affordable and practical onboard carbon capture technologies do not exist*.”<sup>[237]</sup> Therefore, even assuming the framework espoused by the SAFE I Rule and commenters defending the Rule, the relationship between the regulations that would have been preempted under SAFE I Rule and fuel economy still only

exists as a potentially impermanent state of affairs, subject to change as technology or legal standards evolve. As such, it was not appropriate for the SAFE I Rule to try and confine these dynamic regulatory subjects to a static and one-size-fits-all prohibition.

In light of the foregoing, upon reconsideration, NHTSA finalizes its view that the SAFE I Rule's categorical scope was an inappropriate approach. The preemption framework established by the Rule necessarily could not account for legally relevant considerations and, in any event, imprudently and unnecessarily imposed preemption in absolute terms, foreclosing any outlet for a more narrowly tailored approach instead and precluding opportunities to account for program-specific variables that could affect the accuracy or nature of a preemption analysis.

### **III. RESTORING THE FOCUS TO THE GOVERNING STATUTORY LANGUAGE PROMOTES A PROPERLY APPLIED EPCA PREEMPTION FRAMEWORK**

In light of the foregoing, NHTSA maintains the Proposal's concern that the Agency's preceding discourse on EPCA preemption paints a circuitous regulatory landscape, which convolutes the proper application of legal principles on important questions of preemption. Such confusion culminated in the SAFE I Rule, which as described throughout herein, misapplied the governing legal principles, articulated an impermissible legal role for the Agency, and failed to identify the legally relevant factors that bore on an EPCA preemption determination. In doing so, the SAFE I Rule also purported to synthesize a variety of Agency statements and positions that predated that rulemaking. And, even though the SAFE I Rule represented a marked departure from the Agency's longstanding historical practice of not codifying express EPCA preemption requirements, the SAFE I Rule (including its preambles that accompanied the rulemaking) still attempted to envelop the Agency's historical discussions of EPCA preemption within its legally problematic preemption framework. Accordingly, NHTSA continues to believe that a repeal of the SAFE I Rule is justified in order to clarify the applicable preemption framework and restore the traditional focus on EPCA's longstanding statutory standards in Section 32919, which ultimately govern the preemption analysis. Moreover, because of the extent to which the SAFE I Rule inextricably comingled its analysis with a variety of prior Agency statements on the subject of EPCA preemption, in repealing the SAFE I Rule, the Agency also stresses that none of those preceding statements should be read as persisting Agency positions on the nature or scope of EPCA preemption. In doing so, NHTSA strives to disentangle any regulatory confusion wrought by the SAFE I Rule from the original statutory standards in Section 32919.

Start Printed  
Page 74262

Accordingly, NHTSA is finalizing its proposed approach of refining the discourse on EPCA preemption by repealing the SAFE I Rule. The Agency considers this basis for a repeal applicable regardless of whether NHTSA possessed authority for the SAFE I rulemaking because, either way, the SAFE I Rule introduced confusion that undermined a properly scoped preemption analysis. In this respect, as described before, the Agency remains cognizant that Congress has not required NHTSA to speak substantively on EPCA preemption. Thus, anything NHTSA says on this subject is, at most, elective and unnecessary for Section 32919 to function as Congress intended. Consequently, if NHTSA's regulations on EPCA preemption raise the possibility of confusion or otherwise convolute the discourse on the subject, it would be better to reset those statements entirely than allow them to linger.

#### **A. REPEALING THE SAFE I RULE FACILITATES THE DIRECT APPLICATION OF LONGSTANDING STATUTORY STANDARDS**

NHTSA finalizes the Proposal's view that a repeal of the SAFE I Rule helpfully elucidates the proper standards to apply when conducting an EPCA preemption analysis. This is not simply because the SAFE I Rule promulgated requirements for which no authority existed, as described above. Even apart from their

unsustainable legal status, the SAFE I Rule also introduced entirely new and largely undefined concepts into the preemption analysis. In doing so, the SAFE I Rule diverted attention from the statutory standards of Section 32919, which were traditional standards long applied by regulated entities and courts. By layering additional uncharted and undefined regulatory standards on top of this longstanding statutory language, the SAFE I Rule introduced new uncertainty into the EPCA preemption regulatory landscape. As such, today's repeal of the Rule removes this superfluous layer thereby restoring the focus on the original statutory standards, which are capable of direct application.

On balance, the comments to the Proposal illustrated the degree to which a repeal of the SAFE I Rule promoted a clearer and more direct application of the governing statutory preemption standards. Several commenters opposing a repeal expressed concern that this step would undo what they viewed as the SAFE I Rule's clarification of EPCA preemption. To reach this conclusion, such comments generally argued that by categorically preempting states and local jurisdictions, the SAFE I Rule established a clear brightline for preemption, whereas a repeal would fail to provide any guidance on the subject or potentially result in overlapping requirements.<sup>[238]</sup>

However, commenters by no means agreed on the proposition that the SAFE I Rule clarified the regulatory landscape. In fact, a large number of commenters supporting a repeal specifically expressed the opposite concern: That the SAFE I Rule introduced more uncertainty. Many of these commenters were states and local entities who especially need to understand the contours of EPCA preemption in order to formulate their own policies and assess their viability. Such commenters pointed to tangible examples of how aspects of the SAFE I Rule convoluted the EPCA preemption analysis by introducing new regulatory requirements and standards that produced more uncertainty than the underlying statutory standards in Section 32919.

Ultimately, NHTSA finalizes the Proposal's view that refocusing the governing preemption spotlight back on Section 32919's statutory terms is ideal because the SAFE I Rule did not elucidate the regulatory landscape, and in some cases, may have even added confusion by introducing unfamiliar and uncharted terms into the preemption analysis. Permitting the regulations of the SAFE I Rule to linger enhances the potential that these regulations may only add regulatory confusion to the statutory standards long in place under EPCA. As described throughout this final rule, EPCA preemption is governed by the express preemption provision in Section 32919, which has employed substantially the same language throughout the history of the CAFE program. Multiple commenters noted that the "related to" language enacted in Section 32919 has also been used by Congress in other enactments beyond EPCA and has the benefit of extensive jurisprudence analyzing the meaning of the term.<sup>[239]</sup> Moreover, Section 32919 itself has even been applied by several Federal courts, who have applied the provision to both preempt and not preempt state and local programs.<sup>[240]</sup> Therefore, the governing statutory standards in Section 32919 are familiar concepts that the public, including regulated entities, and adjudicators have frequently analyzed or considered over the span of EPCA's many years of existence.

In contrast, the unprecedented approach of the SAFE I Rule confused this framework and, as described above, purported to introduce new prescriptive standards into the preemption analysis by way of the codified regulations. The SAFE I Rule substituted this long-applied statutory standard for new regulatory phrases that lacked any jurisprudential history or further definition. The resulting ambiguity introduced many unknowns into the EPCA preemption landscape, such as what those new standards mean or how NHTSA may seek to construe its new standards in the future. In addition, because Section 32919 can also support a private right of action, in the past, private parties have undertaken litigation seeking to enforce the terms of EPCA preemption. As such, any new  and potentially malleable standards promulgated by the SAFE I Rule

also offer new opportunities for private litigants to advocate for novel applications of the SAFE I Rule's prescriptive preemption requirements in contexts even beyond the scope originally contemplated by the Agency. These factors introduce substantial uncertainties into a regulatory landscape that, before the SAFE I Rule, had been exclusively governed by the longstanding statutory language in Section 32919.

Many of the comments raised concerns associated with such uncertainties. For instance, a joint comment submitted by California along with numerous other states and local jurisdictions expressed concern that the new regulations from the SAFE I Rule introduced new—and undefined—legal standards into the preemption framework, pointing to new concepts or phrases such as “direct or substantial effect” or “in-use” regulations.<sup>[241]</sup> Commenting states and local jurisdictions also feared that all of these unknowns actually complicated their long-term planning by making the EPCA preemption standard unpredictable.<sup>[242]</sup> For example, a group of municipal entities expressed uncertainty over whether these untested standards could even be stretched to apply to routine traffic measures in the future.<sup>[243]</sup> And another local jurisdiction noted that the ensuing litigation over the SAFE I Rule's validity introduced further disruptions into anticipated regulatory initiatives that were already in the process of development upon the promulgation of the Rule.<sup>[244]</sup> Ultimately, all of these comments underscore the Proposal's concern that the SAFE I Rule did not even achieve the clarity that it cited so frequently as the reason for the rulemaking. In fact, strong indications exist that the Rule actually amplified any ambiguities surrounding EPCA preemption by suddenly linking the preemption analysis to uncharted standards and unfamiliar concepts. As such, even setting aside the litany of other legal problems with the Rule discussed throughout this rulemaking, NHTSA views this repeal as a necessary and prudent step to unclutter the EPCA regulatory landscape.

Other aspects of the SAFE I Rule's regulatory text exacerbated the uncertainty surrounding the SAFE I Rule's unprecedented preemption framework. For instance, the Proposal highlighted that the codified text of the SAFE I Rule was potentially perplexing because Sections 531.7 and 533.7 merely parroted the statutory text in Section 32919. As such, the Proposal expressed a concern that the verbatim recitation of the statutory language in the CFR could even be confusing to some, who assume some subtle difference must exist in the statutory and regulatory provisions. One commenter defending the SAFE I Rule rejected this reasoning, arguing that “such concerns would be immediately dispelled upon comparing the statutory and regulatory text and realizing the provisions were identical.”<sup>[245]</sup> The comment assumed this alignment would be naturally understood because the commenter asserted that “agencies routinely” parrot their statutes in such a manner.<sup>[246]</sup> But this assumption is not shared by all, with at least one prominent administrative law treatise expressly recognizing that “agencies rarely issue legislative rules that simply repeat the precise language of a statute.”<sup>[247]</sup> Agencies may often integrate portions of statutory language into their regulations, but to fully copy an entire statutory provision into their own regulations is a step further (and a step that the Supreme Court discourages, at least with regard to deference).<sup>[248]</sup> In this respect, the oddity of codifying into regulation multiple provisions that already exist verbatim and in full in a statute creates a peculiar regulatory maze for statutory standards otherwise capable of direct implementation. As one joint comment noted, the uncertain purpose of taking this superfluous step was exacerbated by the SAFE I “Rule's preamble [which] magnified the risk of confusion by stating that verbatim recitation of Section 32919 in the Code of Federal Regulations ‘articulates NHTSA's views on the meaning’ of that section.”<sup>[249]</sup> This approach sends readers on a search for meaning, straining to find differences between the statute and their mirroring regulatory provisions or perhaps attempting to apply some sort of extra-textual analysis to construe one iteration of the text differently than the other. And even if, as AFPM's comment hypothesizes, a thoughtful reader may eventually reach the conclusion that no such differences actually exist because the provisions are identical, the entire circuitous endeavor serves no purpose because the statutory text already controlled the analysis and its regulatory copies do nothing to further illuminate that analysis.

In any event, whether or not such a parroting regulation is actually confusing need not be dispositive because, at the very least, such a parroting regulation is superfluous and unnecessary. As such, it is not unreasonable for NHTSA to conclude that the superfluous and potentially confusing provisions in Sections 531.7 and 533.7 should no longer remain codified and if they were to remain so, would only overcomplicate the EPCA preemption analysis. Accordingly, NHTSA finalizes its view that a repeal of the SAFE I Rule is independently warranted in order to restore the focus to EPCA's governing statutory standards and remove an unnecessary and potentially confusing layer of regulatory haze that risks obscuring the proper preemption analysis.

#### **B. NHTSA REITERATES THAT PRIOR REGULATORY STATEMENTS ON THE SCOPE AND NATURE OF EPCA PREEMPTION NO LONGER REMAIN CURRENT VIEWS OF THE AGENCY**

Finally, NHTSA reiterates the Proposal's view that, to the extent prior rulemaking statements from the Agency discuss matters of EPCA preemption, they should not be read inconsistently with the reconsidered views that NHTSA now expresses in this final rule. Throughout the SAFE I rulemaking, NHTSA sought to portray the  regulations as the culmination of the Agency's historical discourse on the subject of EPCA preemption. To be sure, as has been reiterated throughout this final rule, NHTSA does not view the SAFE I Rule as a natural or consistent outgrowth of its historical position of not promulgating preemption regulations under Section 32919. Nevertheless, the degree to which the SAFE I Rule sought to emmesh the Agency's prior discussions of EPCA preemption, which appeared occasionally in preambles to substantive CAFE standard-setting rulemakings, within the flawed rationale of the SAFE I Rule warrants a clarification of the relationship of those prior statements to today's repeal.

Start Printed  
Page 74264

In this respect, NHTSA fully agrees with several commenters who expressed that this clarification is not formally necessary because this final rule clearly contains the current views of the Agency and upon the repeal of the SAFE I Rule, “any preambular statements justifying or explaining the Preemption Rule's regulatory provisions or appendices will be a ‘legal nullity.’”<sup>[250]</sup> NHTSA likewise agrees that this portion of the rulemaking is not a separate final agency action. Any such statements or discussions in the SAFE I rulemaking preambles simply accompanied the SAFE I regulations so upon the repeal of those regulations there is nothing further to formally undo. Likewise, NHTSA is not formally repealing any statements that preceded the SAFE I Rule in the sense that NHTSA is suggesting that the statements will be somehow stricken from past **Federal Register** publications (nor is the Agency even aware of a legal mechanism to do so).<sup>[251]</sup> But it is precisely because those statements will remain published that NHTSA considers it prudent to, out of an abundance of caution, make crystal clear that they should not be read in isolation or taken out of context as views NHTSA continues to endorse.

Therefore, to the extent the Proposal referred to this clarification as a “repeal” or “clean slate,” the Agency simply means that any statements NHTSA has made in past rulemaking discussions (in the SAFE I Rule or otherwise) that seek to impose a scope for EPCA preemption or suggest NHTSA has the authority to do so should no longer be read as current NHTSA positions.<sup>[252]</sup> In other words, no one should attempt to overly parse NHTSA's prior statements in order to argue, for example, that NHTSA somehow left a portion of the SAFE I Rule analysis untouched and continues to hold those views. NHTSA continues to consider this precautionary step worthwhile. In doing so, NHTSA makes clear that no prior statements should continue to clutter the EPCA preemption analysis. This promotes a clearer and more precise discourse on EPCA preemption, which is easier to follow because of the manner in which the SAFE I Rule's preambulatory discussion of EPCA preemption comingled core legal concepts and purported to draw from prior Agency positions. As explained in the preceding section, the SAFE I Rule was repeatedly imprecise in the way it described several fundamental legal principles, such as rulemaking authority, the nature of preemption, and

the effect of regulations. This results in a legally confusing discussion about how EPCA preemption operates, how the legal framework should apply, and how NHTSA's views on preemption should factor into any such analysis. Irrespective of the substantive conclusions reached through such a rulemaking, this confusing landscape created by the SAFE I rulemaking record unnecessarily convolutes the EPCA preemption discourse and provides a difficult legal footprint for any members of the public or adjudicatory body to follow. Accordingly, renewing the focus on Section 32919's original language through this final rule restores a more direct and straightforward application of EPCA's familiar and longstanding statutory preemption terms.

### III. Rulemaking Analyses and Notices

#### 1. Executive Order 12866, Executive Order 13563 (/executive-order/13563), and DOT Regulatory Policies and Procedures

NHTSA has considered the impact of this rulemaking action under Executive Order 12866, Executive Order 13563 (/executive-order/13563), and the Department of Transportation's regulatory policies and procedures. Only one commenter raised any of these issues during the comment process. This commenter argued that the Proposal conflicted with Executive Order 12866 because the NPRM “failed to evaluate whether the action is a significant regulatory action.”<sup>[253]</sup> However, this comment is not correct, as this rulemaking document has been considered a “significant regulatory action” under Executive Order 12866, but has not been designated as “economically significant,” as it would not directly reinstate any state programs or otherwise affect the self-executing statutory preemption framework in 49 U.S.C. 32919 (<https://www.govinfo.gov/link/uscode/49/32919>).

The same commenter also argued that NHTSA failed to comply with Executive Order 12866 because the Proposal did not “assess all costs and benefits of its proposed action and available regulatory alternatives.”<sup>[254]</sup> The Agency addressed this comment in Section II.A. of this notice.

#### 2. Executive Order 13990 (/executive-order/13990)

Executive Order 13990 (/executive-order/13990), “Protecting Public Health and the Environment and Restoring Science to Tackle the Climate Crisis” (86 FR 7037 (/citation/86-FR-7037), Jan. 25, 2021), directed the immediate review of “The Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule Part One: One National Program,” 84 FR 51310 (/citation/84-FR-51310) (September 27, 2019), by April 2021.” The Proposal followed the review directed in this Executive Order and this Final Rule concludes the review. As noted in the Proposal and reiterated again today, the Agency continues to deliberate further about the complex substantive issues surrounding EPCA preemption and may elect to undertake further action in the future, if warranted, to exercise NHTSA's interpretative and policymaking discretion with respect to such issues. Nevertheless, as the Agency's review under Executive Order 13990 (/executive-order/13990) identified other independent and dispositive problems with the SAFE I Rule, these grounds suffice for NHTSA to conclude its reconsideration of the Rule by repealing the SAFE I Rule in full.

#### 3. Executive Order 14008 (/executive-order/14008)

Executive Order 14008 (/executive-order/14008), “Tackling the Climate Crisis at Home and Abroad” (86 FR 7619 (/citation/86-FR-7619)) expressly recognizes that “[t]he United States and the world face a profound climate crisis.” Accordingly, the Order describes a multitude of □ domestic and foreign policy measures designed to promote “climate considerations” as “an essential element of United States foreign policy and national security.”<sup>[255]</sup>

One commenter opposing the Proposal and defending the SAFE I Rule argued that by repealing the SAFE I Rule without a technical analysis of any impacts of state electric vehicle mandates on “low-income car buyers,” NHTSA failed to comply with the environmental justice provisions of Executive Order 14008 (/executive-order/14008).<sup>[256]</sup> In response, first and foremost, the Agency stresses that the substantive climate considerations described in the Order do not change the principally legal justifications for the repeal of the SAFE I Rule. As described throughout this Final Rule, a repeal of the SAFE I Rule is necessitated by the multiple legal deficits with the Rule, including a lack of NHTSA rulemaking authority and the Agency's failure to adequately consider legally relevant considerations prior to promulgating the preemption regulations. These legal problems leave the Agency with no discretion but to repeal the Rule.

Moreover, NHTSA notes that both the nature and application of this rulemaking are consistent with the climate and environmental justice goals expressed in Executive Order 14008 (/executive-order/14008). While NHTSA's repeal does not depend upon substantive issues, as described throughout, the Agency notes that commenters delving into the substantive issues surrounding the SAFE I Rule widely viewed the original rule as undermining efforts to “address[ ] climate change and improv[e] equity.”<sup>[257]</sup> Moreover, as explained in Section II.B.ii. above, repealing the SAFE I Rule enables any future preemption analyses to occur at a more nuanced level compared to the categorical and rigid prohibition instituted by the repealed regulations. In this sense, repealing the SAFE I Rule facilitates future opportunities to better incorporate climate and environmental justice considerations into future substantive applications or interpretations of EPCA preemption.

Finally, Executive Order 14008 (/executive-order/14008) makes clear that pursuing environmental justice often entails understanding policies from the perspective of local communities, “to address the disproportionately high and adverse human health, environmental, climate-related and other cumulative impacts on disadvantaged communities” from those policies.<sup>[258]</sup> This rulemaking has repeatedly described the extent to which repealing the SAFE I Rule will remove improper restrictions on states and local jurisdictions, thereby facilitating their development of innovative policies tailored to address the challenges facing their local communities.<sup>[259]</sup> In doing so, repealing the SAFE I Rule increases the potential that environmental justice may be served as those jurisdictions are often in the best situation to both quickly identify the unique challenges facing disadvantaged local communities and understand the steps necessary to mitigate them.

#### **4. Regulatory Flexibility Act**

Pursuant to the Regulatory Flexibility Act (5 U.S.C. 601 (<https://www.govinfo.gov/link/uscode/5/601>) *et seq.*, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996), whenever an agency is required to publish a notice of proposed rulemaking or final rule, it must prepare and make available for public comment a regulatory flexibility analysis that describes the effect of the rule on small entities ( *i.e.*, small businesses, small organizations, and small governmental jurisdictions). No regulatory flexibility analysis is required, however, if the head of an agency certifies the proposal will not have a significant economic impact on a substantial number of small entities.

NHTSA has considered the impacts of this document under the Regulatory Flexibility Act and certifies that this rulemaking will not have a significant economic impact on a substantial number of small entities. The following provides the factual basis for this certification under 5 U.S.C. 605(b) (<https://www.govinfo.gov/link/uscode/5/605>). This final rule only concerns the question of preemption; the action does not set CAFE or emissions standards themselves. The preemption regulations repealed in this action have no direct effect on any private entities, regardless of size, because the rules do not regulate

private entities. Further, unlike the SAFE I Rule, this rulemaking takes no position on whether any particular State or local law is preempted and has no impact, let alone a significant impact, on any small government jurisdiction. Thus, NHTSA confirms in this final rule that this rule would have no significant impact on any small entities.

## 5. Executive Order 13132 (/executive-order/13132) (Federalism)

Executive Order 13132 (/executive-order/13132) requires NHTSA to develop an accountable process to ensure “meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.”<sup>[260]</sup> “Policies that have federalism implications” is defined in the Executive Order to include regulations that have “substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.”<sup>[261]</sup> Executive Order 13132 (/executive-order/13132) imposes additional consultation requirements on two types of regulations that have federalism implications: (1) A regulation that imposes substantial direct compliance costs, and that is not required by statute; and (2) a regulation that preempts State law.<sup>[262]</sup>

While this final rule concerns matters of preemption, it does not entail either type of regulation covered by Executive Order 13132 (/executive-order/13132)'s consultation requirements. Rather, the action in this final rule merely repeals regulations and positions that sought to preempt State law. Thus, this final rule does not implicate the consultation procedures that Executive Order 13132 (/executive-order/13132) imposes on agency regulations that would either preempt state law or impose substantial direct compliance costs on states.

## 6. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995, Public Law 104-4 (<https://www.govinfo.gov/link/plaw/104/public/4>), requires agencies to prepare a written assessment of the cost, benefits and other effects of proposed or final rules that include a Federal mandate likely to result in the expenditure by State, local, or tribal governments, in the aggregate, or by the private sector, of more than \$100 million annually. Because this rulemaking does not include a Federal mandate, no unfunded mandate assessment was prepared.

## 7. National Environmental Policy Act

The National Environmental Policy Act of 1969)<sup>[263]</sup> directs that Federal agencies proposing “major Federal actions significantly affecting the quality of the human environment” must, “to the fullest extent possible,” prepare “a detailed statement” on the environmental impacts of the proposed □ action (including alternatives to the proposed action).<sup>[264]</sup> However, there are some instances where NEPA does not apply to a particular proposed action.

□ Start Printed  
Page 74266

In the Proposal, NHTSA emphasized that one consideration is whether the action is a non-discretionary action to which NEPA may not apply.<sup>[265]</sup> In this Final Rule, NHTSA has concluded that the SAFE I Rule was legally flawed for several reasons. Principally, Congress did not provide legislative rulemaking authority to the Agency with regard to 49 U.S.C. 32919 (<https://www.govinfo.gov/link/uscode/49/32919>). To the extent that the SAFE I Rule purported to dictate or proclaim EPCA preemption with the force of law, the Agency determined through this rulemaking that such actions exceed the Congressional grant of authority to NHTSA under EPCA. Accordingly, the Agency believes that the only legally appropriate course of action is to realign its regulatory activities to their properly authorized scope by removing the regulatory language and appendices from the Code of Federal Regulations and repealing the corresponding analysis of particular state

programs in the SAFE I Rule. In addition, this Final Rule concluded that the SAFE I Rule failed to adequately consider a litany of context-dependent variables that bear upon the preemption analysis—including legally relevant considerations such as the longstanding reliance interests undermined by the preemption imposed by the SAFE I Rule. Overlooking these considerations also renders the SAFE I Rule legally invalid and in need of repeal. Courts have long held that NEPA does not apply to nondiscretionary actions by Federal agencies.<sup>[266]</sup> Based on the conclusion in this final rule that the legal deficits in the SAFE I Rule compel the Agency to repeal it, NHTSA maintains the position that NEPA does not apply to this action.

This is consistent with the position described in the Proposal, which also considered NEPA inapplicable due to the legally required nature of the repeal. Only two comments even raised NEPA issues, with one supporting the Agency's position and the other challenging it. Notably, the supporting comment was submitted on behalf of twelve public interest organizations, many of which consisted of environmental interest organizations. This joint comment expressly agreed with NHTSA that "if NHTSA definitively concludes that the Preemption Rule exceeds its statutory authority, it need not analyze the environmental impacts of a repeal under the National Environmental Policy Act."<sup>[267]</sup> This comment further recognized that since the Agency's repeal is compelled by law, any attendant NEPA evaluation is unnecessary because "the agency 'lacks the power to act on whatever information' it might gather in a NEPA analysis."<sup>[268]</sup> This matches the framework described in this Final Rule.

The sole comment opposing the Proposal's approach to NEPA was a joint comment submitted by the Urban Air Initiative. This comment argued that a repeal of the SAFE I Rule was a major action that required an environmental impact statement.<sup>[269]</sup> In support of this argument, the comment tried to link the rulemaking to a variety of environmental impacts, such as changes to motor vehicle fuel economy from increased battery pack weight, as well as toxicity from electric automobile batteries.<sup>[270]</sup> However, even this comment predicates NHTSA's NEPA obligation on the rulemaking qualifying "as a discretionary action."<sup>[271]</sup> As described throughout this final rule, NHTSA's repeal of the SAFE I Rule is nondiscretionary due to the need to remedy the legal deficits with the Rule. Nothing in this comment changes this traditional understanding of NEPA's operation. Moreover, in labeling this repeal an action subject to NEPA, these commenters fail to explain why this conclusion, if true, would not also apply to the SAFE I Rule, which is what originally set in motion such a sweeping preemption scope. In doing so, the comment strenuously defends the viability of the SAFE I Rule without recognizing that this very same argument would render the SAFE I Rule violative of NEPA and only provide another reason that the Rule is legally invalid and in need of repeal.<sup>[272]</sup>

Moreover, as in the Proposal, the Agency also reiterates that the Supreme Court has characterized an express preemption statute's scope as a legal matter of statutory construction, in which "the purpose of Congress is the ultimate touchstone of pre-emption analysis."<sup>[273]</sup> In turn, "Congress' intent, of course, primarily is discerned from the language of the pre-emption statute and the 'statutory framework' surrounding it."<sup>[274]</sup> This particularly applies "[i]f the statute contains an express pre-emption clause[. Then] the task of statutory construction must in the first instance focus on the plain wording of the clause, which necessarily contains the best evidence of Congress' pre-emptive intent."<sup>[275]</sup>

In light of this background, as both this rulemaking and the SAFE I Rule itself consistently made clear, the statutory text of Section 32919 ultimately governs express preemption through self-executing terms. The SAFE I Rule even relied on this to conclude that NEPA was not required for that rulemaking because NHTSA could not change the scope of EPCA preemption. As described in this rulemaking, the SAFE I Rule was confused and contradictory in this respect because, *if valid*, the regulations codified by the SAFE I Rule would have actually imposed prescriptive preemption requirements. Nevertheless, the SAFE I Rule still

accurately assessed that under a properly scoped application of Section 32919, preemption “is not the result of the exercise of Agency discretion, but rather reflects the operation and application of the Federal statute.” [276]

The express preemption provision of Section 32919 remains enacted, in full and unchanged, irrespective of the SAFE I Rule or this final rule. As almost all commenters agreed, this provision is self-executing and governing of the EPCA preemption issue irrespective of any Agency regulations that purport to do so as well. Therefore, in repealing the SAFE I Rule, NHTSA is not actually  changing the scope of EPCA preemption. To be sure, a repeal will remove the SAFE I Rule, which facially imposed binding requirements. But those requirements themselves were invalid because NHTSA's regulations were never capable of modifying the scope of EPCA's self-executing terms, even if they purported to do so. Accordingly, under Section 32919's constant language, the actual scope of EPCA preemption is the same today as it was yesterday when the regulations remained codified, as well as the same as it was in 2018 before those rules were ever promulgated. Therefore, this final rule likewise does not change the statutorily set scope of express preemption and, as such, the Agency does not consider this rule to result in any environmental impact that may arise from such preemption. [277]

## 8. Executive Order 12988 (/executive-order/12988) (Civil Justice Reform)

Pursuant to Executive Order 12988 (/executive-order/12988), “Civil Justice Reform,” [278] NHTSA has determined that this final rule does not have any retroactive effect.

## 9. Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1980, NHTSA states that there are no requirements for information collection associated with this rulemaking action.

## 10. Privacy Act

In accordance with 5 U.S.C. 553(c) (<https://www.govinfo.gov/link/uscode/5/553>), NHTSA solicited comments from the public to better inform the rulemaking process. These comments are posted, without edit, to *www.regulations.gov* (<http://www.regulations.gov>),, as described in DOT's system of records notice, DOT/ALL-14 FDMS, accessible through *www.transportation.gov/privacy* (<http://www.transportation.gov/privacy>) .

## 11. Congressional Review Act

Pursuant to Subtitle E of the Small Business Regulatory Enforcement Fairness Act of 1996, also known as the Congressional Review Act (5 U.S.C. 801 (<https://www.govinfo.gov/link/uscode/5/801>) *et seq.* ), the Office of Information and Regulatory Affairs designated this action as not a “major rule,” as defined by 5 U.S.C. 804(2) (<https://www.govinfo.gov/link/uscode/5/804>). NHTSA will submit a rule report to each House of the Congress and to the Comptroller General of the United States.

## List of Subjects in 49 CFR Parts 531 (<https://www.ecfr.gov/current/title-49/part-531>) and 533 (<https://www.ecfr.gov/current/title-49/part-533>)

- Fuel economy

## Regulatory Text

For the reasons stated in the preamble, the National Highway Traffic Safety Administration amends 49 CFR parts 531 (<https://www.ecfr.gov/current/title-49/part-531>) and 533 (<https://www.ecfr.gov/current/title-49/part-533>) as set forth below.

## **PART 531—PASSENGER AUTOMOBILE AVERAGE FUEL ECONOMY STANDARDS**

1. The authority citation for part 531 continues to read as follows:

**Authority:** 49 U.S.C. 32902 (<https://www.govinfo.gov/link/uscode/49/32902>); delegation of authority at 49 CFR 1.95 (<https://www.ecfr.gov/current/title-49/section-1.95>).

§ 531.7 [Removed]

2. Remove § 531.7.

### **Appendix B [Removed]**

3. Remove appendix B to part 531.

## **PART 533—LIGHT TRUCK FUEL ECONOMY STANDARDS**

4. The authority citation for part 533 continues to read as follows:

**Authority:** 49 U.S.C. 32902 (<https://www.govinfo.gov/link/uscode/49/32902>); delegation of authority at 49 CFR 1.95 (<https://www.ecfr.gov/current/title-49/section-1.95>).

§ 533.7 [Removed]

5. Remove § 533.7.

### **Appendix B [Removed]**

6. Remove appendix B to part 533.

Issued on December 21, 2021, in Washington, DC, under authority delegated in 49 CFR 1.81 (<https://www.ecfr.gov/current/title-49/section-1.81>), 1.95 (<https://www.ecfr.gov/current/title-49/section-1.95>), and 501.5 (<https://www.ecfr.gov/current/title-49/section-501.5>).

Steven S. Cliff,

Deputy Administrator.

79. See, e.g., *National Automobile Dealers Association*, Docket No. NHTSA-2021-0030-0435 (June 10, 2021) (“the regulatory language set out in the SAFE I Rule was adopted in full compliance with all applicable procedural requirements.”).

Back to Citation

80. See *Long Island Care at Home, Ltd. v. Coke*, 551 U.S. 158, 173 (2007) (describing how an agency's use of “full notice-and-comment rulemaking procedures” suggested the agency intended to promulgate a legislative rule). To be clear, the mere fact that an Agency requests comment on an action before finalizing it is not itself dispositive evidence that an action is a legislative rule, as there are many strong policy reasons for agencies to seek public input on documents beyond when they are expressly required to do so by statute. However, in those instances, the agency will generally make clear that the document at issue is an interpretation, policy statement, or other sort of guidance document, which stands in significant contrast to the approach taken in the SAFE I rulemaking.

Back to Citation

81. *Am. Min. Cong.*, 995 F.2d at 1109 (“an agency seems likely to have intended a rule to be legislative if it has the rule published in the Code of Federal Regulations”). NHTSA recognizes that, as at least one commenter pointed out, some subsequent cases have deemed a rule interpretative even if published in the CFR. See, e.g., *Health Ins. Ass'n of Am., Inc. v. Shalala*, 23 F.3d 412, 423 (D.C. Cir. 1994). While such cases may indicate that a CFR publication is not dispositive of the issue, they do not eliminate the relevance of this step as a helpful piece of the larger puzzle of identifying the agency's intent to codify binding regulations.

101. NHTSA stresses that it is not necessary to substantively determine whether “related to” could be properly interpreted to include these concepts in order to reach this point, nor does the Agency make such a determination here. What matters is that, once codified, the regulation now forms the operative standard, which purports to be legally binding and capable of standalone application. In that sense, the regulation functions as a legislative rule, which requires legislative rulemaking authority to promulgate, no matter how proper or improper the substantive content of the rule may be.

115. *A few comments go further and suggest that NHTSA not only lacks legislative authority with respect to EPCA preemption, but interpretative authority as well. See, e.g., Northeast States for Coordinated Air Use Management, Docket No. NHTSA-2021-0030-0300 (June 11, 2021) (noting that “the agency lacks statutory authority to define the scope of EPCA preemption through legislative or interpretative rules”) (emphasis added). In response, NHTSA stresses that it continues to believe that the Agency may offer interpretations or guidance as to its views. To be sure, NHTSA does not agree with other commenters who argue that this interpretative authority equates to the ability to issue binding interpretations. See Urban Air Initiative et al., Docket No. NHTSA-2021-0030-0423 (June 11, 2021). But the Agency nevertheless maintains the view expressed in the Proposal that NHTSA may properly announce interpretative views about matters of EPCA preemption if so desired. See CAFE Preemption NPRM, 86 FR at 25988 (“While NHTSA still retains interpretative authority to set forth its advisory views on whether a state regulation impermissibly conflicts with Federal law, such authority does not support the power to codify binding legislative rules on the matter.”).*

153. *Similarly, the joint comment submitted by the Urban Air Initiative argues that because these issues are irrelevant, NHTSA is simply manufacturing issues to conceal the “political pretext” for a repeal of the SAFE I Rule. See Urban Air Initiative et al., Docket No. NHTSA-2021-0030-0423 (June 11, 2021). But this contradicts the authorities cited here, which encourage an agency to closely assess its statutory authority, as NHTSA is doing in this rulemaking. These commenters may disagree with NHTSA’s ultimate conclusions in this rulemaking, but dismissing the concerns surrounding the SAFE I Rule as merely “pretextual” ignores the litany of legitimate issues articulated in this rulemaking, as well as the substantial number of thoughtful comments expressing additional concerns about the SAFE I Rule.*

185. The SAFE I Rule was not an enforcement action, and NHTSA’s portion of the Rule was not (unlike EPA’s portion) even an adjudication. Instead, as described throughout this final rule, the SAFE I Rule codified rules of general applicability, which instituted preemption requirements for all states so long as the rule remained in effect. As such, even if those commenters’ arguments explain the background for why NHTSA tried to undertake the SAFE I Rule, they cannot justify how NHTSA acted through a legislative rulemaking of general applicability. For that, it is necessary to instead focus on the issues of rulemaking authority that form so much of this final rule.

Back to Citation

186. Through this, NHTSA stresses that it takes no position in this rulemaking on whether EPCA preemption either expressly or impliedly preempts the particular state and local programs identified by such commenters. The point here is that these mechanisms persist to weigh such commenters’ concerns, not that their substantive concerns are substantiated.

192. See, e.g., *Patriotic Veterans, Inc. v. Indiana*, 736 F.3d 1041, 1051 (7th Cir. 2013) (describing how under the doctrine of conflict preemption, state law may be preempted “if it interferes” with federal law) (emphasis added).

[Back to Citation](#)

193. See, e.g., *Freightliner Corp. v. Myrick*, 514 U.S. 280, 287 (1995) (explaining that implied conflict preemption may exist in particular situations “where it is impossible for a private party to comply with both state and federal requirements or where state law stands as an obstacle to the accomplishment and execution of the full purposes and objectives of Congress.”) (internal quotations omitted). See also, e.g., *CSX Transp., Inc. v. Easterwood*, 507 U.S. 658, 663 (1993) (“Where a state statute conflicts with, or frustrates, federal law, the former must give way.”).

[Back to Citation](#)

194. Commenters opposing a repeal even appeared to recognize as much, as several argued that state and local programs prohibited by the SAFE I Rule were also impliedly preempted. See, e.g., *American Fuel & Petrochemical Manufacturers*, Docket No. NHTSA-2021-0030-0425 (June 11, 2021) (arguing that such programs “are impliedly preempted because they `stand[ ] as an obstacle to the accomplishment and execution of the full purposes and objectives of Congress” in EPCA) (internal citations omitted).

[Back to Citation](#)

195. Judicial applications of implied and express preemption illustrate how they are separate concepts, which are applied regimentally by courts rather than as a monolithic preemption analysis. See, e.g., *Geier v. Am. Honda Motor Co.*, 529 U.S. 861, 869 (2000).

## LEGAL STATUS

This site displays a prototype of a “Web 2.0” version of the daily Federal Register. It is not an official legal edition of the Federal Register, and does not replace the official print version or the official electronic version on GPO’s govinfo.gov.

The documents posted on this site are XML renditions of published Federal Register documents. Each document posted on the site includes a link to the corresponding official PDF file on govinfo.gov. This prototype edition of the daily Federal Register on FederalRegister.gov will remain an unofficial informational resource until the Administrative Committee of the Federal Register (ACFR) issues a regulation granting it official legal status. For complete information about, and access to, our official publications and services, go to [About the Federal Register](#) on NARA’s archives.gov.

The OFR/GPO partnership is committed to presenting accurate and reliable regulatory information on FederalRegister.gov with the objective of establishing the XML-based Federal Register as an ACFR-sanctioned publication in the future. While every effort has been made to ensure that the material on FederalRegister.gov is accurately displayed, consistent with the official SGML-based PDF version on govinfo.gov, those relying on it for legal research should verify their results against an official edition of the Federal Register. Until the ACFR grants it official status, the XML rendition of the daily Federal Register on FederalRegister.gov does not provide legal notice to the public or judicial notice to the courts.

**PUBLISHED DOCUMENT****AGENCY:**

Council on Environmental Quality.

**ACTION:**

Notice of proposed rulemaking.

**SUMMARY:**

The Council on Environmental Quality (CEQ) is proposing to modify certain aspects of its regulations for implementing the procedural provisions of the National Environmental Policy Act (NEPA) to generally restore regulatory provisions that were in effect for decades before being modified in 2020. CEQ proposes these changes in order to better align the provisions with CEQ's extensive experience implementing NEPA, in particular its perspective on how NEPA can best inform agency decision making, as well as longstanding Federal agency experience and practice, NEPA's statutory text and purpose, including making decisions informed by science, and case law interpreting NEPA's requirements. The proposed rule would restore provisions addressing the purpose and need of a proposed action, agency NEPA procedures for implementing CEQ's NEPA regulations, and the definition of "effects." CEQ invites comments on the proposed revisions.

**DATES:**

*Comments:* CEQ must receive comments by November 22, 2021.

*Public meeting:* CEQ will conduct two online public meetings for the proposed rule on Tuesday, October 19, 2021, from 1 to 4 p.m. EDT, and Thursday, October 21, 2021 from 5 to 8 p.m. EDT. To register for the meetings, please visit CEQ's website at [www.nepa.gov](http://www.nepa.gov) (<http://www.nepa.gov>).

## **ADDRESSES:**

You may submit comments, identified by docket number CEQ-2021-0002, by any of the following methods:

*Federal eRulemaking Portal:* <https://www.regulations.gov> (<https://www.regulations.gov>). Follow the instructions for submitting comments.

*Fax:* 202-456-6546.

*Mail:* Council on Environmental Quality, 730 Jackson Place NW, Washington, DC 20503.

*Instructions:* All submissions received must include the agency name, "Council on Environmental Quality," and docket number, CEQ-2021-0002, for this rulemaking. All comments received will be posted without change to <https://www.regulations.gov> (<https://www.regulations.gov>), including any personal information provided. Do not submit electronically any information you consider to be private, Confidential Business Information (CBI), or other information, the disclosure of which is restricted by statute.

*Docket:* For access to the docket to read background documents or comments received, go to <https://www.regulations.gov> (<https://www.regulations.gov>).

## **FOR FURTHER INFORMATION CONTACT:**

## **SUPPLEMENTARY INFORMATION:**

### **I. Background**

On January 1, 1970, President Nixon signed into law the National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. 4321 (<https://www.govinfo.gov/link/uscode/42/4321>) *et seq.* Congress enacted NEPA by a unanimous vote in the Senate and a nearly unanimous vote in the House <sup>[1]</sup> to declare a national policy to promote environmental protection for present and future generations. NEPA was established to "encourage productive and enjoyable harmony" between humans and the environment; to promote efforts that will prevent or eliminate damage to the environment and biosphere and stimulate the health and welfare of people; and to enrich the understanding of the ecological systems and natural resources important to the Nation. 42 U.S.C. 4321 (<https://www.govinfo.gov/link/uscode/42/4321>).

To achieve these objectives, NEPA makes it the continuing policy of the Federal Government to use all practicable means and measures to create and maintain conditions under which humans and nature can exist in productive harmony and fulfill the social, economic, and other requirements of present and future generations of Americans. 42 U.S.C. 4331 (<https://www.govinfo.gov/link/uscode/42/4331>). NEPA directs

Federal agencies to prepare “detailed statements,” referred to as environmental impact statements (EISs), for “major Federal actions significantly affecting the quality of the human environment.” 42 U.S.C. 4332(2)(C) (<https://www.govinfo.gov/link/uscode/42/4332>). NEPA established the Council on Environmental Quality (CEQ) in the Executive Office of the President, which advises the President on environmental policy matters and oversees Federal agencies' implementation of NEPA. 42 U.S.C. 4342 (<https://www.govinfo.gov/link/uscode/42/4342>). In many respects, NEPA was a statute ahead of its time, and it remains relevant and vital today, from its statements that decisions be grounded in science to its recognition that sustainability and a livable environment are fundamental to social and economic well-being. *See, e.g.*, 42 U.S.C. 4331 (<https://www.govinfo.gov/link/uscode/42/4331>), 4332(A) (<https://www.govinfo.gov/link/uscode/42/4332>).

In 1970, President Nixon issued Executive Order (E.O.) 11514, *Protection and Enhancement of Environmental Quality*, which directed CEQ to issue guidelines for implementation of section 102(2)(C) of NEPA.<sup>[2]</sup> In response, CEQ issued interim guidelines in April 1970, and revised the guidelines in 1971 and 1973.<sup>[3]</sup> In 1977, President Carter issued E.O. 11991, *Relating to Protection and Enhancement of Environmental Quality*, amending E.O. 11514 and directing CEQ to issue regulations to govern implementation of NEPA and requiring that Federal agencies comply with those regulations.<sup>[4]</sup> CEQ promulgated implementing procedures in 1978 at 40 CFR parts 1500 (<https://www.ecfr.gov/current/title-40/part-1500>) through 1508 (<https://www.ecfr.gov/current/title-40/part-1508>).<sup>[5]</sup> The regulations, issued 8 years after NEPA's enactment, reflect CEQ's interpretation of and expertise in NEPA, initial interpretations of the courts, and Federal agency experience implementing NEPA. Consistent with the requirement in 40 CFR 1507.3 (<https://www.ecfr.gov/current/title-40/section-1507.3>), Federal agencies, in turn, issue and update their own implementing procedures to supplement CEQ's procedures and integrate the NEPA process into the agencies' specific programs and processes. Agencies consult with CEQ in the development of these procedures to ensure that their agency-specific procedures are consistent with CEQ's regulations. CEQ made technical amendments to the 1978 implementing regulations in 1979<sup>[6]</sup> and amended one provision in 1986,<sup>[7]</sup> but it left the regulations largely unchanged for over 40 years (1978 NEPA Regulations). As a result, CEQ and Federal agencies have extensive experience in implementing NEPA and the 1978 regulations, and a large body of agency practice and case law has developed based on the CEQ NEPA regulations that remained in substantially the same form from 1978 to 2020. The fundamental principles of informed and science-based decision making, transparency, and public engagement are reflected in both the NEPA statute and CEQ's 1978 NEPA Regulations, and it is those core principles that CEQ seeks to advance in this proposed rule.

On August 15, 2017, President Trump issued E.O. 13807 (</executive-order/13807>), *Establishing Discipline and Accountability in the Environmental Review and Permitting Process for Infrastructure Projects*,<sup>[8]</sup> which, in part, directed CEQ to establish and lead an interagency working group to identify and propose changes to the NEPA regulations.<sup>[9]</sup> In response, on January 10, 2020, CEQ published a notice of proposed rulemaking (NPRM) proposing broad revisions to the 1978 NEPA Regulations.<sup>[10]</sup> A wide range of stakeholders submitted more than 1.1 million comments on the proposed rule,<sup>[11]</sup> including state and local governments, Tribes, environmental advocacy organizations, professional and industry associations, and other advocacy or non-profit organizations. Many commenters provided detailed feedback on the legality, policy wisdom, and potential consequences of the proposed amendments. In keeping with the proposed rule, the final rule promulgated on July 16, 2020, made wholesale revisions to the regulations and took effect on September 14, 2020 (2020 NEPA Regulations or 2020 Rule).<sup>[12]</sup>

In the months that followed the issuance of the 2020 NEPA Regulations, five lawsuits were filed challenging the 2020 Rule.<sup>[13]</sup> These cases challenge the 2020 NEPA Regulations on a variety of grounds, including under the Administrative Procedure Act (APA), NEPA, and the Endangered Species Act, contending that the rule exceeded CEQ's authority and that the related rulemaking process was procedurally and substantively defective. In response to CEQ and joint motions, the district courts have issued temporary stays in each of these cases, except for *Wild Virginia v. Council on Environmental Quality*, which the district court dismissed without prejudice on June 21, 2021,<sup>[14]</sup> and is currently on appeal to the U.S. Court of Appeals for the Fourth Circuit.

On January 20, 2021, President Biden issued E.O. 13990 (/executive-order/13990), *Protecting Public Health and the Environment and Restoring Science to Tackle the Climate Crisis*.<sup>[15]</sup> Section 1 of E.O. 13990 (/executive-order/13990) establishes an Administration policy to listen to the science; improve public health and protect our environment; ensure access to clean air and water; limit exposure to dangerous chemicals and pesticides; hold polluters accountable, including those who disproportionately harm communities of color and low-income communities; reduce greenhouse gas emissions; bolster resilience to the impacts of climate change; restore and expand our national treasures and monuments; and prioritize both environmental justice and the creation of well-paying union jobs necessary to deliver these goals.<sup>[16]</sup>

Section 2 of the E.O. calls for Federal agencies to review existing regulations issued between January 20, 2017, and January 20, 2021, for consistency with the policy articulated in the E.O. and to take appropriate action. Section 7(b) revokes a number of E.O.s, including E.O. 13807 (/executive-order/13807), and section 7(f) directs agencies to promptly take steps to rescind any rules or regulations implementing or enforcing any of the revoked E.O.s. An accompanying White House fact sheet, published on January

□

20, 2021, specifically directs CEQ to review the 2020 NEPA Regulations for consistency with E.O. 13990 (/executive-order/13990)'s objectives.<sup>[17]</sup>

On January 27, 2021, the President signed E.O. 14008 (/executive-order/14008), *Tackling the Climate Crisis at Home and Abroad*, which establishes a government-wide approach to the climate crisis by reducing greenhouse gas emissions and an Administration policy to increase climate resilience, transition to a clean-energy economy, address environmental justice and invest in disadvantaged communities, and spur well-paying union jobs and economic growth.<sup>[18]</sup> E.O. 14008 (/executive-order/14008) also requires the Chair of CEQ and the Director of the Office of Management and Budget (OMB) to ensure that Federal infrastructure investments reduce climate pollution and that Federal permitting decisions consider the effects of greenhouse gas emissions and climate change.<sup>[19]</sup>

## II. CEQ's Approach to Revising the 2020 NEPA Regulations

Consistent with E.O. 13990 (/executive-order/13990) and E.O. 14008 (/executive-order/14008), CEQ is engaged in a comprehensive review of the 2020 NEPA Regulations to ensure that they provide for sound and efficient environmental review of Federal actions, including those actions integral to tackling the climate crisis, in a manner that enables meaningful public participation, respects Tribal sovereignty, protects our Nation's resources, and promotes better environmental and community outcomes. CEQ proposes regulatory changes in this NPRM to enhance clarity on NEPA implementation, to better effectuate NEPA's statutory requirements and purposes, to ensure that Federal decisions are guided by science, to better protect and enhance the quality of the human environment, and to provide full and fair processes that inform the public about the environmental effects of government actions and enable public participation.

□ Start Printed  
Page 55759

CEQ's review of the 2020 NEPA Regulations and the proposed regulatory amendments are guided by CEQ's and Federal agencies' extensive experience implementing NEPA for the last 50 years. As part of its oversight role, CEQ reviews every agency's proposed new or updated NEPA implementing procedures. As part of this iterative process, CEQ engages with agencies to understand their specific authorities and programs to ensure consideration of environmental impacts is integrated into their decision-making processes. Additionally, where necessary or appropriate, CEQ engages with agencies on NEPA reviews for specific projects or project types. For example, CEQ has convened interagency working groups to ensure efficient and effective environmental reviews for transportation and broadband projects. CEQ also has extensive experience providing written guidance to Federal agencies on a wide range of NEPA-related issues, including environmental justice, emergency response activities, climate change, and more.<sup>[20]</sup> And, CEQ meets regularly with external stakeholders to understand their perspectives on the NEPA process. Finally, CEQ coordinates with other Federal agencies and components of the White House on a wide array of environmental issues that also arise in the NEPA context, such as endangered species consultation or impacts to Federal lands and waters from federally permitted activities.

It is CEQ's view that the 2020 NEPA Regulations may have the effect of limiting the scope of NEPA analysis, with negative repercussions for environmental protection and environmental quality, including in critical areas such as climate change and environmental justice. Portions of the 2020 NEPA Regulations also may not reflect NEPA's statutory purposes to “encourage productive and enjoyable harmony” between humans and the environment, promote efforts that will prevent or eliminate damage to the environment and biosphere, and enhance public health and welfare. *See* 42 U.S.C. 4321 (<https://www.govinfo.gov/link/uscode/42/4321>). Some changes introduced by the 2020 NEPA Regulations also may not support science-based decision making or be compatible with the Administration's policies to improve public health, protect the environment, prioritize environmental justice, provide access to clean air and water, and reduce greenhouse gas emissions that contribute to climate change.<sup>[21]</sup>

To address these concerns, CEQ is engaging in a series of rulemakings to propose revisions to the 2020 NEPA Regulations. As a preliminary step, CEQ issued an interim final rule on June 29, 2021, amending the requirement in 40 CFR 1507.3(b) ([https://www.ecfr.gov/current/title-40/section-1507.3#p-1507.3\(b\)](https://www.ecfr.gov/current/title-40/section-1507.3#p-1507.3(b))) for agencies to propose changes to their existing NEPA supplemental procedures by September 14, 2021, in order to make their procedures consistent with the 2020 NEPA Regulations.<sup>[22]</sup> CEQ extended the date by two years to avoid having agencies propose changes to their implementing procedures on a tight deadline to conform to a rule that is undergoing extensive review and will likely change in the near future.

CEQ intends to reconsider and revise the 2020 NEPA Regulations using a phased approach. This NPRM initiates a “Phase 1” rulemaking to focus on a discrete set of provisions. In identifying what provisions to address in Phase 1, CEQ focused on the provisions that (1) pose significant near-term interpretation or implementation challenges for Federal agencies and would have the most impact to agencies' NEPA processes during the interim period before a “Phase 2” rulemaking is complete; (2) make sense to revert to the 1978 regulatory approach for the reasons discussed in Part III of this preamble; and (3) CEQ is generally unlikely to propose to further revise in a Phase 2 rulemaking. Further, because CEQ recently received comments on these exact provisions through the rulemaking process for the 2020 NEPA Regulations, CEQ has the benefit of voluminous public comments on these issues, which CEQ considered in the development of this proposed rule. In Phase 2, CEQ intends to issue a second NPRM to more broadly revisit the 2020 NEPA Regulations and propose further revisions to ensure that the NEPA process provides for efficient and

effective environmental reviews that are consistent with the statute's text and purpose; provides regulatory certainty to Federal agencies; promotes better decision making consistent with NEPA's statutory requirements; and meets environmental, climate change, and environmental justice objectives.

### III. Summary of Proposed Rule

As discussed in this section, CEQ proposes three revisions to the 2020 NEPA Regulations in this Phase 1 rulemaking: (1) To eliminate language in the description of purpose and need for a proposed action when it is an agency's statutory duty to review applications for authorization (40 CFR 1502.13 (<https://www.ecfr.gov/current/title-40/section-1502.13>)) and make a conforming edit to the definition of "reasonable alternatives" (40 CFR 1508.1(z) ([https://www.ecfr.gov/current/title-40/section-1508.1#p-1508.1\(z\)](https://www.ecfr.gov/current/title-40/section-1508.1#p-1508.1(z)))); (2) to remove limitations on agency NEPA procedures for implementing CEQ's NEPA Regulations (40 CFR 1507.3 (<https://www.ecfr.gov/current/title-40/section-1507.3>)); and (3) to return to the definitions of "effects" in the prior,  longstanding 1978 NEPA Regulations (40 CFR 1508.1(g) ([https://www.ecfr.gov/current/title-40/section-1508.1#p-1508.1\(g\)](https://www.ecfr.gov/current/title-40/section-1508.1#p-1508.1(g)))).

Start Printed  
Page 55760

CEQ proposes to amend these provisions by generally reverting to the language from the 1978 NEPA Regulations that was in effect for more than 40 years, subject to minor revisions for clarity. In proposing to revert to language in the 1978 Regulations, this NPRM addresses issues similar or identical to those the public and Federal agencies recently had the opportunity to consider and comment on during the rulemaking for the 2020 NEPA Regulations, which will facilitate an expeditious Phase 1 rulemaking. For each provision described in this section, CEQ provides a high-level summary of some of the significant issues raised in these public comments, which CEQ considered in the development of this proposed rule.

#### A. Purpose and Need (§ 1502.13)

The purpose and need section of an EIS sets forth the rationale for the agency's proposed action. Development of the purpose and need is a vital early step in the NEPA process that is foundational to other elements of a NEPA review. For example, the purpose and need statement sets the parameters for the range of reasonable alternatives an agency considers and informs the scope of effects that an agency must analyze in an EIS. The 1978 NEPA Regulations required that each EIS briefly state the underlying purpose and need to which the agency is responding in proposing the alternatives, including the proposed action. The 2020 NEPA Regulations modified this provision by adding language that requires agencies to base the purpose and need on the goals of an applicant and the agency's authority when the agency's statutory duty is to review an application for authorization. The 2020 NEPA Regulations also made a conforming addition to the definition of "reasonable alternatives" to carry over the new language on purpose and need. Here, CEQ proposes in § 1502.13 to revert to the language of the 1978 NEPA Regulations for purpose and need and conform the definition of "reasonable alternatives" in § 1508.1(z) to this change.

CEQ proposes this change because the language added by the 2020 NEPA Regulations requires an agency to always base the purpose and need on the goals of an applicant and the agency's statutory authority when an agency is reviewing an application for authorization. This language could be construed to require agencies to prioritize the applicant's goals over other relevant factors, including the public interest. CEQ does not consider this approach to reflect the best reading of the NEPA statute or lay the appropriate groundwork for environmentally sound decision making. Agencies should have discretion to base the purpose and need for their actions on a variety of factors, which include the goals of the applicant, but not to the exclusion of other factors. For example, agencies may consider regulatory requirements, desired conditions on the landscape or other environmental outcomes, and local economic needs, as well as an applicant's goals. Always tailoring the purpose and need to an applicant's goals when considering a request for an authorization could prevent

an agency from considering alternatives that better meet the policies and responsibilities set forth in NEPA merely because they do not meet an applicant's stated goals. Additionally, an applicant's goals themselves could be potentially confusing or unduly narrow or restrictive. Restoring the 1978 language would eliminate this confusing language and reaffirm agency discretion to develop and rely on statements of purpose and need that are consistent with the agency's decision-making responsibilities while considering multiple relevant factors, including the public interest and the goals of an applicant. This restoration would confirm that agencies should consider a range of alternatives that are technically and economically feasible and meet the purpose and need for the proposed action but that are not unreasonably constrained by an applicant's stated goals.

In adding this language, the preamble to the 2020 Rule explained that CEQ intended to clarify that when an agency is responsible for reviewing applications for authorizations, the agency *must* base the purpose and need on the applicant's goals and the agency's statutory authority, citing *Citizens Against Burlington, Inc. v. Busey*, 938 F.2d 190, 196 (D.C. Cir. 1991). However, this case did not require the agency to base the purpose and need on the applicant's goals; rather, the court held that the agency's consideration of the applicant's goals to develop the purpose and need statement was not arbitrary and capricious. However, the court did not require that the applicant's goals be the sole (or even primary) factor in the formulation of the purpose and need for the action. *See id.* at 196-99.

CEQ proposes to remove the reference to the agency's statutory authority because it is unnecessary and confusing. It is unnecessary because agencies already had a long history of developing purpose and need statements under the 1978 NEPA Regulations guided by their statutory authority and the scope of the agency decision under consideration. The reference is confusing because it implies that an agency's authority is only relevant when an agency proposes to grant an authorization, and agencies must also appropriately consider the scope of their authority when evaluating other agency actions, including those that do not involve specific authorizations. Therefore, CEQ proposes to eliminate the reference to an agency's authority because purpose and need statements have always been informed by the scope of the agency's statutory decision-making authority irrespective of whether the action is an application for authorization. A reference to an agency's statutory authority in this one context therefore seems unnecessary.

To promote informed decision making, transparency, and public engagement, a properly drawn purpose and need statement should lead to consideration of the reasonable alternatives to the proposed action, consistent with NEPA's requirements. *See* 42 U.S.C. 4332(2)(C) (<https://www.govinfo.gov/link/uscode/42/4332>). While a purpose and need statement that is too narrow is inconsistent with NEPA's requirement to consider alternatives to the proposed action, so too is a boundless analysis of alternatives. Rather, agencies are guided by a rule of reason in identifying the reasonable alternatives that are technically and economically feasible and meet the purpose and need of a proposed action. *See, e.g., HonoluluTraffic.com v. Fed. Transit Admin.*, 742 F.3d 1222, 1230 (9th Cir. 2014).

For example, a private applicant seeking a right-of-way on Federal land may want to site the right-of-way at a specific location and may, correspondingly, frame the applicant's goals as a right-of-way with a particular location or route. However, the agency with jurisdiction over the proposed action may want to consider a range of reasonable locations for the right-of-way that would, for example, avoid environmental impacts or reduce conflicts with other programs or plans.

Inherent in the NEPA process is the consideration of the public interest when developing a purpose and need statement, including analyzing proposed actions and alternatives. As the U.S. Court of Appeals for the Seventh Circuit explained in *Simmons v. U.S. Army Corps of Engineers*, it is contrary to NEPA for agencies to “contrive a purpose so slender as to define competing ‘reasonable alternatives’ out of consideration (and even out of existence).” 120 F.3d 664, ¶ 666 (7th Cir. 1997) (citing 42 U.S.C. 4332(2)(E) (<https://www.govinfo.gov/link/uscode/42/4332>)). The court explained that constricting the definition of the project's purpose could exclude truly reasonable alternatives, making an EIS incompatible with NEPA's requirements. *Id.*; see also, e.g., *Nat'l Parks & Conservation Ass'n v. Bureau of Land Mgmt.*, 606 F.3d 1058, 1070 (9th Cir. 2010) (“Agencies enjoy ‘considerable discretion’ to define the purpose and need of a project. However, ‘an agency cannot define its objectives in unreasonably narrow terms.’” (internal citations omitted)).

Start Printed  
Page 55761

During the rulemaking process for the 2020 NEPA Regulations, numerous public comments addressed the purpose and need provision. Some commenters supported limiting the purpose and need to the goals of the applicant in order to narrow the number of alternatives agencies must consider and shorten the timeframe for the environmental review. Other commenters expressed the view that this provision would result in purpose and need statements and environmental reviews that give undue deference to applicants. Some commenters also stated that the proposed change would unduly elevate the goals of applicants over the needs of the public and Federal agencies' purview to consider the public interest. In reconsidering the approach taken in the 2020 Rule, CEQ reviewed these comments. As discussed in this section, CEQ considers the proposed reversion to the 1978 language on purpose and need to better reflect NEPA's objectives. Upon further consideration, CEQ does not consider that the language added by the 2020 Rule would necessarily lead to more efficient reviews and finds a lack of evidence to support that claim. CEQ requests comment on this proposed change and the potential effects of this change on the environmental review process, including timeframes for environmental review.

CEQ also proposes to make a conforming edit to the definition of “reasonable alternatives. The 2020 Rule defines “reasonable alternatives” to mean “a reasonable range of alternatives that are technically and economically feasible, meet the purpose and need for the proposed action, *and, where applicable, meet the goals of the applicant.*” 40 CFR 1508.1(z) ([https://www.ecfr.gov/current/title-40/section-1508.1#p-1508.1\(z\)](https://www.ecfr.gov/current/title-40/section-1508.1#p-1508.1(z))) (emphasis added). CEQ's proposed change would be consistent with the proposed change to purpose and need, by deleting the reference in “reasonable alternatives” to the goals of the applicant for the same reasons discussed above regarding the proposed change to the purpose and need section, § 1502.13.

## **B. Agency NEPA Procedures (§ 1507.3)**

CEQ proposes to revise § 1507.3(a) and (b) to clarify that while agency NEPA procedures need to be consistent with the CEQ regulations, agencies have the discretion and flexibility to develop procedures beyond the CEQ regulatory requirements, enabling agencies to address their specific programs and the contexts in which they operate. Specifically, the proposed rule would remove language from § 1507.3(a) stating that where existing agency NEPA procedures are “inconsistent” with the CEQ regulations, the CEQ regulations apply “unless there is a clear and fundamental conflict with the requirements of another statute.” The proposed rule also would remove from § 1507.3(b) the language requiring agencies “to eliminate any inconsistencies” with the CEQ regulations and the prohibition on agencies imposing additional procedures or requirements beyond the CEQ regulations unless those additional procedures promote agency efficiency or are required by law. Collectively, these “ceiling provisions” make the CEQ regulations a ceiling for agency NEPA procedures, which departed from CEQ's and Federal agencies' prior understanding and practice that CEQ's NEPA regulations provide a floor for environmental review procedures.

As noted in section II of this preamble, CEQ amended paragraph (b) in June 2021 to provide agencies until September 14, 2023, to propose updates to their agency procedures. This NPRM does not propose to change that date. In proposing these revisions, CEQ is affirming that agencies have the authority and discretion to develop and implement NEPA procedures beyond those specified in the CEQ regulations to address the unique contexts in which they operate, and that CEQ will continue to ensure that such additional procedures are consistent with CEQ's regulations through its consistency review process set forth in 40 CFR 1507.3(b)(2) ([https://www.ecfr.gov/current/title-40/section-1507.3#p-1507.3\(b\)\(2\)](https://www.ecfr.gov/current/title-40/section-1507.3#p-1507.3(b)(2))).

Prior to the 2020 NEPA Regulations, Federal agencies could develop NEPA procedures of their own to augment the CEQ regulations, so long as those procedures met or exceeded the degree of environmental review required by the CEQ regulations. CEQ's proposal better meets NEPA's statutory requirements and purpose to provide flexibility to agencies in carrying out their NEPA requirements, including by allowing agencies to adopt agency-specific NEPA procedures that align with their unique missions or circumstances. Agencies should be able to tailor their procedures to meet their unique statutory mandates and include additional procedures or requirements beyond those outlined in CEQ's NEPA regulations, especially if doing so will promote better decisions, improve environmental or community outcomes, or spur innovation that advances NEPA's policies.

For example, agency procedures could include more specific requirements for the development of environmental assessments to facilitate the decision-making process, such as requiring multiple alternatives or documentation of alternatives considered but dismissed. Procedures also could require public hearings or provide for more specific consideration or evaluation of certain issues such as air and water quality impacts, environmental justice considerations, or habitat effects. For example, the National Oceanic and Atmospheric Administration (NOAA), which among other things, is responsible for the stewardship of the Nation's ocean resources and their habitat, might adopt agency-specific procedures on the analysis of impacts to species or habitats protected by the Endangered Species Act, the Marine Mammal Protection Act, or the Magnuson-Stevens Fishery Conservation and Management Act, as well as other vulnerable marine and coastal ecosystems. CEQ has heard from Federal agencies that the ceiling provisions have created confusion as to whether agencies can continue to carry out their agency-specific procedures or adopt new procedures to implement NEPA for their programs and authorities.

CEQ reviews any proposed changes to agency NEPA procedures before their adoption to ensure the procedures are consistent with NEPA and the CEQ regulations. *See* 40 CFR 1507.3 (<https://www.ecfr.gov/current/title-40/section-1507.3>). That review process provides the opportunity to discuss the reasons behind any new or additional procedures or requirements proposed by agencies. This also allows CEQ to promote consistency across the Federal Government without limiting agencies' flexibility to do more than the CEQ regulations describe or otherwise inhibiting innovation.

Removing these ceiling provisions also improves alignment of the NEPA Regulations with NEPA's statutory text, which directs agencies to pursue the statute's goals "to the fullest extent possible." 42 U.S.C. 4332 (<https://www.govinfo.gov/link/uscode/42/4332>). The legislative history of NEPA indicates that the intent behind this statement was to ensure that all Federal agencies comply with NEPA as well as their statutory authorities and that "no agency shall utilize an excessively narrow construction of its existing statutory authorizations to avoid compliance." [23]

Additionally, removing these sentences would allow agencies to fully pursue NEPA's aims by allowing them to establish procedures specific to their missions and authorities that may provide for additional environmental review and public participation. *See* 42 U.S.C. 4332 (<https://www.govinfo.gov/link/uscode/42/4332>). CEQ would continue to perform its longstanding role of reviewing any proposed agency-specific NEPA procedures to ensure that they are consistent with, but not necessarily identical to, CEQ's regulations. The proposed change would also help Federal agencies ensure that their NEPA procedures, and the NEPA documents and processes that follow those procedures, meet the goal of NEPA to provide for the protection and enhancement of the environment and human health.

Since all agencies are charged with administering NEPA—not only CEQ—agencies should be allowed to pursue the environmental aims of the statute, including by adopting and carrying out procedures that require additional or more specific environmental analysis than called for by the CEQ regulations. NEPA also expressly instructs agencies to develop methods and procedures for the development of EISs, indicating that agencies are intended to take responsibility for their own procedures, even while consulting with CEQ. *See* 42 U.S.C. 4332(2)(B) (<https://www.govinfo.gov/link/uscode/42/4332>). Eliminating the 2020 NEPA Regulations' ceiling provisions would allow agencies to carry out their NEPA obligations to the “fullest extent possible.” *See* 42 U.S.C. 4332 (<https://www.govinfo.gov/link/uscode/42/4332>).

The public extensively commented on the ceiling provisions during the rulemaking for the 2020 NEPA Regulations. Many commenters opposed the addition of these provisions, expressing the view that it is important for agencies to have flexibility to meet NEPA's statutory requirements and establish the procedures and requirements necessary to implement NEPA. Commenters stated that precluding an agency from applying its expertise would arbitrarily limit the role of agencies responsible for implementing NEPA. Some commenters found that the 2020 NEPA Regulations did not adequately justify the addition of these provisions or clearly articulate what problem the change was trying to solve. A few commenters also noted that the proposed changes could interfere with state and Federal collaboration or coordination to the extent they would prevent Federal agencies from adopting NEPA procedures that integrate with state review processes that have more stringent requirements and procedures than those set out in the proposed rule. The commenters noted that impairing Federal agencies' coordination with states would create greater complexity and uncertainty for applicants and potentially additional delays and paperwork. The few comments in support of the change expressed general support or stated that including ceiling provisions would reduce costs and delays—a rationale that appears in the NPRM for the 2020 Rule—but did not provide an explanation or basis for that statement.

In developing this proposal, CEQ considered these comments as well as the rationale provided for the 2020 Rule and, in alignment with the discussion provided earlier in this section, disagrees with the rationale provided for the 2020 Rule and agrees with the comments that opposed the addition of the ceiling provisions. Even if the ceiling provisions would reduce costs and delays in some circumstances, which commenters did not provide evidence to support, CEQ considers the benefits of agency flexibility to outweigh the potential costs and delays. NEPA is more than a check-the-box paperwork exercise. Providing agencies flexibility to integrate their NEPA reviews into their unique programs can both make the decision-making process more efficient—because the process can be tailored to the particularities of agency programs—and more effective because a more tailored environmental review process may result in environmental reviews that better inform the decision maker and the public. Moreover, CEQ retains authority to review proposed agency procedures for consistency with CEQ's regulations and can evaluate specific proposals made by agencies at that time and work with the agencies to ensure implementing procedures do not result in undue cost or delay. CEQ invites public comment on this proposed provision.

### C. Definition of “Effects” or “Impacts” (§ 1508.1(g))

NEPA requires Federal agencies to examine the environmental effects of their proposed actions and alternatives and any adverse environmental effects that cannot be avoided if the proposed action is implemented. 42 U.S.C. 4332(2)(C) (<https://www.govinfo.gov/link/uscode/42/4332>). CEQ proposes to revise the definition of “effects” or “impacts” in § 1508.1(g) to restore the substance of the definitions of “effects” and “cumulative impacts” contained in the 1978 NEPA Regulations with some minor, non-substantive changes for consistency with the current format of the Code of Federal Regulations. Specifically, CEQ proposes to restore the definitions of “direct” and “indirect” effects, and “cumulative impacts” from the 1978 NEPA Regulations, 40 CFR 1508.7 (<https://www.ecfr.gov/current/title-40/section-1508.7>) and 1508.8 (<https://www.ecfr.gov/current/title-40/section-1508.8>) (2019), by incorporating them into the definition of “effects” or “impacts,” such that each reference to these terms throughout 40 CFR parts 1500 (<https://www.ecfr.gov/current/title-40/part-1500>) through 1508 (<https://www.ecfr.gov/current/title-40/part-1508>) would include direct, indirect, and cumulative effects.

Direct effects are effects caused by the action and occur at the same time and place. 40 CFR 1508.8(a) ([https://www.ecfr.gov/current/title-40/section-1508.8#p-1508.8\(a\)](https://www.ecfr.gov/current/title-40/section-1508.8#p-1508.8(a))) (2019). Indirect effects are effects caused by the action that are later in time or farther removed in distance but are still reasonably foreseeable. *Id.* at § 1508.8(b). Cumulative effects are effects resulting from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of who undertakes the other actions. *Id.* at § 1508.7.

CEQ's proposal would remove the language from paragraph (g) defining “effects” as those “that are reasonably foreseeable and have a reasonably close causal relationship.” The proposal also would remove and replace paragraph (g)(2), which states that a “but for” causal relationship is insufficient to make an agency responsible for a particular effect under NEPA; generally excludes effects that are remote in time, geographically remote, or the product of a lengthy causal chain; and fully excludes effects that the agency has no ability to prevent due to its limited statutory authority or would occur regardless of the proposed action. The proposed rule also would remove and replace paragraph (g)(3), which states that an agency's analysis of effects must be consistent with the definition of “effects” and explicitly repeals the definition of cumulative impact in 40 CFR 1508.7 (<https://www.ecfr.gov/current/title-40/section-1508.7>) (2019). CEQ proposes to remove this language because it creates confusion and could be read to improperly narrow the scope of environmental effects relevant to NEPA analysis, contrary to NEPA's purpose.

CEQ's proposal would retain the introductory phrase added in the 2020 Rule that defines “effects” as “changes to the human environment from the proposed action or alternatives.” This revision eliminated the circular definition (“effects” include effects) of the 1978 NEPA Regulations. Finally, CEQ does not propose to include the statement from the 1978 NEPA Regulations that “effects” and “impacts” as used in the regulations are ☐ synonymous, as this statement would be redundant as the definition defines both “effects” and “impacts” together.

☐ Start Printed  
Page 55763

#### 1. REINSTATING “DIRECT” AND “INDIRECT” EFFECTS

CEQ proposes to restore the terms “direct” and “indirect” to the definition of “effects” to realign the regulations with longstanding agency practice<sup>[24]</sup> and judicial decisions interpreting NEPA. Based on CEQ's extensive experience implementing NEPA, this change would better reflect NEPA's statutory purpose and intent and be more consistent with case law, as courts have interpreted the NEPA statute to require agencies to analyze the reasonably foreseeable direct and indirect effects of a proposed action and alternatives. *See, e.g., Minn. Pub. Int. Rsch. Grp. v. Butz*, 498 F.2d 1314, 1322 (8th Cir. 1974) (stating that NEPA “is concerned

with indirect effects as well as direct effects,” and emphasizing long-term effects as a reason that a logging project would significantly affect the environment and require an EIS); *see also, e.g., Sierra Club v. Fed. Energy Reg. Comm'n*, 867 F.3d 1357, 1371-72 (D.C. Cir. 2017); *San Juan Citizens All. v. U.S. Bureau of Land Mgmt.*, 326 F. Supp. 3d 1227, 1244 (D.N.M. 2018) (holding that greenhouse gas emissions are foreseeable indirect effects of leases for fossil fuel production and approvals of pipelines that transport fossil fuels). As reflected in many of the public comments to the 2020 Rule as well as in CEQ's discussions with agency NEPA practitioners who have asked CEQ for clarification since the 2020 Rule went into effect, this change would eliminate confusion caused by the modified definition and ensure that the NEPA process fully and fairly considers the appropriate universe of effects, such as air and water pollution, greenhouse gas emissions that contribute to climate change, and effects on communities with environmental justice concerns.

While the 2020 NEPA Regulations retained the definition of “direct” effects without using the term, the revised definition creates ambiguity regarding whether and to what extent indirect effects are included in the definition of “effects.” In particular, the definition states in paragraph (g) that effects “may include effects that are later in time or farther removed in distance” but then states in paragraph (g)(2) that effects should generally not be considered if they are remote in time or geographically remote. CEQ's proposed changes would provide clarity to agencies, practitioners, and the public by restoring the terms and definitions of “direct” and “indirect,” as these terms can help agencies and the public evaluate and understand the full scope of reasonably foreseeable effects in NEPA reviews.

This reinstatement also would ensure that agencies consider the full range of reasonably foreseeable effects in the NEPA process, consistent with NEPA's goal of facilitating reason-based decision making that protects public health and the environment, as well as this Administration's policies to be guided by science and to address environmental protection, climate change, and environmental justice. For example, air pollution, including greenhouse gas emissions, released by fossil fuel combustion is often a reasonably foreseeable indirect effect of proposed fossil fuel extraction that agencies should evaluate in the NEPA process, even if the pollution is remote in time or geographically remote from a proposed action. And even where an agency does not exercise regulatory authority over all aspects of a project, it may be appropriate to consider and compare the air pollution and greenhouse gas emission effects that the proposal and the reasonable alternatives would have on the environment, even if the agency does not have control over all of the emissions that the alternatives would produce. The consideration of such effects can provide important information on the selection of a preferred alternative; for example, an agency decision maker might select the no action alternative, as opposed to a fossil fuel leasing alternative, on the basis that it best aligns with the agency's statutory authorities and policies with respect to greenhouse gas emission mitigation.<sup>[25]</sup>

Use of the terms “direct” and “indirect” also can help explain both adverse and beneficial effects over various timeframes. For instance, a utility-scale solar facility could have short-term direct adverse effects, such as land impacts associated with construction. The facility also could have long-term indirect beneficial effects, such as reductions in air pollution, including greenhouse gas emissions, from the renewable energy generated by the solar facility that displaces more greenhouse gas-intensive energy sources (such as coal or natural gas) as an electricity source for years or decades into the future. Consistent with CEQ's proposed restored definition, such indirect effects could be caused by the action to authorize a new solar facility, and would be later in time or farther removed in distance yet still reasonably foreseeable. Fully evaluating the effects of the facility would require identifying and evaluating both the direct and indirect effects of the proposed action.

The 2020 NEPA Regulations also removed the explanatory examples of indirect effects, including growth-inducing effects and other effects related to induced changes in the pattern of land use, population density, or growth rate, and related effects on air and water and other natural systems, including ecosystems. Restoring these examples is appropriate to highlight indirect effects that may be associated with myriad proposed Federal actions, such as expanding or repairing Federal highways or authorizing new renewable energy projects.

Numerous public comments discussed the elimination of references to “direct” and “indirect” in the definition of “effects” during the rulemaking for the 2020 NEPA Regulations. Commenters who supported the elimination of “direct” and “indirect” expressed views that the existing language creates confusion, that removal of the terms could help reduce the length of NEPA documents, and that retaining the terms would lead to an increase in litigation. Commenters also raised concerns that the terms have expanded the scope of NEPA analysis without serving NEPA's purpose of informed decision making but did not provide bases, analyses, or evidence to support these conclusions. The 2020 Rule adopted the position of these comments. CEQ considers the disclosure of both direct and indirect effects to be critical to the informed decision-making process such that the benefits of any such disclosure outweigh any potential for shorter NEPA documents or timeframes. Moreover, a well-drafted NEPA document can both be concise and supported by thorough analysis, and agencies have decades of experience considering the direct and indirect effects of their proposed actions. CEQ considers the potential for reduced litigation from the 2020 changes to be speculative, especially given the confusion that has resulted from deleting these familiar terms. Finally, CEQ expects that restoring these definitions that have been in place and in use for decades will better clarify the effects agencies need to consider in their NEPA analyses and may even help avoid delays in NEPA reviews.

Start Printed  
Page 55764

The vast majority of comments on the 2020 NEPA Regulations opposed the removal of the terms, and CEQ views those comments as supporting its proposal to restore the terms “direct” and “indirect” to the definition of “effects.” Commenters expressed views that retaining the terms would reduce confusion and litigation. They also expressed views that direct and indirect effects are critical elements of the evaluation of potential environmental effects of a proposed action, and they raised concerns that by deleting the term “indirect,” agencies may not adequately consider long-term or geographically remote impacts, including greenhouse gas emissions or water pollution that travels downstream. Commenters supported their views by pointing to CEQ's longstanding guidance and decades of agency guidance and court decisions using the terms to address effects pursuant to NEPA. Many commenters argued that removal of these terms would be contrary to the intent of the statute, and that consideration of both direct and indirect effects is essential to determining significance. CEQ invites comment on these proposed changes.

## **2. ADDING “CUMULATIVE EFFECTS” TO THE DEFINITION OF “EFFECTS”**

CEQ proposes to revise § 1508.1(g)(3) by restoring, with minor modifications, the definition of “cumulative impacts” from the 1978 NEPA Regulations and striking the current provision that repealed that definition. Analysis of reasonably foreseeable cumulative effects is integral to sound and complete environmental review. Cumulative effects analysis is an essential component of NEPA analysis, as it allows agencies and the public to understand how the incremental impacts of a proposed action contribute to cumulative environmental problems such as air pollution, water pollution, climate change, and biodiversity loss, among others. Today, science and data confirm that cumulative environmental harms, including repeated or frequent exposure to toxic air or water pollution, threaten human and environmental health and poses undue burdens on historically marginalized communities.<sup>[26]</sup> CEQ seeks to ensure that agencies fully analyze reasonably foreseeable cumulative effects before Federal decisions are made by restoring the term and its definition.

The 2020 Rule's deletion of the definition of "cumulative impacts" did not exclude reasonably foreseeable effects from consideration merely because they could be categorized as cumulative effects. In responding to comments about potential effects on threatened and endangered species, the preamble to the 2020 Rule explains that "the final rule does not ignore cumulative effects on listed species."<sup>[27]</sup> CEQ similarly explained in the Final Rule Response to Comments that the 2020 Rule did not automatically exclude from analysis effects falling within the deleted definition of "cumulative impacts."<sup>[28]</sup> However, CEQ considers the deletion of the longstanding term to have the potential to create confusion about when and if agencies should analyze cumulative effects, and creates uncertainty regarding this type of effects analysis contrary to longstanding agency practice and NEPA's purpose. For example, CEQ has heard from Federal agency NEPA practitioners both individually and in agency meetings that they would like clarification about how to address cumulative effects, including whether it remains permissible to use the term, in light of the changes made in 2020. In addition, outside stakeholders have raised concerns in meetings and listening sessions regarding the deletion of the term in light of the potential impact this could have in truncating the environmental review and disclosure of important categories of effects. Additionally, public comments received on the proposed 2020 Rule raised such concerns. By restoring the definition of cumulative effects, the proposed rule would clarify that agencies must analyze and disclose reasonably foreseeable cumulative effects.

Since its initial NEPA guidelines in 1970, CEQ has interpreted the statute as requiring consideration of cumulative effects. In its 1970 interim guidelines, CEQ provided that agencies should construe the statutory clause "major Federal actions significantly affecting the quality of the human environment" "with a view to the overall, *cumulative* impact of the action proposed (and of further actions contemplated)."<sup>[29]</sup> CEQ explained that agencies should consider "that the effect of many Federal decisions about a project or complex of projects can be individually limited but cumulatively considerable" because, for instance, agencies may provide funds over a period of years or multiple agencies may individually make decisions about partial aspects of a project.<sup>[30]</sup> The guidelines further stated that an agency should prepare an EIS "if it is reasonable to anticipate a cumulatively significant impact on the environment from the Federal action."<sup>[31]</sup>

These initial guidelines also interpreted the requirement in section 102(2)(C)(iv) to mean that "[t]he relationship between local short-term uses of man's environment and the maintenance and enhancement of long-term productivity . . . requires the agency to assess the action for *cumulative and long-term effects* from the perspective that each generation is trustee of the environment for succeeding generations."<sup>[32]</sup> This interpretation is reflected in the 1971 final guidelines<sup>[33]</sup> and the 1978 NEPA Regulations.<sup>[34]</sup> Decades of agency practice and CEQ guidance affirm the interpretation that NEPA requires analysis of cumulative effects.<sup>[35]</sup> For example, in 1997 CEQ noted that cumulative effects analysis is "critical" for the purposes of evaluating project □ alternatives and developing appropriate mitigation strategies.<sup>[36]</sup>

□ Start Printed  
Page 55765

CEQ's proposal to reinstate the definition of "cumulative impacts" aligns with longstanding legal precedent interpreting NEPA to require agencies to consider cumulative effects. Even before CEQ issued regulations on cumulative effects, the U.S. Supreme Court had interpreted NEPA to include them. In 1976, the Court held that NEPA requires consideration of cumulative effects "when several proposals . . . that will have *cumulative* or synergistic environmental impact upon a region are pending concurrently before an agency, their environmental consequences must be considered together." *Kleppe v. Sierra Club*, 427 U.S. 390, 410 (1976) (emphasis added).

Numerous commenters on the proposed 2020 Rule raised concerns that the 2020 Rule could be interpreted to eliminate consideration of cumulative effects and eliminating consideration of cumulative effects would undermine NEPA's purpose and environmental protection goals, and could interfere with the necessary

analysis of a proposed action's impacts. Other commenters expressed views that indirect and cumulative effects often disproportionately affect Tribes, minority, and low-income populations, and excluding the details of such effects from NEPA analyses could lead agency decision makers to unknowingly make decisions that negatively impact Tribes or communities with environmental justice concerns. Some commenters who favored striking the requirement to analyze cumulative effects expressed views that the consideration of cumulative impacts could be redundant and that removal of cumulative effects would reduce the time it takes to complete the NEPA process. Other commenters were neutral on the change but expressed views that the proposed change would be controversial and could lead to potential litigation or delays. The 2020 Rule eliminated the “cumulative effects” language, adopting the view that the analysis of cumulative effects was too broad, categorizing and determining the scope of cumulative effects is difficult and can divert agency resources from the most significant effects, and the analysis of cumulative effects could require agency attention to information that is irrelevant or inconsequential, and did not lead to informed decision making.

CEQ considered these comments and the rationale described in the 2020 Rule when developing this proposal. CEQ has changed its view and does not consider the term cumulative effects to be too broadly defined in the 1978 NEPA Regulations or too difficult for agencies to meaningfully implement. As explained earlier in this section, CEQ's own prior guidelines and guidance, along with decades of agency practice and longstanding legal precedent have interpreted NEPA to require agencies to consider cumulative effects. While the 2020 Rule found that cumulative effects was previously too broadly defined, the removal of “cumulative effects” created an even less clear definition of effects, resulting in more confusion and uncertainty about what type of effects analysis is necessary. Rather than diverting agency resources or focusing on effects that are irrelevant or inconsequential, as the 2020 Rule stated with respect to cumulative effects analysis, CEQ considers analysis of reasonably foreseeable cumulative effects to be an important part of NEPA analysis, helping the public and decision makers understand the full scope of potential impacts from a proposed action. Reasonably foreseeable cumulative effects are not irrelevant or inconsequential; for example, aggregate air and water pollution and habitat impacts affect long-term environmental conditions, wildlife, and communities—including in regions already overburdened by pollution. Analyzing reasonably foreseeable cumulative effects is consistent with NEPA's text and purpose and better informs decision makers about important aspects of proposed actions and their alternatives. Further, CEQ is not aware of any evidence supporting the claim that evaluation of cumulative effects necessarily leads to longer timelines, especially given the long history of agency and practitioner experience with this type of analysis as well as modern techniques that leverage science and technology to make reviews comprehensive yet efficient. And clarity on analyzing reasonably foreseeable cumulative effects, as proposed, would outweigh the speculative potential for shorter NEPA documents or timeframes.

CEQ shares the view that environmental reviews should be efficient and effective and will continue to evaluate the NEPA process for opportunities to improve timeliness consistent with NEPA's purposes. However, CEQ disagrees that requiring analysis of reasonably foreseeable cumulative effects causes unacceptably long NEPA processes. Further, by deleting the definition of cumulative effects, the 2020 Rule did not prohibit agencies from evaluating reasonably foreseeable cumulative effects and therefore, it was not certain to result in faster and less burdensome NEPA analyses. Rather, in affirmatively repealing the defined term from the regulations, the 2020 Rule has caused confusion and cast doubt as to whether agencies can and should continue to do this analysis. Finally, consideration of cumulative effects is important in order to fully inform agency decision makers before actions are taken, and effects analysis remains bound by the notion of reasonable foreseeability. CEQ invites comment on this proposed change.

### 3. REMOVING LIMITATIONS ON EFFECTS ANALYSIS

In proposing to restore the definition of “effects” from the 1978 NEPA Regulations, CEQ would remove changes made in the 2020 Rule stating that effects are those “that are reasonably foreseeable and have a reasonably close causal relationship to the proposed action or alternatives.” 40 CFR 1508.1(g) ([https://www.ecfr.gov/current/title-40/section-1508.1#p-1508.1\(g\)](https://www.ecfr.gov/current/title-40/section-1508.1#p-1508.1(g))). CEQ also proposes to remove and replace § 1508.1(g)(2), which states that “a ‘but for’ causal relationship is insufficient to make an agency responsible for a particular effect under NEPA;” agencies generally should not consider effects that are remote in time, geographically remote, or the product of a lengthy causal chain; and agencies should not consider effects that the agency has no ability to prevent due to its limited statutory authority. Finally, the proposed rule would remove as superfluous and replace § 1508.1(g)(3), which states that “[a]n agency’s analysis of effects shall be consistent with this paragraph.” This phrase seeks to enforce the limitations added to the “effects” definition in the 2020 Rule, which would be unnecessary if the limitations are removed.

The definition of “effects” in the 1978 NEPA Regulations gave agencies the discretion to identify the reasonably foreseeable effects of a proposed action and its alternatives in light of NEPA’s goals. It is CEQ’s view that this approach provides for more sound decision making, including decisions informed by science, and a more knowledgeable and engaged public than the definition of “effects” in the 2020 NEPA Regulations. Whether an effect is reasonably foreseeable is a context-specific inquiry that Federal agencies have engaged in for more than 40 years. Agencies have made these determinations guided by agency procedures and practice, evolving scientific understanding about natural systems and environmental outcomes, and court decisions.

The current definition of “effects” has internal inconsistencies, which make it  confusing to apply. The introductory paragraph of 40 CFR 1508.1(g) ([https://www.ecfr.gov/current/title-40/section-1508.1#p-1508.1\(g\)](https://www.ecfr.gov/current/title-40/section-1508.1#p-1508.1(g))) states that effects “may include” those that are later in time and farther removed in distance, but paragraph (g)(2) states that effects “should generally not be considered if they are remote in time, geographically remote, or the product of a lengthy causal chain.” This creates confusion as to whether agencies can or should consider these types of effects, potentially leading to inconsistent application of NEPA, public confusion or controversy, and enhanced risk of litigation and concomitant delays in the NEPA process.

Start Printed  
Page 55766

Removing the language from § 1508.1(g)(2) limiting the consideration of temporally or geographically removed environmental effects and effects that are a product of a lengthy causal chain would better align with the statutory text, which does not include any of these qualifiers and instead directs agencies to produce a detailed statement on the “environmental impact of [a] proposed action,” “any adverse environmental effects which cannot be avoided,” and “the relationship between local short-term uses of man’s environment and the maintenance and enhancement of long-term productivity.” 42 U.S.C. 4332(2)(C) (<https://www.govinfo.gov/link/uscode/42/4332>) (emphasis added). Many consequential reasonably foreseeable environmental effects, such as toxic releases into air or water and greenhouse gas emissions that contribute to climate change, often occur remote in time or place from the original action or are a product of a causal chain. For instance, when considering a potential Federal action that would permit fossil fuel extraction, it is reasonably foreseeable that the fossil fuel will be extracted, transported, and ultimately combusted to create energy, all of which cause air pollution that can have adverse public health and environmental effects. Thus, the 2020 Rule’s limiting language could cause Federal agencies to omit critical categories of effects from analysis and disclosure, frustrating NEPA’s core purpose and Congressional intent. Similarly, the statement that “a ‘but for’ causal relationship is insufficient to make an agency responsible for a particular effect under NEPA” added a confusing new standard to apply that could cause agencies to omit

reasonably foreseeable effects in NEPA reviews, contrary to NEPA's statutory purpose to promote informed decision making. CEQ disagrees that this language would help agencies better understand what effects they need to analyze and discuss, helping to reduce delays and paperwork with unnecessary analyses. Rather, the new language poses new implementation and interpretation challenges that could, in turn, create delays and conflict. The definition of “effects” that CEQ proposes to restore does not require that agencies disclose every possible effect; rather, the standard under NEPA has long been whether effects are reasonably foreseeable.

Similarly, the direction in the 2020 Rule to exclude “effects that the agency has no ability to prevent due to its limited statutory authority or would occur regardless of the proposed action” unduly limits agency discretion. CEQ proposes to remove this limitation because agencies may conclude that analyzing and disclosing such effects will provide important information to decision makers and the public. For example, agencies may need to analyze and disclose reasonably foreseeable growth and development that will occur if they authorize infrastructure projects such as highway interchanges or causeways, even if they do not have general land use authority. *See, e.g., Sierra Club v. Marsh*, 769 F.2d 868 (1st Cir. 1985); *City of Davis v. Coleman*, 521 F.2d 661 (9th Cir. 1975). Reasonably foreseeable environmental effects do not fall neatly within discrete agency jurisdictional or regulatory confines; rather, agencies make decisions about reviews and authorizations that have real world impacts, including effects like water or air pollution that are measurable and ascertainable yet may have physical effects outside an agency's statutory purview.

CEQ's proposal to restore the definition of “effects” from the 1978 NEPA Regulations is consistent with the U.S. Supreme Court's decision in *Department of Transportation v. Public Citizen*, 541 U.S. 752 (2004), which the 2020 Rule identified as the authority for the revised definition. In this case, the Supreme Court explained that NEPA and the 1978 NEPA Regulations are governed by a “rule of reason.” *Id.* at 767. The Federal Motor Carrier Safety Administration (FMCSA) was required to issue certification and safety regulations for Mexican trucks entering the United States, *id.* at 760, and had no ability to deny certification if trucks met the requirements, *id.* at 758-59. The Court held that, based on FMCSA's limited statutory authority, it was not arbitrary and capricious for FMCSA to exclude from its NEPA analysis the effects of trucks entering the United States that would result from the President's commitment to lift a moratorium on Mexican truck entry once FMCSA issued the regulations. *See id.* at 770. By affirming FMCSA's implementation of the 1978 NEPA Regulations under a substantial deference standard of review, the Court did not hold that agencies *may not* consider a broader range of effects in other circumstances, as the 2020 Rule suggests. Instead, the Court held that FMCSA's effects analysis in the specific factual and legal context of its proposed action was reasonable and not arbitrary and capricious.

It is CEQ's view that establishing a regulatory limitation on the scope of NEPA analysis drawn from *Public Citizen* does not lead to improved agency decision making, enhanced public participation, or a better-informed public. Rather, as CEQ has heard from NEPA practitioners and outside stakeholders, these limitations undermine sound decision making by creating confusion with respect to NEPA implementation, departing from CEQ's consistent interpretation of NEPA prior to 2020, breaking from science-based decisions, and potentially limiting relevant NEPA analysis with negative repercussions in critical areas such as climate change and environmental justice. NEPA has long been understood to require only analysis of effects that are “reasonably foreseeable,” but the limitations added by the 2020 NEPA Regulations could undermine longstanding agency discretion to determine the appropriate scope of analysis or result in agencies making less informed decisions contrary to NEPA's stated goals.

Numerous commenters addressed these limitations during the rulemaking for the 2020 NEPA Regulations. Many opposed the limitations, expressing views that requiring a close causal relationship could be confusing to implement and could inappropriately constrain consideration of reasonably foreseeable impacts of a proposed action on the human environment, undermining the purpose of NEPA. Those opposed also expressed views that the new limitations could be used to justify the exclusion of effects of a proposed action including air or water pollution affecting communities or wildlife located outside the immediate vicinity of the proposed action that are nonetheless reasonably foreseeable. For example, the limitations could cause agencies to exclude consideration of the effects to a community that relies on a water source downstream from a project area that is indirectly impacted by the proposed action's water quality effects. Some commenters also stated that the term "remote" is too vague and relative. Those who supported the limitations expressed views that the changes were in keeping with the judicial precedent <sup>1</sup> cited in the proposed rule and could help cut the length and time of NEPA analysis by reducing burdens on Federal agencies; however, commenters did not provide evidence demonstrating how inclusion of these limitations would help cut the length and time of NEPA analysis.

[Start Printed Page 55767](#)

Upon reconsidering the position taken in the 2020 NEPA Regulations, CEQ proposes to remove these provisions in order to improve clarity on the types of effects that agencies must consider, eliminate restrictions that may conflict with scientific understanding of environmental outcomes, and better inform decision makers and the public about the full suite of reasonably foreseeable effects of a proposed action and its alternatives. CEQ disagrees that the provisions added in 2020 will reduce burdens on Federal agencies, given that Federal agencies have long operated under the definition of "effects" as defined in the 1978 NEPA Regulations and may have existing NEPA procedures aligned with the 1978 definitions. The 2020 Rule indicated that the added provisions would help agencies better understand what effects need to be analyzed and discussed and would reduce delays and unnecessary analysis. However, agencies have indicated confusion about how to apply the "close causation" and "but for" limitations in the current definition of effects and are concerned that the 2020 Rule may preclude them from considering the same range of effects as the 1978 Regulations. With the proposed changes in this rulemaking, CEQ seeks to reduce confusion and provide clarity on the effects that agencies must consider and does not agree that removing this language will directly result in delays. Additionally, providing clarity to agencies and the public on what is required provides benefits to the environmental review process that outweigh any uncertain potential for shorter timeframes. CEQ requests comment on these changes. CEQ also invites comments on whether CEQ should provide in a Phase 2 rulemaking more specificity about the manner in which agencies should analyze certain categories of effects.

## **IV. Rulemaking Analyses and Notices**

### **A. Executive Order 12866, Regulatory Planning and Review**

E.O. 12866 provides that the Office of Information and Regulatory Affairs will review all significant rules.<sup>[37]</sup> E.O. 13563 (/executive-order/13563) reaffirms the principles of E.O. 12866, calling for improvements in the Federal Government's regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory objectives.<sup>[38]</sup> This proposed rule is a significant regulatory action that CEQ submitted to OMB for review. The proposed changes would remove uncertainty created by the 2020 Rule to benefit agencies and the public. Removing constraints on agency NEPA analyses could result in longer review timeframes, but these changes do not obligate agencies to undertake longer, more complicated analyzes. If agencies choose to consider additional alternatives and conduct more robust analyses, these analyses should improve societal outcomes by improving agency

decision making. Since individual cases will vary, the magnitude of potential costs and benefits resulting from these proposed changes are difficult to anticipate. Therefore, CEQ has not quantified them. CEQ invites public comment on those expected impacts and the role they should play in informing the final rule.

### **B. Regulatory Flexibility Act and Executive Order 13272 (/executive-order/13272), Proper Consideration of Small Entities in Agency Rulemaking**

The Regulatory Flexibility Act (RFA), as amended, 5 U.S.C. 601 (<https://www.govinfo.gov/link/uscode/5/601>) *et seq.*, and E.O. 13272 (/executive-order/13272)<sup>[39]</sup> require agencies to assess the impacts of proposed and final rules on small entities. Under the RFA, small entities include small businesses, small organizations, and small governmental jurisdictions. An agency must prepare an Initial Regulatory Flexibility Analysis (IRFA) unless it determines and certifies that a proposed rule, if promulgated, would not have a significant economic impact on a substantial number of small entities. 5 U.S.C. 605(b) (<https://www.govinfo.gov/link/uscode/5/605>). The proposed rule would not directly regulate small entities. Rather, the proposed rule would apply to Federal agencies and set forth the process for their compliance with NEPA. Accordingly, CEQ hereby certifies that the proposed rule, if promulgated, would not have a significant economic impact on a substantial number of small entities.

### **C. National Environmental Policy Act**

Under the CEQ regulations, major Federal actions may include regulations. When CEQ issued regulations in 1978, it prepared a “special environmental assessment” for illustrative purposes pursuant to E.O. 11991.<sup>[40]</sup> The NPRM for the 1978 rule stated “the impacts of procedural regulations of this kind are not susceptible to detailed analysis beyond that set out in the assessment.”<sup>[41]</sup> Similarly, in 1986, while CEQ stated in the final rule that there were “substantial legal questions as to whether entities within the Executive Office of the President are required to prepare environmental assessments,” it also prepared a special environmental assessment.<sup>[42]</sup> The special environmental assessment issued in 1986 made a finding of no significant impact, and there was no finding made for the assessment of the 1978 final rule.

CEQ continues to take the position that a NEPA analysis is not required for establishing or updating NEPA procedures. *See Heartwood v. U.S. Forest Serv.*, 230 F.3d 947, 954-55 (7th Cir. 2000) (finding that neither NEPA or the CEQ regulations required the Forest Service to conduct an environmental assessment or an EIS prior to the promulgation of its procedures creating a categorical exclusion). Nevertheless, based on past practice, CEQ has developed a special environmental assessment and has posted it in the docket. CEQ invites comments on the special environmental assessment.

### **D. Executive Order 13132 (/executive-order/13132), Federalism**

E.O. 13132 (/executive-order/13132) requires agencies to develop an accountable process to ensure meaningful and timely input by state and local officials in the development of regulatory policies that have federalism implications.<sup>[43]</sup> Policies that have federalism implications include regulations that have substantial direct effects on the states, on the relationship between the Federal Government and the states, or on the distribution of power and responsibilities among the various levels of government. CEQ does not anticipate that this proposed rule has federalism implications because it applies to Federal agencies, not states.

### **E. Executive Order 13175 (/executive-order/13175), Consultation and Coordination With Indian Tribal Governments**

E.O. 13175 (/executive-order/13175) requires agencies to have a process to ensure meaningful and timely input by Tribal officials in the development of policies that have Tribal implications.<sup>[44]</sup> Such policies include regulations that have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes. CEQ has assessed the impact of this proposed rule on Indian Tribal governments and has determined preliminarily that the proposed rule would not significantly or uniquely affect these communities but seeks comment on this preliminary determination. However, CEQ plans to engage in government-to-government consultation with federally recognized Tribes and Alaska Native Corporations on its NEPA regulations generally.

Start Printed  
Page 55768

#### **F. Executive Order 12898 (/executive-order/12898), Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations**

E.O. 12898 (/executive-order/12898) requires agencies to make achieving environmental justice part of their missions by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations and low-income populations.<sup>[45]</sup> CEQ has analyzed this proposed rule and preliminarily determined that it would not cause disproportionately high and adverse human health or environmental effects on minority populations and low-income populations. This rule would set forth implementing regulations for NEPA; it is in the agency implementation of NEPA when conducting reviews of proposed agency actions where consideration of environmental justice effects typically occurs. CEQ invites comment on this preliminary determination.

#### **G. Executive Order 13211 (/executive-order/13211), Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use**

Agencies must prepare a Statement of Energy Effects for significant energy actions under E.O. 13211 (/executive-order/13211).<sup>[46]</sup> CEQ has preliminarily determined that this rulemaking is not a “significant energy action” because it is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

#### **H. Executive Order 12988 (/executive-order/12988), Civil Justice Reform**

Under section 3(a) of E.O. 12988 (/executive-order/12988),<sup>[47]</sup> agencies must review their proposed regulations to eliminate drafting errors and ambiguities, draft them to minimize litigation, and provide a clear legal standard for affected conduct. Section 3(b) provides a list of specific issues for review to conduct the reviews required by section 3(a). CEQ has conducted this review and determined that this proposed rule complies with the requirements of E.O. 12988 (/executive-order/12988).

#### **I. Unfunded Mandate Reform Act**

Section 201 of the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1531 (<https://www.govinfo.gov/link/uscode/2/1531>), requires Federal agencies to assess the effects of their regulatory actions on state, local, and Tribal governments, and the private sector to the extent that such regulations incorporate requirements specifically set forth in law. Before promulgating a rule that may result in the expenditure by a state, Tribal, or local government, in the aggregate, or by the private sector of \$100 million, adjusted annually for inflation, in any 1 year, an agency must prepare a written statement that assesses the effects on state, Tribal, and local governments and the private sector. 2 U.S.C. 1532 (<https://www.govinfo.gov/link/uscode/2/1532>). This proposed rule would apply to Federal agencies and would not result in expenditures of \$100 million or more for state, local, and Tribal governments, in the

aggregate, or the private sector in any 1 year. This proposed action also would not impose any enforceable duty, contain any unfunded mandate, or otherwise have any effect on small governments subject to the requirements of 2 U.S.C. 1531-1538 (<https://www.govinfo.gov/link/uscode/2/1531>).

## J. Paperwork Reduction Act

This proposed rule would not impose any new information collection burden that would require additional review or approval by OMB under the Paperwork Reduction Act (PRA), 44 U.S.C. 3501 (<https://www.govinfo.gov/link/uscode/44/3501>) *et seq.*

## List of Subjects in 40 CFR Parts 1502 (<https://www.ecfr.gov/current/title-40/part-1502>), 1507 (<https://www.ecfr.gov/current/title-40/part-1507>), and 1508 (<https://www.ecfr.gov/current/title-40/part-1508>)

- Administrative practice and procedure
- Environmental impact statements
- Environmental protection
- Natural resources

Brenda Mallory,

Chair.

For the reasons discussed in the preamble, the Council on Environmental Quality proposes to amend parts 1502, 1507, and 1508 in title 40 of the Code of Federal Regulations (<https://www.ecfr.gov/current/title-40>) as follows:

## PART 1502—ENVIRONMENTAL IMPACT STATEMENT

1. Revise the authority citation for part 1502 to read as follows:

**Authority:** 42 U.S.C. 4321-4347 (<https://www.govinfo.gov/link/uscode/42/4321>); 42 U.S.C. 4371-4375 (<https://www.govinfo.gov/link/uscode/42/4371>); 42 U.S.C. 7609 (<https://www.govinfo.gov/link/uscode/42/7609>); and E.O. 11514, 35 FR 4247 (</citation/35-FR-4247>), 3 CFR (<https://www.ecfr.gov/current/title-3>), 1966-1970, Comp., p. 902, as amended by E.O. 11991, 42 FR 26967 (</citation/42-FR-26967>), 3 CFR (<https://www.ecfr.gov/current/title-3>), 1977 Comp., p. 123.

2. Revise § 1502.13 to read as follows:

### § 1502.13 Purpose and need.

The statement shall briefly specify the underlying purpose and need to which the agency is responding in proposing the alternatives including the proposed action.

## PART 1507—AGENCY COMPLIANCE

3. Revise the authority citation for part 1507 to read as follows:

**Authority:** 42 U.S.C. 4321-4347 (<https://www.govinfo.gov/link/uscode/42/4321>); 42 U.S.C. 4371-4375 (<https://www.govinfo.gov/link/uscode/42/4371>); 42 U.S.C. 7609 (<https://www.govinfo.gov/link/uscode/42/7609>); and E.O. 11514, 35 FR 4247 (/citation/35-FR-4247), 3 CFR (<https://www.ecfr.gov/current/title-3>), 1966-1970, Comp., p. 902, as amended by E.O. 11991, 42 FR 26967 (/citation/42-FR-26967), 3 CFR (<https://www.ecfr.gov/current/title-3>), 1977 Comp., p. 123.

4. Amend § 1507.3 by revising paragraphs (a) and the introductory text of paragraph (b) to read as follows:

**§ 1507.3 Agency NEPA procedures.**

(a) The Council has determined that the categorical exclusions contained in agency NEPA procedures as of September 14, 2020, are consistent with this subchapter.

(b) No more than 36 months after September 14, 2020, or 9 months after the establishment of an agency, whichever comes later, each agency shall develop or revise, as necessary, proposed procedures to implement the regulations in this subchapter. When the agency is a department, it may be efficient for major subunits (with the consent of the department) to adopt their own procedures.

★\*

★\*

★\*

★\*

★\*

## PART 1508—DEFINITIONS

5. Revise the authority citation for part 1508 to read as follows:

**Authority:** 42 U.S.C. 4321-4347 (<https://www.govinfo.gov/link/uscode/42/4321>); 42 U.S.C. 4371-4375 (<https://www.govinfo.gov/link/uscode/42/4371>); 42 U.S.C. 7609 (<https://www.govinfo.gov/link/uscode/42/7609>); and E.O. 11514, 35 FR 4247 (/citation/35-FR-4247), 3 CFR (<https://www.ecfr.gov/current/title-3>), 1966-1970, Comp., p. 902, as amended by E.O. 11991, 42 FR 26967 (/citation/42-FR-26967), 3 CFR (<https://www.ecfr.gov/current/title-3>), 1977 Comp., p. 123.

6. Amend § 1508.1 by revising paragraphs (g) and (z) to read as follows:

**§ 1508.1 Definitions.**

★\*

★\*

★\*

★\*

★\*

(g) *Effects or impacts* means changes to the human environment from the proposed action or alternatives and include the following:

(1) Direct effects, which are caused by the action and occur at the same time and place.

(2) Indirect effects, which are caused by the action and are later in time or farther removed in distance, but are still reasonably foreseeable. Indirect effects may include growth inducing effects and other effects related to induced □ changes in the pattern of land use, population density or growth rate, and related effects on air and water and other natural systems, including ecosystems.

□ Start Printed  
Page 55769

(3) Cumulative effects, which are effects on the environment that result from the incremental effects of the action when added to the effects of other past, present, and reasonably foreseeable actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions. Cumulative effects can result from individually minor but collectively significant actions taking place over a period of time.

(4) Effects include ecological (such as the effects on natural resources and on the components, structures, and functioning of affected ecosystems), aesthetic, historic, cultural, economic, social, or health, whether direct, indirect, or cumulative. Effects may also include those resulting from actions which may have both beneficial and detrimental effects, even if on balance the agency believes that the effects will be beneficial.

★\*

★\*

★\*

★\*

★\*

(z) *Reasonable alternatives* means a reasonable range of alternatives that are technically and economically feasible, and meet the purpose and need for the proposed action.

★\*

★\*

★\*

★\*

★\*

25. Agencies may consider all available tools and resources in assessing GHG emissions and climate change effects of their proposed actions, including, as appropriate and relevant, CEQ's 2016 "Final Guidance for Federal Departments and Agencies on Consideration of Greenhouse Gas Emissions and the Effects of Climate Change in National Environmental Policy Act Reviews," 81 FR 51866 (/citation/81-FR-51866) (Aug. 5, 2016). Additionally, under E.O. 13990 (/executive-order/13990), the Interagency Working Group (IWG) on the Social Cost of Greenhouse Gases published interim estimates and is preparing updated estimates, which agencies may find helpful in considering greenhouse gas emission effects and mitigation as part of the NEPA process. See [https://www.whitehouse.gov/wp-content/uploads/2021/02/TechnicalSupportDocument\\_SocialCostofCarbonMethaneNitrousOxide.pdf?source=email](https://www.whitehouse.gov/wp-content/uploads/2021/02/TechnicalSupportDocument_SocialCostofCarbonMethaneNitrousOxide.pdf?source=email) ([https://www.whitehouse.gov/wp-content/uploads/2021/02/TechnicalSupportDocument\\_SocialCostofCarbonMethaneNitrousOxide.pdf?source=email](https://www.whitehouse.gov/wp-content/uploads/2021/02/TechnicalSupportDocument_SocialCostofCarbonMethaneNitrousOxide.pdf?source=email)). This proposed rule does not specifically address the IWG's interim or final Social Cost of Greenhouse Gases estimates. More information on the interim estimates is available from the Office of Information and Regulatory Affairs. See <https://www.whitehouse.gov/wp-content/uploads/2021/06/Social-Cost-of-Greenhouse-Gas-Emissions.pdf> (<https://www.whitehouse.gov/wp-content/uploads/2021/06/Social-Cost-of-Greenhouse-Gas-Emissions.pdf>).

Proclamation 10287 of October 8, 2021

## Northeast Canyons and Seamounts Marine National Monument

### A Proclamation

On September 15, 2016, President Barack Obama issued Proclamation 9496 (Northeast Canyons and Seamounts Marine National Monument), which designated approximately 4,913 square miles of waters and submerged lands where the Atlantic Ocean meets the continental shelf as the Northeast Canyons and Seamounts Marine National Monument. This designation represented the culmination of nearly a half-century of conservation efforts to preserve the vulnerable deep marine ecosystems of the Atlantic canyons and seamounts, which are widely known as natural laboratories for the long-term study of benthic ecology due to their rich biodiversity of important deep-sea corals, endangered whales, endangered and threatened sea turtles, other marine mammals, and numerous fish and invertebrate species.

The monument is composed of two units, the Canyons Unit and the Seamounts Unit, each of which showcases unique geological features that anchor vulnerable ecological communities threatened by varied uses, climate change, and related impacts. As described by Proclamation 9496, the Canyons Unit includes three underwater canyons: Oceanographer, Gilbert, and Lydonia. The canyons' hard walls, which range from 200 meters to thousands of meters deep, provide important habitats for, and support the life cycles of, a diversity of ocean life, including sponges, corals, and other invertebrates; larger species such as squid, octopuses, skates, flounders, and crabs; and highly migratory oceanic species, including tuna, billfish, sharks, toothed whales (such as the endangered sperm whale), and many species of beaked whales. The larger Seamounts Unit is home to four extinct undersea volcanoes—Bear, Physalia, Retriever, and Mytilus—that form a portion of an underwater chain of more than 30 extinct volcanoes that runs from the southern side of the Georges Bank to midway across the western Atlantic Ocean. These extinct volcanoes were formed as the Earth's crust passed over a stationary hot spot that pushed magma up through the seafloor, and many of them have flat tops that were created as ocean waves eroded the cooling magma. Geographically isolated from the continental platform and characterized by steep and complex submarine topography that interrupts existing ocean currents and provides a constant supply of plankton and nutrients, the seamounts are biological islands with various substrates that form ocean oases and act as incubators for new life. All four seamounts support highly diverse ecological communities, including many rare and endemic species that are new to science and are not known to live anywhere else on Earth. Together, the monument's submarine canyons and seamounts create the unique ecological conditions necessary to support one of the Atlantic Ocean's most biologically productive and important marine environments and one of science's greatest oceanic laboratories. Proclamation 9496 recognized the undersea canyons and seamounts, the deep-sea, pelagic, and other marine ecosystems they support, and the biodiversity they contain as objects of historic and scientific interest and dedicated the Federal lands and waters within the monuments' boundaries to their protection.

To provide for the proper care and management of the monument's objects of historic and scientific interest, Proclamation 9496 directed the Secretary of Commerce and the Secretary of the Interior (Secretaries) to prepare a joint management plan and promulgate implementing regulations, as appropriate. To the extent consistent with domestic and international law, Proclamation 9496 also directed the Secretaries to prohibit

Start Printed  
Page 57350

certain activities within the monument, including mineral exploration and development; the use of poisons, electrical charges, or explosives to collect or harvest monument resources; and drilling into, anchoring, dredging, or otherwise altering submerged lands. Proclamation 9496 also directed the Secretaries to prohibit all commercial fishing within the monument, but allowed the Secretaries to permit a 7-year phase-out for red crab and American lobster commercial fishing.

Despite the monument's ecological importance, wealth of objects of historic and scientific interest, and potential for additional scientific discovery, President Donald Trump issued Proclamation 10049 (Modifying the Northeast Canyons and Seamounts Marine National Monument) on June 5, 2020, to remove the restrictions on commercial fishing. Multiple parties challenged Proclamation 10049 in Federal court, asserting that it exceeded the President's authority under the Antiquities Act. Restoring the prohibition on commercial fishing will ensure that the unique, fragile, and largely pristine canyons and seamounts, and the dynamic ocean systems and marine life they support, identified in Proclamation 9496 as objects of historic or scientific interest requiring protection under the Antiquities Act, will be safeguarded and will continue to provide an important venue for scientific study and research.

The Canyons Unit and Seamounts Unit each contain interconnected oceanographic, geologic, and biologic features that create a unique oceanic system that supports an abundant concentration of biodiversity. These features' close proximity to each other results in an interdependent whole that exceeds the sum of its constituent parts.

In the case of the Canyons Unit, the monument boundary closely corresponds to a contiguous continental shelf break area around the heads of the three canyons, which extend seaward from features that have not yet fully taken on the distinctive canyon shape, to the walls and valleys of the canyons themselves, and out to the start of the outer shelf thousands of meters below. Within this transitional region, the walls of the three closely situated canyons combine with ocean currents, temperature gradients, eddies, and fronts to create significant and complex nutrient cycling and other processes that result in a biologically rich and distinct oceanic system. The Canyons Unit is sized to correspond to and protect these large-scale oceanic processes that provide the foundation for the distinct habitat that supports numerous objects of scientific interest. For example, the shallower depths of the canyons include ecologically significant and vulnerable habitat for tilefish, which function as ecosystem engineers by creating “pueblo” habitat at depths of 100 to 300 meters in the monument's canyons, which in turn supports a diversity of fish and invertebrate species. The Canyons Unit also supports a great abundance of marine mammals and other upper-trophic level predators attracted to the prey abundance fostered by the Canyons Unit's unique marine landscape. Due to the close proximity of the three canyons to one another, congregating marine mammals and pelagic fish species routinely transit the inter-canyon areas while foraging among the biologic abundance found there. This is an example of the important ecological linkages that connect the monument's various topographies, the surrounding shelf, and the water column above them, which necessitate protection of the entire interrelated system.

In the case of the Seamounts Unit, the boundary encompasses the four seamounts and the areas between the edges of Bear and Retriever Seamounts on the north side, Bear and Mytilus Seamounts on the south side, and out to the boundary line of the Exclusive Economic Zone on the east side. These four seamounts, rising thousands of feet from the surrounding seafloor, are the only seamounts located within U.S. Atlantic waters. As with the Canyons Unit, the proximity of these important geologic features to each other influences the currents, upwelling, stratification, and mixing that make the species and habitat within the monument so diverse, abundant, and unique. The seamounts function as oases in the open ocean environment and feature distinct ecological communities as they grade down from the relatively shallow seamount peaks to the abyss

below. They are critical to protecting the ecosystem linkages that transport nutrients to the surface through predator-prey interactions and temperature-driven upwelling, and transport organic carbon to deep-sea ecosystems (corals and benthic communities) through plankton and fecal detritus, downwelling materials, down-slope currents, and animal migration and mortality.

The boundaries of the monument reflect the need to protect the canyons, seamounts, and the attendant deep-sea, pelagic, and other marine ecosystems, which are themselves objects of historic and scientific interest, as well as the complex geologic, oceanographic, and biologic characteristics in the Canyons Unit and Seamounts Unit. The monument ensures these vulnerable marine ecosystems are safeguarded and will remain the great ocean laboratories recognized in Proclamation 9496. The boundaries are closely hewn to prominent geologic objects that form the foundation of closely linked habitats, which support the monument's great abundance and diversity of life. The boundaries are scaled to avoid cascading negative effects from failing to protect parts of these complex and interconnected marine environments and their unique oceanographic processes. In order to ensure effective management and protection of the objects of historic and scientific interest, straight-line coordinates are used where possible to provide clear and enforceable demarcation of this open-ocean monument. For these reasons, Proclamation 9496 found that the lands owned or controlled by the Federal Government within the monument's boundaries were the smallest area compatible with the proper care and management of the objects of historic and scientific interest designated for protection.

Commercial fishing activity has the potential to significantly degrade the monument's objects of historic and scientific interest. Bottom-contact fishing gear and fixed fishing gear (for example, traps, gillnets, and bottom and pelagic long-line gear) with buoys, submerged lines, and associated traps, mesh, or hooks, all pose threats to the canyons and seamounts, the ecosystem, and the deep-sea, pelagic, and other marine life they support, as well as the additional objects of historic and scientific interest contained therein. Although statutes such as the Magnuson-Stevens Fishery Conservation and Management Act, 16 U.S.C. 1801 (<https://www.govinfo.gov/link/uscode/16/1801>) *et seq.*, the Endangered Species Act, 16 U.S.C. 1531 (<https://www.govinfo.gov/link/uscode/16/1531>) *et seq.*, the Migratory Bird Treaty Act, 16 U.S.C. 703-712 (<https://www.govinfo.gov/link/uscode/16/703>), the National Wildlife Refuge System Administration Act, 16 U.S.C. 668dd-668ee (<https://www.govinfo.gov/link/uscode/16/668dd>), the Refuge Recreation Act, 16 U.S.C. 460k (<https://www.govinfo.gov/link/uscode/16/460k>) *et seq.*, the Marine Mammal Protection Act, 16 U.S.C. 1361 (<https://www.govinfo.gov/link/uscode/16/1361>) *et seq.*, the Clean Water Act, 33 U.S.C. 1251 (<https://www.govinfo.gov/link/uscode/33/1251>) *et seq.*, the Oil Pollution Act, 33 U.S.C. 2701 (<https://www.govinfo.gov/link/uscode/33/2701>) *et seq.*, the National Marine Sanctuaries Act, 16 U.S.C. 1431 (<https://www.govinfo.gov/link/uscode/16/1431>) *et seq.*, and Title I of the Marine Protection, Research and Sanctuaries Act (Ocean Dumping Act), 33 U.S.C. 1401 (<https://www.govinfo.gov/link/uscode/33/1401>) *et seq.*, provide important safeguards that did not exist prior to the Antiquities Act's passage, these laws do not adequately address the threats facing the canyons and seamounts and their surrounding ecosystem. The prohibition on commercial fishing confers necessary, additional, and lasting protections for the objects of historic and scientific interest in the Northeast Canyons and Seamounts Marine National Monument for current and future generations.

Protection of the Northeast Canyons and Seamounts as a marine national monument preserves significant geological features, marine biota, and deep-sea, pelagic, and other marine ecosystems that the canyons and seamounts create and support as they interact with ocean currents, ensuring that the natural and scientific values of this area are maintained for the benefit of all Americans and for the discovery of new information about living marine resources for years to come. □

WHEREAS, section 320301 of title 54, United States Code (<https://www.govinfo.gov/link/uscode/54/320301>) (the “Antiquities Act”) authorizes the President, in his discretion, to declare by public proclamation historic landmarks, historic and prehistoric structures, and other objects of historic or scientific interest that are situated upon the lands owned or controlled by the Federal Government to be national monuments, and to reserve as a part thereof parcels of land, the limits of which shall be confined to the smallest area compatible with the proper care and management of the objects to be protected; and

WHEREAS, Proclamation 9496 designated the Northeast Canyons and Seamounts Marine National Monument in the Atlantic Ocean and reserved approximately 4,913 square miles of water and submerged lands in and around certain deep-sea canyons and seamounts situated upon lands and interests in lands owned or controlled by the Federal Government as the smallest area compatible with the proper care and management of objects of historic and scientific interest; and

WHEREAS, Proclamation 10049 modified the conditions of the Northeast Canyons and Seamounts Marine National Monument to allow commercial fishing activities, which could impact monument objects; and

WHEREAS, I find that the resources identified above and in Proclamation 9496 are objects of historic or scientific interest in need of protection under the Antiquities Act; and

WHEREAS, I find that the unique nature of the waters and submerged lands that make up the marine environment in the Northeast Canyons and Seamounts area and the collection of objects and resources therein make the entire area within the boundaries of the monument an object of historic and scientific interest in need of protection under the Antiquities Act; and

WHEREAS, I find that there are documented threats to the objects identified above and in Proclamation 9496; and

WHEREAS, I find that the objects identified above and in Proclamation 9496 are not adequately protected by applicable law and other administrative designations; and

WHEREAS, I find that the boundaries of the monument reserved by Proclamation 9496 represent the smallest area compatible with the proper care and management of the objects of historic or scientific interest; and

WHEREAS, it is in the public interest to ensure the preservation and protection of the objects of historic and scientific interest in the Northeast Canyons and Seamounts Marine National Monument;

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by the authority vested in me by section 320301 of title 54, United States Code (<https://www.govinfo.gov/link/uscode/54/320301>), hereby proclaim that, in order to provide for the proper care and management of the objects identified above and in Proclamation 9496, management of lands and interests in lands owned or controlled by the Federal Government within the Northeast Canyons and Seamounts Marine National Monument shall be governed by the management provisions of Proclamation 9496. Such provisions include paragraph 6 in the section entitled “Prohibited Activities” and paragraph 5 in the section entitled “Regulated Activities,” which provide for the prohibition of all commercial fishing in the monument, except for red crab and American lobster commercial fishing, which may be permitted until September 15, 2023.

The Secretary of Commerce, through the National Oceanic and Atmospheric Administration, and the Secretary of the Interior, through the United States Fish and Wildlife Service, share management responsibility for the monument, as prescribed in Proclamation 9496. Within their respective authorities, the Secretaries shall prepare a joint management plan for the monument by September 15, 2023, and, as appropriate, shall promulgate implementing regulations that address any further specific actions necessary for the proper care and management of the objects and area identified above and in Proclamation 9496. □

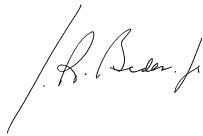

□ Start Printed  
Page 57353

To the extent any provision of Proclamation 10049 is inconsistent with this proclamation or Proclamation 9496, the terms of this proclamation and Proclamation 9496 shall govern.

Warning is hereby given to all unauthorized persons not to appropriate, excavate, injure, destroy, or remove any feature of this monument and not to locate or settle upon any lands thereof.

If any provision of this proclamation, including its application to a particular parcel of land, is held to be invalid, the remainder of this proclamation and its application to other parcels of land shall not be affected thereby.

IN WITNESS WHEREOF, I have hereunto set my hand this eighth day of October, in the year of our Lord two thousand twenty-one, and of the Independence of the United States of America the two hundred and forty-sixth.

## PUBLISHED DOCUMENT

**AGENCY:**

Fish and Wildlife Service, Interior.

**ACTION:**

Proposed rule.

**SUMMARY:**

On January 7, 2021, we, the U.S. Fish and Wildlife Service (we, the Service, or USFWS), published a final rule defining the scope of the Migratory Bird Treaty Act (MBTA) as it applies to conduct resulting in the injury or death of migratory birds protected by the MBTA. We are now proposing to revoke that rule for the reasons set forth below. The effect of this proposed rule would be to return to implementing the MBTA as prohibiting incidental take and applying enforcement discretion, consistent with judicial precedent.

## DATES:

We request public comments on this proposed rule on or before June 7, 2021.

## ADDRESSES:

You may submit comments by one of the following methods:

(1) *Electronically*: Go to the Federal eRulemaking Portal: <http://www.regulations.gov> (<http://www.regulations.gov>). In the Search box, enter FWS-HQ-MB-2018-0090, which is the docket number for this action. Then, click on the Search button. You may submit a comment by clicking on “Comment Now!” Please ensure you have located the correct document before submitting your comments.

(2) *By hard copy*: Submit by U.S. mail to: Public Comments Processing, Attn: FWS-HQ-MB-2018-0090, U.S. Fish and Wildlife Service, MS: JAO/3W, 5275 Leesburg Pike, Falls Church, VA 22041-3803.

We request that you send comments only by the methods described above. We will post all comments on <https://www.regulations.gov> (<https://www.regulations.gov>). This generally means that we will post any personal information you provide us (see Public Comments, below, for more information).

## FOR FURTHER INFORMATION CONTACT:

Jerome Ford, Assistant Director, Migratory Birds, at 202-208-1050.

## SUPPLEMENTARY INFORMATION:

On January 7, 2021, we published a final rule defining the scope of the MBTA (16 U.S.C. 703 (<https://www.govinfo.gov/link/uscode/16/703>) *et seq.*) as it applies to conduct resulting in the injury or death of migratory birds protected by the MBTA (86 FR 1134 (/citation/86-FR-1134)) (hereafter referred to as the “January 7 rule”). The January 7 rule codified an interpretation of the MBTA set forth in a 2017 legal opinion of the Solicitor of the Department of the Interior, Solicitor's Opinion M-37050, which concluded that the MBTA does not prohibit incidental take.

As initially published, the January 7 rule was to become effective 30 days later, on February 8, 2021. However, on February 4, 2021, USFWS submitted a final rule to the **Federal Register** correcting the January 7 rule's effective date to March 8, 2021, to conform with its status as a “major rule” under the Congressional Review Act, which requires a minimum effective date period of 60 days, *see* 5 U.S.C. 801(a)(3) (<https://www.govinfo.gov/link/uscode/5/801>) and 804(2) (<https://www.govinfo.gov/link/uscode/5/804>). The final rule extending the effective date of the January 7 final rule itself became effective when it was made available for public inspection in the reading room of the Office of Federal Register on February 5, 2021 and was published in the **Federal Register** on February 9, 2021 (86 FR 8715 (/citation/86-FR-8715)). In that document, we also sought public comment to inform our review of the January 7 rule and to determine whether further extension of the effective date is necessary.

After further review, we decided not to extend the effective date of the January 7 rule beyond March 8. We acknowledge that the January 7 rule will remain in effect for some period of time even if it is ultimately determined, after notice and comment, that it should be revoked. But, rather than extending the effective date again, we believe that the most transparent and efficient path forward is instead to immediately propose

to revoke the January 7 rule. This proposed rule provides the public with notice of our current intent to revoke the January 7 rule's interpretation of the MBTA that it does not prohibit incidental take, subject to our final decision after consideration of public comments.

We have undertaken further review of the January 7 rule and have determined that the rule does not reflect the best reading of the MBTA's text, purpose, and history. It is also inconsistent with the majority of relevant court decisions addressing the issue, including the decision of the District Court for the Southern District of New York that expressly rejected the rationale offered in the rule. The rule's reading of the MBTA also raises serious concerns with a United States' treaty partner, and for the migratory bird resources protected by the MBTA and underlying treaties. Accordingly, we are proposing to revoke the January 7 rule.

The MBTA statutory provisions at issue in the January 7 rule have been the subject of repeated litigation and diametrically opposed opinions of the Solicitors of the Department of the Interior. The longstanding historical agency practice confirmed in the earlier Solicitor M-Opinion, M-37041, and upheld by most reviewing courts, had been that the MBTA prohibits the incidental take of migratory birds (subject to certain legal constraints). The January 7 rule reversed these several decades of past agency practice and interpreted the scope of the MBTA to exclude incidental take of migratory birds. In so doing, the January 7 rule codified Solicitor's Opinion M-37050, which itself had been vacated by the United States District Court for the Southern District of New York. This interpretation focused on the language of section 2 of the MBTA, which, in relevant part, makes it "unlawful at any time, by any means, or in any manner, to pursue, hunt, take, capture, kill" migratory birds or attempt to do the same. 16 U.S.C. 703(a)

(<https://www.govinfo.gov/link/uscode/16/703>). Solicitor's  Opinion M-37050 and the January 7 rule argued that the prohibited terms listed in section 2 all refer to conduct directed at migratory birds, and that the broad preceding language, "by any means, or in any manner," simply covers all potential methods and means of performing actions directed at migratory birds and does not extend coverage to actions that incidentally take or kill migratory birds.

Start Printed  
Page 24574

As noted above, on August 11, 2020, a court rejected the interpretation set forth in Solicitor's Opinion M-37050 as contrary to the MBTA and vacated that opinion. *Natural Res. Def. Council v. U.S. Dep't of the Interior*, 478 F. Supp. 3d 469 (S.D.N.Y. 2020) ("NRDC"). In late January 2021, two new lawsuits were filed that challenge the January 7 rule. *Nat'l Audubon Soc'y v. U.S. Fish & Wildlife Serv.*, 1:21-cv-00448 (S.D.N.Y. filed Jan. 19, 2021); *State of New York v. U.S. Dep't of the Interior*, 1:21-cv-00452 (S.D.N.Y. filed Jan. 19, 2021). At the time the January 7 rule was published, the United States had filed a notice of appeal of the NRDC decision in the U.S. Court of Appeals for the Second Circuit. Since that time, the United States filed a stipulation to dismiss that appeal on February 25, 2021, and the Deputy Solicitor permanently withdrew M-37050 on March 8, 2021.

The District Court's decision in NRDC expressly rejected the basis for the January 7 rule's conclusion that the statute does not prohibit incidental take. In particular, the court reasoned that the plain language of the MBTA's prohibition on killing protected migratory bird species "at any time, by any means, and in any manner" shows that the MBTA prohibits incidental killing. *See* 478 F. Supp. 3d at 481. Thus, the statute is not limited to actions directed at migratory birds. After closely examining the court's holding, we are persuaded that it advances the better reading of the statute, including that the better reading of "kill" is that it also prohibits incidental killing.

The interpretation contained in the January 7 rule relies heavily on *United States v. CITGO Petroleum Corp.*, 801 F.3d 477 (5th Cir. 2015) (*CITGO*). The Fifth Circuit is the only Circuit Court of Appeals to expressly state that the MBTA does not prohibit incidental take. In *CITGO*, the Fifth Circuit held that the term “take” in the MBTA does not include incidental taking because “take” at the time the MBTA was enacted in 1918 referred in common law to “[reducing] animals, by killing or capturing, to human control” and accordingly could not apply to accidental or incidental take. *Id.* at 489 (following *Babbitt v. Sweet Home Chapter Cmty. for a Great Or.*, 515 U.S. 687, 717 (1995) (Scalia J., dissenting) (*Sweet Home*)). While we do not agree with the *CITGO* court's interpretation of the term “take” under the MBTA, we further note that *CITGO* does not provide legal precedent for construing “kill” narrowly. The *CITGO* court's analysis is limited by its terms to addressing the meaning of the term “take” under the MBTA; thus, any analysis of the meaning of the term “kill” was not part of the court's holding. As discussed below, however, we also disagree with the *CITGO* court's analysis of the term “kill.”

Although the *CITGO* court's holding was limited to interpreting “take,” the court opined in dicta that the term “kill” is limited to intentional acts aimed at migratory birds in the same manner as “take.” *See* 801 F.3d at 489 n.10. However, the court based this conclusion on two questionable premises.

First, the court stated that “kill” has little if any independent meaning outside of the surrounding prohibitory terms “pursue,” “hunt,” “capture,” and “take,” analogizing the list of prohibited acts to those of two other environmental statutes—the Endangered Species Act (ESA) (16 U.S.C. 1531 (<https://www.govinfo.gov/link/uscode/16/1531>) *et seq.*) and the Migratory Bird Conservation Act (16 U.S.C. 715 (<https://www.govinfo.gov/link/uscode/16/715>) *et seq.*). *See id.* The obvious problem with this argument is that it effectively reads the term “kill” out of the statute; in other words, the *CITGO* court's reasoning renders “kill” superfluous to the other terms mentioned, thus violating the rule against surplusage. *See, e.g., Corley v. United States*, 556 U.S. 303, 314 (2009).

Second, employing the *noscitur a sociis* canon of statutory construction (which provides that the meaning of an ambiguous word should be determined by considering its context within the words it is associated with), the Fifth Circuit argued that because the surrounding terms apply to “deliberate acts that effect bird deaths,” then “kill” must also. *See* 801 F.3d at 489 n.10. The January 7 rule also relied heavily on this canon to argue that both “take” and “kill” must be read as deliberate acts in concert with the other referenced terms. Upon closer inspection though, the only terms that clearly and unambiguously refer to deliberate acts are “hunt” and “pursue.” Both the *CITGO* court and the January 7 final rule erroneously determined that “capture” can also only be interpreted as a deliberate act. This is not so. There are many examples of unintentional or incidental capture, such as incidental capture in traps intended for animals other than birds or in netting designed to prevent swallows nesting under bridges. Thus, the *CITGO* court's primary argument that “kill” only applies to “deliberate actions” rests on the fact that just two of the five prohibited actions unambiguously describe deliberate acts. The fact that most of the prohibited terms can be read to encompass actions that are not deliberate in nature is a strong indication that Congress did not intend those terms to narrowly apply only to direct actions.

The *NRDC* court similarly rejected the January 7 rule's interpretation of the term “kill” and its meaning within the context of the list of actions prohibited by the MBTA. The court noted the broad, expansive language of section 2 prohibiting hunting, pursuit, capture, taking, and killing of migratory birds “by any means or in any manner.” 478 F. Supp. 3d at 482. The court reasoned that the plain meaning of this language can only be construed to mean that activities that result in the death of a migratory bird are a violation “irrespective of whether those activities are specifically directed at wildlife.” *Id.* The court also noted that the

*Sweet Home* decision relied upon by the *CITGO* court and the January 7 rule actually counsels in favor of a broad reading of the term “kill,” even assuming Justice Scalia accurately defined the term “take” in his dissent. The *Sweet Home* case dealt specifically with the definition of “take” under the ESA, which included the terms “harm” and “kill.” The majority in *Sweet Home* was critical of the consequences of limiting liability under the ESA to “affirmative conduct intentionally directed against a particular animal or animals,” reasoning that knowledge of the consequences of an act are sufficient to infer liability, including typical incidental take scenarios. *Id.* at 481-82.

The *NRDC* court went on to criticize the use of the *noscitur a sociis* canon in Solicitor's Opinion M-37050 (a use repeated in the January 7 rule). The court reasoned that the term “kill” is broad and can apply to both intentional, unintentional, and incidental conduct. The court faulted the Solicitor's narrow view of the term and disagreed that the surrounding terms required that narrow reading. To the contrary, the court found the term “kill” to be broad and not at all ambiguous, pointedly noting that proper use of the *noscitur* canon is confined to interpreting ambiguous statutory language. Moreover, use of the *noscitur* canon deprives “kill” of any independent meaning, which runs headlong into the canon against surplusage as noted above. The court did not agree that an example provided □ by the government demonstrated that “kill” had independent meaning from “take” under the interpretation espoused by Solicitor's Opinion M-37050. By analogy, the court referenced the Supreme Court's rejection of the dissent's use of the *noscitur* canon in *Sweet Home*, which similarly gave the term “harm” the same essential function as the surrounding terms used in the definition of “take” under the ESA, denying it independent meaning. *See id.* at 484.

□ Start Printed  
Page 24575

In sum, after further review of the *CITGO* and *NRDC* decisions, along with the language of the statute, we now conclude that the interpretation of the MBTA set forth in the January 7 rule and Solicitor's Opinion M-37050, which provided the basis for that interpretation, is not the construction that best accords with the text, purposes, and history of the MBTA. It simply cannot be squared with the *NRDC* court's holding that the MBTA's plain language encompasses the incidental killing of migratory birds. Even if the *NRDC* court's plain-language analysis were incorrect, the operative language of the MBTA is at minimum ambiguous, thus USFWS has discretion to implement that language in a manner consistent with the conservation purposes of the statute and its underlying Conventions. To the extent that the primary policy justifications for the January 7 rule were resolving uncertainty and increasing transparency through rulemaking, we do not consider these concerns to outweigh the legal infirmities of the January 7 rule or the conservation purposes of the statute and its underlying Conventions. Interpreting the statute to exclude incidental take is not the reading that best advances these purposes, which is underscored by the following additional reasons for revoking the current regulation.

First, the January 7 rule is undermined by the 2002 legislation authorizing military-readiness activities that incidentally take or kill migratory birds. In that legislation, Congress temporarily exempted “incidental taking” caused by military-readiness activities from the prohibitions of the MBTA; required the Secretary of Defense to identify, minimize, and mitigate the adverse effect of military-readiness activities on migratory birds; and directed USFWS to issue regulations under the MBTA creating a permanent exemption for military-readiness activities. Bob Stump National Defense Authorization Act for Fiscal Year 2003, Public Law 107-314 (<https://www.govinfo.gov/link/plaw/107/public/314>), Div. A, Title III, section 315 (2002), 116 Stat. 2509 (Stump Act). This legislation was enacted in response to a court ruling that had enjoined military training that incidentally killed migratory birds. *Ctr. for Biological Diversity v. Pirie*, 191 F. Supp. 2d 161 and 201 F. Supp. 2d 113 (D.D.C. 2002), *vacated on other grounds sub nom. Ctr. for Biological Diversity v. England*, 2003 U.S. App. Lexis 1110 (D.C. Cir. Jan. 23, 2003). Notably, Congress did not amend the MBTA to define the terms “take” or “kill.” Instead, Congress itself uses the term “incidental take” and provides that the

MBTA “shall not apply” to such take by the Armed Forces during “military-readiness activities.” Moreover, Congress limited the exemption only to military-readiness activities to training and operations related to combat and the testing of equipment for combat use; it expressly excluded routine military-support functions and the “operation of industrial activities” from the exemption afforded by the 2002 legislation, leaving such non-combat-related activities fully subject to the prohibitions of the Act. Even then, the military-readiness incidental take carve-out was only temporarily effectuated through the statute itself. Congress further directed the Department of the Interior (DOI or the Department) “to prescribe regulations to exempt the Armed Forces for the incidental taking of migratory birds during military readiness activities.” This would be an odd manner in which to proceed to address the issue raised by the *Pirie* case if Congress’ governing understanding at the time was that incidental take of any kind was not covered by the Act (we acknowledge that Congress’s understanding when enacting legislation in 2002 is relevant to, but not dispositive of, Congress’s intent when it enacted the MBTA in 1918). Congress simply could have amended the MBTA to clarify that incidental take is not prohibited by the statute or, at the least, that take incidental to military-readiness activities is not prohibited. Instead, Congress limited its amendment to exempting incidental take only by military-readiness activities, expressly excluded other military activities from the exemption, and further directed DOI to issue regulations delineating the scope of the military-readiness carve-out from the prohibitions of the Act. All of these factors indicate that Congress understood that the MBTA’s take and kill prohibitions included what Congress itself termed “incidental take.”

In arguing that Congress’s authorization of incidental take during military-readiness activities did not authorize enforcement of incidental take in other contexts, the January 7 rule cites the *CITGO* court’s conclusion that a “single carve-out from the law cannot mean that the entire coverage of the MBTA was implicitly and hugely expanded.” *CITGO*, 801 F.3d at 491. It is true that the Stump Act clearly did not, by its terms, authorize enforcement of incidental take in other contexts. It clearly could not do anything of the sort, based on its narrow application to military-readiness activities. Rather, the logical explanation is that Congress considered that the MBTA already prohibited incidental take (particularly given USFWS’s enforcement of incidental take violations over the prior three decades) and there was no comprehensive regulatory mechanism available to authorize that take. Thus, it was necessary to temporarily exempt incidental take pursuant to military-readiness activities to address the *Pirie* case and direct USFWS to create a permanent exemption. This conclusion is supported by the fact that Congress specifically stated in the Stump Act that the exemption did not apply to certain military activities that do not meet the definition of military readiness, including operation of industrial activities and routine military-support functions.

On closer inspection, the *CITGO* court’s analysis of the purposes behind enactment of the military-readiness exemption is circular. Assuming the military-readiness exemption is necessary because the MBTA otherwise prohibits incidental take only represents an implicit and huge expansion of coverage under the MBTA if it is assumed that the statute did not already prohibit incidental take up to that point. But Congress would have had no need to enact the exemption if the MBTA did not—both on its terms and in Congress’s understanding—prohibit incidental take. The adoption of a provision to exempt incidental take in one specific instance is merely a narrowly tailored exception to the general rule, and provides clear evidence of what Congress understood the MBTA to prohibit.

Second, further consideration of concerns expressed by one of our treaty partners counsels in favor of revoking the January 7 rule. The MBTA implements four bilateral migratory bird Conventions with Canada, Mexico, Russia, and Japan. *See* 16 U.S.C. 703-705 (<https://www.govinfo.gov/link/uscode/16/703>), 712

(<https://www.govinfo.gov/link/uscode/16/712>). The Government of Canada communicated its concerns with the January 7 rule both during and after the rulemaking process, including providing comments on the environmental impact statement (EIS) associated with the rule.

After the public notice and comment period had closed, Canada's Minister of Environment and Climate Change summarized the Government of Canada's concerns in a public statement issued on December 18, 2020 (<https://www.canada.ca/en/environment-climate-change/news/2020/12/minister-wilkinson-expresses-concern-over-proposed-regulatory-changes-to-the-united-states-migratory-bird-treaty-act.html>) (<https://www.canada.ca/en/environment-climate-change/news/2020/12/minister-wilkinson-expresses-concern-over-proposed-regulatory-changes-to-the-united-states-migratory-bird-treaty-act.html>)).

Minister Wilkinson voiced the Government of Canada's concern regarding “the potential negative impacts to our shared migratory bird species” of allowing the incidental take of migratory birds under the MBTA rule and “the lack of quantitative analysis to inform the decision.” He noted that the “Government of Canada's interpretation of the proposed changes . . . is that they are not consistent with the objectives of the Convention for the Protection of Migratory Birds in the United States and Canada.” Additionally, in its public comments on the draft EIS for the MBTA rule, Canada stated that it believes the rule “is inconsistent with previous understandings between Canada and the United States (U.S.), and is inconsistent with the long-standing protections that have been afforded to non-targeted birds under the Convention for the Protection of Migratory Birds in the United States and Canada . . . as agreed upon by Canada and the U.S. through Article I. The removal of such protections will result in further unmitigated risks to vulnerable bird populations protected under the Convention.” After further consideration, we have similar concerns to those of our treaty partner, Canada.

The protections for “non-targeted birds” noted by the Canadian Minister are part and parcel of the Canada Convention, as amended by the Protocol between the United States and Canada Amending the 1916 Convention for the Protection of Migratory Birds in Canada and the United States, which protects not only game birds hunted and trapped for sport and food, but also nongame birds and insectivorous birds. For instance, the preamble to the Convention declares “saving from indiscriminate slaughter and of insuring the preservation of such migratory birds as are either useful to man or are harmless” as its very purpose and declares that “many of these species are . . . in danger of extermination through lack of adequate protection during the nesting season or while on their way to and from their breeding grounds.” Convention between the United States and Great Britain (on behalf of Canada) for the Protection of Migratory Birds, 39 Stat. 1702 (Aug. 16, 1916). Thus, whether one argues that the language of section 2 of the MBTA plainly prohibits incidental killing of migratory birds or is ambiguous in that regard, an interpretation that excludes incidental killing is difficult to square with the express conservation purposes of the Canada Convention. Moreover, until recently there had been a longstanding “mutually held interpretation” between the two treaty partners that regulating incidental take is consistent with the underlying Convention, as stated in an exchange of Diplomatic Notes in 2008. While Canada expressed its position before the final rule on January 7, upon review, we now have determined that the concerns raised by the United States' treaty partner counsel in favor of revocation of the rule.

In addition to the Canada Convention, the January 7 rule may also be inconsistent with the migratory bird conventions with Mexico, Japan, and Russia. The Japan and Russia Conventions both broadly call for the parties to prevent damage to birds from pollution. *See* Convention between the Government of the United States of America and the Government of Japan for the Protection of Migratory Birds and Birds in Danger of Extinction, and Their Environment, Mar. 4, 1972, 25 U.S.T. 3329 (Japan Convention); Convention between the United States of America and the Union of Soviet Socialist Republics Concerning the Conservation of

Start Printed  
Page 24576

Migratory Birds and Their Environment, Nov. 19, 1976, 29 U.S.T. 4647 (Russia Convention). The Protocols amending the Canada and Mexico Conventions contain similar language calling for the parties to seek means to prevent damage to birds and their environment from pollution. See Protocol between the Government of the United States and the Government of Canada Amending the 1916 Convention Between the United Kingdom and the United States of America for the Protection of Migratory Birds, Dec. 14, 1995, S. Treaty Doc. No. 104-28, T.I.A.S. 12721; Protocol Between the Government of the United States of America and the Government of the United Mexican States Amending the Convention for the Protection of Migratory Birds and Game Mammals, May 5, 1997, S. Treaty Doc. No. 105-26.

Some of the relevant provisions include Article IV of the Protocol with Canada, which states that each party shall use its authority to “take appropriate measures to preserve and enhance the environment of migratory birds,” and in particular shall “seek means to prevent damage to [migratory] birds and their environments, including damage resulting from pollution”; Article I of the Mexico Convention, which discusses protecting migratory birds by “means of adequate methods[. . .]”; Article VI(a) of the Japan Convention, which provides that parties shall “[s]eek means to prevent damage to such birds and their environment, including, especially, damage resulting from pollution of the seas”; and Articles IV(1) and 2(c) of the Russia Convention, which require parties to “undertake measures necessary to protect and enhance the environment of migratory birds and to prevent and abate the pollution or detrimental alteration of that environment,” and, in certain special areas, undertake, to the maximum extent possible, “measures necessary to protect the ecosystems in those special areas . . . against pollution, detrimental alteration and other environmental degradation.”

The January 7 rule eliminates a source of liability for pollution that incidentally takes and kills migratory birds, a position that is difficult to square with the mutually agreed-upon treaty provisions agreeing to prevent damage to birds from pollution. The January 7 rule does not directly affect natural resource damage assessments conducted under the Comprehensive Environmental Response Compensation and Liability Act, the Oil Pollution Act, and the Clean Water Act to determine compensation to the public for lost natural resources and their services from accidents that have environmental impacts, such as oil spills. However, for oils spills such as the BP Deepwater Horizon Gulf oil spill and the *Exxon Valdez* oil spill in Alaska, significant penalties were levied in addition to those calculated under natural resource damage assessments based on incidental-take liability under the MBTA. Those fines constituted a large proportion of the total criminal fines and civil penalties associated with historical enforcement of incidental take violations. As noted in the EIS, the January 7 rule eliminates the Federal Government's ability to levy similar fines in the future, thereby reducing the deterrent effect of the MBTA and reducing funding for the North American Wetland Conservation Fund for the protection and restoration of wetland habitat for migratory birds.

In sum, the issues raised by the Government of Canada raise significant concerns regarding whether the January 7 rule is consistent with the Canada Convention, and questions also remain regarding that rule's consistency with the other migratory bird Conventions. We note as well that the primary policy justifications for the January 7 rule were resolving uncertainty and increasing  transparency through rulemaking. These concerns, however, do not outweigh the legal infirmities of the January 7 rule or the conservation objectives described above. On these bases, in addition to the legal concerns raised above, we are proposing to revoke the MBTA rule.

## Public Comments

We solicit public comments on the following topics:

1. Whether we should revoke the rule, as proposed here, and why or why not;
2. The costs or benefits of revoking the rule;
3. The costs or benefits of leaving the rule in place; and
4. Any reliance interests that might be affected by revoking the rule, or not revoking the rule.

You may submit your comments and materials concerning this proposed rule by one of the methods listed in **ADDRESSES**. If you provided comments in response to the February 9, 2021, rule (86 FR 8715 (/citation/86-FR-8715)) to extend the effective date of the January 7 rule, you do not need to resubmit those comments in response to this proposed rule. The USFWS will consider all comments pertaining to the January 7 rule that were submitted in response to the February 9, 2021, rule in determining whether to revoke the January 7 rule. Comments must be submitted to <http://www.regulations.gov> (<http://www.regulations.gov>) before 11:59 p.m. (Eastern Time) on the date specified in **DATES**. We will not consider mailed comments that are not postmarked by the date specified in **DATES**.

We will post your entire comment—including your personal identifying information—on <http://www.regulations.gov> (<http://www.regulations.gov>). If you provide personal identifying information in your comment, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. Comments and materials we receive will be available for public inspection on <http://www.regulations.gov> (<http://www.regulations.gov>).

## Required Determinations

### National Environmental Policy Act

Because we are proposing to revoke the January 7 MBTA rule, we will rely on the final EIS developed to analyze that rule in determining the environmental impacts of revoking it: “Final Environmental Impact Statement; Regulations Governing Take of Migratory Birds,” available on <http://www.regulations.gov> (<http://www.regulations.gov>) in Docket No. FWS-HQ-MB-2018-0090. The alternatives analyzed in that EIS cover the effects of interpreting the MBTA to both include and exclude incidental take. If we finalize this proposed rule, we will publish an amended Record of Decision that explains our decision to instead select the environmentally preferable alternative, or Alternative B, in the final EIS. If we determine that any additional, relevant impacts on the human environment have occurred subsequent to our existing Record of Decision, we will describe those impacts in the amended Record of Decision.

### Government to Government Relationship With Tribes

In accordance with Executive Order 13175 (/executive-order/13175), “Consultation and Coordination with Indian Tribal Governments,” and the Department of the Interior’s manual at 512 DM 2, we considered the possible effects of this rule on federally recognized Indian Tribes. The Department of the Interior strives to strengthen its government-to government relationship with Indian Tribes through a commitment to consultation with Indian Tribes and recognition of their right to self governance and Tribal sovereignty.

We have evaluated the January 7 rule that this proposed rule would revoke under the criteria in Executive Order 13175 (/executive-order/13175) and under the Department's Tribal consultation policy and determined that the January 7 rule may have a substantial direct effect on federally recognized Indian Tribes. We

received requests from nine federally recognized Tribes and two Tribal councils for government-to-government consultation on that rule. Accordingly, the Service initiated government to government consultation via letters signed by Regional Directors and completed the consultations before issuing the January 7 final rule.

During these consultations, there was unanimous opposition from Tribes to the re-interpretation of the MBTA to exclude coverage of incidental take under the January 7 rule. Thus, this proposal to revoke the January 7 rule is consistent with the requests of federally recognized Tribes during those consultations.

### **Energy Supply Distribution**

E.O. 13211 (/executive-order/13211) requires agencies to prepare Statements of Energy Effects when undertaking certain actions. As noted above, this rule is a significant regulatory action under E.O. 12866, but the rule is not likely to have a significant adverse effect on the supply, distribution, or use of energy. The action has not been otherwise designated by the Administrator of the Office of Information and Regulatory Affairs (OIRA) in the Office of Management and Budget (OMB) as a significant energy action. Therefore, no Statement of Energy Effects is required.

### **Endangered Species Act**

Section 7 of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531-44 (<https://www.govinfo.gov/link/uscode/16/1531-44>)), requires that “The Secretary [of the Interior] shall review other programs administered by him and utilize such programs in furtherance of the purposes of this Act.” 16 U.S.C. 1536(a)(1) (<https://www.govinfo.gov/link/uscode/16/1536>). It further states “[e]ach Federal agency shall, in consultation with and with the assistance of the Secretary, insure that any action authorized, funded, or carried out by such agency . . . is not likely to jeopardize the continued existence of any endangered species or threatened species or result in the destruction or adverse modification of [critical] habitat.” 16 U.S.C. 1536(a)(2) (<https://www.govinfo.gov/link/uscode/16/1536>). We have determined that this rule proposing the revocation of the January 7 rule regarding the take of migratory birds will have no effect on ESA-listed species within the meaning of ESA Section 7(a)(2).

### **Regulatory Planning and Review (Executive Orders 12866 and 13563)**

Executive Order (E.O.) 12866 provides that the Office of Information and Regulatory Affairs (OIRA) in the Office of Management and Budget (OMB) will review all significant rules. OIRA has determined that this proposed rule is economically significant.

Executive Order 13563 (/executive-order/13563) reaffirms the principles of E.O. 12866 while calling for improvements in the nation's regulatory system to promote predictability, to reduce uncertainty, and to use the best, most innovative, and least burdensome tools for achieving regulatory ends. The executive order directs agencies to consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public where these approaches are relevant, feasible, and consistent with regulatory objectives. E.O. 13563 (/executive-order/13563) emphasizes further that regulations must be based on the best available science and that the rulemaking process must allow for public participation and an open exchange of ideas. We have developed this proposed rule in a manner consistent with these requirements.

This proposed regulation would revoke the January 7 MBTA rule. The legal effect of this proposal would be to remove from the Code of Federal Regulations (CFR) the interpretation that incidental take of migratory birds is not prohibited under the MBTA, based on □ the rationale explained in the preamble. As explained in the preamble, the Solicitor's Opinion (M-37050) that formed the basis for the January 7 rule was overturned

in court and has since been withdrawn by the Solicitor's Office. By removing § 10.14 from subpart B of title 50 CFR (<https://www.ecfr.gov/current/title-50/part-B>), USFWS would revert to implementing the statute without an interpretative regulation governing incidental take, consistent with judicial precedent. This would mean that incidental take can violate the MBTA to the extent consistent with the statute and judicial precedent. Enforcement discretion would be applied, subject to certain legal constraints.

The Service conducted a regulatory impact analysis of the January 7 rule, which can be viewed online at <http://www.regulations.gov> (<http://www.regulations.gov>) in Docket No. FWS-HQ-MB-2018-0090. In that analysis, we analyzed the effects of an alternative (Alternative B) where the Service would promulgate a regulation that interprets the MBTA to prohibit incidental take consistent with the Department's longstanding prior interpretation. By reverting to this interpretation, the Service would view the incidental take of migratory birds as a potential violation of the MBTA, consistent with judicial precedent. The Regulatory Impact Analysis for this proposed rule can be viewed online at <http://www.regulations.gov> (<http://www.regulations.gov>) in Docket No. FWS-HQ-MB-2018-0090. The primary benefit of this rule results from decreased incidental take. While we are unable to quantify the benefits, we expect this rule to result in increased ecosystem services and benefits to businesses that rely on these services. Further, benefits will accrue from increased bird watching opportunities. The primary cost of this rule is the compliance cost incurred by industry, which is also not quantifiable. Firms are more likely to implement best practice measures to avoid potential fines. Additionally, potential fines generate transfers from industry to the government. Using a 10-year time horizon (2022-2031), the present value of these transfers is estimated to be \$73.6 million at a 7-percent discount rate and \$67.1 million at a 3-percent discount rate. This would equate to an annualized value of \$15.6 million at a 7-percent discount rate and \$15.3 million at a 3-percent discount rate.

### **Regulatory Flexibility Act and Small Business Regulatory Enforcement Fairness Act**

Under the Regulatory Flexibility Act (5 U.S.C. 601 (<https://www.govinfo.gov/link/uscode/5/601>) *et seq.*, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996 (Pub. L. 104-121 (<https://www.govinfo.gov/link/plaw/104/public/121>))), whenever an agency is required to publish a notice of rulemaking for any proposed or final rule, it must prepare and make available for public comment a regulatory flexibility analysis that describes the effects of the rule on small businesses, small organizations, and small government jurisdictions. However, in lieu of an initial or final regulatory flexibility analysis (IRFA or FRFA) the head of an agency may certify on a factual basis that the rule would not have a significant economic impact on a substantial number of small entities.

SBREFA amended the Regulatory Flexibility Act to require Federal agencies to provide a statement of the factual basis for certifying that a rule would not have a significant economic impact on a substantial number of small entities. Thus, for an initial/final regulatory flexibility analysis to be required, impacts must exceed a threshold for "significant impact" and a threshold for a "substantial number of small entities." *See* 5 U.S.C. 605(b) (<https://www.govinfo.gov/link/uscode/5/605>). We prepared an Initial Regulatory Flexibility Analysis, briefly summarized below, to accompany this rule that can be viewed online at <http://www.regulations.gov> (<http://www.regulations.gov>) in Docket No. FWS-HQ-MB-2018-0090.

The proposed rule may affect industries that typically incidentally take substantial numbers of birds and with which the Service has worked to reduce those effects (Table 1). In some cases, these industries have been subject to enforcement actions and prosecutions under the MBTA prior to the issuance of M-37050. The vast majority of entities in these sectors are small entities, based on the U.S. Small Business Administration (SBA) small business size standards. It is important to note that many small businesses would not be affected

if we ultimately promulgate this proposed rule. Only those businesses that reduced best management practices that avoid or minimize incidental take of migratory birds as a result of the issuance of M-37050 in January 2017 and the January 7, 2021, rule would incur costs. If we promulgate this proposed rule, those businesses would presumably reinstate those best management practices. We are requesting public comment on the number of businesses that reduced best management practices and the resulting cost savings as a direct result of issuance of M-37050 and the January 7 rule.

Table 1—Distribution of Businesses Within Affected Industries

NAICS industry description	NAICS code	Number of businesses	Small business size standard (number of employees)	Number of small businesses
Finfish Fishing	114111	1,210	<sup>a</sup> 20	1,185
Crude Petroleum and Natural Gas Extraction	211111	6,878	1,250	6,868
Drilling Oil and Gas Wells	213111	2,097	1,000	2,092
Solar Electric Power Generation	221114	153	250	153
Wind Electric Power Generation	221115	264	250	263
Electric Bulk Power Transmission	221121	261	500	214
Electric Power Distribution	221122	7,557	1,000	7,520
Wireless Telecommunications Carriers (except Satellite)	517312	15,845	1,500	15,831

Source: U.S. Census Bureau, 2012 County Business Patterns.

<sup>a</sup> **Note:** The SBA size standard for finfish fishing is \$22 million. Neither Economic Census, Agriculture Census, nor the National Marine Fisheries Service collect business data by revenue size for the finfish industry. Therefore, we employ other data to approximate the number of small businesses. Source: U.S. Census Bureau, 2017 Economic Annual Survey.

Since the Service does not currently have a permitting system dedicated to authorizing incidental take of migratory birds, the Service does not have specific information regarding how many businesses in each sector implement measures to reduce incidental take of birds. Not all businesses in each sector incidentally take birds. In addition, a variety of factors would influence whether, under the previous interpretation of the MBTA, businesses would implement such measures. It is also unknown how many businesses continued or reduced practices to reduce the incidental take of birds since publication of the Solicitor's Opinion M-37050 or issuance of the January 7 rule. We did not receive sufficient information on that issue during the public comment periods associated with the January 7 rule and associated NEPA analysis or the February 9 rule extending the effective date of the January 7 rule. We reiterate our request for public comment on these issues for this proposed rule.

If this proposed rulemaking results in revoking the January 7 rule, any subsequent incidental take of migratory birds could violate the MBTA, consistent with the statute and judicial precedent. Some small entities would incur costs if they reduced best management practices after M-Opinion 37050 was issued in January 2017 or after promulgation of the January 7, 2021, rule and would need to subsequently reinstate those practices if the January 7 rule is revoked, assuming they did not already reinstate such practices after vacatur of M-Opinion 37050.

## Summary

Table 2 identifies examples of bird mitigation measures, their associated costs, and why available data are not extrapolated to the entire industry sector or small businesses. We are requesting public comment so we can extrapolate data, if appropriate, to each industry sector and any affected small businesses. Table 3 summarizes likely economic effects of the proposed rule on the business sectors identified in Table 1. In many cases, the costs of actions businesses typically implement to reduce effects on birds are small compared to the economic output of business, including small businesses, in these sectors. We are requesting public comment regarding this estimate. As shown by the limited data in Table 3, we are also requesting public comment for the finfish fishing and solar power electric generation industries to determine significance. The likely economic effects summarized in Table 3 are based on the RFA analysis for the January 7 rule. We solicited public comments on these issues during the public comment periods associated with the January 7 rule and associated NEPA analysis and the February 9 rule extending the effective date of the January 7 rule. We reiterate our request for public comment on these data for this proposed rule.

Table 2—Best Management Practices Costs by Industry<sup>1</sup>

NAICS industry	Example of bird mitigation measure	Estimated cost	Why data are not extrapolated to entire industry or small businesses
Finfish Fishing (NAICS 11411)	Changes in design of longline fishing hooks, changes in offal management practices, use of flagging or streamers on fishing lines	<ul style="list-style-type: none"> <li>• Costs are per vessel per year</li> <li>• \$1,400 for thawed blue-dyed bait.</li> <li>• \$150 for strategic offal discards.</li> <li>• \$4,600 for Tori line.</li> <li>• \$4,000 one-time cost for underwater setting chute.</li> <li>• \$4,000 initial and \$50 annual for side setting.</li> </ul>	<ul style="list-style-type: none"> <li>• No data available on fleet size.</li> <li>• No data available on how many measures are employed on each vessel.</li> </ul>
Crude Petroleum and Natural Gas Extraction (NAICS 211111)	<ul style="list-style-type: none"> <li>• Netting of oil pits and ponds</li> <li>• Closed wastewater systems.</li> </ul>	<ul style="list-style-type: none"> <li>• \$130,680 to \$174,240 per acre to net ponds.</li> <li>• Most netted pits are 1/4 to 1/2 acre.</li> <li>• Cost not available for wastewater systems.</li> </ul>	<ul style="list-style-type: none"> <li>• Infeasible to net pits larger than 1 acre due to sagging.</li> <li>• Size distribution of oil pits is unknown.</li> <li>• Average number of pits per business is unknown.</li> <li>• Closed wastewater systems typically used for reasons other than bird mitigation.</li> </ul>
Drilling Oil and Gas Wells (NAICS 213111)	<ul style="list-style-type: none"> <li>• Netting of oil pits and ponds</li> <li>• Closed loop drilling fluid systems.</li> </ul>	<ul style="list-style-type: none"> <li>• \$130,680 to \$174,240 per acre to net ponds.</li> <li>• Cost not available for closed loop drilling fluid systems, but may be a net cost savings in arid areas with water conservation requirements.</li> </ul>	<ul style="list-style-type: none"> <li>• Infeasible to net pits larger than 1 acre due to sagging.</li> <li>• Size distribution of oil pits is unknown.</li> <li>• Average number of pits per business is unknown.</li> <li>• Closed loop drilling fluid systems typically used for reasons other than bird mitigation.</li> <li>• High variability in number of wells drilled per year (21,200 in 2019).</li> </ul>
Solar Electric Power Generation (NAICS 221114)	Pre- and post-construction bird surveys	No public comments received on January 7 rule to estimate costs	New projects can vary from 100 to 5,000 acres in size, and mortality surveys may not scale linearly.

<b>NAICS industry</b>	<b>Example of bird mitigation measure</b>	<b>Estimated cost</b>	<b>Why data are not extrapolated to entire industry or small businesses</b>
Wind Electric Power Generation (NAICS 221115)	<ul style="list-style-type: none"> <li>• Pre-construction adjustment of turbine locations to minimize bird mortality during operations</li> <li>• Pre- and post-construction bird surveys.</li> <li>• Retrofit power poles to minimize eagle mortality.</li> </ul>	<ul style="list-style-type: none"> <li>• Cost not available for adjustment of turbine construction locations</li> <li>• \$100,000 to \$500,000 per facility per year for pre-construction site use and post-construction bird mortality surveys.</li> <li>• \$7,500 per power pole with high variability of cost</li> <li>• Annual nationwide labor cost to implement wind energy guidelines: \$17.6M.</li> <li>• Annual nationwide non-labor cost to implement wind energy guidelines: \$36.9M.</li> </ul>	<ul style="list-style-type: none"> <li>• Data not available for adjustment of turbine construction locations.</li> <li>• High variability in survey costs and high variability in need to conduct surveys.</li> <li>• High variability in cost and need to retrofit power poles.</li> </ul>
Electric Bulk Power Transmission (NAICS 221121)	Retrofit power poles to minimize eagle mortality	\$7,500 per power pole with high variability of cost	High variability in cost and need to retrofit power poles.
Electric Power Distribution (NAICS 221122)	Retrofit power poles to minimize eagle mortality	\$7,500 per power pole with high variability of cost	High variability in cost and need to retrofit power poles.
Wireless Telecommunications Carriers (except Satellite) (NAICS 517312)	<ul style="list-style-type: none"> <li>• Extinguish non-flashing lights on towers taller than 350'</li> <li>• Retrofit towers shorter than 350' with LED flashing lights.</li> </ul>	<ul style="list-style-type: none"> <li>• Industry saves hundreds of dollars per year in electricity costs by extinguishing lights</li> <li>• Retrofitting with LED lights requires initial cost outlay, which is recouped over time due to lower energy costs and reduced maintenance.</li> </ul>	Data not available for number of operators who have implemented these practices.

Table 3—Summary of Economic Effects on Small Businesses

NAICS industry description (NAICS code)	Potential bird mitigation measures under this proposed rule	Economic effects on small businesses	Rationale
Finfish Fishing (11411)	Changes in design of longline fishing hooks, changes in offal management practices, and flagging/streamers on fishing lines	Likely minimal effects	Seabirds are specifically excluded from the definition of bycatch under the Magnuson-Stevens Fishery Conservation and Management Act and, therefore, seabirds not listed under the ESA may not be covered by any mitigation measures. The impact of this on small entities is unknown.
Crude Petroleum and Natural Gas Extraction (211111)	Using closed waste-water systems or netting of oil pits and ponds	Likely minimal effects	Thirteen States have regulations governing the treatment of oil pits such as netting or screening of reserve pits, including measures beneficial to birds. In addition, much of the industry is increasingly using closed systems, which do not pose a risk to birds. For these reasons, this proposed rule is unlikely to affect a significant number of small entities.
Drilling Oil and Gas Wells (213111)	Using closed waste-water systems or netting of oil pits and ponds	Likely minimal effects	Thirteen States have regulations governing the treatment of oil pits, such as netting or screening of reserve pits, including measures beneficial to birds. In addition, much of the industry is increasingly using closed systems, which do not pose a risk to birds. For these reasons, this proposed rule is unlikely to affect a significant number of small entities.
Solar Electric Power Generation (221114)	Monitoring bird use and mortality at facilities, limited use of deterrent systems such as streamers and reflectors	Likely minimal effects	Bird monitoring in some States may continue to be required under State policies. The number of States and the policy details are unknown.
Wind Electric Power Generation (221115)	Following Wind Energy Guidelines, which involve conducting risk assessments for siting facilities	Likely minimal effects	Following the Wind Energy Guidelines has become industry best practice and would likely continue. In addition, the industry uses these guidelines to aid in reducing effects on other regulated species like eagles and threatened and endangered bats.
Electric Bulk Power Transmission (221121)	Following Avian Power Line Interaction Committee (APLIC) guidelines	Likely minimal effects	Industry would likely continue to use APLIC guidelines to reduce outages caused by birds and to reduce the take of eagles, regulated under the Bald and Golden Eagle Protection Act.
Electric Power Distribution (221122)	Following Avian Power Line Interaction Committee (APLIC) guidelines	Likely minimal effects	Industry would likely continue to use APLIC guidelines to reduce outages caused by birds and to reduce the take of eagles, regulated under the Bald and Golden Eagle Protection Act.

NAICS industry description (NAICS code)	Potential bird mitigation measures under this proposed rule	Economic effects on small businesses	Rationale
Wireless Telecommunications Carriers (except Satellite) (517312)	Installation of flashing obstruction lighting	Likely minimal effects	Industry will likely continue to install flashing obstruction lighting to save energy costs and to comply with recent Federal Aviation Administration Lighting Circular and Federal Communication Commission regulations.

While the Service concludes that certification is likely appropriate in this case, and consistent with our analysis of economic impacts under the January 7 rule, we have developed an IRFA out of an abundance of caution to ensure that economic impacts on small entities are fully accounted for in this rulemaking process.

### Unfunded Mandates Reform Act

In accordance with the Unfunded Mandates Reform Act (2 U.S.C. 1501 (<https://www.govinfo.gov/link/uscode/2/1501>) *et seq.*), we have determined the following:

- a. This proposed rule would not “significantly or uniquely” affect small government activities. A small government agency plan is not required.
- b. This proposed rule would not produce a Federal mandate on local or State government or private entities. Therefore, this proposed action is not a “significant regulatory action” under the Unfunded Mandates Reform Act.

### Takings

In accordance with E.O. 12630, this proposed rule does not contain a provision for taking of private property, and would not have significant takings implications. A takings implication assessment is not required.

### Federalism

This proposed rule will not create substantial direct effects or compliance costs on State and local governments or preempt State law. Some States may choose not to enact changes in their management efforts and regulatory processes and staffing to develop and or implement State laws governing birds, likely accruing benefits for States. Therefore, this proposed rule would not have sufficient federalism effects to warrant preparation of a federalism summary impact statement under E.O. 13132 (</executive-order/13132>).

### Civil Justice Reform

In accordance with E.O. 12988 (</executive-order/12988>), we determine that this proposed rule will not unduly burden the judicial system  and meets the requirements of sections 3(a) and 3(b)(2) of the Order.

Start Printed  
Page 24581

### Paperwork Reduction Act

This proposed rule does not contain information collection requirements, and a submission to the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 (<https://www.govinfo.gov/link/uscode/44/3501>) *et seq.*) is not required. We may not conduct or sponsor, and you are not required to respond to, a collection of information unless it displays a currently valid OMB control number.

### Proposed Regulation Removal

For the reasons described in the preamble, we hereby propose to amend subchapter B of chapter I, title 50 of the Code of Federal Regulations (<https://www.ecfr.gov/current/title-50>) as set forth below:

### PART 10—GENERAL PROVISIONS

1. The authority citation for part 10 continues to read as follows:

**Authority:** 16 U.S.C. 668a-668d (<https://www.govinfo.gov/link/uscode/16/668a>), 703-712 (<https://www.govinfo.gov/link/uscode/16/703>), 742a-742j- (<https://www.govinfo.gov/link/uscode/16/742a>), 1361-1384, 1401-1407, 1531-1543, 3371-3378; 18 U.S.C. 42 (<https://www.govinfo.gov/link/uscode/18/42>); 19 U.S.C. 1202 (<https://www.govinfo.gov/link/uscode/19/1202>).

2. Remove § 10.14.

Shannon A. Estenoz,

Principal Deputy Assistant Secretary for Fish and Wildlife and Parks, Exercising the Delegated Authority of the Assistant Secretary for Fish and Wildlife and Parks.

Content

## Action

Interim policy statement.

## Summary

This interim policy statement describes Commission procedures for evaluating climate impacts under NEPA and describes how the Commission will integrate climate considerations into its public interest determinations under the NGA.

## Dates

Public comments are due on or before April 4, 2022. Comments on the information collection are due May 10, 2022.

## Addresses

Comments, identified by docket number, may be filed electronically at <http://www.ferc.gov> in acceptable native applications and print-to-PDF, but not in Scanned or picture format. For those unable to file electronically, comments may be filed by mail or hand-delivery to: Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street NE, Washington, DC 20426. The Comment Procedures section of this document contains more detailed filing procedures.

## For Further Information Contact

Karin Larson (Legal Information), Office of the General Counsel, 888 First Street NE, Washington, DC 20426, (202) 502-8236, [Karin.Larson@ferc.gov](mailto:Karin.Larson@ferc.gov)

Eric Tomasi (Technical Information), Office of Energy Projects, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, (202) 502-8097, [Eric.Tomasi@ferc.gov](mailto:Eric.Tomasi@ferc.gov)

## Supplementary Information

1. The Commission is issuing this interim policy statement to explain how the Commission will assess the impacts of natural gas infrastructure projects on climate change in its reviews under the National Environmental Policy Act (NEPA) and the Natural Gas Act (NGA). We seek comment on all aspects of the interim policy statement, including, in particular, on the approach to assessing the significance of the proposed project's contribution to climate change. Although the guidance contained herein is subject to revision based on the record developed in this proceeding, we will begin applying the framework established in this policy statement in the interim. Doing so will allow the Commission to evaluate and act on pending applications under sections 3 and 7 of the NGA without undue delay and with an eye toward greater certainty and predictability for all stakeholders.

### I. Introduction

2. Climate change poses a severe threat to the nation's security, economy, environment, and to the health of individual citizens. Human-made greenhouse gas (GHG) emissions, including carbon dioxide and methane, are the primary cause of climate change. <sup>(1)</sup> GHG emissions are released in large quantities through the production, transportation, and consumption of natural gas. Accordingly, to fulfill its statutory responsibilities, it is critical that the Commission consider and document how its authorization of infrastructure projects under the NGA, particularly natural gas transportation facilities, will affect emissions of GHGs. <sup>(2)</sup>

3. This policy statement describes Commission procedures for evaluating climate impacts under NEPA, both those caused by a project's contribution to climate change and the impacts of climate change on the project, and describes how the Commission will integrate climate considerations into its public interest determinations under the NGA. For purposes of assessing the appropriate level of NEPA review, Commission staff will apply the 100% utilization or "full burn" rate for the proposed project's emissions to determine whether to prepare an Environmental Impact Statement (EIS) or an environmental assessment (EA). Commission staff will proceed with the preparation of an EIS, if the proposed project may result in 100,000 metric tons per year of CO<sub>2</sub>e or more. <sup>(3)</sup> As further described below, the Commission believes this estimate is appropriate because it captures Commission projects that may result in incremental GHG emissions that may have a significant effect upon the human environment. <sup>(4)</sup> This approach is consistent

with the overall goal of NEPA to require a “hard look” at adverse environmental impacts and assess whether those can be minimized or avoided. <sup>(5)</sup> To appropriately assess possible mitigation, as further explained below, the Commission will determine a project’s reasonably foreseeable GHG emissions based on a projection of the amount of capacity that will be actually used (projected utilization rate), as opposed to assuming 100% utilization, and any other factors impacting the quantification of project emissions. The Commission’s NEPA analysis will examine any proposed measures to reduce reasonably foreseeable emissions.

4. When considering under the NGA whether a project is in the public interest, the Commission considers a project’s impacts on climate change, and, accordingly, will consider proposals by the project sponsor to mitigate all or a portion of the project’s climate change impacts, and the Commission may condition its authorization on the project sponsor further mitigating those impacts.

5. This policy statement does not establish binding rules and is intended to explain how the Commission will consider these issues when they arise. <sup>(6)</sup>

## II. Background

### A. GHG Emissions and Climate Change

6. Climate change is the variation in the Earth’s climate (including temperature, precipitation, humidity, wind, and other meteorological variables) over time. Climate change is driven by accumulation of GHGs in the atmosphere due to the increased consumption of fossil fuels ( e.g., coal, petroleum, and natural gas) since the early beginnings of the industrial age and accelerating in the mid- to late-20th century. <sup>(7)</sup> The GHGs produced by fossil-fuel combustion are carbon dioxide, methane, and nitrous oxide.

7. In 2017 and 2018, the U.S. Global Change Research Program <sup>(8)</sup> issued its Climate Science Special Report: Fourth National Climate Assessment, Volumes I and II. <sup>(9)</sup> This report and the recently released report by the Intergovernmental Panel on Climate Change, *Climate Change 2021: The Physical Science Basis*, state that climate change has resulted in a wide range of impacts across every region of the country and the globe. Those impacts extend beyond atmospheric climate change and include changes to water resources, agriculture, ecosystems, human health, and ocean systems. <sup>(10)</sup> According to the Fourth Assessment Report, the United States and the world are warming, global sea level is rising and oceans are acidifying, and certain weather events are becoming more frequent and more severe. <sup>(11)</sup> These impacts have accelerated throughout the end of the 20th century and into the 21st century. <sup>(12)</sup>

### B. Council on Environmental Quality Guidance on Climate Change

8. In 2010, the Council on Environmental Quality (CEQ) issued its first draft guidance on how federal agencies can consider the effects of GHG emissions and climate change under NEPA. <sup>(13)</sup> CEQ revised the draft guidance in 2014, <sup>(14)</sup> and issued final guidance in 2016. <sup>(15)</sup> Throughout the guidance’s evolution, CEQ advised agencies to quantify GHG emissions and to consider both the extent to which a proposed project’s GHG emissions would contribute to climate change and how a changing climate may impact the proposed project. The 2016 guidance, however, explicitly declined to establish a quantity or threshold of GHGs for determining whether a proposed project will have a significant impact on climate. <sup>(16)</sup>

9. CEQ rescinded the 2016 guidance in April 2017, as directed by Executive Order 13783 *Promoting Energy Independence and Economic Growth*, <sup>(17)</sup> and issued revised draft guidance in June 2019. <sup>(18)</sup> In January 2021, Executive Order 13990 *Protecting Public Health and the Environment and Restoring Science to Tackle the Climate Crisis* revoked Executive Order 13783 and directed CEQ to rescind the 2019 draft guidance and to review, revise, and update the 2016 guidance. <sup>(19)</sup> CEQ has not yet issued an update to the

2016 guidance, but, in the interim, has directed agencies to consider all available tools and resources, including the 2016 guidance, in assessing GHG emissions and the climate change effects of proposed actions. <sup>(20)</sup>

### C. Previous Commission Policy on Consideration of Climate Change Under NEPA

10. Commission staff has addressed climate change in some fashion in its NEPA documents for at least a decade. <sup>(21)</sup> Commission staff's NEPA documents have included direct GHG emission estimates from project construction ( e.g., tailpipe emissions from construction equipment) and/or operation ( e.g., fuel combustion at compressor stations and gas venting and leaks). <sup>(22)</sup> Starting in late 2016, the Commission began to conservatively estimate indirect downstream GHG emissions by assuming full combustion of the maximum annual volume of gas that could be transported by the project. <sup>(23)</sup> For indirect upstream, production-related GHG emissions, Commission orders during that time period relied on Department of Energy studies to calculate broad estimates. <sup>(24)</sup> For upstream impacts, the Commission generally indicated that these analyses were not required by NEPA because the Commission lacked detailed information about the precise source of the gas to be transported, but provided estimates for informational purposes. <sup>(25)</sup>

11. In 2017, the United States Court of Appeals for the District of Columbia Circuit (D.C. Circuit) in *Sierra Club v. FERC ( Sabal Trail )* <sup>(26)</sup> found that downstream GHG emissions were an indirect effect of the Sabal Trail pipeline project and required the Commission to give a quantitative estimate of the downstream GHG emissions resulting from the burning of the natural gas to be transported by the pipeline or explain why the Commission could not do so, and to discuss the significance of these emissions. <sup>(27)</sup> On remand, the Commission compared the estimated downstream GHG emissions from the project to state and national GHG emission inventories. <sup>(28)</sup> However, the Commission concluded that it could not determine whether those downstream GHG emissions were significant and rejected the use of the Social Cost of Carbon (SCC) tool to inform the Commission's analysis. <sup>(29)</sup>

12. In 2018, the Commission stated in *Dominion Transmission, Inc.* <sup>(30)</sup> that end use consumption of gas and upstream production of gas were generally not reasonably foreseeable or causally related to the project (no party had identified the specific end use of the gas) and thus the Commission was not required to consider upstream or downstream emissions as indirect impacts under NEPA. <sup>(31)</sup> The Commission stated it would continue to “analyze upstream and downstream environmental effects when those effects are sufficiently causally connected to and are reasonably foreseeable effects of the proposed action.” <sup>(32)</sup> The Commission reiterated that without an accepted methodology it could not find whether a particular quantity of GHG emissions was significant. <sup>(33)</sup>

13. However, in *Birckhead*, the D.C. Circuit rejected the Commission's position that *Sabal Trail* is limited to the narrow facts of that case. While the court in *Birckhead* acknowledged that downstream emissions may not always be a foreseeable effect of natural gas projects, it rejected the notion that downstream GHG emissions are a reasonably foreseeable indirect effect of a natural gas project only if a specific end destination is identified. <sup>(34)</sup> The court further noted that the Commission should attempt to obtain information on downstream uses to determine whether downstream GHG emissions are a reasonably foreseeable effect of the project. <sup>(35)</sup>

14. In 2021, in *Northern Natural Gas Co.*, the Commission explained that it had reconsidered its position that it was unable to assess the significance of a project's GHG emissions or those emissions' contribution to climate change. <sup>(36)</sup> The Commission found that that project's reasonably foreseeable GHG emissions—construction and operation emissions only, as the project proposed no new capacity—would not significantly contribute to climate change. <sup>(37)</sup> Later in 2021, the D.C. Circuit further criticized the Commission's stance prior to *Northern Natural Gas Co.* that it was unable to assess the significance of a project's GHG emissions or those emissions' contribution to climate change, holding that the Commission

failed to appropriately analyze the significance of three natural gas projects' contribution to climate change using "theoretical approaches or research methods generally accepted in the scientific community," such as the SCC tool. <sup>(38)</sup>

#### D. Certificate Policy Statement Notices of Inquiry

15. On April 19, 2018, the Commission issued a Notice of Inquiry (2018 NOI) <sup>(39)</sup> seeking information and stakeholder perspectives to help the Commission explore whether, and if so how, it should revise its approach for determining whether proposed projects are consistent with the public convenience and necessity under the currently effective policy statement on the certification of new interstate natural gas transportation facilities (Certificate Policy Statement). <sup>(40)</sup> The 2018 NOI included a background section discussing how the legal standards and historical context informed the creation of the Certificate Policy Statement in 1999, how the Commission's evaluations under the Certificate Policy Statement and under NEPA have evolved, and how changed circumstances since 1999 have required the present review. <sup>(41)</sup> Notably, the Commission sought input on whether, and if so how, the Commission should adjust its evaluation of the environmental impacts of a proposed project.

16. In response to the 2018 NOI, the Commission received more than 3,000 comments from stakeholders including landowners; tribal, federal, state, and local government officials; non-governmental organizations; consultants, academic institutions, and think tanks; natural gas producers, Commission-regulated companies, local distribution companies, and industry trade organizations; electricity generators and utilities; and others. Many comments addressed GHG emissions.

17. On February 18, 2021, the Commission issued a new, refreshed Notice of Inquiry (2021 NOI), <sup>(42)</sup> seeking comments to build upon the existing record established by the 2018 NOI. The Commission posed several updated questions relating to GHG emissions, including asking: How the Commission could consider upstream impacts from natural gas production and downstream end-use impacts; how the Commission should determine the significance of a project's GHG emissions' contribution to climate change; whether the NGA, NEPA, or another federal statute authorize or mandate the use of the SCC analysis by the Commission; how the Commission could determine whether a proposed project's GHG emissions could be offset by reduced GHG emissions resulting from the project's operations; and how the Commission could impose GHG emission limits or mitigation to reduce the significance of impacts from a proposed project on climate change. <sup>(43)</sup>

18. With respect to determining significance, the 2021 NOI sought comment on (1) what type of metrics and models the Commission should consider in determining significance, (2) whether any level of emissions should be considered *de minimis*, and (3) how the SCC tool or other tools could factor into determining significance. <sup>(44)</sup>

19. The public comment period for the 2021 NOI closed on May 26, 2021. <sup>(45)</sup> The Commission received over 35,000 comments and approximately 150 unique comment letters from a wide range of stakeholders, as noted above.

20. Comments relevant to this policy statement are addressed in Section III below.

### III. Statutory Authority/Obligations

#### A. NGA

21. Section 7 of the NGA authorizes the Commission to issue certificates of public convenience and necessity for the construction and operation of facilities transporting natural gas in interstate commerce. <sup>(46)</sup> The Commission does not have authority to regulate intrastate transportation facilities or other facilities that

affect interstate transportation, such as those used for the production, gathering, or local distribution of natural gas. Congress did not displace state authority over such subjects. <sup>(47)</sup>

22. Section 3(a) of the NGA provides for federal jurisdiction over the siting, construction, and operation of facilities used to import or export gas. <sup>(48)</sup> To date, the Commission has exercised section 3 authority to authorize: (1) LNG terminals located at the site of import or export and (2) the site and facilities at the place of import/export where a pipeline crosses an international border. <sup>(49)</sup> Additionally, NGA section 3(e) states that “[t]he Commission shall have the exclusive authority to approve or deny an application for the siting, construction, expansion, or operation of an LNG terminal.” <sup>(50)</sup>

23. Both NGA sections 7 and 3 authorize the Commission to attach terms and conditions to its authorization. <sup>(51)</sup> Courts have interpreted these provisions broadly and given the Commission latitude in deciding what types of mitigation to require. <sup>(52)</sup> In issuing authorizations, the Commission has required project sponsors to comply with conditions to prevent or mitigate project impacts on environmental resources. <sup>(53)</sup>

## B. NEPA

24. NEPA and its implementing regulations require agencies, before taking or authorizing a major federal action that may significantly affect the quality of the human environment, to take a “hard look” at the environmental consequences of the proposed action and disclose their analyses to the public by preparing an EIS. <sup>(54)</sup> Alternatively, agencies can first prepare an Environmental Assessment (EA) for a proposed action that is not likely to have significant effects or when the significance is unknown, to determine whether an EIS is necessary for a particular action. <sup>(55)</sup> Depending on the outcome of the EA, agencies can either prepare an EIS or issue a finding of no significant impact. <sup>(56)</sup>

25. Previous CEQ regulations and court cases have examined a proposed project’s “context” and “intensity” or the severity of the impact as factors for determining what constitutes a significant effect. <sup>(57)</sup> In assessing significance, Commission staff considers, for each resource, the duration of the impact as well as the geographic, biological, or social context in which the effects would occur, and the intensity ( e.g. severity) of the impact. <sup>(58)</sup> This analysis may draw on both qualitative and quantitative information. <sup>(59)</sup> Using both types of data, the Commission routinely makes significance determinations for impacts to various resources from natural gas projects. <sup>(60)</sup>

26. In evaluating whether an impact is significant, the Commission determines whether “it would result in a substantial adverse change in the physical environment.” <sup>(61)</sup> In making that determination, the Commission considers available evidence, giving that evidence such weight as it deems appropriate using its experience, judgment, and expertise. <sup>(62)</sup> Notably, NEPA does not require that the studies, metrics, and models on which an agency relies be universally accepted or otherwise uncontested. <sup>(63)</sup> Instead, NEPA permits agencies to rely on the best available evidence, quantitative and qualitative, even where that evidence has certain limitations when assessing the significance of their actions, <sup>(64)</sup> and an agency’s determination is entitled to deference. <sup>(65)</sup>

27. In addition to determining whether its actions may significantly affect the quality of the human environment, NEPA requires the Commission to consider whether there are steps that could be taken to mitigate any adverse environmental consequences. <sup>(66)</sup> While NEPA is a procedural statute and does not require a federal agency to reject a proposed project with significant adverse effects or take action to mitigate adverse effects, <sup>(67)</sup> an agency may require mitigation of impacts as a condition of its permitting or approval, <sup>(68)</sup> and the Commission routinely does so. <sup>(69)</sup>

## IV. Discussion

## A. Quantifying GHG Emissions and Determining Significance

28. Consistent with CEQ regulations, <sup>(70)</sup> the Commission will quantify a project's GHG emissions that are reasonably foreseeable and have a reasonably close causal relationship to the proposed action, including those effects that occur at the same time and place as the proposed action and effects that are later in time or farther removed in distance from the proposed action. This will include GHG emissions resulting from construction and operation of the project <sup>(71)</sup> as well as, in most cases, GHG emissions resulting from the downstream combustion of transported gas. <sup>(72)</sup>

29. The Commission will consider all evidence in the record relating to a project's estimated GHG emissions, <sup>(73)</sup> utilization rate, or offsets: Estimates presented by project sponsors, as well as opposing evidence from other parties. Going forward, in determining the level of GHG emissions attributed to a project, the Commission will estimate a project's GHG emissions based on a projection of what amount of project capacity will be actually used (projected utilization rate), as opposed to assuming 100% utilization. <sup>(74)</sup> The Commission will also consider evidence of factors expected to reduce or offset the estimated direct or reasonably foreseeable downstream emissions of the project.

### 1. Categories of Emissions

30. CEQ regulations implementing NEPA require agencies to consider effects or impacts that “are reasonably foreseeable and have a reasonably close causal relationship to the proposed action . . . including those effects that occur at the same time and place as the proposed action . . . and may include effects that are later in time or farther removed in distance for the proposed action . . . .” <sup>(75)</sup> A “but for” causal relationship is insufficient to make an agency responsible for a particular effect, <sup>(76)</sup> and effects should not be considered if they are the “product of a lengthy causal chain.” <sup>(77)</sup> Further, effects to be considered do not include those that the agency has no ability to prevent due to its limited statutory authority or would occur regardless of the proposed action. <sup>(78)</sup> Regarding reasonable foreseeability, courts have found that an impact is reasonably foreseeable if it is “sufficiently likely to occur that a person of ordinary prudence would take it into account in reaching a decision.” <sup>(79)</sup> Although courts have held that NEPA requires “reasonable forecasting,” <sup>(80)</sup> an agency “is not required to engage in speculative analysis” <sup>(81)</sup> or “to do the impractical, if not enough information is available to permit meaningful consideration.” <sup>(82)</sup>

31. As discussed below, the Commission proposes to:

- Consider direct emissions of a project a reasonably foreseeable effect;
- Find that an NGA section 3 export facility project is not the legally relevant cause of upstream and downstream emissions; <sup>(83)</sup>
  - Consider on a case-by-case basis whether downstream emissions are a reasonably foreseeable effect of an NGA section 7 interstate project; and
  - Consider on a case-by-case basis whether upstream emissions are a reasonably foreseeable effect of an NGA 7 project.

#### a. Direct Emissions

32. Several commenters assert that the Commission must consider fugitive emissions from the transportation of gas. <sup>(84)</sup> New Jersey Conservation Foundation, Sabin Center for Climate Change Law (Sabin Center), The Watershed Institute, Clean Air Council, PennFuture, and New Jersey League of Conservation Voters (collectively, New Jersey Conservation Foundation) argue that natural gas leakage from both pipeline operation and natural gas production is worse than combustion because methane has a higher global warming potential than carbon dioxide. <sup>(85)</sup>

33. As the Commission has long held, direct GHG emissions from the project's short-term construction <sup>(86)</sup> and long-term operational activities <sup>(87)</sup> are an effect of the proposed project. Under current Commission regulations, the project sponsor provides an estimate of construction emissions and an estimate of the project's potential operational emissions, including fugitive emissions from both pipeline and aboveground facilities, in its application for Commission authorization. <sup>(88)</sup>

#### b. Downstream Emissions

34. Some commenters argue that the Commission must consider the downstream emissions of natural gas projects, <sup>(89)</sup> including fugitive emissions. <sup>(90)</sup> In contrast, other commenters generally assert that the Commission should not consider downstream emissions, or at most, should only do a qualitative assessment of downstream emissions, because they are not reasonably foreseeable impacts or do not have a close causal relationship under NEPA to gas transportation. <sup>(91)</sup>

35. As discussed above, in August 2017, the D.C. Circuit issued *Sabal Trail*, which involved a greenfield pipeline project that would deliver all gas transported by the project to specific gas-fired generating plants. The D.C. Circuit found that downstream emissions from the use of the transported natural gas were an indirect, reasonably foreseeable effect of the proposed pipeline and that in the circumstances of that case—where the vast majority of throughput on the proposed project was destined for a limited number of specifically identified electric generation facilities—the downstream GHG emissions could be reasonably quantified by the Commission. <sup>(92)</sup>

36. The D.C. Circuit reiterated this determination in two subsequent cases. First, in *Birckhead*, the court rejected the claim that downstream emissions are only a foreseeable effect in factual circumstances akin to *Sabal Trail*, *i.e.*, where all transported gas will be burned at specifically identified destinations, but also rejected the argument that downstream emissions are always a foreseeable effect of a natural gas certificate project. <sup>(93)</sup> Then, in *Allegheny Defense Project v. FERC*, <sup>(94)</sup> the court stated that the downstream emissions of a project designed to deliver gas into large interstate pipeline systems, which in turn deliver gas to 16 states, are an indirect effect of the project. <sup>(95)</sup>

37. INGAA and others read the Supreme Court's *Public Citizen* decision as requiring an agency to consider an environmental effect only when the agency has the authority to control the outcome and note that the Commission has no authority to regulate the end use (or production) of natural gas. <sup>(96)</sup> INGAA states that attempting to regulate downstream (or upstream) activities would invade the jurisdiction of other regulators, that most projects will not result in reasonably foreseeable downstream GHG emissions like those in *Sabal Trail*, and thus, downstream emissions should only be considered on a case-by-case basis. <sup>(97)</sup> INGAA suggests the Commission look for guidance to *Center for Biological Diversity v. U.S. Army Corps of Engineers*, <sup>(98)</sup> which criticizes *Sabal Trail* as “breezing past . . . statutory limits and precedents . . . clarifying what effects are cognizable under NEPA.” <sup>(99)</sup>

38. Given that data show that the vast majority of consumed gas is ultimately combusted, <sup>(100)</sup> there appears to be a substantial likelihood of GHG emissions from the end-use combustion of transported gas as a result of a natural gas project proposed under NGA section 7. <sup>(101)</sup> However, as contemplated by the court in *Birckhead*, there may be circumstances where downstream emissions are not a foreseeable effect of an authorized project, and the court stated that each project must be analyzed on a case-by-case basis. <sup>(102)</sup> Accordingly, project sponsors may submit any evidence they believe indicates that downstream emissions are not a reasonably foreseeable effect of a proposed project.

39. We disagree with commenters' assertions that *Public Citizen* prohibits the Commission from considering downstream GHG emissions. The question is not whether the Commission has regulatory authority over downstream emissions. Rather, as the *Sabal Trail* court reasoned in applying *Public Citizen*, the Commission “has no obligation to gather or consider environmental information [only] if it has no statutory

authority *to act on that information.*” <sup>(103)</sup> Because the Commission can reject a section 7 certificate based on the project’s environmental impacts, including GHG emissions, the court held that the Commission was required to consider downstream emissions resulting from the Sabal Trail project’s construction. <sup>(104)</sup> For section 7 projects—unlike section 3 projects, described below—there is no independent decision, such as the DOE authorization critical in *Freeport*, to “break the NEPA causal” chain. <sup>(105)</sup> Accordingly, the Commission’s authorization for section 7 projects is a “legally relevant cause” of the emissions, meeting *Public Citizen*’s direction that “NEPA requires ‘a reasonably close causal relationship’ between the environmental effect and the alleged cause,” analogous to the “familiar doctrine of proximate cause from tort law.” <sup>(106)</sup>

40. The Commission finds this and subsequent direction from the D.C. Circuit more instructive than *Center for Biological Diversity*, which determined that a specific effect was too tenuous to be considered in analysis of a U.S. Army Corps of Engineers discharge permit for mining activities under the Clean Water Act. <sup>(107)</sup>

41. However, for proposed export projects under NGA section 3, the Commission will not consider downstream GHG emissions an effect requiring analysis under NEPA regulations. The Department of Energy, not the Commission, has sole authority to license and consider the environmental impacts of the export of any natural gas. <sup>(108)</sup> As courts have explained, the Commission need not consider the effects of downstream transportation, consumption, or combustion of exported gas because the Department of Energy’s “independent decision to allow exports . . . breaks the NEPA causal chain and absolves the Commission of responsibility to include [these considerations] in its NEPA analysis.” <sup>(109)</sup>

### c. Upstream Emissions

42. Some commenters state that the Commission must consider the upstream GHG emissions of natural gas projects, including fugitive emissions from production, <sup>(110)</sup> to assess the project’s total impact on climate change. <sup>(111)</sup> Other commenters argue that upstream emissions are not a reasonably foreseeable effect of a natural gas transportation project, and therefore should not be considered by the Commission. <sup>(112)</sup> Some commenters focus on how to obtain sufficient information to account for upstream GHG emissions. For example, EPA recommends that the Commission require project sponsors to provide available information on reasonably foreseeable induced production demand. EPA states that environmental documents under NEPA should disclose this information as well as items such as the proposal’s regionally known hydrocarbon accumulations and a decline curve analysis to allow for appropriate regional and local impact analysis. <sup>(113)</sup>

43. In various NGA section 7 proceedings, the Commission has considered upstream emissions on a case-by-case basis—sometimes acknowledging it is difficult to quantify upstream emissions due to several unknown factors, including the location of the supply source and whether transported gas will come from new or existing production. <sup>(114)</sup> The Commission will continue to consider on a case-by-case basis whether the environmental effects resulting from natural gas production are either likely caused by a proposed NGA section 7 project or reasonably foreseeable consequences of our approval of such projects. To the extent known, project sponsors are encouraged to submit information on the reasonably foreseeable upstream impacts caused by the project or an explanation as to why there are none for Commission consideration.

## 2. Calculating GHG Emissions

44. To calculate operational emissions, project sponsors should continue to follow the existing guidance outlined in section 4.9.1.3 of the Commission’s Guidance Manual for Environmental Report Preparation for Applications Filed under the NGA. <sup>(115)</sup> However, under this policy statement, for purposes of assessing the impact of a project’s GHG emissions on climate change, the Commission will consider operational GHG emissions calculated based on a projected utilization rate for the project, as described below. <sup>(116)</sup>

45. Additionally, the Commission recognizes that there may be other factors that might serve to reduce a proposed project's climate impacts. For example, the installation of emission-reduction technology or purchase of offsets by downstream users would reduce the impacts. Thus, to enable the Commission's use of the best estimate of a project's GHG emissions, project sponsors are encouraged to calculate project GHG emissions using a projected utilization rate and submit evidence of any other factors that might impact a project's net emissions such as the factors identified by commenters below.

46. Commenters recommend that the Commission consider factors that might impact a project's net emissions, such as (1) whether the transported gas will phase out use of a more carbon-intensive energy source, like coal or fuel oil, and will prevent the use of more carbon-intensive energy sources in the future; (2) whether the pipeline will transport gas that would otherwise be transported by vehicles, thereby reducing the emissions from transporting the gas; (3) whether the proposed project will transport gas volumes that would have otherwise been delivered to the same consumers through a different pipeline or may ultimately end up transporting fuel blends including renewable natural gas or hydrogen; (4) whether the project sponsor will purchase offsets to counter project emissions; or (5) whether the project may be backed by a local distribution company serving customer demand in states with established emissions caps. <sup>(117)</sup> INGAA states that in the absence of reliable and verifiable predictive models to the contrary, the requirement of reasonable foreseeability arguably dictates that the Commission cannot adopt any default assumption that a natural gas infrastructure project will increase (rather than decrease, or leave unchanged) net global GHG emissions, and that at minimum, the Commission would have to provide a rational justification for any such assumption. <sup>(118)</sup> By contrast, New Jersey Conservation Foundation and others contend that the Commission should consider whether the project may be displacing renewable energy sources, thereby increasing GHG emissions. <sup>(119)</sup>

47. INGAA and other commenters strongly urge the Commission to calculate a project's downstream emissions, if at all, based on the likely utilization rate of the proposed project, instead of relying on a full-burn estimate. <sup>(120)</sup>

48. Conversely, New Jersey Conservation Foundation and others argue the Commission must calculate direct, downstream, and upstream GHG emissions by assuming the maximum authorized operating conditions, unless, some add, the project sponsor can demonstrate otherwise. <sup>(121)</sup> Further, other commenters propose their own methods of how to calculate the downstream emissions of a proposed project. <sup>(122)</sup> New Jersey Conservation Foundation urges the Commission to recommend or require the use of specified emissions factors to calculate project emissions. <sup>(123)</sup> Some commenters argue that the Commission must, beyond asking project sponsors, require certain information to be provided, conduct independent research, or otherwise compile missing information. <sup>(124)</sup> Dr. Susan F. Tierney states that the Commission should articulate a default methodology, set of assumptions, and sources of data (suggesting multiple sources including data from the U.S. Department of Energy's National Energy Technology Laboratory's 2019 life-cycle estimates of GHG emissions for the natural gas supply chain) to establish a default maximum emissions rate, which could then be supplemented by an applicant's own estimate or an intervenor's alternative estimate. <sup>(125)</sup>

#### a. Projected Utilization Rate

49. In previous environmental documents and certificate orders, the Commission has disclosed a project's operational emissions <sup>(126)</sup> and estimates of downstream emissions <sup>(127)</sup> by assuming a 100% utilization rate estimate of the project ( e.g., the maximum capacity is transported 365 days per year, 24 hours a day and fully combusted downstream). This represents the maximum potential downstream GHG emissions. However, most projects do not operate at 100% utilization at all times. In fact, many projects are designed

to address peak demand. For example, traditionally, in the Northeast, demand for gas is highest in the winter months, resulting in high utilization rates during those months due to heating needs, but lower in the summer, resulting in low annual utilization rates. <sup>(128)</sup>

50. Because in most instances a 100% utilization rate estimate does not accurately capture the project's climate impacts, estimated emissions that reflect a projected utilization rate will provide more useful information. The project's projected utilization rate may be calculated using, for example:

- Expected utilization data from project shippers;
- Historical usage data; <sup>(129)</sup>
  - Demand projections;
  - An estimate of how much capacity will be used on an interruptible basis.

51. The project sponsor is encouraged to file its projected utilization rate, as well as its justification for the rate and any supporting evidence, in its application for authorization under NGA section 3 or 7. The Commission will also consider evidence submitted by commenters and protesters in support of or opposition to the projected utilization rate.

#### b. Other Evidence Considered

52. Further, the Commission will consider any other evidence in the record that impacts the quantification of the project's reasonably foreseeable emissions. For example, the Commission will consider: Evidence of a net-reduction in GHG emissions where the use of transported gas displaces the use of a higher emitting alternative fuel; <sup>(130)</sup> evidence of anticipated changes in downstream usage rates over time; evidence of any real, verifiable, and measurable reduction efforts taken by the pipeline or downstream users to reduce their GHG emissions or offset their impacts; <sup>(131)</sup> and evidence that a project would displace zero-emissions electric generation. Further, other agencies, notably the EPA, have proposed regulations that may impact the emission of methane from Commission-regulated facilities. <sup>(132)</sup> If such regulations are adopted, the Commission will consider them when examining project GHG emissions. Similarly, the Commission will consider evidence from commenters and protestors supporting or challenging such estimates and assumptions.

#### B. Level of Review and Significance

53. Under NEPA, an agency must prepare an EIS for every "major [f]ederal action[] significantly affecting the quality of the human environment." <sup>(133)</sup> To determine whether an EIS is necessary for a particular action, the agency may prepare an EA, <sup>(134)</sup> described as a "concise public document" providing "sufficient evidence and analysis," to determine whether to prepare an EIS or issue a finding of no significant impact. <sup>(135)</sup>

54. To assess significance, the Commission determines whether the impact "would result in a substantial adverse change in the physical environment," <sup>(136)</sup> which, as discussed, is based on considerations of the severity of adverse environmental impacts. In making that determination, the Commission uses its experience, judgment, and expertise to give record evidence appropriate weight. <sup>(137)</sup> The Commission found that "there is nothing about GHG emissions or their resulting contribution to climate change that prevents us from making that same type of significance determination." <sup>(138)</sup>

55. Specifically, in *Northern Natural Gas Co.*, the Commission explained that:

The U.S. Court of Appeals for the District of Columbia Circuit has explained that a proposed interstate natural gas pipeline's reasonably foreseeable GHG emissions are relevant to whether the pipeline is required by the public convenience and necessity. A rigorous review of a project's reasonably foreseeable GHG emissions is also an essential part of the Commission's responsibility under NEPA to take a "hard

look” at a project's environmental impacts. Determining the significance of the impacts from a proposed project's GHG emissions informs the Commission's review in a number of important respects, including its decision whether to prepare an environmental impact statement. <sup>(139)</sup>

56. To date, no federal agency, including the Commission, has established a threshold for determining what level of project-induced GHG emissions is significant. The Commission received a number of comments, discussed below, offering perspectives on whether and at what level it should assess the significance of a proposed project's GHG emissions.

#### 1. Comments

57. The Commission received relevant comments in response to both the 2018 and 2021 NOIs on whether the Commission should: Determine significance at all; set a specific significance threshold and at what level; and/or use various inventories, goals, and tools to set the threshold.

##### a. Whether the Commission Should Determine Significance

58. Numerous commenters (Delaware Riverkeeper, Food and Water Watch, North Carolina Department of Environmental Quality, Sabin Center, and others) argue that the Commission should make a significant impact determination based on a project's GHG emissions, which they argue would include the project's associated upstream and downstream emissions. Some commenters, for example the Sabin Center in 2018, direct the Commission to the NEPA regulation at 40 CFR 1508.27 (that was removed by amendments effective September 14, 2020), which provides that “significantly” as used in NEPA requires considerations of both the context of the action and the intensity of the impacts associated with any proposal. <sup>(140)</sup>

59. In contrast, some regulated entities and other commenters express concern about the Commission determining the significance of a project's impacts on the basis of GHG emissions, especially upstream and downstream emissions. For example, INGAA and others (Energy Infrastructure Council, Williams, etc.) argue that the Commission should, at most, engage in a qualitative discussion of downstream GHG emissions because net GHG emissions are not reasonably foreseeable, and that the Commission should not assess the significance of upstream or downstream emissions. <sup>(141)</sup> Commenters such as Boardwalk state that the Commission cannot reject a project because of downstream GHG emissions or consider upstream GHG emissions, may only include a general disclosure of downstream emissions in limited circumstances (such as where all end use is known), and should generally decline to assess significance and only engage in a qualitative discussion. <sup>(142)</sup>

60. Commenters argue that the Commission lacks the ability to make a significance determination and has no objective basis upon which to evaluate the impacts of GHG emissions associated with any specific proposed project. <sup>(143)</sup> Other commenters state that setting any significance threshold would be arbitrary <sup>(144)</sup> and potentially outside of the Commission's authority or jurisdiction. <sup>(145)</sup>

61. Finally, commenters state that the Commission should defer to other agencies, such as CEQ or EPA, in setting a significance threshold, citing: The lack of a national energy policy or federal GHG limits; the EPA's existing authority to regulate GHG emissions under the Clean Air Act; the direction of Executive Orders 13990 and 14008, which commenters say direct EPA to examine its own GHG emissions standards; and the ongoing Interagency Work Group efforts on the SCC. <sup>(146)</sup> A few industry commenters also caution against creating uncertainty or a moving target for industry while waiting for a significance threshold to be established. <sup>(147)</sup>

##### b. What the Threshold Should Be

62. Some commenters argue that the Commission should consider any net increase in GHG emissions as significant. <sup>(148)</sup> Attorneys General of Massachusetts, Connecticut, Maryland, Minnesota, New Jersey, New York, Oregon, Rhode Island, and the District of Columbia (Attorneys General of Massachusetts et al.)

argues that any investment in pipeline infrastructure is inconsistent with new national emissions reductions targets and thus, project emissions can be significant on that basis alone, even if they represent a small share of national emissions, or that emissions are significant if they impede the ability of a state to meet its clean energy goals. <sup>(149)</sup>

63. A few commenters suggest specific numerical thresholds. The Sabin Center recommends that the Commission assess the magnitude of GHG emissions impacts using EPA's quantification threshold of 25,000 tons per year of CO<sub>2</sub>e to identify major emitters under the Clean Air Act, social cost of GHG tools to assign a dollar value to the potential impacts of the emissions, and EPA's GHG Equivalencies Calculator as a comparison tool. <sup>(150)</sup> One commenter cites to EIS examples where the Commission stated that monetized benefits of \$8 million and \$28 million would be "significant" for local economies and suggests that gross climate damages between roughly \$8 and \$20 million should be considered significant. <sup>(151)</sup>

64. Conversely, a few commenters state that emissions from all individual projects could be considered *de minimis* and individually too small to impact climate change. <sup>(152)</sup> Others urge the Commission away from taking a bright line approach to determining significance, <sup>(153)</sup> while Driftwood Pipeline LLC urges that significance, if appropriate, requires the Commission to disclose a clear threshold. <sup>(154)</sup>

65. CEQ points the Commission to its 2016 guidance as an existing resource to help agencies assess GHG emissions and the effects of climate change in NEPA reviews. <sup>(155)</sup>

#### c. Use of Inventories, Climate Goals, Programmatic Analyses, Etc. in Determining Significance

66. Some commenters recommend that the Commission use state, regional, and global GHG reduction goals to provide context and/or define significance of GHG emissions. <sup>(156)</sup> For example, Attorneys General of Massachusetts et al. comments that the Commission already analyzes whether a proposed pipeline project is consistent with various energy and climate policies and goals and that this can be used as a metric for evaluating significance. <sup>(157)</sup> Others argue that the Commission's analysis of a proposed project's public benefits should weigh the effect of project GHG emissions on states' and the nation's abilities to comply with climate and clean energy laws and policies, such as specific energy and climate change action plans and policies. <sup>(158)</sup> The Ohio Environmental Council recommends that the Commission consider the total proposed upstream and downstream GHG emissions of all gas projects pending in any given year, giving weight to the total possible GHG emissions that could be locked in by those projects and comparing this total with international goals. <sup>(159)</sup>

67. Other commenters suggest alternative means or tools for assessing significance. For example, commenters suggest that the Commission should use a "Climate Test." <sup>(160)</sup> Patricia Weber comments that the Commission should use such a test to determine if a project is viable in a scenario where the climate goals of the Paris agreement are met using climate and global energy market models. One commenter urges the Commission to examine acres of wetlands that will be lost due to climate impacts of proposed projects as a proxy for significance. <sup>(161)</sup> Some commenters suggest the Commission consider a programmatic or regional analysis of pipelines. <sup>(162)</sup>

68. EDF comments that a comparison of a project's emissions to international, state, or regional carbon budgets, or assessing geophysical impacts such as increases in carbon dioxide levels, global temperatures, or sea levels can be misleading and trivialize the project's impacts. <sup>(163)</sup>

69. Some industry commenters state that any comparison of direct or indirect emissions should be made to global GHG inventories, not national or state inventories. <sup>(164)</sup> However, Williams states that, while the Commission should consider only direct construction and operation emissions, the Commission should compare those emissions against national GHG inventories and not against international agreements or regional targets. <sup>(165)</sup> Others oppose use of a regional analysis of GHG emissions from pipeline projects. <sup>(166)</sup>

#### d. Use of the Social Cost of Greenhouse Gases

70. Several commenters generally argue for a monetization of climate damages using the Social Cost of Greenhouse Gas (SC-GHG) tools <sup>(167)</sup> to determine significance. <sup>(168)</sup> EDF recommends that the approach should be consistent with the Commission's practices for determining the significance of other monetized effects, such as economic impacts. <sup>(169)</sup> Public Interest Organizations comment that an established numerical significance threshold is not necessary, but if one is established, it should be used in tandem with the SCC tool and should not be based solely on one metric, especially not on a comparison to global emissions. Rather, they urge a holistic review of how a proposed project's impacts weigh against any benefits. <sup>(170)</sup> EDF states that if the climate damages exceeded monetized project benefits, the Commission could reject the project. <sup>(171)</sup>

71. Conversely, other commenters oppose use of the SCC tool in determining significance <sup>(172)</sup> or of using the SCC tool at all. <sup>(173)</sup> The Attorneys General of Missouri, Alabama, Alaska, Arizona, Arkansas, Georgia, Indiana, Kansas, Kentucky, Louisiana, Mississippi, Montana, Nebraska, Ohio, Oklahoma, South Carolina, South Dakota, Tennessee, Texas, Utah, and West Virginia (Attorneys General of Missouri et al.) contends that the NGA does not allow use of the SCC tool to calculate speculative damages and that its use is contrary to the Commission's public interest responsibilities. Further, they argue that NEPA does not permit the use of the SCC because NEPA does not allow agencies to rely on conclusions that are speculative or reflect substandard or outdated science. <sup>(174)</sup>

72. Public Interest Organizations state that, while neither the NGA nor NEPA explicitly reference the SCC tool, there is nothing in these or other federal statutes that would prohibit its use. <sup>(175)</sup> New Jersey Conservation Foundation notes that President Biden's Executive Order 13990 supports the use of the SC-GHG tools by agencies to capture the full costs of GHG emissions as accurately as possible. <sup>(176)</sup> New Jersey Conservation Foundation states that following issuance of Executive Order 13990, the Interagency Working Group on the Social Cost of Greenhouse Gases (GHG IWG) published interim SC-GHG values, which the Commission should use. <sup>(177)</sup>

73. CEQ notes that it was working with representatives on the GHG IWG to develop additional guidance regarding the application of the SC-GHG tools in decision-making processes, including NEPA analysis. <sup>(178)</sup> NGSA and API urge the Commission to wait for this review to be completed. <sup>(179)</sup> NGSA further states that it would be inappropriate for the Commission to develop a likely conflicting approach for utilizing the SCC tool. <sup>(180)</sup> API states that it would violate principles of consistency for the Commission to apply the interim SC-GHG values to current proposals ( *i.e.*, for the remainder of this year), knowing that these values may change and lead to different treatment for future proposals. <sup>(181)</sup> EPA states that in cases where the Commission determines that a monetary comparison between benefits and costs is appropriate, the Commission should take into account established practices for benefit-cost analyses ( *e.g.*, the Office of Management and Budget's Circular A-4 and references therein). If the Commission chooses to use the SC-GHG tools, EPA states that it should disclose all assumptions and levels of uncertainty associated with the analysis. <sup>(182)</sup>

74. The Public Interest Organizations state that monetizing impacts using the SCC tool provides the public and decisionmakers with accessible figures useful in determining whether a project is in the public interest and allows the Commission to easily compare project harms and economic benefits, whereas other metrics can misleadingly minimize climate impacts due to inadequate contextualization. <sup>(183)</sup>

75. Kinder Morgan asserts that the SCC tool relies on inputs or assumptions that introduce too much uncertainty. <sup>(184)</sup> Similarly, Attorneys General of Missouri et al. contends that the SCC tool is too speculative and arbitrary to hold up to the hard-look requirement under NEPA. <sup>(185)</sup> Rebutting this, EDF emphasizes that the GHG IWG's methodology is rigorous and based on the best available data and economic practices, such as utilizing a 300-year time horizon. <sup>(186)</sup> INGAA states that the significant variation in output among

GHG IWG's interim values shows that discount rates reflect a high level of uncertainty in the models and that an agency's chosen discount rate wields an outsized influence on the end result. <sup>(187)</sup> INGAA states that the Commission should: (1) Only use the SCC tool within the NEPA evaluation, not the NGA evaluation; (2) use the SCC tool as a relative, but not absolute, measure; (3) use the SCC tool only as a threshold indicator; and (4) place any SCC estimates in the proper context. <sup>(188)</sup>

76. New Jersey Conservation Foundation recommends that the Commission use all of the GHG IWG's interim values provided for the SC-GHG tools (GHG IWG recommends using a discount rate of 3%, but also provides values associated with discount rates of 2.5% and 5%). <sup>(189)</sup>

77. Boardwalk and Kinder Morgan argue that the Commission should only use the SCC tool as a qualitative tool. <sup>(190)</sup> Boardwalk further asserts that there should not be any triggering levels that would result in adverse action by the Commission or a significance determination. Boardwalk contends that the use of trigger levels would create substantial regulatory uncertainty. Kinder Morgan and Williams also express concern that the SCC tool yields inherently one-sided GHG data if it is applied to a project in a manner that monetizes only the project's GHG costs and not the corresponding project benefits. <sup>(191)</sup> Energy Infrastructure Council asserts that the SCC tool is meaningless without a standard or threshold for significance and its use requires a monetized cost-benefit analysis of an entire project. <sup>(192)</sup>

78. Kinder Morgan states that the SCC tool was not designed for project-specific analysis but could be used as a screening tool in a qualitative analysis. If the Commission uses the SCC tool, Kinder Morgan recommends that it should explain why and how it was used. <sup>(193)</sup> This explanation should include information about the SCC's function, its mechanism, its embedded limitations and assumptions, and the specific reason for its application in a given circumstance. Kinder Morgan states that this type of explanation is vital to avoid misleading the public about the purpose of the SCC calculation and the meaning of its results. <sup>(194)</sup> Spectra Energy Partners, LP and Seneca Resources Corporation contend that the Commission has no basis to designate a particular SCC dollar amount as significant, and any such designation would be arbitrary and could not meaningfully inform the Commission's decision making or the public. <sup>(195)</sup> Additionally, Kinder Morgan states that the Commission should not use the SCC tool to determine mitigation measures or conditions because no statute requires that the Commission implement mitigation based on calculations from such a tool. <sup>(196)</sup>

## 2. Appropriate Level of NEPA Review and Significance Determination

79. To determine the appropriate level of NEPA review, the Commission is establishing a significance threshold of 100,000 metric tons or more per year of CO<sub>2</sub> e. In calculating this emissions estimate, Commission staff will apply the 100% utilization or "full burn" rate for natural gas supplies delivered by the proposed project and will prepare an EIS if the estimated emissions from the proposed project may exceed the 100,000 metric tons per year threshold.

80. An emissions threshold of 100,000 metric tons per year of CO<sub>2</sub> e captures the majority of annual emissions generated by Commission authorized projects, including those that may result in incremental GHG emissions over a long duration that may have a significant effect upon the human environment. Establishing a threshold for NEPA purposes also provides Commission staff, industry, and other stakeholders clarity regarding whether a particular project will result in the preparation of either an EA or an EIS. We believe that such clarity ultimately benefits both the regulated community and public by ensuring certainty regarding the Commission's process for reviewing applications for natural gas infrastructure.

81. In its NEPA document, staff will estimate the proposed project's GHG emissions based on all relevant evidence submitted in the record—including the project's utilization rate, offsets, and mitigation. A project with estimated emissions of 100,000 metric tons per year of CO<sub>2</sub> e or greater will be presumed to have a significant effect, unless record evidence refutes that presumption. <sup>(197)</sup> While the 100,000 metric ton

presumption will serve as a guidepost, facilitating transparent, predictable analysis of a proposed project's contribution to climate change, our analysis will continue to consider all evidence in the record on a case-by-case basis. As part of that analysis, the Commission will continue to consider any emerging tools as well as any forthcoming frameworks or analysis issued by CEQ or other agencies on this issue. Finally, as noted at the outset, we encourage commenters to address this approach to assessing significance—including the 100,000 metric ton CO<sub>2</sub>e threshold.

a. Commission Authority To Establish a Threshold

82. Section 3 of the NGA requires the Commission to approve an application for the exportation or importation of natural gas unless the proposal “will not be consistent with the public interest.”<sup>(198)</sup> Similarly, under section 7, the Commission must find a proposed project is or will be required by the present or future public convenience and necessity.<sup>(199)</sup> The Commission has long regarded section 3's “public interest” standard and section 7's “public convenience and necessity” standard as substantially equivalent.<sup>(200)</sup> In considering applications under section 3 or section 7, the Commission must “evaluate all factors bearing on the public interest.”<sup>(201)</sup> The Commission has recognized from its earliest decisions that it may consider the end use of gas as a factor in assessing the public interest<sup>(202)</sup> and has long considered the impact of natural gas combustion on air pollution.<sup>(203)</sup>

83. As discussed above, the courts have interpreted the Commission's obligations under NEPA to require analysis of downstream GHG emissions for NGA section 7 certificate projects, but do not require an analysis of either downstream or upstream GHG emissions for section 3 export projects.<sup>(204)</sup> As also discussed above, the Commission has previously acknowledged that upstream emissions for NGA section 7 certificate projects may be difficult to quantify. However, as noted, the Commission will continue to consider on a case-by-case basis whether GHG emissions from upstream production activities are a reasonably foreseeable and causally connected result of a proposed project.<sup>(205)</sup>

84. Contrary to the suggestion of some commenters, the Commission would not intrude into another agency's domain by establishing a significance threshold. The Commission does not propose to set an emissions standard that projects will be expected to meet; rather, the threshold would be an indication of potential significance for purposes of the Commission's review of a project's environmental impacts under NEPA and trigger the preparation of an EIS.<sup>(206)</sup>

85. As discussed above, NEPA requires the Commission to take a “hard look” at the environmental consequences of a proposed action and to prepare an EIS disclosing its analysis to the public where its action may significantly affect the quality of the human environment, or to prepare an EA for a proposed action that is not likely to have significant effects or when the significance is unknown to determine if an EIS is necessary. We note that neither EPA nor CEQ raise objections to the Commission determining the significance of GHG emissions; in fact, EPA points to Executive Order 14008, which directs the federal government to prioritize assessment, disclosure, and mitigation of climate pollution and climate-related risks, in response to the Commission's query on how it could determine the significance of a project's GHG emissions.<sup>(207)</sup>

86. As discussed above, NEPA requires the Commission to determine whether a project would have any significant effects on the environment, including the effects of GHG emissions on the climate.<sup>(208)</sup> Moreover, courts have rejected the claim that under the NEPA framework, the determination of whether an impact is significant must not involve any subjective judgment calls.<sup>(209)</sup>

87. We are establishing a uniform GHG emissions threshold because GHG emissions affect climate to the same degree, regardless of the location or specifics of a particular project. Establishing such a threshold will provide the Commission a workable and consistent path forward to analyze proposed projects. Further, a

numerical threshold is a clear, consistent standard that can be easily understood and applied by the regulated community and interested stakeholders.

b. Rationale for an Emissions Threshold of 100,000 Metric Tons per Year

88. Human impact on the warming of the global climate system is unequivocal. <sup>(210)</sup> Even if deep reductions in GHG emissions are achieved, the planet is projected to warm by at least 1.5 degrees Celsius (°C) by 2050. <sup>(211)</sup> This level of warming will present major global consequences. For example, extreme temperature events that may have occurred once in 10 years on average in a climate without human influence will occur 4.1 times as frequently and be 1.9 °C hotter. <sup>(212)</sup> Agricultural and ecological drought events that may have occurred once in 10 years on average across drying regions in a climate without human influence will occur twice as frequently. <sup>(213)</sup> Warming beyond 1.5 °C presents even more severe consequences. The Intergovernmental Panel on Climate Change states that “[w]ith every additional increment of global warming, changes in extremes continue to become larger.” <sup>(214)</sup> For example, every subsequent 0.5 °C of warming “causes clearly discernible increases in the intensity and frequency of hot extremes, including heatwaves ( *very likely* ), and heavy precipitation ( *high confidence* ), as well as agricultural and ecological droughts in some regions ( *high confidence* ).” <sup>(215)</sup> Because of the dire effects at stake, even relatively minor GHG emissions pose a significant threat, 100,000 metric tons per year of project GHG emissions will capture all natural gas projects that have what we believe to be the potential for causing significant impacts on climate, given the typical lifespans of authorized projects. For a single natural gas project with a lifespan of 30 years, this threshold represents a total of three million metric tons of GHG emissions.

89. Based on an internal review of natural gas projects from 2008 to 2021, a 100,000 metric tons per year threshold will cover the vast majority of potential GHG emissions from natural gas projects authorized by the Commission. For context, projects that likely have 100,000 metric tons per year or more of GHG emissions include projects transporting an average of 5,200 dekatherms per day and projects involving the operation of one or more compressor stations or LNG facilities.

90. Outside the NEPA context, other federal and state agencies that have established thresholds to evaluate or regulate GHG emissions from an analysis of the emissions from regulated sources. Most notably, in 2012, EPA issued the Tailoring Rule to regulate GHG emissions from stationary sources of air pollution under the Prevention of Significant Deterioration (PSD) <sup>(216)</sup> and Title V <sup>(217)</sup> permitting programs <sup>(218)</sup> and proposed to phase in the regulation of GHG emissions in two steps. Under Step 1, sources already subject to the PSD permitting program for at least one non-GHG pollutant (“anyway” sources) were required to utilize best available control technology (BACT) for GHG emissions <sup>(219)</sup> if they increased net GHG emissions by at least 75,000 tons per year of CO<sub>2</sub> e.

91. Under Step 2, EPA expanded the Tailoring Rule by requiring a new source or a major modification to an existing source to obtain PSD and/or Title V permits based on GHG emissions alone. Sources that had the potential to emit at least 100,000 tons per year of CO<sub>2</sub> e would become newly subject to the PSD and/or Title V requirements, even if they did not exceed the statutory threshold for any other pollutant. Additionally, modifications to an existing source already subject to PSD and/or Title V that increased net GHG emissions by at least 75,000 tons per year of CO<sub>2</sub> e would be subject to PSD requirements regardless of whether there was an increase in the emissions of any other pollutant. <sup>(220)</sup>

92. In setting the 75,000 tons and 100,000 tons per year of GHGs thresholds, EPA considered the administrative burden of permitting the estimated number of additional facilities under each threshold and the percentage of total national stationary source GHG emissions that would be covered under the threshold. <sup>(221)</sup> For example, under Step 1, EPA estimated a 5% increase in the total annual cost to run the permitting programs and that approximately 65% of GHG emissions would be covered. Under Step 2, EPA estimated that approximately 550 new sources would become subject to the PSD and Title V programs,

increasing total annual costs to run the programs by 42% and covering 67% of GHG emissions. EPA further found that lowering the threshold to 50,000 or 25,000 tons per year of CO<sub>2</sub>e would drastically increase both the number of new facilities requiring permits and the cost of administering the programs but would only marginally increase the percentage of GHG emissions covered to 70% and 75%, respectively.

93. In 2014, the Supreme Court invalidated portions of the Tailoring Rule, holding that EPA may not use GHG emissions as the sole basis for determining whether a source is subject to a PSD or Title V permitting requirements.<sup>(222)</sup> While the Supreme Court's ruling struck down Step 2 of the Tailoring Rule, it upheld Step 1 and allowed EPA to continue to regulate GHG emissions from "anyway" sources. Notably, the decision did not discuss EPA's methodology for establishing the thresholds; it only ruled that deviating from the 100 and 250 tons per year statutory thresholds in the Clean Air Act when requiring sources to newly obtain PSD or Title V permits based solely on GHG emissions under Step 2 was impermissible.

94. Further, at least two agencies in California that are directed to determine the significance of GHG emissions and climate impacts of proposed projects under the California Environmental Quality Act have also proposed or established thresholds of significance based on an analysis of regulated sources. First, in 2008, the California Air Resources Board (California ARB) proposed finding a less than significant impact for a proposed industrial project that, with mitigation, emits no more than 7,000 metric tons per year of CO<sub>2</sub>e from non-transportation sources, including combustion and fugitive emissions.<sup>(223)</sup> Second, the South Coast Air Quality Management District (South Coast AQMD) adopted an interim GHG significance threshold of 10,000 metric tons of CO<sub>2</sub>e per year for stationary sources of air pollution in 2008.<sup>(224)</sup> Both California ARB and South Coast AQMD found that their thresholds would capture approximately 90% of emissions from their respective regulated sources.<sup>(225)</sup>

95. Like EPA and the California agencies, we are basing our threshold on an analysis of regulated sources. Although we are adopting a conceptually similar methodology in establishing our threshold, we note that our approach will cover a larger number of emissions than the threshold established by EPA in the Tailoring Rule. EPA's thresholds of 75,000 and 100,000 tons per year accounted for only 65% and 67% of emissions from EPA-regulated sources, respectively, whereas our proposed threshold of 100,000 metric tons per year would deem nearly three-quarters of Commission-regulated natural gas project, which collectively account for roughly 99% of GHG emissions from Commission-regulated natural gas projects, to have a significant impact on climate change.

### 3. Other Metrics

96. As noted above, commenters argue for and against the use of various existing GHG inventories or goals as a comparison tool to determine significance. Comparison to an existing GHG inventory or goal presents substantially different percentages based on the chosen goal (international, state, regional, or local). Because different projects may have different potential purposes and the purpose of a project may be characterized to support or oppose a particular viewpoint, we do not believe that tying the Commission's significance determination for a proposed project's GHG emissions to a particular inventory or goal is appropriate. However, we recognize that this type of comparison can be helpful to inform the Commission's analysis and the public, especially when presented using a consistent metric across proposed projects under consideration by the Commission. We note that many commenters reference the SC-GHG as one tool. To the extent permitted by law,<sup>(226)</sup> the Commission could consider the SC-GHG in the future.

### C. Mitigation

97. Federal agencies can use mitigation to minimize the potential adverse environmental effects of their actions,<sup>(227)</sup> and mitigation is used by the Commission in reviewing NGA sections 3 and 7 proposals.<sup>(228)</sup>

98. The NGA grants the Commission broad authority to attach reasonable terms and conditions to NGA section 7 certificates of public convenience and necessity and NGA section 3 authorizations. <sup>(229)</sup> The Commission has consistently exercised this authority to attach environmental conditions that mitigate the adverse environmental impacts of a proposed project, and the Commission is not precluded from utilizing this authority to require a project sponsor to mitigate all, or a portion of, the impacts related to a proposed project's GHG emissions. Therefore, consistent with the discussion provided herein, going forward project proponents are encouraged to propose mitigation that will minimize climate impacts. The Commission will consider any mitigation measures proposed by the project sponsor on a case-by-case basis when balancing the need for a project against its adverse environmental impacts and may require additional mitigation as a condition of an NGA section 3 authorization or section 7 certificate.

#### 1. Technical Conference on GHG Mitigation

99. On November 19, 2021, the Commission held a Commission staff-led technical conference to discuss methods project sponsors may use to mitigate the effects of direct and indirect greenhouse gas emissions resulting from Natural Gas Act sections 3 and 7 authorizations. <sup>(230)</sup> Representatives from industry, academia, non-governmental organizations, and state regulatory commissions participated as panelists, with discussion topics including: How the Commission could determine the quantity of reasonably foreseeable GHG emissions resulting from a project proposed under section 3 or 7 of the NGA and the appropriate level of mitigation for such emissions; types of mitigation measures a project sponsor could employ to reduce the amount of GHG emissions associated with a proposed project; and methods for the continued verification and accounting of GHG mitigation during project operation, as well as cost impacts to the industry from implementing GHG mitigation measures and how project sponsors might recover those costs.

100. In addition to the panelists' written statements, the Commission received over 20 comments in response to the technical conference. The Commission considered these statements and comments in developing the mitigation policy described below.

#### 2. Authority To Require Mitigation

101. Some commenters state that the Commission has broad authority under the NGA to place conditions in certificate authorizations requiring pipeline companies to mitigate GHG impacts, <sup>(231)</sup> while others argue that the Commission does not have authority under the NGA or NEPA to impose mitigation measures, <sup>(232)</sup> especially measures to mitigate upstream or downstream GHG emissions. <sup>(233)</sup> Specifically, commenters argue that the Commission's authority under NGA section 7(e) to place conditions on a certificate is limited by the statutory purpose to regulate interstate transportation to ensure reliable access to plentiful natural gas at reasonable prices. <sup>(234)</sup> Commenters further assert that the Commission has no authority to establish environmental policy and that the Commission cannot use its conditioning authority to indirectly mitigate an effect that it has no authority to directly mitigate. <sup>(235)</sup>

102. Commenters also claim that any attempt to mitigate indirect GHG emissions would infringe on the regulatory authority of other federal and state agencies and result in back-door regulation of energy policy. <sup>(236)</sup> Specifically, commenters state that any attempt by the Commission to mitigate upstream or downstream GHG emissions would interfere with state resource decisions and usurp issues of national energy and environmental policy that Congress vested in other federal authorities. <sup>(237)</sup> For example, commenters argue that Congress has delegated authority to the EPA and state agencies to regulate GHGs under the CAA. <sup>(238)</sup> Even if the Commission had the authority to impose mitigation measures for upstream or downstream GHG emissions, commenters argue that the Commission must first establish that those GHG emissions are reasonably foreseeable and have a sufficiently close causal connection (akin to

proximate causation under tort law) <sup>(239)</sup> to the authorization of a project under NEPA, and if not, should not be considered for mitigation purposes. <sup>(240)</sup> Lastly, commenters question reliance on *Sabal Trail* to support the Commission's authority to impose mitigation. <sup>(241)</sup>

103. We disagree with contentions that the Commission does not have the authority under the NGA or NEPA to require mitigation of GHG emissions by a project sponsor. The D.C. Circuit stated in *Sabal Trail*, that “the [Commission] has legal authority to mitigate” greenhouse-gas emissions that are an indirect effect of authorizing a pipeline project. <sup>(242)</sup> And, as early as 1961, the Supreme Court recognized that the Commission's predecessor, the Federal Power Commission, had the authority to consider downstream uses, and specifically, the impact of end-users combusting transported gas on air quality, as part of its public convenience and necessity determination under the NGA. <sup>(243)</sup> Both NGA sections 3 and 7 authorize the Commission to attach “such reasonable terms and conditions as the public convenience and necessity may require.” <sup>(244)</sup> Pursuant to this authority, the Commission has conditioned NGA section 7 certificates and section 3 authorizations on mitigation of impacts of the proposed project. <sup>(245)</sup> Moreover, courts have interpreted this provision broadly and given the Commission latitude in deciding what types of mitigation to require. <sup>(246)</sup>

104. Regarding claims that the Commission cannot mandate mitigation of downstream emissions because those emissions are outside the Commission's jurisdiction, we recognize, as many commenters assert, that the Commission does not have the statutory authority to impose conditions on downstream users or other entities outside the Commission's jurisdiction, such as production, gathering, and local distribution entities. <sup>(247)</sup> Rather, the Commission encourages each *project sponsor* to propose measures to mitigate the impacts of reasonably foreseeable GHG emissions associated with its proposed project, and will consider such mitigation proposals in assessing the extent of a project's adverse impacts. <sup>(248)</sup>

105. We note that the Supreme Court's ruling in *Public Citizen* does not preclude the Commission from requiring project sponsors to mitigate reasonably foreseeable upstream or downstream emissions. As discussed previously, <sup>(249)</sup> the Commission may consider downstream GHG emissions under *Public Citizen*, which states that “NEPA requires ‘a reasonably close causal relationship’ between [an] environmental effect and the alleged cause,” analogous to the “familiar doctrine of proximate cause from tort law” and does not require an agency to gather or consider information regarding environmental harms if it lacks authority to act on that information. <sup>(250)</sup> As directed by *Public Citizen*, decisionmakers should “look to the underlying policies or legislative intent in order to draw a manageable line between those causal changes that may make an actor responsible for an effect and those that do not.” <sup>(251)</sup> Here, the NGA “broadly instruct[s]” the Commission to consider “the public convenience and necessity” when evaluating proposed interstate pipeline applications, balancing public benefits against adverse effects, including adverse environmental effects, <sup>(252)</sup> and we have noted that the Commission has consistently exercised its broad conditioning authority under the NGA to attach environmental conditions that mitigate the adverse environmental impacts of a proposed project. <sup>(253)</sup> NEPA requires an agency to consider the environmental impacts of its actions, including steps that could be taken to mitigate adverse environmental consequences, <sup>(254)</sup> although it does not require a federal agency to take action to mitigate those adverse effects. <sup>(255)</sup> As CEQ recognizes, an agency may, however, require mitigation of impacts under its authority as a condition of its permitting or approval. <sup>(256)</sup> Thus, as the D.C. Circuit held in *Sabal Trail*, the Commission can deny a pipeline certificate on the ground that the pipeline would be too harmful to the environment, because the agency is the “legally relevant cause” of the direct and reasonably foreseeable environmental effects of the pipelines it approves. <sup>(257)</sup> Accordingly, the Commission may consider the end use of gas and the impact of natural gas combustion on air pollution as a factor in assessing the public interest. <sup>(258)</sup> However, as detailed below, the Commission's priority is for project sponsors to mitigate, to the greatest extent possible,

a project's direct GHG emissions. The Commission also encourages project sponsors to propose mitigation of reasonably foreseeable indirect emissions, and will take such proposals into account in assessing the extent of a project's adverse impacts.

### 3. Mitigation Measures

106. The Commission encourages the project sponsor to propose measures to mitigate the direct GHG emissions of its proposed project to the extent these emissions have a significant adverse environmental impact. <sup>(259)</sup> INGAA describes three possible levels of mitigation—to zero, to a level of below significance, and to an amount to be determined by use of the SCC—but dismisses each as unworkable, improperly adopting broad policy judgements, and reliant on a one-sided and imprecise methodology, respectively. <sup>(260)</sup> The Commission plans to evaluate proposed mitigation plans on a case-by-case basis and is not mandating a standard level of mitigation. We also encourage project sponsors to proposed measures to mitigate the reasonably foreseeable upstream or downstream emissions associated with their projects.

107. The Commission will consider the project's impact on climate change, including the project sponsor's mitigation proposal, as part of its public interest determination under NGA section 3 or 7. <sup>(261)</sup> When making the public interest determination, the Commission will assess the adequacy of the project sponsor's proposed mitigation on a case-by-case basis and will consider the project's impact on climate change as one of many factors. <sup>(262)</sup> Further, the Commission may require additional mitigation of a project's direct GHG emissions as a condition of the authorization, should the Commission deem a project sponsor's proposed mitigation inadequate to support the public interest determination.

108. Also we note that NEPA does not preclude the Commission from approving a project with significant adverse impacts. <sup>(263)</sup> If a project's emissions equal or exceed the 100,000 metric tons per year significance threshold and the project sponsor's proposed mitigation will reduce the project's GHG emissions below that threshold, the Commission will consider that mitigation in determining whether it can make a finding of no significant impact.

109. While the Commission has broad authority to require mitigation of GHG emissions by a project sponsor, we are not mandating here any particular form of mitigation. <sup>(264)</sup> A project sponsor is free to propose any mechanism to mitigate the project's GHG emissions. <sup>(265)</sup> However, in order to ensure that any GHG emissions reduction mechanisms achieve real, verifiable, and measurable reductions, any proposed mechanisms should:

- a. Be both real and additional—the emissions reductions would not have otherwise happened unless the proposed reduction mechanism was implemented, and the associated reductions occur beyond regulatory requirements; <sup>(266)</sup>
- b. be quantifiable—any emissions reductions must be calculated using a transparent and replicable methodology;
- c. be unencumbered—seller has clear ownership of or exclusive rights to the benefits of the GHG reduction; and
- d. be trackable—the project sponsor must also propose means for the Commission to monitor and track compliance with the proposed mitigation measures for the life of the project.

110. Commenters express concerns with how the Commission will determine whether mitigation measures are verifiable or how the Commission will monitor or track compliance with mitigation measures in a way that avoids double counting emissions reductions. <sup>(267)</sup> Commenters point out that other federal agencies and states are already monitoring GHG emissions from certificated projects, such as EPA's GHG Reporting Rule, so a Commission-designed monitoring scheme would be duplicative and unnecessary. <sup>(268)</sup> EEI

recommends that the Commission explore interagency agreements or memorandums of understanding (MOU) with agencies like EPA and PHMSA to avoid redundancies and clarify mitigation responsibilities, <sup>(269)</sup> while INGAA states that such agreements or MOUs would be insufficient. <sup>(270)</sup>

111. We believe it best not to mandate mitigation based on a specific volume or proportion of emissions. Encouraging project sponsors to submit proposed mitigation measures as opposed to mandating a certain level of mitigation for all projects allows the Commission to consider a project sponsor's proposed mitigation plan in comparison to the project's benefits, such as fuel switching or providing reliable gas service, when making a public interest determination and allows project sponsors the flexibility to choose what mitigation measures work best for their individual project. Moreover, we recognize that determining an appropriate amount of mitigation, particularly for downstream uses, depends on a variety of complex factors, some of which may not be known at the time of an application, such as state and local climate change policies, the interconnected nature of the natural gas pipeline system, long-term changes in natural gas supply sources, changes in demand for natural gas over time, individual companies' long-term goals to reduce GHG emissions, the availability of renewable energy credits or other carbon offsets, and the potential for future action by other federal agencies. <sup>(271)</sup>

112. Similarly, we believe it best to allow project sponsors to demonstrate that their proposed mitigation measures are verifiable and propose means for the Commission to monitor or track the proposed measures through the life of the project. This approach allows project sponsors to take advantage of existing monitoring programs and tailor verification and tracking to their chosen mitigation proposals and prevents the Commission from needing to establish a new monitoring program.

#### 4. Opportunities for Mitigation

113. While project sponsors are free to propose any type of mitigation mechanism, the following are examples of mitigation mechanisms project sponsors may consider.

##### a. Market-Based Mitigation

114. Project sponsors may mitigate the GHG emissions of a proposed project through participation in one (or more) of the various types of carbon offset markets. Sponsors could, for example, purchase renewable energy credits, participate in a mandatory compliance market (if located in a state that requires participation in such a market), or participate in a voluntary carbon market.

##### i. Renewable Energy Credits

115. Renewable energy credits (REC) are tradeable, market-based commodities that provide proof that one megawatt hour of electricity was generated from a renewable source and delivered to the grid. RECs legally convey the attributes of renewable electricity generation to their owner. While state or regional RECs may be traded on financial exchanges that typically meet state or regional guidelines, they are not limited by geographic boundaries—RECs can be purchased independently from electricity and can be matched with energy consumption. <sup>(272)</sup>

116. Commenters argue that the Commission may not require RECs because unlike offsets, RECs pertain only to the use of electric power and are therefore not appropriate for upstream or downstream mitigation, do not mitigate or compensate for GHG emissions, and are not denominated in carbon dioxide (CO<sub>2</sub>) or CO<sub>2</sub>e, thus, they cannot represent any specific amount of avoided or reduced emissions. <sup>(273)</sup> Enbridge also states that in most instances, project sponsors will not qualify to purchase RECs under existing state programs. <sup>(274)</sup> While RECs may not represent a 100% offset per unit of GHG emitted, RECs do represent a decrease in GHG emissions from overall energy use and production, and we will consider them.

##### ii. Mandatory Compliance Market Participation

117. The compliance market is a mandatory offset program regulated by national, regional, or provincial law and mandates CO<sub>2</sub> and GHG emission reduction requirements. Under this framework an allowance, which is an authorization for an entity to emit GHG emissions, is created. Allowances are generated and traded for regulatory compliance and are priced as a commodity based on supply and demand, regardless of project type.

118. A prime example of an existing, domestic compliance market is the Regional Greenhouse Gas Initiative (RGGI). RGGI is a cooperative effort by eleven Northeast and Mid-Atlantic states <sup>(275)</sup> to limit CO<sub>2</sub> emissions at certain electric power generators. Each region involved in RGGI has an established emissions budget (cap) and each electric power generator holds allowances covering their GHG emissions. If a generator is below its established cap, it may trade an allowance to other entities <sup>(276)</sup> that exceed their cap. RGGI has an established emissions-based auction and trading system where allowances are bought, sold, and traded. <sup>(277)</sup> In addition to allowances, offsets may be used for compliance purposes, which requires a third-party certification of that offset for use. RGGI strictly regulates the quantity and types of offsets. There are five pre-determined types of RGGI offsets:

- a. Landfill gas (methane) capture/burning;
- b. sulfur hexafluoride capture/recycling;
- c. afforestation (the establishment of a forest in an area where there was no previous tree cover);
- d. energy efficiency (end use); and
- e. agricultural manure management operations (avoided emissions).

119. In addition to RGGI, California participates in the Western Climate Initiative with Quebec and Nova Scotia, <sup>(278)</sup> covering industrial production, electricity generation, residential, commercial, and small industrial combustion, and transportation fuel combustion.

120. If an applicant proposes any method of market-based mitigation of GHG emissions, such as those described in this section, we encourage the applicant to inform the Commission of any state or regional compliance goals or initiatives that may be relevant to our consideration of such mitigation proposal.

### iii. Voluntary Carbon Market Participation

121. If a project sponsor is not located in a state that participates in a mandatory compliance market, the voluntary carbon market offers an opportunity to mitigate project emissions. The voluntary carbon market transacts with offsets, which are the instrument representing the reduction, avoidance, or sequestration of one metric ton of GHG. <sup>(279)</sup> The voluntary market funds additional, external projects that avoid or reduce GHG emissions. <sup>(280)</sup> The voluntary carbon market is open to project sponsors regardless of location and is more flexible than compliance markets, although each market has its own standards, registries, and project types. Offset allowances are issued to project sponsors of qualifying CO<sub>2</sub> emissions offset projects.

122. Typically, an independent third party qualifies offset projects and establishes standards to verify offsets; however, not all offsets available in the voluntary market are certified by a third party. In order to ensure the additionality and permanence of offsets, the use of unverified offsets is discouraged. If a project sponsor proposes to mitigate project emissions through participation in a voluntary carbon market, the sponsor is encouraged to seek Commission approval of the third party that would verify the offsets prior to participation. Examples of existing, acceptable third-party certifiers include:

- a. Climate Action Reserve; <sup>(281)</sup>
- b. Verified Carbon Standard; <sup>(282)</sup> and
- c. American Carbon Registry. <sup>(283)</sup>

123. Some commenters support allowing project sponsors to purchase emissions offsets while others oppose it as a mitigation method. For example, Policy Integrity recommends that the Commission require certificate holders to purchase emission offsets from a third party. <sup>(284)</sup> Policy Integrity states that carbon offsets are: (1) Consistent with compensatory mitigation requirements employed by other federal agencies, such as the Bureau of Land Management, U.S. Fish and Wildlife Service, and EPA; and (2) included and supported in CEQ's NEPA regulations and guidance. <sup>(285)</sup> Policy Integrity also recommends that the Commission develop a carbon offset program as opposed to relying on third-party programs; <sup>(286)</sup> however, the Commission lacks statutory authority to create such a program and believes that the existing programs and certifiers mentioned above are sufficient.

124. Conversely, some commenters oppose the Commission requiring project sponsors to purchase offsets from third parties because it is difficult to ensure that carbon offsets have the necessary traits of additionality (the reduction would not have happened but for the purchased offset), permanence (the reduction persists for the entire certification period of the offset), absence of leakage (the offset does not trigger some other activity elsewhere that adds GHG emissions), and rigorous third-party verification. <sup>(287)</sup> INGAA further comments that it would be difficult or impossible for the Commission to choose an appropriate level of offsetting because of the variability in emissions over the life of a project and the risk of over-counting for a given quantity of gas that might move over multiple jurisdictional transportation projects, and that not enough high-quality offsets are available. <sup>(288)</sup> Commissioner Kelliher cautions that the Commission would have to verify offsets given concerns about fraud and environmental and accounting integrity. <sup>(289)</sup> As previously stated, the Commission is not requiring project sponsors to purchase offsets or mandating a certain level of offsetting, and while the Commission acknowledges the challenges with third-party offsets, we believe the certifiers mentioned above will sufficiently account for them.

#### b. Physical Mitigation

125. In addition to purchasing RECs or emissions offsets, project sponsors could also propose to mitigate and/or offset GHG emissions through the use of physical, on- or off-site mitigation measures. Physical mitigation measures could include smaller-scale efforts including reducing a project's fugitive methane emissions or incorporating renewable energy or other energy efficient technologies to reduce a project's GHG emissions from compressor stations, or larger-scale undertakings such as carbon capture and storage, or direct air CO<sub>2</sub> capture. Project sponsors could also propose environmentally based measures, such as planting trees along the right-of-way or in other locations to offset carbon emissions or restoring wetlands to provide additional carbon storage; however, the scale needed for such measures to meaningfully mitigate GHG emissions may render them impractical. In addition, project sponsors could propose to reduce GHG emissions from their existing facilities, including those with no direct connection to the proposed project, as mitigation for project-related emissions.

126. Commenters detail a host of mitigation measures they are currently undertaking or propose to implement to reduce direct project emissions, such as: Installing vent gas recovery systems and optimizing operations to reduce venting and blowdowns, replacing cast iron/unprotected steel pipes with polyethylene or protected steel pipes to minimize leaks, employing a variety of technologies and methods to identify and reduce leaks, and replacing natural gas-fired horsepower at compressor stations. <sup>(290)</sup> Other commenters echo some of those suggestions <sup>(291)</sup> and recommend operational limits on construction equipment, such as limited idle time when engines are not in use. <sup>(292)</sup> Other commenters criticize any mitigation measures, especially carbon capture and sequestration and offsets, and recommend that the Commission achieve "real zero" emissions that accounts for air and water pollution and focuses on environmental justice communities and workers impacted by the negative externalities associated with project operation and jobs that are being phased out. <sup>(293)</sup> Some commenters assert that direct emissions are already substantially mitigated pursuant to the regulatory authority exercised by other agencies. <sup>(294)</sup> With regard to methane leaks, Dr. Anna Scott explains that its independent certification and measurement program verifies that a

company's operations meet regulatory standards and incentivize companies to go beyond the standards by using an engineering-based review process that assesses development through to operations, as well as continuous monitoring of emissions along the supply chain. <sup>(295)</sup> On a policy level, Gary Choquette of Pipeline Research Council International (PRCI) argues for a centralized funding mechanism for pipeline research to establish gas quality requirements with the aim of maximizing supply and reducing emissions and notes that PRCI has developed a tool that provides a method for prioritizing alternatives to reduce emissions based on effectiveness and associated capital and operating costs. <sup>(296)</sup>

127. Commenters also recommend that the Commission consider a project sponsor's participation in programs that help shippers voluntarily reduce emissions and other voluntary emissions reductions programs when evaluating mitigation measures, such as the ONE Future Coalition, Oil and Gas Climate Initiative, Climate and Clean Air Coalition Oil and Gas Methane Partnership, EPA Natural Gas STAR Program and Natural Gas STAR Methane Challenge Program, Methane Guiding Principles, the Natural Gas Sustainability Initiative, and The Environmental Partnership. <sup>(297)</sup> The Commission encourages project sponsors to detail their participation in such programs and any other voluntary measures as part of their mitigation plan for the Commission to consider as part of its public interest determination.

#### c. Cost Recovery

128. Commenters request that the Commission allow full cost recovery for any GHG mitigation measures through either the section 7 process or a general section 4 rate case for capitalized mitigation costs but caution the Commission to ensure that mitigation efforts are verified and the consumer's interest in low prices are balanced with a project sponsor's right to recover costs and earn a fair rate of return under the NGA. <sup>(298)</sup> Alternatively, for periodic purchases of market-based mitigation measures specifically, commenters state that pipelines could propose a tracker through a limited section 4 filing. <sup>(299)</sup> Conversely, other commenters oppose passing mitigation costs along to shippers, especially if it would increase rates for end-users, particularly low-income communities, who may not directly reap any local environmental benefits. <sup>(300)</sup> In the event mitigation costs are passed to shippers, American Forest supports establishing a baseline from which to judge emissions reductions and supports having an independent entity monitor and measure those reductions. <sup>(301)</sup> The Commission has previously considered and approved a proposal by a pipeline proponent to recover the costs of purchasing carbon offsets. In 2010, Ruby Pipeline, L.L.C., proposed to voluntarily purchase GHG offsets for the direct emissions associated with its compressor units (approximately 523,000 metric tons of GHG per year). <sup>(302)</sup> Going forward, project sponsors wishing to purchase offsets or proposing other measures to mitigate their project's GHG emissions may propose to recover the costs of these measures through their proposed rates. Applicants are encouraged to submit detailed cost estimates of GHG mitigation in their application and to clearly state how they propose to recover those costs. Pipelines may seek to recover GHG emissions mitigation costs through their rates, similarly to how they seek to recover other costs associated with constructing and operating a project, such as the cost of other construction mitigation requirements or the cost of fuel. Additionally, the Commission's process for section 7 and section 4 rate cases is designed to protect shippers from unjust or unreasonable rates and will continue to do so with respect to the recovery of costs for mitigation measures.

#### D. Application of Policy Statement

129. We will apply this interim policy statement to both pending and new NGA section 3 and 7 applications. <sup>(303)</sup> As noted above, doing so will allow the Commission to evaluate and act on such applications without undue delay. Applicants with pending applications will be given the opportunity to supplement the record and explain how their proposals are consistent with this policy statement, and stakeholders will have an opportunity to respond to any such filings. A project sponsor for any new natural gas infrastructure project is encouraged to include the following in its NGA section 3 or 7 application:

- The project's projected utilization rate and supporting information;

- an estimate of reasonably foreseeable project GHG emissions;
- if upstream and downstream emissions are not quantified, evidence to support why those emissions are not reasonably foreseeable project emissions;
- evidence, if any, that impacts the quantification of the project's reasonably foreseeable GHG emissions;
- a description of its proposed GHG mitigation measures, including the percent of the project's direct and indirect GHG emissions that will be mitigated and, if applicable, a tracking mechanism for tracking mitigation of GHG emissions; and
- a detailed cost estimate of its proposed GHG mitigation and a proposal for recovering those costs.

130. As explained above, the Commission will then consider the project's impact on climate change, including the project sponsor's mitigation proposal to reduce direct GHG emissions and, to the extent practicable, to reduce any reasonably foreseeable project emissions, as part of its determination under NEPA and its public interest determination under NGA section 3 or 7. <sup>(304)</sup>

### V. Information Collection Statement

131. The collection of information discussed in the Policy Statement is being submitted to the Office of Management and Budget (OMB) for review under section 3507(d) of the Paperwork Reduction Act of 1995 <sup>(305)</sup> and OMB's implementing regulations. <sup>(306)</sup> OMB must approve information collection requirements imposed by agency rules. <sup>(307)</sup> Respondents will not be subject to any penalty for failing to comply with a collection of information if the collection does not display a valid OMB control number.

132. The Commission solicits comments from the public on the Commission's need for this information, whether the information will have practical utility, the accuracy of the burden estimates, recommendations to enhance the quality, utility, and clarity of the information to be collected, and any suggested methods for minimizing respondents' burden, including the use of automated information techniques. PUBLIC COMMENTS ARE DUE May 10, 2022. The burden estimates are focused on implementing the voluntary information collection pursuant to this Policy Statement. The Commission asks that any revised burden estimates submitted by commenters include the details and assumptions used to generate the estimates.

133. The following estimate of reporting burden is related only to this Policy Statement.

134. *Public Reporting Burden:* The collection of information related to this Policy Statement falls under FERC-577 and impacts the burden estimates associated with the "Gas Pipeline Certificates" component of FERC-577. The Policy Statement will not impact the burden estimates related to any other component of FERC-577. The estimated annual burden <sup>(308)</sup> and cost <sup>(309)</sup> follow.

FERC-577 (Natural Gas Facilities: Environmental Review and Compliance) as a Result of PL21-3-000

	<b>Number of respondents</b>	<b>Annual number of responses per respondent</b>	<b>Total number of responses</b>	<b>Average burden &amp; cost (\$)</b>	<b>Total annual burden hours &amp; total annual cost(\$)</b>	<b>Cost per respondent (\$)</b>
	(1)	(2)	(1) * (2) = (3)	(4)	(3) * (4) = (5)	(5) ÷ (1)

	Number of respondents	Annual number of responses per respondent	Total number of responses	Average burden & cost (\$) per response	Total annual burden hours & total annual cost(\$)	Cost per respondent (\$)
Gas Pipeline Certificates	40	1	40	1,520 hrs; \$132,240 Increase	60,800 hrs; \$5,289,600 Increase	\$132,240 Increase.

135. *Title:* FERC-577, Natural Gas Facilities: Environmental Review and Compliance

136. *Action:* Proposed revisions to an existing information collection.

137. *OMB Control No.:* 1902-0128

138. *Respondents:* Entities proposing natural gas projects.

139. *Frequency of Information Collection:* On occasion.

140. *Necessity of Voluntary Information Collection:* The Commission's existing FERC-577 information collection pertains to regulations implementing NEPA and reporting requirements for landowner notifications. The information collected pursuant to this Policy Statement should help the Commission in assessing natural gas infrastructure projects.

141. *Internal Review:* The opportunity to file the information conforms to the Commission's plan for efficient information collection, communication, and management within the natural gas pipeline industry. The Commission has assured itself, by means of its internal review, that there is specific, objective support for the burden estimates associated with the opportunity to file the information.

142. Interested persons may provide comments on this information-collection by one of the following methods:

- *Electronic Filing (preferred):* Documents must be filed in acceptable native applications and print-to-PDF, but not in scanned or picture format.
- *USPS:* Federal Energy Regulatory Commission, Office of the Secretary, 888 First Street NE, Washington, DC 20426
  - Hard copy other than USPS: Federal Energy Regulatory Commission, Office of the Secretary, 12225 Wilkins Avenue, Rockville, Maryland 20852.

## VI. Comment Procedures

143. The Commission invites comments on the interim policy statement by April 4, 2022. Comments must refer to Docket No. PL21-3-000 and must include the commenter's name, the organization they represent, if applicable, and their address in their comments.

144. The Commission encourages comments to be filed electronically via the eFiling link on the Commission's website at <http://www.ferc.gov>. The Commission accepts most standard word processing formats. Documents created electronically using word processing software should be filed in native applications or print-to-PDF format and not in a scanned format. Commenters filing electronically do not need to make a paper filing.

145. Commenters that are not able to file comments electronically must send an original of their comments to: Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street NE, Washington, DC 20426.

146. All comments will be placed in the Commission's public files and may be viewed, printed, or downloaded remotely as described in the Document Availability section below. Commenters on this proposal are not required to serve copies of their comments on other commenters.

## VII. Document Availability

147. In addition to publishing the full text of this document in the Federal Register, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (<http://www.ferc.gov>). At this time, the Commission has suspended access to the Commission's Public Reference Room due to the President's March 13, 2020 proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID-19).

148. From the Commission's Home Page on the internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

149. User assistance is available for eLibrary and the Commission's website during normal business hours from the Commission's Online Support at 202-502-6652 (toll free at 1-866-208-3676) or email at [ferconlinesupport@ferc.gov](mailto:ferconlinesupport@ferc.gov), or the Public Reference Room at (202) 502-8371, TTY (202) 502-8659. Email the Public Reference Room at [public.referenceroom@ferc.gov](mailto:public.referenceroom@ferc.gov).

By the Commission.

Commissioner Danly is dissenting with a separate statement attached.

Commissioner Christie is dissenting with a separate statement attached.

Issued: February 18, 2022.

Kimberly D. Bose,  
Secretary.

## DEPARTMENT OF ENERGY

### Federal Energy Regulatory Commission

Consideration of Greenhouse Gas Emissions in Natural Gas Infrastructure Project Reviews

Docket No. PL21-3-000

DANLY, Commissioner, *dissenting*:

1. I dissent in full from today's Interim Greenhouse Gas (GHG) Policy Statement which purports to set forth the Commission's procedures to evaluate the climate change impacts of proposed natural gas projects under the National Environmental Policy Act (NEPA) and to incorporate climate change considerations into the Commission's determinations under sections 3 and 7 of the Natural Gas Act (NGA).<sup>(1)</sup>

2. This policy statement is irredeemably flawed. It is practically unworkable because it establishes a standardless standard. Its universal application to all projects, both new and pending (some for over two years), is an affront to basic fairness and is unjustifiable, especially in light of the many unnecessary delays already suffered by applicants. It is unlawful because it is illogical, it arrogates to the Commission power it

does not have, and it violates the NGA, NEPA and the Commission's and the Council on Environmental Quality's (CEQ) regulations. It is also deliberately drafted so as to evade judicial review. Lastly, it will sow confusion throughout an industry that already suffers profound uncertainty. This issuance does not know what it is and neither will affected entities: It is immediately applicable, but also seeks comments, and it is allegedly not a draft policy statement, but an "interim" one. How can stakeholders have any confidence in its contents at all? <sup>(2)</sup>

3. When reading this policy statement, it is nearly impossible to credit the majority with actually believing that "minimiz[ing] our litigation risk," making Commission decisions "legally durable," and "increas[ing], not reduc[ing], customer and investor confidence," are truly the goals of this proceeding. <sup>(3)</sup> Rather, the purpose of this Interim Policy Statement, like several of the Commission's other recent Natural Gas Act issuances, appears to be to actively discourage the submission of section 3 or section 7 applications by intentionally making the process more expensive, more time-consuming, and riskier. <sup>(4)</sup>

## I. Overview of the Interim Policy Statement's Contents

4. The Interim Policy Statement begins by explaining it will apply upon issuance while at the same time being subject to comment and revision. <sup>(5)</sup> The majority explains this is necessary to "act on pending applications under sections 3 and 7 of the NGA without undue delay and with an eye toward greater certainty and predictability for all stakeholders." <sup>(6)</sup>

5. Next, it provides a historical background on past court, Commission, and CEQ issuances. For the sake of brevity, I will not describe this background discussion other than to note it is frequently misleading. <sup>(7)</sup>

6. Then the Interim Policy Statement announces that "the Commission will quantify a project's GHG emissions that are reasonably foreseeable and have a reasonably close causal relationship to the proposed action." <sup>(8)</sup> This, it seems, will be fairly broad: the majority goes on to say that "[t]his *will* include GHG emissions resulting from construction and operation of the project as well as, in most cases, GHG emissions resulting from the downstream combustion of transported natural gas." <sup>(9)</sup>

7. The majority also states that it will continue to consider whether upstream emissions are a reasonably foreseeable effect for NGA section 7 projects on a case-by-case basis. <sup>(10)</sup> Notably missing, though, is any discussion of how upstream emissions could have a reasonably close causal relationship to an NGA section 7 project. <sup>(11)</sup>

8. The Interim Policy Statement then describes how the quantity of project's emissions will be determined: By using a projected utilization rate for the project and considering "other factors that might impact a project's net emissions." <sup>(12)</sup> This raises more questions than it answers. Do these other factors include consideration of whether the natural gas being transported will actually reduce overall emissions or simply replace existing emissions; for example by powering natural gas generation that permits the retirement of higher-emitting generation or by serving an end use need that will turn to a different—and perhaps higher emitting—energy source if the pipeline is not constructed? <sup>(13)</sup> What does this mean for projects where the end use is unknown? Does the Commission have the expertise to evaluate a project sponsor's evidence and resolve any factual disputes? Will the majority send these issues to an Administrative Law Judge as it recently did to resolve a dispute over what constituted appropriate post-construction right-of-way restoration (a subject matter with which the Commission presumably has *some* expertise)? <sup>(14)</sup>

9. I would suspect most attentive readers would have been interested to then learn how, having determined the means by which to arrive at these numbers, the Commission plans to weigh emissions among all of the other factors to be considered in its NGA determination. But the majority does not say.

10. Next, the Interim Policy Statement explains “the Commission is establishing a significance threshold of 100,000 metric tons or more per year [(tpy)] of CO<sub>2</sub>e”<sup>(15)</sup> and *will presume* that the impact of a proposed project exceeding that threshold is significant unless refuted by record evidence.<sup>(16)</sup> According to Commission staff, of the 214 projects with direct<sup>(17)</sup> and downstream emissions authorized from January 2017 through June 2021, this policy would have applied to 72% of them. This means that, as of the issuance of this Interim Policy Statement, the EIS is now our default environmental document.<sup>(18)</sup>

11. The Interim Policy Statement says the Commission has authority to impose GHG mitigation for both direct emissions and downstream emissions.<sup>(19)</sup> This is a sweeping claim of jurisdiction and one that drastically departs from the Commission's historic employment of its conditioning authority. But right on the heels of that jurisdictional declaration, instead of ordering mitigation, the majority “encourages” project sponsors to “propose measures to mitigate the direct GHG emissions of its proposed project to the extent these emissions have a significant adverse environmental impact” and “to mitigate the reasonably foreseeable upstream or downstream emissions associated with their projects.”<sup>(20)</sup> The majority states the Commission will consider these mitigation measures in its public interest determinations.<sup>(21)</sup> This whole maneuver is odd—how often does one declare hitherto unasserted jurisdiction and then not employ it? Be warned: this is not restraint, it is foreshadowing.<sup>(22)</sup>

12. The majority tells project sponsors they are “free to propose any mechanism to mitigate the project's GHG emissions”<sup>(23)</sup> and offers some suggestions. Plant trees.<sup>(24)</sup> Incorporate renewable energy or other energy efficiency technologies.<sup>(25)</sup> And, with the faint echo of Johann Tetzl, the majority also suggests purchasing<sup>(26)</sup> renewable energy offsets.<sup>(27)</sup>

13. The majority's guidance ends there, leaving the project sponsor to figure out how *much* they should mitigate by these measures,<sup>(28)</sup> some of which, it ought be pointed out, do not appear to have a discernable connection to the reduction of carbon emissions.<sup>(29)</sup> Nor does the majority explain how the Commission can verify and track any such mitigation throughout the life of the project.<sup>(30)</sup> The majority offers no general framework but says only that it wants project sponsors to mitigate “to the greatest extent possible.”<sup>(31)</sup> One wonders why no mechanism is set forth. Could it be that we learned nothing of value from soliciting comments on GHG mitigation,<sup>(32)</sup> holding a technical conference on the subject,<sup>(33)</sup> and soliciting a second round of comments following that technical conference?<sup>(34)</sup> And think of where this leaves project sponsors. Often, they seek guidance from Commission staff. But for the 30 applications that are currently pending, such communication is potentially barred by the Commission's *ex parte* rules.<sup>(35)</sup> And even for those who are not so disadvantaged, absent direction from the Commission, staff can offer no more than this: You must roll the dice and cross your fingers that the Commission will act on, and maybe even grant, the requested authorization.<sup>(36)</sup>

14. But the mitigation requirements may not end there. The majority states it “may require additional mitigation as a condition of an NGA section 3 authorization or section 7 certificate.”<sup>(37)</sup> Using what standard? Not stated. Perhaps, it will become a good-behavior approach akin to how the Commission has considered landowner impacts, stating: “We are satisfied that [project sponsor] has taken appropriate steps to minimize [GHG emissions].”<sup>(38)</sup> And this encumbrance is perpetual: Mitigation, the majority says, will span “the life of the project.”<sup>(39)</sup> That is long time. Ample opportunity for invasive oversight, enforcement actions, and novel, as yet unpredictable, employments of the Commission's authority.<sup>(40)</sup>

15. Next, we reach the majority's guidance on cost recovery. The majority states “[p]ipelines *may* seek to recover mitigation costs through their rates,” and are “encouraged to submit detailed cost estimates of GHG mitigation in their application and to clearly state how they propose to recover those costs.”<sup>(41)</sup> Pipelines *may* recover costs? On what possible basis could the Commission *deny* recovery? The majority declines to say. Then, presumably in response to comments about increasing rates for low-income communities and requests to balance the cost of mitigation with its environmental benefit, the majority states that “the

Commission's process for section 7 and section 4 rate cases is designed to protect shippers from unjust or unreasonable rates and will continue to do so with respect to the recovery of costs for mitigation measures.”<sup>(42)</sup> How can that be true when the Commission will issue a certificate only when it determines that proposed mitigation measures are required for a pipeline project to be deemed in the public convenience and necessity? Is the Commission really suggesting that it will deny the recovery of costs that it determines are necessary to satisfy the public interest?

16. The Interim Policy Statement concludes by informing project sponsors with pending applications that they “will be given the opportunity to supplement the record and explain how their proposals are consistent with this policy statement” and that those filings will be subject to a reply comment period.<sup>(43)</sup> Future applicants are also “encouraged” to include a list of information in their filings.<sup>(44)</sup> What happens if a project sponsor supplements its record and the Commission revises the Interim Policy Statement once again before acting on that project sponsor’s application? I can imagine that occurring as the comment deadline is six weeks away. And how can future applicants reasonably rely on interim guidance that may or may not change? What “certainty and predictability”<sup>(45)</sup> does this policy provide?

17. In sum, the Commission will weigh direct GHG emissions and, in most cases, downstream emissions in its NGA determinations. It will not tell you how these emissions will be assessed other than to say that project sponsors are encouraged to mitigate them. It will not tell you how project shippers will be protected from imprudently incurred costs. This is the tyranny of vagueness. It is also a threat. Imagine the fear that will animate the mitigation “voluntarily” proposed by those project sponsors with pending applications who are facing millions of dollars in sunk costs and with shippers that have relied on projects being placed into service and now only have higher cost and less reliable options available. This policy statement cannot rightly be described as “encouraging” anything.<sup>(46)</sup>

## II. Interim Policy Statement Proposes, and Takes, Unlawful Actions

### A. The Interim Policy Statement, in Its Entirety, Is Based on the Wrong Premise

18. It is worth pausing to consider the underlying premise of the majority's policy for considering GHG emissions, establishing a GHG emission threshold for preparing EISs, and requiring GHG emission mitigation. All are based on the presumption that GHG emissions are an “effect” of the proposed action.

19. In order to constitute an “effect,” three elements must be met: (1) There is a “change[] in the human environment,” that change (2) is “reasonably foreseeable,” and (3) it “has a reasonably close causal relationship to the proposed action or alternatives.”<sup>(47)</sup> The majority, however, does not allege that the change in the human environment at issue is the release of GHG emissions themselves. That makes sense, given that it would be like the Commission saying, in the hydropower context, that the flow of water from the powerhouse is a change in the human environment. While this would be *an* effect, it is not the kind of effect that is at issue in an environmental review. Instead, the effect we would care about would be the change to the quality or quantity of the body of water through which the water flows and any resultant further changes caused to species, vegetation, etc.

20. No, the majority is concerned about the changes in the human environment caused, not by the existence of GHG emissions themselves, but by climate change. The Interim Policy Statement is absolutely clear that this is its animating purpose: “The Commission is issuing this interim policy statement to explain how the Commission will assess the impacts of natural gas infrastructure projects on climate change”;<sup>(48)</sup> “Climate change is the variation in the Earth's climate (including temperature, humidity, wind, and other meteorological variables) over time”;<sup>(49)</sup> “[C]limate change has resulted in a wide range of impacts across every region of the country and the globe. Those impacts extend beyond atmospheric climate change and include changes to water resources, agriculture, ecosystems, human health, and ocean systems.”<sup>(50)</sup>

21. The question therefore is not whether GHG emissions are reasonably foreseeable but whether *climate change and its resulting effects* are reasonably foreseeable and have a reasonably close causal relationship to the proposed action. And if so, whether those effects are significant and can be mitigated by the Commission.

22. While determining the environmental impacts of a project is done on a case-by-case basis, the construction of a natural gas pipeline and transportation of natural gas in that pipeline are unlikely, on a project-by-project basis, to have a reasonably foreseeable (which is to say traceable and calculable) effect on climate change “in most cases.”<sup>(51)</sup> Were climate change a reasonably foreseeable effect (as this term is used in environmental reviews) of a particular project, we would be able to examine the cause (here, the construction and the transportation of gas) and then determine some articulable and quantifiable effect (here, the amount of additional climate change) for which the project itself is causally responsible. We have never been able to do that. And while it is not acknowledged at all in the Interim Policy Statement’s procedural history, the Commission has repeatedly stated that “it cannot determine a project’s incremental physical impacts on the environment caused by GHG emissions,”<sup>(52)</sup> and CEQ has made similar statements.<sup>(53)</sup> Nothing in the Interim Policy Statement suggests this has changed nor has any new reasoning been offered to explain how we can better determine a quantifiable connection between the two.

23. The chain of causation is too attenuated for the cause and effect in this case to be considered to have a “reasonably close causal relationship.” The reasoning goes as follows: “Changes to water resources, agriculture, ecosystems, human health, and ocean systems” occurring throughout the world result from global atmospheric changes that themselves result from the warming that itself results from increases in the world-wide concentration of GHGs that enter the atmosphere as the emissions released by using natural gas, that in the case of end uses (that is, not pipeline operational uses), results from the transportation of natural gas. The logical sequence is clear, but the causation is quite attenuated. And this attenuation cannot be shortened through the ploy of employing GHG emissions as a proxy for climate change.

#### B. Consideration of Effects on Climate Change From Non-Jurisdictional Entities Violates the NGA and CEQ Regulations

24. The consideration of effects resulting from the upstream production or downstream use of natural gas violates the NGA and CEQ’s regulations.

25. The NGA authorizes the Commission to consider only those factors bearing on the “public convenience and necessity.”<sup>(54)</sup> The phrase “public convenience and necessity” is not “a broad license to promote the general public welfare.”<sup>(55)</sup> It does not permit the majority to conjure up its own meanings. As a “creature of statute,”<sup>(56)</sup> the Commission must “look to the purposes for which the [Natural Gas Act] was adopted” to give it content and meaning.<sup>(57)</sup>

26. As the Court explained in *NAACP v. FPC*, “public convenience and necessity” means “a charge to *promote the orderly production of plentiful supplies* of electric energy and natural gas at just and reasonable rates.”<sup>(58)</sup> Simply put, the production and use of natural gas were not only presumed but were presumed to be in the public interest. Congress put its thumb on the scale in favor of gas and charged the Commission with ensuring that there would be adequate infrastructure in place to provide an abundant supply of natural gas available at reasonable prices for all Americans to use. The purpose of the NGA is narrow and clear. And it is a mousehole through which the elephant of addressing the climate change impacts of the entire natural-gas industry cannot pass.<sup>(59)</sup>

27. And while there were “subsidiary purposes” for the passage of the Natural Gas Act,<sup>(60)</sup> addressing the effects of climate change caused by using natural gas could not have been one of them. And even if it were, it is obvious that something that is “subsidiary” cannot, definitionally, override that which is primary. The majority cannot flip the NGA’s presumptions and consider the use of natural gas as intrinsically harmful,

thus requiring mitigation. And it certainly cannot abandon our charge under the NGA to “*promote* the orderly production of plentiful supplies of . . . natural gas at just and reasonable rates”<sup>(61)</sup> by then weighing their determination that natural gas is harmful against the public interest when adjudicating section 3 and section 7 applications. This is directly contrary to the purpose Congress established the Commission to serve and supplants the judgment of Congress with that of the Commission. If that were not reason enough, it also invades jurisdictional territory that the courts have repeatedly held that Congress has reserved to the States.<sup>(62)</sup>

28. The majority cannot turn to the Supreme Court's holding in *Transco* as authority.<sup>(63)</sup> In that case, the Court held that the Federal Power Commission lawfully denied a certificate based on two factors: First, that using natural gas to alleviate air pollution from burning coal was an inferior use, and second, the proposal would increase future prices.<sup>(64)</sup> It does not stand for the proposition that the Commission can consider adverse effects of air pollution, and thus climate change impacts, of using natural gas as the majority implies.<sup>(65)</sup>

29. Nor is the D.C. Circuit's outlier opinion, *Sabal Trail*, as instructive as the majority seems to believe. It is very much in tension with prevailing Supreme Court precedent in *Public Citizen*, which held that agencies are only obligated to consider environmental effects to which their actions are the proximate cause.<sup>66</sup> *Public Citizen* explained that courts must look to the “underlying policies or legislative intent” of an agency's organic statute to determine whether an agency is obligated to consider environmental effects.<sup>(67)</sup> The D.C. Circuit has also characterized *Public Citizen* as “explicit” that an agency is “not obligated to consider those effects . . . that could only occur after intervening action” by some other actor “and that only [that] actor[ ] . . . had the authority to prevent.”<sup>(68)</sup> In other words, when any potential effects are the result of the actions of third parties such as retail consumers, upstream production companies, and power generators, who may be several degrees of separation removed from the jurisdictional pipeline, those effects are outside the scope of what the agency must consider.

30. Thus, we should not rest too much weight upon *Sabal Trail*. Not only is the holding narrower than the majority seems to believe and was roundly criticized by the accompanying dissent,<sup>(69)</sup> its reasoning has since been called into question by another appellate court and I expect it will soon be challenged in the Supreme Court.<sup>(70)</sup>

31. In sum, environmental effects resulting from the upstream production and downstream use of gas are not factors bearing on the public convenience and necessity under the Natural Gas Act. Further, the CEQ's regulations affirmatively prohibit those effects from being considered in an agency's compliance with NEPA.<sup>(71)</sup>

### C. The Significance Threshold Is Illogical and Violates Regulations

32. In addition, the majority's presumption that project emissions exceeding 100,000 tpy of CO<sub>2</sub>e will have a significant effect on the human environment is illogical and inconsistent with CEQ and Commission regulations.

33. The majority offers three irrelevant rationales for this presumption:<sup>72</sup> *first*, the threshold is administratively workable;<sup>73</sup> *second*, other agencies have established thresholds under different statutory schemes that are not based on a project's effect on the climate;<sup>(74)</sup> and *third*, the threshold will “capture”<sup>(75)</sup> “99% of GHG emissions from Commission-regulated natural gas projects.”<sup>(76)</sup> It is worth noting that according to Commission staff, a 1 million tpy threshold would have covered 98.909% of emissions from natural gas projects authorized from 2017 through 2021, making the unsupported selection of the lower threshold both arbitrary and capricious.

34. The majority also states “even relatively minor GHG emissions pose a significant threat” “[b]ecause of the dire effects at stake.”<sup>(77)</sup> This rationale, however, is not supported by the evidence offered. The Commission does not explain how minor GHG emissions could lead to “dire effects.” We cannot just assume—this is administrative law—we must show evidence. More importantly, the rationale does not link a proposed project to effects on climate change. And for good reason. As CEQ declared: “it is not currently useful for the NEPA analysis to attempt to link specific climatological changes, or the environmental impacts thereof, to the particular project or emissions, as such direct linkage is difficult to isolate and to understand.”<sup>(78)</sup> The Commission has repeatedly agreed.<sup>(79)</sup>

35. On top of being illogical, the Interim Policy Statement effectively amends the Commission's NEPA regulations without undergoing notice-and-comment procedures as required by the Administrative Procedure Act.<sup>(80)</sup> The Interim Policy Statement provides that an EIS will be prepared when the threshold is exceeded at full burn.<sup>(81)</sup> The Commission's NEPA regulations, however, set forth specific categories of projects where an EA and EIS “will normally be prepared,”<sup>(82)</sup> with no mention of GHG emissions. And in a case where an EA is normally prepared, the Commission “may in *specific* circumstances”—meaning a case-by-case determination—decide whether to prepare an EIS “depending on the location or scope of the proposed action, or resources affected.”<sup>(83)</sup>

36. Given these fatal flaws, it is no wonder the majority seeks comment “in particular, on the approach to assessing the significance of the proposed project's contribution to climate change.”<sup>(84)</sup>

#### D. GHG Mitigation

##### 1. Claims of Authority To Mitigate

37. Next, the majority states that the Commission's conditioning power gives it authority to require a pipeline to mitigate GHGs emitted by its operations and reasonably foreseeable indirect effects.<sup>(85)</sup> The majority is incorrect.

38. As commenters explain,<sup>(86)</sup> without any response from the majority, the Supreme Court has held that “Congress *delegated to EPA the decision whether and how to regulate carbon-dioxide emissions*” from stationary sources.<sup>(87)</sup> By claiming the authority to mitigate these same emissions as part of the Natural Gas Act certification process, the majority are attempting to usurp the statutory authority the Court found Congress has delegated to EPA and which cannot be reassigned absent Congressional action.<sup>(88)</sup> If the EPA were to regulate GHG emissions from pipeline facilities, which it is contemplating doing,<sup>(89)</sup> the Commission could possibly require project sponsors to comply with those requirements. But one would not say that the Commission could on its own require project sponsors to mitigate, for example, sulfur dioxide because the EPA had chosen not to do so, or the Commission believed its regulations to be inadequate.

39. The Commission's conditioning authority also does not allow the Commission to mitigate GHG emissions from upstream or downstream users. The commenters make the point,<sup>(90)</sup> also sidestepped by the majority,<sup>(91)</sup> that the Commission's conditioning authority cannot be used to indirectly do what the Commission cannot do directly. That is, the Commission may not indirectly rely on the Natural Gas Act to impose conditions on non-jurisdictional entities.<sup>(92)</sup>

40. Further, the Commission's conditioning authority cannot be used in ways that would be directly contrary to the purpose of the NGA—to promote the production of plentiful supplies of natural gas at reasonable rates. The majority may not rewrite the purpose of the NGA to instead charge the Commission with the mission of discouraging the production and use of natural gas.

##### 2. Encouraging Project Sponsors To Mitigate GHG Emissions

41. The Interim Policy Statement's encouragement that project sponsors mitigate GHG emissions is in practical effect a requirement, <sup>(93)</sup> and is not in accordance with the NGA. The NGA only empowers the Commission to impose terms and conditions in two contexts: (1) Pursuant to NGA section 3 when it finds such terms "necessary or appropriate" <sup>(94)</sup> to ensure a proposed export or import facility is not inconsistent with the public interest, and (2) pursuant to NGA section 7, when it finds such terms are "reasonable" and "require[d]" by the "public convenience and necessity." <sup>(95)</sup> Only after making these findings, can the Commission require mitigation.

42. The majority does not attempt to make either of these required findings. It simply leaps from stating that the Commission has the discretion to mitigate GHG emissions to "expecting" applicants to mitigate their emissions. This amounts to no more than "because I said so." More is required. <sup>(96)</sup>

### III. Intent of the Interim Policy Statement

43. One cannot help but notice the lengths to which the majority goes in order to make this policy statement "non-binding," using words like "propose," "wish," "opportunity," and even insisting, in response to this dissent, that it does not "impose[] an obligation, deny[y] a right, or fix[] some legal relationship," <sup>(97)</sup> for what appears to have no purpose other than to avoid notice-and-comment procedures (that is, public participation) and judicial review. For without judicial review as a check, there is no need to engage in reasoned decision-making or be limited by the purposes of the statute.

44. In this way, the majority appears to believe it can do whatever it wants. Arrogate to the Commission authority it does not have. Disregard regulations that are currently in force. Flout prevailing Supreme Court precedent. Make threats to manipulate project sponsors into "voluntarily" subjecting themselves to unnecessary processes and proposing mitigation of the "harm" resulting from the proposed use or transportation of natural gas to provide a service that Congress declared to be in the public interest.

45. If an entity requests rehearing of today's policy statement, the majority can simply reject it—either by notice or order (without any discussion of the merits)—stating that rehearing does not lie for policy statements. And if a petition for review follows, the Commission can argue that the Interim Policy Statement is not subject to review because it is not a substantive rule. And if some project sponsor suggests it is proposing mitigation under duress and it reserves the right to challenge the mitigation requirement in court, the Commission can argue the project sponsor cannot be aggrieved because it voluntarily proposed the mitigation and accepted the certificate and its terms. <sup>(98)</sup>

46. This is not good governance. Nor do I think it likely the majority will be successful. In my view, the Interim Policy Statement is a substantive, binding rule that is subject to judicial review. Despite the Interim Policy Statement's hortatory verbiage, "there are sinews of command beneath the velvet words." <sup>(99)</sup> Perhaps the best illustration of this is the list of six items project sponsors are "encouraged" to include in their applications in light of the new policy statement. <sup>(100)</sup> This list includes estimates of the proposal's cumulative direct and indirect emissions and what mitigation measures the project sponsors propose, as well as a "detailed cost estimate" of the proposed mitigation and a "proposal for recovering those costs." <sup>(101)</sup>

47. This is not encouragement. This is command. The project sponsors will know that if they want to win approval for their projects this is what they must do <sup>(102)</sup> even if they must guess at what will ultimately satisfy the Commission's new policies. Certainly, no project sponsor will believe that mitigation is optional or that submitting an application exceeding the Interim Policy Statement's 100,000 tpy threshold without a mitigation proposal would be anything other than a waste of time and money. And what other reason could the majority have for delaying action on those projects that have effectively twice completed the NEPA process? <sup>(103)</sup>

48. There is, however, no ambiguity in this: The Commission has changed the requirements for obtaining project approvals and applicants need to come before the Commission acknowledging that it is so. <sup>(104)</sup> The effect of this change is immediate. Even applicants whose projects have been pending with the Commission for upwards of two years will be subjected to the Commission's new rules.

49. The interim policy statement also determines that emissions over 100,000 tpy of CO<sub>2</sub>e are significant (and emissions which fall below, not significant), a determination from which legal consequences flow under NEPA. <sup>(105)</sup> And it binds Commission staff. <sup>(106)</sup> While I acknowledge the courts have given the Commission's characterization of issuances deference in the past, <sup>(107)</sup> whether a court will do so in this instance is far from certain.

For these reasons, I respectfully dissent.

James P. Danly, *Commissioner*

## DEPARTMENT OF ENERGY

### Federal Energy Regulatory Commission

#### Consideration of Greenhouse Gas Emissions in Natural Gas Infrastructure Project Reviews

Docket No. PL21-3-000

CHRISTIE, Commissioner, *dissenting* :

1. Last year I voted to re-issue this Notice of Inquiry (NOI) for another round of comment <sup>(1)</sup> because I believed—and still do—that there are reasonable updates to the 1999 policy statement that would be worthwhile. <sup>(2)</sup> For example, I agree that precedent agreements between corporate affiliates, because of the obvious potential for self-dealing, should not, in and of themselves and without additional evidence, prove need. <sup>(3)</sup> I also believe that the Commission's procedures for guaranteeing due process to affected property owners, which, as Justice Frankfurter taught, consists of the two core elements of notice and opportunity to be heard, <sup>(4)</sup> could be strengthened.

2. Unfortunately, the new certificate policy the majority approves today <sup>(5)</sup> does not represent a reasonable update to the 1999 statement. On the contrary, what the majority does today is arrogate to itself the power to rewrite both the Natural Gas Act (NGA) <sup>(6)</sup> and the National Environmental Policy Act (NEPA), <sup>(7)</sup> a power that *only* the elected legislators in Congress can exercise. Today's action represents a truly radical departure from decades of Commission practice and precedent implementing the NGA.

3. The fundamental changes the majority imposes today to the Commission's procedures governing certificate applications are wrong as both law *and* policy. They clearly exceed the Commission's legal authority under the NGA and NEPA and, in so doing, violate the United States Supreme Court's major questions doctrine. <sup>(8)</sup>

4. The new policy also threatens to do fundamental damage to the nation's energy security by making it even more costly and difficult to build the infrastructure that will be critically needed to maintain reliable power service to consumers as the generation mix changes to incorporate lower carbon-emitting resources such as wind and solar. And as recent events in Europe and Ukraine graphically illustrate, America's energy security is an inextricable part of our national security. <sup>(9)</sup> The majority's proposal on GHG impacts is obviously motivated by a desire to address climate change, but will actually make it *more* difficult to expand the deployment of low or no-carbon resources, because it will make it more difficult to build or maintain the gas infrastructure essential to keep the lights on as more intermittent resources are deployed. <sup>(10)</sup> In

addition to the essential need for natural gas to keep our power supply reliable, a dependable and adequate natural gas supply is critically needed for our manufacturing industries and the millions of jobs for American workers in those industries. <sup>(11)</sup>

5. And while I agree that reducing carbon emissions that impact the climate is a compelling policy goal, <sup>(12)</sup> this Commission—an administrative agency that only has the powers Congress has explicitly delegated to it—has no open-ended license under the U.S. Constitution or the NGA to address climate change or any other problem the majority may wish to address.

## I. Legal Questions

6. The long-running controversy over the role and use of GHG analyses in natural-gas facility certificate cases raises two central questions of law and a third that flows from the first two:

7. *First*, whether the Commission can use a GHG analysis to *reject* a certificate—or attach conditions (including the use of coercive deficiency letters) amounting to a *de facto* rejection by rendering the project unfeasible—based on the NGA's “public convenience and necessity” <sup>(13)</sup> provision, even when the evidence otherwise supports a finding under the NGA that the facility is both “convenient and necessary” to provide the public with essential gas supply? Today's orders assume that the answer is yes. <sup>(14)</sup>

8. *Second*, whether the Commission can, or is required to, *reject* a certificate—or attach conditions (including the use of coercive deficiency letters) amounting to a *de facto* rejection by rendering the project unfeasible—based on a GHG analysis conducted as part of an environmental review under NEPA, <sup>(15)</sup> when the certificate application would otherwise be approved as both “convenient and necessary” under the NGA? Again, today's orders assume the answer is yes. <sup>(16)</sup>

9. *Third*, which, if any, conditions related to a GHG analysis may be attached to a certificate under NGA § 7(e), <sup>(17)</sup> or demanded through the use of deficiency letters? Today's orders seem to assume that there is essentially no limit to the conditions the Commission can impose. <sup>(18)</sup>

10. As discussed below, today's orders get each of these questions wrong.

### A. The “Public Interest” in the Natural Gas Act

11. The starting point for answering all of these questions must be what “public interest” analysis the NGA empowers the Commission to make. Can the Commission's statutory responsibility to determine the “public convenience and necessity” be used to *reject* a project otherwise needed by the public based *solely* on adverse impacts to “environmental interests” <sup>(19)</sup> (a term today's orders leave undefined but which could be reduced to an unspecified level of GHG emissions) as the Commission today asserts? <sup>(20)</sup> Or can the Commission reject a project *solely* due to “the interests of landowners and environmental justice communities” as the majority also asserts? <sup>(21)</sup> The short answer is no. There is nothing in the text or history of the NGA to support such a claim about, or application of, the Commission's public interest responsibilities under the NGA.

12. As discussed herein, any claim that a “public interest” analysis under the NGA gives FERC the authority to reject a project based solely on GHG emissions is specious and ahistorical. The history of the NGA indicates that Congress intended the statute to *promote* the development of pipelines and other natural-gas facilities. As one federal judge has observed, “nothing in the text of [the NGA] . . . empowers the Commission to entirely deny the construction of an export terminal or the issuance of a certificate based solely on an adverse indirect environmental effect regulated by another agency.” <sup>(22)</sup>

13. I recognize that the Commission and the courts have construed “public convenience and necessity” to require the Commission to consider “all factors bearing on the public interest,” <sup>(23)</sup> but the Supreme Court has been very clear that any public interest analysis undertaken in the course of determining “public necessity and convenience” is constrained by the purposes and limitations of the statute. <sup>(24)</sup> It is not an open-ended license to use this Commission's certificating authority to promote whatever a majority of Commissioners from time to time may happen to view as the “public interest.”

14. With regard to GHG emissions that may be associated with upstream production activities or downstream distribution to, or consumption by, retail consumers, the Commission simply has *no* authority over such activities. That authority was left to the states. <sup>(25)</sup> Congress intended for the NGA to fill “a regulatory gap” over the “*interstate* shipment and sale of gas.” <sup>(26)</sup>

15. Even if the Commission were to undertake some estimate of the indirect GHG impacts of third-party activities that it has no authority to regulate, it does not follow that the Commission can then reject a certificate based on those impacts. <sup>(27)</sup> To do so would be to ignore the undeniable purpose of the NGA, which was enacted to facilitate the development and bringing to market of natural gas resources. The Commission's role under the NGA is to *promote* the development of the nation's natural gas resources and to safeguard the interests of ratepayers. <sup>(28)</sup> Any consideration of environmental impacts, while important, is necessarily subsidiary to that role. <sup>(29)</sup>

16. It is a truism that FERC is an economic regulator, *not* an environmental regulator. This Commission was not given certification authority in order to advance environmental goals; <sup>(30)</sup> it was given certification authority to *ensure the development* of natural gas resources and their availability—this includes pipeline infrastructure—at just and reasonable rates. To construe the Commission's analysis of the public convenience and necessity as a license to *prohibit* the development of *needed* natural gas resources using the public interest language in the NGA would be to negate the very legislative purpose of the statute. <sup>(31)</sup> Put another way, the premise of the NGA is that the production and transportation of natural gas for ultimate consumption by end users is socially valuable and should be promoted, not that the use of natural gas (which inevitably results in some discharge of GHGs) is inherently destructive and must be curbed, mitigated, or discouraged.

17. To those who say “well, times have changed and Congress was not thinking about climate change when it passed the NGA,” here's an inconvenient truth: *If Congress wants to change the Commission's mission under the NGA it has that power; FERC does not.*

18. Any authority to perform a public interest analysis under the NGA must be construed with reference to the animating purposes of the Act. It is not a free pass to pursue any policy objective—however important or compelling it may be—that is related in some way to jurisdictional facilities. <sup>(32)</sup> As the Court of Appeals for the D.C. Circuit has explained:

Any such authority to consider all factors bearing on “the public interest” must take into account what “the public interest” means *in the context of the Natural Gas Act*. FERC's authority to consider all factors bearing on the public interest when issuing certificates means authority to look into those factors which reasonably relate to the purposes for which FERC was given certification authority. *It does not imply authority to issue orders regarding any circumstance in which FERC's regulatory tools might be useful.* <sup>(33)</sup>

19. Whereas the Commission's role in certificating facilities under the NGA is explicit, <sup>(34)</sup> any purported authority for the Commission to regulate GHGs is conspicuously absent. The claim that the Commission can reject a needed facility due to GHG emissions using the public interest component in the NGA seems to be based on the following logic: To ascertain whether a facility serves the public convenience and necessity, the Commission must first determine whether the facility is in “the public interest,” which in turn entails considering factors such as “environmental” impacts from construction and operation of the proposed

facility, as well as estimating and quantifying greenhouse gas emissions from the proposed facility, including both upstream emissions associated with gathering the gas and downstream emissions associated with its use, which the Commission is somehow empowered to deem to be too excessive to grant the certificate. (35) Suffice it to say, this tortured logic breaks apart in multiple places. (36)

20. Surely if Congress had any intention that GHG analyses should (or could) be the basis for rejecting certification of natural-gas facilities, it would have given the Commission clear statutory guidance as to when to reject on that basis. Instead, those who want the Commission to conjure up a standard on GHG emissions for deciding how much is *too* much are advocating for a standard resembling Justice Stewart's famous method for identifying obscenity, to wit, that he could not describe it, but "I know it when I see it." (37) And the Supreme Court eventually had the good sense to abandon that ocular standard. (38)

21. Using GHG analysis to reject a certificate implicates an important judicial doctrine used in evaluating just how far an administrative agency can go in essentially *creating* public policy without clear textual support in statutory law. Now let's turn to that doctrine in this context.

## B. The Major Questions Doctrine and the NGA

22. The Commission's actions today implicate the "major questions doctrine," which Justice Gorsuch has recently explained as follows:

The federal government's powers . . . are not general, but limited and divided. Not only must the federal government properly invoke a constitutionally enumerated source of authority to regulate in this area or any other, it must also act consistently with the Constitution's separation of powers. And when it comes to that obligation, this Court has established at least one firm rule: "We expect Congress to speak clearly" if it wishes to assign to an executive agency decisions "of vast economic and political significance." We sometimes call this the major questions doctrine. (39)

In short, the major questions doctrine presumes that Congress reserves major issues to itself, so unless a grant of authority to address a major issue is explicit in a statute administered by an agency, it cannot be inferred to have been granted.

23. Whether this Commission can reject a certificate based on a GHG analysis—a certificate that otherwise would be approved under the NGA—is undeniably a major question of public policy. It will have enormous implications for the lives of everyone in this country, given the inseparability of energy security from economic security. Yet the Supreme Court has made it clear that broad deference to administrative agencies on major questions of public policy is *not* in order when statutes are lacking in any explicit statutory grant of authority. (40) "*When much is sought from a statute, much must be shown.* . . . [B]road assertions of administrative power demand *unmistakable legislative* support." (41)

24. There is no "unmistakable legislative support" for the powers the Commission asserts today. A broad power to regulate upstream and downstream GHG emissions and their global impacts has simply *not* been delegated to this Commission. (42) To the extent the federal government has such power, it has been delegated elsewhere. "Of necessity, Congress selects different regulatory regimes to address different problems." (43) The U.S. Environmental Protection Agency (EPA) is charged with regulating greenhouse gas emissions under the Clean Air Act. (44) By contrast, Congress established in the NGA a regulatory regime to address entirely different problems, namely, the need to develop the nation's natural gas resources and to protect ratepayers from unjust and unreasonable rates for gas shipped in the flow of interstate commerce. If it chose, Congress could enact legislation that would invest the Commission with authority to constrain the development and bringing to market of natural gas resources, but the fact is that Congress has chosen *not* to do so. On the contrary, every time Congress has enacted natural gas legislation, it has been to *promote* the development of natural gas resources, not throw up barriers to them. (45)

25. The fact that the NGA requires the Commission to make some form of public interest determination in the course of a certificate proceeding does not furnish a basis for the Commission to arrogate to itself the authority to constrain the development of natural gas resources on the grounds of their potential greenhouse gas emissions. As now-Justice Kavanaugh has explained: “If an agency wants to exercise expansive regulatory authority over some major social or economic activity . . . *regulating greenhouse gas emitters, for example*—an ambiguous grant of statutory authority is not enough. Congress must *clearly authorize* an agency to take such a major regulatory action.”<sup>(46)</sup> Congress has *not* “clearly authorize[d]” this Commission to regulate greenhouse gas emitters, nor to deny certificates to facilities whose construction and operation would be in the public convenience and necessity, simply because the construction and operation of such infrastructure may result in some amount of greenhouse gas emissions.<sup>(47)</sup> “Even if the text were ambiguous, the sheer scope of the . . . claimed authority . . . would counsel against” such an expansive interpretation.<sup>(48)</sup>

26. The fact that the Commission has absolutely no standard against which to measure the impact of natural gas production upstream or use downstream of the facilities it certifies is also important. In order for Congress to delegate any authority to an executive agency, it must legislatively set forth an intelligible principle for the agency to follow.<sup>(49)</sup> There is no such “intelligible principle” for the Commission to follow when it comes to greenhouse gas emissions.

27. Although the NGA requires the Commission to determine whether a proposed facility is in the “public convenience and necessity,” the term “has always been understood to mean ‘need’ for the service. To the extent the environment is considered, such consideration is limited to the effects stemming from the construction and operation of the proposed facilities.”<sup>(50)</sup> The term “public convenience and necessity” has long been understood to refer most essentially to the public's need for service on terms that are just and reasonable, *i.e.*, that are low enough for the public to pay the rates and high enough for the provider to maintain a profitable business.<sup>(51)</sup> That understanding was reflected in various statutes employing the term, including the Natural Gas Act.<sup>(52)</sup> And it was further reflected in the earliest “public convenience and necessity” analyses under the NGA.<sup>(53)</sup>

28. To summarize: Whether and how to regulate GHG emissions is a major question of vast economic and political significance. Congress has not explicitly authorized the Commission to regulate in this area as required under the major questions doctrine, nor has it laid down an intelligible principle for the Commission to follow as required by the non-delegation doctrine. Moreover, EPA, in coordination with the states, already has authority to regulate in this area as specified in federal statutes, which is far removed from this Commission's core expertise and traditional responsibilities.

29. Let's now turn to the second major question.

### C. GHG Analysis Under NEPA

30. Is this Commission required or allowed by NEPA<sup>(54)</sup> to *reject* a certificate for a natural gas facility— *one that would otherwise be approved under the NGA*—based on a GHG analysis conducted as part of the NEPA environmental review? And rejection includes attaching mitigation conditions so onerous (or coercing through deficiency letters) that they render the project unfeasible.<sup>(55)</sup>

31. Again, the short answer is no. NEPA does not contain a shred of specific textual authority requiring or allowing the Commission to *reject* based on a NEPA review of estimated GHG impacts (indirect or direct) a certificate application for a facility that otherwise would be found necessary to serve the public under the NGA. Nor would it: As an information-forcing statute, NEPA imposes no substantive obligations.<sup>(56)</sup>

32. Even conducting an analysis of indirect GHG effects under NEPA goes too far. The Supreme Court has explicitly rejected the idea that an “agency's action is considered a cause of an environmental effect [under NEPA] even when the agency has no statutory authority to prevent that effect.”<sup>(57)</sup> Rather, NEPA

“requires a reasonably close causal relationship between the environmental effect and the alleged cause,” that is analogous to “the familiar doctrine of proximate cause from tort law.”<sup>(58)</sup> While this might leave some difficult judgments at the margins, estimates of the potential global impacts of possible non-jurisdictional upstream or downstream activity—as today’s orders purport to require<sup>(59)</sup>—is not a close call.

33. First off, in determining how far an agency’s NEPA responsibilities run, one “must look to the underlying policies or legislative intent in order to draw a manageable line between those causal changes that may make an actor responsible for an effect and those that do not.”<sup>(60)</sup> As discussed at length above, there is no way of drawing a plausible line, much less a manageable one, from the Commission’s certificating responsibilities under the NGA and the possible consequences of global climate change—consequences which, however potentially grave, are remote from this agency’s limited statutory mission under the NGA.

34. Second, speculating about the possible future impact on global climate change of a facility’s potential GHG emissions does not assist the Commission in its decision-making and therefore violates the “rule of reason”: Where an agency lacks the power to do anything about the possible environmental impacts, it is not obligated to analyze them under NEPA.<sup>(61)</sup> Again, the Supreme Court has explained, “inherent in NEPA and its implementing regulations is a ‘rule of reason,’ which ensures that agencies determine whether and to what extent to prepare an EIS based on the usefulness of any new potential information to the decision-making process. Where the preparation of an EIS would serve ‘no purpose’ in light of NEPA’s regulatory scheme as a whole, no rule of reason worthy of the title would require an agency to prepare an EIS.”<sup>(62)</sup>

35. This conclusion becomes even more obvious when considered alongside the undeniable fact that neither NEPA nor any other statute contains a scintilla of guidance as to which specific metrics are to be used to determine when the Commission can or must reject a project based on a GHG analysis. The Commission today establishes a threshold of 100,000 metric tons of CO<sub>2</sub>e of annual project emissions for purposes of its analysis of natural gas projects under NEPA.<sup>(63)</sup> The rationale for establishing this threshold has literally *nothing* to do with the Commission’s NGA obligations, or even with its NEPA obligations. It consists of little more than piggybacking on EPA’s approach to regulating stationary sources.<sup>(64)</sup> Today’s order boasts that this new threshold will capture projects “transporting an average of 5,200 dekatherms per day and projects involving the operation of *one* or more compressor stations or LNG facilities”<sup>(65)</sup> and that this threshold “will capture over 99% of GHG emissions from Commission-regulated natural gas projects.”<sup>(66)</sup>

36. These are just arbitrarily chosen numbers. A proliferation of quantification does not constitute reasoned decision-making. All of the important questions about the creation and application of this threshold remain unanswered: Is there anything in either the NGA or NEPA to indicate how much is too much and should be rejected? Or how little is low enough to get under the red line? No. If the Commission is attempting to quantify *indirect* global GHG impacts, as EPA now suggests we do,<sup>(67)</sup> how much global impact is too much and requires rejection of the certificate? How much impact is *not* too much? Should rejection only be based on impacts on the United States? North America? The Western Hemisphere? The planet? Where is the line? Again, there is absolutely no statutory provision that answers these questions as to the application of GHG metrics in a certificate proceeding brought under the NGA. The complete absence of any statutory guidance on the seminal question of “how much is too much?” would render any action by the Commission to reject a certificate based on any metric as “arbitrary and capricious” in the fullest sense.<sup>(68)</sup>

37. I recognize that the 100,000 metric tons marker adopted in today’s orders is not a threshold for rejecting a proposed project but only for subjecting it to further scrutiny in the form of an EIS. But this is no small matter—completion of an EIS is extremely cost-intensive and time-consuming and, in addition, creates a plethora of opportunities for opponents of the project who otherwise lack meritorious objections to it, to run up the costs, to cause delays, and to create new grounds for the inevitable appeals challenging the certificate even if the applicant does manage to obtain it.<sup>(69)</sup>

38. NEPA provides no statutory authority to reject a gas project that would otherwise be approved under the NGA. How could it? As is well-known, the duties NEPA imposes are essentially procedural and informational. <sup>(70)</sup> The Commission's regulations implementing NEPA reflect its limits by noting that, “[t]he Commission will comply with the regulations of the Council on Environmental Quality *except where those regulations are inconsistent with the statutory requirements of the Commission* .” <sup>(71)</sup>

39. It's not actually very difficult to see how the approach the majority adopts today is “inconsistent with the statutory requirements of the Commission.” <sup>(72)</sup> I will repeat that the purpose of the NGA is to *promote* the development, transportation, and sale at reasonable rates of natural gas. I will repeat that the NGA conveys only *limited* jurisdictional authority; that NEPA conveys *no* jurisdictional authority; that a *different* agency is responsible for regulating GHGs; and that such regulation is a *major issue* that Congress would have to speak to *unambiguously*, which it clearly has *not* done. And yet under the analysis embraced by the majority today, this Commission purports to impose onerous—possibly fatal—regulatory requirements on certificate applicants in order to generate reams of highly speculative data that have no meaningful role to play in the execution of this agency's statutory duties. <sup>(73)</sup> In fact, it contravenes the purposes of the NGA in at least two obvious ways: First, by bringing extrinsic considerations to bear on the Commission's decision-making, and second, by causing needless delay in the process. <sup>(74)</sup>

40. There is no meaningful way of evaluating any of the critical issues, and no statutory authority to actually do anything about upstream or downstream emissions, <sup>(75)</sup> but unlimited ways to find fault with any analysis. Even though they aren't supposed to “flyspeck” an agency's NEPA analysis, judges who wish to impose their own policy preferences will be tempted to do exactly that. And once the agency undertakes to address an issue in its NEPA analysis, it is subject to the APA's “reasoned decision-making” standard of review. <sup>(76)</sup> Thus the effect is to ramp up dramatically the legal uncertainties and costs facing any certificate applicant.

#### D. The Policy Statements Rest on Inadequate Legal Authority

41. Today's orders rely to a remarkable degree on a smattering of statements from a handful of recent orders. Simply put, these authorities are simply “too slender a reed” <sup>(77)</sup> to support the great weight today's orders place on them.

42. Neither *Sabal Trail* <sup>(78)</sup> nor *Birckhead*, <sup>(79)</sup> nor the more recent *Vecinos* <sup>(80)</sup> opinion from the D.C. Circuit changes any of the analysis above. Indeed, to the extent language from those cases is interpreted as requiring the Commission to exercise authority *not* found in statutes—and these opinions are more confusing than clear, as well as inconsistent with the D.C. Circuit's own precedent—then such an interpretation would be contrary to the Supreme Court's major question doctrine. Be that as it may, while I recognize that *Sabal Trail* and *Vecinos* are presently applicable to this Commission, neither of those cases individually nor both of them together provide a lawful basis for *rejecting* a certificate for a facility that is otherwise found to be needed under the NGA solely because of its estimated potential impacts on global climate change. <sup>(81)</sup>

43. Virtually the entire structure of the majority's fundamental policy changes rests on a single line from *Sabal Trail*. <sup>(82)</sup> That statement is itself predicated on an idiosyncratic reading of *Public Citizen* and the D.C. Circuit's own precedents. <sup>83</sup> *Sabal Trail* rather facilely distinguished existing D.C. Circuit precedent on the grounds that, in contrast to those cases, the same agency that was performing the EIS was also authorized to approve or deny the certificate. <sup>(84)</sup> It reasoned that because the Commission could take “environmental” issues into account in its public interest analysis, and GHG emissions raise “environmental” issues, it must therefore follow that the Commission could deny a certificate based on projected GHG emissions estimates.

44. *Sabal Trail* acknowledged that “*Freeport* and its companion cases rested on the premise that FERC had no legal authority to prevent the adverse environmental effects of natural gas exports.” <sup>(85)</sup> Specifically, “FERC was forbidden to rely on the effects of gas exports *as a justification for denying an upgrade license*.”

<sup>(86)</sup> In contrast with those cases—all of which addressed certification of LNG facilities under NGA § 3 as opposed to interstate transportation facilities under NGA § 7—the court in *Sabal Trail* concluded that, under NGA § 7, by contrast, “FERC is not so limited. Congress broadly instructed the agency to consider ‘the public convenience and necessity’ when evaluating applications to construct and operate interstate pipelines.” <sup>(87)</sup> It thus concluded that, “[b]ecause FERC could deny a pipeline certificate on the ground that the pipeline would be too harmful for the environment, the agency is a ‘legally relevant cause’ of the direct and indirect environmental effects of pipelines that it approves. See *Freeport*, 827 F.3d at 47. *Public Citizen* thus did not excuse FERC from considering these indirect effects.” <sup>(88)</sup>

45. But the *Sabal Trail* court never considered with reference to the Commission's statutory authority the proper scope of that public interest analysis or the extent to which “environmental” issues could be considered in that context. It simply assumed the Commission's authority to be unlimited. But as discussed above, Congress drafted the NGA for the purpose of filling a specific gap in regulatory authority. The only way *Sabal Trail* would be correct is if Congress had “clearly authorized” the Commission to evaluate geographically and temporally remote impacts of non-jurisdictional activity in its “public convenience and necessity” determinations. As discussed above, that conclusion is clearly, irredeemably, wrong. <sup>(89)</sup>

46. As for *Vecinos*, there, the court compounds that error both by relying uncritically on *Sabal Trail* and by finding fault with the Commission for failing to connect its decision not to use the Social Cost of Carbon to Petitioners' argument that it was required to do so under 40 CFR. § 1502.21(c). <sup>(90)</sup> That regulation sets forth an agency's obligations when “information relevant to reasonably foreseeable significant adverse impacts cannot be obtained.” <sup>(91)</sup> But global climate change is only a “foreseeable significant adverse impact” of the Commission's action *if* the Commission's authority extends as far as the *Sabal Trail* court said it does. For the reasons set out in this statement, I respectfully disagree. Nor am I alone in my disagreement. <sup>(92)</sup>

47. Finally, as to the contention that the Commission is bound to follow *Sabal Trail* notwithstanding its errors, I would simply point out that intervening Supreme Court precedents—such as *NFIB* <sup>(93)</sup> and *Aia. Ass'n.* <sup>(94)</sup>—have not just significantly weakened, but utterly eviscerated the conceptual underpinnings of *Sabal Trail*'s limitless construction of the Commission's public interest inquiry under the NGA's “public convenience and necessity” analysis. <sup>(95)</sup> It is folly for this Commission to proceed heedless of the Supreme Court's recent rulings that agencies may not use ambiguous or limited grants of statutory authority in unprecedented ways to make policy on major questions that Congress has reserved for itself. But that's exactly what the Commission does today. <sup>(96)</sup>

48. We are indeed bound to follow judicial precedent, but we don't get to “cherry pick” one precedent such as *Sabal Trail* because we like that particular opinion, while ignoring the many other conflicting precedents, especially those more recent rulings from the Supreme Court itself applying the major question doctrine. These more recent opinions light up *Sabal Trail* as a clear outlier.

## II. The Real Debate Is About Public Policy not Law

49. Preventing the construction of each and every natural gas project is the overt public-policy goal of many well-funded interest groups working to reduce or eliminate natural gas usage. <sup>(97)</sup> Today's orders, whatever the intent, will have the undeniable effect of advancing that *policy* goal, and we should not deny the obvious. Rather than bringing legal certainty to the Commission's certificate orders, <sup>(98)</sup> today's orders will greatly increase the costs and uncertainty associated with this Commission's own handling of certificate applications. In fact, by purporting to apply today's new policy retroactively on applications that have already been submitted (and in many instances pending for years), today's action is deeply unfair: It judges by an entirely new set of standards applications that were prepared and submitted to meet the old standards and

essentially opens all of them to be relitigated. <sup>(99)</sup> The undoubted effect of these orders will be to interpose additional months or years of delay on project applicants and to increase exponentially the vulnerability on appeal of any Commission orders that do approve a project.

50. Recently I said the Commission's new rule on unlimited late interventions in certificate cases was “not a legal standard, but a legal weapon.” <sup>(100)</sup> The new certificate policy approved today is the mother of all legal weapons. There is no question that it will be wielded against each and every natural gas facility both at the Commission and in the inevitable appeals, making the costs of even pursuing a natural gas project insuperable.

51. Let me emphasize that every person or organization pursuing the policy goal of ending the use of natural gas by opposing every natural gas facility has an absolute right under the First Amendment to engage in such advocacy. However, whether to end the use of natural gas by banning the construction of all new natural gas projects is a public policy question of immense importance, one that affects the lives and livelihoods of tens of millions of Americans and their communities, as well as the country's national security. In a democracy, such a huge policy question should *only* be decided by legislators elected by the people, not by unelected judges or administrative agencies. <sup>(101)</sup>

52. This public-policy context is absolutely relevant to these orders because it illustrates that the long-running controversy at this Commission over the use of GHG analyses in natural-gas certificate cases, whether it's a demand to quantify indirect impacts from upstream production and downstream use, <sup>(102)</sup> or a demand to apply an administratively-constructed metric such as the Social Cost of Carbon <sup>(103)</sup>—and then use GHG analyses to *reject* (or mitigate to death, or impose costly delays on) a gas project—has far less to do with the law itself and far more to do with promoting preferred *public policy* goals.

53. EPA admits as much in a remarkably (perhaps unwittingly) revealing passage in a letter to this Commission:

EPA reaffirms the suggestion that the Commission avoid expressing project-level emissions as a percentage of national or state emissions. Conveying the information in this way *inappropriately diminishes* the significance of project-level GHG emissions. Instead, EPA continues to recommend disclosing *the increasing conflict between GHG emissions and national, state, and local GHG reduction policies and goals* . . . <sup>(104)</sup>

54. So according to EPA, this Commission—which is supposed to be *independent* of the current (or any) presidential administration, by the way—should literally manipulate how it presents GHG data in order to avoid “inappropriately” diminishing the impact. As EPA reveals, this is really not about data or any specific GHG metric at all, but is really about pursuing *public policy* goals, especially those of the current presidential administration that runs EPA. <sup>(105)</sup>

55. The EPA's purported guidance to this Commission illustrates that the real debate here is not over the minutiae of one methodology versus another, or whether one methodology is “generally accepted in the scientific community” and another is not, <sup>(106)</sup> or whether one particular esoteric formula is purportedly required by a regulation issued by the CEQ <sup>(107)</sup> and another does not meet the CEQ's directives.

56. The real debate over the use of GHG analyses in certificate proceedings is about public policy, not law, and ultimately comes down to these questions: *Who makes major decisions of public policy in our constitutional system?* Legislators elected by the people or unelected administrative agencies or judges? *Who decides?* <sup>(108)</sup>

### III. Conclusions

57. Based on the analysis above the following legal conclusions can be drawn:

58. *First*, the Commission may not reject a certificate based solely on an estimate of the impacts of GHG emissions, indirect or direct. Nor, on the basis of such GHG estimates, may the Commission attach to a certificate (or coerce through deficiency letters) conditions that represent a *de facto* rejection by rendering the project financially or technically unfeasible.

59. *Second*, the Commission can consider the direct GHG impacts of the specific facility for which a certificate is sought, just as it analyzes other direct environmental impacts of a project, and can attach reasonable and feasible conditions to the certificate designed to reduce or minimize the direct GHG impacts caused by the facility, just as it does with other environmental impacts.

60. *Third*, the conditions the Commission can impose are, like its other powers, limited to the authorities granted to it by Congress and the purposes for which they are given. So, no, the Commission may not impose conditions on a certificate to mitigate upstream or downstream GHG emissions arising from non-jurisdictional activity.

61. These legal conclusions do not mean that responding to climate change is not a compelling policy necessity for the nation. In my view it is, as I stated above. <sup>(109)</sup>

62. However, neither my policy views—nor those of any other member of this Commission—can confer additional legal authority on FERC. <sup>(110)</sup> For in our democracy, it is the *elected* legislators who have the exclusive power to determine the major policies that respond to a global challenge such as climate change. Further, the argument that administrative agencies must enact policies to address major problems whenever Congress is too slow, too polarized, or too prone to unsatisfying compromises, must be utterly rejected. <sup>(111)</sup> That is not how it is supposed to work in a democracy.

63. For if democracy means anything at all, it means that the people have an inherent right to choose the legislators to whom the people grant the power to decide the major questions of public policy that impact how the people live their daily lives. Unelected federal judges and executive-branch administrators, no matter how enlightened they and other elites may regard themselves to be, do not have the power to decide such questions; they only have the power to carry out the duly-enacted laws of the United States, including the most important law of all, the Constitution. That is the basic constitutional framework of the United States and it is the same for any liberal democracy worth the name.

For these reasons, I respectfully dissent.

Mark C. Christie,  
Commissioner.

(2021), [https://www.ipcc.ch/report/ar6/wg1/downloads/report/IPCC\\_AR6\\_WGI\\_SPM.pdf](https://www.ipcc.ch/report/ar6/wg1/downloads/report/IPCC_AR6_WGI_SPM.pdf) (IPCC Report).

<sup>(2)</sup> See *Sierra Club v. FERC*, 867 F.3d 1357, 1374 (D.C. Cir. 2017) ( *Sabal Trail* ) (requiring the Commission to consider the reasonably foreseeable GHG emissions resulting from natural gas projects).

<sup>(3)</sup> Carbon dioxide equivalent is the combination of the emissions that contribute to climate change adjusted using each pollutant's global warming potential. This allows the Commission to aggregate all GHG emissions into a single value that accounts for each chemical's specific potential to trap heat in the atmosphere.

- (4) See, e.g., *Grand Canyon Trust v. FAA*, 290 F.3d 339, 340 (D.C. Cir. 2002) (“If any ‘significant’ environmental impacts might result from the proposed agency action[,] then an EIS must be prepared before agency action is taken.” (quoting *Sierra Club v. Peterson*, 717 F.2d 1409, 1415 (D.C. Cir. 1983)); *Found. for N. Am. Wild Sheep v. U.S. Dep’t of Agr.*, 681 F.2d 1172, 1178 (9th Cir. 1982) (“If substantial questions are raised whether a project may have a significant effect upon the human environment, an EIS must be prepared.”).
- (5) See 42 U.S.C. 4331(a); 4332(c).
- (6) Commissioner Danly’s dissent claims that today’s interim policy statement is “a substantive, binding rule that is subject to judicial review.” Danly Dissent at P 46. This interim document is intended to provide all interested entities with guidance as to how the Commission will approach application under NGA sections 3 and 7. It does not “impose[] an obligation, den[y] a right, or fix[] some legal relationship.” *Reliable Automatic Sprinkler Co. v. Consumer Prod. Safety Comm’n*, 324 F.3d 726, 731 (D.C. Cir. 2003). Parties that disagree with the approach outlined in the statement retain their full rights to litigate their concerns in any individual proceeding. Cf. *id.* (“Final agency action ‘marks the consummation of the agency’s decisionmaking process’ and is ‘one by which rights or obligations have been determined, or from which legal consequences will flow.’”) (quoting *Bennett v. Spear*, 520 U.S. 154, 178 (1997)). In addition, Commissioner Danly speculates that “no project sponsor will believe that mitigation is optional or that submitting an application exceeding the Interim Policy Statement’s 100,000 tpy threshold without a mitigation proposal would be anything other than a waste of time and money.” Danly Dissent PP 46-47. In response, we note only that the Commission will consider mitigation on a case-by-case basis and that we have not suggested that GHG emissions must be mitigated to insignificant levels in order for us to conclude that a proposed project is required by the public convenience and necessity or consistent with the public interest.

- (52) See *Twp. of Bordentown v. FERC*, 903 F.3d 234, 261 n.15 (3d Cir. 2018) (concluding that the Commission's authority to enforce any required remediation is amply supported by provisions of the NGA); *Sabal Trail*, 867 F.3d at 1374 (holding that the Commission has legal authority to mitigate reasonably

foreseeable indirect effects).

(53) See, e.g., *Atl. Coast Pipeline, LLC*, 161 FERC ¶ 61,042, at app. A (2017), *on reh'g*, 164 FERC ¶ 61,100 (2018).

(54) 42 U.S.C. 4332(2)(C); 40 CFR 1502.3; see *Balt. Gas & Elec. Co. v. Nat. Res. Def. Council, Inc.*, 462 U.S. 87, 97 (1983) (discussing the twin aims of NEPA).

(55) 40 CFR 1501.5, 1508.1(h).

(56) 40 CFR 1508.1(1) (defining a finding of no significant impact as a document that briefly presents the reasons why an action that is not otherwise categorically excluded under § 1501.4 will not have a significant effect on the human environment and for which an EIS will therefore not be prepared).

(57) *Vieux Carre Prop. Owners, Residents & Assocs., Inc. v. Pierce*, 719 F.2d 1272, 1279 (5th Cir. 1983) (stating there is “no hard and fast definition of ‘significant’” but considering the proposed project’s context in assessing whether a finding of no significance impact was reasonable). The regulations implementing NEPA previously addressed the term “significantly,” but that provision was removed by amendments effective September 14, 2020 and replaced with 40 CFR 1501.3(b). “Whether a project has significant environmental impacts, thus triggering the need to produce an EIS, depends on its ‘context’ (region, locality) and ‘intensity’ (‘severity of impact’).” *Nat’l Parks Conservation Ass’n v. Semonite*, 916 F.3d 1075, 1082 (D.C. Cir.) (quoting 40 CFR 1508.27 (2018)), *amended in part by* 925 F.3d 500 (D.C. Cir. 2019). The new 40 CFR 1501.3(b) calls for agencies to consider the “potentially affected environment and degree of the effects of the action” and to consider the short-term, long-term, beneficial, and adverse effects, and effects on public safety and those that would violate laws.

(58) See, e.g. Final EIS for the Alaska LNG Project, Docket No. CP17-178-000, at 4-1.

(59) See *Sabal Trail*, 867 F.3d at 1371 (“The EIS also gave the public and agency decisionmakers the qualitative and quantitative tools they needed to make an informed choice for themselves. NEPA requires nothing more.”).

(60) See, e.g., *Transcon. Gas Pipe Line Co., LLC*, 158 FERC ¶ 61,125, at P 79 (describing how the final EIS for the Atlantic Sunrise Project concluded that the project would result in adverse impacts that would be mitigated to less than significant levels), *order on reh'g*, 161 FERC ¶ 61,250 (2017), *petition denied sub nom., Allegheny Def. Project v. FERC*, 964 F.3d 1 (D.C. Cir. 2020); see also *infra* note 61; see also *Magnum Gas Storage, LLC*, 134 FERC ¶ 61,197, at P 115 (2011) (explaining that “‘significantly,’ as used in NEPA, requires considerations of both context and intensity, which varies with the setting of each proposed action.”).

(61) *N. Nat. Gas Co.*, 174 FERC ¶ 61,189, at P 32 (citing *Magnum Gas Storage, LLC*, 134 FERC ¶ 61,197 at P 114 (“[A]n impact was considered to be significant if it would result in a substantial adverse change in the physical environment or natural condition and could not be mitigated to less-than-significant level.”)).

(62) See, e.g., *Tex. LNG Brownsville LLC*, 169 FERC ¶ 61,130, at P 56 (2019) (“Due to the relatively undeveloped nature of the project area, the visual sensitivity of nearby recreation areas, and the lack of feasible visual screening measures, the Final EIS concluded that the project would result in a significant impact on visual resources when viewed from the adjacent Laguna Atascosa National Wildlife Refuge.”), *order on reh'g*, 170 FERC ¶ 61,139, at P 32 (2020), *remanded on other grounds, Vecinos*, 6 F.4th 1321; Final EIS for the Alaska LNG Project, Docket No. CP17-178-000, at ES-4 (Mar. 2020) (explaining the significant, long-term to permanent project impacts from the loss of thousands of acres of permafrost from construction that would permanently alter hydrology and vegetation within and past the project footprint).

(63) *Sierra Club v. U.S. Dep't of Transp.*, 753 F.2d 120, 128 (D.C. Cir. 1985) (“It is clearly within the expertise and discretion of the agency to determine proper testing methods.”); *see also Hughes River Watershed Conservancy v. Johnson*, 165 F.3d 283, 289 (4th Cir. 1999) (“Agencies are entitled to select their own methodology as long as that methodology is reasonable. The reviewing court must give deference to an agency's decision.”).

(64) *See Spiller v. White*, 352 F.3d 235, 244 n.5 (5th Cir. 2003) (rejecting petitioner's contention that the significance determination must be objective, factual, and quantitative and should not involve any qualitative judgment calls).

(65) *See La. Crawfish Producers Ass'n-W. v. Rowan*, 463 F.3d 352, 355 (5th Cir. 2006) (NEPA-related decisions are accorded a considerable degree of deference); *Spiller v. White*, 352 F.3d at 244 n.5 (“We should note that our deference to the [lead [a]gencies] fact-finding and conclusions includes deference to their judgment as to whether any particular environmental impact of the proposed pipeline rises to the level of significance”); *Powder River Basin Res. Council v. U.S. Bureau of Land Mgmt.*, 37 F.Supp. 3d 59, 74 (D.D.C. 2014) (agencies are afforded discretion to use their expertise to determine the best method to evaluate the significance of an impact to a particular resource, so long as that method is reasonable).

(66) *Robertson v. Methow Valley Citizens Council*, 490 U.S. 332, 351 (1989) (“To be sure, one important ingredient of an EIS is the discussion of steps that can be taken to mitigate adverse environmental consequences.”).

(67) *Id.* at 352 (“There is a fundamental distinction, however, between a requirement that mitigation be discussed in sufficient detail to ensure that environmental consequences have been fairly evaluated, on the one hand, and a substantive requirement that a complete mitigation plan be actually formulated and adopted, on the other.”).

(68) *Final Guidance for Federal Departments and Agencies on the Appropriate Use of Mitigation and Monitoring and Clarifying the Appropriate use of Mitigated Findings of No Significant Impact*, 76 FR 3843, 3848 (Jan. 21, 2011).

(69) *See, e.g., Columbia Gas Transmission, LLC*, 170 FERC ¶ 61,045, at P 66, app. (2020) (conditioning certificate authority on site-specific mitigation measures when crossing abandoned mine lands, including the management and disposal of contaminated groundwater, and mitigation measures for acid mine drainage); *PennEast Pipeline Co., LLC*, 170 FERC ¶ 61,198, at PP 29-30, app. A (2020) (conditioning certificate authority on mitigation of construction impacts on karst features); *Atl. Coast Pipeline, LLC*, 161 FERC ¶ 61,042 at app. A (conditioning certificate authority on the mitigation of construction impacts on karst features and on a nearby inn and mitigation of impacts from the discovery of invasive aquatic species during construction); *Port Arthur LNG, LP*, 115 FERC ¶ 61,344, at PP 68-71, app. A (conditioning sections 3 and 7 authority on the mitigation of construction impacts on aquatic resources and wetlands), *order on reh'g*, 117 FERC ¶ 61,213 (2006), *vacated*, 136 FERC ¶ 61,196 (2011).

(70) 40 CFR 1508.1(g) (defining the effects or impacts that must be considered when conducting a review under NEPA).

(71) Emissions quantification also includes loss of carbon storage/sinks through land use conversions, forest clearing, wetland conversions, etc.

(72) As discussed below, the vast majority of all natural gas consumed in the United States is combusted. *See infra* note 101.

(73) Additionally, the Commission will consider evidence regarding whether certain emissions associated with a proposed project, such as upstream and downstream emissions, are reasonably foreseeable.

- (74) See *Certification of New Interstate Natural Gas Pipeline Facilities*, 178 FERC ¶ 61,107, at P 55 (2022) (explaining that project sponsors are encouraged to provide the Commission with information on estimated utilization rates and the intended end use of gas to demonstrate project need).
- (75) 40 CFR 1508.1(g).
- (76) *Id.* § 1508.1(g)(2); see also *U.S. Dep't of Transp. v. Pub. Citizen*, 541 U.S. 752, 767 (2004) ( *Pub. Citizen* ) (finding that “NEPA requires ‘a reasonably close causal relationship’ between the environmental effect and the alleged cause” in order “to make an agency responsible for a particular effect under NEPA” (quoting *Metro. Edison Co. v. People Against Nuclear Energy*, 460 U.S. 766, 774 (1983) ( *Metro. Edison Co.* )))).
- (77) 40 CFR 1508.1(g)(2); see also *Metro. Edison Co.*, 460 U.S. at 774 (finding that “[s]ome effects that are ‘caused by’ a change in the physical environment in the sense of ‘but for’ causation,” will not fall within NEPA if “the causal chain is too attenuated”).
- (78) 40 CFR 1508.1(g)(2); see also *Pub. Citizen*, 541 U.S. at 770 (“[W]here an agency has no ability to prevent a certain effect due to its limited statutory authority over the relevant actions, the agency cannot be considered a legally relevant ‘cause’ of the effect.”).

FERC*, 485 F.App’x 472, 474-75 (2d Cir. 2012) (unpublished opinion); see also *Adelphia Gateway, LLC*, 169 FERC ¶¶61,220, at P 243 (2019), *order on reh’g*, 171 FERC ¶¶61,049, at P 89 (2020).
- (115) We note that thresholds for Clean Air Act and state air permits are typically based on the regulated source’s potential to emit, or the maximum capacity of a stationary source to emit any air pollutant under its physical and operational design, rather than its actual emissions, and that air permits themselves are expressed in potential to emit. See 40 CFR 70.2. This policy statement does not apply to any other air pollutants than GHGs. For all other air pollutants, we will continue to evaluate a project’s air quality impacts based on its potential to emit.
- (116) See *infra* section III.A.2.a.
- (117) See, e.g., American Gas Association (AGA) Technical Conference Comments at 28, 40; API Technical Conference Comments at 3; Boardwalk Technical Conference Comments at 23 (stating that the Commission should rely on local distribution companies’ air permits to determine GHG emissions); Enbridge Technical Conference Comments at 31-34; Hon. Joseph T. Kelliher Technical Conference Comments at 5-6 (Commissioner Kelliher, Principal at Three Acorns, was a panelist at the GHG Technical Conference on Panel 1.); INGAA Technical Conference Comments at 17-18 (suggesting the net emissions analysis must be undertaken on a global level); Kinder Morgan Entities (Kinder Morgan) Technical Conference Comments at 12-15; National Grid Gas Companies Technical Conference Comments at 3-7 (describing the Distributed

Infrastructure Solution that it has developed in coordination with the State of New York); Williams Technical Conference Comments at 7-8; Charles River Associates 2021 Comments at 4-5; Ohio Environmental Council 2021 Comments at 3. See Environmental Assessment for the Iroquois Gas Transmission System, L.P. (Iroquois) Enhancement by Compression Project, Docket No. CP20-48-000, at B-110 (Sept. 30, 2020) (citing Iroquois' end-use GHG analysis that projected greater GHG emissions if the project was not built under scenarios where the energy needs of all new buildings are met by fuel oil as opposed to gas supplied by the project). One industrial end user expresses concern about the potential of integrating renewable natural gas due to concerns about pipeline integrity or increased costs. American Forest and Paper Association and Process Gas Consumers Group (collectively, American Forest) Technical Conference Comments at 13-14.

(118) INGAA Technical Conference Comments at 19.

(119) See, e.g., New Jersey Conservation Foundation 2021 Comments at 23.

(120) See, e.g., Enbridge Technical Conference Comments at 12, 29-30; Hon. Joseph T. Kelliher Technical Conference Comments at 5-6; INGAA Technical Conference Comments at 15-16 (describing an analysis it commissioned concluding that in 2020, the maximum utilization on an average annual basis for any of the pipeline "corridors" between different regions is not higher than 65% and it is over 50% only for 7 of the 30 regional corridors); TC Energy Technical Conference Comments at 18; Charles River Associates 2021 Comments at 6; INGAA 2021 Comments at 58; see also Boardwalk Technical Conference Comments at 3, 23; Williams Technical Conference Comments at 7. API, on the other hand, asserts that use of utilization estimates or emissions data forces the Commission to pick winners among competing pipeline projects and asserts that such decisions are best made by market forces after the Commission authorizes a project. API Technical Conference Comments at 3-4.

(121) See, e.g., New Jersey Conservation Foundation 2021 Comments at 21-22; Public Interest Organizations 2018 Comments at 91; Washington State Department of Commerce and Washington State Department of Ecology 2018 Comments at 6. Public Interest Organizations' 2018 comments represent 63 entities including Natural Resources Defense Council.

(122) See, e.g., Charles River Associates 2021 Comments at 6-8 (proposing a regional analysis to estimate downstream emissions of a gas project).

(123) New Jersey Conservation Foundation 2021 Comments at 22.

(124) See, e.g., Berkshire Environmental Action Team 2021 Comments at 3; North Carolina Department of Environmental Quality 2018 Comments at 5-8.

(125) Dr. Susan F. Tierney, Senior Advisor with the Analysis Group, Inc., was a panelist at the GHG Technical Conference on Panel 1. Dr. Susan F. Tierney Technical Conference Statement at 4-10. The applicant could supplement its estimate with an alternative estimate, and intervenors could also submit estimates.

(126) See Environmental Assessment for the Lake City 1st Branch Line Abandonment and Capacity Replacement Project, Docket No. CP20-504-000, at 51-53 (Feb. 2021); see also Environmental Assessment for the Philadelphia Lateral Expansion Project, Docket No. CP11-508-000, at 24 (Jan. 18, 2012) (construction emissions); Environmental Assessment for the Minisink Compressor Project, Docket No. CP11-515-000, at 29 (Feb. 29, 2012) (operation emissions).

(127) See *Atl. Coast Pipeline, LLC*, 161 FERC ¶ 61,042 at P 305.

(128) Some commenters point out that daily pipeline load factors vary significantly based on seasonal trends. See, e.g., Charles River Associates 2021 Comments at 3; Williams 2021 Comments at 46.

(129) We note that for a greenfield pipeline project, historic data will not be available. In those cases, the project sponsor could use data from other similar projects or regional data.

(130) For instance, in a downstream end-use analysis, Iroquois projected that its Enhancement by Compression project could result in net GHG reductions when considering the alternative fuel that may be used ( e.g., fuel oil for heating) by the end use customer in the event that gas is not available. Iroquois Gas Transmission, LP, Downstream GHG Report, Docket No. CP20-48-000 (filed May 19, 2020).

(131) For example, the Commission may consider evidence that a downstream user purchases credits to offset its GHG emissions from the consumption of transported gas. The Commission will consider downstream user's mitigation measures according to the criteria outlined in *infra* section III.C.3 for applicant-proposed mitigation measures. With regards to construction and operational emissions, project sponsors should continue to provide evidence of measures that minimize emissions, such as using low-sulfur diesel fuel and limiting equipment idling during construction, as outlined in the Guidance Manual. Guidance Manual at 4-124. However, as described *supra* section III.A.2.a, operational emissions should now be calculated based on the project's projected utilization rate.

(213) IPCC Report at SPM-23.

(214) IPCC Report at SPM-19.

(215) IPCC Report at SPM-19 (emphasis in original).

(216) The PSD permitting program is part of the New Source Review program, which requires new stationary sources and major modifications to existing major sources to obtain preconstruction permits. PSD is designed to prevent air quality deterioration in regions that are attaining the National Ambient Air Quality Standards by requiring major sources or major modifications to install the Best Available Control Technology (BACT). Major sources under the PSD program are defined as facilities that emit or have the potential to emit 250 tons per year of any criteria air pollutant or 100 tons per year of any criteria air pollutant for specific types of facilities listed in the statute. 42 U.S.C. 7479(1). The six criteria pollutants are carbon monoxide, ground-level ozone, lead, nitrogen dioxide, particulate matter, and sulfur dioxide. 40 CFR pt. 50.

(217) The Title V program requires major stationary sources to obtain a single operating permit that consolidates all of the permitting requirements in the Clean Air Act into a single permit, including PSD, New Source Performance Standards, and National Emission Standards for Hazardous Air Pollutants. Major sources under the Title V program are defined as any stationary facility that emits or has the potential to emit 100 tons per year of any hazardous air pollutant, except GHGs. 42 U.S.C. 7602(j). The Clean Air Act Amendments of 1990 originally designated over 180 chemicals as hazardous air pollutants, and EPA has the authority to modify the list through rulemaking. 42 U.S.C. 7412(b)-(c).

(218) Prevention of Significant Deterioration and the Title V Greenhouse Gas Tailoring Rule, 75 FR 31514 (June 3, 2010) (Tailoring Rule).

(219) BACT is used to minimize emissions based on the maximum degree of control that the facility can achieve as determined by the permitting authority on a case-by-case basis. BACT may be a design, equipment, work practice, or operational standard, such as add-on control equipment, fuel cleaning or treatment, or innovative fuel combustion techniques. Note that BACT for minimizing GHG emissions at natural gas facilities is limited.

(220) EPA also planned a Step 3 to further reduce the threshold, although not below 50,000 tons per year of CO<sub>2</sub> e. The Supreme Court struck down relevant portions of the Tailoring Rule before EPA finalized Step 3.

- (221) Tailoring Rule, 75 FR at 31533-80.

- (232) *See, e.g.*, Boardwalk Technical Conference Comments at 7; Dr. Jason Scott Johnston Technical Conference Comments at 1; TC Energy Technical Conference Comments at 4; API 2021 Comments at 29-30; *see also* Williams Technical Conference Comments at 17 (claiming that there is no reasonable basis for the Commission to require project sponsors to submit mitigation proposals with their applications because

the technical conference demonstrated a lack of evidentiary support for any specific mitigation methods, offered no specific proposals regarding the levels of fees, offsets, or caps, and proposed no concrete and cost-effective means to mitigate emissions).

(233) API Technical Conference Comments at 5; Boardwalk Technical Conference Comments at 10; Consolidated Edison Company of New York, Inc. and Orange and Rockland Utilities, Inc. (collectively, Con Edison) Technical Conference Comments at 5; Hon. Joseph T. Kelliher Technical Conference Comments at 1; INGAA Technical Conference Comments at 6-7; TC Energy Technical Conference Comments at 8; API 2021 Comments at 31; INGAA 2021 Comments at 74-83; TC Energy 2021 Comments at 56-58.

(234) See, e.g., Hon. Joseph T. Kelliher Technical Conference Comments at 1 (citing *NAACP v. FPC*, 425 U.S. 662, 669-70 (1976)); *id.* at 8-9 (asserting that the proper place to consider GHG emissions (direct only) is under the Commission's balancing test, where a project sponsor may choose to voluntarily offset emissions); TC Energy Technical Conference Comments at 8; INGAA 2021 Comments at 74-76.

(235) See, e.g., Boardwalk Technical Conference Comments at 11-13 (arguing that *Transco* does not authorize the Commission to indirectly regulate upstream and downstream emissions); Enbridge Technical Conference Comments at 5, 16, 21; Hon. Joseph T. Kelliher Technical Conference Comments at 4; INGAA 2021 Comments at 76-77.

(236) See, e.g., API Technical Conference Comments at 2, 4; Edison Electric Institute (EEI) Technical Conference Comments at 9-10; Enbridge Technical Conference Comments at 18-19, 23-24; Hon. Joseph T. Kelliher Technical Conference Comments at 5; Attorneys General of Missouri et al. Technical Conference Comments at 3 (citing *S. Coast Air Quality Mgmt. Dist. v. FERC*, 621 F.3d 1085, 1092 (9th Cir, 2010)); TC Energy Technical Conference Comments at 6-7; Boardwalk 2021 Comments at 10. Commenters further argue that the NGA was not enacted to comprehensively regulate the natural gas industry, but instead to fill a regulatory gap over interstate gas transportation and sales; therefore, Congress left the regulation of upstream production and downstream consumption to the states. Enbridge Technical Conference Comments at 16-17; Hon. Joseph T. Kelliher Technical Conference Comments at 2 (citing *NAACP v. FPC*, 425 U.S. at 669-70; *State of Cal. v. Southland Royalty Co.*, 436 U.S. 519, 523 (1989); *ONEOK, Inc. v. Learjet, Inc.*, 575 U.S. 373, 378, 384-85 (2015); *ANR Pipeline Co. v. FERC*, 876 F.2d 124, 132-33 (D.C. Cir. 1989)).

(237) INGAA Technical Conference Comments at 8; Boardwalk 2021 Comments at 107; Con Edison Technical Conference Comments at 6-7 (stating that the state regulators are the best positioned to determine and impose mitigation measures for upstream and downstream GHG emissions); INGAA 2021 Comments at 77-79.

(238) American Public Gas Association (APGA) Technical Conference Comments at 5-6; EEI Technical Conference Comments at 9-10; Enbridge Technical Conference Comments at 23-24; TC Energy Technical Conference Comments at 9-10.

(239) Specifically, commenters argue that the Commission should rely on *Center for Biological Diversity*, which states that “the legal analysis in *Sabal Trail* is questionable at best” and that “[i]t fails to take seriously the rule of reason announced in *Public Citizen* or to account for the untenable consequences of its decision.” *Center for Biological Diversity*, 941 F.3d at 1300; see also AGA Technical Conference Comments at 13-14; Boardwalk Technical Conference Comments at 16-17; Hon. Joseph T. Kelliher Technical Conference Comments at 3; INGAA Technical Conference Comments at 12-13; TC Energy Technical Conference Comments at 13-14.

(240) API Technical Conference Comments at 4; EEI Technical Conference Comments at 6; INGAA Technical Conference Comments at 14; Williams Technical Conference Comments at 5.

(241) See AGA Technical Conference Comments at 12-13 (arguing that the Commission should not rely on this statement of dicta because the issue of mandatory mitigation was not at issue in this case; rather, the court only addressed whether the Commission is, in some circumstances, required by NEPA to include a discussion of downstream GHG emissions when conducting its environmental review); Boardwalk Technical Conference Comments at 16 (same); Enbridge Technical Conference Comments at 20 (same); Hon. Joseph T. Kelliher Technical Conference Comments at 3-4 (same); TC Energy Technical Conference Comments at 12 (same).

(242) *Sabal Trail*, 867 F.3d at 1374.

(243) *Transco*, 365 U.S. at 17; see also *NAACP v. FPC*, 425 U.S. at n.6 (stating that the Commission has the authority to consider conservation and environmental issues under the NGA's public interest determination). See *Certification of New Interstate Natural Gas Pipeline Facilities*, 178 FERC ¶ 61,107 at PP 71-72.

(244) 15 U.S.C. 717f(e); see also *id.* 717b(e)(3)(A) (providing the authority to approve an application for an LNG Terminal, "in whole or part, with such modifications and upon such terms and conditions as the Commission find[s] necessary or appropriate.").

(245) For examples where the Commission has conditioned approval of natural gas projects on mitigation of adverse impacts, see *supra* note 69.

(246) See *Twp. of Bordentown v. FERC*, 903 F.3d at 261 n.15 (concluding that the Commission's authority to enforce any required remediation is amply supported by provisions of the NGA); *Sabal Trail*, 867 F.3d at 1374 (holding that the Commission has legal authority to mitigate reasonably foreseeable indirect effects).

(247) See generally *Tex. Pipeline Ass'n v. FERC*, 661 F.3d 258, 260 (5th Cir. 2011) (holding that the Commission lacked authority to require "major non-interstate pipelines" to post certain flow information).

(248) As described *supra* in section III.A.2.b, the Commission will consider GHG emission mitigation and reduction efforts taken by non-jurisdictional entities, including downstream users, when quantifying the reasonably foreseeable project GHG emissions. However, the project sponsor's GHG mitigation plan should only include its own proposed mitigation efforts.

(249) See *supra* section III.A.1.b.

(250) *Pub. Citizen*, 541 U.S. at 767, 770 (quoting *Metro. Edison Co.*, 460 U.S. at 774); see *Sabal Trail*, 867 F.3d at 1372.

(251) *Pub. Citizen*, 541 U.S. at 767 (quoting *Metro. Edison Co.*, 460 U.S. at 774 n.7).

(253) See *supra* P 97.

(254) *Robertson v. Methow Valley Citizens Council*, 490 U.S. at 351 ("To be sure, one important ingredient of an EIS is the discussion of steps that can be taken to mitigate adverse environmental consequences.").

(255) *Id.* at 352 ("There is a fundamental distinction, however, between a requirement that mitigation be discussed in sufficient detail to ensure that environmental consequences have been fairly evaluated, on the one hand, and a substantive requirement that a complete mitigation plan be actually formulated and adopted, on the other."); *S. Fork Band Couns. of W. Shoshone of Nev. v. U.S. Dep't of Interior*, 588 F.3d at 727 (NEPA does not require that agencies mitigate significant environmental harms).

(256) *Final Guidance for Federal Departments and Agencies on the Appropriate Use of Mitigation and Monitoring and Clarifying the Appropriate use of Mitigated Findings of No Significant Impact*, 76 FR 3843, 3848.

(257) *Sabal Trail*, 867 F.3d at 1373 (distinguishing *Public Citizen* ).

(258) *See supra* P 80.

(259) The Attorneys General of Massachusetts, Delaware, Maryland, Michigan, Minnesota, New Jersey, Rhode Island, and the District of Columbia (Attorneys General of Massachusetts et al.) recommends that the Commission include reasonable, binding mitigation measures that incorporate any applicable state or federal regulations or permit conditions. Attorneys General of Massachusetts et al. Technical Conference Comments at 6. The technical conference commenters are made up of a slightly different group of state attorneys general than those filing comments in 2018 or 2021. As explained below, the Commission is only considering mitigation measures that reduce emissions beyond those associated with regulatory requirements in this policy statement.

(260) INGAA Technical Conference Comments at 21-27; *see also* Enbridge Technical Conference Comments at 12-13, 35-38 (recommending the Commission await direction from Congress in choosing a mitigation level, especially if requiring project sponsors to mitigate to less than significant levels and noting that mitigation to zero is not practicable if downstream or upstream emissions are included).

(261) Attorneys General of Massachusetts et al. urges the Commission to consider the impacts of any mitigation measures on environmental justice communities. Attorneys General of Massachusetts et al. Technical Conference Comments at 5-6.

(262) Jennifer Danis, Senior Fellow with the Sabin Center for Climate Change Law and a panelist at the GHG Technical Conference on Panel 1, recommends that the Commission should not consider the effect of any mitigation measures in its public interest determination but should only consider mitigation measures once the Commission has determined that public convenience and necessity absolutely requires the project. Jennifer Danis Technical Conference Statement at 8-11. As explained in the Certificate Policy Statement, the Commission considers all factors, including the extent to which adverse impacts are mitigated, to determine whether a project is in the public convenience and necessity. *Certification of New Interstate Natural Gas Pipeline Facilities*, 178 FERC ¶ 61,107 at PP 70, 93-95.

(263) *See supra* section II.B.

(264) Commenters emphasize the need for flexibility in assessing mitigation measures. *See, e.g.*, Enbridge Pre-Conference Comments at 9; Enbridge Technical Conference Comments at 46-47 (suggesting that, depending on a variety of factors, the applicant may or may not be able to propose appropriate mitigation at the time of the project application); Hon. Joseph T. Kelliher Technical Conference Comments at 11 (recommending alternatives to imposing mitigation requirements such as revising the Commission's 2015 Modernization Policy Statement, issuing a new GHG policy statement that either allows limited section 4 rate filings to recover costs or clarifies the level of shipper support required to support establishment of a tracker surcharge and recommending that such a policy address lost and unaccounted-for fuel, or implementing a fast track certificate process for project sponsors that voluntarily commit to mitigate direct GHG emissions); INGAA Technical Conference Comments at 30; Magnolia LNG LLC Technical Conference Comments at 2; TC Energy Technical Conference Comments at 5, 21 (arguing against the Commission requiring market-based mitigation measures). A few commenters either oppose use of the SCC in determining a required level of mitigation for project emissions, Enbridge Technical Conference Comments at 6, 38-39, or urge the Commission to use the SCC to monetize the impacts of any GHGs that are not able to be mitigated, Attorneys General of Massachusetts et al. Technical Conference Comments at 7. As described above, the Commission does not propose to mandate any particular level or type of mitigation.

(265) For example, Mountain Valley Pipeline, LLC, proposed to offset the operational emissions of the Mountain Valley Pipeline Project by purchasing carbon offset credits equivalent to 90% of GHG emissions associated with the project's operations in its first 10 years of service from a new methane abatement project located at a mine in southwest Virginia. Mountain Valley Pipeline, LLC, Carbon Offset Commitment for Mountain Valley Pipeline Project Operations, Docket No. CP21-57-000 (filed July 12, 2021).

(266) Regulatory requirements include those imposed by the Commission and other federal and state regulatory agencies. However, project sponsors may include participation in voluntary regulatory programs that reduce GHG emissions.

(267) See, e.g., INGAA Technical Conference Comments at 38-39. Dr. Carl Pechman, Director of the National Regulatory Research Institute and a panelist at the GHG Technical Conference on Panel 3, provides extensive comments on how the Commission could establish accounting protocols and offset tracking. Dr. Carl Pechman Technical Conference Statement at 1-15.

(268) APGA Technical Conference Comments at 8-9; Enbridge Technical Conference Comments at 48-49; INGAA Technical Conference Comments at 40-41; TC Energy Technical Conference Comments at 5-6, 22-23. Similarly, commenters state that the Commission should defer to other agencies, such as the EPA and state environmental agencies, that are already taking regulatory action regarding emissions, express concern over the potential for inconsistent mitigation requirements between agencies, and/or point to EPA's methane regulation proposal to reduce GHG emissions from new, reconstructed, modified, and existing facilities in the oil and gas source category under section 111 of the Clean Air Act. APGA Technical Conference Comments at 5; EEI Technical Conference Comments at 10-11; INGAA Technical Conference Comments at 30-32; NGSAs Technical Conference Comments at 6-7. Conversely, one commenter encourages the Commission to use resources from the EPA's pending rulemaking. Attorneys General of Massachusetts et al. Technical Conference Comments at 6-7 (referencing Standards of Performance for New, Reconstructed, and Modified Sources and Emissions Guidelines for Existing Sources: Oil and Natural Gas Sector Climate Review, 86 FR 63110 (Nov. 15, 2021)).

(269) EEI Technical Conference Comments at 12-14.

(270) INGAA Technical Conference Comments at 40-41.

(271) See, e.g., Standards of Performance for New, Reconstructed, and Modified Sources and Emissions Guidelines for Existing Sources: Oil and Natural Gas Sector Climate Review, 86 FR 63110 (Nov. 15, 2020).

(272) For more information, see EPA Green Power Partnership, *Offsets and RECs: What's the Difference* (Feb. 2018), [https://www.epa.gov/sites/default/files/2018-03/documents/gpp\\_guide\\_recs\\_offsets.pdf](https://www.epa.gov/sites/default/files/2018-03/documents/gpp_guide_recs_offsets.pdf).

(273) Enbridge Pre-Conference Comments at 6-7; Enbridge Technical Conference Comments at 42-46; Enbridge 2021 Comments at 145-148; INGAA Technical Conference Comments at 33.

(274) Enbridge 2021 Comments at 23, 148 n. 406 (stating that the lack of a federal REC program coupled with the patchwork of state and regional, as well as voluntary and mandatory, REC programs brings into question whether project sponsors could participate in these existing programs).

(275) RGGI includes: Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Rhode Island, Vermont, and Virginia.

(276) Any entity is eligible to participate in CO<sub>2</sub> allowance auctions including, but not limited to, corporations, individuals, non-profit corporations, environmental organizations, brokers, and other interested parties. The Regional Greenhouse Gas Initiative, *CO<sub>2</sub> Allowance Auctions, Frequently Asked Questions 1* (Apr. 6, 2021), [https://www.rggi.org/sites/default/files/Uploads/Auction-Materials/54/FAQS\\_Apr\\_6\\_2021.pdf](https://www.rggi.org/sites/default/files/Uploads/Auction-Materials/54/FAQS_Apr_6_2021.pdf).

(277) 23.5 million CO<sub>2</sub> allowances (short tons) sold at RGGI auction in March 2021 at clearing price of \$7.60/allowance.

(278) 54.7 million CO<sub>2</sub> allowances (metric tons) sold at settlement price of \$17.8/allowance during a February 2021 auction.

(279) EPA Green Power Partnership, *supra* note 272.

(280) In 2019, 104 million metric tons of CO<sub>2</sub>e offsets were sold and the price per metric ton CO<sub>2</sub>e was \$1.40 to \$4.30, depending on type of project (renewable energy and forestry/land use, respectively). S&P Global Platts, *Voluntary Carbon Market Grows 6% on Year in 2019: Ecosystem Marketplace* (Sep. 22, 2020), <https://www.spglobal.com/platts/en/market-insights/latest-news/coal/092220-voluntary-carbon-market-grows-6-on-year-in-2019-ecosystem-marketplace>.

(281) Typical offset projects include ozone depleting substances destruction, landfill gas capture/combustion, livestock gas capture/combustion, improved forest management, avoided grassland conversion, and improved forest management, among others. For more information, see generally <https://www.climateactionreserve.org/>.

(282) Typical offset projects include renewable energy, forest and wetland conservation and restoration, transport efficiency improvement, nitrous oxide abatement, clean cookstoves, methane capture and use/combustion, and waste heat recovery. For more information, see generally <https://verra.org/>.

(283) Typical offset projects include ozone depleting substances destruction, industrial process emissions, fuel switching, livestock waste management, transport fleet efficiency, landfill gas capture and combustion, wetland restoration, forest management, and coal mine methane capture. For more information, see generally <https://americancarbonregistry.org/>.

(284) Policy Integrity 2021 Comments at 14-15, 19.

(285) Policy Integrity 2021 Comments at 23-26 (citing 40 CFR 1508.1(s)(5)).

(286) Policy Integrity 2021 Comments at 20.

(287) Enbridge Pre-Conference Comments at 7-8; INGAA 2021 Comments at 79-82.

(288) INGAA Technical Conference Comments at 34-36; INGAA 2021 Comments at 79-82; *see also* Enbridge Pre-Conference Comments at 8-9; Enbridge Technical Conference Comments at 46-47.

(289) Hon. Joseph T. Kelliher Technical Conference Comments at 7; *see also id.* (asserting that this process would be complicated because credits could originate outside the U.S. and the Commission has no verification expertise).

(290) *E.g.*, AGA Technical Conference Comments at 28-30; API Technical Conference Comments at 6-8; Boardwalk Technical Conference Comments at 5-6; Con Edison Technical Conference Comments at 7-10 (detailing other efforts reduce emissions using renewable natural gas, certified natural gas, and hydrogen); Enbridge Pre-Conference Comments at 5; Enbridge Technical Conference Comments at 13-14, 39-41; INGAA Technical Conference Comments at 28-30 (citing its 2021 Climate Report); Magnolia LNG LLC Technical Conference Comments at 2 (describing its proprietary technology to reduce emissions during the liquefaction process); Scott A. Hallam Technical Conference Statement at 2 (Scott A. Hallam, Senior Vice President of Transmission and Gulf of Mexico at Williams, was a panelist at the GHG Technical Conference on Panel 1.); Stephen Mayfield Technical Conference Statement at 1-2 (Stephen Mayfield, AGM of Gas Operations at City of Tallahassee, was a panelist at the GHG Technical Conference on Panel 3.); Texas LNG Brownsville LLC Technical Conference Comments at 6; William F. Donahue Technical Conference Statement at 3 (William F. Donahue, Manager of Natural Gas Resources at Puget Sound Energy, was a

panelist at the GHG Technical Conference on Panel 2.); INGAA 2021 Comments at 79-82. Some commenters note, however, that use of electric compressors may increase indirect emissions depending on the generation mix and existing infrastructure or cite concerns about the impact to the reliability of gas service during power outages. *E.g.*, American Forest Technical Conference Comments at 13; Enbridge Pre-Conference Comments at 5-6; Enbridge Technical Conference Comments at 41; Kinder Morgan Technical Conference Comments at 22-23.

<sup>(291)</sup> Delaware Riverkeeper 2021 Comments at 66; Kirk Frost 2021 Comments at 11.

<sup>(292)</sup> Delaware Riverkeeper 2021 Comments at 66.

<sup>(293)</sup> Rachel Dawn Davis, the Public Policy and Justice Organizer at Waterspirit, was a panelist at the GHG Technical Conference on Panel 3. Rachel Dawn Davis Technical Conference Statement at 1; Waterspirit Technical Conference Comments at 1-2; *see also* Technical Conference Transcript at 106-107 (transcribing remarks made by Dr. Nicky Sheats, Director of the Center for Urban Environment at the John S. Watson Institute for Public Policy and panelist on Panel 2).

<sup>(294)</sup> *E.g.*, TC Energy Technical Conference Comments at 20.

<sup>(295)</sup> Dr. Anna Scott, Co-Founder and Chief Science Officer of Project Canary, was a panelist at the GHG Technical Conference on Panel 2. Dr. Anna Scott Technical Conference Statement at 1-2, 5 (mentioning key engineering components such as operational venting or flaring, electrification of facilities and equipment, low bleed and/or zero bleed process controls, leak detection and repair programs, produced water treatment and reuse, and infrastructure and facility efficiency investments and describing how the company uses on-site sensors and algorithm technology to provide continuous monitoring). Along with pursuing carbon capture and storage solutions, Ivan Van der Walt, Chief Operating Officer at NextDecade Corporation and a panelist at the GHG Technical Conference on Panel 2, describes the joint pilot project NextDecade has formed with Project Canary for measuring and certifying the GHG intensity of LNG sold from the Rio Grande LNG Project export facility. Ivan Van der Walt Technical Conference Statement at 2-3.

<sup>(296)</sup> Gary Choquette, Executive Director of Research and IT at PRCI, was a panelist at the GHG Technical Conference on Panel 2. Gary Choquette Technical Conference Statement at 3-4.

<sup>(297)</sup> *See, e.g.*, AGA Technical Conference Comments at 17-20; API Technical Conference Comments at 7-8; Boardwalk Technical Conference Comments at 5-6; NGSA Technical Conference Comments at 5; Scott A. Hallam Technical Conference Statement at 2-3; Stephen Mayfield Technical Conference Statement at 1; William F. Donahue Technical Conference Statement at 3-4; BHE Pipeline Group 2021 Comments at 12-14; Cheniere Energy Inc. 2021 Comments at 17.

<sup>(298)</sup> Boardwalk Technical Conference Comments at 3; Enbridge Technical Conference Comments at 15, 49; INGAA Technical Conference Comments at 42-45; TC Energy Technical Conference Comments at 6.

<sup>(299)</sup> Enbridge Technical Conference Comments at 15, 49; INGAA Technical Conference Comments at 45 (noting that the Commission should be clear that “recovery of costs related to an ongoing obligation to purchase market-based mitigation is akin to a fuel tracker and would not be subject to the modernization cost recovery tracker policy or the Commission’s policy against cost recovery trackers for regulatory compliance costs,” and incremental operating costs to reduce GHG emissions should also be recoverable through a tracker); *see also* Hon. Joseph T. Kelliher Technical Conference Comments at 7 (suggesting that, while burdensome to stakeholders, the Commission could adopt a true-up mechanism requiring project sponsors to deposit offsets, which would later be compared to actual emissions).

<sup>(300)</sup> American Forest Technical Conference Comments at 15-16; APGA Technical Conference Comments at 6-8 (urging the Commission to consider the effects of cost-recovery on end-users, particularly low-income communities, who may not directly reap any local environmental benefits); American Forest and Paper

Association et al. 2021 Comments at 26.

(301) American Forest Technical Conference Comments at 14 (asserting that there is little transparency for customers with respect to Lost and Unaccounted for Fuel Charges, which are recoverable by shippers).

(302) *Ruby Pipeline, LLC*, 131 FERC ¶ 61,007, at P 34 (2010).

(303) Unless required by law or regulation, the Commission will not apply a presumptive significance threshold below 100,000 metric tons of CO<sub>2</sub>e to applications filed prior to issuance of a final policy statement. If the Commission adopts a new lower threshold in a final policy statement, that threshold will only apply to applications filed after issuance of that statement.

(304) *Certification of New Interstate Natural Gas Pipeline Facilities*, 178 FERC ¶ 61,107 at PP 70-72, 93-95.

(305) 44 U.S.C. 3507(d).

(306) 5 CFR 1320.

(307) This policy statement does not require the collection of any information, but rather discusses information that entities may elect to provide. The Commission is following Paperwork Reduction Act procedures to ensure compliance with that act.

(308) Burden is defined as the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a federal agency. See 5 CFR 1320 for additional information on the definition of information collection burden.

(309) Commission staff estimates that the industry's average hourly cost for this information collection is approximated by the Commission's average hourly cost (for wages and benefits) for 2021, or \$87.00/hour.

(1) *Consideration of Greenhouse Gas Emissions in Natural Gas Infrastructure Project Reviews*, 178 FERC ¶ 61,108 (2022) (Interim Policy Statement).

(2) *But see* Chairman Glick September 24, 2021 Response to Senator Barrasso September 15, 2021 Letter, Docket Nos. CP17-40-000, et al., at 1 (“When courts find flaws in the Commission's analysis, it can lead to lengthy delays and cost developers substantially more than they originally forecasted.”) (Accession No. 20210927-4003); *id.* at 9 (“Ultimately, I believe that performing thorough permitting reviews and providing developers with legally durable certificates on which they can rely will do more than just about anything else to satisfy the purposes of the Natural Gas Act.”); Chairman Glick May 21, 2021 Response to Senator Hoeven April 29, 2021 Letter, Docket No. PL18-1-000, at 1 (“I believe we can make changes to the Certificate Process that enhance our efficiency in processing applications and better address various directives we have received from the appellate courts.”) (Accession No. 20210524-4014).

(3) Chairman Glick February 2, 2022 Response to Senator Barrasso December 15, 2021 Letter at 4 (Accession No. 20220202-4003); *see also* Commissioner Clements February 2, 2022 Response to Senator Barrasso December 15, 2021 Letter at 2 (Accession No. 20220202-4000) (“I will do my part to assure that the updated policy will be a legally durable framework for fairly and efficiently considering certificate applications—one that serves the public interest and increases regulatory certainty for all stakeholders.”).

(4) *See, e.g., Algonquin Gas Transmission, LLC*, 174 FERC ¶ 61,126 (2021) (Danly and Christie, Comm'rs, dissenting) (Briefing Order), *terminated*, 178 FERC ¶ 61,029 (2022) (Danly and Christie, Comm'rs, concurring in part and dissenting in part); *see also* Commission Staff May 27, 2021 Notice in Tenn. Gas Pipeline Co., L.L.C., Docket No. CP20-493-000 (Accession No. 20210527-3054) (announcing schedule for Environmental Impact Statement (EIS) for project with previously prepared Environmental Assessment (EA)); Commission Staff May 27, 2021 Notice in North Baja Pipeline, LLC, Docket No. CP20-27-000 (Accession No. 20210527-3052) (same); Commission Staff May 27, 2021 Notice in Columbia Gulf

Transmission, LLC, Docket No. CP20-527-000 (Accession No. 20210527-3049) (same); Commission Staff May 27, 2021 Notice in Iroquois Gas Transmission System, L.P., Docket No. CP20-48-000 (Accession No. 20210527-3047) (same).

(5) Interim Policy Statement, 178 FERC ¶ 61,108 at P 1.

(6) *Id.*

(7) For example, the D.C. Circuit in *Vecinos para Bienestar de la Comunidad Costera v. FERC* ( *Vecinos* ) found that the Commission failed to “respond to significant opposing viewpoints” regarding its analysis of GHG emissions. *Vecinos*, 6 F.4th 1321, 1329 (D.C. Cir. 2021). It did not find “that the Commission failed to appropriately analyze the significance of three natural gas projects’ contribution to climate change . . . .” Interim Policy Statement, 178 FERC ¶ 61,108 at P 14.

(8) Interim Policy Statement, 178 FERC ¶ 61,108 at P 28.

(9) *Id.* (emphasis added) (footnotes omitted). I interpret “in most cases” as meaning the Commission will quantify and consider downstream emissions for NGA section 7 projects unless it is shown that the gas will not be burned. *See id.* P 28 n.72.

(10) *See id.* P 43.

(11) It should be noted that the majority cites *Sierra Club v. FERC* ( *Sabal Trail* ) to argue downstream emissions have a reasonably close causal relationship to NGA section 7 projects. *Id.* P 39 & n.103 (citing 867 F.3d 1357, 1372-73 (D.C. Cir. 2017) (Brown, J., concurring in part and dissenting in part)). Below I explain how *Sabal Trail* must not be given too much weight.

(12) *Id.* P 45.

(13) *See id.* P 52.

(14) *See Midship Pipeline Co., LLC* ( *Midship* ), 177 FERC ¶ 61,186 (2021) (Danly, Comm’r, dissenting at P 5) (“I, for one, am willing to consider the parties’ arguments and make a decision.”).

(15) Interim Policy Statement, 178 FERC ¶ 61,108 at P 79.

(16) *See id.* P 81.

(17) Despite the fact that CEQ’s regulations no longer distinguish between “direct” and “indirect” effects, in order to reduce confusion I use the term “direct” to be consistent with the Interim Policy Statement. *See Update to the Regulations Implementing the Procedural Provisions of the National Environmental Policy Act*, 85 FR 43304, 43343 (Jul. 16, 2020).

(18) *But see* 18 CFR. §§ 380.5-380.6 (setting forth when the Commission will prepare an EIS).

(19) *See* Interim Policy Statement, 178 FERC ¶ 61,108 at PP 104-06.

(20) *Id.* P 107; *see also id.* (“The Commission plans to evaluate proposed mitigation plans on a case-by-case basis . . . .”).

(21) *See id.* P 108.

(22) *See id.* P 106 (“However, as detailed below, the Commission’s priority is for project sponsors to mitigate, to the greatest extent possible, a project’s direct GHG emissions.”).

(23) *Id.* P 110.

(24) *See id.* P 126.

(25) *See id.*

(26) *See id.* PP 115-26; *see also id.* P 129 (“project sponsors *wishing* to purchase offsets”) (emphasis added).

(27) “As soon as the coin in the coffer rings, the soul from purgatory springs.” *See* Robert King, *Only in America: Tax Patents and the New Sale of Indulgences*, 60 Tax Law 761, 761 (2007) (citing Ronald H. Bainton, *Here I Stand: A Life of Martin Luther* 60 (1950)).

(28) *See* Interim Policy Statement, 178 FERC ¶¶ 61,108 at P 107 (“The Commission plans to evaluate proposed mitigation plans on a case-by-case basis and is not mandating a standard level of mitigation.”).

(29) For example, the Commission does not explain how the construction of a renewable energy or energy efficiency project reduces carbon emissions unless it could be shown that such construction will cause the retirement of, or prevent the construction of, a specific carbon emitting generation facility. Nor does the Commission describe how, in the absence of the identification of a specific facility to be displaced, it would be possible to determine the amount of mitigation provided by renewable energy or energy efficiency projects.

(30) *See* Interim Policy Statement, 178 FERC ¶¶ 61,108 at P 113 (“[W]e believe it best to allow project sponsors to demonstrate that their proposed mitigation measures are verifiable and propose means for the Commission to monitor or track the proposed measures through the life of the project.”).

(31) *Id.* P 106.

(32) *See Certification of New Interstate Nat. Gas Facilities*, 174 FERC ¶¶ 61,125, at P 17 (2021) (“C10. How could the Commission impose GHG emission limits or mitigation to reduce the significance of impacts from a proposed project on climate change? . . . If the Commission decides to impose GHG emission limits, how would the Commission determine what limit, if any, is appropriate?”).

(33) *See* Greenhouse Gas Mitigation, Technical Conference Transcript, Docket No. PL21-3-000 (Nov. 19, 2021).

(34) *See* Commission Staff November 16, 2021 Notice Inviting Technical Conference Comments, Docket No. PL21-3-000.

(35) 18 CFR. § 385.2201.

(36) I have anticipated a couple possible questions and will hazard answers that may be of interest: *Will an EIS assess the adequacy of GHG mitigation or recommend GHG mitigation measures?* My understanding is no. The Commission will determine the adequacy of mitigation on a case-by-case basis in its orders. *Will mitigation that was not considered in an environmental document require the Commission to supplement its environmental review?* A clear answer was not provided. It is worth noting that section 1502.9(d)(1)(i) of CEQ's regulations state “Agencies . . . [s]hall prepare supplements to either draft or final environmental impact statements if a major Federal action remains to occur, and . . . [t]he agency makes substantial changes to the proposed action that are relevant to environmental concerns . . . .” 40 CFR. § 1502.9(d)(1)(i).

(37) Interim Policy Statement, 178 FERC ¶¶ 61,108 at P 99.

(38) *Double E Pipeline, LLC*, 173 FERC ¶¶ 61,074, at P 32 (2020).

(39) Interim Policy Statement, 178 FERC ¶¶ 61,108 at P 110.

- (40) See, e.g., *Algonquin Gas Transmission, LLC*, 174 FERC ¶ 61,126 (2021) (Danly and Christie, Comm'rs, dissenting) (order establishing briefing to reopen final, non-appealable certificate order); *Algonquin Gas Transmission, LLC*, 178 FERC ¶ 61,029 (2022) (Danly and Christie, Comm'rs, concurring in part and dissenting in part) (order terminating briefing order but suggesting can reopen certificates to impose new terms).

- (89) Standards of Performance for New, Reconstructed, and Modified Sources and Emissions Guidelines for Existing Sources: Oil and Natural Gas Sector Climate Review, 86 FR 63110 (Nov. 15, 2021). Commenters make the point, to which the majority does not respond, that the Commission should defer to EPA’s rulemaking. *See, e.g.*, EEI Technical Conference Comments at 11 n.29.
- (90) *See id.* P 102.

(91) See *id.* P 105 (“we recognize, as many commenters assert, that the Commission does not have the statutory authority to impose conditions on downstream users or other entities outside the Commission’s jurisdiction . . . rather, the Commission encourages each *project sponsor* to propose measures . . . .”) (emphasis in original).

(92) See *Altamont Gas Transmission, Co. v. FERC*, 92 F.3d 1239, 1248 (D.C. Cir. 1996) (“Although the Commission ordinarily has the authority to consider a matter beyond its jurisdiction if the matter affects jurisdictional sales—at least if there would otherwise be a regulatory gap—here there is no such gap but, on the contrary, an express congressional reservation of jurisdiction to another body.”); *Am. Gas Ass’n v. FERC*, 912 F.2d 1496, 1510 (“[T]he Commission may not use its § 7 conditioning power to do indirectly . . . things that it cannot do at all.”); see also *Calpine Corp.*, 171 FERC ¶ 61,035 (2020) (Glick, Comm’r, dissenting at P 7) (“In recent years, the Supreme Court has repeatedly admonished both the Commission and the states that the FPA prohibits actions that ‘aim at’ or ‘target’ the other sovereign’s exclusive jurisdiction.”).

(93) See Interim Policy Statement, 178 FERC ¶ 61,108 at P 107 (“[T]he Commission plans to *evaluate* proposed mitigation plans on a case-by-case basis . . . .”) (emphasis added); *id.* P 131 (“the Commission will then consider the project’s impact on climate change, including the project sponsor’s mitigation proposal to reduce direct GHG emissions and, to the extent practicable, to reduce any reasonably foreseeable project emissions . . . .”).

(94) 15 U.S.C. 717b(a).

(95) *Id.* § 717f(e).

(96) See also *Michigan v. EPA*, 576 U.S. 743, 752 (2015) (explaining that the phrase “appropriate and necessary” in the Clean Air Act “requires at least some attention to cost”); *id.* (“One would not say that it is even rational, never mind ‘appropriate,’ to impose billions of dollars in economic costs in return for a few dollars in health or environmental benefits.”); *id.* 752-53 (“Agencies have long treated cost as a centrally relevant factor when deciding to regulate.”).

(97) See Interim Policy Statement, 178 FERC ¶ 61,108 at P 5, n.6.

(98) I recognize that project sponsors have previously reserved their right to appeal when accepting a certificate, which the Commission has not opposed. However, in the context of hydropower cases, the Commission has taken a different approach. See *Rivers Elec. Co., Inc.*, 178 FERC ¶ 61,027, P 9 n.25 (2022) (Dally, Comm’r, concurring in part and dissenting in part) (“If the transferee accepts this order, it is thereby agreeing to the new condition. It may decline to do so if it does not wish to accept the condition.”).

(99) *Am. Trucking Ass’n, Inc. v. I. C. C.*, 659 F.2d 452, 463 (5th Cir. 1981), *opinion clarified on other grounds*, 666 F.2d 167 (5th Cir. 1982) ( *Am. Trucking* ).

(100) Interim Policy Statement, 178 FERC ¶ 61,108 at P 130.

(101) *Id.*

(102) *Cf. Am. Trucking*, 659 F.2d at 463-464 (“The manner of dealing with applicants who do not follow what is declared to be the ‘normal’ course demonstrates graphically that the carrier who does not conform will incur both delay and potentially vast litigation expense”).

(103) For example, on August 24, 2020, Commission staff issued an EA for Tennessee Gas Pipeline Company, LLC et al.’s Evangeline Pass Expansion Project which concluded, “[w]e recommend that the Commission Order contain a finding of no significant impact.” Commission Staff, Environmental Assessment for Tenn. Gas Pipeline Co., LLC et al.’s Evangeline Pass Expansion Project, Docket Nos. CP20-50-000 et al., at 168 (Aug. 24, 2020). Despite this recommendation, which would have normally been

adopted by the Commission, Commission staff, at the direction of the Chairman, issued supplemental Draft and Final Environmental Impact Statements. See Commission Staff, Final Environmental Impact Statement for Tenn. Gas Pipeline Co., LLC et al.'s Evangeline Pass Expansion Project, Docket Nos. CP20-50-000 et al. (Oct. 8, 2021); Commission Staff, Draft Environmental Impact Statement for Tenn. Gas Pipeline Co., LLC et al.'s Evangeline Pass Expansion Project, Docket Nos. CP20-50-000 et al. (July 16, 2021).

(104) See *Brown Exp., Inc. v. United States*, 607 F.2d 695, 701 (5th Cir. 1979) (“An announcement stating a change in the method by which an agency will grant substantive rights is not a ‘general statement of policy.’”).

(105) See *Nat. Res. Def. Council, Inc. v. NRC*, 539 F.2d 824 (2d Cir. 1976) (“Further, it is clear that NEPA legal consequences flow from that decision since the order below sets forth rules concerning how the agency will comply with the environmental laws.”), *cert. granted*, 430 U.S. 944 (1977), *judgment vacated and case remanded for consideration of mootness*, 434 U.S. 1030 (1978).

(106) Interim Policy Statement, 178 FERC ¶¶ 61,108 at P 3 (“For purposes of assessing the appropriate level of NEPA review, Commission staff *will apply* the 100% utilization or ‘full burn’ rate for the proposed project’s emissions to determine whether to prepare an Environmental Impact Statement (EIS) or an environmental assessment (EA). Commission staff *will proceed* with the preparation of an EIS, if the proposed project may result in 100,000 metric tons per year of CO<sub>2</sub>e or more.”) (emphasis added); see also *Tex. v. Equal Emp’t Opportunity Comm’n*, 933 F.3d 433, 441-44 (5th Cir. 2019); *id.* at 442 (“That the agency’s action binds its staff . . . demonstrates that legal consequences flow from it . . .”).

(107) See, e.g., *Interstate Nat. Gas Ass’n of Am. v. FERC*, 285 F.3d 18, 59 (D.C. Cir. 2002).

(1) *Certification of New Interstate Natural Gas Facilities*, 174 FERC ¶¶ 61,125 (2021).

(2) I also voted for the 2021 changes to the procedures for imposing a stay on the certificate and use of eminent domain during periods when petitions for reconsideration and appeals were pending. *Limiting Authorizations to Proceed with Construction Activities Pending Rehearing*, Order No. 871-B, 175 FERC ¶¶ 61,098 (2021). These changes were largely opposed by the pipeline industry, but in my opinion represented a reasonable approach to bring more certainty and fairness to our procedures for handling petitions for reconsideration and the use of eminent domain during the pending period.

(3) See *Certification of New Interstate Natural Gas Facilities*, 178 FERC ¶¶ 61,107 (2022) (Certificate Policy Statement) at PP 53-57. The need for enhanced scrutiny of contracts among corporate affiliates is recognized in state utility regulation. See, e.g., Va. Code § 56-76 *et seq.*, known as the “Virginia Affiliates Act.”

(4) See *Joint Anti-Fascist Refugee Comm. v. McGrath*, 341 U.S. 123 (1951) (Frankfurter, J., concurring).

(5) *Certificate Policy Statement; Consideration of Greenhouse Gas Emissions in Natural Gas Infrastructure Project Reviews*, 178 FERC ¶¶ 61,108 (2022) (GHG Policy Statement). Although styled as an “interim” policy statement, it goes into effect immediately and will inflict major new costs and uncertainties on certificate applications that have been pending with the Commission for months or years. *Id.* at PP 1, 130. I consider both policy statements to be indivisible parts of a new policy governing certificates. Thus, my statement applies to both, and I am entering this dissent in both dockets.

(6) 15 U.S.C. 717 *et seq.* See, e.g., Certificate Policy Statement at P 62.

(7) 42 U.S.C. 4321 *et seq.*

(8) *Nat’l Fed’n of Indep. Bus. v. Dep’t of Labor, OSHA*, 142 S. Ct. 661 (2022) ( *NFIB* ); *Alabama Ass’n. of Realtors v. Dep’t of Health and Human Services*, 141 S. Ct. 2485 (2021) ( *Ala. Ass’n.* ); *Util. v. EPA*, 573 U.S. 302 (2014) ( *UARG* ); *FDA v. Brown & Williamson Tobacco Corp.*, 529 U.S. 120 (2000) ( *Brown &*

*Williamson* ). I discuss this doctrine in Section I.B., *infra*.

(10) See *NERC December 2021 Long-Term Reliability Assessment*, at 5 (Dec. 2021) (“Natural gas is the reliability ‘fuel that keeps the lights on,’ and *natural gas policy must reflect this reality.*”) (emphasis added) (available at [https://www.nerc.com/pa/RAPA/ra/Reliability%20Assessments%20DL/NERC\\_LTRA\\_2021.pdf](https://www.nerc.com/pa/RAPA/ra/Reliability%20Assessments%20DL/NERC_LTRA_2021.pdf) ); *id.* at 6 (“Sufficient flexible [dispatchable] resources are needed to support increasing levels of variable [intermittent] generation *uncertainty*. Until storage technology is fully developed and deployed at scale, (which cannot be presumed to occur within the time horizon of this LTRA), natural gas-fired generation will remain a necessary balancing resource to provide increasing flexibility needs.”) (emphasis added); *NERC 2020 Long-Term Reliability Assessment, December 2020*, at 7 (Dec. 2020) (“As *more solar and wind* generation is added, *additional* flexible resources are needed to offset their resources' variability. This is placing *more* operating pressure on those ( *typically natural gas* ) resources and makes them *the key to* securing [Bulk Power System] reliability.” (emphases added) (available at [https://www.nerc.com/pa/RAPA/ra/Reliability%20Assessments%20DL/NERC\\_LTRA\\_2020.pdf](https://www.nerc.com/pa/RAPA/ra/Reliability%20Assessments%20DL/NERC_LTRA_2020.pdf) ).

(11) Letter from Industrial Energy Consumers of America to Sen. Joe Manchin III, Sen. John Barrasso, Sen. Frank Pallone, Jr., Sen. Cathy McMorris Rodgers, *Lack of Interstate Natural Gas Pipeline Capacity Threatens Manufacturing Operations, Investments, Jobs, and Supply Chain* (Feb. 9, 2022).

(12) Since we are regulators with an advisory role, not Article III judges, my personal view is that the most politically realistic and sustainable way to reduce carbon emissions significantly without threatening the reliability of our grid and punishing tens of millions of American workers and consumers with lost jobs and skyrocketing energy prices ( see, e.g., Europe) is by massive *public* investment in the research, development and deployment of the technologies that can achieve that goal economically and effectively. See, e.g., Press Release, Bipartisan Policy Center, *New AEIC Report Recommends DOE Combine Loan and Demonstration Offices, Jumpstart American Clean Energy Deployment* (Jan. 21, 2022), available at <https://bipartisanpolicy.org/press-release/new-aeic-report-recommends-doe-combine-loan-and-demonstration-offices-jumpstart-american-clean-energy-deployment/> (citing to American Energy Innovation Council, *Scaling Innovation: A Proposed Framework for Scaling Energy Demonstrations and Early Deployment* (Jan. 2022)). Once developed to commercial scale, marketable technologies will roll out globally on their own, without the market-distorting mandates and subsidies that only enrich rent-seekers and impoverish consumers. More specifically with regard to natural gas facilities, there is also the potential with available technology to reduce direct methane emissions from the existing oil and gas system within existing legal authority. And such initiatives do not obviate the need for near-term mitigation measures, such as preparing the electric grid to maintain power during extreme weather events.

- (19) Certificate Policy Statement at P 62.
- (20) *Id.*
- (21) *Id.* The notion that a certificate could be rejected based solely on the interests of “landowners” or “environmental justice communities” (a term the majority leaves largely undefined) illustrates the radical divergence from both law and long Commission practice of what the Commission purports to do today. While a regulatory commission should always be mindful of and sensitive to the impacts on affected property owners and communities in every case involving the potential use of eminent domain—particularly on the question of the project’s route or siting—and should generally seek wherever possible to reduce or minimize such impacts, specific measures to reduce or minimize such impacts are governed by the statutes applicable to each proceeding. Under both the Constitution and the NGA, if a project is needed for a public purpose, then landowners are made whole through just compensation. U.S. Const. amend. V. Questions of compensation are adjudicated in state or federal court—not by this Commission. NGA § 7(h), 15 U.S.C. 717f(h). Bringing such extra-jurisdictional considerations into the Commission’s public convenience and necessity analyses under NGA § 7 is just another expansion of Commission power far beyond anything justified in law.
- (22) *Sabal Trail*, 867 F.3d 1357, 1382 (DC Cir. 2017) ( *Sabal Trail* ) (Brown, J., dissenting in part and concurring in part).
- (23) *Atl. Refining Co. v. Pub. Serv. Comm’n of State of N.Y.*, 360 U.S. 378, 391 (1959) (“This is not to say that rates are the only factor bearing on the public convenience and necessity, for § 7(e) requires the Commission to evaluate all factors bearing on the public interest.”); *N.C. Gas Corp.*, 10 FPC 469, 476 (1950) (“Public convenience and necessity comprehends a question of the public interest. Or, stated another way: Is the proposal conducive to the public welfare? Is it reasonably required to promote the accommodation of the public? The public interest we referred to has many facets. *To the limit of our authority under the law* our responsibility encompasses them all”) (emphasis added) (quoting *Commonwealth Nat. Gas Corp.*, 9 FPC 70 (1950)).
- (24) *NAACP v. FPC*, 425 U.S. 662, 669 (1976) (“This Court’s cases have consistently held that the use of the words ‘public interest’ in a regulatory statute is not a broad license to promote the general public welfare. Rather, the words take meaning from the purposes of the regulatory legislation.”). Where the Supreme Court has permitted the Commission to consider end use, those considerations have related directly to its core statutory responsibilities under the NGA, namely, ensuring adequate supply at reasonable rates. See *FPC v. Transcontinental Pipe Line Co.*, 365 U.S. 1 (1961) (permitting the Commission to consider whether the end use was “wasteful” of limited gas resources).
- (25) NGA § 1(b), 15 U.S.C. 717(b).
- (26) *ONEOK, Inc. v. Learjet, Inc.*, 575 U.S. 373, 378 (2015) (emphasis added); see also, *FPC v. Panhandle E. Pipe Line Co.*, 337 U.S. 498, 502-503 (1949) (“suffice it to say that the Natural Gas Act did not envisage federal regulation of the entire natural-gas field to the limit of constitutional power. Rather it contemplated the exercise of federal power as specified in the Act, particularly in that interstate segment which states were powerless to regulate because of the Commerce Clause of the Federal Constitution. The jurisdiction of the Federal Power Commission was to *complement* that of the state regulatory bodies.”) (emphasis added) (footnotes omitted); *Myersville Citizens for a Rural Cmty., Inc. v. FERC*, 783 F.3d 1301, 1315 (D.C. Cir. 2015) (“the Commission’s power to preempt state and local law is circumscribed by the Natural Gas Act’s savings clause, which saves from preemption the ‘rights of States’ under the Clean Air Act and two other statutes.”) (citations omitted).

- (27) *Ofc. of Consumers' Counsel v. FERC*, 655 F.2d 1132, 1142 (D.C. Cir. 1980) (“We bear in mind the caveat that an agency may not bootstrap itself into an area in which it has no jurisdiction by violating its statutory mandate.”) (citations, quotation marks, ellipsis omitted).
- (28) *City of Clarksville, Tenn. v. FERC*, 888 F.3d 477, 479 (D.C. Cir. 2018) ( *City of Clarksville* ) (“Congress enacted the Natural Gas Act with the principal aim of ‘encouraging the orderly development of plentiful supplies of natural gas at reasonable prices,’ and ‘protect[ing] consumers against exploitation at the hands of natural gas companies,”) (citations omitted); see also Alexandra B. Klass & Danielle Meinhardt, *Transporting Oil and Gas: U.S. Infrastructure Challenges*, 100 Iowa L. Rev. 947, 990-99 (Mar. 2015).
- (29) *City of Clarksville*, 888 F.3d. at 479. (“Along with those main objectives, there are also several ‘subsidiary purposes including conservation, environmental, and antitrust issues.’”) (quoting *Pub. Utils. Comm'n of Cal. v. FERC*, 900 F.2d 269, 281 (D.C. Cir. 1990)) (cleaned up). This does not mean that the Commission cannot properly impose conditions or mitigation to address environmental impacts *directly* related to the jurisdictional project; it merely recognizes that the Commission's main objective is to facilitate the expansion and preservation of natural gas service at just and reasonable rates and that doing so will inevitably entail some measure of environmental costs. These can sometimes be reduced or minimized, but never completely eliminated. Every project ever built has some degree of environmental impacts. The standard under the NGA cannot be zero impacts.
- (30) Congress could easily have conferred that authority if it had wanted to. There is no indication that Congress intended or expected FERC to perform any environmental regulation when it created the agency. See generally, Clark Bye, *The Department of Energy Organization Act: Structure and Procedure*, 30 Admin. L. Rev. 193 (1978). This Commission's predecessor, the Federal Power Commission, existed for decades before EPA was created in 1970. And Congress began enacting legislation bearing on emissions decades before then as well. See Christopher D. Ahlers, *Origins of the Clean Air Act: A New Interpretation*, 45 Env'tl. L. 75 (2015). Nor were the effects of GHG emissions unknown at that time. See Danny Lewis, *Scientists Have Been Talking About Greenhouse Gases for 191 Years*, *Smithsonian Magazine* (Aug. 3, 2015) (citing to Nobel Laureate Svante Arrhenius' 1896 paper “On the Influence of Carbonic Acid in the Air upon the Temperature of the Ground”).
- (31) See *United States v. Pub. Utils. Comm'n of Cal.*, 345 U.S. 295, 315 (1953) (explaining that recourse to legislative history is appropriate where “the literal words would bring about an end completely at variance with the purpose of the statute.”) (citations omitted). The present circumstance is very nearly the opposite: We are urged to pursue “an end completely at variance with the purpose of the statute” and for which there is *no* support in the “literal words.” *Id.*; see also *Ctr. for Biological Diversity v. U.S. Army Corps of Eng'rs*, 941 F.3d 1288, 1299 (11th Cir. 2019) ( *Ctr. for Biological Diversity* ) (“Regulations cannot contradict their animating statutes or manufacture additional agency power.”) (citing *Brown & Williamson*, 529 U.S. at 125-26).
- (32) *NAACP v. FPC*, 425 U.S. at 665-670 (noting that, although “the eradication of discrimination in our society is an important national goal,” the Supreme Court has “consistently held that the use of the words ‘public interest’ in a regulatory statute is not a broad license to promote the general welfare. Rather, the words take meaning from the purposes of the regulatory legislation” which, for the [Federal Power Act] and [Natural Gas Act], are “to encourage the orderly development of plentiful supplies of electricity and natural gas at reasonable prices.”); see also *Brown & Williamson*, 529 U.S. at 161 (“no matter how important, conspicuous, and controversial the issue, and regardless of how likely the public is to hold the Executive Branch politically accountable, . . . an administrative agency's power to regulate in the public interest must always be grounded in a valid grant of authority from Congress.”) (quotation marks, citation omitted).
- (33) *Office of Consumers' Counsel v. FERC*, 655 F.2d at 1147 (emphases added).

(34) See, e.g., NGA §§ 7(e), 15 U.S.C. 717f(e) (apart from statutory exceptions, “a certificate *shall* be issued to any qualified applicant . . . if it is found that the applicant is able and willing properly to do the acts and to perform the service proposed,” and, among other things, to comply with “the requirements, rules and regulations of the Commission . . .”) (emphasis added).

(35) Certificate Policy Statement at PP 4-6; GHG Policy Statement at P 39 (citing *Sabal Trail*, 867 F.3d at 1372-73).

(36) I won't belabor the point, but just to reiterate: a “public convenience and necessity” analysis is not a generalized “public interest” analysis, as courts have recognized. See, *supra*, P 13 & n.24 and *infra*, P 27. The “environmental” impacts appropriately considered in a certification proceeding must surely be limited in some way to the proposed facility itself since both upstream gathering and downstream use are beyond the Commission's statutory jurisdiction. See *City of Clarksville*, 888 F.3d at 479 (identifying “environmental” concerns as a “subsidiary” purpose of the NGA).

(37) *Jacobellis v. Ohio*, 378 U.S. 184, 197 (1964) (Stewart, J., concurring); see also Catherine Morehouse, *Glick, Danly spar over gas pipeline reviews as FERC considers project's climate impacts for first time*, Utility Dive (Mar. 19, 2021) (quoting Chairman Glick regarding use of GHG emissions analysis in *N. Natural Gas Co.*, 174 FERC ¶ 61,189 (2021): “We essentially used the eyeball test. . . .”). Shorn of its irrelevant disquisition on EPA's stationary source regulations, today's GHG policy statement enshrines an eyeball test as the trigger for subjecting virtually all certificate applicants to the time-consuming and costly EIS process. GHG Statement at PP 88-95.

(38) *Miller v. California*, 413 U.S. 15 (1973).

(39) *NFIB*, 142 S. Ct. at 667 (Gorsuch, J., concurring) (citations omitted).

(40) *UARG*, 573 U.S. 302, 324 (2014) (“When an agency claims to discover in a long-extant statute an unheralded power to regulate `a significant portion of the American economy,' *Brown & Williamson*, 529 U.S. at 159 . . . , we typically greet its announcement with a measure of skepticism. We expect Congress to speak clearly if it wishes to assign to an agency decisions of vast `economic and political significance.' *Id.* at 160.”); *Gundy v. United States*, 139 S. Ct. 2116, 2141-42 (2019) ( *Gundy* ) (Gorsuch, J., dissenting) (“Under our precedents, an agency can fill in statutory gaps where `statutory circumstances' indicate that Congress meant to grant it such powers. But we don't follow that rule when the `statutory gap' concerns `a question of deep economic and political significance' that is central to the statutory scheme. So we've rejected agency demands that we defer to their attempts to rewrite rules for billions of dollars in healthcare tax credits, to assume control over millions of small greenhouse gas sources, and to ban cigarettes.) (citations omitted).

(41) *In re MCP No. 165*, 20 F.4th 264, 267-268 (6th Cir. 2021) (Sutton, C.J., dissenting from denial of initial hearing en banc) (emphases added).

(42) *Panhandle E. Pipe Line Co. v. Pub. Serv. Comm'n of Ind.*, 332 U.S. 507, 516 (1947) (“three things, and three things only Congress drew within its own regulatory power, delegated by the [Natural Gas] Act to its agent, the Federal Power Commission. These were: (1) The transportation of natural gas in interstate commerce; (2) its sale in interstate commerce for resale; and (3) natural gas companies engaged in such transportation or sale.”); cf. *Ala. Assn.*, 141 S. Ct. at 2488 (invalidating the CDC's eviction moratorium because the “downstream connection between eviction and the interstate spread of disease is markedly different from the direct targeting of disease that characterizes the measures identified in the statute”).

(43) *Am. Elec. Power Co. v. Conn.*, 564 U.S. 410, 426 (2011).

(44) *Id.* (“ Congress delegated to EPA the decision whether and how to regulate carbon-dioxide emissions from powerplants ”) (emphasis added); *Am. Lung Ass'n. v. EPA*, 985 F.3d at 959-60 (D.C. Cir. 2021) (“there is no question that the regulation of greenhouse gas emissions by power plants across the Nation falls

squarely within the EPA's wheelhouse.”). Consider for a moment how strange it would be for Congress to delegate regulation of GHG emissions from electric power plants to EPA, while somehow delegating regulation of GHG emissions from natural gas fired power plants to FERC. Yet that is what today's orders presuppose.

(45) See *Mountain Valley Pipeline, LLC*, 171 FERC ¶¶ 61,232 (2020) (McNamee, Comm'r, concurring at PP 32-40) (discussing decades' worth of legislative enactments, all of which “indicates that the Commission's authority over upstream production and downstream use of natural gas has been further limited by Congress.”).

(46) *U.S. Telecom Ass'n v. FCC*, 855 F.3d 381, 422 (Kavanaugh, J. dissenting) (emphases added); see also *NFIB*, 142 S. Ct. at 665 (“the question . . . is whether the Act plainly authorizes the Secretary's mandate. It does not.”).

(47) We cannot assume a Congressional intent to regulate every incidence of greenhouse gas emissions. As Justice Ginsberg observed, “we each emit carbon dioxide merely by breathing.” *Am. Elec. Power Co. v. Conn.*, 564 U.S. at 426.

(48) *Ala. Ass'n.*, 141 S. Ct. at 2489.

(49) Congress may “delegate power under broad general directives” so long as it sets forth “an intelligible principle” to guide the delegee. *Mistretta v. United States*, 488 U.S. 361, 372 (1989). See *Gundy*, 139 S. Ct. at 2129 (“a delegation is constitutional so long as Congress has set out an ‘intelligible principle’ to guide the delegee's exercise of authority. Or in a related formulation, the Court has stated that a delegation is permissible if Congress has made clear to the delegee the general policy he must pursue and the boundaries of his authority.”) (citations, internal quotations omitted).

(50) *Mountain Valley*, 171 FERC ¶¶ 61,232 (McNamee, Comm'r, concurring at P 41); see also *id.* PP 15-47.

(51) See generally, Ford P. Hall, *Certificates of Public Convenience and Necessity*, 28 Mich. L. Rev. 276 (1930) (analyzing the meaning of “public convenience and necessity” in state laws antedating passage of the NGA, and concluding that it is the need of the consuming public, without which it will be inconvenienced, that is the critical question to be answered).

(52) The first such statute appears to have been the Interstate Commerce Act (ICA). The Supreme Court explicitly held that the use of the term “public convenience and necessity” was chosen in the knowledge that it would be understood against the background of its historical usage. *ICC v. Parker*, 326 U.S. 60, 65 (1945) (construing “public convenience and necessity” under the ICA and recognizing that Congress' decision to use a term with such a long history indicated Congress intended “a continuation of the administrative and judicial interpretation of the language.”) When it passed the NGA, Congress was similarly cognizant of having employed the same concept as in the ICA. See, Robert Christin et al., *Considering the Public Convenience and Necessity in Pipeline Certificate Cases under the Natural Gas Act*, 38 Energy L.J. 115, 120 (2017) (citing Comm. on Interstate Commerce, Interstate Transportation and Sale of Natural Gas, S. Rep. No. 75-1162, at 5 (Aug. 9, 1937) and noting that “the concept of a regulatory agency determining whether a private entity's proposal was in the public convenience and necessity was an established practice when the NGA was enacted.”).

(53) See *In re Kan. Pipe Line & Gas Co.*, 2 FPC 29, 56 (1939) (“We view the term [public convenience and necessity] as meaning a public need or benefit without which the public is inconvenienced to the extent of being handicapped in pursuit of business or comfort or both without which the public generally in the area involved is denied to its detriment that which is enjoyed by the public of other areas similarly situated.”)

(54) NEPA, 42 U.S.C. 4321 *et seq.*, requires all federal agencies to undertake an “environmental assessment” of their actions, typically including the preparation of an “environmental impact statement” of proposed “major federal actions.” As discussed below, the purpose of the EA and EIS is for the agency to be fully informed of the impact of its decisions. NEPA does not mandate any specific action by the agency in response to an EA or EIS, other than to make an informed decision. *See, e.g.,* Steven M. Siros, et al., *Pipeline Projects—The Evolving Role of Greenhouse Gas Emissions Analyses under NEPA*, 41 Energy L.J. 47 (May 2020); *see also Sabal Trail*, 867 F.3d at 1367-68 (describing NEPA as “primarily information-forcing” and noting that courts “should not “`flyspeck” an agency’s environmental analysis, looking for any deficiency no matter how minor.”) (quoting *Nevada v. Dep’t of Energy*, 457 F.3d 78, 93 (D.C. Cir. 2006)).

(55) NGA § 7(e), 15 U.S.C. 717f(e), authorizes the Commission to attach to a certificate “such reasonable terms and conditions as the public convenience and necessity may require.” There is no analytical difference between the Commission’s authority to reject a certificate application and its authority to mitigate it. *See Nat’l Fuel Gas Supply Corp. v. FERC*, 909 F.2d 1519, 1522 (D.C. Cir. 1990) (“The Commission may not, . . . when it lacks the power to promote the public interest directly, do so indirectly by attaching a condition to a certificate that is, in its unconditional form, already in the public convenience and necessity.”) (citations omitted). That the Commission may be tempted to abuse its conditioning authority has long been recognized. *See* Carl I. Wheat, *Administration by the Federal Power Commission of the Certificate Provisions of the Natural Gas Act*, 14 Geo. Wash. L. Rev. 194, 214-215 (1945) (“It is particularly important that the Commission . . . steel itself against the somewhat natural temptation to attempt to use such `conditions’ as substitutes or `shortcuts’ for other (and more appropriate) methods of regulation prescribed in the statute. . . . [W]hatever may be said with respect to conditions concerning rates and other matters over which the Commission has specific authority under other provisions of the Act, it would appear clear that the power to prescribe `reasonable conditions’ in certificates cannot be greater in scope than the statutory authority of the Commission.”)

(56) “[ I ] t is now well settled that NEPA itself does not mandate particular results, but simply prescribes the necessary process. If the adverse environmental effects of the proposed action are adequately identified and evaluated, the agency is not constrained by NEPA from deciding that other values outweigh the environmental costs. . . . Other statutes may impose substantive environmental obligations on federal agencies, . . . but NEPA merely prohibits uninformed—rather than unwise—agency action.” *Robertson v. Methow Valley Citizens Council*, 490 U.S. 332, 350-51 (1989) (citations omitted; emphases added). *See also, e.g., Minisink Residents for Env’tl. Preserv. & Safety v. FERC*, 762 F.3d 97, 112 (D.C. Cir. 2014) (same).

(57) *Dep’t. of Transp. v. Pub. Citizen*, 541 U.S. 752, 767 (2004) ( *Pub. Citizen* ). This principle has been incorporated into the implementing regulations of the Council of Environmental Quality (CEQ), an executive branch agency. *See* 40 CFR. § 1508.1(g)(2) (2021) (“Effects do not include those effects that the agency has no ability to prevent due to its limited statutory authority or would occur regardless of the proposed action”).

(58) *Pub. Citizen*, 541 U.S. at 767 (citations omitted).

(59) Certificate Policy Statement at PP 73-76; GHG Policy Statement at PP 28-31.

(60) *Pub. Citizen*, 541 U.S. at 767 (citations omitted).

(61) *See, e.g., Sabal Trail*, 867 F.3d at 1372 (citing *Pub. Citizen*, 541 U.S. at 770) (“when the agency has no legal power to prevent a certain environmental effect, there is no decision to inform, and the agency need not analyze the effect in its NEPA review.”) (emphasis in original); *Citizens Against Burlington, Inc. v. Busey*, 938 F.2d 190, 195 (D.C. Cir. 1991) (“an agency need follow only a `rule of reason’ in preparing an EIS . . . and . . . this rule of reason governs both *which* alternatives the agency must discuss, and the *extent* to

which it must discuss them.”) (internal citations and quotations omitted, emphasis in original). To state the obvious: We have absolutely no way of knowing how much an individual project may or may not contribute to global climate change for any number of reasons, including because there is no way for us to meaningfully evaluate the release of GHG emissions if the facility in question were not to be certificated. Notwithstanding, today, the majority boasts of forcing virtually every certificate applicant into the EIS process. GHG Policy Statement at PP 80, 88.

(62) *Pub. Citizen*, 541 U.S. at 767 (citations omitted).

(63) GHG Policy Statement at P 80, 88. For purposes of determining what emissions count toward the 100,000 metric tons per year threshold, the majority states that this number is measured based on “the construction, operational, downstream, and, where determined to be reasonably foreseeable, upstream GHG emissions that reoccur annually over the life of the project.” *Id.* P 80 & n.197.

(64) *Id.* PP 88-93 (acknowledging that the Supreme Court has partially invalidated EPA's regulatory regime).

(65) *Id.* P 89 (emphasis added).

(66) *Id.* P 95. It appears that the majority's intent is to force all applicants into the EIS process. This will undeniably cause each application to become far more costly and time-consuming, both obvious disincentives to even trying.

(67) EPA Comments, *Iroquois Gas Transmission Sys., L.P.*, Docket No. CP20-48-000 at 1-2 (filed Dec. 20, 2021) (EPA Dec. 20, 2021 Letter).

(68) And yet, as a practical matter, applicants must spend years of work and possibly millions of dollars (or more) in preparatory tasks like lining up financing, securing local political support, obtaining permits, etc. All this extensive legwork is needed just to put an application in to the Commission. Today's orders effectively tell applicants that their application could be rejected for any reason or no reason at all. Nor does the majority even do the courtesy of providing a target for the applicant to aim at.

(69) See Bradley C. Karkkainen, *Whither NEPA?*, N.Y.U. *Envtl. L.J.* 333, 339 & n.31 (2004) (noting that “Department of Energy EISs produced prior to 1994 had a mean cost of \$6.3 million and a median cost of \$1.2 million; following an aggressive effort to reduce costs, after 1994 the mean cost fell to \$5.1 million, but the median cost rose to \$2.7 million.”)

(70) See, *Nat. Res. Def. Council, Inc. v. EPA*, 822 F.2d 104, 129 (D.C. Cir. 1987) (“NEPA, as a procedural device, does not work a broadening of the agency's substantive powers. Whatever action the agency chooses to take must, of course, be within its province in the first instance.”) (citations omitted, emphasis added); *Balt. Gas & Elec. Co. v. Natural Res. Defense Council, Inc.*, 462 U.S. 87, 97 (1983) (acknowledging NEPA's “twin aims” as obligating an agency “to consider every significant aspect of the environmental impact of a proposed action” and ensuring “that the agency will inform the public that it has indeed considered environmental concerns in its decision-making process,” but noting that “Congress in enacting NEPA, however, did not require agencies to elevate environmental concerns over other appropriate considerations.”) (citations, alterations omitted).

(71) 18 CFR 380.1 (2021) (emphasis added); see also 40 CFR 1500.3(a) (2021) (compliance with the CEQ regulations “is applicable to and binding on all Federal agencies . . . except where compliance would be inconsistent with other statutory requirements”).

(72) 18 CFR 380.1 (2021). See The Hon. Joseph T. Kelliher Jan. 7, 2022 Comments, *Technical Conference on Greenhouse Gas Mitigation: Natural Gas Act Sections 3 and 7 Authorizations*, Docket No. PL21-3-000 at 2 (The Hon. Joseph T. Kelliher Jan. 7, 2022 Comments) (“if imposing mitigation for direct and indirect

emissions discourages or forestalls pipeline development, the mitigation policy is directly contrary to the principal purpose of the Natural Gas Act and must be set aside.”).

(73) Bradley C. Karkkainen, *Whither NEPA?*, N.Y.U. *Envtl. L.J.* at 345-346 (noting that fear of NEPA challenges has led agencies to “kitchen sink” EISs to reduce the risk of reversal, but that almost nobody actually reads them “and those who attempt to do so may find it difficult to separate the good information from the junk. Contrary to conventional wisdom, more information is not always better.”); *see also*, *Pub. Citizen*, 541 U.S. at 768-769 (“NEPA’s purpose is not to generate paperwork—even excellent paperwork—but to foster excellent action.”) (quoting then-in effect 40 CFR 1500.1(c) (2003)).

(74) The delay is clearly part of the point. Why else funnel virtually every certificate applicant into the EIS process? *See e.g.*, Bradley C. Karkkainen, *Whither NEPA?*, N.Y.U. *Envtl. L.J.* at 339-40 (observing that NEPA has become “a highly effective tool that environmental NGOs and others can use to raise the financial and political costs of projects they oppose and stretch out decisions over an extended time frame, giving time to rally political opposition.”). *See also* P 47, *infra*.

(75) In fact, even if the Commission had the authority to impose upstream or downstream GHG emissions mitigation, or to deny certificates of public convenience and necessity on that basis, the majority admits that it is by no means obvious that doing so would actually prevent or even meaningfully reduce global climate change or the problems associated with it. *See* GHG Policy Statement at P 88 (noting that “[e]ven if deep reductions in GHG emissions are achieved, the planet is projected to warm by at least 1.5 degrees Celsius (°C) by 2050;” and that “even relatively minor GHG emissions pose a significant threat”).

(76) *Vecinos Para El Bienestar de la Comunidad Costera v. FERC*, 6 F.4th 1321, 1329 (D.C. Cir. 2021) (*Vecinos*) (“Because the Commission failed to respond to significant opposing viewpoints concerning the adequacy of its analyses of the projects’ greenhouse gas emissions, we find its analyses deficient under NEPA and the APA.”).

(77) *Cf.* The Hon. Joseph T. Kelliher Jan. 7, 2022 Comments at 3.

(78) *Sabal Trail*, 867 F.3d 1357. In support of its assertion of broad discretion in attaching conditions to a certificate, the majority also cites to *ANR Pipeline Co. v. FERC*, 876 F.2d 124, 129 (D.C. Cir. 1989) (*ANR Pipeline*). Certificate Policy Statement at P 74 & n. 190. Since the Commission’s conditioning authority is limited in the same way as its certifying authority, there is little reason to discuss it separately. I will only note in passing that, although the court described the Commission’s conditioning authority as “extremely broad,” the only issue actually before the court in *ANR Pipeline* was the validity of certificate terms imposed in furtherance of the Commission’s core duty to ensure that rates are non-discriminatory. *Id.*

(79) *Birckhead v. FERC*, 925 F.3d 510 (D.C. Cir. 2019) (rejecting, for failure to raise the issue before the Commission, a claim that NEPA requires FERC to analyze downstream GHG emissions). Since *Birckhead* was decided on jurisdictional grounds, any substantive commentary in that order is mere dicta and I will not discuss it further.

(80) *Vecinos*, 6 F.4th 1321.

(81) Both orders suffer from a number of infirmities that don’t bear belaboring in this context. In brief, however, *Sabal Trail* reads the Commission’s duty to “balance the public benefits against the adverse effects of the project, including adverse environmental effects,” *Sabal Trail*, 867 F.3d at 1373 (quoting *Minisink Residents for Env’tl. Pres. & Safety v. FERC*, 762 F.3d 97 at 101-02 and citing *Myersville Citizens for a Rural Cmty. v. FERC*, 783 F.3d at 1309), far too expansively, and *Vecinos* compounds that error. Both orders are discussed below.

(82) Namely, “[b]ecause FERC could deny a pipeline certificate on the ground that the pipeline would be too harmful for the environment, the agency is a ‘legally relevant cause’ of the direct and indirect environmental effects of pipelines that it approves.” *Sabal Trail*, 867 F.3d at 1373. The other orders the majority relies on depend vitally on this statement. See, e.g., Certificate Policy Statement at PP 75 & n. 192 (citing *Birckhead* ); 86 & n. 207 (citing *Vecinos* ); GHG Policy Statement at PP 13, 36-38 (citing *Birckhead* ) and P 14 & n. 38 (citing *Vecinos* ).

(83) See *Ctr. for Biological Diversity*, 941 F.3d at 1300 (“the legal analysis in *Sabal Trail* is questionable at best. It fails to take seriously the rule of reason announced in *Public Citizen* or to account for the untenable consequences of its decision. The *Sabal Trail* court narrowly focused on the reasonable foreseeability of the downstream effects, as understood colloquially, while breezing past other statutory limits and precedents—such as *Metropolitan [Edison Co. v. People Against Nuclear Energy]*, 460 U.S. 776 (1983)] and *Public Citizen*—clarifying what effects are cognizable under NEPA.”).

(84) *Sabal Trail*, 867 F.3d at 1372-1373. In each of the D.C. Circuit orders *Sabal Trail* purported to distinguish, the court had found that FERC did not have to analyze, because it could not regulate, downstream emissions.

(85) *Id.* at 1373 (citing *Sierra Club v. FERC (Freeport)*, 827 F.3d 36, 47 (D.C. Cir. 2016). The “companion cases” are *Sierra Club v. FERC (Sabine Pass)*, 827 F.3d 59 (D.C. Cir. 2016) and *EarthReports, Inc. v. FERC*, 828 F.3d 949 (D.C. Cir. 2016).

(86) *Sabal Trail*, 867 F.3d at 1373 (emphasis in original).

(87) *Id.* (citations omitted).

(88) *Id.*

(89) *Supra*, Section I.B. Cf. *ICC v. Parker*, 326 U.S. 60, 65 (1945) (construing “public convenience and necessity” under the Interstate Commerce Act and recognizing that Congress’ decision to use a term with such a long history indicated Congress intended “a continuation of the administrative and judicial interpretation of the language.”). Far from being “a continuation of the administrative and judicial interpretation of the language,” construing it to extend to an analysis of global GHG emissions is novel and unprecedented.

(90) *Vecinos*, 6 F.4th at 1328-30.

(91) 40 CFR. § 1502.21(c).

(92) See *supra*, n. 83.

(93) *NFIB*, 142 S. Ct. 661.

(94) *Ala. Ass’n.*, 141 S. Ct. 2485 at 2489.

(95) See generally, *Allegheny Def. Project v. FERC*, 964 F.3d 1, 18 (D.C. Cir. 2020) (noting that circuit court precedent may be departed from “when intervening developments in the law—such as Supreme Court decisions—have removed or weakened the conceptual underpinnings of the prior decision.”) (cleaned up, citation omitted).

(96) In his *NFIB* concurrence, Justice Gorsuch states: “Sometimes Congress passes broadly worded statutes seeking to resolve important policy questions in a field while leaving an agency to work out the details of implementation. Later, the agency may seek to exploit some gap, ambiguity, or doubtful expression in Congress’s statutes to assume responsibilities far beyond its initial assignment. The major

questions doctrine guards against this possibility by recognizing that Congress does not usually hide elephants in mouseholes.” 142 S. Ct. at 669 (Gorsuch, J., concurring) (citations, alterations omitted). It would be hard to find a better description of the path the Commission has taken to arrive at today's orders.

(97) See, e.g., Bloomberg Philanthropies, <https://www.bloomberg.org/environment/moving-beyond-carbon/> (“Launched in 2019 with a \$500 million investment from Mike Bloomberg and Bloomberg Philanthropies, Beyond Carbon . . . works . . . to . . . *stop the construction of proposed gas plants* .”) (last visited Feb. 8, 2022) (emphasis added); Sierra Club, <https://www.sierraclub.org/policy/energy/fracking> , (“There are no ‘clean’ fossil fuels. The Sierra Club is committed to *eliminating the use of fossil fuels*, including coal, *natural gas* and oil, as soon as possible”) (emphases added) (last visited Feb. 8, 2022); Natural Resources Defense Council, <https://www.nrdc.org/issues/reduce-fossil-fuels> (“Oil, *gas*, and other fossil fuels come with grave consequences for our health and our future. . . . *NRDC is pushing America to move beyond these dirty fuels. We fight dangerous energy development on all fronts*” ) (emphases added) (last visited Feb. 8, 2022); Press Release, *NRDC Receives \$100 million from Bezos Earth Fund to Accelerate Climate Action* (Nov. 16, 2020), available at <https://www.nrdc.org/media/2020/201116> (“The Bezos Earth Fund grant will be used to help NRDC advance climate solutions and legislation at the state level, move the needle on policies and programs focused on *reducing oil and gas production* ”) (emphasis added) (last visited Feb. 8, 2022); Sebastian Herrera, *Jeff Bezos Pledges \$10 Billion to Tackle Climate Change*, Wall Street Journal (Feb. 17, 2020) (“Mr. Bezos . . . said the *Bezos Earth Fund* would help back scientists, *activists, [non-governmental organizations]*”) (emphasis added); see also, Ellie Potter, *Environmentalists launch campaign to ban gas from US clean energy program*, S&P Global Platts (Sep. 2, 2021) (quoting Collin Rees, U.S. Campaign Manager for Oil Change International, “Clean energy means *no gas* and no other fossil fuels, period.”) (emphases added); Sean Sullivan, *FERC sets sights on gas infrastructure policy in 2022*, S&P Capital IQ (Dec. 31, 2021) (quoting Maya van Rossum, head of Delaware Riverkeeper Network, “we are not changing course at all: We continue to take on every pipeline, LNG, and fracked gas project as urgently as we did before, knowing we will have to *invest heavily to stop it* . . .”) (emphases added).

(98) See Letter of Chairman Richard Glick to Sen. John Barasso, M.D. (Feb. 1, 2022) (“Preparing an EIS to consider the reasonably foreseeable GHG emissions that may be attributed to a project proposed under section 7 of the NGA allows the Commission to issue more legally durable orders on which all stakeholders can depend, including project developers.”); Letter of Commissioner Allison Clements to Sen. John Barasso, M.D. (Feb. 1, 2022) (“I will do my part to assure that the updated policy will be a legally durable framework for fairly and efficiently considering certificate applications—one that serves the public interest and increases regulatory certainty for all stakeholders.”); see also, Corey Paul, *FERC Dems argue legal benefits from climate reviews outweigh gas project delays*, S&P Capital IQ Pro (Feb. 3, 2022).

(99) Certificate Policy Statement at P 100 (“the Commission will apply the Updated Policy Statement to any currently pending applications for new certificates. Applicants will be given the opportunity to supplement the record and explain how their proposals are consistent with this Updated Policy Statement, and stakeholders will have an opportunity to respond to any such filings.”)

(100) *Adelphia Gateway, LLC*, 178 FERC ¶ 61,030 (2022) (Christie, Comm'r concurring at P 4) (available at: <https://www.ferc.gov/news-events/news/item-c-3-commissioner-christies-partial-concurrence-and-partial-dissent-adelphia> ).

(101) See *Am. Lung Ass'n v. EPA*, 985 F.3d at 1003 (Walker, J., concurring in part and dissenting in part) (“whatever multi-billion-dollar regulatory power the federal government might enjoy, it's found on the open floor of an accountable Congress, not in the impenetrable halls of an administrative agency—even if that agency is an overflowing font of good sense.”) (citing U.S. Const. art I, § 1).

(102) GHG Policy Statement at PP 27-28, 31, & n.97. See also, EPA Dec. 20, 2021 Letter.

(103) GHG Policy Statement at P 96. *See also, e.g., Vecinos*, 6 F.4th at 1328-1329.

(104) EPA Dec. 20, 2021 Letter at 4 (emphases added).

(105) This Commission's independence reflects a conscious choice on Congress' part to insulate certain of its functions from the vicissitudes of political pressure. *See generally*, Sharon B. Jacobs, *The Statutory Separation of Powers*, 129 Yale L.J. 378 (2019) (explaining that some but not all of the Federal Power Commission's authorities were transferred to FERC, which was intended at least in part to counterbalance presidential influence). Succumbing to the pressure of EPA and others would sacrifice that crucial independence in meaningful ways.

(106) *Cf. Vecinos*, 6 F.4th at 1329.

(107) It has been observed that the values associated with the imputed social costs of GHG emissions have fluctuated dramatically from one administration to the next. *See, e.g.,* Garrett S. Kral, *What's In a Number: The Social Cost of Carbon*, Geo. Envtl. L. Rev. Online 1 (Aug. 19, 2021) (comparing the social cost of GHG emissions under the Trump administration with the interim social cost under the Biden administration and noting "the value of SC-GHGs have fluctuated. A lot."). This degree of abrupt fluctuation— *e.g.*, the social cost of carbon increasing from \$7 per ton to \$51 per ton—can only be explained by politics, not science.

(108) *NFIB*, 142 S. Ct. at 667 (Gorsuch, J. Concurring). ("The central question we face today is: *Who decides?* ") (emphasis added).

(109) *See* P 5 and n.12, *supra*.

(110) *Office of Consumers Counsel*, 655 F.2d at 1142 ("an agency may not bootstrap itself into an area in which it has no jurisdiction by violating its statutory mandate") (quoting *FMC v. Seatrain Lines, Inc.*, 411 U.S. 726, 745 (1973)) (ellipsis omitted); *see also In re MCP No. 165*, 20 F.4th 264, 269 (6th Cir. 2021) (Sutton, C.J., dissenting) ("As the Supreme Court recently explained in invalidating an eviction moratorium promulgated by the Center for Disease Control, 'our system does not permit agencies to act unlawfully even in pursuit of desirable ends.' *Ala. Ass'n of Realtors*, 141 S. Ct. at 2490. Shortcuts in furthering preferred policies, even urgent policies, rarely end well, and *they always undermine, sometimes permanently, American vertical and horizontal separation of powers, the true mettle of the U.S. Constitution, the true long-term guardian of liberty* .") (emphasis added).

(111) This argument is often put forth by the legal, academic, and corporate elites who assume that an administrative agency will enact the public policies they prefer when Congress will not. Such an expectation is perfectly rational since these elites disproportionately have the resources that are most effective in achieving desired outcomes in the administrative process, which is largely an insiders' game. The body of work on the economic theory of regulatory capture over the past half-century is relevant to this topic. *See generally*, Susan E. Dudley, *Let's Not Forget George Stigler's Lessons about Regulatory Capture*, Regulatory Studies Center (May 20, 2021) (available at <https://regulatorystudies.columbian.gwu.edu/let%E2%80%99s-not-forget-george-stigler%E2%80%99s-lessons-about-regulatory-capture> ). And it is not just for-profit corporate elites at work here, so are other special interests who seek desired policy outcomes from administrative action rather than from the often messy and hard democratic processes of seeking to persuade voters to elect members of Congress who agree with you. *See, e.g.*, n. 97, *supra*.

# FERC Issues Policy Statement on Carbon Pricing in Organized Wholesale Markets

*April 15, 2021*

**Docket No.** AD20-14-000

**Item** [E-2](#)

The Federal Energy Regulatory Commission (FERC) today issued a policy statement clarifying how it will consider market rules proposed by regional grid operators that seek to incorporate a state-determined carbon price in organized wholesale electricity markets.

Carbon pricing has emerged as an important market-based tool in state efforts to reduce greenhouse gas emissions, including in the electricity sector. Twelve states now impose some version of carbon pricing, with numerous additional states considering them. Various entities, including regional grid operators, are examining approaches to incorporating state-determined carbon prices into wholesale electricity markets.

During FERC's September 2020 technical conference on carbon pricing, participants identified a range of potential benefits from incorporating state-determined carbon pricing into the wholesale markets, including the development of technology-neutral, transparent price signals within the markets.

The policy statement explains that wholesale market rules incorporating a state-determined carbon price can fall within the Commission's jurisdiction under section 205 of the Federal Power Act (FPA). The policy statement presents a framework for the Commission to exercise its jurisdiction when it reviews any future proposals under FPA section 205 while making clear that the Commission will evaluate any proposal based on the facts and circumstances presented in each proceeding.

Finally, the policy statement does not indicate a preference for carbon pricing over any other state policy. It affirms that whether and how a state chooses to address greenhouse gas emissions is a matter exclusively within that state's jurisdiction.

The policy statement takes effect immediately.

## Regulations for Greenhouse Gas Emissions from Passenger Cars and Trucks

<<https://epa.gov/regulations-emissions-vehicles-and-engines/regulations-greenhouse-gas-emissions-passenger-cars-and>>

Clean Trucks Plan <<https://epa.gov/regulations-emissions-vehicles-and-engines/clean-trucks-plan>>

The Environmental Protection Agency (EPA) finalized federal greenhouse gas (GHG) emissions standards for passenger cars and light trucks for Model Years (MY) 2023 through 2026. The final standards leverage advances in clean car technology to unlock \$190 billion in net benefits to Americans, including reducing climate pollution, improving public health, and saving drivers money at the pump. These standards are the strongest vehicle emissions standards ever established for the light-duty vehicle sector, and are based on sound science and grounded in a rigorous assessment of current and future technologies. The updated standards will result in avoiding more than 3 billion tons of GHG emissions through 2050.

These standards set the light-duty vehicle greenhouse gas (GHG) program on track to provide a strong launch point for the Agency's next phase of standards for MY 2027 and beyond. EPA is planning to initiate a separate rulemaking to establish multi-pollutant emission standards under the Clean Air Act for MY 2027 and later that will speed the transition of the light-duty vehicle fleet toward a zero-emissions future consistent with President Biden's Executive Order, "Strengthening American Leadership in Clean Cars and Trucks."

# Financial Stability Oversight Council Identifies Climate Change as an Emerging and Increasing Threat to Financial Stability

October 21, 2021

*In First Step, FSOC Releases Report and Recommendations on Climate-related Financial Risk*

WASHINGTON — The Financial Stability Oversight Council (FSOC) has released a new report in response to President Biden’s Executive Order 14030, Climate-related Financial Risk. For the first time, FSOC has identified climate change as an emerging and increasing threat to U.S. financial stability. The report and accompanying recommendations demonstrate FSOC’s commitment to building on and accelerating existing efforts on climate change through concrete recommendations for member agencies to:

- Assess climate-related financial risks to financial stability, including through scenario analysis, and evaluate the need for new or revised regulations or supervisory guidance to account for climate-related financial risks;
- Enhance climate-related disclosures to give investors and market participants the information they need to make informed decisions, which will also help regulators and financial institutions assess and manage climate-related risks;
- Enhance actionable climate-related data to allow better risk measurement by regulators and in the private sector; and
- Build capacity and expertise to ensure that climate-related financial risks are identified and managed.

“Climate change is an emerging and increasing threat to America’s financial system that requires action,” Secretary of the Treasury Janet L. Yellen said. “FSOC’s report and recommendations represent an important first step towards making our financial system more resilient to the threat of climate change. These measures will support the Administration’s urgent, whole-of-government effort on climate change and help the financial system support an orderly, economy-wide transition toward the goal of net-zero emissions.”

While the report recommends that FSOC members take new actions on climate change data,

disclosure, and scenario analysis, it also discusses how individual members are already taking important steps forward. For example:

- The Securities and Exchange Commission (SEC) has begun to evaluate its disclosure rules and requested public comment on ways to improve climate disclosure.
- The Federal Reserve Board (FRB) has established two committees to develop a better understanding of climate-related risks and incorporate them into its supervision of financial firms and into its financial stability framework.
- The Commodities Futures Trading Commission (CFTC) has engaged on climate-related financial risk issues through its Market Risk Advisory Committee (MRAC). In September 2020, the MRAC's climate subcommittee issued a report entitled *Managing Climate Risk in the U.S. Financial System*, with recommendations to address the growing impact of climate-related financial risk.
- Both the Federal Housing Financing Agency (FHFA) and the Treasury Department's Federal Insurance Office have requested information on climate-related financial risks from the public to inform their activities

Established under the Dodd-Frank Wall Street Reform and Consumer Protection Act, FSOC is charged with identifying risks to U.S. financial stability, promoting market discipline, and responding to emerging threats to the stability of the U.S. financial system. FSOC consists of 10 voting members and 5 nonvoting members and brings together the expertise of federal financial regulators, state regulators, and an independent insurance expert appointed by the President.

[The full report and recommendations can be found here.](#)      [A factsheet on FSOC's actions can be found here.](#)      [A copy of Secretary Yellen's remarks during the open session can be found here](#) and [a readout of FSOC's meeting can be found here.](#)

## NOTES

The Administration’s proposals are not intended to create any inferences regarding current law.

Within the *General Explanations of the Administration’s Fiscal Year 2022 Revenue Proposals*, unless otherwise stated:

- “AGI” refers to Adjusted Gross Income
- “Budget” refers to the *Fiscal Year 2022 Budget of the U.S. Government*
- “Code” refers to the Internal Revenue Code
- “C-CPI-U” refers to the Chained Consumer Price Index for Urban Consumers
- “IRA” refers to Individual Retirement Account or Annuity
- “IRS” refers to the Internal Revenue Service
- “Section” refers to the respective section of the Internal Revenue Code
- “Secretary” refers to the Secretary of the Treasury
- “Treasury” refers to the Department of the Treasury
- “TIN” refers to Taxpayer Identification Number

# REVENUE PROPOSALS

---

In the Fiscal Year 2022 Budget, the President proposes a number of reforms to the Internal Revenue Code (Code) that would modernize our tax system to respond to today's challenges. These changes would raise revenue, improve tax administration, and make the tax system more equitable and efficient.

The American Jobs Plan includes revenue proposals that reform corporate taxation, support housing and infrastructure, and prioritize clean energy. Reforms to the corporate income tax aim to collect sufficient revenue, build a fairer tax system, and reduce tax incentives that encourage profit shifting and offshoring. Housing and infrastructure tax credits would support low-income housing, economic development, and public school and transportation infrastructure. The American Jobs Plan would eliminate all fossil fuel subsidies that linger in the Code, while substantially expanding tax incentives that encourage clean energy sources, energy efficiency, carbon sequestration, and electric vehicle adoption.

The American Families Plan includes revenue proposals that strengthen the taxation of high-income taxpayers, expand tax credits for low- and middle-income workers and families, and invest in improved taxpayer compliance and service. Income tax rates for those with the highest incomes would increase, and loopholes, such as the carried interest preference and the like-kind real estate preference, would be eliminated for those with the highest incomes. Reformed taxation of capital income would even the tax treatment of labor and capital income and eliminate a loophole that lets substantial capital gains income escape taxation forever. The economic security of families and workers would be supported through more generous child tax credits, an expanded earned income tax credit, expanded child and dependent care tax credits, and more generous premium tax credits. Finally, transformative investments in taxpayer compliance would provide the Internal Revenue Service with the resources and information that it needs to build a fairer and more efficient tax administration system.

## **REFORM CORPORATE TAXATION**

### **RAISE THE CORPORATE INCOME TAX RATE TO 28 PERCENT**

#### **Current Law**

Income of a business entity can be subject to federal income tax in a manner that varies depending upon the classification of the entity for federal income tax purposes. Most small businesses are owned by individuals and taxed as “pass-through” entities, meaning that their income is passed through to their owners who are taxed under the individual income tax system. Most large businesses, including substantially all publicly traded businesses, are classified as “C corporations” because these corporations are subject to the rules of subchapter C of chapter 1 of the Internal Revenue Code (Code) and pay an entity-level income tax. Additionally, taxable shareholders of such corporations generally pay federal income tax on most distributions attributable to their ownership in the corporation. Some mid-sized businesses choose a pass-through form of entity classification (under subchapter K or subchapter S of chapter 1 of the Code) while others choose the C corporation form of entity classification.

C corporations determine their taxable income, credits, and tax liability according to the Code and regulations promulgated thereunder. The Tax Cuts and Jobs Act of 2017 replaced a graduated tax schedule (with most corporate income taxed at a marginal and average rate of 35 percent) with a flat tax of 21 percent applied to all C corporations.

#### **Reasons for Change**

Raising the corporate income tax rate is an administratively simple way to raise revenue in order to pay for the Administration’s infrastructure proposals and other long-run drivers of spending growth. Furthermore, a corporate tax rate increase can increase the progressivity of the tax system and help reduce income inequality. Additionally, a significant share of the effects of the corporate tax increase would be borne by foreign investors. Therefore, some of the revenue raised by this proposal would result in no additional federal income tax burden to U.S. persons. Also, the majority of U.S. equity income is untaxed by the U.S. government at the individual level, so the corporate tax is a primary mechanism for taxing such capital income.

#### **Proposal**

The proposal would increase the income tax rate for C corporations from 21 percent to 28 percent.

The proposal would be effective for taxable years beginning after December 31, 2021. For taxable years beginning after January 1, 2021 and before January 1, 2022, the tax rate would be equal to 21 percent plus 7 percent times the portion of the taxable year that occurs in 2022.

## **REVISE THE GLOBAL MINIMUM TAX REGIME, DISALLOW DEDUCTIONS ATTRIBUTABLE TO EXEMPT INCOME, AND LIMIT INVERSIONS**

### **Current Law**

#### Global minimum tax regime with respect to controlled foreign corporation earnings

Any U.S. shareholder of a controlled foreign corporation (CFC) is taxed annually in the United States under the global minimum tax in section 951A of the Internal Revenue Code with respect to all of its CFCs. A U.S. shareholder's global minimum tax inclusion is determined by combining its pro rata share of the tested income (or tested loss) of all its CFCs. A CFC's tested income is the excess of certain gross income of the CFC over the deductions of the CFC that are properly allocable to the CFC gross tested income. A CFC's tested loss is the excess of the CFC's properly allocable deductions over the CFC's gross tested income. The U.S. shareholder's actual global minimum tax inclusion reflects a reduction for a 10 percent return on certain foreign tangible property (referred to as qualified business asset income, or QBAI). QBAI is generally tangible property eligible for depreciation, such as buildings or machinery, but does not include assets that are not depreciable (such as land) nor intangible assets.

Under section 250, subject to a taxable income limitation, a corporate U.S. shareholder is generally allowed 50-percent deduction against its global minimum tax inclusion. The section 250 deduction generally results in a 10.5-percent U.S. effective tax rate on a corporate U.S. shareholder's global minimum tax inclusion under the current U.S. corporate tax rate of 21 percent. The 50-percent deduction is scheduled to be reduced to 37.5 percent starting in 2026.

Certain foreign income taxes paid by a CFC can be credited against a corporate U.S. shareholder's U.S. tax liability attributable to its global minimum tax inclusion. The allowable credit is limited to 80 percent of the amount of the foreign income taxes properly allocable to a CFC's tested income taken into account as part of the global minimum tax inclusion. Under final Treasury regulations promulgated in 2020, if the foreign effective tax rate on the gross income of a CFC that would otherwise be part of a global minimum tax inclusion exceeds 90 percent of the U.S. corporate income tax rate, the U.S. shareholder of the CFC is generally permitted to exclude that gross income (and the associated deductions and foreign income taxes) from its global minimum tax inclusion. A similar statutory rule applies for purposes of certain subpart F income. Subpart F taxes certain foreign income earned indirectly by U.S. persons at full U.S. tax rates.

A single foreign tax credit limitation generally applies to a corporate U.S. shareholder's global minimum tax inclusion. Therefore, foreign income taxes paid to a high-tax foreign jurisdiction can be used to reduce the U.S. tax liability with respect to global minimum tax income earned in lower-tax jurisdictions. Thus, generally, a U.S. shareholder's aggregate U.S. tax (after accounting for the allocation of U.S. shareholder deductions) on its global minimum tax inclusion is reduced by reference to the average foreign effective tax rate on its aggregate global minimum tax income rather than the effective tax rates in each individual foreign jurisdiction where income is actually earned.

### Treatment of deductions properly allocable to exempt income

Certain dividends received by a domestic corporation from foreign corporations are effectively exempt from U.S. tax by reason of the 100-percent deduction allowed with respect to such dividends under section 245A. Specifically, section 245A provides a domestic corporation a deduction equal to the foreign-source portion of a dividend received from a specified 10-percent owned foreign corporation, but only if the domestic corporation is a U.S. shareholder of the foreign corporation.

Section 265(a)(1) generally disallows a deduction for any amount that is allocable to certain classes of income that is wholly exempt from U.S. tax. For purposes of determining a taxpayer's foreign tax credit limitation, tax exempt assets and their associated income are disregarded under section 864(e)(3). Section 904(b)(4) applies to disregard (solely for purposes of the foreign tax credit limitation) deductions allocable to income from foreign stock other than global minimum tax or subpart F income inclusions, for determining a taxpayer's foreign tax credit limitation.

### Limitations on the ability of domestic corporations to expatriate

Section 7874 applies to certain transactions (known as "inversion transactions") in which a U.S. corporation is acquired by a foreign corporation ("foreign acquiring corporation") in a transaction where (1) substantially all of the assets held directly or indirectly by the domestic corporation are acquired directly or indirectly by the foreign acquiring corporation; (2) the former shareholders of the domestic corporation hold at least a 60-percent ownership interest in the foreign acquiring corporation by reason of the acquisition; and (3) the foreign acquiring corporation, together with its expanded affiliated group, does not conduct substantial business activities in the country in which the foreign acquiring corporation is created or organized. Similar provisions apply to acquisitions of domestic partnerships.

The tax consequences of an inversion transaction depend on the level of continuing former shareholder ownership. If the continuing former shareholder ownership of the foreign acquiring corporation is at least 80 percent (by vote or value), the foreign acquiring corporation is treated as a domestic corporation for all U.S. tax purposes (the "80-percent test"). If the continuing former shareholder ownership is at least 60 percent but less than 80 percent (by vote or value), the foreign acquiring corporation is respected as foreign but full U.S. tax must generally be paid with respect to certain income or gain recognized by the expatriated U.S. entity and its affiliates in connection with the inversion or within the ten year period ending after the completion of the inversion (the "60-percent test"). Furthermore, the Tax Cuts and Jobs Act of 2017 (TCJA) adopted several anti-abuse provisions that apply to inversion transactions that satisfy the 60-percent test.

### **Reasons for Change**

#### Global minimum tax regime

The reduction to global minimum tax inclusions for a percentage of certain foreign tangible assets incentivizes U.S. multinational companies to invest in tangible assets abroad rather than

domestically. The elimination of QBAI would eliminate this perverse investment incentive while simplifying the taxation of CFCs.

The difference between the effective U.S. tax rate on global minimum tax inclusions versus the effective U.S. tax rate on income earned directly by U.S. companies that results from the section 250 deduction incentivizes U.S. companies to locate profits and operations offshore. Reducing the section 250 deduction for these foreign earnings would reduce this perverse incentive.

The determination of a U.S. company's global minimum tax inclusion and residual U.S. tax liability on such inclusions on a global blended basis incentivizes U.S. companies with operations in high-tax jurisdictions to invest in lower-tax jurisdictions, to take advantage of the automatic global averaging under the existing global minimum tax regime. In some cases, U.S. companies may have an incentive to locate operations in jurisdictions with corporate income tax rates higher than the United States, to average these high taxes against low-taxed income earned elsewhere. This automatic blending feature exacerbates the race to the bottom on corporate income tax rates and encourages U.S. companies to report profits (as well as the activities that give rise to those profits) in offshore jurisdictions rather than in the United States, creating a perverse "America last" tax policy. Similar global blending concerns arise with respect to high and low-taxed income earned through foreign branches.

In contrast, determining a taxpayer's global minimum tax inclusion and residual U.S. tax liability on such inclusions on a jurisdiction-by-jurisdiction basis would be a stronger deterrent to profit shifting and offshoring because residual U.S. tax would be due on every dollar earned in a low-tax jurisdiction at the minimum rate, with no ability to reduce that residual U.S. tax for excess foreign taxes paid to higher-tax jurisdictions.

Under the Organisation for Economic Co-operation and Development (OECD)/G20 Inclusive Framework on BEPS project's Pillar Two proposal, the United States and the international community are nearing a comprehensive agreement on jurisdiction-by-jurisdiction global minimum taxation which would help end the race to the bottom on corporate tax rates in a manner that puts the United States and other countries on a more level playing field. Under the "income inclusion rule" (IIR) proposed under Pillar Two, the IIR applies on a "top down" basis. That is, it is applied only by the ultimate parent entity of a multinational group, and generally is not applied by lower-tier holding companies. Therefore, in the case of foreign-controlled domestic corporations that own CFCs, the income inclusion rule proposed under Pillar Two is expected to be applied by the foreign parent with respect to low-taxed CFC income.

#### Deductions attributable to income exempt from U.S. tax and taxed at preferential rates

To the extent deductions are claimed for expenses allocable to income eligible for a deduction under section 245A or section 250, on the basis that section 265 does not apply because that income is not "wholly exempt" from U.S. tax, the United States is providing a tax subsidy for foreign investment.

## Limitations on the ability of domestic corporations to expatriate

In order to reduce their U.S. tax liabilities, certain domestic entities have been combining with smaller foreign entities in transactions that avoid the 80 percent test but that may satisfy the 60 percent test under section 7874. These combination transactions are typically structured so that the domestic entity and the foreign entity become subsidiaries of a newly formed foreign parent company. The domestic entities can often substantially reduce their U.S. income tax liability following these combination transactions with only a minimal change to their operations.

Inversion transactions raise significant policy concerns because they facilitate the erosion of the U.S. tax base through deductible payments by the U.S. members of the multinational group to the non-U.S. members and through aggressive transfer pricing for transactions between such U.S. and non-U.S. members. The inverted group also may reduce its U.S. taxes by reducing or eliminating altogether its direct and indirect U.S. ownership in foreign subsidiaries or assets. The adverse tax consequences under current law of 60-percent inversion transactions have not deterred taxpayers from pursuing these transactions. There is no policy reason to respect an inverted structure when the owners of a domestic entity retain a controlling interest in the group, only minimal operational changes are expected, and there is potential for substantial erosion of the U.S. tax base. Furthermore, an inverted structure should not be respected when the structure results from the combination of a larger U.S. group with a smaller entity or group and, after the transaction, the expanded affiliated group is primarily managed and controlled in the United States and does not have substantial business activities in the relevant foreign country, even if the shareholders of the domestic entity do not maintain control of the resulting multinational group.

## **Proposal**

### Reforms to global minimum tax regime

The proposal would make several changes to the existing global minimum tax system. First, the QBAI exemption would be eliminated, so that the U.S. shareholder's entire net CFC tested income is subject to U.S. tax. Second, the section 250 deduction for a global minimum tax inclusion would be reduced to 25 percent, thereby generally increasing the U.S. effective tax rate under the global minimum tax to 21 percent under the proposed U.S. corporate income tax rate of 28 percent. Third, the "global averaging" method for calculating a U.S. shareholder's global minimum tax would be replaced with a "jurisdiction-by-jurisdiction" calculation. Under the new standard, a U.S. shareholder's global minimum tax inclusion and, by extension, residual U.S. tax on such inclusion, would be determined separately for each foreign jurisdiction in which its CFCs have operations. As a result, a separate foreign tax credit limitation would be required for each foreign jurisdiction. A similar jurisdiction-by-jurisdiction approach would also apply with respect to a U.S. taxpayer's foreign branch income. These changes mean that foreign taxes paid to higher-taxed jurisdictions will no longer reduce the residual U.S. tax paid on income earned in lower-taxed foreign jurisdictions.

The proposal would also repeal the high tax exemption to subpart F income and repeal the cross-reference to that provision in the global minimum tax rules in section 951A.

A domestic corporation that is a member of a foreign parent controlled group generally owes residual U.S. tax when it has a global minimum tax inclusion. The proposal would take into account any foreign taxes paid by the foreign parent, under an IIR that is consistent with an OECD/Inclusive Framework Pillar Two agreement on global minimum taxation (if such consensus is reached), with respect to the CFC income that would otherwise be part of the domestic corporation's global minimum tax inclusion. The proposal's jurisdiction-by-jurisdiction approach would also apply for this purpose.

The proposal would be effective for taxable years beginning after December 31, 2021.

#### Deductions attributable to income that is exempt from U.S. tax or taxed at preferential rates

The proposal would expand the application of section 265 to disallow deductions allocable to a class of foreign gross income that is exempt from tax or taxed at a preferential rate through a deduction (e.g., a global minimum tax inclusion with respect to which a section 250 deduction is allowed or dividends eligible for a section 245A deduction).<sup>1</sup> The proposal would provide rules for determining the amount of disallowed deductions when only a partial deduction is allowed under section 245A with respect to a dividend or a partial section 250 deduction with respect to a global minimum tax inclusion. The proposal would also repeal section 904(b)(4).

The proposal would be effective for taxable years beginning after December 31, 2021.

#### Limit the ability of domestic corporations to expatriate

The proposal would broaden the definition of an inversion transaction by replacing the 80-percent test with a greater than 50-percent test and eliminating the 60-percent test. The proposal would also provide that, regardless of the level of shareholder continuity, an inversion transaction occurs if (1) immediately prior to the acquisition, the fair market value of the domestic entity is greater than the fair market value of the foreign acquiring corporation, (2) after the acquisition the expanded affiliated group is primarily managed and controlled in the United States, and (3) the expanded affiliated group does not conduct substantial business activities in the country in which the foreign acquiring corporation is created or organized. The proposal would also expand the scope of an acquisition for purposes of section 7874 to include a direct or indirect acquisition of substantially all of the assets constituting a trade or business of a domestic corporation, substantially all of the assets of a domestic partnership, or substantially all of the U.S. trade or business assets of a foreign partnership. Furthermore, a distribution of stock of a foreign corporation by a domestic corporation or a partnership that represents either substantially all of the assets or substantially all of the assets constituting a trade or business of the distributing corporation or partnership would be treated as a direct or indirect acquisition of substantially all of the assets or trade or business assets, respectively, of the distributing corporation or partnership.

The proposal would be effective for transactions that are completed after the date of enactment.

---

<sup>1</sup>As stated in the notes at the beginning of this document, this proposal is not intended to create any inferences regarding current law, including whether section 265 currently applies to this income.

## **REFORM TAXATION OF FOREIGN FOSSIL FUEL INCOME**

### **Current Law**

Under the Global Intangible Low-Taxed Income (GILTI) rules, foreign oil and gas extraction income (FOGEI) is excluded from a controlled foreign corporation's (CFC's) gross tested income under GILTI rules while foreign oil related income (FORI) is included in the CFC's gross tested income under GILTI rules. In addition, FOGEI and FORI earned by a CFC are not part of the CFC's subpart F income. Therefore, FOGEI earned through CFCs may be eligible for a deduction under section 245A when repatriated and thus is generally exempt from U.S. taxation, and FORI may be eligible for a 50 percent section 250 deduction and effectively taxed at a reduced U.S. income tax rate. In contrast, both FOGEI and FORI earned directly through a foreign branch (including a disregarded entity) are subject to full U.S. taxation, subject to allowable foreign tax credits. In both cases, foreign oil and gas income (combined FOGEI and FORI) is taxed preferentially relative to domestic oil and gas income.

Subject to certain limitations, a taxpayer may claim a credit against its U.S. income tax liability for income, war profits, and excess profits taxes paid or accrued during the taxable year to any foreign country or possession of the United States. Under current Treasury regulations, a foreign levy is a tax for this purpose if it requires a compulsory payment under the authority of a foreign government to levy taxes and is not compensation for a specific economic benefit provided by the foreign jurisdiction. Taxpayers that are subject to a foreign levy and that also receive a specific economic benefit, such as a concession for developing the jurisdiction's natural resources, from the levying government (dual capacity taxpayers) may not credit the portion of the foreign levy paid for the specific economic benefit. To ensure dual capacity taxpayers cannot claim foreign tax credits for levies that are not taxes, current Treasury regulations require taxpayers to prove that the levy constitutes an income tax or a tax paid in lieu of income tax and further that no portion of that levy is paid in exchange for the separate economic benefit. Current Treasury regulations provide a safe harbor for determining the creditable portion of the levy based on the generally applicable rate of tax under the jurisdiction's income tax. Taxpayers may, however, elect to use the facts and circumstances method of determining the qualifying portion of the tax rather than the safe harbor.

### **Reasons for Change**

The purpose of the foreign tax credit is to mitigate double taxation of income by the United States and a foreign government. When a payment is made to a foreign government in exchange for a specific economic benefit, there is no double taxation. Current law recognizes the distinction between a payment of creditable taxes and a payment in exchange for a specific economic benefit but may fail to achieve the appropriate split between the two, for example, when a foreign jurisdiction charges no royalties and imposes a levy only on oil and gas income, or imposes a higher levy on oil and gas income as compared to other income. The safe harbor method reflects the view that the higher effective rate of the nominal foreign tax is appropriately characterized as compensating the foreign government in its capacity as the owner of the minerals in place, rather than in its role as tax collector. However, many dual capacity taxpayers subject to alternative tax regimes elect to use an alternative method of determining the qualifying

portion of the levy and claim foreign tax credits for a much larger amount than would be creditable under the safe harbor method. Consequently, many oil and gas producers are able to claim a credit against their U.S. income tax liability for high levies imposed by foreign governments that arguably constitute royalty equivalents (instead of income taxes), while other U.S. businesses (not in the oil/gas sector) in those same countries pay a much lower income tax rate (and therefore are only eligible for the correspondingly lower foreign tax credit in the United States).

Finally, foreign hydrocarbon income should not be eligible for preferential tax treatment relative to other industries in light of the negative externalities associated with such income and the Administration's overall goal of promoting clean energy.

### **Proposal**

The proposal would repeal the exemption from GILTI for FOGEI. The definition of FOGEI and FORI would also be amended to include income derived from shale oil and tar sands activity.

In the case of a dual capacity taxpayer, the proposal would limit the amount of a levy that would qualify as a creditable foreign tax to the amount of tax that the dual capacity taxpayer would have paid to the foreign government if it were a non-dual capacity taxpayer, thereby codifying the safe harbor included in the current Treasury regulations for determining the portion of the levy that is paid in exchange for a specific economic benefit, and making safe harbor the sole method for determining the creditable portion of the levy. The aspect of the proposal that would determine the amount of a foreign levy paid by a dual-capacity taxpayer that qualifies as a creditable tax would yield to United States treaty obligations that explicitly allow a credit for taxes paid or accrued on certain oil or gas income.

Unless otherwise specified, the proposal provisions would be effective for taxable years beginning after December 31, 2021.

## **REPEAL THE DEDUCTION FOR FOREIGN-DERIVED INTANGIBLE INCOME (FDII)**

### **Current Law**

Current law provides a deduction to domestic corporations on their foreign-derived intangible income (FDII). The deduction allowed is 37.5 percent of a domestic corporation's FDII for any taxable year beginning after December 31, 2017 and 21.875 percent for any taxable year beginning after December 31, 2025. A domestic corporation's FDII is the portion of its intangible income, determined on a formulaic basis, that is derived from exports. The calculation of income eligible for the FDII deduction is generally determined by taking a domestic corporation's overall income, minus certain exceptions, and reducing it by a deemed tangible income return, which is 10 percent of a domestic corporation's qualified business asset investment, to arrive at a domestic corporation's deemed intangible income. A portion of this amount is treated as FDII based on the percentage of the taxpayer's income that is derived from serving foreign markets.

### **Reasons for Change**

The Administration has determined that FDII is not an effective way to encourage research and development (R&D) in the United States. It provides large tax breaks to companies with excess profits—who are reaping the rewards of prior innovation—rather than incentivizing new domestic investment or R&D. Further, FDII preferences multinational companies relative to domestic producers, offering tax incentives only to those companies with high export sales, rather than those with largely domestic sales.

In addition, FDII perversely creates undesirable incentives to locate certain economic activity abroad. Because the preferential FDII rate applies to income in excess of a given rate of return on a domestic corporation's tangible assets, firms can lower the hurdle necessary to obtain preferential tax treatment by reducing tangible investments in the United States. Coupled with the current global minimum tax regime, there is a strong incentive for companies to offshore plant and equipment, since moving plant and equipment offshore can both increase the tax-free return under the current global minimum tax regime and increase the tax deduction under FDII.

Finally, eliminating FDII will raise significant revenue that can be deployed to incentivize R&D in the United States directly and more effectively.

### **Proposal**

The proposal would repeal the deduction allowed for FDII. The resulting revenue will be used to encourage R&D.

The proposal would be effective for taxable years beginning after December 31, 2021.

## **REPLACE THE BASE EROSION ANTI-ABUSE TAX (BEAT) WITH THE STOPPING HARMFUL INVERSIONS AND ENDING LOW-TAX DEVELOPMENTS (SHIELD) RULE**

### **Current Law**

Section 59A of the Internal Revenue Code (Code) imposes a tax on certain corporate taxpayers in addition to their regular tax liability (BEAT liability). Liability for BEAT is generally limited to corporate taxpayers with substantial gross receipts that also make deductible payments to foreign related parties above a specified threshold (referred to as a “base erosion payment”). Taxpayers potentially liable for this additional tax have three-year average gross receipts in excess of \$500 million and a “base erosion percentage” exceeding a specified threshold. The base erosion percentage is generally determined by dividing the taxpayer’s “base erosion tax benefits” by the amount of all deductions allowed to the taxpayer for the taxable year.<sup>1</sup>

A taxpayer’s BEAT liability is computed by reference to the taxpayer’s “modified taxable income” and comparing the resulting amount to the taxpayer’s regular tax liability (as reduced by certain credits against such tax). For taxable years beginning after December 31, 2025, the regular tax liability is reduced by all credits for this purpose. A taxpayer’s modified taxable income is equal to its regular taxable income increased by base erosion tax benefits with respect to base erosion payments and an adjustment for the taxpayer’s net operating loss (NOL) deduction, if any. The taxpayer’s BEAT liability generally equals the difference, if any, between 10 percent of the taxpayer’s modified taxable income and the taxpayer’s regular tax liability (as reduced by certain credits against such tax). For taxable years beginning after December 31, 2025, the relevant share of modified taxable income for calculating BEAT liability increases from 10 percent to 12.5 percent.<sup>2</sup> Under current Treasury regulations, certain deductible payments made to foreign related parties are not treated as base erosion payments (e.g., interest on total loss-absorbing capacity (or TLAC) securities that are required to be issued by Globally Systemically Important Banking Organizations under Federal Reserve Board regulations).

### **Reasons for Change**

The Administration has determined that the BEAT does not adequately address the concern of erosion of the U.S. corporate base, while inefficiently favoring certain types of activities over others. For example, firms with lower profit margins are more likely to have a BEAT liability than similarly situated firms with higher profit margins because the BEAT has embedded a form of alternative minimum tax. Further, the BEAT does not distinguish between a payment to a foreign related party subject to a low effective tax rate and a payment to a foreign related party subject to a high effective tax rate.

In addition, the Administration has determined that the BEAT’s approach of targeting the existence of amounts deducted in the United States and paid to a foreign person does not

---

<sup>1</sup> Under current Treasury regulations, taxpayers can avoid a BEAT liability by electing to “waive” deductions for payments made to related foreign persons sufficient to remain below the base erosion percentage threshold.

<sup>2</sup> For all periods, the relevant BEAT rate is one percentage point higher for certain banks and registered securities dealers.

adequately address the incentives that lead to the erosion of the U.S. tax base and the loss of U.S. jobs and activities. These incentives are not limited to separating activities from profits or the shifting of profits from one jurisdiction to another (which were the core focus of the OECD/G20's Base Erosion and Profit Shifting project). In addition, a fundamental problem is the existence of a race to the bottom by jurisdictions on corporate tax rates that incentivizes multinational companies to report income (including, in some cases, the activities that give rise to that income) in low-tax jurisdictions. This race to the bottom hampers the United States from maintaining a competitive corporate income tax rate that meets its revenue needs. It also incentivizes U.S.-based multinational companies to relocate their headquarters to low-tax jurisdictions that do not tax foreign earnings. The resulting shifting of profits and activities to low-tax jurisdictions erodes the U.S. tax base and results in a loss of U.S. jobs and investment.

This race to the bottom on tax rates can be stopped by ensuring that income earned by any multinational, whether based in the United States or elsewhere, and whether that income is earned in the United States or elsewhere, is subject to a minimum rate of taxation. The Administration has included a separate proposal to reform the GILTI regime to ensure a minimum per-jurisdiction rate of tax is paid by U.S.-based companies on income earned through controlled foreign corporations (CFCs). A comparable rule that applies to entities that are not CFCs is necessary to ensure that companies cannot avoid a minimum rate of taxation by, for example, inverting to a foreign jurisdiction.

In addition, under the auspices of the OECD/G20 Inclusive Framework on BEPS project under Pillar Two, the United States and the international community are negotiating a comprehensive agreement on minimum taxation which would help end the race to the bottom on tax rates in a manner that puts the United States and other jurisdictions on a more level playing field. This agreement would include adoption of an "income inclusion rule" imposed on a jurisdiction-by-jurisdiction basis similar to the minimum tax proposal contained in this document under *Revise the Global Minimum Tax Regime, Disallow Deductions Attributable to Exempt Income, and Limit Inversions*. The Administration has determined that strong measures are needed to ensure that, if a Pillar Two agreement is reached, jurisdictions have an incentive to adopt the income inclusion rule.

### **Proposal**

The proposal would repeal the BEAT, replacing it with a new rule disallowing deductions to domestic corporations or branches by reference to low-taxed income of entities that are members of the same financial reporting group (including a member that is the common foreign parent, in the case of a foreign-parented controlled group). Specifically, under the Stopping Harmful Inversions and Ending Low-Tax Developments (SHIELD) rule, a deduction (whether related or unrelated party deductions) would be disallowed to a domestic corporation or branch, in whole or in part, by reference to all gross payments that are made (or deemed made) to "low-taxed members," which is any financial reporting group member whose income is subject to (or deemed subject to) an effective tax rate that is below a designated minimum tax rate.<sup>3</sup> The

---

<sup>3</sup> Corresponding provisions would take into account reductions in the gross amount of premiums and other consideration on insurance and annuity contracts arising out of indemnity insurance; deductions from the amount of gross premiums written on insurance contracts during the taxable year for premiums paid for reinsurance; and

“designated minimum tax rate” will be determined by reference to the rate agreed to under Pillar Two. If SHIELD is in effect before a Pillar Two agreement has been reached, the designated minimum tax rate trigger will be the U.S. global minimum tax rate (which is 21 percent under the proposal to *Revise the Global Minimum Tax Regime, Disallow Deductions Attributable to Exempt Income, and Limit Inversions*).

A financial reporting group is any group of business entities that prepares consolidated financial statements and that includes at least one domestic corporation, domestic partnership, or foreign entity with a U.S. trade or business. Consolidated financial statements means those determined in accordance with U.S. Generally Accepted Accounting Principles (GAAP), International Financial Reporting Standards (IFRS), or other method authorized by the Secretary under regulations. A financial reporting group member’s effective tax rate is determined based on the income earned (in the aggregate, taking into account both related and unrelated party income) and taxes paid or accrued with respect to the income earned in that jurisdiction by financial reporting group members, as determined based on the members’ separate financial statements or the financial reporting group’s consolidated financial statements, as disaggregated on a jurisdiction by jurisdiction basis. The proposal will include authority for the Secretary to provide special rules to address differences (both permanent and temporary) between the relevant income tax base and the base as determined under financial accounting, and to provide rules to account for net operating losses in a jurisdiction.

Payments made by a domestic corporation or branch directly to low-tax members would be subject to the SHIELD rule in their entirety. In particular, payments that are otherwise deductible costs would be disallowed in their entirety, while in the case of payments for other types of costs (such as cost of goods sold), other deductions (including unrelated party deductions) would be disallowed up to the amount of the payment. In addition, payments made to financial reporting group members that are not low-tax members would be partially subject to the SHIELD rule to the extent that other financial reporting group members were subject to an effective tax rate of less than the designated minimum tax rate in any jurisdiction. In such cases, the domestic corporation or branch would effectively be treated as having paid a portion of its related party amounts to the low-taxed members, if any, of the financial reporting group based on the aggregate ratio of the financial reporting group’s low-taxed profits to its total profits, as reflected on the financial reporting group’s consolidated financial statements.

The proposal provides authority for the Secretary to exempt from SHIELD payments in respect of financial reporting groups that meet, on a jurisdiction-by-jurisdiction basis, a minimum effective level of taxation as determined to the satisfaction of the Secretary. Finally, the proposal provides authority for the Secretary to exempt payments to domestic and foreign members that are investment funds, pension funds, international organizations, or non-profit entities, and to take into account payments by partnerships.

The rule would apply to financial reporting groups with greater than \$500 million in global annual revenues (as determined based on the group’s consolidated financial statement).

---

insurance policy claims and benefits accrued and losses paid during a taxable year (which would be deductible payments that are within scope of the SHIELD).

The proposal to repeal BEAT and replace with SHIELD would be effective for taxable years beginning after December 31, 2022.

## LIMIT FOREIGN TAX CREDITS FROM SALES OF HYBRID ENTITIES

### **Current Law**

A corporation that makes a qualified stock purchase of a target corporation is permitted to elect under section 338 of the Internal Revenue Code (section 338 election) to treat the stock acquisition as an asset acquisition for U.S. tax purposes, thereby generally adjusting the post-acquisition tax basis of the target corporation's assets to fair market value. For this purpose, a qualified stock purchase is any transaction or series of transactions in which the purchasing corporation acquires at least 80 percent of the stock of the target corporation. Section 338(h)(16) provides that (subject to certain exceptions) the deemed asset sale resulting from a section 338 election is generally ignored in determining the source or character of any item for purposes of applying the foreign tax credit rules to the seller. Instead, for these purposes, any gain recognized by the seller is treated as gain from the sale of the stock of the target corporation. Thus, in the case of a foreign target corporation, section 338(h)(16) prevents the earnings and profits generated from the deemed asset sale from changing the character of the gain from capital to ordinary and thereby permitting the use of foreign tax credits to reduce or eliminate residual U.S. tax on the stock gain. Similar to a section 338 election, Treasury regulations under section 336(e) allow a corporation to elect to treat certain dispositions of stock of a domestic corporation (but not a foreign corporation) instead as a disposition of the assets of the domestic corporation. These regulations apply section 338(h)(16) to a deemed sale of foreign assets of the domestic corporation.

### **Reasons for Change**

Section 338(h)(16) applies to a qualified stock purchase for which a section 338 election is made, but it does not apply to transactions that produce similar results -- sales of an interest in an entity that is treated as a corporation for foreign tax purposes but as a partnership or a disregarded entity for U.S. tax purposes (specified hybrid entity), or taxable changes in the classification of an entity for U.S. tax purposes that are not recognized for foreign tax purposes. These transactions present the same foreign tax credit concerns as those addressed by section 338(h)(16) in the case of a qualified stock purchase for which a section 338 election is made and therefore should be subject to similar limitations.

### **Proposal**

The proposal would apply the principles of section 338(h)(16) to determine the source and character of any item recognized in connection with a direct or indirect disposition of an interest in a specified hybrid entity and to a change in the classification of an entity that is not recognized for foreign tax purposes (for example, due to an election under the entity classification regulations). Thus, for purposes of applying the foreign tax credit rules, the source and character of any item resulting from the disposition of the interest in the specified hybrid entity, or change in entity classification, would be determined based on the source and character of an item of gain or loss the seller would have taken into account upon the sale or exchange of stock (determined without regard to section 1248). In addition, because the proposal is limited to determining the source and character of such an item of gain or loss for purposes of applying the foreign tax

credit rules, the proposal does not affect the amount of gain or loss recognized as a result of the disposition or the change in entity classification. The Secretary would be granted authority to issue any regulations necessary or appropriate to carry out the purposes of the proposal, including those applying the proposal to other transactions that have a similar effect and exempting certain transactions among related parties from application of the proposal.

The proposal would be effective for transactions occurring after the date of enactment.

## **RESTRICT DEDUCTIONS OF EXCESSIVE INTEREST OF MEMBERS OF FINANCIAL REPORTING GROUPS FOR DISPROPORTIONATE BORROWING IN THE UNITED STATES**

### **Current Law**

Business interest expense generally is deductible from regular taxable income. An exception to this general rule is section 163(j) of the Internal Revenue Code, which generally limits U.S. tax deductions for business interest expense to the sum of (1) business interest income, (2) 30 percent of adjusted taxable income (not less than zero), and (3) floor plan financing interest. Business interest expense for which a deduction is disallowed under section 163(j) may be carried forward indefinitely for deduction in a subsequent year.

Certain interest paid to a foreign related party is also treated as a base erosion payment for purposes of the base erosion and anti-abuse tax (BEAT), in which case the deduction is added back to the BEAT modified taxable income base. See *Replace the Base Erosion Anti-Abuse Tax with the Stopping Harmful Inversions and Ending Low-Tax Developments Rule*. In addition, certain interest paid to a foreign related party may not be deductible by reason of the anti-hybrid rules of section 267A.

Certain rules affect the timing of a deduction for interest, for example section 267(a). In addition, both case law and regulations issued under section 385 can determine whether an instrument issued by an entity is treated as indebtedness that gives rise to interest expense for federal income tax purposes, or as stock. Specifically, regulations under section 385 treat as stock certain debt instruments issued by a corporation to a controlling shareholder in a distribution or in certain other related-party transactions that achieve an economically similar result.

### **Reasons for Change**

The fungibility of money makes it easy for multinational groups to substitute debt for equity in a controlled entity in order to shift profits to lower-tax jurisdictions. Although section 163(j) limits the amount of interest expense a corporation can deduct relative to its U.S. earnings, section 163(j) does not consider the leverage of a multinational group's U.S. operations relative to the leverage of the group's worldwide operations. Therefore, under current law, multinational groups are able to reduce their U.S. tax on income earned from U.S. operations by over-leveraging their U.S. operations relative to those located in lower-tax jurisdictions. In addition, while certain interest paid to a foreign related party is added to the modified taxable income base for determining a taxpayer's BEAT liability, many taxpayers are able to avoid a BEAT liability because of the various exceptions for certain deductible payments. In addition, the BEAT rate is less than half of the regular corporate income tax rate. See *Replace the Base Erosion Anti-Abuse Tax with the Stopping Harmful Inversions and Ending Low-Tax Developments Rule* (referred to below as the "SHIELD").

## **Proposal**

The proposal generally would apply to an entity that is a member of a multinational group that prepares consolidated financial statements (“financial reporting group”) in accordance with U.S. Generally Accepted Accounting Principles (GAAP), International Financial Reporting Standards (IFRS), or other method identified by the Secretary under regulations. Under the proposal, a financial reporting group member’s deduction for interest expense generally would be limited if the member has net interest expense for U.S. tax purposes and the member’s net interest expense for financial reporting purposes (computed on a separate company basis) exceeds the member’s proportionate share of the financial reporting group’s net interest expense reported on the group’s consolidated financial statements (excess financial statement net interest expense). A member’s proportionate share of the financial reporting group’s net interest expense would be determined based on the member’s proportionate share of the group’s earnings (computed by adding back net interest expense, tax expense, depreciation, depletion, and amortization) reflected in the financial reporting group’s consolidated financial statements.

When a financial reporting group member has excess financial statement net interest expense, a deduction will be disallowed for the member’s excess net interest expense for U.S. tax purposes. For this purpose, the member’s excess net interest expense equals the member’s net interest expense for U.S. tax purposes multiplied by the ratio of the member’s excess financial statement net interest expense to the member’s net interest expense for financial reporting purposes. Conversely, if a member’s net interest expense for financial reporting purposes is less than the member’s proportionate share of the net interest expense reported on the group’s consolidated financial statements, such excess limitation would be converted into a proportionate amount of excess limitation for U.S. tax purposes and carried forward as set forth below.

Alternatively, if a financial reporting group member fails to substantiate its proportionate share of the group’s net interest expense for financial reporting purposes, or a member so elects, the member’s interest deduction would be limited to the member’s interest income plus ten-percent of the member’s adjusted taxable income (as defined under section 163(j)). Regardless of whether a taxpayer computes the interest limitation under the proportionate share approach or using the ten-percent alternative, any disallowed interest expense could be carried forward indefinitely. A member of a financial reporting group that is subject to the proposal would continue to be subject to the application of section 163(j). Thus, the amount of interest expense disallowed for a taxable year of a taxpayer that is subject to both interest expense disallowance provisions would be determined based on whichever of the two provisions imposes the lower limitation. A member of a financial reporting group may also be subject to the new Stopping Harmful Inversions and Ending Low-Tax Developments (SHIELD) rule (see *Replace the Base Erosion Anti-Abuse Tax with the Stopping Harmful Inversions and Ending Low-Tax Developments Rule*).

U.S. subgroups of a financial reporting group would be treated as a single member of the financial reporting group for purposes of applying the proposal. For this purpose, a U.S. subgroup is comprised of any U.S. entity that is not owned directly or indirectly by another U.S. entity, and all members (domestic or foreign) that are owned directly or indirectly by such entity. If a member of a U.S. subgroup owns stock in one or more foreign corporations, this proposal

would apply before the application of section 265, which generally disallows a deduction for amounts allocable to tax-exempt income. Under the Administration's proposals, tax-exempt income would include dividends from a foreign corporation eligible for a section 245A deduction and a GILTI inclusion eligible for a section 250 deduction. See *Revise the Global Minimum Tax Regime, Disallow Deductions Attributable to Exempt Income, and Limit Inversions*.

The proposal would not apply to financial services entities, and such entities would be excluded from the financial reporting group for purposes of applying the proposal to other members of the financial reporting group. The proposal also would not apply to financial reporting groups that would otherwise report less than \$5 million of net interest expense, in the aggregate, on one or more U.S. income tax returns for a taxable year.

The Secretary would be granted authority to promulgate any regulations necessary to carry out the purposes of the proposal, including (i) coordinating the application of the proposal with other interest deductibility rules, including the SHIELD, (ii) defining interest and financial services entities, (iii) permitting financial reporting groups to apply the proportionate share approach using the group's net interest expense for U.S. tax purposes rather than net interest expense reported in the group's financial statements, (iv) providing for the treatment of pass-through entities, (v) providing adjustments to the application of the proposal to address differences in functional currency of members, (vi) if a U.S. subgroup has multiple U.S. entities that are not all members of a single U.S. consolidated group for U.S. tax purposes, providing for the allocation of the U.S. subgroup's excess net interest expense for U.S. tax purposes among the members of the U.S. subgroup; and (vii) providing rules to address structures with a principal purpose to limit application of the proposal. In addition, if a financial reporting group does not prepare financial statements under U.S. GAAP or IFRS, it is expected that regulations generally would allow the use of financial statements prepared under other jurisdictions' generally accepted accounting principles in appropriate circumstances.

The proposal would be effective for taxable years beginning after December 31, 2021.

## **IMPOSE A 15 PERCENT MINIMUM TAX ON BOOK EARNINGS OF LARGE CORPORATIONS**

### **Current Law**

Taxpayers are generally required to compute their taxable income based on their books and records. Although books and records are the starting point for determining taxable income, various provisions of the Internal Revenue Code result in providing profitable corporations with a variety of allowances that reduce their income subject to federal income tax. Corporations are simultaneously able to report large profits to shareholders in financial reports and reward executives based on these measures, while claiming that their taxable income is at such a low level that they do not have any federal income tax liability. In a typical year, around 120 companies report pre-tax net income of \$2 billion or more on their financial statements but a significant share of these firms pay zero income tax or receive tax refunds.

### **Reasons for Change**

The proposal would work to reduce the significant disparity between the income reported by large corporations on their federal income tax returns and the profits reported to shareholders in financial statements by requiring them to pay a minimum amount of tax based on their reported financial income. The proposal is a targeted approach to ensure that the most aggressive corporate tax avoiders bear meaningful federal income tax liabilities. The proposal would also provide a backstop for the proposed new international tax regime since highly profitable multinational corporations would no longer be able to report significant profits to shareholders while avoiding federal income taxation entirely.

### **Proposal**

The proposal would impose a 15 percent minimum tax on worldwide book income for corporations with such income in excess of \$2 billion. In particular, taxpayers would calculate book tentative minimum tax (BTMT) equal to 15 percent of worldwide pre-tax book income (calculated after subtracting book net operating loss deductions from book income), less General Business Credits (including R&D, clean energy and housing tax credits) and foreign tax credits. The book income tax equals the excess, if any, of tentative minimum tax over regular tax. Additionally, taxpayers would be allowed to claim a book tax credit (generated by a positive book tax liability) against regular tax in future years but this credit could not reduce tax liability below book tentative minimum tax in that year.

The proposal would be effective for taxable years beginning after December 31, 2021.

## **PROVIDE TAX INCENTIVES FOR LOCATING JOBS AND BUSINESS ACTIVITY IN THE UNITED STATES AND REMOVE TAX DEDUCTIONS FOR SHIPPING JOBS OVERSEAS**

### **Current Law**

Under current law, there are limited tax incentives for U.S. employers to bring offshore jobs and investments into the United States. In addition, costs incurred to offshore U.S. jobs generally are deductible for U.S. income tax purposes.

### **Reasons for Change**

The Administration would like to create a tax incentive to bring offshore jobs and investments to the United States. In addition, the Administration would like to reduce the tax benefits that exist under current law for expenses incurred to move U.S. jobs offshore.

### **Proposal**

The proposal would create a new general business credit equal to 10 percent of the eligible expenses paid or incurred in connection with onshoring a U.S. trade or business. For this purpose, onshoring a U.S. trade or business means reducing or eliminating a trade or business (or line of business) currently conducted outside the United States and starting up, expanding, or otherwise moving the same trade or business to a location within the United States, to the extent that this action results in an increase in U.S. jobs. While the eligible expenses may be incurred by a foreign affiliate of the U.S. taxpayer, the tax credit would be claimed by the U.S. taxpayer. If a non-mirror code U.S. territory (the Commonwealth of Puerto Rico and American Samoa) implements a substantially similar proposal, the U.S. Treasury will reimburse the U.S. territory for the new general business credits provided to their taxpayers pursuant to a plan. Furthermore, the U.S. Treasury will reimburse a mirror code U.S. territory (Guam, the Commonwealth of the Northern Mariana Islands, and the U.S. Virgin Islands) for the new general business credits provided to their taxpayers by reason of the enactment of the proposal.

In addition, to reduce tax benefits associated with U.S. companies moving jobs outside of the United States, the proposal would disallow deductions for expenses paid or incurred in connection with offshoring a U.S. trade or business. For this purpose, offshoring a U.S. trade or business means reducing or eliminating a trade or business or line of business currently conducted inside the United States and starting up, expanding, or otherwise moving the same trade or business to a location outside the United States, to the extent that this action results in a loss of U.S. jobs. In determining the income of a U.S. shareholder of a controlled foreign corporation (CFC) on its global minimum tax inclusion or Subpart F income, no deduction would be allowed in determining such amounts for any expenses paid or incurred in connection with moving a U.S. trade or business outside the United States.

For purposes of the proposal, expenses paid or incurred in connection with onshoring or offshoring a U.S. trade or business are limited solely to expenses associated with the relocation of the trade or business and do not include capital expenditures or costs for severance pay and

other assistance to displaced workers. The Secretary may prescribe rules to implement the provision, including rules to determine covered expenses and treatment of independent contractors.

The proposal would be effective for expenses paid or incurred after the date of enactment.

## **SUPPORT HOUSING AND INFRASTRUCTURE**

### **EXPAND THE LOW-INCOME HOUSING TAX CREDIT**

#### **Current Law**

Low-income housing tax credits (LIHTCs) incentivize and subsidize the construction and rehabilitation of affordable rental housing for low-income tenants. The Internal Revenue Code (Code) offers LIHTCs to each State, the District of Columbia, and each territory of the United States (each referred to as a State). Every year, the Code makes available to each State an inflation-adjusted finite pool of new housing credit dollar amounts (HCDAs), which are potential LIHTCs. The total amount available for the State to allocate each year also includes unused or returned HCDAs from prior years. The predominant way for a project to become eligible to earn LIHTCs is by receiving an allocation of HCDAs. Because the HCDA pools are almost always oversubscribed, potential developers of LIHTC projects compete by offering proposed projects to the relevant State or local housing credit agency (HCA). Each HCA must have a Qualified Allocation Plan (QAP) to guide its allocations.

To actually receive LIHTCs, a project that receives such an allocation must construct and operate the building(s) in the project in compliance with applicable Federal law (including limitations on tenant income, restrictions on gross rents, and habitability requirements). For each of 10 years, the project may claim LIHTCs equal to the lesser of the initial HCDA allocation and the product of three figures: (a) the depreciable cost of the entire building (eligible basis); (b) the portion of the building that consists of low-income units; and (c) a credit rate.

The Code allows a deeper subsidy in certain cases, notably for projects located in difficult development areas (DDAs). A DDA is an area designated by the Secretary of Housing and Urban Development (HUD) as an area that has high construction, land, or utility costs relative to area median gross income. If an HCA both determines that a higher subsidy is necessary for the financial feasibility of a project and allocates sufficient additional HCDAs to support the project's increased annual LIHTCs, the project may compute its LIHTCs based on 130 percent of actual depreciable basis (colloquially called a "basis boost").

#### **Reasons for Change**

The volume of HCDAs (and thus of LIHTCs) that are available under current law are grossly insufficient to meet low-income tenants' needs for affordable rental housing. And that inadequate amount will decrease in 2022 with the expiration of a temporary statutory increase in HCDAs.

The current allocation of HCDAs is based on population and does not consider differences among States such as average rent burden or the costs of providing affordable rental housing.

Many HCAs' allocations of HCDAs are concentrated in projects in high-poverty areas, a practice that tends to increase concentrations of poverty in the community, as well as limiting the social mobility of tenants and their families.

### **Proposal**

The proposal would create an additional type of HCDA, called an "Opportunity HCDA" (OHCDAs). HCAs would have a separate ceiling for OHCDAs from their existing allocation ceilings of HCDAs. HCAs would continue to receive annual infusions of regular HCDAs, without change to the allocation and ceilings for those HCDAs under current law.

HCAs would be required to allocate the majority of their OHCDAs to projects in Census Tracts of Opportunity (CTOs). The proposal would define a CTO as a tract which is entirely in one or more DDAs or which has low poverty or other advantages, as determined by the Secretary of the Treasury in consultation with HUD.

In each calendar year 2022 through 2026, the aggregate number of new OHCDAs would be 118 percent of the aggregate annual number of new HCDAs under current law. These additional OHCDAs would be made available to all States on a *per capita* basis, but with a different *per capita* amount applied to each State. The *per capita* amount for a State would be determined by a formula established by the Secretary in consultation with HUD that provides higher amounts to States with higher costs of constructing and operating affordable housing, as demonstrated by, for example, larger populations living in DDAs or higher percentages of rent-burdened households.

Buildings in DDAs that receive allocations of either HCDAs or OHCDAs would receive basis boosts of up to 50 percent. All other basis boosts in current law (including those for bond-financed buildings in DDAs) would be unchanged.

The proposal would be effective for calendar years beginning with 2022. The restrictions on use of OHCDAs would last until all OHCDAs ceilings (including unused and returned amounts) had been allocated or had expired. The increased basis boost for buildings in DDAs with allocations would be permanent.

## **PROVIDE NEIGHBORHOOD HOMES INVESTMENT TAX CREDIT**

### **Current Law**

Low-income housing credits (LIHTCs) support low-income renters, as do Section 8 housing vouchers from the Department of Housing and Urban Development (HUD). The mortgage interest deduction, tax-exempt housing bonds, and mortgage credit certificates assist homeowners by reducing the after-tax costs of their mortgage payments. The new markets tax credit and the opportunity zone tax incentive primarily support commercial real estate and businesses rather than homeownership. Thus, there are no Federal tax provisions that directly support building or renovating owner-occupied housing or that cover a development or financing gap.

### **Reasons for Change**

Every State has neighborhoods where the homes are in poor condition and the property values are too low to support new construction or substantial renovation. The lack of move-in-ready homes makes it difficult to attract or retain homebuyers in these areas.

This new proposed credit would apply to these neighborhoods. It would ameliorate those problems by covering the gap between the cost of building or renovating homes and the price at which they can be sold. It would also help existing homeowners rehabilitate their homes, even in the absence of any plans to sell them.

### **Proposal**

The proposal would create a new tax credit—the Neighborhood Homes Investment Credit (NHIC). The credit would support new construction for sale, substantial rehabilitation for sale, and substantial rehabilitation for existing homeowners. The constructed or rehabilitated residence must be a single-family home (including homes with up to four dwelling units), a condominium, or a residence in a housing cooperative.

For each year between 2022 and 2031, inclusive, a specified amount of potential NHICs would be allocated to the 50 States, the District of Columbia, and U.S. possessions (collectively, States). The amount for 2022 would be \$2 billion, and this amount would be indexed for inflation for the years 2023 to 2031. The Secretary of the Treasury or her delegate (Secretary) would establish rules to divide the potential NHICs among the States, with an emphasis based on populations living in distressed urban, suburban, and rural neighborhoods. The Secretary, in consultation with HUD, would provide criteria for identifying distressed neighborhoods for this purpose and for purposes of determining where NHIC-supported projects must generally be located (NHIC-Qualified Neighborhoods). In addition, the Secretary, in consultation with HUD, may establish criteria according to which a limited volume of NHICs may be earned in certain additional rural communities and/or in gentrifying census tracts for owner-occupied rehabilitation.

Each State would create a new agency (or identify a pre-existing agency) to serve as the Neighborhood Homes Credit Agency (NHCA), with authority to allocate potential NHICs to project sponsors. Sponsors seeking potential NHICs would apply on a competitive basis by providing candidate plans for construction or rehabilitation, generally in one or more NHIC-Qualified Neighborhoods. The NHCA would be responsible for monitoring compliance with all provisions governing NHICs and for reporting violations to the Internal Revenue Service.

Each NHCA would establish a qualified allocation plan (QAP) to guide it in allocating potential NHICs among competing proposals. Every QAP would be required by statute to contain certain factors and preferences.<sup>1</sup> The Secretary could require additional attributes, and each NHCA could add further criteria to address local conditions. NHCAs would also set standards for development costs, building quality, and developer fees.<sup>2</sup>

Each NHCA would be prohibited from allocating more potential NHICs than are reasonably expected to be necessary for financial feasibility. If unforeseen matters render an allocation inadequate, the taxpayer may seek an additional allocation. If potential NHICs remain after the sponsor and the sponsor's investors have received their NHICs from a construction or rehabilitation, the unused potential credits would revert to the NHCA for future allocation. The sponsor returning the potential NHICs would receive a preference in the competition for the returned credits.

A taxpayer may claim NHICs only after construction, inspection, and owner occupancy. In the case of a home to be sold to a qualifying new, purchasing owner-occupant, the credit is claimed when that owner-occupant begins residence. In the case of continuing qualifying owner-occupants who are rehabilitating their homes, the credit is claimed when construction has been completed and inspected and the owner-occupant is in residence.

NHICs can be claimed only if the owner-occupant after construction or rehabilitation is a NHIC-Qualified Owner. NHIC-Qualified Owners are those who meet criteria to be established by the Secretary and whose household income does not exceed 140 percent of area/State median income, adjusting for household size as determined by the Secretary of HUD. The method for determining household income shall be established in consultation with HUD. If, within five years of the date of qualification for the NHIC, the purchasing or rehabilitating owner/occupant ceases to be the residence's owner/occupant, a portion of the claimed NHIC amount would

---

<sup>1</sup> QAPs would require assessments of (i) neighborhood need for new or rehabilitated homes, (ii) neighborhood revitalization strategy and impact, (iii) sponsor capability, and (iv) likely long-term homeownership sustainability. In addition, QAPs would include (v) a preference for proposals that would affirmatively further the purposes of 42 USC, Chapter 45, Subchapter I, as interpreted by HUD. Moreover, the statute would require that non-profit sponsors receive at least 10 percent of potential-NHIC allocations made each year.

<sup>2</sup> Development costs are amounts paid for construction, substantial rehabilitation, and any necessary demolition and environmental remediation. In the case of construction or rehabilitation for sale, development costs include the cost of acquisition of building and land; however, development costs are not taken into account to the extent they exceed two times sales proceeds. In the case of rehabilitation for sale, acquisition costs are not taken into account in excess of 75 percent of costs for construction, substantial rehabilitation, and any necessary demolition and environmental remediation. Rehabilitation costs are not taken into account unless they are at least \$20,000 per unit. In the case of rehabilitation for an owner-occupant, the Secretary may establish a lower minimum amount of development costs.

generally have to be repaid to the NHCA for use in activities that further the purposes of the NHIC.<sup>3</sup>

Broadly conceived, the amount of the credit is computed as development costs less the sales price or, in the case of a homeowner rehabilitation, less the amounts paid by the homeowners. The amounts that may actually be claimed, however, are subject to several limits.

The following principles contribute to determining the amount of credit—

- *Necessity*: When sales proceeds meet or exceed development costs, no credit may be claimed.
- *Limited subsidy*: The credit may not exceed 35 percent of the lesser of development costs or 80 percent of the national median sales price for new homes, nor may it exceed the excess of development costs over sales proceeds.
- *Skin in the game*: The taxpayer always has an incentive to sell the residence for a higher sales price. That is, an increase in sales price can result in an increase in the taxpayer's after-tax income. This determination considers both reduction in the credit and reduction in the taxpayer's tax loss on the property. A similar consideration applies to receipt of owner payments toward rehabilitation of an owner-occupant's home.
- *No cliffs*: There is no point at which an additional dollar of sales proceeds precipitously reduces the credit to zero. Instead, the credit smoothly phases out such that it reaches zero at the maximum amount of permitted sales proceeds.

The IRS would be authorized and mandated to collect data relevant to evaluating the socioeconomic effects of the operation of the credit, whether or not that information is directly related to tax administration.

The Secretary would be granted strong anti-abuse regulatory authority, including the ability to recharacterize the otherwise applicable tax consequences of a residence seller's original receipt of the NHIC and a passthrough investor's receipt of the credit as part of a distributive share or other pass-through allocation (including an investor that obtained its interest in the original NHIC recipient not long before receipt of the NHIC).

The proposal would apply to allocations of potential NHICs to and by NHCAs in calendar years after 2021. Credits could be claimed in taxable years ending after December 31, 2021.

---

<sup>3</sup> If the residence is sold or exchanged to an unrelated person, the repayment amount is the lesser of the amount of the NHIC and 50 percent of the owner-occupant's gain on the sale if the sale is in the first year following the date of qualification for the NHIC. Each year thereafter, the percentage of gain declines by 10 percent until it is zero in the sixth year. In any other case in which the purchasing or rehabilitating owner-occupant ceases to be the residence's owner or occupant, the amount to be repaid is determined as if the owner-occupant had sold the residence on that date and there had been gain in the amount of the NHIC. This includes a sale or exchange with a related person and a transaction, such as a gift, in which gain or loss is not taxed. This rule, however, does not apply if the owner-occupant, or the owner-occupant's spouse, dies or develops a physical condition that makes continued residence unsafe. The rule also does not apply in additional circumstances specified by the Secretary. To secure the NHCA's right to the possible repayment, the residence must be burdened by a recorded right of first refusal giving the NHCA the right to buy the residence for the amount of the NHIC. The owner occupant can buy out this amount by paying the required repayment amount. The right of first refusal ceases to apply in case of a foreclosure or transfer of the residence to a mortgage lender in full satisfaction of the mortgage loan.

## **MAKE PERMANENT THE NEW MARKETS TAX CREDIT (NMTC)**

### **Current Law**

The NMTC is an up-to-39-percent tax credit for qualified equity investments (QEIs) made to acquire stock in a corporation, or a capital interest in a partnership, that is a qualified community development entity (CDE). The investment must be held for a period of at least seven years and must have been made within five years after the CDE receives an allocation out of the national credit limitation amount for the year. The CDEs in turn make investments in low-income communities.

For calendar years 2010 through 2019, the national credit limitation amount for the year was \$3.5 billion, and for 2020 through 2025 the annual amount is \$5 billion. No new credit allocation authority is provided beyond 2025.

A taxpayer's allowable credit amount for any given year is the applicable percentage of the amount paid to the CDE for the investment at its original issue. Specifically, the applicable percentage is five percent for the year the equity interest is purchased from the CDE and for each of the two subsequent years, and it is six percent for each of the following four years. The NMTC is available for a taxable year to the taxpayer who holds the QEI on the date of the initial investment or on an investment anniversary date that occurs during the taxable year. The credit is recaptured if, at any time during the seven-year period that begins on the date of the original issue of the investment, the entity ceases to be a qualified CDE, the proceeds of the investment cease to be used as required, or the equity investment is redeemed.

The NMTC can be used to offset regular Federal income tax liability but, if the taxpayer is not a corporation and has an alternative minimum tax (AMT) liability, the NMTC cannot be used to offset the AMT.

### **Reasons for Change**

Permanent extension of the NMTC would allow CDEs to continue to generate investments in low-income communities. This would also create greater certainty for investment planning purposes.

### **Proposal**

The proposal would permanently extend the NMTC, with a new allocation for each year after 2025. These annual amounts would be \$5 billion, indexed for inflation after 2026.

The proposal would be effective after the date of enactment.

## **PROVIDE FEDERALLY SUBSIDIZED STATE AND LOCAL BONDS FOR INFRASTRUCTURE**

### **Current Law**

State and local governments issue tax-exempt bonds to finance a wide range of projects, including school construction. There are two basic kinds of tax-exempt bonds: governmental bonds and qualified private activity bonds. Bonds generally are treated as governmental bonds if the proceeds and any financed property are used to carry out governmental purposes or the bonds are repaid with governmental funds. Bonds that have excess private business involvement or private loans are classified as “private activity bonds.” Private activity bonds may be issued on a tax-exempt basis only if they meet the general requirements applicable to governmental bonds and certain additional requirements necessary for “qualified private activity bonds.”

Section 11143 of Title XI of the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) added highway and freight transfer facilities to the types of qualified activities for private activity bonds in 2005. Moreover, the law provided a total of \$15 billion for such bonds to be allocated by the Secretary of Transportation among qualified projects. These tax-exempt bonds were not subject to state volume caps. As of April 2021, \$13.54 billion in these private activity bonds have been issued, with an additional \$1.18 billion in bonds approved by the U.S. Department of Transportation.

Build America Bonds (BABs) and Qualified School Construction Bonds (QSCBs) were enacted under the American Recovery and Reinvestment Act of 2009 (ARRA) and could finance educational facilities. BABs were taxable bonds issued by State and local governments in which the Federal Government either makes direct payments to State and local governmental issuers or provides tax credits to bondholders (called “refundable credits”) to subsidize a portion of the State and local governments borrowing costs in an amount equal to 35 percent of the coupon interest on the bonds. ARRA authorized the issuance of BABs in 2009 and 2010 without volume limitation, and the authority to issue these bonds expired at the end of 2010. Issuers could choose in 2009 and 2010 to issue BABs or traditional tax-exempt bonds. In 2009 and 2010, approximately \$50 billion of BABs were issued to finance education.

QSCBs were enacted by ARRA as bonds for which the bondholders receive taxable interest and Federal tax credits. The Hiring Incentives to Restore Employment Act of 2010 made it possible for the issuer to elect to receive direct payment refundable credits to support the issuer’s payments of taxable cash interest to the bondholders. The cash payments to the bondholders were in lieu of the Federal tax credits that the bondholder might have otherwise received. The amounts of the refundable credits are determined by a formula and could subsidize up to 100 percent of the interest costs. Issuance of QSCBs was limited to original financing for the construction, rehabilitation, or repair of a public school facility or for the acquisition of land on which such a facility was to be constructed with part of the proceeds of the bond issue. ARRA authorized a volume limitation of \$11 billion for each of 2009 and 2010 and permitted unused volume to be carried forward into subsequent years.

## **Reasons for Change**

Aging educational facilities create a need to renovate educational facilities and to encourage construction of new facilities. A subsidy for investment in school facilities that exceeds the current subsidy for tax-exempt governmental bonds would result in more such investment.

The BAB and QSCB programs expanded the market for State and local governmental debt by: (1) providing a broader market for investors without regard to tax liability (e.g., pension funds, charitable endowments, and other tax indifferent persons); and (2) delivering an efficient Federal subsidy directly to State and local governments.

School infrastructure bonds build upon the successful model of the BAB program by providing a new bond program that will attract new sources of capital for investment in our nation's schools.

Similarly, the Administration recognizes the importance of public infrastructure investment and the role that the private sector can play in public infrastructure projects. The existing framework for tax-exempt bonds can limit private sector involvement in public infrastructure projects. The proposal aims to encourage greater private investment in public infrastructure by expanding the types of transportation projects that qualify for tax-exempt bonds and increasing the amount of such bonds eligible to be allocated by the U.S. Department of Transportation.

## **Proposal**

### **School infrastructure bonds**

The proposal would create qualified School Infrastructure Bonds (QSIBs), which would be similar to BABs under prior law. There would be a total national QSIB limitation of \$50 billion—\$16.7 billion each for 2022, 2023, and 2024. The allocation of this bond authority among States would be based on the proportion of funds that each State receives under Title I, Part A of the Elementary and Secondary Education Act of 1965.

Analogous to the operation of BABs, interest on QSIBs would be taxable. Either the bondholders' interest would take the form of a tax credit equal to 100 percent of the interest on a QSIB, or the bondholders would receive cash from the bond issuer, and the Federal Government would make corresponding direct payments to the bond issuer.

Each State would have to use no less than 0.5 percent of its total QSIB allocation for outlying areas. Similarly, no less than 0.5 percent of the QSIB allocation would have to be for schools funded by the Bureau of Indian Education.

States could enable local education agencies to issue QSIBs to expand access to high-speed broadband sufficient for digital learning. The local authorization may not exceed 10 percent of the State's total authorization to issue QSIBs and must be competitively allocated among local education agencies based on the poverty level of the schools' student population and the severity of the need to improve school facilities.

For QSIBs issued under the 2022 authorization, States would be required to prioritize allocations to finance projects necessary to reopen schools in line with Centers for Disease Control and Prevention (CDC) guidelines.

#### Bonds for transportation infrastructure

The proposal would also expand the category of private activity bonds created by SAFETEA-LU. It would increase the amount of such bonds to be allocated by the Secretary of Transportation by an additional \$15 billion. The proposal would also add public transit, passenger rail, and infrastructure for zero emissions vehicles as qualified activities for which such bonds may be issued. These bonds would not be subject to state private activity bond volume caps.

Both the proposal for QSIBs and the increase in transportation bond volume would be effective beginning with calendar year 2022.

## **PRIORITIZE CLEAN ENERGY**

### **ELIMINATE FOSSIL FUEL TAX PREFERENCES**

#### **Current Law**

Current law provides several credits, deductions and other special provisions that are targeted towards encouraging oil, gas, and coal production.

#### **Enhanced oil recovery credit**

The general business credit includes a 15 percent credit for eligible costs attributable to enhanced oil recovery (EOR) projects. Eligible costs include the cost of constructing a gas treatment plant to prepare Alaska natural gas for pipeline transportation, the cost of depreciable or amortizable tangible property that is integral to a qualified EOR project, intangible drilling and development costs (IDCs), and deductible tertiary injectant costs. A qualified EOR project must be located in the United States and must involve the application of one or more of nine listed tertiary recovery methods. The allowable credit is phased out over a \$6 range for a taxable year if the annual reference price exceeds an inflation adjusted threshold. The credit is completely phased out in 2020 because the 2019 reference price, \$55.55, exceeds the beginning of the phase out range, \$49.32, by more than \$6.

#### **Credit for oil and natural gas produced from marginal wells**

In addition, the general business credit includes a credit for crude oil and natural gas produced from marginal wells. The credit rate in 2019 is \$3.90 per barrel of oil and 65 cents per 1,000 cubic feet of natural gas and is adjusted for inflation. The credit per well is limited to 1,095 barrels of oil or barrel-of-oil equivalents per year. The credit rates for crude oil and natural gas are phased out for a taxable year if the reference price exceeds the applicable thresholds. The crude oil phase-out range and the applicable threshold at which phase-out begins in 2019 are \$3.90 and \$19.52 respectively. The natural gas phase-out range and the applicable threshold at which phase-out begins are \$0.43 and \$2.17. Both sets of rates are adjusted for inflation. In 2019, the credit amount was \$0.08 per 1,000 cubic feet of natural gas and the credit for oil was completely phased out.

#### **Expensing of intangible drilling costs**

IDCs include all expenditures made by an operator for wages, fuel, repairs, hauling, supplies, and other expenses incident to and necessary for the drilling of wells and the preparation of wells for the production of oil and natural gas. Generally, IDCs do not include expenses for items which have a salvage value or items related to the acquisition of the property. An operator who pays or incurs IDCs in the development of an oil or natural gas property located in the United States, including certain wells drilled offshore, may elect either to expense or capitalize those costs. If a taxpayer elects to expense IDCs, the amount of the IDCs is deductible as an expense in the taxable year the cost is paid or incurred. For any particular taxable year, a taxpayer may deduct some portion of its IDCs and capitalize the rest under the provision.

### Deduction of costs paid or incurred for any tertiary injectant used as part of tertiary recovery method

Taxpayers are allowed to deduct the cost of qualified tertiary injectant expenses for the taxable year. Qualified tertiary injectant expenses are amounts paid or incurred for any tertiary injectants, except for recoverable hydrocarbon injectants, that are used as a part of a tertiary recovery method to increase the recovery of crude oil. The deduction is treated as an amortization deduction in determining the amount subject to recapture upon disposition of the property.

### Exception to passive loss limitations provided to working interests in oil and natural gas properties

Deductions attributable to passive activities, to the extent they exceed income from passive activities, generally may not be used against other income, such as wages, portfolio income, or business income that is derived from a nonpassive activity. A similar rule applies to credits. Passive activities are defined to include trade or business activities in which the taxpayer does not materially participate. An exception is provided, however, for any working interest in an oil or natural gas property that the taxpayer holds directly or through an entity that does not limit the liability of the taxpayer with respect to the interest. Suspended deductions and credits are carried forward and treated as deductions and credits from passive activities in the next year. The suspended losses and credits from a passive activity are allowed in full when the taxpayer completely disposes of the activity.

### Use of percentage depletion with respect to oil and natural gas wells

The capital costs of oil and natural gas wells are recovered through the depletion deduction. Under the cost depletion method, the basis recovery for a taxable year is proportional to the exhaustion of the property during the year and cannot exceed basis. A taxpayer may also qualify for percentage depletion; hence, the amount of the deduction is a statutory percentage of the gross income from the property. In general, only independent producers and royalty owners, in contrast to integrated oil companies, qualify for the percentage depletion deduction. A qualifying taxpayer determines the depletion deduction for each oil and natural gas property under both the percentage depletion method and the cost depletion method then deducts the larger of the two amounts. Because percentage depletion is computed without regard to the taxpayer's basis in the depletable property, a taxpayer may continue to claim percentage depletion after all the expenditures incurred to acquire and develop the property have been recovered.

### Two-year amortization of independent producers' geological and geophysical expenditures

Geological and geophysical expenditures are costs incurred for the purpose of obtaining and accumulating data that will serve as the basis for the acquisition and retention of mineral properties. The amortization period for geological and geophysical expenditures incurred in connection with oil and natural gas exploration in the United States is two years for independent producers and seven years for integrated oil and natural gas producers.

### Expensing of exploration and development costs

A taxpayer may elect to expense the exploration costs incurred for the purpose of ascertaining the existence, location, extent, or quality of a domestic ore or mineral deposit, including a deposit of coal or other hard mineral fossil fuel. After the existence of a commercially marketable deposit has been disclosed, costs incurred for the development of a mine to exploit the deposit are deductible in the year paid or incurred unless the taxpayer elects to deduct the costs on a ratable basis as the minerals or ores produced from the deposit are sold.

### Percentage depletion for hard mineral fossil fuels

The capital costs of coal mines and other hard-mineral fossil-fuel properties are recovered through the depletion deduction. Under the cost depletion method, the basis recovery for a taxable year is proportional to the exhaustion of the property during the year. A taxpayer may also qualify for percentage depletion; hence, the amount of the deduction is a statutory percentage of the gross income from the property. A qualifying taxpayer determines the depletion deduction for each property under both the percentage depletion method and the cost depletion method and deducts the larger of the two amounts. Because percentage depletion is computed without regard to the taxpayer's basis in the depletable property, a taxpayer may continue to claim percentage depletion after all the expenditures incurred to acquire and develop the property have been recovered.

### Capital gains treatment for royalties

Royalties received on the disposition of coal or lignite generally qualify for treatment as long-term capital gain, and the royalty owner does not qualify for percentage depletion with respect to the coal or lignite. This treatment does not apply unless the taxpayer has been the owner of the mineral in place for at least one year before it is mined.

### Exemption from the corporate income tax for fossil fuel publicly traded partnerships

Publicly traded partnerships are generally subject to the corporate income tax. Partnerships that derive at least 90 percent of their gross income from depletable natural resources, real estate, or commodities are exempt from the corporate income tax. Instead they are taxed as partnerships. They pass through all income, gains, losses, deductions, and credits to their partners, with the partners then being liable for income tax (or benefitting from the losses) on their distributive shares.

### Oil Spill Liability Trust Fund (OSTLF) excise tax exemption for crude oil derived from bitumen and kerogen-rich rock

Crudes such as those that are produced from bituminous deposits as well as kerogen-rich rock are not treated as crude oil or petroleum products for purposes of the Oil Spill Liability Trust Fund tax. They are exempt from the oil spill liability excise tax of \$0.09 per barrel of crude oil

received at a United States refinery, and on petroleum products entered into the United States for consumption, use or warehousing.

### Amortization of Air Pollution Control Facilities

Under current law, expenses related to certain pollution control facilities are entitled to amortization over 60 months or 84 months. The 60-month life applies to property placed in service at a plant that began operation prior to January 1, 1976. The 84-month life applies to property placed in service after April 11, 2005 at coal-fired power plants constructed after December 31, 1975. Eligible pollution control facilities include new identifiable treatment facilities which are used, in connection with a plant or other property, to abate or control water or atmospheric pollution by removing, altering, disposing, storing, or preventing the creation or emission of pollutants, contaminants, wastes, or heat. Eligible facilities must be certified by a state certifying authority and a federal certifying authority as being in compliance with applicable regulations and requirements. Without this special treatment, most pollution control facilities would be depreciated over 39 years as nonresidential real estate property.

### Reasons for Change

These oil, gas, and coal tax preferences distort markets by encouraging more investment in the fossil fuel sector than would occur under a more neutral tax system. This market distortion is detrimental to long-term energy security and is also inconsistent with the Administration's policy of supporting a clean energy economy, reducing our reliance on oil, and reducing greenhouse gas emissions. Moreover, the subsidies for oil, natural gas, and coal must ultimately be financed with taxes that cause further economic distortions including underinvestment in other, potentially more productive, areas of the economy.

### Proposal

The proposal would repeal: (1) the enhanced oil recovery credit for eligible costs attributable to a qualified enhanced oil recovery project; (2) the credit for oil and gas produced from marginal wells; (3) the expensing of intangible drilling costs; (4) the deduction for costs paid or incurred for any tertiary injectant used as part of a tertiary recovery method; (5) the exception to passive loss limitations provided to working interests in oil and natural gas properties; (6) the use of percentage depletion with respect to oil and gas wells; (7) two-year amortization of independent producers' geological and geophysical expenditures, instead allowing amortization over the seven-year period used by integrated oil and gas producers; (8) expensing of exploration and development costs; (9) percentage depletion for hard mineral fossil fuels; (10) capital gains treatment for royalties; (11) the exemption from the corporate income tax for publicly traded partnerships with qualifying income and gains from activities relating to fossil fuels; (12) the Oil Spill Liability Trust Fund excise tax exemption for crude oil derived from bitumen and kerogen-rich rock; and (13) accelerated amortization for air pollution control facilities.

Unless otherwise specified, the proposal provisions would be effective for taxable years beginning after December 31, 2021. In the case of royalties, the proposal provision would be effective for amounts realized in taxable years beginning after December 31, 2021. The repeal of

the exemption from the corporate income tax for publicly traded partnerships with qualifying income and gains from activities relating to fossil fuels would be effective for taxable years beginning after December 31, 2026.

## **EXTEND AND ENHANCE RENEWABLE AND ALTERNATIVE ENERGY INCENTIVES**

### **Current Law**

#### **Renewable Electricity Production Credit**

The general business tax credits include a renewable electricity production tax credit for each kilowatt hour of electricity produced from qualified energy resources at a qualified facility. The electricity must be sold to an unrelated third party and a taxpayer may generally claim the credit for a 10-year period beginning on the date the facility was placed in service. The production tax credit rate is 1.5 cents per kilowatt hour of electricity, adjusted annually for inflation. Qualified energy resources include wind, open and closed-loop biomass, geothermal energy, municipal solid waste, hydropower, and marine and hydrokinetic renewable energy. Different timing rules apply to the various types of facilities. For example, construction of a wind facility must begin before January 1, 2022 to be eligible for the credit. Further, the credits for wind facilities are reduced by 20 percent if construction begins in 2017, 40 percent if construction begins in 2018, 60 percent if construction begins in 2019, and 40 percent if construction begins in 2020 or 2021. There is no credit for facilities that begin construction after 2021.

#### **Renewable Energy Investment Credit**

Current law provides an investment tax credit for certain energy property, including solar and geothermal electric property, qualified fuel cell power plants, stationary microturbine power plants, geothermal heat pumps, small wind property, waste energy recovery property, and combined heat and power property. The investment credit is calculated as a percentage of the basis of energy property placed in service during the taxable year. Generally, the investment credit is 30 percent for property that begins construction before January 1, 2020, 26 percent for property that begins construction after December 31, 2019 and before January 1, 2023, and 22 percent for property that begins construction in after December 31, 2022 and before January 1, 2024, and the energy property must be placed in service before January 1, 2026. For combined heat and power, geothermal electric, geothermal heat pumps, and microturbines, the credit is 10 percent. A 10 percent credit is available for geothermal electric or qualified solar property placed in service after December 31, 2025. Taxpayers cannot claim both the production and investment credit for the same property; however, special rules apply where a taxpayer that is eligible for the production tax credit may elect to claim the investment tax credit in lieu of the production tax credit. For example, offshore wind energy property is eligible for the investment tax credit if construction begins before January 1, 2026.

#### **Residential Energy Efficiency Credit**

Taxpayers may claim a nonrefundable credit for the purchase of certain residential energy efficient property, including solar electric property, solar water heaters, fuel cell property, geothermal heat pumps, small wind turbines, and biomass fuel property installed in a taxpayer's U.S. residence. Special rules for fuel cell property require the installation at the taxpayer's principal residence and limit the tax credit to \$500 with respect to each half kilowatt of capacity

of the qualified fuel cell property. The credit is equal to 30 percent of the cost of qualified property placed in service after December 31, 2016 and before January 1, 2020, 26 percent for property placed in service after December 31, 2019 and before January 1, 2023, and 22 percent for qualified property placed in service after December 31, 2022 and before January 1, 2024. The credit shall not apply to property placed in service after December 31, 2023.

### **Reasons for Change**

The proposal incentivizes investments in renewable energy resources and expands renewable power generation across the economy. Promoting clean energy sources would reduce carbon and other kinds of air pollution, bolster domestic clean energy industries and supply chains, create high-quality jobs, and align the country with international climate initiatives such as the Paris Climate Agreement. The Residential Energy Efficiency Credit encourages similar clean energy investment at the individual household level.

### **Proposal**

The proposal would extend the full production tax credit for qualified facilities commencing construction after December 31, 2021 and before January 1, 2027. Starting in 2027, the credit rate would begin to phase down to zero over five years. The credit rate would be reduced by 20 percent for facilities commencing construction after December 31, 2026 and before January 1, 2028, 40 percent for facilities commencing construction after December 31, 2027 and before January 1, 2029, and so on until the credit rate reaches zero.

The proposal would extend the credits for investments in solar and geothermal electric energy property, qualified fuel cell power plants, geothermal heat pumps, small wind property, offshore wind property, waste energy recovery property, and combined heat and power property. Starting in 2022, the investment credit would be expanded to include stand-alone energy storage technology that stores energy for conversion to electricity and has a capacity of not less than five kilowatt hours. The credit would be restored to the full 30 percent rate for eligible property that begins construction after December 31, 2021 and before January 1, 2027. After 2026, the credit rate will begin to phase down to zero over five years. Eligible property commencing construction after December 31, 2026 and before January 1, 2028 will receive 80 percent of the full credit, property commencing construction after December 31, 2027 and before January 1, 2029 will receive 60 percent of the full credit, and so on until the credit rate reaches zero in 2031.

Taxpayers would have the option to elect a cash payment in lieu of the business tax credits (i.e., a direct pay option).

The Administration will work with Congress on measures to pair these credits with strong labor standards, benefitting employers that provide good-paying and good-quality jobs.

The proposal would also extend the Residential Energy Efficiency Credit and expand residential energy efficient property to include qualified battery storage technology of at least three kilowatt hours of capacity installed in a residence. Starting in 2022, the credit would return to the full 30 percent rate for property placed in service after December 31, 2021 and before January 1, 2027.

The credit would be phased out over the next five years. The credit would be reduced by 20 percent of the full credit for property placed in service after December 31, 2026 and before January 1, 2028, 40 percent of the full credit for property placed in service after December 31, 2027 and before January 1, 2029, and so on until the credit reaches zero in 2031.

The proposal would be effective after December 31, 2021.

## **PROVIDE TAX CREDIT FOR ELECTRICITY TRANSMISSION INVESTMENTS**

### **Current Law**

The Internal Revenue Code (Code) provides investment credits for various types of energy property used to generate electricity from several different sources. Presently there is no credit for investments in transmission infrastructure used to deliver electricity from where it is generated to where it is used.

### **Reasons for Change**

It is widely recognized that significant investments in the United States' electricity transmission system are necessary to facilitate the clean energy transition. These investments are also instrumental in enhancing and maintaining the reliability and resilience of the electricity supply. Many factors will influence the viability and pace of these transmission investments, including permitting considerations and the need for cross-jurisdictional coordination. However, targeted Federal financial support for these investments via the Code can make them more attractive to those that must navigate the many hurdles to bringing such projects to fruition. The benefits of such support can also extend beyond the users and payers of specific facilities, generating positive externalities such as system-wide reliability, job creation, and cleaner air.

### **Proposal**

The proposal would provide a credit equal to 30 percent of a taxpayer's investment in qualifying electric power transmission property placed in service in a given year. Qualifying electric power transmission property would include overhead, submarine, and underground transmission facilities meeting certain criteria, including a minimum voltage of 275 kilovolts and a minimum transmission capacity of 500 megawatts. Qualifying property would also include any ancillary facilities and equipment necessary for the proper operation of the transmission facility.

Taxpayers would have the option to elect a cash payment in lieu of the tax credits (i.e., a direct pay option).

The Administration will work with Congress on measures to pair these credits with strong labor standards, benefitting employers that provide good-paying and good-quality jobs.

The proposal would be effective for property placed in service after December 31, 2021, and before January 1, 2032.

## **PROVIDE ALLOCATED CREDIT FOR ELECTRICITY GENERATION FROM EXISTING NUCLEAR POWER FACILITIES**

### **Current Law**

Section 45J of the Internal Revenue Code provides an allocated production tax credit for the first 8 years of operation of new advanced nuclear power facilities. The credit is based on the amount of electricity produced and sold by the advanced nuclear power facility. The amount of the credit is subject both to a national limit on the amount of eligible new nuclear capacity and to a facility-specific limit on the amount of credit that can be received. Presently, there is no tax credit for generation of electricity from existing nuclear power facilities.

### **Reasons for Change**

In 2020, existing nuclear power facilities contributed about one-fifth of the United States' total electricity generation and about half of all generation that did not produce greenhouse gas emissions. Changes in wholesale electricity markets in recent years have significantly affected the economics of many of these facilities. Many considerations influence decisions to retire nuclear power facilities. However, under current conditions, some facilities are expected to be retired before the expiration of their existing operating licenses, and before they would be retired if their revenue reflected the full value of their electricity. This full value includes nuclear power facilities' contribution to avoiding pollution, such as greenhouse gas emissions, that would otherwise result from meeting U.S. electricity demand.

Targeted Federal financial support for generation from economically-at-risk facilities could prevent the premature retirement of nuclear power facilities that could otherwise continue to operate safely for decades. Such support could maintain these facilities' contributions to employment and the economy, and it could help maintain the progress that has already been made in the United States' clean energy transition.

### **Proposal**

The proposal would create an allocated production credit for electricity generation from eligible existing nuclear power facilities that bid for the credits. Eligibility to bid for these credits would depend on, among other potential requirements, demonstration of a good operation and safety record, demonstration that the facility is facing financial operating losses and that future projections include continued losses, and demonstration that emissions of various air pollutants would increase if the facility ceased operations. Eligible facilities would bid to receive credits over two-year windows. A solicitation of bids would be held every two years. In addition to providing all information necessary for determination of eligibility, bidding facilities would identify the minimum credit amount per megawatt-hour of their generation that would be sufficient for them to maintain operations during the two-year window.

Up to \$1 billion in credits would be available in each year to be allocated based on an evaluation of the bids received and the goal of maximizing the preservation of existing nuclear electricity

generation. Eligible facilities would have the option to elect a cash payment in lieu of the allocated tax credits (i.e., a direct pay option).

The Administration will work with Congress on measures to pair these credits with strong labor standards, benefitting employers that provide good-paying and good-quality jobs.

The proposal would be effective after December 31, 2021. The first two-year crediting window would commence on January 1, 2022, and the last crediting window would commence on January 1, 2030.

## **ESTABLISH NEW TAX CREDITS FOR QUALIFYING ADVANCED ENERGY MANUFACTURING**

### **Current Law**

Section 48C of the Internal Revenue Code (Code) authorized the Department of the Treasury to award \$2.3 billion in tax credits (48C tax credits) to promote investment and job creation in clean energy manufacturing. The tax credit is equal to 30 percent of the eligible investment in qualifying advanced energy projects. A qualifying advanced energy project is a project that re-equips, expands, or establishes a manufacturing facility for the production of: solar, wind, geothermal, or other renewable energy equipment; electric grids and storage for renewables; fuel cells and microturbines; energy storage systems for electric or hybrid vehicles; carbon dioxide capture and sequestration equipment; equipment for refining or blending renewable fuels; equipment for energy conservation, including lighting and smart grid technologies; and other advanced energy property designed to reduce greenhouse gas emissions may also be eligible as determined by the Secretary of the Treasury or her delegate.

The Department of the Treasury, in consultation with the Department of Energy, established the 48C tax credit program to review and evaluate applications and award the tax credits to qualified applicants. Projects are assessed on the following criteria: commercial viability, domestic job creation, technological innovation, speed to project completion, and potential for reducing air pollution and greenhouse gas emissions. Additional factors such as diversity of geography, technology, project size, and regional economic development are also considered.

All \$2.3 billion of tax credits were allocated through two application rounds with the last allocations awarded in November 2013. The Congress has not authorized additional 48C tax credits.

### **Reasons for Change**

Domestic manufacturing of clean energy property is a critical component of building a clean and equitable economy. The \$2.3 billion cap on 48C tax credits resulted in the funding of less than one-third of the technically acceptable applications that were received. Applicants requested over \$8 billion in tax credits. The 48C tax credits have proven successful in leveraging private investment in building and equipping factories that produce clean energy products and create good jobs for workers and communities. To support worthy projects that could be deployed quickly to create jobs and economic activity, 48C tax credits should be expanded.

### **Proposal**

The proposal would modify and expand section 48C of the Code. The definition of a qualifying advanced energy project would be revised to include: industrial facilities; recycling in addition to production; and expanded eligible technologies, including but not limited to energy storage and components, electric grid modernization equipment, carbon oxide sequestration, and energy conservation technologies. Selection criteria would be revised to include evaluating wages for

laborers and additional consideration for projects that create jobs in communities impacted by the closure of coal mines or coal power plants.

The proposal would authorize an additional \$10 billion of 48C tax credits for investments in eligible property used in a qualifying advanced energy manufacturing project. Of the \$10 billion allocation, \$5 billion would be specifically allocated to projects in coal communities. Successful applicants would have the option to elect a cash payment in lieu of the 48C tax credits (i.e., a direct pay option).

Applications for the additional 48C tax credits would be made during the three-year period beginning on the date on which the additional authorization is enacted. Applicants who are allocated the additional credits must provide evidence that program requirements have been met within 18 months of the date of acceptance of the application and must place the property in service within three years of the date of the issuance of the certification.

The Administration will work with Congress on measures to pair these credits with strong labor standards, benefitting employers that provide good-paying and good-quality jobs.

The proposal would be effective after December 31, 2021.

## **ESTABLISH TAX CREDITS FOR HEAVY- AND MEDIUM-DUTY ZERO EMISSIONS VEHICLES**

### **Current Law**

Section 30D of the Internal Revenue Code provides business and individual taxpayers a nonrefundable tax credit for “qualified plug-in electric drive motor vehicles” including passenger vehicles and light trucks. A qualified plug-in electric motor vehicle is defined, in part, as a vehicle weighing less than 14,000 pounds that is propelled by an electric motor that uses a rechargeable battery and such vehicle is subject to and in compliance with applicable Clean Air Act Standards. The vehicle must be acquired for use or lease and not for resale, the original use of the vehicle must commence with the taxpayer, and the vehicle must be used predominantly in the United States. Vehicle manufacturers submit to the Internal Revenue Service the vehicles eligible for the credit that satisfy the specifications of the credit.

The credit amount varies based on the battery size and the number of electric vehicles sold per manufacturer. The total amount of the credit allowed for a vehicle is limited to \$7,500. The credit begins to phase out for a manufacturer’s vehicles when at least 200,000 qualifying vehicles have been sold for use in the United States (determined on a cumulative basis for sales after December 31, 2009).

Notably, this tax credit for electric vehicles does not extend to medium- and heavy-duty vehicles. A tax credit of up to \$18,000 for heavy-duty hybrid electric vehicles expired in 2009. Individual states do provide tax credits for medium- and heavy-duty all-electric vehicles. For example, Colorado’s tax credit for medium- and heavy-duty vehicles varies by vehicle size and is capped at \$16,000 per vehicle.

### **Reasons for Change**

The current tax credit applies only to passenger vehicles and light-duty trucks. There are no similar federal tax incentives for medium- and heavy-duty vehicles. Heavy duty trucks emit 23 percent of U.S. transportation greenhouse gas emissions and are a major source of local pollution. The Administration supports a rapid shift to zero emission vehicles, including battery electric and fuel cell electric vehicles. A tax credit specifically for medium- and heavy-duty vehicles will accelerate adoption of such vehicles, which is a key component of the overall shift to a zero-emission economy.

### **Proposal**

The proposal would provide a business tax credit for new medium- and heavy-duty zero-emission vehicles, including battery electric vehicles and fuel cell electric vehicles, to promote consumer choice and vehicle adoption. These vehicles would be in Classes 3 through 8, as defined by the Federal Highway Administration’s vehicle classification system.

Similar to the section 30D tax credit, vehicle manufacturers would submit to the Internal Revenue Service the medium- and heavy-duty vehicles eligible for the credit. Additionally, the

vehicle must be acquired for use or lease by the taxpayer and not for resale, the original use of the vehicle must commence with the taxpayer, and the vehicle must be used predominantly in the United States. Compliance with applicable Clean Air Act standards and federal motor vehicle safety standards would be required for a vehicle to be eligible for the tax credit.

For each vehicle class, the tax credit would be a set amount per vehicle as follows:

- For a Class 3 vehicle, the credit is:
  - \$25,000 per vehicle purchased between January 1, 2022 and December 31, 2024.
  - \$20,000 per vehicle purchased between January 1, 2025 and December 31, 2025.
  - \$15,000 per vehicle purchased between January 1, 2026 and December 31, 2026.
  - \$10,000 per vehicle purchased between January 1, 2027 and December 31, 2027.
- For Class 4-6 vehicles, the credit is:
  - \$45,000 per vehicle purchased between January 1, 2022 and December 31, 2024.
  - \$40,000 per vehicle purchased between January 1, 2025 and December 31, 2025.
  - \$35,000 per vehicle purchased between January 1, 2026 and December 31, 2026.
  - \$30,000 per vehicle purchased between January 1, 2027 and December 31, 2027.
- For Class 7-8 short-haul vehicles, the credit is:
  - \$120,000 per vehicle purchased between January 1, 2022 and December 31, 2023.
  - \$100,000 per vehicle purchased between January 1, 2024 and December 31, 2024.
  - \$80,000 per vehicle purchased between January 1, 2025 and December 31, 2027.
- For Class 7-8 long-haul vehicles, the credit is:
  - \$120,000 per vehicle purchased between January 1, 2022 and December 31, 2024.
  - \$100,000 per vehicle purchased between January 1, 2025 and December 31, 2027.

Taxpayers would have the option to elect a cash payment in lieu of a general business credit (i.e., a direct pay option).

The Administration will work with Congress on measures to pair these credits with strong labor standards, benefitting employers that provide good-paying and good-quality jobs.

The proposal would be effective after December 31, 2021.

## **PROVIDE TAX INCENTIVES FOR SUSTAINABLE AVIATION FUEL**

### **Current Law**

Current law does not include an investment tax credit for sustainable aviation fuel production facilities or property. However, sustainable aviation fuel is eligible for the biodiesel tax credit. The current production tax credit of \$1 per gallon of biodiesel is set to expire on December 31, 2022.

### **Reasons for Change**

While the ground transportation industry is expanding use of clean energy technologies such as electrification and fuel cell technology, the aviation industry is heavily reliant on fossil fuels and lacks similar renewable alternatives. Sustainable aviation fuel is a substitute for fossil jet fuel up to a certain blending percentage and multiple types have been certified by the American Society for Testing and Materials (ASTM) International for safe use in aviation up to certain blending levels.

Sustainable aviation fuel is beginning to enter the U.S. market but at a very slow pace due to its expense and demand for the same feedstock inputs to produce marginally cheaper renewable diesel. Providing incentives to spur the production of sustainable aviation fuel would deliver more feedstocks to sustainable aviation fuel production and help decarbonize the aviation industry.

### **Proposal**

The proposal would introduce a production tax credit of \$1.50 per gallon for sustainable aviation fuel that achieves at least a 50 percent reduction in emissions relative to conventional jet fuel. The credit would be offered for fuel produced after December 31, 2021 and before January 1, 2028. A supplementary credit of up to \$0.25 per gallon would be available on a sliding scale depending on the emissions reduction relative to conventional jet fuel. The emissions reduction certification amount would be \$0.01 for every two percentage points above the 50 percent reduction baseline. Sustainable aviation fuel with a 50 percent emissions reduction relative to conventional fuel would receive a \$1.50 per gallon credit, while fuel with a 100 percent emissions reduction would receive a \$1.75 per gallon credit.

The Administration will work with Congress on measures to pair these credits with strong labor standards, benefitting employers that provide good-paying and good-quality jobs.

The proposal would be effective after December 31, 2021.

## **PROVIDE A PRODUCTION TAX CREDIT FOR LOW-CARBON HYDROGEN**

### **Current Law**

Section 30B of the Internal Revenue Code (Code) provides alternative motor vehicle credits to taxpayers who place in service new qualified fuel cell motor vehicles, including vehicles propelled by hydrogen fuel cells. Prior to 2021, the Code had also provided a 30 percent credit for the cost of qualified alternative fuel vehicle refueling property placed in service by a taxpayer, including for fuel at least 85 percent of the volume of which consists of hydrogen. Current law does not provide a tax credit for low-carbon hydrogen production.

### **Reasons for Change**

The use of low-carbon hydrogen as a fuel source, an industrial feedstock, or to produce and store electricity, can play a critical role in accelerating the reduction of carbon emissions (and other kinds of pollution) in the United States. Investments in facilities for producing low-carbon hydrogen will provide an opportunity to transition existing jobs and create new jobs needed to support a low-carbon economy. In order to create a low-carbon economy at the scale necessary to achieve national objectives, the Federal government must take action to significantly reduce the carbon intensity of hydrogen production.

### **Proposal**

The proposal would implement a low-carbon hydrogen production tax credit. For the purposes of the proposal, “low-carbon” refers to hydrogen produced using zero-carbon emissions electricity (renewables or nuclear) and water as a feedstock, or hydrogen produced using natural gas as a feedstock and with all carbon emitted in the production process captured and sequestered. The credit would apply to each kilogram of qualified low-carbon hydrogen: (1) produced by the taxpayer, (2) for an end use application in the energy, industrial, chemicals, or transportation sector; and (3) from a qualified low-carbon hydrogen production facility during the 6-year period beginning on the date the facility was originally placed in service. The credit would be indexed annually for inflation measured after the facility is placed into service, based upon the initial amount of \$3.00 per kilogram of hydrogen between 2022 and 2024 and \$2.00 per kilogram between 2025 and 2027. Taxpayers would have the option to elect a cash payment in lieu of the tax credits (i.e., a direct pay option).

The hydrogen may be sold to an unrelated third party or, if directly consumed by the taxpayer that owns the facility, the production must be independently verified. Construction of a qualified facility must have begun before the end of 2026 for the facility to be eligible for the low-carbon hydrogen production tax credit.

The Administration will work with Congress on measures to pair these credits with strong labor standards, benefitting employers that provide good-paying and good-quality jobs.

The proposal would be effective after December 31, 2021.

## **EXTEND AND ENHANCE ENERGY EFFICIENCY AND ELECTRIFICATION INCENTIVES**

### **Current Law**

Taxpayers can claim deductions and tax credits for investments in energy efficiency property and improvements for their homes and businesses.

#### Nonbusiness energy property

Section 25C of the Internal Revenue Code (Code) provides a tax credit for certain expenditures to improve the energy efficiency of a taxpayer's principal U.S. residence. Two types of property qualify for the credit: "qualified energy efficiency improvements" and "residential energy property expenditures." The 25C tax credit is equal to the sum of ten percent of the cost of qualified energy efficiency improvements and eligible costs for residential energy property expenditures, subject to a limit of a \$500 nonrefundable tax credit for the taxpayer's lifetime. Qualified energy efficiency improvements are defined, in part, as energy efficient building components, including insulation, windows, exterior doors, certain metal or asphalt roofs, that satisfy energy savings criteria established by the 2009 International Energy Conservation Code (IECC). Residential energy property expenditures must meet energy efficiency standards prescribed by the Secretary and include certain types of property, such as natural gas, propane, or oil furnace or hot water boiler; an advanced main air circulating fan; and "energy-efficient building property." For residential energy property expenditures, the credit amount is limited to \$50 for any advanced main air circulating fan; \$150 for any qualified natural gas, propane, or oil furnace or hot water boiler; and \$300 for any item of energy-efficient building property. A separate tax credit limit of \$200 applies to windows. The 25C tax credit will expire December 31, 2021.

#### Construction of new energy efficient homes

Section 45L of the Code provides a tax credit for the construction of new energy efficient homes that are purchased on or before December 31, 2021. A new energy efficient home is defined as a dwelling unit located in the United States that meets specified energy saving requirements. Energy savings may be accomplished through energy-efficient roofs, windows, insulation, air conditioners, and other energy efficient property. The tax credit for a new energy efficient home is \$2,000 per dwelling unit. For manufactured homes, the tax credit is \$1,000 per dwelling unit and manufactured homes are subject to different energy savings requirements. A certification process requires that the energy savings are verified. The 45L tax credit will expire December 31, 2021.

#### Energy efficient commercial buildings

Section 179D of the Code provides a tax deduction for energy efficient commercial building property placed in service during a taxable year. Energy efficient commercial building property is defined as property to which depreciation or amortization is allowable and meets certain building energy efficiency standards established by the American Society of Heating,

Refrigerating, and Air Conditioning Engineers and the Illuminating Engineering Society of North America. A certification process is required to ensure compliance with energy-savings plans and targets for the buildings.

The maximum allowable section 179D deduction is \$1.80 per square foot. In the case of a building that does not achieve at least 50 percent energy savings, a partial deduction of \$0.60 per square foot is available for systems that meet energy-saving targets established by the Secretary of the Treasury.

The section 179D deduction has been in effect since 2006 and was made permanent in 2020. For taxable years beginning after 2020, the dollar amount of the allowable deduction will be indexed for inflation using the C-CPI-U determined for the calendar year in which the taxable year begins.

#### Mechanical insulation labor costs

Presently, there is no tax credit solely for the labor costs for mechanical insulation.

#### **Reasons for Change**

Increasing the value and duration of the energy efficiency incentives would help bring clean energy building projects into existence. Also, increasing incentives for electric appliances and expanding credits for equipment that supports higher on-premise electricity demand will help promote electrification goals.

#### **Proposal**

##### Nonbusiness energy property

The proposal would extend the section 25C tax credit five years and increase the lifetime limit to \$1,200 for property placed in service after December 31, 2021 and before January 1, 2027. For qualified energy efficiency improvements, the credit rate would be increased to 15 percent and the credit amounts for certain types of residential energy property expenditures would also be increased. Also, the proposal would modify the definitions of eligible qualified energy efficiency improvements and residential energy property expenditures and update the required energy efficiency standards for such property. Roofs, advanced circulating fans, and certain equipment, such as water heaters and furnaces, powered by fossil fuels, would no longer be eligible for the tax credit; however, certain geothermal and load center equipment would be eligible for the tax credit.

The proposal would be effective after December 31, 2021.

##### Construction of new energy efficient homes

The proposal would increase the section 45L tax credit for an energy efficient home from \$2,000 to \$2,500 and extend the tax credit five years to December 31, 2026. The proposal would also

modify and expand the dwelling units eligible for the credit. For new energy efficient homes, the required energy savings percentage would increase from 50 percent to 60 percent under the 2006 IECC standards. In addition, certified Energy Star homes would also be eligible for the 45L tax credit as well as dwelling units with annual heating and cooling consumption at least 15 percent below the annual energy consumption level of a comparable dwelling unit under the 2018 IECC standards.

The proposal would be effective after December 31, 2021.

#### Energy efficient commercial buildings

The proposal would increase the maximum section 179D deduction per square foot from \$1.80 to \$3.00 for qualifying property placed in service after December 31, 2021. The partial deduction rate would be increased from \$0.60 to \$1.00 per square foot for qualifying property placed in service after December 31, 2021. The required efficiency standard in relation to the reference building's total annual energy reduction would be adjusted from 50 percent to 30 percent.

The proposal would be effective after December 31, 2021.

#### Mechanical insulation labor costs

The proposal would create a new general business tax credit for qualifying mechanical insulation labor costs. The tax credit would be equal to 10 percent of the mechanical insulation labor costs paid or incurred by the taxpayer during such taxable year. Mechanical insulation labor costs would include the labor cost of installing mechanical insulation property, including insulation materials, and facings and accessory products, for a depreciable mechanical system that is placed in service in the United States and that satisfies certain energy loss reductions. The credit would be available for labor costs incurred after December 31, 2021 through December 31, 2026.

The Administration will work with Congress on measures to pair these credits with strong labor standards, benefitting employers that provide good-paying and good-quality jobs.

The proposal would be effective after December 31, 2021.

## **PROVIDE DISASTER MITIGATION TAX CREDIT**

### **Current Law**

Federal tax credits related to disasters, such as earthquakes, fire, and hurricanes, focus on providing tax relief after damage has occurred. Generally, home- and business-owners can deduct casualty losses if the loss is caused by a Federal declared disaster. These losses only include those not covered by insurance or other federal aid. Taxpayers whose principal residences are involuntarily destroyed or condemned by a Federal declared disaster are allowed special treatment. Owners of low-income rental properties are allowed disaster-based relief from certain requirements of credit programs.

In addition to these and other permanent features the Internal Revenue Code, there are temporary measures to allow for tax relief after specific disasters. Features of these temporary packages may include enhanced access to retirement funds, employee retention tax credits, increased charitable giving limits, and increased casualty loss deductions.

### **Reasons for Change**

The National Oceanic and Atmospheric Administration reports that since 1980, the United States has sustained 241 weather and climate disasters with overall damage costs exceeding \$1.6 trillion. The benefit-to-cost ratio of mitigation efforts for the United States is estimated to be around 4; for every \$1 spent on mitigation, \$4 are saved in rehabilitation costs after disasters. Several states, including Alabama, Louisiana, and South Carolina, have tax credits for installation of disaster mitigation measures. The proposal offers a federal incentive to install disaster mitigation measures prior to the occurrence of a disaster.

### **Proposal**

The proposal provides a nonrefundable tax credit for homeowners and businesses equal to 25 percent of qualified disaster mitigation expenditures capped at \$5,000. For individual taxpayers, the credit begins to phase out at an adjusted gross income of approximately \$85,000 for single tax filers and approximately \$170,000 for joint filers. For businesses, the credit begins to phase out when the business has gross receipts above \$5 million. The credit is only available to homeowners and businesses in areas where a Federal disaster declaration has been made within the preceding 10-year period or in areas adjacent to where a Federal disaster declaration has been made within the preceding 10-year period.

The credit would be available for taxable years beginning after the date of enactment.

## **EXPAND AND ENHANCE THE CARBON OXIDE SEQUESTRATION CREDIT**

### **Current Law**

Current law allows a tax credit for the capture and sequestration of qualified carbon oxide using carbon capture equipment that is placed in service at a qualified facility on or after February 9, 2018. The amount of the credit depends on when and how the carbon oxide is sequestered. In 2020, qualified carbon oxide disposed of in secure geological storage and not used as a tertiary injectant in a qualified enhanced oil or natural gas recovery project could receive a credit of \$31.77 per metric ton. The credit increases to \$50 by 2026 and is adjusted for inflation in later years. In 2020, qualified carbon oxide that is used as a tertiary injectant in an enhanced oil or natural gas recovery project could receive a credit of \$20.22 per metric ton. This credit increases to \$35 by 2026 and is adjusted for inflation in later years.<sup>1</sup> In 2020, the fixation of qualified carbon oxide through photosynthesis or chemosynthesis, the chemical conversion of qualified carbon oxide to a material or chemical compound in which qualified carbon oxide is securely stored, or the use of qualified carbon oxide for any other purpose for which a commercial market exists as determined by the Secretary could receive a credit of \$20.22 per metric ton. The credit increases to \$35 by 2026 and is adjusted for inflation in later years.

Qualified facilities must begin construction by January 1, 2026. Taxpayers may claim these credits for a 12-year period from the date the carbon capture equipment was originally placed in service.

### **Reasons for Change**

Carbon oxide sequestration can play an important role in reducing greenhouse gas emissions from point sources and from the ambient air. The current credit provides incentives for carbon oxide sequestration, but additional incentives are required to achieve greater carbon oxide reductions and address the cost differences among methods of carbon capture. With additional incentives, nascent carbon capture technologies could continue to become less expensive over time and with experience. Additional investments in carbon oxide capture and sequestration technologies will help facilitate further technological improvements that will be important for reducing the costs of controlling future greenhouse gas emissions.

### **Proposal**

The proposal would extend the “commence construction” date by 5 years, such that qualified facilities must begin construction by January 1, 2031.

---

<sup>1</sup> Current law provides lower credit rates for carbon oxide that is captured using carbon capture equipment that was placed in service before February 9, 2018. For these earlier projects, current law allows for a \$23.82 (in 2020) per metric ton of qualified carbon oxide disposed of in secure geological storage and not used as a tertiary injectant in a qualified enhanced oil or natural gas recovery project. A credit of \$11.91 (in 2020) per metric ton is available if qualified carbon oxide is used as a tertiary injectant in an enhanced oil or natural gas recovery project. The credit in connection with pre-February 9, 2018 equipment is allowed through the end of the calendar year in which the Secretary certifies that 75 million metric tons of qualified carbon dioxide have been sequestered under this credit. As of June 2020, 72 million metric tons had been sequestered.

The proposal would provide an enhanced credit for carbon oxide captured from hard-to-abate industrial carbon oxide capture sectors such as cement production, steelmaking, hydrogen production, and petroleum refining. The enhanced credit for industrial capture would not apply to ethanol, natural gas processing, or ammonia production facilities. An additional \$35 per metric ton of qualified carbon oxide is available for qualified carbon oxide that is captured from such sources and is disposed of in secure geological storage. The amount of the \$35 per-ton additional credit does not change each year. The total per-ton credit for these projects would be \$85 in 2026.

The proposal would also provide an enhanced credit for direct air capture projects. An additional \$70 per metric ton of qualified carbon oxide is available for qualified carbon oxide that is disposed of in secure geological storage. The amount of the \$70 per-ton additional credit does not change each year. The total per-ton credit for direct air capture projects with secure geological storage would be \$120 in 2026.

Taxpayers would have the option to elect a cash payment in lieu of the carbon sequestration credit (i.e., a direct pay option).

The Administration will work with Congress on measures to pair these credits with strong labor standards, benefitting employers that provide good-paying and good-quality jobs.

The proposal would be effective after December 31, 2021.

## **EXTEND AND ENHANCE THE ELECTRIC VEHICLE CHARGING STATION CREDIT**

### **Current Law**

Current law allows an investment tax credit equal to 30 percent of the cost of alternative fuel vehicle refueling property, which includes electric vehicle charging stations and hydrogen refueling stations. The tax credit is capped at \$1,000 for refueling property installed at a taxpayer's residence and at \$30,000 for refueling property installed for commercial use. Notably, the credit is allowed on a per-location basis, not on a per-device basis. The credit is currently set to expire on December 31, 2021.

### **Reasons for Change**

Since the tax credit is currently applied on a per-location basis, it is difficult to finance multiple charging or refueling stations at one commercial location. Also, the \$30,000 tax credit limit on business investments, which is set to expire at the end of 2021, does not provide adequate financial incentive to promote refueling infrastructure. The proposal seeks to encourage more private, long-term investment in the latest technologies in refueling infrastructure.

### **Proposal**

The proposal modifies and expands the tax credit for electric vehicle charging stations. The proposal allows taxpayers to claim the tax credits on a per-device basis (i.e., electric vehicle supply equipment, or ESVE, also called a port or a charger), increases the tax credit limit on individual devices to \$200,000, and extends the tax credit for five years through December 31, 2026. Taxpayers would have the option to elect a cash payment in lieu of the general business tax credits (i.e., a direct pay option). The \$1,000 tax credit for refueling property installed at a taxpayer's residence would not increase but would also be extended for five years.

The Administration will work with Congress on measures to pair these credits with strong labor standards, benefitting employers that provide good-paying and good-quality jobs.

The proposal would be effective for taxable years beginning after December 31, 2021.

## **REINSTATE SUPERFUND EXCISE TAXES AND MODIFY OIL SPILL LIABILITY TRUST FUND FINANCING**

### **Current Law**

The following Superfund excise taxes were imposed before January 1, 1996: (1) An excise tax on domestic crude oil and on imported petroleum products at a rate of 9.7 cents per barrel; (2) An excise tax on listed hazardous chemicals at a rate that varied from 22 cents to \$4.87 per ton; and (3) An excise tax on imported substances that use as materials in their manufacture or production one or more of the hazardous chemicals subject to the excise tax described in (2) above.

The revenues from these taxes were dedicated to the Hazardous Substance Superfund Trust Fund. Amounts in the Trust Fund are available for expenditures incurred in connection with releases or threats of releases of hazardous substances into the environment under specified provisions of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (as amended).

An excise tax to finance the Oil Spill Liability Trust Fund (OSLTF) is imposed on: (1) crude oil received at a U.S. refinery; (2) imported petroleum products (including crude oil) entered into the United States for consumption, use, or warehousing; and (3) any domestically produced crude oil that is used (other than on the premises where produced for extracting oil or natural gas) in or exported from the United States if, before such use or exportation, no taxes were imposed on the crude oil. The tax is eight cents per barrel before January 1, 2017, and nine cents per barrel thereafter. Crudes such as those that are produced from bituminous deposits as well as kerogen-rich rock (e.g., tar sands) are not treated as crude oil or petroleum products for purposes of the tax. The tax is deposited in the OSLTF to pay costs associated with oil removal and damages resulting from oil spills, as well as to provide annual funding to certain agencies for a wide range of oil pollution prevention and response programs, including research and development. In the case of an oil spill, the OSLTF makes it possible for the Federal government to pay for removal costs up front, and then seek full reimbursement from the responsible parties.

The Customs drawback statute (Title 19 U.S.C (Customs Duties) section 1313) has been administratively interpreted to allow drawback of the tax when products subject to this tax are exported.

### **Reasons for Change**

The Superfund excise taxes should be reinstated and increased because of the continuing need for funds to remedy damages caused by releases of hazardous substances. In addition, it is appropriate to extend the tax to other crudes such as those produced from bituminous deposits as well as kerogen-rich rock.

The magnitude of the Federal response to recent disasters has reinforced the importance of the OSLTF and the need to maintain a sufficient balance, particularly in order to accommodate spills

of national significance. It is appropriate to extend the tax to other sources of crudes that present environmental risks comparable to those associated with crude oil and petroleum products.

The drawback of the tax is granted when the product is exported even though there is no concomitant reduction in the risk of an oil spill. A prohibition on the drawbacks of the tax will strengthen the finances of the OSLTF and remove an incentive to export crude and like products.

### **Proposal**

The proposal would reinstate the three Superfund excise taxes at double the previous rates for periods beginning after December 31, 2021 and through December 31, 2031. In addition, the proposal would extend the Superfund excise tax on domestic crude oil and imported petroleum products to other crudes such as those produced from bituminous deposits as well as kerogen-rich rock. To support the OSLTF, the proposal would also extend the OSLTF tax to include crudes such as those produced from bituminous deposits as well as kerogen-rich rock. Finally, the eligibility of the OSLTF for drawback would be eliminated.

The proposal would be effective after December 31, 2021.

## **STRENGTHEN TAXATION OF HIGH-INCOME TAXPAYERS**

### **INCREASE THE TOP MARGINAL INCOME TAX RATE FOR HIGH EARNERS**

#### **Current Law**

For taxable years beginning after December 31, 2017 and before January 1, 2026, the top marginal tax rate for the individual income tax is 37 percent. For taxable years beginning after December 31, 2025, the top marginal tax rate for the individual income tax is 39.6 percent.

For 2021, the 37 percent marginal individual income tax rate applies to taxable income over \$628,300 for married individuals filing a joint return and surviving spouses, \$523,600 for unmarried individuals (other than surviving spouses) and head of household filers, and \$314,150 for married individuals filing a separate return.

#### **Reasons for Change**

The proposal would reverse a recent tax cut for the highest income taxpayers. It would raise revenue while increasing the progressivity of the tax system.

#### **Proposal**

The proposal would increase the top marginal individual income tax rate to 39.6 percent. This rate would be applied to taxable income in excess of the 2017 top bracket threshold, adjusted for inflation. In taxable year 2022, the top marginal tax rate would apply to taxable income over \$509,300 for married individuals filing a joint return, \$452,700 for unmarried individuals (other than surviving spouses), \$481,000 for head of household filers, and \$254,650 for married individuals filing a separate return. After 2022, the thresholds would be indexed for inflation using the C-CPI-U, which is used for all current tax rate thresholds for the individual income tax.

The proposal would be effective for taxable years beginning after December 31, 2021.

## **REFORM THE TAXATION OF CAPITAL INCOME**

### **Current Law**

Most realized long-term capital gains and qualified dividends are taxed at graduated rates under the individual income tax, with 20 percent generally being the highest rate (23.8 percent including the net investment income tax, if applicable, based on the taxpayer's modified adjusted gross income). Moreover, capital gains are taxable only upon realization, such as the sale or other disposition of an appreciated asset. When a donor gives an appreciated asset to a donee during the donor's life, the donee's basis in the asset is the basis of the donor; in effect, the basis is "carried over" from the donor to the donee. There is no realization of capital gain by the donor at the time of the gift, and there is no recognition of capital gain (or loss) by the donee until the donee later disposes of that asset. When an appreciated asset is held by a decedent at death, the basis of the asset for the decedent's heir is adjusted (usually "stepped up") to the fair market value of the asset at the date of the decedent's death. As a result, the amount of appreciation accruing during the decedent's life on assets that are still held by the decedent at death completely avoids federal income tax.

### **Reasons for Change**

Preferential tax rates on long-term capital gains and qualified dividends disproportionately benefit high-income taxpayers and provide many high-income taxpayers with a lower tax rate than many low- and middle-income taxpayers. The rate disparity between ordinary income taxes and capital gains and dividends taxes also encourages economically wasteful efforts to convert labor income into capital income as a tax avoidance strategy.

Under current law, since a person who inherits an appreciated asset receives a basis in that asset equal to the asset's fair market value at the time of the decedent's death, appreciation that had accrued during the decedent's life is never subjected to income tax. In contrast, less-wealthy individuals who must spend down their assets during retirement pay income tax on their realized capital gains. This increases the inequity in the tax treatment of capital gains. In addition, the preferential treatment for assets held until death produces an incentive for taxpayers to inefficiently lock in portfolios of assets and hold them primarily for the purpose of avoiding capital gains tax on the appreciation, rather than reinvesting the capital in more economically productive investments.

Moreover, the distribution of wealth among Americans has grown increasingly unequal, concentrating economic resources among a steadily shrinking percentage of individuals. Coinciding with this period of growing inequality, the long-term fiscal shortfall of the United States has significantly increased. Reforms to the taxation of capital gains and qualified dividends will reduce economic disparities among Americans and raise needed revenue.

## **Proposal**

### **Tax capital income for high-income earners at ordinary rates.**

Long-term capital gains and qualified dividends of taxpayers with adjusted gross income of more than \$1 million would be taxed at ordinary income tax rates, with 37 percent generally being the highest rate (40.8 percent including the net investment income tax),<sup>1</sup> but only to the extent that the taxpayer's income exceeds \$1 million (\$500,000 for married filing separately), indexed for inflation after 2022.<sup>2</sup>

This proposal would be effective for gains required to be recognized after the date of announcement.

### **Treat transfers of appreciated property by gift or on death as realization events.**

Under the proposal, the donor or deceased owner of an appreciated asset would realize a capital gain at the time of the transfer. For a donor, the amount of the gain realized would be the excess of the asset's fair market value on the date of the gift over the donor's basis in that asset. For a decedent, the amount of gain would be the excess of the asset's fair market value on the decedent's date of death over the decedent's basis in that asset. That gain would be taxable income to the decedent on the Federal gift or estate tax return or on a separate capital gains return. The use of capital losses and carry-forwards from transfers at death would be allowed against capital gains income and up to \$3,000 of ordinary income on the decedent's final income tax return, and the tax imposed on gains deemed realized at death would be deductible on the estate tax return of the decedent's estate (if any).

Gain on unrealized appreciation also would be recognized by a trust, partnership, or other non-corporate entity that is the owner of property if that property has not been the subject of a recognition event within the prior 90 years, with such testing period beginning on January 1, 1940. The first possible recognition event for any taxpayer under this provision would thus be December 31, 2030.

A transfer would be defined under the gift and estate tax provisions and would be valued using the methodologies used for gift or estate tax purposes. However, for purposes of the imposition of this tax on appreciated assets, the following would apply. First, a transferred partial interest would be its proportional share of the fair market value of the entire property. Second, transfers of property into, and distributions in kind from, a trust, partnership, or other non-corporate entity, other than a grantor trust that is deemed to be wholly owned and revocable by the donor, would be recognition events. The deemed owner of such a revocable grantor trust would recognize gain on the unrealized appreciation in any asset distributed from the trust to any person other than the deemed owner or the U.S. spouse of the deemed owner, other than a distribution made in discharge of an obligation of the deemed owner. All of the unrealized appreciation on assets of

---

<sup>1</sup> A separate proposal would first increase the top ordinary individual income tax rate to 39.6 percent (43.4 percent including the net investment income tax).

<sup>2</sup> For example, a taxpayer with \$900,000 in labor income and \$200,000 in preferential capital income would have \$100,000 of capital income taxed at the current preferential tax rate and \$100,000 taxed at ordinary income tax rates.

such a revocable grantor trust would be realized at the deemed owner's death or at any other time when the trust becomes irrevocable.

Certain exclusions would apply. Transfers by a decedent to a U.S. spouse or to charity would carry over the basis of the decedent. Capital gain would not be recognized until the surviving spouse disposes of the asset or dies, and appreciated property transferred to charity would not generate a taxable capital gain. The transfer of appreciated assets to a split-interest trust would generate a taxable capital gain, with an exclusion allowed for the charity's share of the gain based on the charity's share of the value transferred as determined for gift or estate tax purposes.

The proposal would exclude from recognition any gain on tangible personal property such as household furnishings and personal effects (excluding collectibles). The \$250,000 per-person exclusion under current law for capital gain on a principal residence would apply to all residences and would be portable to the decedent's surviving spouse, making the exclusion effectively \$500,000 per couple. Finally, the exclusion under current law for capital gain on certain small business stock would also apply.

In addition to the above exclusions, the proposal would allow a \$1 million per-person exclusion from recognition of other unrealized capital gains on property transferred by gift or held at death. The per-person exclusion would be indexed for inflation after 2022 and would be portable to the decedent's surviving spouse under the same rules that apply to portability for estate and gift tax purposes (making the exclusion effectively \$2 million per married couple). The recipient's basis in property received by reason of the decedent's death would be the property's fair market value at the decedent's death. The same basis rule would apply to the donee of gifted property to the extent the unrealized gain on that property at the time of the gift was not shielded from being a recognition event by the donor's \$1 million exclusion. However, the donee's basis in property received by gift during the donor's life would be the donor's basis in that property at the time of the gift to the extent that the unrealized gain on that property counted against the donor's \$1 million exclusion from recognition.

Payment of tax on the appreciation of certain family-owned and -operated businesses would not be due until the interest in the business is sold or the business ceases to be family-owned and operated. Furthermore, the proposal would allow a 15-year fixed-rate payment plan for the tax on appreciated assets transferred at death, other than liquid assets such as publicly traded financial assets and other than businesses for which the deferral election is made. The Internal Revenue Service (IRS) would be authorized to require security at any time when there is a reasonable need for security to continue this deferral. That security may be provided from any person, and in any form, deemed acceptable by the IRS.

Additionally, the proposal would include other legislative changes designed to facilitate and implement this proposal, including: the allowance of a deduction for the full cost of appraisals of appreciated assets; the imposition of liens; the waiver of penalty for underpayment of estimated tax to the extent that underpayment is attributable to unrealized gains at death; the grant of a right of recovery of the tax on unrealized gains; rules to determine who has the right to select the return filed; the achievement of consistency in valuation for transfer and income tax purposes; coordinating changes to reflect that the recipient would have a basis in the property equal to the

value on which the capital gains tax is computed; and a broad grant of regulatory authority to provide implementing rules.

To facilitate the transition to taxing gains at gift, death and periodically under this proposal, the Secretary would be granted authority to issue any regulations necessary or appropriate to implement the proposal, including rules and safe harbors for determining the basis of assets in cases where complete records are unavailable, reporting requirements for all transfers of appreciated property including value and basis information, and rules where reporting could be permitted on the decedent's final income tax return.

The proposal would be effective for gains on property transferred by gift, and on property owned at death by decedents dying, after December 31, 2021, and on certain property owned by trusts, partnerships, and other non-corporate entities on January 1, 2022.

## **RATIONALIZE NET INVESTMENT INCOME AND SELF-EMPLOYMENT CONTRIBUTIONS ACT TAXES**

### **Current Law**

Individuals with incomes over a threshold amount are subject to a 3.8 percent tax on net investment income. The threshold is \$200,000 for single and head of household returns and \$250,000 for joint returns. Net investment income generally includes: (1) interest, dividends, rents, annuities, and royalties, other than such income derived in the ordinary course of a trade or business; (2) income derived from a trade or business in which the taxpayer does not materially participate; (3) income from a business of trading in financial instruments or commodities; and (4) net gain from the disposition of property other than property held in a trade or business in which the taxpayer materially participates. The net investment income tax (NIIT) does not apply to self-employment earnings. Proceeds from the NIIT flow into the General Fund of the Treasury.

Self-employment earnings and wages are subject to employment taxes under either the Self-Employment Contributions Act (SECA) or the Federal Insurance Contributions Act (FICA), respectively. Both SECA and FICA taxes apply at a rate of 12.4 percent for social security tax on employment earnings (capped at \$142,800 in 2021) and at a rate of 2.9 percent for Medicare tax on all employment earnings (not subject to a cap). An additional 0.9 percent Medicare tax is imposed on self-employment earnings and wages of high-income taxpayers, above the same NIIT thresholds of \$200,000 for single and head of household filers and \$250,000 for joint filers. The SECA and FICA taxes flow into the Social Security and Hospital Insurance Trust Funds.

General partners and sole proprietors pay SECA tax on the full amount of their net trade or business income, subject to certain exceptions. Section 1402(a)(13) of the Internal Revenue Code provides that limited partners are statutorily excluded from paying SECA tax with respect to their distributive shares of partnership income or loss, although they are subject to SECA tax on their section 707(c) guaranteed payments from the partnership that are for services they provide to, or on behalf of, the partnership. Because the statutory exclusion only refers to limited partners, questions have arisen as to the meaning of this term and whether the limited partner exclusion might be applicable to limited liability company (LLC) members. Some partners who might more accurately be considered general partners and some LLC members avoid SECA by claiming the treatment of limited partners.

S corporation shareholders are not subject to SECA tax. However, tax law requires that owner-employees pay themselves “reasonable compensation” for services provided, on which they pay FICA tax like any other employee. Nonwage distributions to shareholders of S corporations are not subject to either FICA or SECA taxes.

### **Reason for Change**

Active owners of pass-through businesses are treated differently for purposes of the NIIT and SECA tax according to the legal form of their ownership and the legal form of the payment that they receive. While general partners and sole proprietors pay SECA tax on earnings from their

businesses, S corporation owner-employees and limited partners (their counterparts and sometimes competitors) pay employment taxes on only a portion of their earnings. LLC members often pay little or no SECA tax at all. Although the NIIT reflects an intention to impose the 3.8 percent tax on both earned and unearned income of high-income taxpayers, certain income escapes both SECA tax and the NIIT, including the distributive shares of S corporation shareholder-employees, limited partners, and LLC members who claim the statutory exclusion for limited partners. Different treatment is unfair, inefficient, distorts choice of organizational form, and provides tax planning opportunities for business owners, particularly those with high incomes, to avoid paying their fair share of taxes.

The current system is also a challenge for the Internal Revenue Service (IRS) to administer. The determination of “reasonable compensation” of S corporation owners generally depends on facts and circumstances and requires a valuation analysis, which is expensive, and which can be contested by the taxpayer, adding to the cost of administration and enforcement. Uncertainty surrounding the treatment of limited partners and LLC members who materially participate in their businesses undermines the IRS’s ability to ensure payment of SECA tax and the NIIT.

In addition, proceeds from the NIIT are paid into the General Fund of the Treasury, while the Medicare portion of FICA and SECA taxes are paid into the Hospital Insurance Trust Fund. This treatment of the taxes is inconsistent with the fact that the taxes are intended for the same purpose.

### **Proposal**

The proposal would (i) ensure that all pass-through business income of high-income taxpayers is subject to either the NIIT or SECA tax, (ii) redirect NIIT funds to the Hospital Insurance Trust Fund, (iii) make the application of SECA to partnership and LLC income more consistent for high-income taxpayers, and (iv) apply SECA to the ordinary business income of high-income nonpassive S corporation owners.

First, the proposal would ensure that all trade or business income of high-income taxpayers is subject to the 3.8-percent Medicare tax, either through the NIIT or SECA tax. In particular, for taxpayers with adjusted gross income in excess of \$400,000, the definition of net investment tax would be amended to include gross income and gain from any trades or businesses that is not otherwise subject to employment taxes.

Second, all of the revenue from the NIIT (that raised under current law and that which would be raised by the proposed expansion) would be directed to the Hospital Insurance Trust Fund, just as is the revenue from the 3.8 percent tax under FICA and SECA.

Third, limited partners and LLC members who provide services and materially participate in their partnerships and LLCs would be subject to SECA tax on their distributive shares of partnership or LLC income to the extent that this income exceeds certain threshold amounts. The exemptions from SECA tax provided under current law for certain types of partnership income (e.g., rents, dividends, capital gains, and certain retired partner income) would continue to apply to these types of income.

Fourth, S corporation owners who materially participate in the trade or business would be subject to SECA taxes on their distributive shares of the business's income to the extent that this income exceeds certain threshold amounts. The exemptions from SECA tax provided under current law for certain types of S corporation income (e.g., rents, dividends, and capital gains) would continue to apply to these types of income.

In order to determine the amount of partnership income and S corporation income that would be subject to SECA tax under the proposal, the taxpayer would sum (a) ordinary business income derived from S corporations for which the owner materially participates in the trade or business, and (b) ordinary business income derived from either limited partnership interests or interests in LLCs that are classified as partnerships to the extent a limited partner or LLC member materially participates in its partnership's or LLC's trade or business (this sum referred to as the "potential SECA income"). Beginning in 2022, the additional income that would be subject to SECA tax would be the lesser of (i) the potential SECA income, and (ii) the excess over \$400,000 of the sum of the potential SECA income, wage income subject to FICA under current law, and 92.35 percent of self-employment income subject to SECA tax under current law. The \$400,000 threshold amount would not be indexed for inflation.

Material participation standards would apply to individuals who participate in a business in which they have a direct or indirect ownership interest. Taxpayers are usually considered to materially participate in a business if they are involved in it in a regular, continuous, and substantial way. Often this means they work for the business for at least 500 hours per year. The statutory exception to SECA tax for limited partners would not exempt a limited partner from SECA tax if the limited partner otherwise materially participated.

The proposal would be effective for taxable years beginning after December 31, 2021.

## **SUPPORT WORKERS, FAMILIES, AND ECONOMIC SECURITY**

### **MAKE PERMANENT THE AMERICAN RESCUE PLAN EXPANSION OF PREMIUM TAX CREDITS**

#### **Current Law**

A premium assistance tax credit (premium tax credit or PTC) is provided to certain individuals who purchase health insurance through a Marketplace exchange in the individual health insurance market established under the Affordable Care Act of 2010 (ACA). The PTC is refundable and payable in advance (as advance payments of the premium tax credit, or APTC) directly to the insurer. Eligibility for the APTC is based on the individual's household income and family size for the most recent available year of tax data. However, eligibility may be updated to reflect changes in income, marital status or other household circumstances, and employment status.

The PTC is generally available to individuals with household income between 100 and 400 percent of the Federal poverty line (FPL) for the relevant family size. Individuals are eligible for the PTC only if they are not eligible for health care under programs such as Medicare, Medicaid, the Children's Health Insurance Program, or Tricare, or for certain types of health insurance provided through an employer.

A taxpayer's PTC is equal to the lesser of: (1) the premium for the plan chosen by the taxpayer, or (2) the amount by which the cost of the benchmark plan exceeds a required contribution by the taxpayer. The taxpayer's required contribution is a percentage of household income (the applicable contribution percentage) calculated with reference to the taxpayer's FPL.

The American Rescue Plan Act of 2021 (ARP) decreased the applicable contribution percentages and extended PTC eligibility to taxpayers with household income above 400 percent of FPL for taxable years 2021 and 2022. The ARP changed the household income limitation on eligibility for the credit so that the PTC phases out with income as the required contribution eventually exceeds the benchmark premium. By fixing the parameters for two years, the ARP paused the pre-ARP indexation of the applicable contribution percentages. The chart below shows the applicable contribution percentages for 2021 under the ARP and prior law.

## Applicable Contribution Percentages for 2021<sup>1</sup>

<b>Percent of FPL</b>	<b>ARP<sup>2</sup></b>	<b>Pre-ARP<sup>3</sup></b>
Up to 133%	0%	2%
133% up to 150%	0%	3%-4%
150% up to 200%	0%-2%	4%-6.3%
200% up to 250%	2%-4%	6.3%-8.05%
250% up to 300%	4%-6%	8.05%-9.5%
300% up to 400%	6%-8.5%	9.5%
400%+	8.5%	Not Eligible

<sup>1</sup> Required contributions increase incrementally between income breaks.

<sup>2</sup> These percentages also apply in 2022.

<sup>3</sup> Pre-ARP applicable contribution percentages have been indexed beginning in 2015. These are the percentages for 2021.

### **Reasons for Change**

Even with the ACA's changes to the individual market, health coverage can still be expensive for some families and out of reach for others. Under the American Families Plan, expanding the PTC will reduce individuals' cost of individual market coverage by increasing the amount and availability of premium tax credits for a wide range of income levels.

### **Proposal**

The proposal would make permanent the ARP decrease in the applicable contribution percentages of household income used for determining the PTC. The proposal would also make permanent the ARP expansion of PTC eligibility to taxpayers with household income above 400 percent of FPL.

In addition, the proposal would permanently repeal the indexation of the applicable contribution percentages for years after 2022.

The proposal would be effective after December 31, 2022.

## **MAKE PERMANENT THE EXPANSION OF THE EARNED INCOME TAX CREDIT (EITC) FOR WORKERS WITHOUT QUALIFYING CHILDREN**

### **Current Law**

Low- and moderate-income workers may be eligible for a refundable EITC. Eligibility for the EITC is based on the presence and number of qualifying children in the worker's household, as well as the worker's earned income, adjusted gross income (AGI), investment income, filing status, age, and immigration and work status in the United States.

The EITC has a phase-in range (where each additional dollar of earned income results in a larger credit), a plateau (where additional dollars of earned income or AGI have no effect on the size of the credit), and a phase-out range (where each additional dollar of the larger of earned income or AGI results in a smaller total credit). The dollar thresholds are adjusted annually for inflation.

The American Rescue Plan Act of 2021 (ARP) expanded the credit for workers without children in taxable year 2021 by increasing the phase-in and phase-out rates, and increasing the income range over which the credit phases in. These changes increased the maximum credit from \$542 to \$1,502. The chart below shows the 2021 parameters for workers without children, with and without the ARP expansion.

### **EITC Parameters for Workers Without Children in 2021**

<b>Parameter</b>	<b>ARP</b>	<b>Pre-ARP</b>
Credit phase-in rate	15.30%	7.65%
Credit phase-out rate	15.30%	7.65%
End of phase-in range	\$9,820	\$7,100
End of plateau	\$11,610	\$8,880
(married joint filers)	\$17,550	\$14,820
End of phase-out range	\$21,430	\$15,980
(married joint filers)	\$27,370	\$21,920
Maximum credit	\$1,502	\$543

To be eligible for the EITC for workers without qualifying children, the taxpayer must meet the relevant age requirements. In 2021, the taxpayer must be at least 19 years old or at least 23 if a full-time student. In the case of married taxpayers filing jointly, the credit may be claimed if at least one spouse is over age 19 (or at least 23 if a full-time student). Former foster children and qualified homeless individuals are eligible at age 18, regardless of student status. In years before and after 2021 the taxpayer must be at least 25 years old and less than 65. In the case of married taxpayers filing jointly, at least one spouse must be within the eligible age range to qualify for the credit.

In all years there is no age limitation to the EITC for workers with qualifying children. A taxpayer who may be claimed as a dependent or as a qualifying child by another taxpayer, including most college students, is not eligible to claim the EITC for workers without children.

Also, in all taxable years beginning with 2021 taxpayers who live with qualifying children who they do not claim for EITC purposes because the children do not have social security numbers may claim the EITC for workers without children if otherwise eligible.

#### U.S. Territories (Permanent Change):

The ARP provides for a reimbursement of mirror code Territories (those whose tax codes mirror the U.S. federal income tax code: Guam, the U.S. Virgin Islands, and the Northern Mariana Islands) for the costs of this credit in 2021; reimbursement is done on a permanent basis so it will also affect credits in future years. American Samoa will be reimbursed if it institutes a similar earned income tax credit. Puerto Rico will be reimbursed for increasing the credit they have, plus some base amount that depends on the cost of Puerto Rico's EITC.

#### Reasons for Change

The permanent EITC for workers without children is relatively small and phases out at very low incomes. As such, it provides little or no assistance to individuals at or near the poverty line. For example, in 2021 under pre-ARP law, a single worker without children who earned \$13,000 (a wage close to the poverty line), would be in the phase-out range and eligible for a credit of about \$228. This credit would generate a net refund of about \$183 after subtracting his or her Federal income tax. (The taxpayer would pay nearly \$1,000 in Federal payroll taxes.) A larger EITC for workers without children would promote employment and reduce poverty for this group of workers. It also would increase the progressivity of the Federal tax system.

The current age restrictions prevent young workers and older workers from claiming the EITC. As a result, young workers living independently from their families are unable to benefit from the antipoverty and work-related effects of the EITC just when they are establishing the patterns of behavior that may persist throughout their working lives. The EITC, by increasing the effective after-tax wage, encourages additional work effort in the short run, which may in turn affect long-run labor force attachment and wages.

The current age restriction on older workers is inconsistent with recent increases in the full retirement age for Social Security retirement benefits and the increased labor force participation by older adults.

#### Proposal

The proposal would make permanent the increase in the EITC parameters for workers without children that was enacted in the ARP. The end of the phase-in and the end of the plateau income ranges would be indexed for inflation in the same manner as other EITC parameters (by the C-CPI-U).

The proposal would also make permanent the ARP expansion of age-eligibility. As under ARP law, taxpayers who could be claimed as a qualifying child or a dependent would not be eligible for the EITC for childless workers. Thus, full-time students who are dependent on their parents would not be allowed to claim the EITC for workers without qualifying children, despite meeting

the new age requirements, even if their parents did not claim a dependent exemption or an EITC on their behalf.

This proposal would be effective for taxable years beginning after December 31, 2021.

## **MAKE PERMANENT AMERICAN RESCUE PLAN CHANGES TO THE CHILD AND DEPENDENT CARE TAX CREDIT**

### **Current Law**

Taxpayers with child or dependent care expenses who are working, training, or looking for work are eligible for a tax credit that partially offsets the cost of care. Married couples are eligible only if they file a joint return and either both spouses are working or looking for work, or if one spouse is working or looking for work and the other is attending school full-time. To qualify for the tax credit, the child and dependent care expenses must be for either (1) a child under age 13 when the care was provided or (2) a disabled dependent of any age with the same place of abode as the taxpayer. The expenses eligible for tax credit are reduced by the total amount of dependent care expenses that the taxpayer excludes from income under a dependent care assistance program.

The credit is calculated as a percentage of qualified expenses up to a cap. The cap varies with the number of qualified children or other dependents, up to two. The percentage match decreases with income.

Taxpayers may also be offered dependent care assistance through their employers. Certain amounts of employer assistance or employee contributions to a flexible spending account (FSA) may be excluded from employee wages for both income and payroll tax purposes. The maximum amount of expenses that may be used to claim the Child and Dependent Care Tax Credit (CDCTC) must be reduced by any amount of employer assistance that is excluded from wages.

Under current law, expenses are self-reported, though taxpayers provide employment identification number (EIN) or taxpayer identification number (TIN) for the payee. The Internal Revenue Service (IRS) has limited ability to identify noncompliance outside of an audit.

Paid preparers of returns with a claim for the earned income tax credit, the child tax credit/additional child tax credit, the credit for other dependents, the American opportunity tax credit and/or head of household status must meet due diligence requirements in determining the taxpayer's eligibility and the appropriate credit amount(s). These are described in section 6695(g) of the Internal Revenue Code.

Low and moderate-income families with childcare expenses may receive financial assistance from federal, state, local or private organizations that offset some or all of the out-of-pocket costs for child and dependent care. Providers include the state and local partners of the Child Care Development Fund (CCDF) in the Department of Health and Human Services.

The CDCTC and dependent care employer assistance plans have special rules for taxable year 2021, which were part of the American Rescue Plan Act of 2021 (ARP).

### The CDCTC and dependent care assistance for taxable year 2021

Eligible taxpayers may claim a refundable credit for up to 50 percent of up to \$8,000 in eligible expenses for one child or disabled dependent and up to \$16,000 in eligible expenses for more than one child and/or disabled dependent. The percentage of expenses for which a credit may be taken (the match rate) is reduced by 1 percentage point for each \$2,000 or part thereof by which the taxpayer's adjusted gross income (AGI) exceeds \$125,000 until the match rate reaches 20 percent (at an AGI of \$183,000) after which point the match rate plateaus. The match rate begins decreasing again by 1 percentage point for each \$2,000 or part thereof by which the taxpayer's AGI exceeds \$400,000, reaching zero at AGI in excess of \$438,000.

Up to \$10,500 in employer assistance or employee contributions for dependent care may be excluded from employee wages for both income and payroll tax purposes. As under pre-ARP law, the maximum amount of expenses that may be used to claim the CDCTC must be reduced by any amount of employer assistance that is excluded from wages.

Reporting of expenses is unchanged by ARP.

### The CDCTC and dependent care assistance before and after taxable year 2021

Eligible taxpayers may claim a nonrefundable credit for up to 35 percent of up to \$3,000 in eligible expenses for one child or disabled dependent and up to \$6,000 in eligible expenses for more than one child and/or disabled dependent. The percentage of expenses for which a credit may be taken is reduced by 1 percentage point for each \$2,000 or part thereof by which the taxpayer's AGI exceeds \$15,000 until the percentage of expenses reaches 20 percent (at an AGI of \$43,000). This 20 percent credit rate applies at all income levels above \$43,000. The phase-down thresholds and the amount of expenses eligible for the credit are not indexed for inflation and have been unchanged since 2003.

The value of the credit has eroded over time. No taxpayer actually receives the maximum credit of \$2,100 (35 percent of \$6,000) because no taxpayer with dependent children incurs an income tax liability with AGI as low as \$15,000.

Up to \$5,000 in employer assistance or employee contributions to a dependent care flexible spending account (FSA) may be excluded from employee wages for both income and payroll tax purposes. The maximum amount of expenses that may be used to claim the CDCTC must be reduced by any amount of employer assistance that is excluded from wages.

### US territories (permanent change)

The ARP provides for a reimbursement of mirror code Territories (those whose tax codes mirror the U.S. federal income tax code: Guam, the U.S. Virgin Islands, and the Northern Mariana Islands) for the costs of this refundable credit in 2021; reimbursement is done on a permanent basis, so it also affects credits in future years. Additionally, for non-mirror code Territories (that is, Puerto Rico and American Samoa), the ARP provides a reimbursement for the aggregate value of such a credit, provided the Territory develops a plan, approved by the Secretary, to

distribute these amounts to its residents promptly. This extension of a CDCTC to the Territories is permanent.

### **Reasons for Change**

Good quality care for children and disabled dependents is expensive. For moderate income taxpayers, the cost of childcare can be more than a third of their resources, and good quality care may be out of reach. The expansions in the ARP recognize the importance of access to quality childcare by providing a broad subsidy to most families, including those with limited income tax liability.

Strong reporting requirements maintain the integrity of the tax system. The expansion of the CDCTC will increase the number of people who claim the credit and the total value of the credits claimed. In order to maintain compliance, improved reporting requirements are useful. A small additional burden to taxpayers and providers is appropriate given the size of the tax benefit.

Families who pay for childcare find solutions to their childcare needs through many different types of care, including large childcare centers, small centers or individual providers, or week-long or day-long “camps” coordinated with school closings. Relationships between a family and a provider might last for years or change with employment or preferences. A broad set of reporting rules is needed to address all kind of care.

### **Proposal**

The proposal would make permanent the changes to the CDCTC enacted in the ARP for taxable year 2021.

In addition, the proposal would establish reporting requirements appropriate for an expanded refundable tax credit. For example, the following requirements would further compliance:

The CDCTC would be added to the list of credits subject to paid preparer due diligence requirements described in section 6695(g). This change would treat the CDCTC in a comparable manner to the other refundable credits.

To claim the CDCTC, taxpayers would be required to provide the information about the organizations or persons who provide the care, including the name, address, and the EIN or TIN of the care provider. Math error authority would be provided to the IRS to decline credit claims if such information is missing or deemed invalid.

Another helpful measure would be the establishment of an information return requirement for agencies that provide childcare subsidies on behalf of children or other dependents, including those associated with the Child Care Development Fund (CCDF) or the Child Care for American Families program proposed in this Budget. This requirement would prevent credit claims in excess of allowable limits or on amounts not paid by the taxpayer. The Secretary of the Treasury or her delegate would be granted authority to issue regulations to exempt certain agencies from this reporting requirement and to prescribe a standardized form detailing the information about

the care expenses claimed for the CDCTC that would apply to the exempted agencies and other care providers.

The American Families Plan would establish Child Care for American Families to ensure that low and middle-income families pay no more than 7 percent of their income for high-quality childcare for children from birth to five-years-old. While families can benefit from both this childcare program and the tax benefits, including for the same child, they cannot claim the CDCTC (or the exclusion) for a care expense, including a co-pay, that was already subsidized under Child Care for American Families.

The proposal would be effective for taxable years beginning after December 31, 2021.

## **EXTEND THE CHILD TAX CREDIT INCREASE THROUGH 2025 AND MAKE PERMANENT FULL REFUNDABILITY**

### **Current Law**

A taxpayer may claim a child tax credit (CTC) for each qualifying child. A qualifying child for the CTC must meet the following five requirements:

1. Relationship – The child generally must be the taxpayer’s son, daughter, grandchild, sibling, niece, nephew, or foster child.
2. Residence – The child must live with the taxpayer in the same principal place of abode for over half the year.
3. Support – The child must not have provided more than half of his or her own support.
4. Age – The child must be under the age of 17 (or under age 18 in taxable year 2021).
5. Identification – The child must have a taxpayer identification number (TIN) at the time the return is filed. (In taxable years 2021 through 2025 this TIN must be a social security number valid for work.)

The value of the credit, the portion of the credit that may be received as a refund, the presence of a related credit for children and dependents who do not meet the requirements for the CTC, and the income thresholds differ across taxable years. Taxpayers receive the credit in two parts: the portion that offsets individual income tax liability which is generally called the CTC, and the remainder which is received as an additional child tax credit (ACTC).

The CTC was substantially expanded for taxable year 2021 by the American Rescue Plan of 2021 (ARP). Prior expansions under the Tax Cuts and Jobs Act of 2017 (TCJA) still apply for taxable years 2021 through 2025. For subsequent taxable years, most elements of the child credit reflect pre-TCJA law. Specific rules for each period are described below:

### **CTC in taxable year 2021 (ARP in effect)**

Taxpayers may claim a child tax credit (CTC) for up to \$3,600 for each qualifying child under age 6 and up to \$3,000 for all other qualifying children under age 18. To be a qualifying child in taxable year 2021, a child must have a social security number (SSN) at the time the return is due.

The full amount of the credit is refundable, regardless of the taxpayer’s Federal income tax liability or the presence of earned income.

A taxpayer may also claim a \$500 nonrefundable credit for all children and other dependents for whom a CTC may not be claimed. This second credit is called the credit for other dependents (ODTC).

The first \$1,600 of the CTC per qualifying child under age 6 and the first \$1,000 per qualifying child age 6 through 17 phase out sequentially with modified adjusted gross income (modified AGI) in excess of \$150,000 for married joint filers or surviving spouses, \$112,500 for head of household filers, and \$75,000 for all other filers, at a rate of \$50 per \$1,000 (or part thereof) of modified AGI in excess of the relevant threshold.

The remainder of the CTC, plus any amount of ODTC, is further reduced by \$50 for each \$1,000 (or part thereof) that exceeds \$200,000 (\$400,000 for married taxpayers filing a joint return) of modified AGI. Larger families follow a modified phaseout rule that extends the AGI range of the phaseout.

For taxable year 2021 only, taxpayers may receive up to 50 percent of their estimated total CTC (including ACTC) in advance, in a series of periodic payments. These payments will be issued from July to December of 2021. A taxpayer may receive up to 50 percent of their otherwise allowable credit based on information reported on their 2020 individual income tax return (or the 2019 return if the 2020 return is not available).

Taxpayers may opt out of advance payments using a designated Internal Revenue Service (IRS) portal. The portal may also be used to report changes in circumstances during the year that affect taxable year 2021 CTC eligibility. A taxpayer's Federal income tax will be increased, dollar-for-dollar, if their total CTC advance payments during 2021 exceeds the amount of the CTC to which they are eventually entitled. However, safe harbor rules may reduce the additional income tax owed depending on the taxpayer's modified AGI.

#### CTC for taxable years 2022-2025 (TCJA in effect, ARP changes expired)

For taxable years 2022 through 2025, a taxpayer may claim a CTC of up to \$2,000 per qualifying child, only part of which is refundable. To be a qualifying child in these taxable years, a child must be under age 17 and have an SSN valid for work at the time the return is due.

A taxpayer without sufficient Federal income tax liability to claim the full CTC can claim the ACTC. The ACTC will be the lesser of (1) \$1,400 per qualifying child, and (2) 15 percent of earnings in excess of \$2,500, up to the amount of any unclaimed CTC.

As in taxable year 2021, a taxpayer may claim a \$500 ODTC for all children and other dependents for whom a CTC may not be claimed. The sum of the CTC (including any ACTC) and the ODTC will be reduced by \$50 for each \$1,000 that exceeds \$200,000 of modified AGI (or \$400,000 for married taxpayers filing a joint return).

The \$1,400 maximum refundable amount per qualifying child is indexed for inflation but cannot exceed \$2,000. The maximum credit amount per qualifying child, the income at which the phaseout begins, and the \$2,500 earned income threshold for refundability are not indexed.

### CTC in taxable years after 2025 (TCJA has expired)

For taxable years beginning after December 31, 2025, a taxpayer may claim a CTC of up to \$1,000 per qualifying child. To be a qualifying child, a child must have a TIN at the time the return is due.

A taxpayer without sufficient Federal income tax liability to claim the full \$1,000 credit can claim the ACTC. The ACTC will be the lesser of (1) \$1,000 per qualifying child, and (2) 15 percent of earnings in excess of \$3,000, up to the amount of any unclaimed CTC.

The credit will be reduced for taxpayers with over \$75,000 of modified AGI (or \$110,000 for married taxpayers filing a joint return). No parameters are indexed for inflation.

### U.S. territories (permanent change):

The ARP provides for a reimbursement of mirror code Territories (those whose tax codes mirror the U.S. Federal income tax code: Guam, the U.S. Virgin Islands, and the Northern Mariana Islands) for the costs of this credit in 2021; reimbursement is done on a permanent basis so it will also affect child tax credits in future years. Mirror code Territories also receive administrative costs to set up the advance child tax credit payments in 2021. Puerto Rico's child tax credit will be administered by the IRS directly, with no advance payments. American Samoa may choose to be reimbursed (and issue advance payments of the CTC) or have IRS administer (no advance payments).

### **Reasons for Change**

The ARP expansion of the Child Tax Credit will substantially reduce child poverty by supplementing the earnings of families receiving the tax credit, making the full credit available to a significant number of new families with limited earnings and income tax liability (through complete refundability), and providing regular financial assistance to families throughout the year.

### **Proposal**

The proposal would extend to taxable years beginning before January 1, 2026 most of the ARP changes to the CTC:

1. The age to qualify for the CTC would be increased one additional year to include children who are 17 years old.
2. The maximum tax credit per child would be increased to \$3,600 for qualifying children under 6 and to \$3,000 for all other qualifying children. The portion of the credit in excess of \$2,000 will phase out sequentially with income in excess of \$150,000 of modified AGI for married joint filers or surviving spouses, \$112,500 for head of household filers, and \$75,000 for all other filers, with a modified rule for large families.

3. Allow 50 percent of the otherwise allowable credit to be paid in advance based on information on the previous year's income tax return.

The CTC would be made fully refundable, regardless of earned income, for all taxable years.

Advance payments of the CTC would be automatically deposited by electronic funds transfer into the recipient's bank or card account each month to the maximum extent possible. This disbursement method would help ensure the quick and secure delivery of advance CTC payments.

The Treasury and the Internal Revenue Service will develop strategies to minimize the amount of advance CTC payments that is paid to individuals who are ultimately not eligible for the credit. This effort will include additional statutory recommendations, regulatory changes, data collection, and data matching.

The proposal would be effective for taxable years beginning after December 31, 2021.

## **INCREASE THE EMPLOYER-PROVIDED CHILDCARE TAX CREDIT FOR BUSINESSES**

### **Current Law**

Employers who provide childcare facilities or contract with an outside facility for the provision of care may claim a nonrefundable credit of 25 percent of qualified care expenses and 10 percent of referral expenses, for a maximum total credit of \$150,000 per year. Qualified expenses include the acquisition, construction, rehabilitation or expansion of qualifying properties, operating costs, or contracting with a qualified childcare facility to provide services for the taxpayer's employees.

### **Reasons for Change**

Increased tax credits available to businesses would subsidize the cost and encourage the provision of childcare for employees. On-site childcare is valued by parents, and may generate important benefits such as lower absenteeism, higher employee performance, higher employee retention, and higher employee satisfaction.

### **Proposal**

The proposal would increase the existing tax credit to 50 percent of the first \$1 million of qualified care expenses for a maximum total credit of \$500,000 per year. The portion of the tax credit related to referral expenses would remain at 10 percent with a maximum amount of \$150,000.

The proposal would be effective for taxable years beginning after December 31, 2021.

## **CLOSE LOOPHOLES**

### **TAX CARRIED (PROFITS) INTERESTS AS ORDINARY INCOME**

#### **Current Law**

A partnership is not subject to Federal income tax. Instead, an item of income or loss of the partnership retains its character and flows through to the partners who must include such item on their tax returns. Generally, certain partners receive partnership interests in exchange for contributions of cash and/or property, while certain partners (not necessarily other partners) receive partnership interests, typically interests in future partnership profits referred to as “profits interests” or “carried interests,” in exchange for services. Accordingly, if and to the extent a partnership recognizes long-term capital gain, the partners, including partners who provide services, will reflect their shares of such gain on their tax returns as long-term capital gain. If the partner is an individual, such gain would be taxed at the reduced rates for long-term capital gains. Gain recognized on the sale of a partnership interest, whether it was received in exchange for property, cash, or services, is generally capital gain. Section 1061 of the Internal Revenue Code (Code) generally extends the long-term holding period requirement for certain capital gains resulting from partnership property dispositions and from partnership interest sales, from one year to three years.

Under current law, income attributable to a profits interest is generally subject to self-employment tax, except to the extent the partnership generates types of income that are excluded from self-employment taxes, e.g., capital gains, certain interest, and dividends. A limited partner’s distributive share is generally excluded from self-employment tax under section 1402(a)(13) of the Code.

#### **Reasons for Change**

Although profits interests are structured as partnership interests, the income allocable to such interests is received in connection with the performance of services. A service provider’s share of the income of a partnership attributable to a carried interest should be taxed as ordinary income and subject to self-employment tax because such income is derived from the performance of services. By allowing service partners to receive capital gains treatment on labor income without limit, even with the holding period extension provided by section 1061, the current system creates an unfair and inefficient tax preference. Activity among large private equity firms and investment funds has increased the breadth and cost of this tax preference, with some of the highest-income Americans benefiting from this preferential tax treatment.

#### **Proposal**

The proposal would generally tax as ordinary income a partner’s share of income on an “investment services partnership interest” (ISPI) in an investment partnership, regardless of the character of the income at the partnership level, if the partner’s taxable income (from all sources) exceeds \$400,000. Accordingly, such income would not be eligible for the reduced rates that apply to long-term capital gains. In addition, the proposal would require partners in such

investment partnerships to pay self-employment taxes on such income. In order to prevent income derived from labor services from avoiding taxation at ordinary income rates, this proposal assumes that the gain recognized on the sale of an ISPI would generally be taxed as ordinary income, not as capital gain, if the partner is above the income threshold. To ensure more consistent treatment with the sales of other types of businesses, the Administration remains committed to working with Congress to develop mechanisms to assure the proper amount of income recharacterization where the business has goodwill or other assets unrelated to the services of the ISPI holder.

An ISPI is a profits interest in an investment partnership that is held by a person who provides services to the partnership. A partnership is an investment partnership if substantially all of its assets are investment-type assets (certain securities, real estate, interests in partnerships, commodities, cash or cash equivalents, or derivative contracts with respect to those assets), but only if over half of the partnership's contributed capital is from partners in whose hands the interests constitute property not held in connection with a trade or business. To the extent (1) the partner who holds an ISPI contributes "invested capital" (which is generally money or other property) to the partnership, and (2) such partner's invested capital is a qualified capital interest (which generally requires that (a) the partnership allocations to the invested capital be made in the same manner as allocations to other capital interests held by partners who do not hold an ISPI and (b) the allocations to these non-ISPI holders are significant), income attributable to the invested capital would not be recharacterized. Similarly, the portion of any gain recognized on the sale of an ISPI that is attributable to the invested capital would be treated as capital gain. However, "invested capital" will not include contributed capital that is attributable to the proceeds of any loan or advance made or guaranteed by any partner or the partnership (or any person related to such persons).

Also, any person who performs services for any entity and holds a "disqualified interest" in the entity is subject to tax at rates applicable to ordinary income on any income or gain received with respect to the interest, if the person's taxable income (from all sources) exceeds \$400,000. A "disqualified interest" is defined as convertible or contingent debt, an option, or any derivative instrument with respect to the entity (but does not include a partnership interest, stock in certain taxable corporations, or stock in an S corporation). This is an anti-abuse rule designed to prevent the avoidance of the property through the use of compensatory arrangements other than partnership interests. Other anti-abuse rules may be necessary.

The proposal is not intended to adversely affect qualification of a real estate investment trust owning a profits interest in a real estate partnership.

The proposal would repeal section 1061 for taxpayers with taxable income (from all sources) in excess of \$400,000 and would be effective for taxable years beginning after December 31, 2021.

## **REPEAL DEFERRAL OF GAIN FROM LIKE-KIND EXCHANGES**

### **Current Law**

Currently, owners of appreciated real property used in a trade or business or held for investment can defer gain on the exchange of the property for real property of a “like kind.” As a result, the tax on the gain is deferred until a later recognition event, provided that certain requirements are met.

### **Reasons for Change**

The proposal would treat the exchanges of real property used in a trade or business (or held for investment) similarly to sales of real property, resulting in fewer distortions.

The change would raise revenue while increasing the progressivity of the tax system.

### **Proposal**

The proposal would allow the deferral of gain up to an aggregate amount of \$500,000 for each taxpayer (\$1 million in the case of married individuals filing a joint return) each year for real property exchanges that are like kind. Any gains from like-kind exchanges in excess of \$500,000 (or \$1 million in the case of married individuals filing a joint return) during a taxable year would be recognized by the taxpayer in the year the taxpayer transfers the real property subject to the exchange.

The proposal would be effective for exchanges completed in taxable years beginning after December 31, 2021.

## **MAKE PERMANENT EXCESS BUSINESS LOSS LIMITATION OF NONCORPORATE TAXPAYERS**

### **Current Law**

Section 461(l) of the Internal Revenue Code limits the extent to which pass-through business losses may be used to offset other income. In particular, for taxable years beginning after December 31, 2020, and before January 1, 2027, noncorporate taxpayers may not deduct an “excess business loss” from taxable income. Instead, these losses are carried forward to subsequent taxable years as net operating losses.

Excess business loss is defined as the excess of losses from business activities over the sum of (a) gains from business activities, and (b) a specified threshold amount. In 2021, these thresholds are \$524,000 for married couples filing jointly and \$262,000 for all other taxpayers; these amounts are indexed for inflation thereafter. The determination of excess business loss is made at the taxpayer level, aggregating across all business activities. However, gains or losses attributable to any trade or business of performing services as an employee are not considered.

### **Reasons for Change**

The proposal would bring the tax treatment of losses from nonpassive pass-through business activities closer in line with the tax treatment of losses from corporations and passive pass-through business activities.

Corporate losses do not flow through to individual owners. Instead, they are carried forward (or backward) to other taxable years to offset other income sources derived from the same business.

Losses from passive pass-through business activities face somewhat less restrictive constraints. They may generally only be used to offset income derived from other passive pass-through business activities. Generally, they may not offset other income sources, such as wage income.

By constraining individuals’ abilities to offset income sources such as wages with nonpassive pass-through business losses, section 461(l) creates a more similar tax regime for business losses across different forms of business organization and types of business activity. However, the provision is set to expire in 2027.

### **Proposal**

The proposal would make permanent the section 461(l) excess business loss limitation on noncorporate taxpayers.

The proposal would be effective for taxable years beginning after December 31, 2026.

## **IMPROVE COMPLIANCE**

### **IMPLEMENT A PROGRAM INTEGRITY ALLOCATION ADJUSTMENT AND PROVIDE ADDITIONAL FUNDING FOR TAX ADMINISTRATION**

#### **Current Law**

Almost all Internal Revenue Service (IRS) operating costs are funded by congressional appropriations. Previous Administrations and Congresses have used a budget mechanism called a program integrity allocation adjustment to increase congressional allocations for annual budget appropriations. Under the mechanism, funding above the discretionary levels specified in the annual congressional appropriations process is granted for certain program integrity purposes, where the term “program integrity” broadly refers to activity that maintains the effectiveness of a government program. In the past, Congress has appropriated funding to the IRS through a program integrity allocation adjustment for enforcement and compliance programs that generate positive net revenue.

#### **Reasons for Change**

The IRS’s operating budget fell by about 20 percent in constant dollars between 2010 and 2020. At the same time, the IRS needed additional resources to identify and respond to many emerging areas of noncompliance, implement some of the most significant tax legislative changes in decades, and stand up several new or expanded programs in response to a global pandemic and economic crisis. A robust and reliable stream of resources is critical for the IRS to maintain its enforcement functions, expand and improve its compliance programs, and help the agency increase its effectiveness and efficiency. A visible, robust presence of IRS functions helps promote voluntary compliance and ensure confidence in the tax system.

#### **Proposal**

The Administration proposes a multi-year adjustment to the discretionary spending allocation for the IRS Enforcement and Operations Support accounts. The total adjustment would be \$6.7 billion over the budget window. The proposed allocation adjustment for 2022 would fund \$417 million in enforcement and compliance initiatives and investments above current levels of activity. The adjustment would cover inflation and the cost to sustain the new initiatives and investments through 2031.

In addition, the Administration proposes to provide the IRS \$72.5 billion in mandatory funding over the budget window. A portion of these proposed IRS resources would fund improvements and expansions in enforcement and compliance activities. The proposed mandatory funding would also provide the IRS with resources to enhance its information technology capability, including implementation of the proposed financial information reporting regime, and to strengthen taxpayer service.

The proposal would direct that additional resources go toward enforcement against those with the highest incomes, rather than Americans with actual income of less than \$400,000.

Details about these IRS funding programs are provided elsewhere in the Budget.

## **INTRODUCE COMPREHENSIVE FINANCIAL ACCOUNT REPORTING TO IMPROVE TAX COMPLIANCE**

### **Current Law**

Business income is subject to limited information reporting. Current information reporting of gross receipts exists for only certain types of revenue (from Forms 1099-MISC, 1099-NEC, and 1099-K), and there is no information reporting on total deductible expenses.

### **Reasons for Change**

The tax gap for business income (outside of large corporations) from the most recently published Internal Revenue Service (IRS) estimates is \$166 billion a year.<sup>1</sup> The scale of this revenue loss is driven primarily by the lack of comprehensive information reporting and the resulting difficulty identifying noncompliance outside of an audit. While the net misreporting percentage is only 5 percent for income subject to substantial information reporting, the net misreporting percentage for certain categories of business income exceeds 50 percent.

Requiring comprehensive information reporting on the inflows and outflows of financial accounts will increase the visibility of gross receipts and deductible expenses to the IRS. Increased visibility of business income will enhance the effectiveness of IRS enforcement measures and encourage voluntary compliance.

### **Proposal**

This proposal would create a comprehensive financial account information reporting regime. Financial institutions would report data on financial accounts in an information return. The annual return will report gross inflows and outflows with a breakdown for physical cash, transactions with a foreign account, and transfers to and from another account with the same owner. This requirement would apply to all business and personal accounts from financial institutions, including bank, loan, and investment accounts,<sup>2</sup> with the exception of accounts below a low de minimis gross flow threshold of \$600 or fair market value of \$600.

Other accounts with characteristics similar to financial institution accounts will be covered under this information reporting regime. In particular, payment settlement entities would collect Taxpayer Identification Numbers (TINs) and file a revised Form 1099-K expanded to all payee accounts (subject to the same de minimis threshold), reporting not only gross receipts but also gross purchases, physical cash, as well as payments to and from foreign accounts, and transfer inflows and outflows.

Similar reporting requirements would apply to crypto asset exchanges and custodians. Separately, reporting requirements would apply in cases in which taxpayers buy crypto assets

---

<sup>1</sup> Computed from individual income tax business income, small corporations, and self-employment tax components.

<sup>2</sup> Current income reporting by financial institutions would be expanded to all entities, including certain corporations. Interest payments would be included in the loan account reporting. Transferee information would be reported for all real estate transactions on Form 1099-S.

from one broker and then transfer the crypto assets to another broker, and businesses that receive crypto assets in transactions with a fair market value of more than \$10,000 would have to report such transactions.

The Secretary would be given broad authority to issue regulations necessary to implement this proposal.

The proposal would be effective for tax years beginning after December 31, 2022.

## **IMPROVE TAX ADMINISTRATION**

### **INCREASE OVERSIGHT OF PAID TAX RETURN PREPARERS**

#### **Current Law**

##### Oversight of paid preparers by the Internal Revenue Service (IRS)

Taxpayers are increasingly turning to paid tax return preparers and software to assist them in meeting their tax filing obligations. Under U.S.C. Title 31 (Money and Finance), Section 330 – Practice before the Department, the Secretary has the authority to regulate practice before the IRS. Regulations under that section, referred to as “Circular 230,” regulate the practice of licensed attorneys, certified public accountants, and enrolled agents and actuaries. In 2009, in response to concerns about the lack of regulation of unlicensed and unenrolled paid tax return preparers, the IRS conducted a formal review of its regulation of paid tax return preparers. After significant consideration and input from taxpayers, tax professionals, and other stakeholders, Treasury and the IRS amended Circular 230 to regulate the practice of all paid tax return preparers, including individuals who are unlicensed and unenrolled. Paid tax return preparers challenged these regulations in *Loving v. Commissioner*. The Court of Appeals for the District of Columbia Circuit determined that these regulations exceeded the authority of the IRS.

##### Penalties on ghost preparers

By law, anyone who is paid to prepare or assists in preparing federal tax returns must identify themselves on those returns by using the prescribed identifying number. Under the applicable regulations, that number is a valid Preparer Tax Identification Number, or PTIN. Paid tax return preparers must sign and include their PTIN on the return. Paid tax return preparers who fail to identify themselves on tax returns are generally referred to as “ghost preparers.” The penalty for failure to identify a paid tax return preparer is \$50 per return, not to exceed \$25,000 per preparer per year. The penalty must be assessed within three years after the return has been filed.

#### **Reasons for Change**

These proposals would improve compliance by increasing the tools available to ensure that those who prepare tax returns do so in a high-quality and professional manner.

Paid tax return preparers have an important role in tax administration because they assist taxpayers in complying with their obligations under the tax laws. Incompetent and dishonest tax return preparers increase collection costs, reduce revenues, disadvantage taxpayers by potentially subjecting them to penalties and interest as a result of incorrect returns, and undermine confidence in the tax system. Regulation of paid tax return preparers, in conjunction with diligent enforcement, will help promote high quality services from paid tax return preparers, will improve voluntary compliance, and will foster taxpayer confidence in the fairness of the tax system. The lack of authority to provide federal oversight on tax preparers can result in greater non-compliance by taxpayers due to their preparers’ incompetence or unscrupulous conduct. This potentially harms taxpayers who become subject to penalties or avoidable costs of litigation.

It also results in less revenue to the IRS when the noncompliance is not mitigated during return processing.

Requiring paid tax return preparers to obtain and report a PTIN improves tax compliance. Ghost preparers are compensated for preparing returns but refuse to identify themselves on the returns purposely to avoid detection. These preparers may be: (1) attempting to avoid IRS scrutiny of positions taken on the return; (2) already subject to a compliance action or under a federal court order barring them from further return preparation; or (3) underreporting their own income from tax preparation, thereby increasing the tax gap.

The IRS spends significant resources identifying and investigating those paid tax return preparers who fail to include a valid identifying number on returns they prepared. The costs to the IRS for a single infraction can easily exceed the \$50 penalty per return.

## **Proposal**

### **Increase oversight of paid tax return preparers**

The proposal would amend Title 31, U.S. Code (Money and Finance) to provide the Secretary with explicit authority to regulate all paid preparers of Federal tax returns, including by establishing mandatory minimum competency standards.

The proposal would be effective on the date of enactment.

### **Increase penalties on ghost preparers**

The proposal would increase the penalty amount to the greater of \$500 per return or 100 percent of the income derived per return by a ghost preparer. The proposal would also increase the limitations period during which the penalty may be assessed from three years to six years.

The proposal would be effective for returns required to be filed after December 31, 2021.

## **ENHANCE ACCURACY OF TAX INFORMATION**

### **Current Law**

#### **Electronic filing of forms and returns**

Generally, the Secretary of the Treasury or her delegate (Secretary) may issue regulations that require electronic filing of returns (as opposed to paper filing of returns) if the taxpayer files a minimum number of returns during a year. For example, corporations that have assets of \$10 million or more and file at least 250 returns of any type during a calendar year are required to file electronically their Form 1120/1120S income tax returns. Partnerships with more than 100 partners are required to file electronically, regardless of how many returns they file.

Before requiring electronic filing, the Internal Revenue Service (IRS) and the Department of the Treasury are generally required to take into account the ability of taxpayers to comply at a reasonable cost. Taxpayers may request waivers of the electronic filing requirement if they cannot meet that requirement due to technological constraints, or if compliance with the requirement would result in undue financial burden on the taxpayer. In general, the Secretary may not require individuals, estates, and trusts to file their income tax returns electronically.

#### **Reportable payments subject to backup withholding**

Backup withholding applies to a reportable payment if a payee fails to furnish the payee's taxpayer identification number (TIN) to the payor in the manner required. Currently, the IRS may only require that the payee furnish the TIN under penalties of perjury with respect to interest, dividends, patronage dividends, and amounts subject to broker reporting. Accordingly, payees of these reportable payments are generally required to provide payors with a certified TIN using a Form W-9, Request for Taxpayer Identification Number and Certification under penalties of perjury. Payees of other reportable payments subject to backup withholding may furnish their TINs in other ways, including orally, unless the IRS has notified a payor that the TIN furnished is incorrect. This applies to payments under sections 6041, 6041A, 6050A, 6050N, and 6050W of the Internal Revenue Code.

### **Reasons for Change**

Facilitating more accurate tax information supports the broader goals of improving IRS service to taxpayers, enhancing compliance, and modernizing tax administration.

Expanding electronic filing will help provide tax return information to the IRS in a more uniform electronic form, which will enhance the ability of the IRS to better target its audit activities. This in turn can reduce burdens on compliant taxpayers by decreasing the probability that they will be among those selected for audit. Consequently, increased electronic filing of returns may improve satisfaction and confidence in the filing process. The proposal would provide the Secretary broader authority to require electronic filing that would facilitate the IRS's compliance risk assessment process and allow for more efficient tax administration, particularly with respect to

large or complex business entities and certain types of transactions that may warrant greater scrutiny.

The intent of backup withholding is to serve as an enforcement tool in ensuring payors and payees are compliant with their reporting obligations. Requiring payees to certify their TINs to payors on a Form W-9 or equivalent form reduces the level of enforcement necessary to ensure information is accurate. Information reporting increases compliance by providing taxpayers with the information that they need to accurately complete their tax returns and by providing the IRS with information that can be used to verify taxpayer compliance. Without accurate taxpayer identifying information, information reporting requirements impose avoidable burdens on businesses and the IRS.

### **Proposal**

#### **Expand the Secretary's authority to require electronic filing for forms and returns**

Electronic filing would be required for returns filed by taxpayers reporting larger amounts or that are complex business entities, including: (1) income tax returns of individuals with gross income of \$400,000 or more; (2) income, estate, or gift tax returns of all related individuals, estates, and trusts with assets or gross income of \$400,000 or more in any of the three preceding years; (3) partnership returns for partnerships with assets or any item of income of more than \$10 million in any of the three preceding years; (4) partnership returns for partnerships with more than 10 partners; (5) returns of REITs, REMICs, RICs, and all insurance companies; and (6) corporate returns for corporations with \$10 million or more in assets or more than 10 shareholders. Further, electronic filing would be required for the following forms: (1) Forms 8918, "Material Advisor Disclosure Statement"; (2) Forms 8886, "Reportable Transaction Disclosure Statement"; (3) Forms 1042, "Annual Withholding Tax Return for U.S. Source Income of Foreign Persons"; (4) Forms 8038-CP, "Return for Credit Payments to Issuers of Qualified Bonds"; and (5) Forms 8300, "Report of Cash Payments Over \$10,000 Received in a Trade or Business."

Return preparers that expect to prepare more than 10 corporation income tax returns or partnership returns would be required to file such returns electronically.

The Secretary would also be authorized to determine which additional returns, statements, and other documents must be filed in electronic form in order to ensure the efficient administration of the internal revenue laws without regard to the number of returns that a person files during a year.

#### **Improve information reporting for reportable payments subject to backup withholding**

The proposal would also treat all information returns subject to backup withholding similarly. Specifically, the IRS would be permitted to require payees of any reportable payments to furnish their TINs to payors under penalty of perjury. The proposal would be effective for payments made after December 31, 2021.

## **EXPAND BROKER INFORMATION REPORTING WITH RESPECT TO CRYPTO ASSETS**

### **Current Law**

Under current law, any person doing business as a broker is required to report certain information about their customers to the Internal Revenue Service (IRS), such as the identity of each customer, the gross proceeds from sales of securities and certain commodities for such customer, and, for covered securities, cost basis information. A broker means a dealer, barter exchange, or a person who, for a consideration, regularly acts as a middleman with respect to property or services. A customer means any person for whom the broker has transacted any business.

Pursuant to an income tax treaty or other international agreement to which the United States is a party and that authorizes the exchange of tax information with a foreign jurisdiction (information exchange agreements), the United States may receive, as well as provide, tax information. Information that is foreseeably relevant for tax administration may be exchanged under these agreements, including information about the identity of beneficial owners of entities.

### **Reasons for Change**

Tax evasion using crypto assets is a rapidly growing problem. Since the industry is entirely digital, taxpayers can transact with offshore crypto exchanges and wallet providers without leaving the United States. The global nature of the crypto market offers opportunities for U.S. taxpayers to conceal assets and taxable income by using offshore crypto exchanges and wallet providers. U.S. taxpayers also attempt to avoid U.S. tax reporting by creating entities through which they can act. To combat the potential for crypto assets to be used for tax evasion, third party information reporting is critical to help identify taxpayers and bolster voluntary tax compliance.

The United States has established a broad network of information exchange relationships with foreign jurisdictions under information exchange agreements. The information obtained through those agreements has been central to recent successful IRS enforcement efforts against offshore tax evasion involving traditional assets. The strength of those information exchange relationships depends, however, on cooperation and reciprocity. Further, as the IRS has gained more experience with exchange of tax information on an automatic basis with appropriate partner jurisdictions, it is clear that a jurisdiction's willingness to share information on an automatic basis with the United States often depends on the United States' willingness and ability to reciprocate by exchanging comparable information.

In order to ensure that the United States is able to benefit from a global automatic exchange of information framework with respect to offshore crypto assets and receive information about U.S. beneficial owners it is essential that United States reciprocally provide information on foreign beneficial owners of certain entities transacting in crypto assets with U.S. brokers.

## **Proposal**

The proposal would expand the scope of information reporting by brokers who report on crypto assets to include reporting on certain beneficial owners of entities holding accounts with the broker. This would allow the United States to share such information on an automatic basis with appropriate partner jurisdictions, in order to reciprocally receive information on U.S. taxpayers that directly or through passive entities engage in crypto asset transactions outside the United States pursuant to a global automatic exchange of information framework.

The proposal would require brokers, including entities such as U.S. crypto asset exchanges and hosted wallet providers, to report information relating to certain passive entities and their substantial foreign owners when reporting with respect to crypto assets held by those entities in an account with the broker. The proposal, if adopted, and combined with existing law, would require a broker to report gross proceeds and such other information as the Secretary may require with respect to sales of crypto assets with respect to customers, and in the case of certain passive entities, their substantial foreign owners.

The proposal would be effective for returns required to be filed after December 31, 2022.

## **ADDRESS TAXPAYER NONCOMPLIANCE WITH LISTED TRANSACTIONS**

### **Current Law**

Generally, the assessment of any internal revenue tax must be made within three years after the date the return is filed. A special rule applies if a taxpayer fails to include on any return or statement information that is required with respect to a listed transaction. A listed transaction means a reportable transaction which is the same as, or substantially similar to, a transaction specifically identified by the Secretary of the Treasury or her delegate (Secretary) as a tax avoidance transaction. The period for assessment of tax with respect to a listed transaction does not expire before one year after the earlier of the date the required information is furnished to the Secretary or the date that a material advisor makes the required disclosure.

The Department of the Treasury and Internal Revenue Service (IRS) have identified “Intermediary Transaction Tax Shelters” as listed transactions that require disclosure on a tax return to avoid certain penalties. These transactions typically involve a sale of a controlling interest in the stock of a C corporation to another entity (an intermediary entity) that is undertaken as part of a plan to cause the C corporation to recognize income or gain from the sale of its assets shortly before or shortly after the sale of the C corporation’s stock.

In a typical case, an intermediary entity borrows funds to purchase the stock of the C corporation from the C corporation’s shareholders, and the consideration received by the C corporation from the sale of its assets is effectively used to repay that loan. These transactions are structured so that when a C corporation’s assets are sold, the C corporation is ultimately left with insufficient assets from which to pay the tax owed from the asset sale. In many cases, the intermediary does not pay the corporate income tax liability and is judgment-proof, frustrating the IRS’ ability to collect taxes that are legally owed.

The transaction may yield the selling shareholders a higher sales price for their C corporation stock than could be supported if the corporate income tax liability were to be paid. However, outside of the consolidated return context, former shareholders of a C corporation generally are not liable for any unpaid income taxes, interest, additions to tax, or penalties owed by the C corporation.

### **Reasons for Change**

Additional time is needed for the IRS to conduct examinations and assess taxes in connection with listed transactions, which may be complex in nature and require a thorough examination of the relevant facts.

Despite Intermediary Transaction Tax Shelters having been identified by the IRS as listed transactions since 2001, shareholders, corporate officers, directors, and their advisors have continued to engage in Intermediary Transaction Tax Shelters or substantially similar transactions. Because the unpaid Federal tax evaded through these transactions is reflected in the price paid for the corporation’s stock, either the buyer or the seller could be liable for such unpaid amounts. Although the Federal government generally has adequate tools under current

law to collect amounts from the buyer or its lenders, these parties typically do not have assets in the United States against which the IRS can proceed to collect the unpaid taxes. The selling shareholders are typically the only parties with sufficient assets in the United States against which the IRS could proceed for collection; however, it has proven difficult for the IRS to effectively collect the unpaid Federal taxes from these selling shareholders under current law. Even though the IRS has pursued litigation to enforce collection from the selling shareholders of several corporations, these actions have yielded mixed results in factually similar cases. Thus, existing law does not adequately protect the Federal government's interest in collecting the amounts due from selling shareholders as a result of these transactions.

## **Proposal**

### **Extend statute of limitations for listed transactions**

The proposal would increase the limitations period under section 6501(a) of the Internal Revenue Code (Code) for returns reporting benefits from listed transactions from three years to six years. The proposal also would increase the limitations period for listed transactions under section 6501(c)(10) from one year to three years. This proposed change would be effective on the date of enactment.

### **Impose liability on shareholders to collect unpaid income taxes of applicable corporations**

The proposal would also add a new section to the Code that would impose on shareholders who sell the stock of an "applicable C corporation" secondary liability (without resort to any State law) for payment of the applicable C corporation's income taxes, interest, additions to tax, and penalties to the extent of the sales proceeds received by the shareholders. The proposal applies to shareholders who, directly or indirectly, dispose of a controlling interest (at least 50 percent) in the stock of an applicable C corporation within a 12-month period in exchange for consideration other than stock issued by the acquirer of the applicable C corporation stock. The secondary liability would arise only after the applicable C corporation was assessed income taxes, interest, additions to tax, and penalties with respect to any taxable year within the 12-month period before or after the date that its stock was disposed of and the applicable C corporation did not pay such amounts within 180 days after assessment.

For purposes of the proposal, an applicable C corporation is any C corporation (or successor) two thirds or more of whose assets consist of cash, passive investment assets, or assets that are the subject of a contract of sale or whose sale has been substantially negotiated on the date that a controlling interest in its stock is sold. The proposal would grant the Department of the Treasury authority to prescribe regulations necessary or appropriate to carry out the proposal.

The proposal would not apply with respect to dispositions of a controlling interest (1) in the stock of a C corporation or real estate investment trust with shares traded on an established securities market in the United States, (2) in the shares of a regulated investment company that offers shares to the public, or (3) to an acquirer whose stock or securities are publicly traded on an established market in the United States, or is consolidated for financial reporting purposes with such a public issuer of stock or securities.

The proposal would close the taxable year of an applicable C corporation as of the later of a disposition of a controlling interest in its stock or a disposition of all of its assets. The proposal would also amend the Code to provide that the amount that the selling shareholder was secondarily liable for under this proposal would constitute a deficiency that was governed by the general notice and demand rules of the Code but with an additional year added to the statute of limitations for assessment. The proposal would not limit the government's ability to pursue any cause of action available under current law against any person.

The proposed changes above would be effective for sales of controlling interests in the stock of applicable C corporations occurring on or after April 10, 2013.

## **MODIFY TAX ADMINISTRATION RULES**

### **Current Law**

#### Centralized partnership audit regime

Section 6226 of the Internal Revenue Code (Code) requires reviewed year partners to include in their reporting year taxes an amount equal to the change in tax that would have occurred for the reviewed year and all years between the reviewed year and the reporting year if the partnership adjustments were taken into account by the partners in those taxable years. The statutory formula provides, however, that for each of those years, the partners take into account the changes in tax liability that would have occurred in those years by increasing or decreasing their tax liability on their reporting year return by the sum of those changes in tax. If the calculation results in a net decrease, current law treats that net decrease as an amount that can be used by the partners to reduce their reporting year income tax liabilities to zero. Any excess of that amount not offset with an income tax due in the reporting year at the partner level does not result in an overpayment that can be refunded. The excess amount cannot be carried forward and is permanently lost.

#### Requisite supervisory approval of penalty included in notice

Section 6751(b)(1) provides that no penalty under Title 26 shall be assessed unless the initial determination of such assessment is personally approved in writing by the immediate supervisor of the individual making such determination or such higher-level official as the Secretary of the Treasury or her delegate may designate. This section applies to all civil penalties imposed by the Code, except for penalties under section 6651 for failure to file tax returns or to pay tax; section 6654 for failure by individuals to pay estimated income tax; section 6655 for failure by corporations to pay estimated income tax; section 6662 with respect to an overstatement of certain qualified charitable contributions; and penalties that are automatically calculated through electronic means. With respect to individuals, the Internal Revenue Service (IRS) has the burden of production in a United States Tax Court proceeding challenging penalties to show the penalties are appropriate.

### **Reasons for Change**

The inability for reviewed year partners to receive the full benefit of any reductions in tax as a result of partnership adjustments can lead to situations where a partner may be viewed as being taxed more for an adjustment made under the centralized partnership audit regime than the partner would have outside of the centralized partnership audit regime.

With respect to obtaining supervisory approval pursuant to section 6751(b), recent court decisions have led to uncertainty concerning, among other things, the requisite timing of the approval and qualified approvers. Judicial opinions have required supervisory approval of a penalty before the penalty is communicated to a taxpayer when a taxpayer still has the opportunity to raise defenses to the penalty. As a result, a supervisor may not have all the information relevant to making a decision whether a penalty is appropriate by the deadline

certain opinions have imposed. Many judicial opinions have barred penalties that a supervisor approved before assessment and before any opportunity for judicial review. When supervisory approval did not meet judicially-created deadlines, courts have barred penalties without considering whether the penalties were appropriate under the facts of the particular case. These barred penalties have included accuracy-related penalties where the taxpayers did not show they acted with reasonable care for underpayments on their returns. Barred penalties have also included those arising from understatements attributable to reportable transactions that the IRS identified as tax avoidance transactions or that taxpayers entered into with a significant purpose of income tax avoidance or evasion. In some cases, barred penalties have even included civil fraud penalties where the IRS has met its burden of showing by clear and convincing evidence that an underpayment of tax was attributable to fraud. These cases undercut the purpose of penalties to deter taxpayer non-compliance with tax laws, based on unclear, hard to apply rules that often apply retroactively.

### **Proposal**

#### **Amend the centralized partnership audit regime to address tax decreases greater than a partner's income tax liability**

The proposal would amend sections 6226 and 6401 of the Code to provide that the amount of the net negative change in tax that exceeds the income tax liability of a partner in the reporting year is considered an overpayment under section 6401 and may be refunded.

#### **Modify requisite supervisory approval of penalty included in notice**

The proposal also clarifies that a penalty can be approved at any time prior to the issuance of a notice from which the Tax Court can review the proposed penalty and, if the taxpayer petitions the court, the IRS may raise a penalty in the court if there is supervisory approval before doing so. For any penalty not subject to Tax Court review prior to assessment, supervisory approval may occur at any time before assessment. In addition, this proposal expands approval authority from an "immediate supervisor" to any supervisory official, including those that are at higher levels in the management structure or others responsible for review of a potential penalty. Finally, this proposal eliminates the written approval requirement under section 6662 for underpayments of tax; section 6662A for understatements with respect to reportable transactions; and section 6663 for fraud penalties.

The proposals would be effective upon enactment.

## **AUTHORIZE LIMITED SHARING OF BUSINESS TAX RETURN INFORMATION TO MEASURE THE ECONOMY MORE ACCURATELY**

### **Current Law**

Current law authorizes the Internal Revenue Service (IRS) to disclose certain Federal tax information (FTI) for governmental statistical use. Business FTI may be disclosed to officers and employees of the Census Bureau for all businesses. Similarly, business FTI may be disclosed to officers and employees of the Bureau of Economic Analysis (BEA), but only for corporate businesses. Specific items permitted to be disclosed are detailed in the associated Treasury Regulations. The Bureau of Labor Statistics (BLS) is currently not authorized to receive FTI.

### **Reasons for Change**

BEA's limited access to business FTI and BLS's lack of access to business FTI prevent BEA, BLS, and Census Bureau from synchronizing their business lists. Synchronization of business lists would significantly improve the consistency and quality of sensitive economic statistics including productivity, payroll, employment, and average hourly earnings.

In addition, given the growth of non-corporate businesses, especially in the service sector, the current limitation on BEA's access to corporate FTI impedes the measurement of income and international transactions in the National Accounts. The accuracy and consistency of income data are important to the formulation of fiscal policies.

Further, the Census Bureau's Business Register is constructed using both FTI and non-tax business data derived from the Economic Census and current economic surveys. Because this non-tax business data is inextricably comingled with FTI, it is not possible for the Census Bureau to share data with BEA and BLS in any meaningful way.

### **Proposal**

The proposal would give officers and employees of BEA access to FTI of those sole proprietorships with receipts greater than \$250,000 and of all partnerships. BEA contractors would not have access to FTI.

The proposal would also give BLS officers and employees access to certain business (and tax-exempt entities) FTI including: TIN; name(s) of the business; business address (mailing address and physical location); principal industry activity (including business description); number of employees and total business-level wages (including wages, tips, and other compensation, quarterly from Form 941, Employer's Quarterly Federal Tax Return, and annually from Forms 943, Employer's Annual Federal Return for Agricultural Employees, and 944, Employer's Annual Federal Tax Return); and sales revenue for employer businesses only. BLS would not have access to individual employee FTI. In other words, the proposal would allow officers and employees of each of BLS, BEA, and the Census Bureau to access the same FTI for businesses, and would permit BLS, BEA, and the Census Bureau to share such FTI amongst themselves (subject to the restrictions described below).

For the purpose of synchronizing BLS and Census Bureau business lists, the proposal would permit employees of State agencies to receive from BLS the following FTI identity items: TIN, business name(s), business address(es), and principal industry activity (including business description). No BLS contractor or State agency contractor would have access to FTI.

The proposal would require any FTI to which BEA and BLS would have access, either directly from the IRS, from the Census Bureau, or from each other, to be used for statistical purposes consistently with the Confidential Information Protection and Statistical Efficiency Act (CIPSEA). The three statistical agencies and State agencies would be subject to taxpayer privacy law, safeguards, and penalties. They would also be subject to CIPSEA confidentiality safeguard procedures, requirements, and penalties. Conforming amendments to applicable statutes would be made as necessary to apply the taxpayer privacy law, including safeguards and penalties to BLS as well as the Census Bureau and BEA. BLS would be required to monitor compliance by State agencies with the prescribed safeguard protocols.

The proposal would be effective upon enactment.

Department of the Treasury

Notes:  
1/ Presentation in this table does not necessarily reflect the order in which these proposals were estimated.

2/ The FY 2022 Budget includes additional receipts effects from the proposal to create a mandatory reemployment services and eligibility assessment program and to account for interactions with proposed spending programs to make community college and child and dependent care more affordable, and to spark further adoption of electric vehicles.

**REVENUE ESTIMATES OF THE  
ADMINISTRATION'S FISCAL YEAR 2022 REVENUE PROPOSALS 1/2/ -- continued**  
(fiscal years, in millions of dollars)

# Good Neighbor Plan for 2015 Ozone NAAQS

## Proposed “Good Neighbor” Plan to Cut Smog Across Much of the United States

### Basic Information

#### Federal Register Citations:

- 87 FR 20036 EXIT <<https://www.federalregister.gov/documents/2022/04/06/2022-04551/federal-implementation-plan-addressing-regional-ozone-transport-for-the-2015-ozone-national-ambient>> (April 6, 2022 Proposed Rule)

#### Docket Number

- EPA\_FRDOC\_0001-28128 EXIT <[https://www.regulations.gov/document/epa\\_frdoc\\_0001-28128](https://www.regulations.gov/document/epa_frdoc_0001-28128)>

## Rule Summary

### How to Comment and Participate in the Public Hearing

EPA will accept comments on this proposal until June 6, 2022. Comments may be submitted through the Federal eRulemaking Portal [EXIT](https://www.regulations.gov/document/epa_frdoc_0001-28128) <[https://www.regulations.gov/document/epa\\_frdoc\\_0001-28128](https://www.regulations.gov/document/epa_frdoc_0001-28128)> or by alternative methods described in the fact sheet.

EPA will hold a public hearing on the proposal on April 21, 2022 <<https://epa.gov/csapr/public-hearing-epas-proposed-good-neighbor-plan-2015-ozone-naaqs>>. If you would like to speak at the public hearing, please complete the registration form [EXIT](https://2015ozonefip-publichearing.eventbrite.com/) <<https://2015ozonefip-publichearing.eventbrite.com/>>.

On February 28, 2022, the Administrator signed a proposed Federal Implementation Plan (FIP) to assure that the 26 states identified in the proposal do not significantly contribute to problems attaining and maintaining the 2015 Ozone National Ambient Air Quality Standards (NAAQS) in downwind states. This action, known as a “Transport Rule” would help states fully resolve their Clean Air Act “good neighbor” obligations for the 2015 Ozone NAAQS.

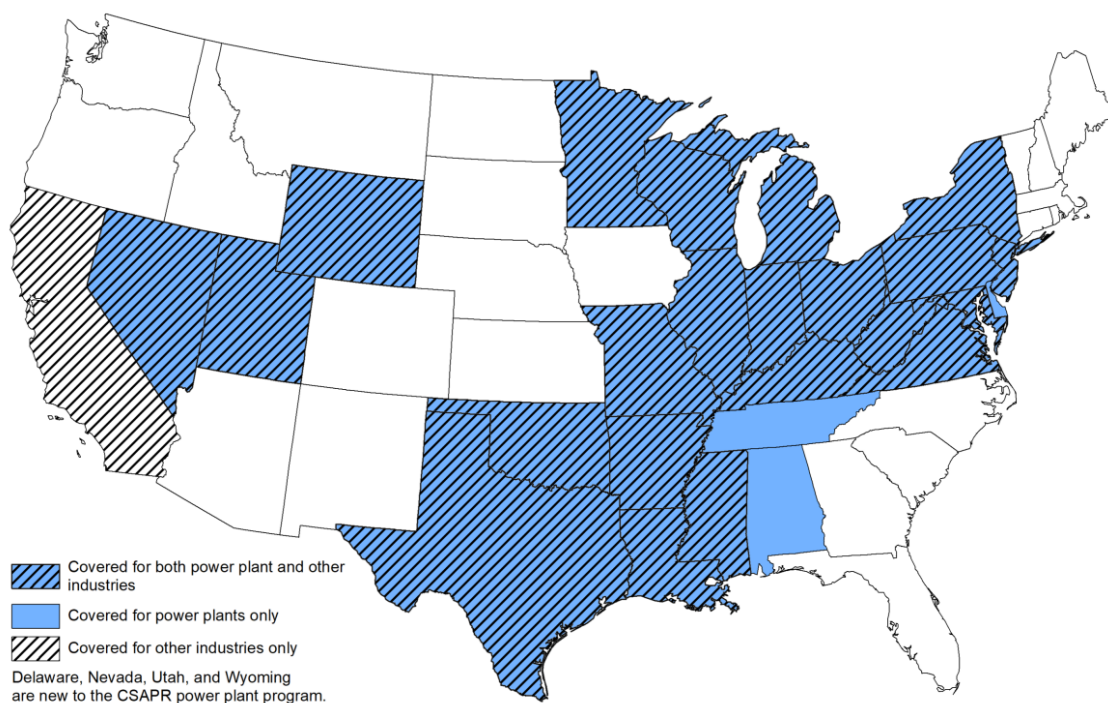

The rule would establish an allowance-based ozone season trading program with nitrogen oxides (NO<sub>x</sub>) emissions budgets for fossil fuel-fired power plants in 25 states. The rule would also establish NO<sub>x</sub> emissions limitations for certain other industrial stationary sources in 23 states.

EPA will hold a public hearing on the proposal and will post details on this page as soon as they are available. The public comment period for the proposal is open for 60 days after publication in the Federal Register.

## Maps

Provided are four maps that show various aspects of the Good Neighbor Plan. Click on each map to see a larger version.

States Covered Under the Power Plant and Other Industries Portions of the Good Neighbor Plan for the 2015 Ozone NAAQS

EGU Emissions Reductions in 2026 Relative to 2021

Non-EGU Emissions Reductions in 2026 Relative to Pre-Proposal Levels

Upwind States Contributing Above 1% to Downwind States in 2023 for the 2015 Ozone NAAQS

## Rule History

### February 28, 2022 - Proposed Good Neighbor Plan for the 2015 Ozone NAAQS

The Environmental Protection Agency proposed significant steps to reduce ozone forming NO<sub>x</sub> emissions. This action would ensure that the 26 states identified in the proposal do not “significantly contribute” to problems attaining and maintaining the 2015 Ozone National Ambient Air Quality Standards (NAAQS) in downwind states through a combination of requirements for power plants and certain other industrial sources.

INTRODUCTION

INT

# Introduction

## Background

Climate change is a crisis impacting communities across the United States. From severe storms and flooding, to wildfires, drought, and extreme heat or cold, Americans are already feeling its effects. As the Federal agency dedicated to creating strong, sustainable, inclusive communities and quality affordable homes, HUD is on the front lines of the nation's efforts to increase resilience to climate impacts.

HUD also plays an essential role in mitigating climate change by reducing greenhouse gas emissions, due to its portfolio of approximately 4.5 million public and assisted housing units<sup>1</sup> and given its role in the development and preservation of affordable housing. HUD's spending on utilities in public and assisted housing is an estimated \$6.9 billion annually and, according to an internal analysis, consumes as much as 14 percent of the agency's total budget and produces an estimated 13.6 million metric tons of carbon emissions each year. HUD is committed to improving the efficiency of public and assisted housing to not only lower carbon emissions, but also to increase housing affordability and quality by allowing more funds to be spent on the provision of housing instead of on utilities.

HUD has significant influence over how the nation's households and communities will respond to the climate crisis. In addition to public and assisted housing, HUD provides mortgage financing for both single-family home buyers and multifamily rental housing. HUD's FHA-insured portfolio consists of 76 million single family insured loans, 11,213 multifamily insured loans (1,405,260 units), 3,825 residential healthcare facilities, and 88 hospitals with \$1.2 trillion, \$111 billion, \$33 billion, and \$6.3 billion respectively of mortgage balances (as of June 30, 2021).

Further, the Department invests billions of dollars every year in housing, infrastructure, and services in neighborhoods and cities across the U.S. through its ever-increasing role in disaster recovery and risk mitigation. This investment includes over \$89.8 billion appropriated since 1993 by Congress for Community Development Block Grant-Disaster Recovery (CDBG-DR) grants, \$15.9 billion of which is allocated for CDBG-Mitigation (CDBG-MIT) for States and local governments that experienced Presidentially-declared disasters in 2015 – 2018. These grants have driven innovation and elevated the national conversation on resilient recovery through such initiatives as Rebuild by Design and the National Disaster Resilience Competition.

The most recent National Climate Assessment from the U.S. Global Change Research Program (USGCRP)<sup>2</sup> underscores how critical HUD's climate change mitigation and adaptation work is to achieving climate justice. It shows that climate change creates new risks and exacerbates existing vulnerabilities in communities across the U.S., presenting growing challenges to human health and safety, quality of life, and economic prosperity. Though these challenges are universal, our nation's low-income families and communities of color are disproportionately impacted by climate change due to historic disinvestment and a longstanding pattern of residential segregation. For low-income households and communities of color, climate change

---

<sup>1</sup> For the purposes of this plan, references to HUD public and assisted housing include public housing, multifamily assisted housing and Housing Choice Vouchers.

<sup>2</sup> *Four National Climate Assessment*, <https://nca2018.globalchange.gov/>

exacerbates existing vulnerabilities in their communities, such as aging infrastructure and the siting of toxic waste facilities.

Responding to this crisis is core to the Department's mission, which is why HUD recently established an internal Climate and Environmental Justice Council with representation at the Assistant Secretary level as well as a staff-level Working Group. HUD's Senior Advisor for Climate Change will lead the Council with support from the Office of Environment and Energy. The Climate and Environmental Justice Council will manage the implementation and monitoring of the climate and environmental justice priorities detailed in this plan. This Council is the main body responsible for the long-term integration of climate and environmental justice into HUD's programs and operations.

## Policy Statement

One of President Biden's first actions in office was Executive Order (EO) 14008, *Tackling the Climate Crisis at Home and Abroad*. It lays out a broad vision for how the Federal government can address climate change while creating economic opportunity. The Department supports the President's message that our nation has limited time to act to avoid the most catastrophic impacts of this crisis and seize the opportunity that tackling climate change presents. HUD will play a critical role in implementing this vision.

It is the policy of the Department to organize and deploy the full capacity of its offices to combat the climate crisis and implement a department-wide approach that reduces greenhouse gas emissions; increases resilience to the impacts of climate change; protects public health; delivers environmental justice; and spurs well-paying union jobs and economic growth. The Department's policy is to do so in a way that delivers on the President's commitment to environmental justice and promoting racial equity, consistent with Executive Order 13985, which requires that HUD allocate resources in a manner that addresses the historic failure of the Federal government to invest sufficiently, justly, and equally in underserved communities, particularly communities of color. HUD is committed to taking actions that address the intersection of these two policy directives.

Indeed, the Department has already taken significant steps to address climate threats and environmental injustice. HUD has adapted its programs to help communities both prepare for and respond to the effects of climate change and will continue to take comprehensive action to advance this Administration's priorities on climate adaptation and resilience, decarbonization, and environmental justice. Furthermore, HUD will help lead the Federal government's response to this unprecedented challenge consistent with the Department's unique and historic role in supporting underserved communities, investing in housing across the country, and guiding communities through post disaster recovery and rebuilding.

HUD is recommitting to tackling the climate crisis through the development of this ambitious Climate Action Plan. This plan will guide the integration of climate resilience and environmental justice into HUD's core programs and policies. The actions outlined in this plan will help communities across the nation build more resilient infrastructure, promote responsible utility consumption, create good-paying jobs, and address environmental injustices.

Moreover, HUD has affirmed its dedication to this plan's actions by centering them in the Department's current budget priorities, which highlight HUD's intent to promote climate resilience, environmental justice, and energy efficiency within its portfolio and across the

housing sector. The Department's fiscal year 2022 budget request included \$800 million in proposed funding to reduce carbon pollution, increase resilience to climate impacts, and address environmental injustice. As part of the Administration's whole-of-government approach to the climate crisis, the budget reflects HUD's commitment to expanding energy efficiency and climate resiliency in public and assisted housing. HUD's ability to further its commitment hinges upon the support of Congress through appropriation and authorization.

HUD is not alone in this effort; the Department will work with Federal partners, stakeholders, grantees, and members of the public to develop innovative solutions that equitably prepare for and adapt to climate change. The Administration has recognized the profound climate crisis facing the U.S. and the world – yet in this crisis, there is opportunity to build back better. Tackling climate change is an opportunity to improve the lives of individuals and communities across the nation through increased resilience and equity.

## Plan Organization

In response to the policy set forth in Executive Order 14008, this Plan is organized around three overarching Climate Action Goals for programs and policies under HUD's purview:

Goal 1: Increase Climate Resilience

Goal 2: Reduce Greenhouse Gas Emissions

Goal 3: Pursue Environmental Justice

Each goal contains a number of subgoals, organized into topic areas. Each subgoal contains a table with the specific actions that HUD will undertake to achieve the primary goal. Each action will serve as a metric that, when accomplished, will move HUD closer to accomplishing its primary goal. For each of these actions, the plan identifies the method for implementing such action (e.g., rulemaking, technical assistance, coordination), the lead office(s) responsible for implementation, the implementation timeline, and the resource needs. Given that each action contains a subset of actions, HUD has detailed the common approach used for each implementation method. The implementation method summaries below give an overview of the underlying work that will be required for each type of action.

To emphasize HUD's commitment to addressing climate change, HUD will be integrating this Climate Action Plan into its agency Strategic Plan. Integrating the actions from this plan into the Strategic Plan not only underscores the importance of this work to HUD achieving its mission, but also provides a platform for HUD to track and report on the progress of achieving its climate goals.

HUD's Climate Action Plan has been developed in close consultation with the Office of Management and Budget. Under OMB's guidance, HUD has chosen a format for its plan for climate action that better fits the nature of HUD's programs and authorities and reflects the fact that HUD does not own buildings or infrastructure.

Additionally, HUD determined it was important to incorporate Environmental Justice into this plan because of the close link between climate change and issues of environmental justice. Placing environmental justice actions in the Department's Climate Action Plan allows for an integrated response to interlinked climate and environmental justice challenges and recognizes advancing environmental justice as core to HUD's mission.

**Implementation methods:** For each action, HUD has identified seven distinct implementation methods, each with specific processes and timelines according to agency procedure. These are further outlined below.

1. **Research.** This includes studies of problems and issues within HUD's purview, evaluations of HUD programs, and identification and evaluation of new technologies and approaches to solving problems. Studies and reports include housing and community development matters such as climate-related research on high-performance buildings, energy, and the environment. HUD's Office of Policy Development and Research (PD&R) accepts independent proposals, carries out research in-house, and contracts with external researchers to fulfill HUD's research agenda. Research projects typically take several years to complete.

HUD notes the importance of PD&R research studies to inform Department climate policy and program implementation. PD&R is committed to exploring new studies and research opportunities that will enable HUD to assess the success of the actions identified in this plan as well as expand climate and environmental justice efforts in the future depending on available resources.

2. **Assessment.** These are short-term reviews or evaluations of specific topics that need to be addressed to implement a policy or program. Assessments are conducted in response to staff or stakeholder concerns or to determine the impact of potential policy or program changes. Assessments can take between 6 months and 2 years.
3. **Coordination.** This involves cross-program and/or interagency collaboration on initiatives or policies in which the organizations share objectives or concerns. While individual programs may have specific regulations or requirements, some objectives can be met by maximizing coordination across programs and partnering with other Federal agencies to harmonize climate-related goals and policies. Agencies can formalize coordination through Memorandums of Understanding and through participation on Federal task forces and working groups.
4. **Rulemaking.** Where program regulations require updating or modification, or when required by Congress to implement a statute, HUD implements a rulemaking process following procedures outlined in 24 CFR part 10. Rulemaking involves multiple rounds of Federal Register publications, Paperwork Reduction Act compliance, stakeholder consultation, legal and program analysis, and approval from the Office of Management and Budget. From beginning to end, rulemaking processes usually takes at least 24 months. While rulemaking itself may not require additional resources, the actions and responsibilities that stem from the rulemaking may require additional funding to implement.
5. **Information Technology.** HUD develops IT systems to improve both data collection and program monitoring or reporting. This plan identifies several IT updates needed to improve tracking, monitoring or assessing energy and climate related performance of HUD's inventory of public and assisted housing. IT solutions often take 2 to 4 years to implement.

6. **Guidance.** Guidance as referenced in this report may be published through a program notice, Mortgagee Letter, or guides or handbooks posted on [HUD Exchange](#) or [www.hud.gov](http://www.hud.gov). Depending on the implementation requirements under statute and regulations, new guidance is based on internal program office deliberation, so it can be drafted and released in a shorter time period (e.g., 2 to 4 months).
7. **Technical Assistance.** Technical Assistance (TA) is the transfer of skills and knowledge to HUD customers that may need additional capacity. HUD TA is guidance which enables HUD's customers to overcome a lack of specific skills or knowledge of an associated HUD program, which results in the successful performance of and compliance with that program. TA can take many forms and can be provided directly by HUD staff or delivered by HUD TA providers through the HUD-funded TA program. HUD funds TA and capacity building activities for HUD customers through the Departmentwide Community Compass Technical Assistance program. Outside of the standard Departmentwide two-year, Congressionally funded Community Compass program, Congress often provides supplemental funding for TA tied to specific program appropriations (e.g., HOME-American Rescue Plan, CDBG-DR, CDBG-CV).

**Resource Implications:** This column in each table indicates the nature of the resources needed to implement each proposed action—whether offices can undertake proposed actions using existing resources, are anticipating using funds that were included in the President's FY22 Budget request to Congress, or will need to reprioritize existing resources.

1. **None.** Many of the actions identified in this plan utilize existing HUD authority and staff in the implementation and therefore do not require any additional resources.
2. **FY 22 Budget Request.** The Department has existing resources and authorities that can be deployed to increase the efficiency and resilience of HUD-funded new construction and substantial rehabilitation; however, there are meaningful gaps in the Department's existing resources that if filled, could result in more influential climate change action. Recognizing these gaps, the Department was the first ever Federal agency to have a climate-specific section in its budget request. HUD requested \$800M in its FY22 budget, across five programs, for energy and resilience. If appropriated, these new resources would be a critical component of this plan.
3. **Reprioritize Existing Resources.** For HUD funded TA, the reprioritization of existing resources may require an update to HUD TA Plans from previous years, depending on the nature of the priority adjustment and the source year of the funding identified in each case. The program office will work with the Technical Assistance Division to assess any adjustments to approved plans and ensure the proper process is followed prior to assigning TA. For forthcoming actions, these will be reflected in upcoming HUD TA Plans and Notice of Funding Opportunities (NOFO), not yet issued. For other aspects of HUD programs and TA provided directly by HUD staff, reprioritizing existing resources can occur at the program or office level through leadership approval, temporary staff rotations, and reprogramming older or expiring funds to new priorities.

**Timeline:** The timeline for each action listed in this Plan is defined by the fiscal year (FY) and quarter (Q) in which the action is expected to be initiated and completed.

GOAL 1:  
Increase Climate  
Resilience

## Goal 1: Increase Climate Resilience

Affordable housing (including but not limited to public and assisted housing) is increasingly at risk from both extreme weather events and sea-level rise. Recent analysis and mapping by Climate Central projects that the number of affordable housing units at risk from flooding in coastal areas will triple by 2050.<sup>3</sup> Coastal communities are especially at risk – a report from the Denali Commission found that 144 Native Alaskan Villages (43 percent of all Alaskan communities) experienced infrastructure damage from erosion, flooding, and permafrost thaw.<sup>4</sup>

A specific threat to HUD programs is the potential vulnerability of the Federal Housing Administration (FHA) Mutual Mortgage Insurance (MMI) and General Insurance and Special Risk (GI/SR) Funds to increased defaults and loss severities due to physical damage, disruptions in borrowers' ability to repay, and declining property values in vulnerable communities. Johns Hopkins researchers warn of a "potential threat to the stability of financial institutions" as global warming leads to more frequent and more severe disasters, forcing more HUD-insured and other loans to go into default as homeowners cannot or will not make mortgage payments.<sup>5</sup>

Many HUD programs help communities recover from and build resilience to climate hazards and natural disasters. HUD's disaster recovery portfolio alone accounts for the Federal government's single largest investment in recovery and resilience in low-to-moderate-income communities. While HUD already plays a major role in this space, the Department must expand its climate resilience work to increase resources for grantees and stakeholders and make it easier for them to implement climate resilient activities. HUD can accomplish its goal of increasing the resilience of communities nationwide through improving climate resources and continuing investment in areas most vulnerable to the impacts of climate threats.

**Scale:** Nationwide.

**Risks and opportunities:** Low-income families and communities of color are disproportionately impacted by climate change.<sup>6</sup> Without targeted intervention, this climate injustice will continue.

### Accomplishments to Date

Disaster recovery and mitigation. HUD works with communities to respond to or prepare for natural disasters through two primary funding sources: CDBG-DR and CDBG-MIT. Since 1993, Congress has appropriated a total of \$89.8 billion for CDBG-DR. As of April 2021, this encompasses 137 grants awarded to 64 grantees (34 states and territories and 30 local governments). Active CDBG-DR and CDBG-MIT grants total over \$67 billion. This includes

<sup>5</sup> Amine Ouazad, Matthew E. Kahn, *Mortgage Finance and Climate Change: Securitization Dynamics in the Aftermath of Natural Disasters*, [http://www.ouazad.com/resources/paper\\_kahn\\_ouazad.pdf](http://www.ouazad.com/resources/paper_kahn_ouazad.pdf). January 2021. See also New York Times September 27, 2019, <https://www.nytimes.com/2019/09/27/climate/mortgage-climate-risk.html>

<sup>6</sup> *Fourth National Climate Assessment*, <https://nca2018.globalchange.gov/>

funding to support resilient rebuilding after Superstorm Sandy in New York, New Jersey, and Connecticut; Hurricane Katrina on the Gulf Coast; and, more recently, Hurricane Harvey in Texas, Hurricanes Irma and Maria in Florida, Puerto Rico, and the U.S. Virgin Islands; and wildfires in California – as well as many other disasters.

Since 2019, HUD has allocated more than \$16 billion of CDBG-MIT funds to 22 states and local governments for activities that lessen the impact of future disasters. Fifty percent of these grant funds must benefit low- and moderate-income persons. The State of Louisiana, for example, will use its \$1.2 billion CDBG-MIT allocation to implement the Louisiana Watershed Initiative, to “fundamentally change Louisiana’s approach to statewide flood mitigation activities” (<https://www.watershed.la.gov/action-plan>). CDBG-MIT is a unique and significant opportunity for grant recipients to use this assistance in areas impacted by recent disasters to carry out strategic and high-impact activities that mitigate disaster risk and reduce future losses, especially for low- and moderate-income families and households.

CDBG-DR grants are also a significant source of Federal support for building resilience, particularly in low- and moderate-income areas. HUD has long required CDBG-DR grantees to implement certain climate-related measures as part of recovery (e.g., elevation of structures in the flood plain, green building standards) and many CDBG-DR grantees have implemented additional forward-looking investments in resilience. The State of New Jersey, for example, has used \$200 million of funding from its Hurricane Sandy CDBG-DR grant to increase the energy resilience of many of its hospitals, allowing for continued operations in the event of future power disruptions.

Additionally, HUD obligated nearly \$1 billion of funding through the National Disaster Resilience competition, funding 13 innovative resilience projects across the country. This includes initiatives in Virginia to foster the development of businesses focused on resilience<sup>7</sup> and to increase California’s resilience to wildfires.<sup>8</sup> HUD has also obligated \$930 million for regional flood mitigation projects in New York, New Jersey, and Connecticut through Rebuild by Design.<sup>9</sup>

While CDBG-DR and CDBG-MIT grants are not permanently authorized, after more than 20 years of supplemental appropriations to fund the awards, CDBG-DR is one of the largest sources of funding for recovery and resilience building, and the largest source that primarily benefits persons with low and moderate income.

Flood resilience. HUD has implemented program-specific policies to increase climate resilience, particularly related to flooding. For example, residential new construction and substantial improvements funded with CDBG-DR assistance are now required to elevate two feet above base flood elevation. Similarly, the Federal Housing Administration (FHA) Office of Multifamily Housing (MF) recently updated its standards to require new construction projects in 100-year floodplains to elevate two feet above base flood elevation. FHA MF has extended the same limitations that apply in Coastal High Hazard Areas (V Zones) to all areas within the Limit of

---

<sup>7</sup> RISE Coastal Community Resilience Challenges, <https://riseresilience.org/>

<sup>8</sup> California Department of Housing and Community Development, National Disaster Resilience Competition. <https://www.hcd.ca.gov/community-development/disaster-recovery-programs/ndrc.shtml>

<sup>9</sup> Rebuild by Design, Hurricane Sandy Design Competition, <http://www.rebuildbydesign.org/our-work/sandy-projects>

Moderate Wave Action (LiMWA) for new construction and substantial rehabilitation, with lesser but still significant limitations on existing properties. HUD will continue this effort by assessing and initiating a modernization of its floodplain management regulations in 24 CFR part 55, potentially extending increased flood protection across all HUD programs.

Community Development Block Grants (CDBG). CDBG is both a flexible and widespread program, reaching over 1,200 local governments in all states and territories. The program's scope and promotion of community-specific solutions make CDBG a powerful tool for climate resilience. As a condition for funding, CDBG grantees are required to submit a Consolidated Plan every three to five years. In 2016, HUD promulgated the rule *Modernizing HUD's Consolidated Planning Process to Narrow the Digital Divide and Increase Resilience to Natural Hazards*.<sup>10</sup> This rule requires jurisdictions to incorporate resilience to natural hazard risks and a discussion of how climate change will increase those risks into their Consolidated Plan. The rule also requires CDBG grantees to address the impacts of climate change on low- and moderate-income residents. HUD plans to create additional resources and guidance around this rule to help grantees better incorporate climate change adaptation into their regular planning process.

HUD Climate Communities Initiative. HUD, in partnership with local leaders, is announcing a suite of resources, support, and tools to help cities respond to equitably the climate crisis. This includes the HUD Community Resilience Toolkit, a user-friendly guide to help Community Planning and Development (CPD) grant recipients learn how current and future natural hazard risks may impact their community and how to reduce said risks, as well as implementation models, peer-to-peer learning opportunities, stakeholder engagement with underserved communities, and direct support to a cohort of climate cities. With the suite of flexible block grant funding that local governments already receive, this concerted effort will help cities focus climate action on the needs of the most vulnerable and further climate justice.

Indian Housing Community Development Block Grant (ICDBG). The ICDBG Program provides eligible grantees with direct grants for use in developing Indian and Alaska Native communities, including the provision of decent housing, a suitable living environment, and economic opportunities, primarily for low- and moderate-income persons. The ICDBG provides single purpose grants which are awarded on a competition basis as well as imminent threat grants which are awarded first come, first served to lessen or eliminate problems which pose an imminent threat to the health and safety of Tribal residents.

## Climate Risk Data

### 1.1 Collect Data and Map Risk

**Implementing offices:** Housing, PD&R, CPD, FHEO

**Description:** Collect complete and accurate building-level data across HUD programs to map existing climate risks and environmental justice concerns. Comprehensive and modernized data collection can help inform how to best address climate impacts to protect HUD-assisted assets and their occupants, with a focus on underserved communities, tribal communities, communities of color, and individuals with disabilities. Accurate and easily available data will enable HUD,

---

<sup>10</sup> 81 FR 90997 (Dec. 16, 2016).

grantees, borrowers, and the public to conduct vulnerability assessments and develop resilience plans addressing climate impacts.

Office	Action	Implementation Method	Resource Implications	Timeline
FHA MF, PIH	Review current building-level data to ensure accuracy and facilitate mapping of the portfolio's climate risk	Assessment, IT Solution	Requested in the President's FY22 Budget	FY22 Q3 – FY23 Q3
Housing	Procure data sources to enable modeling for climate risks	IT Solution	Reprioritize Existing Resources	FY22 Q3 – FY23 Q4
FHA SF	Identify additional data elements during underwriting and servicing for all FHA insured mortgages	Assessment	None	FY22 Q2 – FY23 Q4
OEE, FHEO, PIH, Housing	Implement vulnerability assessments for multifamily properties, including a consideration of equity and the impact on relevant protected class groups	Technical Assistance	Reprioritize Existing Resources	FY22 Q4 – ongoing
PD&R	Assess feasibility of expanding existing HUD planning applications to include climate risk data	Assessment	None	FY22 Q1 – FY22 Q3
PD&R	Assess HUD's research and capacity-building needs related to climate risk of underrepresented communities for inclusion in HUD's 2022-25 Learning Agenda	Assessment	None	FY22 Q1 – FY22 Q2

## 1.2 Conduct Research on Climate Resilience

**Implementing Offices:** PD&R, FHEO

**Description:** HUD's Office of Policy Development and Research's research agenda will include new studies to assess the effectiveness of current building efficiency codes and recovery programs and to identify resilience best practices. This research will inform and encourage HUD policy makers, grantees, and stakeholders to adopt stricter building requirements, improve programs, and invest in climate resilience.

Office	Action	Implementation Method	Resource Implications	Timeline
PD&R	Assess HUD's research and capacity-building needs related to building efficiency and resiliency codes for inclusion in HUD's 2022-25 Learning Agenda	Research	None	FY22 Q3 – FY23 Q1
PD&R	Assess HUD's research and capacity-building needs related to buyouts and resettlement for inclusion in HUD's 2022-25 Learning Agenda	Research & Guidance	None	FY22 Q2 – FY22 Q4

PD&R	Conduct cost effectiveness research of CDBG-DR resilience funding and generate guidance on best practices, vulnerability assessments, and evaluative framework	Research & Guidance	None	FY23 Q1 - FY24 Q1
PD&R	Provide resources and expertise to the Advanced Research Projects Agency – Climate (ARPA-C) at the Department of Energy for research on housing, climate adaptation, and resilience	Research, Coordination	Requested in FY22 Budget	FY22 - ongoing

## Mortgage Financing

### 1.3 Reduce Climate-Related Financial Risk

**Implementing Offices:** PD&R, Housing, FHEO

**Description:** HUD mortgage financing programs, primarily its insurance programs, enable billions of dollars of capital to fund the purchase, refinance, construction, and rehabilitation of single- and multifamily housing, assisted housing, and healthcare facilities around the country. Per the Executive Order on Climate-Related Financial Risk (EO 14030), HUD is collaborating with the Departments of Veterans Affairs and Agriculture to consider approaches to better integrate climate-related financial risk into underwriting standards, loan terms and conditions, and asset management and servicing procedures. HUD is also exploring market strategies to incentivize both energy and water efficiency and climate-resilient building practices.

Office	Action	Implementation Method	Resource Implications	Timeline
PD&R	Assess HUD’s research and capacity-building needs related to economic threats of climate change to housing finance ecosystem for inclusion in HUD’s 2022-25 Learning Agenda	Assessment	None	FY22 Q3 – FY23 Q2
PD&R	Assess HUD’s research and capacity-building needs related to benefits and fair housing implications of including climate risk in FHA underwriting for inclusion in HUD’s 2022-25 Learning Agenda	Assessment	None	FY22 Q1 – FY22 Q2
FHA	Identify and assess approaches to integrate climate-related financial risk into underwriting standards, loan terms and conditions, and asset management and servicing procedures	Assessment	None	FY22 Q2 – FY23 Q4
FHA SF, OHP	Consider using reduced Mortgage Insurance Premiums to incentivize	Assessment	None	FY22 Q2 – FY23 Q4

	property owners to adopt higher building standards			
FHA SF	Review and update the standards for Manufactured Housing to allow the use of stretch ratios for a Manufactured Home that is certified as ENERGY STAR	Guidance	None	FY22 Q1
FHA SF	Review and update program standards and documentation requirements for underwriting, repairs, and escrow to make it easier for lenders and borrowers to understand and use the Single Family 203(k) Program for Energy Retrofits and Climate Mitigation	Assessment, Guidance, Rulemaking	None	FY22 Q4 – FY25 Q2
FHA SF	Assess the benefits and risks of introducing a new loan product, Resilience and Energy Assistance Loan (REAL) Title 1 Property Improvement Program, to provide low-cost financing for consumers making climate hazard mitigation and energy efficiency improvements	Assessment	Reprioritize Existing Resources	FY22 Q2 – FY25 Q1
FHA MF	Assess benefits and risks of expanding the Green MIP Program to encourage climate resilience actions. Expansion could include incentives for climate resilience actions such as creating defensible space in fire-prone areas; building or retrofitting to withstand extreme weather; or mitigating for flood risk	Assessment	Reprioritize Existing Resources	FY22 Q4 – FY23 Q4
Ginnie Mae	As part of an overall environmental, social, and governance (ESG) strategy, enhance (i) analytical capabilities for environmental assessments; (ii) securities disclosures that create value for investors utilizing ESG metrics, and (iii) pooling, issuance and reporting flexibilities to support FHA, VA, USDA and PIH program innovations having ESG aspects	IT Solution	Reprioritize Existing Resources	FY22 Q2 – FY23 Q4
Ginnie Mae	Until such time that the new platform goes into production, Ginnie Mae will explore how current capabilities can be leveraged in current form, or with some level of modification, to support shorter term goals of supporting environmental justice initiatives that may be pursued by FHA, VA, USDA	Assessment	None	FY22 Q1 – FY23 Q4

	and PIH. Securities disclosures are routinely enhanced to meet the ever-evolving demands of MBS investors and Ginnie Mae will explore opportunities to target increased ESG data disclosure with a goal of generating greater investor demand for securities supporting ESG objectives.			
--	---	--	--	--

## Disaster Recovery and Resilience

### 1.4 Update CDBG-DR Grant Requirements to Promote Resilience and Environmental Justice

**Implementing Offices:** CPD

**Description:** With over \$67 billion in active grants, CDBG-DR and CDBG-MIT funds are arguably the Federal Government’s largest investment in resilience and addressing environmental injustice in some of the nation’s most vulnerable areas. 2020 was the sixth consecutive year in which there were ten or more weather and climate disaster events impacting the United States that caused more than a billion dollars in damage. The sheer scale of these events illustrates the importance of HUD’s disaster recovery work. A more holistic integration of resilience and environmental justice principles into the CDBG-DR program will ensure that communities recovering from disasters are more resilient in the future. A commitment to environmental justice means ensuring equal protection from environmental and health hazards and providing all people a meaningful opportunity to participate in the decision-making process to achieve a healthy environment.

Office	Action	Implementation Method	Resource Implications	Timeline
CPD	Finalize the CDBG-DR implementing notices to reflect climate priorities and describe policies and requirements that can foster resilient projects and promote environmental justice.	Guidance	None	FY22 Q1 – FY22 Q2

### 1.5 Enable a Sustainable Recovery for Puerto Rico and the U.S. Virgin Islands

**Implementing Office:** CPD

**Description:** Collaborate with Puerto Rico and the U.S. Virgin Islands (USVI) to support targeted resilience plans and innovative energy solutions for their sustainable long-term recovery.

Office	Action	Implementation Method	Resource Implications	Timeline
OEE	Work with the DOE, Puerto Rico Field Office and Public Housing Authority (PRPHA)	Coordination, Technical Assistance, Assessment	None	FY22 Q2 – FY23 Q1

	PowerOasis solar plus battery storage pilot			
DRSI	Collaborate with grantees on their work with Federal partners (DOE, DOI, FEMA) to implement required actions in the Federal Register Notice providing \$2 billion for resilient CDBG-DR Electrical Power Systems for Puerto Rico and USVI	Coordination, Guidance	None	FY22 Q1 – FY22 Q3
DRSI	Provide technical assistance to Puerto Rico and USVI to deliver the clean energy and green building programs outlined in their CDBG-DR and CDBG-MIT Action Plans	Coordination, Technical Assistance	None	FY22 Q1

## 1.6 Strengthen Flood Resilience Standards

**Implementing Offices:** CPD

**Description:** Implement EO 13690, Establishing a Federal Flood Risk Management Standard and a Process for Further Soliciting and Considering Stakeholder Input, by implementing the Federal Flood Risk Management Standard (FFRMS) and updating HUD’s floodplain management regulations in 24 CFR part 55. (EO 13690 was revoked in 2017 by EO 13807, but was recently reinstated through EO 14030, Climate-Related Financial Risk.) This rulemaking will focus on increasing flood resilience, clarifying processes and standards, promoting environmental justice concerns in floodplain decision-making, improving fiscal security, and minimizing adverse impacts to the beneficial functions of floodplains and wetlands.

Office	Action	Implementation Method	Resource Implications	Timeline
OEE	Update floodplain management and wetlands protection regulations in 24 CFR part 55 to implement FFRMS and otherwise increase flood resilience standards in HUD projects	Rulemaking	None <sup>11</sup>	In Progress – FY23 Q1
Department-wide	Develop a training series for HUD grantees and update HUD’s online tools to reflect updated policy	Technical Assistance, IT Solution	Reprioritize Existing Resources	FY22 Q4 – FY23 Q2

## Capacity Building

### 1.7 Provide Climate Resilience and Environmental Justice Training

**Implementing Offices:** PD&R, PIH, CPD, FHEO

**Description:** Before HUD can advance its work on climate adaptation, mitigation, and environmental justice, it will be necessary for HUD staff, grantees, and stakeholders to have a

<sup>11</sup> Although there may be resource implications for implementing any rulemaking, the full resource implications cannot be known until the rule has been drafted. Therefore, the resource implications for rulemaking apply only to the resources required to draft and publish the rule.

baseline understanding of climate resilience and environmental justice. HUD will begin to create spaces, both formal and informal, for mutual learning around climate change and its impacts. This learning culture will also focus on environmental justice issues impacting low-income communities, communities of color, individuals with disabilities, and other protected classes.

Office	Action	Implementation Method	Resource Implications	Timeline
Department-wide	Facilitate trainings for grantees and partners that includes climate adaptation and environmental justice, incorporating climate risk in their areas	Technical Assistance	None	FY22 Q4 – ongoing
PIH, CPD, FHEO	Conduct trainings and provide information to PHAs on adaptation and mitigation activities	Technical Assistance	None	FY22 Q4 – ongoing

### 1.8 Create Community Resilience and Sustainability Resources

**Implementing Office(S):** PD&R, CPD, FHEO, Field Policy and Management (FPM)

**Description:** Design the next generation of best practices, case studies, and tools developed from HUD research studies and collaboration with other Federal agencies and HUD stakeholders. These resources will be dynamic, user-friendly, and inclusive.

Office	Action	Implementation Method	Resource Implications	Timeline
PD&R	Generate case studies and guidance on resilience planning, disaster recovery, strategic funding strategies, and land use planning for HUD customers	Guidance, Technical Assistance	None	FY22 Q1 – ongoing
PD&R, FHEO	Collaborate with Home Innovation Research Labs to create a series of residential resilience guidelines for homebuilders and developers. Guidelines will incorporate the latest resilience construction techniques and best practices presented in a practical, user-friendly format	Coordination, Guidance	None	FY21 Q1 – FY22 Q3
CPD	Develop a tool and webinar series for HUD customers on the need to incorporate resilience measures and stronger building codes when rebuilding after a disaster	Technical Assistance	None	FY22 Q1 – FY22 Q4
CPD	Conduct grant “launch” and program implementation technical assistance to CDBG-MIT grantees	Technical Assistance	None	FY22 Q2 – ongoing

	who are working to implement hazard mitigation projects			
CPD	Work with HUD CDBG-DR and CDBG grantees to improve resilience decision making using science-based tools	Technical Assistance	None	FY22 Q2 – ongoing
CPD. FPM	Collaborate with local climate city leaders to facilitate peer-to-peer learning opportunities, stakeholder engagement, and direct support as part of the HUD Climate Communities Initiative	Technical Assistance	Reprioritize Existing Resources	FY22 Q1 – ongoing
CPD, FHEO	Organize and expand online library of resources, trainings, and toolkits for climate resilience and environmental justice. Resources will include a range of on-demand webinars and trainings, as well as toolkits, implementation guides, and best practices	Technical Assistance	Reprioritize Existing Resources	FY22 Q2 – ongoing
OLHCHH	Collaborate with the Centers for Disease Control and Prevention on its Building Resilience Against Climate Effects (BRACE) grant program	Guidance	None	FY22 Q1 – ongoing

GOAL 2:  
Reduce Greenhouse  
Gas Emissions

02

## Goal 2: Reduce Greenhouse Gas Emissions

HUD has a portfolio of approximately 4.5 million public and assisted housing units (including 2.2 million market-rate apartments occupied by Housing Choice Voucher households) and plays a key role in the development and preservation of affordable housing. HUD's annual outlays on utilities in this portfolio (primarily subsidizing energy and water costs for both property owners and tenants) account for as much as 14 percent of the agency's total budget and, according to an internal HUD analysis, consume enough on-site energy to produce an estimated 13.6 million metric tons of carbon emissions.<sup>12</sup> HUD spends at least \$6.9 billion on utilities across the components of its portfolio: 36 percent or \$2.49 billion in multifamily assisted housing; 30 percent or \$2.02 billion in public housing; and 34 percent or \$2.35 billion for Housing Choice Voucher utility allowances.<sup>13</sup>

In order to meet the Administration's goal of lowering economy-wide net greenhouse gas pollution by 50-52 percent by 2030<sup>14</sup>, HUD must significantly improve the energy performance of HUD-assisted and FHA-insured assets while scaling up deployment of renewable energy. HUD will accomplish this goal by increasing investments in climate and energy retrofits of existing housing, incentivizing green building design in new construction, and proactively advancing climate mitigation and adaptation strategies across HUD programs.

In addition to spurring significant reductions in carbon emissions associated with public and assisted housing, these actions will advance economic equity by reducing utility costs for HUD assisted and FHA insured stakeholders and creating green job opportunities in disadvantaged communities. HUD must also explore incentivizing or otherwise assisting communities to implement land use changes that allow for denser, transit-oriented housing development that reduces households' reliance on cars, by far the largest source of greenhouse gas emissions in the transportation sector, which is itself the greatest contributor to economy-wide emissions since surpassing the electricity generation sector in 2017.<sup>15</sup> These land-use changes will simultaneously help to address exclusionary policies that have resulted in racial disparities in wealth, public health, and economic opportunity (see Goal 3 below).<sup>16</sup>

**Scale:** Nationwide.

---

<sup>12</sup> Preliminary internal HUD estimate of carbon emissions, March 2021. Assisted multifamily and Housing Choice Voucher unit counts from *Characteristics of HUD-Assisted Renters and Their Units in 2017 (2020)* and public housing unit counts from PIC database were used to estimate total BTU consumption for each subsidy type by Census Division, using per-household annual BTU consumption rates from the Residential Energy Consumption Survey (RECS).

<sup>13</sup> HUD, *Achieving Utility Savings in HUD-Assisted Housing: Progress Report to Congress*, September 2019  
<sup>14</sup> *FACT SHEET: President Biden Sets 2030 Greenhouse Gas Pollution Reduction Target Aimed at Creating Good-Paying Union Jobs and Securing U.S. Leadership on Clean Energy Technologies*, April 2021, [www.whitehouse.gov](http://www.whitehouse.gov).

<sup>15</sup> *Data Highlights: Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990-2019*, Environmental Protection Agency.

<sup>16</sup> Cecilia Rouse, Jared Bernstein, Helen Knudsen, and Jeffery Zhang, "Exclusionary Zoning: Its Effect on Racial Discrimination in the Housing Market," June 17, 2021, [www.whitehouse.gov](http://www.whitehouse.gov).

**Risks and opportunities:** Up to 14 percent of HUD’s budget is tied up in utility payments. Investing in substantially lowering the budget impact of utilities will lower the per-household subsidy for public and assisted housing, freeing up resources to allow HUD to serve more low-income families while improving health and comfort for existing residents. In addition, 67 percent of low-income households in the U.S. face a high energy burden. Black, Hispanic, Native American, and older adult households, as well as families residing in low-income multifamily housing, manufactured housing, and older buildings experience disproportionately high energy burdens.<sup>17</sup> Without targeted intervention, this climate injustice will continue.

## Accomplishments to Date

HUD has a demonstrated history of promoting clean energy and energy efficiency investments through voluntary leadership and incentive programs, as well as mandatory above-code building standard requirements. Current and previous energy and water conservation initiatives demonstrate the potential for achieving energy savings and carbon reduction with the right mix of incentives, direct financial support, and/or technical assistance. This includes the following initiatives.

Renew300. Under the Obama Administration, HUD launched the Renew300 Initiative, aimed at significantly increasing the adoption of solar and renewable energy in federally assisted housing properties through on-site installations or community solar. A 300-Megawatt (MW) target was established to take advantage of millions of square feet of federally subsidized roofs with on-site or community generation potential. More than 80 affordable housing owners committed to the installation of 344 MW of renewable energy using technical assistance through Renew300.

The Green Mortgage Insurance Premium (Green MIP) provides a strong incentive for FHA multifamily borrowers to adopt one of several approved green building standards. A total of \$38.2 billion in multifamily mortgage insurance for green projects has been endorsed for 1,413 developments with 281,000 units of multifamily housing since the Green MIP was introduced in 2016.<sup>18</sup> Green MIP borrowers must also commit to benchmarking utilities and achieve a minimum 75 Energy Star score in the Environmental Protection Agency’s (EPA) Portfolio Manager.

Benchmarking. HUD’s primary benchmarking initiative is the Multifamily Better Buildings Challenge, part of the DOE’s Better Buildings Challenge. Its goal is to support participating partners who have made a commitment to reducing their portfolio-wide energy consumption by at least 20 percent over 10 years through the use of better utility usage data collection and tracking methods. There are 92 Multifamily BBC partners, accounting for approximately 553,400 units of public and assisted housing (accounting for 23 percent of those programs’ units). As of 2020, 70 percent of multifamily partners are successfully benchmarking, producing actionable data on over 400,000 multifamily units. As a result, the multifamily program has facilitated over 21 trillion British thermal units (Btus) of documented energy savings.

<sup>17</sup> Ariel Drehoj, Lauren Ross, and Roxana Ayala, *How High Are Household Energy Cost Burdens? An Assessment of National and Metropolitan Energy Burden across the United States*, September 2020, American Council for an Energy-Efficient Economy.

<sup>18</sup> HUD Office of Multifamily Housing, Internal Green MIP Report, Through 2021, Quarter 2.

Energy Incentives in Public Housing Operating Fund. Energy incentives including Add-On Subsidy (AOS), Resident Paid Utility (RPU), and Frozen Rolling Base (FRB) are used to incentivize investment for energy and water efficiency measures and renewable energy through the Public Housing Energy Performance Contract (EPC).

Rental Assistance Demonstration (RAD). All RAD conversions undertake an environmental review to assess the site and proposed activities for hazards to the residents, including lead, asbestos, radon, or flooding. PHAs and owners undergoing RAD conversion are required to mitigate any environmental risks that arise from the environmental review. For rehab and new construction projects, PHAs complete a green Capital Needs Assessment (CNA) that provides a detailed analysis of energy-saving alternatives and other green building components and are required to utilize the most energy- and water-efficient options that are financially feasible. At minimum, PHAs or owners must use Energy Star®, WaterSense® or Federal Energy Management Program (FEMP)-designated products and appliances.

HUD has also adopted innovative program provisions to ensure that owners have incentives to undertake cost-effective energy and water efficient improvements, regardless of whether utilities are paid by the owner or by the tenant. All projects are strongly encouraged to use building components that improve air quality and/or reduce environmental impact if doing so would incur little or no cost premium. Public Housing projects converting with any new construction construction must meet or exceed the latest IECC or ASHRAE codes that are adopted by HUD.

They are also encouraged to meet or exceed the requirements for Energy Star for New Homes or Energy Star for Multifamily High-Rise buildings and to use industry-recognized green building certifications such as the US Green Building Council's LEED Rating System, Enterprise Green Communities Criteria, the National Green Building Standard, Green Globes, GreenPoint Rating, EarthCraft, Earth Advantage, Passive House, or Living Buildings. In addition, HUD has required above-code building standards in the Capital Fund Program, Choice Neighborhoods Program, the Section 202 Supportive Housing for the Elderly program for new construction, and recent CDBG-DR grants.

## **Benchmarking and Data Collection**

In order to achieve significant reductions in greenhouse gas pollution, HUD must be able to measure the performance of its portfolio, prioritize investments in energy and water conservation, and track savings over time. To do this, HUD will need to collect and analyze comprehensive data on utility consumption and expenditures as well as building characteristics and investments in energy efficiency and renewable energy. OEE will provide cross-agency coordination to ensure alignment between program office actions and the enterprise-wide data collection and analysis that are required to meet HUD's greenhouse gas reduction goals.

### **2.1 Assess Current Data Collections**

**Implementing Offices:** PIH, Housing, PD&R, CPD

**Description:** Assess current data collections and identify alternative data sources where necessary to improve data collection on energy- and hazard mitigation. In order to meet the ambitious goal of cutting greenhouse gas pollution across public, assisted, and FHA-insured housing by 50-52 percent by 2030, HUD needs to have a full accounting of all utility consumption and expenditures in its portfolio. The first step will be to analyze current data collections and identify gaps and deficiencies.

Office	Action	Implementation Method	Resource Implications	Timeline
FHA SF	Identify additional data elements during underwriting and servicing for single-family FHA insured mortgages	Assessment	None	FY22 Q2 – FY23 Q4
PIH	Assess utility data collection and analysis and identify deficiencies	Assessment	None	FY22 Q3 – FY23 Q1
PD&R, OEE, PIH	Compare and analyze data reported from the Better Buildings Challenge and data reported through Form 52722	Assessment	None	FY23 Q1 – FY24 Q1

## 2.2 Improve Utility Data Reporting and Tracking

**Implementing Offices:** Housing, PIH, CPD, PD&R, OCIO

**Description:** In 2016, PIH and Multifamily Housing proposed utility benchmarking requirements for their portfolios of public and assisted housing that will play a foundational role in achieving HUD’s emission reduction goals. Both program offices will reevaluate the proposed rules in light of public comments and determine how to proceed toward the adoption of this crucial requirement. Separately, Multifamily Housing proposes to fund utility benchmarking for a majority of units in the Multifamily-assisted portfolio through the Green and Resilient Retrofit Program (GRRP).

Concurrent with reevaluation of approaches to benchmarking, HUD will work to assess existing data collections and take steps to address identified gaps and deficiencies and create a more effective agency-wide data architecture consistent with Data Governance principles established under the leadership of the Chief Data Officer and OCIO Enterprise Architect. These efforts will include developing agency-wide data standards for utility management and risk mitigation such that all data collections across programs can contribute to an enterprise-wide analysis of climate risks and carbon reduction opportunities. The data on building performance and energy usage HUD collects as part of these actions will be critical to HUD’s Equitable Decarbonization Roadmap discussed in 2.3, Publish Actionable Analysis on Greenhouse Gas Reduction.

Office	Action	Implementation Method	Resource Implications	Timeline
FHA SF	Develop capacity to collect third party data such as utility data to enable HUD to assess effectiveness of single-family energy investments	IT Solution	None	FY23 Q4 – FY25 Q3

PIH	Migrate HUD Forms 52722 and 52723 to the Operating Fund Web Portal	IT Solution, Guidance	Reprioritize Existing Resources	FY22 Q1 – FY24 Q3
CPD, FHA, PIH	Develop enterprise - wide minimum data standards for utility management and risk mitigation	Coordination	None	FY22 Q1 – FY22 Q3
FHA MF, PIH, OEE	Formulate and implement an updated enterprise-wide approach to utility benchmarking	Rulemaking, TA	Requested in FY 22 Budget	FY22 Q1 – FY24 Q1
CPD, OCIO, FHA, PIH	Pursue Portfolio Manager interoperability solutions	IT solution	Reprioritize Existing Resources	FY22 Q2 – FY24 Q4

### 2.3 Publish Actionable Analysis on Greenhouse Gas Emissions Reduction

**Implementing Offices:** PIH, OEE

**Description:** HUD will work to provide new data products and data analysis that help program offices and grantees better understand their utility consumption and energy efficiency and renewable energy opportunities nationwide.

Office	Action	Implementation Method	Resource Implications	Timeline
PIH	Publish utility data dashboards for PHAs and HUD	IT solution, policy	Reprioritize Existing Resources	FY23 Q1 – FY23 Q2
OEE	Develop scope for a High-Performance Building Database in partnership with DOE	Coordination	Reprioritize Existing Resources	FY22 Q2 – FY24 Q1
OEE	Develop updated approach to modeling carbon reductions and energy savings	Research	None	FY22 Q3 – FY24 Q2
Department-wide	Publish an Equitable Decarbonization Roadmap establishing a path for HUD's portfolio to meet the Nation's climate commitments equitably	Assessment	Reprioritize Existing Resources	FY22 Q1 – FY23 Q1

## Green Building Requirements and Incentives

### 2.4 Update Codes and Standards **Implementing Offices:** CPD, Housing, PD&R, PIH

**Description:** Some HUD funding sources, including Choice Neighborhoods, CDBG-DR, and CDBG-MIT, have set minimum above-code Energy Star New Home or green building standards for new construction. Other programs, such as RAD, encourage adoption of these above-code green building standards. HUD will take steps to strengthen these green building standards and update minimum HUD new construction standards to align with IECC and ASHRAE 90.1 standards contingent on an affordability analysis as required by statute.

Office	Action	Implementation Method	Resource Implications	Timeline
OEE, FHA, PIH	Update Minimum Energy Standards through rulemaking	Rulemaking	None	FY23 Q3 – FY25 Q1
OEE	Evaluate voluntary stretch energy and/or resilience codes	Assessment	None	FY22 Q4 – FY23 Q2
OMHP	Consult with DOE on updating the building and energy efficiency standards for manufactured homes	Coordination, Rulemaking	None	FY22 Q1 – FY23 Q1

### 2.5 Align Incentives with Efficiency

#### **Implementing Offices:** PD&R, CPD, OLHCHH, Housing, FHEO

**Description:** Existing utility subsidies in HUD public and assisted housing programs do not encourage or discourage recipients from taking steps to make their buildings more energy and water efficient. Program offices will take every opportunity to shift incentives toward energy- and water-saving investments in an equitable manner consistent with civil rights requirements and identify persistent barriers that require congressional action.

Office	Action	Implementation Method	Resource Implications	Timeline
Department-wide	Establish points for climate mitigation and adaptation measures in competitive Notices of Funding Opportunity (NOFOs), where appropriate	Coordination	None	FY22 Q1 – FY24 Q1
PIH	Implement Small Rural Frozen Rolling Base program	Technical Assistance	Reprioritize Existing Resources	FY23 Q1 – FY23 Q4
PIH	Initiate an Energy Performance Contracting (EPC) Innovation Pilot to encourage new strategies and approaches to utilizing the EPC Program	New Resource	Requested in the President's FY22 Budget	FY23 Q1 – FY24 Q4
PIH	Implement the Public Housing Rapid Return Utility Conservation Program, offering competitive grants to fund	New Resource	Requested in the President's FY22 Budget	FY23 Q1 – FY24 Q4

	capital investments to reduce utility consumption			
PIH	Target resources to make Indian Housing Block Grant-assisted housing more energy efficient and resilient, and to reduce energy and water consumption and utility burden	New Resource	Requested in the President's FY 22 Budget	FY23 Q2 – ongoing
PIH	Expand Choice Neighborhoods grants to support energy efficient and resilient design	New Resource	Requested in the President's FY 22 Budget	FY22 Q2 – ongoing
OEE	Coordinate with DOE to qualify HUD-assisted properties for DOE weatherization assistance	Coordination	None	FY22 Q1 – FY24 Q4
OEE, OLHCHH	Streamline and harmonize income eligibility requirements among HUD-funded rehab and lead hazard control programs, and DOE and HHS/LIHEAP-funded weatherization assistance programs	Coordination	None	FY22 Q1 – FY22 Q2
OLHCHH	Award cooperative agreements for joint interventions by OLHCHH Lead Hazard Reduction grantees and DOE Weatherization Assistance Program subgrantees to improve residential energy efficiency	New Resource	Requested in the President's FY22 Budget	FY22 Q1 – ongoing
OEE, OLHCHH	Pilot a model for integrating Lead Hazard Control, HOME/CDBG rehab, HHS and DOE weatherization funds	Coordination, Assessment	None	FY22 Q2 – FY23 Q3
FHA SF	Assess single family mortgage programs to identify opportunities to incentivize energy efficiency	Assessment	None	FY22 Q2 – FY23 Q4
FHA MF	Create the Green and Resilient Retrofit Program to combine direct loan subsidy and competitive grants to support energy efficiency and climate resilient improvements in assisted multifamily properties	New Resource	Requested in the President's FY 22 Budget	FY 22 Q1 – ongoing
Housing	Strengthen energy and resilience investments in RAD conversions	New Resource	Requested in the President's FY 22 Budget	FY22 Q2 – FY22 Q4

PIH	Award funds to Tribes for energy and water efficiency retrofits	New Resource	Requested in the President's FY22 Budget	FY22 Q1 – FY24 Q3
OEE	Create working group with program offices to assess current programmatic barriers to energy efficiency, including utility allowance methodologies	Coordination, Assessment	None	FY22 Q2 – FY24 Q1

## Capacity Building

### 2.6 Deliver Education and Training

**Description:** HUD program offices will provide educational materials and training to increase utilization of existing incentives for energy efficiency and resilience improvements among grantees, borrowers, and other program beneficiaries.

**Implementing Offices:** Housing, PIH, PD&R, CPD

Office	Action	Implementation Method	Resource Implications	Timeline
FHA SF	Develop stakeholder education strategy regarding tools and resources FHA offers to finance energy-related improvements and to mitigate climate hazards	Technical Assistance	Reprioritize Existing Resources	FY22 Q2 – FY24 Q4
FHA SF	Make necessary updates to training and marketing materials to ensure lenders and consumers are aware of flexibility of FHA's 203(k) program	Technical Assistance	None	FY22 Q2 – FY24 Q4
FHA SF	Develop and deliver training to ensure single family appraisers are aware of approaches for valuing energy- and hazard-mitigation-related improvements into valuation	Technical Assistance	Reprioritize Existing Resources	FY22 Q2 – FY24 Q4
PIH	Update guidance, and training for EPC, Energy Incentive Programs, and other programs, to support rural communities' energy efficiency hazard risk reduction efforts	Guidance, Technical Assistance	None	FY22 Q1 – FY23 Q3
CPD	Deliver training to spur adoption of Health@Home Rehabilitation Guidelines by HUD grantees	Technical Assistance	None	FY22 Q1 – FY23 Q1
PD&R	Collaborate with DOE to hold HUD-wide training and informational forum on energy efficiency	Training	None	FY21 Q4 – FY22 Q1

## 2.7 Foster Innovation and Remove Barriers

**Implementing Offices:** CPD, PD&R, PIH

**Description:** PHAs and owners of HUD-assisted multifamily housing face a unique collection of barriers to energy and water conservation. The multifamily portfolio has a greater range of building types and systems than in any other building sector, there are potentially hundreds of different utility accounts per building, access to financing is limited by program rules, and organizations often lack the staff capacity to plan and implement a portfolio-wide investment strategy. HUD offices, often in partnership with the Department of Energy, will add to the current state of knowledge and find new strategies and solutions to help HUD grantees overcome these barriers.

Office	Action	Implementation Method	Resource Implications	Timeline
CPD	Support DOE Multifamily Solar Collaborative to address barriers and implement community solar in affordable multifamily housing	Coordination	None	FY22 Q1 – FY23 Q4
PD&R	Assess HUD’s research and capacity-building needs related to health and safety compliance of older manufactured housing units for inclusion in HUD’s 2022-25 Learning Agenda	Assessment	None	FY22 Q4 – FY24 Q2
PD&R	Assess HUD’s research and capacity-building needs related to submetering and sale of renewable energy for inclusion in HUD’s 2022-25 Learning Agenda	Assessment	Reprioritize Existing Resources	FY22 Q4 – FY24 Q2
CPD	Partner with DOE on Low-Carbon Pilot and launch of 50 percent Carbon Reduction Challenge	Coordination	None	FY22 Q1 – FY23 Q4

GOAL 3:  
Pursue  
Environmental Justice

03

## Goal 3: Pursue Environmental Justice

Addressing climate and environmental justice is at the core of HUD's mission to create strong, sustainable, inclusive communities. Environmental justice means ensuring equal protection from environmental and health hazards and providing equal and meaningful opportunity to participate in the decision-making process to achieve a healthy environment. In this plan, HUD commits to a variety of actions to empower communities to achieve climate resilience, facilitate economic opportunities, and eliminate health risks caused by environmental injustices. HUD has established environmental justice as a budget priority, ensuring that both HUD staff and its external stakeholders are aware of the significance of avoiding and reversing environmental inequities.

HUD strongly supports the Administration's whole-of-government effort to ensure that at least 40 percent of overall Federal investments in climate and clean energy are delivered to disadvantaged communities. Because of its unique focus on supporting low-income communities, HUD anticipates that most of its programs already exceed this goal. Nonetheless, HUD will strive to maximize investments in low-income communities, communities of color, and other disadvantaged and historically underserved communities.

**Scale:** Nationwide.

**Risks and opportunities:** Low-income communities and communities of color experience disproportionately large impacts from climate change and environmental hazards due to a history of disinvestment and discrimination. Without targeted intervention, these environmental inequities will widen.

### Accomplishments to Date

Affirmatively Furthering Fair Housing. In addition to barring housing discrimination, the Fair Housing Act requires HUD and its grantees to administer programs and activities relating to housing and urban development in a manner that affirmatively furthers the purposes of the Fair Housing Act. This means taking meaningful actions that not only overcome patterns of segregation but foster inclusive communities free from barriers that restrict access to opportunity based on protected characteristics. Specifically, Affirmatively Furthering Fair Housing (AFFH) means implementing concrete changes that, taken together, address significant disparities in housing needs and in access to opportunity. These actions would replace segregated living patterns with truly integrated and balanced living patterns, transform racially or ethnically concentrated areas of poverty into areas of opportunity, and foster and maintain compliance with civil rights and fair housing laws.

On July 31, 2021, HUD's interim final rule to restore certain definitions related to AFFH and certifications incorporating those definitions became effective. Program participants covered by the rule certify that they will comply with the obligation to AFFH, consistent with the restored definitions. Program participants may voluntarily engage in fair housing planning to support their certifications, and HUD provides technical assistance and support to assist program participants in carrying out their obligation to AFFH, including by supporting funding recipients that carry out this voluntary fair housing planning process. HUD intends to undertake a separate rulemaking to build upon and further improve the 2015 AFFH rule by instituting a new fair housing planning process and framework to achieve material, positive change that affirmatively furthers fair housing.

Partnership with EPA’s Superfund program. Since 2017, EPA and HUD have been engaged in a coordinated effort to address potential Superfund site-related exposure to residents of HUD Public Housing and multifamily assisted housing. This effort has helped EPA prioritize site work to protect communities located within Superfund site areas while also helping to inform future decisions and coordination with HUD. HUD and EPA continue to refine this analysis both to inform the interagency workgroup’s ongoing effort to review HUD-assisted properties that may be at risk for site contamination and to reach the goal of providing accurate data to the public. Next steps and goals for this effort are discussed in section 3.4 below.

Radon protection. HUD’s Offices of Housing, Multifamily Housing, and Healthcare have existing radon policies that are leading the mortgage insurance industry. HUD’s Office of Multifamily Housing received the AARST Policy Leadership Award for “Leadership in Establishing and Implementing Effective Radon Risk Reduction Policies that Save Lives” in September 2019. Multifamily and Healthcare continuously refine radon policy in the MAP guide, 232 Handbook and the RAD program in coordination with HUD’s Office of Healthy Homes, EPA, and the ANSI-AARST standards.

## Empowering Disadvantaged Communities

### 3.1 Promote Climate Justice in Tribal Communities

**Implementing Offices:** PIH, PD&R

**Description:** HUD recognizes the unique legal and political relationship that exists between the United States and Tribal governments. The Department also recognizes the history of environmental inequities that has created barriers to achieving climate resilience in Tribal communities. HUD intends to help Tribal communities achieve safe, resilient housing and infrastructure through improved access to data, technical support, and funding opportunities.

Office	Action	Implementation Method	Resource Implications	Timeline
PD&R, ONAP	Assess HUD’s research and capacity-building needs related to exclusion of Tribal Lands and communities in national climate, weather, utility, geological and infrastructure data for inclusion in HUD’s 2022-25 Learning Agenda, and Coordinate with National Labs to address exclusions	Coordination	None	FY22 Q1 – FY23 Q1
PD&R, ONAP	Assess HUD’s research and capacity-building needs related to Sustainable Construction in Indian Country for inclusion in HUD’s 2022-25 Learning Agenda.	Assessment, Guidance	None	FY22 Q1 – FY23 Q1
ONAP	Build capacity of Tribes and Federal agencies to develop efficient, coordinated environmental reviews and strengthen environmental	Technical Assistance	None	In progress – FY24 Q1

	compliance through the Tribal Housing and Related Infrastructure Interagency Task Force, led by HUD's Office of Native American Programs			
ONAP	Provide technical assistance to HUD customers to support sustainable, net zero/next generation building that is reflective of Tribal cultures and supports job creation	Technical Assistance	Reprioritize Existing Resources	FY22 Q3 – FY23 Q3

### 3.2 Create Green Job Opportunities

**Implementing Offices:** PIH, CPD

**Description:** Invest in the creation of green jobs in partnership with PHAs and local workforce partners. Many HUD programs are subject to requirements in section 3 of the Housing and Community Development Act of 1968, which requires that employment and other economic opportunities generated by Federal financial assistance for housing and community development programs be directed, to the greatest extent feasible, toward low- and very low-income persons, particularly those who are recipients of government assistance for housing. HUD has an opportunity to guide and empower Section 3 compliance that supports green workforce development in the communities that HUD serves.

Office	Action	Implementation Method	Resource Implications	Timeline
CPD, PIH	Provide direct technical assistance to help PHAs and local workforce partners leverage Section 3 training and improve green economy employment outcomes through the newly created Building Futures pilot	Technical Assistance	None	FY21 Q3 – FY23 Q1
CPD, PIH	Based on experience in the Building Futures pilot, identify best practices and possibilities to scale up the program	Assessment	None	FY23 Q1 – FY23 Q2
PIH	Leverage EPC (including EPC Innovation Pilot Program) and Small Rural Frozen Rolling Base Programs to support investment and green jobs at the public housing level	Rulemaking, Guidance	None	In progress – FY23 Q4

### 3.3 Encourage Equitable Community Planning and Engagement

**Implementing Offices:** FHEO, PD&R, CPD

**Description:** Provide resources and technical support to help communities improve equity in both community planning and community engagement. HUD will seek to include best practices related to removing barriers to and promoting the development of affordable housing in areas with low environmental hazards, providing meaningful access for individuals with Limited English Proficiency (LEP) and effective communication for individuals with disabilities, and advancing equity with selection criteria that avoid disproportionate allocations based on race other protected characteristics.

Office	Action	Implementation Method	Resource Implications	Timeline
PD&R, FHEO	Generate guidance on best practices for community land use and site planning, including zoning reforms and transit-oriented development, that promote energy efficiency and hazard mitigation	Research, Guidance	None	In progress – FY23 Q3
CPD, FHEO	Create a Citizen Participation and Engagement Toolkit for CDBG-DR and CDBG-MIT grantees. This online, interactive toolkit will help to ensure whole community recovery and resilience by providing information and resources to help grantees bring in the “whole” community to the conversation, specifically historically disadvantaged populations and protected classes	Technical Assistance	None	In progress – FY22 Q3
FHEO	Consider expanding Citizen Participation and Engagement Toolkit to other programs and audiences	Assessment	None	FY22 Q4 – FY24 Q1
CPD, FHEO	Publish guidance on how to incorporate use of Social Vulnerability Index (SOVI) and similar data into Consolidated Plan development and grantee priority setting	Guidance	None	FY22 Q3 – FY22 Q4
PD&R, FHEO	Assess practices that advance equitable implementation of disaster recovery resilience funding and generate guidance on best practices	Assessment, Guidance	None	FY23 Q1 – FY24 Q1
CPD	HUD’s Office of Block Grant Assistance is assessing ways to provide specialized TA, best practices and guidance to field office staff and grantees around the existing required zoning element of the Consolidated Plan	Assessment, Guidance, TA		FY22 Q1 – FY23 Q1

## Healthy Housing Initiatives

### 3.4 Prevent Residential Lead Poisoning

**Implementing Offices:** OLHCHH, PD&R, PIH, CPD, Housing

**Description:** HUD is a leader in increasing awareness of lead poisoning prevention and reducing childhood lead exposure. HUD will continue to prioritize comprehensive reductions in Americans' exposure to lead pollution in their homes by addressing lead contamination in soil, air, water, and paint. This includes expanding HUD's existing lead control programs as well as continuing an ongoing partnership with EPA to assess and remediate potential health risks to residents of public and assisted housing both within and near Superfund site boundaries.

Office	Action	Implementation Method	Resource Implications	Timeline
OLHCHH	Update the soil-lead hazard standard for OLHCHH Lead Hazard Reduction Program grants by working with the EPA to identify a lower, more protective "action level" than the current standard	Guidance	None <sup>19</sup>	FY22 Q3 – FY23 Q3
OLHCHH, PD&R	Assess HUD's research and capacity-building needs related to lead risk and geospatial products for inclusion in HUD's 2022-25 Learning Agenda	Assessment	Reprioritize Existing Resources	FY22 Q1 – FY23 Q3
PIH	Issue policy guidance, provide technical assistance, and monitor public and voucher housing to further compliance with lead-based paint safety regulations	Guidance, Technical Assistance	None	FY22 Q1 – FY24 Q1
PIH	Launch competitive Lead-based Paint Capital Funds program for PHAs to test and abate lead paint	Guidance	FY22 Budget Request	FY22 Q4 – FY24 Q4
OLHCHH	Develop plans and implement Justice40 pilot in Lead Hazard Control and Healthy Homes Grants	Assessment, Guidance	None	FY22 Q1 – FY23 Q1
OEE, PIH, Housing, OLHCHH	Continue ongoing partnership with EPA to identify and investigate Public Housing and Multifamily assisted housing in which lead pollution and other contaminants of concern from NPL sites could impact residents' health	Coordination, Assessment	None	FY21 Q2 – FY22 Q4
CPD, PIH,	Where contamination is found in HUD-assisted housing, work across	Coordination, assessment	None	FY21 Q4–FY23 Q4

<sup>19</sup> Although there may be resource implications for implementing any rulemaking, the full resource implications cannot be known until the rule has been drafted. Therefore, the resource implications for rulemaking apply only to the resources required to draft and publish the rule.

Housing, OLHCHH	Federal, Tribal, State, and Local agencies and nongovernmental organizations to help the impacted community identify available resources and appropriate solutions to eliminate hazards and improve residents' overall health			
PD&R, CPD, PIH, Housing, OLHCHH	Collaborate with EPA's Office of Brownfields and Land Revitalization, as well as State and Tribal Response Programs, to ensure cross-agency alignment with respect to changing climate conditions and brownfields policies	Coordination	None	FY23 Q1 – FY24 Q1

### 3.5 Minimize Residential Radon Exposure

**Implementing Offices:** OLHCHH, CPD, Housing, PIH

**Description:** Coordinate across programs to develop targeted policy, guidance, and technical assistance to HUD customers to minimize radon exposure in the Nation's housing stock.

Office	Action	Implementation Method	Resource Implications	Timeline
OLHCHH, CPD, PIH, Housing	Deliver radon training series and guidance materials to HUD customers covering topics including radon basics, regulatory requirements, and testing and mitigation best practices	Technical Assistance	None	FY22 Q1- FY23 Q4
OEE, OLHCHH	Develop a simple departmental radon policy clarifying current regulatory minimums	Guidance	None	FY21 Q4- FY22 Q1
CPD, PIH	Develop program-specific radon policies for grantees and PHAs	Guidance	None	FY22 Q1- FY22 Q4
OEE, OLHCHH, PIH, Housing	Refine departmentwide radon testing and mitigation standards by rule	Rulemaking	None	FY22 Q1- FY24 Q4

### 3.6 Update HUD's National Environmental Policy Act (NEPA) Policies

**Implementing Offices:** CPD, PIH, Housing

**Description:** Revise HUD's environmental review policies to ensure consideration of climate- and environmental justice-related hazards and health risks in all proposed site selection and placement of new assistance activities. HUD will update its NEPA-implementing regulations, guidance materials, and online tools to specify how HUD and grantees will consider climate-related hazards and environmental justice concerns in environmental reviews prepared pursuant to 24 CFR parts 50 and 58. This effort will reflect diverse concerns and resources, including guidance from the White House Council on Environmental Quality (CEQ), recent

evaluations of the potential health risks from lead and radon in public and assisted housing, and the particular impacts of climate change on vulnerable communities. CPD will work closely with program offices across the department to define program-specific policies and standards.

<b>Office</b>	<b>Action</b>	<b>Implementation Method</b>	<b>Resource Implications</b>	<b>Timeline</b>
OEE	Follow up on HUD’s 2014 Climate Adaptation Plan and CEQ guidance by updating guidance on how to assess climate resilience and environmental justice when completing Environmental Assessments under 24 CFR parts 50 and 58	Guidance	None	FY22 Q1 – FY22 Q3
OEE	Revise HUD’s environmental regulations – including 24 CFR parts 50, 55, and 58 – to better integrate strategies to mitigate climate- and EJ-related hazards and health risks in HUD-assisted activities	Rulemaking	None	FY22 Q1- FY23 Q4
CPD, PIH, Housing	Update Program guidance on environmental review procedures to include analysis of climate mitigation measures, adaptation strategies, and environmental justice	Guidance	None	FY22 Q2- FY23 Q4
CPD	Develop a training series for HUD customers and update HUD’s online tools to reflect updated policy	Technical Assistance, IT Solution	None	FY22 Q3- FY23 Q4
CPD, PIH, Housing, FHEO	Extend ongoing efforts to improve environmental review compliance across HUD programs through improved guidance, technical support, and monitoring	Guidance, Technical Assistance	None	Ongoing

# NASA Aims for Climate-Friendly Aviation

(/sites/default/files/thumbnails/image/ttbw-90-aerial-forest-16x9-2-no-logo.jpg)

NASA is expanding research to lead the nation to a sustainable, net-zero carbon emissions aviation future.

**Credits: Vehicle image created by Scott Anders, Rich Wahls and Lillian Gipson; Forest Imagery frackreporter, E+, GettyImages**

(.)

NASA Aeronautics has always been about improving aviation efficiency and safety, while reducing noise, fuel use and harmful emissions. For decades, our NASA-developed technologies have contributed to making aviation more sustainable – environmentally and economically.

Now we are expanding research for sustainable aviation by developing and testing new green technologies for next-generation aircraft, new automation tools for greener and safer airspace operations, and new sustainable energy options for aircraft propulsion.

## NASA Tests Sustainable Aviation Fuel Emissions

5 months ago

We're partnering with industry, academia and other agencies through our Sustainable Flight National Partnership to accomplish aviation's aggressive climate change agenda – by 2050 reduce aviation carbon emissions by half compared to 2005, and achieve net-zero emissions by 2060.

During the next ten years we'll demonstrate first-ever high-power hybrid-electric propulsion on a large transport aircraft, ultra-high efficiency long and slender aircraft wings, new large-scale manufacturing techniques of composite materials, and advanced engine technologies based on breakthrough NASA innovation.

In partnership with the Federal Aviation Administration and airlines, we'll also pioneer new air traffic management automation tools that safely and reliably put future aircraft on flight paths optimized for minimal environmental impact.

(/sites/default/files/thumbnails/image/ttbw-hero.png)

NASA will demonstrate high-risk, high-payoff technology advancements critical for U.S. aerospace manufacturers to bring to market innovative, cost-effective, and sustainable products and services demanded by airlines and customers.

## Regulations for Greenhouse Gas Emissions from Passenger Cars and Trucks

<https://epa.gov/node/159769>

Clean Trucks Plan <https://epa.gov/node/270593>

The Environmental Protection Agency (EPA) proposed to strengthen federal greenhouse gas (GHG) emissions standards for passenger cars and light trucks by setting stringent requirements for reductions through Model Year (MY) 2026. The proposed 2023-2026 MY standards would achieve significant GHG emissions reductions along with reductions in other pollutants. The proposal would result in substantial public health and welfare benefits, while providing consumers with savings from lower fuel costs. The proposal would incentivize technology available today to make vehicles cleaner and to encourage more hybrid and electric vehicle technology.

### Comment and Public Hearing Information:

To view comments submitted for this proposed rulemaking, please visit [regulations.gov](https://www.regulations.gov) <sup>EXIT</sup> <https://www.regulations.gov/> and access the rule under Docket ID No. EPA-HQ-OAR-2021-0208.

EPA held a virtual public hearing on this proposal on August 25, and August 26, 2021. The transcripts can be found on the Public Hearing <https://epa.gov/node/270524> page.

LAST UPDATED ON FEBRUARY 11, 2022

**SECURITIES AND EXCHANGE COMMISSION**

**17 CFR 210, 229, 232, 239, and 249**

**[Release Nos. 33-11042; 34-94478; File No. S7-10-22]**

**RIN 3235-AM87**

**The Enhancement and Standardization of Climate-Related Disclosures for Investors**

**AGENCY:** Securities and Exchange Commission

**ACTION:** Proposed rule.

**SUMMARY:** The Securities and Exchange Commission (“Commission”) is proposing for public comment amendments to its rules under the Securities Act of 1933 (“Securities Act”) and Securities Exchange Act of 1934 (“Exchange Act”) that would require registrants to provide certain climate-related information in their registration statements and annual reports. The proposed rules would require information about a registrant’s climate-related risks that are reasonably likely to have a material impact on its business, results of operations, or financial condition. The required information about climate-related risks would also include disclosure of a registrant’s greenhouse gas emissions, which have become a commonly used metric to assess a registrant’s exposure to such risks. In addition, under the proposed rules, certain climate-related financial metrics would be required in a registrant’s audited financial statements.

**DATES:** Comments should be received on or before May 20, 2022.

**ADDRESSES:** Comments may be submitted by any of the following methods:

Electronic comments:

- Use the Commission’s internet comment form  
[\(<https://www.sec.gov/rules/submitcomments.htm>\)](https://www.sec.gov/rules/submitcomments.htm).

- Send an email to [rule-comments@sec.gov](mailto:rule-comments@sec.gov). Please include File Number S7-10-22 on the subject line.

Paper comments:

- Send paper comments to Vanessa A. Countryman, Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to File Number S7-10-22. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method of submission. The Commission will post all comments on the Commission's website (<https://www.sec.gov/rules/proposed.shtml>). Comments are also available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10 a.m. and 3 p.m. Operating conditions may limit access to the Commission's Public Reference Room. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly.

Studies, memoranda, or other substantive items may be added by the Commission or staff to the comment file during this rulemaking. A notification of the inclusion in the comment file of any such materials will be made available on our website. To ensure direct electronic receipt of such notifications, sign up through the "Stay Connected" option at [www.sec.gov](http://www.sec.gov) to receive notifications by email.

**FOR FURTHER INFORMATION CONTACT:** Elliot Staffin, Special Counsel, Office of Rulemaking, at (202) 551-3430, in the Division of Corporation Finance; or Anita H. Chan,

Professional Accounting Fellow or Shehzad K. Niazi, Acting Deputy Chief Counsel, in the Office of the Chief Accountant, at (202) 551-5300, U.S. Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549.

**SUPPLEMENTARY INFORMATION:** We are proposing to add 17 CFR 210.14-01 and 14-02 (Article 14 of Regulation S-X) and 17 CFR 17 CFR 229.1500 through 1506 (subpart 1500 of Regulation S-K) under the Securities Act<sup>1</sup> and the Exchange Act,<sup>2</sup> and amend 17 CFR 239.11 (Form S-1), 17 CFR 239.18 (Form S-11), 17 CFR 239.25 (Form S-4), and 17 CFR 239.34 (Form F-4) under the Securities Act, and 17 CFR 249.210 (Form 10), 17 CFR 249.220f (Form 20-F), 17 CFR 249.306 (Form 6-K), 17 CFR 249.308a (Form 10-Q), and 17 CFR 249.310 (Form 10-K) under the Exchange Act.

## I. INTRODUCTION

We are proposing to require registrants to provide certain climate-related information in their registration statements and annual reports, including certain information about climate-related financial risks and climate-related financial metrics in their financial statements. The disclosure of this information would provide consistent, comparable, and reliable—and therefore decision-useful—information to investors to enable them to make informed judgments about the impact of climate-related risks on current and potential investments.

The Commission has broad authority to promulgate disclosure requirements that are “necessary or appropriate in the public interest or for the protection of investors.”<sup>3</sup> We have considered this statutory standard and determined that disclosure of information about climate-related risks and metrics would be in the public interest and would protect investors. In making this determination, we have also considered whether the proposed disclosures “will promote efficiency, competition, and capital formation.”<sup>4</sup>

We are proposing to require disclosures about climate-related risks and metrics reflecting those risks because this information can have an impact on public companies’ financial performance or position and may be material to investors in making investment or voting decisions. For this reason, many investors—including shareholders, investment advisers, and investment management companies—currently seek information about climate-related risks from companies to inform their investment decision-making. Furthermore, many companies have

---

<sup>3</sup> See, e.g., Section 7 of the Securities Act [15 U.S.C. 77g] and Sections 12, 13, and 15 of the Exchange Act [15 U.S.C. 78l, 78m, and 78o].

<sup>4</sup> See, e.g., Section 2(b) of the Securities Act [15 U.S.C. 77b(b)] and Section 3(f) of the Exchange Act [15 U.S.C. 78c(f)].

begun to provide some of this information in response to investor demand and in recognition of the potential financial effects of climate-related risks on their businesses.

We are concerned that the existing disclosures of climate-related risks do not adequately protect investors. For this reason, we believe that additional disclosure requirements may be necessary or appropriate to elicit climate-related disclosures and to improve the consistency, comparability, and reliability of climate-related disclosures. With respect to their existing climate-related disclosures (to the extent registrants are already disclosing such information), registrants often provide information outside of Commission filings and provide different information, in varying degrees of completeness, and in different documents and formats—meaning that the same information may not be available to investors across different companies. This could result in increased costs to investors in obtaining useful climate-related information and impair the ability to make investment or voting decisions in line with investors’ risk preferences. Also, companies may not disclose certain information needed to understand their existing climate-related disclosures, such as the methodologies, data sources, assumptions, and other key parameters used to assess climate-related risks. To the extent companies primarily provide this information separate from their financial reporting, it may be difficult for investors to determine whether a company’s financial disclosures are consistent with its climate-related disclosures.<sup>5</sup> In addition, the information provided outside of Commission filings is not subject to the full range of liability and other investor protections that help elicit complete and accurate disclosure by public companies.

---

<sup>5</sup> S&P Global, [Seven ESG Trends to Watch in 2021](https://www.spglobal.com/en/research-insights/featured/seven-esg-trends-to-watch-in-2021) (Feb. 7, 2021), available at <https://www.spglobal.com/en/research-insights/featured/seven-esg-trends-to-watch-in-2021>. This study found that approximately 90% of S&P 500 companies publish sustainability reports but only 16% include any reference to ESG factors in their Commission filings.

Investors need information about climate-related risks—and it is squarely within the Commission’s authority to require such disclosure in the public interest and for the protection of investors—because climate-related risks have present financial consequences that investors in public companies consider in making investment and voting decisions.<sup>6</sup> Investors have noted that climate-related inputs have many uses in the capital allocation decision-making process including, but not limited to, insight into governance and risks management practices,<sup>7</sup> integration into various valuation models, and credit research and assessments.<sup>8</sup> Further, we understand investors often employ diversified strategies, and therefore do not necessarily consider risk and return of a particular security in isolation but also in terms of the security’s effect on the portfolio as a whole, which requires comparable data across registrants.<sup>9</sup>

While climate-related risks implicate broader concerns—and are subject to various other regulatory schemes—our objective is to advance the Commission’s mission to protect investors,

<sup>18</sup> See Antony J. Blinken, Secretary of State, *The United States Officially Rejoins the Paris Agreement*, Press Statement, (Feb. 19, 2021). 191 countries plus the European Union have now signed the Paris Climate Agreement. The central aim of the Paris Climate Agreement is to strengthen the global response to the threat of climate change by keeping a global temperature rise this century to well below 2° Celsius above pre-industrial levels and to pursue efforts to limit the temperature increase even further to 1.5° degrees Celsius. See *Paris Agreement* (Paris, Dec. 12, 2015) (entered into force Nov. 4, 2016). Moreover, at the UN Climate Change Conference (COP 26), the United States committed to become net zero by 2050, China by 2060, and India by 2070. Further, over 100 countries formed a coalition to reduce methane emissions by 30 percent by 2030. See *Environment+Energy Leader, COP26 Net Zero Commitments will Speed Energy Transition, Increase Pressure on Industries, According to Moody’s Report* (Nov. 17, 2021).

institutions.<sup>19</sup> How a company assesses and plans for climate-related risks may have a significant impact on its future financial performance and investors' return on their investment in the company.

Consistent, comparable, and reliable disclosures on the material climate-related risks public companies face would serve both investors and capital markets. Investors would be able to use this information to make investment or voting decisions in line with their risk preferences. Capital allocation would become more efficient as investors are better able to price climate-related risks. In addition, more transparency and comparability in climate-related disclosures would foster competition. Many other jurisdictions and financial regulators around the globe have taken action or reached similar conclusions regarding the importance of climate-related disclosures and are also moving towards the adoption of climate-related disclosure standards.<sup>20</sup>

This proposal builds on the Commission's previous rules and guidance on climate-related disclosures, which date back to the 1970s. In 2010, in response to increasing calls by the public and shareholders for public companies to disclose information regarding how climate change may affect their business and operations, the Commission published guidance ("2010 Guidance") for registrants on how the Commission's existing disclosure rules may require disclosure of the impacts of climate change on a registrant's business or financial condition.<sup>21</sup> Since that time, as climate-related impacts have increasingly been well-documented and awareness of climate-

related risks to businesses and the economy has grown,<sup>22</sup> investors have increased their demand for more detailed information about the effects of the climate on a registrant’s business and for more information about how a registrant has addressed climate-related risks and opportunities when conducting its operations and developing its business strategy and financial plans.<sup>23</sup> It is appropriate for us to consider such investor demand in exercising our authority and responsibility to design an effective and efficient disclosure regime under the federal securities laws.

In developing these proposals, we have considered the feedback we have received to date from a wide range of commenters, including comments from investors as to the information they need to make informed investment or voting decisions, as well as concerns expressed by registrants with regard to compliance burdens and liability risk.<sup>24</sup> While our proposals include disclosure requirements designed to foster greater consistency, comparability, and reliability of available information, they also include a number of features designed to mitigate the burdens on

---

<sup>22</sup> See, e.g., *supra* notes 6, 10, and 12.

<sup>23</sup> See, e.g., Larry Fink, *A Fundamental Reshaping of Finance*, 2020 Letter to CEOs, at <https://www.blackrock.com/corporate/investor-relations/2020-larry-fink-ceo-letter>, available at <https://www.blackrock.com/corporate/investor-relations/2020-larry-fink-ceo-letter> (stating that climate risk is investment risk and asking the companies that BlackRock invests in to, among other matters, disclose climate-related risks in line with the recommendations of the Task Force on Climate-related Financial Disclosures); see also Climate Action 100+, at <https://www.climateaction100.org/>. Climate Action 100+ is an investor-led initiative composed of 615 investors who manage \$60 trillion in assets (as of Nov. 2021), who aim “to mitigate investment exposure to climate risk and secure ongoing sustainable returns for their beneficiaries.” See also Glasgow Financial Alliance for Net Zero (GFANZ), at <https://www.gfanzero.com/>, a global coalition of leading financial institutions focused on promoting the transition to a net zero global economy. Formed in Apr. 2021, its membership as of Nov. 2021 included over 450 financial firms controlling assets of over \$130 trillion. Further, more than 500 investor signatories with assets under management of nearly \$100 trillion are signatories to the CDP climate risk disclosure program, [https://cdn.cdp.net/cdp-production/comfy/cms/files/files/000/004/697/original/2021\\_CDP\\_Capital\\_Markets\\_Brochure\\_General.pdf](https://cdn.cdp.net/cdp-production/comfy/cms/files/files/000/004/697/original/2021_CDP_Capital_Markets_Brochure_General.pdf). We discuss the growing investor demand for climate-related information in greater detail in Section I.C below.

<sup>24</sup> See Acting Chair Allison Herren Lee Public Statement, *Public Input Welcomed on Climate Change Disclosures* (Mar. 15, 2021), available at <https://www.sec.gov/news/public-statement/lee-climate-change-disclosures>. See also, e.g., *Concept Release: Business and Financial Disclosure Required by Regulation S-K*, Release No. 33-10064 (Apr. 16, 2016), [83 FR 23915 (Apr. 22, 2016)] and related comments, available at <https://www.sec.gov/rules/concept/conceptarchive/conceptarch2016.shtml>.

registrants, such as phase-in periods for the proposed climate-related disclosure requirements,<sup>25</sup> a safe harbor for certain emissions disclosures,<sup>26</sup> and an exemption from certain emissions reporting requirements for smaller reporting companies.<sup>27</sup> In addition, the existing safe harbors for forward-looking statements under the Securities Act and Exchange Act would be available for aspects of the proposed disclosures.<sup>28</sup>

Although the various requirements we are proposing are supported by overlapping rationales, we emphasize that the different aspects of the proposal serve independent, albeit complementary, objectives. In addition, we have carefully considered how to craft this proposal to best advance investor protection and the public interest, consistent with the Commission's disclosure authority and regulatory mission, and we welcome comments on how we can further achieve that goal.

#### **A. Background**

The Commission first addressed the disclosure of material environmental issues in the early 1970s when it issued an interpretive release stating that registrants should consider disclosing in their SEC filings the financial impact of compliance with environmental laws.<sup>29</sup> Throughout the 1970s, the Commission continued to explore the need for specific rules mandating disclosure of information relating to litigation and other business costs arising out of

---

<sup>25</sup> See *infra* Section II.M.

<sup>26</sup> See Section II.G.3.

<sup>27</sup> See *id.*

<sup>28</sup> See Securities Act Section 27A [15 U.S.C. 77z-2] and Exchange Act Section 21E [15 U.S.C. 78u-5]. We discuss the application of the existing forward-looking statement safe harbors to the proposed climate-related disclosures primarily in Sections II.C.3-4, II.E, II.G.1, and II.I.

<sup>29</sup> See Release No. 33-5170 (July 19, 1971) [36 FR 13989]. The Commission codified this interpretive position in its disclosure forms two years later. See Release 33-5386 (Apr. 20, 1973) [38 FR 12100] (“1972 Amendments”).

compliance with federal, state, and local laws that regulate the discharge of materials into the environment or otherwise relate to the protection of the environment. These topics were the subject of several rulemaking efforts, extensive litigation, and public hearings, all of which resulted in the rules that now specifically address disclosure of environmental issues.<sup>30</sup>

After almost a decade of consideration, the Commission adopted rules in 1982 mandating disclosure of information relating to litigation and other business costs arising out of compliance with federal, state, and local laws that regulate the discharge of materials into the environment or otherwise relate to the protection of the environment.<sup>31</sup> In addition to these specific disclosure requirements, the Commission's other disclosure rules requiring, for example, information about material risks and a description of the registrant's business, could give rise to an obligation to provide disclosure related to the effects of climate change.<sup>32</sup>

---

<sup>30</sup> See Interpretive Release No. 33-6130 (Sept. 27, 1979) [44 FR 56924], which includes a brief summary of the National Environmental Policy Act of 1969 and the legal and administrative actions taken with regard to the Commission's environmental disclosure during the 1970s. See also *NRDC v. SEC*, 606 F.2d 1031, 1036-42 (DC Cir. 1979) (discussing this history). More information relating to the Commission's efforts in this area is chronicled in Release No. 33-6315 (May 4, 1981) [46 FR 25638].

<sup>31</sup> See Release No. 33-6383 (Mar. 3, 1982) [47 FR 11380] ("1982 Release") (adopting 17 CFR 229.103, which requires a registrant to describe its material pending legal proceedings, other than ordinary routine litigation incidental to the business, and indicating that administrative or judicial proceedings arising under federal, state, or local law regulating the discharge of materials into the environment or primarily for the purpose of protecting the environment, shall not be deemed "ordinary routine litigation incidental to the business" and must be described if meeting certain conditions). The 1982 Release also moved the information called for by the 1973 Amendments to 17 CFR 229.101(c)(1)(xii), which, as part of a registrant's business description, required the disclosure of the material effects that compliance with Federal, State and local provisions regulating the discharge of materials into the environment, or otherwise relating to the protection of the environment, have had upon the registrant's capital expenditures, earnings and competitive position, as well as the disclosure of its material estimated capital expenditures for environmental control facilities. In 2020, the Commission amended 17 CFR 229.101(c)(1) to require, to the extent material to an understanding of the business taken as a whole, disclosure of the material effects that compliance with government regulations, including environmental regulations, may have upon the capital expenditures, earnings, and competitive position of the registrant and its subsidiaries. See *Modernization of Regulation S-K Items 101, 103, and 105*, Release No. 33-10825 (Aug. 26, 2020) [85 FR 63726 (Oct. 8, 2020)] ("2020 Release").

<sup>32</sup> See Release No. 33-9106, Section III.

In its 2010 Guidance, the Commission observed that, in response to investor demand for climate-related information, many companies were voluntarily reporting climate-related information outside their filings with the Commission. The Commission emphasized that “registrants should be aware that some of the information they may be reporting pursuant to these mechanisms also may be required to be disclosed in filings made with the Commission pursuant to existing disclosure requirements.”<sup>33</sup> Specifically, the 2010 Guidance emphasized that climate change disclosure might, depending on the circumstances, be required in a company’s Description of Business, Risk Factors, Legal Proceedings, and Management’s Discussion and Analysis of Financial Condition and Results of Operations (“MD&A”).<sup>34</sup> The 2010 Guidance further identified certain climate-related issues that companies may need to consider in making their disclosures, including the direct and indirect impact of climate-related legislation or regulations, international agreements, indirect consequences of business trends including changing demand for goods, and the physical impacts of climate change.

The proposals set forth in this release would augment and supplement the disclosures already required in SEC filings. Accordingly, registrants should continue to evaluate the climate-related risks they face and assess whether disclosures related to those climate-related risks must be disclosed in their Description of Business, Risk Factors, Legal Proceedings, and MD&A as described in the 2010 Guidance. These disclosures should be based on the registrant’s specific facts and circumstances. While climate risks impact many issuers across industries, the impacts of those risks on a particular registrant and how the registrant addresses

---

<sup>33</sup> See Release No. 33-9106, Section I.

<sup>34</sup> The 2010 Guidance also applies to corresponding disclosure requirements in Form 20-F by foreign private issuers.

those risks are fact-specific and may vary significantly by registrant.<sup>35</sup> The disclosures required by our existing rules should reflect these company-specific risks.

## **B. The March 2021 Request for Public Input**

On March 15, 2021, Acting Chair Allison Herren Lee requested public input on climate disclosure from investors, registrants, and other market participants.<sup>36</sup> The Acting Chair solicited input on several issues, including how the Commission could best regulate disclosure concerning climate change in order to provide more consistent, comparable, and reliable information for investors, whether the Commission should require the disclosure of certain metrics and other climate-related information, the role that existing third-party climate-related disclosure frameworks should play in the Commission's regulation of such disclosure, and whether and how such disclosure should be subject to assurance.

The Commission received approximately 600 unique letters and over 5800 form letters in response to the Acting Chair's request for public input.<sup>37</sup> We received letters from academics, accounting and audit firms, individuals, industry groups, investor groups, registrants, non-governmental organizations, professional climate advisors, law firms, professional investment

---

<sup>35</sup> Our recent amendments to Item 105 of Regulation S-K discourage the presentation of generic risks that could apply generally to any registrant or offering. The fact that climate risks are broad-based does not, in our view, cause them to be generic. For example, thousands of companies in Houston were impacted by Hurricane Harvey. However, (1) their flood risk varied and some companies may have been far more impacted than others (and would be more vulnerable to future catastrophic storms); (2) their operations were different and some may have been more disrupted as a result than others—*e.g.*, a services business on the 10th floor of a building may have experienced just a few days of disruption while an oil refinery may have been shut down for weeks; and (3) their risk management processes may have been different—two similarly situated companies may have different continuity of operations plans or may have taken steps to mitigate those types of risks. In sum, while the source of the risk may be common to many companies, the impact is not.

<sup>36</sup> See Acting Chair Allison Herren Lee Public Statement, Public Input Welcomed on Climate Change Disclosures.

<sup>37</sup> The comment letters are available at <https://www.sec.gov/comments/climate-disclosure/cll12.htm>. Except as otherwise noted, references to comments in this release pertain to these comments.

advisors and investment management companies, standard-setters, state government officials, and US Senators and Members of the House of Representatives.

Many of these commenters, including investors with trillions of dollars of assets under management collectively,<sup>38</sup> supported implementation of climate-related disclosure rules. A number of commenters<sup>39</sup> stated that mandated disclosures are necessary because climate change poses significant financial risks to registrants and their investors.<sup>40</sup> According to one of the commenters, 68 out of 77 industries are likely to be significantly affected by climate risk.<sup>41</sup> Many commenters criticized the current disclosure practice, in which some issuers voluntarily provide climate disclosures based on a variety of different third-party frameworks, because it has

<sup>41</sup> See letter from SASB.

not produced consistent, comparable, reliable information for investors and their advisors, who otherwise have difficulty obtaining that information.<sup>42</sup>

Other commenters, however, questioned whether climate change posed a risk to companies or their investors. These commenters stated their belief that the assumptions underlying the assessment of the impact of climate change were too uncertain to permit companies to ascertain the real risks to their operations and financial condition caused by climate change.<sup>43</sup> These commenters stated that they opposed implementation of climate-related disclosure rules, and argued that such rules would exceed the Commission’s statutory authority. Some of these commenters also argued that such rules are not necessary because registrants are already required to disclose material climate risks, or that such rules would be more costly than the current “private ordering” of climate disclosures.<sup>44</sup> Some commenters also argued that mandated climate disclosure rules could violate First Amendment rights.<sup>45</sup>

<sup>45</sup> See, e.g., letters from the Institute for Free Speech (June 10, 2021); Patrick Morrissey, West Virginia Attorney General (Mar. 25, 2021); and Texas Public Policy Foundation.

As noted above, we have considered these comments and other feedback received from the public in formulating the current proposal. As part of its filing review process, the Commission staff also assessed the extent to which registrants currently disclose climate-related risks in their Commission filings. Since 2010, disclosures related to climate change have generally increased, but there is considerable variation in the content, detail, and location (*i.e.*, in reports filed with the Commission, in sustainability reports posted on registrant websites, or elsewhere) of climate-related disclosures. The staff has observed significant inconsistency in the depth and specificity of disclosures by registrants across industries and within the same industry. The staff has found significantly more extensive information in registrants' sustainability reports and other locations such as their websites as compared with their reports filed with the Commission. In addition, the disclosures in registrants' Forms 10-K frequently contain general, boilerplate discussions that provide limited information as to the registrants' assessment of their climate-related risks or their impact on the companies' business.<sup>46</sup>

We are also mindful of the benefits to investors of requiring climate-related information in SEC filings. Providing more extensive climate-related disclosure in sustainability reports, while excluding such relevant information from Forms 10-K, may make it difficult for investors to analyze and compare how climate-related risks and impacts affect registrants' businesses and consolidated financial statements. The inclusion of climate-related disclosures in SEC filings should increase the consistency, comparability, and reliability of climate-related information for investors. The placement of climate-related information in different locations can make it difficult for investors to find comparable climate-related disclosures, whereas inclusion in a

---

<sup>46</sup> The staff of the Division of Corporation Finance has developed a sample comment letter for registrants to elicit improved disclosure on some of the deficient areas noted in their review of filings. *See* Climate Change Disclosure-Sample Letter, available at <https://www.sec.gov/corpfin/sample-letter-climate-change-disclosures>.

registrant’s Form 10-K or registration statement should make it easier for investors to find and compare this information.<sup>47</sup> Further, information that is filed with the Commission in Exchange Act periodic reports is subject to disclosure controls and procedures (“DCP”), which help to ensure that a registrant maintains appropriate processes for collecting and communicating the necessary information by which to formulate the climate-related disclosures.<sup>48</sup> Moreover, information filed as part of a registrant’s Form 10-K carries certain additional potential liability, which itself can cause registrants to prepare and review information filed in the Form 10-K more carefully than information presented outside SEC filings.<sup>49</sup>

Having considered the public feedback and the staff’s experience with climate-related disclosures, we believe that the current disclosure system is not eliciting consistent, comparable, and reliable information that enables investors both to assess accurately the potential impacts of climate-related risks on the nature of a registrant’s business and to gauge how a registrant’s board and management are assessing and addressing those impacts.<sup>50</sup> The Commission has broad authority to promulgate disclosure rules that are in the public interest or for the protection

---

<sup>47</sup> See, e.g., letter from Pricewaterhouse Coopers.

<sup>48</sup> See 17 CFR 240.13a-15 and 17 CFR 240.15d-15.

<sup>49</sup> We note that the liability provisions of Section 10(b) and Rule 10b-5 of the Exchange Act can apply to statements made in filings with the SEC or elsewhere, such as in sustainability reports or on company websites. See, e.g., SEC v. Stinson, No. 10-3130, 2011 U.S. Dist. LEXIS 65723, 2011 WL 2462038, at 12 (E.D. Pa. June 20, 2011) (finding defendants liable under Section 10(b) when they communicated material misstatements and omissions in direct solicitations via e-mail, a webinar, and various web sites). As such, registrants should scrutinize and ensure the accuracy of such statements whether or not filed with the Commission. In addition, information filed in a Form 10-K is subject to Section 18 of the Exchange Act. Further, information filed in an annual report on Form 10-K (and other current and periodic reports) can be incorporated by reference in certain Securities Act registration statements, such as those filed on Form S-3, and thereby become subject to the liability provisions of the Securities Act. See Securities Act Section 11 (15 U.S.C. 77k) and Section 12 (15 U.S.C. 77l). See *infra* Section II.C.3-4, II.E, II.G.1, and II.I regarding the application to forward-looking climate disclosures of the safe harbor for forward-looking statements that was added to the Securities Act and Exchange Act pursuant to the Private Securities Litigation Reform Act of 1995.

<sup>50</sup> See *supra* note 42 and accompanying text.

of investors and that promote efficiency, competition, and capital formation.<sup>51</sup> In light of the present and growing significance of climate-related risks to registrants and the inadequacies of current climate disclosures, we are proposing to revise our rules to include climate-related disclosure items and metrics to elicit investment decision-useful information that is necessary or appropriate to protect investors.

We also believe that enhanced climate disclosure requirements could increase confidence in the capital markets and help promote efficient valuation of securities and capital formation by requiring more consistent, comparable, and reliable disclosure about climate-related risks, including how those risks are likely to impact a registrant’s business operations and financial performance.<sup>52</sup> The proposed requirements may also result in benefits to registrants, given existing costs to registrants that have resulted from the inconsistent market response to investor demand for climate-related information.<sup>53</sup> In this regard our proposal would provide registrants with a more standardized framework to communicate their assessments of climate-related risks

---

<sup>51</sup> See letters from Jill E. Fisch and 18 other law professor signatories (June 11, 2021) (referencing Sections 7, 10, and 19(a) of the Securities Act; and Sections 3(b), 12, 13, 14, 15(d), and 23(a) of the Exchange Act); and Natural Resources Defense Council (June 11, 2021).

<sup>52</sup> See letters from Eni SpA (June 12, 2021); Jill E. Fisch *et al*; Natural Resources Defense Council; SASB; and Value Balancing Alliance (June 28, 2021); *see also infra* Section IV.

<sup>53</sup> See, e.g., letter from SASB (stating that through the “multiple voluntary disclosure frameworks (*i.e.*, the “alphabet soup” decried by companies)...and numerous direct requests to companies for information through surveys, the current private ordering-led system has increased the burden on companies—and investors—while still leaving many companies uncertain as to whether they are, in practice, providing the decision-useful information required by investors.”); *see also* letters from Americans for Financial Reform Education Fund and Public Citizen (June 14, 2021) (stating that “the proliferation of differing frameworks has increased compliance complexities and costs for companies”); Eni SpA (stating that the fragmentation of data fostered by the proliferation of reporting frameworks has multiplied the efforts of companies in satisfying all their requirements); and BSR (June 11, 2021) (providing that “a fragmented environment is limiting the impact of reporting and creating undue confusion and cost on the part of reporters.”).

as well as the measures they are taking to address those risks.<sup>54</sup> At the same time, we are open to exploring ways in which registrants could be afforded flexibility in making the necessary disclosures while still providing appropriate consistency and comparability, and are seeking comment in that regard.

## **C. The Growing Investor Demand for Climate-Related Risk Disclosure and Related Information**

### **1. Major Investor Climate-Related Initiatives**

As the Commission recognized in 2010 and earlier, there has been significant investor demand for information about how climate conditions may impact their investments. That demand has been increasing in recent years. Several major institutional investors, which collectively have trillions of dollars in investments under management, have demanded climate-related information from the companies in which they invest because of their assessment of climate change as a risk to their portfolios, and to investments generally, and also to satisfy investor interest in investments that are considered “sustainable.” As a result, these investors have sought to include and consider climate risk as part of their investment selection process.<sup>55</sup> These institutional investors have formed investor initiatives to collectively urge companies to provide better information about the impact that climate change has had or is likely to have on

---

<sup>54</sup> Providing a more standardized framework for climate-related disclosures would be consistent with the Recommendation from the Investor-as-Owner Subcommittee of the SEC Investor Advisory Committee Relating to ESG Disclosure (May 14, 2020) (“IAC Recommendation”), available at <https://www.sec.gov/spotlight/investor-advisory-committee-2012/recommendation-of-the-investor-as-owner-subcommittee-on-esg-disclosure.pdf>. The term “ESG” refers to environmental, social, and governance matters, of which climate-related disclosures is a part. The IAC Recommendation focused on the inadequacies of ESG disclosures broadly, and not just on those involving climate. The IAC Recommendation stated that, to the extent that SEC reporting obligations would require a single standard of material, decision-useful ESG information, as relevant to each issuer, and based upon data that issuers already use to make their business decisions, such an approach would level the playing field between well-financed large issuers and capital constrained small issuers.

<sup>55</sup> See *supra* note 23.

their businesses, and to urge governments and companies to take steps to reduce investors' exposure to climate risks. Among these initiatives:<sup>56</sup>

- In 2019, more than 630 investors collectively managing more than \$37 trillion signed the Global Investor Statement to Governments on Climate Change urging governments to require climate-related financial reporting;<sup>57</sup>
- This investor initiative continued as the Investor Agenda's 2021 Global Investor Statement to Governments on the Climate Crisis, which was signed by 733 global institutional investors, including some of the largest investors, with more than US \$52 trillion in assets under management in the aggregate. This Statement called for governments to implement a number of measures, including mandating climate risk disclosure.<sup>58</sup>
- The UN Principles for Responsible Investment ("PRI")<sup>59</sup> has acquired over 4,000 signatories who, as of July 13, 2021, have, in the aggregate, assets under management exceeding \$120 trillion as of July 13, 2021;<sup>60</sup>

---

<sup>56</sup> There is some overlap in the signatories to the listed initiatives.

<sup>57</sup> See United Nations Climate Change, [631 Institutional Investors Managing More than USD 37 Trillion in Assets Urge Governments to Step up Climate Ambition](https://unfccc.int/news/631-institutional-investors-managing-more-than-usd-37-trillion-in-assets-urge-governments-to-step-up) (Dec. 9, 2019), available at <https://unfccc.int/news/631-institutional-investors-managing-more-than-usd-37-trillion-in-assets-urge-governments-to-step-up>.

<sup>58</sup> See The Investor Agenda, [2021 Global Investor Statement to Governments on the Climate Crisis](https://theinvestoragenda.org/wp-content/uploads/2021/09/2021-Global-Investor-Statement-to-Governments-on-the-Climate-Crisis.pdf) (Oct. 27, 2021), available at <https://theinvestoragenda.org/wp-content/uploads/2021/09/2021-Global-Investor-Statement-to-Governments-on-the-Climate-Crisis.pdf>.

<sup>59</sup> PRI was created by a UN-sponsored small group of large global investors in 2006. A stated core goal of the PRI is to help investors protect their portfolios from climate-related risks and to take advantage of climate-related opportunities associated with a shift to a low-carbon global economy. See PRI, *Climate Change*, available at <https://www.unpri.org/climate-change>.

<sup>60</sup> See PRI, *CEO quarterly update: celebrating 4000 signatories and supporting the evolution of PRI* (July 13, 2021), available at <https://www.unpri.org/pri-blog/ceo-quarterly-update-celebrating-4000-signatories-and-supporting-the-evolution-of-ri/8033.article>.

- The Net Zero Asset Managers Initiative, which was formed by an international group of asset managers, has 128 signatories that collectively manage \$43 trillion in assets as of July 2021;<sup>61</sup>
- The Climate Action 100+, an investor-led initiative, now comprises 617 global investors that together have more than \$60 trillion in assets under management;<sup>62</sup> and
- The Glasgow Financial Alliance for Net Zero (“GFANZ”), a coalition of over 450 financial firms from 45 countries, responsible for assets of over \$130 trillion, that are committed to achieving net-zero emissions by 2050, reaching 2030 interim targets, covering all emission scopes and providing transparent climate-related reporting.<sup>63</sup>

Each of these investor initiatives has emphasized the need for improved disclosure by companies regarding climate-related impacts. Each of these initiatives has advocated for mandatory climate risk disclosure requirements aligned with the recommendations of the Task Force on Climate-Related Financial Disclosures (“TCFD”)<sup>64</sup> so that disclosures are consistent, comparable, and reliable. The investor signatories of Climate Action 100+ emphasized that obtaining better disclosure of climate-related risks and companies’ strategies to address their

---

<sup>61</sup> See Net Zero Asset Managers Initiative, *Net Zero Asset Managers initiative announces 41 new signatories, with sector seeing ‘net zero tipping point’* (July 6, 2021), available at <https://www.netzeroassetmanagers.org/net-zero-asset-managers-initiative-announces-41-new-signatories-with-sector-seeing-net-zero-tipping-point>.

<sup>62</sup> See Climate Action 100+, *About Climate Action 100+*, available at <https://www.climateaction100.org/about/> (indicating that the initiative is engaging companies on strengthening climate-related financial disclosures).

<sup>63</sup> See GFANZ, *About Us*, available at <https://www.gfanzero.com/about/>. Another organization, the CDP, provides a means for investors to request that companies provide climate-related disclosures through the CDP. In 2021, over 590 investors with \$110 trillion in assets under management requested that thousands of companies disclose climate related information to them through the CDP. See CDP, *Request Environmental Information*, available at <https://www.cdp.net/en/investor/request-environmental-information#d52d69887a88f63e15931b5db2cbe80d>.

<sup>64</sup> We discuss the TCFD in greater detail in Section I.D.1 below.

exposure to those risks is consistent with the exercise of their fiduciary duties to their respective clients.<sup>65</sup>

At the same time, many companies have made commitments with respect to climate change, such as commitments to reduce greenhouse gas emissions or become “net zero” by a particular date.<sup>66</sup> Companies may make these commitments to attract investors, to appeal to customers that prioritize sustainability, or to reduce their exposure to risks posed by an expected transition to a lower carbon economy.<sup>67</sup> In response to these commitments, investors have demanded more detailed information about climate-related targets and companies’ plans to achieve them in order to assess the credibility of those commitments and compare companies based on those commitments.<sup>68</sup>

These initiatives demonstrate that investors are using information about climate risks now as part of their investment selection process and are seeking more informative disclosures about those risks. As an increasing number of investors incorporate this information, in particular

---

<sup>65</sup> See Climate Action 100+, *About Climate Action 100+*. Further, commenters noted their fiduciary obligations to consider climate-related risks. See, e.g., letters from PRI (Consultation Response); and California Public Employee Retirement System (CalPERS) (June 12, 2021).

<sup>66</sup> According to one publication, two-thirds of S&P 500 companies had set a carbon reduction target by the end of 2020. See Jean Eaglesham, *Climate Promises by Businesses Face New Scrutiny*, *The Wall Street Journal* (Nov. 5, 2021).

<sup>67</sup> See Global Survey Shows Race to Decarbonization is on: Johnson Controls finds Delivering Growth and Competitive Advantage are Main Drivers for Companies to Commit to Net Zero (Dec. 1, 2021), available at [https://www.mckinsey.com/business-functions/sustainability/our-insights/cop26-made-net-zero-a-core-principle-for-business-heres-how-leaders-can-act](https://ih.adfn.com/stock-market/NYSE/johnson-controls-JCI/stock-news/86696470/global-survey-shows-race-to-decarbonization-is-on#:~:text=Global%20Survey%20Shows%20Race%20to%20Decarbonization%20is%20on%3A,December%2001%202021%20-%2007%3A01AM%20PR%20Newswire%20%28US%29;and COP26 made net zero a core principle for business. Here’s how leaders can act, McKinsey (Nov. 12, 2021), available at <a href=).

<sup>68</sup> See, e.g., letters from Ceres; Investor Adviser Association (June 11, 2021); SIFMA Asset Management Group (June 10, 2021); Trillium Asset Management; and T. Rowe Price (June 11, 2021); see also letters from Boston University Impact Measurement and Allocation Program (June 7, 2021); CDP (June 11, 2021); Christopher Lish (June 12, 2021); and Pricewaterhouse Coopers (June 10, 2021).

GHG emissions, into their investment selection or voting decisions, this may in turn create transition risks for companies that are seeking to raise capital.

## **2. Third-Party Data, Voluntary Disclosure Frameworks, and International Disclosure Initiatives**

Despite increasing investor demand for information about climate-related risks and strategies, many investors maintain that they cannot obtain the consistent, comparable, and material information that they need to properly inform their investment or voting decisions.<sup>69</sup> In 2020, the Commission’s Investor Advisory Committee (“IAC”) noted the fragmentation of information that has resulted from a rise in third-party data providers that have emerged to try to meet the informational demands of investors.<sup>70</sup> The IAC recommended that the Commission take action to ensure investors have the material, comparable, consistent information about climate and other ESG matters that they need to make investment and voting decisions.

In addition, a diverse group of third parties has developed climate-related reporting frameworks seeking to meet investors’ informational demands. These include the Global

---

<sup>69</sup> See *supra* note 42.

<sup>70</sup> See IAC Recommendation. The IAC Recommendation noted that more than 125 third-party ESG data providers, including ESG ratings firms, have emerged to try to meet the informational demands of investors. According to the IAC Recommendation, these data providers are limited in their ability collectively to provide investors with comparable and consistent information as they use different information sources and different—frequently opaque—methodologies to conduct their analyses, which compromises the usefulness and reliability of the information. This current heterogeneity in practices and disparate demands from investors and ratings firms places a significant burden on companies asked to provide this information in a variety of formats. The IAC Recommendation further observed that many companies feel compelled to respond to the multiple surveys of ESG rating firms because ignoring them or refusing to respond can lead to a low rating, which can adversely affect stock price and access to capital. While the proposed rules would not necessarily eliminate third-party questionnaires, they would help to provide standardized information to all investors and might reduce the need to obtain the information obtained through questionnaires.

Reporting Initiative (“GRI”),<sup>71</sup> CDP (formerly the Carbon Disclosure Project),<sup>72</sup> Climate Disclosure Standards Board (“CDSB”),<sup>73</sup> Value Reporting Foundation (formed through a merger of the Sustainability Accounting Standards Board (“SASB”) and the International Integrated Reporting Council (“IIRC”)),<sup>74</sup> and the TCFD.<sup>75</sup>

To some extent, the development of these disparate frameworks has led to an increase in the number of companies that are providing some climate-related disclosures.<sup>76</sup> However, because they are voluntary, companies that choose to disclose under these frameworks may provide partial disclosures or they may choose not to participate every year. In addition, the form and content of the disclosures may vary significantly from company to company, or from period to period for the same company. The situation resulting from these multiple voluntary frameworks has failed to produce the consistent, comparable, and reliable information that investors need.<sup>77</sup> Instead, the proliferation of third-party reporting frameworks has contributed to reporting fragmentation, which can hinder investors’ ability to understand and compare registrants’ climate-related disclosures. An analysis conducted by the World Business Council

---

<sup>71</sup> See GRI, *About GRI*, available at <https://www.globalreporting.org/about-gri/>.

<sup>72</sup> See CDP, *About Us*, available at <https://www.cdp.net/en/info/about-us>. In 2018, CDP revised its questionnaire to companies so that it aligns with the TCFD recommended framework. See letter from CDP.

<sup>73</sup> See CDSB, *About the Climate Disclosure Standards Board*, available at <https://www.cdsb.net/our-story>.

<sup>74</sup> See Value Reporting Foundation, *Understanding the Value Reporting Foundation*, available at <https://www.valuereportingfoundation.org/>.

<sup>75</sup> See TCFD, *About*, available at <https://www.fsb-tcfid.org/about/>.

<sup>76</sup> For example, according to the CDP, over 3,000 companies have provided climate-related disclosures through the CDP’s platform by responding to the CDP’s questionnaires that are aligned with the TCFD’s disclosure recommendations. See letter from CDP. The TCFD has similarly reported growth in the number of companies and countries supporting its climate-related disclosure recommendations. See TCFD, *2021 Status Report* (Oct. 2021), available at [https://assets.bbhub.io/company/sites/60/2021/07/2021-TCFD-Status\\_Report.pdf](https://assets.bbhub.io/company/sites/60/2021/07/2021-TCFD-Status_Report.pdf) (stating that, as of Oct. 6, 2021, the TCFD had over 2,600 supporters globally, including 1,069 financial institutions responsible for assets of US \$194 trillion).

<sup>77</sup> See *supra* note 42.

for Sustainable Development found that investors had difficulty using existing sustainability disclosures because they lack consistency and comparability.<sup>78</sup> In addition, a 2020 study by the Yale Initiative on Sustainable Finance found that the proliferation of reporting frameworks may have made reporting more difficult for issuers.<sup>79</sup> Moreover, given the voluntary nature of these third-party frameworks, there may not be sufficient incentives or external disciplines to ensure that companies are providing complete and robust disclosure under those frameworks.<sup>80</sup>

The staff has reviewed more than a dozen studies of climate-related disclosures conducted by third parties, such as the CDP,<sup>81</sup> KPMG,<sup>82</sup> TCFD<sup>83</sup>, and Ernst & Young,<sup>84</sup> which assessed the adherence of the climate-related disclosures to various third-party frameworks, such as the TCFD. These studies have reinforced the staff's observations from their review of filings that there is significant variation across companies and industries with regard to the content of

<sup>84</sup> See Ernst & Young, *How can climate change disclosures protect reputation and value?-The 2019 EY Global Climate Risk Disclosure Barometer* (Apr. 2020), available at [https://www.ey.com/en\\_us/climate-change-sustainability-services/how-can-climate-change-disclosures-protect-reputation-and-value](https://www.ey.com/en_us/climate-change-sustainability-services/how-can-climate-change-disclosures-protect-reputation-and-value).

current climate disclosures.<sup>85</sup> Further, much of this climate-related information, particularly GHG emissions and targets, appears outside of Commission filings, in sustainability reports, and on corporate websites. Other analyses of current climate reporting have found a lack of transparency and standardization with regard to the methodologies companies apply in disclosing climate-related information.<sup>86</sup>

The increased fragmentation of climate reporting resulting from the proliferation of third-party reporting frameworks has motivated a number of recent international efforts to obtain more consistent, comparable, and reliable climate-related information for investors. For example:

- A consultation paper published by the IFRS Foundation<sup>87</sup> Trustees in 2020 noted the broad range of voluntary sustainability reporting frameworks that have increased

---

<sup>85</sup> For example, the TCFD report found that the average level of disclosure across the TCFD’s 11 disclosure categories was 40% for the energy sector, 30% for the materials and building sector, 18% for the consumer goods sector and 13% for the technology sector. The level of disclosure varied among categories with only 4% or reporting companies disclosing the resilience of their strategies in North America and 50% reporting their risks and opportunities (the category with the highest level of disclosure). The Ernst & Young report found many companies in industries considered to have high exposure to climate-related risks lack high quality climate disclosures. The Ernst & Young report graded the average quality of the disclosures at 27 out of 100.

<sup>86</sup> See, e.g., *The SEC’s Time to Act*, Center for American Progress (Feb. 19, 2021) (“[T]here is a lack of standardization of the data, assumptions, and methodologies companies use to meet the standards, with much of this information being opaque. Clearly, the current path of climate disclosure will not provide the transparency that an increasing number of investors are seeking and, indeed, a properly functioning market requires—consistency of disclosures across time, comparability of disclosures across companies, and reliability of the information that is disclosed.”) See, also, Andy Green and Andrew Schwartz, *Corporate Long-Termism, Transparency, and the Public Interest* (Oct. 2, 2018) (“[C]orporate disclosure available today is insufficient, not comparable, and unreliable”); and *Managing Climate Risk in the U.S. Financial System*, Report of the Climate-Related Market Risk Subcommittee, Market Risk Advisory Committee of the U.S. Commodity Futures Trading Commission (2020) (“Large companies are increasingly disclosing some climate-related information, but significant variations remain in the information disclosed by each company, making it difficult for investors and others to understand exposure and manage climate risks.”).

<sup>87</sup> The IFRS Foundation refers to the International Financial Reporting Standards Foundation, which was established to develop a single set of “high-quality,” enforceable, and globally accepted accounting standards. See *IFRS - Who we are*, available at <https://www.ifrs.org/about-us/who-we-are/>. The IFRS Foundation was formed in 2010 and succeeded the International Accounting Standards Foundation, which was formed in 2001.

complexity and cost to preparers without improving the quality of the information available to investors;<sup>88</sup>

- Based on the response to the IFRS Foundation consultation paper, the IFRS Foundation took steps toward the establishment of an International Sustainability Standards Board (“ISSB”) operating within the existing governance structure of the IFRS Foundation;
- In 2021, following two roundtables hosted by its Sustainable Finance Task Force, IOSCO<sup>89</sup> issued a report that concluded that companies’ current sustainability disclosures do not meet investors’ needs, and the proliferation of voluntary disclosure frameworks has led to inconsistency in application of the frameworks and, in some cases “cherry picking” of information that might not present an accurate picture of companies’ risks.<sup>90</sup>
- A Technical Experts’ Group of IOSCO worked with a Technical Readiness Working Group of the IFRS Foundation to assess and fine-tune a prototype climate-related financial disclosure standard (“Prototype”) drafted by an alliance of prominent sustainability reporting organizations and designed as a potential model for standards that an ISSB might eventually develop;<sup>91</sup>

<sup>88</sup> IFRS Foundation, [IFRS Foundation Trustees’ Feedback Statement on the Consultation Paper on Sustainability Reporting](https://www.ifrs.org/content/dam/ifrs/project/sustainability-reporting/sustainability-consultation-paper-feedback-statement.pdf) (Apr. 2021), available at <https://www.ifrs.org/content/dam/ifrs/project/sustainability-reporting/sustainability-consultation-paper-feedback-statement.pdf>.

<sup>89</sup> IOSCO refers to the International Organization of Securities Commissions, of which the Commission is a member.

<sup>90</sup> IOSCO, [Report on Sustainability-related Issuer Disclosures](https://www.iosco.org/library/pubdocs/pdf/IOSCOPD678.pdf), Final Report (June 2021) available at <https://www.iosco.org/library/pubdocs/pdf/IOSCOPD678.pdf>.

<sup>91</sup> See CDP, CDSB, GRI, IIRC and SASB, [Reporting on enterprise value Illustrated with a prototype climate-related financial disclosure standard](https://29kjwb3armds2g3gi4lq2sx1-wpengine.netdna-ssl.com/wp-content/uploads/Reporting-on-enterprise-value_climate-prototype_Dec20.pdf) (Dec. 2020), available at [https://29kjwb3armds2g3gi4lq2sx1-wpengine.netdna-ssl.com/wp-content/uploads/Reporting-on-enterprise-value\\_climate-prototype\\_Dec20.pdf](https://29kjwb3armds2g3gi4lq2sx1-wpengine.netdna-ssl.com/wp-content/uploads/Reporting-on-enterprise-value_climate-prototype_Dec20.pdf); and IFRS Foundation, [IFRS Foundation announces International Sustainability Standards Board, consolidation with CDSB and VRF, and publication of prototype disclosure requirements](https://www.ifrs.org/news-and-events/news/2021/11/ifrs-foundation-announces-issb-consolidation-with-cdsb-and-vrf-and-publication-of-prototype-disclosure-requirements/), available at <https://www.ifrs.org/news-and-events/news/2021/11/ifrs-foundation-announces-issb-consolidation-with-cdsb-vrf-publication-of-prototypes/>.

- In November 2021, the IFRS Foundation announced the formation of the ISSB.<sup>92</sup> The ISSB is expected to engage in standard setting to build on the Prototype, including developing climate-specific disclosure standards based on the recommendations of the TCFD.<sup>93</sup>
- Several jurisdictions, including the European Union,<sup>94</sup> are developing or revising their mandatory climate-related disclosure regimes to provide investors with more consistent, useful climate-related financial information, including associated assurance requirements and data tagging to facilitate the use of the information.<sup>95</sup>

These international developments show an increasing global recognition of the need to improve companies' climate-related disclosures, which the proposed rules would help address, as well as the convergence of investors and issuers around the TCFD as a useful framework for communicating information about climate-related risks that companies may face.

---

<sup>92</sup> See IFRS Foundation, *[IFRS Foundation announces International Sustainability Standards Board, consolidation with CDSB and VRF, and publication of prototype disclosure requirements](https://www.ifrs.org/news-and-events/news/2021/11/ifrs-foundation-announces-issb-consolidation-with-cdsb-vrf-and-publication-of-prototype-disclosure-requirements)* (Nov. 3, 2021), available at <https://www.ifrs.org/news-and-events/news/2021/11/ifrs-foundation-announces-issb-consolidation-with-cdsb-vrf-publication-of-prototypes/>. At the same time, the IFRS Foundation announced the planned consolidation of the Climate Disclosure Standards Board and the Value Reporting Foundation into the ISSB during 2022. The ISSB is expected to develop reporting standards using the Prototype as a starting point and engaging in rigorous due process under the oversight of the IFRS Foundation Trustees' Due Process Oversight Committee.

<sup>94</sup> *[Proposal for a DIRECTIVE OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL amending Directive 2013/34/EU, Directive 2004/109/EC, Directive 2006/43/EC and Regulation \(EU\) No 537/2014, as regards corporate sustainability reporting](https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:52021PC0189)* (Apr. 2021), available at <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:52021PC0189>. In proposing revised corporate sustainability reporting requirements, the EU explained that there exists a widening gap between the sustainability information, including climate-related data, companies report and the needs of the intended users of that information, which may mean that investors are unable to take sufficient account of climate-related risks in their investment decisions.

<sup>95</sup> See IOSCO, *[Report on Sustainability-related Issuer Disclosures](#)*, Final Report (June 2021) (noting progress in several jurisdictions, including Hong Kong, India, Japan, New Zealand and the United Kingdom, to incorporate TCFD's disclosure recommendations into their legal and regulatory frameworks).

## **D. Development of a Climate-Related Reporting Framework**

In recent years, two significant developments have occurred that support and inform the Commission’s proposed climate-related reporting rules. The first involves the TCFD, which has developed a climate-related reporting framework that has become widely accepted by both registrants and investors.<sup>96</sup> The second involves the Greenhouse Gas Protocol (“GHG Protocol”), which has become a leading accounting and reporting standard for greenhouse gas emissions.<sup>97</sup> Both the TCFD and the GHG Protocol have developed concepts and a vocabulary that are commonly used by companies when providing climate-related disclosures in their sustainability or related reports. As discussed in greater detail below, the Commission’s proposed rules incorporate some of these concepts and vocabulary, which by now are familiar to many registrants and investors.

### **1. The Task Force on Climate-Related Financial Disclosure**

Our proposed climate-related disclosure framework is modeled in part on the TCFD’s recommendations. A goal of the proposed rules is to elicit climate-related disclosures that are consistent, comparable, and reliable while also attempting to limit the compliance burden associated with these disclosures. The TCFD framework has been widely accepted by issuers,

---

<sup>96</sup> A number of registrants recommended basing the Commission’s climate-related disclosure rules on the TCFD framework. *See, e.g.*, letters from Adobe; Alphabet Inc. *et al.*; BNP Paribas (June 11, 2021); bp; Chevron (June 11, 2021); ConocoPhillips; and Walmart. Similarly, numerous investors and investor groups recommended the TCFD framework. *See* letters from Alberta Investment Management Corporation; BlackRock; CalPERS; CALSTRS (June 4, 2021); Impact Investors, Inc.; and San Francisco Employees Retirement System. *See also infra* Section II.A.1 for further discussion of the many commenters that recommended basing the Commission’s climate-related disclosure rules on the TCFD framework.

<sup>97</sup> *See, e.g.*, letter from Natural Resources Defense Council (stating that most companies providing climate-related information do so using the three-part (scope) framework developed by the GHG Protocol and noting other organizations, such as the CDP, that use the GHG Protocol’s framework and methodology); *see also* GHG Protocol, [Companies and Organizations](https://ghgprotocol.org/companies-and-organizations), available at <https://ghgprotocol.org/companies-and-organizations> (stating that 92% of companies responding to the CDP in 2016 used the GHG Protocol’s standards and guidance).

investors, and other market participants, and, accordingly, we believe that proposing rules based on the TCFD framework may facilitate achieving this balance between eliciting better disclosure and limiting compliance costs.<sup>98</sup>

In April 2015, the Group of 20 Finance Ministers directed the Financial Stability Board (“FSB”) to evaluate ways in which the financial sector could address climate-related concerns.<sup>99</sup> The FSB concluded that better information was needed to facilitate informed investment decisions and to help investors and other market participants to better understand and take into account climate-related risks. The FSB established the TCFD, an industry-led task force charged with promoting better-informed investment, credit, and insurance underwriting decisions.<sup>100</sup> Since then, the framework for climate-related disclosures developed by the TCFD has been refined and garnered global support as a reliable framework for climate-related financial reporting.<sup>101</sup>

In 2017, the TCFD published disclosure recommendations that provide a framework by which to evaluate material climate-related risks and opportunities through an assessment of their projected short-, medium-, and long-term financial impacts on a registrant. The TCFD framework establishes eleven disclosure topics related to four core themes that provide a

---

<sup>98</sup> See *infra* Section II.A.1 and notes 145 through 149.

<sup>99</sup> See TCFD, 2020 Status Report (Oct. 2020). The Group of 20 (“G20”) is a group of finance ministers and central bank governors from 19 countries, including the United States, plus the European Union, which was formed in 1999 to promote global economic growth, international trade, and regulation of financial markets. According to the G20, its members represent more than 80% of world GDP, 75% of international trade, and 60% of the world population. See G20, [About the G20](https://g20.org/about-the-g20/), available at <https://g20.org/about-the-g20/>.

<sup>100</sup> See TCFD, [Recommendations of the Task Force on Climate-related Financial Disclosures](https://assets.bbhub.io/company/sites/60/2020/10/FINAL-2017-TCFD-Report-11052018.pdf) (June 2017), available at <https://assets.bbhub.io/company/sites/60/2020/10/FINAL-2017-TCFD-Report-11052018.pdf>.

<sup>101</sup> See, e.g., Climate Action 100+, [The Three Asks](https://www.climateaction100.org/approach/the-three-asks/), available at <https://www.climateaction100.org/approach/the-three-asks/> (requiring participating investors to ask the companies with which they engage to provide enhanced corporate disclosure in line with the TCFD’s recommendations; and CDP, [How CDP is aligned to the TCFD](https://www.cdp.net/en/guidance/how-cdp-is-aligned-to-the-tcfid), available at <https://www.cdp.net/en/guidance/how-cdp-is-aligned-to-the-tcfid> (explaining how the CDP has aligned its questionnaires to elicit disclosures aligned with the TCFD’s recommendations).

structure for the assessment, management, and disclosure of climate-related financial risks: governance, strategy, risk management, and metrics and targets.<sup>102</sup>

Support for the TCFD’s recommendations by companies and other reporting frameworks has grown steadily since the TCFD’s formation.<sup>103</sup> As of October 2021 more than 2,600 organizations globally, with a total market capitalization of \$25 trillion have expressed support for the TCFD.<sup>104</sup> Further, 1,069 financial institutions, managing assets of \$194 trillion, also support the TCFD.<sup>105</sup> In recognition of the widespread adoption by companies of TCFD reporting, a number of countries, including the United Kingdom, New Zealand, and Switzerland, and the European Union that have proposed mandatory climate-risk disclosure requirements have indicated an intention to base disclosure requirements on the TCFD framework.<sup>106</sup> Further, the TCFD’s recommendations have been adopted by, and incorporated into, other voluntary climate disclosure frameworks such as the CDP, GRI, CDSB, and SASB frameworks. The TCFD also forms the framework for the Prototype that the IFRS Foundation provided to the

---

<sup>102</sup> See TCFD, *TCFD Booklet FNL Digital March-2020.pdf (bbhub.io)* (Mar. 2021), available at [https://assets.bbhub.io/company/sites/60/2020/10/TCFD\\_Booklet\\_FNL\\_Digital\\_March-2020.pdf](https://assets.bbhub.io/company/sites/60/2020/10/TCFD_Booklet_FNL_Digital_March-2020.pdf).

<sup>103</sup> According to the TCFD, “[for] companies, support is a commitment to work toward their own implementation of the TCFD recommendations.” <https://www.fsb-tcfid.org/support-tcfid/>

<sup>104</sup> See TCFD, 2021 Status Report. A recent survey by Moody’s of over 3,800 companies worldwide indicated that the global average disclosure rate of companies that reported across all 11 TCFD’s recommendations increased to 22% in 2021 from 16% in 2020. See Moody’s *State of TCFD Disclosures 2021*, available at [https://assets.website-files.com/5df9172583d7eec04960799a/616d36184f3e6431a424b9df\\_BX9303\\_MESG\\_State%20of%20TCFD%20Disclosures%202021.pdf](https://assets.website-files.com/5df9172583d7eec04960799a/616d36184f3e6431a424b9df_BX9303_MESG_State%20of%20TCFD%20Disclosures%202021.pdf). In addition, according to a recent report by the Governance & Accountability Institute, Inc., 70% of companies in the Russell 1000 Index published sustainability reports in 2020, and of those reporters, 30% mentioned or aligned their disclosures with the TCFD framework, and 40% responded to the CDP questionnaires, which are aligned with the TCFD. See Governance & Accountability Institute, *Sustainability Reporting in Focus, 2021*, available at [https://www.ga-institute.com/fileadmin/ga\\_institute/images/FlashReports/2021/Russell-1000/G\\_A-Russell-Report-2021-Final.pdf?vgo\\_ee=NK5m02JiOOHgDiUUST7fBRwUnRnlmwuCIJkd9A7F3A%3D](https://www.ga-institute.com/fileadmin/ga_institute/images/FlashReports/2021/Russell-1000/G_A-Russell-Report-2021-Final.pdf?vgo_ee=NK5m02JiOOHgDiUUST7fBRwUnRnlmwuCIJkd9A7F3A%3D). We discuss the findings of this report, and other similar findings, in greater detail in Section IV.A.5.c below.

<sup>105</sup> See TCFD, 2021 Status Report.

<sup>106</sup> See *id.*

ISSB as a potential starting point for its standard setting initiative.<sup>107</sup> The G7 Finance Ministers and Central Bank Governors have also endorsed the TCFD.<sup>108</sup> As a result, although the reporting landscape is crowded with voluntary standards that seek different information in different formats, the TCFD framework has been widely endorsed by U.S. companies and regulators and standard-setters around the world.

## 2. The Greenhouse Gas Protocol

Quantitative greenhouse gas (“GHG”) emissions data can enable investors to assess a registrant’s exposure to climate-related risks, including regulatory, technological, and market risks driven by a transition to a lower-GHG intensive economy.<sup>109</sup> This data also could help investors to assess the progress of registrants with public commitments to reduce GHG emissions, which would be important in assessing potential future capital outlays that might be required to meet such commitments. For these reasons, many investors and other commenters recommended that we require disclosure of a registrant’s GHG emissions.<sup>110</sup> Many commenters also recommended that we base any GHG emissions disclosure requirement on the GHG

<sup>107</sup> See Climate-related Disclosures Prototype, Developed by the Technical Readiness Working Group, chaired by the IFRS Foundation, to provide recommendations to the International Sustainability Standards Board for consideration (Nov. 2021).

<sup>108</sup> HM Treasury, *G7 Finance Ministers and Central Bank Governors Communique – Policy Paper* (June 2021), available at <https://www.gov.uk/government/publications/g7-finance-ministers-meeting-june-2021-communicue/g7-finance-ministers-and-central-bank-governors-communicue> (stating their support of mandatory climate-related financial disclosures based on the TCFD framework because of investors’ need for high quality, reliable, comparable climate-risk data).

<sup>109</sup> See, e.g., letters from Calvert Research and Management (June 1, 2021); Ceres *et al* (June 10, 2021); NY State Comptroller (June 8, 2021); and SASB (May 19, 2021).

<sup>110</sup> See *infra* Section II.G.1 and note 412.

Protocol.<sup>111</sup> These commenters indicated that the GHG Protocol has become the most widely-used global greenhouse gas accounting standard.<sup>112</sup> For example, the Environmental Protection Agency (“EPA”) Center for Corporate Climate Leadership references the GHG Protocol’s standards and guidance as resources for companies that seek to calculate their GHG emissions.<sup>113</sup>

The GHG Protocol was created through a partnership between the World Resources Institute and the World Business Council for Sustainable Development, which agreed in 1997 to collaborate with businesses and NGOs to create a standardized GHG accounting methodology.<sup>114</sup> The GHG Protocol has been updated periodically since its original publication and has been broadly incorporated into sustainability reporting frameworks, including the TCFD, Value Reporting Foundation, GRI, CDP, CDSB, and the IFRS Foundation’s Prototype.

The GHG Protocol’s Corporate Accounting and Reporting Standard provides uniform methods to measure and report the seven greenhouse gasses covered by the Kyoto Protocol – carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, sulfur

<sup>114</sup> See Greenhouse Gas Protocol, *About Us | Greenhouse Gas Protocol (ghgprotocol.org)*, available at <https://ghgprotocol.org/about-us>.

hexafluoride, and nitrogen trifluoride.<sup>115</sup> The GHG Protocol introduced the concept of “scopes” of emissions to help delineate those emissions that are directly attributable to the reporting entity and those that are indirectly attributable to the company’s activities.<sup>116</sup> Under the GHG Protocol, Scope 1 emissions are direct GHG emissions that occur from sources owned or controlled by the company. These might include emissions from company-owned or controlled machinery or vehicles, or methane emissions from petroleum operations. Scope 2 emissions are those emissions primarily resulting from the generation of electricity purchased and consumed by the company.<sup>117</sup> Because these emissions derive from the activities of another party (the power provider), they are considered indirect emissions. Scope 3 emissions are all other indirect emissions not accounted for in Scope 2 emissions. These emissions are a consequence of the company’s activities but are generated from sources that are neither owned nor controlled by the company.<sup>118</sup> These might include emissions associated with the production and transportation of

---

<sup>115</sup> See *id.* The Kyoto Protocol, adopted in 1997, implemented the United Nations Framework Convention on Climate Change by obtaining commitments from industrialized countries to reduce emissions of the seven identified gasses according to agreed targets. See United Nations Climate Change, What is the Kyoto Protocol?, available at [https://unfccc.int/kyoto\\_protocol](https://unfccc.int/kyoto_protocol). The EPA includes these seven greenhouse gases in its greenhouse gas reporting program. See, e.g., EPA, *GHGRP Emissions by GHG*, available at <https://www.epa.gov/ghgreporting/ghgrp-emissions-ghg>.

<sup>116</sup> See World Business Council for Sustainable Development and World Resources Institute, *The Greenhouse Gas Protocol, A Corporate Accounting and Reporting Standard* REVISED EDITION, available at <https://ghgprotocol.org/corporate-standard>.

<sup>117</sup> *Id.*

<sup>118</sup> The Scope 3 emissions standard was developed over a three-year period with participation by businesses, government agencies, academics, and NGOs to help companies understand and manage their climate-related risks and opportunities in their upstream and downstream value chains. See Greenhouse Gas Protocol, *Corporate Value Chain (Scope 3) Accounting and Reporting Standard, Supplement to the GHG Protocol Corporate Accounting and Reporting Standard* (Sept. 2011), available at [https://ghgprotocol.org/sites/default/files/standards/Corporate-Value-Chain-Accounting-Reporting-Standard\\_041613\\_2.pdf](https://ghgprotocol.org/sites/default/files/standards/Corporate-Value-Chain-Accounting-Reporting-Standard_041613_2.pdf). This standard identified eight upstream and seven downstream emission categories that can give rise to Scope 3 emissions. The GHG Protocol is developing additional guidance that may impact Scope 3 emissions related to land use and land sector activities. See Greenhouse Gas Protocol, *Update on Greenhouse Gas Protocol Carbon Removals and Land Sector Initiative* (July 8, 2021), available at <https://ghgprotocol.org/blog/update-greenhouse-gas-protocol-carbon-removals-and-land-sector-initiative>.

goods a registrant purchases from third parties, employee commuting or business travel, and the processing or use of the registrant's products by third parties.<sup>119</sup>

We have based our proposed GHG emissions disclosure requirement primarily on the GHG Protocol's concept of scopes and related methodology.<sup>120</sup> By basing this requirement on an established GHG emissions reporting framework, we believe the compliance burden would be mitigated, especially for those registrants that are already disclosing or estimating their GHG emissions pursuant to the GHG Protocol.

#### **E. Summary of the Proposed Rules**

We are proposing to add a new subpart to Regulation S-K, 17 CFR 229.1500-1507 ("Subpart 1500 of Regulation S-K") that would require a registrant to disclose certain climate-related information, including information about its climate-related risks that are reasonably likely to have material impacts on its business or consolidated financial statements, and GHG emissions metrics that could help investors assess those risks.<sup>121</sup> A registrant may also include disclosure about its climate-related opportunities. The proposed new subpart to Regulation S-K

---

<sup>119</sup> See Section II.G.1, below, for a more extensive discussion of Scope 3 categories and emissions.

<sup>120</sup> See *id.*

<sup>121</sup> See *infra* Sections II.B through E and II.G through I.

would include an attestation requirement for accelerated filers<sup>122</sup> and large accelerated filers<sup>123</sup> regarding certain proposed GHG emissions metrics disclosures.<sup>124</sup>

We are also proposing to add a new article to Regulation S-X, 17 CFR 210.14-01 and 02 (“Article 14 of Regulation S-X”) that would require certain climate-related financial statement metrics and related disclosure to be included in a note to a registrant’s audited financial statements.<sup>125</sup> The proposed financial statement metrics would consist of disaggregated climate-related impacts on existing financial statement line items. As part of the registrant’s financial statements, the financial statement metrics would be subject to audit by an independent registered public accounting firm, and come within the scope of the registrant’s internal control over financial reporting (“ICFR”).<sup>126</sup>

### **1. Content of the Proposed Disclosures**

The proposed climate-related disclosure framework is modeled in part on the TCFD’s recommendations, and also draws upon the GHG Protocol. In particular, the proposed rules would require a registrant to disclose information about:

---

<sup>122</sup> See 17 CFR 240.12b-2 (defining “accelerated filer” as an issuer after it first meets the following conditions as of the end of its fiscal year: (i) the issuer had an aggregate worldwide market value of the voting and non-voting common equity held by its non-affiliates of \$75 million or more, but less than \$700 million, as of the last business day of the issuer’s most recently completed second fiscal quarter; (ii) the issuer has been subject to the requirements of Section 13(a) or 15(d) of the Exchange Act for a period of at least twelve calendar months; (iii) the issuer has filed at least one annual report pursuant to Section 13(a) or 15(d) of the Exchange Act; and (iv) the issuer is not eligible to use the requirements for SRCs under the SRC revenue test).

<sup>123</sup> See 17 CFR 240.12b-2 (defining “large accelerated filer” as an issuer after it first meets the following conditions as of the end of its fiscal year: (i) the issuer had an aggregate worldwide market value of the voting and non-voting common equity held by its non-affiliates of \$700 million or more, as of the last business day of the issuer’s most recently completed second fiscal quarter; (ii) the issuer has been subject to the requirements of Section 13(a) or 15(d) of the Exchange Act for a period of at least twelve calendar months; (iii) the issuer has filed at least one annual report pursuant to Section 13(a) or 15(d) of the Exchange Act; and (iv) the issuer is not eligible to use the requirements for SRCs under the SRC revenue test).

<sup>124</sup> See *infra* Section II.H.

<sup>125</sup> See *infra* Section II.F.

<sup>126</sup> See *infra* Sections II.F.2 and 3.

- The oversight and governance of climate-related risks by the registrant’s board and management;<sup>127</sup>
- How any climate-related risks identified by the registrant have had or are likely to have a material impact on its business and consolidated financial statements, which may manifest over the short-, medium-, or long-term;<sup>128</sup>
- How any identified climate-related risks have affected or are likely to affect the registrant’s strategy, business model, and outlook;<sup>129</sup>
- The registrant’s processes for identifying, assessing, and managing climate-related risks and whether any such processes are integrated into the registrant’s overall risk management system or processes;<sup>130</sup>
- The impact of climate-related events (severe weather events and other natural conditions as well as physical risks identified by the registrant) and transition activities (including transition risks identified by the registrant) on the line items of a registrant’s consolidated financial statements and related expenditures,<sup>131</sup> and disclosure of financial estimates and assumptions impacted by such climate-related events and transition activities.<sup>132</sup>
- Scopes 1 and 2 GHG emissions metrics, separately disclosed, expressed:
  - Both by disaggregated constituent greenhouse gases and in the aggregate, and

---

<sup>127</sup> See *infra* Section II.D.

<sup>128</sup> See *infra* Sections II.B and C.

<sup>129</sup> See *infra* Section II.C.

<sup>130</sup> See *infra* Section II.E.

<sup>131</sup> See *infra* Sections II.F.2 and 3.

<sup>132</sup> See *infra* Sections II.F.4.

- In absolute and intensity terms;<sup>133</sup>
- Scope 3 GHG emissions and intensity, if material, or if the registrant has set a GHG emissions reduction target or goal that includes its Scope 3 emissions; and
- The registrant’s climate-related targets or goals, and transition plan, if any.<sup>134</sup>

When responding to any of the proposed rules’ provisions concerning governance, strategy, and risk management, a registrant may also disclose information concerning any identified climate-related opportunities.

## **2. Presentation of the Proposed Disclosures**

The proposed rules would require a registrant (both domestic and foreign private issuers<sup>135</sup>):

- To provide the climate-related disclosure in its registration statements and Exchange Act annual reports;<sup>136</sup>
- To provide the Regulation S-K mandated climate-related disclosure in a separate, appropriately captioned section of its registration statement or annual report, or alternatively to incorporate that information in the separate, appropriately captioned

---

<sup>133</sup> See *infra* Section II.G.1.

<sup>134</sup> See *infra* Section III.

<sup>135</sup> As defined by Commission rules, a foreign private issuer is any foreign issuer other than a foreign government except an issuer meeting the following conditions as of the last business day of its most recently completed second fiscal quarter: more than 50% of the outstanding voting securities of such issuer are directly or indirectly owned of record by residents of the United States; and either the majority of its executive officers or directors are United States citizens or residents, more than 50% of the assets of the issuer are located in the United States, or the business of the issuer is administered principally in the United States. See 17 CFR 230.405 and 17 CFR 240.3b-4.

<sup>136</sup> See *infra* Section II.A.2.

section by reference from another section, such as Risk Factors, Description of Business, or Management’s Discussion and Analysis (“MD&A”);<sup>137</sup>

- To provide the Regulation S-X mandated climate-related financial statement metrics and related disclosure in a note to the registrant’s audited financial statements;<sup>138</sup>
- To electronically tag both narrative and quantitative climate-related disclosures in Inline XBRL;<sup>139</sup> and
- To file rather than furnish the climate-related disclosure.<sup>140</sup>

### **3. Attestation for Scope 1 and Scope 2 Emissions Disclosure**

The proposed rules would require an accelerated filer or a large accelerated filer to include, in the relevant filing, an attestation report covering, at a minimum, the disclosure of its Scope 1 and Scope 2 emissions and to provide certain related disclosures about the service provider.<sup>141</sup> As proposed, both accelerated filers and large accelerated filers would have time to transition to the minimum attestation requirements. The proposed transition periods would provide existing accelerated filers and large accelerated filers one fiscal year to transition to providing limited assurance and two additional fiscal years to transition to providing reasonable assurance, starting with the respective compliance dates for Scopes 1 and 2 disclosure described below.<sup>142</sup> The proposed rules would provide minimum attestation report requirements, minimum standards for acceptable attestation frameworks, and would require an attestation service

---

<sup>137</sup> *See id.*

<sup>138</sup> *See infra* Section II.F.

<sup>139</sup> *See infra* Section II.K.

<sup>140</sup> *See infra* Section II.L.

<sup>141</sup> *See infra* Section II.H.

<sup>142</sup> *See infra* Section II.H.1 (providing further details on the proposed timing of the minimum attestation requirements).

provider to meet certain minimum qualifications. The proposed rules would not require an attestation service provider to be a registered public accounting firm.

#### **4. Phase-In Periods and Accommodations for the Proposed Disclosures**

The proposed rules would include:

- A phase-in for all registrants, with the compliance date dependent on the registrant’s filer status;
- An additional phase-in period for Scope 3 emissions disclosure;
- A safe harbor for Scope 3 emissions disclosure;
- An exemption from the Scope 3 emissions disclosure requirement for a registrant meeting the definition of a smaller reporting company (“SRC”);<sup>143</sup> and
- A provision permitting a registrant, if actual reported data is not reasonably available, to use a reasonable estimate of its GHG emissions for its fourth fiscal quarter, together with actual, determined GHG emissions data for the first three fiscal quarters, as long as the registrant promptly discloses in a subsequent filing any material difference between the estimate used and the actual, determined GHG emissions data for the fourth fiscal quarter.

The proposed rules would be phased in for all registrants, with the compliance date dependent upon the status of the registrant as a large accelerated filer, accelerated or non-accelerated filer, or SRC, and the content of the item of disclosure. For example, assuming that the effective date of the proposed rules occurs in December 2022 and that the registrant has a

---

<sup>143</sup> See *infra* Section II.G.3. The Commission’s rules define a smaller reporting company to mean an issuer that is not an investment company, an asset-backed issuer, or a majority-owned subsidiary of a parent that is not a smaller reporting company and that: (1) had a public float of less than \$250 million; or (2) had annual revenues of less than \$100 million and either: (i) no public float; or (ii) a public float of less than \$700 million. See 17 CFR 229.10(f)(1), 230.405, and 17 CFR 240.12b-2.

December 31st fiscal year-end, the compliance date for the proposed disclosures in annual reports, other than the Scope 3 disclosure, would be:

- For large accelerated filers, fiscal year 2023 (filed in 2024);
- For accelerated and non-accelerated filers, fiscal year 2024 (filed in 2025); and
- For SRCs, fiscal year 2025 (filed in 2026).<sup>144</sup>

Registrants subject to the proposed Scope 3 disclosure requirements would have one additional year to comply with those disclosure requirements.

We welcome feedback and encourage interested parties to submit comments on any or all aspects of the proposed rules. When commenting, it would be most helpful if you include the reasoning behind your position or recommendation.

## **II. DISCUSSION**

### **A. Overview of the Climate-Related Disclosure Framework**

#### **1. Proposed TCFD-Based Disclosure Framework**

We have modeled the proposed disclosure rules in part on the TCFD disclosure framework. Building on the TCFD framework should enable companies to leverage the framework with which many investors and issuers are already familiar, which should help to mitigate both the compliance burden for issuers and any burdens faced by investors in analyzing and comparing the new proposed disclosures.

Many commenters that supported climate disclosure rules recommended that we consider the TCFD framework in developing those rules. Numerous commenters stated that the Commission should base its climate-related disclosure rules on the TCFD framework either as a

---

<sup>144</sup> See *infra* Section II.M.

standalone framework,<sup>145</sup> or in conjunction with industry-specific metrics drawn from the SASB<sup>146</sup> or other third-party frameworks.<sup>147</sup> A broad range of commenters, including both

issuers<sup>148</sup> and investors,<sup>149</sup> supported basing new climate-related disclosure rules on the TCFD framework.

Commenters provided several reasons for their support of the TCFD framework. First, commenters indicated that, because of the widespread adoption of the framework, issuers and investors have experience making and using TCFD disclosures. As a result, according to commenters, aligning SEC rules with the TCFD could reduce the burden on issuers and increase the consistency and comparability of climate disclosures.<sup>150</sup> Second, commenters stated that the information that the TCFD disclosures elicit is useful for investors to understand companies' exposure to and management of climate-related risks.<sup>151</sup> Third, various jurisdictions around the world have announced their intention to align their domestic disclosure rules with the TCFD.<sup>152</sup> Commenters stated that by aligning with the TCFD framework, the Commission could potentially facilitate higher levels of consistency and comparability of disclosures globally.<sup>153</sup>

The consistency and breadth of these comments comport with our understanding that the TCFD framework has been widely accepted by issuers, investors, and other market participants and reinforce our view that the framework would provide an appropriate foundation for the

---

<sup>148</sup> See, e.g., letters from Adobe; Alphabet Inc. *et al.*; BNP Paribas; bp; Chevron; ConocoPhillips; and Walmart.

<sup>149</sup> See, e.g., letters from Alberta Investment Management Corporation; BlackRock; CalPERS; CALSTRS; Impact Investors, Inc.; and San Francisco Employees Retirement System.

<sup>150</sup> See, e.g., letters from BNP Paribas; Deutsche Bank (June 11, 2021); and Institute of International Bankers.

<sup>151</sup> See, e.g., letters from AllianceBernstein; CALSTRS; Investment Company Institute; and NY State Comptroller.

<sup>152</sup> See *supra* note 95 and accompanying text.

<sup>153</sup> See, e.g., letters from BNP Paribas; bp; and Chevron.

proposed amendments.<sup>154</sup> Basing the Commission’s climate-related disclosure rules on a globally recognized framework should help elicit climate-related disclosures that are consistent, comparable, and reliable while also limiting the compliance burden for registrants that are already providing climate-related disclosures based on this framework.

Similar to the TCFD framework, the proposed climate-related provisions under Regulation S-K would require disclosure of a registrant’s: governance of climate-related risks;<sup>155</sup> any material climate-related impacts on its strategy, business model, and outlook;<sup>156</sup> climate-related risk management;<sup>157</sup> GHG emissions metrics;<sup>158</sup> and climate-related targets and goals, if any.<sup>159</sup>

The proposed climate-related provisions under Regulation S-X would require a registrant to disclose in a note to its financial statements certain disaggregated climate-related financial statement metrics that are mainly derived from existing financial statement line items.<sup>160</sup> The proposed rules would require disclosure falling under the following three categories of

---

<sup>154</sup> Proponents of the TCFD framework include academics (*see, e.g.*, letters from Jill Fisch *et al.*, J. Robert Gibson (May 26, 2021), and Gina-Gail S Fletcher (June 14, 2021)); accounting and audit firms (*see, e.g.*, letters from AICPA (June 11, 2021), Center for Audit Quality (“CAQ”) (June 11, 2021), and KPMG LLP (June 12, 2021)); foreign firms (*see, e.g.*, letters from Bank of Finland, BNP Paribas, bp, and Deutsche Bank); industry groups (*see, e.g.*, letters from American Chemistry Council, Association of American Railroads (June 11, 2021), and Information Technology Industry Council (June 11, 2021)); investor groups (*see, e.g.*, letters from CalPERS; CALSTRS; and San Francisco Employees Retirement System); individuals (*see, e.g.*, letters from Emmanuelle Haack, Christopher Lish, and Maria Stoica); issuers (*see, e.g.*, letters from Adobe, Alphabet Inc. *et al.*, Apple, and Chevron); NGOs (*see, e.g.*, letters from Ceres *et al.*, Climate Governance Initiative, Natural Resources Defense Council, and UNEP); professional climate advisors (*see, e.g.*, letters from Catavento Consultancy, Douglas Hileman Consulting, ERM CVS, and Ethic Inc.); and professional investment advisors/investment management companies (*see, e.g.*, letters from AllianceBernstein, Impact Investors, Miller/Howard Investments, and Neuberger Berman).

<sup>155</sup> *See* proposed 17 CFR 229.1501.

information: financial impact metrics;<sup>161</sup> expenditure metrics;<sup>162</sup> and financial estimates and assumptions.<sup>163</sup> Similar to the TCFD’s recommendation regarding financial impacts, the proposed financial statement metrics have the objective of increasing transparency about how climate-related risks impact a registrant’s financial statements.<sup>164</sup> The TCFD framework identifies two broad categories of actual and potential financial impacts driven by climate-related risks and opportunities: financial performance (income statement focused) and financial position (balance sheet focused), and includes suggested metrics such as the amount of capital expenditure deployed toward climate-related risks and opportunities, which is similar to our proposed financial statement metrics.<sup>165</sup>

## 2. Location of the Climate-Related Disclosure

Many commenters stated that the Commission should amend Regulation S-K or Regulation S-X to include climate-related disclosure requirements.<sup>166</sup> Other commenters

---

<sup>161</sup> See proposed 17 CFR 210.14-02(c) and (d).

<sup>162</sup> See proposed 17 CFR 210.14-02(e) and (f).

<sup>163</sup> See proposed 17 CFR 210.14-02(g) and (h).

<sup>164</sup> See TCFD, *Recommendations of the Task Force on Climate-related Financial Disclosures* (June 2017), Section B.3 (Financial Impacts).

<sup>165</sup> See TCFD, *Guidance on Metrics, Targets, and Transition Plans* (Oct. 2021), Section F (Financial Impacts), available at [https://assets.bbhub.io/company/sites/60/2021/07/2021-Metrics\\_Targets\\_Guidance-1.pdf](https://assets.bbhub.io/company/sites/60/2021/07/2021-Metrics_Targets_Guidance-1.pdf). For avoidance of doubt, disclosure of climate-related opportunities is optional, not required, under our proposal.

<sup>166</sup> See, e.g., letters from AllianceBernstein; American Society of Adaptation Professionals; Seema Arora (June 22, 2021); Associated General Contractors of America (June 11, 2021); Baillie Gifford; CalPERS; Cardano Risk Management Ltd. (Apr. 19, 2021); Center for American Progress; Ceres *et al.*; Eni SpA; Jill Fisch (June 3, 2021); George S. Georgiev (June 22, 2021); Hannon Armstrong (June 15, 2021); Henry Schein, Inc.; Hermes Equity Ownership Services Limited; Virginia Harper Ho; Institute for Governance and Sustainable Development (June 9, 2021); Institute for Market Transformation (June 12, 2021); Interfaith Center on Corporate Responsibility; International Corporate Governance Network (June 11, 2021); Japanese Bankers Association; Morrison & Foerster LLP; National Investor Relations Institute (June 11, 2021); Natural Resources Defense Council; Newmont Corporation (June 13, 2021); New York State Society of Certified Public Accountants; NY State Comptroller; PayPal Holdings, Inc.; PRI (Consultation Response); PricewaterhouseCoopers LLP; Maria Stoica; Sunrise Bay Area (June 14, 2021); Teachers Insurance and Annuity Association of America; Vert Asset Management LLC (June 14, 2021); WBCSD; and Wespeth Benefits and Investments (June 11, 2021).

recommended that the Commission adopt a new stand-alone regulation for climate-related disclosure.<sup>167</sup> We are proposing to include the climate-related disclosure rules in Regulation S-K and Regulation S-X because the required disclosure is fundamental to investors' understanding the nature of a registrant's business and its operating prospects and financial performance, and therefore, should be presented together with other disclosure about the registrant's business and its financial condition.

Specifically, we are proposing to require a registrant to include climate-related disclosure in Securities Act or Exchange Act registration statements and Exchange Act annual reports in a separately captioned "Climate-Related Disclosure" section and in the financial statements.<sup>168</sup> Requiring climate-related disclosure to be presented in this manner would facilitate review of the climate-related disclosure by investors alongside other relevant company financial and non-financial information.

A registrant would be able to incorporate by reference disclosure from other parts of the registration statement or annual report (*e.g.*, Risk Factors, MD&A, or the financial statements) or, in most cases, from other filed or submitted reports into the Climate-Related Disclosure item if it is responsive to the topics specified in Items 1500-1506 of Regulation S-K and if the registrant satisfies the incorporation by reference requirements under the Commission's rules and forms.<sup>169</sup> Allowing incorporation by reference for the Regulation S-K climate-related disclosure

---

<sup>167</sup> See letters from Bank Policy Institute; Andrew Behar (As You Sow) (June 14, 2021); Entelligent Inc. (June 14, 2021); Impax Asset Management; Information Technology Industry Council; Majedie Asset Management (May 25, 2021); David Marriage (June 15, 2021); and XBRL US (June 15, 2021).

<sup>168</sup> See *infra* Section II.J for a discussion of the registrants and forms to which the proposed rules would apply.

<sup>169</sup> See 17 CFR 230.411; 17 CFR 240.12b-23; and the applicable forms.

would be consistent with the treatment of other types of business disclosure under our rules and would provide some flexibility for registrants while reducing redundancy in disclosure.<sup>170</sup>

Many commenters stated that the Commission should require registrants to discuss and analyze their quantitative climate data in a manner similar to that required for MD&A.<sup>171</sup> These commenters stressed the importance of placing climate-related metrics in the context of other company financial and non-financial information to enable investors to see how those metrics intersect with business operations and industrial processes.<sup>172</sup> Other commenters supported a requirement to discuss and analyze the climate-related metrics, but stated that such discussion should be part of the existing MD&A disclosures.<sup>173</sup> We agree with the commenters supporting a narrative discussion and analysis of the climate-related metrics as means to present these disclosures in context and explain how they relate to the registrant’s strategy and management of its climate-related risks. In this way, such a discussion will serve a similar function to the MD&A but will focus on climate-related risk specifically. Our proposed approach, which

---

<sup>170</sup> A registrant that elects to incorporate by reference any of the metrics or narrative disclosure that is subject to XBRL tagging must comply with the electronic tagging requirement in the section of the registration statement or report where the metrics or narrative disclosure appears in full. We discuss the XBRL tagging requirement in Section II.K.

<sup>171</sup> *See, e.g.*, letters from Acadian Asset Management LLC (June 14, 2021); Actual Systems, Inc. (June 11, 2021); Baillie Gifford; Biotechnology Innovation Organization; CDP; ClientEarth US (June 14, 2021); FAIRR Initiative (June 15, 2021); Jill Fisch (June 3, 2021); Hermes Equity Ownership Services Limited; International Corporate Governance Network; Japanese Bankers Association; Majedie Asset Management; Morningstar, Inc.; NEI Investments; NY State Comptroller; Paradice Investment Management; Pre-Distribution Initiative (June 14, 2021); PricewaterhouseCoopers LLP; Matthew Roling and Samantha Tirakian (June 11, 2021); Terra Alpha Investments; Vert Asset Management; and WBCSD.

<sup>172</sup> *See, e.g.*, letters from Pricewaterhouse Coopers Ltd.; Vert Asset Management; and WBCSD.

<sup>173</sup> *See, e.g.*, letters from Canadian Coalition for Good Governance; Clean Production Action and Environmental Health Network (June 11, 2021); Decatur Capital Management; Dimensional Fund Advisors (June 11, 2021); Environmental Industry Group (June 9, 2021); Institute for Governance and Sustainable Development; PRI (Consultation Response); Kenya Rothstein (May 3, 2021); and Maria Stoica. *But see* letter from Sarah Ladin (June 14, 2021) (doubting that a “sustainability discussion and analysis” requirement would achieve the desired results and stating that it would be difficult to enforce); and David Marriage (indicating that a discussion and analysis requirement for climate-related data would make the data difficult for the market to absorb).

requires the climate-related disclosure to be included in a specific section but allows registrants to incorporate from disclosure elsewhere (consistent with applicable incorporation by reference requirements), provides some flexibility to the proposed climate-related disclosure scheme while ensuring the disclosure is consistent and comparable across registrants.

### **Request for Comment**

1. Should we add a new subpart to Regulation S-K and a new article to Regulation S-X that would require a registrant to disclose certain climate-related information, as proposed? Would including the climate-related disclosure in Regulation S-K and Regulation S-X facilitate the presentation of climate information as part of a registrant's regular business reporting? Should we instead place the climate-related disclosure requirements in a new regulation or report? Are there certain proposed provisions, such as GHG emissions disclosure requirements, that would be more appropriate under Regulation S-X than Regulation S-K?

2. If adopted, how will investors utilize the disclosures contemplated in this release to assess climate-related risks? How will investors use the information to assess the physical effects and related financial impacts from climate-related events? How will investors use the information to assess risks associated with a transition to a lower carbon economy?

3. Should we model the Commission's climate-related disclosure framework in part on the framework recommended by the TCFD, as proposed? Would alignment with the TCFD help elicit climate-related disclosures that are consistent, comparable, and reliable for investors? Would alignment with the TCFD framework help mitigate the reporting burden for issuers and facilitate understanding of climate-related information by investors because the framework is widely used by companies in the United States and around the world? Are there aspects of the TCFD framework that we should not adopt? Should we instead adopt rules that are based on a

different third-party framework? If so, which framework? Should we base the rules on something other than an existing third-party framework?

4. Do our current reporting requirements yield adequate and sufficient information regarding climate-related risks to allow investors to make informed decisions? In lieu of, or in addition to the proposed amendments, should we provide updated guidance on how our existing rules may elicit better disclosure about climate-related risks?

5. Should we require a registrant to present the climate-related disclosure in an appropriately captioned, separate part of the registration statement or annual report, as proposed? Should this disclosure instead be presented as part of the registrant's MD&A?

6. Should we permit a registrant to incorporate by reference some of the climate-related disclosure from other parts of the registration statement or annual report, as proposed? Should we permit a registrant to incorporate by reference climate-related disclosure that appears in a sustainability report if the registrant includes the incorporated by referenced disclosure as an exhibit to the registration statement or annual report? Are there some climate-related disclosure items, such as GHG emissions data, that we should not permit a registrant to incorporate by reference? Would requiring a registrant to include all of the proposed climate-related disclosures in a separate, appropriately captioned section, while precluding a registrant from incorporating by reference some or all of the climate-related disclosures, promote comparability and ease of use of the climate-related information for investors?

7. Should we permit a registrant to provide certain of the proposed climate-related disclosures in Commission filings other than the annual report or registration statement? For example, should we permit a registrant to provide information about board and management oversight of climate-related risks in its proxy statement?

## B. Disclosure of Climate-Related Risks

As many commenters have noted when seeking more detailed climate-related disclosures,<sup>174</sup> climate events and contingencies can pose financial risks to issuers across industrial sectors.<sup>175</sup> Physical risks may include harm to businesses and their assets arising from acute climate-related disasters such as wildfires, hurricanes, tornadoes, floods, and heatwaves. Companies and their investors may also face chronic risks and more gradual impacts from long-term temperature increases, drought, and sea level rise.

In addition to the physical risks associated with the climate, issuers and investors may also face risks associated with a potential transition to a less carbon intensive economy. These risks may arise from potential adoption of climate-related regulatory policies including those that may be necessary to achieve the national climate goals that may be or have been adopted in the United States and other countries;<sup>176</sup> climate-related litigation; changing consumer, investor, and employee behavior and choices; changing demands of business partners; long-term shifts in market prices; technological challenges and opportunities, and other transitional impacts.

---

<sup>174</sup> See *supra* note 40.

<sup>175</sup> The 2020 CFTC Advisory Subcommittee Report found that climate change currently impacts or is expected to affect every part of the U.S. economy, including agriculture, real estate, infrastructure, and the financial sectors. See *infra* note 361.

<sup>176</sup> A National Climate Taskforce created by the president established commitments to reduce economy-wide net greenhouse gas emissions by 50-52% by 2030 as compared to 2005 levels, and to reach net zero emissions by 2050. See The White House, *FACT SHEET: President Biden Sets 2030 Greenhouse Gas Pollution Reduction Target Aimed at Creating Good-Paying Union Jobs and Securing U.S. Leadership on Clean Energy Technologies* (Apr. 22, 2021). An Executive Order also directs the Federal government to achieve net-zero emissions from overall Federal operations by 2050, and a 65% emissions reduction by 2030. See The White House, *FACT SHEET: President Biden Signs Executive Order Catalyzing America's Clean Energy Economy Through Federal Sustainability* (Dec. 8, 2021), at <https://www.whitehouse.gov/briefing-room/statements-releases/2021/12/08/fact-sheet-president-biden-signs-executive-order-catalyzing-americas-clean-energy-economy-through-federal-sustainability/>. A growing number of governments and companies have made net zero commitments or announced similar carbon-reduction goals or targets. See United Nations Climate Change, *Commitments to Net Zero Double in Less Than a Year* (Sept. 21, 2020), available at <https://unfccc.int/news/commitments-to-net-zero-double-in-less-than-a-year>.

Disclosure about a registrant’s exposure to transition risks, as well as how the registrant is assessing and managing those risks, would help investors assess and plan for how the registrant would be financially impacted by a transition to a lower-carbon economy.

### **1. Definitions of Climate-Related Risks and Climate-Related Opportunities**

A central focus of the Commission’s proposed rules is the identification and disclosure of a registrant’s material climate-related risks. The proposed rules would require a registrant to disclose any climate-related risks reasonably likely to have a material impact on the registrant’s business or consolidated financial statements.<sup>177</sup> A registrant may also disclose, as applicable, the actual and potential impacts of any climate-related opportunities it is pursuing.<sup>178</sup> The proposed definitions are substantially similar to the TCFD’s definitions of climate-related risks and climate-related opportunities.<sup>179</sup> We have based our definitions on the TCFD’s definitions because they provide a common terminology that allows registrants to disclose climate-related risks and opportunities in a consistent and comparable way. Grounding our definitions in a framework that is already widely accepted also could help limit the burden on issuers to identify and describe climate-related risks and improve the comparability and usefulness of the disclosures for investors.

As proposed, “climate-related risks” means the actual or potential negative impacts of climate-related conditions and events on a registrant’s consolidated financial statements,

---

<sup>177</sup> See proposed 17 CFR 229.1502(a).

<sup>178</sup> See *id.*

<sup>179</sup> See TCFD, [Recommendations of the Task Force on Climate-related Financial Disclosures](#), Appendix 5.

business operations, or value chains, as a whole.<sup>180</sup> “Value chain” would mean the upstream and downstream activities related to a registrant’s operations.<sup>181</sup> Under the proposed definition, upstream activities include activities by a party other than the registrant that relate to the initial stages of a registrant’s production of a good or service (*e.g.*, materials sourcing, materials processing, and supplier activities). Downstream activities would be defined to include activities by a party other than the registrant that relate to processing materials into a finished product and delivering it or providing a service to the end user (*e.g.*, transportation and distribution, processing of sold products, use of sold products, end of life treatment of sold products, and investments).<sup>182</sup> We have proposed including a registrant’s value chain within the definition of climate-related risks to capture the full extent of a registrant’s potential exposure to climate-related risks, which can extend beyond its own operations to those of its suppliers, distributors, and others engaged in upstream or downstream activities.<sup>183</sup>

Climate-related conditions and events can present risks related to the physical impacts of the climate (“physical risks”) and risks related to a potential transition to a lower carbon economy (“transition risks”). As proposed, “physical risks” is defined to include both acute and chronic risks to a registrant’s business operations or the operations of those with whom it does business.<sup>184</sup> “Acute risks” is defined as event-driven risks related to shorter-term extreme

---

<sup>180</sup> See proposed 17 CFR 229.1500(c). The reference to ‘negative’ impact is intended to refer to the actual or potential impact on the registrant’s consolidated financial statements, business operations, or value chains as a whole, rather than the mathematical impacts on a specific financial statement line item. See *infra* Section II.F.2 (discussing the proposed financial impact metrics, which focus on the line items in a registrant’s consolidated financial statements).

<sup>181</sup> See proposed 17 CFR 229.1500(t).

<sup>182</sup> See *id.*

<sup>183</sup> See, *e.g.*, *infra* Section II.G.1.

<sup>184</sup> See proposed 17 CFR 229.1500(c)(1).

weather events, such as hurricanes, floods, and tornadoes.<sup>185</sup> “Chronic risks” is defined as those risks that the business may face as a result of longer term weather patterns and related effects, such as sustained higher temperatures, sea level rise, drought, and increased wildfires, as well as related effects such as decreased arability of farmland, decreased habitability of land, and decreased availability of fresh water.<sup>186</sup> Many of these physical risks have already impacted and may continue to impact registrants across a wide range of economic sectors.<sup>187</sup>

The proposed rules would define transition risks to mean the actual or potential negative impacts on a registrant’s consolidated financial statements, business operations, or value chains attributable to regulatory, technological, and market changes to address the mitigation of, or adaptation to, climate-related risks.<sup>188</sup> Transition risks would include, but are not limited to, increased costs attributable to climate-related changes in law or policy, reduced market demand for carbon-intensive products leading to decreased sales, prices, or profits for such products, the devaluation or abandonment of assets, risk of legal liability and litigation defense costs, competitive pressures associated with the adoption of new technologies, reputational impacts (including those stemming from a registrant’s customers or business counterparties) that might trigger changes to market behavior, changes in consumer preferences or behavior, or changes in a registrant’s behavior. A registrant that has significant operations in a jurisdiction that has made

---

<sup>185</sup> See proposed 17 CFR 229.1500(c)(2).

<sup>186</sup> See proposed 17 CFR 229.1500(c)(3). The physical risks described are examples, but registrants may be exposed to many other types of physical risks from climate change depending on their specific facts and circumstances. As such, any reference to certain types of risks should be considered as non-exhaustive examples.

<sup>187</sup> The IPCC’s Sixth Assessment Report noted drought, heatwaves, hurricanes, and heavy precipitation. See IPCC, [Climate Change 2021, The Physical Science Basis Summary for Policymakers](#).

<sup>188</sup> See proposed 17 CFR 229.1500(c)(4).

a GHG emissions reduction commitment would likely be exposed to transition risks related to the implementation of the commitment.<sup>189</sup>

The proposed rules would require a registrant to specify whether an identified climate-related risk is a physical or transition risk so that investors can better understand the nature of the risk<sup>190</sup> and the registrant's actions or plan to mitigate or adapt to the risk.<sup>191</sup> If a physical risk, the proposed rules would require a registrant to describe the nature of the risk, including whether it may be categorized as an acute or chronic risk.<sup>192</sup>

The proposed rules would require a registrant to include in its description of an identified physical risk the location of the properties, processes, or operations subject to the physical risk.<sup>193</sup> The proposed location disclosure would only be required for a physical risk that a registrant has determined has had or is likely to have a material impact on its business or consolidated financial statements. In such instances, a registrant would be required to provide the ZIP code for the location or, if the location is in a jurisdiction that does not use ZIP codes, a similar subnational postal zone or geographic location.<sup>194</sup> Because physical risks can be concentrated in particular geographic areas, the proposed disclosure would allow investors to better assess the risk exposure of one or more registrants with properties or operations in a particular area. One commenter cited location information as a key component of how it, as an

---

<sup>189</sup> See proposed 17 CFR 229.1502(a)(1)(ii).

<sup>190</sup> See proposed 17 CFR 229.1502(a)(1).

<sup>191</sup> See, e.g., proposed 17 CFR 229.1502(b)(1) and 229.1503(c)(1) and (2).

<sup>192</sup> See proposed 17 CFR 229.1502(a)(1)(i). In some instances, chronic risks might give rise to acute risks. For example, drought (a chronic risk) that increases acute risks, such as wildfires, or increased temperatures (a chronic risk) that increases acute risks, such as severe storms. In such instances, a registrant should provide a clear and consistent description of the nature of the risk and how it may affect a related risk.

<sup>193</sup> See *id.*

<sup>194</sup> See proposed 17 CFR 229.1500(k).

investor, assesses the climate risk facing a company, particularly for companies with fixed assets that may be disproportionately exposed to climate-related physical risks.<sup>195</sup> Several other commenters recommended that we require the disclosure of certain climate data to be disaggregated by location using a point source's zip code for risk assessment.<sup>196</sup> Disclosing the zip codes of its identified material climate-related risks, rather than a broader location designation, could help investors more accurately assess a registrant's specific risk exposure.

Some registrants might be exposed to water-related acute physical risks, such as flooding, which could impair a registrant's operations or devalue its property. If flooding presents a material physical risk, the proposed rules would require a registrant to disclose the percentage of buildings, plants, or properties (square meters or acres) that are located in flood hazard areas in addition to their location.<sup>197</sup> This information could help investors evaluate the magnitude of a registrant's exposure to flooding, which, for example, could cause a registrant in the real estate sector to lose revenues from the rental or sale of coastal property or incur higher costs or a diminished ability to obtain property insurance, or a manufacturing registrant to incur increased expenses due to the need to replace water-damaged equipment or move an entire plant.

Additional disclosure would be required if a material risk concerns the location of assets in regions of high or extremely high water stress.<sup>198</sup> For example, some registrants might be impacted by water-related chronic physical risks, such as increased temperatures and changes in weather patterns that result in water scarcity. Registrants that are heavily reliant on water for

---

<sup>195</sup> See letter from Wellington Management Co.

<sup>196</sup> See letters from Action Center on Race and Economy (June 14, 2021); Americans for Financial Reform Education Fund; Confluence Philanthropy; Domini Impact Investments; William and Flora Hewlett Foundation; Public Citizen; and Revolving Door Project.

<sup>197</sup> See proposed 17 CFR 229.1502(a)(1)(i)(A).

<sup>198</sup> See proposed 1502(a)(1)(i)(B).

their operations, such as registrants in the energy sector, materials and buildings sector, or agriculture sector,<sup>199</sup> could face regulatory restrictions on water use, increased expenses related to the acquisition and purchase of alternative sources of water, or curtailment of its operations due to a reduced water supply that diminishes its earning capacity. If the location of assets in regions of high or extremely high water stress presents a material risk, the proposed rules would require a registrant to disclose the amount of assets (*e.g.*, book value and as a percentage of total assets) located in such regions in addition to their location. The registrant would also be required to disclose the percentage of its total water usage from water withdrawn in those regions.<sup>200</sup> These disclosures could help investors understand the magnitude of a registrant's material water-stress risks with a degree of specificity that might not be elicited under our current risk factor disclosure standards.

Any increased temperatures could also materially impact a registrant in other ways. For example, a registrant in the construction industry might be required to disclose the physical risk of increased heat waves that affect the ability of its personnel to safely work outdoors, which could result in a cessation or delay of operations, and a reduction in its current or future earnings.<sup>201</sup> A registrant operating in wildfire-prone areas could be exposed to potential disruption of operations, destruction of property, and relocation of personnel in the event of heat-

---

<sup>199</sup> Registrants in these industry sectors could be particularly susceptible to water-stress risks because operations in these sectors require large amounts of water. *See* TCFD, *Implementing the Recommendations of the Task Force on Climate-Related Financial Disclosures*, Section E (Oct. 2021), available at [https://assets.bbhub.io/company/sites/60/2021/07/2021-TCFD-Implementing\\_Guidance.pdf](https://assets.bbhub.io/company/sites/60/2021/07/2021-TCFD-Implementing_Guidance.pdf) (discussing the listed events and other risks).

<sup>200</sup> *See* proposed 17 CFR 229.1502(a)(1)(i)(B).

<sup>201</sup> *See, e.g.* [How Seasonal Temperature Changes Affect the Construction Industry \(constructconnect.com\)](https://www.constructconnect.com/blog/seasonal-temperature-changes-affect-construction-industry) (Aug. 15, 2018), available at <https://www.constructconnect.com/blog/seasonal-temperature-changes-affect-construction-industry>.

induced wildfires.<sup>202</sup> A registrant in the real estate sector might similarly be required to disclose the likelihood that sea levels could rise faster than expected and reduce the value of its coastal properties.<sup>203</sup>

The proposed rules would require a registrant to describe the nature of transition risks, including whether they relate to regulatory, technological, market (including changing consumer, business counterparty, and investor preferences), liability, reputational, or other transition-related factors, and how those factors impact the registrant.<sup>204</sup> For example, an automobile manufacturer might describe how market factors, such as changing consumer and investor preferences for low-emission vehicles, have impacted or will likely impact its production choices, operational capabilities, and future expenditures. An energy producer might describe how regulatory and reputational factors have impacted or are likely to impact its operational activities, reserve valuations, and investments in renewable energy. An industrial manufacturer might describe how investments in innovative technologies, such as carbon capture and storage, have impacted or are likely to impact its consolidated financial statements, such as by increasing its capital expenditures.

Climate related conditions and any transition to a lower carbon economy may also present opportunities for companies and investors. The proposed rules would define “climate-related opportunities” to mean the actual or potential positive impacts of climate-related conditions and events on a registrant’s consolidated financial statements, business operations, or

---

<sup>202</sup> See, e.g., [The Impact of Wildfires on Business is Enormous | Are You Ready? \(alertmedia.com\)](https://www.alertmedia.com/blog/the-impact-of-wildfires-on-business/) (Aug. 27, 2020), available at <https://www.alertmedia.com/blog/the-impact-of-wildfires-on-business/>.

<sup>203</sup> See, e.g., [Climate change and the coming coastal real estate crash - Curbed](https://archive.curbed.com/2018/10/16/17981244/real-estate-climate-change-infrastructure) (Oct. 16, 2018), available at <https://archive.curbed.com/2018/10/16/17981244/real-estate-climate-change-infrastructure>.

<sup>204</sup> See proposed 17 CFR 229.1502(a)(1)(ii).

value chains, as a whole.<sup>205</sup> Efforts to mitigate or adapt to the effects of climate-related conditions and events can produce opportunities, such as cost savings associated with the increased use of renewable energy, increased resource efficiency, the development of new products, services, and methods, access to new markets caused by the transition to a lower carbon economy, and increased resilience along a registrant’s supply or distribution network related to potential climate-related regulatory or market constraints. A registrant, at its option, may disclose information about any climate-related opportunities it may be pursuing when responding to the proposed disclosure requirements concerning governance, strategy, and risk management in connection with climate-related risks. We are proposing to treat this disclosure as optional to allay any anti-competitive concerns that might arise from a requirement to disclose a particular business opportunity.<sup>206</sup> By defining “climate-related opportunities,” the proposed rules would promote consistency when such opportunities are disclosed, even if such disclosure is not required.

## **2. Proposed Time Horizons and the Materiality Determination**

The proposed rules would require a registrant to disclose whether any climate-related risk is reasonably likely to have a material impact on a registrant, including its business or consolidated financial statements, which may manifest over the short, medium, and long term.<sup>207</sup>

Several commenters made a similar recommendation, stating that disclosure of climate-related

---

<sup>205</sup> See proposed 17 CFR 229.1500(b). The reference to ‘positive’ impact is intended to refer to the actual or potential impact on the registrant’s consolidated financial statements, business operations, or value chains as a whole, rather than the mathematical impacts on a specific financial statement line item. See *infra* Section II.F.2 (discussing the proposed financial impact metrics, which focus on the line items in a registrant’s consolidated financial statements).

<sup>206</sup> Some commenters expressed concern about potential anti-competitive effects of the Commission’s possible climate disclosure rules. See, e.g., letters from Association of General Contractors of America (June 11, 2021); and Healthy Markets Association (June 14, 2021).

<sup>207</sup> See proposed Item 1502(a) of Regulation S-K.

risks and impacts across short, medium, and long-term time horizons is necessary to fully understand a registrant’s susceptibility to material climate-related risks.<sup>208</sup>

As proposed, a registrant would be required to describe how it defines short-, medium-, and long-term time horizons, including how it takes into account or reassesses the expected useful life of the registrant’s assets and the time horizons for the registrant’s planning processes and goals. We have not proposed a specific range of years to define short-, medium-, and long-term time horizons in order to allow flexibility for a registrant to select the time horizons that are most appropriate to its particular circumstances.

As defined by the Commission and consistent with Supreme Court precedent, a matter is material if there is a substantial likelihood that a reasonable investor would consider it important when determining whether to buy or sell securities or how to vote.<sup>209</sup> As the Commission has previously indicated, the materiality determination is largely fact specific and one that requires both quantitative and qualitative considerations.<sup>210</sup> Moreover, as the Supreme Court has articulated, the materiality determination with regard to potential future events requires an

---

<sup>208</sup> See, e.g., letters from Boston Common Asset Management; Christian Brothers Investment Services (June 11, 2021); Clean Yield Asset Management; and Miller/Howard Investments; see also American Institute of CPAs (AICPA) (June 11, 2021).

<sup>209</sup> See 17 CFR 240.12b-2 (definition of “material”). See also *Basic Inc. v. Levinson*, 485 U.S. 224, 231, 232, and 240 (1988) (holding that information is material if there is a substantial likelihood that a reasonable investor would consider the information important in deciding how to vote or make an investment decision; and quoting *TSC Industries, Inc. v. Northway, Inc.*, 426 U. S. 438, 449 (1977) to further explain that an omitted fact is material if there is “a substantial likelihood that the disclosure of the omitted fact would have been viewed by the reasonable investor as having significantly altered the ‘total mix’ of information made available.”).

<sup>210</sup> See Release No. 33-10064, *Business and Financial Disclosure Required by Regulation S-K* (Apr. 13, 2016), [81 FR 23915 (Apr. 22, 2016)] (discussing materiality in the context of, among other matters, restating financial statements). See also [Staff Accounting Bulletin No. 99](https://www.sec.gov/interps/account/sab99.htm) (Aug. 12, 1999), available at <https://www.sec.gov/interps/account/sab99.htm> (emphasizing that a registrant or an auditor may not substitute a percentage threshold for a materiality determination that is required by applicable accounting principles). Staff accounting bulletins are not rules or interpretations of the Commission, nor are they published as bearing the Commission's official approval. They represent interpretations and practices followed by the Division of Corporation Finance and the Office of the Chief Accountant in administering the disclosure requirements of the Federal securities laws.

assessment of both the probability of the event occurring and its potential magnitude, or significance to the registrant.<sup>211</sup>

The materiality determination that a registrant would be required to make regarding climate-related risks under the proposed rules is similar to what is required when preparing the MD&A section in a registration statement or annual report. The Commission's rules require a registrant to disclose material events and uncertainties known to management that are reasonably likely to cause reported financial information not to be necessarily indicative of future operating results or of future financial condition.<sup>212</sup> As the Commission has stated, MD&A should include descriptions and amounts of matters that have had a material impact on reported operations as well as matters that are reasonably likely to have a material impact on future operations.<sup>213</sup>

The proposed rule serves to emphasize that, when assessing the materiality of a particular risk, management should consider its magnitude and probability over the short, medium, and long term. In the context of climate, the magnitude and probability of such risks vary and can be significant over such time periods. For example, wildfires in California, which recently have become more frequent and more intense, may be a material risk for wineries, farmers, and other property owners.<sup>214</sup> Some insurance companies have withdrawn from certain wildfire prone

---

<sup>211</sup> See *Basic, Inc. v. Levinson*, 485 U.S. 224, 238 (1988). When considering the materiality of different climate-related risks, a registrant might, for example, determine that certain transition risks and chronic physical risks are material when balancing their likelihood and impact. It also might determine that certain acute physical risks are material even if they are less likely to occur if the magnitude of their impact would be high.

<sup>212</sup> See 17 CFR 229.303(a).

<sup>213</sup> See Release No. 33-10890, *Management's Discussion and Analysis, Selected Financial Data, and Supplementary Financial Information* (Nov. 19, 2020), [86 FR 2080, 2089 (Jan. 11, 2021)].

<sup>214</sup> See, e.g., Daoping Wang, Dabo Guan, Shupeng Zhu, *et al.*, *Economic footprint of California wildfires in 2018*, Nature Sustainability (Dec. 2020) (stating that the frequency and size of wildfires in the western United States

areas after concluding the risk is no longer insurable.<sup>215</sup> For many investors, the availability of insurance and the potential exposure to damage, loss, and legal liability from wildfires may be a determining factor in their investment decision-making. Moreover, registrants must bear in mind that the materiality determination is made with regard to the information that a reasonable investor considers important to an investment or voting decision.

To help ensure that management considers the dynamic nature of climate-related risks, we are proposing to require a registrant to discuss its assessment of the materiality of climate-related risks over the short, medium, and long term. We recognize that determining the likely future impacts on a registrant's business may be difficult for some registrants. Commenters have noted that the science of climate modelling has progressed in recent years and enabled the development of various software tools and that climate consulting firms are available to assist registrants in making this determination.<sup>216</sup> We also note that, under our existing rules, registrants long have had to disclose forward-looking information, including pursuant to MD&A requirements. To the extent that the proposed climate-related disclosures constitute forward-looking statements, as discussed below,<sup>217</sup> the forward-looking statement safe harbors pursuant

---

has been increasing for several decades, driven by decreases in precipitation and related changes in the moisture in vegetation, which, together with land use and fire management practices, has dramatically increased wildfire risks, culminating in a series of enormously damaging fires in California in 2017, 2018 and 2020); Andrew Freedman, *California wildfires prompt new warnings amid record heat, erratic winds*, the Washington Post (Oct. 1, 2020) (reporting that the "Glass Fire" forced about 80,000 to evacuate from Napa and Sonoma Counties and took a heavy toll on the wine industry).

<sup>215</sup> See Shelby Vittek, *California Farmers Struggle to Secure Wildfire Insurance Coverage*, Modern Farmer (Aug. 2, 2021), available at <https://modernfarmer.com/2021/08/california-farmers-struggle-to-secure-wildfire-insurance-coverage/>

<sup>216</sup> See, e.g., letters from AIR Worldwide (June 11, 2021); Coastal Risk Consulting (May 3, 2021); CoreLogic (June 12, 2021); Datamaran (June 14, 2021); Dynamhex, Inc. (June 15, 2021); EC-Map (June 12, 2021); FutureProof Technologies, Inc. (June 7, 2021); and right.based on science GmbH (June 12, 2021).

<sup>217</sup> See, e.g., *infra* Sections II.C.4 and II.I.

to the Private Securities Litigation Reform Act (“PSLRA”)<sup>218</sup> would apply, assuming the conditions specified in those safe harbor provisions are met.<sup>219</sup> We note, however, that there are important limitations to the PSLRA safe harbor. For example, we are proposing that climate-related disclosures would be required in registration statements, including those for initial public offerings, and forward-looking statements made in connection with an initial public offering are excluded from the protections afforded by the PSLRA. In addition, the PSLRA does not limit the Commission’s ability to bring enforcement actions.

### **Request for Comment**

8. Should we require a registrant to disclose any climate-related risks that are reasonably likely to have a material impact on the registrant, including on its business or consolidated financial statements, which may manifest over the short, medium, and long term, as proposed? If so, should we specify a particular time period, or minimum or maximum range of years, for “short,” “medium,” and “long term?” For example, should we define short term as 1 year, 1-3 years, or 1-5 years? Should we define medium term as 5-10 years, 5-15 years, or 5-20 years? Should we define long-term as 10-20 years, 20-30 years, or 30-50 years? Are there other possible years or ranges of years that we should consider as the definitions of short, medium, and long term? What, if any, are the benefits to leaving those terms undefined? What, if any, are the

---

<sup>218</sup> Pub. Law 104-67, 109 Stat. 737.

<sup>219</sup> See Securities Act Section 27A and Exchange Act Section 21E. The statutory safe harbors by their terms do not apply to forward-looking statements included in financial statements prepared in accordance with generally accepted accounting principles (“GAAP”). The statutory safe harbors also would not apply to forward-looking statements made: (i) in connection with an initial public offering; a tender offer; an offering by, or relating to the operations of, a partnership, limited liability company, or a direct participation investment program, an offering of securities by a blank check company; a roll-up transaction; or a going private transaction; or (ii) by an issuer of penny stock. See Section 27A(b) of the Securities Act and Section 21E(b) of the Exchange Act. Also, the statutory safe harbors do not, absent a rule, regulation, or Commission order, apply to forward-looking statements by certain “bad actor” issuers under Section 27A(b)(1)(A) of the Securities Act and Section 21E(b)(1)(A) of the Exchange Act.

concerns to leaving those terms undefined? Would the proposed provision requiring a registrant to specify what it means by the short, medium, and long term mitigate any such concerns?

9. Should we define “climate-related risks” to mean the actual or potential negative impacts of climate-related conditions and events on a registrant’s consolidated financial statements, business operations, or value chains, as proposed? Should we define climate-related risks to include both physical and transition risks, as proposed? Should we define physical risks to include both acute and chronic risks and define each of those risks, as proposed? Should we define transition risks, as proposed? Are there any aspects of the definitions of climate-related risks, physical risks, acute risks, chronic risks, and transition risks that we should revise? Are there other distinctions among types of climate-related risks that we should use in our definitions? Are there any risks that we should add to the definition of transition risk? How should we address risks that may involve both physical and transition risks?

10. We define transition risks to include legal liability, litigation, or reputational risks. Should we provide more examples about these types of risks? Should we require more specific disclosures about how a registrant assesses and manages material legal liability, litigation, or reputational risks that may arise from a registrant’s business operations, climate mitigation efforts, or transition activities?

11. Some chronic risks might give rise to acute risks, *e.g.*, drought (a chronic risk) that increases acute risks, such as wildfires, or increased temperatures (a chronic risk) that increases acute risks, such as severe storms. Should we require a registrant to discuss how the acute and chronic risks they face may affect one another?

12. For the location of its business operations, properties or processes subject to an identified material physical risk, should we require a registrant to provide the ZIP code of the location or, if

located in a jurisdiction that does not use ZIP codes, a similar subnational postal zone or geographic location, as proposed? Is there another location identifier that we should use for all registrants, such as the county, province, municipality or other subnational jurisdiction? Would requiring granular location information, such as ZIP codes, present concerns about competitive harm or the physical security of assets? If so, how can we mitigate those concerns? Are there exceptions or exemptions to a granular location disclosure requirement that we should consider?

13. If a registrant determines that the flooding of its buildings, plants, or properties is a material risk, should we require it to disclose the percentage of those assets that are in flood hazard areas in addition to their location, as proposed? Would such disclosure help investors evaluate the registrant's exposure to physical risks related to floods? Should we require this disclosure from all registrants, including those that do not currently consider exposure to flooding to be a material physical risk? Should we require this disclosure from all registrants operating in certain industrial sectors and, if so, which sectors? Should we define "flood hazard area" or provide examples of such areas? If we should define the term, should we define it similar to a related definition by the Federal Emergency Management Agency ("FEMA") as an area having flood, mudflow or flood-related erosion hazards, as depicted on a flood hazard boundary map or a flood insurance rate map? Should we require a registrant to disclose how it has defined "flood hazard area" or whether it has used particular maps or software tools when determining whether its buildings, plants, or properties are located in flood hazard areas? Should we recommend that certain maps be used to promote comparability? Should we require disclosure of whether a registrant's assets are located in zones that are subject to other physical risks, such as in locations subject to wildfire risk?

14. If a material risk concerns the location of assets in regions of high or extremely high water stress, should we require a registrant to quantify the assets (*e.g.*, book value and as a percentage of total assets) in those regions in addition to their location, as proposed? Should we also require such a registrant to disclose the percentage of its total water usage from water withdrawn in high or extremely high water stressed regions, as proposed? If so, should we include a definition of a “high water stressed region” similar to the definition provided by the World Resource Institute as a region where 40-80 percent of the water available to agricultural, domestic, and industrial users is withdrawn annually? Should we similarly define an “extremely high water stressed area” as a region where more than 80 percent of the water available to agricultural, domestic, and industrial users is withdrawn annually? Are there other definitions of high or extremely high water stressed areas we should use for purposes of this disclosure? Would these items of information help investors assess a registrant’s exposure to climate-related risks impacting water availability? Should we require the disclosure of these items of information from all registrants, including those that do not currently consider having assets in high water-stressed areas a material physical risk? Should we require these disclosures from all registrants operating in certain industrial sectors and, if so, which sectors?

15. Are there other specific metrics that would provide investors with a better understanding of the physical and transition risks facing registrants? How would investors benefit from the disclosure of any additional metrics that would not necessarily be disclosed or disclosed in a consistent manner by the proposed climate risk disclosures? What, if any, additional burdens would registrants face if they were required to disclose additional climate risk metrics?

16. Are there other areas that should be included as examples in the definitions of acute or chronic risks? If so, for each example, please explain how the particular climate-related risk could materially impact a registrant's operations or financial condition.

17. Should we include the negative impacts on a registrant's value chain in the definition of climate-related risks, as proposed? Should we define "value chain" to mean the upstream and downstream activities related to a registrant's operations, as proposed? Are there any upstream or downstream activities included in the proposed definition of value chain that we should exclude or revise? Are there any upstream or downstream activities that we should add to the definition of value chain? Are there any upstream or downstream activities currently proposed that should not be included?

18. Should we define climate-related opportunities as proposed? Should we permit a registrant, at its option, to disclose information about any climate-related opportunities that it is pursuing, such as the actual or potential impacts of those opportunities on the registrant, including its business or consolidated financial statements, as proposed? Should we specifically require a registrant to provide disclosure about any climate-related opportunities that have materially impacted or are reasonably likely to impact materially the registrant, including its business or consolidated financial statements? Is there a risk that the disclosure of climate-related opportunities could be misleading and lead to "greenwashing"? If so, how should this risk be addressed?

## **C. Disclosure Regarding Climate-Related Impacts on Strategy, Business Model, and Outlook**

### **1. Disclosure of Material Impacts**

Once a registrant has described the climate-related risks reasonably likely to have a material impact on the registrant's business or consolidated financial statements as manifested over the short, medium, and long term as required by proposed Item 1502(a), proposed Item 1502(b) would require the registrant to describe the actual and potential impacts of those risks on its strategy, business model, and outlook.<sup>220</sup> Several commenters stated that many registrants have included largely boilerplate discussions about climate-related risks and failed to provide a meaningful analysis of the impacts of those risks on their businesses.<sup>221</sup> The TCFD's most recent assessment of public companies' voluntary climate reports also noted that a minority of companies disclosed the impacts of climate-related risks and opportunities on their businesses in alignment with the TCFD framework.<sup>222</sup> Because information about how climate-related risks have impacted or are likely to impact a registrant's strategy, business model, and outlook can be important for purposes of making an investment or voting decision about the registrant, we are proposing the provisions below to elicit robust and company-specific disclosure on this topic.

As proposed, a registrant would be required to disclose impacts on its:

- Business operations, including the types and locations of its operations;

---

<sup>220</sup> See proposed 17 CFR 229.1502(b).

<sup>221</sup> See, e.g., letters from CALSTRS; Cardano Risk Management Ltd.; Climate Risk Disclosure Lab (June 14, 2021); and Colorado PERA (June 11, 2021).

<sup>222</sup> See TCFD, *2021 Status Report*, Section B (Oct. 2021) (stating that, based on a review of reports of 1,651 public companies from 2018-2020, while 38-52% of companies surveyed described climate-related risks and opportunities during 2018-2020, only 26-39% disclosed the impacts of those risks and opportunities during this period).

- Products or services;
- Suppliers and other parties in its value chain;
- Activities to mitigate or adapt to climate-related risks, including adoption of new technologies or processes;
- Expenditure for research and development; and
- Any other significant changes or impacts.<sup>223</sup>

A registrant would also be required to disclose the time horizon for each described impact (*i.e.*, as manifested in the short, medium, or long term, as defined by the registrant when determining its material climate-related risks).<sup>224</sup>

The proposed rules would require a registrant to discuss how it has considered the identified impacts as part of its business strategy, financial planning, and capital allocation.<sup>225</sup> A registrant would be required to provide both current and forward-looking disclosures<sup>226</sup> that facilitate an understanding of whether the implications of the identified climate-related risks have been integrated into the registrant’s business model or strategy, including how resources are being used to mitigate climate-related risks.<sup>227</sup> The discussion must also include how any of the metrics referenced in proposed Rule 14-02 of Regulation S-X and Item 1504 of Regulation S-K or any of the targets referenced in proposed Item 1506 relate to the registrant’s business model or business strategy.<sup>228</sup>

---

<sup>223</sup> See proposed 17 CFR 229.1502(b)(1).

<sup>224</sup> See proposed 17 CFR 229.1502(b)(2).

<sup>225</sup> See proposed 17 CFR 229.1502(c).

<sup>226</sup> See *infra* Sections II.C.3 and 4, II.E, II.G.1, and II.I regarding the application to forward-looking climate disclosures of the PSLRA safe harbor for forward-looking statements.

<sup>227</sup> See *id.*

<sup>228</sup> See *infra* Sections II.F and II.G for a discussion of the proposed metrics and targets.

For example, a registrant that operates in a jurisdiction that has imposed or is likely to impose limits on GHG emissions in support of the Paris Agreement might set a long-term target of net zero GHG emissions from its operations in 2050, a medium-term target of reducing its emissions by 30 percent by 2030, and a short-term target of maintaining its emissions at its 2020 rate through 2023. This registrant could face material transition risks due to the estimated costs of the operational changes expected to be implemented to achieve these targets. The registrant would be required to disclose these transition risks and their impacts on its strategy, business model, and outlook.

Some of the described impacts would likely be common across industries and may involve reducing a registrant's Scopes 1 and 2 GHG emissions<sup>229</sup> and incurring increased expenses in the short term related to, for example, acquiring new technology to curb its operational emissions and increasing the amount of electricity purchased from renewable sources. Other described impacts of material transition risks, however, would likely vary by industry. For example, an oil company might determine that a likely change in demand for fossil fuel-based products would require it to modify its business model or alter its product mix to emphasize advanced diesel gas and biofuels in order to maintain or increase its earning capacity, thereby requiring disclosure under the proposed rules. An electric utilities company might disclose an increase in the amount of electricity generated from less carbon-intensive sources, such as wind turbines, nuclear, hydroelectric, or solar power to meet current or likely regulatory constraints.

---

<sup>229</sup> See *supra* Section I.D.2 and *infra* Section II.G for a discussion of Scopes 1 and 2 emissions.

A registrant would also be required to disclose the material impacts of physical risks on its strategy, business model, and outlook. For example, an agricultural producer or distributor might disclose the likely impacts of drought on its own product mix or that of its suppliers, including increased expenses for additional water or due to the procurement of alternative product sources. Similarly, a mining company that operates in areas susceptible to extreme rise in temperatures might disclose the likely impacts that this temperature rise has on its workforce and on its production schedule, including a reduction in output and future earning capacity. A real estate company that owns coastal property might disclose the likely impacts of rising sea levels on such property, including the potential diminution in value of, and a potential change in its strategy and outlook regarding, such properties.

The proposed rules would require a registrant to provide a narrative discussion of whether and how any of its identified climate-related risks described in response to proposed Item 1502(a) have affected or are reasonably likely to affect the registrant's consolidated financial statements.<sup>230</sup> The discussion should include any of the financial statement metrics disclosed pursuant to proposed Regulation S-X Rule 14-02.<sup>231</sup> As previously noted, many commenters recommended that we require registrants to discuss and analyze their quantitative climate data in a manner similar to that required for MD&A.<sup>232</sup> Proposed 17 CFR 229.1502(d) (Item 1502(d) of Regulation S-K) is intended to provide climate-related disclosure that is similar

---

<sup>230</sup> See proposed 17 CFR 229.1502(d). To the extent that the proposed narrative discussion is provided in its MD&A, a registrant could incorporate by reference that part of the MD&A into the Climate-Related Disclosure section of the registration statement or report. See *supra* Section II.A.2.

<sup>231</sup> See *infra* Section II.F.

<sup>232</sup> See *supra* note 171.

to MD&A, although, as previously noted, a registrant may provide such disclosure as part of its MD&A.

For example, an automobile manufacturer might discuss an increase in operating costs or capital expenditures due to the need to revamp its assembly lines to build lower emission vehicles to comply with new regulatory guidelines or to meet changing consumer demand. An oil company might discuss a change in the valuation of its proven reserves because of an anticipated reduced demand for fossil fuels. A freight company might discuss impairment charges or early write-offs for older equipment it might need to replace due to anticipated changes in regulation or policy favoring lower emissions equipment. While a registrant may currently have an obligation to make some of these disclosures pursuant to Regulation S-X, the disclosed impacts in the financial statements may not be in disaggregated form and may lack explanation. Proposed Item 1502(d) would require the disclosure in the form of a narrative analysis akin to MD&A that would be more easily accessible for investors.

Moreover, it is likely that any disclosed impacts in the financial statements would be assessed for the fiscal years presented in the financial statements with a focus on near short-term impacts. Because proposed Item 1502 would require a registrant to identify material climate-related impacts that may manifest in the short, medium, and long term, a registrant's narrative discussion of the likely climate-related impacts on its consolidated financial statements should cover more than just short-term impacts. For example, if a registrant has a transition plan<sup>233</sup> that includes the development of lower carbon products and processes, that registrant might disclose that it expects to incur higher initial capital costs to implement its strategy, but anticipates

---

<sup>233</sup> See *infra* Section II.E for proposed disclosure requirements regarding the use of a transition plan.

increased revenues or reduced expenses over the longer term. An automobile manufacturer that transitions from the production of internal combustion engine vehicles to the production of electric vehicles might disclose that it expects to incur costs in the short term to change its manufacturing processes, but over the longer term, it expects to realize increased sales, protect its market share against transition risks, including reputational risks, and potentially avoid regulatory fines or other costs as consumer and regulatory demands change.

## **2. Disclosure of Carbon Offsets or Renewable Energy Credits If Used**

If, as part of its net emissions reduction strategy, a registrant uses carbon offsets or renewable energy credits or certificates (“RECs”), the proposed rules would require it to disclose the role that carbon offsets or RECs play in the registrant’s climate-related business strategy.<sup>234</sup> Under the proposed rules, carbon offsets represent an emissions reduction or removal of greenhouse gases in a manner calculated and traced for the purpose of offsetting an entity’s GHG emissions.<sup>235</sup> We are proposing to define a REC, consistent with the EPA’s commonly used definition, to mean a credit or certificate representing each purchased megawatt-hour (1 MWh or 1000 kilowatt-hours) of renewable electricity generated and delivered to a registrant’s power grid.<sup>236</sup> While both carbon offsets and RECs represent commonly used GHG emissions mitigation options for companies, they are used for somewhat different purposes.<sup>237</sup>

---

<sup>234</sup> See proposed 17 CFR 229.1502(c).

<sup>235</sup> See proposed 17 CFR 229.1500(a).

<sup>236</sup> See proposed 17 CFR 229.1500(n). See, e.g., EPA, *Offsets and RECs: What's the Difference?*, available at [https://www.epa.gov/sites/default/files/2018-03/documents/gpp\\_guide\\_recs\\_offsets.pdf](https://www.epa.gov/sites/default/files/2018-03/documents/gpp_guide_recs_offsets.pdf).

<sup>237</sup> A company may purchase carbon offsets to address its direct and indirect GHG emissions (*i.e.*, its Scopes 1, 2, and 3 emissions) by verifying global emissions reductions at additional, external projects. The reduction in

Some registrants might plan to use carbon offsets or RECs as their primary means of meeting their GHG reduction goals, including those formulated in response to government law or policy or customer or investor demands. Other registrants, including those that set Science Based Targets pursuant to the Science Based Targets Initiative,<sup>238</sup> might develop strategies to reduce their emissions to the extent possible through operational changes—such as modifications to their product offerings or the development of solar or other renewable energy sources. They then might plan to use carbon offsets or RECs to offset the remainder of their emissions that they cannot reduce through operational changes or to meet their GHG reduction goals while they transition to lower carbon operations.

Understanding the role that carbon offsets or RECs play in a registrant’s climate-related business strategy can help investors gain useful information about the registrant’s strategy, including the potential risks and financial impacts. A registrant that relies on carbon offsets or RECs to meet its goals might incur lower expenses in the short term but could expect to continue to incur the expense of purchasing offsets or RECs over the long term. It also could bear the risk

---

GHG emissions from one place (“offset project”) can be used to “offset” the emissions taking place somewhere else (at the company’s operations). *See, e.g., EPA, Offsets and RECs: What's the Difference?*, available at [https://www.epa.gov/sites/default/files/2018-03/documents/gpp\\_guide\\_recs\\_offsets.pdf](https://www.epa.gov/sites/default/files/2018-03/documents/gpp_guide_recs_offsets.pdf). In contrast, a company may purchase a REC in renewable electricity markets solely to address its indirect GHG emissions associated with purchased electricity (*i.e.*, Scope 2 emissions) by verifying the use of zero- or low-emissions renewable sources of electricity. Each REC provides its owner exclusive rights to the attributes of one megawatt-hour of renewable electricity whether that renewable electricity has been installed on the company’s facilities or produced elsewhere. *See id.*

<sup>238</sup> Science Based Targets Initiative (“SBTi”) is a partnership between CDP, the United Nations Global Compact, World Resources Institute (WRI) and the World Wide Fund for Nature (WWF), which defines and promotes best practice in emissions reductions and net-zero targets in line with climate science. SBTi provides technical assistance and its expertise to companies who voluntarily set science-based targets in line with the latest climate science. *See SBTi, Who We Are/What We Do*, available at <https://sciencebasedtargets.org/about-us#who-we-are>. The SBTi does not permit offsets to be counted toward a company’s emission reduction targets to meet its science-based targets but does permit offsets by companies that wish to finance additional emission reductions beyond their science-based targets. *See SBTi Criteria and Recommendations* (Apr. 2020), available at <https://sciencebasedtargets.org/resources/legacy/2019/03/SBTi-criteria.pdf>.

of increased costs of offsets or RECs if increased demand for offsets or RECs creates scarcity and higher costs to acquire them over time. Alternatively, the value of an offset may decrease substantially and suddenly if, for example, the offset represents protected forest land that burns in a wildfire and no longer represents a reduction in GHG emissions. In that case, the registrant may need to write off the offset and purchase a replacement. In other cases, increased demand for, or scarcity of, offsets and RECs may benefit a registrant that produces or generates offsets or RECs to the extent their prices increase. Accordingly, under the proposed rules, a registrant that purchases offsets or RECs to meet its goals as it makes the transition to lower carbon products would need to reflect this additional set of short and long-term costs and risks in its Item 1502 disclosure, including the risk that the availability or value of offsets or RECs might be curtailed by regulation or changes in the market.

### **3. Disclosure of a Maintained Internal Carbon Price**

Some registrants may use an internal carbon price when assessing climate-related factors. Under the proposed definition, an internal carbon price is an estimated cost of carbon emissions used internally within an organization.<sup>239</sup> Internal carbon pricing may be used by a registrant, among other purposes, as a planning tool to help identify climate-related risks and opportunities, as an incentive to drive energy efficiencies to reduce costs, to quantify the potential costs the company would incur should a carbon price be put into effect, and to guide capital investment decisions. If a registrant uses an internal carbon price, the proposed rules would require it to disclose:

---

<sup>239</sup> See proposed 17 CFR 229.1500(j).

- The price in units of the registrant’s reporting currency per metric ton of carbon dioxide equivalent (“CO<sub>2</sub>e”);<sup>240</sup>
- The total price, including how the total price is estimated to change over time, if applicable;
- The boundaries for measurement of overall CO<sub>2</sub>e on which the total price is based (if different from the GHG emission organizational boundary required pursuant to 17 CFR 229.1504(e)(2);<sup>241</sup> and
- The rationale for selecting the internal carbon price applied.<sup>242</sup>

These proposed items of disclosure would help investors understand the rationale and underlying assumptions for a registrant’s internal carbon price and help them assess whether the registrant’s use of an internal carbon price as a planning tool is reasonable and effective.

A registrant would also be required to describe how it uses its disclosed internal carbon price to evaluate and manage climate-related risks.<sup>243</sup> If a registrant uses more than one internal carbon price, the proposed rules would require it to provide disclosures for each internal carbon price, and to disclose its reasons for using different prices.<sup>244</sup> For example, a registrant might disclose that it uses different internal carbon prices when considering different climate-related

---

<sup>240</sup> See *infra* Section II.G for a discussion of our proposal to use CO<sub>2</sub>e as a unit of measurement in the proposed requirements.

<sup>241</sup> See *infra* Section II.G.2 for a discussion of the proposed requirements for determining the GHG emission organizational boundary.

<sup>242</sup> See proposed 17 CFR 229.1502(e)(1).

<sup>243</sup> See proposed 17 CFR 229.1502(e)(2).

<sup>244</sup> See proposed 17 CFR 229.1502(e)(3).

scenarios to help it develop an appropriate business strategy over the short-, medium-, and long-term.<sup>245</sup>

Commenters that addressed the topic of carbon price generally supported requiring its disclosure in some form, such as: (i) establishing a broad-based carbon price; (ii) requiring companies to maintain and disclose an internal carbon price; (iii) requiring disclosure of any internal carbon price already used by a company; or (iv) requiring disclosure of carbon prices used in the context of scenario analysis.<sup>246</sup> One commenter referred to disclosure of a company's use of internal carbon pricing as one of several "foundational climate disclosures" that should be required in any Commission rule.<sup>247</sup> Another commenter also underscored the importance of this information, stating that "the thorough quantification of climate risk has been hampered by the lack of carbon pricing."<sup>248</sup> We agree with commenters that supported the disclosure of carbon pricing as a key data point for evaluating how a registrant is planning for and managing climate-related risks. However, the proposed rules would not require registrants to maintain an internal carbon price or to mandate a particular carbon pricing methodology. We are aware that many registrants may not currently track this information and recognize that a robust carbon market on which to base such a price may not exist in many contexts.<sup>249</sup> Accordingly, the proposed

---

<sup>245</sup> See *infra* Section II.C.4 for the proposed disclosure required if a registrant uses scenario analysis.

<sup>246</sup> See, e.g., letters from Rob Bonta, California Attorney General, on behalf of several state attorney generals (June 14, 2021); Catavento; Center for Climate and Energy Solutions; Ceres; Climate Risk Disclosure Lab; Hermes Equity Ownership Services Limited; Majedie Asset Management; Managed Funds Association; Norges Bank Investment Management; Open Source Climate; PRI (Consultation Response); Regenerative Crisis Response Committee; Total Energies (June 13, 2021); and Trillium Asset Management. *But see* Edison Electric Institute (stating that a "robust carbon market" does not exist today" and disclosures based on that market would be "fraught with risk").

<sup>247</sup> Letter from Ceres.

<sup>248</sup> Letter from PRI.

<sup>249</sup> See Edison Electric Institute.

disclosures would be required only if the registrant otherwise maintains an internal carbon price. For similar reasons, we have not proposed requiring a specific methodology for setting an internal carbon price.

Registrants may choose to use an internal carbon price when quantifying, analyzing, and assessing the financial impacts of climate-related risks and climate-related opportunities. For example, an internal carbon price helps monetize emissions by converting emissions data from CO<sub>2</sub>e into a value in the registrant's reporting currency. A registrant may determine that monetization is useful when assessing the costs and benefits of its possible climate-related strategies, as it effectively puts a price on the emission impacts. Disclosure of an internal carbon price, when used by a registrant, would provide investors with material information regarding how the registrant developed a particular business strategy to mitigate or adapt to identified climate-related risks and would help quantify for investors at least part of the transition risks faced by a registrant. We believe that this proposed disclosure requirement would help investors assess whether a registrant's internal carbon pricing practice is reasonable and whether its overall evaluation and planning regarding climate-related factors is sound.<sup>250</sup>

A registrant's disclosure of any internal carbon price necessarily would include assumptions about future events. The carbon price applied should not be viewed as a promise or guarantee with regard to the future costs to the registrant of GHG emissions. Moreover, to the extent that certain information regarding a registrant's internal carbon pricing would constitute

---

<sup>250</sup> We also note, based on current voluntary reporting, an increasing trend among public companies to use internal carbon pricing. See CDP, *Putting a Price on Carbon* (2021), available at [https://cdn.cdp.net/cdp-production/cms/reports/documents/000/005/651/original/CDP\\_Global\\_Carbon\\_Price\\_report\\_2021.pdf?1618938446](https://cdn.cdp.net/cdp-production/cms/reports/documents/000/005/651/original/CDP_Global_Carbon_Price_report_2021.pdf?1618938446).

forward-looking statements, the PSLRA safe harbors would apply to such statements, assuming all other statutory requirements for those safe harbors are satisfied.

#### **4. Disclosure of Scenario Analysis, if Used**

We are proposing to require a registrant to describe the resilience of its business strategy in light of potential future changes in climate-related risks. A registrant also would be required to describe any analytical tools, such as scenario analysis, that the registrant uses to assess the impact of climate-related risks on its business and consolidated financial statements, or to support the resilience of its strategy and business model in light of foreseeable climate-related risks.<sup>251</sup> Scenario analysis is a process for identifying and assessing a potential range of outcomes of future events under conditions of uncertainty.<sup>252</sup> The proposed definition of scenario analysis both states that (i) when applied to climate-related assessments, scenario analysis is a tool used to consider how, under various possible future climate scenarios, climate-related risks may impact a registrant's operations, business strategy, and consolidated financial statements over time; and that (ii) registrants might use scenario analysis to test the resilience of their strategies under future climate scenarios, including scenarios that assume different global temperature increases, such as, for example, 3 °C, 2 °C, and 1.5 °C above pre-industrial levels.<sup>253</sup>

---

<sup>251</sup> See proposed 17 CFR 229.1502(f).

<sup>252</sup> See, e.g., the definition of "scenario analysis" in TCFD, [Recommendations of the Task Force on Climate-related Financial Disclosures](#).

<sup>253</sup> See proposed 17 CFR 229.1500(o).

Many commenters recommended that we require a registrant to conduct scenario analysis and disclose the results of such analysis.<sup>254</sup> One commenter stated that scenario analysis was useful because it allows companies to test their business strategy against a spectrum of hypothetical future climate scenarios and develop a better informed view of implications for their enterprise value and value chains. The same commenter further indicated that disclosure of the scenarios used by a company was necessary to inform investors about the reliability, reasonableness, and resiliency of the company’s plans to address climate-related risks and opportunities.<sup>255</sup>

Another commenter stated that the Commission should require disclosure of a registrant’s climate scenario analysis by no later than 2025, and recommended that companies engage in scenario analysis involving a base case, worse case, better case, and “Black Swan” scenarios related to possible climate transition pathways.<sup>256</sup> Alternatively, the commenter suggested that a company take into account three scenarios: a smooth economic transition to +1.5 °C, which would form the basis of the company’s net-zero strategy; a disorderly and, therefore, more costly and disruptive transition to +1.5 °C; and a higher temperature scenario outcome of +3 °C of warming, which would be associated with extreme physical effects and unprecedented economic costs and disruption. This commenter further stated that robust disclosure of a company’s

---

<sup>254</sup> See, e.g., letters from AllianceBernstein; Americans for Financial Reform Education Fund; R. Ted Atwood (June 23, 2021); BlackRock; Bloomberg, LP; Boston Common Asset Management; Cardano Risk Management Ltd.; Certified B Corporations; Climate Governance Initiative; Climate Risk Disclosure Law and Policy Lab (June 14, 2021); Consumer Federation of America; CPP Investments; E2; ERM CVS; FAIRR Initiative; Forum for Sustainable and Responsible Investment (June 11, 2021); Friends of the Earth *et al.*; George Georgiev; Global Equity Strategy (June 14, 2021); Impax Asset Management; Invesco; Christopher Lish; NY State Comptroller; PRI (Consultation Response); Revolving Door Project; RMI; Trillium Asset Management; UNEP; and Sens. Elizabeth Warren and Rep. Sean Casten (June 11, 2021).

<sup>255</sup> See letter from Bloomberg.

<sup>256</sup> See letter from Climate Governance Initiative.

scenario analysis was necessary so that investors can understand how longer-term “climate drivers” have been incorporated into its corporate strategy and financial disclosures.<sup>257</sup>

Another commenter expressed the view that, although many companies purport to use scenario analysis in the climate context, their reporting regarding such use has been generally deficient. That commenter stated that the assumptions underlying the selected scenarios often are undisclosed and that the analysis tends to be limited and not usefully comparable.<sup>258</sup> The TCFD’s most recent assessment of public companies’ voluntary climate reporting similarly found that only a small percentage of the surveyed companies disclosed the resilience of their strategies using scenario analysis as recommended by the TCFD.<sup>259</sup>

Some commenters recommended providing certain accommodations in connection with a scenario analysis requirement, such as creating a safe harbor for scenario analysis disclosure<sup>260</sup> or permitting scenario analysis to be furnished in a separate report that would not be subject to the same liability as Commission filings.<sup>261</sup> Other commenters stated that they opposed a scenario analysis requirement because of the lack of a common methodology for scenario analysis;<sup>262</sup> a belief that the underlying methodology would be too difficult for investors to

---

<sup>257</sup> *See id.*

<sup>258</sup> *See* letter from Ceres. The CDP similarly reported that, although 54% of the 9600+ companies that responded to their questionnaires in 2020 reported engaging in scenario analysis, 14% of the companies only considered one scenario with many others considering only slight variations of one scenario. *See* CDP, *3 common pitfalls of using scenario analysis – and how to avoid them* (Mar. 10, 2021), available at <https://www.cdp.net/en/articles/companies/3-common-pitfalls-companies-make-when-using-scenario-analysis-and-how-to-avoid-them>.

<sup>259</sup> *See* TCFD, 2021 Status Report, Section B (indicating that, during 2018-2020, only 5-13% of the surveyed companies disclosed the resilience of their strategies using scenario analysis).

<sup>260</sup> *See* letter from J. Robert Gibson.

<sup>261</sup> *See* letter from NEI Investments.

<sup>262</sup> *See* letter from Information Technology Industry Council.

understand;<sup>263</sup> the need for further development of scenario analysis as a discipline;<sup>264</sup> or a belief that the focus of climate-related disclosure should be on historical data, and not on forward-looking information.<sup>265</sup>

We agree with those commenters who stated that information concerning scenario analysis could help investors evaluate the resilience of the registrant's business strategy in the face of various climate scenarios that could impose potentially different climate-related risks. We are not, however, proposing to mandate that registrants conduct scenario analysis. We recognize that not every registrant conducts scenario analysis and that, in certain instances, it may be costly or difficult for some registrants to conduct such scenario analysis. Instead, the proposed rules would require that if a registrant uses scenario analysis or any analytical tools to assess the impact of climate-related risks on its business and consolidated financial statements, and to support the resilience of its strategy and business model, the registrant must disclose certain information about such analysis.<sup>266</sup> We believe this approach strikes an appropriate balance between the various positions expressed by commenters by requiring registrants to share any scenario analysis that they are otherwise conducting for their business operations while avoiding imposing a potentially difficult or burdensome requirement on those registrants that have not yet undertaken to conduct such analysis.

If a registrant uses scenario analysis, the proposed amendments would require disclosure of the scenarios considered (*e.g.*, an increase of no greater than 3 °, 2 °, or 1.5 °C above pre-

---

<sup>263</sup> See letter from Dimensional Fund Advisors.

<sup>264</sup> See letter from bp.

<sup>265</sup> See letter from Nareit (June 11, 2021).

<sup>266</sup> See proposed 17 CFR 229.1502(f). One commenter recommended requiring the disclosure of the results of scenario analysis if a registrant has engaged in such analysis. See letter from E3G.

industrial levels), including parameters, assumptions, and analytical choices, and the projected principal financial impacts on the registrant’s business strategy under each scenario. The disclosure should include both quantitative and qualitative information. Disclosure of the parameters, assumptions, and analytical choices involved in the described scenarios would help investors better understand the various considered scenarios and help them evaluate whether the registrant has a plan to manage the climate-related risks posed by each scenario.

Because a registrant’s scenario analysis disclosure would necessarily include predictions and other forward-looking statements based on assumptions concerning future events, we believe that the PSLRA forward-looking safe harbors would apply to much of the disclosure concerning scenario analysis provided the other statutory conditions for application of the safe harbor are met.

We note that there are a number of publicly-available climate-related scenarios that could form the basis of a registrant’s scenario analysis. The TCFD has categorized these scenarios as transition scenarios and physical climate scenarios.<sup>267</sup> If a registrant uses scenario analysis to assess the resilience of its business strategy to climate-related risks, investors may benefit from the use of scientifically based, widely accepted scenarios, such as those developed by the IPCC, International Energy Agency (“IEA”),<sup>268</sup> or Network of Central Banks and Supervisors for Greening the Financial System (“NGFS”).<sup>269</sup> Investors may also benefit by the use of more than

---

<sup>267</sup> See TCFD, Technical Supplement, *The Use of Scenario Analysis in Disclosure of Climate-Related Risks and Opportunities* (June 2017), available at <https://assets.bbhub.io/company/sites/60/2020/09/2020-TCFD-Guidance-Scenario-Analysis-Guidance.pdf>.

<sup>268</sup> The TCFD has summarized a number of publicly available scenario analysis models, with particular emphasis on the transition scenarios developed by the IEA and the physical risk scenarios developed by the IPCC. See *id.* at Appendix 1: IEA and IPCC Climate Scenarios.

<sup>269</sup> See NGFS, *Scenarios Portal*, available at <https://www.ngfs.net/ngfs-scenarios-portal/>.

one climate scenario, including one that assumes a disorderly transition (*i.e.*, one that assumes that climate policies are delayed or divergent across countries and industrial sectors, resulting in higher transition risks to companies). These could enhance the reliability and usefulness of the scenario analysis for investors.

### **Request for Comment**

19. Should we require a registrant to describe the actual and potential impacts of its material climate-related risks on its strategy, business model, and outlook, as proposed? Should we require a registrant to disclose impacts from climate-related risks on, or any resulting significant changes made to, its business operations, including the types and locations of its operations, as proposed?

20. Should we require a registrant to disclose climate-related impacts on, or any resulting significant changes made to, its products or services, supply chain or value chain, activities to mitigate or adapt to climate-related risks, including adoption of new technologies or processes, expenditure for research and development, and any other significant changes or impacts, as proposed? Are there any other aspects of a registrant's business operations, strategy, or business model that we should specify as being subject to this disclosure requirement to the extent they may be impacted by climate-related factors?

21. Should we require a registrant to specify the time horizon applied when assessing its climate-related impacts (*i.e.*, in the short, medium, or long term), as proposed?

22. Should we require a registrant to discuss whether and how it considers any of the described impacts as part of its business strategy, financial planning, and capital allocation, as proposed? Should we require a registrant to provide both current and forward-looking disclosures to facilitate an understanding of whether the implications of the identified climate-

related risks have been integrated into the registrant’s business model or strategy, as proposed? Would any of the proposed disclosures present competitive concerns for registrants? If so, how can we mitigate such concerns?

23. Should we require the disclosures to include how the registrant is using resources to mitigate climate-related risks, as proposed? Should the required discussion also include how any of the metrics or targets referenced in the proposed climate-related disclosure subpart of Regulation S-K or Article 14 of Regulation S-X relate to the registrant’s business model or business strategy, as proposed? Should we require additional disclosures if a registrant leverages climate-related financing instruments, such as green bonds or other forms of “sustainable finance” such as “sustainability-linked bonds,” “transition bonds,” or other financial instruments linked to climate change as part of its strategy to address climate-related risks and opportunities? For example, should we require disclosure of the climate-related projects that the registrant plans to use the green bond proceeds to fund? Should we require disclosure of key performance metrics tied to such financing instruments?

24. If a registrant has used carbon offsets or RECs, should we require the registrant to disclose the role that the offsets or RECs play in its overall strategy to reduce its net carbon emissions, as proposed? Should the proposed definitions of carbon offsets and RECs be clarified or expanded in any way? Are there specific considerations about the use of carbon offsets or RECs that we should require to be disclosed in a registrant’s discussion regarding how climate-related factors have impacted its strategy, business model, and outlook?

25. Should we require a registrant to provide a narrative discussion of whether and how any of its identified climate-related risks have affected or are reasonably likely to affect its consolidated financial statements, as proposed? Should the discussion include any of the

financial statement metrics in proposed 17 CFR 210.14-02 (14-02 of Regulation S-X) that demonstrate that the identified climate-related risks have had a material impact on reported operations, as proposed? Should the discussion include a tabular representation of such metrics?

26. Should we require registrants to disclose information about an internal carbon price if they maintain one, as proposed? If so, should we require that the registrant disclose:

- The price in units of the registrant's reporting currency per metric ton of CO<sub>2</sub>e;
- The total price;
- The boundaries for measurement of overall CO<sub>2</sub>e on which the total price is based if different from the GHG emission organizational boundary required pursuant to 17 CFR 210.14-03(d)(4); and
- The rationale for selecting the internal or shadow carbon price applied, as proposed?

Should we also require registrants to describe the methodology used to calculate its internal carbon price?

27. Should we also require a registrant to disclose how it uses the described internal carbon price to evaluate and manage climate-related risks, as proposed? Should we further require a registrant that uses more than one internal carbon price to provide the above disclosures for each internal carbon price, and disclose its reasons for using different prices, as proposed? Are there other aspects regarding the use of an internal carbon price that we should require to be disclosed? Would disclosure regarding any internal carbon price maintained by a registrant elicit important or material information for investors? Would requiring the disclosure of the registrant's use of an internal carbon price raise competitive harm concerns that would act as a disincentive from the use of an internal carbon price? If so, should the Commission provide an accommodation

that would mitigate those concerns? For example, are there exceptions or exemptions to an internal carbon price disclosure requirement that we should consider?

28. To the extent that disclosure that incorporates or is based on an internal carbon price constitutes forward-looking information, the PSLRA safe harbors would apply. Should we adopt a separate safe harbor for internal carbon price disclosure? If so, what disclosures should such a safe harbor cover and what should the conditions be for such a safe harbor?

29. Should we require all registrants to disclose an internal carbon price and prescribe a methodology for determining that price? If so, what corresponding disclosure requirements should we include in connection with such mandated carbon price? What methodology, if any, should we prescribe for calculating a mandatory internal or shadow carbon price? Would a different metric better elicit disclosure that would monetize emissions?

30. Should we require a registrant to disclose analytical tools, such as scenario analysis, that it uses to assess the impact of climate-related risks on its business and consolidated financial statements, and to support the resilience of its strategy and business model, as proposed? What other analytical tools do registrants use for these purposes, and should we require disclosure of these other tools? Are there other situations in which some registrants should be required to conduct and provide disclosure of scenario analysis? Alternatively, should we require all registrants to provide scenario analysis disclosure? If a registrant does provide scenario analysis disclosure, should we require it to follow certain publicly available scenario models, such as those published by the IPCC, the IEA, or NGFS and, if so, which scenarios? Should we require a registrant providing scenario analysis disclosure to include the scenarios considered (*e.g.*, an increase of global temperature of no greater than 3 °, 2 °, or 1.5 °C above pre-industrial levels), the parameters, assumptions, and analytical choices, and the projected principal financial impacts

on the registrant's business strategy under each scenario, as proposed? Are there any other aspects of scenario analysis that we should require registrants to disclose? For example, should we require a registrant using scenario analysis to consider a scenario that assumes a disorderly transition? Is there a need for us to provide additional guidance regarding scenario analysis? Are there any aspects of scenario analysis in our proposed required disclosure that we should exclude? Should we also require a registrant that does not use scenario analysis to disclose that it has not used this analytical tool? Should we also require a registrant to disclose its reasons for not using scenario analysis? Will requiring disclosure of scenario analysis if and when a registrant performs scenario analysis discourage registrants from conducting scenario analysis? If so, and to the extent scenario analysis is a useful tool for building strategic resilience, how could our regulations prevent such consequences?

31. Would the PSLRA forward-looking statement safe harbors provide adequate protection for the proposed scenario analysis disclosure? Should we instead adopt a separate safe harbor for scenario analysis disclosure? If so, what disclosures should such a safe harbor cover that would not be covered by the PSLRA safe harbors and what should the conditions be for such a safe harbor?

32. Should we adopt a provision similar to 17 CFR 229.305(d) that would apply the PSLRA forward-looking statement safe harbor to forward-looking statements made in response to specified climate-related disclosure items, such as proposed Item 1502 and Item 1505 (concerning targets and goals) of Regulation S-K? If so, which proposed items should we specifically include in the safe harbor?

33. As proposed, a registrant may provide disclosure regarding any climate-related opportunities when responding to any of the provisions under proposed 17 CFR 229.1502 (Item

1502). Should we require disclosure of climate-related opportunities under any or all of the proposed Item 1502 provisions?

#### **D. Governance Disclosure**

Similar to the TCFD framework, the proposed rules would require a registrant to disclose, as applicable, certain information concerning the board's oversight of climate-related risks, and management's role in assessing and managing those risks.<sup>270</sup> Many commenters asserted that climate-related issues should be subject to the same level of board oversight as other financially material matters.<sup>271</sup> Most of these commenters supported robust disclosure of a board's and management's governance of climate-related risks and opportunities, consistent with the TCFD framework.<sup>272</sup>

Our proposed disclosure requirements are based on specific recommendations of the TCFD. We agree with commenters that a comprehensive understanding of a board's oversight, and management's governance, of climate-related risks is necessary to aid investors in evaluating

---

<sup>270</sup> See proposed 17 CFR 229.1501.

<sup>271</sup> See, e.g., letters from Americans for Financial Reform Education Fund; Baillie Gifford; Andrew Behar; Bloomberg, LP; Canadian Coalition for Good Governance; Cardano Risk Management Ltd.; CDP NA (June 11, 2021); Center for American Progress; CAQ; Ceres *et al.*; Climate Disclosure Standards Board (June 14, 2021); Climate Governance Initiative; Climate Risk Disclosure Lab; Eni SpA; ERM CVS; Friends of the Earth, Amazon Watch, and Rainforest Action Network (June 11, 2021); Regenerative Crisis Response Committee; Hermes Equity Ownership Limited; William and Flora Hewlett Foundation (June 9, 2021); Impax Asset Management; Institute of Internal Auditors (May 23, 2021); Institutional Shareholder Services (June 14, 2021); Interfaith Center on Corporate Responsibility; International Corporate Governance Network; Morningstar, Inc.; International Organization for Standardization (June 11, 2021); Natural Resources Defense Council; NEI Investments; NY City Comptroller (June 14, 2021); NY State Comptroller; NY State Department of Financial Services (June 14, 2021); Oregon State Treasury (June 4, 2021); PRI (Consultation Response); Pricewaterhouse Coopers; Revolving Door Project (June 11, 2021); George Serafeim (June 9, 2021); Maria Stoica; TotalEnergies (June 13, 2021); Value Balancing Alliance; WBCSD; and World Benchmarking Alliance.

<sup>272</sup> See, e.g., letters from Baillie Gifford; Bloomberg, LP; Ceres *et al.*; Climate Disclosure Standards Board; Climate Governance Initiative; Climate Risk Disclosure Lab; Eni SpA; William and Flora Hewlett Foundation; Impax Asset Management; Institute for Governance and Sustainable Development; International Corporate Governance Network; Richard Love; Morningstar, Inc.; Natural Resources Defense Council; NEI Investments; NY State Comptroller; Maria Stoica; TotalEnergies; and WBCSD. *But see* letter from Amanda Rose (stating that federalizing aspects of corporate governance could inhibit the ability of states to compete for corporate charters).

the extent to which a registrant is adequately addressing the material climate-related risks it faces, and whether those risks could reasonably affect the value of their investment.<sup>273</sup> We also note that, despite the importance of governance disclosure, according to the TCFD, only a small percentage of issuers that voluntarily provided climate-related information presented governance disclosure aligned with the TCFD's recommendations.<sup>274</sup> While the proposed rules are intended to provide investors with additional insight into a board's and management's governance of climate-related risks, they are similar to the Commission's existing rules under Regulation S-K that call for disclosure about corporate governance in that they are intended to provide investors with relevant information about a registrant's board, management, and principal committees.<sup>275</sup>

### **1. Board Oversight**

The proposed rules would require a registrant to disclose a number of board governance items, as applicable. The first item would require a registrant to identify any board members or board committees responsible for the oversight of climate-related risks.<sup>276</sup> The responsible board committee might be an existing committee, such as the audit committee or risk committee, or a separate committee established to focus on climate-related risks. The next proposed item would require disclosure of whether any member of a registrant's board of directors has expertise in climate-related risks, with disclosure required in sufficient detail to fully describe the nature of the expertise.<sup>277</sup>

---

<sup>273</sup> See, e.g., letters from Bloomberg, LP; and Natural Resources Defense Council.

<sup>274</sup> See TCFD, *2021 Status Report* (Oct. 2021) (finding that 9% of surveyed companies provided TCFD-recommended board disclosure in 2018, which increased to 25% in 2020; and 9% provided TCFD-recommended management disclosure in 2018, which increased to 18% in 2020).

<sup>275</sup> See, e.g., 17 CFR 229.401 and 229.407.

<sup>276</sup> See proposed 17 CFR 229.1501(a)(1)(i).

<sup>277</sup> See proposed 17 CFR 229.1501(a)(1)(ii).

Another proposed item would require a description of the processes and frequency by which the board or board committee discusses climate-related risks.<sup>278</sup> The registrant would have to disclose how the board is informed about climate-related risks, and how frequently the board considers such risks. These proposed disclosure items could provide investors with insight into how a registrant's board considers climate-related risks and any relevant qualifications of board members.<sup>279</sup>

The proposed rule also would require disclosure about whether and how the board or board committee considers climate-related risks as part of its business strategy, risk management, and financial oversight.<sup>280</sup> This disclosure could enable an investor to understand whether and how the board or board committee considers climate-related risks when reviewing and guiding business strategy and major plans of action, when setting and monitoring implementation of risk management policies and performance objectives, when reviewing and approving annual budgets, and when overseeing major expenditures, acquisitions, and divestitures. In this way, the proposed disclosure requirement could help investors assess the degree to which a board's consideration of climate-related risks has been integrated into a registrant's strategic business and financial planning and its overall level of preparation to maintain its shareholder value.

Finally, the proposed rule would require disclosure about whether and how the board sets climate-related targets or goals and how it oversees progress against those targets or goals, including the establishment of any interim targets or goals.<sup>281</sup> Such a target might be, for

---

<sup>278</sup> See proposed 17 CFR 229.1501(a)(1)(iii).

<sup>279</sup> See, e.g., letters from Bloomberg, LP; NY State Comptroller; and Vanguard Group, Inc.

<sup>280</sup> See proposed 17 CFR 229.1501(a)(1)(iv).

<sup>281</sup> See proposed 17 CFR 229.1501(a)(1)(v).

example, to achieve net-zero carbon emissions for all or a large percentage of its operations by 2050 or to reduce the carbon intensity of its products by a certain percentage by 2030 in order to mitigate transition risk. This proposed requirement would help investors evaluate whether and how a board is preparing to mitigate or adapt to any material transition risks, and whether it is providing oversight for the registrant's potential transition to a lower carbon economy. If applicable, a registrant can elect also to discuss the board's oversight of climate-related opportunities.

## **2. Management Oversight**

Similar to the proposed required disclosures on board oversight, the proposed rules would require a registrant to disclose a number of items, as applicable, about management's role in assessing and managing any climate-related risks. For example, a registrant would be required to disclose, as applicable, whether certain management positions or committees are responsible for assessing and managing climate-related risks and, if so, to identify such positions or committees and disclose the relevant expertise of the position holders or members in such detail as necessary to fully describe the nature of the expertise.<sup>282</sup> This proposed requirement would give investors additional information to assess the extent to which management addresses climate-related risks, which could help them to make better informed investment or voting decisions.

Similar to the proposed board oversight provision described above, another proposed item would require disclosure about the processes by which the responsible managers or management committees are informed about and monitor climate-related risks.<sup>283</sup> Such a discussion might include, for example, whether there are specific positions or committees

---

<sup>282</sup> See proposed 17 CFR 229.1501(b)(1)(i).

<sup>283</sup> See proposed 17 CFR 229.1501(b)(1)(ii).

responsible for monitoring and assessing specific climate-related risks, the extent to which management relies on in-house staff with the relevant expertise to evaluate climate-related risks and implement related plans of action, and the extent to which management relies on third-party climate consultants for these same purposes.

The final proposed management governance item would require disclosure about whether the responsible positions or committees report to the board or board committee on climate-related risks and how frequently this occurs.<sup>284</sup> These proposed disclosure items could help investors evaluate whether management has adequately implemented processes to identify, assess, and manage climate-related risks. If applicable, a registrant may elect also to describe management's role in assessing and managing climate-related opportunities.

Several commenters recommended that we require a registrant to disclose whether it has connected a portion of its executive remuneration with the achievement of climate-related targets or goals.<sup>285</sup> Other commenters expressed the view that such a requirement is unnecessary, because a registrant could implement other measures to motivate progress towards climate-related targets<sup>286</sup> or connect executive remuneration with climate-related achievements as a discretionary matter for the registrant.<sup>287</sup> We are not proposing a compensation-related disclosure requirement at this time, because we believe that our existing rules requiring a compensation discussion and analysis should already provide a framework for disclosure of any

---

<sup>284</sup> See proposed 17 CFR 229.1501(b)(1)(iii).

<sup>285</sup> See, e.g., letters from Baillie Gifford; Andrew Behar; CDP; Climate Governance Initiative; E3G (June 14, 2021); Interfaith Center on Corporate Responsibility; Majedie Asset Management; NEI Investments; NY State Comptroller; PRI (Consultation Response); RMI (June 11, 2021); Maria Stoica; and Value Balancing Alliance.

<sup>286</sup> See letter from Richard Love.

<sup>287</sup> See letter from Western Energy Alliance (June 12, 2021).

connection between executive remuneration and achieving progress in addressing climate-related risks.<sup>288</sup>

### **Request for Comment**

34. Should we require a registrant to describe, as applicable, the board's oversight of climate-related risks, as proposed? Should the required disclosure include whether any board member has expertise in climate-related risks and, if so, a description of the nature of the expertise, as proposed? Should we also require a registrant to identify the board members or board committee responsible for the oversight of climate-related risks, as proposed? Do our current rules, which require a registrant to provide the business experience of its board members, elicit adequate disclosure about a board member's or executive officer's expertise relevant to the oversight of climate-related risks?

35. Should we require a registrant to disclose the processes and frequency by which the board or board committee discusses climate-related risks, as proposed?

36. Should we require a registrant to disclose whether and how the board or board committee considers climate-related risks as part of its business strategy, risk management, and financial oversight, as proposed? Would the proposed disclosure raise competitive harm concerns? If so, how could we address those concerns while requiring additional information for investors about how a registrant's board oversees climate-related risks?

---

<sup>288</sup> See 17 CFR 229.402(b) (requiring disclosure of all material elements of a registrant's executive compensation, including the objectives of the registrant's compensation programs and what each compensation program is designed to reward). Further, the Commission recently decided to reopen the comment period on rules to implement section 953(a) of the Dodd-Frank Act, which requires disclosure of the relationship between executive compensation and the performance of the issuer. See Release No. 34-94074, *Reopening of Comment Period for Pay Versus Performance* (Jan. 27, 2021).

37. Should we require a registrant to disclose whether and how the board sets climate-related targets or goals, as proposed? Should the required disclosure include how the board oversees progress against those targets or goals, including whether it establishes any interim targets or goals, as proposed? Would the proposed disclosure raise competitive harm concerns? If so, how could we address those concerns while requiring additional information for investors about how a registrant's board oversees the setting of any climate-related targets or goals?

38. Should we require a registrant to describe, as applicable, management's role in assessing and managing climate-related risks, as proposed? Should the required disclosure include whether certain management positions or committees are responsible for assessing and managing climate-related risks and, if so, the identity of such positions or committees, and the relevant expertise of the position holders or members in such detail as necessary to fully describe the nature of the expertise, as proposed? Should we require a registrant to identify the executive officer(s) occupying such position(s)? Or do our current rules, which require a registrant to provide the business experience of its executive officers, elicit adequate disclosure about management's expertise relevant to the oversight of climate-related risks?

39. Should we require a registrant to describe the processes by which the management positions or committees responsible for climate-related risks are informed about and monitor climate-related risks, as proposed? Should we also require a registrant to disclose whether and how frequently such positions or committees report to the board or a committee of the board on climate-related risks, as proposed?

40. Should we specifically require a registrant to disclose any connection between executive remuneration and the achievement of climate-related targets and goals? Is there a need for such

a requirement in addition to the executive compensation disclosure required by 17 CFR 229.402(b)?

41. As proposed, a registrant may disclose the board’s oversight of, and management’s role in assessing and managing, climate-related opportunities. Should we require a registrant to disclose these items?

## **E. Risk Management Disclosure**

### **1. Disclosure of Processes for Identifying, Assessing, and Managing Climate-Related Risks**

The proposed rules would require a registrant to describe any processes the registrant has for identifying, assessing, and managing climate-related risks.<sup>289</sup> Risk disclosure is a long-standing disclosure concept under our regulations.<sup>290</sup> Several commenters recommended that we adopt decision-useful disclosure requirements concerning a registrant’s climate-related risk management practices.<sup>291</sup> More granular information regarding any climate-related risk management could allow investors to better understand how a registrant identifies, evaluates, and addresses climate-related risks that may materially impact its business. Such information could also permit investors to ascertain whether a registrant has made the assessment of climate-related

---

<sup>289</sup> See proposed 17 CFR 229.1503(a).

<sup>290</sup> Risk factor disclosure has been part of the Commission’s Securities Act disclosure requirements since prior to and from adoption of its integrated disclosure system. See Release No. 33-6383, *Adoption of Integrated Disclosure System* (Mar. 3, 1982). The Commission added risk factor disclosure to its Exchange Act registration and annual reporting requirements in 2005. See Release No. 33-8591, *Securities Offering Reform* (July 19, 2005) [70 FR 44722 (Aug. 3, 2005)].

<sup>291</sup> See, e.g., letters from Rob Bonta, California Attorney General *et al.*; Boston Common Asset Management; Carbon Tracker Initiative; Confluence Philanthropy; Hermes Equity Ownership Services Ltd.; The Institute for Policy Integrity (“Policy Integrity”) at New York University School of Law, Environmental Defense Fund (“EDF”), the Initiative on Climate Risk and Resilience Law (“ICRRL”), and Professors Madison Condon, Jim Rossi, and Michael Vandenberg (June 14, 2021) (“Institute for Policy Integrity, Environmental Defense Fund, Initiative on Climate Risk & Resilience Law”); and Total Energies.

risks part of its regular risk management processes. Despite the importance of climate-related risk management information, only a minority of registrants currently include such information in their voluntary climate reports.<sup>292</sup>

When describing the processes for identifying and assessing climate-related risks, the registrant would be required to disclose, as applicable:

- How it determines the relative significance of climate-related risks compared to other risks;
- How it considers existing or likely regulatory requirements or policies, such as GHG emissions limits, when identifying climate-related risks;
- How it considers shifts in customer or counterparty preferences, technological changes, or changes in market prices in assessing potential transition risks; and
- How it determines the materiality of climate-related risks, including how it assesses the potential size and scope of any identified climate-related risk.<sup>293</sup>

When describing any processes for managing climate-related risks, a registrant would be required to disclose, as applicable:

- How it decides whether to mitigate, accept, or adapt to a particular risk;
- How it prioritizes addressing climate-related risks; and
- How it determines how to mitigate a high priority risk.<sup>294</sup>

---

<sup>292</sup> See TCFD, *2021 Status Report*, Section B (indicating that, during 2018-2020, 16-30% of surveyed public companies disclosed their climate risk identification and assessment processes, 14-29% disclosed their risk management processes, and 10-27% disclosed whether their climate risk management processes were integrated into their overall risk management).

<sup>293</sup> See proposed 17 CFR 229.1503(a)(1).

<sup>294</sup> See proposed 17 CFR 229.1503(a)(2).

Together, these proposed disclosures would help investors evaluate whether a registrant has implemented adequate processes for identifying, assessing, and managing climate-related risks so that they may make better informed investment or voting decisions. As part of this risk management description, if a registrant uses insurance or other financial products to manage its exposure to climate-related risks, it may need to describe its use of these products.<sup>295</sup>

The proposed rules would also require a registrant to disclose whether and how climate-related risks are integrated into the registrant's overall risk management system or processes.<sup>296</sup> If a separate board or management committee is responsible for assessing and managing climate-related risks, a registrant would be required to disclose how that committee interacts with the registrant's board or management committee governing risks.<sup>297</sup> These proposed disclosures would help investors assess whether the registrant has centralized the processes for managing climate-related risks, which may indicate to investors how the board and management may respond to such risks as they unfold.

## **2. Transition Plan Disclosure**

Adoption of a transition plan to mitigate or adapt to climate-related risks may be an important part of a registrant's climate-related risk management strategy, particularly if it operates in a jurisdiction that has made commitments under the Paris Agreement to reduce its GHG emissions. Many commenters recommended that we require disclosure regarding a registrant's transition plan, stating that such disclosure would help investors evaluate whether a

---

<sup>295</sup> To the extent loss of insurance coverage or increases in premiums is reasonably likely to have a material impact on the registrant, the registrant would be required to disclose that risk pursuant to proposed Item 1502(a).

<sup>296</sup> See proposed 17 CFR 229.1503(b).

<sup>297</sup> See *id.*

registrant has an effective strategy to achieve its short-, medium-, or long-term climate-related targets or goals.<sup>298</sup>

The proposed rules would define a “transition plan” to mean a registrant’s strategy and implementation plan to reduce climate-related risks.<sup>299</sup> A transition plan may include a plan to reduce its GHG emissions in line with a registrant’s commitments or commitments of jurisdictions within which it has significant operations.<sup>300</sup> Transition plans may also be important to registrants and their shareholders to the extent transition risk arises from changes in customer or business counterparty preferences, technological change, or changes in market prices. If a registrant has adopted a transition plan, the proposed rules would require it to describe its plan, including the relevant metrics and targets used to identify and manage physical and transition risks.<sup>301</sup> This information could help investors understand how a registrant intends to address identified climate-related risks and any transition to a lower carbon economy while managing and assessing its business operations and financial condition. Because transition planning inherently requires judgments and predictions about the future, forward-looking statements made as part of a registrant’s discussion of its transition plan would be eligible for the PSLRA forward-looking statement safe harbors provided all applicable conditions are met.<sup>302</sup>

If a registrant has adopted a transition plan as part of its climate-related risk management strategy, the proposed rules would require the registrant to discuss, as applicable, how it plans to

---

<sup>298</sup> See, e.g., letters from As You Sow; BlackRock; Clean Yield Asset Management; Climate Advisers; Climate Governance Initiative; Fiends of the Earth *et al*; Institute for Governance and Sustainable Development; Miller/Howard Investments; Trillium Asset Management; and World Benchmarking Alliance.

<sup>299</sup> See proposed 17 CFR 229.1500(s).

<sup>300</sup> See *id.*

<sup>301</sup> See proposed 17 CFR 229.1503(c)(1).

<sup>302</sup> See *supra* note 219.

mitigate or adapt to any physical risks identified in the filing, including but not limited to those concerning exposure to sea level rise, extreme weather events, wildfires, drought, and severe heat.<sup>303</sup> For example, a company with significant operations in areas vulnerable to sea level rise might plan to relocate its vulnerable operations as part of any transition plan. A company operating in areas subject to severe storms might have a transition plan that includes reinforcing its physical facilities to better withstand such weather events, or a plan to relocate those facilities. An agricultural producer that operates in areas subject to increasing water stress might discuss its plans to adjust its business strategy or operations, for example by developing or switching to drought-resistant crops, developing technologies to optimize the use of available water, or acquiring land in other areas.<sup>304</sup>

The proposed rules would also require a registrant that has adopted a transition plan as part of its climate-related risk management strategy to discuss, as applicable, how it plans to mitigate or adapt to any identified transition risks, including the following:

- Laws, regulations, or policies that:
  - Restrict GHG emissions or products with high GHG footprints, including emissions caps,<sup>305</sup> or
  - Require the protection of high conservation value land or natural assets;<sup>306</sup>

---

<sup>303</sup> See proposed 17 CFR 229.1503(c)(2)(i).

<sup>304</sup> A registrant would be required to disclose the expected impact of any potential reduction on its results of operations or financial condition pursuant to proposed 17 CFR 229.1502 to the extent it believes the likely impact would be material. Such quantified disclosure may be eligible for the PSLRA safe harbors if the conditions of the safe harbors are met.

<sup>305</sup> See proposed 17 CFR 229.1503(c)(2)(ii)(A)(1).

<sup>306</sup> See proposed 17 CFR 229.1503(c)(2)(ii)(A)(2).

- Imposition of a carbon price;<sup>307</sup> and
- Changing demands or preferences of consumers, investors, employees, and business counterparties.<sup>308</sup>

While each of these transition risks may not be applicable to each registrant and its particular transition plan, the above examples are intended to guide registrants in providing meaningful disclosure about its risk management strategies that is not generic or boilerplate. In this regard, it is important for investors to understand how a registrant plans to mitigate or adapt to any identified transition risks in its transition plan given the potential associated costs and burdens and their impact on the registrant's business.

The proposed rules would require a registrant that has adopted a transition plan as part of its climate-related management strategy to update its disclosure about its transition plan each fiscal year by describing the actions taken during the year to achieve the plan's targets or goals.<sup>309</sup> This is intended to provide investors with information that can help them better understand the registrant's effectiveness in implementing any transition plan and the potential risks and costs associated with what it still needs to accomplish.

A registrant that has adopted a transition plan as part of its climate-related risk management strategy may also describe how it plans to achieve any identified climate-related opportunities, such as:

- The production of products that facilitate the transition to a lower carbon economy, such as low emission modes of transportation and supporting infrastructure;

---

<sup>307</sup> See proposed 17 CFR 229.1503(c)(2)(ii)(B).

<sup>308</sup> See proposed 17 CFR 229.1503(c)(2)(ii)(C).

<sup>309</sup> See proposed 17 CFR 229.1503(c)(1).

- The generation or use of renewable power;
- The production or use of low waste, recycled, or other consumer products that require less carbon intensive production methods;
- The setting of conservation goals and targets that would help reduce GHG emissions; and
- The provision of goods or services related to any transition to a lower carbon economy.<sup>310</sup>

For example, an energy company might discuss how, due to actual or potential regulatory constraints, it intends to take advantage of climate-related opportunities by increasing the amount of electricity purchased that is produced using renewable energy sources, reducing its medium and long-range fossil fuel exploration and production, increasing the percentage of its products consisting of biofuels and other lower emissions fuels, or investing in carbon capture and storage technologies. A transportation company might discuss how, to mitigate reputational risk, it plans to realize any climate-related opportunities presented by switching its existing fleet to one composed of low- or no-emission vehicles by a certain date.<sup>311</sup>

### **Request for Comment**

42. Should we require a registrant to describe its processes for identifying, assessing, and managing climate-related risks, as proposed?

43. When describing the processes for identifying and assessing climate-related risks, should we require a registrant to disclose, as applicable, as proposed:

- How the registrant determines the relative significance of climate-related risks compared to other risks?

---

<sup>310</sup> See proposed 17 CFR 229.1503(c)(3)(i) through (v).

<sup>311</sup> A registrant would be required to disclose the expected impact of any transition opportunity on its results of operations or financial condition, *e.g.*, increased costs or expenditures, pursuant to proposed 17 CFR 229.1502 to the extent it believes they would be reasonably likely to have a material impact.

- How it considers existing or likely regulatory requirements or policies, such as emissions limits, when identifying climate-related risks?
- How it considers shifts in customer or counterparty preferences, technological changes, or changes in market prices in assessing potential transition risks?
- How the registrant determines the materiality of climate-related risks, including how it assesses the potential size and scope of an identified climate-related risk?

Are there other items relevant to a registrant’s identification and assessment of climate-related risks that we should require it to disclose instead of or in addition to the proposed disclosure items?

44. When describing the processes for managing climate-related risks, should we require a registrant to disclose, as applicable, as proposed:

- How it decides whether to mitigate, accept, or adapt to a particular risk?
- How it prioritizes climate-related risks?
- How it determines to mitigate a high priority risk?

Are there other items relevant to a registrant’s management of climate-related risks that we should require it to disclose instead of or in addition to the proposed disclosure items?

45. Should we require a registrant to disclose whether and how the processes described in response to proposed 17 CFR 229.1503(a) are integrated into the registrant’s overall risk management system or processes, as proposed? Should we specify any particular aspect of this arrangement that a registrant should disclose, such as any interaction between, and corresponding roles of, the board or any management committee responsible for assessing climate-related risks, if there is a separate and distinct committee of the board or management, and the registrant’s committee in charge, generally, of risk assessment and management?

46. If a registrant has adopted a transition plan, should we require the registrant to describe the plan, including the relevant metrics and targets used to identify and manage physical and transition risks, as proposed? Would this proposed disclosure requirement raise any competitive harm concerns and, if so, how can we mitigate such concerns? Would any of the proposed disclosure requirements for a registrant's transition plan act as a disincentive to the adoption of such a plan by the registrant?

47. If a registrant has adopted a transition plan, should we require it, when describing the plan, to disclose, as applicable, how the registrant plans to mitigate or adapt to any identified physical risks, including but not limited to those concerning energy, land, or water use and management, as proposed? Are there any other aspects or considerations related to the mitigation or adaptation to physical risks that we should specifically require to be disclosed in the description of a registrant's transition plan?

48. If a registrant has adopted a transition plan, should we require it to disclose, if applicable, how it plans to mitigate or adapt to any identified transition risks, including the following, as proposed:

- Laws, regulations, or policies that:
  - Restrict GHG emissions or products with high GHG footprints, including emissions caps; or
  - Require the protection of high conservation value land or natural assets?
- Imposition of a carbon price?
- Changing demands or preferences of consumers, investors, employees, and business counterparts?

Are there any other transition risks that we should specifically identify for disclosure, if applicable, in the transition plan description? Are there any identified transition risks that we should exclude from the plan description?

49. If a registrant has adopted a transition plan, when describing the plan, should we permit the registrant also to discuss how it plans to achieve any identified climate-related opportunities, including, as proposed:

- The production of products that facilitate the transition to a lower carbon economy, such as low emission modes of transportation and supporting infrastructure?
- The generation or use of renewable power?
- The production or use of low waste, recycled, or environmentally friendly consumer products that require less carbon intensive production methods?
- The setting of conservation goals and targets that would help reduce GHG emissions?
- The provision of services related to any transition to a lower carbon economy?

Should we require a registrant to discuss how it plans to achieve any of the above, or any other, climate-related opportunities when describing its transition plan?

50. If a registrant has disclosed its transition plan in a Commission filing, should we require it to update its transition plan disclosure each fiscal year by describing the actions taken during the year to achieve the plan's targets or goals, as proposed? Should we require a registrant to provide such an update more frequently, and if so, how frequently? Would the proposed updating requirement act as a disincentive to the adoption of a transition plan by the registrant?

51. To the extent that disclosure about a registrant's transition plan constitutes forward-looking information, the PSLRA safe harbors would apply. Should we adopt a separate safe

harbor for transition plan disclosure? If so, what disclosures should such a safe harbor cover and what should the conditions be for such a safe harbor?

## **F. Financial Statement Metrics**

### **1. Overview**

If a registrant is required to file the disclosure required by subpart 229.1500 in a form that also requires audited financial statements,<sup>312</sup> under our proposal it would be required to disclose in a note to its financial statements certain disaggregated climate-related financial statement metrics that are mainly derived from existing financial statement line items.<sup>313</sup> In particular, the proposed rules would require disclosure falling under the following three categories of information:

- Financial Impact Metrics;
- Expenditure Metrics; and
- Financial Estimates and Assumptions.

The proposed financial statement metrics disclosures would involve estimation uncertainties that are driven by the application of judgments and assumptions, similar to other financial statement disclosures (*e.g.*, estimated loss contingencies, fair value measurement of certain assets, etc.). Accordingly, for each type of financial statement metric, the proposed rules would require the registrant to disclose contextual information to enable a reader to understand

---

<sup>312</sup> For example, the climate-related note to the financial statements would not be required in a Form 10-Q filing. *See* proposed 17 CFR 210.14-01(a). *See infra* note 690 and accompanying text, which discusses the applicability of the proposed rules to foreign private issuers.

<sup>313</sup> *See* FASB Concepts Statement No. 8, Chapter 8, par. D8 (“[T]he primary purpose of notes to financial statements is to supplement or further explain the information on the face of financial statements by providing financial information relevant to existing and potential investors, lenders, and other creditors for making decisions about providing resources to an entity.”).

how it derived the metric, including a description of significant inputs and assumptions used, and if applicable, policy decisions made by the registrant to calculate the specified metrics.<sup>314</sup>

A number of existing accounting standards could elicit climate-related disclosure in the financial statements, as highlighted by the FASB in a Staff Educational Paper and by the IFRS in a similar document.<sup>315</sup> Nevertheless, we believe the proposed rules would benefit registrants by specifying when to provide such disclosures. Furthermore, the proposed rules may increase the consistency and comparability of such disclosures by prescribing accounting principles for preparing the proposed climate-related financial statement metrics disclosures, including, among other things, provisions that would specify the basis of calculation for such metrics and their presentation.<sup>316</sup>

To avoid potential confusion, maintain consistency with the rest of the financial statements, and aid comparability, registrants would be required to calculate the proposed

---

<sup>314</sup> See proposed 17 CFR 210.14-02(a). Inputs and assumptions may include the estimation methodology used to disaggregate the amount of impact on the financial statements between the climate-related events and activities and other factors. Policy decisions referenced herein may include a registrant's election to disclose the impacts from climate-related opportunities. See also *infra* Section II.F.2 for an example of contextual information that would be required.

<sup>315</sup> See FASB Staff Educational Paper, *Intersection of Environmental, Social, and Governance Matters with Financial Accounting Standards* (Mar. 2021), available at [https://fasb.org/jsp/FASB/Document\\_C/DocumentPage&cid=1176176379917](https://fasb.org/jsp/FASB/Document_C/DocumentPage&cid=1176176379917). See also IFRS, *Effects of climate-related matters on financial statements* (Nov. 2020), available at <https://www.ifrs.org/content/dam/ifrs/supporting-implementation/documents/effects-of-climate-related-matters-on-financial-statements.pdf#:~:text=IFRS%20Standards%20do%20not%20refer%20explicitly%20to%20climate-related,significant%20judgements%20and%20estimates%20that%20management%20has%20made>.

<sup>316</sup> The Commission has broad authority to set accounting standards and principles. See, e.g., 15 U.S.C. 77s; 15 U.S.C. 7218(c); and *Policy Statement: Reaffirming the Status of the FASB as a Designated Private-Sector Standard Setter*, Release No. 33-8221 (Apr. 25, 2003) [68 FR 23333 (May 1, 2003)], at 23334 (“While the Commission consistently has looked to the private sector in the past to set accounting standards, the securities laws, including the Sarbanes-Oxley Act, clearly provide the Commission with authority to set accounting standards for public companies and other entities that file financial statements with the Commission.”). See also FASB Accounting Standards Codification (“FASB ASC”) Topic 105-10-10-1 (“Rules and interpretive releases of the Securities and Exchange Commission . . . are also sources of authoritative GAAP for SEC registrants.”).

financial statement metrics using financial information that is consistent with the scope of the rest of the registrant’s consolidated financial statements included in the filing.<sup>317</sup> Therefore, registrants would have to include in any such calculation financial information from consolidated subsidiaries.<sup>318</sup>

For the avoidance of doubt, and to further promote consistency in the preparation of the financial statements, the proposed basis of calculation requirements would also specify that a registrant would be required to apply the same set of accounting principles that it is required to apply in preparation of the rest of its consolidated financial statements included in the filing, whenever applicable.<sup>319</sup> Although 17 CFR 210.4-01(a)(1) already states that financial statements filed with the Commission that are not prepared in accordance with GAAP will be presumed misleading or inaccurate unless the Commission has otherwise provided, clarifying the application of this concept in the proposed rules may be helpful, given the possible confusion that may arise between the current body of GAAP and the proposed requirements.<sup>320</sup>

The proposed rules would also require disclosure to be provided for the registrant’s most recently completed fiscal year and for the historical fiscal year(s) included in the registrant’s

---

<sup>317</sup> See proposed 17 CFR 210.14-01(c)(1).

<sup>318</sup> See, e.g., 17 CFR 210.3-01(a) (“There shall be filed, for the registrant and its subsidiaries consolidated, audited balance sheets as of the end of each of the two most recent fiscal years.”).

<sup>319</sup> See proposed 17 CFR 210.14-01(c)(2). Foreign private issuers that file consolidated financial statements under home country GAAP and reconcile to U.S. GAAP, would be required to use U.S. GAAP (including the provisions of the proposed rules) as the basis for calculating and disclosing the proposed climate-related financial statement metrics. Foreign private issuers that file consolidated financial statements under IFRS as issued by the IASB, would apply IFRS and the proposed rules as the basis for calculating and disclosing the proposed climate-related financial statement metrics. For simplicity, we do not refer to the corresponding IFRS in each instance where we refer to a FASB ASC. Accordingly, references in this release to a FASB ASC should be read to also refer to the corresponding IFRS for foreign private issuers applying those standards. See also *infra* note 690 which discusses proposed amendments to Form 20-F.

<sup>320</sup> See also 17 CFR 210.4-01(a)(2) (discussing the application of U.S. GAAP, IFRS, and the use of other comprehensive sets of accounting principles (with reconciliation to U.S. GAAP)).

consolidated financial statements in the applicable filing.<sup>321</sup> For example, a registrant that is required to include balance sheets as of the end of its two most recent fiscal years and income statements and cash flow statements at the end of its three most recent fiscal years would be required to disclose two years of the climate-related financial statement metrics that correspond to balance sheet line items and three years of the climate-related financial statement metrics that correspond to income statement or cash flow statement line items. If the registrant is an emerging growth company (“EGC”)<sup>322</sup> or SRC, only two years would be required.<sup>323</sup>

A registrant, however, would not need to provide a corresponding historical metric for a fiscal year preceding its current reporting fiscal year if it is eligible to take advantage of the accommodation in 17 CFR 230.409 (“Rule 409”) or 17 CFR 240.12b-21 (“Rule 12b-21”). For example, if a registrant has not previously presented such metric for such fiscal year and the historical information necessary to calculate or estimate such metric is not reasonably available to the registrant without unreasonable effort or expense, the registrant may be able to rely on Rule 409 or Rule 12b-21 to exclude a corresponding historical metric. Requiring disclosure of current and, when known or reasonably available, historical periods, should allow investors to analyze trends in the climate-related impacts on the consolidated financial statements and to

---

<sup>321</sup> See proposed 17 CFR 210.14-01(d).

<sup>322</sup> An EGC is a registrant that had total annual gross revenues of less than \$1.07 billion during its most recently completed fiscal year and has not met the specified conditions for no longer being considered an EGC. See 17 CFR 230.405; 17 CFR 240.12b-2; 15 U.S.C. 77b(a)(19); 15 U.S.C. 78c(a)(80); and *Inflation Adjustments and Other Technical Amendments under Titles I and III of the JOBS Act*, Release No. 33-10332 (Mar. 31, 2017) [82 FR 17545 (Apr. 12, 2017)].

<sup>323</sup> An EGC is only required to provide audited statements of comprehensive income and cash flows for each of the two fiscal years preceding the date of the most recent audited balance sheet (or such shorter period as the registrant has been in existence). See 17 CFR 210.3-02(a). A similar accommodation is provided to SRCs. See 17 CFR 210.8-02.

better evaluate the narrative trend disclosure provided pursuant to proposed Subpart 1500 of Regulation S-K.<sup>324</sup>

### **Request for Comment**

52. Should we require a registrant to provide contextual information, including a description of significant inputs and assumptions used, and if applicable, policy decisions made by the registrant to calculate the specified metrics, as proposed? Should we revise the proposed requirement to provide contextual information to require specific information instead? We provide some examples of contextual information disclosure in Sections II.F.2 and II.F.3 below. Would providing additional examples or guidance assist registrants in preparing this disclosure?

53. The proposed rules would specify the basis of calculation for the climate-related financial statement metrics. Is it clear how to apply these accounting principles when calculating the proposed climate-related financial statement metrics, or should we provide additional guidance? Should we require a registrant to report these metrics with reference to its consolidated financial statements, as proposed? If not, how should registrants report these metrics? If we were to establish accounting principles (*e.g.*, the basis for reporting these metrics) in a manner that differs from the principles applicable to the rest of the consolidated financial statements, would the application of those principles to the proposed metrics make climate-related disclosures less clear, helpful, or comparable for investors?

54. Should we also require such metrics to be calculated at a reportable segment level when a registrant has more than one reportable segment (as defined by the FASB ASC Topic 280 *Segment Reporting*)? In addition, should we require such metrics to be presented by geographic

---

<sup>324</sup> See *supra* Section II.C.

areas that are consistent with the registrant's reporting pursuant to FASB ASC Topic 280-10-50-41? How would investors use such information?

55. The proposed rules would require disclosure for the registrant's most recently completed fiscal year and for the corresponding historical fiscal years included in the registrant's consolidated financial statements in the filing. Should disclosure of the climate-related financial statement metrics be required for the fiscal years presented in the registrant's financial statements, as proposed? Instead, should we require the financial statement metrics to be calculated only for the most recently completed fiscal year presented in the relevant filing? Would requiring historical disclosure provide important or material information to investors, such as information allowing them to analyze trends? Are there other approaches we should consider?

56. Should information for all periods in the consolidated financial statements be required for registrants that are filing an initial registration statement or providing climate-related financial statement metrics disclosure for historical periods prior to the effective date or compliance date of the rules? Would the existing accommodation in Rules 409 and 12b-21 be sufficient to address any potential difficulties in providing the proposed disclosures in such situations?

57. Should we provide additional guidance as to when a registrant may exclude a historical metric for a fiscal year preceding the current fiscal year?

58. In several instances, the proposed rules specifically point to existing GAAP and, in this release, we provide guidance with respect to the application of existing GAAP. Are there other existing GAAP requirements that we should reference? Are there instances where it would be preferable to require an approach based on TCFD guidance or some other framework, rather than requiring the application of existing GAAP?

## 2. Financial Impact Metrics

As discussed above, proposed Item 1502(d) of Regulation S-K would require a registrant to provide a narrative discussion of whether and how any of its identified climate-related risks have affected or are reasonably likely to affect the registrant’s consolidated financial statements.<sup>325</sup> The term “climate-related risks” would be defined, in part, as the actual or potential negative impacts of climate-related conditions and events on a registrant’s consolidated financial statements.<sup>326</sup> “Climate-related risks” would also be defined to include physical risks, such as extreme weather events, and transition risks.<sup>327</sup> To complement this proposed requirement in Regulation S-K to provide narrative disclosure about impacts on a registrant’s consolidated financial statements, we are proposing to amend Regulation S-X to require a registrant to include disaggregated information about the impact of climate-related conditions and events, and transition activities, on the consolidated financial statements included in the relevant filing,<sup>328</sup> unless such impact is below a specified threshold.

We are proposing to require disclosure of the impacts from severe weather events and other natural conditions and transition activities, which should capture a broad spectrum of these two types of climate-related risks (physical risks and transition risks). In addition, the proposed rules would require disclosure of the impacts of any climate-related risks identified pursuant to proposed Item 1502(a)—both physical risks (“identified physical risks”) and transition risks

---

<sup>325</sup> See proposed 17 CFR 229.1502(d).

<sup>326</sup> See *supra* Section II.B.1 (discussing the definition of “climate-related risks”).

<sup>327</sup> See proposed 17 CFR 229.1500(c) (defining “climate related risks” to include “physical risks” and “transition risks”).

<sup>328</sup> For example, the impact on the income statement line items for the periods presented in the financial statements in a registrant’s Form 10-K.

(“identified transition risks”)—on any of the financial statement metrics.<sup>329</sup> Among the examples of severe weather events and other natural conditions that we have highlighted in the proposed rule are those that the Commission identified more than a decade ago in the 2010 Guidance as potentially affecting a registrant’s operations and results.<sup>330</sup> In addition, although not specifically mentioned in the 2010 Guidance, we are including wildfires as an example because it is well recognized as another type of natural event that can have significant impacts on a registrant’s financial statements.<sup>331</sup> Providing examples of severe weather events, other natural conditions, and transition activities in the proposed rule would aid in the comparability of the resulting disclosure while assisting issuers in making the disclosures.

Specifically, we are proposing that impacts on any relevant line item in the registrant’s consolidated financial statements during the fiscal years presented arising from severe weather events and natural conditions, and the identified physical risks (collectively, “climate-related events”), would trigger the proposed disclosure requirement discussed below. Specific examples of such severe weather events and natural conditions may include the following:

- Flooding;
- Drought;

---

<sup>329</sup> See proposed 17 CFR 210.14-02(i).

<sup>330</sup> See, e.g., 2010 Guidance, 26 (“Significant physical effects of climate change, such as effects on the severity of weather (for example, floods or hurricanes), [and] sea levels . . . have the potential to affect a registrant’s operations and results.”). Temperature extremes and drought are also discussed in the 2010 Guidance. See, e.g., *id.* at 6-7.

<sup>331</sup> See, e.g., Aurora A. Gutierrez et al., *Wildfire response to changing daily temperature extremes in California’s Sierra Nevada*, *Science Advances*, Vol. 7, Issue 47 (Nov. 17, 2021) (“Our work supports the conclusion that considerable potential exists for an increase in fire activity as a consequence of climate warming in the absence of changes in fire and ecosystem management.”); U.S. Geological Survey, *Will global warming produce more frequent and more intense wildfires?* (“[R]esearchers have found strong correlations between warm summer temperatures and large fire years, so there is general consensus that fire occurrence will increase with climate change.”), available at <https://www.usgs.gov/faqs/will-global-warming-produce-more-frequent-and-more-intense-wildfires>.

- Wildfires;
- Extreme temperatures; and
- Sea level rise.<sup>332</sup>

As discussed, above, there has been increased recognition of the current and potential effects, both positive and negative, of these events and the associated physical risks on a registrant's business as well as its financial performance and position. For example, as mentioned above, the 2010 Guidance discusses the potential impacts on a registrant's business and financial performance from climate-related events, including, for example, severe weather events, that could negatively impact a registrant's supply chain or distribution chain and lead to higher input costs or delayed product deliveries.<sup>333</sup> The 2010 Guidance also points to credit risks for banks driven by borrowers with assets located in high risk coastal areas.<sup>334</sup> More recently, the FSOC's Report on Climate-Related Financial Risk 2021 discusses significant costs from the types of events included in proposed Rule 14-02(c).<sup>335</sup> The TCFD, in a recent publication, also discusses the potential financial impacts of such climate-related events.<sup>336</sup> Furthermore, the TCFD provides examples of disclosures already being made by some companies (including

---

<sup>332</sup> See proposed 17 CFR 210.14-02(c).

<sup>333</sup> See 2010 Guidance, 6.

<sup>334</sup> See *id.*

<sup>335</sup> See, e.g., 2021 FSOC Report, Chapter 1: *From Climate-related Physical Risks to Financial Risks* (discussing the listed events and other risks).

<sup>336</sup> TCFD, *Implementing the Recommendations of the Task Force on Climate-related Financial Disclosures* (Oct. 2021), Section A.4 *Assessing Financial Impacts of Climate-Related Risks and Opportunities*.

registrants) of the financial statement impact of the climate-related events discussed above in their standalone sustainability (or equivalent) reports.<sup>337</sup>

Generally, climate-related events such as severe weather events and other natural conditions, and climate-related risks more generally, are linked to negative impacts on a registrant's financial performance and position. There could be situations, however, where such events result in positive impacts. For example, if a registrant's business is to conduct post-disaster cleanup and reconstruction, the occurrence of such severe weather events would generate additional revenues for the registrant.

In addition to the physical risks associated with climate change, registrants and investors also face climate-related transition risks. As government leaders across the globe have made public commitments to transition to a lower carbon economy, investors have sought information about the impact such a transition may have on registrants.<sup>338</sup> In addition to public commitments, these impacts may be prompted by regulatory, technological, market (including changing consumer, business counterparty, and investor preferences), liability, reputational, or other transition-related factors.<sup>339</sup> For example, significant shifts in modes of production may occur in GHG intensive economic sectors, such as the transportation, electricity generation, and heavy manufacturing sectors.<sup>340</sup> A registrant that is engaged in transition activities may experience business losses or, conversely, may benefit from such transition activities.<sup>341</sup> In

---

<sup>337</sup> See, e.g., TCFD, *Guidance on Metrics, Targets, and Transition Plans* (Oct. 2021), 23 (Figure C6), Appendix 2, available at [https://assets.bbhub.io/company/sites/60/2021/07/2021-Metrics\\_Targets\\_Guidance-1.pdf](https://assets.bbhub.io/company/sites/60/2021/07/2021-Metrics_Targets_Guidance-1.pdf) (providing examples, mostly from sustainability (or equivalent) reports, that illustrate the feasibility of some of the disclosures that would be required by the proposed rules).

<sup>338</sup> See *supra* Section I.C.1.

<sup>339</sup> See *supra* Section II.B.

<sup>340</sup> See, e.g., 2021 FSOC Report, Chapter 1, *From Climate-related Transition Risks to Financial Risks*.

<sup>341</sup> See *id.*

response, some companies are already providing disclosure of the impact of transition-related activities on their financial statements and some have publicly made commitments related to this transition.<sup>342</sup> In light of these transition risks, the proposed rules would also require a registrant to disclose the financial impact of the impact of any identified transition risks and any efforts to reduce GHG emissions or otherwise mitigate exposure to transition risks (collectively, “transition activities”) on any relevant line items in the registrant’s consolidated financial statements during the fiscal years presented.<sup>343</sup>

A registrant may also disclose the impact of any opportunities arising from severe weather events and other natural conditions, any impact of efforts to pursue climate-related opportunities associated with transition activities, and the impact of any other climate-related opportunities, including those identified by the registrant pursuant to proposed Item 1502(a), on any of the financial statement metrics.<sup>344</sup> If a registrant makes a policy decision to disclose the impact of a climate-related opportunity on the proposed financial statement metrics, it must do so consistently (*e.g.*, for each fiscal year presented in the consolidated financial statements, for each financial statement line item, for all relevant opportunities identified by the registrant) and must follow the same presentation and disclosure threshold requirements applicable to the required disclosures related to financial impact metrics and expenditure metrics, as discussed below.<sup>345</sup>

The financial impact metric disclosure requirements in proposed Rules 14-02(c), (d), and (i) would require a registrant to disclose the financial impacts of severe weather events, other

---

<sup>342</sup> See, *e.g.*, TCFD, Guidance on Metrics, Targets, and Transition Plans (Oct. 2021), Appendix 2.

<sup>343</sup> See proposed 17 CFR 210.14-02(d).

<sup>344</sup> See proposed 17 CFR 210.14-02(j).

<sup>345</sup> See *id.*

natural conditions, transition activities, and identified climate-related risks on the consolidated financial statements included in the relevant filing unless the aggregated impact of the severe weather events, other natural conditions, transition activities, and identified climate-related risks is less than one percent of the total line item for the relevant fiscal year.<sup>346</sup> The proposed threshold would provide a bright-line standard for registrants and should reduce the risk of underreporting such information. The proposed quantitative threshold could also promote comparability and consistency among a registrant's filings over time and among different registrants compared to a principles-based approach. The Commission has used similar one percent thresholds in other contexts.<sup>347</sup> More generally, in addition to the approach in Article 5 of Regulation S-X discussed below, other rules such as 17 CFR 229.103 and 17 CFR 229.404 use quantitative disclosure thresholds to facilitate comparability, consistency, and clarity in determining when information must be disclosed.<sup>348</sup>

A registrant would be required to determine the impacts of the severe weather events, other natural conditions, transition activities, and identified climate-related risks described above on each consolidated financial statement line item.<sup>349</sup> Within each category (*i.e.*, climate-related

---

<sup>346</sup> See proposed 17 CFR 210.14-02(b). The registrant would be required to evaluate the impact on a line-by-line basis consistent with the line items presented in its consolidated financial statements. See proposed 17 CFR 210.14-02(c) and (d).

<sup>347</sup> The Commission currently uses a 1% threshold in other contexts for disclosure of certain items within the financial statements and without. See, e.g., 17 CFR 210.5-03.1(a) (stating that if the total of sales and revenues reported under this caption includes excise taxes in an amount equal to 1% or more of such total, the amount of such excise taxes shall be shown on the face of the statement parenthetically or otherwise); 17 CFR 210.12-13 (requiring disclosure of open option contracts by management investment companies using a 1% of net asset value threshold, based on the notional amounts of the contracts); and 17 CFR 229.404(d) (requiring disclosure of transactions between a SRC and related persons in which the amount involved exceeds the lesser of \$120,000 or 1% of the average of the SRC's total assets at year-end for the last two completed fiscal years).

<sup>348</sup> See 17 CFR 229.103(b)(2), (c)(3)(iii) and 17 CFR 229.404(a).

<sup>349</sup> Examples of such line items include revenue, cost of revenue, selling, general and administrative expenses, sale of property, plant, and equipment (in statement of cash flows), inventories, intangible assets, long-term debt, or contingent liabilities.

events or transition activities), impacts would, at a minimum, be required to be disclosed on an aggregated, line-by-line basis for all negative impacts and, separately, on an aggregated, line-by-line basis for all positive impacts.<sup>350</sup> However, for purposes of determining whether the disclosure threshold has been met, a registrant would be required to aggregate the absolute value of the positive and negative impacts on a line-by-line basis, which we believe would better reflect the significance of the impact of the climate-related events and transition activities on a registrant's financial performance and position.<sup>351</sup>

For example, when evaluating the line-by-line impact, a registrant may determine that its cost of revenue is impacted by Events A, B, and C, and Transition Activity D in the following manner:

- Cost of revenue was impacted negatively by Events A and B by \$300,000, driven by increased input costs impacted by severe weather events that strained the registrant's main supplier;
- Cost of revenue was impacted positively by Event C by \$70,000, driven by technology that improved the registrant's ability to manage the impact of severe heat on certain raw materials, which resulted in more efficient production; and
- Cost of revenue was impacted positively by Transition Activity D, which reduced production costs for certain products by \$90,000 through advanced technology that improved energy efficiency during the production process.<sup>352</sup>

---

<sup>350</sup> See proposed 17 CFR 210.14-02(c) and (d).

<sup>351</sup> See proposed 17 CFR 210.14-02(b).

<sup>352</sup> This example illustrates a situation where the registrant has elected to include impacts from transition opportunities.

For purposes of determining whether the impacts from the example above would trigger the disclosure threshold requirements, the registrant would perform the analysis illustrated in the following table:

F/S line-item	F/S balance (from consolidated financial statements)	Impact of Events A and B	Impact of Event C	Impact of Transition Activity D	Absolute value of impacts	Percentage impact
Cost of revenue	\$10,000,000	-\$300,000	+\$70,000	+\$90,000	\$460,000	4.6%

Although some of the impacts (*e.g.*, impact of Event C, impact of Transition Activity D) do not individually meet the one percent threshold, the absolute value of the aggregated impacts from the events and transition activities on the line item in the above example is \$460,000 and thus exceeds one percent of the corresponding line-item threshold; therefore, disclosure for that specific line item would be required. The registrant’s disclosure of such impacts may be provided, for example, as illustrated in the following table (excluding disclosure of contextual information):

**Note X.** Climate-related financial metrics:

F/S line-item	Total negative impact from climate-related events	Total positive impact from climate-related events	Total negative impact from climate-related transition activities	Total positive impact from climate-related transition activities and climate-related opportunities*
Cost of revenue	(Debit) \$300,000	(Credit) \$70,000	---	(Credit) \$90,000

\* As discussed earlier, a registrant may elect to include the impact of climate-related opportunities when calculating its climate-related financial impact metrics. This example illustrates a situation where the registrant has elected to include impacts from transition opportunities.

In this example, contextual information may include disclosure such as the registrant’s election to include the impact from opportunities in its disclosure analysis and calculation, the specific events that were aggregated for purposes of determining the impact on the cost of revenue and, if applicable, a discussion of the estimation methodology used to disaggregate the

amount of impact on the cost of revenue between the climate-related events, transition activities, and other factors.

To provide additional clarity, the proposed rule would include the following examples of disclosures that may be required to reflect the impact of the severe weather events and other natural conditions on each line item of the registrant's consolidated financial statements (*e.g.*, line items of the consolidated income statement, balance sheet, or cash flow statement):<sup>353</sup>

- Changes to revenue or costs from disruptions to business operations or supply chains;
- Impairment charges and changes to the carrying amount of assets (such as inventory, intangibles, and property, plant and equipment) due to the assets being exposed to severe weather, flooding, drought, wildfires, extreme temperatures, and sea level rise;
- Changes to loss contingencies or reserves (such as environmental reserves or loan loss allowances) due to impact from severe weather events; and
- Changes to total expected insured losses due to flooding or wildfire patterns.<sup>354</sup>

With respect to the financial impacts of transition activities, the proposed rule would include the following examples of potential impacts:

- Changes to revenue or cost due to new emissions pricing or regulations resulting in the loss of a sales contract;
- Changes to operating, investing, or financing cash flow from changes in upstream costs, such as transportation of raw materials;

---

<sup>353</sup> The examples below, like all of the examples in this release (including examples in the text of the proposed rules), are non-exclusive and should not be interpreted as a checklist for compliance with any proposed rule.

<sup>354</sup> See proposed 17 CFR 210.14-02(c)(1) through (4).

- Changes to the carrying amount of assets (such as intangibles and property, plant, and equipment), for example, due to a reduction of the asset’s useful life or a change in the asset’s salvage value by being exposed to transition activities; and
- Changes to interest expense driven by financing instruments such as climate-linked bonds issued where the interest rate increases if certain climate-related targets are not met.<sup>355</sup>

Many commenters stated that climate-related financial disclosure is material and should be reflected separately in the financial statements.<sup>356</sup> For example, one commenter stated that it is critical to investors and others in assessing a company’s risk profile, estimating its risk-adjusted returns, and completing other relevant financial analyses to include information on how climate-related risks and climate-related opportunities may affect companies’ income statements, cash flow statements, and balance sheets.<sup>357</sup>

Other commenters, however, generally expressed the view that if such disclosures are material, they would already be required by existing financial statement disclosure requirements.<sup>358</sup> For example, some of these commenters stated that they opposed new climate-specific disclosure rules because, in their view, the traditional concept of materiality already

---

<sup>355</sup> See proposed 17 CFR 210.14-02(d)(1) through (4).

Brian Schatz and Sheldon Whitehouse (June 10, 2021); Ted Atwood; The Forum for Sustainable and Responsible Investment; The Revolving Door Project; The Washington State Investment Board; UNEP – FI; Union of Concerned Scientists; and WBCSD.

<sup>357</sup> See letter from Bloomberg.

<sup>358</sup> See, e.g., letters from the American Fuel Petrochemical Manufacturers (June 13, 2021); Environmental Bankers Association; Heritage Foundation; National Mining Association (June 11, 2021); Society for Mining, Metallurgy, & Exploration (June 13, 2021); and The Associated General Contractors of America.

requires the disclosure of climate-related impacts that materially affect the issuer's financial condition and results of operations.<sup>359</sup>

Although we agree that registrants are currently required to disclose material financial impacts on the financial statements, the proposed climate-related financial statement metrics should provide additional transparency into the impact of climate-related events on information reported in the financial statements that would be relevant to investors when making investment or voting decisions.<sup>360</sup> Such disclosure would also provide investors with additional insights into the nature of a registrant's business, the implementation of the registrant's targets and goals, and material trends in climate-related impacts. Furthermore, separately stating the financial statement impacts from the climate-related events and transition activities could improve comparability across both the registrant's year-to-year disclosures and the disclosures of different registrants.

We further note that the proposed requirement to separately disclose the financial impacts of the climate-related events and transition activities may be necessary not only because climate-related risks may have significant impacts on individual registrants, but also because the risks presented by the climate-related events and transition activities may be correlated across

---

<sup>359</sup> See letters from American Fuel Petrochemical Manufacturers; Environmental Bankers Association; and The Associated General Contractors of America.

<sup>360</sup> Certain commenters, in response to FASB's 2021 Agenda Consultation, were also supportive of more disaggregated disclosures within the financial statements. See, e.g., letters from CalPERS (Sept. 22, 2021); CFA Institute (Oct. 7, 2021); and CII (Sept. 16, 2021). Comment letters in response to FASB's invitation to comment are available at [https://www.fasb.org/jsp/FASB/CommentLetter\\_C/CommentLetterPage&cid=1218220137090&project\\_id=2021-004&page\\_number=1](https://www.fasb.org/jsp/FASB/CommentLetter_C/CommentLetterPage&cid=1218220137090&project_id=2021-004&page_number=1).

different, similarly situated registrants.<sup>361</sup> Climate-related risks present the potential for a high correlation and therefore concentration of risk within a portfolio. Separate disclosure of climate-related risks could help to provide investors with information to help them more effectively evaluate their portfolio risk. In this regard, we note that an analogous approach to disaggregated, or separately stated, disclosure has been taken in other contexts within the financial statements and elsewhere.<sup>362</sup> For example, in segment reporting, a registrant must present within its consolidated financial statements a separate presentation of certain financial statement line items for each segment.<sup>363</sup> The Commission has noted the importance of disaggregated disclosure in

---

<sup>361</sup> See, e.g., Madison Condon, *Market Myopia's Climate Bubble*, 2022 UTAH L. REV. 63 (2021). See also 2020 CFTC Advisory Subcommittee Report (“Climate change is expected to affect multiple sectors, geographies, and assets in the United States, sometimes simultaneously and within a relatively short timeframe. As mentioned earlier, transition and physical risks—as well as climate and non-climate-related risks—could interact with each other, amplifying shocks and stresses. This raises the prospect of spillovers that could disrupt multiple parts of the financial system simultaneously.”).

<sup>362</sup> The analogies presented are not intended to imply that FASB ASC Topic 280, IFRS 8 or other concepts would have to be applied when accounting for and disclosing the climate-related financial statement metrics. The analogies are also not intended to imply that the determination of when disclosure may be required and how that determination is made is the same across all of these concepts. See, e.g., *infra* note 363 (discussing management’s evaluation under FASB ASC Topic 280 *Segment Reporting* and IFRS 8 *Operating Segments*) and the discussion below of FASB ASC Topic 606, IFRS 15, and Article 5 of Regulation S-X.

<sup>363</sup> See FASB ASC Topic 280 *Segment Reporting* and IFRS 8 *Operating Segments* (requiring segment reporting disclosures to be included in the audited financial statements). FASB ASC 280-10-10-1 states that the objective of segment reporting is to provide information about the different types of business activities in which a registrant engages and the different economic environments in which it operates to help users of financial statements: (i) better understand the public entity’s performance; (ii) better assess its prospects for future net cash flows; and (iii) make more informed judgments about the public entity as a whole. FASB ASC Topic 280 and IFRS 8 focus on the chief operating decision maker’s view when evaluating the registrant and prescribes certain qualitative and quantitative considerations when determining what constitutes an operating segment. Similarly, the proposed rule would require an initial determination by the registrant of the relevant climate-related events and transition activities, and their impact on the registrant’s financial statements.

the segment reporting context, stating that it “has long been aware of the importance of meaningful segment information to reasoned investment decision-making.”<sup>364</sup>

The importance of disaggregated disclosure in a registrant’s financial statements is also supported by the concepts set forth in FASB ASC Topic 606 *Revenue from Contracts with Customers* and IFRS 15 *Revenue from Contracts with Customers*, which require, among other things, disclosure of disaggregated revenue recognized from contracts with customers into categories that depict how the nature, amount, timing, and uncertainty of revenue and cash flows are affected by economic factors. As noted earlier, the Commission also requires disaggregation of certain financial statement line items in Article 5 of Regulation S-X. Specifically, Article 5 requires separate disclosures of specific balance sheet and income statement line items when practicable or when certain percentage thresholds are met, depending on the nature of the information.<sup>365</sup> Those conditions on when separate disclosure is required are analogous to the proposed condition that financial impacts result from the climate-related events and transition activities.

### **Request for Comment**

59. Should we require registrants to disclose the financial impact metrics, as proposed?

Would presenting climate-specific financial information on a separate basis based on climate-related events (severe weather events and other natural conditions and identified physical risks)

---

<sup>364</sup> See *Industry and Homogenous Geographic Segment Reporting*, Release No. 33-6514 (Feb. 15, 1984) [49 FR 6737-01 (Feb. 23, 1984)], at 6738. Robust segment reporting disclosures are important as they can provide crucial transparency to investors that are reviewing financial statements. See also Gary Buesser, *For the Investor: Segment Reporting*, FASB OUTLOOK (Apr. 2019) (“[I]nvestors normally model a company at the segment level rather than at the consolidated level. More segments and greater information about an operating segment improve an analyst’s ability to forecast a company’s revenue, margins and assets – which serves as the basis for valuing a company.”).

<sup>365</sup> See *supra* note 347 for examples of the Commission’s use of a 1% threshold in other contexts.

and transition activities (including identified transition risks) elicit decision-useful or material information for investors? Are there different metrics that would result in disclosure of more useful information about the impact of climate-related risks and climate-related opportunities on the registrant's financial performance and position?

60. Would the impact from climate-related events and transition activities yield decision-useful information for investors? Would the climate-related events (including the examples provided) and transition activities result in impacts that are easier to quantify or disaggregate than climate-related risks more generally? Would a registrant be able to quantify and provide the proposed disclosure when the impact may be the result of a mixture of factors (*e.g.*, a factory shutdown due to an employee strike that occurs simultaneously with a severe weather event)? If there are situations where disaggregation would not be practicable, should we require a registrant to disclose that it was unable to make the required determination and why, or to make a reasonable estimate and provide disclosure about the assumptions and information that resulted in the estimate?

61. Alternatively, should we not require disclosure of the impacts of identified climate-related risks and only require disclosure of impacts from severe weather events and other natural conditions? Should we require a registrant to disclose the impact on its consolidated financial statements of only certain examples of severe weather events and other natural conditions? If so, should we specify which severe weather events and other natural conditions the registrant must include? Would requiring disclosure of the impact of a smaller subset of climate-related risks be easier for a registrant to quantify without sacrificing information that would be material to investors?

62. Should impact from climate-related opportunities be required, instead of optional, as proposed? We are proposing to require a registrant that elects to disclose the impact of an opportunity to do so consistently (*e.g.*, for each fiscal year presented in the consolidated financial statements, for each financial statement line item, and for all relevant opportunities identified by the registrant). Are there any other requirements that we should include to enhance consistency? Should we only require consistency between the first fiscal period in which opportunities were disclosed and subsequent periods?

63. Is it clear which climate-related events would be covered by “severe weather events and other natural conditions”? If not, should we provide additional guidance or examples about what events would be covered? Should we clarify that what is considered “severe weather” in one region may differ from another region? For example, high levels of rainfall may be considered “severe weather” in a typically arid region.

64. Are the proposed requirements for calculating and presenting the financial impact metrics clear? Should the analysis be performed and disclosed in a manner other than on a line-by-line basis referring to the line items of the registrant’s consolidated financial statements?

65. We are proposing to allow a registrant to aggregate the absolute value of negative and positive impacts of all climate-related events and, separately, transition activities on a financial statement line item. Should we instead require separate quantitative disclosure of the impact of each climate-related event or transition activity? Should we require separate disclosure of the impact of climate-related opportunities that a registrant chooses to disclose?

66. The proposed financial impact metrics would not require disclosure if the absolute value of the total impact is less than one percent of the total line item for the relevant fiscal year. Is the proposed threshold appropriate? Should we use a different percentage threshold (*e.g.*, three

percent, five percent) or use a dollar threshold (*e.g.*, less than or greater than \$1 million)?

Should we use a combination of a percentage threshold and a dollar threshold? Should we only require disclosure when the financial impact exceeds the threshold, as proposed, or should we also require a determination of whether an impact that falls below the proposed quantitative threshold would be material and should be disclosed?

67. For purposes of determining whether the disclosure threshold has been met, should impacts on a line item from climate-related events and transition activities be permitted to offset (netting of positive and negative impacts), instead of aggregating on an absolute value basis as proposed? Should we prescribe how to analyze positive and negative impacts on a line item resulting from the same climate-related event or the same transition activity (*e.g.*, whether or not netting is permitted at an event or activity level)? Should we permit registrants to determine whether or not to offset as a policy decision (netting of the positive and negative impact within an event or activity) and provide relevant contextual information? Should we require the disclosure threshold to be calculated separately for the climate-related events and transition activities, rather than requiring all of the impacts to be aggregated as proposed?

68. Instead of including a quantitative threshold, as proposed, should we require disaggregated disclosure of *any* impact of climate-related risks on a particular line item of the registrant's consolidated financial statements? Alternatively, should we just use a materiality standard?

69. Should we require a registrant to disclose changes to the cost of capital resulting from the climate-related events? If so, should we require a registrant to disclose its weighted average cost of capital or any internal cost of capital metrics? Would such disclosure elicit decision-useful or material information for investors?

70. We have not proposed defining the term “upstream costs” as used in the proposed examples for the financial impact metrics and elsewhere. Should we define that term or any others? If so, how should we define them?

71. Are the proposed examples in the financial impact metrics helpful for understanding the types of disclosure that would be required? Should we provide different or additional examples or guidance?

### **3. Expenditure Metrics**

The proposed expenditure metrics would refer to the positive and negative impacts associated with the same climate-related events, transition activities, and identified climate-related risks as the proposed financial impact metrics.<sup>366</sup> As proposed, the expenditure metrics would require a registrant to separately aggregate amounts of (i) expenditure expensed and (ii) capitalized costs incurred during the fiscal years presented.<sup>367</sup> For each of those categories, a registrant would be required to disclose separately the amount incurred during the fiscal years presented (i) toward positive and negative impacts associated with the climate-related events (*i.e.*, severe weather events and other natural conditions and identified physical risks) and (ii) toward transition activities, specifically, to reduce GHG emissions or otherwise mitigate exposure to transition risks (including identified transition risks).<sup>368</sup> The registrant may also choose to disclose the impact of efforts to pursue climate-related opportunities associated with transition activities.<sup>369</sup> As discussed above, if a registrant elects to disclose the impact of an

---

<sup>366</sup> See proposed 17 CFR 210.14-02(e), (f), and (i).

<sup>367</sup> See *id.* These metrics are focused on expenditures (spending) incurred in each reported fiscal year(s). We therefore believe the number of periods of the expenditure metrics should correspond to the number of years of income statement or cash flow statement presented in the consolidated financial statements.

<sup>368</sup> See *id.*

<sup>369</sup> See proposed 17 CFR 210.14-02(j).

opportunity, it must do so consistently and must follow the same presentation and disclosure threshold requirements applicable to the required disclosures of expenditure metrics associated with transition risks. The amount of expenditure disclosed pursuant to the proposed metrics would be a portion, if not all, of the registrant's total recorded expenditure (expensed or capitalized), as calculated pursuant to the accounting principles applicable to the registrant's financial statements.<sup>370</sup>

The proposed expenditure metrics would be subject to the same disclosure threshold as the financial impact metrics, which we believe would promote comparability, consistency, and clarity in determining when information must be disclosed. For purposes of calculating the disclosure threshold for the expenditure metrics, a registrant would be permitted to separately determine the amount of expenditure expensed and the amount of expenditure capitalized; however, a registrant would be required to aggregate expenditure related to climate-related events and transition activities within the categories of expenditure (*i.e.*, amount capitalized and amount expensed). This approach should better reflect the significance of climate-related expenditure compared to a calculation approach that would allow for a disclosure threshold to be measured at the individual event or activity level, which may result in more limited disclosures.

For example, assume a registrant capitalized \$200,000 of expenditure incurred related to Event D and capitalized another \$100,000 of expenditure incurred related to Activity E. The registrant also expensed \$25,000 of expenditure incurred related to Event F (which is an identified transition risk disclosed by the registrant). The registrant would determine whether the

---

<sup>370</sup> See 17 CFR 210.4-01(a)(1) and (2).

impacts would trigger the disclosure requirements based on the proposed thresholds, as illustrated below:

Expenditure category	Current fiscal year balances (from consolidated financial statements)*	Event D	Activity E	Event F	Percentage impact
Capitalized costs (total expenditure incurred during the year that was capitalized)	\$8,000,000	\$200,000	\$100,000		3.85% **
Expense (total expenditure incurred during the year that was expensed)	\$3,000,000			\$25,000	0.8%

\*As expenditures capitalized and expensed are recorded in various financial statement line items, we expect the “total” to be used for disclosure threshold calculation purposes for each category to represent the aggregated expenditures capitalized during the fiscal year and aggregated expenditures expensed during the fiscal year. See below for additional discussion regarding associated contextual information that may be required.

\*\*Calculated based on total impact on capitalized costs from Event D (\$200,000), Activity E (\$100,000), and Event F (\$0):  $\$300,000/\$8,000,000$ .

In the above example, the expenditure incurred toward Event D was \$200,000 (capitalized) and the expenditure incurred toward Activity E and Event F were \$100,000 (capitalized) and \$25,000 (expensed). The amount of capitalized costs equaled the proposed one percent threshold, and thus the disclosure would be required for that category of expenditure. No disclosure would be required for the expenditure incurred that was expensed (related to Event F in this example), because it was below the one percent threshold. The registrant’s resulting disclosure of such expenditure (capitalized or expensed) may be provided, for example, as illustrated in the following table (excluding disclosure of contextual information):

**Note X.** Climate-related financial metrics:

	Expenditure incurred for climate-related events	Expenditure incurred for climate-related transition activities
Capitalized costs	\$200,000	\$100,000

In this example, contextual information may include disclosure such as the specific climate-related events and transition activities that were aggregated for purposes of determining the impacts on the capitalized or expensed expenditure amounts and, if applicable, policy decisions made by a registrant to determine the amount of climate-related events or transition activities that are categorized as expenditure capitalized versus expenditure expensed or whether impact from pursuing any climate-related opportunities are included in the analysis. Contextual information may also include a discussion of the composition of the total expenditure expensed and total expenditure capitalized, which were used to calculate whether the disclosure threshold was met, and, if applicable, a discussion of the estimation methodology used to disaggregate the amount of impact between the climate-related events, transition activities, and other factors, including if an event or an activity impacted both capitalized and expensed costs.

The proposed rules would clarify that a registrant may be required to disclose the amount of expenditure expensed or capitalized costs, as applicable, incurred for the climate-related events to increase the resilience of assets or operations, retire or shorten the estimated useful lives of impacted assets, relocate assets or operations at risk, or otherwise reduce the future impact of severe weather events and other natural conditions on business operations.<sup>371</sup> The proposed rules would also clarify that a registrant may be required to disclose the amount of expenditure expensed or capitalized costs, as applicable, incurred for climate-related transition activities related to research and development of new technologies, purchase of assets, infrastructure, or products that are intended to reduce GHG emissions, increase energy efficiency, offset emissions (purchase of energy credits), or improve other resource efficiency.<sup>372</sup>

---

<sup>371</sup> See proposed 17 CFR 210.14-02(e).

<sup>372</sup> See proposed 17 CFR 210.14-02(f).

Several commenters recommended taking a similar approach, stating that we should require disclosure of climate-related capital expenditure (*i.e.*, capitalized assets),<sup>373</sup> or both climate-related expenses and capitalized assets.<sup>374</sup> Consistent with these comments, and for similar reasons to those stated above with respect to the financial impact metrics, separate disclosure of total expense and total capitalized costs incurred toward the climate-related events and transition activities should provide important information to help investors make better informed investment or voting decisions. Moreover, the financial impacts of expenditure typically appear in different places within the financial statements (*e.g.*, in an asset line item(s) on the balance sheet or in an expense line item(s) in the income statement). The proposed approach is intended to address this dispersed presentation by requiring registrants to first identify the relevant climate-related expenditures and then compile those impacts in one location. Similar to the proposed financial impact metrics, such an approach should provide insight into, and context for understanding, the nature of a registrant’s business, including any disclosed strategy for addressing and managing the specified risks—particularly in the context of transition planning.<sup>375</sup>

### **Request for Comment**

72. Should we require registrants to disclose the expenditure metrics, as proposed? Would presenting the expenditure metrics separately in one location provide decision-useful information

---

<sup>373</sup> *See, e.g.*, letters from Amalgamated Bank; Interfaith Center on Corporate Responsibility; and Natural Resources Defense Council.

<sup>374</sup> *See, e.g.*, letters from Calvert; Climate Risk Disclosure Lab; and World Benchmarking Alliance.

<sup>375</sup> *See supra* Section II.C, which discusses our proposals to require the registrant to describe the actual and potential impacts of the identified climate-related risks (and climate-related opportunities if the registrant elects to do so) on its strategy, business model, and outlook. Further, such disclosure could also provide additional context to other narrative disclosures such as the discussion of risk factors required by 17 CFR 229.105.

to investors? Is there a different type of metric that would result in more useful disclosure of the expense or capitalized costs incurred toward climate-related events and transition activities or toward climate-related risks more generally?

73. Would the disclosure required by the expenditure metrics overlap with the disclosure required by the financial impact metrics? If so, should we require the disclosure to be provided pursuant to only one of these types of metrics?

74. Should the same climate-related events (including severe weather events and other natural conditions and identified physical risks) and transition activities (including identified transition risks) that we are proposing to use for the financial impact metrics apply to the expenditure metrics, as proposed? Alternatively, should we not require a registrant to disclose expenditure incurred towards identified climate-related risks and only require disclosure of expenditure relating to severe weather events and other natural conditions? Should we require a registrant to disclose the expenditure incurred toward only certain examples of severe weather events and other natural conditions? If so, should we specify which severe weather events and other natural conditions the registrant must include? Would requiring disclosure of the expenditure relating to a smaller subset of climate-related risks be easier for a registrant to quantify without sacrificing information that would be material to investors?

75. Should the proposed rules instead require a registrant to disclose the aggregate amounts of expensed and capitalized costs incurred toward *any* climate-related risks? Should expenditures incurred towards climate-related opportunities be optional based on a registrant's election to disclose such opportunities, as proposed?

76. Should we apply the same disclosure threshold to the expenditure metrics and the financial impact metrics? Is the proposed threshold for expenditure metrics appropriate? Should

we use a different percentage threshold (*e.g.*, three percent, five percent) or use a dollar threshold (*e.g.*, less than or greater than \$1 million)? Should we use a combination of a percentage threshold and a dollar threshold? Should we only require disclosure when the amount of climate-related expenditure exceeds the threshold, as proposed, or should we also require a determination of whether an amount of expenditure that falls below the proposed quantitative threshold would be material and should be disclosed? Should we require separate aggregation of the amount of expense and capitalized costs for purposes of the threshold, as proposed? Should we require separate aggregation of expenditure relating to the climate-related events and transition activities, as proposed?

77. Instead of including a quantitative threshold, as proposed, should we require disaggregated disclosure of *any* amount of expense and capitalized costs incurred toward the climate-related events and transition activities, during the periods presented? Alternatively, should we just use a materiality standard?

78. Are the proposed requirements for calculating and presenting the expenditure metrics clear? Should the analysis be performed and disclosed in a different manner, other than separately based on capitalized costs and amount of expenditure expensed and separately based on the climate-related events and transition activities? Should disclosure of expenditure incurred be required for both the amount of capitalized costs and the amount of expenditure expensed if only one of the two types of expenditure meets the disclosure threshold? Should we require separate disclosure of expenditure incurred toward each climate-related event and transition activity?

79. The proposed rule does not specifically address expensed or capitalized costs that are *partially* incurred towards the climate-related events and transition activities (*e.g.*, the

expenditure relates to research and development expenses that are meant to address both the risks associated with the climate-related events and other risks). Should we prescribe a particular approach to disclosure in such situations? Should we require a registrant to provide a reasonable estimate of the amount of expense or capitalized costs incurred toward the climate-related events and transition activities and to provide disclosure about the assumptions and information that resulted in the estimate?

80. Are the proposed terms and examples used in the expenditure metrics helpful for understanding the types of disclosures that would be required? Should we provide different or additional examples?

#### **4. Financial Estimates and Assumptions**

The proposed rules would require a registrant to disclose whether the estimates and assumptions used to produce the consolidated financial statements were impacted by exposures to risks and uncertainties associated with, or known impacts from, climate-related events (including identified physical risks and severe weather events and other natural conditions), such as flooding, drought, wildfires, extreme temperatures, sea level rise.<sup>376</sup> If so, the registrant would be required to provide a qualitative description of how such events have impacted the development of the estimates and assumptions used by the registrant in the preparation of such financial statements. Similar to the other proposed financial statement metrics, the proposed rules would include a provision that would require separate disclosure focused on transition activities (including identified transition risks).<sup>377</sup> Further, if a registrant elects to disclose the impact of an opportunity on its financial estimates and assumptions, it must do so consistently

---

<sup>376</sup> See proposed 17 CFR 210.14-02(g) and (i).

<sup>377</sup> See proposed 17 CFR 210.14-02(h) and (i).

and must follow the same presentation and disclosure requirements applicable to the required disclosures herein.<sup>378</sup>

If the estimates and assumptions a registrant used to produce the consolidated financial statements were impacted by risks and uncertainties associated with, or known impacts from, a potential transition to a lower carbon economy or any climate-related targets it has disclosed, the registrant would be required to provide a qualitative description of how the development of the estimates and assumptions were impacted by such a potential transition or the registrant's disclosed climate-related targets.

Estimates and assumptions are currently required for accounting and financial reporting purposes (*e.g.*, projected financial information used in impairment calculations, estimated loss contingencies, estimated credit risks, commodity price assumptions, etc.). The proposed disclosures could provide decision-useful information and transparency to investors about the impact of the climate-related events and transition activities, including disclosed targets and goals,<sup>379</sup> on such estimates and assumptions. Moreover, in addition to providing insight into impacts on the registrant's financial statements, such disclosure could allow investors to evaluate the reasonableness of the registrant's estimates and assumptions, which are used to prepare the registrant's financial statements. Although current accounting standards require registrants to consider how climate-related matters may intersect with and affect the financial statements,

---

<sup>378</sup> See proposed 17 CFR 210.14-02(j).

<sup>379</sup> See proposed 17 CFR 229.1506.

including their impact on estimates and assumptions,<sup>380</sup> the nature of the climate-related events and transition activities discussed in the proposed rules, which may manifest over a longer time horizon, necessitate targeted disclosure requirements to elicit decision-useful information for investors in a consistent manner. We also note that some registrants have already provided disclosure along the lines of the proposed requirements, which lends support to the feasibility of making such disclosures.<sup>381</sup>

By way of example, the proposed climate-related events and impacts relating to a transition away from greenhouse gas producing products and activities could affect a registrant's asset values and may result in asset impairments. The effect on asset values and the resulting impairments could, in turn, affect a registrant's assumptions when calculating depreciation expenses or asset retirement obligations associated with the retirement of tangible, long-lived assets. Providing related disclosure could help an investor understand if a registrant would be responsible for removing equipment or cleaning up hazardous materials sooner than originally planned due to a severe weather event. Similarly, a registrant's climate-related targets and related commitments, such as a commitment to achieve net-zero emissions by 2040, may impact certain accounting estimates and assumptions. For example, if a registrant announced a

---

<sup>380</sup> See FASB Staff Educational Paper, Intersection of Environmental, Social and Governance Matters with Financial Accounting Standards (Mar. 2021), available at [https://fasb.org/jsp/FASB/Document\\_C/DocumentPage&cid=1176176379917](https://fasb.org/jsp/FASB/Document_C/DocumentPage&cid=1176176379917). See also IFRS, Effects of climate-related matters on financial statements (Nov. 2020), available at <https://www.ifrs.org/content/dam/ifrs/supporting-implementation/documents/effects-of-climate-related-matters-on-financial-statements.pdf#:~:text=IFRS%20Standards%20do%20not%20refer%20explicitly%20to%20climate-related,significant%20judgements%20and%20estimates%20that%20management%20has%20made>. We also remind registrants of the requirements under FASB ASC Topic 250-10-50-4 for disclosures of changes in accounting estimates, including the requirement that if a change in estimate does not have a material effect in the period of change, but is reasonably certain to have a material effect in later periods, a description of that change in estimate must be disclosed whenever the financial statements of the period of change are presented.

<sup>381</sup> See letter from Carbon Tracker (stating that some companies in the European Union and United Kingdom (several of which are registrants) are already providing this information and providing examples).

commitment that would require decommissioning an asset by a target year, then the registrant’s depreciation expense should reflect alignment with that commitment. If the registrant believes it can execute a strategy that would allow it to meet the commitment and continue to operate the asset past the target date, then the proposed disclosure requirement could facilitate an investor’s understanding and own assessment of the feasibility of that strategy. Other financial statement estimates and assumptions that may require disclosure pursuant to the proposed rules may include those related to the estimated salvage value of certain assets, estimated useful life of certain assets, projected financial information used in impairment calculations, estimated loss contingencies, estimated reserves (such as environmental reserve or loan loss allowances), estimated credit risks, fair value measurement of certain assets, and commodity price assumptions.

Several commenters stated that it was important to provide investors with an understanding of how climate-related events and activities are considered when a registrant develops the assumptions and estimates used to prepare its financial statements.<sup>382</sup> In particular, one commenter stated that investors may face “substantial risk” if disclosure on the impact of “decarbonization” on the estimates and assumptions underlying asset valuations is not disclosed.<sup>383</sup> Another commenter stated that “current corporate disclosure is not sufficient, is not readily available in existing financial disclosures, and does not allow investors to make comparable assessments of how companies are evaluating and responding to climate-related risks and opportunities.”<sup>384</sup>

---

<sup>382</sup> See, e.g., letters from Carbon Tracker; Climate Accounting Project; ICCR; and Institute for Policy Integrity, Environmental Defense Fund, Initiative on Climate Risk & Resilience Law.

<sup>383</sup> See letter from Carbon Tracker.

<sup>384</sup> See letter from ICCR.

## **Request for Comment**

81. Should we require disclosure of financial estimates and assumptions impacted by the climate-related events and transition activities (including disclosed targets), as proposed? How would investors use this information?

82. Should we instead require disclosure of only significant or material estimates and assumptions that were impacted by the climate-related events and transition activities? Alternatively, should we require disclosure of only estimates and assumptions that were materially impacted by the climate-related events and transition activities?

83. Should we instead require disclosure of financial estimates and assumptions impacts by a subset of climate-related events and transition activities, such as not requiring disclosure related to identified climate-related risks or only requiring disclosure with respect to a subset of severe weather events and natural conditions? If so, how should the subset be defined?

84. Should we instead utilize terminology and thresholds consistent with the critical accounting estimate disclosure requirement in 17 CFR 229.303(b)(3), such as “estimates made in accordance with generally accepted accounting principles that involve a significant level of estimation uncertainty and have had or are reasonably likely to have a material impact on the financial condition or results of operations of the registrant”? If so, should we only require disclosures of whether and how the climate-related events and transition activities impacted such critical accounting estimates? Should we require only a qualitative description of how the estimates and assumptions were impacted by the climate-related events and transition activities, as proposed? Should we require quantitative disclosures as well? If so, should we require such disclosure only if practicable or subject to another qualifier?

85. Should the disclosure of financial estimates and assumptions impacted by climate-related opportunities be optional, as proposed?

86. For the proposed financial statement metrics, should we require a registrant to disclose material changes in estimates, assumptions, or methodology among fiscal years and the reasons for those changes? If so, should we require the material changes disclosure to occur on a quarterly, or some other, basis? Should we require disclosure beyond a discussion of the material changes in assumptions or methodology and the reasons for those changes? Do existing required disclosures already elicit such information? What other approaches should we consider?

## **5. Inclusion of Climate-Related Metrics in the Financial Statements**

The proposed financial statement metrics would be required in the financial statements, and therefore would be (i) included in the scope of any required audit of the financial statements in the relevant disclosure filing, (ii) subject to audit by an independent registered public accounting firm, and (iii) within the scope of the registrant's ICFR.

As discussed above, the proposed disclosures share many characteristics with other complex financial statement disclosures. The financial statement metrics present financial data that is derived from the registrant's consolidated balance sheets, income statements, and statements of cash flows, and would be presented in a similar way to existing financial statement disclosures.<sup>385</sup> Requiring certain climate-related information to be included in a note to the financial statements, and therefore subject to audit and within the scope of ICFR, should enhance the reliability of the proposed financial statement metrics.

---

<sup>385</sup> See *supra* Section II.F.2 for additional discussion of shared characteristics that the financial statement metrics have with existing financial statement disclosures and commenters' views.

## **Request for Comment**

87. We are proposing to require the financial statement metrics to be disclosed in a note to the registrant's audited financial statements. Should we require or permit the proposed financial statement metrics to be disclosed in a schedule to the financial statements? If so, should the metrics be disclosed in a schedule to the financial statements, similar to the schedules required under Article 12 of Regulation S-X, which would subject the disclosure to audit and ICFR requirements? Should we instead require the metrics to be disclosed as supplemental financial information, similar to the disclosure requirements under FASB ASC Topic 932-235-50-2 for registrants that have significant oil- and gas-producing activities? If so, should such supplemental schedule be subject to assurance or ICFR requirements?

88. Instead of requiring the financial statement metrics to be disclosed in a note to the registrant's audited financial statements, should we require a new financial statement for such metrics? For example, should a "consolidated climate statement" be created in addition to the consolidated balance sheets, statements of comprehensive income, cash flows, and other traditional financial statements? Would including the proposed metrics in a new financial statement provide more clarity to investors given that the metrics are intended to follow the structure of the existing financial statements (including the line items)? What complications or unintended consequences may arise in practice if such a climate statement is created?

89. Should we require the disclosure to be provided outside of the financial statements? Should we require all of the disclosure to be provided in the proposed separately captioned item in the specified forms?

90. Should we require any additional metrics or disclosure to be included in the financial statements and subject to the auditing and ICFR requirements as described above? For example,

should any of the disclosures we are proposing to require outside of the financial statements (such as GHG emissions metrics) be included in the financial statements? If so, should such metrics be disclosed in a note or a schedule to the financial statements? If in a schedule, should such schedule be similar to the schedules required under Article 12 of Regulation S-X and subject to audit and ICFR requirements? Should we instead require the metrics to be disclosed as supplemental financial information in a supplemental schedule? If so, should such supplemental schedule be subject to assurance or ICFR requirements?

91. Under the proposed rules, PCAOB auditing standards would be applicable to the financial statement metrics that are included in the audited financial statements, consistent with the rest of the audited financial statements. What, if any, additional guidance or revisions to such standards would be needed in order to apply PCAOB auditing standards to the proposed financial statement metrics? For example, would guidance on how to apply existing requirements, such as materiality, risk assessment, or reporting, be needed? Would revisions to the auditing standards be necessary? What additional guidance or revisions would be helpful to auditors, preparers, audit committee members, investors, and other relevant participants in the audit and financial reporting process?

92. Would it be clear that the climate-related financial statement metrics would be included in the scope of the audit when the registrant files financial statements prepared in accordance with IFRS as issued by the IASB? Would it be clear that the proposed rules would not alter the basis of presentation of the financial statements as referred to in an auditor's report? Should we amend Form 20-F, other forms, or our rules to clarify the scope of the audit or the basis of presentation in this context? For example, should we amend Form 20-F to state specifically that the scope of the audit must include any notes prepared pursuant to Article 14 of Regulation S-X?

What are the costs for accounting firms to provide assurance with respect to the financial statement metrics? Would those costs decrease over time?

**G. GHG Emissions Metrics Disclosure**

**1. GHG Emissions Disclosure Requirement**

**a. Overview**

In addition to the other proposed climate-related disclosures, the proposed rules would require a registrant to disclose its GHG emissions for its most recently completed fiscal year.<sup>386</sup> As institutional investors and other commenters have indicated, GHG emissions information is important to investment decisions for various reasons, including because GHG emissions data is quantifiable and comparable across industries and can be particularly useful in conducting a transition risk analysis;<sup>387</sup> it can be used to evaluate the progress in meeting net-zero commitments and assessing any associated risks;<sup>388</sup> and it may be relevant to investment or voting decisions because GHG emissions could impact the company's access to financing, as well as its ability to reduce its carbon footprint in the face of regulatory, policy, and market constraints.<sup>389</sup> Thus, while the justifications for the proposed GHG emissions disclosures overlap in some respects with the justifications for the other proposed climate-related disclosure rules, the GHG emissions requirements are intended to address separate challenges and are supported by the particular justifications discussed in detail in the following sections.

---

<sup>386</sup> See proposed 17 CFR 229.1504(a). As discussed below, the proposed rules would also require a registrant to disclose its GHG emissions for the historical fiscal years included in its consolidated financial statements.

<sup>387</sup> See, e.g., *infra* note 432 and accompanying text.

<sup>388</sup> See, e.g., *infra*, note 433 and accompanying text.

<sup>389</sup> See, e.g., *infra* note 455 and accompanying text.

The proposed rules would establish certain requirements regarding the measurement and reporting of GHG emissions that would promote the comparability of such disclosure. We have based the proposed GHG emissions disclosure rules on the concept of scopes, which are themselves based on the concepts of direct and indirect emissions, developed by the GHG Protocol. We also have proposed definitions of Scope 1, Scope 2, and Scope 3 emissions that are substantially similar to the corresponding definitions provided by the GHG Protocol. Commenters indicated that the GHG Protocol has become the leading accounting and reporting standard for GHG emissions.<sup>390</sup> By sharing certain basic concepts and a common vocabulary with the GHG Protocol, the proposed rules should help limit the compliance burden for those registrants that are already disclosing their GHG emissions pursuant to the GHG Protocol.<sup>391</sup> Similarly, to the extent that registrants elect to follow GHG Protocol standards and methodologies, investors already familiar with the GHG Protocol may also benefit.

The proposed rules would define “greenhouse gases” as carbon dioxide (“CO<sub>2</sub>”); methane (“CH<sub>4</sub>”); nitrous oxide (“N<sub>2</sub>O”); nitrogen trifluoride (“NF<sub>3</sub>”); hydrofluorocarbons (“HFCs”); perfluorocarbons (“PFCs”); and sulfur hexafluoride (“SF<sub>6</sub>”).<sup>392</sup> The greenhouse gases included in the proposed definition reflect the gases that are currently commonly referenced by international, scientific, and regulatory authorities as having significant climate impacts. In

---

<sup>390</sup> See *supra* note 112 and accompanying text.

<sup>391</sup> In addition, as discussed in Section II.G.2.d, the proposed rules would permit a registrant, if actual reported data is not reasonably available, to use a reasonable estimate of its GHG emissions for its fourth fiscal quarter, together with actual, determined GHG emissions data for the first three fiscal quarters, as long as the registrant promptly discloses in a subsequent filing any material difference between the estimate used and the actual, determined GHG emissions data for the fourth fiscal quarter. See proposed 17 CFR 229.1504(e)(4)(i). This proposed provision should also help mitigate the GHG emissions compliance burden for registrants.

<sup>392</sup> See proposed 17 CFR 229.1500(g).

addition to being consistent with the GHG Protocol,<sup>393</sup> the list of constituent greenhouse gases would be consistent with the gases identified by widely used frameworks, such as the Kyoto Protocol, the UN Framework Convention on Climate Change, the U.S. Energy Information Administration, and the EPA.<sup>394</sup>

The proposed rules would define GHG emissions to mean direct and indirect emissions of greenhouse gases.<sup>395</sup> Pursuant to the proposed definition of GHG emissions, direct emissions are GHG emissions from sources that are owned or controlled by a registrant,<sup>396</sup> whereas indirect emissions are GHG emissions that result from the activities of the registrant, but occur at sources not owned or controlled by the registrant.<sup>397</sup> Similar to the GHG Protocol, the proposed rules would define:<sup>398</sup>

---

<sup>393</sup> In Feb. 2013 the GHG Protocol amended the required greenhouse gas inventory list to align with the seven gases required by the Kyoto Protocol (consistent with the proposed definition of greenhouse gases). See GHG Protocol, *Required Greenhouse Gases in Inventories: Accounting and Reporting Standard Amendment* (Feb. 2013), available at [https://www.ghgprotocol.org/sites/default/files/ghgp/NF3-Amendment\\_052213.pdf](https://www.ghgprotocol.org/sites/default/files/ghgp/NF3-Amendment_052213.pdf). Nevertheless, the GHG Protocol's Corporate Accounting and Reporting Standard, which was updated in 2015, continues to refer to only six greenhouse gases. We believe the common understanding of the GHG Protocol's Corporate Accounting and Reporting Standard is that the earlier amendment (reflecting seven gases) applies despite the subsequent 2015 update to the standard.

<sup>394</sup> See UN Framework Convention on Climate Change ("UNFCCC") – *Reporting requirements* (last visited Nov. 4, 2021), available at <https://unfccc.int/process-and-meetings/transparency-and-reporting/reporting-and-review-under-the-convention/greenhouse-gas-inventories-annex-i-parties/reporting-requirements>. The Kyoto Protocol is the international agreement linked to the UNFCCC. See also U.S. Energy Information Administration – *Where greenhouse gases come from* (last updated May 21, 2021), available at <https://www.eia.gov/energyexplained/energy-and-the-environment/where-greenhouse-gases-come-from.php>; and EPA – *Overview of Greenhouse Gases* (last visited Nov. 4, 2021), available at <https://www.epa.gov/ghgemissions/overview-greenhouse-gases>.

<sup>395</sup> See proposed 17 CFR 229.1500(h).

<sup>396</sup> See proposed 17 CFR 229.1500(h)(1).

<sup>397</sup> See proposed 17 CFR 229.1500(h)(2).

<sup>398</sup> Sources of emissions can include transportation, electricity production, industrial processes, commercial and residential use, agriculture, and land use changes (including deforestation). See, e.g., EPA, *Sources of Greenhouse Gas Emissions*, available at <https://www.epa.gov/ghgemissions/sources-greenhouse-gas-emissions>.).

- Scope 1 emissions as direct GHG emissions from operations that are owned or controlled by a registrant;<sup>399</sup>
- Scope 2 emissions as indirect GHG emissions from the generation of purchased or acquired electricity, steam, heat, or cooling that is consumed by operations owned or controlled by a registrant;<sup>400</sup> and
- Scope 3 emissions as all indirect GHG emissions not otherwise included in a registrant's Scope 2 emissions, which occur in the upstream and downstream activities of a registrant's value chain.<sup>401</sup> Upstream emissions include emissions attributable to goods and services that the registrant acquires, the transportation of goods (for example, to the registrant), and employee business travel and commuting. Downstream emissions include the use of the registrant's products, transportation of products (for example, to the registrant's customers), end of life treatment of sold products, and investments made by the registrant.

As previously noted, the EPA uses the concept of scopes, and refers to the GHG Protocol, when providing guidance to companies regarding their GHG emissions inventories.<sup>402</sup> Because GHG emissions data compiled for the EPA's own GHG emissions reporting program would be consistent with the GHG Protocol's standards, and thus with the proposed rules, a registrant may use that data in partial fulfillment of its GHG emissions disclosure obligations pursuant to the proposed rules.

---

<sup>399</sup> See proposed 17 CFR 229.1500(p).

<sup>400</sup> See proposed 17 CFR 229.1500(q).

<sup>401</sup> See proposed 17 CFR 229.1500(r).

<sup>402</sup> See *supra* note 113. The EPA requires the disclosure of direct GHG emissions primarily from large industrial sources as well as emissions from fuel and industrial gas suppliers and CO<sub>2</sub> injection sites in the United States. See EPA, *Greenhouse Gas Reporting Program*, available at <https://www.epa.gov/ghgreporting>.

The proposed rules would require a registrant to disclose its total Scope 1 emissions separately from its total Scope 2 emissions after calculating them from all sources that are included in the registrant’s organizational and operational boundaries.<sup>403</sup> A registrant would also be required to disclose separately its total Scope 3 emissions for the fiscal year if those emissions are material, or if it has set a GHG emissions reduction target or goal that includes its Scope 3 emissions.<sup>404</sup> For each of its Scopes 1, 2, and 3 emissions, the proposed rules would require a registrant to disclose the emissions both disaggregated by each constituent greenhouse gas (*e.g.*, by carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O), nitrogen trifluoride (NF<sub>3</sub>), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF<sub>6</sub>)) and in the aggregate.<sup>405</sup> By requiring the disclosure of GHG emissions both disaggregated by the constituent greenhouse gases and in the aggregate, investors could gain decision-useful information regarding the relative risks to the registrant posed by each constituent greenhouse gas in addition to the risks posed by its total GHG emissions by scope. For example, if a government targets reduction of a specific greenhouse gas, knowing that a registrant has significant emissions of such gas would provide insight into potential impacts on the registrant’s business.<sup>406</sup> Because measuring the constituent greenhouse gases is a necessary step in

---

<sup>403</sup> See proposed 17 CFR 229.1504(b)(1). We discuss the setting of a registrant’s organizational and operational boundaries in Section II.G.2. below.

<sup>404</sup> See proposed 17 CFR 229.1504(c)(1). As discussed in greater detail below, for many companies, these emissions may be material for assessing the companies’ exposure to climate-related risks, particularly transition risks, and their strategy to reduce their carbon footprint in the face of regulatory, policy, and market constraints. See *infra* Section II.G.1.b.

<sup>405</sup> See proposed 17 CFR 229.1504(a)(1).

<sup>406</sup> For example, the White House has recently launched an initiative to reduce methane emissions in the United States. See the White House Office of Domestic Climate Policy, *U.S. Methane Emissions Reductions Action Plan* (Nov. 2021), available at <https://www.whitehouse.gov/wp-content/uploads/2021/11/US-Methane-Emissions-Reduction-Action-Plan-1.pdf>.

calculating a registrant’s total GHG emissions per scope, the proposed disaggregation by each constituent greenhouse gas should not create significant additional burdens.

Consistent with the GHG Protocol, the proposed rules would require a registrant to express each scope of its GHG emissions in terms of carbon dioxide equivalent (“CO<sub>2</sub>e”).<sup>407</sup> CO<sub>2</sub>e is the common unit of measurement used by the GHG Protocol to indicate the global warming potential (“GWP”)<sup>408</sup> of each greenhouse gas, expressed in terms of the GWP of one unit of carbon dioxide (CO<sub>2</sub>).<sup>409</sup> Requiring a standard unit of measurement for GHG emissions, rather than different units of measurement for the different greenhouse gases, should simplify the disclosure for investors and enhance its comparability across registrants with different types of GHG emissions.

For all scopes of GHG emissions, the proposed rules would require a registrant to disclose GHG emissions data in gross terms, excluding any use of purchased or generated offsets.<sup>410</sup> Because the value of offsets can vary depending on restrictions that are or may be imposed by regulation or market conditions, disclosing GHG emissions data in this manner would allow investors to assess the full magnitude of climate-related risk posed by a registrant’s GHG emissions and the registrant’s plans for managing such risk. This proposed approach also is consistent with the approach taken by the GHG Protocol.<sup>411</sup>

---

<sup>407</sup> *See id.*

<sup>408</sup> The proposed rules would define global warming potential to mean a factor describing the global warming impacts of different greenhouse gases. It is a measure of how much energy will be absorbed in the atmosphere over a specified period of time as a result of the emission of one ton of a greenhouse gas, relative to the emissions of one ton of carbon dioxide (CO<sub>2</sub>). *See* proposed 17 CFR 229.1500(f).

<sup>409</sup> *See* proposed 17 CFR 229.1500(d).

<sup>410</sup> *See* proposed 17 CFR 229.1504(a)(2). The proposed rules would define carbon offsets to represent an emissions reduction or removal of greenhouse gases in a manner calculated and traced for the purpose of offsetting an entity’s GHG emissions. *See* proposed 17 CFR 229.1500(a).

<sup>411</sup> *See* GHG Protocol, *Corporate Accounting and Reporting Standard*, Chapter 9.

Commenters generally supported requiring disclosure of a registrant’s Scope 1 and Scope 2 emissions, with many also supporting disclosure of Scope 3 emissions.<sup>412</sup> A common reason asserted by commenters for requiring GHG emissions disclosure is that quantitative data, such as GHG emissions data, is useful for assessing a registrant’s exposure to climate-related risks and accordingly its ability to transition to a lower carbon economy.<sup>413</sup> Investors that are currently

Associates, Inc. (June 14, 2021); World Benchmarking Alliance; and WBCSD.

<sup>413</sup> See, e.g., letters from Calvert Research and Management; Ceres *et al.*; NY State Comptroller; and SASB.

using GHG emissions data do so because the data provides insight into a registrant’s exposure to climate-related risks, and transition risks in particular—risks that have implications for a registrant’s financial condition and results of operations.<sup>414</sup> An increasing number of investors have identified GHG emissions as material to their investment decision-making and are either purchasing this information from third-party providers or engaging with companies to obtain the information directly. In each situation, there is a lack of consistency, comparability, and reliability in those data that our proposal seeks to address.<sup>415</sup>

Some of these commenters supported requiring disclosure of Scope 1 emissions at the individual greenhouse gas level.<sup>416</sup> Although commenters noted an increase in the voluntary reporting of climate-related disclosure, several also stated that significant gaps remain in the

---

<sup>414</sup> *See, e.g.*, letters from Bloomberg, LP (stating that GHG emissions are critical components of any climate-related financial disclosure scheme, and that understanding the emissions contributions of a company is an important factor for understanding how financially vulnerable they may be to shifts in regulation, technology, and markets during any transition to a lower-carbon economy); CalPers (indicating the use of GHG emissions data by asset managers to evaluate potential transition risks); and Credit Suisse (supporting mandatory disclosure of Scopes 1, 2, and 3 emissions for key industries as such information is critical for financial market participants to have a better understanding of their total climate-related exposure to the highest emitting sectors).

<sup>415</sup> *See, e.g.*, letters from CALSTRS (indicating the use by asset managers of third-party derived climate data, the expense and lack of consistency regarding such data, and the need for publicly available climate data so that the commenter may more efficiently and cost-effectively allocate capital to lower climate risk assets in line with its investment objectives); Credit Suisse (stating that the lack of consistent and reliable climate-related data has created significant challenges in the ability of financial market participants to adequately assess and compare the performance of reporting companies, as well as efficiently allocate capital towards low-carbon solutions); and Norges Bank Investment Management (indicating their reliance on companies’ climate-related data to assess their exposure to the effects of climate and how they manage climate-related risks and opportunities, and stating that the scope and quality of companies’ climate-related disclosures varies significantly and that their climate-related data is often incomplete and/or not comparable).

<sup>416</sup> *See, e.g.*, letters from Amazon Watch and Rainforest Action Network; Dimensional; Friends of the Earth; and ICCR.

disclosure, particularly regarding Scope 3 emissions, which, for certain industries, can comprise a majority of GHG emissions.<sup>417</sup>

Many commenters recommended basing any GHG emissions disclosure requirement on the GHG Protocol.<sup>418</sup> Several of these commenters stated that the GHG Protocol’s framework for reporting GHG emissions, delineated as Scopes 1, 2, and 3 emissions, has become the globally-accepted standard used by numerous companies for reporting their GHG emissions.<sup>419</sup> Commenters also indicated that a mandatory standard for reporting GHG emissions based on the GHG Protocol would help in producing consistent, comparable, and reliable climate-related information for investors.<sup>420</sup> Some commenters also stated that mandating GHG emissions pursuant to a standardized approach, such as the GHG Protocol, would help mitigate instances of greenwashing.<sup>421</sup>

---

<sup>417</sup> *See, e.g.*, letters from Ceres (“In land-intensive sectors, deforestation, forest degradation, and land-use change are important financial risks associated with climate change. In these sectors—for example food and forest management—currently Scope 3 GHG emissions are not regularly disclosed, despite comprising upwards of 90% of emissions from companies.”); *see also* letters from Apple (stating that Scope 3 emissions “represent the overwhelming majority of most companies’ carbon footprint and are therefore critical to include”); Natural Resources Defense Council; NY State Comptroller; and Teachers Insurance and Annuity Association of America.

<sup>421</sup> *See, e.g.*, letters from BNP Paribas; Center for Law and Social Policy (June 15, 2021); and Dimensional Fund Advisors. *See also* Section IV.C below for further discussion of the practice of greenwashing.

Some commenters indicated that the Commission should mandate disclosure of only Scopes 1 and 2 emissions.<sup>422</sup> Other commenters suggested limiting the mandatory disclosure of Scope 3 emissions to registrants in certain industries,<sup>423</sup> larger registrants, or when a registrant's Scope 3 emissions comprise 40 percent of its total emissions.<sup>424</sup> These commenters pointed to difficulties in obtaining the necessary data from third parties and methodological uncertainties as reasons for limiting or not requiring disclosure of Scope 3 emissions. Other commenters and research support a requirement for disclosure of Scope 3 emissions that is independent of an individual company's materiality assessment.<sup>425</sup>

A few commenters stated that the Commission should require the disclosure of only Scope 1 emissions.<sup>426</sup> One commenter stated that this approach would be consistent with the Greenhouse Gas Reporting Program overseen by the EPA, which they stated requires the tracking of facility-level Scope 1 emissions from "large greenhouse gas emitters."<sup>427</sup> Another

<sup>426</sup> See letters from American Petroleum Institute; Virginia Harper Ho; and David Marriage.

<sup>427</sup> See letter from American Petroleum Institute.

commenter opposed a requirement to disclose any GHG emissions, asserting that GHG emissions do not serve as adequate indicators for the actual risks faced by a registrant.<sup>428</sup>

We agree with the many commenters that indicated that GHG emissions disclosure could provide important information for investors to help them evaluate the climate-related risks faced by registrants and to understand better how registrants are planning to mitigate or adapt to those risks.<sup>429</sup> The proposed GHG emissions disclosures could be important to an investor's understanding of other disclosures that would be required by the proposed rules, such as disclosure of the likely impacts of climate-related risks as well as any targets and goals disclosure.<sup>430</sup>

We propose requiring disclosure of registrants' Scopes 1 and 2 emissions because, as several institutional investor commenters stated, investors need and many investors currently use this information to make investment or voting decisions.<sup>431</sup> One of those commenters stated that GHG emissions information serves as the starting point for transition risk analysis because it is quantifiable and comparable across companies and industries.<sup>432</sup> The commenter, an institutional investor, indicated that it uses GHG emissions data to rank companies within industries based on their GHG emissions intensity to better assess transition risk exposure of companies in its portfolio and make informed investment decisions. This commenter also

<sup>432</sup> See Wellington Management Co.

indicated that Scopes 1 and 2 emissions information is more broadly available than Scope 3 emissions data because of the challenges of collecting the latter data.

As previously mentioned, several large institutional investors and financial institutions, which collectively have trillions of dollars in assets under management, have formed initiatives and made commitments to achieve a net-zero economy by 2050, with interim targets set for 2030.<sup>433</sup> These initiatives further support the notion that investors currently need and use GHG emissions data to make informed investment decisions. These investors and financial institutions are working to reduce the GHG emissions of companies in their portfolios or of their counterparties and need GHG emissions data to evaluate the progress made regarding their net-zero commitments and to assess any associated potential asset devaluation or loan default risks.<sup>434</sup> A company's GHG emissions footprint also may be relevant to investment or voting decisions because it could impact the company's access to financing or signal potential changes in its financial planning as governments, financial institutions, and other investors make demands to reduce GHG emissions.

We also agree with commenters that basing the Commission's proposed GHG emissions disclosure rules on concepts used in the GHG Protocol could help provide investors with consistent, comparable, and reliable information about a registrant's GHG emissions.<sup>435</sup> In this regard, we note that several studies have found that GHG emissions data prepared pursuant to the

---

<sup>433</sup> See *supra* Section I.C.1 (discussing, in particular, Climate Action 100+ and GFANZ).

<sup>434</sup> See, e.g., Climate Action 100+, *The Three Asks*.

<sup>435</sup> See *supra* note 420.

GHG Protocol have become the most commonly referenced measurements of a company's exposure to climate-related risks.<sup>436</sup>

However, we are not proposing to adopt all of the features of the GHG Protocol into the Commission's proposed climate-related disclosure rules. As explained in greater detail below, in one significant respect the proposed rules differ from the approach taken by the GHG Protocol regarding the methodology that a registrant would be required to use when calculating its GHG emissions. This difference better suits the U.S. financial reporting regime and the needs of investors.<sup>437</sup> We recognize that the methodologies pertaining to the measurement of GHG emissions, particularly Scope 3 emissions, are evolving. While we expect that many registrants would choose to follow the standards and guidance provided by the GHG Protocol when calculating their GHG emissions, the proposed rules would not require registrants to do so. Allowing for some flexibility in the choice of GHG emissions methodologies would permit registrants to adapt to new approaches, such as those pertaining to their specific industry, as they emerge.

**b. The Treatment of Scopes 1 and 2 Emissions Compared to Scope 3 Emissions**

We are proposing to require all registrants to disclose their Scopes 1 and 2 emissions. Those types of emissions result directly or indirectly from facilities owned or activities controlled by a registrant. The relevant data for calculating Scopes 1 and 2 emissions should be

---

<sup>436</sup> See, e.g., Kauffmann, C., C. Tébar Less and D. Teichmann (2012), *Corporate Greenhouse Gas Emission Reporting: A Stocktaking of Government Schemes*, OECD Working Papers on International Investment, 2012/01, OECD Publishing, at 8, available at <http://dx.doi.org/10.1787/5k97g3x674lq-en> ("For example, the use of scope 1, 2, 3 to classify emissions as defined by the GHG Protocol has become common language and practice today.").

<sup>437</sup> See *infra* Section II.G.2 (discussing the proposed treatment for determining ownership or control for the purpose of setting a registrant's organizational boundaries when measuring its Scopes 1 and 2 emissions).

reasonably available to registrants, and the relevant methodologies are fairly well-developed.

Registrants with large stationary sources of emissions already report Scope 1 emissions data to the EPA, and the EPA provides detailed methodologies for a range of industries with significant Scope 1 emissions.<sup>438</sup> The EPA also provides detailed guidance for the calculation of Scope 2 emissions, which, although classified as “indirect emissions,” are generated by direct activities of the registrant in using purchased energy.<sup>439</sup>

Unlike Scopes 1 and 2 emissions, Scope 3 emissions typically result from the activities of third parties in a registrant’s value chain<sup>440</sup> and thus collecting the appropriate data and calculating these emissions would potentially be more difficult than for Scopes 1 and 2 emissions. At the same time, in many cases Scope 3 emissions disclosure may be necessary to present investors a complete picture of the climate-related risks—particularly transition risks—that a registrant faces and how GHG emissions from sources in its value chain, which are not included in its Scopes 1 and 2 emissions, may materially impact a registrant’s business operations and associated financial performance. Scope 3 emissions can augment the information provided in Scopes 1 and 2 emissions and help to reflect the total emissions associated with a registrant’s operations, including inputs from upstream activities, such as those

---

<sup>438</sup> See EPA, *Direct Emissions from Stationary Combustion Sources* (Dec. 2020), available at <https://www.epa.gov/sites/default/files/2020-12/documents/stationaryemissions.pdf>.

<sup>439</sup> See EPA, *Indirect Emissions from Purchased Electricity* (Dec. 2020), available at <https://www.epa.gov/sites/default/files/2020-12/documents/electricityemissions.pdf>.

<sup>440</sup> As previously mentioned, the proposed rules would define a registrant’s value chain to mean the upstream and downstream activities related to a registrant’s operations. Upstream activities include activities that relate to the initial stages of producing a good or service (e.g., materials sourcing, materials processing, and supplier activities). Downstream activities include activities that relate to processing materials into a finished product and delivering it or providing a service to the end user (e.g., transportation and distribution, processing of sold products, use of sold products, end of life treatment of sold products, and investments). See proposed 17 CFR 229.1500(t).

of its suppliers, and outputs from downstream activities, such as those involving the distribution, use, and disposal of a registrant's products or services.<sup>441</sup>

Scope 3 emissions are indirect, but registrants can and do take steps to limit Scope 3 emissions and the attendant risks. Although a registrant may not own or control the operational activities in its value chain that produce Scope 3 emissions, it nevertheless may influence those activities, for example, by working with its suppliers and downstream distributors to take steps to reduce those entities' Scopes 1 and 2 emissions (and thus help reduce the registrant's Scope 3 emissions) and any attendant risks. As such, a registrant may be able to mitigate the challenges of collecting the data required for Scope 3 disclosure.<sup>442</sup> Such data may reveal changes in a registrant's Scope 3 emissions over time that could be informative for investors in discerning how the registrant is managing transition risks. For example, a registrant could seek to reduce the potential impacts on its business of its upstream emissions by choosing to purchase from more GHG emission-efficient suppliers or by working with existing suppliers to reduce emissions. A registrant could also seek to reduce the potential impacts on its business of downstream emissions by producing products that are more energy efficient or involve less GHG emissions when consumers use them, or by contracting with distributors that use shorter transportation routes. Being able to compare Scope 3 emissions over time could thus be a valuable tool for investors in tracking a registrant's progress in mitigating transition and other climate-related risks.

---

<sup>441</sup> See, e.g., letter from Wellington Management Co.

<sup>442</sup> See, e.g., letter from Apple (referencing its *2021 Environmental Progress Report*, available at [https://www.apple.com/environment/pdf/Apple\\_Environmental\\_Progress\\_Report\\_2021.pdf](https://www.apple.com/environment/pdf/Apple_Environmental_Progress_Report_2021.pdf), which states that 109 suppliers across 24 countries have committed to manufacturing Apple products with 100 percent renewable energy, and indicating Apple's development of detailed life cycle assessment models, which help the company identify its top product component contributors of carbon emissions and facilitate its providing a comprehensive account of its relevant Scope 3 emissions).

To balance the importance of Scope 3 emissions with the potential relative difficulty in data collection and measurement, the proposed rules would require disclosure of Scope 3 emissions only if those emissions are material, or if the registrant has set a GHG emissions reduction target or goal that includes its Scope 3 emissions.<sup>443</sup> As explained in greater detail below, this latter proposed disclosure requirement could assist investors in tracking the progress of the registrant toward reaching the target or goal so that investors can better understand potential associated costs.<sup>444</sup>

Consistent with the Commission’s definition of “material” and Supreme Court precedent, a registrant would be required to disclose its Scope 3 emissions if there is a substantial likelihood that a reasonable investor would consider them important when making an investment or voting decision.<sup>445</sup> In articulating this materiality standard, the Supreme Court recognized that “[d]oubts as to the critical nature” of the relevant information “will be commonplace.” But “particularly in view of the prophylactic purpose” of the securities laws,” and “the fact that the content” of the disclosure “is within management’s control, it is appropriate that these doubts be resolved in favor of those the statute is designed to protect,” namely investors.<sup>446</sup>

When recommending that the Commission require the disclosure of Scope 3 emissions, some commenters indicated that Scope 3 emissions represent the relatively large source of overall GHG emissions for many companies.<sup>447</sup> Given their relative magnitude, we agree that,

---

<sup>443</sup> See proposed 17 CFR 229.1504(c)(1). As explained below, we are also proposing a safe harbor for Scope 3 disclosures. See *infra* Section II.G.3.

<sup>444</sup> See *infra* note 461 and accompanying text.

<sup>445</sup> See *supra* note 209.

<sup>446</sup> *TSC Industries, Inc. v Northway*, 426 U.S. at 448.

<sup>447</sup> See, e.g., letters from Apple; and WK Associates.

for many registrants, Scope 3 emissions may be material to help investors assess the registrants' exposure to climate-related risks, particularly transition risks,<sup>448</sup> and whether they have developed a strategy to reduce their carbon footprint in the face of regulatory, policy, and market constraints.<sup>449</sup>

Scope 3 emissions information may be material in a number of situations to help investors gain a more complete picture of the transition risks to which a registrant may be exposed. In certain industries, a transition to lower-emission products or processes may already be underway, triggered by existing laws or regulations, changes in weather, policy initiatives, a shift in consumer preferences, technological changes, or other market forces, such that financial risks are reasonably foreseeable for registrants in those industries based on the emissions in their value chain. For example, some registrants may need to allocate capital to invest in lower emissions equipment. Investors thus need and use information about the full GHG emissions footprint and intensity of a registrant to determine and compare how exposed a registrant is to the financial risks associated with any transition to lower-emission products.

For example, in the automobile industry, the vast majority of car manufacturers' GHG emissions footprint comes from tailpipe emissions of cars driven by customers, as compared to

---

<sup>448</sup> See, e.g., letter from Wellington Management Co.

<sup>449</sup> See Eric Rosenbaum, *Climate experts are worried about the toughest carbon emissions for companies to capture* (Aug. 18, 2021) ("Scope 3 carbon emissions, or those not part of operations or under direct control, represent the majority of the carbon footprint for most companies, in some cases as high as 85% to 95%"), available at <https://www.cnbc.com/2021/08/18/apple-amazon-exxon-and-the-toughest-carbon-emissions-to-capture.html#:~:text=Scope%203%20carbon%20emissions%2C%20or,as%2085%25%20to%2095%25>. See also MSCI, *Emissions: Seeing the Full Picture* (Sept. 17, 2020) ("For some companies and industries, Scope 3 emissions dominate the overall carbon footprint. For example, the Scope 3 emissions of the integrated oil and gas industry . . . are more than six times the level of its Scope 1 and 2 emissions."), available at <https://www.msci.com/www/blog-posts/scope-3-carbon-emissions-seeing/02092372761>; letter from WK Associates, Inc. (June 14, 2021) (stating that Scope 3 emissions account for approximately 70-90% of lifecycle emissions from oil products and 60-85% of those from natural gas, according to the International Energy Agency).

the emissions from manufacturing the cars.<sup>450</sup> There is already a transition underway to reduce tailpipe emissions through the adoption of stricter fuel efficiency regulations<sup>451</sup> and by governmental initiatives that encourage the manufacture and demand for electric vehicles.<sup>452</sup> Demand for electric vehicles is increasing in the United States and globally,<sup>453</sup> and leading automobile manufacturers have announced plans to increase the manufacture of electric vehicles, with many setting commitments to manufacture all-electric fleets or achieve net-zero emissions.<sup>454</sup> This transition raises financial risks for automobile manufacturers, which can be gauged, in part, by their Scope 3 emissions. Investors can use Scope 3 emissions data concerning a car manufacturer's suppliers and the use of its sold products to assess whether a

---

<sup>450</sup> See, e.g., TCFD, *Guidance on Metrics, Targets, and Transition Plans* (Oct. 2021), Appendix 1, Figure A1-1 (*Importance of Scope 3 GHG Emissions in Certain Sectors*) (showing that, for the automobiles and components sector, the majority of GHG emissions result from downstream product use), available at [https://assets.bbhub.io/company/sites/60/2021/07/2021-Metrics\\_Targets\\_Guidance-1.pdf](https://assets.bbhub.io/company/sites/60/2021/07/2021-Metrics_Targets_Guidance-1.pdf).

<sup>454</sup> See, e.g., Tom Krisher and Aamer Madhani, *US automakers pledge huge increase in electric vehicles*, AP News, Aug. 5, 2021, available at <https://apnews.com/article/technology-joe-biden-business-environment-and-nature-economy-88fe6ca8e333f3d00f6d2e98c6652cea> (reporting that General Motors aspires to sell only electric passenger vehicles by 2035 and Ford and Stellantis (formerly Fiat Chrysler) each expect that 40% of global sales to be electric vehicles by 2030); see also <https://www.caranddriver.com/news/g35562831/ev-plans-automakers-timeline/>; and Jim Motavalli, *Every Automaker's EV Plans Through 2035 And Beyond*, Forbes, Oct. 4, 2021, available at <https://www.forbes.com/wheels/news/automaker-ev-plans/>.

particular manufacturer is taking steps to mitigate or adapt to the risks posed by a transition to lower emission vehicles.

Changes in requirements by financial institutions and institutional investors can present similar financial risks for companies. As many financial institutions and investors begin to set their own GHG emissions reduction goals, they may consider the total GHG emissions footprint of companies that they finance or invest in to build portfolios to meet their goals.<sup>455</sup> Financial institutions and investors may focus on Scopes 1 and 2 emissions for companies in some industries, particularly for industries in which Scopes 1 and 2 represent the majority of companies' total GHG emissions footprint. For other industries, however, Scope 3 emissions represent a relatively significant portion of companies' total GHG footprint, and therefore may reflect a more complete picture of companies' exposure to transition risks than Scopes 1 and 2 emissions alone. For oil and gas product manufacturers, for example, Scope 3 emissions are likely to be material and thus necessary to an understanding of a registrant's climate-related risks.

When assessing the materiality of Scope 3 emissions, registrants should consider whether Scope 3 emissions make up a relatively significant portion of their overall GHG emissions. While we are not proposing a quantitative threshold for determining materiality, we note that some companies rely on, or support reliance on, a quantitative threshold such as 40 percent when assessing the materiality of Scope 3 emissions.<sup>456</sup> However, even when Scope 3 emissions do not represent a relatively significant portion of overall GHG emissions, a quantitative analysis

---

<sup>455</sup> See *supra* Section I.C.1.

<sup>456</sup> See, e.g., letter from Uber Technologies; see also TCFD, *Guidance on Metrics, Targets, and Transition Plans*, at note 40, citing SBTi, *SBTi Criteria and Recommendations* (Oct. 2021), available at <https://sciencebasedtargets.org/resources/files/SBTi-criteria.pdf>.

alone would not suffice for purposes of determining whether Scope 3 emissions are material. Consistent with the concept of materiality in the securities laws, this determination would ultimately need to take into account the total mix of information available to investors, including an assessment of qualitative factors. Accordingly, Scope 3 emissions may make up a relatively small portion of a registrant’s overall GHG emissions but still be material where Scope 3 represents a significant risk, is subject to significant regulatory focus, or “if there is a substantial likelihood that a reasonable [investor] would consider it important.”<sup>457</sup> Moreover, if a materiality analysis requires a determination of future impacts, *i.e.*, a transition risk yet to be realized, then both the probability of an event occurring and its magnitude should be considered. Even if the probability of an adverse consequence is relatively low, if the magnitude of loss or liability is high, then the information in question may still be material.

If a registrant determines that its Scope 3 emissions are not material, and therefore not subject to disclosure, it may be useful to investors to understand the basis for that determination. Further, if a registrant determines that certain categories of Scope 3 emissions are material, registrants should consider disclosing why other categories are not material. If, however, Scope 3 emissions are material, then understanding the extent of a registrant’s exposure to Scope 3 emissions, and the choices it makes regarding them, would be important for investors when making investment or voting decisions.

Several commenters stated that disclosure of a registrant’s Scope 3 emissions is essential to making an informed investment decision because Scope 3 emissions can indicate a registrant’s

---

<sup>457</sup> *TSC Industries v. Northway*, 426 U.S. at 449.

exposure to climate-related transition risks.<sup>458</sup> For example, if policy changes lead to mandatory emissions reductions or carbon pricing, a registrant with high Scope 3 emissions could experience higher costs in sourcing key inputs. Similarly, if consumer preferences change to favor products that are less carbon intensive, a registrant could see a significant change in demand for its products. Registrants that do not account for these risks, or make suboptimal choices regarding them, could become less profitable in the future than registrants that acknowledge these risks and successfully mitigate them.<sup>459</sup> Thus, Scope 3 emissions disclosure could help convey to investors the potential financial risks facing a company related to any transition to a lower carbon economy. With Scope 3 information disclosed, investors would be able to assess, in conjunction with reported financial information, how GHG emissions impact the registrant's operations as well as its overall business strategy so that they can make more informed investment or voting decisions.<sup>460</sup>

Disclosure of Scope 3 emissions could also highlight instances where a registrant attempts to reduce its total Scopes 1 and 2 emissions by outsourcing carbon intensive activities. For example, a registrant could contract out certain high-emissions production activities so that its own Scope 1 or 2 emissions are lower than a similar company that has retained direct ownership and control over more of its production activities. Thus, Scope 3 emissions reporting

---

<sup>458</sup> *See, e.g.*, letters from Confluence Philanthropy; Forum for Sustainable and Responsible Investment; Mirova US LLC; NY City Comptroller; and Wellington Management Co.

<sup>459</sup> *See id.*

<sup>460</sup> For example, registrants that choose to mitigate climate-related risks by undertaking research and development activities to source inputs involving less GHG emissions might incur expenses in the short-term but could achieve potential long-term cost savings by implementing more energy-efficient production processes and avoiding potential penalties imposed by regulation.

could provide greater transparency and help preclude any efforts by registrants to obscure for investors the full magnitude of the climate-related risks associated with their GHG emissions.

The proposed rules would also require a registrant to disclose its Scope 3 emissions if it has set a GHG emissions reduction target or goal that includes Scope 3 emissions.<sup>461</sup> This disclosure requirement would enable investors to understand the scale and scope of actions the registrant may need to take to fulfill its commitment to reduce its Scope 3 emissions and the potential financial impact of that commitment on the registrant. It would also enable an investor to assess the registrant's strategy for meeting its Scope 3 emissions target or goal and its progress towards that target or goal, which may affect the registrant's business.

Scope 3 emissions disclosures would help investors to understand and assess the registrant's strategy. For example, Scope 3 emissions disclosures would allow an investor to better understand how feasible it would be for the registrant to achieve its targets through its current strategy, to track the registrant's progress over time, and to understand changes the registrant may make to its strategy, targets, or goals. Scope 3 emissions disclosures would thus be important to evaluating the financial effects of the registrant's target or goal. In addition, this disclosure could help prevent instances of greenwashing or other misleading claims concerning the potential impact of Scope 3 emissions on a registrant's business because investors, and the market would have access to a quantifiable, trackable metric.

A registrant's Scope 3 emissions disclosure, together with the proposed financial statement metrics, would also enable an investor to assess the efficiency and efficacy of the registrant's actions to achieve its target or goal (*e.g.*, by comparing the registrant's expenditures

---

<sup>461</sup> See proposed 17 CFR 229.1504(c)(1).

or other investments in lower carbon transition activities from year to year with any corresponding reduction in its Scope 3 emissions). If a registrant has a relatively ambitious Scope 3 emissions target, but discloses little investment in transition activities in its financial statements and little or no reduction in Scope 3 emissions from year to year, these disclosures could indicate to investors that the registrant may need to make a large expenditure or significant change to its business operations as it gets closer to its target date, or risk missing its target. Both potential outcomes could have financial ramifications for the registrant and, accordingly, investors.

The proposed disclosure requirement should also give investors the ability to evaluate whether a registrant's target or goal and its plan for achieving that target or goal could have an adverse impact on the registrant. For example, an investor might conclude that the financial costs of a registrant's plan would outweigh any benefits to the business, and factor that into how the registrant's securities fit into the investor's own investment portfolio given the investor's risk tolerance and other investment goals. Thus, the objective of this disclosure is not to drive targets, goals, plans, or conduct, but to provide investors with the tools to assess the implications of any targets, goals, or plans on the registrant in making investment or voting decisions.

This disclosure requirement could also enable investors to better compare firms. For example, two registrants may have the same total GHG emissions and have made the same commitments to reduce total GHG emissions from Scopes 1, 2, and 3 emissions combined. However, if the registrants have different proportions of emissions from Scope 1 and 2 versus Scope 3, investors might determine that there would be different costs and effects for these registrants from their disclosed plans to reduce their overall emissions.

Scope 3 emissions disclosures could also enable investors to better compare registrants' plans to achieve their Scope 3 emissions targets or goals. For example, registrants in the retail industry may have a relatively large portion of their Scope 3 emissions derived from customer travel to the registrant's stores and shipping products or goods to customers or stores. If a registrant in this industry has set Scope 3 emissions targets or goals, in order to meet those targets or goals it may choose to relocate its stores to be closer to public transportation. Another similarly situated registrant may elect to switch to using electric vehicles for shipping. A third similarly situated registrant might elect to take neither action, but instead assume Scope 3 emissions reductions based on customers' change in behavior. Investors could assess the likelihood of each of these three registrants meeting their Scope 3 emissions target or goal—as well as the likely financial and operational impact—which could depend on the amount and type of their Scope 3 emissions. Investors could also compare the potential impacts of these plans on the three different registrants. Without disclosures of the amount and type of Scope 3 emissions, investors would face difficulty assessing the likely impacts of a target or goal that includes Scope 3 emissions on registrants and comparing the relative impacts across registrants.

If required to disclose Scope 3 emissions, a registrant would be required to identify the categories of upstream and downstream activities that have been included in the calculation of its Scope 3 emissions. Consistent with the GHG Protocol,<sup>462</sup> the proposed rules identify several categories of activities that can give rise to Scope 3 emissions. Upstream activities from which Scope 3 emissions might result include:

- A registrant's purchased goods and services;

---

<sup>462</sup> See WBCSD and World Resources Institute, Greenhouse Gas Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard (Sept. 2011).

- A registrant’s capital goods;
- A registrant’s fuel and energy related activities not included in Scope 1 or Scope 2 emissions;
- Transportation and distribution of purchased goods, raw materials, and other inputs;
- Waste generated in a registrant’s operations;
- Business travel by a registrant’s employees;
- Employee commuting by a registrant’s employees; and
- A registrant’s leased assets related principally to purchased or acquired goods or services.<sup>463</sup>

Downstream activities from which Scope 3 emissions might result include:

- Transportation and distribution of a registrant’s sold products, goods or other outputs;
- Processing by a third party of a registrant’s sold products;
- Use by a third party of a registrant’s sold products;
- End-of-life treatment by a third party of a registrant’s sold products;
- A registrant’s leased assets related principally to the sale or disposition of goods or services;
- A registrant’s franchises; and
- Investments by a registrant.<sup>464</sup>

The list of upstream and downstream activities set forth in proposed Item 1500(r) is non-exclusive. If any upstream or downstream activities were significant to the registrant when

---

<sup>463</sup> See proposed 17 CFR 229.1500(r).

<sup>464</sup> See *id.* The “investments” category would capture what are commonly referred to as “financed emissions.”

calculating its Scope 3 emissions, the proposed rules would require it to identify such categories and separately disclose Scope 3 emissions data for each of those categories together with a total of all Scope 3 emissions.<sup>465</sup> For example, an energy company that produces oil and gas products may find that a significant category of activity resulting in Scope 3 emissions relates to the end use of its sold products. A manufacturer might find that a significant category of activities resulting in Scope 3 emissions relate to the emissions of its suppliers in the production of purchased goods or services, the processing of its sold products, or by the fuel consumed by its third-party transporters and distributors of those goods and services and of its sold products. In some cases, the category in which an emissions source belongs may be unclear, or the source might fit within more than one category. In those cases, registrants would need to use their best judgment as to the description of the emissions source and provide sufficient transparency as to the reasoning and methodology to facilitate investor understanding of the emissions category and source.

If required to disclose Scope 3 emissions, a registrant would also be required to describe the data sources used to calculate those emissions, including the use of any of the following:

- Emissions reported by parties in the registrant’s value chain, and whether such reports were verified by the registrant or a third party, or unverified;
- Data concerning specific activities,<sup>466</sup> as reported by parties in the registrant’s value chain; and

---

<sup>465</sup> See proposed 17 CFR 229.1504(c)(1).

<sup>466</sup> Activity data refers to a quantitative measure of a level of activity that results in GHG emissions. Depending on the activity, such data could be expressed, for example, as: liters of fuel consumed; kilowatt-hours of electricity consumed; kilograms of material consumed; kilometers of distance traveled; hours of time operated; square meters of area occupied; kilograms of waste generated; kilograms of product sold; or quantity of money spent. See GHG Protocol, *Corporate Value Chain (Scope 3) Accounting and Reporting Standard*, Chapter 7.

- Data derived from economic studies, published databases, government statistics, industry associations, or other third-party sources outside of a registrant’s value chain, including industry averages of emissions, activities, or economic data.<sup>467</sup>

This information is intended to assist investors in assessing the reliability and accuracy of the registrant’s Scope 3 emissions disclosure. For example, an investor might find emissions data related to the downstream transportation and distribution of a registrant’s sold products more reliable if based on specific distances traveled by the registrant’s transportation and distribution partners and company-specific emissions factors rather than estimates of distances traveled based on industry-average data and using national average emission factors. Although we recognize that a registrant may sometimes need to use industry- and national-average data when calculating its Scope 3 emissions, information about the data sources for its Scope 3 emissions would help investors better understand the risk exposure posed by the registrant’s value chain in comparison with other registrants and make more informed investment decisions.

We acknowledge that a registrant’s material Scope 3 emissions is a relatively new type of metric, based largely on third-party data, that we have not previously required. We are proposing the disclosure of this metric because we believe capital markets have begun to assign financial value to this type of metric, such that it can be material information for investors about financial risks facing a company. Scope 3 emissions disclosure is an integral part of both the TCFD<sup>468</sup> framework and the GHG Protocol,<sup>469</sup> which are widely accepted. It also has been widely recognized that, for some companies, disclosure of just Scopes 1 and 2 emissions could

---

<sup>467</sup> See proposed 17 CFR 229.1504(c)(2).

<sup>468</sup> See, e.g., TCFD, *Guidance on Metrics, Targets, and Transition Plans* (Oct. 2021), Appendix 1.

<sup>469</sup> See, e.g., GHG Protocol, *Corporate Value Chain (Scope 3) Accounting and Reporting Standard*.

convey an incomplete, and potentially misleading, picture.<sup>470</sup> We have attempted to calibrate our proposal to balance investors' demand for this information with the current limitations of the Scope 3 emissions data.

We also recognize, as discussed below, that the reporting of Scope 3 emissions may present more challenges than the reporting of Scopes 1 and 2 emissions. But in light of the fact that a GHG emissions reporting regime may be incomplete without the reporting of Scope 3 emissions, we are proposing to include them, with an appropriate transition period and safe harbor, at the outset. Although we have not proposed to exclude specific upstream or downstream activities from the scope of the proposed Scope 3 disclosure requirement, we have limited the proposed disclosure requirement to those value chain emissions that overall are material. We also have not proposed a bright-line quantitative threshold for the materiality determination as suggested by some commenters<sup>471</sup> because whether Scope 3 emissions are material would depend on the particular facts and circumstances, making it difficult to establish a "one size fits all" standard.

### **Request for Comment**

93. How would investors use GHG emissions disclosures to inform their investment and voting decisions? How would such disclosures provide insight into a registrant's financial condition, changes in financial condition, and results of operations? How would such disclosures help investors evaluate an issuer's climate risk-related exposure? Would such

---

<sup>470</sup> See, e.g., TCFD, *Guidance on Metrics, Targets, and Transition Plans* (Oct. 2021), Appendix 1; and letters from Apple; NY City Comptroller; and Wellington Investment Co.

<sup>471</sup> See, e.g., letter from Catavento Consultancy (stating that Scope 3 emissions disclosure should be mandatory for larger companies and for those in which Scope 3 emissions account for more than 40% of total emissions).

disclosures enable investors to better assess physical risks associated with climate-related events, transition risks, or both types of risks?

94. Should we require a registrant to disclose its GHG emissions both in the aggregate, per scope, and on a disaggregated basis for each type of greenhouse gas that is included in the Commission's proposed definition of "greenhouse gases," as proposed? Should we instead require that a registrant disclose on a disaggregated basis only certain greenhouse gases, such as methane (CH<sub>4</sub>) or hydrofluorocarbons (HFCs), or only those greenhouse gases that are the most significant to the registrant? Should we require disaggregated disclosure of one or more constituent greenhouse gases only if a registrant is obligated to separately report the individual gases pursuant to another reporting regime, such as the EPA's greenhouse gas reporting regime or any foreign reporting regime? If so, should we specify the reporting regime that would trigger this disclosure?

95. We have proposed defining "greenhouse gases" as a list of specific gases that aligns with the GHG Protocol and the list used by the EPA and other organizations. Should other gases be included in the definition? Should we expand the definition to include any other gases to the extent scientific data establishes a similar impact on climate change with reasonable certainty? Should we require a different standard to be met for other greenhouse gases to be included in the definition?

96. Should we require a registrant to express its emissions data in CO<sub>2</sub>e, as proposed? If not, is there another common unit of measurement that we should use? Is it important to designate a common unit of measurement for GHG emissions data, as proposed, or should we permit registrants to select and disclose their own unit of measurement?

97. Should we require a registrant to disclose its total Scope 1 emissions and total Scope 2 emissions separately for its most recently completed fiscal year, as proposed? Are there other approaches that we should consider?

98. Should we require a registrant to disclose its Scope 3 emissions for the fiscal year if material, as proposed? Should we instead require the disclosure of Scope 3 emissions for all registrants, regardless of materiality? Should we use a quantitative threshold, such as a percentage of total GHG emissions (*e.g.*, 25%, 40%, 50%) to require the disclosure of Scope 3 emissions? If so, is there any data supporting the use of a particular percentage threshold? Should we require registrants in particular industries, for which Scope 3 emissions are a high percentage of total GHG emissions, to disclose Scope 3 emissions?

99. Should we require a registrant that has made a GHG emissions reduction commitment that includes Scope 3 emissions to disclose its Scope 3 emissions, as proposed? Should we instead require registrants that have made any GHG emissions reduction commitments, even if those commitments do not extend to Scope 3, to disclose their Scope 3 emissions? Should we only require Scope 3 emissions disclosure if a registrant has made a GHG emissions reduction commitment that includes Scope 3 emissions?

100. Should Scope 3 emissions disclosure be voluntary? Should we require Scope 3 emissions disclosure in stages, *e.g.*, requiring qualitative disclosure of a registrant's significant categories of upstream and downstream activities that generate Scope 3 emissions upon effectiveness of the proposed rules, and requiring quantitative disclosure of a registrant's Scope 3 emissions at a later date? If so, when should we require quantitative disclosure of a registrant's Scope 3 emissions?

101. Should we require a registrant to exclude any use of purchased or generated offsets when disclosing its Scope 1, Scope 2, and Scope 3 emissions, as proposed? Should we require a registrant to disclose both a total amount with, and a total amount without, the use of offsets for each scope of emissions?

102. Should we require a registrant to disclose its Scope 3 emissions for each separate significant category of upstream and downstream emissions as well as a total amount of Scope 3 emissions for the fiscal year, as proposed? Should we only require the disclosure of the total amount of Scope 3 emissions for the fiscal year? Should we require the separate disclosure of Scope 3 emissions only for certain categories of emissions and, if so, for which categories?

103. Should the proposed rules include a different standard for requiring identification of the categories of upstream and downstream emissions, such as if those categories of emissions are significant to total GHG emissions or total Scope 3 emissions? Are there any other categories of, or ways to categorize, upstream or downstream emissions that a registrant should consider as a source of Scope 3 emissions? For example, should we require a registrant to disclose Scope 3 emissions only for categories of upstream or downstream activities over which it has influence or indirect control, or for which it can quantify emissions with reasonable reliability? Are there any proposed categories of upstream or downstream emissions that we should exclude as sources of Scope 3 emissions?

104. Should we, as proposed, allow a registrant to provide their own categories of upstream or downstream activities? Are there additional categories, other than the examples we have identified, that may be significant to a registrant's Scope 3 emissions and that should be listed in the proposed rule? Are there any categories that we should preclude, *e.g.*, because of lack of accepted methodologies or availability of data? Would it be useful to allow registrants to add

categories that are particularly significant to them or their industry, such as Scope 3 emissions from land use change, which is not currently included in the Greenhouse Gas Protocol's Scope 3 categories? Should we specifically add an upstream emissions disclosure category for land use?

105. Should we require the calculation of a registrant's Scope 1, Scope 2, and/or Scope 3 emissions to be as of its fiscal year end, as proposed? Should we instead allow a registrant to provide its GHG emissions disclosures according to a different timeline than the timeline for its Exchange Act annual report? If so, what should that timeline be? For example, should we allow a registrant to calculate its Scope 1, Scope 2, and/or Scope 3 emissions for a 12-month period ending on the latest practicable date in its fiscal year that is no earlier than three months or, alternatively, six months prior to the end of its fiscal year? Would allowing for an earlier calculation date alleviate burdens on a registrant without compromising the value of the disclosure? Should we allow such an earlier calculation date only for a registrant's Scope 3 emissions? Would the fiscal year end calculations required for a registrant to determine if Scope 3 emissions are material eliminate the benefits of an earlier calculation date? Should we instead require a registrant to provide its GHG emissions disclosures for its most recently completed fiscal year one, two, or three months after the due date for its Exchange Act annual report in an amendment to that report?

106. Should we require a registrant that is required to disclose its Scope 3 emissions to describe the data sources used to calculate the Scope 3 emissions, as proposed? Should we require the proposed description to include the use of: (i) emissions reported by parties in the registrant's value chain, and whether such reports were verified or unverified; (ii) data concerning specific activities, as reported by parties in the registrant's value chain; and (iii) data derived from economic studies, published databases, government statistics, industry associations,

or other third-party sources outside of a registrant's value chain, including industry averages of emissions, activities, or economic data, as proposed? Are there other sources of data for Scope 3 emissions the use of which we should specifically require to be disclosed? For purposes of our disclosure requirement, should we exclude or prohibit the use of any of the proposed specified data sources when calculating Scope 3 emissions and, if so, which ones?

107. Should we require a registrant to provide location data for its disclosed sources of Scope 1, Scope 2, and Scope 3 emissions if feasible? If so, should the feasibility of providing location data depend on whether it is known or reasonably available pursuant to the Commission's existing rules (Securities Act Rule 409 and Exchange Act Rule 12b-21)? Would requiring location data, to the extent feasible, assist investors in understanding climate-related risks, and in particular, likely physical risks, associated with a registrant's emissions' sources? Would a requirement to disclose such location data be duplicative of any of the other disclosure requirements that we are proposing?

108. If we require a registrant to provide location data for its GHG emissions, how should that data be presented? Should the emissions data be grouped by zip code separately for each scope? Should the disclosure be presented in a cartographic data display, such as what is commonly known as a "heat map"? If we require a registrant to provide location data for its GHG emissions, should we also require additional disclosure about the source of the emissions?

**c. GHG Intensity**

In addition to requiring the disclosure of its GHG emissions in gross terms, the proposed rules would also require a registrant to disclose the sum of its Scopes 1 and 2 emissions in terms

of GHG intensity.<sup>472</sup> If required to disclose Scope 3 emissions, a registrant would also be required to separately disclose its Scope 3 emissions in terms of GHG intensity.<sup>473</sup> GHG intensity disclosure should provide context to a registrant’s emissions in relation to its business scale (*e.g.*, emissions per economic output). For example, car manufacturer A may generate more emissions in terms of CO<sub>2</sub>e than car manufacturer B; however, when analyzing an intensity metric (emissions per unit of production), it becomes apparent that car manufacturer A actually has a lower emission rate per car produced than car manufacturer B, which indicates a registrant’s emission efficiency. Because emission efficiency can be a potential indicator of the likelihood of the registrant being impacted by transition risks, such GHG intensity disclosure could provide decision-useful information to investors. In addition, the proposed GHG intensity disclosure would provide a standardized method for presenting such measure of efficiency across registrants, which should facilitate comparability of the registrant’s emissions efficiency over time.

The proposed rules would define “GHG intensity” (or “carbon intensity”) to mean a ratio that expresses the impact of GHG emissions per unit of economic value (*e.g.*, metric tons of CO<sub>2</sub>e per unit of total revenues, using the registrant’s reporting currency) or per unit of production (*e.g.*, metric tons of CO<sub>2</sub>e per unit of product produced).<sup>474</sup> For purposes of standardizing the disclosure and facilitating its comparability, we are proposing to require the disclosure of GHG intensity in terms of metric tons of CO<sub>2</sub>e per unit of total revenue and per unit

---

<sup>472</sup> See proposed 17 CFR 229.1504(d)(1).

<sup>473</sup> See proposed 17 CFR 229.1504(d)(2). The proposed safe harbor for Scope 3 emissions disclosure would apply to this proposed GHG intensity metric for Scope 3 emissions. See *infra* Section II.C.3.

<sup>474</sup> See proposed 17 CFR 229.1500(i). We derived this proposed definition from the GHG Protocol. See GHG Protocol, *A Corporate Accounting and Reporting Standard*, Chapter 9.

of production for the fiscal year.<sup>475</sup> Total revenue is one of the most commonly used and understood financial metrics when investors analyze a registrant's financial results and applies to most registrants (depending on the nature and maturity of the business) and therefore would be a good common denominator for the intensity calculation. The selected unit of production should be relevant to the registrant's industry to facilitate investor comparison of the GHG intensity of companies within an industry without regard to registrant size. Investors may find such a comparison to be useful to making informed investment decisions to the extent that a registrant within a particular industry that has a lower GHG intensity relative to its peers that face fewer climate-related risks.

If the registrant has no revenue for a fiscal year, it would be required to calculate its GHG intensity with another financial measure (*e.g.*, total assets), with an explanation of why the particular measure was used. Similarly, if the registrant does not have a unit of production, it would be required to calculate its GHG intensity with another measure of economic output, depending on the nature of its business (*e.g.*, data processing capacity, volume of products sold, or number of occupied rooms) with an explanation of why the particular measure was used.<sup>476</sup>

A registrant could also voluntarily disclose other additional measures of GHG intensity, including non-financial measures such as economic output, provided it includes an explanation of the reasons why those particular GHG intensity measures were used and why the registrant believes such measures provide useful information to investors.<sup>477</sup> In all cases, the registrant

---

<sup>475</sup> See proposed 17 CFR 229.1504(d)(1).

<sup>476</sup> See proposed 17 CFR 229.1504(d)(3).

<sup>477</sup> See proposed 17 CFR 229.1504(d)(4).

would be required to disclose the methodology and other information required pursuant to the proposed GHG emissions metrics instructions.<sup>478</sup>

### **Request for Comment**

109. Should we require a registrant to disclose the intensity of its GHG emissions for the fiscal year, with separate calculations for (i) the sum of Scope 1 and Scope 2 emissions and, if applicable (ii) its Scope 3 emissions (separately from Scopes 1 and 2), as proposed? Should we define GHG intensity, as proposed? Is there a different definition we should use for this purpose?

110. Should we require the disclosed GHG intensity to be expressed in terms of metric tons of CO<sub>2</sub>e per unit of total revenue, as proposed? Should we require a different financial measure of GHG intensity and, if so, which measure? For example, should GHG intensity be expressed in terms of metric tons of CO<sub>2</sub>e per unit of total assets?

111. Should we require the disclosed GHG intensity to be expressed in terms of metric tons of CO<sub>2</sub>e per unit of production, as proposed? Would such a requirement facilitate the comparability of the disclosure? Should we require a different economic output measure of GHG intensity and, if so, which measure? For example, should GHG intensity be expressed in terms of metric tons of CO<sub>2</sub>e per number of employees? Should we require the GHG intensity to be expressed per unit of production relevant to the registrant's business (rather than its industry)? Is further guidance needed on how to comply with the proposed requirement? Would requiring GHG intensity to be expressed in terms of metrics tons of CO<sub>2</sub>e per unit of production require disclosure of commercially sensitive or competitively harmful information?

---

<sup>478</sup> See proposed 17 CFR 229.1504(e)(1) and *infra* Section II.G.2 for the proposed disclosure requirements pertaining to GHG emissions methodology.

112. Should we require a registrant with no revenue or unit of production for a fiscal year to disclose its GHG intensity based on, respectively, another financial measure or measure of economic output, as proposed? Should we require such a registrant to use a particular financial measure, such as total assets, or a particular measure of economic output, such as total number of employees? For registrants who may have minimal revenue, would the proposed calculation result in intensity disclosure that is confusing or not material? Should additional guidance be provided with respect to such instances?

113. Should we permit a registrant to disclose other measures of GHG intensity, in addition to the required measures, as long as the registrant explains why it uses the particular measure of GHG intensity and discloses the corresponding calculation methodology used, as proposed?

**d. GHG Emissions Data for Historical Periods**

The proposed rules would require disclosure to be provided for the registrant's most recently completed fiscal year and for the historical fiscal years included in the registrant's consolidated financial statements in the applicable filing, to the extent such historical GHG emissions data is reasonably available.<sup>479</sup> Requiring historical GHG emissions data, to the extent available, would provide useful information for investors by enabling investors to track over time the registrant's exposure to climate-related impacts represented by the yearly emissions data, and to assess how it is managing the climate-related risks associated with those impacts. Requiring GHG emissions disclosure for current and, when reasonably available, historical periods should enable investors to analyze trends in the impacts of material climate-related risks and to evaluate the narrative disclosure provided pursuant to proposed Item 1502.<sup>480</sup> Historical GHG emissions

---

<sup>479</sup> See proposed 17 CFR 229.1504(a).

<sup>480</sup> See *supra* Section II.C for a discussion of proposed 17 CFR 229.1502.

data also could be particularly useful when a registrant has announced a target or goal for reducing GHG emissions by a certain date by helping investors assess its progress in meeting that target or goal and the related impacts on the registrant.

Linking the required number of years of historical GHG emissions data to the historical periods required in the consolidated financial statements should benefit investors by requiring emissions data that is consistent with the financial statement metrics in the filing. This should help investors connect GHG emissions with the financial performance of a registrant in the same period, including the proposed financial statement metrics. Moreover, although we are not proposing to require the GHG emissions data to be included in the registrant's consolidated financial statements, we nevertheless believe that the GHG emissions data is relevant to, and would be read in conjunction with, information included in the consolidated financial statements. Just as data about a registrant's revenues and expenses on its income statement reflect its activities in financial terms for a given year, a registrant's emissions data reflect its carbon footprint activities for that year. For this reason, we have proposed requiring a registrant to provide its GHG emissions data for the same number of years as it is required to provide data on its income statement and cash flow statement, to the extent such emissions data is reasonably available. For example, a registrant that is required to include income statements and cash flow statements at the end of its three most recent fiscal years would be required to disclose three years of its Scope 1, Scope 2 and, if material to the registrant or if it has set a GHG emissions target or goal that includes its Scope 3 emissions, its Scope 3 emissions, expressed both in

absolute terms and in terms of intensity.<sup>481</sup> If the registrant is a SRC, only two years of Scopes 1 and 2 emissions metrics would be required.<sup>482</sup>

A registrant, however, would not otherwise be required to provide a corresponding GHG emissions metric for a fiscal year preceding its current reporting fiscal year if, for example, it was not required to and has not previously presented such metric for such fiscal year and the historical information necessary to calculate or estimate such metric is not reasonably available to the registrant without unreasonable effort or expense.<sup>483</sup>

### **Request for Comment**

114. Should we require GHG emissions disclosure for the registrant's most recently completed fiscal year and for the appropriate, corresponding historical fiscal years included in the registrant's consolidated financial statements in the filing, to the extent such historical GHG emissions data is reasonably available, as proposed? Should we instead only require GHG emissions metrics for the most recently completed fiscal year presented in the relevant filing? Would requiring historical GHG emissions metrics provide important or material information to investors, such as information allowing them to analyze trends?

## **2. GHG Emissions Methodology and Related Instructions**

The proposed rules would require a registrant to describe the methodology, significant inputs, and significant assumptions used to calculate its GHG emissions metrics.<sup>484</sup> As proposed, the description of the registrant's methodology must include the registrant's organizational

---

<sup>481</sup> Alternatively, if a registrant has no revenue, and it decides to calculate GHG intensity using total assets, we believe it would be appropriate for that registrant to provide its GHG intensity for the same number of years as are required on its balance sheets (*i.e.*, two years if not a SRC).

<sup>482</sup> We are proposing to exempt SRCs from Scope 3 disclosures. *See infra* Section II.G.3.

<sup>483</sup> *See* Securities Act Rule 409 and Exchange Act Rule 12b-21.

<sup>484</sup> *See* proposed 17 CFR 229.1504(e)(1).

boundaries, operational boundaries, calculation approach, and any calculation tools used to calculate the registrant's GHG emissions.<sup>485</sup> Organizational boundaries would be defined to mean the boundaries that determine the operations owned or controlled by a registrant for the purpose of calculating its GHG emissions.<sup>486</sup> Operational boundaries would be defined to mean the boundaries that determine the direct and indirect emissions associated with the business operations owned or controlled by a registrant.<sup>487</sup> This information should help investors understand the scope of a registrant's operations included in its GHG emissions metrics and how those metrics were measured. With this information, investors could more knowledgeably compare a registrant's GHG emissions metrics with the GHG emissions metrics of other registrants and make more informed investment decisions.

**a. The Setting and Disclosure of Organizational Boundaries**

The proposed rules would require a registrant to disclose its Scope 1 emissions and its Scope 2 emissions separately after calculating them from all sources that are included in the registrant's organizational and operational boundaries.<sup>488</sup> An initial step for many registrants may be to set their organizational boundaries.<sup>489</sup> Those boundaries determine the business operations owned or controlled by a registrant to be included in the calculation of its GHG emissions.<sup>490</sup> Because both Scope 1 and Scope 2 emissions relate to the operations owned or

---

<sup>485</sup> *See id.*

<sup>486</sup> *See* proposed 17 CFR 229.1500(m).

<sup>487</sup> *See* proposed 17 CFR 229.1500(l).

<sup>488</sup> *See* proposed 17 CFR 229.1504(b)(1).

<sup>489</sup> *See* GHG Protocol, Corporate Accounting and Reporting Standard, Chapter 3.

<sup>490</sup> *See* proposed 17 CFR 229.1500(m).

controlled by a registrant, setting a registrant's organizational boundaries is an important part of determining its Scopes 1 and 2 emissions.

Several commenters stated that the GHG Protocol's standards and guidance would provide an appropriate framework for reporting GHG emissions if the Commission required disclosure of GHG emissions.<sup>491</sup> A company following the GHG Protocol would base its organizational boundaries on either an equity share approach or a control approach.<sup>492</sup> Our proposed approach, however, would require a registrant to set the organizational boundaries for its GHG emissions disclosure using the same scope of entities, operations, assets, and other holdings within its business organization as those included in, and based upon the same set of accounting principles applicable to, its consolidated financial statements.<sup>493</sup>

For similar reasons to those noted above regarding the proposed time periods required for GHG emissions disclosure, we propose requiring the scope of consolidation and reporting to be consistent for financial data and GHG emissions data. This would be accomplished by applying existing GAAP.<sup>494</sup> Requiring a consistent approach should help avoid potential investor confusion about the reporting scope used in determining a registrant's GHG emissions and the reporting scope used for the financial statement metrics, which are included in the financial statements. Applying existing GAAP could help limit the compliance burden for registrants as

---

<sup>491</sup> See *supra* note 111.

<sup>492</sup> Under the GHG Protocol's equity share approach, a company accounts for GHG emissions from operations according to its share of equity in the operation. Under the GHG Protocol's control approach, a company accounts for 100% of the GHG emissions from operations over which it has control. A company can choose to define control either in financial or operational terms. See *GHG Protocol, Corporate Accounting and Reporting Standard*, Chapter 3.

<sup>493</sup> See proposed 17 CFR 229.1504(e)(2).

<sup>494</sup> Foreign private issuers that file consolidated financial statements under IFRS as issued by the IASB would apply IFRS under the proposed rules as the basis for setting its organizational boundaries for the purpose of providing the proposed GHG emissions disclosure.

they would be able to use familiar concepts from financial reporting when preparing their required GHG emissions disclosures. Requiring registrants to follow the scope of reporting used in their financial statements should also enhance comparability across registrants when compared with the multiple options available under the GHG Protocol.

Thus, as proposed, the scope of reporting for a registrant’s GHG emissions metrics would be consistent with the scope of reporting for the proposed financial statement metrics and other financial data included in its consolidated financial statements in order to provide investors a consistent view of the registrant’s business across its financial and GHG emissions disclosures. For example, a registrant that prepares its financial statements pursuant to U.S. GAAP would apply relevant guidance from U.S. GAAP (e.g., FASB ASC Topic 810 *Consolidation* and FASB ASC Topic 323 *Investments –Equity Method and Joint Ventures*) when determining which entities would be subject to consolidation or which investments qualify for equity method accounting or proportionate consolidation.<sup>495</sup> Therefore, under the proposed rules a registrant would be required to include all of the emissions from an entity that it consolidates.<sup>496</sup> For an equity method investee or an operation that is proportionally consolidated, the registrant would be required to include its share of emissions based on its percentage ownership of such investee or operation.<sup>497</sup> For a registrant that applies the equity method to an investee, the percentage of ownership interest used to record its share of earnings or losses in the investee must be the same

---

<sup>495</sup> Issuers that are permitted to, and do, apply IFRS issued by the International Accounting Standards Board would apply the IASB’s equivalent standards. *See, e.g.,* IFRS 10 *Consolidated Financial Statements*, IFRS 11 *Joint Arrangements* and International Accounting Standards (“IAS”) 28 *Investments in Associates and Joint Ventures*. *See supra* note 319, which states that foreign private issuers that file consolidated financial statements under home country GAAP and reconcile to U.S. GAAP, would be required to use U.S. GAAP as the basis for calculating and disclosing the proposed climate-related financial statement metrics. The same requirement would apply for the purpose of determining the proposed GHG emissions metrics.

<sup>496</sup> *See* proposed 17 CFR 229.1504(e)(2).

<sup>497</sup> *See id.*

for measuring its share of GHG emissions by the equity method investee.<sup>498</sup> The proposed rules would permit a registrant to exclude emissions from investments that are not consolidated, are not proportionately consolidated, or that do not qualify for the equity method of accounting in the registrant's consolidated financial statements.<sup>499</sup>

For example, a registrant might own or control several plants but have only a minority ownership in another plant over which it has no control. For the plants that are owned or controlled by the registrant, all of those plants' direct and indirect emissions should be included in its Scopes 1 and 2 emissions disclosure (regardless of ownership percentage that resulted in consolidation for financial statement purposes).<sup>500</sup> If the registrant's proportional interest in the latter plant is reflected in its consolidated financial statements (*e.g.*, the investment qualifies for the equity method or a proportionate consolidation approach), when calculating its Scopes 1 and 2 emissions the registrant should include such proportional share (based on ownership interest) of that plant's emissions in the total of each of its Scopes 1 and 2 emissions.<sup>501</sup>

A related provision under the proposed rules would require a registrant to use the same organizational boundaries when calculating its Scope 1 emissions and Scope 2 emissions<sup>502</sup> since both sets of emissions relate to operations that a registrant owns or controls. If required to disclose its Scope 3 emissions, a registrant would also be required to apply the same organizational boundaries used when determining its Scopes 1 and 2 emissions as an initial step

---

<sup>499</sup> *See* proposed 17 CFR 229.1504(b)(2).

<sup>500</sup> *See* proposed 17 CFR 229.1500(m) (defining organizational boundaries as the boundaries that determine the operations owned or controlled by a registrant) and 17 CFR 229.1504(b)(1) (requiring the disclosure of Scopes 1 and 2 emissions separately after calculating them from all sources included in a registrant's organizational and operational boundaries).

<sup>501</sup> *See* proposed 17 CFR 229.1504(e)(2).

<sup>502</sup> *See* proposed 17 CFR 229.1504(e)(3).

in identifying the sources of indirect emissions from activities in its value chain over which it lacks ownership and control and which must be included in the calculation of its Scope 3 emissions.<sup>503</sup> Requiring a registrant to use the same organizational boundaries when calculating its Scopes 1, 2 and 3 emissions should help limit investor confusion over those operations or activities over which it has ownership or control (sources of its Scopes 1 and 2 emissions) and those activities in its value chain over which it lacks ownership or control (sources of its Scope 3 emissions). The proposed provision also would provide that, once a registrant has determined its organizational (and operational) boundaries, it must consistently use those boundaries when calculating its GHG emissions.<sup>504</sup> This proposed provision should help investors track and compare a registrant's GHG emissions over time.

**b. The Setting and Disclosure of Operational Boundaries**

When describing the methodology, significant inputs, and significant assumptions used to calculate its GHG emissions metrics, a registrant is required to describe its operational boundaries.<sup>505</sup> This would involve identifying emissions sources within its plants, offices, and other operational facilities that fall within its organizational boundaries, and then categorizing the emissions as either direct or indirect emissions. For example, a registrant might have direct emissions from one or more of the following sources that it owns or controls:

- Stationary equipment (from the combustion of fuels in boilers, furnaces, burners, turbines, heaters, and incinerators);

---

<sup>503</sup> *See id.*

<sup>504</sup> *See id.*

<sup>505</sup> *See* proposed Item 1504(e)(1).

- Transportation (from the combustion of fuels in automobiles, trucks, buses, trains, airplanes, boats, ships, and other vessels);
- Manufacturing processes (from physical or chemical processes, such as CO<sub>2</sub> from the calcination process in cement manufacturing or from catalytic cracking in petrochemical processing, and PFC emissions from aluminum smelting); and
- Fugitive emission sources (equipment leaks from joints, seals, packing, gaskets, coal piles, wastewater treatment, pits, cooling towers, and gas processing facilities, and other unintentional releases).<sup>506</sup>

Most registrants would likely have emission sources from stationary equipment and transportation devices. Registrants in certain industrial sectors, such as cement, aluminum, and other manufacturers, or oil and gas production and refining, are likely also to produce emissions from physical or chemical processes. Some registrants would likely have emissions from all four types of sources, particularly if they have their own power generation or waste treatment facilities.<sup>507</sup>

The proposed rules would require a registrant to include its approach to categorizing its emissions and emissions sources when describing its methodology to determine its operational boundaries.<sup>508</sup> A registrant could use the above non-exclusive list of emissions sources or other categories of emissions sources as long as it describes how it determined the emissions to include as direct emissions, for the purpose of calculating its Scope 1 emissions, and indirect emissions,

---

<sup>506</sup> This non-exclusive list of possible emissions sources is based on categories of emissions sources provided in the GHG Protocol. *See* GHG Protocol, *Corporate Accounting and Reporting Standard*, Chapter 6.

<sup>507</sup> *See id.*

<sup>508</sup> *See* proposed 17 CFR 229.1504(e)(1).

for the purpose of calculating its Scope 2 emissions.<sup>509</sup> For most registrants, purchased electricity would likely constitute a large percentage of their Scope 2 emissions. Although Scope 2 emissions are generated from a source external to a registrant, the electricity (or steam, heat, or cooling) is consumed by the registrant's operations that it owns or controls.

**c. The Selection and Disclosure of a GHG Emissions Calculation Approach, including Emission Factors**

In addition to setting its organizational and operational boundaries, a registrant would need to select a GHG emissions calculation approach. While the direct measurement of GHG emissions from a source by monitoring concentration and flow rate is likely to yield the most accurate calculations, due to the expense of the direct monitoring of emissions, an acceptable and common method for calculating emissions involves the application of published emission factors to the total amount of purchased fuel consumed by a particular source.<sup>510</sup> The proposed rules would define “emission factor” as a multiplication factor allowing actual GHG emissions to be calculated from available activity data or, if no activity data is available, economic data, to derive absolute GHG emissions.<sup>511</sup> Emission factors are ratios that typically relate GHG emissions to a proxy measure of activity at an emissions source. Examples of activity data reflected in emission factors include kilowatt-hours of electricity used, quantity of fuel used, output of a process, hours of operation of equipment, distance travelled, and floor area of a building.<sup>512</sup> If no activity data is available, a registrant may use an emission factor based on economic data.<sup>513</sup> For example,

---

<sup>509</sup> *See id.*

<sup>510</sup> *See, e.g.,* GHG Protocol, Corporate Accounting and Reporting Standard, Chapter 6.

<sup>511</sup> *See* proposed 17 CFR 229.1500(e).

<sup>512</sup> *See id.*

<sup>513</sup> *See id.*

when calculating Scope 3 emissions from purchased goods or services, a registrant could determine the economic value of the goods or services purchased and multiply it by an industry average emission factor (expressed as average emissions per monetary value of goods or services).<sup>514</sup>

The EPA has published a set of emission factors based on the particular type of source (e.g., stationary combustion, mobile combustion, refrigerants, and electrical grid, among others) and type of fuel consumed (e.g., natural gas, coal or coke, crude oil, and kerosene, among many others).<sup>515</sup> The GHG Protocol’s own set of GHG emission calculation tools are based in part on the EPA’s emission factors.<sup>516</sup> Whatever set of emission factors a registrant chooses to use, it must identify the emission factors and its source.<sup>517</sup>

After a registrant has selected a calculation approach (i.e., direct measurement or application of emissions factors), the registrant would determine what data must be collected and how to conduct the relevant calculations, including whether to use any publicly-available calculation tools. In this regard, we note that there are a number of publicly-available calculation

---

<sup>514</sup> See, e.g., Greenhouse Gas Protocol, *Corporate Value Chain (Scope 3) Accounting and Reporting Standard, Supplement to the GHG Protocol Corporate Accounting and Reporting Standard*, Chapter 1 (describing the “spend-based method” for calculating emissions from purchased goods or services).

<sup>515</sup> See EPA, [Emission Factors for Greenhouse Gas Inventories](https://www.epa.gov/sites/default/files/2021-04/documents/emission-factors_apr2021.pdf) (Apr. 2021), available at [https://www.epa.gov/sites/default/files/2021-04/documents/emission-factors\\_apr2021.pdf](https://www.epa.gov/sites/default/files/2021-04/documents/emission-factors_apr2021.pdf).

<sup>516</sup> See, e.g., The Greenhouse Gas Protocol, *GHG Emission Calculation Tool* (Mar. 2021), available at <https://ghgprotocol.org/calculation-tools>.

<sup>517</sup> See proposed 17 CFR 229.1504(e)(1).

tools a registrant may elect to utilize in determining its GHG emissions.<sup>518</sup> Finally, a registrant would gather and report GHG emissions up to the corporate level.

For example, when determining its Scope 1 emissions for a particular plant, a registrant might add up the amount of natural gas consumed by furnaces and other stationary equipment during its most recently completed fiscal year and then apply the CO<sub>2</sub> emission factor for natural gas to that total amount to derive the amount of GHG emissions expressed in CO<sub>2</sub>e. The registrant would repeat this process for each type of fuel consumed and for each type of source. If a registrant owns a fleet of trucks, it might total the amount of diesel fuel or other type of gasoline consumed for the fiscal year and apply the appropriate CO<sub>2</sub> emission factor for that vehicle and type of fuel. A registrant that uses refrigerants also might apply the appropriate emission factor for the particular type of refrigerant to the total amount of that refrigerant used during the fiscal year. As part of the roll-up process for a registrant with multiple entities and emission sources, once it has determined the amount of CO<sub>2</sub>e for each type of direct emissions source and for each facility within its organizational and operational boundaries, the registrant would then add them together to derive the total amount of Scope 1 emissions for the fiscal year.<sup>519</sup>

---

<sup>518</sup> See, e.g., GHG Protocol, *Corporate Accounting and Reporting Standard, Chapter 6* (providing an overview of calculation tools by type of source (e.g., for stationary combustion, mobile combustion, and air conditioning and refrigeration use) and by sector (e.g., for aluminum production, iron and steel production, cement manufacturing, and pulp and paper production), which are available on the GHG Protocol website at <https://ghgprotocol.org/>). The EPA also has published a Simplified GHG Emissions Calculator that is designed as a simplified calculation tool to help small businesses and low emitter organizations estimate and inventory their annual GHG emissions. See EPA, *Simplified GHG Emissions Calculator (2021)*, available at <https://www.epa.gov/climateleadership/simplified-ghg-emissions-calculator>.

<sup>519</sup> As noted earlier, a registrant that is required to report its direct emissions to the EPA may be able to use the EPA-provided data, together with data for any direct emissions not reported to the EPA, to help fulfill the Commission's proposed Scope 1 emission disclosure requirement.

A registrant would undergo a similar process when calculating its Scope 2 emissions for its most recently completed fiscal year. There are two common methods for calculating Scope 2 emissions for purchased electricity: the market-based method and the location-based method.<sup>520</sup> Pursuant to the market-based method, a registrant would calculate its Scope 2 emissions based on emission factors and other data provided by the generator of electricity from which the registrant has contracted to purchase the electricity and which are included in the contractual instruments. Pursuant to the location-based method, a registrant would calculate its Scope 2 emissions based on average energy generation emission factors for grids located in defined geographic locations, including local, subnational, or national boundaries.<sup>521</sup> A registrant could use either of these methods, both methods, a combination, or another method as long as it identifies the method used and its source.<sup>522</sup> For example, if using the location-based method, the registrant would apply an appropriate emission factor for the electricity grid in its region to the total amount of electricity purchased from that grid during its fiscal year.<sup>523</sup> The registrant would then calculate the amount of CO<sub>2</sub>e from purchased steam/heat, if any, by applying the appropriate emission factor for that type of energy source to the total amount consumed.<sup>524</sup> The

---

<sup>520</sup> See World Resources Institute, *GHG Protocol Scope 2 Guidance* (2015), Chapter 4, available at [https://ghgprotocol.org/sites/default/files/standards/Scope%202%20Guidance\\_Final\\_Sept26.pdf](https://ghgprotocol.org/sites/default/files/standards/Scope%202%20Guidance_Final_Sept26.pdf).

<sup>521</sup> See *id.*

<sup>522</sup> We note that, pursuant to the GHG Protocol, and as referenced by the EPA, a company that determines its Scope 2 emissions using a market-based approach would also calculate those emissions using the location-based method to provide a more complete picture of the company's Scope 2 emissions. See World Resources Institute, *GHG Protocol Scope 2 Guidance*, Chapter 7; and EPA Center for Corporate Climate Leadership, *Scope 1 and Scope 2 Inventory Guidance*.

<sup>523</sup> See, e.g., EPA, *Emission Factors for Greenhouse Gas Inventories*, Table 6, which provides emission factors for regional electrical grids.

<sup>524</sup> See, e.g., EPA, *Emission Factors for Greenhouse Gas Inventories*, Table 7, which provides emission factors for steam and heat.

registrant would report the sum of its CO<sub>2</sub>e from purchased electricity and steam/heat as its total Scope 2 emissions for the fiscal year.

As noted above, in all instances a registrant would be required to describe its methodology, including its organizational and operational boundaries, calculation approach (including any emission factors used and the source of the emission factors), and any calculation tools used to calculate the GHG emissions.<sup>525</sup> Requiring a registrant to describe its methodology for determining its GHG emissions should provide investors with important information to assist them in evaluating the registrant's GHG emissions disclosure as part of its overall business and financial disclosure. Such disclosure should enable investors to evaluate the reasonableness and accuracy of the emission disclosures, and should promote consistency and comparability over time. For example, an investor would be able to evaluate both if the registrant's selection of an emission factor is reasonable given the registrant's industry sector and whether changes in reported emissions reflect changes in actual emissions in accordance with its strategy or simply a change in calculation methodology.

Like registrants in other sectors, registrants in the financial sector would be required to disclose their Scope 3 emissions if those emissions are material and to describe the methodology used to calculate those emissions. A financial registrant's Scope 3 emissions disclosures would likely include the emissions from companies that the registrant provides debt or equity financing to ("financed emissions"). While financial registrants may use any appropriate methodology to calculate its Scope 3 emissions, the Partnership for Carbon Accounting Financials' Global GHG Accounting & Reporting Standard (the "PCAF Standard") provides one methodology that

---

<sup>525</sup> See proposed 17 CFR 229.1504(e)(1).

complements the GHG Protocol and assists financial institutions in calculating their financed emissions.<sup>526</sup> The PCAF Standard was developed to work with the calculation of Scope 3 emissions for the “investment” category of downstream emissions and was endorsed by the drafters of the GHG Protocol.<sup>527</sup> The PCAF Standard covers six asset classes: listed equity and corporate bonds; business loans and unlisted equity; project finance; commercial real estate; mortgages; and motor vehicle loans.<sup>528</sup>

At this time, we are not proposing to require a particular methodology for the financial sector in order to provide a financial sector registrant the flexibility to choose the methodology that best suits its particular portfolio and financing activities. We believe the proposed requirement to disclose the methodology used (*e.g.*, the PCAF Standard or another standard) would provide sufficient information to an investor.

#### **d. Additional Rules Related to Methodology Disclosure**

We are proposing additional rules related to the methodology for calculating GHG emissions. Some of these rules would apply generally to the determination of GHG emissions while some would apply specifically to the calculation of Scope 3 emissions. For example, one proposed rule would provide that a registrant may use reasonable estimates when disclosing its GHG emissions as long as it also describes the assumptions underlying, and its reasons for using,

---

<sup>526</sup> See PCAF, *Global GHG Accounting & Reporting Standard for the Financial Industry* (2020), available at <https://carbonaccountingfinancials.com/files/downloads/PCAF-Global-GHG-Standard.pdf>.

<sup>527</sup> See *id.* See also GHG Protocol Press Release, *New Standard Developed to Help Financial Industry Measure and Report Emissions* (Mar. 2021), available at <https://ghgprotocol.org/blog/new-standard-developed-help-financial-industry-measure-and-report-emissions>.

<sup>528</sup> While the guidance provided by the PCAF Standard for each asset class differs in certain respects, the PCAF Standard applies a common set of principles across the various asset classes. A key principle is that the GHG emissions from a client’s activities financed by loans or investments attributable to the reporting financial institution should be allocated to that institution based on its proportional share of lending or investment in the borrower or investee through the application of an “attribution factor.” See PCAF, *Global GHG Accounting & Reporting Standard for the Financial Industry* (2020), Sections 4.2 and 5.

the estimates.<sup>529</sup> While we encourage registrants to provide as accurate a measurement of its GHG emissions as is reasonably possible, we recognize that, in many instances, direct measurement of GHG emissions at the source, which would provide the most accurate measurement, may not be possible.

Several commenters indicated that a registrant may find it difficult to complete its GHG emissions calculations for its most recently completed fiscal year in time to meet its disclosure obligations for that year's Exchange Act annual report.<sup>530</sup> The proposed rules would permit a registrant to use a reasonable estimate of its GHG emissions for its fourth fiscal quarter if no actual reported data is reasonably available, together with actual, determined GHG emissions data for its first three fiscal quarters when disclosing its GHG emissions for its most recently completed fiscal year, as long as the registrant promptly discloses in a subsequent filing any material difference between the estimate used and the actual, determined GHG emissions data for the fourth fiscal quarter.<sup>531</sup> We believe that this proposed provision would help address the concerns of commenters about the timely completion of both the work required to disclose a registrant's GHG emissions as of its fiscal year-end and to meet its other Exchange Act annual reporting obligations.<sup>532</sup>

Another proposed provision would require a registrant to disclose, to the extent material and as applicable, any use of third-party data when calculating its GHG emissions, regardless of

---

<sup>529</sup> See proposed 17 CFR 229.1504(e)(4).

<sup>530</sup> See, e.g., letters from Cisco; Dow; Energy Infrastructure Council; National Mining Association; Newmont Corporation; and United Airlines Holdings, Inc.

<sup>531</sup> See proposed 17 CFR 229.1504(e)(4)(i). One commenter made a similar recommendation when stating that a registrant should be required to follow the same timeline for disclosure of its GHG emissions as for its Exchange Act annual reporting obligations. See letter from Pricewaterhouse Coopers.

<sup>532</sup> See *supra* note 530.

the particular scope of emissions.<sup>533</sup> While this proposed provision would be most relevant to the disclosure of Scope 3 emissions, where the use of third-party data is common, it would apply in other instances when third-party data is material to the GHG emissions determination, such as when determining Scope 2 emissions using contractual, supplier-provided emission factors for purchased electricity. When disclosing the use of third-party data, a registrant would be required to identify the source of the data and the process the registrant undertook to obtain and assess such data.<sup>534</sup> This information would help investors better understand the basis for, and assess the reasonableness of, the GHG emissions determinations and, accordingly, evaluate the GHG disclosures as part of a registrant's business and financial information.

One proposed provision would require a registrant to disclose any material change to the methodology or assumptions underlying its GHG emissions disclosure from the previous fiscal year.<sup>535</sup> For example, if a registrant uses a different set of emission factors, or develops a more direct method of measuring GHG emissions, which results in a material change to the GHG emissions produced from the previous year under (or assuming) the same organizational and operational boundaries, it would be required to report that change. This should help investors more knowledgeably compare the emissions data from year to year and better understand the nature and significance of a material change in emissions (*i.e.*, was the change primarily due to an implementation of strategy or a change in methodology).

---

<sup>533</sup> See proposed 17 CFR 229.1504(e)(5).

<sup>534</sup> See *id.*

<sup>535</sup> See proposed 17 CFR 229.1504(e)(6).

Another proposed provision would require a registrant to disclose, to the extent material and as applicable, any gaps in the data required to calculate its GHG emissions.<sup>536</sup> This proposed provision would be particularly relevant to a registrant's Scope 3 emissions. While a registrant's GHG emissions disclosure should provide investors with a reasonably complete understanding of the registrant's GHG emissions in each scope of emissions, as previously noted, we recognize that a registrant may encounter data gaps, particularly when calculating its Scope 3 emissions. The proposed provision would require the registrant to disclose the data gaps and discuss whether it used proxy data or another method to address such gaps. A registrant would also be required to discuss how its accounting for any data gaps has affected the accuracy or completeness of its GHG emissions disclosure.<sup>537</sup> This information should help investors understand certain underlying uncertainties and limitations, and evaluate the corresponding reliability, of a registrant's GHG emissions disclosure, particularly for its Scope 3 emissions, as part of their assessment of the registrant's business and financial information.

One proposed provision would provide that, when determining whether its Scope 3 emissions are material, and when disclosing those emissions, in addition to emissions from activities in its value chain, a registrant must include GHG emissions from outsourced activities that it previously conducted as part of its own operations, as reflected in the financial statements for the periods covered in the filing.<sup>538</sup> This proposed approach, which is consistent with the GHG Protocol,<sup>539</sup> would help ensure that investors receive a complete picture of a registrant's

---

<sup>536</sup> See proposed 17 CFR 229.1504(e)(7).

<sup>537</sup> See *id.*

<sup>538</sup> See proposed 17 CFR 229.1504(e)(8).

<sup>539</sup> See Greenhouse Gas Protocol, [Corporate Value Chain \(Scope 3\) Accounting and Reporting Standard](#), [Supplement to the GHG Protocol Corporate Accounting and Reporting Standard](#), Chapter 6.

carbon footprint by precluding the registrant from excluding emissions from activities that are typically conducted as part of operations over which it has ownership or control but that are outsourced in order to reduce its Scopes 1 or 2 emissions.

Another proposed provision would provide that, if a registrant is required to disclose Scope 3 emissions, and if there was any significant overlap in the categories of activities producing the Scope 3 emissions, the registrant must describe the overlap, how it accounted for the overlap, and its disclosed total Scope 3 emissions.<sup>540</sup> For example, a mining registrant may mine and process iron ore for conversion into steel products. Because the processing of iron ore and steelmaking both require the use of coal, GHG emissions would arise both from the downstream activities involving the processing of sold products and the use of sold products (*i.e.*, the use of iron ore in the production of steel). If the registrant has allocated GHG emissions to both categories (*i.e.*, processing of sold products and use of sold products), it would be required to describe the overlap in emissions between the two categories of downstream activities, how it accounted for the overlap, and the effect on its disclosed total Scope 3 emissions. For example, if the total reported Scope 3 emissions involved some double-counting because of the overlap, a registrant would be required to report this effect. This information could help investors better understand the true extent of a registrant's disclosed Scope 3 emissions and, thus, the climate-related risks faced by the registrant.

Finally, a proposed provision would provide that a registrant may present its estimated Scope 3 emissions in terms of a range as long as it discloses its reasons for using the range and the underlying assumptions.<sup>541</sup> This proposed provision reflects our understanding that, because

---

<sup>540</sup> See proposed 17 CFR 229.1504(e)(9).

<sup>541</sup> See proposed 17 CFR 229.1504(e)(4)(ii).

a registrant may encounter more difficulties obtaining all of the data required for determining its Scope 3 emissions compared to determining its Scopes 1 and 2 emissions, presenting its Scope 3 emissions in terms of a range may be a reasonable means of estimating these emissions when faced with such gaps in the data.

### **Request for Comment**

115. Should we require a registrant to disclose the methodology, significant inputs, and significant assumptions used to calculate its GHG emissions metrics, as proposed? Should we require a registrant to use a particular methodology for determining its GHG emission metrics? If so, should the required methodology be pursuant to the GHG Protocol's Corporate Accounting and Reporting Standard and related standards and guidance? Is there another methodology that we should require a registrant to follow when determining its GHG emissions? Should we base our climate disclosure rules on certain concepts developed by the GHG Protocol without requiring a registrant to follow the GHG Protocol in all respects, as proposed? Would this provide flexibility for registrants to choose certain methods and approaches in connection with GHG emissions determination that meet the particular circumstances of their industry or business or that emerge along with developments in GHG emissions methodology as long as they are transparent about the methods and underlying assumptions used? Are there adjustments that should be made to the proposed methodology disclosure requirements that would provide flexibility for registrants while providing sufficient comparability for investors?

116. Should we require a registrant to disclose the organizational boundaries used to calculate its GHG emissions, as proposed? Should we require a registrant to determine its organizational boundaries using the same scope of entities, operations, assets, and other holdings within its business organization as that used in its consolidated financial statements, as proposed?

Would prescribing this method of determining organizational boundaries avoid potential investor confusion about the reporting scope used in determining a registrant's GHG emissions and the reporting scope used for the financial statement metrics, which are included in the financial statements? Would prescribing this method of determining organizational boundaries result in more robust guidance for registrants and enhanced comparability for investors? If, as proposed, the organizational boundaries must be consistent with the scope of the registrant's consolidated financial statements, would requiring separate disclosure of the organizational boundaries be redundant or otherwise unnecessary?

117. Except for calculating Scope 3 emissions, the proposed rules would not require a registrant to disclose the emissions from investments that are not consolidated, proportionately consolidated, or that do not qualify for the equity method of accounting. Should we require such disclosures for Scopes 1 and 2 emissions, and if so, how?

118. Could situations arise where it is impracticable for a registrant to align the scope of its organizational boundaries for GHG emission data with the scope of the consolidation for the rest of its financial statements? If so, should we allow a registrant to take a different approach to determining the organizational boundaries of its GHG emissions and provide related disclosure, including an estimation of the resulting difference in emissions disclosure (in addition to disclosure about methodology and other matters that would be required by the proposed GHG emissions disclosure rules)?

119. Alternatively, should we require registrants to use the organizational boundary approaches recommended by the GHG Protocol (*e.g.*, financial control, operational control, or equity share)? Do those approaches provide a clear enough framework for complying with the proposed rules? Would such an approach cause confusion when analyzing information in the

context of the consolidated financial statements or diminish comparability? If we permit a registrant to choose one of the three organizational boundary approaches recommended by the GHG Protocol, should we require a reconciliation with the scope of the rest of the registrant's financial reporting to make the disclosure more comparable?

120. Should we require a registrant to disclose its operational boundaries, as proposed? Should we require a registrant to discuss its approach towards the categorization of emissions (*e.g.*, as direct or indirect emissions) and emissions sources (*e.g.*, stationary or mobile) when describing its operational boundaries, as proposed?

121. The proposed operational boundaries disclosure is based largely on concepts developed by the GHG Protocol. Would requiring a registrant to determine its organizational boundaries pursuant to the GAAP applicable to the financial statement metrics included in the financial statements but its operational boundaries largely pursuant to concepts developed by the GHG Protocol cause confusion? Should we require a registrant to apply the GAAP applicable to its financial statements when determining whether it "controls" a particular source pursuant to the definition of Scope 1 emissions, or particular operations pursuant to the definition of Scope 2 emissions, as proposed? If not, how should "control" be determined and would applying a definition of control that differs from applicable GAAP result in confusion for investors?

122. Should we require a registrant to use the same organizational boundaries when calculating its Scopes 1 and 2 emissions, as proposed? Are there any circumstances when a registrant's organizational boundaries for determining its Scope 2 emissions should differ from those required for determining its Scope 1 emissions? Should we also require a registrant to apply the same organizational boundaries used when determining its Scopes 1 and 2 emissions as an initial step in identifying the sources of indirect emissions from activities in its value chain

over which it lacks ownership and control and which must be included in the calculation of its Scope 3 emissions, as proposed? Are there any circumstances where using a different organizational boundary for purposes of Scope 3 emissions disclosure would be appropriate?

123. Should we require a registrant to be consistent in its use of its organizational and operational boundaries once it has set those boundaries, as proposed? Would the proposed requirement help investors to track and compare the registrant's GHG emissions over time?

124. Should we require a registrant to disclose the methodology for calculating the GHG emissions, including any emission factors used and the source of the emission factors, as proposed? Should we require a registrant to use a particular set of emission factors, such as those provided by the EPA or the GHG Protocol?

125. Should we permit a registrant to use reasonable estimates when disclosing its GHG emissions as long as it also describes the assumptions underlying, and its reasons for using, the estimates, as proposed? Should we permit the use of estimates for only certain GHG emissions, such as Scope 3 emissions? Should we permit a registrant to use a reasonable estimate of its GHG emissions for its fourth fiscal quarter if no actual reported data is reasonably available, together with actual, determined GHG emissions data for its first three fiscal quarters when disclosing its GHG emissions for its most recently completed fiscal year, as long as the registrant promptly discloses in a subsequent filing any material difference between the estimate used and the actual, determined GHG emissions data for the fourth fiscal quarter, as proposed? If so, should we require a registrant to report any such material difference in its next Form 10-Q if domestic, or in a Form 6-K, if a foreign private issuer? Should we permit a domestic registrant to report any such material difference in a Form 8-K if such form is filed (rather than furnished)

with the Commission? Should any such reasonable estimate be subject to conditions to help ensure accuracy and comparability? If so, what conditions should apply?

126. Should we require a registrant to disclose, to the extent material, any use of third-party data when calculating its GHG emissions, regardless of the particular scope of emissions, as proposed? Should we require the disclosure of the use of third-party data only for certain GHG emissions, such as Scope 3 emissions? Should we require the disclosure of the use of third-party data for Scope 3 emissions, regardless of its materiality to the determination of those emissions? If a registrant discloses the use of third-party data, should it also be required to identify the source of such data and the process the registrant undertook to obtain and assess the data, as proposed?

127. Should we require a registrant to disclose any material change to the methodology or assumptions underlying its GHG emissions disclosure from the previous year, as proposed? If so, should we require a registrant to restate its GHG emissions data for the previous year, or for the number of years for which GHG emissions data has been provided in the filing, using the changed methodology or assumptions? If a registrant's organizational or operational boundaries, in addition to methodology or assumptions, change, to what extent should we require such disclosures of the material change, restatements or reconciliations? In these cases, should we require a registrant to apply certain accounting standards or principles, such as FASB ASC Topic 250, as guidance regarding when retrospective disclosure should be required?

128. Should we require a registrant to disclose, to the extent material, any gaps in the data required to calculate its GHG emissions, as proposed? Should we require the disclosure of data gaps only for certain GHG emissions, such as Scope 3 emissions? If a registrant discloses any data gaps encountered when calculating its Scope 3 emissions or other type of GHG emissions,

should it be required to discuss whether it used proxy data or another method to address such gaps, and how its management of any data gaps has affected the accuracy or completeness of its GHG emissions disclosure, as proposed? Are there other disclosure requirements or conditions we should adopt to help investors obtain a reasonably complete understanding of a registrant's exposure to the GHG emissions sourced by each scope of emissions?

129. When determining the materiality of its Scope 3 emissions, or when disclosing those emissions, should a registrant be required to include GHG emissions from outsourced activities that it previously conducted as part of its own operations, as reflected in the financial statements for the periods covered in the filing, in addition to emissions from activities in its value chain, as proposed? Would this requirement help ensure that investors receive a complete picture of a registrant's carbon footprint by precluding the registrant from excluding emissions from activities that are typically conducted as part of operations over which it has ownership or control but that are outsourced in order to reduce its Scopes 1 or 2 emissions? Should a requirement to include outsourced activities be subject to certain conditions or exceptions and, if so, what conditions or exceptions?

130. Should we require a registrant that must disclose its Scope 3 emissions to discuss whether there was any significant overlap in the categories of activities that produced the Scope 3 emissions? If so, should a registrant be required to describe any overlap, how it accounted for the overlap, and its effect on the total Scope 3 emissions, as proposed? Would this requirement help investors assess the accuracy and reliability of the Scope 3 emissions disclosure?

131. Should we permit a registrant to present its Scope 3 emissions in terms of a range as long as it discloses its reasons for using the range and the underlying assumptions, as proposed? Should we place limits or other parameters regarding the use of a range and, if so, what should

those limits or parameters be? For example, should we require a range to be no larger than a certain size? What other conditions or guidance should we provide to help ensure that a range, if used, is not overly broad and is otherwise reasonable?

132. Should we require a registrant to follow a certain set of published standards for calculating Scope 3 emissions that have been developed for a registrant's industry or that are otherwise broadly accepted? For example, should we require a registrant in the financial industry to follow PCAF's Global GHG Accounting & Reporting Standard for the Financial Industry when calculating its financed emissions within the "Investments" category of Scope 3 emissions? Are there other industry-specific standards that we should require for Scope 3 emissions disclosure? Should we require a registrant to follow the GHG Protocol's Corporate Value Chain (Scope 3) Accounting and Reporting Standard if an industry-specific standard is not available for Scope 3 emissions disclosure? If we should require the use of a third-party standard for Scope 3 emissions reporting, or any other scope of emissions, how should we implement this requirement?

### **3. The Scope 3 Emissions Disclosure Safe Harbor and Other Accommodations**

We recognize that the calculation and disclosure of Scope 3 emissions may pose difficulties compared to Scopes 1 and 2 emissions, which has caused concern for some commenters.<sup>542</sup> It may be difficult to obtain activity data from suppliers and other third parties in a registrant's value chain, or to verify the accuracy of that information. It may also be necessary to rely heavily on estimates and assumptions to generate Scope 3 emissions data. For example,

---

<sup>542</sup> See, e.g., letter from Dimensional Fund Advisors; see also *supra* note 422.

registrants may need to rely on assumptions about how customers will use their products in order to calculate Scope 3 emissions from the use of sold products.

Depending on the size and complexity of a company and its value chain, the task of calculating Scope 3 emissions could be challenging.<sup>543</sup> We expect that some of these challenges may recede over time. For example, as more companies make their Scope 1 and 2 emissions data publicly available, these data can serve as the input for other companies' Scope 3 calculations. In addition, large companies that are voluntarily disclosing Scope 3 emissions information currently are also working with suppliers to increase access to emissions data and improve its reliability,<sup>544</sup> which could have positive spillover effects for other companies that use the same suppliers. Furthermore, within certain industries, there is work underway to improve methodologies and share best practices to make Scope 3 calculations less burdensome and more reliable.<sup>545</sup> Notwithstanding these anticipated developments, calculating and disclosing Scope 3

---

<sup>543</sup> While there may be less challenging approaches, such as using industry averages or proxies for activity data (such as economic data), the result may be less accurate and could obscure the impact of choices that companies may make to reduce their Scope 3 emissions. For example, if a company uses industry averages to calculate Scope 3 emissions from shipping its products, it may have difficulty communicating to investors how its selection of a shipping company that runs on lower emissions fuel or picks more efficient routes has lowered its Scope 3 emissions.

<sup>544</sup> See, e.g., Apple, *Environmental Social Governance Report* (2021), available at [https://s2.q4cdn.com/470004039/files/doc\\_downloads/2021/08/2021\\_Apple\\_ESG\\_Report.pdf](https://s2.q4cdn.com/470004039/files/doc_downloads/2021/08/2021_Apple_ESG_Report.pdf) (stating that Apple works with its suppliers to help address Apple's environmental commitments, such as becoming carbon neutral by 2030 across its entire product footprint).

<sup>545</sup> See, e.g., PCAF, *The Global GHG Accounting and Reporting Standard for the Financial Industry*. In addition, the American Petroleum Institute has developed an overview of Scope 3 methodologies to inform oil and gas companies about Scope 3 estimation approaches. See API and IPIECA, *Estimating petroleum industry value chain (Scope 3) greenhouse gas emissions*, available at <https://www.api.org/~media/Files/EHS/climate-change/Scope-3-emissions-reporting-guidance-2016.pdf>. Finally, an initiative launched by food and beverage companies, Danone and Mars, together with the Science Based Targets Initiative, aims to provide Scope 3 guidance to companies in difference industries, starting with the food and beverage industry. See SB, *Serious About Scope 3: Pioneering Companies Embracing Complexity, Reaping the Benefits*, available at <https://sustainablebrands.com/read/supply-chain/serious-about-scope-3-pioneering-companies-embracing-complexity-reaping-the-benefits>.

emissions could represent a challenge for certain registrants, in particular those that do not currently report such information on a voluntary basis.

To balance concerns about reporting Scope 3 emissions with the need for decision-useful emissions disclosure, we are proposing the following accommodations for Scope 3 emissions disclosure:

- A safe harbor for Scope 3 emissions disclosure from certain forms of liability under the Federal securities laws;<sup>546</sup>
- An exemption for smaller reporting companies (“SRCs”) from the Scope 3 emissions disclosure provision;<sup>547</sup> and
- A delayed compliance date for Scope 3 emissions disclosure.<sup>548</sup>

We are proposing a safe harbor for Scope 3 emissions disclosure to alleviate concerns that registrants may have about liability for information that would be derived largely from third parties in a registrant’s value chain. Many commenters recommended that the Commission adopt a safe harbor for climate-related disclosures.<sup>549</sup> These commenters asserted that a safe harbor would encourage registrants to provide meaningful, quantitative metrics and analysis. Other commenters focused their recommendation for a safe harbor on certain types of climate-

---

<sup>546</sup> See 17 CFR 229.1504(f).

<sup>547</sup> See proposed 17 CFR 229.1504(c)(3).

<sup>548</sup> See *infra* Section II.M.

<sup>549</sup> See, e.g., letters from ACCO Brands Corp.; American Bankers Association; American Petroleum Institute; American Property Casualty Insurance Association; Associated General Contractors of America; Bank of America Corporation; Biotechnology Innovation Organization; ConocoPhillips; Delta Airlines, Inc. (June 16, 2021); Deutsches Bank AG; Dow; Enbridge Inc.; Energy Infrastructure Council; Etsy, Inc.; Freeport-McMoran; KPMG LLP; Managed Funds Association; Nacco Industries; National Investor Relations Institute; National Ocean Industries Association; Neuberger Berman; NIRI Los Angeles; Oshkosh Corporation; Salesforce.com; SASB; SIFMA (June 10, 2021); Society for Corporate Governance; United Airlines Holdings, Inc. related disclosures, such as those pertaining to scenario analysis, third-party derived data (such as Scope 3 emissions),<sup>550</sup> or forward-looking statements generally.<sup>551</sup> With respect to Scope 3 emissions specifically, commenters recommended that the Commission provide a safe harbor due to the reliance on estimates and data needed for Scope 3 emissions reporting that are outside of the registrant's control.<sup>552</sup>

While we are not proposing a broad safe harbor for all climate-related disclosures, many of which are similar to other business and financial information required by Commission rules, we are proposing a targeted safe harbor for Scope 3 emissions data in light of the unique challenges associated with this information. The proposed safe harbor would provide that disclosure of Scope 3 emissions by or on behalf of the registrant would be deemed not to be a fraudulent statement unless it is shown that such statement was made or reaffirmed without a reasonable basis or was disclosed other than in good faith.<sup>553</sup> The safe harbor would extend to any statement regarding Scope 3 emissions that is disclosed pursuant to proposed subpart 1500 of Regulation S-K and made in a document filed with the Commission.<sup>554</sup> For purposes of the proposed safe harbor, the term "fraudulent statement" would be defined to mean a statement that is an untrue statement of material fact, a statement false or misleading with respect to any material fact, an omission to state a material fact necessary to make a statement not misleading,

<sup>553</sup> *See* proposed 17 CFR 229.1504(f)(1).

<sup>554</sup> *See* proposed 17 CFR 229.1504(f)(2).

or that constitutes the employment of a manipulative, deceptive, or fraudulent device, contrivance, scheme, transaction, act, practice, course of business, or an artifice to defraud as those terms are used in the Securities Act or the Exchange Act or the rules or regulations promulgated thereunder.<sup>555</sup> The proposed safe harbor is intended to mitigate potential liability concerns associated with providing emissions disclosure based on third-party information by making clear that registrants would only be liable for such disclosure if it was made without a reasonable basis or was disclosed other than in good faith. It also may encourage more robust Scope 3 emissions information, to the extent registrants feel reassured about relying on actual third-party data as opposed to national or industry averages for their emissions estimates.

Several commenters expressed concern that the Commission would impose a “one size fits all” approach, which could disproportionately impact smaller registrants, when adopting climate-related disclosure rules.<sup>556</sup> Several commenters recommended that the Commission phase-in or scale down the climate-related disclosure requirements for smaller registrants.<sup>557</sup>

Although we are not proposing to exempt SRCs from the full scope of the proposed climate-related disclosure rules, we are proposing to exempt SRCs from the proposed Scope 3 emissions disclosure requirement.<sup>558</sup> We believe that exempting SRCs from the proposed Scope

---

<sup>555</sup> See proposed 17 CFR 229.1504(f)(3). This definition is based on the definition of fraudulent statement in 17 CFR 230.175.

<sup>556</sup> See, e.g., letters from Elisha Doerr (May 24, 2021); Freedomworks Foundation (June 14, 2021); Roger Hawkins (May 24, 2021); and Jonathan Skee (May 26, 2021).

<sup>557</sup> See, e.g., letters from American Bankers Association (June 11, 2021); Biotechnology Innovation Organization (June 15, 2021); BNP Paribas; Cardano Risk Management Ltd.; Catavento Consultancy; Chamber of Commerce (June 11, 2021); Credit Roundtable (June 11, 2021); Douglas Hileman Consulting; Environmental Bankers Association (June 9, 2021); Grant Thornton; Virginia Harper Ho; Manulife Investment Management; Mirova US; Morrison & Foerster; NEI Investments (June 11, 2021); New York State Society of Certified Public Accountants; PIMCO; and SIFMA.

<sup>558</sup> See proposed 17 CFR 229.1504(c)(3). We also are proposing a later compliance date for SRCs. See *infra* Section II.M.

3 emissions disclosure requirement would be appropriate in light of the proportionately higher costs they could incur, compared to non-SRCs, to engage in the data gathering, verification, and other actions associated with Scope 3 emissions reporting, many of which may have fixed cost components.

To further ease the burden of complying with the proposed Scope 3 disclosure requirement, we are also proposing a delayed compliance date for this requirement. As explained in greater detail below, all registrants, regardless of their size, would have an additional year to comply initially with the Scope 3 disclosure requirement beyond the compliance date for the other proposed rules. Moreover, because a registrant's Scope 3 emissions consist of the Scopes 1 and 2 emissions of its suppliers, distributors, and other third parties in the registrant's value chain, to the extent those parties become subject to the proposed rules, the increased availability of Scopes 1 and 2 emissions data following the rules' effectiveness should help ease the burden of complying with the Scope 3 emissions disclosure requirement.

Finally, we note that Securities Act Rule 409 and Exchange Act Rule 12b-21, which provide accommodations for information that is unknown and not reasonably available, would be available for the proposed Scope 3 emissions disclosures.<sup>559</sup> These rules allow for the conditional omission of required information when such information is unknown and not reasonably available to the registrant, either because obtaining the information would involve

---

<sup>559</sup> See 17 CFR 230.409 and 17 CFR 240.12b-21.

unreasonable effort or expense, or because the information rests peculiarly within the knowledge of another person not affiliated with the registrant.<sup>560</sup>

### **Request for Comment**

133. Should we provide a safe harbor for Scope 3 emissions disclosure, as proposed? Is the scope of the proposed safe harbor clear and appropriate? For example, should the safe harbor apply to any registrant that provides Scope 3 disclosure pursuant to the proposed rules, as proposed? Should we limit the use of the safe harbor to certain classes of registrants or to registrants meeting certain conditions and, if so, which classes or conditions? For example, should we require the use of a particular methodology for calculating and reporting Scope 3 emissions, such as the PCAF Standard if the registrant is a financial institution, or the GHG Protocol Scope 3 Accounting and Reporting Standard for other types of registrants? Should we clarify the scope of persons covered by the language “by or on behalf of a registrant” by including language about outside reviewers retained by the registrant or others? Should we define a “fraudulent statement,” as proposed? Is the level of diligence required for the proposed safe harbor (*i.e.*, that the statement was made or reaffirmed with a reasonable basis and disclosed in good faith) the appropriate standard? Should the safe harbor apply to other climate-related disclosures, such as Scopes 1 and 2 emissions disclosures, any targets and goals disclosures in response to proposed Item 1505 (discussed below), or the financial statement metrics disclosures required pursuant to Proposed Article 14 of Regulation S-X? Should the safe harbor apply indefinitely, or should we include a sunset provision that would eliminate the safe harbor some number of years, (*e.g.*, five years) after the effective date or applicable compliance date of the

---

<sup>560</sup> *See id.* We expect, however, that a registrant that requires emissions data from another registrant in its value chain would be able to obtain that data without unreasonable effort or expense because of the increased availability of Scopes 1 and 2 emissions data for registrants following the effectiveness of the proposed rules.

rules? Should the safe harbor sunset after certain conditions are satisfied? If so, what types of conditions should we consider? What other approaches should we consider?

134. Should we provide an exemption from Scope 3 emissions disclosure for SRCs, as proposed? Should the exemption not apply to a SRC that has set a target or goal or otherwise made a commitment to reduce its Scope 3 emissions? Are there other classes of registrants we should exempt from the Scope 3 emissions disclosure requirement? For example, should we exempt EGCs, foreign private issuers, or a registrant that is filing or has filed a registration statement for its initial public offering during its most recently completed fiscal year from the Scope 3 disclosure requirement? Instead of an exemption, should we provide a longer phase in for the Scope 3 disclosure requirements for SRCs than for other registrants?

## **H. Attestation of Scope 1 and Scope 2 Emissions Disclosure**

### **1. Overview**

The proposed rules would require a registrant, including a foreign private issuer, that is an accelerated filer or large accelerated filer to include in the relevant filing an attestation report covering the disclosure of its Scope 1 and Scope 2 emissions<sup>561</sup> and to provide certain related disclosures about the service provider.<sup>562</sup> As proposed, the attestation engagement must, at a

---

<sup>561</sup> See proposed 17 CFR 229.1505(a). In order to attest to the Scopes 1 and 2 emissions disclosure, we believe a GHG emissions attestation provider would need to include in its evaluation relevant contextual information. In particular, the attestation provider would be required to evaluate the registrant's compliance with (i) proposed Item 1504(a), which includes presentation requirements (*e.g.*, disaggregation by each constituent greenhouse gas), (ii) the calculation instructions included in proposed Item 1504(b), and (iii) the disclosure requirements in proposed Item 1504(e) regarding methodology, organizational boundary, and operational boundary. See *infra* Section II.H.3 for further discussion of the criteria against which the Scopes 1 and 2 emissions disclosure are measured or evaluated.

<sup>562</sup> See proposed 17 CFR 229.1505(d).

minimum, be at the following assurance level for the indicated fiscal year for the required GHG emissions disclosure:<sup>563</sup>

<b>Limited Assurance</b>	<b>Reasonable Assurance</b>
Fiscal Years 2 and 3 after Scopes 1 and 2 emissions disclosure compliance date	Fiscal Years 4 and beyond after Scopes 1 and 2 emissions disclosure compliance date

To provide additional clarity, the following table illustrates the application of the transition periods assuming that the proposed rules will be adopted with an effective date in December 2022 and that the accelerated filer or large accelerated filer has a December 31<sup>st</sup> fiscal year-end:

<b>Filer Type</b>	<b>Scopes 1 and 2 GHG Disclosure Compliance Date *</b>	<b>Limited Assurance</b>	<b>Reasonable Assurance</b>
<b>Accelerated Filer</b>	Fiscal year 2024 (filed in 2025)	Fiscal year 2025 (filed in 2026)	Fiscal year 2027 (filed in 2028)
<b>Large Accelerated Filer</b>	Fiscal year 2023 (filed in 2024)	Fiscal year 2024 (filed in 2025)	Fiscal year 2026 (filed in 2027)

\* See *infra* Section II.M for a discussion of the proposed disclosure compliance dates for Scopes 1 and 2 GHG emissions disclosure. If the accelerated filer or the large accelerated filer has a non-calendar-year fiscal year-end date that results in its 2024 or 2023 fiscal year, respectively, commencing before the compliance dates of the rules, it would not be required to comply with proposed GHG emissions disclosure requirements until the following fiscal year (as discussed below in Section II.M). Accordingly, for such filers, the time period for compliance with the corresponding attestation requirements under proposed Item 1505 would be one year later than illustrated above.

During the transition period when limited assurance is required, the proposed rules would permit an accelerated filer or a large accelerated filer, at its option, to obtain reasonable assurance of its Scope 1 and 2 emissions disclosure.<sup>564</sup> For example, an accelerated filer or a

---

<sup>563</sup> See proposed 17 CFR 229.1505(a)(1).

<sup>564</sup> Reasonable assurance is equivalent to the level of assurance provided in an audit of a registrant's consolidated financial statements included in a Form 10-K. Limited assurance is equivalent to the level of assurance (commonly referred to as a "review") provided over a registrant's interim financial statements included in a Form 10-Q.

large accelerated filer may choose to obtain reasonable assurance such that its GHG emissions disclosure receives the same level of assurance as its financial statements.<sup>565</sup>

At its option, an accelerated filer or a large accelerated filer would be able to obtain any level of assurance over its climate-related disclosures that are not required to be assured pursuant to proposed Item 1505(a). For example, an accelerated filer or a large accelerated filer could voluntarily include an attestation report at the limited assurance level for its GHG intensity metrics or its Scope 3 emissions disclosure. To avoid potential confusion, however, the voluntary assurance obtained by such filer would be required to follow the requirements of proposed Item 1505(b)–(d), including using the same attestation standard as the required assurance over Scope 1 and Scope 2.<sup>566</sup> For filings made by accelerated filers and large accelerated filers after the compliance date for the GHG emissions disclosure requirements but before proposed Item 1505(a) requires limited assurance, the filer would only be required to provide the disclosure called for by proposed Item 1505(e). As discussed below in Section II.H.5, a registrant that is not an accelerated filer or a large accelerated filer that obtains voluntary assurance would be required to comply only with proposed Item 1505(e).

---

<sup>565</sup> We refer to “assurance” broadly when describing the level and scope of assurance to which climate-related disclosures should be subject. Our proposed approach to assurance has been guided by “attestation” standards published by organizations including the PCAOB, AICPA, and the International Auditing and Assurance Standards Board (“IAASB”). Such attestation standards apply to engagements other than audit and review of historical financial statements and have been widely used in the current voluntary ESG and GHG assurance market for a number of years.

<sup>566</sup> See proposed 17 CFR 229.1505(a)(2). If the accelerated filer or large accelerated filer was required to obtain reasonable assurance over its Scope 1 and Scope 2 emissions disclosures and the attestation provider chose to follow, for example, the AICPA attestation standards, the accelerated filer or large accelerated filer could voluntarily obtain limited assurance over its GHG intensity metric or Scope 3 emissions disclosures, and the attestation provider would be required to follow the AICPA’s attestation standard for providing limited assurance.

Many commenters recommended that we require climate-related disclosures to be subject to some level of assurance to enhance the reliability of the disclosures.<sup>567</sup> Commenters noted that companies are increasingly seeking some type of third-party assurance or verification over ESG and climate-related disclosures. For example, according to one commenter, 80 percent of S&P 100 companies currently subject certain items of their ESG information, including climate-related disclosures such as greenhouse gas emissions, to some type of third-party assurance or verification.<sup>568</sup> Several commenters recommended that we require climate-related disclosures to be subject to limited assurance,<sup>569</sup> which provides a lower level of assurance than reasonable assurance, but is less costly, and is the most common form of assurance provided for ESG, including climate-related disclosures, in the current voluntary reporting landscape.<sup>570</sup>

One commenter recommended that, at a minimum, we require a registrant to obtain a limited assurance report for its Scopes 1 and 2 emissions disclosure while encouraging optional verification for other ESG metrics.<sup>571</sup> Another commenter indicated that a limited assurance requirement for climate-related disclosures would be similar to the EU's Corporate Sustainability

<sup>569</sup> See, e.g., letters from Credit Suisse; ERM CVS; PayPal Holdings, Inc.; TotalEnergies; and Walmart.

<sup>570</sup> See letter from Energy Infrastructure Council; see also CAQ, *S&P 500 and ESG Reporting* (Aug. 9, 2021).

<sup>571</sup> See letter from PayPal Holdings, Inc.

Reporting Directive proposal that, if adopted, would initially require companies in the European Union to obtain limited assurance on reported sustainability information with an option to move towards reasonable assurance in the future.<sup>572</sup> One commenter stated the view that, while the professional capacity of audit firms might, at this point, be insufficient to provide reasonable assurance of ESG data, it supported a mandatory limited assurance requirement for climate risk reporting.<sup>573</sup> Other commenters recommended that we require climate-related disclosures to be audited at the reasonable assurance level.<sup>574</sup>

Some commenters, however, opposed any third-party assurance requirement for climate-related disclosures because of the significant cost that these commenters asserted it could impose on public companies, and because, in their view, application of assurance standards to data that is different from traditional financial reporting disclosures, such as GHG emissions, would be a relatively new and evolving field.<sup>575</sup> Some of these commenters indicated that, as a first step, registrants should develop their internal controls and disclosure controls and procedures (“DCP”) to include climate-related disclosures, and defer mandated third-party assurance requirements to a later time.<sup>576</sup>

We recognize that requiring GHG emissions disclosure in Commission filings should enhance the consistency, comparability, and reliability of such disclosures due to the application

---

<sup>572</sup> See letter from CAQ.

<sup>573</sup> See letter from Credit Suisse.

<sup>574</sup> See, e.g., letters from Ceres *et al.*; and Interfaith Center on Corporate Responsibility.

<sup>575</sup> See, e.g., letters from American Petroleum Institute; Investment Company Institute; and National Association of Manufacturers.

<sup>576</sup> See, e.g., letters from American Petroleum Institute; and Investment Company Institute. We agree that registrants should develop their DCP to include their GHG emissions disclosures. When the proposed GHG emissions disclosures are included in Form 10-K and Form 20-F annual reports, our rules governing DCP would apply to those disclosures. See 17 CFR 240.13a-15 and 240.15d-15.

of DCP and the proposed inclusion of certain prescriptive elements that may help improve standardization of GHG emissions calculations. Nevertheless, the evolving and unique nature of GHG emissions reporting involves and, in some cases, warrants varying methodologies, differing assumptions, and a substantial amount of estimation. Certain aspects of GHG emissions disclosure also involve reliance on third-party data. As such, requiring a third party's attestation over these disclosures would provide investors with an additional degree of reliability regarding not only the figures that are disclosed, but also the key assumptions, methodologies, and data sources the registrant used to arrive at those figures. In other contexts, such as mineral resources and oil and gas reserves, the Commission has recognized the value that third parties with specialized expertise in audit and engineering can bring to company disclosures of physical resources or risks.<sup>577</sup>

Our rules typically do not require registrants to obtain assurance over disclosure provided outside of the financial statements, including quantitative disclosure. We believe, however, that there are important distinctions between existing quantitative disclosure required to be provided outside of the financial statements and the proposed GHG emissions disclosure. In contrast to GHG emissions disclosure, quantitative disclosure outside of the financial statements typically is derived, at least in part, from the same books and records that are used to generate a registrant's audited financial statements and accompanying notes and that are subject to ICFR. Accordingly, such quantitative disclosure has been subject to audit procedures as part of the audit of the

---

<sup>577</sup> See 17 CFR 229.1302 (requiring a registrant's disclosure of exploration results, mineral resources, or mineral reserves to be based on and accurately reflect information and supporting documentation prepared by a qualified person, which, pursuant to 17 CFR 229.1300, is defined to mean a mineral industry professional with at least five years of relevant experience in the type of mineralization and type of deposit under consideration who meets certain additional criteria); and 17 CFR 229.1202(a)(7) (requiring a registrant to disclose the qualifications of the technical person primarily responsible for overseeing the preparation of the oil and gas reserves estimates or reserves audit).

financial statements in the same filing. Further, the auditor's read and consider obligation requires an evaluation of this quantitative information based on the information obtained through the audit of the financial statements.<sup>578</sup> Unlike other quantitative information that is provided outside of the financial statements, GHG emissions disclosure would generally not be developed from information that is included in the registrant's books and records and, therefore, would not be subjected to audit procedures.<sup>579</sup> In addition, although not an assurance engagement, we have adopted rules requiring an expert to review and provide conclusions on other specialized, quantitative data that is provided outside of the financial statements.<sup>580</sup> Accordingly, to enhance its reliability, we believe it is appropriate to require that GHG emissions disclosure be subject to third-party attestation.

For similar reasons, we also considered proposing to require that management assess and disclose the effectiveness of controls over GHG emissions disclosure (apart from the existing requirements with respect to the assessment and effectiveness of DCP). More specifically, in addition to the requirement to assess such controls, we considered whether to require management to include a statement in their annual report regarding their responsibility for the

---

<sup>578</sup> See PCAOB AS 2710 *Other Information in Documents Containing Audited Financial Statements* (requiring an auditor to read the other information (included in an annual report with the audited financial statements) and consider whether such information, or the manner of its presentation, is materially inconsistent with information, or the manner of its presentation, appearing in the financial statements). For example, disclosure pursuant to 17 CFR 229.303 (Item 303 of Regulation S-K – MD&A) is derived in part from the same books and records that are subject to ICFR and used to generate a registrant's audited financial statements and accompanying notes (*e.g.*, the liquidity and capital resources disclosures are anchored to the audited cash flows information disclosed in the financial statements).

<sup>579</sup> Although GHG emission disclosure would generally not be directly derived from the same books and records that are used to generate a registrant's audited financial statements and accompanying notes and that are subject to ICFR, GHG emission disclosure, as proposed, would be required to use the same organizational and operational boundaries as the registrant's financial statement disclosures. See proposed 17 CFR 229.1504(e)(2).

<sup>580</sup> See *Modernization of Property Disclosures for Mining Registrants*, Release No. 33-10570 (Oct. 31, 2018), [83 FR 66344 (Dec. 26, 2018)].

design and evaluation of controls over GHG emissions disclosures, as well as to disclose their conclusion regarding the effectiveness of such controls. We also considered proposing to require a GHG emissions attestation provider’s attestation of the effectiveness of controls over GHG emissions disclosure in addition to the proposed attestation over the Scopes 1 and 2 GHG emissions disclosure. Although both such requirements could further enhance the reliability of the related Scopes 1 and 2 GHG emissions disclosure, we are not currently proposing them at this time. We are, however, continuing to consider these alternatives, including: (i) the need to develop guidance for management on conducting such an assessment and (ii) whether appropriate attestation standards exist. Accordingly, we request comment on these and related issues below.

The Commission has long recognized the important role played by an independent audit in contributing to the reliability of financial reporting.<sup>581</sup> Relatedly, studies suggest that investors have greater confidence in information that has been assured, particularly when it is assured at the reasonable assurance level.<sup>582</sup> Although a limited assurance engagement provides a lower level of assurance than a reasonable assurance engagement,<sup>583</sup> studies of ESG-related assurance, which is typically provided at a limited assurance level, have found benefits such as

---

<sup>581</sup> See *Qualifications of Accountants*, Release No. 33-10876 (Oct. 16, 2020) [85 FR 80508 (Dec. 11, 2020)], at 80508. See also Statement of Paul Munter, Acting Chief Accountant, *The Importance of High Quality Independent Audits and Effective Audit Committee Oversight to High Quality Financial Reporting to Investors* (Oct. 26, 2021), available at <https://www.sec.gov/news/statement/munter-audit-2021-10-26>.

<sup>582</sup> See, e.g., Carol Callaway Dee, et al., *Client Stock Market Reaction to PCAOB Sanctions against a Big Four Auditor*, 28 CONTEMP. ACCT. RES. 263 (Spring 2011) (“Audits are valued by investors because they assure the reliability of and reduce the uncertainty associated with financial statements.”); Center for Audit Quality, *2019 Main Street Investor Survey* (“[I]nvestors continue to register high degrees of confidence in the ability of public company auditors to fulfill their investor-protection roles. Eighty-three percent of US retail investors view auditors as effective in their investor-protection role within the US capital markets, up from 81% in 2018); and CFA Institute, *CFA Institute Member Survey Report – Audit Value, Quality, and Priorities* (2018).

<sup>583</sup> See *infra* note 604 for a discussion of the key differences between limited and reasonable assurance engagements.

credibility enhancement, lower cost of equity capital, and lower analyst forecast errors and dispersion.<sup>584</sup> Therefore, proposing to require Scope 1 and Scope 2 emissions disclosure by accelerated filers and large accelerated filers be subject to limited assurance initially, with an eventual scaling up to reasonable assurance, could potentially improve both the actual reliability of disclosure and investor confidence in such disclosure.<sup>585</sup>

Increasing investor demand for consistent, comparable, and reliable climate-related financial information appears to have led a growing number of companies to voluntarily obtain third-party assurance over their climate-related disclosures both within the U.S. and globally. For example, according to one study, 53% of the S&P 500 companies had some form of assurance or verification over climate-related metrics, along with other metrics.<sup>586</sup> Another survey of sustainability reporting trends from 5,200 companies across 52 countries (including the United States) stated that, of the top 100 companies (by revenue), 80% have reporting on ESG (including climate), with up to 61% of those companies also obtaining assurance.<sup>587</sup> The

<sup>587</sup> See KPMG, *The KPMG Survey of Sustainability Reporting 2020*, available at <https://home.kpmg/xx/en/home/insights/2020/11/the-time-has-come-survey-of-sustainability-reporting.html>.

prevalence of major companies obtaining assurance in connection with their voluntary sustainability reports suggests that both the companies and their investors are focused on the reliability of such disclosures.

Although many registrants have voluntarily obtained some level of assurance for their climate-related disclosures, current voluntary ESG assurance practices have been varied with respect to the levels of assurance provided (*e.g.*, limited versus reasonable), the assurance standards used, the types of service providers, and the scope of disclosures covered by the assurance. This fragmentation has diminished the comparability of the assurance provided and may require investors to become familiar with many different assurance standards and the varying benefits of different levels of assurance. The consequences of such fragmentation has also been highlighted by certain international organizations,<sup>588</sup> including IOSCO, which stated that the “perceived lack of clarity and consistency around the purpose and scope of [voluntary] assurance . . . potentially lead[s] to market confusion, including misleading investors and exacerbating the expectations gap.”<sup>589</sup> For example, investors may see that a service provider has produced an assurance report for a registrant’s GHG emissions disclosure and have an expectation that such assurance will enhance the reliability of that disclosure without always understanding the service provider’s qualifications for producing the report, what level of assurance (*e.g.*, limited versus reasonable) is being provided, what scope of assurance (*e.g.*, the disclosures covered by the assurance) is being provided with respect to the registrant’s GHG

<sup>589</sup> IOSCO, *Report on Sustainability-related Issuer Disclosures* (June 2021).

emissions disclosure, and the methodologies and procedures that the attestation provider used. While some experienced assurance providers may be proficient in applying attestation standards to GHG emissions disclosures, other assurance providers may lack GHG emissions expertise. Similarly, some service providers providing assurance may have expertise in GHG emissions but have minimal assurance experience. Moreover, some service providers may use standards that are developed by accreditation bodies with notice and public comment and other robust due process procedures<sup>590</sup> for standard setting, while other service providers may use privately developed “verification” standards.<sup>591</sup>

To improve accuracy, comparability, and consistency with respect to the proposed GHG emissions disclosure, we are proposing to require a minimum level of attestation services for accelerated filers and large accelerated filers including: (1) limited assurance for Scopes 1 and 2 emissions disclosure that scales up to reasonable assurance after a specified transition period; (2) minimum qualifications and independence requirements for the attestation service provider; and (3) minimum requirements for the accompanying attestation report. These proposed requirements would be minimum standards that the GHG emissions attestation provider engaged by accelerated filers and large accelerated filers must meet, but, as mentioned above, would not prevent a registrant from obtaining a heightened level of assurance over its climate-related disclosures (prior to the transition to reasonable assurance) or to obtain assurance over climate-related disclosures other than Scope 1 and Scope 2 emissions.

---

<sup>590</sup> See *infra* Section II.H.3.

<sup>591</sup> See, e.g., CAQ, *S&P 500 and ESG Reporting* (Aug. 9, 2021) (pointing to the use of assurance methodologies developed by individual service providers, which in some cases were based on IAASB International Standard on Assurance Engagements (ISAE) 3000 with modifications).

By specifying minimum standards for the attestation provided with respect to GHG emissions disclosure by accelerated filers and large accelerated filers, the proposed rules should improve accuracy and consistency in the reporting of this information, while also providing investors with an enhanced level of reliability against which to evaluate the disclosure. In addition to the proposed minimum standards for attestation services, the proposed additional disclosure requirements for registrants, described below, should further assist investors in understanding the qualifications and suitability of the GHG emissions attestation provider selected by the registrant, particularly in light of the broad spectrum of attestation providers that would be permitted to provide attestation services under the proposed rules.

Although we are proposing certain minimum standards for attestation services, this proposal does not aim to create or adopt a specific attestation standard for assuring GHG emissions, just as this proposal does not define a single methodology for calculating GHG emissions. This is because both the reporting and attestation landscapes are currently evolving and it would be premature to adopt one approach and potentially curtail future innovations in these two areas. The evolving nature of GHG emissions calculations and attestation standards could suggest that it may also be premature to require assurance. We are soliciting comment on the feasibility of our proposal and will consider any public feedback received, but we have preliminarily determined that the phased-in approach that we are proposing, along with an extended period for disclosure compliance for accelerated filers, balances the benefits of third-party review with the costs of seeking assurance in this evolving space.

The proposed minimum standards for attestation services and the proposed additional disclosure requirements would not eliminate fragmentation with respect to assurance or obviate the need for investors to assess and compare multiple attestation standards. Nevertheless, we

believe some flexibility in our approach is warranted at this time given the unique and evolving nature of third-party assurance for climate-related disclosures. We believe the proposed minimum standards and additional disclosure requirements would enable investors to better understand the assurance that has been provided.

We are cognizant of the fact that the calculation and disclosure of GHG emissions would be new for many registrants, as would be the application of assurance standards to GHG emissions disclosure. For these reasons and the reasons discussed in greater detail below, we are proposing to require assurance (1) only for accelerated filers and large accelerated filers, (2) only with respect to Scope 1 and Scope 2 emissions, and (3) with an initial transition period for limited assurance and a subsequent transition period for reasonable assurance.

Although we have considered the challenges that mandatory assurance of GHG emissions disclosure could present, accelerated filers and large accelerated filers should have the necessary resources to devote to complying with such requirements over the proposed implementation timetable. For the many large accelerated filers that are already voluntarily obtaining some form of assurance over their GHG emissions, any cost increases associated with complying with the proposed rules would be mitigated.<sup>592</sup> Furthermore, larger issuers generally bear proportionately

---

<sup>592</sup> See, e.g., CAQ, *S&P 500 and ESG Reporting* (Aug. 9, 2021) (providing statistics on limited assurance versus reasonable assurance obtained voluntarily in the current market (e.g., at least 26 of 31 companies that obtained assurance from public company auditors obtained limited assurance; at least 174 of 235 companies that obtained assurance or verification from other service providers (non-public company auditors) obtained limited assurance)). For similar information on the S&P 100, see CAQ, *S&P 100 and ESG Reporting* (Apr. 29, 2021), available at <https://www.thecaq.org/sp-100-and-esg-reporting/>. Based on an analysis by Commission staff on Mar. 3, 2022, a substantial number of the S&P 500 companies (460+) are large accelerated filers and therefore would be subject to the proposed assurance requirements.

lower compliance costs than smaller issuers due to the fixed cost components of such compliance.<sup>593</sup>

The proposed transition periods would also provide existing accelerated filers and large accelerated filers one fiscal year to transition to limited assurance<sup>594</sup> and two additional fiscal years to transition to reasonable assurance.<sup>595</sup> For existing accelerated filers, this transition period would be in addition to the one additional year they will have to comply with the Scopes 1 and 2 emission disclosure requirements (compared to large accelerated filers). As such, these filers would have significant time to develop processes to support their GHG emissions disclosure requirements and the relevant DCP, as well as to adjust to the incremental costs and efforts associated with escalating levels of assurance. During this transition period, GHG emissions attestation providers would also have time to prepare themselves for providing such services in connection with Commission filings.

In addition to the challenges posed by the newness of calculating and disclosing GHG emissions, we believe that only requiring assurance over Scope 1 and Scope 2 emissions would be appropriate because the emissions result directly or indirectly from facilities owned or activities controlled by a registrant, which makes it relatively more accessible and easier to subject to the registrant's DCP compared to Scope 3 data. Further, as discussed earlier, many

---

<sup>593</sup> See *infra* note 948 in Section IV.C of the Economic Analysis for further discussion on proportionate costs between different types of filers.

<sup>594</sup> See *infra* note 604 for a discussion of the key differences between limited and reasonable assurance engagements.

<sup>595</sup> By limiting the assurance requirements to accelerated filers and large accelerated filers, a new registrant would not be required to provide assurance until it has been subject to the requirements of Section 13(a) or 15(d) of the Exchange Act for a period of at least twelve calendar months and it has filed at least one annual report pursuant to Section 13(a) or 15(d) of the Exchange Act. See 17 CFR 240.12b-2. Therefore, no registrant would be required to provide assurance covering its GHG emissions disclosure during an initial public offering. However, any registrant that voluntarily includes an attestation report for GHG emissions disclosure would be required to comply with proposed Item 1505(e).

registrants already voluntarily seek assurance over their GHG emissions disclosure (predominately Scope 1 and Scope 2 disclosures),<sup>596</sup> which further supports the feasibility and readiness of Scope 1 and Scope 2 emissions disclosure for mandatory assurance. In contrast, we are not proposing to require assurance of Scope 3 emissions disclosure at this time because the preparation of such disclosure presents unique challenges.<sup>597</sup> Depending on the size and complexity of a company and its value chain, the task of calculating Scope 3 emissions could be relatively more burdensome and expensive than calculating Scope 1 and Scope 2 emissions. In particular, it may be difficult to obtain activity data from suppliers, customers, and other third parties in a registrant's value chain, or to verify the accuracy of that information compared to disclosures of Scope 1 and Scope 2 emissions data, which are more readily available to a registrant.

We are proposing to require accelerated filers and large accelerated filers to obtain limited assurance, with an eventual scaling up to reasonable assurance. The objective of a limited assurance engagement is for the service provider to express a conclusion about whether it

---

<sup>597</sup> *See supra* Section II.G.3 for further discussion of the unique challenges presented by the disclosure of Scope 3 emissions.

is aware of any material modifications that should be made to the subject matter (*e.g.*, the Scopes 1 and 2 emissions disclosure) in order for it to be fairly stated or in accordance with the relevant criteria (*e.g.*, the methodology and other disclosure requirements specified in proposed 17 CFR 229.1504 (Item 1504 of Regulation S-K)).<sup>598</sup> In such engagements, the conclusion is expressed in the form of negative assurance regarding whether any material misstatements have been identified.<sup>599</sup> In contrast, the objective of a reasonable assurance engagement, which is the same level of assurance provided in an audit of a registrant’s consolidated financial statements, is to express an opinion on whether the subject matter is in accordance with the relevant criteria, in all material respects. A reasonable assurance opinion provides positive assurance that the subject matter is free from material misstatement.<sup>600</sup>

Reasonable assurance is feasible whenever limited assurance can be provided on a subject,<sup>601</sup> and as noted above the voluntary attestation obtained by some registrants has been at the reasonable assurance level.<sup>602</sup> We understand, however, that a limited assurance engagement

---

<sup>598</sup> See, *e.g.*, AICPA’s Statement on Standards for Attestation Engagements (SSAE) No.22, AT-C Section 210.

<sup>599</sup> See *infra* Section II.H.3 for further discussion of the attestation report requirements, including the difference between a conclusion and an opinion.

<sup>600</sup> See, *e.g.*, AICPA SSAE No. 21, AT-C Sections 205 and 206.

<sup>601</sup> Under commonly used attestation standards, both a reasonable assurance engagement and a limited assurance engagement have the same requirement that the subject matter (*e.g.*, Scope 1 and Scope 2 emissions) of the engagement be appropriate as a precondition for providing assurance. Thus, if the subject matter is appropriate for a limited assurance engagement, it is also appropriate for a reasonable assurance engagement. See AICPA SSAE No. 18 (Apr. 2016); and IAASB ISAE 3000 (Revised) (Dec. 2013).

<sup>602</sup> For example, some registrants have voluntarily sought reasonable assurance over certain information, including Scopes 1, 2, and 3 emissions, for which others have voluntarily sought limited assurance. See, *e.g.*, Apple, Inc. Environmental Progress Report (Mar. 2021), at 88-90, available at [https://www.apple.com/environment/pdf/Apple\\_Environmental\\_Progress\\_Report\\_2021.pdf](https://www.apple.com/environment/pdf/Apple_Environmental_Progress_Report_2021.pdf); United Parcel Service, Inc. (UPS) FY 2020 GRI Content Index, at 72, available at [https://about.ups.com/content/dam/upsstories/assets/reporting/sustainability-2021/2020\\_UPS\\_GRI\\_Content\\_Index\\_081921v2.pdf](https://about.ups.com/content/dam/upsstories/assets/reporting/sustainability-2021/2020_UPS_GRI_Content_Index_081921v2.pdf); and Guess?, Inc. FY2020-2021 Sustainability Report, at 91, available at <https://static1.squarespace.com/static/609c10ed49db5202181d673f/v6/0faf8af82418f5da4778f6f/1627060411937/GUESS+FY20-21+Sustainability+Report.pdf>.

is less extensive and is currently the level of assurance most commonly provided<sup>603</sup> in the voluntary assurance market for climate-related disclosure.<sup>604</sup> Therefore, prior to the transition to reasonable assurance, the additional compliance efforts required to comply with the proposed assurance requirement should be limited for the many registrants that—according to commenters and others—are already obtaining limited assurance for their climate-related disclosures.<sup>605</sup> Furthermore, although reasonable assurance provides a significantly higher level of assurance than limited assurance, we believe limited assurance would benefit investors during the initial transition period by enhancing the reliability of a registrant’s Scopes 1 and 2 emissions disclosure, in light of the benefits that assurance provides, as discussed above. Moreover, under the proposed rules, accelerated filers and large accelerated filers would not be prevented from obtaining reasonable assurance for their climate disclosures earlier than required. After the transition to mandatory reasonable assurance, investors would have the benefits of a higher level of assurance with smaller incremental costs to accelerated filers and large accelerated filers than moving directly to a reasonable assurance requirement.

---

<sup>603</sup> See *supra* note 592 (providing statistics on limited assurance obtained voluntarily in the current market).

<sup>604</sup> The scope of work in a limited assurance engagement is substantially less than a reasonable assurance engagement. The primary difference between the two levels of assurance relates to the nature, timing, and extent of procedures required to obtain sufficient, appropriate evidence to support the limited assurance conclusion or reasonable assurance opinion. Limited assurance engagements primarily include procedures such as inquiries and analytical procedures and do not necessarily include a consideration of whether internal controls have been effectively designed, whereas reasonable assurance engagements require the assurance service provider to consider and obtain an understanding of internal controls. More extensive testing procedures beyond inquiries and analytical procedures, including recalculation and verification of data inputs, are also required in reasonable assurance engagements, such as inspecting source documents that support transactions selected on a sample basis. Driven by these differences, the cost of limited assurance is generally lower than that of reasonable assurance.

<sup>605</sup> See letters from CAQ and Energy Infrastructure Council; *supra* note 592 (providing statistics on voluntary assurance obtained by S&P 100 and S&P 500 companies).

## **Request for Comment**

135. Should we require accelerated filers and large accelerated filers to obtain an attestation report covering their Scope 1 and Scope 2 emissions disclosure, as proposed? Should we require accelerated filers and large accelerated filers to obtain an attestation report covering other aspects of their climate-related disclosures beyond Scope 1 and 2 emissions? For example, should we also require the attestation of GHG intensity metrics, or of Scope 3 emissions, if disclosed? Conversely, should we require accelerated filers and large accelerated filers to obtain assurance covering only Scope 1 emissions disclosure? Should any voluntary assurance obtained by these filers after limited assurance is required be required to follow the same attestation requirements of Item 1505(b)–(d), as proposed?

136. If we required accelerated filers and large accelerated filers to obtain an attestation report covering Scope 3 emissions disclosure, should the requirement be phased-in over time? If so, what time frame? Should we require all Scope 3 emissions disclosure to be subject to assurance or only certain categories of Scope 3 emissions? Would it be possible for accelerated filers and large accelerated filers to obtain an attestation report covering the process or methodology for calculating Scope 3 emissions rather than obtaining an attestation report covering the calculations of Scope 3 emissions? Alternatively, is there another form of verification over Scope 3 disclosure that would be more appropriate than obtaining an attestation report?

137. Should the attestation requirement be limited to accelerated filers and large accelerated filers, as proposed? Alternatively, should the attestation requirement be limited to a subset of accelerated filers and large accelerated filers? If so, what conditions should apply?

Should the attestation requirement only apply to well-known seasoned issuers?<sup>606</sup> Should the attestation requirement also apply to other types of registrants? Should we create a new test for determining whether the attestation requirements apply to a registrant that would take into account the resources of the registrant and also apply to initial public offerings? For example, should we create a test similar to the SRC definition,<sup>607</sup> which includes a separate determination for initial registration statements, but using higher public float and annual revenue amounts?

138. Instead of requiring only accelerated filers and large accelerated filers to include an attestation report for Scope 1 and Scope 2 emissions, should the proposed attestation requirements also apply to registrants other than accelerated filers and large accelerated filers? If so, should the requirement apply only after a specified transition period? Should such registrants be required to provide assurance at the same level as accelerated filers and large accelerated filers and over the same scope of GHG emissions disclosure, or should we impose lesser requirements (*e.g.*, only limited assurance and/or assurance over Scope 1 emissions disclosure only)?

139. Should we require accelerated filers and large accelerated filers to initially include attestation reports reflecting attestation engagements at a limited assurance level, eventually increasing to a reasonable assurance level, as proposed? What level of assurance should apply to the proposed GHG emissions disclosure, if any, and when should that level apply? Should we provide a one fiscal year transition period between the GHG emissions disclosure compliance date and when limited assurance would be required

---

<sup>606</sup> See 17 CFR 230.405 (defining “well-known seasoned issuer”).

<sup>607</sup> See, *e.g.*, 17 CFR 240.12b-2.

for accelerated filers and large accelerated filers, as proposed? Should we provide an additional two fiscal year transition period between when limited assurance is first required and when reasonable assurance is required for accelerated filers and large accelerated filers, as proposed?

140. Should we provide the same transition periods (from the Scopes 1 and 2 emissions disclosure compliance date) for accelerated filers and large accelerated filers, as proposed? Instead, should different transition periods apply to accelerated filers and large accelerated filers? Should we provide transition periods with different lengths than those proposed? Should we require the attestation to be at a reasonable assurance level without having a transition period where only limited assurance is required? Should we instead impose assurance requirements to coincide with reporting compliance periods?
141. Under prevailing attestation standards, “limited assurance” and “reasonable assurance” are defined terms that we believe are generally understood in the marketplace, both by those seeking and those engaged to provide such assurance. As a result, we have not proposed definitions of those terms. Should we define “limited assurance” and “reasonable assurance” and, if so, how should we define them? Would providing definitions in this context cause confusion in other attestation engagements not covered by the proposed rules? Are the differences between these types of attestation engagements sufficiently clear without providing definitions?
142. As proposed, there would be no requirement for a registrant to either provide a separate assessment and disclosure of the effectiveness of controls over GHG emissions disclosure by management or obtain an attestation report from a GHG emissions attestation provider specifically covering the effectiveness of controls over GHG emissions disclosure.

Should we require accelerated filers and large accelerated filers to provide a separate management assessment and disclosure of the effectiveness of controls over GHG emissions disclosure (separate from the existing requirements with respect to the assessment and effectiveness of DCP)? Should we require management to provide a statement in their annual report on their responsibility for the design and evaluation of controls over GHG emissions disclosure and to disclose their conclusion regarding the effectiveness of such controls? Instead of, or in addition to, such management assessment and statement, should we require the registrant to obtain an attestation report from a GHG emissions attestation provider that covers the effectiveness of such GHG emissions controls as of the date when the accelerated filer or large accelerated filer is required to comply with the reasonable assurance requirement under proposed Item 1505(a)? If so:

- (i) Would it be confusing to apply either such requirement in light of the existing DCP requirements that would apply to the proposed GHG emissions disclosure?
- (ii) Would a separate management assessment and statement on the effectiveness of controls over GHG emissions provide meaningful disclosure to investors beyond the existing requirement for DCP?
- (iii) Should we specify that the separate management assessment and statement must be provided by the accelerated filer's or large accelerated filer's principal executive and principal financial officers, or persons performing similar functions? Should we clarify which members of the accelerated filer or large accelerated filer's management should be involved in performing the underlying assessment?
- (iv) What controls framework(s) would the effectiveness of the registrant's controls over GHG emissions disclosure be evaluated against, if any?

- (v) For the GHG emissions attestation provider, what requirements should be applied to such GHG emissions disclosure controls attestation requirement? For example, what attestation standards should apply? Should other service provider(s) in addition to or in lieu of the GHG emissions attestation provider be permitted to provide such attestation over the effectiveness of the GHG controls?
- (vi) Should we limit such a requirement to accelerated filers and large accelerated filers only or should it apply to other registrants as well?
- (vii) What would be the potential benefits and costs of either approach?
- (viii) Should we require a certification on the design and evaluation of controls over GHG emissions disclosures by officers serving in the principal executive and principal financial officer roles or persons performing similar functions for an accelerated filer or large accelerated filer? Would a certification requirement have any additional benefits or impose any additional costs when compared to a requirement for management to assess and disclose in a statement in the annual report the effectiveness of controls over GHG emissions?

143. We considered whether to require registrants to include the GHG emissions metrics in the notes or a separate schedule to their financial statements, by amending Regulation S-X instead of Regulation S-K.

- (i) Would there be benefits to including this information in a registrant's financial statements? For example, would requiring the GHG emissions disclosure to be included in the financial statements improve the consistency, comparability, reliability, and decision-usefulness of the information for investors? Would it facilitate the integration of GHG metrics and targets into the registrant's financial analysis? Would

such placement cause registrants to incur significantly more expense in obtaining an audit of the disclosure? If so, please quantify those additional expenses where possible.

(ii) Should we require a registrant to include the GHG emissions disclosure in its audited financial statements so that the disclosure would be subject to the existing requirements for an independent audit and ICFR? If so, we seek comment on the following aspects of this alternative:

(a) If GHG emissions disclosure is subject to ICFR, or an internal control framework similar to ICFR, would GHG emissions disclosure be more reliable compared to what is currently proposed? What are the benefits or costs?

(b) Should the GHG emissions disclosure be included in a note to the registrant's financial statements (*e.g.*, in the note where the proposed financial statement metrics as discussed above in Section II.F would be included) or in a schedule, or somewhere else? If the GHG emissions disclosure was required in the financial statements, should it be subject to a reasonable assurance audit like the other information in the financial statements? If in a schedule, should the GHG emissions disclosure be disclosed in a schedule similar to those required under Article 12 of Regulation S-X, which would subject the disclosure to audit and ICFR requirements? Should we instead require the metrics to be disclosed as supplemental financial information, similar to the disclosure requirements under FASB ASC Topic 932-235-50-2 for registrants that have significant oil- and gas-producing activities? If so, should such supplemental schedule be subject to ICFR requirements? Instead of requiring the GHG emissions disclosure to be included

in a note to the registrant's audited financial statements, should we require a new financial statement for such metrics?

- (c) PCAOB auditing standards apply to the audit of a registrant's financial statements.

If GHG emissions disclosure is included in a supplemental schedule to the financial statements, should we allow other auditing standards to be applied? If so, which ones? What, if any, additional guidance or revisions to such standards would be needed in order to apply them to the audit of GHG emissions disclosure?

- (d) What are the costs and benefits of employing registered public accounting firms to perform audits of GHG emissions disclosure and related attestation of internal controls? Are there potential cost savings in employing registered public accountants that currently perform audits of financial statements and attestation of ICFR to review GHG emissions disclosure and any related internal controls? If we require GHG emissions disclosure to be presented in the financial statements, should we permit entities other than registered public accounting firms to provide assurance of this information, as proposed for the current attestation requirements under Regulation S-K? If not limited to registered public accounting firms, who should be permitted to provide assurance of GHG emissions disclosure? Should we permit environmental consultants, engineering firms, or other types of specialists to provide assurance? What are the costs and benefits of such approach? Would the reliability of the audits and therefore the information disclosed be affected if assurance providers other than registered public accounting firms are permitted to conduct these audits? Please provide supporting data where possible. If we should allow for assurance providers that are not registered public accounting firms, what

qualifications and oversight should they have, and what requirements should we impose on them? Should we direct the PCAOB to develop a separate registration process for service providers that are not otherwise registered? What expertise, independence and quality control standards should apply?

(e) What would be the other potential benefits and costs of such an approach?

## **2. GHG Emissions Attestation Provider Requirements**

The proposed rules would require the GHG emissions attestation report required by proposed Item 1505(a) for accelerated filers and large accelerated filers to be prepared and signed by a GHG emissions attestation provider.<sup>608</sup> The proposed rules would define a GHG emissions attestation provider to mean a person or a firm that has all of the following characteristics:

- Is an expert in GHG emissions by virtue of having significant experience in measuring, analyzing, reporting, or attesting to GHG emissions. Significant experience means having sufficient competence and capabilities necessary to:
  - perform engagements in accordance with professional standards and applicable legal and regulatory requirements; and
  - enable the service provider to issue reports that are appropriate under the circumstances.<sup>609</sup>

---

<sup>608</sup> See proposed 17 CFR 229.1505(b).

<sup>609</sup> See proposed 17 CFR 229.1505(b)(1).

- Is independent with respect to the registrant, and any of its affiliates,<sup>610</sup> for whom it is providing the attestation report, during the attestation and professional engagement period.<sup>611</sup>

The proposed expertise requirement is intended to help ensure that the service provider preparing the attestation report has sufficient competence and capabilities necessary to execute the attestation engagement. In this regard, if the service provider is a firm, we would expect that it have policies and procedures designed to provide it with reasonable assurance that the personnel selected to conduct the GHG emissions attestation engagement have significant experience with respect to both attestation engagements and GHG disclosure. This would mean that the service provider has the qualifications necessary for fulfillment of the responsibilities that it would be called on to assume, including the appropriate engagement of specialists, if needed.<sup>612</sup> The proposed expertise requirement would apply to the person or the firm signing the GHG emissions attestation report.<sup>613</sup>

---

<sup>610</sup> “Affiliates,” for purposes of proposed 17 CFR 229.1505 has the meaning provided in 17 CFR 210.2-01, except references to “audit” are deemed to be references to the attestation services provided pursuant to this section. See proposed 17 CFR 229.1505(b)(2)(iii).

<sup>611</sup> See proposed 17 CFR 229.1505(b)(2) and 229.1505(b)(2)(iv) (defining the term “attestation and professional engagement period”).

<sup>612</sup> Independent auditors and accountants are already required to comply with similar quality control and management standards when providing audit and attest services under the PCAOB, AICPA, or IAASB standards. See, e.g., PCAOB, Quality Control (QC) Standards Section 20 *System of Quality Control for a CPA Firm’s Accounting and Auditing Practice* and Section 40 *The Personnel Management Element of a Firm’s System of Quality Control – Competencies Required by a Practitioner-in-Charge of an Attest Engagement*, available at <https://pcaobus.org/oversight/standards/qc-standards>; AICPA, QC Section 10, *A Firm’s System of Quality Control*, available at <https://us.aicpa.org/content/dam/aicpa/research/standards/auditattest/downloadabledocuments/qc-00010.pdf>; and IAASB, International Standard on Quality Management 1, *Quality Management for Firms that Perform Audits or Reviews of Financial Statements, or Other Assurance or Related Services Engagements*, available at <https://www.ifac.org/system/files/publications/files/IAASB-Quality-Management-ISQM-1-Quality-Management-for-Firms.pdf>.

<sup>613</sup> We have adopted similar expertise requirements in the past to determine eligibility to prepare a mining technical report. Although also relating to technical, specialized disclosures, the mining technical report requirements differ in that such an engagement is not an assurance engagement. See *Modernization of Property Disclosures for Mining Registrants*, Release No. 33-10570 (Oct. 31, 2018), [83 FR 66344 (Dec. 26, 2018)].

The second proposed requirement is modeled on the Commission’s qualifications for accountants under 17 CFR 210.2-01 (Rule 2-01 of Regulation S-X), which are designed to ensure that auditors are independent of their audit clients. Similar to how assurance provided by independent public accountants improves the reliability of financial statements and disclosures and is a critical component of our capital markets, assurance of GHG emissions disclosure by independent service providers should also improve the reliability of such disclosure. Academic studies demonstrate that assurance provided by an independent auditor reduces the risk that an entity provides materially inaccurate information to external parties, including investors, by facilitating the dissemination of transparent and reliable financial information.<sup>614</sup> We expect that GHG emissions disclosure would similarly benefit if assured by an independent service provider. Moreover, the potential conflicts of interest, or even the appearance of such conflicts of interest, between the GHG emissions attestation provider and the registrant could raise doubts for investors about whether they can rely on the attestation service and its report.

Similar to Rule 2-01 of Regulation S-X,<sup>615</sup> the proposed rules would provide that a GHG emissions attestation provider is not independent if during the attestation and professional engagement period such attestation provider is not, or a reasonable investor with knowledge of all relevant facts and circumstances would conclude that such attestation provider is not, capable of exercising objective and impartial judgment on all issues encompassed within the attestation

---

<sup>614</sup> See Mark Defond & Jieying Zhang, *A Review of Archival Auditing Research*, 58 J. ACCT. & ECON., 275 (2014); *Qualifications of Accountants*, Release No. 33-10876 (Oct. 16, 2020) [85 FR 80508 (Dec. 11, 2020)], at 80508 (“The Commission has long recognized that an audit by an objective, impartial, and skilled professional contributes to both investor protection and investor confidence”). See also Statement of Paul Munter, Acting Chief Accountant, *The Importance of High Quality Independent Audits and Effective Audit Committee Oversight to High Quality Financial Reporting to Investors* (Oct. 26, 2021).

<sup>615</sup> See 17 CFR 210.2-01(b).

provider's engagement.<sup>616</sup> The proposed definition for the attestation and professional engagement period, which is modeled on Rule 2-01 of Regulation S-X, includes both (1) the period covered by the attestation report and (2) the period of the engagement to attest to the registrant's GHG emissions or to prepare a report filed with the Commission (the "professional engagement period"). Under the proposed rules, the professional engagement period would begin when the GHG attestation service provider either signs an initial engagement letter (or other agreement to attest to a registrant's GHG emissions) or begins attest procedures, whichever is earlier.<sup>617</sup>

The proposed rules would further state that, in determining whether a GHG emissions attestation provider is independent, the Commission will consider:

- whether a relationship or the provision of a service creates a mutual or conflicting interest between the attestation provider and the registrant (or any of its affiliates), places the attestation provider in the position of attesting to such attestation provider's own work, results in the attestation provider acting as management or an employee of the registrant (or any of its affiliates), or places the attestation provider in a position of being an advocate for the registrant (or any of its affiliates);<sup>618</sup> and
- all relevant circumstances, including all financial or other relationships between the attestation provider and the registrant (or any of its affiliates), and not just those relating to reports filed with the Commission.<sup>619</sup>

---

<sup>616</sup> See proposed 17 CFR 229.1505(b)(2)(i).

<sup>617</sup> See proposed 17 CFR 229.1505(b)(2)(iv).

<sup>618</sup> See proposed 17 CFR 229.1505(b)(2)(ii)(A).

<sup>619</sup> See proposed 17 CFR 229.1505(b)(2)(ii)(B).

These proposed provisions are modeled on the factors used by the Commission in determining whether an accountant is independent.<sup>620</sup> Similar to Rule 2-01 of Regulation S-X, the proposed provisions should help protect investors by requiring the GHG emissions attestation provider to be independent both in fact and appearance from the registrant, including its affiliates.

Because the GHG emissions attestation provider would be a person whose profession gives authority to the statements made in the attestation report and who is named as having provided an attestation report that is part of the registration statement, the registrant would be required to obtain and include the written consent of the GHG emissions attestation provider pursuant to Securities Act Section 7,<sup>621</sup> the corresponding rule requiring the written consents of such experts,<sup>622</sup> and the Regulation S-K provision requiring the attachment of the written consent of an expert to a Securities Act registration statement or an Exchange Act report that incorporates by reference a written expert report attached to a previously filed Securities Act registration statement.<sup>623</sup> The GHG emissions attestation provider would also be subject to liability under the federal securities laws for the attestation conclusion or, when applicable, opinion provided. Such liability should encourage the attestation service provider to exercise due diligence with respect to its obligations under a limited or reasonable assurance engagement.

---

<sup>620</sup> See 17 CFR 210.2-01. For the avoidance of doubt, we note that if the independent accountant who audits the registrant's consolidated financial statements is also engaged to perform the GHG emissions attestation for the same filing, the fees associated with the GHG emissions attestation engagement would be considered "Audit-Related Fees" for purposes of Item 9(e) of 17 CFR 240.14a-101, Item 14 of Form 10-K, Item 16C of Form 20-F, or any similar requirements.

<sup>621</sup> 15 U.S.C. 77g.

<sup>622</sup> See 17 CFR 230.436.

<sup>623</sup> See 17 CFR 229.601(b)(23).

## Request for Comment

144. Should we require a registrant to obtain a GHG emissions attestation report that is provided by a GHG emissions attestation provider that meets specified requirements, as proposed? Should one of the requirements be that the attestation provider is an expert in GHG emissions, with significant experience in measuring, analyzing, reporting, or attesting to GHG emissions, as proposed? Should we specify that significant experience means having sufficient competence and capabilities necessary to: (a) perform engagements in accordance with professional standards and applicable legal and regulatory requirements and (b) enable the service provider to issue reports that are appropriate under the circumstances, as proposed? Should we instead require that the GHG emissions attestation provider have a specified number of years of the requisite type of experience, such as 1, 3, 5, or more years? Should we specify that a GHG emissions attestation provider meets the expertise requirements if it is a member in good standing of a specified accreditation body that provides oversight to service providers that apply attestation standards? If so, which accreditation body or bodies should we consider (*e.g.*, AICPA)? Are there any other requirements for the attestation provider that we should specify? Instead, should we require a GHG emissions attestation provider to be a PCAOB-registered audit firm?

145. Is additional guidance needed with respect to the proposed expertise requirement? Should we instead include prescriptive requirements related to the qualifications and characteristics of an expert under the proposed rules? For example, should we include a provision that requires a GHG emissions attestation provider that is a firm to have established policies and procedures designed to provide it with reasonable assurance that the personnel selected to provide the GHG attestation service have the qualifications necessary for fulfillment

of the responsibilities that the GHG emissions attestation provider will be called on to assume, including the appropriate engagement of specialists, if needed?

146. Should we require the GHG emissions attestation provider to be independent with respect to the registrant, and any of its affiliates, for whom it is providing the attestation report, as proposed? Should we specify that a GHG emissions attestation provider is not independent if such attestation provider is not, or a reasonable investor with knowledge of all relevant facts and circumstances would conclude that such attestation provider is not, capable of exercising objective and impartial judgment on all issues encompassed within the attestation provider's engagement, as proposed? The proposed provision is based on a similar provision regarding the qualification of an accountant to be an independent auditor under Rule 2-01 of Regulation S-X. Is Rule 2-01 an appropriate model for determining the independence of a GHG emissions attestation provider? Is being independent from a registrant and its affiliates an appropriate qualification for a GHG emissions attestation provider?

147. Should we specify that the factors the Commission would consider in determining whether a GHG emissions attestation provider is independent include whether a relationship or the provision of a service creates a mutual or conflicting interest between the attestation provider and the registrant, including its affiliates, places the attestation provider in the position of attesting to such attestation provider's own work, results in the attestation provider acting as management or an employee of the registrant, including its affiliates, or places the attestation provider in a position of being an advocate for the registrant and its affiliates, as proposed? Should we specify that the Commission also will consider all relevant circumstances, including all financial and other relationships between the attestation provider and the registrant, including its affiliates, and not just those relating to reports filed with the Commission, as proposed?

148. Should we adopt all of the proposed factors for determining the independence of a GHG emissions attestation provider, or are there factors we should omit? Are there any additional factors that we should specify that the Commission will consider when determining the independence of a GHG emissions attestation provider? For example, should we include any non-exclusive specifications of circumstances that would be inconsistent with the independence requirements, similar to those provided in 17 CFR 210.2-01(c) (Rule 2-01(c) of Regulation S-X)?

149. Should the definition of “affiliates” be modeled on Rule 2-01, as proposed, or should we use a different definition? Would defining the term differently than proposed cause confusion because the rest of the proposed independence requirement is modeled on Rule 2-01? Many accountants are likely familiar with the proposed definition given their required compliance with Rule 2-01, would non-accountants understand how to comply with and apply this concept?

150. Should the term “attestation and professional engagement period” be defined in the proposed manner? If not, how should “attestation and professional engagement period” be defined? Alternatively, should the Commission specify a different time period during which an attestation provider must meet the proposed independence requirements?

151. Should we include disclosure requirements when there is a change in, or disagreement with, the registrant’s GHG emissions attestation provider that are similar to the disclosure requirements in Item 4.01 of Form 8-K and 17 CFR 229.304 (Item 304 of Regulation S-K)?

152. Accountants are already required to comply with the relevant quality control and management standards when providing audit and attest services under the PCAOB, AICPA, or IAASB standards. These quality control and management standards would apply to accountants providing GHG attestation services pursuant to those standards as well. Should we require the

GHG emissions attestation provider to comply with additional minimum quality control requirements (*e.g.*, acceptance and continuance of engagements, engagement performance, professional code of conduct, and ethical requirements) to provide greater consistency over the quality of service provided by GHG emissions attestation providers who do not (or cannot) use the PCAOB, AICPA, or IAASB attestation standards? If so, what should the minimum requirements be?

153. As proposed, the GHG emissions attestation provider would be a person whose profession gives authority to statements made in the attestation report and who is named as having provided an attestation report that is part of the registration statement, and therefore the registrant would be required to obtain and include the written consent of the GHG emissions provider pursuant to Securities Act Section 7 and related Commission rules. This would subject the GHG emissions attestation provider to potential liability under Section 11 of the Securities Act. Would the possibility of Section 11 liability deter qualified persons from serving as GHG emissions attestation providers? Should we include a provision similar to 17 CFR 230.436(c), or amend that rule, to provide that a report on GHG emissions at the limited assurance level by a GHG emissions attestation provider that has reviewed such information is not considered part of a registration statement prepared or certified by a person whose profession gives authority to a statement made by him or a report prepared or certified by such person within the meaning of Section 7 and 11 of the Act?

### **3. GHG Emissions Attestation Engagement and Report Requirements**

The proposed rules would require the attestation report required by proposed Item 1505(a) for accelerated filers and large accelerated filers to be included in the separately-captioned “Climate-Related Disclosure” section in the relevant filing and provided pursuant to

standards that are publicly available at no cost and are established by a body or group that has followed due process procedures, including the broad distribution of the framework for public comment.<sup>624</sup> The requirement that the standards be established by a body or group that has followed due process procedures would be similar to the requirements for determining a suitable, recognized control framework for use in management’s evaluation of an issuer’s ICFR.<sup>625</sup> In both cases, a specific framework is not prescribed but minimum requirements for what constitutes a suitable framework are provided. This approach would help to ensure that the standards upon which the attestation engagement and report are based are the result of a transparent, public, and reasoned process. This requirement should also help to protect investors who may rely on the attestation report by limiting the standards to those that have been sufficiently developed. Rather than prescribe a particular attestation standard, the proposed approach recognizes that more than one suitable attestation standard exists and that others may develop in the future.

---

<sup>624</sup> See proposed 17 CFR 229.1505(a)(2) and (c).

<sup>625</sup> See 17 CFR 240.13a-15(c) and 240.15d-15(c) (stating that the “framework on which management’s evaluation of the issuer’s internal control over financial reporting is based must be a suitable, recognized control framework that is established by a body or group that has followed due-process procedures, including the broad distribution of the framework for public comment”).

In our view, the attestation standards, for example, of the PCAOB,<sup>626</sup> AICPA,<sup>627</sup> and IAASB<sup>628</sup> would meet this due process requirement. In addition, all of these attestation standards are publicly available at no cost to investors who desire to review them. We believe that open access is an important consideration when determining the suitability of attestation standards for application to GHG emissions disclosure because it would enable investors to evaluate the report against the requirements of the selected attestation standard. By highlighting these standards, we do not mean to imply that other standards currently used in voluntary reporting would not be suitable for use under the proposed rules. Our proposal intends to set minimum standards while acknowledging the current voluntary practices of registrants. As noted below, we seek comment on whether other standards currently used in the voluntary climate-related assurance market or that are otherwise under development would meet the proposed due process requirement and also be suitable for application to GHG emissions under the Commission's proposed rules.

The proposed rules would not include any requirement for a registrant to obtain an attestation report covering the effectiveness of internal control over GHG emissions disclosure,

---

<sup>626</sup> See PCAOB AT Section 101, Attest Engagements, available at <https://pcaobus.org/oversight/standards/attestation-standards/details/AT101>.

<sup>627</sup> See AICPA SSAE No. 18 (general attestation standard), available at <https://us.aicpa.org/content/dam/aicpa/research/standards/auditattest/downloadabledocuments/ssae-no-18.pdf>; SSAE No. 22, Review Engagements (limited assurance standard, effective for reports dated on or after June 15, 2022), available at <https://us.aicpa.org/content/dam/aicpa/research/standards/auditattest/downloadabledocuments/ssae-22.pdf>; and SSAE No. 21, Direct Examination Engagements (reasonable assurance standard, effective for reports dated on or after June 15, 2022 and will amend SSAE No. 18), available at <https://us.aicpa.org/content/dam/aicpa/research/standards/auditattest/downloadabledocuments/ssae-21.pdf>.

<sup>628</sup> See IAASB ISAE 3000 (Revised), Assurance Engagements Other than Audits or Reviews of Historical Financial Information, available at <https://www.ifac.org/system/files/publications/files/ISAE%203000%20Revised%20-%20for%20IAASB.pdf>. See also IAASB ISAE 3410, Assurance Engagements on Greenhouse Gas Statements, available at [https://www.ifac.org/system/files/publications/files/Basis%20for%20Conclusions%20-%20ISAE%203410%20Assurance%20Engagements%20on%20Greenhouse%20Gas%20Statements-final\\_0.pdf](https://www.ifac.org/system/files/publications/files/Basis%20for%20Conclusions%20-%20ISAE%203410%20Assurance%20Engagements%20on%20Greenhouse%20Gas%20Statements-final_0.pdf).

and therefore such a report would not be required even when the GHG emissions attestation engagement is performed at a reasonable assurance level. Given the current evolving state of GHG emissions reporting and assurance, we believe that existing DCP obligations, and the proposed requirement that accelerated filers and large accelerated filers initially obtain at least limited assurance of such disclosure, are appropriate first steps toward enhancing the reliability of GHG emissions disclosure. We also note that, under prevailing attestation standards for limited assurance engagements, the testing of and attestation over internal controls are not required.<sup>629</sup> With respect to the eventual reasonable assurance engagements, while there are requirements under prevailing attestation standards to consider and obtain an understanding of internal controls, there is no required attestation of the effectiveness of internal controls such as that included in Section 404(b) of the Sarbanes-Oxley Act of 2002 (Sarbanes-Oxley Act).<sup>630</sup>

We recognize that the attestation standards that a GHG emissions attestation provider may use would have specific requirements for the form and content of attestation reports. The proposed rules would require a GHG emissions attestation provider to follow the specific requirements regarding form and content of the reports set forth by the attestation standard (or standards) used by such attestation provider.<sup>631</sup> Nevertheless, in order to provide some standardization and comparability of GHG emissions attestation reports, the proposed rules would impose minimum requirements for the GHG emissions attestation report.<sup>632</sup> In particular, such minimum report requirements would provide investors with consistent and comparable

---

<sup>629</sup> See, e.g., AICPA SSAE No. 22, AT-C § 210.A16.

<sup>630</sup> See 15 U.S.C. 7262(b) (requiring a registered public accounting firm that prepares or issues an audit report for certain issuers to attest to, and report on, the assessment made by the management of the issuer with respect to internal controls).

<sup>631</sup> See proposed 17 CFR 229.1505(c).

<sup>632</sup> See proposed 17 CFR 229.1505(c)(1) through (13).

information about the GHG emissions attestation engagement and report obtained by the registrant when the engagement is conducted by a GHG emissions attestation provider using an attestation standard that may be less widely used or that has less robust report requirements than more prevalent standards.

The proposed minimum attestation engagement and report requirements are primarily derived from the AICPA's attestation standards (*e.g.*, SSAE No. 18), which are commonly used by accountants who currently provide GHG attestation engagement services as well as other non-GHG-related attestation engagement services, and are largely similar to the report requirements under PCAOB AT-101 and IAASB ISAE 3410. Many of the following proposed minimum attestation report requirements are also elements of an accountant's report when attesting to internal control over financial reporting, of an accountant's report on audited financial statements (which is conducted at a reasonable assurance level), or of a review report on interim financial statements (which is conducted at a limited assurance level). We explain below each of the proposed minimum components of a GHG emissions attestation report. These are all common elements of current assurance reports and are also similar to elements of other expert reports and legal opinions provided in Commission filings and other transactions.

As proposed, the GHG emissions attestation report would be required to include an identification or description of the subject matter or assertion on which the attestation provider is reporting.<sup>633</sup> For example, the attestation report would identify the subject matter as Scope 1 and Scope 2 emissions disclosure. If a registrant voluntarily sought attestation of additional items of disclosure, such as GHG intensity metrics or Scope 3 emissions, the attestation provider would

---

<sup>633</sup> See proposed 17 CFR 229.1505(c)(1).

be required to identify those additional items as well in the attestation report. If a registrant has made an assertion about the measurement or evaluation of the subject matter to the attestation provider,<sup>634</sup> the attestation report must include such assertion. For example, the attestation report might refer to the registrant's assertion that the Scope 1 and Scope 2 emissions disclosure included within the filing has been presented in accordance with Item 1504 of Regulation S-K. These proposed minimum requirements would elicit information that is fundamental to understanding the attestation report and would clarify the scope of the attestation report when the scope does not align with the scope of the registrant's GHG emissions disclosure (*e.g.*, when Scope 3 emissions disclosure is included in the filing but not covered by the attestation report).

The proposed rules would also require the GHG emissions attestation report to include the point in time or period of time to which the measurement or evaluation of the subject matter or assertion relates.<sup>635</sup> Therefore, the attestation provider would be required to identify the time period to which the Scopes 1 and 2 emissions disclosure (or other additional disclosure) relates, which would be the registrant's most recently completed fiscal year or some other 12-month period if permitted under the applicable climate-related disclosure rules<sup>636</sup> as well as any relevant historical period disclosure included within the filing. This proposed requirement seeks to avoid any confusion investors may have about which period or periods of the climate-related disclosures included within the filing are subject to the attestation.

---

<sup>634</sup> *See, e.g.*, AICPA SSAE No. 22, AT-C §210.45(c); AICPA SSAE No. 21, AT-C §205.63(c).

<sup>635</sup> *See* proposed 17 CFR 229.1505(c)(1).

<sup>636</sup> As previously mentioned, we are soliciting comment regarding whether the GHG emissions should be reported as of fiscal year-end or some other 12-month period. *See supra* Section II.G.1.

The proposed rules would also require the attestation report to identify the criteria against which the subject matter was measured or evaluated.<sup>637</sup> For an attestation report solely covering Scopes 1 and 2 emissions disclosure, the identified criteria would include the requirements in proposed Item 1504 of Regulation S-K and, in particular, Item 1504(a), which includes presentation requirements such as disaggregation by each constituent greenhouse gas. The identified criteria would also include Item 1504(b) and the applicable instructions in Item 1504(e) regarding methodology, organizational boundary, and operational boundary. In other words, this minimum requirement would require an attestation provider to refer to the requirements with which the registrant must comply when making the disclosure that is subject to the attestation. Without the frame of reference provided by the identified criteria, the conclusion or opinion included in the report may be open to individual interpretation and misunderstanding by investors.

Prevailing attestation standards require the criteria against which the subject matter is measured or evaluated to be “suitable.” In the context of the proposed rules, suitable criteria would, when followed, result in reasonably consistent measurement or evaluation of the registrant’s disclosure that is within the scope of the engagement. Characteristics of suitable criteria include relevance, objectivity, measurability, and completeness.<sup>638</sup> We believe that proposed Item 1504 of Regulation S-K would satisfy the suitable criteria requirements of the prevailing attestation standards because the proposed requirements set forth relevant, objective

---

<sup>637</sup> See proposed 17 CFR 229.1505(c)(2).

<sup>638</sup> See, e.g., AICPA SSAE No. 18, AT-C §105.A16 and .A42; AICPA SSAE No. 21, AT-C §105.A16 and .A44. In addition to relevance and completeness, the characteristics of suitable criteria under ISAE 3000.A23 include reliability, neutrality and understandability. Despite the differences in the characteristics listed, the underlying concepts and objectives are consistent.

standards that call for measurable and complete disclosure of GHG emissions that would allow for a consistent evaluation of the registrant's disclosure.

The GHG emissions attestation report would further be required to include a statement that identifies the level of assurance provided and describes the nature of the attestation engagement.<sup>639</sup> For example, under the proposed rule, an attestation report providing limited assurance would need to include not only a statement that limited assurance is the provided level of assurance, but also would need to describe the scope of work performed in a limited assurance engagement, which typically would indicate that the procedures performed vary in nature, timing, and extent compared to a reasonable assurance engagement. This proposed minimum requirement would help investors understand the level of assurance provided.

The proposed rules would require the attestation report to include a statement that identifies the attestation standard (or standards) used.<sup>640</sup> As previously discussed, the standard used must be publicly available at no cost and have been established by a body or group that has followed due process procedures, including the broad distribution of the framework for public comment.<sup>641</sup> This minimum report requirement would allow investors to easily identify the attestation standard that the engagement is executed against, which is particularly important because the proposed rules do not prescribe a particular attestation standard. Understanding the attestation standard used would allow investors to better understand the attestation performed by evaluating the report against the attestation standard's requirements and would facilitate comparability across the attestation reports of different registrants.

---

<sup>639</sup> See proposed 17 CFR 229.1505(c)(3).

<sup>640</sup> See proposed 17 CFR 229.1505(c)(4).

<sup>641</sup> See proposed 17 CFR 229.1505(a)(2).

The attestation report would also be required to include a statement that describes the registrant's responsibility to report on the subject matter or assertion being reported on in order to make it clear to investors who is ultimately responsible for the disclosure.<sup>642</sup> At a minimum, this proposed provision would require a statement that the registrant is responsible for the subject matter, or its assertion on the subject matter. This proposed requirement, like all of the minimum requirements, has corollaries outside of the GHG emissions context. For example, an independent auditor's audit report on a registrant's financial statements is required to include a statement that the registrant's management is responsible for the financial statements that are being audited.<sup>643</sup>

The proposed rules would further require the attestation report to include a statement that describes the attestation provider's responsibilities in connection with the preparation of the attestation report.<sup>644</sup> This is consistent with existing requirements in reports such as those issued by the independent auditor on the audited financial statements or a review report on the interim financial statements. For example, with respect to a limited assurance engagement, under prevailing attestation standards, the report would typically include a statement that the attestation provider's responsibilities include expressing a conclusion on the subject matter or the assertion based on the attestation provider's review.<sup>645</sup> Similarly, for a reasonable assurance engagement, the report would typically include a statement that the attestation provider's responsibilities

---

<sup>642</sup> See proposed 17 CFR 229.1505(c)(5).

<sup>643</sup> See, e.g., PCAOB AS 3101, par. 9(a).

<sup>644</sup> See proposed 17 CFR 229.1505(c)(6).

<sup>645</sup> See, e.g., AICPA SSAE No.22, AT-C sec. 210.45(f).

include expressing an opinion on the subject matter or assertion, based on the attestation provider's examination.<sup>646</sup>

The proposed rules would also require the attestation report to include a statement that the attestation provider is independent, as required by proposed 17 CFR 229.1505(a).<sup>647</sup> Because independence from the registrant, including its affiliates, would be a necessary qualification for the GHG emissions attestation provider,<sup>648</sup> the attestation report would be required to include the attestation provider's confirmation of his or her compliance with the proposed independence requirement.

The proposed rules would further require the attestation report, for a limited assurance engagement, to include a description of the work performed as a basis for the attestation provider's conclusion.<sup>649</sup> This proposed provision is intended to enhance the transparency of the GHG emissions attestation report for investors by eliciting disclosure about the procedures undertaken by the attestation provider in its limited assurance engagement, such as inquiries and analytical procedures. This information would allow investors to assess and understand the extent of procedures performed to support the conclusion reached by the attestation provider, which could also facilitate an investor's comparison of different attestation reports provided under the same or different attestation standards.

The GHG emissions attestation report would also be required to include a statement that describes any significant inherent limitations associated with the measurement or evaluation of

---

<sup>646</sup> See, e.g., AICPA SSAE No. 21, AT-C sec. 205.63(f) and sec. 206.12(e)(ii).

<sup>647</sup> See proposed 17 CFR 229.1505(c)(7).

<sup>648</sup> See *supra* Section II.H.2.

<sup>649</sup> See proposed 17 CFR 229.1505(c)(8).

the subject matter (at a minimum, Scopes 1 and 2 emissions) against the criteria (*i.e.*, the applicable requirements in proposed Item 1504).<sup>650</sup> Such a statement is a common characteristic of attestation reports, including the independent auditor's report on internal control over financial reporting. This proposed provision is intended to elicit disclosure about the estimation uncertainties inherent in the quantification of GHG emissions, driven by reasons such as the state of the science, methodology, and assumptions used in the measurement and reporting processes. For example, an attestation provider might include in its report a statement about measurement uncertainty resulting from accuracy and precision of GHG emission conversion factors.

The proposed rules would require the GHG emissions attestation report to include the attestation provider's conclusion or opinion, as applicable, based on the attestation standard(s) used.<sup>651</sup> For a limited assurance engagement, under prevailing attestation standards, the conclusion would typically state whether the provider is aware of any material modifications that should be made to the subject matter in order for the disclosure to be in accordance with (or based on) the requirements specified in Item 1504, or for the registrant's assertion about such subject matter to be fairly stated.<sup>652</sup> For a reasonable assurance engagement, the attestation provider would typically provide an opinion on whether the subject matter is in accordance with (or based on) the requirements specified in Item 1504 in all material respects, or that the registrant's assertion about its subject matter is fairly stated, in all material respects.<sup>653</sup>

---

<sup>650</sup> See proposed 17 CFR 229.1505(c)(9).

<sup>651</sup> See proposed 17 CFR 229.1505(c)(10).

<sup>652</sup> See, *e.g.*, AICPA SSAE No. 22, AT-C sec. 210.45(l).

<sup>653</sup> See, *e.g.*, AICPA SSAE No. 21 AT-C sec. 205.63(k) and sec. 206.12(j).

Finally, the proposed rules would require the GHG emissions attestation report to include the signature of the attestation provider (whether by an individual or a person signing on behalf of the attestation provider's firm),<sup>654</sup> the city and state where the attestation report has been issued,<sup>655</sup> and the date of the report.<sup>656</sup> These are all common elements of current assurance and expert reports, and each of these proposed provisions would help to identify and confirm the validity of the GHG emissions attestation provider.

### **Request for Comment**

154. Should we require the attestation engagement and related attestation report to be provided pursuant to standards that are publicly available at no cost and are established by a body or group that has followed due process procedures, including the broad distribution of the framework for public comment, as proposed? Is the requirement of "due process procedures, including the broad distribution of the framework for public comment" sufficiently clear? Would the attestation standards of the PCAOB, AICPA, and IAASB meet this due process requirement? Are there other standards currently used in the voluntary climate-related assurance market or otherwise in development that would meet the due process and publicly availability requirements? For example, would verification standards commonly used by non-accountants currently, such as ISO 14064-3 and the AccountAbility's AA1000 Series of Standards, meet the proposed requirements? Are there standards currently used in the voluntary climate-related assurance market or otherwise under development that would be appropriate for use under the Commission's climate-related disclosure rules although they may not strictly meet the proposed

---

<sup>654</sup> See proposed 17 CFR 229.1505(c)(11).

<sup>655</sup> See proposed 17 CFR 229.1505(c)(12).

<sup>656</sup> See proposed 17 CFR 229.1505(c)(13).

public comment requirement? If so, please explain whether those standards have other characteristics that would serve to protect investors?

155. Should we require that the attestation standards used be publicly available at no cost to investors, as proposed? Should we permit the use of attestation standards, even if not publicly available at no cost, provided that registrants provide access to those standards at the request of their investors?

156. Should we require the GHG emissions attestation report to meet certain minimum requirements in addition to any form and content requirements set forth by the attestation standard or standards used by the GHG emissions attestation provider, as proposed? Should we instead require that the attestation report solely meet whatever requirements are established by the attestation standard or standards used?

157. Should we adopt each of the proposed minimum requirements? Are there any proposed requirements that we should omit or add to the proposed list of minimum GHG emissions attestation report requirements?

158. Regarding the proposed provision requiring the identification of the criteria against which the subject matter was measured or evaluated, would reference to proposed Item 1504(a), Item 1504(b), and Item 1504(e)'s instructions concerning the presentation, methodology, including underlying assumptions, and organizational and operational boundaries applicable to the determination of Scopes 1 and 2 emissions meet the "suitable criteria" requirement under prevailing attestation standards (*e.g.*, AICPA SSAE No. 18, AT-C 105.A16)?

159. If we require or permit a registrant to use the GHG Protocol as the methodology for determining GHG emissions, would the provisions of the GHG Protocol qualify as "suitable criteria" against which the Scope 1 and Scope 2 emissions disclosure should be evaluated?

#### 4. Additional Disclosure by the Registrant

In addition to the minimum attestation report requirements described above, which reflect the contents of attestation reports under prevailing attestation standards, we are proposing to require disclosure by the registrant of certain additional matters related to the attestation of a registrant's GHG emissions.<sup>657</sup> These disclosures are not typically included in an attestation report, and would not be included in the GHG emissions attestation report under the proposed rules. Instead, the registrant would be required to provide these disclosures in the separately captioned "Climate-Related Disclosure" section, where the GHG emissions disclosure would be provided pursuant to the proposed rules.<sup>658</sup>

These proposed additional disclosures should assist investors in evaluating the qualifications of the GHG emissions attestation provider selected by the registrant, particularly in light of the broad spectrum of attestation providers that would be permitted to provide an attestation report under the proposed rules.<sup>659</sup>

We considered requiring the proposed disclosures to be provided in the attestation report but are not proposing to do so because we are concerned such an approach may create confusion by conflicting with prevalent attestation standards. Furthermore, in light of the variety of attestation service providers the registrant is permitted to engage, requiring the registrant to provide such disclosures may allow the registrant to better provide its investors with relevant information about the qualifications of the service provider that the registrant engaged for the GHG emissions attestation.

---

<sup>657</sup> See proposed 17 CFR 229.1505(d).

<sup>658</sup> See *id.*

<sup>659</sup> See *supra* Section II.H.2.

With respect to the Scope 1 and Scope 2 emissions attestation required pursuant to proposed Item 1505(a) for accelerated filers and large accelerated filers,<sup>660</sup> the registrant would be required to disclose in the filing, based on relevant information obtained from any GHG emissions attestation provider:

- Whether the attestation provider has a license from any licensing or accreditation body to provide assurance, and if so, the identity of the licensing or accreditation body, and whether the attestation provider is a member in good standing of that licensing or accreditation body;<sup>661</sup>
- Whether the GHG emissions attestation engagement is subject to any oversight inspection program, and if so, which program (or programs);<sup>662</sup> and
- Whether the attestation provider is subject to record-keeping requirements with respect to the work performed for the GHG emissions attestation engagement and, if so, identify the record-keeping requirements and the duration of those requirements.<sup>663</sup>

The first two above items of disclosure would help investors better understand the qualifications of the GHG emissions attestation provider, which in turn could help them assess the reliability of the attestation results. An example of a license from a licensing or accreditation body to provide assurance would be a Certified Public Accountant license issued by a state board of accountancy (*e.g.*, the California Board of Accountancy), while an example of oversight programs would include the AICPA peer review program, among others. The proposed

---

<sup>660</sup> If an accelerated filer or a large accelerated filer voluntarily obtains assurance beyond what would be required by proposed Item 1505(a) and uses a different service provider for such assurance, it would also be required to provide the information required by proposed Item 1505(d) for such service provider.

<sup>661</sup> *See* proposed 17 CFR 229.1505(d)(1).

<sup>662</sup> *See* proposed 17 CFR 229.1505(d)(2).

<sup>663</sup> *See* proposed 17 CFR 229.1505(d)(3).

disclosure requirement about any record-keeping requirements to which the attestation provider is subject would help enhance the transparency of the attestation process by providing investors with information about the business practices of the attestation provider that has been retained by the registrant.<sup>664</sup>

### **Request for Comment**

160. Should we require certain items of disclosure related to the attestation of a registrant's GHG emissions to be provided by the registrant in its filing that includes the attestation report (where the GHG emissions and other climate-related disclosures are presented), based on relevant information obtained from the GHG emissions attestation provider, as proposed? Should these additional items of disclosure instead be included in the attestation report?

161. Should we require the registrant to disclose whether the attestation provider has a license from any licensing or accreditation body to provide assurance, and if so, the identity of the licensing or accreditation body, and whether the attestation provider is a member in good standing of that licensing or accreditation body, as proposed? In lieu of disclosure, should we require a GHG emissions attestation provider to be licensed to provide assurance by specified licensing or accreditation bodies? If so, which licensing or accreditation bodies should we specify?

162. Should we require a registrant to disclose whether the GHG emissions attestation engagement is subject to any oversight inspection program, and if so, which program (or programs), as proposed? Should we instead require the registrant to disclose whether the

---

<sup>664</sup> For example, the AICPA imposes a minimum five-year documentation retention program for an audit. *See* AU-C 230.17. Although document retention is less prescriptive for attestation engagements, many attestation providers adhere to the five-year period in practice.

attestation engagement is subject to certain specified oversight programs? If so, which oversight programs should we specify?

163. Should we require a registrant to disclose whether the attestation provider is subject to record-keeping requirements with respect to the work performed for the GHG emissions attestation engagement and, if so, identify the record-keeping requirements and duration of those requirements, as proposed? In lieu of disclosure, should we specify that the record-keeping requirements of a GHG emissions attestation provider must be of a certain minimum duration, such as three, five, or seven years, or some other period? Should we specify that the record-keeping requirements must include certain reasonable procedures and, if so, what procedures?

## **5. Disclosure of Voluntary Attestation**

Because GHG emissions reporting and assurance landscapes are both relatively new and evolving as described earlier, at this time, we are proposing to require a registrant, other than a large accelerated filer or an accelerated filer that is required to include a GHG emissions attestation report pursuant to proposed Item 1505(a), to disclose within the separately captioned “Climate-Related Disclosure” section in the filing the following information if the registrant’s GHG emissions disclosures were subject to third-party attestation or verification:

- (i) Identify the provider of such assurance or verification;<sup>665</sup>
- (ii) Describe the assurance or verification standard used;<sup>666</sup>
- (iii) Describe the level and scope of assurance or verification provided;<sup>667</sup>

---

<sup>665</sup> See proposed 17 CFR 229.1505(e)(1).

<sup>666</sup> See proposed 17 CFR 229.1505(e)(2).

<sup>667</sup> See proposed 17 CFR 229.1505(e)(3).

- (iv) Briefly describe the results of the assurance or verification;<sup>668</sup>
- (v) Disclose whether the third-party service provider has any other business relationships with or has provided any other professional services to the registrant that may lead to an impairment of the service provider's independence with respect to the registrant;<sup>669</sup> and
- (vi) Disclose any oversight inspection program to which the service provider is subject (*e.g.*, the AICPA's peer review program).<sup>670</sup>

Taken together, these proposed disclosure items should help investors understand the nature and reliability of the attestation or verification provided and help them assess whether the voluntary assurance or verification has enhanced the reliability of the GHG emissions disclosure. We are limiting the proposed assurance disclosure requirement to a registrant's GHG emissions disclosure because registrants are more likely to obtain assurance voluntarily for this disclosure item than for other climate-related disclosures.<sup>671</sup> The proposed approach should mitigate the compliance burden of the proposed GHG emissions disclosure rules, taking into consideration the proportionate compliance costs that may impact accelerated and large accelerated filers versus other types of filers, while providing transparency for investors about the level and reliability of the assurance or verification, if any, provided on the GHG emissions disclosures.

### **Request for Comment**

---

<sup>668</sup> See proposed 17 CFR 229.1505(e)(4).

<sup>669</sup> See proposed 17 CFR 229.1505(e)(5).

<sup>670</sup> See proposed 17 CFR 229.1505(e)(6).

<sup>671</sup> See, *e.g.*, letters from BNP Paribas; Eni SpA; ERM CVS; and Walmart. See also CAQ, *S&P 500 and ESG Reporting*.

164. Should we require a registrant that is not required to include a GHG emissions attestation report pursuant to proposed Item 1505(a) to disclose within the separately captioned “Climate-Related Disclosure” section in the filing the following information, if the registrant’s GHG emissions disclosure was subject to third-party attestation or verification, as proposed:

- (i) Identify the provider of such assurance or verification;
- (ii) Disclose the assurance or verification standard used;
- (iii) Describe the level and scope of assurance or verification provided;
- (iv) Briefly describe the results of the assurance or verification;
- (v) Disclose whether the third-party service provider has any other business relationships with or has provided any other professional services to the registrant that may lead to an impairment of the service provider’s independence with respect to the registrant; and
- (vi) Disclose any oversight inspection program to which the service provider is subject (*e.g.*, the AICPA’s peer review program), each as proposed?

Are there other disclosure items that we should require if a registrant has obtained voluntary assurance or verification of the climate-related disclosures? Are there any of the proposed disclosure items that we should omit? Should we specify parameters or include guidance on when the services provided by a third-party would be considered “assurance” or “verification” and thus require disclosure pursuant to the proposed rules? Should a registrant be required to furnish a copy of or provide a link to the assurance or verification report so that it is readily accessible by an investor?

165. Instead of requiring a registrant to disclose whether the third-party service provider has any other business relationships with or has provided any other professional services to the

registrant that may lead to an impairment of the service provider's independence with respect to the registrant as proposed, should we require the third-party service provider to be independent, according to the standard proposed under Item 1505(b) for accelerated filers and large accelerated filers that are required to include a GHG emissions attestation report pursuant to proposed Item 1505(a)? If not, should we provide guidance as to what constitutes an impairment of a service provider's independence with respect to the registrant? Would this result in decision-useful information to an investor? Should we instead require a registrant to disclose whether the third-party service provider would be considered independent under some other independence requirement?

166. As proposed, a registrant would be required to disclose any oversight inspection program to which the service provider is subject, such as the PCAOB's inspection program or the AICPA's peer review program. Are there other oversight programs that we should provide as examples? Would such disclosure provide decision-useful information to an investor? Is it clear what "any oversight inspection program" would include?

167. As proposed, a registrant would not be required to disclose the voluntary assurance or verification fees associated with the GHG disclosures. Should we require GHG disclosure assurance or verification fees to be disclosed? Would such disclosure be decision-useful to investors making voting or investment decisions?

## **I. Targets and Goals Disclosure**

If a registrant has set any climate-related targets or goals, then the proposed rules would require the registrant to provide certain information about those targets or goals.<sup>672</sup> Those goals

---

<sup>672</sup> See proposed 17 CFR 229.1506(a)(1).

or targets might, for example, relate to the reduction of GHG emissions, or address energy usage,<sup>673</sup> water usage, conservation or ecosystem restoration. A registrant might also set goals with regard to revenues from low-carbon products in line with anticipated regulatory requirements, market constraints, or other goals established by a climate-related treaty, law, regulation, policy, or organization. The proposed disclosure requirements could help investors better understand the scope of a registrant's climate-related targets or goals, including those related to GHG emissions, and assist in assessing progress towards achieving those targets or goals.

Many commenters recommended that we require registrants to provide detailed information about their climate-related targets and goals, including action plans and timelines for achieving such targets as GHG emissions reductions and performance data measured against those targets.<sup>674</sup> This information could be important for investors in light of the fact that, according to one publication, two-thirds of S&P 500 companies had set a carbon reduction target by the end of 2020.<sup>675</sup> Despite the numerous commitments to reduce GHG emissions, according to several sources, many companies do not provide their investors with sufficient information to understand how the companies intend to achieve those commitments or the progress made

---

<sup>673</sup> For example, numerous companies have pledged to achieve 100% of the electricity used in their global operations from renewable sources by 2050. *See* RE100, [What are the requirements to become a RE100 member?](https://www.there100.org/technical-guidance), available at <https://www.there100.org/technical-guidance>.

<sup>674</sup> *See, e.g.*, letters from Americans for Financial Reform Education Fund and Public Citizen; Center for Law and Social Policy; Domini Impact Investments; Dynamhex, Inc.; FAIRR Initiative; Generation Investment Management; Hannon Armstrong; HP, Inc.; Interfaith Center on Corporate Responsibility; NYC Office of Comptroller; Pre-Distribution Initiative; Regenerative Crisis Response Committee; and WK Associates.

<sup>675</sup> *See supra* note 66 (referencing The Wall Street Journal (Nov. 5, 2021)).

regarding them.<sup>676</sup> The proposed disclosure requirements are intended to elicit enhanced information about climate-related targets and goals so that investors can better evaluate these points.

If a registrant has set climate-related targets or goals, the proposed rules would require it to disclose them, including, as applicable, a description of:

- The scope of activities and emissions included in the target;
- The unit of measurement, including whether the target is absolute or intensity based;
- The defined time horizon by which the target is intended to be achieved, and whether the time horizon is consistent with one or more goals established by a climate-related treaty, law, regulation, policy, or organization;
- The defined baseline time period and baseline emissions against which progress will be tracked with a consistent base year set for multiple targets;
- Any interim targets set by the registrant; and
- How the registrant intends to meet its climate-related targets or goals.<sup>677</sup>

This information would help investors understand a registrant's particular target or goal and a particular timeline for that target or goal, how the target or goal is to be measured, and how progress against the target or goal is to be tracked. For example, a registrant might disclose that it plans to cut its Scopes 1 and 2 emissions by 50 percent by 2030.<sup>678</sup> The registrant might also disclose a target to reduce its Scope 3 emissions by 50 percent by 2035. In addition, the

---

<sup>676</sup> See, e.g., Jocelyn Timperley, *The Guardian*, *The truth behind corporate climate pledges* (July 26, 2021); Peter Eavis and Clifford Krauss, *The New York Times*, *What's Really Behind Corporate Promises on Climate Change?* (May 12, 2021); and Alice C. Hill and Jennifer Nash, *The Hill*, *The truth behind companies' 'net zero' climate commitments* (Apr. 9, 2021).

<sup>677</sup> See proposed 17 CFR 229.1506(b)(1) through (6).

<sup>678</sup> See proposed 17 CFR 229.1506(b)(3).

registrant might also set a goal of achieving net zero greenhouse gas emissions across its operations by 2050, in keeping with the goals of the Paris Agreement.

Under the proposed rules, the registrant would be required to disclose the baseline year for multiple targets.<sup>679</sup> Requiring disclosure of defined baseline time periods and baseline emissions against which progress will be tracked, with a consistent base year for multiple targets, could help investors compare the progress made towards each target. The registrant would also be required to disclose the unit of measurement, including whether the target is expressed in absolute terms or is intensity-based. If the registrant has set intervening targets (*e.g.*, reducing its Scope 3 emissions by 35 percent by 2030), the registrant would be required to disclose these targets.<sup>680</sup> Each of the proposed disclosure requirements is intended to provide investors with additional insight into the scope and specifics of a registrant's climate-related targets or goals.

The proposed rules would further require a registrant to discuss how it intends to meet its climate-related targets or goals.<sup>681</sup> This information should enable investors to better understand the potential impacts on a registrant associated with pursuing its climate-related targets or goals. For example, for a target or goal regarding net GHG emissions reduction, the discussion could include a strategy to increase energy efficiency, transition to lower carbon products, purchase carbon offsets or RECs, or engage in carbon removal and carbon storage.<sup>682</sup> For a registrant operating in a water-stressed area, with the goal of reducing its freshwater needs, the discussion could include a strategy to increase the water efficiency of its operations, such as by recycling

---

<sup>679</sup> See proposed 17 CFR 229.1506(b)(4).

<sup>680</sup> See proposed 17 CFR 229.1506(b)(5).

<sup>681</sup> See proposed 17 CFR 229.1506(b)(6).

<sup>682</sup> See proposed 17 CFR 229.1506(b)(6).

wastewater or, if in agriculture, engaging in bioengineering techniques to make crops more resilient and less water dependent. Information about how a registrant intends to achieve its climate-related target or goal could provide investors with a better understanding of the potential costs to mitigate a potential climate-related risk, such as a manufacturer's reduction of GHG emissions through implementation of a relatively high cost solution such as carbon capture and storage technology.<sup>683</sup>

The proposed rules would also require a registrant to disclose relevant data to indicate whether it is making progress toward achieving the target or goal and how such progress has been achieved.<sup>684</sup> A registrant would be required to update this disclosure each fiscal year by describing the actions taken during the year to achieve its targets or goals.<sup>685</sup> This proposed disclosure could help investors assess how well a registrant is managing its identified climate-related risks.

Some companies might establish climate-related goals or targets without yet knowing how they will achieve those goals. They might plan to develop their strategies over time, particularly as new technologies become available that might facilitate their achievement of their goals. The fact that a company has set a goal or target does not mean that it has a specific plan for how it will achieve those goals. What is important is that investors be informed of a registrant's plans and progress wherever it is in the process of developing and implementing its plan.

---

<sup>683</sup> See proposed 17 CFR 229.1502.

<sup>684</sup> See proposed 17 CFR 229.1506(c).

<sup>685</sup> See *id.*

If the registrant has used carbon offsets or RECs in its plan to achieve climate-related targets or goals, it would be required to disclose the amount of carbon reduction represented by the offsets or the amount of generated renewable energy represented by the RECS, the source of the offsets or RECs, a description and location of the underlying projects, any registries or other authentication of the offsets or RECs, and the cost of the offsets or RECs.<sup>686</sup> For example, a carbon offset might pertain to an underlying project to reduce GHG emissions, increase the storage of carbon, or enhance GHG removals from the atmosphere. Information regarding the source, value, underlying projects, and authentication of the offsets or RECs could help investors assess the offsets or RECs and the effectiveness of the registrant's plan to achieve its climate-related targets or goals. Such information could also help investors understand changes in the use or viability of the carbon offsets or RECs as part of achieving a registrant's climate-related targets or goals that are caused by changes in regulation or markets. A reasonable investor could well assess differently the effectiveness and value to a registrant of the use of carbon offsets where the underlying projects resulted in authenticated reductions in GHG emissions compared to the use of offsets where the underlying projects resulted in the avoidance, but not the reduction, in GHG emissions or otherwise lacked verification. As some commenters have indicated, mandated detailed disclosure about the nature of a purchased carbon offset could also help to mitigate instances of greenwashing.<sup>687</sup>

Proposed 17 CFR 229.1505(a)(2) (Item 1505(a)(2)) would state that a registrant may provide the disclosures required by the section when discussing climate-related impacts on its strategy, business model, and outlook (in response to proposed Item 1502) or when discussing its

---

<sup>686</sup> See proposed 17 CFR 229.1506(d).

<sup>687</sup> See, e.g., letter from Dimensional Fund Advisors.

transition plan as part of its risk management disclosure (in response to proposed Item 1503). If so, it need not repeat the disclosure in response to the proposed targets and goals section but should cross-refer to the section where the information has been provided.

A registrant's disclosure of its climate-related targets or goals should not be construed to be promises or guarantees. To the extent that information regarding a registrant's climate-related targets or goals would constitute forward-looking statements, which we would expect, for example, with respect to how a registrant intends to achieve its climate-related targets or goals and expected progress regarding those targets and goals, the PSLRA safe harbors would apply to such statements, assuming all other statutory requirements for those safe harbors are satisfied.

### **Request for Comment**

168. Should we require a registrant to disclose whether it has set any targets related to the reduction of GHG emissions, as proposed? Should we also require a registrant to disclose whether it has set any other climate-related target or goal, *e.g.*, regarding energy usage, water usage, conservation or ecosystem restoration, or revenues from low-carbon products, in line with anticipated regulatory requirements, market constraints, or other goals, as proposed? Are there any other climate-related targets or goals that we should specify and, if so, which targets or goals? Is it clear when disclosure under this proposed item would be triggered, or do we need to provide additional guidance? Would our proposal discourage registrants from setting such targets or goals?

169. Should we require a registrant, when disclosing its targets or goals, to disclose:

- The scope of activities and emissions included in the target;
- The unit of measurement, including whether the target is absolute or intensity based;

- The defined time horizon by which the target is intended to be achieved, and whether the time horizon is consistent with one or more goals established by a climate-related treaty, law, regulation, or organization;
- The defined baseline time period and baseline emissions against which progress will be tracked with a consistent base year set for multiple targets;
- Any intervening targets set by the registrant; and
- How it intends to meet its targets or goals, each as proposed?

Are there any other items of information about a registrant's climate-related targets or goals that we should require to be disclosed, in addition to or instead of these proposed items? Are there any proposed items regarding such targets or goals that we should exclude from the required disclosure? If a registrant has set multiple targets or goals, should it be permitted to establish different base years for those targets or goals?

170. Should we require a registrant to discuss how it intends to meet its climate-related targets or goals, as proposed? Should we provide examples of potential items of discussion about a target or goal regarding GHG emissions reduction, such as a strategy to increase energy efficiency, a transition to lower carbon products, purchasing carbon offsets or RECs, or engaging in carbon removal and carbon storage, as proposed? Should we provide additional examples of items of discussion about climate-related targets or goals and, if so, what items should we add? Should we remove any of the proposed examples of items of discussion?

171. Should we require a registrant, when disclosing its targets or goals, to disclose any data that indicates whether the registrant is making progress towards meeting the target and how such progress has been achieved, as proposed?

172. Should we require that the disclosure be provided in any particular format, such as charts? Would certain formats help investors and others better assess these disclosures in the context of assessing the registrant's business and financial condition? What additional or other requirements would help in this regard?

173. If a registrant has used carbon offsets or RECs, should we require the registrant to disclose the amount of carbon reduction represented by the offsets or the amount of generated renewable energy represented by the RECS, the source of the offsets or RECs, the nature and location of the underlying projects, any registries or other authentication of the offsets or RECs, and the cost of the offsets or RECs, as proposed? Are there other items of information about carbon offsets or RECs that we should specifically require to be disclosed when a registrant describes its targets or goals and the related use of offsets or RECs? Are there proposed items of information that we should exclude from the required disclosure about offsets and RECs?

174. Should we apply the PSLRA statutory safe harbors as they currently exist to forward-looking statements involving climate-related targets and goals, or other climate-related forward-looking information? Should we instead create a separate safe harbor for forward-looking climate-related information, including targets and goals? Should we adopt an exception to the PSLRA statutory safe harbors that would extend the safe harbors to climate-related forward-looking disclosures made in an initial public offering registration statement?

## **J. Registrants Subject to the Climate-Related Disclosure Rules and Affected Forms**

The proposed climate-related disclosure rules would apply to a registrant with Exchange Act reporting obligations pursuant to Exchange Act Section 13(a)<sup>688</sup> or Section 15(d)<sup>689</sup> and companies filing a Securities Act or Exchange Act registration statement. Specifically, we are proposing to require a registrant to include climate-related disclosure in Securities Act or Exchange Act registration statements (Securities Act Forms S-1, F-1, S-3, F-3, S-4, F-4, and S-11, and Exchange Act Forms 10 and 20-F)<sup>690</sup> and Exchange Act annual reports (Forms 10-K and 20-F), including the proposed financial statement metrics.<sup>691</sup> Similar to the treatment of other important business and financial information, the proposed rules would also require registrants to disclose any material change to the climate-related disclosure provided in a registration statement

---

<sup>688</sup> 15 U.S.C. 78m(a).

<sup>689</sup> 15 U.S.C. 78o(d).

<sup>690</sup> Form 20-F is the Exchange Act form used by a foreign private issuer for its annual report or to register a class of securities under Section 12 of the Exchange Act. The proposed rules would amend Part I of Form 20-F to require a foreign private issuer to provide the climate-related disclosures pursuant to the proposed rules either when registering a class of securities under the Exchange Act or when filing its Exchange Act annual report. A foreign private issuer would also be required to comply with the proposed rules when filing a Securities Act registration statement on Form F-1. Because Form F-1 requires a registrant to include the disclosures required by Part I of Form 20-F, the proposed amendment to Form 20-F would render unnecessary a formal amendment to Form F-1. We are similarly not formally amending Forms S-3 and F-3 because the climate-related disclosure would be included in a registrant's Form 10-K or 20-F annual report that is incorporated by reference into those Securities Act registration statements.

<sup>691</sup> See Form 20-F, General Instruction B(d) (stating that Regulation S-X applies to the presentation of financial information in the form). Although Item 17 and 18 of Form 20-F, and the forms that refer to Form 20-F (including Forms F-1 and F-3) permit a foreign private issuer to file financial statements prepared in accordance with IFRS as issued by the IASB, the proposed Article 14 disclosure would nevertheless be required (similar to disclosure required by Article 12 of Regulation S-X). See *Acceptance from Foreign Private Issuers of Financial Statements Prepared in Accordance with International Financial Reporting Standards Without Reconciliation to U.S. GAAP*, Rel. No. 33-8879 (Dec. 21, 2007) [73 FR 986 (Jan. 4, 2008)], 999, n.136 (stating that "Regulation S-X will continue to apply to the filings of all foreign private issuers, including those who file financial statements prepared using IFRS as issued by the IASB," but providing that such issuers "will comply with IASB requirements for form and content within the financial statements, rather than with the specific presentation and disclosure provisions in Articles 4, 5, 6, 7, 9, and 10 of Regulation S-X").

or annual report in its Form 10-Q (or, in certain circumstances, Form 6-K for a registrant that is a foreign private issuer that does not report on domestic forms).<sup>692</sup>

The proposed rules would amend Form 20-F and the Securities Act forms that a foreign private issuer may use to register the offer and sale of securities under the Securities Act to require the same climate-related disclosures as proposed for a domestic registrant.<sup>693</sup> Because climate-related risks potentially impact both domestic and foreign private issuers, regardless of the registrant's jurisdiction of origin or organization, requiring that foreign private issuers provide this disclosure would be important to achieving our goal of more consistent, reliable, and comparable information across registrants. Moreover, we note that Form 20-F imposes substantially similar disclosure requirements as those required for Form 10-K filers on matters, such as risk factors and MD&A, that are similar and relevant to the proposed climate-related disclosures.<sup>694</sup>

---

<sup>692</sup> Form 6-K is the form furnished by a foreign private issuer with an Exchange Act reporting obligation if the issuer: (i) makes or is required to make the information public pursuant to the law of the jurisdiction of its domicile or in which it is incorporated or organized, or (ii) files or is required to file the information with a stock exchange on which its securities are traded and which was made public by that exchange, or (iii) distributes or is required to distribute the information to its security holders. *See* General Instruction B to Form 6-K. That instruction currently list certain types of information that are required to be furnished pursuant to subparagraphs (i), (ii), and (iii), above. While we are proposing to amend Form 6-K to add climate-related disclosure to the list of the types of information to be provided on Form 6-K, a foreign private issuer would not be required to provide the climate-related disclosure if such disclosure is not required to be furnished pursuant to subparagraphs (i), (ii), or (iii) of General Instruction B.

<sup>693</sup> *See* proposed Item 3.E to Form 20-F.

<sup>694</sup> For similar reasons, we believe that requiring the proposed climate disclosures on Forms F-1, F-3, and F-4 is appropriate because those forms either require the disclosure pursuant to certain parts of Form 20-F (Forms F-1 and F-4) and certain items, such as risk factors, under Regulation S-K, or permit the incorporation by reference of Form 20-F (Forms F-3 and F-4) and therefore require disclosure similar to the domestic forms.

We are not proposing generally to exempt SRCs, EGCs,<sup>695</sup> or registrants that are foreign private issuers from the entire scope of the proposed climate-related disclosure rules because we agree with commenters who stated that, because of their broad impact across industries and jurisdictions, climate-related risks may pose a significant risk to the operations and financial condition of domestic and foreign issuers, both large and small.<sup>696</sup> While we are not proposing to exempt SRCs from the full scope of the proposed climate-related disclosure rules, we are proposing to exempt SRCs from the proposed Scope 3 emissions disclosure requirement.<sup>697</sup> We also are proposing to provide a longer transition period for SRCs to comply with the proposed rules than we are proposing for other registrants.<sup>698</sup> The proposed accommodations for Scope 3 emissions disclosures could mitigate the proposed rules' compliance burden for smaller registrants that, when compared to larger registrants with more resources, may be less able to afford the fixed costs associated with the reporting of GHG emissions. In addition, the extended compliance period would give SRCs additional time to allocate the resources necessary to compile and prepare their climate-related disclosures.

---

<sup>695</sup> An emerging growth company (“EGC”) is a registrant that had total annual gross revenues of less than \$1.07 billion during its most recently completed fiscal year and has not met the specified conditions for no longer being considered an EGC. *See* 17 CFR 230.405; 17 CFR 240.12b-2; 15 U.S.C. 77b(a)(19); 15 U.S.C. 78c(a)(80); and *Inflation Adjustments and Other Technical Amendments under Titles I and II of the JOBS Act*, Release No. 33-10332 (Mar. 31, 2017) [82 FR 17545 (Apr. 12, 2017)].

<sup>696</sup> *See, e.g.*, letters from Rob Bonta, California Attorney General *et al.*; Ceres *et al.*; and Natural Resources Defense Council.

<sup>697</sup> *See* proposed 17 CFR 229.1504(c)(3). In this regard we note that participants in the Commission-hosted 2021 Small Business Forum recommended that the Commission provide exemptions or scaled requirements for small and medium-sized companies in connection with any new ESG disclosure requirements adopted by the Commission. *See* Report on the 40<sup>th</sup> Annual Small Business Forum (May 2021), available at [https://www.sec.gov/files/2021\\_OASB\\_Annual\\_Forum\\_Report\\_FINAL\\_508.pdf](https://www.sec.gov/files/2021_OASB_Annual_Forum_Report_FINAL_508.pdf). *See also* Office of the Advocate for Small Business Capital Formation, *Annual Report for Fiscal Year 2021* (supporting “efforts to continue tailoring the disclosure and reporting framework to the complexity and size of operations of companies, either by scaling obligations or delaying compliance for the smallest of the public companies, particularly as it pertains to potential new or expanded disclosure requirements”).

<sup>698</sup> *See infra* Section II.M.

## Request for Comment

175. Should the proposed climate-related disclosures be required in Exchange Act reports and registration statements, as proposed? Should we exempt SRCs from all of the proposed climate-related disclosure rules instead of exempting them solely from Scope 3 emissions disclosure requirements, as proposed? Should we exempt SRCs from certain other proposed climate-related disclosure requirements and, if so, which requirements? For example, in addition to the proposed exemption from Scope 3 emissions disclosure, should we exempt SRCs from the proposed requirement to disclose Scopes 1 and 2 emissions? Are there certain types of other registrants, such as EGCs or business development companies (“BDCs”),<sup>699</sup> that should be excluded from all or some of the proposed climate-related disclosure rules?

176. Should we require foreign private issuers that report on Form 20-F to provide the same climate-related disclosures as Form 10-K filers, as proposed? Should we require climate-related disclosures in the registration statements available for foreign private issuers, as proposed? If not, how should the climate-related disclosures provided by foreign private issuer registrants differ from the disclosures provided by domestic registrants?

177. Should we require a registrant to disclose any material changes to the climate-related disclosure provided in its registration statement or annual report in its Form 10-Q or Form 6-K, as proposed? Are there any changes that should be required to be reported on Form 8-K?

178. Should we require the climate-related disclosure in the forms specified above? Is the application of the proposed rules to the forms sufficiently clear, or should we include additional

---

<sup>699</sup> A BDC is a closed-end investment company that has a class of its equity securities registered under, or has filed a registration statement pursuant to, Section 12 of the Exchange Act, and elects to be regulated as a business development company. *See* Section 54 of the Investment Company Act, 15 U.S.C. 80a-53. Like other Section 12 registrants, BDCs are required to file Exchange Act annual reports.

clarifying amendments? For example, would the application of proposed Article 14 to Forms 20-F, F-1 and F-3 be sufficiently clear when a registrant prepares its financial statements pursuant to IFRS as issued by the International Accounting Standards Board (“IASB”) without reconciliation to U.S. generally accepted accounting principles (“U.S. GAAP”), or should we add a related instruction to those forms?

179. Are there certain registration statements or annual reports that should be excluded from the scope of the proposed climate-related disclosure rules? For example, should we exclude Securities Act registration statements filed in connection with a registrant’s initial public offering? Would such an accommodation help address concerns about the burdens of transitioning to public company status? We have not proposed to require climate-related disclosures in registration statements on Form S-8 or annual reports on Form 11-K. Should we require such disclosures?

180. Should we require climate-related disclosure in Forms S-4 and F-4, as proposed? Should we provide transitional relief for recently acquired companies? For example, should we provide that a registrant would not be required to provide the proposed climate-related disclosures for a company that is a target of a proposed acquisition under Form S-4 or F-4 until the fiscal year following the year of the acquisition if the target company is not an Exchange Act reporting company and is not the subject of foreign climate-related disclosure requirements that are substantially similar to the Commission’s proposed requirements? Should such transitional relief in this instance be for a longer period than one year and, if so, for how long should such transitional relief extend?

181. We have not proposed to amend Form 40-F, the Exchange Act form used by a Canadian issuer eligible to report under the Multijurisdictional Disclosure System (“MJDS”) to

register securities or to file its annual report under the Exchange Act, to include the proposed climate-related disclosure requirements. Should we require a Form 40-F issuer to comply with the Commission's proposed climate-related disclosure requirements? Should we permit a MJDS issuer to comply with Canadian climate-related disclosure requirements instead of the proposed rules if they meet certain conditions or provide certain additional disclosures and, if so, which conditions or disclosures?

182. The proposed rules would not apply to asset-backed issuers. The Commission and staff are continuing to evaluate climate-related disclosures with respect to asset-backed securities. Should we require asset-backed issuers to provide some or all of the disclosures under proposed Subpart 1500 of Regulation S-K? If so, which of the proposed disclosures should apply to asset-backed issuers? Are other types of climate disclosure better suited to asset-backed issuers? How can climate disclosure best be tailored to various asset classes?

183. Should we adopt an alternative reporting provision that would permit a registrant that is a foreign private issuer and subject to the climate-related disclosure requirements of an alternative reporting regime that has been deemed by the Commission to be substantially similar to the requirements of proposed Subpart 1500 of Regulation S-K and Article 14 of Regulation S-X to satisfy its disclosure obligations under those provisions by complying with the reporting requirements of the alternative reporting regime ("alternative reporting provision")? If so, should we require the submission of an application for recognition of an alternative reporting regime as having substantially similar requirements for purposes of alternative reporting regarding climate-related disclosures? Should we permit companies, governments, industry groups, or climate-related associations to file such an application? Should we require the applicant to follow certain procedures, such as those set forth in 17 CFR 240.0-13?

184. If we adopt an alternative reporting provision, should we specify certain minimum standards that the alternative reporting regime must meet in order to be recognized and, if so, what standards? For example, should we specify that an alternative reporting regime must require the disclosure of a foreign private issuer's Scopes 1 and 2 emissions and related targets, the proposed financial statement metrics, as well as disclosures pursuant to the TCFD's recommendations regarding governance, strategy, and risk management disclosure? Should we specify that the alternative reporting regime must require the disclosure of Scope 3 emissions and, if so, should we deem the alternative reporting regime to be substantially similar even if its Scope 3 emissions requirements become effective after the Commission's phase in period for Scope 3 emissions disclosure requirements? Should we specify that the alternative reporting regime must require the disclosure of scenario analysis if a registrant uses scenario analysis in formulating its strategy regarding climate-related risks? Are there certain climate-related disclosure requirements that have been adopted or are in the process of being adopted in other jurisdictions that we should consider to be substantially similar to the Commission's rules for purposes of an alternative reporting provision? If so, which requirements should we consider?

185. If we adopt an alternative reporting provision, should it be a mutual recognition system, so that, as a condition of our recognition of a particular jurisdiction as an alternative reporting regime, that jurisdiction must recognize the Commission's climate-related disclosure rules as an alternative reporting system that a registrant dual-listed in the United States and the other jurisdiction may use to fulfill the foreign jurisdiction's climate-related disclosure rules?

186. If we adopt an alternative reporting provision, should we require a registrant filing the alternative climate-related disclosure to make certain changes that we deem necessary as a condition to alternative reporting? For example, should we require a registrant to comply with

XBRL tagging requirements as a condition to filing alternative climate-related disclosure? Are there other specific conditions that we should impose on disclosure under an alternative climate reporting provision?

187. If we adopt an alternative reporting provision, should we require a registrant using that system to:

- State in the filing that it is relying on this alternative reporting provision;
- Identify the alternative reporting regime for which the climate-related disclosure was prepared;
- Identify the exhibit number of the filing where the alternative disclosure can be found; and
- File a fair and accurate English translation of the alternative climate-related disclosure if in a foreign language?

Would these requirements enhance the accessibility of the alternative disclosures? Are there other requirements that we should impose to enhance the transparency of the alternative climate-related disclosure?

188. If we adopt an alternative reporting provision, should we permit a registrant to follow the submission deadline of the approved alternative reporting regime even if that deadline differs from the deadline for reporting under our rules? If so, what conditions, if any, should apply to permit the use of such alternative deadline? For example, should the registrant be required to provide adequate notice, before the due date of the Commission filing in which the alternative disclosure is required to be included? Should such notice indicate the registrant's intent to file the alternative disclosure using the alternative jurisdiction's deadline? If so, what would constitute adequate notice? For example, should the deadline for filing the notice be three, five,

or ten business days before the Commission filing deadline? Should we permit a registrant to provide such notice through an appropriate submission to the Commission's EDGAR system? Should we permit a registrant to indicate in its Form 20-F or other report that it will file the alternative disclosure at a later date if permitted to do so by the alternative reporting regime? In that case, should we permit the registrant to file the alternative disclosure on a Form 6-K or 8-K? Should we instead require a registrant to submit the notice via a form that we would create for such purpose? Should there be any consequences if a registrant fails to file a timely notice or fails to file the alternative disclosure by the alternative regime's due date? For example, should we preclude such a registrant from relying on the alternative reporting provision for the following fiscal year?

189. An International Sustainability Standards Board (ISSB) has recently been created, which is expected to issue global sustainability standards, including climate-related disclosure standards.<sup>700</sup> If we adopt an alternative reporting provision, should that provision be structured to encompass reports made pursuant to criteria developed by a global sustainability standards body, such as the ISSB? If so, should such alternative reporting be limited to foreign private issuers, or should we extend this option to all registrants? What conditions, if any, should we place on a registrant's use of alternative reporting provisions based on the ISSB or a similar body?

#### **K. Structured Data Requirement**

The proposed rules would require a registrant to tag the proposed climate-related disclosures in a structured, machine-readable data language.<sup>701</sup> Specifically, the proposed rules

---

<sup>700</sup> See *supra* note 92.

<sup>701</sup> See proposed 17 CFR 229.1507.

would require a registrant to tag climate-related disclosures in Inline eXtensible Business Reporting Language (“Inline XBRL”) in accordance with 17 CFR 232.405 (Rule 405 of Regulation S-T) and the EDGAR Filer Manual. The proposed requirements would include block text tagging and detail tagging of narrative and quantitative disclosures provided pursuant to Subpart 1500 of Regulation S-K and Article 14 of Regulation S-X.<sup>702</sup>

In 2009, the Commission adopted rules requiring operating companies to submit the information from the financial statements (including footnotes and schedules thereto) included in certain registration statements and periodic and current reports in a structured, machine-readable data language using eXtensible Business Reporting Language (“XBRL”).<sup>703</sup> In 2018, the Commission adopted modifications to these requirements by requiring issuers to use Inline XBRL, which is both machine-readable and human-readable, to reduce the time and effort associated with preparing XBRL filings and improve the quality and usability of XBRL data for

---

<sup>702</sup> For the proposed Subpart 1500 disclosures, this tagging requirement would be implemented by including a cross-reference to Rule 405 of Regulation S-T in proposed Item 1507 of Regulation S-K, and by revising Rule 405(b) of Regulation S-T to include the proposed climate-related disclosures required by Subpart 1500 of Regulation S-K. The proposed Article 14 of Regulation S-X disclosures would be subject to existing requirements in Rule 405(b) to tag information in financial statements (including footnotes). Pursuant to Rule 301 of Regulation S-T the EDGAR Filer Manual is incorporated by reference into the Commission’s rules. In conjunction with the EDGAR Filer Manual, Regulation S-T governs the electronic submission of documents filed with the Commission. Rule 405 of Regulation S-T specifically governs the scope and manner of disclosure tagging requirements for operating companies and investment companies, including the requirement in Rule 405(a)(3) to use Inline XBRL as the specific structured data language to use for tagging the disclosures.

<sup>703</sup> *Interactive Data to Improve Financial Reporting*, Release No. 33-9002 (Jan. 30, 2009) [74 FR 6776 (Feb. 10, 2009)] (“2009 Financial Statement Information Adopting Release”) (requiring submission of an Interactive Data File to the Commission in exhibits to such reports); *see also* Release No. 33-9002A (Apr. 1, 2009) [74 FR 15666 (Apr. 7, 2009)].

investors.<sup>704</sup> In 2020, the Commission adopted Inline XBRL requirements for business development companies that will be effective no later than February 2023.<sup>705</sup>

Requiring Inline XBRL tagging of the proposed climate-related disclosures would benefit investors by making the disclosures more readily available and easily accessible to investors, market participants, and other users for aggregation, comparison, filtering, and other analysis, as compared to requiring a non-machine readable data language such as ASCII or HTML. This would enable automated extraction and analysis of climate-related disclosures, allowing investors and other market participants to more efficiently perform large-scale analysis and comparison of climate-related disclosures across companies and time periods. At the same time, we do not expect the incremental compliance burden associated with tagging the additional information to be unduly burdensome, because issuers subject to the proposed requirements are or in the near future will be subject to similar Inline XBRL requirements in other Commission filings.<sup>706</sup>

### **Request for Comment**

190. Should we require registrants to tag the climate-related disclosures, including block text tagging and detail tagging of narrative and quantitative disclosures required by Subpart 1500 of Regulation S-K and Article 14 of Regulation S-X in Inline XBRL, as proposed? Should we permit custom tags for the climate-related disclosures?

---

<sup>704</sup> *Inline XBRL Filing of Tagged Data*, Release No. 33-10514 (June 28, 2018) [83 FR 40846, 40847 (Aug. 16, 2018)]. Inline XBRL allows filers to embed XBRL data directly into an HTML document, eliminating the need to tag a copy of the information in a separate XBRL exhibit. *Id.* at 40851.

<sup>705</sup> *Securities Offering Reform for Closed-End Investment Companies*, Release No. 33-10771 (Apr. 8, 2020) [85 FR 33290 (June 1, 2020) at 33318].

<sup>706</sup> *See supra* notes 704 and 705. Inline XBRL requirements for business development companies will take effect beginning Aug. 1, 2022 (for seasoned issuers) and Feb. 1, 2023 (for all other issuers). *See id.* If the proposed Inline XBRL requirements are adopted in the interim, they will not apply to business development companies prior to the aforementioned effectiveness dates.

191. Should we modify the scope of the proposed climate-related disclosures required to be tagged? For example, should we only require tagging of the quantitative climate-related metrics?

192. Are there any third-party taxonomies the Commission should look to in connection with the proposed tagging requirements?

193. Should we require issuers to use a different structured data language to tag climate-related disclosures? If so, what structured data language should we require? Should we leave the structured data language undefined?

#### **L. Treatment for Purposes of Securities Act and Exchange Act**

We are proposing to treat the proposed required climate-related disclosures as “filed” and therefore subject to potential liability under Exchange Act Section 18,<sup>707</sup> except for disclosures furnished on Form 6-K. The proposed filed climate-related disclosures would also be subject to potential Section 11 liability<sup>708</sup> if included in or incorporated by reference into a Securities Act registration statement. This treatment would apply both to the disclosures in response to proposed subpart 1500 of Regulation S-K and to proposed Article 14 of Regulation S-X.

Form 6-K disclosures would not be treated as “filed” because the form, by its own terms, states that “information and documents furnished in this report shall not be deemed to be “filed” for the purposes of Section 18 of the Act or otherwise subject to the liabilities of that section.”<sup>709</sup> The treatment of disclosures on Form 6-K as furnished is a long-standing part of our foreign private issuer disclosure system.<sup>710</sup>

---

<sup>707</sup> 15 U.S.C. 78r.

<sup>708</sup> 15 U.S.C. 77k.

<sup>709</sup> Form 6-K, General Instruction B.

<sup>710</sup> *See* Release No. 34-8069 (Apr. 28, 1967), [32 FR 7853 (May 30, 1967)]. Form 6-K’s treatment as furnished for purposes of Section 18 has existed since the Commission adopted the form.

Commenters expressed differing views on whether we should treat Commission-mandated climate-related disclosures as filed or furnished. Many commenters recommended that we treat such climate-related disclosures as filed.<sup>711</sup> Some of these commenters stated that we should treat climate-related disclosures like financial disclosures and require them to be filed together with the rest of the Commission filing.<sup>712</sup> Other commenters indicated that the treatment of climate-related disclosures as filed would help ensure that investors have confidence in the accuracy and completeness of such disclosures because of the liability associated with filed documents.<sup>713</sup>

Other commenters recommended that we treat climate-related disclosures as furnished.<sup>714</sup> Some of these commenters stated that the Commission’s treatment of such disclosures as filed could act as a disincentive to providing “broader” disclosure and would incentivize some issuers “to disclose in the manner most limited to meet the specific requirement and avoid more robust explanation.”<sup>715</sup> Other commenters stated that the treatment of climate-related disclosures as

<sup>714</sup> See, e.g., letters from American Petroleum Institute; Associated General Contractors of America; Bank Policy Institute; Business Roundtable; Chamber of Commerce; Chevron; Cisco; ConocoPhillips; Dell Technologies; Dow; FedEx Corporation (June 11, 2021); Investment Company Institute; NACCO Industries, Inc. (June 11, 2021); KPMG, LLP; National Association of Manufacturers; National Investor Relations Institute; National Mining Association; Society for Corporate Governance; and United Airlines Holdings, Inc.

<sup>715</sup> Letter from American Petroleum Institute; see also letters from Chamber of Commerce; and National Association of Manufacturers.

furnished would be appropriate because, in their view, much of that disclosure is based on projections and aspirational statements ill-suited to the application of a stricter liability standard.<sup>716</sup>

We agree with those commenters who indicated that the treatment of climate-related disclosures as filed could help promote the accuracy and reliability of such disclosures for the benefit of investors.<sup>717</sup> In this regard, we believe these disclosures should be subject to the same liability as other important business or financial information that the registrant includes in its registration statements and periodic reports. While we acknowledge commenters who stated that the methodology underlying climate data continues to evolve,<sup>718</sup> we intend to provide registrants with an ample transition period to prepare to provide such disclosure.<sup>719</sup> Further, much of the disclosure proposed to be required reflects discussion of a company's own climate risk assessment and strategy, which is not dependent on external sources of information. In addition, we have provided guidance and proposed rules on the applicability of safe harbors to certain disclosures under the proposed rules. For these reasons, we believe it would be appropriate for the proposed disclosures to be filed rather than furnished, except with respect to the proposed disclosure we are requiring on Form 6-K.

### **Request for Comment**

194. Should we treat the climate-related disclosures required by proposed subpart 1500 of Regulation S-K and proposed Article 14 of Regulation S-X as filed for purposes of potential

---

<sup>716</sup> See, e.g., letters from National Mining Association; and United Airlines Holdings.

<sup>717</sup> See *supra* note 713.

<sup>718</sup> See, e.g., letter from National Association of Manufacturers.

<sup>719</sup> See *infra* Section II.M.

liability under the Securities Act and Exchange Act, except for the climate disclosures on Form 6-K, as proposed? Should we instead treat the climate-related disclosures required by both proposed subpart 1500 of Regulation S-K and proposed Article 14 of Regulation S-X as furnished? Are there reasons why the proposed climate-related disclosures should not be subject to Section 18 liability?

195. Should we only treat the climate-related disclosures required by proposed subpart 1500 of Regulation S-K as filed? Should we only treat the climate-related disclosures required by proposed Article 14 of Regulation S-X as filed? Is there some other subset of climate-related disclosures that should be treated as furnished rather than filed? For example, should we only treat as filed disclosures related to a registrant's Scopes 1 and 2 emissions, and treat a registrant's Scope 3 emissions as furnished?

196. Should we treat the climate disclosures on Form 6-K as filed?

#### **M. Compliance Date**

We recognize that many registrants may require time to establish the necessary systems, controls, and procedures to comply with the proposed climate-related disclosure requirements. In addition, some commenters recommended that the Commission not adopt a "one size fits all" approach when promulgating climate-related disclosure rules because such an approach would disproportionately impact smaller registrants.<sup>720</sup> In order to provide registrants, especially smaller registrants, with additional time to prepare for the proposed climate-related disclosures, we are proposing phased-in dates for complying with proposed subpart 1500 of Regulation S-K and Article 14 of Regulation S-X, which would provide additional time for certain smaller

---

<sup>720</sup> See *supra* note 556.

registrants. The table below summarizes the proposed phase-ins for the compliance date. The table assumes, for illustrative purposes, that the proposed rules will be adopted with an effective date in December 2022, and that the registrant has a December 31st fiscal year-end.

<b>Registrant Type</b>	<b>Disclosure Compliance Date</b>		<b>Financial Statement Metrics Audit Compliance Date</b>
	All proposed disclosures, including GHG emissions metrics: Scope 1, Scope 2, and associated intensity metric, but excluding Scope 3.	GHG emissions metrics: Scope 3 and associated intensity metric	
Large Accelerated Filer	Fiscal year 2023 (filed in 2024)	Fiscal year 2024 (filed in 2025)	Same as disclosure compliance date
Accelerated Filer and Non-Accelerated Filer	Fiscal year 2024 (filed in 2025)	Fiscal year 2025 (filed in 2026)	
SRC	Fiscal year 2025 (filed in 2026)	Exempted	

The proposed compliance dates in the table above would apply to both annual reports and registration statements. For example, if a non-accelerated filer with a December 31st fiscal year-end filed a registration statement that was not required to include audited financial statements for fiscal year 2024 (*e.g.*, the registration statement was filed in 2023 or 2024), it would not be required to comply with the proposed climate disclosure rules in that registration statement.

A registrant with a different fiscal year-end date that results in its fiscal year 2023 commencing before the effective date of the rules would not be required to comply with subpart 1500 of Regulation S-K and Article 14 of Regulation S-X until the following fiscal year. For example, a large accelerated filer with a March 31st fiscal year-end date would not be required to comply with the proposed climate disclosure rules until its Form 10-K for fiscal year 2024, filed in June, 2024. This would provide large accelerated filers, who would have the earliest compliance date of all categories of filers, with what we believe is a reasonable amount of time to comply with the rules.

We believe that initially applying the disclosure requirements to the more limited pool of large accelerated filers would be appropriate, because many large accelerated filers are already collecting and disclosing climate-related information, have already devoted resources to these efforts, and have some levels of controls and processes in place for such disclosure.<sup>721</sup> In comparison, registrants that are not large accelerated filers may need more time to develop the systems, controls, and processes necessary to comply with the proposed rules, and may face proportionately higher costs. Accordingly, we propose to provide them additional time to comply.

We also recognize that obtaining the data necessary to calculate a registrant's Scope 3 emissions might prove challenging since much of the data is likely to be under the control of third parties. In order to provide sufficient time for registrants to make the necessary arrangements to begin gathering and assessing such data, we are proposing an additional one-year phase-in period for the Scope 3 emissions disclosure requirements. As previously mentioned, we also are proposing an exemption for SRCs from the proposed Scope 3 emissions disclosure provision.<sup>722</sup>

The proposed mandatory compliance periods are intended to provide registrants with ample time to prepare to provide the proposed disclosures. Registrants would, however, be able to provide the disclosures at any time after the effective date of the rules.

### **Request for Comment**

197. Should we provide different compliance dates for large accelerated filers, accelerated filers, non-accelerated filers, or SRCs, as proposed? Should any of the proposed compliance

---

<sup>721</sup> See, e.g., letters from Adobe; Apple; BNP Paribas; bp; Chevron; Eni SpA; and Walmart.

<sup>722</sup> See *supra* Section II.G.3.

dates in the table above be earlier or later? Should any of the compliance dates be earlier so that, for example, a registrant would be required to comply with the Commission's climate-related disclosure rules for the fiscal year in which the rules become effective?

198. Should we provide a compliance date for the proposed Scope 3 emissions disclosure requirements that is one year later than for the other disclosure requirements, as proposed? Should the compliance dates for the Scope 3 emissions disclosure requirements be earlier or later? Should the compliance date for the Scope 3 emissions disclosure requirements depend upon whether the registrant is a large accelerated filer, accelerated filer, or non-accelerated filer?

199. Should we provide different compliance dates for registrants that do not have a December 31st fiscal year-end?

200. Should we include rules or guidance addressing less common situations, such as, but not limited to, reverse mergers, recapitalizations, other acquisition transactions, or if a registrant's SRC (or EGC) status changes as a result of such situations?

201. Are there other phase-ins or exemptions regarding any or all of the proposed rules that we should provide?

### **III. GENERAL REQUEST FOR COMMENTS**

We request and encourage any interested person to submit comments on any aspect of the proposed amendments, other matters that might have an impact on the proposed amendments, and any suggestions for additional changes. With respect to any comments, we note that they are of greatest assistance to our rulemaking initiative if accompanied by supporting data and analysis of the issues addressed in those comments and by alternatives to our proposals where appropriate.

#### IV. ECONOMIC ANALYSIS

We are mindful of the economic effects that may result from the proposed rules, including the benefits, costs, and the effects on efficiency, competition, and capital formation.<sup>723</sup>

This section analyzes the expected economic effects of the proposed rules relative to the current baseline, which consists of the regulatory framework of disclosure requirements in existence today, the current disclosure practices of registrants, and the use of such disclosures by investors and other market participants.

We anticipate the proposed rules will give rise to several benefits by strengthening investor protection, improving market efficiency, and facilitating capital formation. The primary benefit is that investors would have access to more consistent, comparable, and reliable disclosures with respect to registrants' climate-related risks, which is expected to enable investors to make more informed investment or voting decisions.<sup>724</sup> By providing access to this information through SEC filings for all public issuers, this enhanced disclosure could mitigate the challenges that investors currently confront in assessing the nature and extent of the climate-related risks faced by registrants and their impact on registrants' business operations and financial condition. In this way, the proposed rules may reduce information asymmetry both among investors, which can reduce adverse selection problems and improve stock liquidity,<sup>725</sup>

---

<sup>723</sup> Section 2(b) of the Securities Act, 15 U.S.C. 77b (b), and Section 3(f) of the Exchange Act, 17 U.S.C. 78c(f), require the Commission, when engaging in rulemaking where it is required to consider or determine whether an action is necessary or appropriate in the public interest, to consider, in addition to the protection of investors, whether the action will promote efficiency, competition, and capital formation. Further, Section 23(a)(2) of the Exchange Act, 17 U.S.C. 78w(a)(2), requires the Commission, when making rules under the Exchange Act, to consider the impact that the rules would have on competition, and prohibits the Commission from adopting any rule that would impose a burden on competition not necessary or appropriate in furtherance of the Exchange Act.

<sup>724</sup> See *infra* Section IV.C.1.

<sup>725</sup> *Id.*

and between investors and firms, which can reduce investors' uncertainty about estimated future cash flows, thus lowering the risk premium they demand and therefore registrant's cost of capital. The proposed rules could also mitigate certain agency problems between the firm's shareholders and management, thus strengthening investor protection.<sup>726</sup> Further, by enabling climate-related information to be more fully incorporated into asset prices, the proposed rules would allow climate-related risks to be borne by those who are most willing and able to bear them, thereby strengthening financial system resilience. Taken together, the proposed rules are expected to contribute to the efficient allocation of capital, capital formation, competition, and the maintenance of fair and orderly markets.<sup>727</sup>

We are also mindful of the costs that would be imposed by the proposed rules. Registrants would face increased compliance burdens in meeting the new disclosure requirements. In some cases, these additional compliance burdens could be significant while in others relatively small if companies already provide information similar to that required by our rules. Other potential costs include increased litigation risk and the potential disclosure of proprietary information about firms' operations and/or production processes.<sup>728</sup>

#### **A. Baseline and Affected Parties**

This section describes the current regulatory and economic landscape with respect to climate-related disclosures. It discusses the parties likely to be affected by the proposed rules, current trends in registrants' voluntary reporting on climate risks, related assurance practices, and

---

<sup>726</sup> *Id.*

<sup>727</sup> *See infra* Section IV.D.

<sup>728</sup> *See infra* Section IV.C.2

existing mandatory disclosure rules under state and other Federal laws. These factors form the baseline against which we estimate the likely economic effects of the proposed rules.

## **1. Affected Parties**

The proposed disclosure requirements would apply to Forms S-1, F-1, S-3, F-3, S-4, F-4, S-11, 6-K, 10, 10-Q, 10-K, and 20-F. Thus, the parties that are likely affected by the proposed rules include registrants subject to the disclosure requirements imposed by these forms, as well as investors and other market participants that use the information in these filings (e.g. financial analysts, investment advisors, asset managers, etc.).

The proposed rules may affect both domestic registrants and foreign private issuers (FPIs).<sup>729</sup> We estimate that during calendar year 2020, excluding registered investment companies, there were approximately 6,220 registrants that filed on domestic forms<sup>730</sup> and approximately 740 FPIs that filed on Forms 20-F. Among the registrants that filed on domestic forms, approximately 31 percent were large accelerated filers, 11 percent were accelerated filers, and 58 percent were non-accelerated filers. In addition, we estimate that approximately 50 percent of these domestic registrants were smaller reporting companies (SRCs) and 22 percent were emerging growth companies (EGCs).

---

<sup>729</sup> FPIs refer to the subset of all FPIs that file annual reports on Form 20-F, excluding MJDS filers using form 40-F. The number of domestic registrants and FPIs affected by the final amendments is estimated as the number of unique companies, identified by Central Index Key (CIK), that filed a Form 10-K, Form 20-F, or an amendment thereto, or both a Form 10-Q and a Form S-1, S-3, S-4, or S-11 with the Commission during calendar year 2020, excluding asset-backed securities issuers. For purposes of this economic analysis, these estimates do not include registrants that only filed a Securities Act registration statement during calendar year 2020, or only filed a Form 10-Q not preceded by a Securities Act registration statement (in order to avoid including entities such as certain co-issuers of debt securities). We believe that most registrants that have filed a Securities Act registration statement or a Form 10-Q not preceded by a Securities Act registration statement, other than such co-issuers, would be captured by this estimate. The estimates for the percentages of SRCs, EGCs, accelerated filers, large accelerated filers, and non-accelerated filers are based on data obtained by Commission staff using a computer program that analyzes SEC filings, with supplemental data from Ives Group Audit Analytics and manual review of filings by staff.

<sup>730</sup> This number includes approximately 20 FPIs that filed on domestic forms in 2020 and approximately 90 BDCs.

## 2. Current Regulatory Framework

A number of the Commission's existing disclosure requirements may elicit disclosure about climate-related risks; however, many of these requirements are principles-based in nature and thus the nature and extent of the information provided depends to an extent on the judgment of management. As discussed above, in 2010, the Commission published interpretive guidance on existing disclosure requirements as they pertain to business or legal developments related to climate change.<sup>731</sup> The 2010 Guidance emphasized that if climate-related factors have a material impact on a firm's financial condition, disclosure may be required under current Item 101 (Description of Business), Item 103 (Legal Proceedings), Item 105 (Risk Factors), or Item 303 (MD&A) of Regulation S-K. While these provisions may elicit some useful climate-related disclosure, these provisions have not resulted in the consistent and comparable information about climate-related risks that many investors have stated that they need in order to make informed investment or voting decisions.<sup>732</sup>

## 3. Existing State and Federal Laws

There are also state and other Federal laws that require certain climate-related disclosures or reporting. For instance, there are requirements for mandatory climate risk disclosure within the insurance industry. As of 2021, 14 states<sup>733</sup> and the District of Columbia require any

---

<sup>731</sup> See *Commission Guidance Regarding Disclosure Related to Climate Change*, Release No. 33-9106 (Feb. 2, 2010) [75 FR 6290 (Feb. 8, 2010)] (“2010 Climate Change Guidance”), available at <https://www.sec.gov/rules/interp/2010/33-9106.pdf> (The guidance did not create new legal requirements nor modify existing ones. Instead, it highlighted climate-related topics that registrants should consider in seeking to meet their existing disclosure obligations (e.g. the impact of legislation, regulation, international accords, indirect consequences, physical risks, etc.) and in what section they should be discussed (e.g. risk factors, MD&A, etc.)). See also discussion in Section I.A.

<sup>732</sup> See Section I.B.

<sup>733</sup> The 14 states are California, Connecticut, Delaware, Maine, Maryland, Massachusetts, Minnesota, New Mexico, New York, Oregon, Pennsylvania, Rhode Island, Vermont, and Washington.

domestic insurers that write more than \$100 million in annual net written premium<sup>734</sup> to disclose their climate-related risk assessment and strategy via the NAIC Climate Risk Disclosure Survey.<sup>735</sup> Survey question topics include climate risk governance, climate risk management, modeling and analytics, stakeholder engagement, and greenhouse gas management. In fiscal year 2020, there were 66 publicly traded insurance companies that may be required to provide disclosure pursuant to these state law provisions and that also would be subject to the proposed rules.

There also exist Federal- and state-level reporting requirements related to greenhouse gas (GHG) emissions. Federal GHG reporting requirements consist of the U.S. Environmental Protection Agency's (EPA) 2009 Mandatory Reporting of Greenhouse Gases Rule.<sup>736</sup> This rule requires large direct emitters and suppliers of fossil fuels to report their emissions to the EPA.<sup>737</sup> Specifically, the rule requires each facility that directly emits more than 25,000 metric tons of CO<sub>2</sub>e per year to report these direct emissions. Additionally, facilities that supply certain products that would result in over 25,000 metric tons of CO<sub>2</sub>e if those products were released,

---

<sup>734</sup> Net written premium is defined as the premiums written by an insurance company, minus premiums paid to reinsurance companies, plus any reinsurance assumed.

<sup>735</sup> See NAIC, *Assessments of and Insights from NAIC Climate Risk Disclosure Data* (Nov. 2020), [available at https://content.naic.org/article/news\\_release\\_naic\\_assesses\\_provides\\_insight\\_insurer\\_climate\\_risk\\_disclosure\\_survey\\_data.htm](https://content.naic.org/article/news_release_naic_assesses_provides_insight_insurer_climate_risk_disclosure_survey_data.htm).

<sup>736</sup> See 40 CFR Part 98 (2022); see also EPA, *EPA Fact Sheet: Greenhouse Gases Reporting Program Implementation* (2013), [available at https://www.epa.gov/sites/default/files/2014-09/documents/ghgrp-overview-factsheet.pdf](https://www.epa.gov/sites/default/files/2014-09/documents/ghgrp-overview-factsheet.pdf).

<sup>737</sup> According to the EPA, "direct emitters" are facilities that combust fuels or otherwise put GHGs into the atmosphere directly from their facility. An example of this is a power plant that burns coal or natural gas and emits carbon dioxide directly into the atmosphere. The EPA estimates that the GHGRP data reported by direct emitters covers about half of total U.S. emissions. "Suppliers" are those entities that supply products into the economy which if combusted, released or oxidized emit greenhouse gases into the atmosphere. These fuels and industrial gases are not emitted from the supplier facility but instead distributed throughout the country and used. An example of this is gasoline, which is sold in the U.S. and primarily burned in cars throughout the country. The majority of GHG emissions associated with the transportation, residential and commercial sectors are accounted for by these suppliers.

combusted, or oxidized must similarly report these “supplied” emissions.<sup>738</sup> The resulting emissions data are then made public through their website.

Due to the nature of the EPA’s reporting requirements, their emissions data does not allow a clean disaggregation across the different scopes of emissions for a given registrant. The EPA requires reporting of facility-level direct emissions, which can contribute to a registrant’s Scope 1 emissions (but can typically be considered a subset, to the extent that the registrant has other non-reporting facilities), and facility-level supplied emissions, which can contribute to a registrant’s Scope 3 emissions (but can also be very different from it).<sup>739</sup> Gases required to be reported by the EPA include all those referenced by the GHG Protocol and included within the proposed definition of “greenhouse gases.”<sup>740</sup> The EPA estimates that the required reporting under their rule covers 85-90% of all GHG emissions from over 8,000 facilities in the United States.<sup>741</sup>

In addition, at least 17 states have specific GHG emissions reporting requirements.<sup>742</sup> States’ rules vary with respect to reporting thresholds and emissions calculation methodologies,

---

<sup>738</sup> The EPA’s emissions data does not include emissions from agriculture, land use, or direct emissions from sources that have annual emissions of less than 25,000 metric tons of CO<sub>2</sub>e.

<sup>739</sup> On this latest point, in particular, facility-level supplied emissions cannot necessarily be characterized as a portion of the registrant’s Scope 3 emission as the boundaries of the entity required to report under the EPA reporting regime (the facility) are different from the boundaries of the entity required to report under our proposed rules (the registrant).

<sup>740</sup> The EPA requires emissions reporting only for domestic facilities, while the proposed rule would not be limited to U.S. facilities and includes indirect emissions. The EPA also requires some gases (e.g. fluorinated ethers, perfluoropolyether) that are considered optional under the GHG Protocol and that are not included within the proposed definition of “greenhouse gases.”

<sup>741</sup> *See supra* note 736.

<sup>742</sup> *See* NCSL, *Greenhouse Gas Emissions Reduction Targets and Market-Based Policies* (2021), available at <https://www.ncsl.org/research/energy/greenhouse-gas-emissions-reduction-targets-and-market-based-policies.aspx>. The 17 states with GHG reporting requirements are Hawaii, Washington, Oregon, California, Nevada, Colorado, Minnesota, Iowa, Virginia, Pennsylvania, New York, New Jersey, Maryland, Connecticut, Massachusetts, Vermont, and Maine.

but most tend to focus on direct emissions (i.e., Scope 1), with certain exceptions. For example, New York requires the reporting of direct emissions from any owner or operator of a facility that directly emits or has the potential to emit 100 tons per year or more of GHGs, and 100,000 tons per year or more of carbon dioxide equivalent (CO<sub>2</sub>e).<sup>743</sup> Colorado excludes oil and gas that is exported out of state, but includes both imported and exported electricity when calculating the state's emissions inventory.<sup>744</sup> California requires annual reporting of GHG emissions by industrial sources that emit more than 10,000 metric tons of CO<sub>2</sub>e, transportation and natural gas fuel suppliers, and electricity importers.<sup>745</sup> As a result of these federal and state-level emissions reporting requirements, some registrants affected by the proposed rules may already have in place certain processes and systems to measure and disclose their emissions.

#### **4. International Disclosure Requirements**

Issuers with operations abroad may also be subject to those jurisdictions' disclosure requirements. Many jurisdictions' current and/or proposed requirements are based on the TCFD's framework for climate-related financial reporting.<sup>746</sup> In 2015, the Financial Stability Board (FSB) established the TCFD, an industry-led task force charged with developing a framework for assessing and disclosing climate-related financial risk. In 2017, the TCFD published disclosure recommendations that provide a framework to evaluate climate-related risks

<sup>745</sup> See Cal. Air Res. Bd., *Mandatory Greenhouse Gas Reporting 2020 Emissions Year Frequently Asked Questions* (Nov. 4, 2021), available at [https://www.arb.ca.gov/cc/reporting/ghg-rep/reported-data/2020mrrfaqs.pdf?\\_ga=2.110314373.182173320.1638196601-1516874544.1627053872](https://www.arb.ca.gov/cc/reporting/ghg-rep/reported-data/2020mrrfaqs.pdf?_ga=2.110314373.182173320.1638196601-1516874544.1627053872).

<sup>746</sup> See Section I.D.

and opportunities through an assessment of their projected short-, medium-, and long-term financial impact on an issuer. The framework establishes eleven disclosure topics related to four pillars that reflect how companies operate: governance, strategy, risk management, and metrics and targets.<sup>747</sup> The TCFD forms the framework for the recently published climate prototype standard that the IFRS Foundation is considering as a potential model for standards by the IFRS Foundation's International Sustainability Standards Board (ISSB). As of September 2021, the TCFD reported that eight jurisdictions have implemented formal TCFD-aligned disclosure requirements for domestic issuers: Brazil, the European Union, Hong Kong, Japan, New Zealand, Singapore, Switzerland, and the United Kingdom.<sup>748</sup> In these jurisdictions, disclosures are already being provided by in-scope issuers or are expected to start between 2022 and 2025. Plans to expand the scope of current requirements have also been announced in several countries,

---

<sup>747</sup> See TCFD, *Overview* (Mar. 2021) ("TCFD\_Booklet\_FNL\_Digital\_March-2020"), available at [https://assets.bbhub.io/company/sites/60/2020/10/TCFD\\_Booklet\\_FNL\\_Digital\\_March-2020.pdf](https://assets.bbhub.io/company/sites/60/2020/10/TCFD_Booklet_FNL_Digital_March-2020.pdf).

<sup>748</sup> See TCFD, *2021 Status Report* (Oct. 2021), available at [https://assets.bbhub.io/company/sites/60/2021/07/2021-TCFD-Status\\_Report.pdf](https://assets.bbhub.io/company/sites/60/2021/07/2021-TCFD-Status_Report.pdf).

including the United Kingdom,<sup>749</sup> the European Union,<sup>750</sup> and Japan.<sup>751</sup> In addition, several other jurisdictions have proposed TCFD-aligned disclosure requirements, issued policies or guidance in line with the TCFD recommendations, or otherwise indicated support for the TCFD

---

<sup>749</sup> For example, the United Kingdom’s Financial Conduct Authority (FCA) issued a policy statement in 2021 expanding its TCFD-aligned disclosure requirements to standard issuers and formally incorporating references to the TCFD’s Oct. 2021 guidance on metrics, targets and transition plans and updated implementation annex. This policy will apply for accounting periods beginning on or after Jan. 1, 2022. The FCA requirements are currently on a comply-or-explain basis; the FCA has announced that it plans to consult on making these requirements mandatory alongside future proposals adapting the rules to any future ISSB climate standard, once issued. See FCA, *PS21/23: Enhancing Climate-Related Disclosures by Standard Listed Companies* (Dec. 2021), available at <https://www.fca.org.uk/publication/policy/ps21-23.pdf>. In addition, the United Kingdom has adopted TCFD-aligned disclosure requirements for asset managers and certain asset owners, effective Jan. 1, 2022, with certain phase-ins. See FCA, *PS21/24: Enhancing Climate-Related Disclosures by Asset Managers, Life Insurers and FCA-Regulated Pension Providers* (Dec. 2021), available at <https://www.fca.org.uk/publication/policy/ps21-24.pdf>.

<sup>750</sup> In the European Union, the European Commission (EC) adopted a proposal for a Corporate Sustainability Reporting Directive (CSRD), which would revise existing company reporting rules and aim to provide more comparable and consistent information to investors. The CSRD proposal enlarges the scope of the reporting requirements and would cover nearly 50,000 companies in the European Union. The CSRD proposal acknowledges the importance of the IFRS’ efforts to establish the ISSB and seeks compatibility with the TCFD recommendations, along with other international frameworks. The EC aims to have the new CSRD reporting requirements in place for reporting year 2023. See *Proposal for Directive of the European Parliament and of the Council amending Directive 2013/34/EU, Directive 2004/109/EC, Directive 2006/43/EC and Regulation (EU) No 537/2014, as regards corporate sustainability reporting*, COM (2021) 189 final (Apr. 21, 2021), available at <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:52021PC0189>. Additionally, the EC is progressing work on reporting standards for meeting the proposed CSRD requirement. The European Financial Reporting Advisory Group (“EFRAG”) published a climate standard prototype in Sept. 2021 that is based on the TCFD framework. See EFRAG, *Climate Standard Working Paper*, (Sept. 8, 2021), available at <https://www.efrag.org/News/Project-527/EFrag-PTF-ESRS-welcomes-climate-standard-prototype-working-paper?AspxAutoDetectCookieSupport=1>.

<sup>751</sup> Japan’s Financial Services Agency (FSA) is planning to make it mandatory for large companies to make climate-related disclosures aligned with the TCFD framework from as early as Apr. 2022. In addition, climate disclosures have been part of Japan’s corporate governance code since June 2021; however, the code is not legally binding and the disclosures were introduced on a ‘comply-or-explain’ basis. In Apr. 2022, the Tokyo Stock Exchange (TSE) will be replacing its First and Second sections, the “Mothers” market for startups and the tech-focused JASDAQ, with three new segments: Prime, Standard and Growth. According to Nikkei, companies listed on the Prime market will be required to comply with disclosure requirements aligned with the TCFD recommendations starting in Apr. 2022. See Japan’s FSA to Mandate Climate Disclosures from Apr. 2022, (Oct. 2021), available at <https://www.esginvestor.net/japans-fsa-to-mandate-climate-disclosures-from-april-2022/>.

recommendations, including Australia, Canada<sup>752</sup>, Denmark, France, Ireland, Italy, Malaysia, Norway, Russia and South Korea.<sup>753</sup> Insofar as issuers have operations abroad, they would already be subject to these mandatory disclosure requirements, policies and guidance.

## **5. Current Market Practices**

### **a. Climate-Related Disclosures in SEC Filings**

The Commission’s staff reviewed 6,644 annual reports (Forms 10-K, 40-F, and 20-F) submitted from June 27, 2019 until December 31, 2020 to determine how many contain any of the following keywords: “climate change”, “climate risk”, or “global warming”. The presence of any of the keywords in any part of the annual report is indicative of some form of climate-related disclosure.<sup>754</sup> Table 1 (presented as a graph in Figure 1) shows that 33% of all annual reports contain some disclosure related to climate change, with a greater proportion coming from foreign registrants (the corresponding percentages for Forms 20-F and 40-F are 39% and 73%, respectively). Table 2 (presented as a graph in Figure 2) provides a breakdown by accelerated filer status. Among large accelerated filers, 49% of filings discussed climate change, while the figures for accelerated filers and non-accelerated filers are 29% and 17%, respectively. Table 3 (presented as a graph in Figure 3), which provides a breakdown by industry groups, shows that

---

<sup>752</sup> The Canadian Securities Administrators (CSA) is considering proposed climate-related disclosure requirements largely consistent with the TCFD recommendations, with a few exceptions. The proposed requirements would elicit disclosure by issuers related to the four pillars of the TCFD recommendations (Governance, Strategy, Risk management, and Metrics and targets). The CSA anticipates that the proposed requirements would come into force in 2022 and would be phased in over one and three year periods. *See* Consultation: Climate -Related Disclosure Update and CSA and Request for Comment, available at [https://www.osc.ca/sites/default/files/2021-10/csa\\_20211018\\_51-107\\_disclosure-update.pdf](https://www.osc.ca/sites/default/files/2021-10/csa_20211018_51-107_disclosure-update.pdf).

<sup>753</sup> *See* TCFD 2021 Status Report, available at [https://assets.bbhub.io/company/sites/60/2021/07/2021-TCFD-Status\\_Report.pdf](https://assets.bbhub.io/company/sites/60/2021/07/2021-TCFD-Status_Report.pdf).

<sup>754</sup> One limitation of using this keyword search is that it is unable to discern the extent or quality of climate-related disclosures, nor can it determine specific sub-topics within climate-related disclosures. For these reasons, the analysis was supplemented by natural language processing (NLP) analysis, as described later in this section.

the industries with the highest percentage of annual reports containing climate-related disclosure include maritime transportation, electric services, oil and gas, steel manufacturing, and rail transportation, among others.

Table 1. Filings with Climate-related Keywords by Form Type

Form	Has Keyword	All Filings	Percent
10-K	1,785	5,791	31%
20-F	286	729	39%
40-F	91	124	73%
Total	2,162	6,644	33%

This table presents the analysis of annual filings submitted to the Commission between June 27, 2019, and Dec. 31, 2020. For each form type, the table indicates how many contain any of the climate-related keywords, which include “climate change,” “climate risk,” and “global warming.”

Figure 1. Filings with Climate-related Keywords by Form Type

Table 2. Filings with Climate-related Keywords by Accelerated Filer Status

Filer Status	Has Keyword	All Filings	Percent
LAF	1,117	2,280	49%
AF	371	1,290	29%
NAF	465	2,754	17%
Other	209	320	65%
Total	2,162	6,644	33%

This table presents the analysis of annual filings submitted to the Commission between June 27, 2019, and Dec. 31, 2020. Filer status consists of large accelerated filers (LAF), accelerated filers (AF), and non-accelerated filers (NAF). For each filer status, the table indicates how many contain any of the climate-related keywords, which include “climate change,” “climate risk,” and “global warming.”

Figure 2. Filings with Climate-related Keywords by Accelerated Filer Status

Table 3. Filings with Climate-related Keywords by Industry

Industry	Has Keyword	All Filings	Percent
Maritime Transportation	64	68	94%
Electric Services	154	171	90%
Oil and Gas	169	202	84%
Steel Manufacturing	14	17	82%
Rail Transportation	8	10	80%
Paper and Forest Products	20	28	71%
Insurance	46	66	70%
Passenger Air and Air Freight	23	34	68%
Trucking Services	14	22	64%
Mining	109	198	55%
Beverages, Packaged Foods and Meats	56	109	51%
Construction Materials	54	118	46%
Automotive	11	26	42%

Capital Goods	41	110	37%
Technology Hardware & Equipment	61	177	34%
Agriculture	11	32	34%
Textiles and Apparel	12	36	33%
Not in Peer Group	478	1,431	33%
Consumer Retailing	138	558	25%
Banking	158	754	21%
Chemicals	131	922	14%
Interactive Media and Services	116	894	13%
Total	2,162	6,644	33%

This table presents the analysis of annual filings submitted to the Commission between June 27, 2019, and Dec. 31, 2020. For each industry, the table indicates how many contain any of the climate-related keywords, which include “climate change,” “climate risk,” and “global warming.”

Figure 3. Filings with Climate-related Keywords by Industry

Using the same sample of annual reports, additional analysis was conducted by Commission’s staff using natural language processing (NLP), which can provide insight on the semantic meaning of individual sentences within registrants’ climate-related disclosures and

classify them into topics (i.e. clusters).<sup>755</sup> The NLP analysis suggests that climate-related disclosures can be broadly organized into four topics: business impact, emissions, international climate accords, and physical risks. The analysis finds significant heterogeneity, both within the quantity and content, of climate-related disclosures across industries, as shown in Figures 4 and 5. Figure 4 presents the intensity of disclosure for domestic filings. The intensity refers to sentences per firm, which is calculated by taking the aggregate number of sentences in an industry and dividing it by the total number of firms within the industry (including those that do not discuss climate change at all). Thus, the intensity represents a more comparable estimate across industries.

Figure 4 shows that firms in the following industries have the most ample climate-related discussion, on average: electric services, oil and gas, steel manufacturing, passenger air and air freight, and maritime transportation. The majority of the discussion is on business impact, followed by emissions, international climate accords, and physical risks. Figure 5 presents the corresponding information for foreign filings (Forms 40-F and 20-F). Overall, the analysis indicates that the majority of the disclosure is focused on transition risks, with comparatively fewer mentions of physical risk.

---

<sup>755</sup> The specific NLP method used in this analysis is word embedding, which utilizes Google's publicly available, pre-trained word vectors that are then applied to the text of climate-related disclosures within regulatory filings. While this NLP analysis can be used to identify the general topic and the extent of disclosures, it is limited in its ability to discern the quality or decision-usefulness of disclosures from investors' perspective.

Figure 4. Clustered Intensity by Industry for Forms 10-K

This figure presents the analysis of Form 10-K annual filings submitted to the Commission between June 27, 2019, and Dec. 31, 2020. Natural language processing (NLP) is used to analyze sentences contained within the annual filings and classify them into four broad topics (i.e. clusters): business impact, emissions, international climate accords, and physical risks. Intensity refers to sentences per firm, which is calculated by taking the aggregate number of sentences in an industry and dividing it by the total number of firms within the industry

Figure 5. Clustered Intensity by Industry for Foreign Filings (Forms 40-F and 20-F)

This figure presents the analysis of Forms 40-F and 20-F annual filings submitted to the Commission between June 27, 2019, and Dec. 31, 2020. Natural language processing (NLP) is used to analyze sentences contained within the annual filings and classify them into four broad topics (i.e. clusters): business impact, emissions, international climate accords, and physical risks. Intensity refers to sentences per firm, which is calculated by taking the aggregate number of sentences in an industry and dividing it by the total number of firms within the industry.

The staff’s findings are consistent with academic studies that have looked at the extent of climate-related disclosures by SEC registrants. Bolstad et al. (2020) systematically reviewed

Form 10-K filings from Russell 3000 firms over the last 12 years and found that the majority of climate-related disclosure is focused on transition risks as opposed to physical risks.<sup>756</sup> They further report that while 35% of Russell 3000 firms provided climate-related information in 2009, this figure grew to 60% in 2020,<sup>757</sup> representing a significant increase. They also found that the extent of disclosure for a given report has increased. In 2009, firms mentioned climate risks 8.4 times on average in their Form 10-K. This figure grew to 19.1 times in 2020.

**b. Additional Trends in Climate-Related Disclosures**

While Commission staff reviewed certain firms’ sustainability reports for climate-related disclosures, they did not conduct a systematic review of a large, representative sample of sustainability reports. However, as discussed below, a number of industry and advocacy groups have examined the scope of voluntary ESG reporting, including climate-related disclosures and their findings could be relevant to an assessment of the proposed rules’ impact.

The U.S. Chamber of Commerce’s Center for Capital Markets Competitiveness (CCMC), in collaboration with several other organizations, conducted a survey (“CCMC Survey”) on a sample of U.S. public companies – 436 companies across 17 industries that range from small to large in terms of market capitalization.<sup>758</sup> According to the survey, over half of the companies (52%) are currently publishing a corporate social responsibility (CSR), sustainability, ESG or similar report whose content commonly includes information regarding climate-related risks.

---

<sup>756</sup> See P. Bolstad, S. Frank, E. Gesick, and D. Victor, *Flying Blind: What Do Investors Really Know About Climate Change Risks in the U.S. Equity and Municipal Debt Markets*, *Hutchins Center Working Paper 67* (2020).

<sup>757</sup> *Id.* The methodology uses a series of keywords to determine whether a company provides climate-related disclosures. Some keywords may occur in non-climate contexts, with the authors noting that the statistics are biased.

<sup>758</sup> See *Climate Change & ESG Reporting from the Public Company Perspective* (2021), available at [https://www.centerforcapitalmarkets.com/wp-content/uploads/2021/08/CCMC\\_ESG\\_Report\\_v4.pdf](https://www.centerforcapitalmarkets.com/wp-content/uploads/2021/08/CCMC_ESG_Report_v4.pdf).

The most frequently discussed topics there are energy (74%), emissions (70%), environmental policy (69%), water (59%), climate mitigation strategy (57%), and supplier environmental policies (35%). Among the registrants that report climate-related information to the public, the majority disclose such information via external reports or company websites rather than regulatory filings. Similar to the Commission staff review, the CCMC Survey finds that about a third (34%) of the respondents disclose climate change, greenhouse gas emissions, or energy sourcing in their SEC filings information on risks. Among these firms, 82% disclose such information in Risk Factors, 26% in the MD&A, 19% in the Description of Business, and 4% in Legal Proceedings.

The Governance & Accountability Institute<sup>759</sup> (“G&A”) analyzed sustainability reports by the companies belonging to the Russell 1000 Index and found that in 2020, 70% published sustainability reports – up from 65% in 2019 and 60% in 2018.<sup>760</sup>

Other sources confirm that, at least within samples of larger firms, a sizeable portion already measure and disclose their emissions, though not necessarily through their regulatory filings. The CDP<sup>761</sup> reports that out of the 524 U.S. companies in their Climate High Impact

---

<sup>759</sup> Governance & Accountability Institute Inc. (“G&A, Inc.”) is a consulting and research organization providing services to publicly traded and privately owned companies to help enhance their public environmental, social and governance (ESG) and sustainability profiles.

<sup>760</sup> See G & A Inc., *Sustainability Reporting in Focus* (2021), available at <https://www.ga-institute.com/research/ga-research-collection/sustainability-reporting-trends/2021-sustainability-reporting-in-focus.html>.

<sup>761</sup> CDP operates a global disclosure system that enables companies, cities, states and regions to measure and manage their environmental risks, opportunities and impacts. Despite not being a framework like GRI, SASB and TCFD, CDP’s questionnaires gather both qualitative and quantitative information from across governance, strategy, risk, impact and performance. To aid comparability and ensure comprehensiveness, CDP includes sector-specific questions and data points. In 2018, CDP aligned its climate change questionnaire with the TCFD.

Sample,<sup>762</sup> 402 disclosed through the CDP system in 2021, up from 379 in 2020, and 364 in 2019. Out of the sample of reviewed companies, 22.1% (89 out of 402 companies) reported Scope 3 emissions in 2021. This reflects an increase from the previous two years, during which 18% (67 out of 379 companies) reported such information in 2020, and 17% (62 out of 364 companies) in 2019.<sup>763</sup> One commenter stated that there is significant variation in disclosure rates of GHG emissions across various industries.<sup>764</sup> The commenter, using a sample of the 1,100 U.S. companies included within the Sustainalytics dataset, reports that the disclosure rate of material Scopes 1, 2, and 3 emissions is 59.5%.<sup>765</sup> Furthermore, the International Platform on Sustainable Finance found that among the U.S. listed firms present in the Refinitiv dataset, 10.8% disclosed Scope 1 emissions in 2019, representing 55.4% of U.S. market capitalization.<sup>766</sup> To the extent that registrants' current climate-related disclosures overlap with the proposed rules, registrants may face lower incremental compliance costs, as discussed in further detail below.<sup>767</sup>

### **c. Use of Third-Party Frameworks**

Some companies follow existing third-party reporting frameworks when developing climate-related disclosures for SEC filings or to be included in CSR, sustainability, ESG, or similar reports. For instance, the CCMC Survey finds that 59% of respondents follow one or

---

<sup>762</sup> The CDP Climate High Impact sample identifies companies deemed high impact based on two main considerations – market cap and GHG emissions.

<sup>763</sup> See Letter from CDP North America (Dec. 13, 2021).

<sup>764</sup> See Letter from Aron Szapiro, Head of Policy Research, Morningstar (June 9, 2021).

<sup>765</sup> *Id.* The comment letter does not disaggregate the disclosure rate across the different scopes of emissions.

<sup>766</sup> See State and Trends of ESG Disclosure Policy Measures Across IPSF Jurisdictions, Brazil, and the US, International Platform on Sustainable Finance (2021) (The disclosure rates are calculated using data from Refinitiv), available at [https://ec.europa.eu/info/sites/default/files/business\\_economy\\_euro/banking\\_and\\_finance/documents/211104-ipsf-esg-disclosure-report\\_en.pdf](https://ec.europa.eu/info/sites/default/files/business_economy_euro/banking_and_finance/documents/211104-ipsf-esg-disclosure-report_en.pdf).

<sup>767</sup> See Section IV.C.2.3.

more such frameworks. Among these respondents, 44% use the SASB,<sup>768</sup> 31% use the GRI,<sup>769</sup> 29% use the TCFD,<sup>770</sup> and 24% use the CDP.<sup>771</sup> Similar statistics on the usage of different reporting frameworks are also provided by other studies. The G&A report<sup>772</sup> finds that 53% of the Russell 1000 reporters either mention or align with SASB,<sup>773</sup> 52% utilized GRI reporting standards,<sup>774</sup> 30% either mention or align with TCFD recommendations,<sup>775</sup> and 40% responded to the CDP Climate Change questionnaire. The law firm White & Case also conducted an in-

---

<sup>768</sup> The SASB standards are designed for communication by companies to investors about how sustainability issues impact long-term enterprise value. SASB standards guide the disclosure of financially material sustainability information by companies to their investors. SASB standards, which are available for 77 industries, identify the subset of ESG issues most relevant to financial performance in each industry. The SASB standards can be both complementary with the core elements of the TCFD recommendations, as well as used by organizations to operationalize them. See <https://www.sasb.org/about/sasb-and-other-esg-frameworks/>

<sup>769</sup> The GRI standards outline both how and what to report regarding the material economic, social and environmental impacts of an organization on sustainable development. For 33 potentially material sustainability topics, the GRI standards contain disclosure requirements. Three series of GRI standards support the reporting process: the GRI Topic Standards, each dedicated to a particular topic and listing disclosures relevant to that topic; the GRI Sector Standards, which are applicable to specific sectors; and the GRI Universal Standards, which apply to all organizations. The GRI Standards can be used in sustainability reports, as well as in annual or integrated reports that are oriented at a broad range of stakeholders. See <https://www.globalreporting.org/standards/>

<sup>770</sup> The TCFD recommended disclosures cover four core elements: Governance, Strategy, Risk Management and Metrics and Targets. Each element has two or three specific disclosures (as shown in Table 4) to be made in the organization's mainstream report (i.e. annual financial filings). These are meant to generate comparable, consistent and reliable information on climate-related risks. The TCFD provides both general, and in some cases, sector-specific guidance for each disclosure, while simultaneously framing the context for disclosure, and offering suggestions on what and how to disclose in the mainstream report. See <https://www.fsb-tcfid.org/recommendations/>

<sup>771</sup> See *supra* note 761.

<sup>772</sup> See *supra* note 760.

<sup>773</sup> Of the Russell 1000 reporting companies, 39% indicate that they are in alignment with SASB standards, while the other 14% simply mention the standards.

<sup>774</sup> Of those reporters utilizing the GRI standards, G&A finds that a small portion (5%) utilizes the "Comprehensive" level of reporting, the majority (64%) chose to report in accordance with the "Core" option, while the remaining portion (31%) utilizes "GRI-Referenced" reports, which are not fully in accordance with the GRI standards. GRI-Referenced reports contain the GRI Content Index and reference certain disclosures.

<sup>775</sup> Of the Russell 1000 reporting companies, 17% indicate that they are in alignment with the TCFD recommendations, while the other 13% simply mention the recommendations.

depth review of website sustainability disclosures by 80 small- and mid-cap firms across five different industries and found comparable numbers.<sup>776</sup>

While these various frameworks are distinct, they overlap in their alignment with the TCFD. In particular, the CDP questionnaire fully incorporates the TCFD framework and thus exhibits full alignment.<sup>777</sup> The Corporate Reporting Dialogue<sup>778</sup> also provides a detailed assessment of the various frameworks' degrees of alignment with each TCFD disclosure item, ranging from maximum to minimum alignment as follows: Full, Reasonable, Moderate, Very Limited, and None. They report that the GRI exhibits "Reasonable" alignment, while the SASB generally exhibits "Moderate" or "Reasonable" alignment with the majority of the TCFD disclosure items. Thus, companies that report following the CDP, SASB, or GRI frameworks are, to varying degrees, already producing disclosures that are in line with parts of the TCFD. However, because each framework takes different approaches (e.g. intended audience, reporting channel) and because certain differences exist in the scope and definitions of certain elements, investors may find it difficult to compare disclosures under each framework. Table 4 reports the

---

<sup>776</sup> See White & Case and the Society for Corporate Governance: A Survey and In-Depth Review of Sustainability Disclosures by Small- and Mid-Cap Companies, *available at* <https://www.whitecase.com/publications/article/survey-and-depth-review-sustainability-disclosures-small-and-mid-cap-companies> (Among the firms reviewed, 41 firms (51%) provided some form of voluntary sustainability disclosure on their websites. Further, only nine of those 41 firms indicated the reporting standards with which they aligned their reporting, with the majority of the nine companies not following any one set of standards completely. Additionally, six firms followed the GRI, while three firms stated that they follow both the TCFD and SASB).

<sup>777</sup> See How CDP is Aligned to the TCFD (2018), *available at* <https://www.cdp.net/en/guidance/how-cdp-is-aligned-to-the-tcfid>.

<sup>778</sup> The Corporate Reporting Dialogue is a platform, convened by the Value Reporting Foundation, to promote greater coherence, consistency and comparability between corporate reporting frameworks, standards and related requirement. See *Driving Alignment in Climate-related Reporting*, *Corporate Reporting Dialogue* (2019), *available at* [https://www.integratedreporting.org/wp-content/uploads/2019/09/CRD\\_BAP\\_Report\\_2019.pdf](https://www.integratedreporting.org/wp-content/uploads/2019/09/CRD_BAP_Report_2019.pdf).

rate of disclosure for each TCFD disclosure element for a sample of 659 U.S. companies in 2020/21.

Table 4. Disclosure Rate of TCFD Elements among U.S. Firms<sup>779</sup>

TCFD Disclosure Element		Rate of Disclosure
<b>Governance</b>	a) Describe the board’s oversight of climate-related risks and opportunities	17%
	b) Describe management’s role in assessing and managing climate-related risks and opportunities.	10%
<b>Strategy</b>	a) Describe the climate-related risks and opportunities the organization has identified over the short, medium, and long term	45%
	b) Describe the impact of climate-related risks and opportunities on the organization’s businesses, strategy, and financial planning	34%
	c) Describe the resilience of the organization’s strategy, taking into consideration different climate-related scenarios, including a 2°C or lower scenario.	5%
<b>Risk Management</b>	a) Describe the organization’s processes for identifying and assessing climate-related risks.	15%
	b) Describe the organization’s processes for managing climate-related risks.	17%
	c) Describe how processes for identifying, assessing, and managing climate-related risks are integrated into the organization’s overall risk management.	16%
<b>Metrics and Targets</b>	a) Describe the metrics used by the organization to assess climate-related risks and opportunities in line with its strategy and risk management process.	21%
	b) Disclose Scope 1, Scope 2, and, if appropriate, Scope 3 greenhouse gas (GHG) emissions, and the related risks.	19%

<sup>779</sup> See Moody’s Analytics, *TCFD-Aligned Reporting by Major U.S. and European Corporations*, (2022), available at <https://www.moodyanalytics.com/articles/pa/2022/tcfd-aligned-reporting-by-major-us-and-european-corporations>. To arrive at these statistics, Moody’s conducted an artificial intelligence (AI) based review of all public filings, including financial filings, annual reports, integrated reports, sustainability reports, and other publicly available reports that were associated with companies’ annual reporting on sustainability. Non-public disclosures, such as CDP reports, were not included in the analysis.

	c) Describe the targets used by the organization to manage climate-related risks and opportunities and performance against targets	25%
--	--	-----

**d. Climate-Related Targets, Goals, and Transition Plan Disclosures**

Carbon reduction targets or goals have become an increasing focus for both companies and countries.<sup>780</sup> For example, 191 countries, including the United States and European Union, have signed the Paris Climate Agreement. The agreement aims to strengthen the global response to the threat of climate change by keeping a rise in global temperatures to well below 2° Celsius above pre-industrial levels this century, as well as pursue efforts to limit the temperature increase even further to 1.5° degrees Celsius.<sup>781</sup> As of 2020, according to one source, about two-thirds of S&P 500 companies have established a target for carbon emissions – a number that has nearly doubled over the past decade.<sup>782</sup> Approximately one-fifth of these companies have science-based targets in-line with a 1.5 degree Celsius limit on global warming.<sup>783</sup> In addition, a growing number of companies or organizations have signed on to the Climate Pledge, which indicates a

---

<sup>780</sup> See Commitments to Net Zero Double in Less Than a Year, United Nations Climate Change (Sept. 21, 2020), available at <https://unfccc.int/news/commitments-to-net-zero-double-in-less-than-a-year>.

<sup>781</sup> See Section I.

<sup>782</sup> See, e.g., J. Eaglesham, Climate Promises by Businesses Face New Scrutiny, *The Wall Street Journal* (2021), available at [www.wsj.com/articles/climate-promises-by-businesses-face-new-scrutiny-11636104600](http://www.wsj.com/articles/climate-promises-by-businesses-face-new-scrutiny-11636104600).

<sup>783</sup> See memorandum, dated Nov. 30, 2021, concerning staff meeting with representatives of Persefoni. This statistic is compiled by Persefoni using information from the Science Based Targets Initiative. This and the other staff memoranda referenced below are available at <https://www-draft.sec.gov/comments/s7-10-22/s71022.htm>.

commitment to achieve net-zero emissions by 2040.<sup>784</sup> The trend in companies disclosing other climate-related targets (e.g. water usage) has also been increasing over time.<sup>785</sup>

Despite the increasing prevalence in stated targets and goals, monitoring which firms are taking steps to implement them is difficult given the lack of required recurring standardized metrics for progress. Absent such a monitoring device, investors have insufficient information to gauge the credibility of the targets. Moreover, without knowing the specific strategy that registrants intend on adopting in pursuit of their targets, investors are unable to determine how the targets will impact the company's financial position (e.g., a company that plans to only purchase offsets may face different risks and costs over time than a company that invests in renewable energy or carbon capture technology).<sup>786</sup>

Consistent with this need for an oversight or monitoring mechanism, research suggests that the prevalence of “green bonds” and positive cumulative abnormal stock returns surrounding their announcements may arise, at least in part, because they help signal credible value-enhancing targets in the absence of mandatory standardized public disclosures.<sup>787</sup> These findings suggest a demand for such an oversight or monitoring mechanism for targets and goals among investors that would facilitate their understanding of registrants' stated climate-related targets and progress and the impact on the registrant's business.

---

<sup>784</sup> As of Jan. 25, 2022, The Climate Pledge has acquired 217 signatories. See The Climate Pledge, available at <https://www.theclimatepledge.com/us/en/Signatories>.

<sup>785</sup> For example, the percentage of both global and U.S. companies with water reduction targets grew by 4% in 2019 on a year-over-year basis. This represented 28% of major global companies (i.e. those listed on the S&P Global 1200 index) and 27% of major (i.e. those listed in the S&P 500 index) U.S. companies publicly disclosing these targets. See State of Green Business 2021, available at <https://www.spglobal.com/marketintelligence/en/news-insights/research/state-of-green-business-2021>.

<sup>786</sup> See S. Lu, *The Green Bonding Hypothesis: How do Green Bonds Enhance the Credibility of Environmental Commitments?* (2021), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3898909](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3898909).

<sup>787</sup> See C. Flammer, Corporate Green Bonds, *Journal of Financial Economics*, 499-516 (2021). (Green bonds may only be a partial solution to achieving credible targets given that they have implications beyond commitment.)

### e. Third-Party Assurance of Climate-Related Disclosures

Among the companies that provide climate-related disclosures, a considerable portion include some form of third-party assurance for these disclosures. The G&A study<sup>788</sup> finds that 35% of Russell 1000 index firms, which are virtually all large accelerated filers, obtained third-party assurance for their sustainability reports in 2020, up from 24% in the year prior. The rate of assurance is concentrated among the larger half of the sample firms (i.e., the S&P 500 firms). Among the firms that obtained assurance, however, only 3% obtained assurance for the entire report. The remaining firms were evenly split between obtaining assurance on specified sections only and GHG emissions only. Regarding the level of assurance, the overwhelming majority (90%) obtained limited assurance while only 7% obtained reasonable assurance. Regarding service providers, 14% of firms received assurance from an accounting firm, 31% from small consultancy/boutique firms, and 55% from engineering firms. Because these statistics are limited to Russell 1000 firms, corresponding figures for the full sample of U.S. registrants may be lower to the extent that the practice of obtaining third-party assurance is concentrated in large firms.<sup>789</sup>

---

<sup>788</sup> See *supra* note 760.

<sup>789</sup> Other studies also report evidence of third-party assurance among smaller samples of companies analyzed. For example, according to a recent study by the International Federation of Accountants, in 2019, 99 out of the 100 largest U.S. firms by market capitalization provided some form of sustainability disclosure, which may contain climate-related information among other sustainability-related topics. Seventy of those firms obtained some level of third-party assurance, with the vast majority being “limited assurance” according to the study. Of the 70 firms that obtained assurance, the study reports that 54 obtained “limited assurance,” eight obtained “reasonable assurance,” five obtained “moderate assurance,” and three did not disclose any assurance. Of the 81 unique assurance reports examined in the study, nine were found to be issued by an auditing firm, while 72 were issued by another service provider. See International Federation of Accountants (“IFAC”), *The State of Play in Sustainability Assurance (2021)*, available at <https://www.ifac.org/knowledge-gateway/contributing-global-economy/publications/state-play-sustainability-assurance>. Among the sample of 436 companies included in the CCMC Survey, 28% disclosed that they engaged a third party to provide some form of assurance regarding their climate-related disclosure (the frequency of these disclosures was 52% among the 436 companies in the sample). See *supra* note 758.

## B. Broad Economic Considerations

### 1. Investors' Demand for Climate Information

Investors have expressed a need for information on climate-related risks as they relate to companies' operations and financial condition.<sup>790</sup> The results of multiple recent surveys indicate that climate risks are among the most important priorities for a broad set of large asset managers.<sup>791</sup> PWC reported in their Annual Global CEO Survey that in 2016, only 39% of asset and wealth management CEOs reported that they were concerned about the threats posed by physical risks brought about climate change, whereas this figure increased to 70% in 2021.<sup>792</sup>

---

<sup>790</sup> See 2021 Global Investor Statement to Governments on the Climate Crisis (2021) (this statement has been signed by 733 investors collectively managing over US\$52 trillion in assets), available at <https://theinvestoragenda.org/wp-content/uploads/2021/09/2021-Global-Investor-Statement-to-Governments-on-the-Climate-Crisis.pdf>; See also Alexander Karsner, *Testimony Before the House Financial Services Subcommittee on National Security*, INTERNATIONAL DEVELOPMENT AND MONETARY POLICY (Sept. 11, 2019), available at <https://financialservices.house.gov/uploadedfiles/hhrg-116-ba10-wstate-karsnera-20190911.pdf>. A recent report examined how climate change could affect 22 different sectors of the U.S. economy and found that if global temperatures rose 2.8 °C from pre-industrial levels by 2100, climate change could cost \$396 billion each year. If temperatures increased by 4.5 °C, the yearly costs would reach \$520 billion. See Jeremy Martinich and Allison Crimmins, *Climate Damages and Adaptation Potential Across Diverse Sectors of the United States*, NATURE CLIMATE CHANGE 9, 397–404 (2019); available at <https://www.nature.com/articles/s41558-019-0444-6>. Similarly, the Swiss Re Institute estimated how global warming could affect 48 countries – representing 90% of the world economy – and found that the decrease in GDP in North America could range from – 3.1% if Paris Agreement targets are met (a well-below 2°C increase), to – 9.5% if no mitigating actions are taken (3.2°C increase); See *The Economics of Climate Change: No Action Not an Option*, available at <https://www.swissre.com/dam/jcr:e73ee7c3-7f83-4c17-a2b8-8ef23a8d3312/swiss-re-institute-expertise-publication-economics-of-climate-change.pdf>.

<sup>791</sup> See, e.g., Emirhan Ilhan, *Climate Risk Disclosure and Institutional Investors*, *Swiss Fin. Inst. Research Paper Series* (Working Paper No. 19-66), (last revised Jan. 7, 2020), available at <https://ssrn.com/abstract=3437178> (noting that a survey of 439 large institutional investors shows that 79% of respondents believe that climate risk reporting is as important as traditional financial reporting, and almost one-third consider it to be more important); See also *Macquaire Asset Management 2021 ESG Survey Report* (2021), available at <https://www.mirafunds.com/assets/mira/our-approach/sustainability/mam-esg-survey/mam-2021-esg-survey-report.pdf> (noting that in a survey of 180 global institutional real assets investors, including asset managers, banks, consultants and investment advisors, foundations and endowments, insurance companies, and pension funds, who combined represent more than \$21 trillion of assets under management, more than half of responding investors selected climate change as their primary ESG concern).

<sup>792</sup> See PWC, *The Economic Realities of ESG* (Oct. 28, 2021), available at <https://www.pwc.com/gx/en/services/audit-assurance/corporate-reporting/esg-investor-survey.html>.

Investors' demand for climate-related information may also be related to the transition risks that companies face (e.g. changes in future regulation, shifts in investor, consumer, counterparty preferences or other market conditions, and other technological challenges or innovations). For example, the United States' commitment to the Paris Agreement may have contributed to investors' demand for information on registrants' emissions and exposure to potential transition risk, as well as whether they have in place emissions targets with credible pathways of achievement.<sup>793</sup> The 2021 Institutional Investors Survey solicited the views of 42 global institutional investors managing over \$29 trillion in assets (more than a quarter of global assets under management (AUM)) and found that climate risk remains the number one investor engagement priority. A significant majority (85%) of surveyed investors cite climate risk as the leading issue driving their engagements with companies. These institutional investors also indicated that they consider climate risk to be material to their investment portfolios and are demanding robust and quantifiable disclosure around its impacts and the plan to transition to net zero.<sup>794</sup>

State Street Global Advisors (SSGA) and Blackrock, two of the world's largest investment managers, recently announced the focus areas for their asset stewardship program for 2022, with climate change at the top of their priority list. One of the key expectations set by SSGA this year is a requirement for companies to provide disclosures aligned with TCFD recommendations, including reporting on board oversight on climate-related risks and

---

<sup>793</sup> See Section IV.A.5.d.

<sup>794</sup> See Morrow and Sodali, Institutional Investor Survey (2021), available at [https://higherlogicdownload.s3.amazonaws.com/GOVERNANCEPROFESSIONALS/a8892c7c-6297-4149-b9fc-378577d0b150/UploadedImages/Institutional\\_Investor\\_Survey\\_2021.pdf](https://higherlogicdownload.s3.amazonaws.com/GOVERNANCEPROFESSIONALS/a8892c7c-6297-4149-b9fc-378577d0b150/UploadedImages/Institutional_Investor_Survey_2021.pdf).

opportunities, Scope 1 and 2 GHG emissions, and targets for emissions reduction.<sup>795</sup> Similarly, Blackrock expects to continue encouraging companies to demonstrate that their plans are resilient under likely decarbonization pathways, and to ask that companies disclose a net zero-aligned business plan that is consistent with their business model to demonstrate how their targets are consistent with the long-term economic interests of their shareholders.<sup>796</sup>

Investors, including large institutional investors, have also formed initiatives aimed in part at improving corporate disclosures on climate-related risks. These initiatives include the Climate Disclosure Project, Climate Action 100+,<sup>797</sup> the Global Investor Coalition on Climate Change (“GIC”),<sup>798</sup> the Institutional Investors Group on Climate Change (“IIGCC”),<sup>799</sup> and the Transition Pathway Initiative (“TPI”),<sup>800</sup> with many of these groups seeing increasing membership in recent years.<sup>801</sup> In addition to stated demand, revealed preferences from investment decisions and asset price responses to ESG-related news and climate change risk

<sup>795</sup> See <https://www.esgtoday.com/state-street-to-require-companies-to-provide-tcf-aligned-climate-disclosures/>

<sup>796</sup> See BlackRock Investment Stewardship (BIS), *Policies Updated Summary* (2022), <https://www.blackrock.com/corporate/literature/fact-sheet/blk-responsible-investment-engprinciples-global-summary.pdf>

<sup>797</sup> Climate Action 100+ is composed of 615 global investors across 33 markets with more than US\$60 trillion in AUM. See Climate Action 100+, available at <https://www.climateaction100.org/about/>.

<sup>798</sup> As of Apr. 2018, GIC was signed by 409 investors representing more than U.S. \$24 trillion in AUM, available at [https://climateinitiativesplatform.org/index.php/Global\\_Investor\\_Coalition\\_on\\_Climate\\_Change\\_\(GIC\)](https://climateinitiativesplatform.org/index.php/Global_Investor_Coalition_on_Climate_Change_(GIC)).

<sup>799</sup> IIGCC has more than 330 members, mainly pension funds and asset managers, across 22 countries, with over \$33 trillion in AUM. See The Institutional Investors Group on Climate Change, available at <https://www.iigcc.org/>.

<sup>800</sup> The TPI is supported globally by 108 investors with more than \$29 trillion combined AUM. See Transition Pathway Initiative, available at <https://www.transitionpathwayinitiative.org/>.

<sup>801</sup> For example, Climate Action 100+ launched in 2017 with 225 investors with more than USD \$26.3 trillion AUM to engage with 100+ of the world’s highest emitting companies to reduce material climate risks. In 2021, Climate Action 100+ has grown to 615 investors, \$60 trillion in assets, engaging with 167 companies that represent 80%+ of global industrial emissions.

suggest substantive demand for information on climate-related risks.<sup>802</sup> Investors have also demonstrated their interest in climate-related issues through an increase in climate-related shareholder proposals<sup>803</sup> and increased flows into mutual funds with environmental goals in their investment mandates.<sup>804</sup>

## 2. Impediments to voluntary climate-related disclosures

### a. General impediments to voluntary climate-related disclosures

In practice, however, investors' demand for climate-related information is often met by inconsistent and incomplete disclosures due to the considerable variation in the coverage, specificity, location, and reliability of information related to climate risk. Multiple third-party reporting frameworks and data providers have emerged over the years; however, these resources

---

<sup>802</sup> See P. Krüger, *Corporate Goodness and Shareholder Wealth*, 115(2) JOURNAL OF FINANCIAL ECONOMICS 304-329 (2015); G. Capelle-Blancard, A. Petit, *Every Little Helps? ESG News and Stock Market Reaction*, JOURNAL OF BUSINESS ETHICS 157, 543–565 (2019); and G. Serafeim and A. Yoon, *Which Corporate ESG News Does the Market React To?* (Forthcoming) FINANCIAL ANALYSTS JOURNAL (2021) (for evidence of stock market responses to ESG news). See also A. Bernstein, M. Gustafson, and R. Lewis, *Disaster on the Horizon: The Price Effect of Sea Level Rise*, 134.2 JOURNAL OF FINANCIAL ECONOMICS 253-300 (2019), A. Bernstein, S. Billings, M. Gustafson, and R. Lewis, *Partisan Residential Sorting on Climate Change Risk* (Forthcoming), JOURNAL OF FINANCIAL ECONOMICS (2021); M. Baldauf, L. Garlappi, and C. Yannelis, *Does Climate Change Affect Real Estate Prices? Only If You Believe In It*, 33 (3) REVIEW OF FINANCIAL STUDIES 1256-1295 (2020) (for evidence of responses of investor demand in equilibrium prices and investment choice (based on heterogeneous preferences and beliefs) in real estate markets).

<sup>803</sup> A recent 2021 proxy season review by the Harvard Law School found that shareholder climate-related proposals have increased for the second consecutive year. The authors also note that, in 2021, environmental proposals were withdrawn at a meaningfully higher rate relative to the prior year. This is an indication of stronger commitments from companies to take actions towards the specified environmental goals, or at the very least provide the related disclosures. Many companies may prefer engaging with a proponent rather than taking the proposal to a vote. See 2021 Proxy Season Review: Shareholder Proposals on Environmental Matters, available at <https://corpgov.law.harvard.edu/2021/08/11/2021-proxy-season-review-shareholder-proposals-on-environmental-matters/>.

<sup>804</sup> See S.M. Hartzmark and A.B. Sussman, *Do Investors Value Sustainability? A Natural Experiment Examining Ranking and Fund Flows*, 74 (6) THE JOURNAL OF FINANCE 2789-2837 (2019). Data from fund tracker Morningstar Inc. compiled by Goldman Sachs Group Inc. shows that, since the start of 2019, a net \$473 billion has flowed into stock mutual and exchange-traded funds with environmental goals as part of their mandates, compared to a net \$103 billion going into all other stock funds. See Scott Patterson and Amrith Ramkumar, *Green Finance Goes Mainstream, Lining Up Trillions Behind Global Energy Transition*, Wall Street Journal (May 22, 2021), available at [https://www.wsj.com/articles/green-finance-goes-mainstream-lining-up-trillions-behind-global-energy-transition-11621656039?mod=article\\_inline](https://www.wsj.com/articles/green-finance-goes-mainstream-lining-up-trillions-behind-global-energy-transition-11621656039?mod=article_inline).

lack mechanisms to ensure compliance and can contribute to reporting fragmentation.<sup>805</sup> Due to deficiencies in current climate-reporting practices, investor demand for comparable and reliable information does not appear to have been met.<sup>806</sup> As a result, investors may face difficulties locating and assessing climate-related information when making their investment or voting decisions.<sup>807</sup> Below we describe some key market failures with regard to disclosure, for example (1) disclosures are not costless; (2), there are agency problems;<sup>808</sup> (3) managers may inaccurately present information; and (4) investor responses may be unpredictable and non-uniform.<sup>809</sup> In addition, there may be other problems, e.g. a lack of consistency, that may indicate Commission action.

### (1) Disclosures are not costless

In practice, firms can still approach full disclosure voluntarily if there are costs to disclosure, as long as these costs are relatively low.<sup>810</sup> This is not the case, however, if individual firms' private benefits of disclosure are also small, yet those same disclosures provide positive informational externalities. For example, disclosures by one registrant may provide investors with useful information via inference with respect to peer firms. Consistent with this theory,

---

<sup>805</sup> See Section IV.B.2.b.

<sup>806</sup> See IOSCO, *Report on Sustainability-Related Registrant Disclosures*(2021), available at <https://www.iosco.org/library/pubdocs/pdf/IOSCOPD678.pdf>.

<sup>807</sup> See GAO, *Climate-Related Risks* (2018) available at <https://www.gao.gov/assets/gao-18-188.pdf> (reporting that “investors may find it difficult to navigate through the filings to identify, compare, and analyze the climate-related disclosures across filings”).

<sup>808</sup> Agency problems are those conflicts of interest between shareholders (i.e., the principals) and managers (i.e., the agents) of a firm.

<sup>809</sup> See Beyer, Cohen, Lys, and Walther, *The Financial Reporting Environment: Review of The recent Literature*, J. ACCT. ECON. 296–343 (2010) for a more technical and detailed discussion of these and other additional assumptions.

<sup>810</sup> See for example R.E. Verrecchia, *Discretionary Disclosure*, 5 JOURNAL OF ACCOUNTING AND ECONOMICS 365-380 (1983).

research in the accounting literature has documented that earnings announcements by one firm can provide predictive signals about the earnings of other firms in the same industry.<sup>811</sup> In these cases, disclosures can benefit investors in the aggregate (though not necessarily investors of a specific firm) by allowing them to make comparisons across firms, which can aid in their capital allocation decisions.

This illustrates how, theoretically, in the absence of mandated disclosure requirements, registrants fully internalize the costs of disclosure but not the benefits, which may lead them to rationally under-disclose relative to what is optimal from the investors' perspective.<sup>812</sup> As a result, a tension can exist between investors (in the aggregate) and managers, where investors prefer more disclosure and managers prefer less. In such instances, there may be scope for regulation to substantially increase information provision since absent regulation, investors are not able to fully ascertain the risks and opportunities that firms face.

## (2) Agency problems

In order for voluntary disclosure to result in the complete revelation of all relevant private information, there would need to be no agency problems (*i.e.*, no conflicts of interest between managers and shareholders) such that managers' sole objective with respect to such disclosures would be to maximize shareholder information and, ultimately, shareholder value. However, if managers have other objectives and incentives for making voluntary disclosures (*i.e.*, there exist agency problems), then the voluntary disclosures may not result in the same complete

---

<sup>811</sup> See Robert Freeman and Senyo Tse, *An Earnings Prediction Approach to Examining Intercompany Information Transfers*, 15(4) J. ACCT. ECON. 509-523 (1992).

<sup>812</sup> It is worth noting that in some cases, undertaking costly signals can allow agents to credibly signal their type to investors. In these cases, costly disclosures can lead to a separating equilibrium where it may otherwise not exist. See D. Kreps and J. Sobel, 2(1) *Signaling*, HANDBOOK OF GAME THEORY WITH ECONOMIC APPLICATIONS, 849-867 (1994); J. Riley, *Silver Signals: Twenty-Five Years of Screening and Signaling*, 39(1) JOURNAL OF ECONOMIC LITERATURE 432-478, (2001).

information.<sup>813</sup> Moreover, when agency problems exist, investors can no longer be sure if the absence of disclosure under a voluntary regime reflects good or bad news for the firm, given that some managers may have self-serving incentives. For example, managers may have career concerns which could incentivize them to withhold disclosing information they expect to be favorably received until it is useful to balance out bad news. In contrast, when the disclosure requirements are mandatory, the relevant, complete information should be disclosed regardless of managers' objectives or incentives, and investors would accordingly have more confidence in the completeness of the resulting disclosures. For these reasons, the benefits of a mandatory reporting regime may be more pronounced in settings in which disclosure-related conflicts of interests exist between managers and shareholders.

### (3) Misrepresentation by managers

If investors are unable to verify that managerial disclosures are complete and truthful (e.g., if investors have difficulty in determining the extent of managers' selective disclosure of metrics or methods of computation, exaggeration, obfuscation, outright misreporting, etc.), then voluntary disclosures may not be fully revealing. For example, managers may be able to engage in misleading reporting (i.e., they can apply a favorable bias to their disclosures), but they incur a cost that increases with the magnitude of the misreporting.<sup>814</sup> Under these circumstances, theoretical research suggests that, in equilibrium, they may not accurately report their private information. This is because investors would not be able to distinguish truthful disclosures from

---

<sup>813</sup> See E. Einhorn, *Voluntary Disclosure Under Uncertainty About the Reporting Objective*, 43 JOURNAL OF ACCOUNTING AND ECONOMICS 245-274(2007).

<sup>814</sup> See E. Einhorn, and A. Ziv, *Biased Voluntary Disclosure*, REVIEW OF ACCOUNTING STUDIES 420-442 (2012) (Biases in reporting can be any number of costs in these models. These include not only inefficient actual investments associated with the cost of distorted reporting, but also the risk of litigation, reputation erosion, and/or future flexibility in reporting.).

those that are misleading (i.e., favorably biased). In this setting, all managers would then have an incentive to misreport by providing disclosures with a favorable bias, the extent of which depends on the cost of misreporting. Furthermore, because misreporting comes at a cost, this would violate the assumption of costless disclosure, which can exacerbate the issue of incomplete disclosures.<sup>815</sup>

If, on the other hand, misreporting has no costs for managers, then this results in what is referred to as a cheap talk equilibrium.<sup>816</sup> In this setting, any misalignment of incentives between managers and investors could again result in a situation in which not all relevant private information is fully revealed. While this could be driven by agency problems stemming from managerial self-interest, it also occurs when investors have heterogeneous preferences that cause differing incentives or if managers are concerned with strategic disclosures that may be viewed by not only investors, but also competitors, regulators, and customers.

In this case, a mandatory reporting regime would be beneficial to investors to the extent that voluntary disclosures are unverifiable and possibly misleading. These include situations where managers obfuscate certain information in their disclosures, convey information in a complex or difficult manner, or conceal the discretionary choices with respect to what was reported.

---

<sup>815</sup> If misrepresentation becomes sufficiently costly, then there may be no managers who find it advantageous to misrepresent, despite any potential benefits. In this case, purposeful misrepresentation would not occur, thereby fulfilling one of the assumptions of the standard full revelation argument. Clear guidelines for disclosure and imposed costs upon the discovery of misrepresentation are important mechanisms for enforcing and promoting the transmission of information to investors.

<sup>816</sup> See V. Crawford, J. Sobel, *Strategic Information Transformation*, 50 *ECONOMETRICA* 1431-1451 (1982).

#### (4) Uncertain investor responses

Another condition necessary for voluntary reporting to be fully revealing is that managers must be certain of investor responses to disclosures. However, if investors have heterogeneous prior beliefs, such that managers cannot determine whether investors will consider a given disclosure good or bad news, then not all managers will choose to disclose, resulting in certain private information remaining undisclosed.<sup>817</sup> Similarly, if there are varying levels of sophistication among investors in their ability to understand disclosures, then again, some managers may be uncertain about how reports may be interpreted, leading them to abstain from some disclosures.<sup>818</sup> In this respect, mandatory disclosure is more likely to benefit investors in settings where the types of disclosures are complex or divisive, such that managers may not be certain how they will be perceived by investors with differing prior beliefs and/or sophistication.

##### **b. Climate-specific factors that exacerbate impediments to voluntary disclosure**

In the context of climate-related disclosure, these impediments may be made worse due to agency problems arising from the potentially long-term nature of certain climate-related risks and other issues related to the complexity and uncertainty of climate-related factors. We explore each of these impediments in further detail.

Impediments to climate-related disclosures may be exacerbated due to agency problems related to potential conflicts between short-term profitability and long-term climate risk horizons. Physical and transition risks can materialize over time horizons ranging from the immediate

---

<sup>817</sup> See J. Suijs, *Voluntary Disclosure Of Information When Firms Are Uncertain Of Investor Response*, 43 JOURNAL OF ACCOUNTING AND ECONOMICS 391-410 (2007).

<sup>818</sup> See R.A. Dye, *Investor Sophistication and Voluntary Disclosures*, 3 REVIEW OF ACCOUNTING STUDIES 261-287 (1998).

future to several decades.<sup>819</sup> Likewise, shareholders may have interests in maximizing their investment returns over both the short- and long-term. Agency problems can worsen to the extent that the investment horizons of a firm's shareholders and its management are misaligned.<sup>820</sup> If management prioritizes short-term results<sup>821</sup> due to pressures to perform along certain metrics,<sup>822</sup> management may fail to assess and provide relevant disclosures on certain climate-related risks,<sup>823</sup> particularly those that are medium- or long-term in nature.<sup>824</sup> Stock-based management compensation has the potential to mitigate this issue, provided that the stock price reflects the value of the company in the long-run. However, under the current regime, certain climate-related risks may be unobservable or obfuscated, and hence not fully reflected into stock prices, giving

---

<sup>819</sup> Longer horizons, for example, tend to involve changes in chronic physical risks — sea-level rise, drought, etc. Shorter-term horizons may, instead, be relevant for any increase in acute physical risks such as hurricanes, wildfires, and heatwaves. See ING Climate Risk Report 2020, *available at* <https://www.ing.com/MediaEditPage/ING-Climate-Risk-report-2020.htm>.

<sup>820</sup> A stream of literature examines the association of climate-related disclosures with corporate governance structures and managerial characteristics. See, e.g., M. Kılıç and C. Kuzey, *The Effect of Corporate Governance on Carbon Emission Disclosures: Evidence from Turkey*, 11-1 INTERNATIONAL JOURNAL OF CLIMATE CHANGE STRATEGIES AND MANAGEMENT 35-53 (2019). See also S. Yunus, E.T. Evangeline, and S. Abhayawansa, *Determinants of Carbon Management Strategy Adoption: Evidence from Australia's Top 200 Publicly Listed Firms*, 31-2 MANAGERIAL AUDITING JOURNAL 156-179 (2016).

<sup>821</sup> Henry M. Paulson Jr., *Short-Termism and the Threat From Climate Change*, PERSPECTIVES ON THE LONG TERM: BUILDING A STRONGER FOUNDATION FOR TOMORROW (Apr. 2015), *available at* <https://www.mckinsey.com/business-functions/strategy-and-corporate-finance/our-insights/short-termism-and-the-threat-from-climate-change>.

<sup>822</sup> Factors including corporate executive compensation and attention to quarterly earnings and reporting are thought to contribute to excessive focus on short-term goals. See, e.g., *Short-Termism Revisited*, *available at* <https://corpgov.law.harvard.edu/2020/10/11/short-termism-revisited/>.

<sup>823</sup> See *How to Take the Long-Term View in a Short-Term World*, MORAL MONEY (FINANCIAL TIMES), (Feb. 25, 2021), *available at* <https://www.ft.com/content/5bc1580d-911e-4fe3-b5b5-d8040f060fe1>.

<sup>824</sup> See Richard Mahony and Diane Gargiulo, *The State of Climate Risk Disclosure: A Survey of U.S. Companies* (2019) (A recent survey conducted on the members of the Society for Corporate Governance (SCG) about the state of U.S. climate risk disclosures revealed that tying executive compensation to progress on climate goals is beginning to emerge among some companies, but it is far from a common practice. Only 6% of respondents said their board linked compensation to climate objectives.), *available at* [https://www.dfinolutions.com/sites/default/files/documents/2019-10/TCFD\\_II\\_Climate\\_Disclosure\\_V10\\_revisedFINAL.pdf](https://www.dfinolutions.com/sites/default/files/documents/2019-10/TCFD_II_Climate_Disclosure_V10_revisedFINAL.pdf).

short-term-focused managers an incentive to initiate or continue projects exposed to these risks to maximize their compensation at the expense of long-term shareholder value.

Impediments to voluntary climate-related disclosures can also be exacerbated due to the uncertainty and complexity of climate-related risks and the multidimensional nature of the information being disclosed. First, this uncertainty and complexity may lead to misrepresentation of disclosures, which, as discussed previously, violates a condition for the full revelation of material information in a voluntary reporting environment. The complexity of these risks has led to many types of methodologies, metrics, and statements that can be provided to communicate potential economic impacts and risks.<sup>825</sup> This multitude of choices to represent such risks may therefore allow managers substantial discretion to selectively choose metrics that appear favorable. If this managerial discretion is more difficult to be verified by investors, managers may face lower costs for their misreporting. Moreover, the complex and multidimensional nature of certain climate-related risks may further impede investors' abilities to detect misreporting. This could lead to a cheap-talk equilibrium, which, as previously discussed, could lead to climate-related information remaining undisclosed.

The uncertainty and complexity of climate-related risks may also be an impediment to voluntary disclosure if managers are less able to anticipate how investors may respond to such disclosures. As noted above, predictable investor responses to disclosures is one of the key assumptions necessary for the full revelation of material information in a voluntary reporting

---

<sup>825</sup> See, e.g., TCFD, *Recommendations of the Task Force on Climate-Related Financial Disclosures*, at 16 (June 2017), available at <https://www.fsb-tcf.org/wp-content/uploads/2017/06/FINAL-2017-TCFD-Report-11052018.pdf>.

environment.<sup>826</sup> Uncertainty in responses means mandatory disclosures have the potential to improve information provision to investors. The challenge in anticipating investor responses to climate-related disclosure may stem, in part, from the fact that the impact of these risks on registrants' financial outcomes and operations can vary significantly. This challenge may be compounded by the uncertainty surrounding the future path of climate change and the evolving nature of the science and methodologies measuring their economic impacts.<sup>827</sup> The uncertainty and complexity of climate-related risks are likely to cause substantial heterogeneity with respect to investors' interpretation of related disclosures and their understanding of firms' exposures to such risks, resulting in heterogeneous and unpredictable investor responses. In this circumstance, managers may prefer to withhold applicable disclosures.<sup>828</sup>

Due to these impediments, companies may not report (or may report only limited amounts of) relevant climate-related information, and hence, the stock price that investors observe may not reflect the companies' true exposures to physical and transition risks.<sup>829</sup> Even when companies assess and disclose climate-related risks, reporting fragmentation can present

---

<sup>826</sup> In other words, this assumes that all investors uniformly interpret (and react to) managers' disclosures or their absence and that investors' interpretation and reaction is known to managers. *See, e.g.,* A. Beyer, D.A. Cohen, T.Z. Lys, and B.R. Walther, *The Financial Reporting Environment: Review of the Recent Literature*, 50 (2) JOURNAL OF ACCOUNTING AND ECONOMICS 296-343 (2010).

<sup>827</sup> *See, e.g.,* TCFD, *Recommendations of the Task Force on Climate-Related Financial Disclosures*, at 16 (June 2017), available at <https://www.fsb-tcf.org/wp-content/uploads/2017/06/FINAL-2017-TCFD-Report-11052018.pdf>.

<sup>828</sup> *See, e.g.,* M. J. Fishman and K. M. Hagerty, *Mandatory versus Voluntary Disclosure in Markets With Informed and Uninformed Customers*, 19 (1) JOURNAL OF LAW, ECONOMICS, & ORGANIZATION 45-63 (2003); P. Bond and Y. Zeng, *Silence Is Safest: Information Disclosure When the Audience's Preferences Are Uncertain* (forthcoming), JOURNAL OF FINANCIAL ECONOMICS (2021); D. Butler, and D. Read, *Unravelling Theory: Strategic (Non-) Disclosure of Online Ratings*, 12 GAMES 73(2021).

<sup>829</sup> *See* J.A. Bingler, M. Kraus, and M. Leippold, *Cheap Talk and Cherry-Picking: What Climate Bert Has to Say on Corporate Climate Risk Disclosures* (2021) available at, [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3796152](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3796152).

substantial obstacles to investors in processing this information.<sup>830</sup> This is because disclosures currently vary considerably in terms of coverage, location, and presentation across companies, making it difficult for investors to navigate through different information sources and filings to identify, compare, and analyze climate-related information.<sup>831</sup> Moreover, these disclosures are often vague and boilerplate, creating further challenges for investors.<sup>832</sup> While it may seem that more information is always better, when the incentives of investors and managers diverge, evidence suggests such amorphous statements could reduce the quality of communication both in theory<sup>833</sup> and in practice.<sup>834</sup>

The current regulatory regime leaves substantial uncertainty around the type of climate-related information that should be disclosed and how it should be presented. Multiple third-party climate reporting frameworks have emerged to try to fill this reporting gap.<sup>835</sup> Due to the voluntary nature of third-party frameworks, however, companies often disclose some but not all components, and the components that are disclosed may not be the same across companies.<sup>836</sup>

---

<sup>830</sup> Carbon Disclosure Project (“CDP”), *Pitfalls Of Climate-Related Disclosures* (2020), available at [Pitfalls-of-Climate-Related-Disclosure.pdf](https://www.cdp.com/en/2020/pitfalls-of-climate-related-disclosure) (rackcdn.com).

<sup>831</sup> See SASB, *The State Of Disclosure: An Analysis of the Effectiveness of Sustainability Disclosure in SEC Filings*, (2017), available at <https://www.sasb.org/knowledge-hub/state-of-disclosure-2017/>.

<sup>832</sup> The SASB reports that about 50% of SEC registrants provide generic or boilerplate sustainability information in their regulatory filings.

<sup>833</sup> See Vincent P. Crawford and Joel Sobel, *Strategic Information Transmission*, *ECONOMETRICA: JOURNAL OF THE ECONOMETRIC SOCIETY* 1431-1451 (1982).

<sup>834</sup> See, e.g., Robert Forsythe, Russell Lundholm and Thomas Rietz, *Cheap Talk, Fraud, and Adverse Selection In Financial Markets: Some Experimental Evidence*, 12 (3) *THE REVIEW OF FINANCIAL STUDIES* 481–518 (July 1999), available at <https://doi.org/10.1093/revfin/12.3.0481>.

<sup>835</sup> The TCFD, the SASB, the GRI, the Principles for Responsible Investment, the PCAF, and the CDP (among others), have all developed standards and systems that aim to help firms and investors identify, measure, and communicate climate-related information and incorporate that information into their business practices. Multiple frameworks have emerged, in part, because each seeks to provide different information or fulfill different functions when it comes to disclosing information related to climate-related risks or other ESG factors that may be important to investors.

<sup>836</sup> See *Climate Risk Disclosures & Practices*, available at <https://climatedisclosurelab.duke.edu/wp-content/uploads/2020/10/Climate-Risk-Disclosures-and-Practices.pdf>.

The location, format, and granularity of the information provided may also vary, although the substance may be similar. This has resulted in considerable heterogeneity in firms' existing disclosure practices.<sup>837</sup> The wide range of reporting practices and frameworks makes it difficult to assess how much material climate-related information firms currently are disclosing and may leave opportunities for companies to omit unfavorable information.<sup>838</sup> Some studies point to the potential for substantial underreporting of material climate-related information within the current voluntary reporting regime.<sup>839</sup>

The proposed rules aim to address these market failures by requiring more specificity around the way registrants disclose climate-related risks and their impacts on business activities and operations in the short, medium, and long-term. By requiring comprehensive and standardized climate-related disclosures along several dimensions, including disclosure on governance, business strategy, risk management, financial statement metrics, GHG emissions, and targets and goals, the proposed rules would provide investors with climate-related

---

<sup>837</sup> See Section IV.A.5. A recent survey of members of the Society for Corporate Governance (SCG) regarding the state of U.S. climate risk disclosures revealed that companies are using many of the existing frameworks to present emissions, environmental data, and other information on ESG issues. Many of the respondents indicated that their companies are now reporting using CDP, GRI, SASB and other standards, with corporate registrants expressing a desire for greater clarity regarding how to make adequate climate disclosures. The survey results indicate that many companies are grappling with how best to provide useful information to investors regarding complex and interrelated risks. See Richard Mahony and Diane Gargiulo, *The State of Climate Risk Disclosure: A Survey of U.S. Companies* (2019), available at [https://www.dfinsolutions.com/sites/default/files/documents/2019-10/TCFD\\_II\\_Climate\\_Disclosure\\_V10\\_revisedFINAL.pdf](https://www.dfinsolutions.com/sites/default/files/documents/2019-10/TCFD_II_Climate_Disclosure_V10_revisedFINAL.pdf).

<sup>838</sup> See Lee Reiners and Charlie Wowk, *Climate-Risk-Disclosures-and-Practices* (2021), available at <https://climatedisclosurelab.duke.edu/wp-content/uploads/2020/10/Climate-Risk-Disclosures-and-Practices.pdf>.

<sup>839</sup> A past study using ESG disclosure data in Bloomberg on US-listed firms, found that, on average, from 2007 to 2015, firms provided only about 18% (median: 13%) of the prescribed SASB disclosure items (which serve as benchmark for financially material disclosures). See J. Grewal, C. Hauptmann and G. Serafeim, *Material Sustainability Information and Stock Price Informativeness*, JOURNAL OF BUSINESS ETHICS (Forthcoming) (2020), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=2966144](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=2966144).

information that is more comparable, consistent, and reliable and presented in a centralized location.

### **C. Benefits and Costs**

Below we discuss the anticipated economic effects that may result from the proposed rules. Where possible, we have attempted to quantify these economic effects, including the benefits and costs. In many cases, however, we are unable to reliably quantify these potential benefits and costs. For example, existing empirical evidence does not allow us to reliably estimate how enhancements in climate-related disclosure affect information processing by investors or firm monitoring. Nevertheless, there is a large body of studies examining the effects of corporate disclosure in general, as well as a subset focusing on sustainability-related disclosures (e.g. ESG- or CSR-related disclosures).<sup>840</sup> We draw on existing empirical evidence and theoretical arguments from these studies to the extent they are applicable to disclosures on climate-related information specifically.

Similarly, we qualitatively describe the factors that may affect disclosure costs but we are unable to accurately quantify these costs. Costs related to preparing climate-related disclosures are generally private information known only to the issuing firm, hence such data are not readily available to the Commission. There is also likely considerable variation in these costs depending on a given firm's size, industry, complexity of operations, and other characteristics, which makes comprehensive estimates difficult to obtain.

We encourage commenters to provide us with relevant data or empirical evidence related to the costs of preparing climate-related disclosures and, more generally, to provide us with any

---

<sup>840</sup> See H.B. Christensen, L. Hail, and C. Leuz, *Mandatory CSR and Sustainability Reporting: Economic Analysis and Literature Review*, REVIEW OF ACCOUNTING STUDIES 1-73 (2021).

type of data that would allow us to quantitatively assess the costs and benefits of the proposed rules.

## **1. Benefits**

The primary benefit of the proposed rules is that investors would have access to more comparable, consistent, and reliable disclosures with respect to registrants' climate-related risks. As discussed in the previous sections, investors currently face obstacles in accessing comparable, consistent, and reliable climate-related information due to a combination of registrants not disclosing this information at all, or registrants disclosing this information but with varying degrees of coverage and specificity and in varying formats and locations, including company websites, standalone reports, and SEC filings.

Investors are expected to benefit from the required disclosures given that material climate-related information would be provided to the market more consistently across registrants of different sizes and filer status, whether domestic or foreign issuers, and regardless of industry. Investors are also expected to benefit from the more consistent content of the disclosures. Specifically, the proposed rules would enhance comparability by requiring registrants to provide disclosures on a common set of qualitative and quantitative climate-related disclosure topics in their filings.

In addition to the standardized content, investors are expected to benefit from a common location of the disclosures in regulatory filings. The proposed rules would require registrants to place all relevant climate-related disclosures in Securities Act or Exchange Act registration statements and Exchange Act annual reports in a separately captioned "Climate-Related Disclosure" section, or alternatively, to incorporate by reference from another section, such as Risk Factors, Description of Business, or MD&A. By mandating that standardized climate-

related information be disclosed, and requiring it to be placed in a centralized location within regulatory filings, the proposed rules could reduce investors' search costs and improve their information-processing efficiency. These factors can also lead to positive information externalities – as more firms disclose how measures of climate risk affect their business operations, investors would gain a better understanding of how those same climate risks may affect other similar firms.<sup>841</sup>

Furthermore, by requiring this information to be *filed* with the Commission as opposed to posted on company websites or *furnished* as exhibits to regulatory filings, the proposed rules are expected to improve the reliability of information provided to investors moving forward.<sup>842</sup>

Several commenters indicated that the treatment of climate-related disclosures as filed would help improve investor confidence in the accuracy and completeness of such disclosures.<sup>843</sup>

Recent academic work provides evidence of firms' engagement in obfuscation and other misleading efforts (so-called "greenwashing")<sup>844</sup> to manipulate the set of information available on corporate websites and sustainability reports with the goal of attaining higher ESG ratings, which are relied upon, in particular, by unsophisticated investors for the value of institutional

---

<sup>841</sup> One study documents how investors can use information from one firm to make inferences of other similar firms in the context of earnings announcements. *See supra* note 811.

<sup>842</sup> By proposing to treat the proposed required climate-related disclosures as "filed," we are therefore subjecting them to potential liability under Exchange Act Section 18, except for disclosures made on Form 6-K. The proposed filed climate-related disclosures would also be subject to potential Section 11 liability if included in or incorporated by reference into a Securities Act registration statement. *See* Section II.C.4 (discussions within).

<sup>843</sup> *See* Section II.H.k.

<sup>844</sup> A review of several academic papers reveal that there is no universally accepted definition of "greenwashing." Though the term "greenwashing" is often used in industry discussions regarding ESG, the Commission does not define "greenwashing" in this proposal, rules, or form amendments. Greenwashing is typically described as the set of activities conducted by firms or funds to falsely convey to investors that their investment products or practices are aligned with environmental or other ESG principles.

certification.<sup>845</sup> Direct disclosures may also reduce reliance on these ESG ratings, which are not necessarily standardized nor fully transparent with respect to their methodologies. In fact, several studies found low correlations of classifications across ESG providers.<sup>846</sup> Additionally, a study suggested that models and metrics used by ESG providers for appropriately classifying funds are not always transparent and consistent across ESG providers.<sup>847</sup>

As discussed in Section IV.B.1, surveys of institutional investors indicate that climate risk is one of the most prominent issues driving their investment decisions and engagements with companies. Evidence from the stock market response appears consistent with this, with increased mandatory ESG disclosure being associated with aggregate stock price movement.<sup>848</sup> Such stock price effects tend to display cross-sectional heterogeneity with, for example, firms disclosing large GHG emissions experiencing price declines.<sup>849</sup> Similar effects have also been observed in

derivatives markets.<sup>850</sup> Investor responses in real estate markets potentially affected by physical risks,<sup>851</sup> as well as revealed preferences from flows into mutual funds with environmental goals in their investment mandates,<sup>852</sup> provide further evidence of investors' interest in disclosures pertaining climate risks. Taken together, the mandatory and standardized nature of the proposed climate-related disclosures could benefit investors by improving their ability to assess these risks and their impact on registrants' financial condition and operations, thereby allowing investors to make better-informed investment decisions and enhancing investor protection.

Improving and standardizing climate disclosures also could mitigate adverse selection problems that may arise in the presence of asymmetric information<sup>853</sup> by making more accurate and standardized information available to the general public.<sup>854</sup> Improved disclosure could make it easier for investors to process information more effectively and improve the estimation of firm's future cash flows, leading to more accurate firm valuation.<sup>855</sup> In particular, the enhanced disclosures may yield further benefits for the disclosures of financial firms. Because financial firms can have significant exposures to climate-related risks through their portfolio companies,

any enhancements in the portfolio companies' disclosures can subsequently be leveraged by these financial firms in assessing the risks to their portfolios and to the firm as a whole.<sup>856</sup>

Another benefit of the proposed rules is that it could allow firm's shareholders to better monitor management's decisions and mitigate certain agency problems stemming from management's discretionary choices with respect to climate disclosure. Agency problems could occur when management act opportunistically in their own self-interest at the expense of shareholders by disclosing only certain climate-related information at their discretion. As previously discussed in Section IV.B.2.b, management may be motivated to selectively disclose only climate-related information,<sup>857</sup> while omitting harder to verify risks.<sup>858</sup> In the context of climate-related risks, agency issues may be exacerbated by the potential conflicts between short-term profitability and long-term climate risk horizons<sup>859</sup> and the misalignment of interests and

---

<sup>856</sup> In 2021, the CDP coordinated with 168 financial institutions, with a combined AUM of \$17 trillion USD, to engage over 1,300 companies to request climate-related information, among other topics. *See* CDP Non-Disclosure Campaign: 2021 Results, *available at* [https://cdn.cdp.net/cdp-production/cms/reports/documents/000/006/069/original/CDP\\_2021\\_Non-Disclosure\\_Campaign\\_Report\\_10\\_01\\_22\\_%281%29.pdf?1642510694](https://cdn.cdp.net/cdp-production/cms/reports/documents/000/006/069/original/CDP_2021_Non-Disclosure_Campaign_Report_10_01_22_%281%29.pdf?1642510694).

<sup>857</sup> *See supra* note 829 (A recent study, for example, shows that absent mandatory requirements from regulators, voluntary disclosures following third-party frameworks are generally of poor quality and that firms making these disclosures cherry-pick to report primarily non-material climate risk information.).

<sup>858</sup> *See* World Economic Forum, *How to Set Up Effective Climate Governance on Corporate Boards: Guiding Principles and Questions* (2019), *available at* [https://www3.weforum.org/docs/WEF\\_Creating\\_effective\\_climate\\_governance\\_on\\_corporate\\_boards.pdf](https://www3.weforum.org/docs/WEF_Creating_effective_climate_governance_on_corporate_boards.pdf). In addition, there are a number of academic studies examining the association of climate-related disclosures with corporate governance structures and managerial characteristics. *See, e.g.,* M. Kılıç and C. Kuzey, *The Effect of Corporate Governance on Carbon Emission Disclosures: Evidence from Turkey*, 11-1 INTERNATIONAL JOURNAL OF CLIMATE CHANGE STRATEGIES AND MANAGEMENT 35-53 (2019); S. Yunus, E.T. Evangeline, and S. Abhayawansa, *Determinants of Carbon Management Strategy Adoption: Evidence from Australia's Top 200 Publicly Listed Firms*, 31-2 MANAGERIAL AUDITING JOURNAL 156-179 (2016); Caroline Flammer, Michael W. Toffel, and Kala Viswanathan, *Shareholder Activism and Firms' Voluntary Disclosure of Climate Change Risks*, 42-10 STRATEGIC MANAGEMENT JOURNAL 1850-1879 (Oct. 2021).

<sup>859</sup> Physical and transition climate risks can materialize over time horizons ranging from the immediate future to several decades. Long horizons, for example, tend to involve changes in chronic physical risks — (sea-level rise, drought, etc.). Shorter-term horizons may, instead, be relevant for increase in acute physical risks such as hurricanes, wildfires, and heatwaves. *See* ING Climate Risk Report 2020, *available at* <https://www.ing.com/2021-Climate-Report.htm>.

incentives between long-term shareholders and management,<sup>860</sup> whereby the latter may unduly focus on short-term results<sup>861</sup> given pressures to demonstrate performance.<sup>862</sup> Under the current regime, many climate-related risks may be unobservable or obfuscated, giving short-term-focused managers an incentive to initiate projects exposed to these risks without properly informing investors.

Agency problems might be exacerbated by registrants' use of boilerplate language or selective disclosure (i.e. "cherry picking"),<sup>863</sup> which might reduce transparency and impair investors' ability to effectively monitor firm management. The lack of a standardized disclosure framework could make it easier for registrants to forego the use of certain metrics or scopes and omit information that might otherwise indicate shortcomings.<sup>864</sup> Previous studies have found that more detailed reporting can mitigate agency problems as it facilitates the scrutiny and discipline of firm management, allowing investors to monitor firms' operations more closely and thus

---

<sup>860</sup> A report by the Environmental Audit Committee of the UK House of Commons on Greening Finance, issued in June 2018, found that short-termism is a pervasive problem in corporate decision making and leaves business ill-equipped to consider and incorporate long term risks, such as climate change and sustainability. *See* Envtl. Audi Comm., House of Commons, U.K. Parliament, *Greening Finance: Embedding Sustainability in Financial Decision Making* (June 6, 2018), available at <https://publications.parliament.uk/pa/cm201719/cmselect/cmenvaud/1063/106302.htm>.

evaluate whether managers have acted in the best interests of shareholders.<sup>865</sup> By requiring registrants to provide comprehensive and detailed climate-related information to investors, the proposed rules are expected to reduce the likelihood of unreliable or boilerplate disclosures. This can enable investors to better monitor firm's management, reducing agency problems and ultimately strengthening investor protection. In the following sections, we discuss how specific aspects of the proposed rules could contribute to the aforementioned benefits.

The proposed rules would mandate more detailed and comprehensive disclosure with respect to climate-related risks. More consistent, comparable, and reliable disclosures could lead to capital market benefits in the form of improved liquidity, lower costs of capital, and higher asset prices (or firm valuations).<sup>866</sup> These benefits would stem from reductions in information asymmetries brought about by the required disclosure of climate-related information, both among investors and between firms and their investors. In the first case, less information asymmetry among investors could mitigate adverse selection problems by reducing the informational advantage of informed traders. This is likely to improve stock liquidity which, in turn, can attract more investors, thereby reducing the cost of capital. In the second case, less information asymmetry between firms and their investors could allow investors to better estimate future cash flows, which could reduce investors' uncertainty, as well as the risk premium they

<sup>866</sup> See Section IV.D for more information on capital market benefits.

demand, thus lowering the costs of capital for registrants. Economic theory illustrates how, all else equal, a drop in the cost of capital leads to a boost in equity valuation, which can further benefit investors.

**a. Disclosure Regarding Climate-Related Risks and their Impacts on Strategy, Business Model, and Outlook**

The proposed rules would require registrants to identify their climate-related risks that are reasonably likely to have a material impact on the registrant's business or consolidated financial statements over the short, medium, and long-term and describe the actual and potential impacts of those risks on its strategy, business model, and outlook. Registrants would specifically be required to disclose impacts on, or any resulting significant changes made to, their: (i) business operations, including the types and locations of its operations; (ii) products or services; (iii) supply chain or value chain; (iv) activities to mitigate or adapt to climate-related risks; and (v) expenditures for research and development.

If, as part of its net emissions reduction strategy, a registrant uses carbon offsets or RECs, the proposed rules would require it to disclose specific information around the role that carbon offsets or RECs play in the registrant's climate-related business strategy. If a registrant uses an internal carbon price, the proposed rules would require it to disclose information around the boundaries for measurement of overall CO<sub>2</sub>e, the price per metric ton of CO<sub>2</sub>e, as well as how the total price is estimated to change over time, if applicable. Similarly, to the extent that the registrant uses analytical tools such as scenario analysis, the proposed rules would require a description of those analytical tools, including the assumptions and methods used.

The specific disclosures required by the proposed rules are expected to improve investors' understanding of what the registrant considers to be the relevant short-, medium-, and

long-term climate-related risks that are reasonably likely to have a material impact on its business, taking into consideration the useful life of the organization's assets or infrastructure and the fact that climate-related risks may manifest themselves over the medium and longer terms. Compared to the baseline, investors would be better able to identify and assess how climate-related risks may affect a registrant's businesses, strategy, and financial planning in several areas, including products and services, supply chain and/or value chain, adaptation and mitigation activities, investment in research and development, operations (including types of operations and location of facilities), acquisitions or divestments, and access to capital. Investors would gain insight into how climate-related risks may serve as an input to the registrant's financial planning process and the time period(s) used for this process.

For example, investors may gain better insights into the registrant's estimated costs of any operational changes expected to be implemented to achieve emission reduction targets. Alternatively, investors may gain valuable information on how certain climate events may impact the registrant's property, workforce, or its production schedule across the different physical sites where the registrant conducts business. Adverse climate-related events may impact the useful lives and/or valuation reserves of balance sheet assets. For example, sea level increases and other climate related patterns may adversely impact the estimated useful lives of coastal facilities. Similarly, more extreme weather patterns may adversely impact agricultural regions and the value of related equipment and lands. This information is expected to be useful for investors in assessing how climate-related risks are managed, and whether and how these risks may affect a registrant's financial condition and results of operations. The required disclosure around the role that carbon offsets or RECs play in the registrant's climate-related business strategy could help investors better understand that strategy, including how resilient it is

to changes in costs or the availability or value of offsets or RECs over the short, medium and long-term. The required disclosures around internal carbon price, when used by a registrant, could provide investors with more standardized and detailed information regarding how the registrant developed a particular business strategy and help investors assess whether a registrant's internal carbon pricing practice is reasonable and whether its overall evaluation and planning regarding climate-related factors is sound. The required disclosure around the assumptions and methods used by a registrant when employing analytical tools or conducting scenario analysis can improve investors' assessment of the resiliency of a registrant's strategy and business model in light of foreseeable climate-related risks and improve investors' ability to compare said resiliency among registrants.

The proposed requirement to identify material climate-related risks over the short-, medium-, and long-term could also help mitigate agency problems deriving from the potential misalignment of planning horizons between the firm's shareholders and its managers. The information required to be disclosed about the firm's business operations, products or services, supply or value chain, activities to mitigate or adapt to climate-related risks, and expenditure for research and development could allow investors to assess how climate-related issues may impact the registrant's financial performance (e.g., revenues, costs) and financial condition (e.g., assets, liabilities). These disclosures should allow investors to gain valuable insights on how resources are being used by management to mitigate climate-related risks and to facilitate investors' evaluation of whether managers are taking appropriate steps to address such risks.

#### **b. Governance Disclosure**

The proposed rules would require a registrant to disclose information concerning the board's oversight of climate-related risks as well as management's role in assessing and

managing those risks. The proposed rules would require a registrant to disclose whether any member of its board of directors has expertise in climate-related matters and the processes and frequency by which the board discusses climate-related factors. When describing management's role in assessing and managing climate-related factors, a registrant would be required to disclose whether certain management positions are responsible for assessing and managing climate-related factors and the processes by which the responsible managers are informed about and manage climate-related factors.

The disclosures required by the proposed rules should enable investors to better understand how the firm is informed about climate-related factors and how frequently the firm considers such factors as part of its business strategy, risk management, and financial oversight. Investors would be expected to gain better information around whether the organization has assigned climate-related responsibilities to management-level positions or committees and, if so, whether those responsibilities include assessing and/or managing climate-related risks. As a result, investors may be better able to understand and evaluate the processes by which management is informed about and monitors climate-related risks. For example, investors may be better positioned to assess whether and how the firm's board and management consider climate-related risks when reviewing and guiding business strategy and major plans of action, when setting and monitoring implementation of risk management policies and performance objectives, and when reviewing and approving annual budgets.

With detailed information about climate expertise among the registrant's directors, investors could more effectively evaluate the firm's governance practices related to the identification and management of climate-related risks. In particular, investors may be able to exercise closer oversight of management's actions as they assess implementation of risk

management policies and performance objectives, review and approve annual budgets, and oversee major capital expenditures, acquisitions, and divestitures.

**c. Risk Management Disclosure**

The proposed rules would require registrants to describe their processes for identifying, assessing, and managing climate-related risks. This includes disclosure on how registrants assess materiality, whether they consider likely future regulatory actions, how they prioritize, mitigate, or adapt to climate-related risks, and overall how climate-related factors are integrated into the registrants' risk management systems or processes. Registrants would also be required to provide detailed descriptions on any transition plans,<sup>867</sup> as applicable, including relevant targets and metrics, how physical and transition risks are managed, and actions taken and progress made toward the plan's targets or goals.<sup>868</sup>

The disclosures required by the proposed disclosures could inform investors regarding how proactive and diligent registrants may be with respect to climate-related risks. Investors can use this information to acquire a more detailed understanding of how resilient registrants' risk management systems may be towards climate-related risks, which could contribute to better-informed investment or voting decisions. These disclosures could allow investors to better monitor and assess whether registrants have in place adequate risk management systems and whether they are aligned with investor preferences.

---

<sup>867</sup> Transition plans would be defined as a registrant's strategy and implementation plan to reduce climate-related physical and transition risks and increase climate-related opportunities, including by reducing its own emissions. If the registrant has made a public commitment to reduce its GHG emissions by a certain date, it must disclose such date and its plan to achieve its public commitment.

<sup>868</sup> See Section IV.C.1.f for a more detailed discussion of the potential benefits of targets and goals disclosure.

Conversely, investors may be better able to detect whether certain registrants' risk management systems would fail to account for certain types of climate factors such as change in consumer preferences, adjustments of business models, and technological challenges or innovations, which may have implications on companies' operations and financial conditions. These disclosures may also allow investors to assess whether registrants are evaluating these risks over specific time horizons, which may be particularly relevant in cases in which management may be more concerned with short-term performance while neglecting longer term risks. Accordingly, this provision could help address agency problems related to the misalignment of planning horizons.

**d. Financial Statement Metrics**

The proposed rules would require registrants to disclose certain disaggregated climate-related metrics in its financial statements under the following categories: (i) financial impact metrics; (ii) financial expenditure metrics; and (iii) financial assumptions. The proposed rules would require a registrant to disclose the impact of climate-related events (severe weather events and other natural conditions and physical risks identified by the registrant) and transition activities (including transition risks identified by the registrant) on its consolidated financial statements, if the disclosure threshold is met. For each type of metric, the provisions would require the registrant to disclose contextual information to enable the reader to understand how it derived the metric, including a description of significant inputs and assumptions used to calculate the specified metrics, thus providing the necessary transparency for facilitating investors' understanding and peer comparisons. To avoid potential confusion and to maintain consistency with the rest of the financial statements, the proposed financial statement metrics would be required to be calculated using financial information that is consistent with the scope of the rest

of the registrant's consolidated financial statements included in the filing. The proposed rules would specify the basis of calculation for the climate-related financial statement metrics and clarify how to apply these accounting principles when calculating the climate-related financial statement metrics.

With respect to financial impact metrics, the proposed rules would require a registrant to disclose the impacts arising from climate-related events, including physical risks identified by the registrant and severe weather events and natural conditions, such as flooding, drought, wildfires, extreme temperatures, and sea level rise. In addition to physical risks, registrants also would be required to disclose the financial impact of transition activities (including transition risks identified by the registrant), such as efforts to reduce GHG emissions or otherwise mitigate exposure to transition risks on any relevant line items in the registrant's consolidated financial statements. The proposed rule would require registrants to reflect the impact of the climate-related events or transition activities on each line item of the registrant's consolidated financial statements (*e.g.*, line items of the consolidated income statement, balance sheet, or cash flow statement) unless the aggregate impact of the events and transition activities is less than one percent of the total line item. By exempting such line item reporting when the aggregate impact of the events is less than one percent, the proposed rule would reduce overall costs for firms associated with disclosures for instances where the impact is likely to be quite small, while providing assurance to investors that more significant impacts are reflected in line item reporting.<sup>869</sup>

---

<sup>869</sup> The choice of a one percent threshold is consistent with what the Commission currently uses in other contexts for disclosure of certain items within the financial statements and without (*e.g.*, §§ 210.5-03.1(a), 210.12-13, and 229.404(d)).

We expect that the proposed financial statement metrics impact would provide additional transparency into the nature of a registrant’s business and the significance of many of the climate-related risks and impacts on its overall financial condition. Such disclosures are expected to provide investors with valuable insights into potential changes to, among others, revenue or costs from disruptions to business operations or supply chains; impairment charges and changes to the carrying amount of assets due to the assets being exposed to physical risks; revenue or cost due to new emissions pricing or regulations resulting in the loss of a sales contract and; operating, investing, or financing cash flow from changes in upstream costs, such as transportation of raw materials. Separately reporting the financial statement impacts from the specified climate-related events and transition activities could improve comparability of both the registrant’s year-to-year disclosure and between the disclosures of different registrants. Because the risks presented by the climate-related events and transition activities may be correlated across different registrants and across time, future climate-related risks could manifest in such a way that a large subset of registrants are affected, making them potentially a non-diversifiable risk. In this case, separate financial impact disclosures could inform investors of their exposure to these risks not just for a single registrant, but across all the registrants in their portfolios. Such disclosures could be beneficial as they would be informative of both individual registrant exposures to climate-related risks, and the level of climate-related risks in the aggregate, thus allowing investors to more effectively evaluate and manage the risk of their entire portfolio. . Moreover, to the extent that registrants are not aware of climate-related risks in the aggregate, these disclosures would allow for a greater understanding of the climate-related risks they face, providing them the opportunity to make more informed investment decisions taking into account such risks.

With respect to financial expenditure metrics, the proposed rules would require a registrant to disclose the positive and negative impacts associated with the same climate-related events and transition activities as the proposed financial impact metrics. The expenditure metrics would require a registrant to separately aggregate amounts of expenditure expensed and capitalized costs incurred during the fiscal years presented. For each of those categories, a registrant would be required to disclose separately the amount incurred during the fiscal years presented toward positive and negative impacts associated with the specified climate-related events and to mitigate exposure to transition risks. The expenditure metrics would also be subject to the same disclosure threshold as the financial impact metrics, which should promote consistency and clarity.

Together, these disclosures are expected to provide investors with information about the total expenditure toward or capitalized costs incurred for specified climate-related events. As such, they are expected to increase the resilience of assets or operations, retire or shorten the estimated useful lives of impacted assets, relocate assets or operations at risk, or otherwise reduce the future impact of severe weather events and other natural conditions on business operations. The proposed rules also would provide investors with information about the amount of expenditure expensed or capitalized costs incurred for climate-related transition activities related, among others, to research and development of new technologies, purchase of assets, infrastructure, or products that are intended to reduce GHG emissions, increase energy efficiency, or improve other resource efficiency.

With respect to financial assumptions, the proposed rules would require registrants to disclose whether the estimates and assumptions used to produce the consolidated financial statements were impacted by risks and uncertainties associated with, or known impacts from,

severe weather events and other natural conditions, such as flooding, drought, wildfires, extreme temperatures, and sea level rise. If so, the registrant would be required to provide a qualitative description of how such events have impacted the development of the estimates and assumptions used to prepare such financial statements. Similarly, if the estimates and assumptions were impacted by potential transition risks, the registrant would be required to provide a qualitative description of how the development of the estimates and assumptions were impacted by such a transition. We expect that the proposed disclosures would provide transparency to investors on the impact of climate-related events and transition activities on the estimates and assumptions used by the registrant to prepare the financial statements and allow investors to evaluate the reasonableness of the registrant's estimates and assumptions.

Prior evidence shows that existing climate-related disclosures often contain boilerplate language or are “cherry-picked” to present information that is favorable to the company.<sup>870</sup> Accordingly, registrants under the current regulatory regime may choose to provide only brief, qualitative descriptions of certain climate-related factors while omitting concrete, quantitative information on how climate-related factors can impact individual financial statement line items. The proposed rule may mitigate these types of agency problems by requiring registrants to disclose specific, quantitative metrics according to standardized scopes and methodologies, thereby helping investors processing information more effectively.

The proposed financial metrics would be part of the financial statements and thus audited by an independent public accounting firm in accordance with existing Commission rules and

---

<sup>870</sup> See *supra* note 829 and 806.

PCAOB auditing standards.<sup>871</sup> Subjecting these climate-related disclosures to reasonable assurance pursuant to an audit would require the auditor to assess the risk of material misstatement related to the estimates and judgments, including through evaluation of the method of measurement and reasonableness of the assumptions used, and to understand management's risk management processes, including the accuracy of the proposed disclosure, thereby alleviating possible concerns about the data's reliability and comparability, and improving investor confidence in such disclosure.<sup>872</sup> Academic research finds that assurance procedures can increase the relevance and reliability of disclosures, particularly for those involving significant estimation uncertainties.<sup>873</sup>

#### **e. GHG Emissions Metrics**

The proposed rules would require all registrants to disclose Scope 1 and Scope 2 GHG emissions. Given the possibility of a transition to a lower-carbon economy, investors and other market participants may be concerned about registrants that have high GHG emissions since these registrants may be more exposed to certain transition risks, such as regulations that restrict emissions or the potential impacts of changing consumer preferences or market conditions.

Should a transition to a low-carbon economy gain momentum, registrants with higher amounts of

---

<sup>871</sup> Such audits could increase the probability of discovering and penalizing any misrepresentation. Since this would increase the expected costs of engaging in misrepresentation, as discussed in Section IV.B.2, this would also be likely to increase the odds of accurate revelation of material information.

<sup>872</sup> See Section II.F.5.

<sup>873</sup> See M. DeFond and J. A. Zhang, *A Review of Archival Auditing Research*, 58(2-3) *Journal of Accounting and Economics* 275-326 (2014); V.K. Krishnan, *The Association Between Big 6 Auditor Industry Expertise and the Asymmetric Timeliness of Earnings* 20 *Journal of Accounting, Auditing and Finance* 209-228 (2005); W. Kinney and R. Martin, *Does Auditing Reduce Bias in Financial Reporting? A Review of Audit-Related Adjustment Studies*, 13 *AUDITING: A JOURNAL OF PRACTICE & THEORY* 149-156 (1994); K.B. Behn, J.H. Choi, and T. Kang, (2008), *Audit Quality and Properties of Analyst Earnings Forecasts* 83 *THE ACCOUNTING REVIEW* 327-349 (2008). Some commenters expressed similar views. See, e.g., Comment Letters from CAQ, Ceres; Impax Asset Management; San Francisco Employees' Retirement System; and UNEP-FI.

Scope 1 and 2 emissions may be more likely to face sharp declines in cash flows, either from greater costs of emissions or the need to scale back on high-emitting activities, among other reasons, as compared to firms with lower amounts of such emissions.

Understanding the extent of this potential exposure to transition risks could help investors in assessing their risk exposures with respect to the companies in which they invest. Greater consistency in emissions disclosures can further benefit investors as it can facilitate comparisons between the registrants and their peers and assist in understanding the overall risk of their portfolios. As described below, emissions disclosures would also help inform investors about the extent to which a company has been or is following through with its disclosed strategies and transition plans. As further discussed in Section IV.D, we expect this provision to lower uncertainty for investors, thereby reducing the cost of capital. This may make it easier to raise equity and debt, or to obtain loan financing.

Besides the direct risk to cash flows through cost of emissions or the need to scale back on high-emitting activities, such a transition could also cause a registrant's assets to suffer from unanticipated or premature write-downs, devaluations, and/or adverse adjustments in reserves. The proposed Scope 1 and 2 emission disclosures would allow investors to identify registrants whose assets may be more likely to become obsolete or non-performing or lose economic value ahead of their anticipated useful life due to a potential transition to a lower-carbon economy, and more generally allow investors to discern whether certain investments are unlikely to earn the anticipated economic return due to such transition. The proposed disclosures would also allow investors to more closely monitor whether a firm's management is properly accounting for the impairment of such stranded assets to ensure that they are recorded on the balance sheet as a loss of profit and are not carried at more than their recoverable amount. Given the significant

possibility that Scope 1 and 2 emissions will affect the valuation of the registrant through impacts on earnings, cost of capital, investor demand, or potentially some other channel, investor protection would be enhanced by requiring disclosure of this information.

Moreover, by specifying that the information should be provided by all registrants, investors would benefit from having access to a more comprehensive set of emissions data against which to measure a registrant's progress in meeting any stated emissions goals or otherwise managing its climate-related risks, as a part of assessing the registrant's overall business and financial condition. In the absence of the proposed rules, some registrants may choose to selectively omit quantitative emissions metrics. The resulting state of disclosures is less meaningful and less transparent, making it significantly more difficult for investors to assess the degree of risk in individual firms, to compare across firms, and to value securities.

As discussed in Section IV.A, some registrants currently report emissions via the EPA's 2009 mandatory Greenhouse Gas Reporting Program.<sup>874</sup> However, the nature of the reporting requirements and the resulting data is more suited to the purpose of building a national inventory of GHG emissions, not of assessing emissions-related risks to individual registrants. Specifically, direct emitters must report their emissions at the facility-level (not registrant-level) and suppliers of certain products must report their "supplied emissions," conditional on these emissions exceeding a specified threshold.<sup>875</sup> In addition, as previously discussed, the EPA emissions data does not allow a clean disaggregation across the different scopes of emissions for a given registrant.<sup>876</sup> From the point of view of an investor seeking greater information regarding a

---

<sup>874</sup> See Section IV.A.3.

<sup>875</sup> See *supra* note 737.

<sup>876</sup> See Section IV.A.3.

registrant, the EPA's emissions data may be difficult for investors to use, because the data are made public by facility and not by company. While each facility is matched to its parent company, this company may not be the entity registered with the SEC and thus of interest to investors. Taken together, the EPA emissions data is not well suited to enabling investors to fully assess the degree to which each registrant is exposed to transition risks.

The proposed rules would result in more comprehensive and tailored emissions information by requiring disclosure of Scope 1, Scope 2, and in some cases Scope 3 emissions by registrants in SEC filings. Prior evidence has shown that when information that is already publicly available elsewhere is included within SEC filings, the public becomes more aware of the information.<sup>877</sup> While there are numerous differences with regard to EPA reporting, this evidence suggests that even were these differences not to exist, and the only change were to be inclusion in SEC filings, there would nonetheless be an advantage in improving consistency and reliability and decreasing search costs.

The proposed rules would also provide informational benefits beyond the voluntary disclosure of emissions in sustainability reports. While currently disclosed information reflects investor demand, the overall information disclosed to the market may be biased due to its voluntary nature, in that companies that have more favorable data (e.g., lower emissions) may be more likely to make these voluntary disclosures. Requiring all registrants to provide consistent disclosures, as proposed, would reduce the bias that can result from a voluntary regime. Moreover, as discussed above, locating the information in SEC filings may make it more accessible to investors and contribute to greater consistency and reliability.

---

<sup>877</sup> See H.B. Christensen, E. Floyd, L.Y. Liu, and M Maffett, *The Real Effects of Mandated Information on Social Responsibility in Financial Reports: Evidence from Mine-Safety Records*, 64 (2-3) JOURNAL OF ACCOUNTING AND ECONOMICS 284-304 (2017).

Specific provisions are designed to facilitate comparability across registrants and industries. For example, requiring the disclosure of GHG intensity in terms of metric tons of CO<sub>2</sub>e per unit of total revenue and per unit of production would allow investors to directly assess the efficiency of the registrant's operations and compare across different industries and firms of varying size. Increased standardization in the reporting of these metrics may allow investors to assess more effectively a registrant's transition risk against that of its competitors. As another example, the proposed rules would require a registrant to set the organizational boundaries for its GHG emissions disclosure using the same scope of entities, operations, assets, and other holdings within its business organization structure as those included in its consolidated financial statements. Requiring a consistent approach would avoid potential investor confusion about the reporting scope used in the financial statements and enhance comparability across registrants,<sup>878</sup> helping investors in assessing a registrant's transition risk against that of its competitors.

The proposal would also require non-SRC registrants to disclose Scope 3 emissions if material or if the registrant has a target or goal related to Scope 3.<sup>879</sup> In addition, specified registrants would also be required to disclose the methodology used to compute emissions, the breakdown of the different GHGs, as well as upstream and downstream activities, and data quality.<sup>880</sup> Scope 3 emissions GHG emissions can represent the majority of the carbon footprint

---

<sup>878</sup> Unlike the GHG Protocol, which currently provides different options for setting organizational boundaries, the proposed rules would require that the scope of consolidation and reporting be consistent for financial data and GHG emissions data.

<sup>879</sup> The proposed rules include a safe harbor for Scope 3 emissions disclosure from certain forms of liability under the federal securities laws.

<sup>880</sup> In calculating Scope 3 emissions, registrants have the flexibility to choose a methodology they deem fit, however, the specific methodology must be disclosed. Estimates or ranges are permitted. Emissions reporting must be presented as CO<sub>2</sub>e as well as disaggregated into the different types of GHGs.

for many companies, in some cases as high as 85% to 95%.<sup>881</sup> For example, according to Morgan Stanley Capital International (MSCI), the Scope 3 emissions of the integrated oil and gas industry are more than six times the level of its Scope 1 and 2 emissions.<sup>882</sup> Companies may have indirect control over their Scope 3 emissions through choices they make, for example in selecting suppliers, designing products, or sourcing inputs more efficiently. Nevertheless, the majority of companies do not typically report this information. As of July 10, 2020, for example, within the sample of companies belonging to the MSCI ACWI Investable Market Index (IMI),<sup>883</sup> the total Scope 3 average intensity was almost three times greater than the combined Scope 1 and 2 intensity. Yet, only 18% of constituents of the MSCI ACWI IMI reported Scope 3 emissions, with even lower reporting percentages when looking at the individual Scope 3 categories.<sup>884</sup>

The reporting of Scope 3 emissions for these registrants would provide additional benefits for investors. Scope 3 emissions information may be material in a number of situations to help investors gain a more complete picture of the transition risks to which a registrant may be exposed. Relative to registrants with substantial Scope 1 and 2 emissions, future regulations that restrict emissions may impact registrants with high Scope 3 emissions differently. In certain industries, a transition to lower-emission products or processes may already be underway,

---

<sup>881</sup> See Eric Rosenbaum, Climate experts are worried about the toughest carbon emissions for companies to capture (Aug. 18, 2021) available at <https://www.cnbc.com/2021/08/18/apple-amazon-exxon-and-the-toughest-carbon-emissions-to-capture.html#:~:text=Scope%203%20carbon%20emissions%2C%20or,as%2085%25%20to%2095%25>.

<sup>882</sup> See also MSCI, *Emissions: Seeing the Full Picture* (Sept. 17, 2020), available at <https://www.msci.com/www/blog-posts/scope-3-carbon-emissions-seeing/02092372761>

<sup>883</sup> The MSCI ACWI Investable Market Index (IMI) captures large, mid and small cap representation across 23 Developed Markets and 25 Emerging Markets countries, covering approximately 99% of the global equity investment opportunity set.

<sup>884</sup> *Ibid.*

triggered by existing policies, a shift in consumer preferences, technological changes, or other market forces.

Registrants with significant Scope 3 emissions may be more likely to face disruptions not only in their cash flows, but also in their business models or value chains to the extent that these registrants are compelled to make changes in their products, suppliers, distributors, or other commercial partners.<sup>885</sup> Moreover, if consumer demand changes to favor less carbon intensive products, companies with high Scope 3 emissions may see a marked reduction in demand for their products, and companies that are not aware of these risks could be less profitable relative to those that understand these risks and are prepared to mitigate them. Alternatively, companies that can source inputs that involve less GHG emissions could achieve potential cost savings and those that could produce products that generate less GHG emissions by the end user could potentially enjoy higher demand. Some registrants may plan to shift their activities to capitalize on these changes and thus may need to allocate capital to invest in lower emissions equipment or to create new types of products. Investors would need information about the registrants' full GHG emissions footprint and intensity to determine and compare how exposed a registrant is to the financial risks associated with a transition to lower-carbon economy.

Over the last few years, a number of studies have shown that firms try to reduce their local carbon footprints by outsourcing their carbon emissions to suppliers in states or countries

---

<sup>885</sup> Scope 3 upstream and downstream emissions represents a substantial portion of global GHG emissions. For example, according to a recent report, Scope 3 downstream emissions that happen after a product or service leaves a company's control/ownership represented about 49 % of global GHG emissions in 2019. Capital goods (87%), banks (81%) and retailing (80%) were among the industries with the highest percentage of Scope 3 downstream emissions relative to their total emissions. These downstream emissions can come from a variety of sources. For example, capital goods activities include emissions from raw material manufacturing and transport. Banks emit few GHGs to run their operations, — but finance the emissions of other companies through loans and investments. *See* State of Green Business 2021, *available at* <https://www.spglobal.com/marketintelligence/en/news-insights/research/state-of-green-business-2021>.

with weaker environmental policies.<sup>886</sup> These studies provide evidence of the substitutional relationship between direct and outsourced GHG emissions. Recent studies have also analyzed the substitution effects between Scope 1 and Scope 3 GHG emission activities of U.S. firms. The findings show that the relative share of Scope 1 emissions out of a firm's total emissions tend to fall at the expense of the rising proportion of its supplier-generated Scope 3 emissions and that a firm's imports further augment the substitutional relationship between its Scope 1 and Scope 3 emissions.<sup>887</sup> In addition to the outsourcing incentives related to regulatory arbitrage, the authors of these studies posit that firms may also be outsourcing emissions abroad to exploit investors' current difficulties in assessing the firm's carbon emissions through imports along the upstream supply chain. By requiring the disclosure of Scope 3 GHG emissions, the proposed rules would make it more difficult for non-SRC registrants to avoid investors' scrutiny by outsourcing all or part of their activities abroad.

Finally, as described in Section IV.A5.d, many companies have set emissions targets, and it is not always clear whether these targets pertain to Scope 3 emissions or not. As explained in Section IV.C.1.g, registrants would be required to disclose whether the targets pertain to Scope 3 emissions, and as described above, if they do, they would need to report such emissions.

Without reporting of Scope 3 emissions amounts and categories, investors would not have the information they need to understand the scale and scope of actions the company may need to

---

<sup>886</sup> See, e.g. I Ben-David, Y. Jang, S. Kleimeier, and M. Viehs, *Exporting Pollution: Where Do Multinational Firms Emit CO<sub>2</sub>?* 36 (107) ECONOMIC POLICY 377–437 (2021); X. Li and Y.M. Zhou, *Offshoring Pollution While Offshoring Production?* 38 STRATEGIC MANAGEMENT JOURNAL 2310–2329 (2017).

<sup>887</sup> See R. Dai, R. Duan, H. Liang, and L. Ng, *Outsourcing Climate Change* (SSRN Working Paper)(2021), available here [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3765485](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3765485).

take to fulfill its commitment, and thus the overall financial implications of a registrant's targets. For example, a registrant's disclosure of its Scope 3 emissions, together with the proposed financial statement metrics, could allow investors to assess the potential (additional) investments the registrant may need to make to meet a certain goal. Moreover, as described further below, reporting of Scope 3 emissions gives a quantitative metric for investors to track, thus reducing opportunities for misleading claims on the part of the registrant.

Because the value of a firm's equity is largely derived from expected future cash flows, disclosure of Scope 1, 2, and 3 emissions can help investors incorporate risks associated with such future cash flows into asset values today. Indeed, the academic literature indicates that equity is a long-term asset, meaning that even risks related to regulatory changes in the distant future could be priced today.<sup>888</sup> Thus, for many registrants, reasonable investors may view GHG emissions as necessary to assess the registrants' exposure to climate-related risks, particularly transition risks, and whether they have developed strategies to reduce their carbon footprint in the face of potential regulatory, policy, and market constraints. This may be particularly important in light of the investor demand documented in IV.B.1 and the potential price impact, as discussed in IV.D.

---

<sup>888</sup> See J. van Binsbergen, *Duration-Based Stock Valuation: Reassessing Stock Market Performance and Volatility* (2021), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3611428](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3611428); D. Greenwald, M. Leombroni, H. Lustig, and S. van Nieuwerburgh, *Financial and Total Wealth Inequality with Declining Interest Rates* (2021), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3789220](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3789220). Both of these papers find that the Macauley duration of equity, the weighted average length of time which investors will receive the cash flows from the asset, is in excess of 35 years as of 2019. This indicates that changes in cash flows in the distant future can impact equity prices today.

**f. Assurance of GHG Scopes 1 and 2 emissions disclosures for large accelerated filers and accelerated filers**

The proposed rules would require registrants that are large accelerated filers and accelerated filers to provide an attestation report for the registrant's Scope 1 and 2 GHG emissions disclosures. Large accelerated filers constitute approximately 31% of the universe of registrants that filed annual reports during calendar year 2020 (1,950 out of 6,220), but account for 93.6% of market cap within the same universe. Accelerated filers constitute approximately 10% of the universe of registrants that filed annual reports during calendar year 2020 (645 out of 6,220) and account for 0.9% of market cap within the same universe.

The proposed rules provide specific transition periods for obtaining attestation reports. Large accelerated filers would be required to provide Scopes 1 and 2 emissions disclosures in the fiscal year immediately following rule adoption. Next, they would be required to obtain limited assurance over these disclosures in fiscal years 2 and 3 after adoption. They would then be required to obtain reasonable assurance over these disclosures in fiscal year 4 after adoption and going forward. Accelerated filers would follow the same timeline but with a delay of one fiscal year. Specifically, accelerated filers would be required to provide Scopes 1 and 2 emissions disclosures in fiscal year 2 after adoption. Next, they would be required to obtain limited assurance over these disclosures fiscal years 3 and 4 after adoption. They would then be required to obtain reasonable assurance over these disclosures in fiscal year 5 after adoption and going forward.

The proposed transition periods for assurance over large accelerated filers' and accelerated filers' Scopes 1 and 2 GHG emission disclosures are intended to provide these registrants time to familiarize themselves with the GHG emissions disclosure requirements,

develop the relevant DCP, and provide the market with an opportunity to develop enough expertise to satisfy the increased demand for GHG emission assurance services. We expect that during the proposed transition periods, the market for assurance services would further mature with respect to institutional knowledge, procedural efficiency, and overall competition, thus lowering costs for registrants and improving the quality of service. Although Scope 3 GHG emissions can constitute a large portion of a registrant's total emission, the proposed rules would exclude Scope 3 GHG emission disclosures from the attestation requirement due to the unique challenges associated with their measurement, which is based on data sources not owned by the registrant,<sup>889</sup> as well as the potential higher costs associated with their verification.

Section IV.A.5.e above discusses survey evidence on the frequency with which firms obtain assurance in sustainability reports. This evidence suggests that a significant fraction of large companies already obtain some form, albeit limited, of assurance. Practices appear to be fragmented with respect to the levels of assurance provided, the assurance standards used, the types of service providers, and the scope of disclosures covered by the assurance. One consequence of such fragmentation has been a lack of clarity about the nature of assurance provided, which can lead to confusion for investors when assessing the quality of disclosures. Moreover, as noted above, the voluntary nature of the reporting could result in biased or incomplete data. The fact, however, that a significant proportion of large companies already obtain some form of assurance over this information is indicative of investors' and companies' need for such disclosures to be reliable.

---

<sup>889</sup> See Section II.G.3.

The importance of assurance for climate-related information also is highlighted by the International Federation of Accountants, which recently published its Vision for High-Quality Sustainability Assurance.<sup>890</sup> As discussed earlier, contrary to other quantitative information that is provided outside of the financial statements, and which is typically derived from the same books and records that are used to generate a registrant’s audited financial statements, GHG emissions disclosures are not developed from information that is included in the registrant’s books and records.<sup>891</sup> Accordingly, such quantitative disclosure is not be subject to audit procedures as part of the audit of the financial statements in the same filing. Because of this, the proposed requirement of a third-party attestation report may be particularly beneficial to verify the reliability of such quantitative information and enhance its accuracy.. In general, subjecting climate-related disclosures to assurance would require the assurance provider to assess the risk of material misstatements related to the estimates and judgments, including through evaluation of the method of measurement and reasonableness of the assumptions used, and an understanding of management’s risk management processes, including the risks identified and the actions taken to address those risks.<sup>892</sup> Moreover, by specifying minimum standards for the assurance provided with respect to GHG Scope 1 and 2 emissions disclosures, we expect the proposed rules to promote accuracy and consistency in the reporting of this information, while also providing investors with a baseline level of reliability against which to evaluate the disclosures.<sup>893</sup>

---

<sup>890</sup> See IFAC Charts the Way Forward for Assurance of Sustainability Information (Dec. 6, 2021), *available at* <https://www.ifac.org/news-events/2021-12/ifac-charts-way-forward-assurance-sustainability-information>.

<sup>891</sup> See Section II.H.1 for more information.

<sup>892</sup> See PCAOB, AS 2110 Identifying and Assessing Risks of Material Misstatement (2010).

<sup>893</sup> See K. Hodge, K., N. Subramaniam, J. Stewart, *Assurance of Sustainability Reports: Impact on Report Users' Confidence and Perceptions of Information Credibility*, (19) *Australian Accounting Review* 178-194 (2009), *available at* <https://doi.org/10.1111/j.1835-2561.2009.00056.x>

Academic research finds that assurance procedures can increase the relevance and reliability of disclosures,<sup>894</sup> particularly for those involving significant estimation uncertainties. While most of this academic evidence focuses on the effects of reasonable assurance procedures, we cannot preclude the possibility that such findings may have implications for limited assurance as well. Experimental evidence has found that both limited and reasonable assurance can increase perceived reliability of sustainability reports, but those same studies do not find a statistically significant difference between limited and reasonable assurance.<sup>895</sup> Obtaining assurance for sustainability reports, which as noted above is typically limited assurance, has also been associated with firms with lower costs of capital, increased analyst coverage, and decreased analyst forecast errors and forecast dispersion.<sup>896</sup>

The proposed rules would require the attestation report to identify the criteria against which the subject matter was measured or evaluated, the level of assurance provided, the nature of the engagement, and the attestation standard used. In particular, the proposed rules would

---

<sup>894</sup> See supra note 873.

<sup>895</sup> See, e.g., K. Hodge, K., N. Subramaniam, and J. Stewart, *Assurance of Sustainability Reports: Impact on Report Users' Confidence and Perceptions of Information Credibility*, 19 AUSTRALIAN ACCOUNTING REVIEW 178-194 (2009), available at <https://doi.org/10.1111/j.1835-2561.2009.00056.x>; Mark Sheldon, *User Perceptions of CSR Disclosure Credibility with Reasonable, Limited and Hybrid Assurances* (Dissertation) (2016) available at [https://vtechworks.lib.vt.edu/bitstream/handle/10919/65158/Sheldon\\_MD\\_D\\_2016.pdf](https://vtechworks.lib.vt.edu/bitstream/handle/10919/65158/Sheldon_MD_D_2016.pdf). This absence of evidence, however, is not necessarily evidence of absence. It is possible that reasonable assurance can have benefits over limited assurance that are not easily identifiable.

<sup>896</sup> See R.J. Casey and J.H. Grenier, Understanding and contributing to the enigma of corporate social responsibility (CSR) assurance in the United States, 34(1) AUDITING: A JOURNAL OF PRACTICE & THEORY 97, 97-130 (2015). The authors also find that the lower costs of capital are in excess of estimated assurance costs (i.e., 5% to 10% of total audit fees) for the majority of companies. We acknowledge, however, that the benefits cited in this study may be overstated to the extent that they reflect a selection bias. Specifically, companies that anticipate a net loss due to assurance would choose to forgo obtaining such assurance, thereby removing themselves from the treatment group. This potential limitation in interpreting such findings is also supported by evidence of systematic differences in companies voluntarily reporting higher assurance levels. See C. H. Cho, G. Michelon, D. M. Patten, and R. W. Roberts, *CSR report assurance in the USA: an empirical investigation of determinants and effects*, 5(2) SUSTAINABILITY ACCOUNTING, MANAGEMENT AND POLICY JOURNAL 130, 130-148 (2014), available at <https://doi.org/10.1108/SAMPJ-01-2014-0003>.

require the attestation report to include a description of the work performed as a basis for the attestation provider's conclusion and for that conclusion to be provided pursuant to standards that are established by a body or group that has followed due process procedures, including the broad distribution of the framework for public comment. We expect this provision would help ensure that the standards upon which the attestation report is based were the result of a transparent and reasoned process. In this way, the requirement should help to protect investors who may rely on the attestation report by limiting the standards used to those that are appropriate for the subject matter and purpose. Further, we expect this provision to enhance the transparency of the GHG emissions attestation report for investors by providing them with additional information about the general procedures undertaken by the attestation provider. For example, under the proposed rules, an attestation report providing limited assurance would need to state that the procedures performed vary in nature and timing from, and are less extensive than, a reasonable assurance engagement, thus helping investors understand the level of assurance provided.

The GHG emissions attestation report would also be required to include a statement that describes any significant limitations associated with the measurement or evaluation of the subject matter against the criteria. The provision would require disclosure about the estimation uncertainties inherent in the quantification of GHG emissions, driven by reasons such as the state of the science and assumptions used in the measurement and reporting processes. By eliciting disclosure with respect to the procedures undertaken by the attestation provider, such as inquiries and analytical procedures, and the methodology used in the attestation process, the proposed provision would enhance the transparency of the GHG emissions attestation quality, thus allowing investors to gain a better understanding of the emission related information. This could

help investors process emission related information more effectively. More informed investment decisions by investors also may benefit registrants by lowering their cost of capital.

The proposed rules would also require registrants to disclose whether the attestation provider has a license from any licensing or accreditation body to provide assurance and whether the GHG emissions attestation engagement is subject to any oversight inspection program and record-keeping requirements with respect to the work performed for the GHG emissions attestation. These requirements are expected to benefit investors by helping them to better understand the qualifications of the GHG emissions attestation provider, which in turn would allow them to make better informed decisions about the reliability of such information.

Finally, the proposed rules would require that the GHG emissions attestation report be prepared and signed by a provider that is an expert in GHG emissions and independent with respect to the registrant, and any of its affiliates, for whom it is providing the attestation report. These qualification and independence requirements should help ensure that the attestation provider is capable of exercising informed, objective and impartial judgment. Academic research has found that the independence of assurance providers can be important in certain settings for disclosure quality.<sup>897</sup> Academic research has also found that equity prices respond to analyst forecast even after management has released the exact same information, highlighting more generally the perceived value of external evaluations of firm disclosures and resulting investor confidence in the related disclosures.<sup>898</sup>

<sup>898</sup> See Marco Grotteria, and Roberto Gomez Cram, *Do Financial Investors Underreact To Voluntary Corporate Disclosure?* (Working Paper) (2022).

### **g. Targets and Goals Disclosure**

The proposed rules would require a registrant to disclose whether it has set any climate-related targets or goals and, if so, how it intends to meet those targets and goals. Such climate-related targets or goals might relate to the reduction of GHG emissions or address energy usage, water usage, conservation or ecosystem restoration. Associated disclosure would include the scope of activities and emissions included in the target, the unit of measurement, and the defined time horizon. Additionally, disclosures include the baseline emissions for measuring progress, any interim targets, how it intends to meet these targets or goals, and data showing any progress toward achieving these targets, including how that progress was achieved, and details about any carbon offsets of RECs that have been used.

For example, in 2019 Amazon and Global Optimism co-founded The Climate Pledge, a commitment to net zero carbon by 2040. Since then, a growing list of major companies and organizations have signed on to the Climate Pledge, which indicates a commitment to the following three principles: (i) Measure and report greenhouse gas emissions on a regular basis; (ii) Implement decarbonization strategies in line with the Paris Agreement; (iii) Neutralize any remaining emissions with additional offsets to achieve net zero annual carbon emissions by 2040.<sup>899</sup> The proposed rules would help to make such commitments more transparent by requiring disclosure on the unit of measurement, time horizon, and baseline for measuring progress, including how that progress was achieved (e.g. through efficiency improvements, renewable energy adoption, materials reductions, and other carbon emission elimination strategies).

---

<sup>899</sup> As of Jan. 25, 2022, The Climate Pledge has acquired 217 signatories. See *The Climate Pledge*, available at <https://www.theclimatepledge.com/us/en/Signatories>.

Such standardized reporting as a form of an oversight or monitoring mechanism might be critical in overcoming agency problems in the presence of asymmetric information. Investment in achieving targets could be value-enhancing in the long-run, but reduce cash flow in the short-run. Companies may decide that it is an optimal strategy to bear the costs up front of shifting its operations to those that have fewer emissions or upgrading their equipment, rather than bearing the risk that these costs will be borne in an unpredictable and possibly disorderly way in the future. In the absence of a means to credibly convey that efforts to achieve these long-term targets are being undertaken diligently, however, investors might be unable to observe which registrants are actually following through on such actions. For example, if registrants are incurring costs in the short-run to undertake investments to reduce Scope 1, 2, and 3 emissions, reducing short-run profitability, but are unable to convey to investors that they are meaningfully following through on achieving potential long-term value-enhancing strategies, there could be a disincentive for investors to invest in the firm, thus undermining its value in the long-run. This has been put forth as one potential explanation for some private sector attempts at addressing these problems, such as green bonds, which commit firms to recurring, more standardized disclosure requirements for progress in achieving stated targets and goals.<sup>900</sup> The proposed rules would provide enhanced transparency about targets and goals so that investors can identify registrants with credible goals and track their progress over time. This can not only reduce incentives for misleading goal disclosures, but can also allow investors to recognize goals that generate long-term value despite short run costs, which can attract capital and increase firm value.

---

<sup>900</sup> See S. Lu, *The Green Bonding Hypothesis: How do Green Bonds Enhance the Credibility of Environmental Commitments?* (2021), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3898909](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3898909).

As explained above, the pursuit of targets could have a material impact, either in the short-term or long-term, on a registrant’s operations or financial condition.<sup>901</sup> At this time, however, there is little consistency with respect to the extent of disclosure and the relevant details concerning such climate-related targets and goals. This can result in insufficient information for investors’ monitoring or decision-making needs. The proposed disclosure could provide more comparable, consistent, and reliable metrics of any climate-related targets or goals. It would require a registrant to clearly define baselines for targets, the scope of activities and emissions covered by the target, the unit of measurement, the defined time horizon, and how progress is made towards the targets. For example, the disclosure would require the registrant to state whether or not the targets pertain to Scope 3 emissions. If targets do include Scope 3 emissions, disclosure of Scope 3 emission sources and amounts would be required so that investors would understand the scale and scope of changes the company would need to undertake, and thus the full financial impact of meeting the target.<sup>902</sup> Such disclosures would also enable investors to monitor progress firm management has made and plans to make towards achieving climate-related targets or goals, assess the credibility of its goal, and evaluate the effectiveness of the company’s investments to achieve its goals. As described above, this required disclosure could make targets more credible and serves as an oversight or monitoring mechanism.

<sup>901</sup> See supra Sections II.G.1.b. and III C.1.e.

<sup>902</sup> See *id.*

## h. Structured Data Requirement

Under the proposed rules, the new climate-related disclosures would be tagged in the Inline XBRL structured data language. The provision requiring Inline XBRL tagging of climate-related disclosures would benefit investors by making those disclosures more readily available for aggregation, comparison, filtering, and other enhanced analytical methods.<sup>903</sup> These benefits are expected to reduce search costs and substantially improve investors' information-processing efficiency.<sup>904</sup> XBRL requirements for public company financial statement disclosures have been observed to reduce information-processing costs, thereby decreasing information asymmetry and increasing transparency by incorporating more company-specific information into the financial markets.<sup>905</sup> In addition, the proposed Inline XBRL requirement for the climate-related disclosures may further limit agency problems, as XBRL requirements for financial statement

---

<sup>903</sup> For example, structuring climate-related disclosures would enable more advanced analyses than those described in the aforementioned Commission staff review that used keyword searches and NLP. *See supra* IV.A.5.a.

<sup>904</sup> The findings on XBRL cited in the following paragraphs are not necessarily focused on climate-related disclosures and metrics, but we expect the findings to be generally applicable and to result in similar benefits for investors.

<sup>905</sup> *See, e.g.,* Y. Cong, J. Hao, and L. Zou, *The Impact of XBRL Reporting on Market Efficiency*, 28 J. INFO. SYS. 181 (2014) (finding support for the hypothesis that “XBRL reporting facilitates the generation and infusion of idiosyncratic information into the market and thus improves market efficiency”); Y. Huang, J.T. Parwada, Y.G. Shan, and, J. Yang, *Insider Profitability and Public Information: Evidence From the XBRL Mandate* (Working Paper) (2019) (finding XBRL adoption levels the informational playing field between insiders and non-insiders); J. Efendi, J.D. Park, and C. Subramaniam, *Does the XBRL Reporting Format Provide Incremental Information Value? A Study Using XBRL Disclosures During the Voluntary Filing Program*, 52 ABACUS 259 (2016) (finding XBRL filings have larger relative informational value than HTML filings); J. Birt, K. Muthusamy, and P. Bir, *XBRL and the Qualitative Characteristics of Useful Financial Information*, 30 ACCOUNT. RES. J. 107 (2017) (finding “financial information presented with XBRL tagging is significantly more relevant, understandable and comparable to non-professional investors”); S.F. Cahan, S. Chang, W.Z. Siqueira, and K. Tam, *The Roles of XBRL and Processed XBRL in 10-K Readability*, J. BUS. FIN. ACCOUNT. (2021) (finding Form 10-K file size reduces readability before XBRL’s adoption since 2012, but increases readability after XBRL adoption, indicating “more XBRL data improves users’ understanding of the financial statements”).

tagging have been observed to facilitate external monitoring of firms through the aforementioned reduction of information processing costs.<sup>906</sup>

Investors with access to XBRL analysis software may directly benefit from the availability of the climate-related disclosures in Inline XBRL, whereas other investors may indirectly benefit from the processing of Inline XBRL disclosures by asset managers and by information intermediaries such as financial analysts.<sup>907</sup> In that regard, XBRL requirements for public company financial statement disclosures have been observed to increase the number of companies followed by analysts, decrease analyst forecast dispersion, and, in some cases, improve analyst forecast accuracy.<sup>908</sup> Should similar impacts on the analysts' informational

---

<sup>906</sup> See, e.g., P.A. Griffin, H.A. Hong, J.B. Kim, and J.H. Lim, *The SEC's XBRL Mandate and Credit Risk: Evidence on a Link between Credit Default Swap Pricing and XBRL Disclosure*, 2014 AMERICAN ACCOUNTING ASSOCIATION ANNUAL MEETING (2014) (attributing the negative association between XBRL information and credit default swap spreads to "(i) a reduction in firm default risk from better outside monitoring and (ii) an increase in the quality of information about firm default risk from lower information cost"); J.Z. Chen, H.A. Hong, J.B. Kim, and J.W. Ryou, *Information Processing Costs and Corporate Tax Avoidance: Evidence from the SEC's XBRL Mandate*, 40 (2) *J. ACCOUNT PUB. POL.* (2021) (finding XBRL reporting decreases likelihood of firm tax avoidance, because "XBRL reporting reduces the cost of IRS monitoring in terms of information processing, which dampens managerial incentives to engage in tax avoidance behavior").

<sup>907</sup> Additional information intermediaries that have used XBRL disclosures may include financial media, data aggregators and academic researchers. See, e.g., N. Trentmann, *Companies Adjust Earnings for Covid-19 Costs, but Are They Still a One-Time Expense?* THE WALL STREET JOURNAL (2020), available at <https://www.wsj.com/articles/companies-adjust-earnings-for-covid-19-costs-but-are-they-still-a-one-time-expense-11600939813> (citing XBRL research software provider Calcbench as data source); *Bloomberg Lists BSE XBRL Data*, XBRL.org (2018), available at <https://www.xbrl.org/news/bloomberg-lists-bse-xbrl-data/>; R. See *2019 Pension Review First Take: Flat to Down*, GOLDMAN SACHS ASSET MANAGEMENT (2020) (an example of asset manager use of XBRL data), available at [https://www.gsam.com/content/dam/gsam/pdfs/common/en/public/articles/2020/2019\\_Pension\\_First\\_Take.pdf?sa=n&rd=n](https://www.gsam.com/content/dam/gsam/pdfs/common/en/public/articles/2020/2019_Pension_First_Take.pdf?sa=n&rd=n) (citing XBRL research software provider Idaciti as a data source).

<sup>908</sup> See, e.g., A.J. Felo, J.W. Kim, and J. Lim, *Can XBRL Detailed Tagging of Footnotes Improve Financial Analysts' Information Environment?*, 28 *INT'L J. ACCOUNT. INFO. SYS.* 45 (2018); Y. Huang, Y.G. Shan, and J.W. Yang., *Information Processing Costs and Stock Price Informativeness: Evidence from the XBRL Mandate*, 46 *AUST. J. MGMT.*, 110–131 (2020) (finding "a significant increase of analyst forecast accuracy post-XBRL"); M. Kirk, J. Vincent, and D. Williams, *From Print to Practice: XBRL Extension Use and Analyst Forecast Properties* (Working Paper 2016) (finding "the general trend in forecast accuracy post-XBRL adoption is

environment arise from climate-related disclosure tagging requirements, this would likely benefit retail investors, who have generally been observed to rely on analysts' interpretation of financial disclosures rather than directly analyzing those disclosures themselves.<sup>909</sup>

## **2. Costs**

Below we discuss the anticipated direct and indirect costs of the proposed rules. Direct costs would include compliance burdens for registrants in their efforts to meet the new disclosure requirements. These direct costs could potentially be significant; however, the incremental costs would be lower to the extent that registrants already provide the required disclosures. Indirect costs may include heightened litigation risk and the potential disclosure of proprietary information.<sup>910</sup> We proceed by discussing these various costs.

### **a. Direct costs**

The primary direct costs that the proposed rules would impose on registrants are compliance costs. To the extent that they are not already gathering the information required to be disclosed under the proposed rules, registrants may need to re-allocate in-house personnel, hire additional staff, and/or secure third-party consultancy services. Registrants may also need to

---

positive"); C. Liu, T. Wang, and L.J. Yao, *XBRL's Impact on Analyst Forecast Behavior: An Empirical Study*, 33 J. ACCOUNT. PUB. POL. 69–82 (2014) (finding “mandatory XBRL adoption has led to a significant improvement in both the quantity and quality of information, as measured by analyst following and forecast accuracy”). *But see* S.L. Lambert, K. Krieger, and N. Mauck, *Analysts' Forecasts Timeliness and Accuracy Post-XBRL*, 27 INT'L J. ACCOUNT. INFO. MGMT. 151-188 (2019) (finding significant increases in frequency and speed of analyst forecast announcements, but no significant increase in analyst forecast accuracy post-XBRL).

<sup>909</sup> *See, e.g.*, A. Lawrence, J. Ryans, and E. Sun, *Investor Demand for Sell-Side Research*, 92 ACCOUNT. REV. 123–149 (2017) (finding the “average retail investor appears to rely on analysts to interpret financial reporting information rather than read the actual filing”); D. Bradley, J. Clarke, S. Lee, and C. Ornthanalai, *Are Analysts' Recommendations Informative? Intraday Evidence on the Impact of Time Stamp Delays*, 69 J. FINANCE 645–673 (2014) (concluding “analyst recommendation revisions are the most important and influential information disclosure channel examined”).

<sup>910</sup> For example, these costs may include the revelation of trade secrets, the disclosure of profitable customers and markets, or the exposure of operating weakness to competing firms, unions, regulators, investors, customers or suppliers. These costs are commonly referred to as “proprietary costs.”

conduct climate-related risk assessments, collect information or data, measure emissions (or, with respect to Scope 3 emissions, gather data from relevant upstream and downstream entities), integrate new software or reporting systems, seek legal counsel, and obtain assurance on applicable disclosures (i.e., Scopes 1 and 2 emissions). In addition, even if a registrant already gathers and reports the required information, some or all of this information may be in locations outside of SEC filings (such as sustainability reports posted on company websites or emissions data reported to the EPA). These registrants may face lower incremental costs by virtue of already having the necessary processes and systems in place to generate such disclosures; however they may still incur some additional costs associated with preparing this information for inclusion in SEC filings.

#### **(1) General cost estimates**

In this section, we review sources that provide insight into the magnitude of the potential costs associated with the proposed rules. With some exceptions discussed in further detail, these sources provide information at the level of general costs for climate disclosures. We acknowledge that these sources are limited in scope or representativeness and thus may not directly reflect registrants' compliance costs. For instance, some third-party sources may present cost estimates that do not include all items required under the proposed rules (e.g., assurance costs), or else they may aggregate the costs of multiple items (including those not required under the proposed rules) into a single cost figure. However, these sources may serve as useful references to the extent that they overlap with specific disclosure elements required in the proposed rules. For example, third-party cost estimates of preparing TCFD reports or completing the CDP questionnaire can offer a rough approximation of potential compliance costs due to their

similarity with the proposed rules. Below, we request further data to assist us in estimating potential costs.

As discussed in Section V, for purposes of the Paperwork Reduction Act of 1995 (“PRA”),<sup>911</sup> we estimate the annual costs over the first six years of compliance with the proposed rules.<sup>912</sup> For non-SRC registrants, the costs in the first year of compliance are estimated to be \$640,000 (\$180,000 for internal costs and \$460,000 for outside professional costs), while annual costs in subsequent years are estimated to be \$530,000 (\$150,000 for internal costs and \$380,000 for outside professional costs). For SRC registrants, the costs in the first year of compliance are estimated to be \$490,000 (\$140,000 for internal costs and \$350,000 for outside professional costs), while annual costs in subsequent years are estimated to be \$420,000 (\$120,000 for internal costs and \$300,000 for outside professional costs). These costs are expected to decrease over time for various reasons, including increased institutional knowledge, operational efficiency, and competition within the market for relevant services.

One commenter provided cost estimates for their services in assisting client companies prepare TCFD-aligned disclosures.<sup>913</sup> For companies that have no prior experience in GHG analysis or climate-related disclosures, the commenter estimates initial costs to range from

---

<sup>911</sup> See Paperwork Reduction Act, Pub. L. No. 104-13, 109 Stat 163 (1995) (codified at 44 U.S.C. 3501 *et seq.*). See *infra* Section V.

<sup>912</sup> The following estimates are applicable to registrants filing form 10-K that have no existing climate-related disclosure processes or expertise. All estimates are rounded to the nearest \$5,000.

<sup>913</sup> See memorandum, dated Feb. 4, 2022, concerning staff meeting with representatives of S&P Global.

\$150,000 to \$200,000 to prepare TCFD-aligned disclosures.<sup>914</sup> Companies that have already calculated their carbon footprints and only need assistance with TCFD reporting may expect costs of \$50,000 to \$200,000, with the average cost of approximately \$100,000. Ongoing costs for their services are expected to be zero conditional upon the TCFD requirements remaining unchanged,<sup>915</sup> however the reporting company may still incur internal costs in preparing these disclosures on an annual basis.

Another source presents survey results of climate-related disclosure costs for three unnamed companies, which consist of a European-based multinational large-cap financial institution, a US-based large-cap industrial manufacturing company, and a US-based mid-cap waste management company.<sup>916</sup> The survey reports that each firm has “already established robust in-house climate disclosure systems that can easily be leveraged to comply with any new disclosure rule,” as evidenced by their concurrent reporting under multiple climate disclosure frameworks (e.g., TCFD, CDP, SASB, GRI, etc.). The respondents indicate that anticipated incremental costs of a mandatory climate disclosure rule are therefore expected to be minimal.<sup>917</sup>

---

<sup>914</sup> This cost range pertains to clients’ use of the commenter’s “TCFD Suite”, which consists of the following modules: benchmarking / gap assessment, management interviews, physical risk assessment, and various transition risk assessments, including policy risk analysis, market risk assessment, technology risk assessment, and reputation risk assessment. This cost range excludes the cost of additional services, such as target-setting (\$20,000 to \$30,000) and calculating GHG footprints (\$75,000 to \$125,000 for Scopes 1, 2, and 3), the latter of which is discussed in further detail in the following subsection.

<sup>915</sup> The commenter reports that should the TCFD requirements change based on new science, projections, and business changes, costs of the TCFD Suite in future years may range from \$125,000 to \$175,000.

<sup>916</sup> See L. Reiners and K. Torrent, *The Cost of Climate Disclosure: Three Case Studies on the Cost of Voluntary Climate-Related Disclosure*, Climate Risk Disclosure Lab (2021), available at <https://climatedisclosurelab.duke.edu/wp-content/uploads/2021/12/The-Cost-of-Climate-Disclosure.pdf>.

<sup>917</sup> Incremental costs would be minimal to the extent that the mandatory disclosure rule overlaps with their current reporting practices. The respondents acknowledge that actual incremental costs would depend on the contents of the final rule.

All respondents disclose Scopes 1, 2, and 3 emissions, while none of them obtain third-party assurance for their climate-related disclosures.

The mid-cap waste management company estimates that the cost of producing their first TCFD report was less than \$10,000. The company's reported annual costs consist of employee costs (\$12,600)<sup>918</sup> and third-party costs (\$60,000 to \$160,000).<sup>919</sup> However, the reported annual costs may be less applicable to potential compliance costs as they combine additional costs associated with several other activities not necessarily required in the proposed rules, including its adherence to multiple climate disclosure frameworks (e.g. TCFD, GRI, SASB, and CDP) and designing its annual sustainability report and associated webpage.<sup>920</sup> Overall, the company reports that its total costs related to producing climate-related disclosures across these multiple frameworks are less than 5% of its total SEC compliance-related costs.

The large-cap industrial manufacturing company reports that the costs of preparing its first CDP questionnaire was no more than \$50,000. Additionally, the combined costs of producing its first TCFD, SASB, and GRI disclosures were between \$200,000 and \$350,000. Reported annual costs include internal costs (between \$200,000 and \$350,000)<sup>921</sup> and the cost for

---

<sup>918</sup> The company allocates three employees to produce climate-related disclosures. Two employees in Legal and Compliance devote a combined 80 hours per year on this task, while one employee in Management and Administration devotes two hours per year.

<sup>919</sup> The company reports that approximately one-third of these third-party costs is associated with designing the annual sustainability report and associated webpage, while the remaining two-thirds is associated with report writing and consulting work on the voluntary frameworks.

<sup>920</sup> These annual costs reflect a larger scope of climate-related disclosures (e.g. multiple frameworks, sustainability report, etc.) relative to the initial cost, which is specific to TCFD reporting only. Nevertheless, because these estimates aggregate the costs of reporting under the TCFD in addition to other climate disclosure framework, these estimates can serve as an upper bound of what annual costs may be specific to TCFD reporting only.

<sup>921</sup> Internal costs include the cost of approximately 20 employees working part-time on climate-related disclosures from Nov. until Mar. and one full-time consultant.

auditors and consultants (\$400,000).<sup>922</sup> These cost estimates, however, may overestimate potential compliance costs to the extent that they include disclosure items or activities not required in the proposed rules. The company reports that their annual costs of producing its voluntary climate-related disclosures are less than 0.1% of their revenues.

The multinational financial institution reports that the cost of producing its first TCFD report, SASB report, and CDP questionnaire were each less than \$100,000 given that such information overlaps with what the company already discloses under the EU's Prospectus Regulation (Regulation (EU) 2017/1129). The company estimates annual costs ranging from \$250,000 and \$500,000 to produce these disclosures, but as before, this range may combine the costs of activities that are not required in the proposed rules.<sup>923</sup> Similar to the industrial manufacturing company, this company also notes that the annual costs of producing its voluntary climate-related disclosures are less than 0.1% of their revenues.

Some commenters also provided estimates of climate-related disclosure costs for individual firms. One commenter provided a breakdown of such costs for seven unnamed large cap firms across six different industries.<sup>924</sup> Headcount requirements ranged from two to 20 full-time equivalent employees. One large-cap firm in the energy industry reported that its TCFD reporting process involved 40 employees and six months of nearly full-time participation by 20 core team members. Employee hours spent on climate reporting ranged from 7,500 to 10,000 annually. Fees for external advisory services ranged from \$50,000 to \$1.35 million annually,

---

<sup>922</sup> Auditors review data quality and data collection procedures, while consultants help prepare substantive disclosures, advise on adherence to the voluntary climate disclosure frameworks, and prepare web updates.

<sup>923</sup> The company notes that the bulk of its annual costs comes from producing chapter 7 of its Universal Registration Document, issued under the EU's Prospectus Regulation (Regulation (EU) 2017/1129). Chapter 7 pertains to the extra-financial performance statement of the consolidated firm.

<sup>924</sup> See Letter from Society for Corporate Governance (June 11, 2021).

which generally included legal counsel and consulting services related to environmental engineering, emissions, climate science, modeling, or sustainability reporting. Another commenter, a Fortune 500 energy infrastructure firm, reported that it employs a full-time, management level director that spends about 25% of his time developing sustainability reports and other ESG initiatives. This commenter also reported that it pays a third-party consulting firm more than \$250,000 annually to assist in its ESG and sustainability report process.<sup>925</sup>

The UK’s Department for Business, Energy & Industrial Strategy, as part of its Green Finance Strategy, has released a final stage impact assessment (the “UK impact assessment”) of their proposed rules that would also require certain TCFD-aligned disclosures from firms and asset managers listed on UK financial markets.<sup>926</sup> The UK impact assessment provides a breakdown of estimated average compliance costs per affected entity. Under the assumption that affected entities have no pre-existing climate-related disclosure practices or expertise, the UK impact assessment estimates that first-year one-time costs would include familiarization costs (\$17,300<sup>927</sup> plus \$2,600 per subsidiary, as applicable) and legal review (\$4,400). They also

---

<sup>925</sup> See Letter from Williams Companies, Inc. (June 12, 2021).

<sup>926</sup> See U.K. Dep’t for Bus., Energy, & Indus. Strategy, *Mandating Climate-Related Financial Disclosures by Publicly Quoted Companies, Large Private Companies and Limited Liability Partnerships (LLPs)*, Final Stage Impact Assessment (Oct. 1, 2021), available at [https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment\\_data/file/1029317/climate-related-financial-disclosure-consultation-final-stage-impact-assessment.pdf](https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1029317/climate-related-financial-disclosure-consultation-final-stage-impact-assessment.pdf) (The UK’s climate-related disclosure rules would apply to Relevant Public Interest Entities (PIEs), including Premium and Standard Listed Companies with over 500 employees, UK registered companies with securities admitted to AiM with more than 500 employees, Limited Liability Partnership (LLPs) within the threshold of the “500 test,” and UK registered companies which are not included in the categories above and are within the threshold of the “500 test.”).

<sup>927</sup> In the final stage impact assessment, the cost estimate provided for familiarization costs assumes that scenario analysis is required. Because the proposed rules do not require scenario analysis, this number references familiarization costs provided in the *initial* impact assessment, which assumes no scenario analysis. See U.K. Dep’t for Bus., Energy, & Indus. Strategy, *Mandating Climate-Related Financial Disclosures by Publicly Quoted Companies, Large Private Companies and Limited Liability Partnerships (LLPs)*, Consultation Impact Assessment (Jan. 29, 2021), available at [https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment\\_data/file/972423/impact-assessment.pdf](https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/972423/impact-assessment.pdf).

estimate recurring annual governance disclosure costs (\$12,500), strategy disclosure costs (\$17,900<sup>928</sup>), risk management disclosure costs (\$14,900), metrics and targets disclosure costs (\$104,400 in the first year and \$80,500 in subsequent years<sup>929</sup>), internal audit costs (\$30,300), and signposting costs (\$100).<sup>930</sup> For companies with subsidiaries, the costs of collecting information from subsidiaries and processing this information are expected to be \$4,300 for the parent company and \$1,700 for each subsidiary. In total, the study estimates that a company with no pre-existing climate-related disclosure practices or expertise could incur costs of \$201,800 in the first year and \$177,900 in subsequent years, plus additional costs due to subsidiaries, as applicable. This cost estimation methodology is conditional upon assumptions regarding the number of required staff, the rank or title of the staff, and the required labor hours, which are then matched with local wage data to estimate final costs.

It is important to note that all of these cost estimates are conditional on specific assumptions and can vary significantly depending on firm characteristics, such as firm size, industry, business model, the complexity of the firm’s corporate structure, starting level of internal expertise, etc. In addition, we note that, in certain cases, these cost estimates may represent a registrant’s optimal response to investor demand, and thus may exceed the minimum cost necessary to fulfill mandatory reporting of climate-related risks. We are accordingly requesting comments regarding compliance costs, including cost data that can be used to

---

<sup>928</sup> This number excludes the cost of scenario analysis since this is not required under the proposed rules.

<sup>929</sup> We note that these numbers do not include the costs of measuring and reporting Scope 3 emissions since this is not required under the UK proposed rules.

<sup>930</sup> These numbers have been converted from GBP based on the 2021 average exchange rate of \$1.3757 USD/GBP, rounded to the nearest \$100. We note that the impact assessment also provides estimates of incremental costs associated with each subsidiary; however, these costs are not included in the estimates cited above for the sake of brevity. Signposting costs refer to the “additional annual cost to those in scope to upload the required reporting documentation and signposting to this documentation within their annual report.”

generate more accurate, granular, and reliable cost estimates that are more representative of the full set of affected registrants.

## (2) Cost estimates specific to emissions

In this section, we review the available evidence, which provides some insight into the scope of the compliance costs associated with reporting GHG emissions. We are cognizant of the type of costs that registrants will incur to report GHG emissions, e.g. resources, systems, design and implementation of DCP, external consulting services. In light of the limited information available, however, we are unable to fully and accurately quantify these costs. Accordingly, we are requesting comments regarding cost data for GHG emissions reporting.

One commenter reports that their services in calculating client companies' GHG footprints (Scopes 1, 2, and 3 emissions) would initially cost \$75,000 to \$125,000 if the client company has no prior experience in this area.<sup>931</sup> Ongoing costs amount to approximately \$40,000 assuming no material changes in Scope 3 emissions (i.e., assess Scopes 1 and 2 only). If there are material changes to Scope 3 emissions, ongoing costs would range from \$75,000 to \$125,000 (i.e., assess Scopes 1, 2, and 3).

Another commenter, a climate management and accounting platform, provided cost estimates of the measurement and reporting of emissions. This commenter's estimates are disaggregated across scopes of emissions as well as "low maturity" vs "high maturity" companies with respect to emissions reporting. Low maturity companies are defined as those that have no formal understanding of GHG emission calculations and have no related policies or programs in place. Accordingly, these companies have not organized or collected any data for

---

<sup>931</sup> See *supra* note 783. Legal and audit fees are not included in these cost estimates.

such a calculation. High maturity companies are defined as those that have the aforementioned understanding, policies, programs, and data. Therefore, high maturity companies are expected to face lower incremental costs. The commenter estimates that the average first-year startup cost of assessing Scopes 1 and 2 emissions amount to \$45,000 and \$25,000 for companies of low and high maturity, respectively. Including the assessment of Scope 3 emissions would increase the costs by \$80,000 and \$25,000 for companies of low and high maturity, respectively. The commenter indicated that it expects these costs to decrease over time as software solutions simplify the process and reduce the burden on companies.

Additional cost estimates are provided by another commenter, which is an organization that assists companies, communities, and other organizations in accurately assessing emissions data across all scopes of emissions.<sup>932</sup> According to their pricing structure, initial one-time costs amount to \$10,000, which includes identifying data input needs, developing the design and organization of user interfaces, establishing software and IT systems, and reporting emissions from prior years to the extent that historic data is available. Ongoing costs, which includes a subscription fee and data management fee, amount to \$12,000 plus \$1,200 per building that is covered in the calculation of emissions. Another organization that offers similar services, among others, indicates that their fees for GHG accounting for Scopes 1, 2, and 3 can range from \$11,800 to \$118,300.<sup>933</sup> Their fees for applying the PCAF method on investment and lending

---

<sup>932</sup> See memorandum, dated Jan. 21, 2022, concerning staff meeting with representatives of Ledger8760, available at <https://www-draft.sec.gov/comments/s7-10-22/s71022.htm>.

<sup>933</sup> See memorandum, dated Jan. 14, 2022, concerning staff meeting with representatives of South Pole. These numbers have been converted from EUR based on the 2021 average exchange rate of \$1.183 USD/EUR, rounded to the nearest \$100.

portfolios range from \$11,800 to \$35,500. They note that the assessment process take approximately 1-3 months depending on the complexity and availability of data.

The EPA has also sought to quantify the costs of measuring and reporting emissions in accordance with the mandatory Greenhouse Gas Reporting Program, which generally requires facility-level reporting of emissions from large emitters and from large suppliers of certain products (e.g., entities that produce gasoline that will eventually be consumed downstream by the end-user).<sup>934</sup> The EPA estimated that the rule would impose small expected costs on the facilities under its purview. The EPA estimated that, for most sectors, the costs represent at most 0.1% of sales.<sup>935</sup> For small entities,<sup>936</sup> the EPA estimated that the costs are on average less than 0.5% of sales. While the EPA's emissions reporting requirements, as discussed above, may elicit some of the information required under our proposed rules, given that the requirements are different, the actual compliance costs would differ accordingly.

A survey conducted by PCAF provides some estimates of the costs of assessing financed emissions.<sup>937</sup> Financed emissions, which can be one component of Scope 3 emissions for certain financial institutions, can be described as the emissions generated by companies in which a financial institution invests or to which it otherwise has exposure. The PCAF survey of 18

---

<sup>934</sup> See Section IV.A.3 for more information on the EPA mandatory Greenhouse Gas Reporting Program.

<sup>935</sup> See EPA, *Regulatory Impact Analysis for the Mandatory Reporting of Greenhouse Gas Emissions* (Sept. 2009), available at <https://www.epa.gov/sites/default/files/2015-07/documents/regulatoryimpactanalysisghg.pdf>. The EPA notes that several facility types do not currently report emissions (or the existence of such disclosure practices cannot be confirmed), therefore the cost estimates for these facility types reflect full start-up costs to meet the reporting requirements.

<sup>936</sup> The EPA defines a small entity as (1) a small business, as defined by SBA's regulations at 13 CFR Part 121.201; (2) a small governmental jurisdiction that is a government of a city, county, town, school district, or special district with a population of less than 50,000; or (3) a small organization that is any not-for-profit enterprise that is independently owned and operated and is not dominant in its field.

<sup>937</sup> See Letter from PCAF (Dec. 21, 2021).

unnamed financial institutions<sup>938</sup> found that typical staff time ranged between 50 and 100 days and the costs for contracting external support was less than \$20,000 for the majority of respondents. These estimates may provide some sense of the costs that may be incurred by those financial institutions that would be required to report Scope 3 emissions under the proposed rules.

### **(3) Cost estimates of assurance for Scopes 1 and 2 emissions disclosures**

Registrants that are accelerated filers and large accelerated filers will incur additional costs in obtaining assurance of Scopes 1 and 2 emissions disclosures. The Commission estimates these costs starting with data on these filers' median audit fees in fiscal year 2020, which is \$989,566 and \$2,781,962 for accelerated filers and large accelerated filers, respectively.<sup>939</sup> Next, an academic study suggests that assurance costs for sustainability reports (which serve as a common location for climate-related information, in addition to other non-financial topics) may range from 5% to 10% of total audit fees.<sup>940</sup> We take the minimum, median, and maximum percentages (5%, 7.5%, and 10%, respectively) and apply further adjustments based on (i) emissions disclosures typically comprising only a portion of CSR reports, (ii) the potential fee premium related to attestation report included in SEC filings, and (iii) the average pricing difference between limited and reasonable assurance. For limited assurance, we estimate that

---

<sup>938</sup> The 18 survey respondents consist of 2 insurance companies, 13 banks (commercial, investment, or development), 1 asset owner, and 2 asset managers. Respondents' asset size ranges from less than a \$1bn USD to \$500bn USD. The average assets covered by this disclosure activity was approximately \$5-20bn USD.

<sup>939</sup> Data on audit fees is from Audit Analytics, which provides all fee data disclosed by SEC registrants in electronic filings since Jan. 1, 2000.

<sup>940</sup> See R.J. Casey and J.H. Grenier, *Understanding and Contributing to the Enigma of Corporate Social Responsibility (CSR) Assurance in the United States*, 97 *AUDITING: A JOURNAL OF PRACTICE & THEORY* 130 (2015).

accelerated filers will incur costs ranging from \$30,000 to \$60,000 (with a median of \$45,000), while large accelerated filers will incur costs ranging from \$75,000 to \$145,000 (with a median of \$110,000). For reasonable assurance, we estimate that accelerated filers will incur costs ranging from \$50,000 to \$100,000 (with a median of \$75,000), while large accelerated filers will incur costs ranging from \$115,000 to \$235,000 (with a median of \$175,000).

On the one hand, these estimates may underestimate actual costs as they are based on relative costs of assurance for financial statements, and assurance on emissions may differ in important ways. On the other hand, the costs may be lower in the future to the extent that the market for assurance services matures with respect to institutional knowledge, procedural efficiency, and overall competition. We request additional data that may assist in accurately assessing the costs of obtaining assurance over emissions disclosures.

#### **(4) Factors that affect direct costs**

Incremental compliance costs may be relatively lower for registrants that already meet some of the disclosure and tagging requirements. For instance, registrants that are currently subject to the EPA's Greenhouse Gas Reporting Program would face lower incremental costs in reporting certain scopes of emissions relative to a firm that has no emissions measurement systems in place.<sup>941</sup> Similarly, registrants that already provide extensive qualitative disclosures on climate-related risks, which tend to be large accelerated filers and registrants in high emission industries,<sup>942</sup> may face lower incremental costs in meeting certain disclosure requirements. As discussed in Section IV.A.5.a, the Commission's staff reviewed 6,644 recent annual reports

---

<sup>941</sup> See Section IV.C.1.e for more information on how the proposed rules compare to the EPA's emissions reporting requirements.

<sup>942</sup> See Section IV.A.5.a

(Forms 10-K, 40-F, and 20-F) and found that 33% of them contained disclosures related to climate change, the majority of which discussed information related to business impact, emissions, international climate accords, and physical risks. Registrants with operations in foreign jurisdictions<sup>943</sup> where disclosure requirements are based on the TCFD's framework for climate-related financial reporting, would also face lower incremental costs.<sup>944</sup> Moreover, costs may also be mitigated by the proposed transition period, which would allow firms to more gradually transition to the new reporting regime.

Several industry reports also document how a sizeable portion of U.S. companies report climate-related information under one or more third-party frameworks that are either fully or partially aligned with the TCFD disclosure elements. For example, the CCMC survey (G&A study) reports that among their sample of U.S. public companies, 44% (53%) use the SASB, 31% (52%) use the GRI, 29% (30%) use the TCFD, and 24% (40%) use the CDP. Moody's analytics provides a detailed view for a sample of 659 U.S. companies of the existing disclosure rate across the different TCFD disclosure elements that range from a high of 45% disclosure rate for Risks and Opportunities - Strategy (a), to a low of 5% for Risks and Opportunities - Strategy (c) (see Table 4). Since the proposed rules are broadly consistent with the TCFD framework, we would expect lower incremental compliance costs for registrants that provide most or all disclosures according to the TCFD or related frameworks, including the CDP, which has fully integrated the TCFD disclosure elements into its disclosure questionnaire, and other frameworks and/or standards partly aligned with the TCFD recommendations.

---

<sup>943</sup> E.g., Morningstar reports that over 35% of S&P 500 revenues came from foreign markets, while this percentage is around 20% for the revenues coming from companies belonging to the Russell 2000 index. See, <https://www.morningstar.com/articles/918437/your-us-equity-fund-is-more-global-than-you-think>.

<sup>944</sup> See Section IV.A.4 for a discussion on International Disclosure Requirements.

Similarly, registrants in the insurance industry may also face lower incremental costs due to their existing disclosure practices. As discussed in Section IV.A.3, a large subset of insurance firms are required to disclose their climate-related risk assessment and strategy via the NAIC Climate Risk Disclosure Survey. A comment by a state insurance commissioner stated that because this survey overlaps extensively with the TCFD recommendations, these firms should be able to easily switch to reporting via the TCFD disclosure framework.<sup>945</sup> This is because the proposed rules are broadly consistent with the TCFD. We expect that registrants in the insurance industry may be able to adapt more easily to providing disclosure under these rules.

Section IV.A.5.e reports survey evidence on the frequency with which firms obtain assurance in sustainability reports. This evidence suggests that a significant fraction of large companies already obtain some form, albeit limited, of assurance. To the extent that large accelerated filers and accelerated filers already voluntarily obtain some form of assurance over their GHG emissions, these registrants would face lower incremental costs associated with complying with the proposed rules' assurance requirements. These registrants tend to bear proportionately lower compliance costs than smaller issuers due to the fixed cost components of such compliance.<sup>946</sup> Additionally, as the market for assurance matures, the Commission staff expects these costs to decrease over time.

Incremental costs may be higher for smaller firms considering that they are less likely to have climate-related disclosure systems and processes already in place.<sup>947</sup> If smaller firms were

---

<sup>945</sup> See Letter from Mike Kreidler, Office of the Insurance Commissioner, State of Washington (June 14, 2021).

<sup>946</sup> For example, during fiscal year 2020, median audit fees as percentage of revenue for large accelerated filers and accelerated filers was 0.16%, while the corresponding figure for non-accelerated filers was 1.1%.

<sup>947</sup> See *supra* note 760. See also discussion of the Commission staff's review using climate-related keyword searches in Section IV.A.5.a.

to face higher proportional fixed costs in meeting the disclosure requirements, this may potentially put them at a competitive disadvantage to larger firms.<sup>948</sup> Conversely, incremental costs for smaller firms may be lower to the extent that they have less complexity with respect to their assets and operations, which may allow them to assess climate-risk exposures or measure emissions at lower cost.

With respect to the Inline XBRL tagging requirements, various preparation solutions have been developed and used by operating companies to fulfill their structuring requirements, and some evidence suggests that, for smaller companies, XBRL compliance costs have decreased over time.<sup>949</sup> The incremental compliance costs associated with Inline XBRL tagging of climate-related disclosures would also be mitigated by the fact that filers that would be subject to the proposed requirements would also be subject to other Inline XBRL requirements for other disclosures in Commission filings, including financial statement and cover page disclosures in

---

<sup>948</sup> Because higher proportional fixed costs for smaller firms may be particularly acute with respect to assessing Scope 3 emissions, the proposed rules exempt SRCs from providing Scope 3 emissions disclosures. Since SRCs are a small fraction of the market, the overall benefit to investors would not be as large as for non-SRCs, while avoiding high fixed costs that could put them at a potential competitive disadvantage.

<sup>949</sup> An AICPA survey of 1,032 reporting companies with \$75 million or less in market capitalization in 2018 found an average cost of \$5,850 per year, a median cost of \$2,500 per year, and a maximum cost of \$51,500 per year for fully outsourced XBRL creation and filing, representing a 45% decline in average cost and a 69% decline in median cost since 2014. *See* M. Cohn, *AICPA Sees 45% Drop in XBRL Costs for Small Companies*, *Accounting Today* (Aug. 15, 2018) (stating that a 2018 NASDAQ survey of 151 listed registrants found an average XBRL compliance cost of \$20,000 per quarter, a median XBRL compliance cost of \$7,500 per quarter, and a maximum, XBRL compliance cost of \$350,000 per quarter in XBRL costs per quarter), *available at* <https://www.accountingtoday.com/news/aicpa-sees-45-drop-in-xbrl-costs-for-small-reporting-companies> (retrieved from Factiva database). *See also* Letter from Nasdaq, Inc., Mar. 21, 2019 to the Request for Comment on Earnings Releases and Quarterly Reports; Release No. 33-10588 (Dec. 18, 2018) 83 Fed. Reg. 65601 (Dec. 21, 2018).

certain periodic reports and registration statements.<sup>950</sup> As such, the proposal would not impose Inline XBRL compliance requirements on filers that would otherwise not be subject to such requirements, and filers may be able to leverage existing Inline XBRL preparation processes and/or expertise in complying with the proposed climate-related disclosure tagging requirements.

We expect that the number of registrants committed to preparing climate-related disclosures will increase in the future, independently from our proposed rules. As discussed in Section IV.B.1, a sizeable and growing portion of global investors consider climate change as the leading issue driving their engagements with companies and is demanding robust disclosure around its impacts and the plan to mitigate climate-related risks. Consistent with this increasing demand for climate-related information, recent trends showed an uptick in climate-related disclosures, particularly within samples of larger firms, though not necessarily through their regulatory filings.<sup>951</sup> Furthermore, the market for related services (e.g., GHG accounting services, auditors, and other consultants, etc.) may become more competitive, driving down costs. To the extent that these trends continue in the future, we would expect that the incremental costs for complying with the proposed rules would become lower for an increasing number of firms.

---

<sup>950</sup> See 17 CFR 229.601(b)(101); 17 CFR 232.405 (for requirements related to tagging financial statements (including footnotes and schedules) in Inline XBRL). See also 17 CFR 229.601(b)(104); 17 CFR 232.406 for requirements related to tagging cover page disclosures in Inline XBRL. Beginning in 2024, filers of most fee-bearing forms will also be required to structure filing fee information in Inline XBRL, although the Commission will provide an optional web tool that will allow filers to provide those tagged disclosures without the use of Inline XBRL compliance services or software. See 17 CFR 229.601(b)(108) and 17 CFR 232.408; Filing Fee Disclosure and Payment Methods Modernization, Release No. 33-10997 (Oct. 13, 2021), 86 FR 70166 (Dec. 9, 2021).

<sup>951</sup> See Section IV.A.5

## **b. Indirect costs**

In addition to the direct costs of preparing climate-related disclosures, the proposed rules could also lead to indirect costs. For example, the proposed rules may result in additional litigation risk since the proposed climate-related disclosures may be new and unfamiliar to many registrants.<sup>952</sup> The proposed rules would significantly expand the type and amount of information registrants are required to provide about climate-related risks. Registrants unfamiliar preparing these disclosures may face significant uncertainty and novel compliance challenges. To the extent this leads to inadvertent non-compliance, registrants may face additional exposure to litigation or enforcement action.

However, certain factors may mitigate this concern. First, existing and proposed safe harbors<sup>953</sup> would provide protection from liability for certain statements by registrants, including projections regarding future impacts of climate-related risks on a registrant's consolidated financial statements and climate-related targets and goals. Second, the proposed rules would include phase-in periods after the effective date to provide registrants with sufficient time to become familiar with and meet the proposed disclosure requirements.<sup>954</sup>

---

<sup>952</sup> See *supra* note 840.

<sup>953</sup> As previously noted, registrants would be able to use the existing safe harbors for forward-looking statements that were added to the Securities Act and Exchange Act pursuant to the PSLRA assuming all conditions of those safe harbor provisions are met. See *supra* note 219.

<sup>954</sup> Compliance would be required in a registrant's fiscal year ending no earlier than two years after the effective date of any adopted rules. An additional one year phase-in would be provided for registrants that are not large accelerated filers, while complying with Scope 3 emissions reporting would also be provided with an additional one year phase-in.

Another potential indirect cost is the possibility that certain provisions of the proposed rules may force registrants to disclose proprietary information.<sup>955</sup> Under the proposed rules, registrants would be required to disclose a wide range of climate-related information, including potential impacts on its business operations or production processes, types and locations of its operations, products or services, supply chain and/or value chain. Registrants would be further required to disclose whether they have emissions-related targets and metrics or an internal carbon price, and if they do, what they are. To the extent that a registrant’s business model or strategy relies on the confidentiality of such information, the required disclosures may put the registrant at a competitive disadvantage.

**c. Other cost considerations**

Although the proposed rules may impose significant compliance costs, we expect these costs to decrease over time, both from firm-specific and market-wide contexts. From the firm-specific context, registrant disclosing climate-related information for the first time is likely to incur initial fixed costs to develop and implement the necessary processes and controls.<sup>956</sup> Once the firm invests in the institutional knowledge and systems to prepare the disclosures, the procedural efficiency of these processes and controls should subsequently improve, leading to lower costs in following years.<sup>957</sup>

---

<sup>955</sup> Proprietary costs are generally relevant for reporting that involves information about a firms’ business operations or production processes and disclosures that are specific, detailed and process-oriented. *See, e.g.,* C. Leuz, A. Triantis, and T. Y. Wang, *Why Do Firms Go Dark? Causes and Economic Consequences of Voluntary SEC Deregistrations*, 45(2) JOURNAL OF ACCOUNTING AND ECONOMICS 181-208 (2008); D.A. Bens, P. G. Berger, and S. J. Monahan, *Discretionary Disclosure in Financial Reporting: An Examination Comparing Internal Firm Data to Externally Reported Segment Data*, 86 (2) THE ACCOUNTING REVIEW 417-449 (2011).

<sup>956</sup> *See* Letter from Financial Executives International’s (FEI) Committee on Corporate Reporting (CCR) (June 10, 2021).

<sup>957</sup> The assumption that first year’s costs are greater than subsequent years’ is consistent with the cost estimation models of the EPA’s Greenhouse Gas Reporting Program and the UK’s proposal of mandatory TCFD-aligned disclosure.

Establishing a framework for standardized climate-related disclosures could also reduce uncertainty for registrants over the specific content to disclose and could mitigate disclosure burdens to the extent that it reduces information requests from third parties. Before registrants can take any tangible steps toward preparing climate-related disclosures, they must first determine which specific climate-related discussions, metrics, and analyses are most appropriate to disclose – a process that, under the current regime, can involve significant uncertainty. Furthermore, the uncertain, complex, and multidimensional nature unique to climate-related risks, combined with the unpredictability of investor responses to such disclosures,<sup>958</sup> can also make it costly for management to determine the risks which meet the materiality threshold.

By implementing a standardized climate disclosure framework, the proposed rules could potentially reduce the burden that registrants may face in the environment of diverging voluntary frameworks and help clarify for registrants what they should disclose, where and when to make their disclosures, and what structure or methodology to use.<sup>959</sup> While a more principles-based approach would provide additional flexibility for registrants, it also may impose certain costs if they are unsure of what climate-related measures are needed to satisfy legal requirements. Such an approach could entail additional judgment on the part of management, or result in registrants erring on the side of caution in complex matters such as climate-related disclosures. This could ultimately translate into spending more resources to determine appropriate compliance with the Commission's applicable reporting standards. The proposed rules should provide legal certainty around climate-related disclosure and therefore mitigate the compliance burdens associated with the existing regulatory framework.

---

<sup>958</sup> See Section IV.B.2.a.(4)

<sup>959</sup> See *supra* note 806.

Furthermore, some registrants currently receive multiple, diverse requests for climate-related information from different parties, such as investors, asset managers, and data service providers. Responding to such third-party request can be costly and inefficient<sup>960</sup> and may put significant and sometimes competing demands on registrants.<sup>961</sup> A standardized climate disclosure framework could potentially reduce information requests from third parties to the extent that such requests overlap with the disclosures required under the proposed rules. We acknowledge, however, that registrants that currently use third-party frameworks to disclose climate-related information may incur certain costs of switching from their existing practice to our proposed disclosure framework.

From a market-wide context, mandated climate disclosures may heighten demand for certain data or third-party services related to preparing the required disclosures, including assistance with the reporting of emissions data. In the short term, there could be a potential increase in the prices of such services to extent that the initial growth in demand exceeds the supply. In the long term, however, this heightened demand is expected to spur competition, innovation, and other economies of scale that could over time lower associated costs for such services and data and improve their availability. Moreover, the aggregate accumulation of institutional knowledge may lead to a broad convergence of disclosure-related best practices, which could further reduce the costs of the proposed disclosures. .

Overall, the market effects deriving from competition and innovation could enhance the efficiency and availability of relevant data and services, thereby lowering costs. These positive

externalities from standard reporting practices can provide additional market-wide cost savings to the extent that they reduce duplicative effort in the production and acquisition of information.<sup>962</sup>

## **D. Anticipated Effects on Efficiency, Competition, and Capital Formation**

### **1. Efficiency**

As discussed in Section IV.B.2, the complexity, uncertainty, and long-term nature of climate risks make it unlikely that voluntary disclosure of such risks would be fully revealing. Therefore, as detailed in Section IV.C.1, mandating that climate-related disclosures be presented in a comparable and consistent manner and in a machine-readable language (Inline XBRL) is likely to enhance the information environment for investors. In doing so, the proposed rules are expected to improve market efficiency and price discovery by enabling climate-related information to be more fully incorporated into asset prices. Improved efficiency could inform the flow of capital and allow climate-related risks to be borne by those who are most willing and able to bear them.<sup>963</sup>

These expected improvements in market efficiency are broadly consistent with empirical research. If climate-related information is relevant for asset prices, and therefore market efficiency, then the effective disclosure of climate-related information would be expected to cause differential asset price/financing cost responses across firms and settings. Empirical

---

<sup>962</sup> See *supra* note 840.

<sup>963</sup> A recent study by McKinsey found that 85% of investors either agreed or strongly agreed that “more standardization of sustainability reporting” would help them allocate capital more effectively, and 83% either agreed or strongly agreed that it would help them manage risk more effectively. See Sara Bernow et. al., *More Than Values: The Value-Based Sustainability Reporting That Investors Want*, MCKINSEY & COMPANY (Aug. 7, 2019), available at <https://www.mckinsey.com/~media/McKinsey/Business%20Functions/Sustainability/Our%20Insights/More%20Than%20values%20The%20value%20based%20sustainability%20reporting%20that%20investors%20want/More%20than%20values-VF.pdf>.

evidence is largely consistent with this expectation. Academic studies have found evidence that among firms that voluntarily report emissions via the CDP questionnaire, those with higher emissions (relative to their size and industry peers) pay higher loan spreads.<sup>964</sup> A recent report from Lazard Ltd. also found a significant relationship between carbon dioxide emissions and a company's price-to-earnings ratio.<sup>965</sup> Even in settings with mandatory disclosure, evidence is consistent with abnormally positive stock returns on announcement date for low-emitters and negative returns for high-emitters.<sup>966</sup>

While the disclosure of climate-related information can improve market efficiency, investor response to such disclosures can vary depending on specific circumstances, thereby highlighting the limitations of the aforementioned studies.<sup>967</sup> For example, if increased disclosure causes investors to realize that their portfolios are more exposed to climate risk than previously known, valuations may fall and costs of capital may increase as investors reallocate capital to balance this risk. Further, aggregate pricing effects could also be due to a better understanding of

---

<sup>964</sup> See S. Kleimeier, and M. Viehs, Carbon Disclosure, Emission Levels, and the Cost of Debt, Emission Levels, and the Cost of Debt, SSRN (2018), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=2719665](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=2719665).

<sup>965</sup> See Lazard Climate Center (2021), available at <https://www.lazard.com/media/451920/lazard-climate-center-presentation-december-2021.pdf>. The report examined more than 16,000 companies from 2016 through 2020 and found that investors are actively and directly pricing some transition risk into valuations, however the effects vary significantly across different types of GHGs, market cap, and sectors. Large cap companies (>\$50 billion) experience greater valuation discounts, while big emitters, such as energy companies, showed the starkest correlation. On average, a 10% decrease in a large U.S. energy company's emissions corresponded with a 3.9% increase in its price-to-earnings ratio.

<sup>966</sup> See *supra* note 849 (Jouvenout and Kruger, 2021).

<sup>967</sup> *Id.* See also J. Grewal, E. J. Riedl, and G. Serafeim, Market Reaction to Mandatory Nonfinancial Disclosure, 65 (7) *Management Science* 3061-3084 (2019); See *supra* note 849 (Bolton and Kacperczyk, 2020). The first paper in particular finds a negative aggregate stock market response to the passage of a mandatory ESG disclosure rules in the EU. These results, however, should be interpreted with caution. For one, the empirical design is based on matching, but there are reasons to believe that the treatment and control groups differ along important dimensions. Further, there is no event study plot, and results are not shown for cumulative abnormal returns after controlling for common risk factors like the Fama-French 3-factor model. It is therefore difficult to discern whether the passage of the disclosure rules is actually driving the aggregate market response.

future regulatory risks firms face.<sup>968</sup> Studies find, however, that cumulative abnormal stock returns around the announcement date are negatively correlated with firms' mandatorily disclosed emission levels. This consistent with mandatory reporting of climate-related information improving price discovery and market efficiency.

Empirical research has also documented evidence of market inefficiencies with respect to climate-related risks. For example, one study finds that stock prices of food companies (i.e. food processing and agricultural companies) may exhibit mispricing with respect to drought exposure.<sup>969</sup> The study documents that drought-exposed firms report reduced future profitability, indicating that drought exposure is a financial risk. In an efficient market, this risk should result in trading activity that decreases the current stock price and increases the expected return (to compensate investors for bearing this risk). The study, however, finds that drought-exposed firms deliver *lower* future returns relative to firms with less exposure, suggesting that the market initially under-reacts to drought exposure. In other words, the market may fail to sufficiently incorporate the risk of drought exposure into the current stock price, resulting in investors holding mispriced assets and bearing risk for which they are not appropriately compensated. Another study finds, through similar reasoning, that stock prices may exhibit mispricing with respect to temperature changes induced by climate change.<sup>970</sup> According to survey evidence of global institutional investors, respondents believe that equity valuations do not fully reflect

---

<sup>968</sup> For example, the passage of disclosure rules may signal more stringent enforcement of emissions rules going forward, leading to an increase in the risk of regulation. Therefore, it is difficult to disentangle the pure effect of disclosure rules on stock performance and the cost of capital.

<sup>969</sup> See H. Hong, F.W. Li, J. Xu. *Climate Risks And Market Efficiency*, 208.1 JOURNAL OF ECONOMETRICS 265-28 (2019).

<sup>970</sup> See, e.g., K. Alok, W. Xin, C. Zhang, *Climate Sensitivity And Predictable Returns*, available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3331872](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3331872).

climate-related risks.<sup>971</sup> Mandatory disclosures may help address these inefficiencies as it would provide investors with the information necessary to better incorporate climate-related risks into asset prices.

These capital market benefits can be further strengthened by the requirement to tag the climate-related disclosures in Inline XBRL, as XBRL requirements have been observed to reduce informational advantages of informed traders, increase stock liquidity, and reduce cost of capital.<sup>972</sup> These benefits may also have valuation implications. The discounted cash flow model illustrates how, all else equal, a drop in the cost of capital leads to a boost in equity valuation, which can further benefit investors.

There are also important efficiency implications in relation to systemic risks.<sup>973</sup> The increasing frequency and severity of climate events can potentially lead to destabilizing losses for insurance companies,<sup>974</sup> banks,<sup>975</sup> and other financial intermediaries with direct and indirect

Zou, *The Impact of XBRL Reporting on Market Efficiency*, 28(2) JOURNAL OF INFORMATION SYSTEMS 181-207 (2014).

<sup>973</sup> Systemic risk refers to the risk of a breakdown of an entire system, rather than simply the failure of individual parts. In a financial context, systematic risk denotes the risk of a cascading failure in the financial sector, caused by linkages within the financial system, resulting in a severe economic downturn.

<sup>974</sup> See *Facts + Statistics: Global Catastrophes*, INSURANCE INFORMATION INSTITUTE, available at <https://www.iii.org/fact-statistic/facts-statistics-global-catastrophes>.

<sup>975</sup> The Office of the Comptroller of the Currency (OCC) recently requested feedback on draft principles designed to support the identification and management of climate-related financial risks at OCC-regulated institutions with more than \$100 billion in total consolidated assets. See *Principles for Climate-Related Financial Risk Management for Large Banks*, Office of the Comptroller of the Currency (2021), available at <https://occ.gov/news-issuances/news-releases/2021/nr-occ-2021-138.html?source=email>.

exposures to different affected industries and assets. Some commentators state that, in addition to physical risks, the financial system could be destabilized also by potentially rapid and unexpected losses to carbon-intensive assets caused by a disorderly transition to a low-carbon economy or a shift in the market's perception of climate risks.<sup>976</sup> With insufficient and inconsistent disclosures, asset prices may not fully reflect climate-related risks. Consequently, market participants may inadvertently accumulate large exposures to such risks, leaving them vulnerable to considerable unexpected and potentially sudden losses.<sup>977</sup>

In the face of such losses, financial intermediaries may be forced to sell off assets at fire-sale prices to generate enough cash to pay claims or to otherwise meet the time-sensitive cash demands of creditors and counterparties. This fire-sale dynamic could push down asset prices as well as the value of firms holding similar assets due to mark-to-market losses, potentially increasing risk premia and correlations across asset classes.<sup>978</sup> Stress from large, complex, and interconnected financial institutions, or correlated stress across smaller market participants, could be transmitted and propagate through the financial system,<sup>979</sup> causing disruptions in the provision

<sup>979</sup> Physical risks can have immediate and direct effects on asset values, but they also present long-term indirect risks. By damaging assets that serve as collateral for loans or that underpin other investments, reducing property values, increasing insurance premiums or decreasing insurance coverage, diminishing agricultural capacity, and causing labor forces to migrate, the physical consequences of climate change could have profound and long term effects on financial markets more generally. See Jonathan Woetzel et al., *Climate Risk and Response: Physical Hazards and Socioeconomic Impacts*, McKinsey Global Institute (Jan. 2020), available at <https://www.mckinsey.com/business-functions/sustainability/our-insights/climate-risk-and-response-physical-hazards-and-socioeconomic-impacts>.

of financial services.<sup>980</sup> A more efficient allocation of capital brought about the disclosure required by the proposed rules could reduce the probability and magnitude of disorderly price corrections or dislocations, thereby strengthening financial system resilience.<sup>981</sup>

## 2. Competition

The provisions included in the proposed rules are expected to increase comparability among registrants by demanding climate-related information in a consistent manner and with machine-readable data language (Inline XBRL). More standardized climate reporting could improve competition among registrants as it could reduce their costs for both producing such information due to enhanced efficiencies of scale across the economy and the cost for acquiring and processing said information by investors.

As discussed in Section IV.C.2, positive externalities from standard reporting practices can provide market-wide cost savings to registrants in the long-term, to the extent that they reduce duplicative effort in registrants' production and acquisition of information (e.g. certain data or third-party services related to preparing the required disclosures, including the reporting of emissions data, may become cheaper in the long run as the heightened demand spur competition, innovation, and other economies of scale). These cost savings could be particularly

---

<sup>980</sup> A recent report by an advisory committee to the Commodity Futures Trading Commission (CFTC) concluded that "climate change poses a major risk to the stability of the U.S. financial system and to its ability to sustain the American economy." See Report of the Climate-Related Market Risk Subcommittee, Market Risk Advisory Committee of the U.S. Commodity Futures Trading Commission, *Managing Climate Risk in the U.S. Financial System* (2020). The Office of the Comptroller of the Currency (OCC) has identified the effects of climate change and the transition to a low carbon economy as presenting emerging risks to banks and the financial system. See, e.g., *Semiannual Risk Perspective*, 2-4 (Fall 2021), available at <https://www.occ.treas.gov/publications-and-resources/publications/semiannual-risk-perspective/files/pub-semiannual-risk-perspective-fall-2021.pdf>.

<sup>981</sup> See *The Availability Of Data with Which to Monitor and Assess Climate-Related Risks to Financial Stability*, (July 7, 2021) (stating that the availability of data with which to monitor and assess climate-related risks to financial stability), available at <https://www.fsb.org/2021/07/the-availability-of-data-with-which-to-monitor-and-assess-climate-related-risks-to-financial-stability/>.

helpful for smaller registrants, or those that are capital constrained, which otherwise may not be able to provide the same amount, or level of detail, of climate-related disclosures as registrants with greater resources.

More standardized reporting should also reduce investors' costs for acquiring and processing climate-related information by facilitating investors' analysis of a registrant's disclosure and assessing its climate-related risks against those of its competitors. The placement of climate-related information in SEC filings with machine-readable data language (Inline XBRL), rather than external reports or company websites, should also make it easier for investors to find and compare this information.

Overall, we expect that by standardizing reporting practices, the proposed rules would level the playing field among firms, making it easier for investors to assess the climate-related risks of a registrant against those of its competitors. The effects of peer benchmarking can contribute to increased competition for companies in search for capital both across and within industries, whereby firms can be more easily assessed and compared by investors against alternative options.

Failure to implement the proposed rules could lead to an informational gap between U.S. registrants and companies operating in foreign jurisdictions which require climate-related disclosures. For example, such a gap may increase investors' uncertainty when assessing climate-related risks of U.S. registrants vis-à-vis foreign competitors and place U.S. registrants at a competitive disadvantage, with the potential to deter investments and hence increase U.S. registrants' cost of capital. This informational gap may also pose obstacles to U.S. companies transacting with counterparts and businesses in their supply-chain operating in foreign jurisdictions which require Scope 3 emission disclosures. According to Morningstar, more than

35% of S&P 500 firms' total revenues came from foreign markets, while this percentage is around 20% for the revenues of Russell 2000 firms.<sup>982</sup> Lack of standardized disclosures around Scope 1 and 2 GHG emission by U.S. companies, which may in part be due to the aforementioned impediments to voluntary disclosure,<sup>983</sup> may obstruct foreign counterparts from accurately assessing their Scope 3 GHG emissions, thus putting U.S. registrants at a competitive disadvantage over other foreign companies which may be publicly disclosing such information.

### **3. Capital formation**

More consistent, comparable, and reliable disclosures could lead to capital-market benefits in the form of improved liquidity, lower costs of capital, and higher asset prices (or firm valuations).<sup>984</sup> Enhanced disclosures (e.g., accurate GHG emissions disclosures) can reduce the time necessary for processing registrant's relevant information, thus increasing efficiency for registrants in their access to capital and allowing the market to more efficiently assess its cost. These benefits would stem from reductions in information asymmetries brought about by the required disclosure of climate-related information. More comparable, consistent, and reliable climate-related disclosures could reduce information asymmetries, both among investors and between firms and their investors.

---

<sup>982</sup> See, <https://www.morningstar.com/articles/918437/your-us-equity-fund-is-more-global-than-you-think>

<sup>983</sup> See Section IV.B.2.

<sup>984</sup> See D.W. Diamond and R.E. Verrecchia, Disclosure, Liquidity, and the Cost of Capital, 46 *J. Fin.* 1325 (1991) (this study finds that revealing public information to reduce information asymmetry can reduce a firm's cost of capital through increased liquidity); See also C. Leuz and R.E. Verrecchia, The Economic Consequences of Increased Disclosure, 38 *J. Acct. Res.* 91 (2000). Several studies provide both theoretical and empirical evidence of the link between information asymmetry and cost of capital. See, e.g., T.E. Copeland and D. Galai, *Information Effects on the Bid-Ask Spread*, 38 *J. FIN.* 1457 (1983) (proposing a theory of information effects on the bid-ask spread); D. Easley and M. O'Hara, *Information and the Cost of Capital*, 59 *J. FIN.* 1553 (2004) (This study shows that differences in the composition of information between public and private information affect the cost of capital, with investors demanding a higher return to hold stocks with greater private information.).

In the first case, less information asymmetry among investors could mitigate adverse selection problems by reducing the informational advantage of informed traders.<sup>985</sup> This is likely to improve stock liquidity (i.e., narrower bid-ask spreads), which could attract more investors and reduce the cost of capital. In the second case, less information asymmetry between firms and their investors could allow investors to better estimate future cash flows, which could reduce investors' uncertainty, as well as the risk premium they demand, thus lowering the costs of capital.<sup>986</sup>

Recent studies provide some supporting empirical evidence of these effects within the context of ESG- or climate-related disclosure. These studies have found that, when firms voluntarily provide material sustainability disclosures, they also experience improvements in liquidity (e.g. smaller bid-ask spreads).<sup>987</sup> In addition, firms that choose to disclose emissions have lower costs of equity and loan spreads.<sup>988</sup> While firms' decisions about whether and when to disclose emissions data may be correlated with other factors as well as asset prices/financing costs, this would be consistent with such disclosures reducing the costs of capital for firms (to the extent that some of these effects are driven by the disclosures themselves).

## **E. Other Economic Effects**

The proposed rules may have some effects on firm behavior. Prior empirical evidence supports the notion that, in response to mandatory ESG-related disclosure rules, firms tend to report actions that appear more “favorable” with respect to the corresponding disclosures. These decisions would be made by a firm’s management with the goal of maximizing firm value in response to the new disclosure mandate. To the extent that these actions reduce firms’ exposures to physical and transition risks, this could lower the return that investors require for investing in these firms, hence facilitating capital formation. This could reduce volatility of stock returns due to enhanced resiliency against such risks.

Empirical evidence shows that mandatory reporting of GHG emissions results in reduced aggregate reported emissions among affected firms.<sup>989</sup> Academic research shows that mandatory ESG-related disclosure often contributes, not only to increased monitoring by investors or other stakeholders, but also to enhanced peer benchmarking by firms as they can more easily compare themselves with their competitors.<sup>990</sup> These changes may reflect market responses by companies and investors to the newly disclosed information. Accordingly, registrants may change their behavior in response to the proposed disclosure requirements by reducing exposures to certain physical or transition risks. However, this could also come with the potential cost of lower productivity, profitability, or market share in the short-term.

Zaklan, *The Impact of Carbon Disclosure Mandates on Emissions and Financial Operating Performance*, REVIEW OF ACCOUNTING STUDIES 1-39 (2021); S. Tomar, *Greenhouse Gas Disclosure and Emissions Benchmarking* (Working Paper) (2021), available at: [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3448904](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3448904); See *supra* note 849 (Jouvenout and Kruger, 2021).

<sup>990</sup> See *supra* note 840.

Registrants might respond to the proposed disclosures by devoting more resources to climate-related governance and risk management in an effort to address indirect effects on their business arising from the disclosures. For example, the proposed rules require disclosure of members of the board or management that have prior climate expertise. Some registrants may respond by giving more weight to climate expertise when searching for directors, which may lead them to deviate from the board composition that would have been in place absent the proposed rules. Similarly, the proposed rules would require disclosure on how climate-related risks can impact registrants' consolidated financial statements, among others. Registrants may respond by taking measures to minimize negative impacts in order to put forth more favorable metrics. For example, registrants may move assets or operations away from geographic areas with higher physical risk exposures or may seek to decrease GHG emissions.

The provision on GHG Emissions would also require scope 1, 2, and 3 (if material or the registrant has a set a target or goal for scope 3) emission disclosures. These emission disclosures may induce firms to use peer benchmarking to decide whether to investigate and reevaluate their energy usage<sup>991</sup> or otherwise reduce emissions based on anticipated market reactions to the disclosed information. This process may provide certain registrants with incentives to search for alternative energy sources or find different suppliers, which could increase costs. Conversely, it could also prompt certain firms to reduce nonessential activities and improve operational efficiency, which could lead to lower operating costs.

The provision requiring assurance of GHG Scopes 1 and 2 emissions disclosures would only apply to accelerated filers. Non-accelerated filers would, instead, be required only to state

---

<sup>991</sup> See *supra* note 840.

whether any of their GHG emissions disclosures were subject to third-party assurance, and if so, at what level. By asking all registrants, including non-accelerated filers, to disclose climate-related information within SEC filings, however, the proposed rules may motivate more non-accelerated filers to voluntarily seek assurance over these types of disclosures, than if the same information had been disclosed on companies' websites or sustainability reports. Certain non-accelerated filers may also voluntarily decide to attain assurance over their GHG emission disclosures in order to enhance their reliability and prevent these disclosures from being perceived by investors as less reliable compared to those provided by accelerated filers.

As another example, the proposed rules would require the disclosure of the location (via ZIP code) of firm assets or operations, which could allow investors to assess firms' exposures to physical risk at a more granular level. This may allow investors to more easily diversify these geographic-driven risks or expose themselves to such risks, if they choose to, more deliberately. This may cause some firms to relocate assets or operations to geographical areas less exposed to physical risks and/or give preferences to such areas for future business activity. It may also cause some firms with higher geographic exposures to physical risks to alter overall operational risk and strategies.

The proposed rules might also affect the networks firms choose to operate in. For example, a firm may choose to change some suppliers or disengage with certain clients due to the effect that they may have on the firm's Scope 3 emissions. This may be particularly relevant for certain financial institutions that are impacted by their portfolio firms' emissions or climate-related risks. These financial institutions may be less willing to extend credit to firms for which it is difficult to measure climate risk exposure information, potentially increasing the cost of capital for these firms.

However, there are certain factors that may mitigate this effect. First, the proposed rules establish a phase-in period, which is intended to give financial institutions and their prospective borrowers sufficient time to prepare the required disclosures. Second, analytical tools, data, and related methodologies (such as those related to measuring/reporting GHG emissions) are developing rapidly and increasing in availability. Finally, frameworks like the PCAF to measure financed emissions would allow financial institutions to compute proxies for the emissions of their clients in a systematic and comparable manner even in the absence of actual emissions data.

The proposed rules could also cause some firms to pursue avoidance strategies. The provision on Targets and Goals would require a registrant to disclose whether it has set any climate-related targets or goals and the specific plans in place to achieve those objectives and metrics to monitor progress. This may disincentivize certain firms from making such commitments and providing the associated disclosures in SEC filings. Risk of litigation or enforcement actions, could result in registrants being more cautious in their decision to set climate-related targets. Other firms, however, may find the existence of mandatory disclosures around climate-related targets and goals to be beneficial for signaling credible value-enhancing commitments to investors. More credible and standardized disclosures on climate-related targets and goals could make registrants' communication more effective and facilitate investors' understanding of related progress, hence providing additional incentives for making such commitments.

More generally, if compliance costs with the proposed rules are high, this could influence the marginal firm's decision to exit public markets or refrain from going public in the first place in order to circumvent the disclosure requirements. Firms may choose this strategy if they believe the potential compliance costs from the proposed rules outweigh the benefits of being

registered public company. Uptake of this avoidance strategy may widen the transparency gap between public and private firms, negatively affecting capital markets' information efficiency, and potentially reduce the size of the stock market. However, it is unlikely that a significant number of firms would pursue this avoidance strategy given that it would come with significant disadvantages, such as higher costs of capital, limited access to capital markets, and limits to their growth potential. Moreover, recent trends in private markets indicate that industry's top leaders are working toward a standard set of metrics for tracking their portfolio companies' ESG progress. The pressure on private companies to disclose information on climate-related risks is rapidly escalating within the private industry, hence diminishing the potential incentive for registrants to go private in order to avoid climate-related disclosure requirements. For example, since its launch in September 2021, the ESG Data Convergence Project, which seeks to standardize ESG metrics and provide a mechanism for comparative reporting for the private market industry, has announced a milestone commitment of over 100 leading general partners and limited partners to its partnership representing \$8.7 trillion USD in AUM and over 1,400 underlying portfolio companies across the globe. The initial data for the project includes, among others, greenhouse gas emissions and renewable energy metrics.<sup>992</sup>

## **F. Reasonable Alternatives**

### **1. Requirements limited to only certain classes of filers**

One alternative would be to require the proposed disclosures only from larger registrants, such as large accelerated filers or non-SRCs. While the proposed rules already provide certain

---

<sup>992</sup> See Carlyle, Private Equity Industry's First-Ever ESG Data Convergence Project Announces Milestone Commitment of Over 100 LPs and GPs (Jan. 28, 2022), available at <https://www.carlyle.com/media-room/news-release-archive/private-equity-industrys-first-ever-esg-data-convergence-project-announces-over-100-lps-gps>.

exemptions for SRCs (e.g., Scope 3 emissions disclosures and assurance requirements), this alternative would exempt smaller registrants from the entirety of the proposed rules. The main benefit of this alternative is that it would avoid imposing potentially significant compliance costs on smaller registrants, which are more likely to be resource-constrained. However, considering that SRCs make up approximately 50% of registrants (and registrants that are not large accelerated filers make up approximately 70%), this alternative would also considerably undermine one of the primary objectives of the proposed rules, which is to achieve consistent, comparable, and reliable disclosures of climate-related information. Furthermore, climate-related risks are impacting or are expected to impact every sector of the economy,<sup>993</sup> further highlighting the need for enhanced disclosures from all registrants. In an effort to arrive at an appropriate balance between these costs and benefits, the proposed rules exempt SRCs from some, but not all, disclosure requirements.

## **2. Require scenario analysis**

Another alternative would be to require registrants to conduct scenario analysis and include the related information in their disclosures. Consistent, comparable, and reliable disclosures of scenario analysis could inform investors with respect to the resilience of registrants' business strategies and operations across a range of plausible future climate scenarios. Disclosure of scenario analysis could deliver informational benefits to investors beyond that which would be provided under the proposed rules. It could help investors assess

---

<sup>993</sup> SASB research shows climate risk is nearly ubiquitous but highly differentiated across 77 industries. See *SASB Publishes Updated Climate Risk Technical Bulletin* (Apr. 13, 2021), available at <https://www.globenewswire.com/news-release/2021/04/13/2208855/0/en/SASB-Publishes-Updated-Climate-Risk-Technical-Bulletin.html>.

issues that have high uncertainty by evaluating the impact on and the resiliency of the registrant under multiple plausible future scenarios, such as a temperature increase of 1.5°C, 2°C, and 3°C above pre-industrial levels. It could also allow investors to proactively manage risk as they would be better able to assess the range of potential threats and opportunities, evaluate different management actions, and adapt accordingly. Furthermore, since some climate-related risks may only manifest over longer horizons, scenario analysis could assist investors in determining whether registrants have incorporated such risks into their long-term strategy. Investors could subsequently incorporate this information into asset prices, thereby more accurately pricing climate-related risks and contributing to market efficiency.

Both scenario analysis methodologies and climate science, however, continue to advance and develop, which may pose significant challenges for some registrants. Specifically, the required data may be unavailable or costly to obtain. Furthermore, some registrants may lack the necessary expertise, requiring them to hire external consultants to conduct the analysis. These challenges may pose undue burdens with respect to difficulty and/or costs to some registrants, such as smaller companies and those that otherwise have no prior experience in scenario analysis. For these reasons, the Commission is not proposing to mandate scenario analysis and related disclosure at this time.

### **3. Require specific external protocol for GHG emissions disclosure**

Another alternative would be to require registrants to follow an external protocol (e.g., GHG protocol) for reporting emissions. Requiring a specific protocol may potentially benefit investors by providing a more consistent and comparable framework in reporting emissions, thus facilitating investors' information processing. However, there also may be certain drawbacks.

First, the organizational boundaries adopted by external protocols may create inconsistencies with the way companies would report information about their GHG emissions vis-à-vis the rest of their financial statements. The GHG Protocol, for example, requires that a company base its organizational boundaries on either an equity share approach or a control approach, which may differ from the way registrants set their scope for the purpose of reporting information in their financial statements. The proposed rules would require a registrant to set the organizational boundaries for its GHG emissions disclosure using the same scope of entities, operations, assets, and other holdings as those included in its consolidated financial statements. Requiring a consistent scope of consolidation and reporting between financial data and GHG emissions data should help avoid potential investor confusion about the reporting scope used in determining a registrant's GHG emissions and the reporting scope used for the financial statement metrics.

Furthermore, requiring companies to follow a specific external protocol might limit flexibility for registrants and thus reduce their ability to report emissions in a manner that is tailored to their specific circumstances. For example, registrants following an existing but different protocol, which nevertheless provides relevant emissions information, would be required to switch protocols, incurring additional cost.

Requiring compliance with a specific protocol could also reduce the scope for innovation in driving the most appropriate forms of disclosure within these overarching guidelines (e.g., the methodologies pertaining to the measurement of GHG emissions, particularly Scope 3 emissions, are still evolving). Additionally, requiring compliance with a specific external protocol as of the date of the adoption of any final rules may become problematic in the future to the extent that the external protocol's methodologies shift or evolve such that the version incorporated by reference

into the final rules becomes outdated or inconsistent with improving methodologies. While we expect that many registrants will choose to follow many of the standards and guidance provided by the GHG Protocol when calculating their GHG emissions, not requiring compliance with the GHG Protocol would provide some flexibility to the Commission's climate-related disclosure regime and enable registrants to follow new and potentially less costly methodologies as they emerge.

#### **4. Permit GHG emissions disclosures to be “furnished” instead of “filed”**

Another alternative would be to permit Scopes 1, 2, and 3 emissions disclosures to be considered “furnished” instead of “filed,” which may limit the incremental risk of being held liable under Section 18 of the Exchange Act for these disclosures. This may also benefit some registrants as their Scopes 1 and 2 emissions disclosures would not be automatically incorporated into Securities Act registration statements and thereby not be subject to Section 11 liability. We note that this could have a lower incremental impact on Scope 3 emissions disclosures since Scope 3 emissions disclosures are covered under a proposed safe harbor provision and hence already afforded other liability protections. However, reduced liability in general may lead to the applicable disclosures being perceived as less reliable by investors, which could have adverse effects on registrants' stock liquidity or costs of capital. For these reasons, the Commission is not proposing to permit emissions disclosures to be furnished at this time.

#### **5. Do not require Scope 3 emissions for registrants with a target or goal related to Scope 3**

Another alternative would be to not require Scope 3 emissions disclosures if such emissions are part of a target or goal from any registrant. This would allow certain registrants to avoid the potentially significant costs and difficulties associated with measuring and reporting

Scope 3 emissions. This could potentially deprive investors of important information necessary to assess registrants' exposures to certain risks associated with trying to achieve targets or transition plans. Scope 3 emissions can provide investors with a more complete picture of how targets or transition plans might impact risks (*e.g.*, future regulations restricting emissions or changes in market conditions that disfavor high emissions products or services) of the registrant through the value chain. This can be particularly important considering that Scope 3 emissions can make up the vast majority of total emissions for many registrants.<sup>994</sup> Furthermore, some firms can give the appearance of low (direct) emissions by shifting high-emission activities elsewhere in their value chain.<sup>995</sup> Mandatory disclosure of Scope 3 emissions for registrants with a target or goal related to Scope 3 emissions can help prevent such misrepresentation.

#### **6. Exempt EGCs from Scope 3 emissions disclosure requirements**

Another alternative would be to retain the exemption for SRCs, as currently proposed, but also extend it to EGCs. EGCs may similarly face resource constraints related to company size or age, hence this alternative would allow EGCs to avoid the costs of Scope 3 emissions measurement and reporting. Given that the designations of SRC and EGC are not mutually exclusive, however, EGCs that are also SRCs would be covered under the exemption as currently proposed. Conversely, EGCs that are *not* SRCs are relatively less resource-constrained since they, by definition, have greater revenues and/or public float, and therefore may be better positioned to provide Scope 3 emissions disclosures.

---

<sup>994</sup> *See supra*, note 881.

<sup>995</sup> *See supra*, note 886.

## **7. Eliminate exemption for SRCs from Scope 3 reporting**

Another alternative would be to eliminate the exemption for SRCs. Because SRCs make up approximately half of domestic filers in terms of numbers (though considerably less in terms of market cap), this alternative could address data gaps with respect to Scope 3 emissions, with the potential to benefit all investors. As discussed in Section II.G.3, however, this alternative may pose fixed costs (e.g. data gathering and verification), that would fall disproportionately on SRCs. Also, because SRCs are a small fraction of the market, the overall benefit to investors would be limited.

## **8. Remove safe harbor for Scope 3 emissions disclosures**

The proposed rules provide a safe harbor for Scope 3 emissions disclosures. An alternative would be to remove this safe harbor for Scope 3 emissions disclosures. This alternative would strengthen accountability for Scope 3 emissions disclosures. It also would significantly increase registrants' exposure to litigation over the accuracy of such disclosures. While rigorous liability in many contexts can provide incentives that promote reliable disclosures, an accommodation may be warranted for Scope 3 emissions due to the challenges associated with their measurement and disclosure.<sup>996</sup>

## **9. Require large accelerated filers and accelerated filers to provide a management assessment and to obtain an attestation report covering the effectiveness of controls over GHG emissions disclosures.**

The proposed rules would require assurance over Scopes 1 and 2 emissions disclosure from large accelerated filers and accelerated filers. In addition to such assurance, we could

---

<sup>996</sup> See Section II.G.3

require these filers to also obtain either a separate assessment by management and disclosure on the effectiveness of controls over GHG emissions disclosures or an attestation report specifically covering the effectiveness of controls over GHG emissions disclosures, or both. Specifically, management could be required to include a statement in the annual report on their responsibility for the design and evaluation of controls over GHG emission disclosures, as well as to disclose their conclusion regarding the effectiveness of controls over GHG emissions disclosures, in addition to the existing DCP evaluation and disclosure. In addition, we could require a GHG emissions attestation provider to obtain reasonable assurance on whether material weaknesses exist regarding management's assessment of the effectiveness of controls over GHG emissions disclosures as of the measurement date. The GHG emissions attestation provider could also be required to issue an attestation report on the effectiveness of controls over GHG emissions disclosures.<sup>997</sup>

By requiring GHG emissions attestation providers to assess not just the disclosures, but also the controls over GHG emissions disclosures (*i.e.*, the underlying mechanisms, rules, and procedures associated with generating such disclosures), this alternative could further strengthen the integrity of the disclosed information. In the context of emissions, GHG emissions attestation providers may evaluate and test the effectiveness of registrants' controls related to the collection, calculation, estimation, and validation of GHG emissions data and disclosure. These processes could strengthen disclosure credibility as they reduce the likelihood of errors or fraud

---

<sup>997</sup> See AICPA, AU-C 940, *An Audit of Internal Control Over Financial Reporting That Is Integrated With an Audit of Financial Statements* (2021), available at <https://www.aicpa.org/content/dam/aicpa/research/standards/auditattest/downloadabledocuments/au-c-00940.pdf>.

and their ensuing misstatements.<sup>998</sup> Investors would benefit from any resulting improvement in disclosure reliability for reasons discussed in prior sections: it would allow investors to make better-informed investment decisions, allow applicable information to be better incorporated into asset prices, and contribute to a more efficient allocation of capital. Registrants may also benefit via reduced costs of capital and increased stock liquidity.

However, this alternative would also impose additional assurance costs.<sup>999</sup> Given that GHG emissions measurement and disclosure are developing areas, it is unclear what exact controls are or would be in effect, making it difficult to anticipate precisely what such attestation would entail. These uncertainties pose further difficulties in obtaining informative cost estimates and, accordingly, accurate assessments of how burdensome such a requirement would be to registrants. This leaves the possibility that the costs could outweigh the incremental benefits given that the proposed rules already require assurance for Scopes 1 and 2 emissions disclosures for applicable registrants. For these reasons, the Commission is not proposing at this time to require an attestation report on the effectiveness of controls over GHG emissions disclosures.

---

<sup>998</sup> Potentially consistent with this, though in a different setting, academic evidence surrounding Section 404 of the Sarbanes-Oxley Act (SOX) finds lower accruals and discretionary accruals for small firms whose 2002 float (prior to when firms could have known and therefore tried to alter their float to avoid the regulation) made them likely to be just above the requirements for compliance, relative to those just below. Iliev, Peter (2010). The effect of SOX Section 404: Cost, earnings quality and stock prices. *Journal of Finance*, 65, 1163-1196.

<sup>999</sup> Also potentially consistent with this, prior academic studies of Section 404 of SOX find significantly higher auditing fees, negative stock returns, and reduced innovation, though no clear evidence of a decline in investment, for marginally complying small firms near the float requirement threshold. *See* Iliev, Peter (2010). The effect of SOX Section 404: Cost, earnings quality and stock prices. *Journal of Finance*, 65, 1163-1196; Gao, Huasheng, and Jin Zhang (2019). SOX Section 404 and corporate innovation. *Journal of Financial and Quantitative Analysis* 54(2): 759-787; Albuquerque, Ana and Julie Lei Zhu (2019). Has Section 404 of the Sarbanes-Oxley Act discouraged corporate investment? New evidence from a natural experiment. *Management Science* 65(7): 3423-3446.

**10. Require reasonable assurance for Scopes 1 and 2 emissions disclosures from all registrants.**

Another alternative would be to require reasonable assurance for Scopes 1 and 2 emissions disclosures from all registrants. As described above, requiring assurance can benefit investors in several ways, including enhanced reliability of disclosures, which would allow investors to make better-informed investment decisions

However, because costs increase with the level of assurance, requiring reasonable assurance may be particularly burdensome for affected registrants (*i.e.*, smaller firms) as they would be more likely to incur proportionately higher compliance costs due to the fixed cost components of such compliance, regardless of whether or not there is a transition period before this requirement takes effect. While the benefits of assurance could be approximately proportional to registrant's market value, the costs are not. In an effort to arrive at an appropriate balance between these factors, the proposed rules would require reasonable assurance (after a specified transition period) only from large accelerated filers and accelerated filers because the benefits to investors are more likely to justify the costs for these firms.

**11. Require limited, not reasonable, assurance for large accelerated filers and/or accelerated filers and/or other filers.**

Obtaining reasonable assurance generally costs more than obtaining limited assurance. Current market practice appears to favor obtaining limited assurance over sustainability reports, if assurance is obtained at all. Experimental evidence suggests assurance (relative to none) may increase perceived reliability of sustainability reports, but is yet to provide evidence that reasonable assurance increases perceived reliability of sustainability reports relative to limited

assurance.<sup>1000</sup> We acknowledge, however, that experimental findings from lab settings may not necessarily reflect the behavior or preferences of experienced investors in actual financial markets. Furthermore, other research often exhibits a selection bias (*i.e.*, companies that voluntarily decide to obtain a higher-than-required level of assurance are systematically different across several dimensions), making it difficult to determine the causal effect of the different levels of assurance.<sup>1001</sup>

One possibility to mitigate the additional costs of reasonable assurance would be to maintain the requirement that large accelerated filers obtain reasonable assurance, but allow accelerated filers to obtain limited assurance without any scaling up to a reasonable assurance. Another possibility would be to require limited assurance, but expand the assurance requirement to a broader scope of registrants including non-accelerated filers and smaller reporting companies. However, these possibilities have the disadvantage of lack of consistency, which could lead to confusion among investors.

## **12. In lieu of requiring assurance, require disclosure about any assurance obtained over GHG emissions disclosures**

Another alternative would be to require all registrants to disclose what type of assurance they are receiving, if any, in lieu of requiring assurance. This would potentially allow affected

---

<sup>1000</sup> See, e.g., K. Hodge, K., N. Subramaniam, and J. Stewart, *Assurance of Sustainability Reports: Impact on Report Users' Confidence and Perceptions of Information Credibility*, 19 AUSTRALIAN ACCOUNTING REVIEW 178-194 (2009), available at <https://doi.org/10.1111/j.1835-2561.2009.00056.x>; Mark Sheldon, *User Perceptions of CSR Disclosure Credibility with Reasonable, Limited and Hybrid Assurances* (Dissertation) (2016) available at [https://vtechworks.lib.vt.edu/bitstream/handle/10919/65158/Sheldon\\_MD\\_D\\_2016.pdf](https://vtechworks.lib.vt.edu/bitstream/handle/10919/65158/Sheldon_MD_D_2016.pdf).

<sup>1001</sup> See C. H. Cho, G. Michelon, D. M. Patten, and R. W. Roberts, *CSR report assurance in the USA: an empirical investigation of determinants and effects*, 5 (2) SUSTAINABILITY ACCOUNTING, MANAGEMENT AND POLICY JOURNAL 130, 130-148 (2014), available at <https://doi.org/10.1108/SAMPJ-01-2014-0003>.

registrants to avoid the costs of obtaining limited assurance and/or reasonable assurance.<sup>1002</sup>

Additionally, registrants would have the flexibility to choose any level of assurance (*i.e.*, none, limited, or reasonable assurance) but still be required to disclose their choice for transparency.

This alternative, however, may reduce the reliability and comparability of these disclosures relative to the standardized assurance requirements within the proposed rules. In addition, as it does not set any minimum requirements for the assurance, this alternative would not address the fragmentation and selective disclosure issues that characterize the current, voluntary reporting regime.

### **13. Permit host country disclosure frameworks**

Another alternative would be to permit alternative compliance using host country disclosure frameworks that the Commission deems suitable. Such an alternative would be beneficial for registrants that already comply with another country's disclosure requirements since they could avoid incurring additional costs to comply with the Commission's rules. This flexibility, however, may fail to address or may even exacerbate growing concerns from investors that climate-related disclosures lack comparability and consistency. While it might be individually optimal for a given firm to use their existing host country disclosure frameworks, the potential lack of consistency and comparability of the disclosure between these firms and other registrant might impose costs on investors. Investors might not be able to compare across firms using different disclosure presentations, or may have to incur additional costs in order to do so.

---

<sup>1002</sup> See Section IV.C.2.(3) for cost estimates of assurance over emissions disclosures.

#### 14. Alternative tagging requirements

With respect to Inline XBRL tagging, one alternative is to change the scope of disclosures required to be tagged. We could, for example, remove the tagging requirements for climate-related disclosures for all or a subset of registrants (such as smaller reporting companies). As another example, we could require only a subset of proposed climate-related disclosures, such as the quantitative climate-related metrics, to be tagged in Inline XBRL. Narrowing the scope of climate-related disclosures to be tagged could provide some incremental cost savings for registrants compared to the proposal, because incrementally less time would be required to select and review the particular tags to apply to the climate-related disclosures.

We expect this incremental cost savings to be low because all affected registrants are or in the near future will be required to tag certain of their disclosures (including both quantitative and qualitative disclosures) in Inline XBRL.<sup>1003</sup> Moreover, narrowing the scope of tagging requirements would diminish the extent of informational benefits that would accrue to investors by reducing the volume of climate-related information that would become less costly to process and easier to compare across time and registrants. For example, an alternative whereby only quantitative climate-related disclosures would be tagged would inhibit investors from efficiently extracting/searching climate-related disclosures about registrants' governance; strategy, business model, and outlook; risk management; and targets and goals, thus creating the need to manually

---

<sup>1003</sup> Inline XBRL requirements for business development companies will take effect beginning Aug. 1, 2022 (for seasoned issuers) and Feb. 1, 2023 (for all other issuers). If the proposed Inline XBRL requirements are adopted in the interim, they will not apply to business development companies prior to the aforementioned effectiveness dates. *See supra* note 706.

run searches for these disclosures through entire documents.<sup>1004</sup> Such an alternative would also inhibit the automatic comparison/redlining of these disclosures against prior periods, and the performance of targeted artificial intelligence or machine learning assessments (tonality, sentiment, risk words, etc.) of specific narrative climate-related disclosures outside the financial statements rather than the entire unstructured document.

### **G. Request for Comment**

We request comment on all aspects of our economic analysis, including the potential costs and benefits of the proposed rules and alternatives thereto, and whether the proposed rules, if adopted, would promote efficiency, competition, and capital formation or have an impact on investor protection. In addition, we also seek comment on alternative approaches to the proposed rules and the associated costs and benefits of these approaches. Commenters are requested to provide empirical data, estimation methodologies, and other factual support for their views, in particular, on costs and benefits estimates. Specifically, we seek comment with respect to the following questions:

- Are there any costs and benefits to any entity that are not identified or misidentified in the above analysis?
- Are there any effects on efficiency, competition, and capital formation that are not identified or misidentified in the above analysis?
- Are there any other alternative approaches to improving climate-related disclosure that we should consider? If so, what are they and what would be the associated costs or

---

<sup>1004</sup> To illustrate, using a search string such as “climate change” or “greenhouse gas” to search through the text of all filings from a particular filer population so as to determine the trends in narrative climate-related disclosure among that population over time, could return many narrative disclosures outside of the climate-related disclosures. Examples of this would be a description of pending environmental litigation, existing government regulations and agency names, and broader regulatory risk factors.

benefits of these alternative approaches? For example, what would be the costs and benefits of implementing a new, comprehensive system, for reporting and transferring GHG emissions across corporate supply and distribution chains, as described by Kaplan and Ramanna (2021)?<sup>1005</sup>

- Are there any sources of data that could provide a more precise estimation of the potential compliance costs that registrants may incur if the proposed rules are adopted?
  - Have we accurately estimated the costs of disclosing Scope 1 and 2 emissions? If not, please provide alternative estimates of these costs.
  - Have we accurately estimated the costs of disclosing Scope 3? If not, please provide alternative estimates of these costs.
  - Are there any additional sources of information to estimate the costs of complying with the Scopes 1, 2, and 3 GHG emissions disclosure requirements and the costs of obtaining limited and reasonable assurance for these disclosures?
  - Would any data sources allow these compliance cost estimates to be apportioned to separate provisions of the proposed rules? Furthermore, how would these cost estimates vary across time horizons? For example, the first year of implementation may come with higher start-up costs while subsequent years may come with lower costs.
  - Have we accurately characterized the cost of limited assurance and reasonable assurance over Scopes 1 and 2 emissions? If not, please provide an estimate of these costs.
- Similarly, is there data that can show how the costs of limited assurance and reasonable assurance differ for large accelerated, accelerated and non-accelerated filers?

---

<sup>1005</sup> See R. Kaplan and K. Ramanna, *How to Fix ESG Reporting* (2021), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3900146](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3900146).

- How are the costs of obtaining limited assurance and reasonable assurance likely to change over time (*e.g.*, over the five years following adoption or compliance with a specified level of assurance)? What would be the costs and benefits of providing a longer transition period for obtaining assurance over Scopes 1 and 2 emissions disclosures?

## **V. PAPERWORK REDUCTION ACT**

### **A. Summary of the Collections of Information**

Certain provisions of our rules and forms that would be affected by the proposed amendments contain “collection of information” requirements within the meaning of the Paperwork Reduction Act of 1995 (“PRA”).<sup>1006</sup> The Commission is submitting the proposal to the Office of Management and Budget (“OMB”) for review in accordance with the PRA.<sup>1007</sup> The hours and costs associated with preparing and filing the forms and reports constitute reporting and cost burdens imposed by each collection of information. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information requirement unless it displays a currently valid OMB control number. Compliance with the information collections is mandatory. Responses to the information collections are not kept confidential and there is no mandatory retention period for the information disclosed. The titles for the affected collections of information are:

- Form S-1 (OMB Control No. 3235-0065);
- Form F-1 (OMB Control No. 3235-0258);
- Form S-4 (OMB Control No. 3235-0324);
- Form F-4 (OMB Control No. 3235-0325);

---

<sup>1006</sup> See 44 U.S.C. 3501 et seq.

<sup>1007</sup> 44 U.S.C. 3507(d) and 5 CFR 1320.11.

- Form S-11 (OMB Control No. 3235-0067);
- Form 10 (OMB Control No. 3235-0064);
- Form 10-K (OMB Control No. 3235-0063);
- Form 10-Q (OMB Control No. 3235-0070);
- Form 20-F (OMB Control No. 3235-0288); and
- Form 6-K (OMB Control No. 3235-0116).<sup>1008</sup>

The proposed amendments would require U.S. registrants filing Securities Act registration statements on Forms S-1, S-4, and S-11 to include the climate-related disclosures required under proposed subpart 1500 of Regulation S-K and proposed Article 14 of Regulation S-X. The proposed amendments would also require foreign private issuers to include the proposed climate-related disclosures when filing Securities Act registration statements on Forms F-1 and F-4. The proposed amendments would further require U.S. registrants and foreign private issuers to include the proposed climate-related disclosures in their Exchange Act annual reports filed, respectively, on Forms 10-K and 20-F and in Exchange Act registration statements filed, respectively, on Forms 10 and 20-F. Registrants would be required to include the climate-related information required under proposed subpart 1500 in a part of the registration statement or annual report that is separately captioned as *Climate-Related Disclosure*. Registrants would be required to include the climate information required under Article 14 in a note to the financial statements, which would be subject to audit. Further, as described below, accelerated filers and

---

<sup>1008</sup> The proposed amendments would also indirectly affect Forms S-3 and F-3. Registrants filing Forms S-3 and F-3 are able to incorporate by reference their annual reports filed on Forms 10-K or 20-F. Because the proposed amendments would affect Forms 10-K and 20-F, and are not expected to affect Forms S-3 and F-3 except when Forms 10-K and 20-F are incorporated by reference into those Securities Act forms, we are not separately accounting for the PRA burden related to Forms S-3 and F-3.

large accelerated filers would be required to include an attestation report covering their Scopes 1 and 2 emissions disclosure, subject to phase-ins. In addition, U.S. registrants and foreign private issuers would be required to report material changes to the climate information disclosed in their Exchange Act reports on, respectively, Forms 10-Q and 6-K. A description of the proposed amendments, including the need for the climate information and its proposed use, as well as a description of the likely respondents, can be found in Section II above, and a discussion of the economic effects of the proposed amendments can be found in Section IV above.

**B. Summary of the Proposed Amendments’ Effects on the Collections of Information**

Our estimates of the paperwork burden associated with the proposed amendments are based primarily on climate-related reporting cost estimates from six sources: a comment letter from the Society for Corporate Governance (“Society”) that provided some hour and cost estimates for climate reporting by large-cap companies;<sup>1009</sup> a report by the Climate Risk Disclosure Lab at Duke University School of Law’s Global Financial Markets Center that presents survey results of climate-related disclosure costs for three unnamed companies;<sup>1010</sup> an impact assessment conducted by the United Kingdom’s Department for Business, Energy, and Industrial Strategy for a rule that, similar to the Commission’s proposed rules, would require

---

<sup>1009</sup> See letter from Society for Corporate Governance.

<sup>1010</sup> See Climate Risk Disclosure Lab *The Cost of Climate Disclosure: Three Case Studies on the Cost of Voluntary Climate-Related Disclosure* (Dec. 2021), available at <https://climatedisclosurelab.duke.edu/wp-content/uploads/2021/12/The-Cost-of-Climate-Disclosure.pdf>.

TCFD-aligned disclosures from all listed firms;<sup>1011</sup> two cost estimates from a data analytics firm—one that covered primarily risk assessment and analysis pursuant to the TCFD framework, and the other for calculating GHG emissions;<sup>1012</sup> and cost estimates for GHG emissions measurement and reporting from two climate management firms.<sup>1013</sup>

In response to Acting Chair Lee’s request for public input about climate disclosures,<sup>1014</sup> Society submitted the results of a survey it had conducted on a small number of public large-cap companies about the costs of their current climate reporting. According to this commenter, two companies estimated that the number of employee hours spent on climate reporting ranged from 7,500 to 10,000 annually, while a third company estimated the number of annual employee hours spent on climate reporting to be 2,940 hours.<sup>1015</sup> The average annual employee hours spent on climate reporting for these large-cap companies was 6,813 hours.<sup>1016</sup>

The Climate Risk Disclosure Lab’s report presents the results of its survey of one European large-cap financial institution, one US large-cap industrial manufacturing company,

---

<sup>1011</sup> See UK Department for Business, Energy, and Industrial Strategy, [Final Stage Impact Assessment](https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1029317/climate-related-financial-disclosure-consultation-final-stage-impact-assessment.pdf) (Oct. 1, 2021), available at [https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment\\_data/file/1029317/climate-related-financial-disclosure-consultation-final-stage-impact-assessment.pdf](https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1029317/climate-related-financial-disclosure-consultation-final-stage-impact-assessment.pdf); see also UK Department for Business, Energy, and Industrial Strategy, Initial Impact Assessment (Jan. 29, 2021), available at [https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment\\_data/file/972423/impact-assessment.pdf](https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/972423/impact-assessment.pdf). The scope of the impact assessment included companies listed on the London Stock Exchange with over 500 employees, UK registered companies admitted to AIM with over 500 employees, and certain other companies.

<sup>1012</sup> See memorandum, dated Feb. 4, 2022, concerning staff meeting with representatives of S&P Global. This and the other staff memoranda referenced below are available at <https://www-draft.sec.gov/comments/s7-10-22/s71022.htm>.

<sup>1013</sup> See memorandum, dated Nov. 30, 2021, concerning staff meeting with representatives of Persefoni; and memorandum, dated Jan. 14, 2022, concerning staff meeting with representatives of South Pole.

<sup>1014</sup> See *supra* Section I.B.

<sup>1015</sup> See letter from Society for Corporate Governance. This commenter also stated that fees for external climate advisory services ranged from \$50,000 to \$1.35 million annually.

<sup>1016</sup> 7,500 hrs.+ 10,000 hrs. +2,940 hrs. = 20,440 hrs.; 20,440/3 = 6,813 hrs.

and one US mid-cap waste management company about their climate-related disclosure costs.<sup>1017</sup> The European financial institution reported annual climate-related disclosure costs ranging from \$250,000 to \$500,000, which averages to \$375,000 annually.<sup>1018</sup> For PRA purposes, we have converted this dollar cost average to 6,818 burden hours using a metric of \$55/hour.<sup>1019</sup> The US industrial manufacturing company disclosed annual climate-related disclosure costs for its employees and one full-time consultant ranging from \$200,000 to \$350,000, which averages to \$275,000 annually. We have similarly converted this dollar cost average to 5,000 burden hours.<sup>1020</sup> The US waste management company reported that its employees spent 82 hours annually to produce its climate-related disclosures. The average annual internal burden hours spent on climate reporting for these three companies comes to 3,967 hours.<sup>1021</sup>

The UK Impact Assessment estimated on an ongoing, annual basis the number of hours and costs that it would take in-house personnel<sup>1022</sup> to gather data and prepare and provide disclosure for each of the following TCFD-aligned topics: governance, strategy, risk management, and metrics and targets.<sup>1023</sup> The impact assessment also estimated on an annual, ongoing basis the number of hours and costs that it would take a parent company's personnel to

---

<sup>1017</sup> See *supra* Section IV.C.2 for a more detailed discussion of these reported costs.

<sup>1018</sup>  $\$250,000 + \$500,000 = \$750,000$ .  $\$750,000/2 = \$375,000$ .

<sup>1019</sup> This metric is based on a reported national annual average salary for a climate specialist of \$114,463. See glassdoor, *How much does a Climate Change Specialist make?* (Dec. 2021), available at [https://www.glassdoor.com/Salaries/climate-change-specialist-salary-SRCH\\_KO0,25.htm](https://www.glassdoor.com/Salaries/climate-change-specialist-salary-SRCH_KO0,25.htm).  $\$114,463/2080 \text{ hrs.} = \$55/\text{hr.}$   $\$375,000/\$55/\text{hr.} = 6,818 \text{ hrs.}$  (rounded to nearest dollar).

<sup>1020</sup>  $\$200,000 + \$350,000 = \$550,000$ .  $\$550,000/2 = \$275,000$ .  $\$275,000/\$55/\text{hr.} = 5,000 \text{ hrs.}$

<sup>1021</sup>  $6,818 \text{ hrs.} + 5,000 \text{ hrs.} + 82 \text{ hrs.} = 11,900 \text{ hrs.}; 11,900 \text{ hrs.}/3 = 3,967 \text{ hrs.}$

<sup>1022</sup> Unlike this PRA analysis, which assumes that some of the paperwork burden will be borne by in-house personnel and some by outside professionals, the UK Impact Assessment assumed that all of the work would be done by in-house personnel.

<sup>1023</sup> The UK Impact Assessment's estimated number of hours for each TCFD-aligned disclosure topic per company was: 225 hrs. for governance; 295 hrs. for strategy; 245 hrs. for risk management; and (in Year 1) 2,227 hrs. for metrics and targets, which included one in-house climate-related expert working full-time.

collect and process climate-related data from its subsidiaries.<sup>1024</sup> The impact assessment further estimated on a one-time basis the number of hours and costs that it would take in-house personnel to become familiar with and review the new climate-related reporting requirements and related guidance.<sup>1025</sup> The total number of hours that the Impact Assessment estimated it would take a company to comply with the TCFD-aligned disclosure requirements in the first year came to 3,447 hours, of which 977.5 hours pertained to qualitative, TCFD-aligned disclosure and 2,469.5 hours pertained to GHG emissions metrics and targets disclosure.<sup>1026</sup>

We also have considered cost estimates from S&P Global, a data analytics firm that provides ESG consulting services, including climate-related data collection and analysis, among other services. This firm provided one cost estimate for preparing TCFD-aligned disclosures primarily covering physical risk and transition risk assessment and analysis, which, for a company lacking any experience in climate reporting, ranged from \$150,000 to \$200,000 (an average of \$175,000) in the first year of reporting.<sup>1027</sup> For a company with prior experience in GHG emissions reporting but requiring assistance with TCFD-aligned reporting, the firm

---

<sup>1024</sup> This estimate was 85 hrs.

<sup>1025</sup> The primary difference between the Initial Impact Assessment and Final Impact Assessment concerned the estimated “familiarization” costs. The Final Impact Assessment assumed that the rule would require scenario analysis and added additional hours for in-house personnel to become familiar with scenario analysis methodology. Because our proposed rules do not require scenario analysis, we are using the familiarization estimate of the Initial Impact Assessment (323 hrs.) when totaling the estimated hours required to comply with the UK’s proposed climate disclosure rules. We have added to the familiarization estimate the number of hours (77 hrs.) that the Final Impact Assessment estimated for the one-time legal review of the new climate disclosure requirements by in-house personnel.

<sup>1026</sup> 400 hrs. (familiarization and review) + 195 hrs. (governance) + 295 hrs. (strategy) + 245 hrs. (risk management) + 2,227 hrs. (metrics and targets) + 85 hrs. (parent co. processing) = 3,447 hrs. For purposes of the PRA, we have allocated approximately half of the hours pertaining to familiarization and review and parent company processing between the qualitative TCFD-aligned disclosure and the GHG emissions metrics and targets disclosure. This results in 977.5 hrs. allocated to the qualitative TCFD-aligned disclosure and 2,469.5 hrs. allocated to the GHG emissions metrics and targets disclosure.

<sup>1027</sup> See memorandum concerning staff meeting with representatives of S&P Global.  $\$150,000 + \$200,000 = \$350,000$ ;  $\$350,000/2 = \$175,000$ .

estimated average costs of \$100,000.<sup>1028</sup> This results in an average cost estimate for all companies for TCFD-aligned disclosures, excluding GHG emissions calculation and reporting, of \$137,500 in the first year of TCFD-aligned reporting.<sup>1029</sup> For PRA purposes, we have converted this dollar cost average to 2,500 burden hours.<sup>1030</sup>

This data analytics firm provided a separate cost estimate for calculating a company's Scopes 1, 2, and 3 emissions.<sup>1031</sup> For the initial calculation of a company's GHG emissions, including all three scopes, the cost estimate ranged from \$75,000 to \$125,000 (an average of \$100,000).<sup>1032</sup> The firm also estimated that the setting and reporting of GHG emissions targets would on average add an additional \$25,000, resulting in an average first-year cost estimate for GHG emissions metrics and targets of \$125,000.<sup>1033</sup> For PRA purposes, we have converted this dollar cost average to 2,273 burden hours.<sup>1034</sup> This results in a total incremental burden increase (for both TCFD-aligned disclosures and GHG emissions calculation) in the first year of climate-related reporting of 4,773 burden hours.<sup>1035</sup>

---

<sup>1028</sup> *See id.*

<sup>1029</sup>  $\$175,000 + \$100,000 = \$275,000$ ;  $\$275,000/2 = \$137,500$ .

<sup>1030</sup>  $\$137,500/\$55/\text{hr.} = 2,500 \text{ hrs.}$

<sup>1031</sup> *See* memorandum concerning staff meeting with representatives of S&P Global. Although the proposed rules would require the disclosure of a registrant's Scope 3 emissions only if they are material, this cost estimate is relevant for determining the upper bound of the proposed rules' estimated PRA burden.

<sup>1032</sup>  $\$75,000 + \$125,000 = \$200,000$ ;  $\$200,000/2 = \$100,000$ .

<sup>1033</sup> Although the proposed rules would not require a registrant to set GHG emissions targets, they would require certain disclosures if the registrant does set targets. We have therefore included S&P Global's cost estimate for targets for purposes of determining the upper bound of the proposed rules' estimated PRA burden. However, because setting targets would be voluntary under the proposed rules, the estimated PRA burden may overstate the potential burden.

<sup>1034</sup>  $\$125,000/\$55/\text{hr.} = 2,273 \text{ hrs.}$

<sup>1035</sup>  $2,500 \text{ hrs.} + 2,273 \text{ hrs.} = 4,773 \text{ hrs.}$

We also considered the cost estimates for GHG emissions measurement and reporting provided by two climate management firms, Persefoni and South Pole. Persefoni estimated that, depending on the maturity of a company's emissions reporting program, a company's average first-year costs for measuring and reporting Scopes 1, 2, and 3 emissions ranged from \$50,000 to \$125,000, which averages to \$87,500, or 1,591 hours.<sup>1036</sup> South Pole estimated annual costs for measuring and reporting Scopes 1, 2 and 3 emissions as ranging from \$11,800 to \$118,300, which averages to \$65,050, or 1,183 hours.<sup>1037</sup>

The UK Impact Assessment estimated that the calculation and reporting of GHG emissions metrics and related targets would take the greatest amount of time, constituting approximately 72 percent of the total incremental burden.<sup>1038</sup> The data analytics firm, however, estimated that GHG emissions metrics and targets would constitute approximately 48 percent of the total incremental burden.<sup>1039</sup> The burden estimates provided by the above-referenced commenter and Climate Lab did not allocate between GHG emissions and non-GHG emissions climate reporting. For purposes of the PRA, we have allocated the burden estimates from the commenter and Climate Lab equally between the qualitative TCFD-aligned disclosure and the GHG emissions metrics and targets disclosure.<sup>1040</sup>

---

<sup>1036</sup> See memorandum concerning staff meeting with representatives of Persefoni.  $\$50,000 + \$125,000 = \$175,000$ ;  $\$175,000/2 = \$87,500$ ;  $\$87,500/\$55/\text{hr.} = 1,591$  hrs.

<sup>1037</sup> See memorandum concerning staff meeting with representatives of South Pole.  $\$11,800 + \$118,300 = \$130,100$ ;  $\$130,100/2 = \$65,050$ ;  $\$65,050/\$55/\text{hr.} = 1,183$  hrs.

<sup>1038</sup> See *supra* note 1026 (2,469.5 hrs./3,447 hrs. = 72 percent).

<sup>1039</sup> See *supra* note 1035 (2,273 hrs./4,773 hrs. = 48 percent).

<sup>1040</sup> For the Society for Corporate Governance-derived estimate, this results in 3,406.5 hrs. for each of the qualitative TCFD-aligned disclosure and the GHG emissions metrics and targets disclosure. For the Climate Lab-derived burden estimate, this results in 1,983.5 burden hrs. for each of the qualitative and quantitative disclosures.

Based on the above sources, we estimate that the proposed qualitative TCFD-aligned disclosures would result in an average incremental burden hour increase of 2,217 hrs. for each affected collection of information for the first year of climate reporting.<sup>1041</sup> We estimate that the proposed GHG emissions metrics and targets disclosure would result in an average incremental burden hour increase of 2,151 hours for each affected collection of information for the first year of reporting.<sup>1042</sup>

In addition to GHG emissions metrics, the proposed rules would require the disclosure of certain climate-related financial statement metrics. Although the TCFD recommends the disclosure of metrics pertaining to the financial impacts of climate-related events and conditions, it is unclear whether the above sources' burden estimates for TCFD-aligned disclosure would include financial statement metrics. Based on staff experience reviewing financial statements, we estimate that preparation of the financial statements to present the proposed financial statement metrics would require 70 additional burden hours per filing. To ensure that our PRA estimates cover the burden associated with the proposed climate-related financial statement metrics, we have included this amount, in addition to the burden estimate for GHG emissions metrics and targets, in the estimated overall PRA burden of the proposed rules.

The proposed rules would require a registrant to present the climate-related financial statement metrics and associated disclosures in a note to its financial statements, which would be audited. Because the audit of such information would be part of the registrant's overall audit of its financial statements, we expect the incremental audit costs associated with these climate-

---

<sup>1041</sup> 3,406.5 hrs. (Society) + 1,983.5 hrs. (Climate Lab) + 977.5 hrs. (UK) + 2,500 hrs. (S&P Global) = 8,867.5 hrs.; 8,867.5/4 = 2,217 hrs. (rounded to the nearest whole number).

<sup>1042</sup> 3,406.5 hrs. (Society) + 1,983.5 hrs. (Climate Lab) + 2,469.5 hrs. (UK) + 2,273 hrs. (S&P Global) + 1,591 hrs. (Persefoni) + 1,183 hrs. (South Pole) = 12,906.5 hrs.; 12,906.5 hrs./6 = 2,151 hrs.

related financial statement metrics and disclosures to be modest.<sup>1043</sup> We are conservatively estimating that auditing the note pertaining to the climate-related financial statement metrics and associated disclosures would add audit fees of \$15,000 to the overall costs associated with the audit of the registrant’s financial statements. We derived this estimate by first estimating costs as an average percentage of total audit fees (1.5%)<sup>1044</sup> and then applying that percentage to median audit fees of \$690,000,<sup>1045</sup> which results in \$10,350. To be conservative, we have increased this amount to \$15,000 for estimated audit fees. We believe that this estimate represents the average cost of the incremental efforts that may be incurred, taking into consideration factors such as the scale and complexity of different registrants and the extent of impact by climate-related events (*e.g.*, location of operations, nature of business). This cost also takes into consideration the need to understand and evaluate the registrants’ processes and internal controls associated with the reporting of the climate-related financial statement metrics and associated disclosures.

---

<sup>1043</sup> This belief is based on post-implementation review observations and activities from accounting standards that provided further disaggregation of information and that are analogous to the proposed financial statement metrics requirements, as discussed *supra* Section II.F.2.a (*e.g.*, segment reporting and disaggregation of revenue). See FASB’s post-implementation review report on FASB Statement No. 131, Disclosures about Segments of an Enterprise and Related Information (Dec. 2012), 11, (“Preparers’ incremental costs to implement and comply with Statement 131 generally were not significant and were in line with expectations”), available at [https://www.accountingfoundation.org/cs/Satellite?c=Document\\_C&cid=1176160621900&pagename=Foundati on%2FDocument\\_C%2FDocumentPage](https://www.accountingfoundation.org/cs/Satellite?c=Document_C&cid=1176160621900&pagename=Foundati on%2FDocument_C%2FDocumentPage). See also FASB’s Board Meeting Handout, post-implementation review of Topic 606, Revenue with Contracts with Customers Our (July 28, 2021) (While the post-implementation review is still ongoing, most users agreed that the disaggregated [revenue] disclosure is helpful (par. 16) and users noted that although they incurred costs to become familiar with the new standard, update models, or maintain dual models during the transition period, most of those costs were nonrecurring. For users that are generalists or that cover sectors that did not have significant changes to revenue recognition measurement or timing under Topic 606, the costs were not significant. (par. 20), available at [https://www.fasb.org/cs/ContentServer?c=Document\\_C&cid=1176176976563&d=&pagename=FASB%2FDoc ument\\_C%2FDocumentPage](https://www.fasb.org/cs/ContentServer?c=Document_C&cid=1176176976563&d=&pagename=FASB%2FDoc ument_C%2FDocumentPage).

<sup>1044</sup> The staff estimated a range of 0.5% to 2.5%, which averages to 1.5%.

<sup>1045</sup> This is based on staff review of Audit Analytics data for 2020.

The proposed rules would require a registrant that is a large accelerated filer<sup>1046</sup> or an accelerated filer<sup>1047</sup> to include, in the relevant filing, an attestation report covering the disclosure of its Scope 1 and Scope 2 emissions and to provide certain related disclosures. Following a one-year phase-in period in which no attestation report would be required, for filings made for the second and third fiscal years following the compliance date for the GHG emissions disclosure requirement, large accelerated filers would be required to obtain an attestation report for their Scopes 1 and 2 emissions disclosure, at minimum, at a limited assurance level. We estimate the cost of a limited assurance attestation report covering a large accelerated filer's Scopes 1 and 2 emissions to be \$110,000.<sup>1048</sup> Commencing with the fourth fiscal year following the compliance date and thereafter, a large accelerated filer would be required to obtain an attestation report covering its Scopes 1 and 2 emissions disclosure at a reasonable assurance level. We estimate the cost for such a reasonable assurance attestation report to be \$175,000.<sup>1049</sup> This results in an initial six-year average<sup>1050</sup> assurance cost for a large accelerated filer's Scopes 1 and 2 emissions of \$124,167.<sup>1051</sup>

Following a one-year phase-in period in which no attestation report would be required, for filings made for the second and third fiscal years following the compliance date for the GHG

---

<sup>1046</sup> Based on staff review of filings made in 2020, large accelerated filers filed approximately 31% of domestic forms and approximately 37% of Form 20-Fs in 2020. For PRA purposes, we have used 37% as a proxy for the percentage of all foreign private issuer forms filed by large accelerated filers in 2020.

<sup>1047</sup> Based on staff review of filings made in 2020, accelerated filers filed approximately 11% of domestic forms and 15% of Form 20-Fs in 2020.

<sup>1048</sup> See *supra* Section IV.C.2.a.3. for the basis of this limited assurance cost estimate.

<sup>1049</sup> See *id.*

<sup>1050</sup> In order to capture three years of the cost of a reasonable assurance attestation report required for accelerated filers and large accelerated filers, which requirement does not commence until the fourth fiscal year following the proposed rules' compliance date, we have used a six-year average when calculating the estimated paperwork burden effects of the proposed rules.

<sup>1051</sup>  $0 + \$110,000 + \$110,000 + \$175,000 + \$175,000 + \$175,000 = \$745,000$ ;  $\$745,000/6 = \$124,167$ .

emissions disclosure requirement, accelerated filers would be required to obtain an attestation report for their Scopes 1 and 2 emissions disclosure, at minimum, at a limited assurance level. We estimate the cost of a limited assurance attestation report covering an accelerated filer's Scopes 1 and 2 emissions to be \$45,000.<sup>1052</sup> Commencing with the fourth fiscal year following the compliance date and thereafter, an accelerated filer would be required to obtain an attestation report covering its Scopes 1 and 2 emissions disclosure at a reasonable assurance level. We estimate the cost for such a reasonable assurance attestation report to be \$75,000.<sup>1053</sup> This results in an initial six-year average assurance cost for an accelerated filer's Scopes 1 and 2 emissions of \$52,500.<sup>1054</sup>

The proposed rules would require a registrant that is not required to include a GHG emissions attestation report to state whether any of the registrant's GHG emissions disclosures were subject to third-party attestation or verification. If so, the registrant would be required to identify the provider of assurance or verification and disclose certain additional information, such as the level and scope of assurance or verification provided, among other matters.<sup>1055</sup> The burden and costs for this disclosure are encompassed within the estimated overall internal burden and costs for the proposed GHG emissions disclosure.

The UK Impact Assessment assumed a 25 percent reduction in hour and cost estimates for the work required to comply with the GHG emissions metrics and targets disclosure requirement in Year 2 compared to Year 1 because initial implementation of the metrics and

---

<sup>1052</sup> See *supra* Section IV.C.2.a.3. for the basis of this limited assurance cost estimate.

<sup>1053</sup> See *id.*

<sup>1054</sup>  $0 + \$45,000 + \$45,000 + \$75,000 + \$75,000 + \$75,000 = \$315,000$ ;  $\$315,000/6 = \$52,500$ .

<sup>1055</sup> See proposed 17 CFR 229.1505(e).

targets framework would not need to be repeated. We believe this assumption is reasonable and have made a similar reduction after the first year of compliance when calculating the four-year average for the estimated paperwork burden hour effect of the proposed rules. We also have assumed a 10 percent reduction in the hour and cost estimates for preparing and providing the disclosures for the other TCFD-aligned topics in Years 2 through 6 compared to Year 1. We believe that this assumption is reasonable because the burden hours and costs associated with becoming familiar with the other TCFD disclosure topics would not need to be repeated.<sup>1056</sup> We believe that the reduction in the compliance burden and costs for the metrics and targets disclosure requirement would be greater than the reduction for the other TCFD-aligned disclosure topics because the initial work to implement a climate data collection and reporting framework to comply with the metrics and targets requirement would be greater than the initial framework required for the other disclosure requirements.

SRCs, which comprise 50 percent of domestic filers, and 45 percent of total affected registrants,<sup>1057</sup> would bear a lesser compliance burden because those registrants would not be subject to the proposed disclosure requirement pertaining to Scope 3 emissions, which, of the three types of GHG emissions, poses the greatest challenge to calculate and report. We accordingly estimate that the increase in the PRA burden pertaining to the GHG emissions requirement for SRCs filing on domestic forms would be approximately 50% less than the

---

<sup>1056</sup> S&P Global estimated a similar reduction in costs in subsequent years, the magnitude of which depends on the extent of material changes to the TCFD-aligned disclosure and the GHG emissions metrics.

<sup>1057</sup> In 2020, there were 6,220 domestic filers + 740 foreign private issuer (fpi) filers = 6,960 affected filers. 3,110 domestic filers + 740 fpi filers = 3,850 non-SRC filers.  $3,850/6,960 = 55\%$ . 3,110 filers were SRCs in 2020.  $3,110/6,960 = 45\%$ . *See supra* Section IV.B.

increased burden for the GHG emissions requirement for non-SRC registrants.<sup>1058</sup> Smaller foreign private issuers that file on the foreign private issuer forms would not be eligible for this adjustment because those foreign private issuers are excluded from the definition of, and therefore cannot be, SRCs.<sup>1059</sup>

In addition to requiring the annual climate disclosures, the proposed rules would require a registrant to disclose any material change to its climate-related disclosures reported in its annual Exchange Act annual report (Form 10-K or 20-F) on a Form 10-Q (if a domestic filer) or a Form 6-K (if a foreign private issuer filer). We would not expect a registrant to report such a material change until its second year of compliance, at the earliest. Based on the staff's assessment of the amount of time it would take to determine that there has been a material change in the previously reported climate disclosure, particularly concerning its GHG emissions metrics, and to prepare disclosures regarding the material change, if any, we estimate a burden hour increase of 40 hours per form, or an initial six-year average of 33 hours per form.<sup>1060</sup>

The following table summarizes the estimated paperwork burden effects of the proposed amendments for non-SRC and SRC registrants associated with the affected collections of information.

**PRA Table 1. Estimated Paperwork Burden Effects of the Proposed Amendments for Non-SRC and SRC Registrants<sup>1</sup>**

---

<sup>1058</sup> This is generally consistent with some of the cost estimates obtained for calculating and reporting Scopes 1, 2, and 3 emissions. For example, Persefoni indicated that the annual GHG emissions costs for a company having experience calculating and reporting GHG emissions would double if it included Scope 3 emissions after calculating Scopes 1 and 2 emissions. *See supra* note 1013. In addition, S&P Global indicated that a company's annual ongoing reporting costs of Scopes 1 and 2 emissions would, at a minimum, increase from \$40,000 to \$75,000 if it included Scope 3 emissions. *See supra* note 1012.

<sup>1059</sup> *See, e.g.*, Instruction 2 to the definition of smaller reporting company under 17 CFR 230.405.

<sup>1060</sup>  $0 + (40 \text{ hrs.} \times 5) = 200 \text{ hrs.}; 200 \text{ hrs.}/6 = 33 \text{ hrs.}$  (rounded to nearest whole number).

**C. Incremental and Aggregate Burden and Cost Estimates for the Proposed Amendments**

Below we estimate the incremental and aggregate increase in paperwork burden resulting from the proposed amendments. These estimates represent the average burden for all issuers, both large and small. In deriving our estimates, we recognize that the burdens will likely vary among individual registrants based on a number of factors, including the nature of their business, the size and complexity of their operations, and whether they are subject to similar climate-related disclosure requirements in other jurisdictions or already preparing similar disclosures on a voluntary basis. For purposes of the PRA, the burden is to be allocated between internal burden hours and outside professional costs. The table below sets forth the percentage estimates we typically use for the burden allocation for each affected collection of information. We also estimate that the average cost of retaining outside professionals is \$400 per hour.<sup>1061</sup>

**PRA Table 2. Standard Estimated Burden Allocation for Specified Collections of Information**

Collection of Information	Internal	Outside Professionals
Forms S-1, F-1, S-4, F-4, S-11, 10, and 20-F	25%	75%
Forms 10-K, 10-Q, and 6-K	75%	25%

We estimate that the proposed amendments would change the burden per response, but not the frequency, of the existing collections of information. The burden increase estimates for

---

<sup>1061</sup> We recognize that the costs of retaining outside professionals may vary depending on the nature of the professional services, but for purposes of this PRA analysis, we estimate that such costs would be an average of \$400 per hour.

each collection of information were calculated by multiplying the number of responses by the increased estimated average amount of time it would take to prepare and review the disclosure required under the affected collection of information (using the estimated three-year average increase). Since 50 percent of the domestic filers in 2020 were non-SRCs and 50 percent were SRCs, we assume for purposes of our PRA estimates that 50 percent of each domestic collection of information was filed by non-SRCs and 50 percent by SRCs. The table below illustrates the incremental change to the annual compliance burden of the affected collections of information, in hours and costs.

**PRA Table 3. Calculation of the Incremental Change in Burden Estimates of Current Responses Resulting from the Proposed Amendments<sup>1</sup>**

Collection of Information	Filed By	Number of Estimated Affected Respondents	Burden Hour Annual Increase per Affected Respondent	Increase in Burden Hours for Affected Respondents	Increase in Internal Burden Hours for Affected Respondents	Increase in Professional Hours for Affected Respondents	Climate-Related Financial Statement Metrics Assurance Costs for Affected Respondents <sup>2</sup>	GHG Emissions Assurance Costs for AFs <sup>3</sup>	GHG Emissions Assurance Costs for LAFs <sup>4</sup>	Increase in Professional Costs for Affected Respondents

#### **D. Request for Comment**

We request comment in order to:

- Evaluate whether the proposed collections of information are necessary for the proper performance of the functions of the agency, including whether the information would have practical utility;
- Evaluate the accuracy of our estimate of the burden of the proposed collections of information, including any assumptions used;
- Determine whether there are ways to enhance the quality, utility, and clarity of the information to be collected;
- Evaluate whether there are ways to minimize the burden of the collections of information on those who are to respond, including through the use of automated collection techniques or other forms of information technology; and
- Evaluate whether the proposed amendments would have any effects on any other collections of information not previously identified in this section.<sup>1062</sup>

Any member of the public may direct to us any comments about the accuracy of these burden estimates and any suggestions for reducing these burdens. Persons submitting comments on the collection of information requirements should direct the comments to the Office of Management and Budget, Attention: Desk Officer for the Securities and Exchange Commission, Office of Information and Regulatory Affairs, Washington, DC 20503, and should send a copy to Vanessa A. Countryman, Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090, with reference to File No. S7-10-22. Requests for materials

---

<sup>1062</sup> We request comment pursuant to 44 U.S.C. 3506(c)(2)(B).

submitted to OMB by the Commission with regard to these collections of information should be in writing, refer to File No. S7-10-22, and be submitted to the Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington, DC 20549-2736. OMB is required to make a decision concerning the collection of information between 30 and 60 days after publication of this release. Consequently, a comment to OMB is best assured of having its full effect if OMB receives it within 30 days of publication.

## **VI. INITIAL REGULATORY FLEXIBILITY ACT ANALYSIS**

This Initial Regulatory Flexibility Act Analysis (“IRFA”) has been prepared, and made available for public comment, in accordance with the Regulatory Flexibility Act (“RFA”).<sup>1063</sup> It relates to the proposal to add new subpart 1500 to Regulation S-K and new Article 14 to Regulation S-X, which would require registrants to provide certain climate-related disclosures in their Securities Act and Exchange Act registration statements and Exchange Act reports. As required by the RFA, this IRFA describes the impact of these proposed amendments of Regulations S-K and S-X on small entities.<sup>1064</sup>

### **A. Reasons for, and Objectives of, the Proposed Action**

We are proposing to require registrants to provide certain climate-related information in their registration statements and annual reports, including certain information about climate-related financial risks and climate-related financial metrics in their financial statements. The disclosure of this information would provide consistent, comparable, and decision-useful information to investors to enable them to make informed judgments about the impact of climate-related risks on current and potential investments. Information about climate-related

---

<sup>1063</sup> 5 U.S.C. 601 *et seq.*

<sup>1064</sup> 5 U.S.C. 603(a).

risks can have an impact on public companies' financial performance or position and may be material to investors in making investment or voting decisions. For this reason, many investors—including shareholders, investment advisors, and investment management companies—currently seek information about climate-related risks from companies to inform their investment decision-making. Furthermore, many companies have begun to provide some of this information voluntarily in response to investor demand and in recognition of the potential financial effects of climate-related risks on their businesses. We are concerned that the existing voluntary disclosures of climate-related risks do not adequately protect investors. For this reason, mandatory disclosures may be necessary or appropriate to improve the consistency, comparability, and reliability of this information. The reasons for, and objectives of, the proposed amendments are discussed in more detail in Section II above.

## **B. Legal Basis**

We are proposing the amendments contained in this release under the authority set forth in Sections 7, 10, 19(a), and 28 of the Securities Act, as amended, and Sections 3(b), 12, 13, 15, 23(a), and 36 of the Exchange Act, as amended.

## **C. Small Entities Subject to the Proposed Rules**

The proposed amendments would affect some issuers that are small entities. The RFA defines “small entity” to mean “small business,” “small organization,” or “small governmental jurisdiction.”<sup>1065</sup> For purposes of the RFA, under 17 CFR 240.0-10(a), an issuer, other than an investment company, is a “small business” or “small organization” if it had total assets of \$5

---

<sup>1065</sup> 5 U.S.C. 601(6).

million or less on the last day of its most recent fiscal year and, under 17 CFR 230.157, is also engaged or proposing to engage in an offering of securities that does not exceed \$5 million.

The proposed rules would apply to a registrant when filing a Securities Act or Exchange Act registration statement or an Exchange Act annual or other periodic report. We estimate that there are 1,004 registrants that are small entities that would be affected by the proposed rules.

#### **D. Reporting, Recordkeeping, and Other Compliance Requirements**

The proposed amendments would require a registrant, including a small entity, to disclose certain climate-related information, including data about their GHG emissions, when filing a Securities Act or Exchange Act registration statement or Exchange Act annual or other periodic report. In particular, like larger registrants, small entities would be required to disclose information about: the oversight of their boards and management regarding climate-related risks; any material impacts of climate-related risks on their consolidated financial statements, business, strategy, and outlook; their risk management of climate-related risks; climate-related targets or goals, if any; and certain financial statement metrics. In addition, like other registrants, small entities would be required to disclose their Scopes 1 and 2 emissions. We anticipate that the nature of any benefits or costs associated with the above proposed amendments would be similar for large and small entities. Accordingly, we refer to the discussion of the proposed amendments' economic effects on all affected parties, including small entities, in Section IV.C. Consistent with that discussion, we anticipate that the economic benefits and costs likely would vary widely among small entities based on a number of factors, including the nature and conduct of their businesses, which makes it difficult to project the economic impact on small entities with precision. However, we request comment on how the proposed amendments would affect small entities.

While small entities would not be exempt from the full scope of the proposed amendments, they would be exempt from the Scope 3 emissions disclosure requirements, which would likely impose the greatest compliance burden for registrants due to the complexity of data gathering, calculation, and assessment required for that type of emissions.<sup>1066</sup> Small entities would also have a longer transition period to comply with the proposed rules than other registrants.<sup>1067</sup> We believe that these accommodations would reduce the proposed rules' compliance burden for small entities that, compared to larger registrants with more resources, may be less able to absorb the costs associated with reporting of Scope 3 emissions and may need additional time to allocate the resources necessary to begin providing climate-related disclosures.

**E. Duplicative, Overlapping, or Conflicting Federal Rules**

The proposed rules do not duplicate or conflict with other existing federal rules. As discussed in Section IV, some registrants currently report certain GHG emissions via the EPA's 2009 mandatory Greenhouse Gas Reporting Program. However, as discussed above, the reporting requirements of the EPA's program and the resulting data are different and more suited to the purpose of building a national inventory of GHG emissions rather than allowing investors to assess emissions-related risks to individual registrants.

---

<sup>1066</sup> See *supra* Section II.G.3 and II.L (discussing the proposed exemption from Scope 3 emissions disclosure for smaller reporting companies).

<sup>1067</sup> See *supra* Section II.L (discussing the proposed additional two years for smaller reporting companies to comply with the proposed rules compared to large accelerated filers).

## **F. Significant Alternatives**

The RFA directs us to consider alternatives that would accomplish our stated objectives, while minimizing any significant economic impact on small entities. In connection with the proposed amendments, we considered the following alternatives:

- Establishing different compliance or reporting requirements that take into account the resources available to small entities;
- Clarifying, consolidating, or simplifying compliance and reporting requirements under the rules for small entities;
- Using performance rather than design standards; and
- Exempting small entities from all or part of the requirements.

As discussed above, the proposed amendments would exempt small entities from certain GHG emissions disclosure requirements that would likely impose the greatest compliance burden on registrants compared to other proposed disclosure requirements. In addition, while there would be a transition period for all registrants to comply with the proposed amendments, small entities would have an additional two more years to comply with the proposed rules than large accelerated filers and an additional year compared to other registrants. We believe that this scaled and phased-in approach would help minimize the economic impact of the proposed amendments on small entities. We are not, however, proposing a complete exemption from the proposed amendments for SRCs because, due to their broad impact across industries and jurisdictions, climate-related risks may materially impact the operations and financial condition of domestic and foreign issuers, both large and small.

For similar reasons, other than the exemption for reporting Scope 3 emissions by SRCs, we are not proposing to clarify, consolidate, or simplify the proposed disclosure requirements for

small entities. A key objective of the proposed amendments is to elicit consistent, comparable and reliable information about climate-related risks across registrants. Alternative compliance requirements for small entities could undermine that goal.

The proposed amendments are primarily based on performance standards with some provisions that are more like design standards. For example, while the proposed amendments include certain concepts, such as scopes, developed by the GHG Protocol, they do not require a registrant to use the GHG Protocol's methodology when calculating its GHG emissions if another methodology better suits its circumstances. Using a performance standard for calculation of GHG emissions would provide registrants with some flexibility regarding how to comply with the proposed GHG emissions requirement while still providing useful information for investors about the various scopes of emissions. Similarly, the proposed amendments would require a registrant that is a large accelerated filer or an accelerated filer to include an attestation report covering its Scopes 1 and 2 emissions that would require the report to meet certain minimum criteria while permitting the filer, at its option, to obtain additional levels of assurance. In contrast, the proposed amendments would require all registrants, including small entities, to express their GHG emissions both disaggregated by each constituent greenhouse gas and in the aggregate, expressed in terms of carbon dioxide equivalent (CO<sub>2</sub>e). Using a design standard for the expression of a registrant's GHG emissions would enhance the comparability of this disclosure for investors.

### **Request for Comment**

We encourage the submission of comments with respect to any aspect of this IRFA. In particular, we request comments regarding:

- How the proposed rule and form amendments can achieve their objective while lowering the burden on small entities;
- The number of small entity companies that may be affected by the proposed rule and form amendments;
- The existence or nature of the potential effects of the proposed amendments on small entity companies discussed in the analysis;
- How to quantify the effects of the proposed amendments; and
- Whether there are any federal rules that duplicate, overlap, or conflict with the proposed amendments.

Commenters are asked to describe the nature of any effect and provide empirical data supporting the extent of that effect. Comments will be considered in the preparation of the Final Regulatory Flexibility Analysis, if the proposed rules are adopted, and will be placed in the same public file as comments on the proposed rules themselves.

## **VII. SMALL BUSINESS REGULATORY ENFORCEMENT FAIRNESS ACT**

For purposes of the Small Business Regulatory Enforcement Fairness Act of 1996 (“SBREFA”),<sup>1068</sup> the Commission must advise OMB as to whether the proposed amendments constitute a “major” rule. Under SBREFA, a rule is considered “major” where, if adopted, it results in or is likely to result in:

- An annual effect on the U.S. economy of \$100 million or more;
- A major increase in costs or prices for consumers or individual industries; or
- Significant adverse effects on competition, investment, or innovation.

---

<sup>1068</sup> 5 U.S.C. 801 *et seq.*

We request comment on whether our proposal would be a “major rule” for purposes of SBREFA. In particular, we request comment and empirical data on:

- The potential effect on the U.S. economy on an annual basis;
- Any potential increase in costs or prices for consumers or individual industries; and
- Any potential adverse effect on competition, investment, or innovation.

### **VIII. STATUTORY AUTHORITY**

The amendments contained in this release are being proposed under the authority set forth in Sections 7, 10, 19(a), and 28 of the Securities Act, as amended, and Sections 3(b), 12, 13, 15, 23(a), and 36 of the Exchange Act, as amended.

#### **List of Subjects in 17 CFR Parts 210, 229, 232, 239, and 249**

Accountants; Accounting; Administrative practice and procedure, Reporting and recordkeeping requirements, Securities.

For the reasons set out in the preamble, the Commission is proposing to amend title 17, chapter II of the Code of Federal Regulations as follows:

#### **PART 210 – FORM AND CONTENT OF AND REQUIREMENTS FOR FINANCIAL STATEMENTS, SECURITIES ACT OF 1933, SECURITIES EXCHANGE ACT OF 1934, INVESTMENT COMPANY ACT OF 1940, INVESTMENT ADVISERS ACT OF 1940, AND ENERGY POLICY AND CONSERVATION ACT OF 1975**

1. The authority citation for part 210 continues to read as follows:

**Authority:** 15 U.S.C. 77f, 77g, 77h, 77j, 77s, 77z-2, 77z-3, 77aa(25), 77aa(26), 77nn(25), 77nn(26), 78c, 78j-1, 78l, 78m, 78n, 78o(d), 78q, 78u-5, 78w, 78ll, 78mm, 80a-8, 80a20, 80a-29, 80a-30, 80a-31, 80a-37(a), 80b-3, 80b-11, 7202 and 7262, and sec. 102(c), Pub. L. 112-106, 126 Stat. 310 (2012), unless otherwise noted.

2. Amend § 210.8-01 by revising paragraph (b) to read as follows:

**§ 210.8-01 General requirements for Article 8**

\* \* \* \* \*

(b) Smaller reporting companies electing to prepare their financial statements with the form and content required in Article 8 need not apply the other form and content requirements in 17 CFR part 210 (Regulation S-X) with the exception of the following:

(1) The report and qualifications of the independent accountant shall comply with the requirements of §§ 210.2-01 through 210.2-07 (Article 2); and

(2) The description of accounting policies shall comply with § 210.4-08(n);

(3) Smaller reporting companies engaged in oil and gas producing activities shall follow the financial accounting and reporting standards specified in § 210.4-10 with respect to such activities; and

(4) Sections 210.14-01 and 210.14-02 (Article 14).

\* \* \* \* \*

3. Add an undesignated center heading and §§ 210.14-01 and 210.14-02 to read as follows:

*Article 14 – Climate-related disclosure*

**§ 210.14-01 Climate-related disclosure instructions.**

(a) *General.* A registrant must include disclosure pursuant to § 210.14-02 in any filing that is required to include disclosure pursuant to subpart 229.1500 of this chapter and that also requires the registrant to include its audited financial statements. The disclosure pursuant to § 210.14-02 must be included in a note to the financial statements included in such filing.

(b) *Definitions.* The definitions in § 229.1500 (Item 1500 of Regulation S-K) apply to this Article 14 of Regulation S-X.

(c) *Basis of calculation.* When calculating the metrics in this Article 14, except where otherwise indicated, a registrant must:

(1) Use financial information that is consistent with the scope of the rest of its consolidated financial statements included in the filing; and

(2) Whenever applicable, apply the same accounting principles that it is required to apply in preparation of the rest of its consolidated financial statements included in the filing.

(d) *Historical periods.* Disclosure must be provided for the registrant's most recently completed fiscal year, and for the historical fiscal year(s) included in the consolidated financial statements in the filing (*e.g.*, a registrant that is required to include balance sheets as of the end of its two most recent fiscal years and income statements and cash flow statements as of the end of its three most recent fiscal years would be required to disclose two years of the climate-related metrics that correspond to balance sheet line items and three years of the climate-related metrics that correspond to income statement or cash flow statement line items).

**§ 210.14-02 Climate-related metrics.**

(a) *Contextual information.* Provide contextual information, describing how each specified metric was derived, including a description of significant inputs and assumptions used, and, if applicable, policy decisions made by the registrant to calculate the specified metrics.

(b) *Disclosure thresholds.*

(1) Disclosure of the financial impact on a line item in the registrant's consolidated financial statements pursuant to paragraphs (c) and (d) of this section (including any impacts included pursuant to paragraphs (i) and (j) of this section) is not required if the sum of the

absolute values of all the impacts on the line item is less than one percent of the total line item for the relevant fiscal year.

(2) Disclosure of the aggregate amount of expenditure expensed or the aggregate amount of capitalized costs incurred pursuant to paragraphs (e) and (f) of this section (including any impacts included pursuant to paragraphs (i) and (j) of this section) is not required if such amount is less than one percent of the total expenditure expensed or total capitalized costs incurred, respectively, for the relevant fiscal year.

(c) *Financial impacts of severe weather events and other natural conditions.* Disclose the impact of severe weather events and other natural conditions, such as flooding, drought, wildfires, extreme temperatures, and sea level rise on any relevant line items in the registrant's consolidated financial statements during the fiscal years presented. Disclosure must be presented, at a minimum, on an aggregated line-by-line basis for all negative impacts and, separately, at a minimum, on an aggregated line-by-line basis for all positive impacts. Impacts may include, for example:

(1) Changes to revenues or costs from disruptions to business operations or supply chains;

(2) Impairment charges and changes to the carrying amount of assets (such as inventory, intangibles, and property, plant and equipment) due to the assets being exposed to severe weather, flooding, drought, wildfires, extreme temperatures, and sea level rise;

(3) Changes to loss contingencies or reserves (such as environmental reserves or loan loss allowances) due to impact from severe weather events; and

(4) Changes to total expected insured losses due to flooding or wildfire patterns.

(d) *Financial impacts related to transition activities.* Disclose the impact of any efforts to reduce GHG emissions or otherwise mitigate exposure to transition risks on any relevant line items in the registrant's consolidated financial statements during the fiscal years presented. Disclosure must be presented, at a minimum, on an aggregated line-by-line basis for all negative impacts and, separately, at a minimum, on an aggregated line-by-line basis for all positive impacts. Impacts may include, for example:

(1) Changes to revenue or cost due to new emissions pricing or regulations resulting in the loss of a sales contract;

(2) Changes to operating, investing, or financing cash flow from changes in upstream costs, such as transportation of raw materials;

(3) Changes to the carrying amount of assets (such as intangibles and property, plant, and equipment) due to, among other things, a reduction of the asset's useful life or a change in the asset's salvage value by being exposed to transition activities; and

(4) Changes to interest expense driven by financing instruments such as climate-linked bonds issued where the interest rate increases if certain climate-related targets are not met.

(e) *Expenditure to mitigate risks of severe weather events and other natural conditions.* Disclose separately the aggregate amount of expenditure expensed and the aggregate amount of capitalized costs incurred during the fiscal years presented to mitigate the risks from severe weather events and other natural conditions, such as flooding, drought, wildfires, extreme temperatures, and sea level rise. For example, a registrant may be required to disclose the amount of expense or capitalized costs, as applicable, to increase the resilience of assets or operations, retire or shorten the estimated useful lives of impacted assets, relocate assets or

operations at risk, or otherwise reduce the future impact of severe weather events and other natural conditions on business operations.

(f) *Expenditure related to transition activities.* Disclose separately the aggregate amount of expenditure expensed and the aggregate amount of capitalized costs incurred during the fiscal years presented to reduce GHG emissions or otherwise mitigate exposure to transition risks. For example, a registrant may be required to disclose the amount of expense or capitalized costs, as applicable, related to research and development of new technologies, purchase of assets, infrastructure, or products that are intended to reduce GHG emissions, increase energy efficiency, offset emissions (purchase of energy credits), or improve other resource efficiency. A registrant that has disclosed GHG emissions reduction targets or other climate-related commitments must disclose the expenditures and costs related to meeting its targets, commitments, and goals, if any, in the fiscal years presented.

(g) *Financial estimates and assumptions impacted by severe weather events and other natural conditions.* Disclose whether the estimates and assumptions the registrant used to produce the consolidated financial statements were impacted by exposures to risks and uncertainties associated with, or known impacts from, severe weather events and other natural conditions, such as flooding, drought, wildfires, extreme temperatures, and sea level rise. If yes, provide a qualitative description of how the development of such estimates and assumptions were impacted by such events.

(h) *Financial estimates and assumptions impacted by transition activities.* Disclose whether the estimates and assumptions the registrant used to produce the consolidated financial statements were impacted by risks and uncertainties associated with, or known impacts from, a potential transition to a lower carbon economy or any climate-related targets disclosed by the

registrant. If yes, provide a qualitative description of how the development of such estimates and assumptions were impacted by such a potential transition or the registrant's disclosed climate-related targets.

(i) *Impact of identified climate-related risks.* A registrant must also include the impact of any climate-related risks (separately by physical risks and transition risks, as defined in § 229.1500(c) of this chapter), identified by the registrant pursuant to § 229.1502(a) of this chapter, on any of the financial statement metrics disclosed pursuant to paragraphs (c) through (h) of this section.

(j) *Impact of climate-related opportunities.* A registrant may also include the impact of any opportunities arising from severe weather events and other natural conditions, any impact of efforts to pursue climate-related opportunities associated with transition activities, and the impact of any other climate-related opportunities, including those identified by the registrant pursuant to § 229.1502(a) of this chapter, on any of the financial statement metrics disclosed pursuant to paragraphs (c) through (h) of this section. If a registrant makes a policy decision to disclose the impact of an opportunity, it must do so consistently for the fiscal years presented, including for each financial statement line item and all relevant opportunities identified by the registrant.

**PART 229—STANDARD INSTRUCTIONS FOR FILING FORMS UNDER  
SECURITIES ACT OF 1933, SECURITIES EXCHANGE ACT OF 1934 AND ENERGY  
POLICY AND CONSERVATION ACT OF 1975—REGULATION S-K**

4. The authority citation for part 229 continues to read as follows:

**Authority:** 15 U.S.C. 77e, 77f, 77g, 77h, 77j, 77k, 77s, 77z-2, 77z-3, 77aa(25), 77aa(26), 77ddd, 77eee, 77ggg, 77hhh, 77iii, 77jjj, 77nnn, 77sss, 78c, 78i, 78j, 78j-3, 78l, 78m, 78n, 78n-1, 78o, 78u-5, 78w, 78ll, 78 mm, 80a-8, 80a-9, 80a-20, 80a-29, 80a-30, 80a-31(c), 80a37, 80a-

38(a), 80a-39, 80b-11 and 7201 et seq.; 18 U.S.C. 1350; sec. 953(b), Pub. L. 111-203, 124 Stat. 1904 (2010); and sec. 102(c), Pub. L. 112-106, 126 Stat. 310 (2012).

5. Add subpart 229.1500 (“Climate-Related Disclosure”) to read as follows:

**Subpart 229.1500—Climate-Related Disclosure**

Sec.

229.1500 (Item 1500) Definitions.

229.1501 (Item 1501) Governance.

229.1502 (Item 1502) Strategy, business model, and outlook.

229.1503 (Item 1503) Risk management.

229.1504 (Item 1504) GHG emissions metrics.

229.1505 (Item 1505) Attestation of Scope 1 and Scope 2 emissions disclosure.

229.1506 (Item 1506) Targets and goals.

229.1507 (Item 1507) Interactive data requirement.

**Subpart 229.1500—Climate-Related Disclosure**

**§ 229.1500 (Item 1500) Definitions.**

As used in this subpart, these terms have the following meanings:

(a) *Carbon offsets* represents an emissions reduction or removal of greenhouse gases (“GHG”) in a manner calculated and traced for the purpose of offsetting an entity’s GHG emissions.

(b) *Climate-related opportunities* means the actual or potential positive impacts of climate-related conditions and events on a registrant’s consolidated financial statements, business operations, or value chains, as a whole.

(c) *Climate-related risks* means the actual or potential negative impacts of climate-related conditions and events on a registrant’s consolidated financial statements, business operations, or value chains, as a whole. Climate-related risks include the following:

(1) *Physical risks* include both acute risks and chronic risks to the registrant’s business operations or the operations of those with whom it does business.

(2) *Acute risks* are event-driven and may relate to shorter term extreme weather events, such as hurricanes, floods, and tornadoes, among other events.

(3) *Chronic risks* relate to longer term weather patterns and related effects, such as sustained higher temperatures, sea level rise, drought, and increased wildfires, as well as related effects such as decreased arability of farmland, decreased habitability of land, and decreased availability of fresh water.

(4) *Transition risks* are the actual or potential negative impacts on a registrant's consolidated financial statements, business operations, or value chains attributable to regulatory, technological, and market changes to address the mitigation of, or adaptation to, climate-related risks, such as increased costs attributable to changes in law or policy, reduced market demand for carbon-intensive products leading to decreased prices or profits for such products, the devaluation or abandonment of assets, risk of legal liability and litigation defense costs, competitive pressures associated with the adoption of new technologies, reputational impacts (including those stemming from a registrant's customers or business counterparties) that might trigger changes to market behavior, consumer preferences or behavior, and registrant behavior.

(d) *Carbon dioxide equivalent* ("CO<sub>2</sub>e") means the common unit of measurement to indicate the global warming potential ("GWP") of each greenhouse gas, expressed in terms of the GWP of one unit of carbon dioxide ("CO<sub>2</sub>").

(e) *Emission factor* means a multiplication factor allowing actual GHG emissions to be calculated from available activity data or, if no activity data is available, economic data, to derive absolute GHG emissions. Examples of activity data include kilowatt-hours of electricity used, quantity of fuel used, output of a process, hours of operation of equipment, distance travelled, and floor area of a building.

(f) *Global warming potential* (“GWP”) means a factor describing the global warming impacts of different greenhouse gases. It is a measure of how much energy will be absorbed in the atmosphere over a specified period of time as a result of the emission of one ton of a greenhouse gas, relative to the emissions of one ton of carbon dioxide (CO<sub>2</sub>).

(g) *Greenhouse gases* (“GHG”) means carbon dioxide (CO<sub>2</sub>), methane (“CH<sub>4</sub>”), nitrous oxide (“N<sub>2</sub>O”), nitrogen trifluoride (“NF<sub>3</sub>”), hydrofluorocarbons (“HFCs”), perfluorocarbons (“PFCs”), and sulfur hexafluoride (“SF<sub>6</sub>”).

(h) *GHG emissions* means direct and indirect emissions of greenhouse gases expressed in metric tons of carbon dioxide equivalent (CO<sub>2</sub>e), of which:

(1) Direct emissions are GHG emissions from sources that are owned or controlled by a registrant.

(2) Indirect emissions are GHG emissions that result from the activities of the registrant, but occur at sources not owned or controlled by the registrant.

(i) *GHG intensity* (or *carbon intensity*) means a ratio that expresses the impact of GHG emissions per unit of economic value (*e.g.*, metric tons of CO<sub>2</sub>e per unit of total revenues, using the registrant’s reporting currency) or per unit of production (*e.g.*, metric tons of CO<sub>2</sub>e per product produced).

(j) *Internal carbon price* means an estimated cost of carbon emissions used internally within an organization.

(k) *Location* means a ZIP code or, in a jurisdiction that does not use ZIP codes, a similar subnational postal zone or geographic location.

(l) *Operational boundaries* means the boundaries that determine the direct and indirect emissions associated with the business operations owned or controlled by a registrant.

(m) *Organizational boundaries* means the boundaries that determine the operations owned or controlled by a registrant for the purpose of calculating its GHG emissions.

(n) *Renewable energy credit or certificate (“REC”)* means a credit or certificate representing each megawatt-hour (1 MWh or 1,000 kilowatt-hours) of renewable electricity generated and delivered to a power grid.

(o) *Scenario analysis* means a process for identifying and assessing a potential range of outcomes of various possible future climate scenarios, and how climate-related risks may impact a registrant’s operations, business strategy, and consolidated financial statements over time. For example, registrants might use scenario analysis to test the resilience of their strategies under certain future climate scenarios, such as those that assume global temperature increases of 3 °C, 2 °C, and 1.5 °C above pre-industrial levels.

(p) *Scope 1 emissions* are direct GHG emissions from operations that are owned or controlled by a registrant.

(q) *Scope 2 emissions* are indirect GHG emissions from the generation of purchased or acquired electricity, steam, heat, or cooling that is consumed by operations owned or controlled by a registrant.

(r) *Scope 3 emissions* are all indirect GHG emissions not otherwise included in a registrant’s Scope 2 emissions, which occur in the upstream and downstream activities of a registrant’s value chain.

(1) Upstream activities in which Scope 3 emissions might occur include:

(i) A registrant’s purchased goods and services;

(ii) A registrant’s capital goods;

(iii) A registrant's fuel and energy related activities not included in Scope 1 or Scope 2 emissions;

(iv) Transportation and distribution of purchased goods, raw materials, and other inputs;

(v) Waste generated in a registrant's operations;

(vi) Business travel by a registrant's employees;

(vii) Employee commuting by a registrant's employees; and

(viii) A registrant's leased assets related principally to purchased or acquired goods or services.

(2) Downstream activities in which Scope 3 emissions might occur include:

(i) Transportation and distribution of a registrant's sold products, goods or other outputs;

(ii) Processing by a third party of a registrant's sold products;

(iii) Use by a third party of a registrant's sold products;

(iv) End-of-life treatment by a third party of a registrant's sold products;

(v) A registrant's leased assets related principally to the sale or disposition of goods or services;

(vi) A registrant's franchises; and

(vii) Investments by a registrant.

(s) *Transition plan* means a registrant's strategy and implementation plan to reduce climate-related risks, which may include a plan to reduce its GHG emissions in line with its own commitments or commitments of jurisdictions within which it has significant operations.

(t) *Value chain* means the upstream and downstream activities related to a registrant's operations. Upstream activities in connection with a value chain may include activities by a party other than the registrant that relate to the initial stages of a registrant's production of a good

or service (*e.g.*, materials sourcing, materials processing, and supplier activities). Downstream activities in connection with a value chain may include activities by a party other than the registrant that relate to processing materials into a finished product and delivering it or providing a service to the end user (*e.g.*, transportation and distribution, processing of sold products, use of sold products, end of life treatment of sold products, and investments).

**§ 229.1501 (Item 1501) Governance.**

(a)(1) Describe the board of director's oversight of climate-related risks. Include the following, as applicable:

(i) The identity of any board members or board committee responsible for the oversight of climate-related risks;

(ii) Whether any member of the board of directors has expertise in climate-related risks, with disclosure in such detail as necessary to fully describe the nature of the expertise;

(iii) The processes by which the board of directors or board committee discusses climate-related risks, including how the board is informed about climate-related risks, and the frequency of such discussion;

(iv) Whether and how the board of directors or board committee considers climate-related risks as part of its business strategy, risk management, and financial oversight; and

(v) Whether and how the board of directors sets climate-related targets or goals, and how it oversees progress against those targets or goals, including the establishment of any interim targets or goals.

(2) If applicable, a registrant may also describe the board of director's oversight of climate-related opportunities.

(b)(1) Describe management's role in assessing and managing climate-related risks.

Include the following, as applicable:

(i) Whether certain management positions or committees are responsible for assessing and managing climate-related risks and, if so, the identity of such positions or committees and the relevant expertise of the position holders or members in such detail as necessary to fully describe the nature of the expertise;

(ii) The processes by which such positions or committees are informed about and monitor climate-related risks; and

(iii) Whether and how frequently such positions or committees report to the board or a committee of the board on climate-related risks.

(2) If applicable, a registrant may also describe management's role in assessing and managing climate-related opportunities.

**§ 229.1502 (Item 1502) Strategy, business model, and outlook.**

(a) Describe any climate-related risks reasonably likely to have a material impact on the registrant, including on its business or consolidated financial statements, which may manifest over the short, medium, and long term. If applicable, a registrant may also disclose the actual and potential impacts of any climate-related opportunities when responding to any of the provisions in this section.

(1) Discuss such climate-related risks, specifying whether they are physical or transition risks and the nature of the risks presented.

(i) For physical risks, describe the nature of the risk, including if it may be categorized as an acute or chronic risk, and the location and nature of the properties, processes, or operations subject to the physical risk.

(A) If a risk concerns the flooding of buildings, plants, or properties located in flood hazard areas, disclose the percentage of those assets (square meters or acres) that are located in flood hazard areas in addition to their location.

(B) If a risk concerns the location of assets in regions of high or extremely high water stress, disclose the amount of assets (*e.g.*, book value and as a percentage of total assets) located in those regions in addition to their location. Also disclose the percentage of the registrant's total water usage from water withdrawn in those regions.

(ii) For transition risks, describe the nature of the risk, including whether it relates to regulatory, technological, market (including changing consumer, business counterparty, and investor preferences), liability, reputational, or other transition-related factors, and how those factors impact the registrant. A registrant that has significant operations in a jurisdiction that has made a GHG emissions reduction commitment may be exposed to transition risks related to the implementation of the commitment.

(2) Describe how the registrant defines short-, medium-, and long-term time horizons, including how it takes into account or reassesses the expected useful life of the registrant's assets and the time horizons for the registrant's climate-related planning processes and goals.

(b) Describe the actual and potential impacts of any climate-related risks identified in response to paragraph (a) of this section on the registrant's strategy, business model, and outlook.

(1) Include impacts on the registrant's:

(i) Business operations, including the types and locations of its operations;

(ii) Products or services;

(iii) Suppliers and other parties in its value chain;

(iv) Activities to mitigate or adapt to climate-related risks, including adoption of new technologies or processes;

(v) Expenditure for research and development; and

(vi) Any other significant changes or impacts.

(2) Include the time horizon for each described impact (*i.e.*, in the short, medium, or long term, as defined in response to paragraph (a) of this section).

(c) Discuss whether and how any impacts described in response to paragraph (b) of this section are considered as part of the registrant's business strategy, financial planning, and capital allocation. Provide both current and forward-looking disclosures that facilitate an understanding of whether the implications of the identified climate-related risks have been integrated into the registrant's business model or strategy, including how any resources are being used to mitigate climate-related risks. Include in this discussion how any of the metrics referenced in § 210.14-02 of this chapter and § 229.1504 or any of the targets referenced in § 229.1506 relate to the registrant's business model or business strategy. If applicable, include in this discussion the role that carbon offsets or RECs play in the registrant's climate-related business strategy.

(d) Provide a narrative discussion of whether and how any climate-related risks described in response to paragraph (a) of this section have affected or are reasonably likely to affect the registrant's consolidated financial statements. The discussion should include any of the climate-related metrics referenced in § 210.14-02 of this chapter that demonstrate that the identified climate-related risks have had a material impact on reported financial condition or operations.

(e)(1) If a registrant maintains an internal carbon price, disclose:

(i) The price in units of the registrant's reporting currency per metric ton of CO<sub>2</sub>e;

(ii) The total price, including how the total price is estimated to change over time, if applicable;

(iii) The boundaries for measurement of overall CO<sub>2</sub>e on which the total price is based if different from the GHG emission organizational boundary required pursuant to § 229.1504(e)(2); and

(iv) The rationale for selecting the internal carbon price applied.

(2) Describe how the registrant uses any internal carbon price described in response to paragraph (e)(1) of this section to evaluate and manage climate-related risks.

(3) If a registrant uses more than one internal carbon price, it must provide the disclosures required by this section for each internal carbon price, and disclose its reasons for using different prices.

(f) Describe the resilience of the registrant's business strategy in light of potential future changes in climate-related risks. Describe any analytical tools, such as scenario analysis, that the registrant uses to assess the impact of climate-related risks on its business and consolidated financial statements, and to support the resilience of its strategy and business model. If the registrant uses scenario analysis to assess the resilience of its business strategy to climate-related risks, disclose the scenarios considered (*e.g.*, an increase of no greater than 3 °C, 2 °C, or 1.5 °C above pre-industrial levels), including parameters, assumptions, and analytical choices, and the projected principal financial impacts on the registrant's business strategy under each scenario. The disclosure should include both qualitative and quantitative information.

**§ 229.1503 (Item 1503) Risk management.**

(a) Describe any processes the registrant has for identifying, assessing, and managing climate-related risks. If applicable, a registrant may also describe any processes for identifying,

assessing, and managing climate-related opportunities when responding to any of the provisions in this section.

(1) When describing any processes for identifying and assessing climate-related risks, disclose, as applicable, how the registrant:

(i) Determines the relative significance of climate-related risks compared to other risks;

(ii) Considers existing or likely regulatory requirements or policies, such as GHG emissions limits, when identifying climate-related risks;

(iii) Considers shifts in customer or counterparty preferences, technological changes, or changes in market prices in assessing potential transition risks; and

(iv) Determines the materiality of climate-related risks, including how it assesses the potential scope and impact of an identified climate-related risk, such as the risks identified in response to § 229.1502.

(2) When describing any processes for managing climate-related risks, disclose, as applicable, how the registrant:

(i) Decides whether to mitigate, accept, or adapt to a particular risk;

(ii) Prioritizes whether to address climate-related risks; and

(iii) Determines how to mitigate any high priority risks.

(b) Disclose whether and how any processes described in response to paragraph (a) of this section are integrated into the registrant's overall risk management system or processes. If a separate board or management committee is responsible for assessing and managing climate-related risks, a registrant should disclose how that committee interacts with the registrant's board or management committee governing risks.

(c)(1) If the registrant has adopted a transition plan as part of its climate-related risk management strategy, describe the plan, including the relevant metrics and targets used to identify and manage any physical and transition risks. To allow for an understanding of the registrant's progress to meet the plan's targets or goals over time, a registrant must update its disclosure about the transition plan each fiscal year by describing the actions taken during the year to achieve the plan's targets or goals.

(2) If the registrant has adopted a transition plan, discuss, as applicable:

(i) How the registrant plans to mitigate or adapt to any identified physical risks, including but not limited to those concerning energy, land, or water use and management;

(ii) How the registrant plans to mitigate or adapt to any identified transition risks, including the following:

(A) Laws, regulations, or policies that:

(1) Restrict GHG emissions or products with high GHG footprints, including emissions caps; or

(2) Require the protection of high conservation value land or natural assets;

(B) Imposition of a carbon price; and

(C) Changing demands or preferences of consumers, investors, employees, and business counterparties.

(3) If applicable, a registrant that has adopted a transition plan as part of its climate-related risk management strategy may also describe how it plans to achieve any identified climate-related opportunities, such as:

(i) The production of products that may facilitate the transition to a lower carbon economy, such as low emission modes of transportation and supporting infrastructure;

- (ii) The generation or use of renewable power;
  - (iii) The production or use of low waste, recycled, or other consumer products that require less carbon intensive production methods;
  - (iv) The setting of conservation goals and targets that would help reduce GHG emissions;
- and
- (v) The provision of services related to any transition to a lower carbon economy.

**§ 229.1504 (Item 1504) GHG emissions metrics.**

(a) *General.* Disclose a registrant's GHG emissions, as defined in § 229.1500(h), for its most recently completed fiscal year, and for the historical fiscal years included in its consolidated financial statements in the filing, to the extent such historical GHG emissions data is reasonably available.

(1) For each required disclosure of a registrant's Scopes 1, 2, and 3 emissions, disclose the emissions both disaggregated by each constituent greenhouse gas, as specified in § 229.1500(g), and in the aggregate, expressed in terms of CO<sub>2</sub>e.

(2) When disclosing a registrant's Scopes 1, 2, and 3 emissions, exclude the impact of any purchased or generated offsets.

(b) *Scopes 1 and 2 emissions.*

(1) Disclose the registrant's total Scope 1 emissions and total Scope 2 emissions separately after calculating them from all sources that are included in the registrant's organizational and operational boundaries.

(2) When calculating emissions pursuant to paragraph (b)(1) of this section, a registrant may exclude emissions from investments that are not consolidated, are not proportionately

consolidated, or that do not qualify for the equity method of accounting in the registrant's consolidated financial statements.

(c) *Scope 3 emissions.*

(1) Disclose the registrant's total Scope 3 emissions if material. A registrant must also disclose its Scope 3 emissions if it has set a GHG emissions reduction target or goal that includes its Scope 3 emissions. Disclosure of a registrant's Scope 3 emissions must be separate from disclosure of its Scopes 1 and 2 emissions. If required to disclose Scope 3 emissions, identify the categories of upstream or downstream activities that have been included in the calculation of the Scope 3 emissions. If any category of Scope 3 emissions is significant to the registrant, identify all such categories and provide Scope 3 emissions data separately for them, together with the registrant's total Scope 3 emissions.

(2) If required to disclose Scope 3 emissions, describe the data sources used to calculate the registrant's Scope 3 emissions, including the use of any of the following:

(i) Emissions reported by parties in the registrant's value chain, and whether such reports were verified by the registrant or a third party, or unverified;

(ii) Data concerning specific activities, as reported by parties in the registrant's value chain; and

(iii) Data derived from economic studies, published databases, government statistics, industry associations, or other third-party sources outside of a registrant's value chain, including industry averages of emissions, activities, or economic data.

(3) A smaller reporting company, as defined by §§ 229.10(f)(1), 230.405, and 240.12b-2 of this chapter, is exempt from, and need not comply with, the disclosure requirements of this paragraph (c).

(d) *GHG intensity.*

(1) Using the sum of Scope 1 and 2 emissions, disclose GHG intensity in terms of metric tons of CO<sub>2</sub>e per unit of total revenue (using the registrant's reporting currency) and per unit of production relevant to the registrant's industry for each fiscal year included in the consolidated financial statements. Disclose the basis for the unit of production used.

(2) If Scope 3 emissions are otherwise disclosed, separately disclose GHG intensity using Scope 3 emissions only.

(3) If a registrant has no revenue or unit of production for a fiscal year, it must disclose another financial measure of GHG intensity or another measure of GHG intensity per unit of economic output, as applicable, with an explanation of why the particular measure was used.

(4) A registrant may also disclose other measures of GHG intensity, in addition to metric tons of CO<sub>2</sub>e per unit of total revenue (using the registrant's reporting currency) and per unit of production, if it includes an explanation of why a particular measure was used and why the registrant believes such measure provides useful information to investors.

(e) *Methodology and related instructions.*

(1) A registrant must describe the methodology, significant inputs, and significant assumptions used to calculate its GHG emissions. The description of the registrant's methodology must include the registrant's organizational boundaries, operational boundaries (including any approach to categorization of emissions and emissions sources), calculation approach (including any emission factors used and the source of the emission factors), and any calculation tools used to calculate the GHG emissions. A registrant's description of its approach to categorization of emissions and emissions sources should explain how it determined the

emissions to include as direct emissions, for the purpose of calculating its Scope 1 emissions, and indirect emissions, for the purpose of calculating its Scope 2 emissions.

(2) The organizational boundary and any determination of whether a registrant owns or controls a particular source for GHG emissions must be consistent with the scope of entities, operations, assets, and other holdings within its business organization as those included in, and based upon the same set of accounting principles applicable to, the registrant's consolidated financial statements.

(3) A registrant must use the same organizational boundaries when calculating its Scope 1 emissions and Scope 2 emissions. If required to disclose Scope 3 emissions, a registrant must also apply the same organizational boundaries used when determining its Scopes 1 and 2 emissions as an initial step in identifying the sources of indirect emissions from activities in its value chain over which it lacks ownership and control and which must be included in the calculation of its Scope 3 emissions. Once a registrant has determined its organizational and operational boundaries, a registrant must be consistent in its use of those boundaries when calculating its GHG emissions.

(4) A registrant may use reasonable estimates when disclosing its GHG emissions as long as it also describes the assumptions underlying, and its reasons for using, the estimates.

(i) When disclosing its GHG emissions for its most recently completed fiscal year, if actual reported data is not reasonably available, a registrant may use a reasonable estimate of its GHG emissions for its fourth fiscal quarter, together with actual, determined GHG emissions data for the first three fiscal quarters, as long as the registrant promptly discloses in a subsequent filing any material difference between the estimate used and the actual, determined GHG emissions data for the fourth fiscal quarter.

(ii) In addition to the use of reasonable estimates, a registrant may present its estimated Scope 3 emissions in terms of a range as long as it discloses its reasons for using the range and the underlying assumptions.

(5) A registrant must disclose, to the extent material and as applicable, any use of third-party data when calculating its GHG emissions, regardless of the particular scope of emissions. When disclosing the use of third-party data, it must identify the source of such data and the process the registrant undertook to obtain and assess such data.

(6) A registrant must disclose any material change to the methodology or assumptions underlying its GHG emissions disclosure from the previous fiscal year.

(7) A registrant must disclose, to the extent material and as applicable, any gaps in the data required to calculate its GHG emissions. A registrant's GHG emissions disclosure should provide investors with a reasonably complete understanding of the registrant's GHG emissions in each scope of emissions. If a registrant discloses any data gaps encountered when calculating its GHG emissions, it must also discuss whether it used proxy data or another method to address such gaps, and how its accounting for any data gaps has affected the accuracy or completeness of its GHG emissions disclosure.

(8) When determining whether its Scope 3 emissions are material, and when disclosing those emissions, in addition to emissions from activities in its value chain, a registrant must include GHG emissions from outsourced activities that it previously conducted as part of its own operations, as reflected in the financial statements for the periods covered in the filing.

(9) If required to disclose Scope 3 emissions, when calculating those emissions, if there was any significant overlap in the categories of activities producing the Scope 3 emissions, a

registrant must describe the overlap, how it accounted for the overlap, and the effect on its disclosed total Scope 3 emissions.

*(f) Liability for Scope 3 emissions disclosures.*

(1) A statement within the coverage of paragraph (f)(2) of this section that is made by or on behalf of a registrant is deemed not to be a fraudulent statement (as defined in paragraph (f)(3) of this section), unless it is shown that such statement was made or reaffirmed without a reasonable basis or was disclosed other than in good faith.

(2) This paragraph (f) applies to any statement regarding Scope 3 emissions that is disclosed pursuant to §§ 229.1500 through 229.1506 and made in a document filed with the Commission.

(3) For the purpose of this paragraph (f), the term fraudulent statement shall mean a statement that is an untrue statement of material fact, a statement false or misleading with respect to any material fact, an omission to state a material fact necessary to make a statement not misleading, or that constitutes the employment of a manipulative, deceptive, or fraudulent device, contrivance, scheme, transaction, act, practice, course of business, or an artifice to defraud as those terms are used in the Securities Act of 1933 or the Securities Exchange Act of 1934 or the rules or regulations promulgated thereunder.

**§ 229.1505 Attestation of Scope 1 and Scope 2 emissions disclosure.**

*(a) Attestation.*

(1) A registrant that is required to provide Scope 1 and Scope 2 emissions disclosure pursuant to § 229.1504 and that is an accelerated filer or a large accelerated filer must include an attestation report covering such disclosure in the relevant filing. For filings made by an accelerated filer or a large accelerated filer for the second and third fiscal years after the

compliance date for § 229.1504, the attestation engagement must, at a minimum, be at a limited assurance level and cover the registrant's Scope 1 and Scope 2 emissions disclosure. For filings made by an accelerated filer or large accelerated filer for the fourth fiscal year after the compliance date for § 229.1504 and thereafter, the attestation engagement must be at a reasonable assurance level and, at a minimum, cover the registrant's Scope 1 and Scope 2 emissions disclosures.

(2) Any attestation report required under this section must be provided pursuant to standards that are publicly available at no cost and are established by a body or group that has followed due process procedures, including the broad distribution of the framework for public comment. An accelerated filer or a large accelerated filer obtaining voluntary assurance prior to the first required fiscal year must comply with subparagraph (e) of this section. Voluntary assurance obtained by an accelerated filer or a large accelerated filer thereafter must follow the requirements of paragraphs (b) through (d) of this section and must use the same attestation standard as the required assurance over Scope 1 and Scope 2.

(b) *GHG emissions attestation provider.* The GHG emissions attestation report required by paragraph (a) of this section must be prepared and signed by a GHG emissions attestation provider. A GHG emissions attestation provider means a person or a firm that has all of the following characteristics:

(1) Is an expert in GHG emissions by virtue of having significant experience in measuring, analyzing, reporting, or attesting to GHG emissions. Significant experience means having sufficient competence and capabilities necessary to:

(i) Perform engagements in accordance with professional standards and applicable legal and regulatory requirements; and

(ii) Enable the service provider to issue reports that are appropriate under the circumstances.

(2) Is independent with respect to the registrant, and any of its affiliates, for whom it is providing the attestation report, during the attestation and professional engagement period.

(i) A GHG emissions attestation provider is not independent if such attestation provider is not, or a reasonable investor with knowledge of all relevant facts and circumstances would conclude that such attestation provider is not, capable of exercising objective and impartial judgment on all issues encompassed within the attestation provider's engagement.

(ii) In determining whether a GHG emissions attestation provider is independent, the Commission will consider:

(A) Whether a relationship or the provision of a service creates a mutual or conflicting interest between the attestation provider and the registrant (or any of its affiliates), places the attestation provider in the position of attesting such attestation provider's own work, results in the attestation provider acting as management or an employee of the registrant (or any of its affiliates), or places the attestation provider in a position of being an advocate for the registrant (or any of its affiliates); and

(B) All relevant circumstances, including all financial or other relationships between the attestation provider and the registrant (or any of its affiliates), and not just those relating to reports filed with the Commission.

(iii) The term "affiliates" as used in this section has the meaning provided in 17 CFR 210.2-01, except that references to "audit" are deemed to be references to the attestation services provided pursuant to this section.

(iv) The term “attestation and professional engagement period” as used in this section means both:

(A) The period covered by the attestation report; and

(B) The period of the engagement to attest to the registrant’s GHG emissions or to prepare a report filed with the Commission (“the professional engagement period”). The professional engagement period begins when the GHG attestation service provider either signs an initial engagement letter (or other agreement to attest a registrant’s GHG emissions) or begins attest procedures, whichever is earlier.

(c) *Attestation report requirements.* The GHG emissions attestation report required by paragraph (a) of this section must be included in the separately captioned “Climate-Related Disclosure” section in the filing. The form and content of the attestation report must follow the requirements set forth by the attestation standard (or standards) used by the GHG emissions attestation provider. Notwithstanding the foregoing, at a minimum the report must include the following:

(1) An identification or description of the subject matter or assertion being reported on, including the point in time or period of time to which the measurement or evaluation of the subject matter or assertion relates;

(2) An identification of the criteria against which the subject matter was measured or evaluated;

(3) A statement that identifies the level of assurance provided and describes the nature of the engagement;

(4) A statement that identifies the attestation standard (or standards) used;

(5) A statement that describes the registrant’s responsibility to report on the subject matter or assertion being reported on;

(6) A statement that describes the attestation provider’s responsibilities in connection with the preparation of the attestation report;

(7) A statement that the attestation provider is independent, as required by paragraph (a) of this section;

(8) For a limited assurance engagement, a description of the work performed as a basis for the attestation provider’s conclusion;

(9) A statement that describes significant inherent limitations, if any, associated with the measurement or evaluation of the subject matter against the criteria;

(10) The GHG emissions attestation provider’s conclusion or opinion, based on the applicable attestation standard(s) used;

(11) The signature of the attestation provider (whether by an individual or a person signing on behalf of the attestation provider’s firm);

(12) The city and state where the attestation report has been issued; and

(13) The date of the report.

(d) *Additional disclosures by the registrant.* In addition to including the GHG emissions attestation report required by paragraph (a) of this section, a large accelerated filer and an accelerated filer must disclose the following information within the separately captioned “Climate-Related Disclosure” section in the filing, after requesting relevant information from any GHG emissions attestation provider as necessary:

(1) Whether the attestation provider has a license from any licensing or accreditation body to provide assurance, and if so, identify the licensing or accreditation body, and whether the attestation provider is a member in good standing of that licensing or accreditation body;

(2) Whether the GHG emissions attestation engagement is subject to any oversight inspection program, and if so, which program (or programs); and

(3) Whether the attestation provider is subject to record-keeping requirements with respect to the work performed for the GHG emissions attestation engagement and, if so, identify the record-keeping requirements and the duration of those requirements.

(e) *Disclosure of voluntary attestation.* A registrant that is not required to include a GHG emissions attestation report pursuant to paragraph (a) of this section must disclose within the separately captioned “Climate-Related Disclosure” section in the filing the following information if the registrant’s GHG emissions disclosures were subject to third-party attestation or verification:

(1) Identify the provider of such attestation or verification;

(2) Describe the attestation or verification standard used;

(3) Describe the level and scope of attestation or verification provided;

(4) Briefly describe the results of the attestation or verification;

(5) Disclose whether the third-party service provider has any other business relationships with or has provided any other professional services to the registrant that may lead to an impairment of the service provider’s independence with respect to the registrant; and

(6) Disclose any oversight inspection program to which the service provider is subject (*e.g.*, the AICPA’s peer review program).

**§ 229.1506 (Item 1506) Targets and goals.**

(a)(1) A registrant must provide disclosure pursuant to this section if it has set any targets or goals related to the reduction of GHG emissions, or any other climate-related target or goal (e.g., regarding energy usage, water usage, conservation or ecosystem restoration, or revenues from low-carbon products) such as actual or anticipated regulatory requirements, market constraints, or other goals established by a climate-related treaty, law, regulation, policy, or organization.

(2) A registrant may provide the disclosure required by this section as part of its disclosure in response to § 229.1502 or § 229.1503.

(b) If the registrant has set climate-related targets or goals, disclose the targets or goals, including, as applicable, a description of:

(1) The scope of activities and emissions included in the target;

(2) The unit of measurement, including whether the target is absolute or intensity based;

(3) The defined time horizon by which the target is intended to be achieved, and whether the time horizon is consistent with one or more goals established by a climate-related treaty, law, regulation, policy, or organization;

(4) The defined baseline time period and baseline emissions against which progress will be tracked with a consistent base year set for multiple targets;

(5) Any interim targets set by the registrant; and

(6) How the registrant intends to meet its climate-related targets or goals. For example, for a target or goal regarding net GHG emissions reduction, the discussion could include a strategy to increase energy efficiency, transition to lower carbon products, purchase carbon offsets or RECs, or engage in carbon removal and carbon storage.

(c) Disclose relevant data to indicate whether the registrant is making progress toward meeting the target or goal and how such progress has been achieved. A registrant must update this disclosure each fiscal year by describing the actions taken during the year to achieve its targets or goals.

(d) If carbon offsets or RECs have been used as part of a registrant's plan to achieve climate-related targets or goals, disclose the amount of carbon reduction represented by the offsets or the amount of generated renewable energy represented by the RECS, the source of the offsets or RECs, a description and location of the underlying projects, any registries or other authentication of the offsets or RECs, and the cost of the offsets or RECs.

**§ 229.1507 (Item 1507) Interactive data requirement.**

Provide the disclosure required by this Subpart 1500 in an Interactive Data File as required by § 232.405 of this chapter (Rule 405 of Regulation S-T) in accordance with the EDGAR Filer Manual.

**PART 232— REGULATION S-T—GENERAL RULES AND REGULATIONS FOR ELECTRONIC FILINGS**

6. The general authority citation for part 232 continues to read as follows:

**Authority:** 15 U.S.C. 77c, 77f, 77g, 77h, 77j, 77s(a), 77z-3, 77sss(a), 78c(b), 78l, 78m, 78n, 78o(d), 78w(a), 78ll, 80a-6(c), 80a-8, 80a-29, 80a-30, 80a-37, 7201 et seq.; and 18 U.S.C. 1350, unless otherwise noted.

\* \* \* \* \*

7. Amend §232.405 by adding paragraphs (b)(1)(iii), (b)(3)(i)(C), and (b)(4) as follows:

**§232.405 Interactive Data File submissions.**

\* \* \* \* \*

(b) \* \* \*

(1) \* \* \*

(iii) As applicable, the disclosure set forth in paragraph (4) of this section.

\* \* \* \* \*

(3) \* \* \*

(i) \* \* \*

(C) The disclosure set forth in paragraph (4) of this section.

(4) An Interactive Data File must consist of the disclosure provided under 17 CFR 229 (Regulation S-K) and related provisions that is required to be tagged, including, as applicable:

(i) The climate-related information required by Subpart 1500 of Regulation S-K

( §§ 229.1500 through 229.1507 of this chapter).

\* \* \* \* \*

## **PART 239—FORMS PRESCRIBED UNDER THE SECURITIES ACT OF 1933**

8. The general authority citation for part 239 continues to read as follows:

**Authority:** 15 U.S.C. 77c, 77f, 77g, 77h, 77j, 77s, 77z-2, 77z-3, 77sss, 78c, 78l, 78m, 78n, 78o(d), 78o-7 note, 78u-5, 78w(a), 78ll, 78mm, 80a-2(a), 80a-3, 80a-8, 80a-9, 80a-10, 80a-13, 80a-24, 80a-26, 80a-29, 80a-30, and 80a-37; and sec. 107, Pub. L. 112-106, 126 Stat. 312, unless otherwise noted.

\* \* \* \* \*

9. Amend Form S-1 (referenced in § 239.11) by adding Item 11(o) to Part I to read as follows:

**Note: The text of Form S-1 does not, and these amendments will not, appear in the Code of Federal Regulations.**

## FORM S-1

\* \* \* \* \*

### PART I—INFORMATION REQUIRED IN PROSPECTUS

\* \* \* \* \*

#### Item 11. Information with Respect to the Registrant.

\* \* \* \* \*

(o) Information required by Subpart 1500 of Regulation S-K (17 CFR 229.1500 through 229.1507), in a part of the registration statement that is separately captioned as *Climate-Related Disclosure*. Pursuant to Rule 411 (17 CFR 230.411) and General Instruction VII of this form, a registrant may incorporate by reference disclosure from other parts of the registration statement (e.g., Risk Factors, Business, Management’s Discussion and Analysis, or the financial statements) or from a separately filed annual report or other periodic report into the Climate-Related Disclosure item if it is responsive to the topics specified in Items 1500 through 1507 of Regulation S-K.

\* \* \* \* \*

10. Amend Form S-11 (referenced in § 239.18) by adding Item 9 to Part I to read as follows:

**Note: The text of Form S-11 does not, and these amendments will not, appear in the Code of Federal Regulations.**

## FORM S-11

\* \* \* \* \*

### PART I. INFORMATION REQUIRED IN PROSPECTUS

\* \* \* \* \*

Item 9. Climate-related disclosure. Provide the information required by Subpart 1500 of Regulation S-K (17 CFR 229.1500 through 229.1507), in a part of the registration statement that is separately captioned as *Climate-Related Disclosure*. Pursuant to Rule 411 (17 CFR 230.411) and General Instruction H of this form, a registrant may incorporate by reference disclosure from other parts of the registration statement (*e.g.*, Risk Factors, Management’s Discussion and Analysis, or the financial statements) or from a separately filed annual report or other periodic report into the Climate-Related Disclosure item if it is responsive to the topics specified in Items 1500 through 1507 of Regulation S-K.

\* \* \* \* \*

11. Amend Form S-4 (referenced in § 239.25) by:

a. Adding paragraph (k) to Item 14 to Part I; and

b. Adding paragraph (b)(11) to Item 17 to Part I.

The additions read as follows:

**Note: The text of Form S-4 does not, and these amendments will not, appear in the Code of Federal Regulations.**

#### **FORM S-4**

\* \* \* \* \*

#### **PART I**

#### **INFORMATION REQUIRED IN THE PROSPECTUS**

\* \* \* \* \*

Item 14. Information with Respect to Registrants Other Than S-3 Registrants.

\* \* \* \* \*

(k) Information required by Subpart 1500 of Regulation S-K (17 CFR 229.1500 through 229.1507), in a part of the registration statement that is separately captioned as *Climate-Related Disclosure*. Pursuant to Rule 411 (17 CFR 230.411) a registrant may incorporate by reference disclosure from other parts of the registration statement (*e.g.*, Risk Factors, Description of Business, Management’s Discussion and Analysis, or the financial statements) into the Climate-Related Disclosure item if it is responsive to the topics specified in Items 1500 through 1507 of Regulation S-K.

\* \* \* \* \*

Item 17. Information with Respect to Companies Other Than S-3 Companies.

\* \* \* \* \*

(b) \* \* \*

(11) Information required by Items 1500-1507 of Regulation S-K (17 CFR § 229.1500 through § 229.1507), in a part of the registration statement that is separately captioned as *Climate-Related Disclosure of Company Being Acquired*.

\* \* \* \* \*

12. Amend Form F-4 (referenced in § 239.34) by:

- a. Adding paragraph (k) to Item 14 to Part I; and
- b. Amending paragraph (3) to Item 17(b) to Part I.

The additions read as follows:

**-Note: The text of Form F-4 does not, and these amendments will not, appear in the Code of Federal Regulations.**

**FORM F-4**

Section 249.220f is also issued under secs. 3(a), 202, 208, 302, 306(a), 401(a), 401(b), 406 and 407, Pub. L. 107-204, 116 Stat. 745, and secs. 2 and 3, Pub. L. 116-222, 134 Stat. 1063.

Section 249.308a is also issued under secs. 3(a) and 302, Pub. L. 107-204, 116 Stat. 745.

\* \* \* \* \*

Section 249.310 is also issued under secs. 3(a), 202, 208, 302, 406 and 407, Pub. L. 107-204, 116 Stat. 745.

\* \* \* \* \*

14. Amend Form 10 (referenced in § 249.210) by adding Item 3.A (“Climate-Related Disclosure”) to read as follows:

**Note: The text of Form 10 does not, and these amendments will not, appear in the Code of Federal Regulations.**

### FORM 10

\* \* \* \* \*

Item 3.A Climate-Related Disclosure. Provide the information required by Subpart 1500 of Regulation S-K (17 CFR 229.1500 through 229.1507), in a part of the registration statement that is separately captioned as *Climate-Related Disclosure*. Pursuant to Exchange Act Rule 12b-23 (17 CFR 240.12b-23) and General Instruction F of this form, a registrant may incorporate by reference disclosure from other parts of the registration statement (*e.g.*, Risk Factors, Business, Management’s Discussion and Analysis, or the financial statements) into the Climate-Related Disclosure item if it is responsive to the topics specified in Item 1500 through 1507 of Regulation S-K.

\* \* \* \* \*

15. Amend Form 20-F (referenced in § 249.220f) by adding Item 3.E (“Climate-related disclosure”) to Part I to read as follows:

**Note: The text of Form 20-F does not, and these amendments will not, appear in the Code of Federal Regulations.**

### FORM 20-F

\* \* \* \* \*

## PART I

\* \* \* \* \*

### Item 3. Key Information

\* \* \* \* \*

#### E. Climate-related disclosure.

1. *Required disclosure.* The company must provide disclosure responsive to the topics specified in Subpart 1500 of Regulation S-K (17 CFR 229.1500 through 229.1507) in a part of the registration statement or annual report that is separately captioned as *Climate-Related Disclosure*.

2. *Incorporation by reference.* Pursuant to Rule 12b-23 (17 CFR 240.12b-23), the company may incorporate by reference disclosure from other parts of the registration statement or annual report (*e.g.*, Risk Factors, Information on the Company, Operating and Financial Review and Prospects, or the financial statements) into the Climate-Related Disclosure item if it is responsive to the topics specified in Item 1500 through 1507 of Regulation S-K.

\* \* \* \* \*

16. Amend Form 6-K (referenced in § 249.306) by adding the phrase “climate-related disclosure;” before the phrase “and any other information which the registrant deems of material importance to security holders.” in the second paragraph of General Instruction B.

17. Amend Form 10-Q (referenced in § 249.308a) by adding Item 1.B (“Climate-Related disclosure”) to Part II (“Other Information”) to read as follows:

**Note: The text of Form 10-Q does not, and these amendments will not, appear in the Code of Federal Regulations.**

**FORM 10-Q**

\* \* \* \* \*

Item 1B. Climate-Related Disclosure. Disclose any material changes to the disclosures provided in response to Item 6 (“Climate-related disclosure”) of Part II to the registrant’s Form 10-K (17 CFR 229.310).

\* \* \* \* \*

18. Amend Form 10-K (referenced in § 249.310) by:

a. Revising paragraph (1)(g) of General Instruction J (“Use of this Form by Asset-backed Issuers”); and

b. Adding Item 6 (“Climate-Related Disclosure”) to Part II to read as follows:

The revision and addition read as follows:

**Note: The text of Form 10-K does not, and these amendments will not, appear in the Code of Federal Regulations.**

**FORM 10-K**

\* \* \* \* \*

**GENERAL INSTRUCTIONS**

\* \* \* \* \*

J. Use of this Form by Asset-Backed Issuers.

\* \* \* \* \*

(1) \* \* \*

(g) Item 6, Climate-Related Disclosure;

\* \* \* \* \*

Part II

\* \* \* \* \*

Item 6. Climate-Related Disclosure

Provide the disclosure required by Subpart 1500 of Regulation S-K (17 CFR 229.1500 through 229.1507) in a part of the annual report that is separately captioned as *Climate-Related Disclosure*. Pursuant to Rule 12b-23 (17 CFR 240.12b-23) and General Instruction G of this form, a registrant may incorporate by reference disclosure from other parts of the registration statement or annual report (*e.g.*, Risk Factors, Business, Management's Discussion and Analysis, or the financial statements) into the Climate-Related Disclosure item if it is responsive to the topics specified in Item 1500 through 1507 of Regulation S-K.

*Secretary.*

## Statement

---

# Public Input Welcomed on Climate Change Disclosures

**Acting Chair Allison Herren Lee**

**March 15, 2021**

In light of demand for climate change information and questions about whether current disclosures adequately inform investors, public input is requested from investors, registrants, and other market participants on climate change disclosure.

The Securities and Exchange Commission (SEC or Commission) has periodically evaluated its regulation of climate change disclosures within the context of its integrated disclosure system. In 2010, the Commission issued an interpretive release that provided guidance to issuers as to how existing disclosure requirements apply to climate change matters.<sup>[1]</sup> The 2010 Climate Change Guidance noted that, depending on the circumstances, information about climate change-related risks and opportunities might be required in a registrant's disclosures related to its description of business, legal proceedings, risk factors, and management's discussion and analysis of financial condition and results of operations. The release outlined certain ways in which climate change may trigger disclosure obligations under the SEC's rules. It noted legislation and regulations governing climate change, international accords, changes in market demand for goods or services, and physical risks associated with climate change.

Since 2010, investor demand for, and company disclosure of information about, climate change risks, impacts, and opportunities has grown dramatically.<sup>[2]</sup> Consequently, questions arise about whether climate change disclosures adequately inform investors about known material risks, uncertainties, impacts, and opportunities, and whether greater consistency could be achieved. In May 2020, the SEC Investor Advisory Committee approved recommendations urging the Commission to begin an effort to update reporting requirements for issuers to include material, decision-useful environmental, social, and governance, or ESG factors.<sup>[3]</sup> In December 2020, the ESG Subcommittee of the SEC Asset Management Advisory Committee issued a preliminary recommendation that the Commission require the adoption of standards by which corporate issuers disclose material ESG risks.<sup>[4]</sup>

I am asking the staff to evaluate our disclosure rules with an eye toward facilitating the disclosure of consistent, comparable, and reliable information on climate change. To facilitate the staff's assessment, set forth below are questions that would be useful to consider as part of this evaluation.<sup>[5]</sup> In addition, a [webform](#) and [email box](#) are now available for the public to provide input on these issues. Public input on the Commission's disclosure rules and guidance as they apply to climate change disclosures, and whether and how they should be modified, can include comments on existing disclosure requirements in Regulation S-K and Regulation S-X (or, for foreign private issuers, Form 20-F), potential new Commission disclosure requirements, and potential new disclosure frameworks that the Commission might adopt or incorporate in its disclosure rules. In addition to the questions set

forth below, comments generally as to how the Commission can best regulate climate change disclosures are welcomed.<sup>[6]</sup>

I encourage commenters to submit empirical data and other information in support of their comments. Original data from respondents, including academics, data providers, and other organizations, may assist in assessing the materiality of climate-related disclosures, and the costs and benefits of different regulatory approaches to climate disclosure.

## Questions for Consideration

1. How can the Commission best regulate, monitor, review, and guide climate change disclosures in order to provide more consistent, comparable, and reliable information for investors while also providing greater clarity to registrants as to what is expected of them? Where and how should such disclosures be provided? Should any such disclosures be included in annual reports, other periodic filings, or otherwise be furnished?
2. What information related to climate risks can be quantified and measured? How are markets currently using quantified information? Are there specific metrics on which all registrants should report (such as, for example, scopes 1, 2, and 3 greenhouse gas emissions, and greenhouse gas reduction goals)? What quantified and measured information or metrics should be disclosed because it may be material to an investment or voting decision? Should disclosures be tiered or scaled based on the size and/or type of registrant? If so, how? Should disclosures be phased in over time? If so, how? How are markets evaluating and pricing externalities of contributions to climate change? Do climate change related impacts affect the cost of capital, and if so, how and in what ways? How have registrants or investors analyzed risks and costs associated with climate change? What are registrants doing internally to evaluate or project climate scenarios, and what information from or about such internal evaluations should be disclosed to investors to inform investment and voting decisions? How does the absence or presence of robust carbon markets impact firms' analysis of the risks and costs associated with climate change?
3. What are the advantages and disadvantages of permitting investors, registrants, and other industry participants to develop disclosure standards mutually agreed by them? Should those standards satisfy minimum disclosure requirements established by the Commission? How should such a system work? What minimum disclosure requirements should the Commission establish if it were to allow industry-led disclosure standards? What level of granularity should be used to define industries (e.g., two-digit SIC, four-digit SIC, etc.)?
4. What are the advantages and disadvantages of establishing different climate change reporting standards for different industries, such as the financial sector, oil and gas, transportation, etc.? How should any such industry-focused standards be developed and implemented?
5. What are the advantages and disadvantages of rules that incorporate or draw on existing frameworks, such as, for example, those developed by the Task Force on Climate-Related Financial Disclosures (TCFD), the Sustainability Accounting Standards Board (SASB), and the Climate Disclosure Standards Board (CDSB)?<sup>[7]</sup> Are there any specific frameworks that the Commission should consider? If so, which frameworks and why?
6. How should any disclosure requirements be updated, improved, augmented, or otherwise changed over time? Should the Commission itself carry out these tasks, or should it adopt or identify criteria for identifying other organization(s) to do so? If the latter, what organization(s) should be responsible for doing so, and what role should the Commission play in governance or funding? Should the Commission designate a climate or ESG disclosure standard setter? If so, what should the characteristics of such a standard setter be? Is there an existing climate disclosure standard setter that the Commission should consider?

7. What is the best approach for requiring climate-related disclosures? For example, should any such disclosures be incorporated into existing rules such as Regulation S-K or Regulation S-X, or should a new regulation devoted entirely to climate risks, opportunities, and impacts be promulgated? Should any such disclosures be filed with or furnished to the Commission?
8. How, if at all, should registrants disclose their internal governance and oversight of climate-related issues? For example, what are the advantages and disadvantages of requiring disclosure concerning the connection between executive or employee compensation and climate change risks and impacts?
9. What are the advantages and disadvantages of developing a single set of global standards applicable to companies around the world, including registrants under the Commission's rules, versus multiple standard setters and standards? If there were to be a single standard setter and set of standards, which one should it be? What are the advantages and disadvantages of establishing a minimum global set of standards as a baseline that individual jurisdictions could build on versus a comprehensive set of standards? If there are multiple standard setters, how can standards be aligned to enhance comparability and reliability? What should be the interaction between any global standard and Commission requirements? If the Commission were to endorse or incorporate a global standard, what are the advantages and disadvantages of having mandatory compliance?
10. How should disclosures under any such standards be enforced or assessed? For example, what are the advantages and disadvantages of making disclosures subject to audit or another form of assurance? If there is an audit or assurance process or requirement, what organization(s) should perform such tasks? What relationship should the Commission or other existing bodies have to such tasks? What assurance framework should the Commission consider requiring or permitting?
11. Should the Commission consider other measures to ensure the reliability of climate-related disclosures? Should the Commission, for example, consider whether management's annual report on internal control over financial reporting and related requirements should be updated to ensure sufficient analysis of controls around climate reporting? Should the Commission consider requiring a certification by the CEO, CFO, or other corporate officer relating to climate disclosures?
12. What are the advantages and disadvantages of a "comply or explain" framework for climate change that would permit registrants to either comply with, or if they do not comply, explain why they have not complied with the disclosure rules? How should this work? Should "comply or explain" apply to all climate change disclosures or just select ones, and why?
13. How should the Commission craft rules that elicit meaningful discussion of the registrant's views on its climate-related risks and opportunities? What are the advantages and disadvantages of requiring disclosed metrics to be accompanied with a sustainability disclosure and analysis section similar to the current Management's Discussion and Analysis of Financial Condition and Results of Operations?
14. What climate-related information is available with respect to private companies, and how should the Commission's rules address private companies' climate disclosures, such as through exempt offerings, or its oversight of certain investment advisers and funds?
15. In addition to climate-related disclosure, the staff is evaluating a range of disclosure issues under the heading of environmental, social, and governance, or ESG, matters. Should climate-related requirements be one component of a broader ESG disclosure framework? How should the Commission craft climate-related disclosure requirements that would complement a broader ESG disclosure standard? How do climate-related disclosure issues relate to the broader spectrum of ESG disclosure issues?

## How to Provide Feedback

Members of the public interested in making their input known on these or other related matters are invited to submit that input via the webform or e-mail address linked below. To help the staff process and review your comments more efficiently, please use only one of these methods. To the extent that you are responding to a

particular question(s) above, please identify such question(s) in your submission. **Please submit comments within 90 days of the date of this statement.**

Submissions will generally be posted on [www.sec.gov](http://www.sec.gov). Submissions received will be posted without change or redaction of personal identifying information. You should only make submissions that you wish to make available publicly.

In addition to, or in lieu of, making a written submission, staff in the Division of Corporation Finance would be happy to meet with members of the public to discuss their feedback on these and other related matters. Please contact Kristina Wyatt, Senior Special Counsel, at (202) 551-3181.

Submit Input: [Webform](#) | [E-mail](#)

# Secretary Haaland Announces Steps to Establish Protections for Culturally Significant Chaco Canyon Landscape

*Interior Department to initiate a collaborative process to better steward the area's cultural, historic, and geologic values*

---

11/15/2021

---

Date: Monday, November 15, 2021

Contact: [Interior\\_Press@ios.doi.gov](mailto:Interior_Press@ios.doi.gov)

**WASHINGTON** — During the Biden-Harris administration's first White House Tribal Nations Summit later today, President Biden will announce that the Department of the Interior is taking steps to protect the Chaco Canyon and the greater connected landscape with a rich Tribal and cultural legacy in northwest New Mexico.

The Bureau of Land Management (BLM) will initiate consideration of a 20-year withdrawal of federal lands within a 10-mile radius around Chaco Culture National Historical Park, which would bar new federal oil and gas leasing on those lands.

“Chaco Canyon is a sacred place that holds deep meaning for the Indigenous peoples whose ancestors lived, worked, and thrived in that high desert community,” said **Secretary Deb Haaland**. “Now is the time to consider more enduring protections for the living landscape that is Chaco, so that we can pass on this rich cultural legacy to future generations. I value and appreciate the many Tribal leaders, elected officials, and stakeholders who have persisted in their work to conserve this special area.”

In the coming weeks, the BLM intends to publish a notice in the Federal Register that will commence a two-year segregation of the federal lands while the bureau conducts an environmental analysis and seeks public comment on the proposed administrative withdrawal. BLM will also initiate formal Tribal consultation. The segregation and potential withdrawal would not affect existing valid leases or rights and would not apply to minerals owned by private, State, or Tribal entities.

Secretary Haaland also directed the Interior Department to undertake a broader assessment of the Greater Chaco cultural landscape to ensure that public land management better reflects the sacred sites, stories, and cultural resources in the region. Beginning in early 2022, the BLM and the Bureau of Indian Affairs (BIA) will co-lead discussions with Tribes, communities, elected officials, and interested parties to explore ways the Interior Department can manage existing energy development, honor sensitive areas important to Tribes, and build collaborative management frameworks toward a sustainable economic future for the region.

“Today’s announcement has been years in the making,” said **BLM Director Tracy Stone-Manning**. “We look forward to kicking off a broader regional conversation with the many people who care deeply about the Greater Chaco landscape on how we can best manage the cultural and natural values unique to this special place.”

“This important step shows the Biden-Harris administration’s commitment to protecting sacred places for Indigenous people and is a great example of how Tribally-led conservation can advance the nation’s goal of addressing climate change,” said **Assistant Secretary for Indian Affairs Bryan Newland**. In July, Assistant Secretary Newland toured the Chaco Culture National Historical Park, and met with the All Pueblo Council of Governors, Chaco Tribal Heritage

Association, Tribal leaders from the Navajo Nation, and individual Navajo allottees regarding land use in the Chaco Canyon region.

Today's announcement builds on years of efforts by the Pueblos and Tribes, local communities, advocates, and elected officials to protect the greater Chaco Canyon area. Most recently, Congress instituted a one-year pause on new federal oil and gas leasing within a 10-mile radius of the park, as well as appropriated funding for ethnographic studies in the surrounding region. The withdrawal process under consideration will be informed by the ongoing ethnographic studies. This effort also complements the existing joint BLM-BIA effort to update land management plans in the area.

Chaco Canyon is unique and is one of the world's most culturally significant landscapes. Located in the high desert of northwest New Mexico, this valley served as the center of the Chacoan culture for a roughly 400-year span, from 850 - 1250. Today, some of Chaco Canyon is protected as Chaco Culture National Historical Park, which honors the landscape of mountains, mesas, and sacred places that have deep spiritual meaning to this day. The park and related areas were designated as a UNESCO World Heritage Site in 1987, one of only two dozen sites in the United States.

More information can be found on [BLM's website](#).

# The United States Officially Rejoins the Paris Agreement

PRESS STATEMENT

ANTONY J. BLINKEN, SECRETARY OF STATE

FEBRUARY 19, 2021

Share

On January 20, on his first day in office, President Biden signed the instrument to bring the United States back into the Paris Agreement. Per the terms of the Agreement, the United States officially becomes a Party again today.

The Paris Agreement is an unprecedented framework for global action. We know because we helped design it and make it a reality. Its purpose is both simple and expansive: to help us all avoid catastrophic planetary warming and to build resilience around the world to the impacts from climate change we already see.

Now, as momentous as our joining the Agreement was in 2016 — and as momentous as our rejoining is today — what we do in the coming weeks, months, and years is even more

important.

You have seen and will continue to see us weaving climate change into our most important bilateral and multilateral conversations at all levels. In these conversations, we're asking other leaders: how can we do more together?

Climate change and science diplomacy can never again be "add-ons" in our foreign policy discussions. Addressing the real threats from climate change and listening to our scientists is at the center of our domestic and foreign policy priorities. It is vital in our discussions of national security, migration, international health efforts, and in our economic diplomacy and trade talks.

We are reengaging the world on all fronts, including at the President's April 22nd Leaders' Climate Summit. And further out, we are very much looking forward to working with the United Kingdom and other nations around the world to make COP26 a success.

## BRIEFING ROOM

# Executive Order on Tackling the Climate Crisis at Home and Abroad

JANUARY 27, 2021 • PRESIDENTIAL ACTIONS

The United States and the world face a profound climate crisis. We have a narrow moment to pursue action at home and abroad in order to avoid the most catastrophic impacts of that crisis and to seize the opportunity that tackling climate change presents. Domestic action must go hand in hand with United States international leadership, aimed at significantly enhancing global action. Together, we must listen to science and meet the moment.

By the authority vested in me as President by the Constitution and the laws of the United States of America, it is hereby ordered as follows:

## PART I – PUTTING THE CLIMATE CRISIS AT THE CENTER OF UNITED STATES FOREIGN POLICY AND NATIONAL SECURITY

Section 101. Policy. United States international engagement to address climate change — which has become a climate crisis — is more necessary and urgent than ever. The scientific community has made clear that the scale and speed of necessary action is greater than previously believed. There is little time left to avoid setting the world on a dangerous, potentially catastrophic, climate trajectory. Responding to the climate crisis will require both significant short-term global reductions in greenhouse gas emissions and net-zero global emissions by mid-century or before.

It is the policy of my Administration that climate considerations shall be an essential element of United States foreign policy and national security. The United States will work with other countries and partners, both bilaterally and multilaterally, to put the world on a sustainable climate pathway. The United States will also move quickly to build resilience, both at home and abroad, against the impacts of climate change that are already manifest and will continue to intensify according to current trajectories.

Sec. 102. Purpose. This order builds on and reaffirms actions my Administration has already taken to place the climate crisis at the forefront of this Nation's foreign policy and national

security planning, including submitting the United States instrument of acceptance to rejoin the Paris Agreement. In implementing — and building upon — the Paris Agreement’s three overarching objectives (a safe global temperature, increased climate resilience, and financial flows aligned with a pathway toward low greenhouse gas emissions and climate-resilient development), the United States will exercise its leadership to promote a significant increase in global climate ambition to meet the climate challenge. In this regard:

(a) I will host an early Leaders’ Climate Summit aimed at raising climate ambition and making a positive contribution to the 26th United Nations Climate Change Conference of the Parties (COP26) and beyond.

(b) The United States will reconvene the Major Economies Forum on Energy and Climate, beginning with the Leaders’ Climate Summit. In cooperation with the members of that Forum, as well as with other partners as appropriate, the United States will pursue green recovery efforts, initiatives to advance the clean energy transition, sectoral decarbonization, and alignment of financial flows with the objectives of the Paris Agreement, including with respect to coal financing, nature-based solutions, and solutions to other climate-related challenges.

(c) I have created a new Presidentially appointed position, the Special Presidential Envoy for Climate, to elevate the issue of climate change and underscore the commitment my Administration will make toward addressing it.

(d) Recognizing that climate change affects a wide range of subjects, it will be a United States priority to press for enhanced climate ambition and integration of climate considerations across a wide range of international fora, including the Group of Seven (G7), the Group of Twenty (G20), and fora that address clean energy, aviation, shipping, the Arctic, the ocean, sustainable development, migration, and other relevant topics. The Special Presidential Envoy for Climate and others, as appropriate, are encouraged to promote innovative approaches, including international multi-stakeholder initiatives. In addition, my Administration will work in partnership with States, localities, Tribes, territories, and other United States stakeholders to advance United States climate diplomacy.

(e) The United States will immediately begin the process of developing its nationally determined contribution under the Paris Agreement. The process will include analysis and input from relevant executive departments and agencies (agencies), as well as appropriate outreach to domestic stakeholders. The United States will aim to submit its nationally determined contribution in advance of the Leaders’ Climate Summit.

(f) The United States will also immediately begin to develop a climate finance plan, making strategic use of multilateral and bilateral channels and institutions, to assist developing countries in implementing ambitious emissions reduction measures, protecting critical ecosystems, building resilience against the impacts of climate change, and promoting the flow of capital toward climate-aligned investments and away from high-carbon investments. The Secretary of State and the Secretary of the Treasury, in coordination with the Special Presidential Envoy for Climate, shall lead a process to develop this plan, with the participation of the Administrator of the United States Agency for International Development (USAID), the Chief Executive Officer of the United States International Development Finance Corporation (DFC), the Chief Executive Officer of the Millennium Challenge Corporation, the Director of the United States Trade and Development Agency, the Director of the Office of Management and Budget, and the head of any other agency providing foreign assistance and development financing, as appropriate. The Secretary of State and the Secretary of the Treasury shall submit the plan to the President, through the Assistant to the President for National Security Affairs and the Assistant to the President for Economic Policy, within 90 days of the date of this order.

(g) The Secretary of the Treasury shall:

(i) ensure that the United States is present and engaged in relevant international fora and institutions that are working on the management of climate-related financial risks;

(ii) develop a strategy for how the voice and vote of the United States can be used in international financial institutions, including the World Bank Group and the International Monetary Fund, to promote financing programs, economic stimulus packages, and debt relief initiatives that are aligned with and support the goals of the Paris Agreement; and

(iii) develop, in collaboration with the Secretary of State, the Administrator of USAID, and the Chief Executive Officer of the DFC, a plan for promoting the protection of the Amazon rainforest and other critical ecosystems that serve as global carbon sinks, including through market-based mechanisms.

(h) The Secretary of State, the Secretary of the Treasury, and the Secretary of Energy shall work together and with the Export–Import Bank of the United States, the Chief Executive Officer of the DFC, and the heads of other agencies and partners, as appropriate, to identify steps through which the United States can promote ending international financing of carbon-intensive fossil fuel-based energy while simultaneously advancing sustainable development and a green recovery, in consultation with the Assistant to the President for National Security Affairs.

(i) The Secretary of Energy, in cooperation with the Secretary of State and the heads of other agencies, as appropriate, shall identify steps through which the United States can intensify international collaborations to drive innovation and deployment of clean energy technologies, which are critical for climate protection.

(j) The Secretary of State shall prepare, within 60 days of the date of this order, a transmittal package seeking the Senate's advice and consent to ratification of the Kigali Amendment to the Montreal Protocol on Substances that Deplete the Ozone Layer, regarding the phasedown of the production and consumption of hydrofluorocarbons.

Sec. 103. Prioritizing Climate in Foreign Policy and National Security. To ensure that climate change considerations are central to United States foreign policy and national security:

(a) Agencies that engage in extensive international work shall develop, in coordination with the Special Presidential Envoy for Climate, and submit to the President, through the Assistant to the President for National Security Affairs, within 90 days of the date of this order, strategies and implementation plans for integrating climate considerations into their international work, as appropriate and consistent with applicable law. These strategies and plans should include an assessment of:

(i) climate impacts relevant to broad agency strategies in particular countries or regions;

(ii) climate impacts on their agency-managed infrastructure abroad (e.g., embassies, military installations), without prejudice to existing requirements regarding assessment of such infrastructure;

(iii) how the agency intends to manage such impacts or incorporate risk mitigation into its installation master plans; and

(iv) how the agency's international work, including partner engagement, can contribute to addressing the climate crisis.

(b) The Director of National Intelligence shall prepare, within 120 days of the date of this order, a National Intelligence Estimate on the national and economic security impacts of climate change.

(c) The Secretary of Defense, in coordination with the Secretary of Commerce, through the Administrator of the National Oceanic and Atmospheric Administration, the Chair of the Council on Environmental Quality, the Administrator of the Environmental Protection Agency, the Director of National Intelligence, the Director of the Office of Science and Technology

Policy, the Administrator of the National Aeronautics and Space Administration, and the heads of other agencies as appropriate, shall develop and submit to the President, within 120 days of the date of this order, an analysis of the security implications of climate change (Climate Risk Analysis) that can be incorporated into modeling, simulation, war-gaming, and other analyses.

(d) The Secretary of Defense and the Chairman of the Joint Chiefs of Staff shall consider the security implications of climate change, including any relevant information from the Climate Risk Analysis described in subsection (c) of this section, in developing the National Defense Strategy, Defense Planning Guidance, Chairman's Risk Assessment, and other relevant strategy, planning, and programming documents and processes. Starting in January 2022, the Secretary of Defense and the Chairman of the Joint Chiefs of Staff shall provide an annual update, through the National Security Council, on the progress made in incorporating the security implications of climate change into these documents and processes.

(e) The Secretary of Homeland Security shall consider the implications of climate change in the Arctic, along our Nation's borders, and to National Critical Functions, including any relevant information from the Climate Risk Analysis described in subsection (c) of this section, in developing relevant strategy, planning, and programming documents and processes. Starting in January 2022, the Secretary of Homeland Security shall provide an annual update, through the National Security Council, on the progress made in incorporating the homeland security implications of climate change into these documents and processes.

Sec. 104. Reinstatement. The Presidential Memorandum of September 21, 2016 (Climate Change and National Security), is hereby reinstated.

## PART II – TAKING A GOVERNMENT-WIDE APPROACH TO THE CLIMATE CRISIS

Sec. 201. Policy. Even as our Nation emerges from profound public health and economic crises borne of a pandemic, we face a climate crisis that threatens our people and communities, public health and economy, and, starkly, our ability to live on planet Earth. Despite the peril that is already evident, there is promise in the solutions — opportunities to create well-paying union jobs to build a modern and sustainable infrastructure, deliver an equitable, clean energy future, and put the United States on a path to achieve net-zero emissions, economy-wide, by no later than 2050.

We must listen to science — and act. We must strengthen our clean air and water protections. We must hold polluters accountable for their actions. We must deliver environmental justice in communities all across America. The Federal Government must drive assessment, disclosure, and mitigation of climate pollution and climate-related risks in every sector of our

economy, marshaling the creativity, courage, and capital necessary to make our Nation resilient in the face of this threat. Together, we must combat the climate crisis with bold, progressive action that combines the full capacity of the Federal Government with efforts from every corner of our Nation, every level of government, and every sector of our economy.

It is the policy of my Administration to organize and deploy the full capacity of its agencies to combat the climate crisis to implement a Government-wide approach that reduces climate pollution in every sector of the economy; increases resilience to the impacts of climate change; protects public health; conserves our lands, waters, and biodiversity; delivers environmental justice; and spurs well-paying union jobs and economic growth, especially through innovation, commercialization, and deployment of clean energy technologies and infrastructure.

Successfully meeting these challenges will require the Federal Government to pursue such a coordinated approach from planning to implementation, coupled with substantive engagement by stakeholders, including State, local, and Tribal governments.

Sec. 202. White House Office of Domestic Climate Policy. There is hereby established the White House Office of Domestic Climate Policy (Climate Policy Office) within the Executive Office of the President, which shall coordinate the policy-making process with respect to domestic climate-policy issues; coordinate domestic climate-policy advice to the President; ensure that domestic climate-policy decisions and programs are consistent with the President's stated goals and that those goals are being effectively pursued; and monitor implementation of the President's domestic climate-policy agenda. The Climate Policy Office shall have a staff headed by the Assistant to the President and National Climate Advisor (National Climate Advisor) and shall include the Deputy Assistant to the President and Deputy National Climate Advisor. The Climate Policy Office shall have such staff and other assistance as may be necessary to carry out the provisions of this order, subject to the availability of appropriations, and may work with established or ad hoc committees or interagency groups.

All agencies shall cooperate with the Climate Policy Office and provide such information, support, and assistance to the Climate Policy Office as it may request, as appropriate and consistent with applicable law.

Sec. 203. National Climate Task Force. There is hereby established a National Climate Task Force (Task Force). The Task Force shall be chaired by the National Climate Advisor.

(a) Membership. The Task Force shall consist of the following additional members:

- (i) the Secretary of the Treasury;
- (ii) the Secretary of Defense;

- (iii) the Attorney General;
- (iv) the Secretary of the Interior;
- (v) the Secretary of Agriculture;
- (vi) the Secretary of Commerce;
- (vii) the Secretary of Labor;
- (viii) the Secretary of Health and Human Services;
- (ix) the Secretary of Housing and Urban Development;
- (x) the Secretary of Transportation;
- (xi) the Secretary of Energy;
- (xii) the Secretary of Homeland Security;
- (xiii) the Administrator of General Services;
- (xiv) the Chair of the Council on Environmental Quality;
- (xv) the Administrator of the Environmental Protection Agency;
- (xvi) the Director of the Office of Management and Budget;
- (xvii) the Director of the Office of Science and Technology Policy;
- (xviii) the Assistant to the President for Domestic Policy;
- (xix) the Assistant to the President for National Security Affairs;
- (xx) the Assistant to the President for Homeland Security and Counterterrorism; and
- (xxi) the Assistant to the President for Economic Policy.

(b) Mission and Work. The Task Force shall facilitate the organization and deployment of a Government-wide approach to combat the climate crisis. This Task Force shall facilitate planning and implementation of key Federal actions to reduce climate pollution; increase resilience to the impacts of climate change; protect public health; conserve our lands, waters,

oceans, and biodiversity; deliver environmental justice; and spur well-paying union jobs and economic growth. As necessary and appropriate, members of the Task Force will engage on these matters with State, local, Tribal, and territorial governments; workers and communities; and leaders across the various sectors of our economy.

(c) **Prioritizing Actions.** To the extent permitted by law, Task Force members shall prioritize action on climate change in their policy-making and budget processes, in their contracting and procurement, and in their engagement with State, local, Tribal, and territorial governments; workers and communities; and leaders across all the sectors of our economy.

## USE OF THE FEDERAL GOVERNMENT'S BUYING POWER AND REAL PROPERTY AND ASSET MANAGEMENT

Sec. 204. **Policy.** It is the policy of my Administration to lead the Nation's effort to combat the climate crisis by example — specifically, by aligning the management of Federal procurement and real property, public lands and waters, and financial programs to support robust climate action. By providing an immediate, clear, and stable source of product demand, increased transparency and data, and robust standards for the market, my Administration will help to catalyze private sector investment into, and accelerate the advancement of America's industrial capacity to supply, domestic clean energy, buildings, vehicles, and other necessary products and materials.

Sec. 205. **Federal Clean Electricity and Vehicle Procurement Strategy.** (a) The Chair of the Council on Environmental Quality, the Administrator of General Services, and the Director of the Office of Management and Budget, in coordination with the Secretary of Commerce, the Secretary of Labor, the Secretary of Energy, and the heads of other relevant agencies, shall assist the National Climate Advisor, through the Task Force established in section 203 of this order, in developing a comprehensive plan to create good jobs and stimulate clean energy industries by revitalizing the Federal Government's sustainability efforts.

(b) The plan shall aim to use, as appropriate and consistent with applicable law, all available procurement authorities to achieve or facilitate:

(i) a carbon pollution-free electricity sector no later than 2035; and

(ii) clean and zero-emission vehicles for Federal, State, local, and Tribal government fleets, including vehicles of the United States Postal Service.

(c) If necessary, the plan shall recommend any additional legislation needed to accomplish these objectives.

(d) The plan shall also aim to ensure that the United States retains the union jobs integral to and involved in running and maintaining clean and zero-emission fleets, while spurring the creation of union jobs in the manufacture of those new vehicles. The plan shall be submitted to the Task Force within 90 days of the date of this order.

Sec. 206. Procurement Standards. Consistent with the Executive Order of January 25, 2021, entitled, “Ensuring the Future Is Made in All of America by All of America’s Workers,” agencies shall adhere to the requirements of the Made in America Laws in making clean energy, energy efficiency, and clean energy procurement decisions. Agencies shall, consistent with applicable law, apply and enforce the Davis-Bacon Act and prevailing wage and benefit requirements. The Secretary of Labor shall take steps to update prevailing wage requirements. The Chair of the Council on Environmental Quality shall consider additional administrative steps and guidance to assist the Federal Acquisition Regulatory Council in developing regulatory amendments to promote increased contractor attention on reduced carbon emission and Federal sustainability.

Sec. 207. Renewable Energy on Public Lands and in Offshore Waters. The Secretary of the Interior shall review siting and permitting processes on public lands and in offshore waters to identify to the Task Force steps that can be taken, consistent with applicable law, to increase renewable energy production on those lands and in those waters, with the goal of doubling offshore wind by 2030 while ensuring robust protection for our lands, waters, and biodiversity and creating good jobs. In conducting this review, the Secretary of the Interior shall consult, as appropriate, with the heads of relevant agencies, including the Secretary of Defense, the Secretary of Agriculture, the Secretary of Commerce, through the Administrator of the National Oceanic and Atmospheric Administration, the Secretary of Energy, the Chair of the Council on Environmental Quality, State and Tribal authorities, project developers, and other interested parties. The Secretary of the Interior shall engage with Tribal authorities regarding the development and management of renewable and conventional energy resources on Tribal lands.

Sec. 208. Oil and Natural Gas Development on Public Lands and in Offshore Waters. To the extent consistent with applicable law, the Secretary of the Interior shall pause new oil and natural gas leases on public lands or in offshore waters pending completion of a comprehensive review and reconsideration of Federal oil and gas permitting and leasing practices in light of the Secretary of the Interior’s broad stewardship responsibilities over the public lands and in offshore waters, including potential climate and other impacts associated with oil and gas activities on public lands or in offshore waters. The Secretary of the Interior shall complete that review in consultation with the Secretary of Agriculture, the Secretary of Commerce, through the National Oceanic and Atmospheric Administration, and the

Secretary of Energy. In conducting this analysis, and to the extent consistent with applicable law, the Secretary of the Interior shall consider whether to adjust royalties associated with coal, oil, and gas resources extracted from public lands and offshore waters, or take other appropriate action, to account for corresponding climate costs.

Sec. 209. Fossil Fuel Subsidies. The heads of agencies shall identify for the Director of the Office of Management and Budget and the National Climate Advisor any fossil fuel subsidies provided by their respective agencies, and then take steps to ensure that, to the extent consistent with applicable law, Federal funding is not directly subsidizing fossil fuels. The Director of the Office of Management and Budget shall seek, in coordination with the heads of agencies and the National Climate Advisor, to eliminate fossil fuel subsidies from the budget request for Fiscal Year 2022 and thereafter.

Sec. 210. Clean Energy in Financial Management. The heads of agencies shall identify opportunities for Federal funding to spur innovation, commercialization, and deployment of clean energy technologies and infrastructure for the Director of the Office of Management and Budget and the National Climate Advisor, and then take steps to ensure that, to the extent consistent with applicable law, Federal funding is used to spur innovation, commercialization, and deployment of clean energy technologies and infrastructure. The Director of the Office of Management and Budget, in coordination with agency heads and the National Climate Advisor, shall seek to prioritize such investments in the President's budget request for Fiscal Year 2022 and thereafter.

Sec. 211. Climate Action Plans and Data and Information Products to Improve Adaptation and Increase Resilience. (a) The head of each agency shall submit a draft action plan to the Task Force and the Federal Chief Sustainability Officer within 120 days of the date of this order that describes steps the agency can take with regard to its facilities and operations to bolster adaptation and increase resilience to the impacts of climate change. Action plans should, among other things, describe the agency's climate vulnerabilities and describe the agency's plan to use the power of procurement to increase the energy and water efficiency of United States Government installations, buildings, and facilities and ensure they are climate-ready. Agencies shall consider the feasibility of using the purchasing power of the Federal Government to drive innovation, and shall seek to increase the Federal Government's resilience against supply chain disruptions. Such disruptions put the Nation's manufacturing sector at risk, as well as consumer access to critical goods and services. Agencies shall make their action plans public, and post them on the agency website, to the extent consistent with applicable law.

(b) Within 30 days of an agency's submission of an action plan, the Federal Chief Sustainability Officer, in coordination with the Director of the Office of Management and Budget, shall review the plan to assess its consistency with the policy set forth in section 204 of this order and the priorities issued by the Office of Management and Budget.

(c) After submitting an initial action plan, the head of each agency shall submit to the Task Force and Federal Chief Sustainability Officer progress reports annually on the status of implementation efforts. Agencies shall make progress reports public and post them on the agency website, to the extent consistent with applicable law. The heads of agencies shall assign their respective agency Chief Sustainability Officer the authority to perform duties relating to implementation of this order within the agency, to the extent consistent with applicable law.

(d) To assist agencies and State, local, Tribal, and territorial governments, communities, and businesses in preparing for and adapting to the impacts of climate change, the Secretary of Commerce, through the Administrator of the National Oceanic and Atmospheric Administration, the Secretary of Homeland Security, through the Administrator of the Federal Emergency Management Agency, and the Director of the Office of Science and Technology Policy, in coordination with the heads of other agencies, as appropriate, shall provide to the Task Force a report on ways to expand and improve climate forecast capabilities and information products for the public. In addition, the Secretary of the Interior and the Deputy Director for Management of the Office of Management and Budget, in their capacities as the Chair and Vice-Chair of the Federal Geographic Data Committee, shall assess and provide to the Task Force a report on the potential development of a consolidated Federal geographic mapping service that can facilitate public access to climate-related information that will assist Federal, State, local, and Tribal governments in climate planning and resilience activities.

## EMPOWERING WORKERS THROUGH REBUILDING OUR INFRASTRUCTURE FOR A SUSTAINABLE ECONOMY

Sec. 212. Policy. This Nation needs millions of construction, manufacturing, engineering, and skilled-trades workers to build a new American infrastructure and clean energy economy. These jobs will create opportunities for young people and for older workers shifting to new professions, and for people from all backgrounds and communities. Such jobs will bring opportunity to communities too often left behind – places that have suffered as a result of economic shifts and places that have suffered the most from persistent pollution, including low-income rural and urban communities, communities of color, and Native communities.

Sec. 213. Sustainable Infrastructure. (a) The Chair of the Council on Environmental Quality and the Director of the Office of Management and Budget shall take steps, consistent with applicable law, to ensure that Federal infrastructure investment reduces climate pollution, and to require that Federal permitting decisions consider the effects of greenhouse gas emissions and climate change. In addition, they shall review, and report to the National Climate Advisor on, siting and permitting processes, including those in progress under the auspices of the Federal Permitting Improvement Steering Council, and identify steps that can be taken, consistent with applicable law, to accelerate the deployment of clean energy and transmission projects in an environmentally stable manner.

(b) Agency heads conducting infrastructure reviews shall, as appropriate, consult from an early stage with State, local, and Tribal officials involved in permitting or authorizing proposed infrastructure projects to develop efficient timelines for decision-making that are appropriate given the complexities of proposed projects.

#### EMPOWERING WORKERS BY ADVANCING CONSERVATION, AGRICULTURE, AND REFORESTATION

Sec. 214. Policy. It is the policy of my Administration to put a new generation of Americans to work conserving our public lands and waters. The Federal Government must protect America's natural treasures, increase reforestation, improve access to recreation, and increase resilience to wildfires and storms, while creating well-paying union jobs for more Americans, including more opportunities for women and people of color in occupations where they are underrepresented. America's farmers, ranchers, and forest landowners have an important role to play in combating the climate crisis and reducing greenhouse gas emissions, by sequestering carbon in soils, grasses, trees, and other vegetation and sourcing sustainable bioproducts and fuels. Coastal communities have an essential role to play in mitigating climate change and strengthening resilience by protecting and restoring coastal ecosystems, such as wetlands, seagrasses, coral and oyster reefs, and mangrove and kelp forests, to protect vulnerable coastlines, sequester carbon, and support biodiversity and fisheries.

Sec. 215. Civilian Climate Corps. In furtherance of the policy set forth in section 214 of this order, the Secretary of the Interior, in collaboration with the Secretary of Agriculture and the heads of other relevant agencies, shall submit a strategy to the Task Force within 90 days of the date of this order for creating a Civilian Climate Corps Initiative, within existing appropriations, to mobilize the next generation of conservation and resilience workers and maximize the creation of accessible training opportunities and good jobs. The initiative shall aim to conserve and restore public lands and waters, bolster community resilience, increase

reforestation, increase carbon sequestration in the agricultural sector, protect biodiversity, improve access to recreation, and address the changing climate.

Sec. 216. Conserving Our Nation's Lands and Waters. (a) The Secretary of the Interior, in consultation with the Secretary of Agriculture, the Secretary of Commerce, the Chair of the Council on Environmental Quality, and the heads of other relevant agencies, shall submit a report to the Task Force within 90 days of the date of this order recommending steps that the United States should take, working with State, local, Tribal, and territorial governments, agricultural and forest landowners, fishermen, and other key stakeholders, to achieve the goal of conserving at least 30 percent of our lands and waters by 2030.

(i) The Secretary of the Interior, the Secretary of Agriculture, the Secretary of Commerce, through the Administrator of the National Oceanic and Atmospheric Administration, and the Chair of the Council on Environmental Quality shall, as appropriate, solicit input from State, local, Tribal, and territorial officials, agricultural and forest landowners, fishermen, and other key stakeholders in identifying strategies that will encourage broad participation in the goal of conserving 30 percent of our lands and waters by 2030.

(ii) The report shall propose guidelines for determining whether lands and waters qualify for conservation, and it also shall establish mechanisms to measure progress toward the 30-percent goal. The Secretary of the Interior shall subsequently submit annual reports to the Task Force to monitor progress.

(b) The Secretary of Agriculture shall:

(i) initiate efforts in the first 60 days from the date of this order to collect input from Tribes, farmers, ranchers, forest owners, conservation groups, firefighters, and other stakeholders on how to best use Department of Agriculture programs, funding and financing capacities, and other authorities, and how to encourage the voluntary adoption of climate-smart agricultural and forestry practices that decrease wildfire risk fueled by climate change and result in additional, measurable, and verifiable carbon reductions and sequestration and that source sustainable bioproducts and fuels; and

(ii) submit to the Task Force within 90 days of the date of this order a report making recommendations for an agricultural and forestry climate strategy.

(c) The Secretary of Commerce, through the Administrator of the National Oceanic and Atmospheric Administration, shall initiate efforts in the first 60 days from the date of this order to collect input from fishermen, regional ocean councils, fishery management councils,

scientists, and other stakeholders on how to make fisheries and protected resources more resilient to climate change, including changes in management and conservation measures, and improvements in science, monitoring, and cooperative research.

## EMPOWERING WORKERS THROUGH REVITALIZING ENERGY COMMUNITIES

Sec. 217. Policy. It is the policy of my Administration to improve air and water quality and to create well-paying union jobs and more opportunities for women and people of color in hard-hit communities, including rural communities, while reducing methane emissions, oil and brine leaks, and other environmental harms from tens of thousands of former mining and well sites. Mining and power plant workers drove the industrial revolution and the economic growth that followed, and have been essential to the growth of the United States. As the Nation shifts to a clean energy economy, Federal leadership is essential to foster economic revitalization of and investment in these communities, ensure the creation of good jobs that provide a choice to join a union, and secure the benefits that have been earned by workers.

Such work should include projects that reduce emissions of toxic substances and greenhouse gases from existing and abandoned infrastructure and that prevent environmental damage that harms communities and poses a risk to public health and safety. Plugging leaks in oil and gas wells and reclaiming abandoned mine land can create well-paying union jobs in coal, oil, and gas communities while restoring natural assets, revitalizing recreation economies, and curbing methane emissions. In addition, such work should include efforts to turn properties idled in these communities, such as brownfields, into new hubs for the growth of our economy. Federal agencies should therefore coordinate investments and other efforts to assist coal, oil and gas, and power plant communities, and achieve substantial reductions of methane emissions from the oil and gas sector as quickly as possible.

Sec. 218. Interagency Working Group on Coal and Power Plant Communities and Economic Revitalization. There is hereby established an Interagency Working Group on Coal and Power Plant Communities and Economic Revitalization (Interagency Working Group). The National Climate Advisor and the Assistant to the President for Economic Policy shall serve as Co-Chairs of the Interagency Working Group.

(a) Membership. The Interagency Working Group shall consist of the following additional members:

- (i) the Secretary of the Treasury;
- (ii) the Secretary of the Interior;

- (iii) the Secretary of Agriculture;
- (iv) the Secretary of Commerce;
- (v) the Secretary of Labor;
- (vi) the Secretary of Health and Human Services;
- (vii) the Secretary of Transportation;
- (viii) the Secretary of Energy;
- (ix) the Secretary of Education;
- (x) the Administrator of the Environmental Protection Agency;
- (xi) the Director of the Office of Management and Budget;
- (xii) the Assistant to the President for Domestic Policy and Director of the Domestic Policy Council; and
- (xiii) the Federal Co-Chair of the Appalachian Regional Commission.

(b) Mission and Work.

(i) The Interagency Working Group shall coordinate the identification and delivery of Federal resources to revitalize the economies of coal, oil and gas, and power plant communities; develop strategies to implement the policy set forth in section 217 of this order and for economic and social recovery; assess opportunities to ensure benefits and protections for coal and power plant workers; and submit reports to the National Climate Advisor and the Assistant to the President for Economic Policy on a regular basis on the progress of the revitalization effort.

(ii) As part of this effort, within 60 days of the date of this order, the Interagency Working Group shall submit a report to the President describing all mechanisms, consistent with applicable law, to prioritize grantmaking, Federal loan programs, technical assistance, financing, procurement, or other existing programs to support and revitalize the economies of coal and power plant communities, and providing recommendations for action consistent with the goals of the Interagency Working Group.

(c) Consultation. Consistent with the objectives set out in this order and in accordance with applicable law, the Interagency Working Group shall seek the views of State, local, and Tribal officials; unions; environmental justice organizations; community groups; and other persons it identifies who may have perspectives on the mission of the Interagency Working Group.

(d) Administration. The Interagency Working Group shall be housed within the Department of Energy. The Chairs shall convene regular meetings of the Interagency Working Group, determine its agenda, and direct its work. The Secretary of Energy, in consultation with the Chairs, shall designate an Executive Director of the Interagency Working Group, who shall coordinate the work of the Interagency Working Group and head any staff assigned to the Interagency Working Group.

(e) Officers. To facilitate the work of the Interagency Working Group, the head of each agency listed in subsection (a) of this section shall assign a designated official within the agency the authority to represent the agency on the Interagency Working Group and perform such other duties relating to the implementation of this order within the agency as the head of the agency deems appropriate.

#### SECURING ENVIRONMENTAL JUSTICE AND SPURRING ECONOMIC OPPORTUNITY

Sec. 219. Policy. To secure an equitable economic future, the United States must ensure that environmental and economic justice are key considerations in how we govern. That means investing and building a clean energy economy that creates well-paying union jobs, turning disadvantaged communities – historically marginalized and overburdened – into healthy, thriving communities, and undertaking robust actions to mitigate climate change while preparing for the impacts of climate change across rural, urban, and Tribal areas. Agencies shall make achieving environmental justice part of their missions by developing programs, policies, and activities to address the disproportionately high and adverse human health, environmental, climate-related and other cumulative impacts on disadvantaged communities, as well as the accompanying economic challenges of such impacts. It is therefore the policy of my Administration to secure environmental justice and spur economic opportunity for disadvantaged communities that have been historically marginalized and overburdened by pollution and underinvestment in housing, transportation, water and wastewater infrastructure, and health care.

Sec. 220. White House Environmental Justice Interagency Council. (a) Section 1-102 of Executive Order 12898 of February 11, 1994 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations), is hereby amended to read as follows:

“(a) There is hereby created within the Executive Office of the President a White House Environmental Justice Interagency Council (Interagency Council). The Chair of the Council on Environmental Quality shall serve as Chair of the Interagency Council.

“(b) Membership. The Interagency Council shall consist of the following additional members:

- (i) the Secretary of Defense;
- (ii) the Attorney General;
- (iii) the Secretary of the Interior;
- (iv) the Secretary of Agriculture;
- (v) the Secretary of Commerce;
- (vi) the Secretary of Labor;
- (vii) the Secretary of Health and Human Services;
- (viii) the Secretary of Housing and Urban Development;
- (ix) the Secretary of Transportation;
- (x) the Secretary of Energy;
- (xi) the Chair of the Council of Economic Advisers;
- (xii) the Administrator of the Environmental Protection Agency;
- (xiii) the Director of the Office of Management and Budget;
- (xiv) the Executive Director of the Federal Permitting Improvement Steering Council;
- (xv) the Director of the Office of Science and Technology Policy;
- (xvi) the National Climate Advisor;
- (xvii) the Assistant to the President for Domestic Policy; and
- (xviii) the Assistant to the President for Economic Policy.

“(c) At the direction of the Chair, the Interagency Council may establish subgroups consisting exclusively of Interagency Council members or their designees under this section, as appropriate.

“(d) Mission and Work. The Interagency Council shall develop a strategy to address current and historic environmental injustice by consulting with the White House Environmental Justice Advisory Council and with local environmental justice leaders. The Interagency Council shall also develop clear performance metrics to ensure accountability, and publish an annual public performance scorecard on its implementation.

“(e) Administration. The Office of Administration within the Executive Office of the President shall provide funding and administrative support for the Interagency Council, to the extent permitted by law and within existing appropriations. To the extent permitted by law, including the Economy Act (31 U.S.C. 1535), and subject to the availability of appropriations, the Department of Labor, the Department of Transportation, and the Environmental Protection Agency shall provide administrative support as necessary.

“(f) Meetings and Staff. The Chair shall convene regular meetings of the Council, determine its agenda, and direct its work. The Chair shall designate an Executive Director of the Council, who shall coordinate the work of the Interagency Council and head any staff assigned to the Council.

“(g) Officers. To facilitate the work of the Interagency Council, the head of each agency listed in subsection (b) shall assign a designated official within the agency to be an Environmental Justice Officer, with the authority to represent the agency on the Interagency Council and perform such other duties relating to the implementation of this order within the agency as the head of the agency deems appropriate.”

(b) The Interagency Council shall, within 120 days of the date of this order, submit to the President, through the National Climate Advisor, a set of recommendations for further updating Executive Order 12898.

Sec. 221. White House Environmental Justice Advisory Council. There is hereby established, within the Environmental Protection Agency, the White House Environmental Justice Advisory Council (Advisory Council), which shall advise the Interagency Council and the Chair of the Council on Environmental Quality.

(a) Membership. Members shall be appointed by the President, shall be drawn from across the political spectrum, and may include those with knowledge about or experience in

environmental justice, climate change, disaster preparedness, racial inequity, or any other area determined by the President to be of value to the Advisory Council.

(b) **Mission and Work.** The Advisory Council shall be solely advisory. It shall provide recommendations to the White House Environmental Justice Interagency Council established in section 220 of this order on how to increase the Federal Government's efforts to address current and historic environmental injustice, including recommendations for updating Executive Order 12898.

(c) **Administration.** The Environmental Protection Agency shall provide funding and administrative support for the Advisory Council to the extent permitted by law and within existing appropriations. Members of the Advisory Council shall serve without either compensation or reimbursement of expenses.

(d) **Federal Advisory Committee Act.** Insofar as the Federal Advisory Committee Act, as amended (5 U.S.C. App.), may apply to the Advisory Council, any functions of the President under the Act, except for those in section 6 of the Act, shall be performed by the Administrator of the Environmental Protection Agency in accordance with the guidelines that have been issued by the Administrator of General Services.

**Sec. 222. Agency Responsibilities.** In furtherance of the policy set forth in section 219:

(a) The Chair of the Council on Environmental Quality shall, within 6 months of the date of this order, create a geospatial Climate and Economic Justice Screening Tool and shall annually publish interactive maps highlighting disadvantaged communities.

(b) The Administrator of the Environmental Protection Agency shall, within existing appropriations and consistent with applicable law:

(i) strengthen enforcement of environmental violations with disproportionate impact on underserved communities through the Office of Enforcement and Compliance Assurance; and

(ii) create a community notification program to monitor and provide real-time data to the public on current environmental pollution, including emissions, criteria pollutants, and toxins, in frontline and fenceline communities — places with the most significant exposure to such pollution.

(c) The Attorney General shall, within existing appropriations and consistent with applicable law:

- (i) consider renaming the Environment and Natural Resources Division the Environmental Justice and Natural Resources Division;
  - (ii) direct that division to coordinate with the Administrator of the Environmental Protection Agency, through the Office of Enforcement and Compliance Assurance, as well as with other client agencies as appropriate, to develop a comprehensive environmental justice enforcement strategy, which shall seek to provide timely remedies for systemic environmental violations and contaminations, and injury to natural resources; and
  - (iii) ensure comprehensive attention to environmental justice throughout the Department of Justice, including by considering creating an Office of Environmental Justice within the Department to coordinate environmental justice activities among Department of Justice components and United States Attorneys' Offices nationwide.
- (d) The Secretary of Health and Human Services shall, consistent with applicable law and within existing appropriations:
- (i) establish an Office of Climate Change and Health Equity to address the impact of climate change on the health of the American people; and
  - (ii) establish an Interagency Working Group to Decrease Risk of Climate Change to Children, the Elderly, People with Disabilities, and the Vulnerable as well as a biennial Health Care System Readiness Advisory Council, both of which shall report their progress and findings regularly to the Task Force.
- (e) The Director of the Office of Science and Technology Policy shall, in consultation with the National Climate Advisor, within existing appropriations, and within 100 days of the date of this order, publish a report identifying the climate strategies and technologies that will result in the most air and water quality improvements, which shall be made public to the maximum extent possible and published on the Office's website.

Sec. 223. Justice40 Initiative. (a) Within 120 days of the date of this order, the Chair of the Council on Environmental Quality, the Director of the Office of Management and Budget, and the National Climate Advisor, in consultation with the Advisory Council, shall jointly publish recommendations on how certain Federal investments might be made toward a goal that 40 percent of the overall benefits flow to disadvantaged communities. The recommendations shall focus on investments in the areas of clean energy and energy efficiency; clean transit; affordable and sustainable housing; training and workforce development; the remediation and reduction of legacy pollution; and the development of critical clean water infrastructure. The

recommendations shall reflect existing authorities the agencies may possess for achieving the 40-percent goal as well as recommendations on any legislation needed to achieve the 40-percent goal.

(b) In developing the recommendations, the Chair of the Council on Environmental Quality, the Director of the Office of Management and Budget, and the National Climate Advisor shall consult with affected disadvantaged communities.

(c) Within 60 days of the recommendations described in subsection (a) of this section, agency heads shall identify applicable program investment funds based on the recommendations and consider interim investment guidance to relevant program staff, as appropriate and consistent with applicable law.

(d) By February 2022, the Director of the Office of Management and Budget, in coordination with the Chair of the Council on Environmental Quality, the Administrator of the United States Digital Service, and other relevant agency heads, shall, to the extent consistent with applicable law, publish on a public website an annual Environmental Justice Scorecard detailing agency environmental justice performance measures.

### PART III — GENERAL PROVISIONS

Sec. 301. General Provisions. (a) Nothing in this order shall be construed to impair or otherwise affect:

- (i) the authority granted by law to an executive department or agency or the head thereof; or
- (ii) the functions of the Director of the Office of Management and Budget, relating to budgetary, administrative, or legislative proposals.

(b) This order shall be implemented consistent with applicable law and subject to the availability of appropriations.

(c) This order is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

JOSEPH R. BIDEN JR.

THE WHITE HOUSE,

January 27, 2021.

BRIEFING ROOM

# EXECUTIVE SUMMARY: U.S. International Climate Finance Plan

APRIL 22, 2021 • STATEMENTS AND RELEASES

President Biden's Executive Order on *Tackling the Climate Crisis at Home and Abroad* (E.O. 14008, signed January 27, 2021) called for the preparation of a Climate Finance Plan (herein "Plan"). This Plan – the first of its kind in the U.S. government – focuses on international climate finance. For the purposes of this Plan, "climate finance" refers in part to the provision or mobilization of financial resources to assist developing countries to reduce and/or avoid greenhouse gas emissions and build resilience and adapt to the impacts of climate change.

## 1. Scaling-Up International Climate Finance and Enhancing its Impact

The Administration is embracing ambitious but attainable goals regarding the quantity of public climate finance provided by the United States, recognizing the urgency of the climate crisis, confronting the sharp drop in U.S. international climate finance during the FY 2018-2021 period, and understanding the need to re-establish U.S. leadership in international climate diplomacy.

*The United States intends to double, by 2024, our annual public climate finance to developing countries relative to the average level during the second half of the Obama-Biden Administration (FY 2013-2016). As part of this goal, the United States intends to triple our adaptation finance by 2024. The Biden Administration will work closely with Congress to meet these goals.*

U.S. agencies, working with development partners, will prioritize climate in public investments, enhance technical assistance and long-term capacity, align support with country needs and priorities, and boost investments in adaptation and resilience. For example, the U.S. Agency for International Development (USAID) will release a new Climate Change Strategy in November 2021, at the 26<sup>th</sup> Conference of the Parties to the United Nations Framework Convention on Climate Change (COP26). The U.S. International Development Finance Corporation (DFC) will update its development strategy to not only include climate for the first time, but also to make investments in climate mitigation and adaptation a top priority. The Millennium Challenge Corporation (MCC) will adopt a new Climate Strategy in April 2021, centered on investing in climate-smart development and sustainable infrastructure, and

aims to have more than 50 percent of its program funding go to climate-related investments over the next five years. Treasury will direct U.S. executive directors in multilateral development banks (MDBs) to help ensure MDBs set and apply ambitious climate finance targets and policies, in partnership with other shareholders.

U.S. departments and agencies will enhance strategic coordination on providing and mobilizing international climate finance and technical assistance to ensure the complementarity of agency efforts, instruments, and expertise. Departments and agencies will increase collaboration and adopt best practices on incorporating climate considerations into their international work and investments, such as screening all projects for climate-related risks to ensure they are resilient.

## **2. Mobilizing Private Finance Internationally**

Public interventions, including public finance, must also mobilize private capital. Several efforts will help mobilize more private finance. For example, MCC will expand partnerships and the use of blended finance to catalyze private capital for climate projects. DFC will increase its climate-related investments beginning in FY 2023, so that at least one-third of its new investments are linked to addressing the climate crisis. The Export-Import Bank of the United States (EXIM) will identify ways to significantly increase, as per its mandate, its support for environmentally beneficial, renewable energy, energy efficiency, and energy storage exports from the United States. U.S. agencies, including DFC, U.S. Trade and Development Agency, EXIM, the Department of State, MCC, and USAID will work together to build a strong investable project pipeline.

## **3. Ending International Official Financing for Carbon-Intensive Fossil Fuel Based Energy**

Scaling back public investments in carbon-intensive fossil fuel-based energy is the necessary corollary to increasing investments in climate-friendly activities. Departments and agencies will seek to end international investments in and support for carbon-intensive fossil fuel-based energy projects. Departments and agencies will work with other countries, through bilateral and multilateral fora, to promote the flow of capital toward climate-aligned investments and away from high-carbon investments. Treasury, in partnership with other Organisation for Economic Co-operation and Development (OECD) countries and other U.S. government departments and agencies, will spearhead efforts to modify disciplines on official export financing provided by OECD export credit agencies, to reorient financing away from carbon-intensive activities.

## **4. Making Capital Flows Consistent with Low-Emissions, Climate-Resilient Pathways**

Financial markets are increasingly demanding investment opportunities that are consistent with low greenhouse gas (GHG) emissions and climate-resilient pathways Supporting the flow

of capital toward activities that are consistent with those pathways involves building an ecosystem of data, information, practices, and procedures that enable financial market actors to internalize climate-related considerations into their decisions. This concept is embodied in the Paris Agreement's Article 2.1(c) and has been widely embraced by financial policy makers and regulators around the world. The Treasury Department, in coordination with other U.S. agencies and regulatory bodies, as appropriate, will continue to promote improving information on climate-related risks and opportunities; identifying climate-aligned investments; managing climate-related financial risks; and aligning portfolios and strategies with climate objectives.

## **5. Defining, Measuring, and Reporting U.S. International Climate Finance**

Drawing on over a decade of experience in tracking climate finance, the United States intends to ensure that our future reporting is on the cutting edge of transparency and evolves along with our strategic approach to climate finance. This will include more detailed reporting, tracking finance for vulnerable populations, and enhanced reporting on mobilization and impact.

The National Security Council staff will conduct a review of this Plan in FY 2023 to take stock of progress and assess whether changes are needed to increase ambition and impact.

## I. Climate Adaptation Policy Statement

---

This Climate Adaptation Policy Statement affirms the Department of Energy's (DOE) commitment to lead by example in Federal efforts to manage the short and long-term effects of climate change on the Department's mission, policies, programs, and operations. It also reaffirms the Department's goal to address the challenges in President Biden's Executive Order (E.O.) 14008 *Tackling the Climate Crisis at Home and Abroad*, as well as the focus on identifying the physical risks from climate change across government operations in Executive Order (E.O.) 14030, *Executive Order on Climate-Related Financial Risk*, by making climate adaptation and resilience an essential element of the work the Department does.

The mission of DOE is to ensure America's security and prosperity by addressing its energy, environmental, and nuclear challenges through transformative science and technology solutions. DOE works on the frontiers of scientific understanding and technical innovation to address the impacts of climate change by researching, developing, and deploying innovative and promising sustainable and resilient clean energy technologies.

DOE understands its mission is performed in an already changing climate. The Fourth National Climate Assessment reports that the nation will increasingly experience more frequent, intense, and longer duration extreme weather events across all regions of the country, including extreme temperature and precipitation events, stronger hurricanes and storm surge, and droughts and wildfires. The National Oceanic and Atmospheric Administration (NOAA) reports that damage costs are already significant. The year 2020 set an historic record, with 22 separate events each costing over a billion dollars in damages, and a cumulative cost exceeding \$95 billion dollars. For far too long, communities of color and low-income communities have borne the brunt of pollution to the air, water, and soil they rely on to live and raise their families; and under-served communities across the U.S. will be the hardest hit by climate impacts like extreme weather events. The transition to a clean economy must lift up these communities that have been left behind, and make sure those who have suffered the most are the first to benefit.

DOE remains committed to taking every available action to mitigate greenhouse gas (GHG) emissions to reduce the impacts of climate change. Further, we understand that we must adapt to these impacts and increase departmental resilience. Sustaining DOE's mission in this changing environment is dependent on DOE's ability to successfully identify aspects of climate change likely to impact its mission and operations, as well as its ability to respond strategically.

DOE will lead by example to achieve the President's mandate to both mitigate and adapt to climate change by setting ambitious goals, developing aggressive plans, and acting with urgency to execute those plans. The Department's plans will be informed by the best science and technical information to effectively translate these into actions. Climate change adaptation is a crucial component of a comprehensive response to climate change and DOE will – through this plan – develop approaches that ensure its mission, programs, policies, and operations remain effective for the American people in current and future climate conditions. In addition, the DOE Sustainability Plan will outline actions DOE will take to mitigate climate change through emissions reductions.

The Department's climate actions support the President's goals, including those articulated in E.O. 14008. The Department's approach will comprise of several adaptation strategies, such as reducing energy demand and increasing energy efficiency, increasing site and grid hardening and modernization, and enhancing the deployment of microgrids, distributed energy resources, and storage. In addition, sites and offices will conduct climate vulnerability assessments and develop resilience plans no later than one year from issuance of the Climate Adaptation and Resilience Plan and update these documents at least every four years.

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

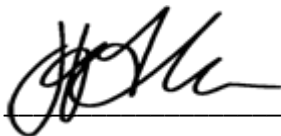

The Department's adaptation and resilience path forward will be shaped by the following guiding principles:

- Protecting DOE assets from climate change impacts by assessing its vulnerabilities, taking action to adapt to the changing environment, and making resilience a cornerstone of operations to ensure DOE has climate-ready sites.
- Using the scientific expertise and world-class research and development capabilities of DOE's National Laboratories to demonstrate promising adaptation technologies at DOE sites.
- Partnering with local communities so we may share in the benefits of DOE's climate adaptation, resilience, and energy and environmental justice initiatives.
- Leveraging DOE's purchasing power in collaboration with other Federal agencies to spur innovation, identify and reduce climate-related financial risk, enhance resilience, and expand the market for U.S. manufactured sustainable products and services, and promote well-paying union jobs on the path to a clean energy economy.

In addition to these guiding principles, the Department commits to implementing the performance goals and actions that are included in the Department's Climate Adaptation and Resilience Plan, and the Sustainability Plan which will be issued in the future. The Department will incorporate these actions, guiding principles and goals in our planning, operations, and budget processes, including where appropriate, identifying opportunities to realign resources and needs for new resources.

Furthermore, the Department will engage and share best practices with other Federal agencies through the National Climate Task Force, interagency working groups, and by joining or forging new collaborations with other agencies and stakeholders, as appropriate. DOE will continue to leverage its unique modeling, climate science expertise, policy, and engineering capabilities in collaboration with other agencies and institutions, to continuously improve our adaptation and resilience strategies. The Climate Adaptation and Resilience Plan will be updated as needed to capture new understandings and any mission changes in order for the Department to effectively address the climate crisis.

I am designating Ingrid Kolb, DOE's Chief Sustainability Officer as the senior level official responsible for coordinating implementation of the Climate Adaptation and Resilience Plan, and directing the Sustainability Steering Committee (SSC), comprised of senior leaders from the DOE program and staff offices, to coordinate implementation of this policy, identify and propose solutions to barriers, and provide any necessary guidance. Quarterly updates on our progress will be provided to DOE senior leadership.

---

**Jennifer Granholm**  
Secretary of Energy

08/25/21

---

**Date**

## II. Introduction

---

DOE recognizes that our country and the world are facing a climate crisis. DOE's mission of ensuring America's security and prosperity by addressing energy, environmental, and nuclear challenges through transformative science and technology solutions is vital to the nation's economic and national security. As outlined in E.O. 14008, *Tackling the Climate Crisis at Home and Abroad*, this Climate Adaptation and Resilience Plan, and Climate Adaptation Policy Statement build upon prior DOE actions taken to bolster adaptation and increase the resilience of DOE facilities and operations.

DOE works on the frontiers of scientific understanding and technological innovation to reduce GHG emissions and mitigate the impacts of climate change by researching, developing, and deploying innovative and promising clean energy technologies. With approximately 50 active sites, DOE has a variety of missions including environmental cleanup, scientific research and development, national nuclear security, power marketing, and more. DOE can only succeed in its mission if it can successfully identify risks, hazards, and vulnerabilities from climate change that have the potential to impact operations, as well as effectively define and implement appropriate adaptation and mitigation actions.<sup>1</sup>

This plan addresses both climate adaptation and mitigation, which are complementary actions necessary for DOE to become more resilient, adapt to a changing climate, and reduce GHG emissions. This forward-looking plan identifies and prioritizes the Department's adaptation and resilience efforts to ensure DOE continues to achieve its mission. The actions described in this plan apply to all programs and facilities and will be updated as needed to capture any mission changes and reaffirm the Department's commitment to address the climate crisis.

DOE has identified five priority adaptation actions in this plan: (1) Assess Vulnerabilities and Implement Resilience Solutions at DOE Sites, (2) Enhance Climate Adaptation and Mitigation Co-benefits at DOE Sites, (3) Institutionalize Climate Adaptation and Resilience Across DOE Policies, Directives, and Processes, (4) Provide Climate Adaptation Tools, Technical Support, and Climate Science Information, and (5) Advance Deployment of Emerging Climate Technologies. In addition, this plan describes DOE's current and planned actions for the following specific topic areas: (1) Climate Vulnerability Assessments, (2) Climate Literacy in DOE's Management Workforce, (3a) Climate Resilience for Climate-Ready Sites and Facilities, and (3b) Climate-Ready Supply of Products and Services. The Department commits to incorporate these actions into our planning, operations, and budget processes, including where appropriate, identifying opportunities to realign resources and needs for new resources.

DOE has designated DOE's Chief Sustainability Officer as the senior level official responsible for coordinating implementation of the Climate Adaptation and Resilience Plan. The designee will work with other senior level officials within each organization and influence the Department's top priorities to ensure that all actions detailed in this plan are implemented. They will also coordinate with the White House Federal Chief Sustainability Officer, Interagency Environmental Justice Working Council, Interagency Sustainability Working Group, and others as appropriate to assist in the planning of and

---

<sup>1</sup> The DOE Climate Adaptation and Resilience Plan addresses adaptation, and emissions mitigation actions that have adaptation and resilience co-benefits. In addition, the DOE Sustainability Plan will outline actions that the Department will take to mitigate climate change through emissions reductions.

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

reporting on DOE's climate-related actions. DOE will submit annual progress reports on implementation efforts to the National Climate Task Force and the Federal Chief Sustainability Officer.

### III. Priority Adaptation Actions

---

This section of the plan provides a description of DOE's five priority actions including implementation, methods, challenges, timeline, and examples. Through the implementation of these priority actions throughout DOE's mission, programs, operations, and management of procurement, real property, public lands and waters, and financial programs, DOE will strive to ensure that climate change adaptation and resilience is achieved Department-wide.

#### **PRIORITY ACTION 1: Assess Vulnerabilities and Implement Resilience Solutions at DOE Sites**

Taking a proactive approach to climate change adaptation and resilience, DOE will reevaluate its vulnerability assessment processes, conduct and update site-level assessments, as well as develop and implement resilience plans. In this effort, each DOE site will identify its vulnerabilities by utilizing the latest climate science data and consulting stakeholders, and as needed develop resilience solutions that will roll up to the Departmental level to inform resource allocation and decision-making. This process will not only create a more climate resilient and adaptive Department but will in some cases enhance the resilience of neighboring communities.

#### **IMPLEMENTATION METHODS**

**Review and Conduct Vulnerability Assessments:** DOE will continue its efforts to understand potential climate-related impacts on its mission and operations and develop a framework to standardize the vulnerability assessment process. Thus far, DOE has completed screenings and assessments at 51 percent of sites. For instance, the Office of Legacy Management (LM), which performs long-term surveillance and maintenance of over 100 prior Manhattan Project and Cold War nuclear legacy sites in 36 states, is working with Lawrence Berkeley National Laboratory (LBNL) to perform a comprehensive analysis of climate change impacts and design/sustainment strategies to mitigate these impacts. LM's understanding of climate change risks and mitigation strategies related to its long-term mission is essential for the protection of current and future LM sites as well as the minimization of DOE's long-term environmental liability.

As noted in the Climate Adaptation Policy Statement, Program Offices will be required to conduct or update assessments and develop resilience plans at their respective sites within one year of issuance of the Climate Adaptation and Resilience Plan. These assessments and plans will be revised on at least a four-year cycle to include updated information, such as data from the latest National Climate Assessment (NCA). The Office of Asset Management's Sustainability Performance Division (SPD) will monitor progress and report to the lead Climate Official, Chief Sustainability Officer, and SSC.

To conduct vulnerability assessments, sites should utilize DOE's 2021 Vulnerability Assessment and Resilience Plan (VARP) guidance and related guidance such as DOE's 2017 screening guidance, *Climate Change Vulnerability Screenings* and 2015 assessment guidance, *Practical Strategies for Climate Change Vulnerability Assessments*. SPD will provide technical assistance during the assessment process, and at the end of this cycle of assessments, will update the guidance documents based on program feedback, including the incorporation of lessons learned. Throughout this process, SPD will work closely with the Program Offices to enable continuous learning by identifying common challenges and potential cost-effective resilience approaches, and sharing best practices and lessons learned.

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

Within the VARP process, sites will account for a range of climate hazards for which they may be at risk. Detailed vulnerability assessments will consider multiplier effects (e.g., wildfires creating more hydrophobic soil) from compounding threats and the extent that vulnerabilities affect mission critical functions and operations. Assessments will be integrated with other site or laboratory planning documents, procedures, and policies. Throughout this process sites will evaluate the potential costs and consequences of inaction, both to DOE sites and external communities, including the assessment of energy and environmental justice communities' impacts. Sites will leverage community partnerships with utility providers, neighboring municipalities, external emergency response entities, tribal stakeholders, and others.

**Plan, Prioritize, and Implement Resilience Solutions:** As part of the VARP process, Program Offices and/or sites will develop resilience plans that identify site level resilience solutions. Resilience solutions should prioritize implementation by considering the number of key vulnerabilities mitigated, mission impact, and capital and operational costs and savings. For example, the Strategic Petroleum Reserve (SPR) conducted a Risk and Resilience Assessment that included an analysis of identified resilience solutions such as elevating equipment vulnerable to storm surge flooding, and SPR linked these vulnerabilities to their Life Extension – Phase II project, which supports actions to extend key equipment and infrastructure capabilities for another 25 years.

DOE sites continue to deploy a variety of resilience solutions addressing a range of climate threats. For example:

- Bonneville Power Administration (BPA) and Western Area Power Administration (WAPA) have developed Wildfire Mitigation Plans to address the risk of wildfires in the Pacific Northwest, Western, and Midwestern United States on electricity transmission lines they operate. These resilience plans help BPA and WAPA prepare and proactively manage the vegetation on their rights-of-way as well as monitor and maintain equipment to mitigate wildfire risks.
- The Office of Environmental Management (EM), which addresses the nation's Cold War environmental legacy through the largest environmental clean-up program in the world, is working to modernize the Savannah River Site's (SRS) electrical distribution system to improve resilience to power outages from extreme heat and storm events by updating and building more resilient transformers and associated equipment, insulator upgrades, pole replacements, grounding, transmission lines, and support towers.
- EM also worked with the Hanford Site on integrating procedures that call for work/rest protocols for extreme heat, limited off-road vehicle use during red flag days, and alert systems for storms/high wind events. The Hanford Site also continues to plant wildfire-tolerant vegetation and fire barriers, including adding firebreaks and performing additional dry tinder removal.
- The Office of Nuclear Energy (NE), which advances nuclear science and technology, is addressing threats of increased drought and higher summer temperatures at Idaho National Laboratory (INL) by undertaking major renovation efforts for laboratories to reduce energy usage by modernizing HVAC control systems and replacing old constant air volume hoods with variable air volume hoods. These efforts improve control of the pressure and temperature within each of the lab spaces, which enhances energy savings and personnel safety.
- The Office of Fossil Energy and Carbon Management (FECM), which is responsible for research and development of programs involving carbon-based fuels, direct air capture, and carbon

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

capture and storage, is addressing the issues of energy and water resilience at its National Energy Technology Laboratory (NETL) through a variety of solutions including cooling tower renovations, boiler and chiller replacements, lighting upgrades, electrical vehicle charging stations expansion, and building upgrades for energy efficiency. With sites in Oregon, West Virginia and Pennsylvania, NETL operations are potentially vulnerable to a range of climate threats including drought, heat waves, and intense storms that can impact electricity demand and supply.

- The National Nuclear Security Administration (NNSA) is modernizing its infrastructure to be more resilient and to provide the capabilities and capacities for meeting the national security mission. Achieving this requires an array of complementary strategies including construction, short-term leases, and timely disposition of excess facilities. Revitalization efforts, energy efficiency measures, and standardized designs that incorporate resilience measures that address threats to NNSA’s national security mission.
- The Office of Energy Efficiency and Renewable Energy’s Water Power Technologies Office (WPTO) enables research, development, and testing of emerging technologies to advance next-generation hydropower and pumped storage systems for a flexible, reliable grid. WPTO, in coordination with Oak Ridge National Laboratory (ORNL) and Pacific Northwest National Laboratory (PNNL), oversees the development and release of an assessment and report to Congress in examining the potential effects of climate change on water available for hydropower at Federal facilities. WPTO’s 9505 Secure Water Analysis (SWA) is a response to Section 9505 of the SECURE Water Act of 2009 (*Omnibus Public Lands Act, Pub. L. No 111-11, Subtitle F*), which requested that the Department assess the effects of and risks from global climate change on water supplies for Federal hydroelectric power generating and marketing practice of the Federal Power Marketing Administrations (PMAs). WPTO is currently conducting a third nationwide assessment—on both the PMAs and non-Federal hydropower entities—to effectively develop tools that bridge climate science to actionable system intelligence. This study aims to assess future vulnerability and risk from drought, decreased snowpack, elevated river temperatures, and flooding. In the future, this work will form a baseline climate assessment to inform climate resilient Federal hydropower.

The Office of Sustainable Environmental Stewardship, within DOE’s Office of Environment, Health, Safety and Security, will continue to partner with SPD, the Program Offices, and sites to develop a sustainable and climate-ready sites initiative to recognize DOE sites that demonstrate leadership by improving performance in natural resource management, climate adaptation, resilience, and sustainability.

#### **CHALLENGES & RISKS**

DOE recognizes the importance of implementing resilience solutions to ensure that the Department can continue to fulfill its mission. DOE has a wide variety of sites located in varying geographic locations, each with a unique set of missions and environmental considerations. Some unique mission facilities may have safety requirements and operational demands that could complicate implementation of resilience solutions and will require further analysis to ensure optimal operations under changing climate conditions.

Many sites may not have staff with the knowledge to conduct an in-depth climate vulnerability assessment and develop resilience plans. To address gaps, DOE will provide technical guidance and

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

support, advance climate literacy training, and use the best available tools to identify cost-effective resilience solutions. DOE has a well-established hazard assessment and adaptation process focused on its high-hazard nuclear facilities. This process ensures that the most critical facilities are well protected from climate risks, but this formal hazard assessment process is complex and costly. A challenge for DOE is leveraging its existing, robust system to improve the implementation of tailored risk adaptation and resilience across the Department. Another risk is the challenges of implementing resilience solutions. To address this, DOE will integrate the implementation of resilience solutions into the budgeting and contracting processes and assess the performance of deployed solutions to inform decision-making.

Conducting assessments, updating DOE guidance documents, and identifying and implementing resilience solutions will require thoughtful and strategic budgeting for resources. While DOE recognizes that the upfront cost of planning for and implementing resilience solutions may prevent future costs from climate-related damage, the execution of these activities is dependent on existing budgeting and contracting processes. DOE sites are primarily government owned and contractor operated through complex management and operations contracts. Within available resources, sites and operations deemed critical to DOE's mission and national security will be given priority.

#### **PERFORMANCE TRACKING & COORDINATION**

Initial metrics include characterizing presence or absence of climate hazards (e.g., coastal flooding, riverine flooding, heat, drought, land degradation, wildfire, and historical extreme weather events). Metrics will also measure whether site vulnerability assessments have been performed and if results are incorporated in planning, including site resilience plans. The Program Offices will be responsible for ensuring the quality of assessment processes and resilience plans at their sites and SPD and the Office of Sustainable Environmental Stewardship will provide technical assistance, as needed. SPD will track the percentage of sites that complete vulnerability assessments and resilience plans. Additionally, DOE sites and programs will track the implementation of resilience solutions as identified in the resilience plans. SPD will report on appropriate metrics to the lead Climate Official, the Chief Sustainability Officer, and SSC. Throughout the assessment and implementation process, DOE will coordinate with other Federal agencies to identify and share resilience solutions, lessons learned, and best practices. DOE will coordinate with tribal, state, and local governments, as well as other partners to plan and implement resilience solutions that may affect neighboring communities.

#### **PRIORITY ACTION 2: Enhance Climate Adaptation and Mitigation Co-benefits at DOE Sites**

DOE recognizes that climate change mitigation is a crucial complement to adaptation and resilience to successfully meet its research, environmental management, and nuclear security missions. The more that can be done to reduce GHG emissions, the less adaptation will be required. Many adaptation and resilience actions have mitigation co-benefits. For example, the deployment of renewable energy resources, such as solar photovoltaic electric systems, in combination with microgrids and storage can reduce vulnerabilities from power outages, while also reducing GHG emissions. Similarly, reductions in energy demand for site operations reduces vulnerability to reductions in power supply from extreme storm events, droughts and wildfires, and other climate risks, but also reduces GHG emissions. DOE will need to pursue a dual climate strategy that leverages the co-benefits of adaptation and mitigation actions, and ensures its mission, programs, policies, and operations remain effective in current and future climate conditions.

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

DOE is committed to leverage the co-benefits of adaptation and mitigation actions to both enhance resilience and achieve net-zero GHG emissions. DOE will accomplish this through comprehensive operational planning, implementation of strategic projects, use of DOE procurement mechanisms to purchase low carbon footprint products, and ongoing monitoring of progress. 85 percent of DOE's Scope 1<sup>2</sup> and 2<sup>3</sup> GHG emissions are from energy use in facilities and the rest are from industrial processes, fugitive sources, and fuel use in fleet vehicles and equipment. Plans to manage these sources will drive operational changes as well as resource allocation across DOE. Adaptation/mitigation strategies include reducing energy and water use, transitioning to clean on-site energy sources and microgrids, electrifying DOE's fleet and facilities, reusing on-site water resources, and managing DOE lands and property to retain water and preserve carbon-storing vegetation, enhancing the use of green infrastructure, and minimizing risk to energy transmission, distribution, and support systems.

In addition, DOE will pursue enhanced electrification in an integrated manner with other objectives such as improving site and grid resilience. Furthermore, DOE will identify approaches to enhance electrification with carbon pollution-free electricity while also decreasing energy use and reducing GHG emissions. DOE's planning efforts will account for both current conditions and evolving future conditions due to climate change. Within one year, the Program Offices will prioritize energy efficiency and identify net-zero emission on-site projects.

#### IMPLEMENTATION METHODS

DOE has already reduced its Scope 1 and 2 GHG emissions by 52 percent from FY 2008 through aggressive energy management and has identified further opportunities for the reduction of Scope 1, 2, and 3 emissions. DOE will focus on four key implementation strategies to enhance climate adaptation and mitigation efforts.

**Reduce Energy and Water Use in Facilities:** To carry out facility related energy and water reductions, DOE will take a strategic approach that includes optimizing DOE's facility footprint to support a flexible workforce, prioritizing the implementation of energy and water efficiency and conservation measures (ECMs), focusing on grid-interactive and net-zero emission buildings, and transforming a diverse set of DOE sites into net-zero emission testbeds. DOE recognizes that it may need to increase electricity use to replace site-delivered fossil fuels and will pursue on-site generation, efficiency, and electrification as pillars of an adaptation and decarbonization strategy. To optimize space for a flexible workforce, DOE will consolidate buildings where feasible and reconfigure space to support alternative workspace solutions. DOE will prioritize ECMs that upgrade legacy HVAC, lighting, and control systems, particularly for energy-intensive operations. DOE will work to expand initiatives such as the Smart Labs Accelerator<sup>4</sup>, creating re-tuning training, and increasing the number of net-zero emission buildings (e.g., National Renewable Energy Laboratory's Research Support Facility) to accelerate progress toward the Administration's and DOE's goals.

One facility exemplifying energy reduction is LBNL's Integrative Genomics Building, a sustainable laboratory built to utilize 70 percent less energy than its predecessor facility. This building includes

---

<sup>2</sup> Scope 1 emissions are direct GHG emissions that occur from owned or controlled sources (e.g., on-site electricity generation, fugitive emissions, owned vehicles).

<sup>3</sup> Scope 2 emissions are indirect GHG emissions associated with purchased energy (e.g., purchased electricity, heat, or steam).

<sup>4</sup> The Smart Labs Accelerator is a FEMP and Better Buildings initiative that helps optimize energy, water, and waste use in laboratories.

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

passive design strategies such as electric heating systems with air and waterside heat recovery, which reduces the carbon footprint for heating by about half compared to a natural gas boiler system, while also enhancing resilience by lowering both the energy and water footprint, thereby reducing vulnerability to power outages and drought related water restrictions.

**Deploy Clean Energy Sources and Modernized Infrastructure:** DOE will accelerate its recapitalization programs to modernize its energy infrastructure and facilities to enhance resilience and reduce GHG emissions. The Office of Electricity (OE), which ensures the delivery of secure, resilient, and reliable energy across the nation, will continue to lead the effort to strengthen, transform, and improve energy infrastructure so consumers, including DOE, have access to resilient, secure, and clean sources of electricity. In addition, the Department's Grid Modernization Initiative, which coordinates electric grid-related research and development across the offices of OE, FECM, NE, Energy Efficiency and Renewable Energy (EERE) and Cybersecurity, Energy Security, and Emergency Response, will be updated within the year. The strategy includes an all-hazards approach to characterize and implement system resilience by considering infrastructure interdependencies, diversity in generation sources, and supply chains against emerging multifaceted threats (i.e., physical, cyber, extreme weather, pandemic, wildfire, geomagnetic disturbance, and earthquake). Outcomes include a full threat-to-consequence characterization of various resilience tradeoffs; a value-based approach to resilience decision-making that serves the U.S. government, private sector, and other stakeholders; and software tools that identify and quantify the costs and benefits of proposed resilience investments.

Within one year, the Program Offices, with support from SPD as needed, will finalize priority sites for large-scale distributed energy deployment and recapitalization plans. Furthermore, DOE will ramp up the installation of on-site clean distributed energy resources for both electric and thermal needs by:

- Installing on-site renewable energy sources, such as Lawrence Livermore National Laboratory's (LLNL) 3.3 megawatt (MW) Solar Center, as well as expanding deployment of systems that integrate renewable generation and storage that both lower GHG emissions and enhance resilience.
- Assessing, and where appropriate, reenergizing existing partnerships (e.g., DOE's Partnership for Energy Sector Climate Resilience) with utilities that are committed to addressing climate adaptation and mitigation opportunities as well as interested in collaborating with DOE to identify and deploy approaches to enhance climate resilience of DOE programs and site operations, as well as transition DOE sites to carbon pollution-free electricity use, with adaptation co-benefits (e.g., use of site-based distributed renewable energy technologies in combination with storage and microgrids to allow operations during central power outages).
- Partnering with utility providers to expand large-scale renewable and carbon-free energy systems using power purchase agreements and other procurement mechanisms. For example, the Northern California Electric Power Consortium and WAPA are creating a 50 MW solar power purchase contract, which will increase use of on-site clean pollution-free electricity, and provide off-grid electricity supply to enhance resilience to power outages.
- Assessing the potential to deploy small modular reactors (SMRs) and microreactors to decarbonize DOE's electricity supply, and power large energy consuming facilities. NE will develop and demonstrate technologies to improve the flexibility of these reactors. Distributed networks powered by SMRs or microreactors could provide reliable clean electricity to sites and

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

surrounding communities, while transitioning away from fossil fuel resources, and avoiding the intermittent nature of certain renewable energy technologies.

**Improve Ecological and Land Use Management:** E.O. 14008 requires that Federal agencies identify strategies that will encourage broad participation in the goal of conserving 30 percent of the Nation’s lands and waters by 2030. DOE manages over two million acres of land, over half of which is comprised of vegetated or forested land. In these areas, DOE will continue to advance its ecological and land use management practices as a tool to enhance resilience (e.g., reduce wildfires) and to mitigate GHG emissions (e.g., provide additional carbon storage benefits). A significant portion of DOE land is either withdrawn Federal land or borders land held by Federal or state governments and natural resource-management agencies. DOE will coordinate with these stakeholders as well as tribes to promote effective management of ecosystems on contiguous lands, and to collaborate and share knowledge.

Implementation will prioritize the preservation and restoration of ecosystem appropriate forest cover, native grasses and forbs, and other indigenous plants to reduce fire risks to DOE sites and to encourage longer-term storage of carbon in biomass and soils, which also have the benefits of controlling destructive invasive species and providing wildfire protection. One example of improved ecological land management is ORNL’s certified arboretum. The arboretum spans 26 acres of ORNL’s west campus and contains 52 different species of trees native to Eastern Tennessee. These native trees have adapted to the landscape and require less water than non-native species, promoting resilience. Another example of beneficial land use management is LM and the University of Wyoming’s 3-year Regenerative Grazing Study, which supports optimizing land use for grazing across LM sites and demonstrates that healthy land management practices, such as regenerative grazing, allow soils to capture more carbon as well as promote healthier vegetation and ecological systems. By optimizing grazing practices, LM is advancing long-term stewardship of the land and improving habitats for local species, helping promote site resilience.

The Office of Sustainable Environmental Stewardship will monitor and report progress on restoration and maintenance plans based on site provided Annual Site Environmental Reports and other sources as well as recognize high-performing DOE sites through the Sustainable Climate-Ready Sites Program. Within one year, Program Offices and sites will update site-level land management plans to include carbon storage considerations and initiate regular reporting on restoration and maintenance.

### **CHALLENGES & RISKS**

The main challenges to implementing this priority action are funding prioritizations, energy-intensive mission growth and related operational processes, and Federal infrastructure development timelines. Significant and sustained capital investments will be required to upgrade building systems and infrastructure and deploy resilient energy and water technologies. Performance contracts will be leveraged where possible but are not always cost-effective due to low utility costs at most DOE sites. DOE has various energy-intensive loads that are driven by mission and operational requirements (e.g., supercomputers, particle accelerators, waste treatment facilities) and relies significantly on off-site electricity providers that employ a range of energy sources, including coal and natural gas. DOE will need to collaborate with these utilities to transition to carbon pollution-free energy sources. Finally, it can be difficult to forecast deployment timelines for large-scale infrastructure projects to increase on-site energy and water resilience and reduce GHG emissions due to uncertainties in the regulatory processes, funding cycles, and the need to integrate the energy and environmental justice concerns of neighboring communities, tribes, and other relevant stakeholders. The key to managing this action

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

includes effective and thoughtful planning approaches, streamlining processes where possible, and sharing lessons learned across DOE and with other agencies.

Climate change poses a risk to DOE with the potential to hinder the Department's mission and substantially increase the operational costs. For example, higher average temperatures in some regions have the potential to increase energy use for HVAC systems and strain transmission and distribution infrastructure. The implementation of effective climate strategies must not only increase the resilience of DOE sites to climate impacts but also reduce the Department's GHG emissions. New on-site distributed energy systems and ECMs that optimize energy use will enhance resilience against utility disruptions. New facility and infrastructure will be designed and sited to account for increased exposure to hazards, such as wildfires. Institutionalizing a clear and consistent approach to resilience planning will help ensure that DOE's programs are prepared to manage these risks.

### **PERFORMANCE TRACKING & COORDINATION**

Performance metrics will be reviewed and updated to reflect evolving understanding of observed and anticipated climate impacts to enhance climate adaptation and mitigation co-benefits at DOE sites. Metrics will track progress in enhancing resilience as a co-benefit of reducing energy and water use, enhancing use of carbon pollution-free electricity, and improving land management. Program Offices will take the lead in planning, prioritizing, and implementing strategies at their respective sites to achieve the Department's goals. Performance will be tracked by the SPD using tools such as the Sustainability Dashboard. The Department will emphasize continuous learning by identifying common challenges and potential cost-effective approaches and sharing best practices and lessons learned. DOE is a national leader in energy technology, research, and policy, and will both leverage this expertise in its own operations and share best practices across DOE and with other agencies. DOE will also rely on lessons learned from its sites and other agencies to avoid duplication of effort and to accelerate deployment. For example, DOE will leverage space management and employee travel reduction strategies from the General Services Administration (GSA) as well as carbon storage and land management expertise from the Department of Agriculture and Department of Interior. DOE will consult with the Department of Defense (DoD) for lessons learned through DoD's Energy Resilience and Conservation Investment Program.

### **PRIORITY ACTION 3: Institutionalize Climate Adaptation and Resilience Across DOE Policies, Directives, and Processes**

To ensure the Department operates in a consistent and efficient manner, DOE orders, directives, and policies must be updated to institutionalize climate adaptation and resilience actions across the complex while also addressing energy and environmental justice impacts. DOE commits to integrate climate information that reflects the current understanding of global climate change into its mission, programs, and management functions and decision points for managing its procurement, real property, public lands and waters, and financial programs including where appropriate, identifying opportunities to realign resources and needs for new resources. DOE will accomplish this through comprehensive operational planning, implementation of strategic projects, use of DOE procurement mechanisms to purchase products and services that are resilient and have a low carbon footprint, and ongoing monitoring of progress. DOE will map out entry points of climate information into management functions and responsibilities that effect funding or contracts. DOE will identify opportunities to incorporate climate criteria in grant and loan program solicitations. DOE will establish formal standards

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

and processes to ensure that policies and directives are implemented in a comprehensive and consistent way that integrates climate adaptation and resilience into Departmental guidance for standard operating procedures, including clear direction to DOE operating contractors.

DOE's facilities face an increasing risk of disruption to programs, operations and damage to real property due to a changing climate. Institutionalizing clear and consistent requirements for assessing and addressing these risks will help ensure that everyone at DOE understands the actions they need to take and are held accountable for implementing those actions. This will help with establishing and institutionalizing a common, Department-wide climate action approach to programs and operations, and allow for the sharing of tools, techniques, and success stories across the complex.

#### **IMPLEMENTATION METHODS**

DOE will institutionalize and integrate climate action into its culture by incorporating requirements and responsibilities into all appropriate orders, directives, policies, and processes.

**Implement Building Standards and Codes:** DOE's Office of Project Management Oversight and Assessment (PM) will develop a requirement that all new construction and major renovation projects meet or exceed the latest building standards and codes as set by ASHRAE 90.1, where appropriate. DOE will also review the new Federal building codes expected in summer of 2021, as well as other building energy standards and codes, such as the International Energy Conservation Code and International Building Code, to further promote climate action and determine the feasibility of making those codes mandatory for all new building construction at DOE. As an example, DOE is currently using the 2013 version of ASHRAE Standard 90.1, as required by Federal energy efficiency performance standards (10 CFR §433) and will consider accelerating the adoption of ASHRAE Standard 90.1 for new DOE buildings. By September 2021, PM will examine the feasibility of mandating the most recent ASHRAE standard for new construction, and if appropriate, will work through DOE's Directives Review Board (DRB) to institute any necessary changes by December 2021.

**Develop Climate-Oriented Procurement Clauses:** DOE's Office of Acquisition Management will lead the effort to review standard contract procurement clauses (e.g., "H" clauses) and identify opportunities to add or modify boiler plate contract language to establish clear climate action requirements (i.e., to be consistent with the Climate Adaptation Policy Statement). This includes requirements for contractors and suppliers to employ climate resilience and carbon footprint considerations, increased energy efficiency, use of carbon pollution-free electricity, and transition away from fossil fuel usage. The Office of Acquisition Management will work with other DOE offices to develop viable language for these "H" clauses, as necessary, by March 2022.

**Integrate Climate Action Requirements into Established DOE Processes:** SPD will partner with the Office of Sustainable Environmental Stewardship to integrate climate action requirements or standards into existing and applicable management systems and processes (e.g., DOE's 50001 Ready Program<sup>5</sup>, ISO 14001<sup>6</sup>, resilience and hazard assessment processes). In addition, DOE will integrate climate action

---

<sup>5</sup> The 50001 Ready Program is a free, self-guided approach based on the principles of the ISO 50001, an international standard for managing and improving energy use.

<sup>6</sup> ISO 14001 is a framework used to set up an effective environmental management system that ensures environmental impacts are being measured and improved. DOE requires the use of ISO 14001 certified or compliant processes at all of its operating facilities.

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

considerations into the Department's planning, programming, budgeting, and evaluation process and guidance.

**Update DOE Directives and Technical Standards:** By leveraging the Office of Sustainable Environmental Stewardship's Directives Resilience Gap Analysis report, the Office of Asset Management will lead the review of DOE directives and technical standards to identify areas to incorporate climate action requirements, including updates to contractor requirements. The Office of Sustainable Environmental Stewardship will provide support, as needed. They will then collaborate with each directive/technical standard's proponent office and DRB to establish proposed climate action language and develop timelines for updates. The directives to be reviewed will include, at a minimum, DOE Orders 150.1A (*Continuity Programs*), 413.3B (*Program and Project Management for the Acquisition of Capital Assets*), 430.1C (*Real Property Asset Management*), 436.1 (*Departmental Sustainability*), and 483.1B (*DOE Cooperative Research and Development Agreements*). The Office of Asset Management and Office of Sustainable Environmental Stewardship will work to identify additional DOE directives appropriate for incorporating climate action by September 2021 and will work with DRB to incorporate such updates by December 2022.

**Define and Communicate Resilience Roles and Responsibilities:** DOE will ensure that management has clearly defined and communicated organizational roles and responsibilities regarding who is responsible and accountable for assessing vulnerabilities of climate risks to site infrastructure and operations, as well as providing oversight and accountability for achieving resilience goals. DOE will pursue management practices that include: (1) Ensuring that management's roles, responsibilities, and accountability for resilience are clearly defined, communicated and understood; (2) Embedding resilience considerations into policies and risk management systems to guide day-to-day decision-making; and (3) Approaching management decisions with full consideration of the impacts of disruptions to operations and infrastructure from climate change risks. To further integrate climate action into management functions, DOE will require Program Offices and sites to assign senior level managers to ensure the execution and integration of the Climate Adaptation and Resilience Plan, and Climate Adaptation Policy Statement initiatives into programs and operations.

### **CHALLENGES & RISKS**

Establishing an ambitious and reasonable schedule for incorporating climate action requirements into all appropriate directives/orders will require close coordination with the DRB, which manages this process and sets priorities and timelines determining when directives can be updated. Revising multiple updates may be a challenge as each directive will undergo a formal process involving extensive coordination and concurrence. Another challenge will be the potential for competition/conflicts between climate-related provisions and other requirements, and operational drivers, which DOE will need to address in contract deliverables and performance tracking.

While the primary action of modifying policies, directives, and processes will involve extensive coordination across many DOE organizations, this can be accomplished using established in-house personnel and resources. However, as climate action requirements are institutionalized, DOE will need to consider how to balance desired outcomes with available funding and personnel resources.

### **PERFORMANCE TRACKING & COORDINATION**

Performance metrics will be reviewed and updated to reflect evolving understanding of observed and reasonably foreseeable climate impacts and the need to modify and institutionalize climate adaptation and resilience across DOE policies, directives, and processes, as well as ensure accountability through

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

DOE's leadership chain. DOE anticipates coordinating with other Federal agencies to exchange information on relevant climate-related policies, directives, and best practices to use for reference. DOE will define the work to be accomplished and create milestones to track progress on a quarterly basis.

**PRIORITY ACTION 4: Provide Climate Adaptation Tools, Technical Support, and Climate Science Information**

The Department will increase access to adaptation tools, technical support, and climate science for DOE sites and their surrounding communities, as well as other Federal agencies and tribal and local governments, to improve climate readiness and overall resilience posture. These strategies build upon existing efforts to disseminate available resources and develop and distribute additional tools, resources, and training. In addition, efforts to increase adaptation and resilience of surrounding communities enhances the resilience of DOE's operations by ensuring the safety and health of the workforce that lives in nearby communities, encouraging employees to consider resilience in their personal lives, developing emergency preparedness plans, as well as adopting other practices that can contribute to enhanced resilience.

**IMPLEMENTATION METHODS**

**Building Codes for Resilience:** DOE's Building Technologies Office (BTO) and the Federal Energy Management Program (FEMP) will provide technical assistance to DOE sites in the adoption of updated building codes that increase energy efficiency and resilience requirements. Specific areas of focus will vary by climate hazard risks drawn from DOE's vulnerability assessment tools. BTO and FEMP will coordinate with GSA and other Federal agencies to ensure a standardized definition and consistent approach are used across DOE sites regarding resilient building codes for Federal buildings. In addition, as directed by the Energy Conservation and Production Act (42 U.S.C. § 6834), FEMP will update Federal standards based on model code revisions to align with BTO's life-cycle cost-effectiveness methodology. FEMP will utilize model code updates to continually improve Federal energy efficiency standards, which is consistent with the Administration's goal to increase the energy efficiency of Federal buildings. More efficient buildings are less vulnerable to anticipated temperature fluctuations due to climate change.

BTO's Building Energy Codes Program (BECF) will assist DOE sites and surrounding communities with the adoption of the latest building codes and the implementation of code improvements. With support from the PNNL, BECF currently tracks state building energy codes adoption across the nation and is exploring opportunities to encourage building code adoption within cities and local jurisdictions, which could be used to assess progress.

**High Performance Computing (HPC) Systems for Climate Simulations and Local Adaptation Planning:** To address climate risks, DOE must ensure that sites have actionable and localized climate science data. Argonne National Laboratory (ANL) will adapt a high resolution dynamically downscaled climate model using its own HPC resources. The downscaled climate dataset covers the entire North American continent and has been used for studies on climate hazards and impacts. ANL will develop demonstration assessments for a few DOE facilities that can be used as a template for the rest of the DOE complex. ANL will also establish an online platform for sharing this data across DOE so that other sites can model climate vulnerabilities and impacts and identify local adaptation and resilience solutions.

**DOE Climate Vulnerability Assessment Tools, Resources, and Training for Sites and Local Communities:** FEMP will continue to provide support for its publicly available tools and resources, including the Technical Resilience Navigator (TRN). The TRN provides a systematic approach for sites to identify

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

energy and water resilience gaps, develop and prioritize solutions that reduce risks, and meet climate change adaptation and resilience goals. For example, PNNL utilized the TRN to identify risks to energy and water loads serving mission critical functions from vulnerability assessments and hazard assessments for its Richland campus. FEMP will provide pilot applications, cohort support, and workshops beginning in 2021 to help sites implement the TRN and identify and mitigate mission critical risks. This effort will leverage the localized climate data from ANL and FEMP and help ensure that DOE sites are aware of additional resources, such as REopt Lite<sup>7</sup> and 50001 Ready Program. The progress of DOE's TRN cohort will be evaluated based on the identified risks and solutions to address any resilience gaps for each site. Once measures to address these gaps have been implemented, the improvement in site resilience posture can be evaluated.

DOE's OE provides tools (e.g., Dynamic Contingency Analysis Tool<sup>8</sup>) and training related to grid infrastructure resiliency. OE will work with DOE sites and local communities to advance climate threat-based risk assessment and prioritization methods for grid planning processes, improve asset management practices, and pilot or validate these approaches at a DOE site. Additionally, mechanisms to incorporate climate risk assessment into the utility planning process are currently being analyzed by DOE and other parties. OE will partner with the PMAs, which operate and transmit energy of Federal hydroelectric dams, and DOE sites to establish a standardized process to assess the risk of drought and other extreme weather events to Federal operations and grid infrastructure which will take two or more years to develop and institutionalize.

The Office of Asset Management and Office of Sustainable Environmental Stewardship will lead the development of virtual and in person training for sustainable acquisition, fleet electrification, environmental management systems, climate change threats and solutions, and other sustainability topics in FY 2022. They will also work with DOE sites to ensure they are aware of the tools and resources available to assist with resilience planning.

**Provide Adaptation and Resilience Support for Energy and Environmental Justice Communities Near DOE Sites:** For far too long, communities of color and low-income communities have borne the brunt of pollution to the air, water, and soil they rely on to live and raise their families. The clean energy revolution must lift up these communities that have been left behind, and make sure those who have suffered the most are the first to benefit. By providing climate adaptation and resilience support for energy and environmental justice communities near DOE sites, the Department will advance priorities related to climate resilience, equity, and energy and environmental justice. In addition to ongoing efforts by EM and LM, the Office of Economic Impact and Diversity (ED) will collaborate with local leadership and stakeholders, and provide technical assistance and training deemed most critical by the energy and environmental justice community. DOE will develop a process for sharing relevant tools and resources that ED will use to facilitate impactful discussions with energy and environmental justice community stakeholders.

The progress of efforts to support energy and environmental justice communities in advancing climate adaptation and mitigation measures will be analyzed through feedback from community leaders and stakeholders. In addition, DOE will utilize metrics such as the number of projects completed and

---

<sup>7</sup> REopt Lite is a tool to assist with identifying the optimal mix of renewable energy, conventional generation, and energy storage technologies for buildings campuses and microgrids.

<sup>8</sup> The Dynamic Contingency Analysis Tool assists with assessing the impact and likelihood of extreme contingencies and potential cascading events across power systems and interconnections.

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

stakeholders impacted and analyze the enhanced resilience posture to demonstrate the efficacy of efforts. Analyses of health and economic benefits will also be performed to enable a broader understanding of the project's impact.

### **CHALLENGES & RISKS**

The challenges related to the implementation of tools and training include the identification and engagement of appropriate stakeholders, development of an outreach plan to help sites take the time during these processes to foster trust with local communities, and the availability and time commitment of participants. Additionally, climate data training is needed to inform decision-making on climate impacts and adaptation.

Mission disruptions may occur due to climate hazards and could result in disruptions to infrastructure and information, such as specialized scientific facilities, data holdings, HPC/data centers, LM sites, national laboratories, and energy/water systems. By providing climate adaptation tools, technical support, and climate science information on adaptation and resilience, DOE sites and surrounding communities can better understand, manage, and mitigate climate risks.

Within available resources, DOE will update and share climate adaptation and resilience methods and tools, with DOE sites, local communities, tribal and local governments. For example, the initial TRN cohort of DOE sites is planned as part of the existing budget; however, implementation of the TRN across the DOE complex will require additional resources or strategic prioritization of available resources. Furthermore, DOE will evaluate resource needs to develop an online platform to deliver the localized climate dataset to the respective DOE site assessment teams, to analyze models and to develop demonstration assessment studies.

### **PERFORMANCE TRACKING & COORDINATION**

To advance this priority action, DOE will create metrics to track performance on a quarterly basis. Metrics will allow tracking of progress in developing and providing climate adaptation tools, as well as providing technical support and climate science information for adaptation and mitigation. DOE will coordinate with tribal, state, and local governments, as well as with other Federal agencies, such as the National Aeronautics and Space Administration and NOAA for climate and extreme weather information, to provide communities near DOE sites with the information and resources necessary to implement climate adaptation and mitigation measures. DOE will explore the use of various Federal mechanisms for sharing information, such as the Federal Climate Resilience Toolkit, as potential vehicles to increase access to DOE climate adaptation tools, technical support, and climate science information.

### **PRIORITY ACTION 5: Advance Deployment of Emerging Climate Resilient Technologies**

DOE will increase climate adaptation and resilience across its sites by demonstrating and deploying cost-effective climate resilient and carbon pollution-free energy technologies. In addition, DOE will assess practices to enhance the purchase of low carbon footprint products and services. The Department is currently advancing research and development programs for climate technologies at its national laboratories and identifying opportunities to use its sites to demonstrate the effectiveness of these innovative technologies and practices. DOE could increase climate performance at its sites by leveraging research, development, and demonstration programs being pursued at the Department. In addition, using DOE sites as testbeds can accelerate the deployment of these technologies and practices throughout the Federal government and private sector.

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

DOE will partner with stakeholders such as local and state governments, universities, and community organizations to ensure these technologies are made available nationwide, including for disadvantaged communities and populations. The dissemination of technologies beyond the DOE complex will help increase accountability through more robust climate change adaptation and mitigation actions and efforts to elevate, support, and increase access for disadvantaged communities and populations, such as black, indigenous, and people of color (BIPOC). By scaling up the development and deployment of the resilient and clean energy technologies of the future, DOE will help put Americans in construction, skilled trades, and engineering to work—building a new clean energy infrastructure and economy, while making sure that every American worker and community can benefit from and see their future in reliable, resilient, clean energy solutions.

### IMPLEMENTATION METHODS

**Develop, Demonstrate, and Deploy Innovative Climate Technologies:** DOE will use its sites as testbeds to pilot innovative climate adaptation and mitigation technologies that improve both grid and climate change resilience as well as reduce GHG emissions. These demonstration projects will involve the advancement of climate technologies with site-specific energy/water resilience components such as new microgrids, power delivery systems, microreactors, water reuse systems, and gray water systems for landscaping. For instance, EERE will use the National Renewable Energy Laboratory (NREL) as a testbed for electric vehicles with a goal of electrifying 100 percent of NREL’s fleet within two years—contributing to both reductions in transportation fossil fuel use, as well as enhanced site resilience by leveraging electric vehicle battery storage as a backup power source. NREL will draft a report, using the information gathered from this pilot, to help other DOE sites and Federal agencies prepare for fleet electrification by understanding potential issues. The Waste Isolation Pilot Plant (WIPP) is working to convert all underground vehicles to be electric. This will provide a showcase for electric vehicle conversion for industrial vehicles, while simultaneously increasing underground air quality, worker safety, and operational efficiency, as well as potentially increasing resilience by leveraging the battery storage capacity for backup generation. WIPP will also investigate the possibility of electric long-haul trucks for its waste transportation fleet. Another example is that DOE’s Energy Assurance for Critical Infrastructure program and SNL are looking to deploy a microgrid in collaboration with Kirtland Air Force Base.

DOE will pursue the resilient net-zero challenge with demonstration projects at sites with a variety of missions, geographical diversity, and different energy sources. The goal of this approach will be to develop and demonstrate innovative, regionally dependent carbon-neutral and climate resilient solutions at varying scales and operating conditions that result in adaptation and mitigation benefits. The demonstration projects will develop a common framework for addressing the net-zero challenge, leverage lessons learned and best practices, and expand opportunities for technology and information transfer across the DOE complex and private sector to advance zero-emission deployment in the marketplace. Transitioning to zero emissions, using technologies such as on-site distributed renewable energy generation as well as the use of more energy efficient equipment will not only reduce energy consumption and emissions, but also reduce impacts from climate change on energy demand and supply. NE is advancing technologies to improve the flexibility of nuclear plants, including SMRs and microreactors, and provide energy resources that contribute to enhanced adaptation and mitigation. Additionally, NETL will assess opportunities for climate technologies that could be deployed at their campuses and could hold on-site demonstrations for technology transfer. Furthermore, working with the responsible Program Offices, ED will assess the feasibility of using DOE sites as resilient hubs for

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

disadvantaged communities, in partnership with relevant stakeholders, including community organizations, minority serving institutions, and governmental authorities. For instance, these hubs will provide a safe space for DOE employees and the surrounding community when faced with severe climate threats. Once completed, successful solutions from these demonstration projects will be deployed at other DOE sites. DOE Program Offices managing site locations will track progress toward their respective technology demonstration and deployment projects.

**Increase Awareness of Cost-effective Resilient Technologies:** To promote energy and environmental justice, DOE will increase awareness at its sites and neighboring environmental justice communities on carbon neutral and cost-effective resilient technologies as well as affordable clean energy solutions. For example, LANL is already working with DOE science and energy programs to create economic opportunities for surrounding communities. Additionally, DOE will create an entrepreneurial pipeline to accelerate the development of emerging climate change technologies within energy and environmental justice communities by providing educational opportunities such as internships. ED will identify communication strategies and assess existing opportunities for resources and internships for neighboring energy and environmental justice communities and BIPOC by September 2022.

### **CHALLENGES & RISKS**

Technology demonstration and deployment can take years to successfully mature. Additionally, demonstration and deployment projects can be resource and budget intensive. Throughout the demonstration process, various DOE programs and offices must coordinate to address challenges. Challenges to establishing an entrepreneurial pipeline for neighboring energy and environmental justice communities and BIPOC include engaging with a large set of communities, defining, and identifying who fits in this space.

Demonstrating innovative climate technologies and conducting educational activities will be a lengthy process. Additionally, developing demonstration projects will require resources including facilities, time, and availability of employees. For certain demonstration projects, new facilities and modifications to existing facilities will be necessary.

### **PERFORMANCE TRACKING**

To track the progress of deployment and demonstration projects, DOE will measure the number of tests or demonstrations initiated, technological advancements in climate readiness, impact of stakeholder outreach, and improvements in the resilience of DOE sites to anticipate climate change impacts as a result of innovative facility and infrastructure projects. For example, over the next five to seven years, NE will build several nuclear demonstration projects and nuclear test beds. As DOE works to develop the entrepreneurial pipeline, DOE will assess metrics such as the number of people gaining access/assistance, number of educational opportunities, number of connecting events (e.g., ARPA-E Energy Innovation Summit), dollars provided to support development of climate change technologies, and number of weighted opportunities to support BIPOC technology development.

## IV. Specific Topic Areas

---

### SPECIFIC TOPIC 1: Update Climate Vulnerability Assessments

Climate change can result in cascading events, disrupting supply chain transportation routes, causing energy and water system shutdowns, resulting in less-suitable conditions, and so much more. These potential impacts put DOE's mission and physical assets at risk. DOE has identified its top five vulnerabilities to be the following: (1) workforce, (2) supply chain and distribution, (3) energy and water systems, (4) mission specific operations and equipment, and (5) real property and physical assets. Multiple factors were considered in identifying these vulnerabilities, including the types of climate change hazards and the associated vulnerabilities to critical DOE infrastructure and operations, scaling considerations associated with DOE-wide hazards and vulnerabilities, and likelihood or severity of damage of disruption given a climate event. To address these vulnerabilities, DOE will implement a Department-wide approach to ensure that the overall mission is not impacted and SPD will work with the Program Offices to identify major vulnerabilities. Conducting vulnerability assessments and the development of resilience plans will ensure that site-level vulnerabilities are identified and addressed. These activities will be completed within one year of the issuance of this Climate Adaptation and Resilience Plan.

#### DOE'S TOP FIVE VULNERABILITIES

**Workforce:** Regardless of region, DOE's workforce must adapt to rising temperatures, extreme weather events, and a rising number of epidemics and pandemics. These climate hazards can affect employee health and result in workforce inefficiencies, site evacuations, and inability to perform daily operations. If left unaddressed, DOE may experience a decline in productivity or an inability to perform mission critical tasks. DOE's outdoor workforce is particularly vulnerable to the climate hazards identified above. Within vulnerability assessments, sites with an outdoor workforce will identify policies and actions to increase employee health and safety, and limit workers' exposure to extreme conditions. The Office of Environment, Health, Safety and Security will assist with integrating climate-related risks into existing health and safety protocols and processes.

To address these types of challenges and modifications to worker health and safety conditions, DOE will coordinate with workers and site unions. Additionally, Program Offices and sites will procure equipment to increase workforce health and safety, reducing the effects of outdoor exposure, as needed. At DOE's Hanford Site, ice vests are utilized to increase employee comfort and reduce heat stress. Barriers to these proposed adaptation strategies include prioritization of equipment procurement or work schedule changes, workforce opposition to shifting schedules, and potentially impractical operation schedules for the work and logistics performed at the site.

**Supply Chain and Distribution:** Extreme weather events (e.g., hurricanes and extreme storm events) or events associated with a warming climate (e.g., wildfires and sea level rise) can impact transportation and manufacturing infrastructure and result in supply chain disruptions of mission critical supplies. Failure to address these climate hazards can result in work disruptions and inhibit mission critical operations. To reduce the risks of climate hazards on supply chains, sites will identify vulnerabilities related to transportation and distribution disruptions within their vulnerability assessments. These vulnerability assessments will also identify alternative procurement opportunities to diversify supply chain sources and alternative distribution routes for site access. Once these risks are identified, Program Offices will work with sites to assist with the resilience implementation process, as needed.

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

These strategies will both reduce site operational risks from climate change and help sites adapt to climate hazards. Barriers to implementing these actions include prioritization and challenges with identifying and implementing alternative contracts.

**Energy and Water Systems:** DOE has seen the impacts of extreme weather, wildfires, and flooding on the Department's energy infrastructure and supply chain. These events have resulted in downed power lines, failed transformers, and disrupted power distribution. Rising temperatures and extreme weather conditions also threaten the availability of water or can lead to an overabundance of water. For example, drought affects the water supply and the production of hydropower at DOE's PMAs, which operationally exposes them to the risk of significant market price shocks in purchasing additional power when they cannot independently meet full contractual power delivery requirements to customers during extreme weather events. In contrast, storm-related flooding impacts operations at the SPR. Heat and drought-related electricity spikes further exacerbate the energy and water feedback loop. The interdependence of energy and water must be considered when addressing DOE's climate change readiness.

DOE sites are taking steps to increase energy system resilience. At INL, wildfires were identified as a threat to power supply, and subsequently, 3,000 transmission and distribution poles were painted with fire-retardant to protect against brush fires. When the 100,000-acre Sheep Fire hit in 2019, INL's treated assets remained intact and power kept flowing. A regional utility on the INL property did not implement this same tactic and lost many poles and lines, suffered impacted power delivery, and faced significant repair costs. LANL is planning a 6-8 MW photovoltaic electric generating station to increase its energy resilience. To increase water resilience, DOE sites will prioritize water reuse and conservation, particularly in the western region of the United States where potable water resources are in high demand. The Nevada National Security Site is considering a remote groundwater sensing demonstration project to detect the presence and levels of groundwater in the desert. This effort would pilot remote monitoring and pave the way for transition to comprehensive remote monitoring on the heavily secured and remote site.

**Mission Specific Operations and Equipment:** DOE's mission utilizes specialized facilities that require significant water and energy resources. As a result, mission specific equipment such as particle accelerators, bio-refinery pilot plants, supercomputers, and waste processing facilities face disruptions due to drought or extreme weather. DOE's nuclear security mission is critical to national security and is also largely conducted at DOE sites that are vulnerable to extreme weather conditions and climate events. DOE's environmental mission could also experience disruptions if facilities dedicated to radioactive waste processing and disposal are impacted by climate hazards or if groundwater remediation systems are impacted by droughts. Failure to react to climate threats could result in the interruption of processes and lead to a significant loss of time and research.

All DOE sites are required by DOE Order 150.1A to maintain plans that identify mission essential assets and mission essential functions. Sites will also be asked to identify mission critical operations and equipment in vulnerability assessments, which are to be updated every four years. Once climate impacts on mission specific operations and equipment have been identified, Program Offices will work with sites to ensure that applicable cost-effective strategies are implemented. Unfortunately, some identified risks may have a low adaptive capacity or backup of critical systems, and the cost of identifying and implementing an alternative process is high. In addition, when seeking to establish new/expanded programs and projects, climate threats such as reduced water supplies due to climate

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

change and droughts should be taken into consideration. Proposed projects with a significant water need in drought-prone regions may be less feasible going forward.

**Real Property and Physical Assets:** Prolonged droughts coupled with warmer weather have resulted in increased wildfires, affecting DOE property in the western region of the United States. Increased precipitation and severe storms have also impacted DOE sites. As these climate threats become more prevalent, DOE's property and physical assets may face damages that could impede site operations. Since all DOE sites may be impacted by climate change, sites must identify climate hazards that impact facilities within their climate vulnerability assessments as well as develop resilience plans to address the vulnerabilities and increase the resilience of existing facilities. Examples of cost-effective hardening strategies as resilience solutions include the installation of berms or bioswales to protect against storm surge, elevating equipment such as substation systems to avoid flooding, undergrounding of power lines, usage of vegetation management, and usage of fire-retardant paint. When highly vulnerable properties are identified without identified cost-effective actions to reduce risks, sites will collaborate with their Program Office to determine feasible resilience solutions.

### **SPECIFIC TOPIC 2: Enhance Climate Literacy in DOE's Management Workforce**

DOE recognizes that a climate-ready organization requires a workforce that can safely and successfully adapt to climate change related challenges, identify, and take advantage of new opportunities, and foster a culture of innovation. A resilient workforce requires knowledge of climate impacts on-site operations, DOE communities, and worker health and safety. Employees should be aware of climate vulnerabilities as well as tools, technology, and guidance available to address those risks. To ensure climate literacy, all DOE employees will be required to take training on climate adaptation and mitigation. This training will help employees develop the skills and climate knowledge necessary to manage and protect the Department's physical assets and its workforce in a changing climate.

#### **IMPLEMENTATION METHODS**

**Climate Change Training and Resource Hub:** DOE plans to improve the climate literacy of its workforce by creating a hub for climate change resources, which will include tools, technical resources, climate science information, and on-demand climate awareness training. DOE will develop a required high-level general introductory course on climate change for all employees (i.e., current and new employees). The course will address the latest climate trends associated with issues such as sea level rise, extreme temperatures, precipitation, flooding, and drought, the variation of climate threats on a temporal and spatial basis, and the potential impact climate trends will have on DOE's mission and operations. This mandatory training will also discuss potential adaptation and mitigation strategies to address these climate threats. DOE will capitalize on existing training and resources when compiling and developing training. To further improve climate literacy within the Department, DOE will identify appropriate DOE job classifications that require additional tailored annual climate trainings. Existing training will be utilized as appropriate and will be updated with new information and case studies each year. The Office of the Chief Human Capital Officer will also explore the recruitment of climate expertise with programs and examine the potential use of direct hire authority for these disciplines.

DOE's Office of the Chief Human Capital Officer will partner with FEMP to take the lead in tracking progress toward these actions. These offices will work to identify specific DOE organizations for the implementation of each action, and SPD and the Office of Sustainable Environmental Stewardship will

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

assist as needed. The Department will begin this effort immediately and will identify metrics to identify progress in deployment of training and enhance climate literacy.

### **CHALLENGES & RISKS**

Developing, updating, and maintaining training requires time, staffing, and funding. Fortunately, DOE can utilize several existing webinars and resources to build a more comprehensive training that is applicable to DOE field sites and Headquarters. In terms of risks, new climate technologies, climate science information, and evolving policies means that the training and resources must be updated regularly. Frequent communication of new climate-related information and findings will also provide employees with important information to assist with their daily activities. The preparation of training materials and creation of a hub that is easily accessible will involve extensive coordination across many DOE organizations but can be accomplished using established in-house personnel and resources.

### **PERFORMANCE TRACKING & COORDINATION**

To objectively assess progress, DOE will not only track the number of DOE employees required to receiving climate training and those who receive the training, but also the effectiveness of this training. DOE will coordinate with other government organizations, such as the Environmental Protection Agency, NOAA, DoD, GSA, the United States Global Change Research Program, and others to implement this effort.

### **SPECIFIC TOPIC 3a: Enhance Climate Resilience for Climate-Ready Sites and Facilities**

DOE plans to integrate climate readiness into its facilities and infrastructure asset management program and has identified the Department's approach to incorporate climate change adaptation and mitigation efforts into its management of real property (i.e., reduce facility related energy and water usage, employ resilience enhancing land use planning and management principles, and use sustainable and resilient remediation options). These efforts not only improve sites' climate readiness by reducing reliance on energy and water resources, but also reduce the effects of climate change by conserving resources and reducing GHG emissions. The Department's approach focuses on two main areas of facility management, which are (1) design and construction and (2) operations and maintenance.

### **IMPLEMENTATION METHODS**

**Design and Construction:** This aspect of facility management focuses on planning and involves the integration of climate-ready measures into the early stages of building design. DOE has a well-established decision-making process for developing facility construction projects from concept to completion. This process is included in DOE Order 413.3B, *Program and Project Management for the Acquisition of Capital Assets*; the order defines Critical Decision phases/milestones for large-scale construction projects from preliminary and conceptual design options through acceptance of the constructed facility. Each of these milestones contain requirements for incorporating the Guiding Principles for Sustainable Federal Buildings (Guiding Principles) into the design, or in the case of acceptance of the constructed facility, documenting how the facility meets sustainable design goals. Currently, under the Guiding Principles, projects must assess localized risks and incorporate design features to enhance the resilience of the building design and operations. In addition, DOE Order 413.3B requires that, "At a minimum, all new construction and major building renovations must meet U.S. Green Building Council's Leadership in Energy and Environmental Design (LEED) Gold certification absent an approved waiver."

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

DOE will direct sites to update their vulnerability assessments and develop resilience plans within one year of issuance of the Climate Adaptation and Resilience Plan. DOE will develop guidance to assist sites with developing location specific design criteria for new facilities and non-occupied building infrastructure projects (i.e., utilities and other supporting infrastructure). This will ensure that climate vulnerabilities and climate-ready solutions are incorporated into these projects.

DOE plans to review Order 413.3B and determine the feasibility of setting design criteria that address climate action as a baseline requirement for all new construction projects covered by the Order. Under such a policy, building features and design elements intended to address climate change through adaptation and resilience would be standard requirements rather than building enhancements from a financial perspective. After reviewing Order 413.3B, DOE will pursue these changes while complying with applicable legal and regulatory requirements that may prohibit the Department from establishing climate-related design elements as baseline requirements.

**Operations and Maintenance (O&M):** This aspect of facility operations involves activities required to keep the facility in working order and able to perform its mission. Facility managers must routinely repair broken equipment, renovate aging systems, and perform preventive maintenance to prolong the life of building equipment. O&M activities consume significant energy and water resources and require continual attention to keep consumption to a minimum.

DOE conducts comprehensive energy and water evaluations at each of its covered facilities every four years. The evaluations identify operations that regularly consume energy and water resources, identify opportunities to eliminate or reduce consumption, and analyze the cost-effectiveness of implementing those opportunities. After evaluations are complete, sites should consider the life-cycle cost-effective opportunities as stand-alone projects or bundle multiple conservation measures into directly funded projects or alternatively financed projects, such as Energy Savings Performance Contracts (ESPCs) and Utility Energy Service Contracts (UESCs).

Conducting high-quality energy and water evaluations is dependent on obtaining reliable energy and water consumption data for each facility and requires accurate building-level metering. Metering data will also help sites measure and verify the effectiveness of the conservation measures they have implemented. FEMP is currently updating guidance to help Federal facilities improve their energy metering and include water metering. The Office of Asset Management will develop a Department-wide metering plan to reflect this guidance and expand its own metering efforts by the summer 2022.

In addition, the Department will update DOE Order 430.1C, *Real Property Asset Management*, to include a requirement for sites to consider the results of their energy and water evaluations when conducting their asset functionality assessments and incorporate life-cycle cost-effective ECMs into facility modernization efforts. This will add depth to the current DOE requirement that each site must conduct a functionality assessment every five years to identify modernization needs.

Finally, DOE will direct sites to review environmental aspects and emergency operation scenarios of O&M activities to determine if changes are needed to address climate vulnerabilities. This includes evaluations to confirm long-term environmental remediation activities and long-term legacy site maintenance activities will be adequate given any projected vulnerabilities. Sites using the TRN will complete a vulnerability assessment as part of the process and will identify O&M activities that need adjusting to address identified climate risks.

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

## CHALLENGES & RISKS

While DOE expects that its sites will successfully conduct energy and water assessments to identify opportunities for increasing climate resilience, the Department also believes sites will encounter challenges in prioritizing the necessary resources to implement those opportunities relative to other Departmental funding priorities. Pursuing performance contracting (e.g., ESPCs) is an avenue many sites can use to reduce large, up-front implementation costs. However, since many sites have already implemented low-cost, high payback opportunities, it will remain a challenge to bundle projects in a way that allows such performance contracts to properly demonstrate cost savings.

## PERFORMANCE TRACKING & COORDINATION

The Department will track site-level data relating to when each DOE site has conducted a climate vulnerability assessment and developed a resilience plan. In addition, DOE will track facility-level data relating to when sites have conducted energy evaluations, water evaluations, and functionality analyses. DOE will use the Sustainable Climate-Ready Sites initiative to recognize leaders and encourage progress, through sharing lessons learned and best practices in sustainable and resilient facility and land management.

### **SPECIFIC TOPIC 3b: Ensure a Climate-Ready Supply of Products and Services**

The Department depends upon a strong, resilient, sustainable, and secure supply chain to ensure our mission and operations are successful. The availability of critical manufacturing capacity, raw materials, and essential goods and services can be threatened by extreme weather events, biological impacts (e.g., pandemics), and other climate-related conditions. DOE will ensure a climate-ready supply of products and services by conducting a supply chain analysis for critical items while also exploring options to require products that are sustainable, from underrepresented businesses, and Made in America, as appropriate. This will improve mission execution across the Department while addressing energy and environmental justice concerns and reducing carbon impacts. DOE will also explore approaches to use its procurement authority to purchase products and services with a low carbon footprint. This effort will build upon the requirement in E.O. 14017, *America's Supply Chains*, which requires the Secretary of Energy to submit a report within 100 days of issuance of the E.O. that identifies supply chain risks for high-capacity batteries (e.g., electric vehicle batteries) and provides policy recommendations to address these risks. The E.O. also requires agencies to identify key supply chain risks relating to semiconductors, batteries, and strategic minerals, which are all critical to the energy sector.

DOE will explore approaches to develop a more resilient, sustainable, secure, and diverse supply chain, such as implementing approaches to encompass greater domestic production as well as identifying and diversifying supply chain sources, while simultaneously supporting small businesses, and encouraging economic growth in neighboring environmental justice communities.

## IMPLEMENTATION METHODS

DOE plans to integrate the evaluation of climate-related acquisition and procurement efforts into its daily operations and culture as well as request that each site conduct an analysis of their supply chain risks and vulnerabilities.

**Climate-Ready Purchasing Preference:** When evaluating purchases, DOE will give preference for various types of vendors, products, and services to ensure DOE is climate-ready. DOE will give preference for the Buy American Act and consider U.S. based vendors to the maximum extent practicable. DOE will

U.S. Department of Energy  
2021 Climate Adaptation and Resilience Plan

also give preference for small business concerns, especially disadvantaged, women owned, and historically underutilized businesses (HUBZones). Additionally, DOE will give preference for sustainable products or locally sourced products (e.g., including an energy and environmental justice consideration), as well as products with a reduced carbon footprint. To carry out these climate-ready purchasing preferences, DOE will leverage its existing acquisition and financial assistance authorities and will evaluate what changes are needed for appropriately including climate considerations in the procurement decision process.

**Supply Chain Analysis:** Each DOE site will conduct a supply chain analysis to determine the reliability and vulnerability of their critical supply chains, and the carbon footprint of its suppliers. This analysis will be incorporated into their vulnerability assessment process and the results will be used to identify critical items that are most at risk to ensure the Department can continue its mission. Options will be identified to address both site specific and Department-wide risks. This risk analysis will consider factors such as gaps in domestic manufacturing capabilities, supply chains with limited suppliers, physical location of key suppliers with climate vulnerabilities, resilience actions taken by suppliers, and availability of alternative sources.

DOE's Office of Acquisition Management will take the overall lead in tracking the Department's progress toward these actions and will work to identify specific offices to serve as the primary lead for implementation. DOE will begin this effort immediately and will establish timelines to review quarterly progress for each priority action based on percentage of activity completed by the targeted timeline.

#### **CHALLENGES & RISKS**

The Federal Acquisition Regulations (FAR) and the Department of Energy Acquisition Regulations (DEAR) may need to be updated to create specific preferences. Across the DOE complex, the sites perform a variety of missions and are likely to identify a multitude of critical items that may require different risk adaptation approaches. It may be a challenge to determine a select few critical products and services when the breadth of DOE's mission is considered. It also may be a challenge to characterize the carbon footprint of its suppliers. In terms of risks, updating the FAR and DEAR along with educating Contracting Officers will take time. While DOE plans to accomplish these actions using established in-house personnel and resources, there may be limited options available to address certain critical materials.

#### **PERFORMANCE TRACKING & COORDINATION**

DOE will establish quantitative measures to objectively track progress. Based on site input, the Department will identify and track agency-wide progress on critical items, services, and adaptation strategies. DOE will coordinate with other government agencies, such as GSA and others to implement this effort as well as share best practices.

## V. Conclusion

---

The Climate Adaptation and Resilience Plan provides a pathway for the Department to adapt to current and projected impacts of climate change while also leveraging the co-benefits of reducing energy demand and GHG emissions. The actions described in this plan will assist the Department in better understanding current and future climate risks that may impact DOE's mission and operations. These actions will also help to characterize DOE's climate vulnerabilities as well as develop the climate science and resilience tools needed to adapt and respond to climate hazards. By assessing vulnerabilities, providing adaptation tools, prioritizing funding, and institutionalizing climate requirements and literacy throughout the workforce, DOE will be able to develop and deploy climate resilient technologies, tools, and practices throughout the DOE complex and within surrounding communities.

Successful implementation of this plan will require collaboration and coordination across DOE, with other Federal agencies, and with non-Federal stakeholders. The priority actions and activities discussed within the specific topic areas of this plan will be incorporated into DOE's planning, operations, and budget development processes. The incorporation into DOE's planning processes includes integration within other departmental plans, such as DOE's Sustainability Plan and laboratory planning documents, to ensure consistency of planned resilience and climate goals as well as tracking year over year progress. Furthermore, the Department will collaborate with other Federal agencies as appropriate through the National Climate Task Force and interagency working groups, as well as investigate new opportunities for collaboration as appropriate. DOE will continue to leverage its unique modeling, climate science expertise, and engineering capabilities in collaboration with other agencies and institutions to continuously improve its understanding of climate change impacts and identify appropriate adaptation and mitigation strategies. Substantial progress can be achieved with the formation of strong partnerships to increase resilience of DOE and create more resilient communities.

This plan and the Climate Adaptation Policy Statement provide guidance for DOE to incorporate climate change adaptation and mitigation into daily business operations at Headquarters and each DOE site. DOE will review and revise the Climate Adaptation and Resilience Plan to acknowledge successes and lessons learned as well as continue to set ambitious goals. By creating a more climate resilient Department, DOE can then build a more climate-ready energy system that ensures clean, affordable, and reliable energy, and promotes energy and environmental justice and well-paying jobs. Thereby, increasing the nation's energy security and helping to create a sustainable clean energy economy.

# United States, European Union, and Partners Formally Launch Global Methane Pledge to Keep 1.5C Within Reach

## MEDIA NOTE

### OFFICE OF THE SPOKESPERSON

NOVEMBER 2, 2021

Share

*Over 100 countries representing 70% of the global economy have now joined the Pledge*

Today, the United States, the European Union, and partners formally launched the Global Methane Pledge, an initiative to reduce global methane emissions to keep the goal of limiting warming to 1.5 degrees Celsius within reach. A total of over 100 countries representing 70% of the global economy and nearly half of anthropogenic methane emissions have now signed onto the pledge.

The strong global support for the Pledge illustrates growing momentum to swiftly reduce

methane emissions—widely regarded as the single most effective strategy to reduce global warming. Countries joining the Global Methane Pledge commit to a collective goal of reducing global methane emissions by at least 30 percent from 2020 levels by 2030 and moving towards using best available inventory methodologies to quantify methane emissions, with a particular focus on high emission sources. The countries who have joined the Pledge represent all regions of the world and include representatives from developed and developing nations.

The U.S. and EU are also proud to announce a significant expansion of financial and technical support to assist implementation of the Pledge. **Global philanthropies have committed \$328 million in funding to support scale up of these types of methane mitigation strategies worldwide.** The European Bank for Reconstruction and Development, the European Investment Bank, and the Green Climate Fund have committed to support the Pledge through both technical assistance and project finance. The International Energy Agency will also serve as an implementation partner.

Delivering on the Global Methane Pledge would reduce warming by at least 0.2 degrees Celsius by 2050, providing a crucial foundation for global climate change mitigation efforts. In addition, according to the Global Methane Assessment from the Climate and Clean Air Coalition (CCAC) and the United Nations Environment Programme (UNEP), achieving the 2030 goal would prevent over 200,000 premature deaths, hundreds of thousands of asthma-related emergency room visits, and over 20 million tons of crop losses a year by 2030.

The supporters of the Global Methane Pledge include the U.S., the EU, and the following 103 countries:

1. Albania
2. Andorra
3. Argentina
4. Armenia
5. Barbados
6. Belgium
7. Belize
8. Benin

9. Bosnia and Herzegovina

Content

## Action

Notification for a public meeting.

## Summary

Pursuant to the Federal Advisory Committee Act (FACA), the U.S. Environmental Protection Agency (EPA) hereby provides notice that the White House Environmental Justice Advisory Council (WHEJAC) will meet on the dates and times described below. The meeting is open to the public. Members of the public are encouraged to provide comments relevant to the beta version of the Climate and Economic Justice Screening Tool that was developed by the Council on Environmental Quality (CEQ) and comments relevant to federal government agencies' implementation of the Justice40 Initiative. For additional information about registering to attend the meetings or to provide public comment, please see “ *Registration* ” under SUPPLEMENTARY INFORMATION . Pre-registration is required.

## Dates

The WHEJAC will hold a virtual public meeting on Wednesday, March 30, 2022, and Thursday, March 31, 2022, from approximately 3:00 p.m.-7:00 p.m., Eastern Time each day. A public comment period relevant to the beta version of the Climate and Economic Justice Screening Tool and federal government agencies' implementation of the Justice40 Initiative will be considered by the WHEJAC during the meeting on March 30, 2022. (see SUPPLEMENTARY INFORMATION ). Members of the public who wish to participate during the public comment period must pre-register by 11:59 p.m., Eastern Time, March 23, 2022.

## For Further Information Contact

Karen L. Martin, WHEJAC Designated Federal Officer, U.S. EPA; email: [whejac@epa.gov](mailto:whejac@epa.gov); telephone: (202) 564-0203. Additional information about the WHEJAC is available at <https://www.epa.gov/environmentaljustice/white-house-environmental-justice-advisory-council>.

## Supplementary Information

The meeting discussion will focus on the beta version of the Climate and Economic Justice Screening Tool developed by the CEQ and WHEJAC draft recommendations on the implementation of the Justice40 Initiative. These two charges were established through Executive Order 14008, “Tackling the Climate Crisis at Home and Abroad.”

The Charter of the WHEJAC states that the advisory committee will provide independent advice and recommendations to the Chair of the CEQ and to the White House Environmental Justice Interagency Council (IAC). The WHEJAC will provide advice and recommendations about broad cross-cutting issues, related but not limited to, issues of environmental justice and pollution reduction, energy, climate change mitigation and resiliency, environmental health, and racial inequity. The WHEJAC's efforts will include a broad range of strategic, scientific, technological, regulatory, community engagement, and economic issues related to environmental justice.

*Registration:* Individual registration is required for the virtual public meeting. Information on how to register is located at <https://www.epa.gov/environmentaljustice/white-house-environmental-justice-advisory-council>. Registration for the meeting is available through the scheduled end time of the meeting. Registration to speak during the public comment period will close 11:59 p.m., Eastern Time, on March 23, 2022. When registering, please provide your name, organization, city and state, and email address for follow up. Please also indicate whether you would like to provide public comment during the meeting, and whether you are submitting written comments at the time of registration.

### A. Public Comment

The WHEJAC is interested in receiving public comments relevant to the beta version of the Climate and Economic Justice Screening Tool that was developed by the CEQ and federal government agencies' implementation of the Justice40 Initiative. Every effort will be made to hear from as many registered public commenters during the time specified on the agenda. Individuals or groups providing remarks during the public comment period will be limited to three (3) minutes. Please be prepared to briefly describe your comments and recommendations on what you want the WHEJAC to advise CEQ and IAC to do regarding the beta version of the Climate and Economic Justice Screening Tool and federal government agencies' implementation of the Justice40 Initiative. Submitting written comments for the record are strongly encouraged. You can submit your written comments in three different ways, 1. by creating comments in the Docket ID No. EPA-HQ-OA-2022-0050 at <http://www.regulations.gov>, 2. by using the webform at <https://www.epa.gov/environmentaljustice/white-house-environmental-justice-advisory-council#whejacmeeting>, and 3. by sending comments via email to [wheja@epa.gov](mailto:wheja@epa.gov). Written comments can be submitted through April 14, 2022.

### B. Information About Services for Individuals With Disabilities or Requiring English Language Translation Assistance

For information about access or services for individuals requiring assistance, please contact Karen L. Martin, via email at [whejac@epa.gov](mailto:whejac@epa.gov) or contact by phone at (202) 564-0203. To request special accommodations for a disability or other assistance, please submit your request at least seven (7) working days prior to the meeting, to give EPA sufficient time to process your request. All requests should be sent to the email listed in the FOR FURTHER INFORMATION CONTACT section.

(Senate Floor)

## STATEMENT OF ADMINISTRATION POLICY

**S.J. Res. 14 – A joint resolution providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Environmental Protection Agency relating to “Oil and Natural Gas Sector: Emission Standards for New, Reconstructed, and Modified Sources Review”**

(Sen. Heinrich, D-NM, and 23 cosponsors)

The Administration supports passage of S.J. Res. 14, a joint resolution providing for congressional disapproval of the rule “Oil and Natural Gas Sector: Emission Standards for New, Reconstructed, and Modified Sources Review,” published at 85 Fed. Reg. 57018 (September 14, 2020). This action would ensure that this rule, which eliminated pollution standards for methane emissions from the oil and gas sector and eliminated all emission standards for the transmission and storage segments of that sector, will have no force or effect and reinstate the pollution reduction requirements established under the Clean Air Act in 2012 and 2016.

Addressing methane leaks through detection and repair by using already cost-effective technologies can spur the creation of good-paying jobs fixing leaking equipment and pipelines – all while minimizing waste and reducing this powerful source of pollution. Today, the oil and gas sector is the largest industrial source of methane emissions – a potent climate-disrupting greenhouse gas that is responsible for approximately one-third of the global warming and the resulting climate disruption we are already experiencing from climate change. In order to effectively mitigate climate change, addressing methane pollution from this and other sectors is an urgent and essential step.

Every American has a fundamental right to breathe clean air and drink clean water. These methane emissions – leaking during oil and gas production, transmission, and distribution activities – also contribute to the formation of smog, or ground-level ozone, which is harmful to both human health and agriculture. Oil and gas production is also a significant emitter of carcinogenic and smog-forming volatile organic compounds into frontline communities. These communities, as well as children, the elderly, outdoor workers, and individuals with respiratory conditions, are at higher risk of experiencing harmful health outcomes due to exposure to such pollution. Oil and gas pollution can also be carried by the wind and intensify air pollution problems in communities along that path, including across state boundaries.

The Clean Air Act authorizes the Environmental Protection Agency (EPA) to protect Americans from dangerous air pollution, including methane and volatile organic compounds. Nonetheless, the rule that this resolution disapproves of took four harmful actions that *increased* the amount of

harmful pollution to which Americans are exposed: (1) the elimination of pollution standards for methane emissions from the oil and gas sector; (2) the elimination of all air pollution standards for the transmission and storage segments of the oil and gas sector; (3) removal of the predicate that establishes EPA's obligation to address the extensive methane pollution emitted by existing sources; and (4) establishment of a new, non-statutory requirement that EPA make an additional, pollutant-specific finding of significant contribution to endangerment before addressing harmful air pollution from a sector already regulated under the Clean Air Act. All four of these actions would be reversed by the passage and signature of the resolution.

S.J. Res. 14 will restore robust Clean Air Act pollution standards for this sector, protecting American communities. The resolution will also clear the pathway for EPA to evaluate opportunities to promulgate even stronger standards under section 111 of the Clean Air Act to address dangerous methane and other pollution from both new and existing sources across the oil and gas sector. The Administration looks forward to working with the Congress to restore these critically important pollution standards.

\* \* \* \* \*

1 (b) EFFECTIVE DATE.—The amendments made by  
2 this section shall apply to taxable years of specified foreign  
3 corporations beginning after November 30, 2021.

4 (c) TRANSITION RULE.—A taxpayer’s first taxable  
5 year beginning after November 30, 2021, shall end at the  
6 same time as the first required year (within the meaning  
7 of section 898(c)(1) of the Internal Revenue Code of  
8 1986) ending after such date.

9 **SEC. 138123. MODIFICATIONS OF FOREIGN TAX CREDIT**  
10 **RULES APPLICABLE TO CERTAIN TAXPAYERS**  
11 **RECEIVING SPECIFIC ECONOMIC BENEFITS.**

12 (a) IN GENERAL.—Section 901 is amended by redес-  
13 ignating subsection (n) as subsection (o) and by inserting  
14 after subsection (m) the following new subsection:

15 “(n) SPECIAL RULES RELATING TO DUAL CAPACITY  
16 TAXPAYERS.—

17 “(1) GENERAL RULE.—Notwithstanding any  
18 other provision of this chapter, any amount paid or  
19 accrued by a dual capacity taxpayer to a foreign  
20 country or possession of the United States for any  
21 period shall not be considered a tax—

22 “(A) if, for such period, the foreign coun-  
23 try or possession does not impose a generally  
24 applicable income tax, or

1           “(B) to the extent such amount exceeds  
2           the amount which would be paid or accrued by  
3           such dual capacity taxpayer under the generally  
4           applicable income tax imposed by such country  
5           or possession if such taxpayer were not a dual  
6           capacity taxpayer.

7           Nothing in this paragraph shall be construed to  
8           imply the proper treatment of any such amount  
9           not in excess of the amount determined under  
10          subparagraph (B).

11          “(2) DUAL CAPACITY TAXPAYER.—For pur-  
12          poses of this subsection, the term ‘dual capacity tax-  
13          payer’ means, with respect to any foreign country or  
14          possession of the United States, a person who—

15                 “(A) is subject to a levy of such country or  
16                 possession, and

17                 “(B) receives (or will receive) directly or  
18                 indirectly a specific economic benefit from such  
19                 country or possession.

20          “(3) GENERALLY APPLICABLE INCOME TAX.—  
21          For purposes of this subsection, the term ‘generally  
22          applicable income tax’ means an income tax (or a se-  
23          ries of income taxes) which is generally imposed  
24          under the laws of a foreign country or possession of  
25          the United States on residents of such foreign coun-

1 as amended by the preceding provisions of this Act, is  
2 amended by inserting after the item relating to section  
3 36C the following new item:

“Sec. 36D. Previously-owned qualified plug-in electric drive motor vehicles.”.

4 (d) EFFECTIVE DATE.—The amendments made by  
5 this section shall apply to vehicles acquired after Decem-  
6 ber 31, 2021.

7 **SEC. 136403. QUALIFIED COMMERCIAL ELECTRIC VEHI-**  
8 **CLES.**

9 (a) IN GENERAL.—Subpart D of part IV of sub-  
10 chapter A of chapter 1 is amended by adding at the end  
11 the following new section:

12 **“SEC. 45Y. CREDIT FOR QUALIFIED COMMERCIAL ELEC-**  
13 **TRIC VEHICLES.**

14 “(a) IN GENERAL.—For purposes of section 38, the  
15 qualified commercial electric vehicle credit for any taxable  
16 year is an amount equal to the sum of the credit amounts  
17 determined under subsection (b) with respect to each  
18 qualified commercial electric vehicle placed in service by  
19 the taxpayer during the taxable year.

20 “(b) PER VEHICLE AMOUNT.—The amount deter-  
21 mined under this subsection with respect to any qualified  
22 commercial electric vehicle shall be equal to 30 percent  
23 of the basis of such vehicle.

1       “(c) QUALIFIED COMMERCIAL ELECTRIC VEHI-  
2 CLE.—For purposes of this section, the term ‘qualified  
3 commercial electric vehicle’ means any vehicle which—

4               “(1) meets the requirements of subparagraphs  
5 (A) and (C) of section 36C(e)(1) without regard to  
6 any gross vehicle weight rating, and is acquired for  
7 use or lease by the taxpayer and not for resale,

8               “(2) either—

9                       “(A) meets the requirements of subpara-  
10 graph (D) of section 36C(e)(1), or

11                      “(B) is mobile machinery, as defined in  
12 section 4053(8),

13               “(3) is primarily propelled by an electric motor  
14 which draws electricity from a battery which—

15                      “(A) has a capacity of not less than 30 kil-  
16 owatt hours,

17                      “(B) is capable of being recharged from an  
18 external source of electricity,

19                      “(C) is not powered or charged by an in-  
20 ternal combustion engine, or

21                      “(D) is a new qualified fuel cell motor ve-  
22 hicle described in subparagraphs (A) and (B) of  
23 section 30B(b)(3), and

24               “(4) is of a character subject to the allowance  
25 for depreciation.

1 “(d) SPECIAL RULES.—

2 “(1) IN GENERAL.—Rules similar to the rules  
3 under subsection (f) of section 36C shall apply for  
4 purposes of this section.

5 “(2) PROPERTY USED BY TAX-EXEMPT ENTI-  
6 TY.—In the case of a vehicle the use of which is de-  
7 scribed in paragraph (3) or (4) of section 50(b) and  
8 which is not subject to a lease, the person who sold  
9 such vehicle to the person or entity using such vehi-  
10 cle shall be treated as the taxpayer that placed such  
11 vehicle in service, but only if such person clearly dis-  
12 closes to such person or entity in a document the  
13 amount of any credit allowable under subsection (a)  
14 with respect to such vehicle.

15 “(e) VIN NUMBER REQUIREMENT.—No credit shall  
16 be determined under subsection (a) with respect to any  
17 vehicle unless the taxpayer includes the vehicle identifica-  
18 tion number of such vehicle on the return of tax for the  
19 taxable year.

20 “(f) TERMINATION.—No credit shall be determined  
21 under this section with respect to any vehicle acquired  
22 after December 31, 2031.”.

23 (b) CONFORMING AMENDMENTS.—

24 (1) Section 38(b) is amended by striking para-  
25 graph (30) and inserting the following:

1           “(30) the qualified commercial electric vehicle  
2           credit determined under section 45Y,”.

3           (2) Section 6213(g)(2), as amended by the pre-  
4           ceding provisions of this Act, is amended—

5                   (A) in subparagraph (T), by striking  
6                   “and” at the end,

7                   (B) in subparagraph (U), by striking the  
8                   period at the end and inserting “, and”, and

9                   (C) by adding at the end the following:

10                   “(V) an omission of a correct vehicle iden-  
11                   tification number required under section 45Y(e)  
12                   (relating to commercial electric vehicle credit)  
13                   to be included on a return.”.

14           (3) The table of sections for subpart D of part  
15           IV of subchapter A of chapter 1 is amended by add-  
16           ing at the end the following new item:

          “Sec. 45Y. Qualified commercial electric vehicle credit.”.

17           (c) EFFECTIVE DATE.—The amendments made by  
18           this section shall apply to vehicles acquired after Decem-  
19           ber 31, 2021.

20   **SEC. 136404. QUALIFIED FUEL CELL MOTOR VEHICLES.**

21           (a) IN GENERAL.—Section 30B(k)(1) is amended by  
22           striking “December 31, 2021” and inserting “December  
23           31, 2031”.

24           (b) NEW QUALIFIED FUEL CELL MOTOR VEHI-  
25           CLE.—Section 30B(b) is amended by striking “and” at

1 the end of subparagraph (D), by striking the period at  
2 the end of subparagraph (E) and inserting “, and”, and  
3 by adding at the end the following new subparagraph:

4                   “(F) which is not property of a character  
5                   subject to an allowance for depreciation.”.

6           (c) EFFECTIVE DATE.—The amendments made by  
7 this section shall apply to property placed in service after  
8 December 31, 2021.

9 **SEC. 136405. ALTERNATIVE FUEL REFUELING PROPERTY**  
10 **CREDIT.**

11           (a) IN GENERAL.—Section 30C(g) is amended by  
12 striking “December 31, 2021” and inserting “December  
13 31, 2031”.

14           (b) ADDITIONAL CREDIT FOR CERTAIN ELECTRIC  
15 CHARGING PROPERTY.—

16                   (1) IN GENERAL.—Section 30C(a) is amend-  
17 ed—

18                           (A) by striking “equal to 30 percent” and  
19                           inserting the following: “equal to the sum of—  
20                           “(1) 30 percent”,

21                           (B) by striking the period at the end and  
22                           inserting “, plus”, and

23                           (C) by adding at the end the following new  
24                           paragraph:

1           “(2) 20 percent of so much of such cost as ex-  
2           ceeds the limitation under subsection (b)(1) that  
3           does not exceed the amount of cost attributable to  
4           qualified alternative vehicle refueling property (de-  
5           termined without regard to subsection (c)(1) and as  
6           if only electricity, and fuel at least 85 percent of the  
7           volume of which consists of hydrogen, were treated  
8           as clean-burning fuels for purposes of section  
9           179A(d)) which—

10                   “(A) is intended for general public use  
11                   with no associated fee or payment arrangement,

12                   “(B) is intended for general public use and  
13                   accepts payment via a credit card reader, in-  
14                   cluding a credit card reader that uses  
15                   contactless technology, or

16                   “(C) is intended for use exclusively by  
17                   fleets of commercial or governmental vehicles.”.

18           (2)       CONFORMING       AMENDMENT.—Section  
19           30C(b) is amended—

20                   (A) by striking “The credit allowed under  
21                   subsection (a)” and inserting “The amount of  
22                   cost taken into account under subsection  
23                   (a)(1)”,

24                   (B) by striking “\$30,000” and inserting  
25                   “\$100,000”, and

1 (C) by striking “\$1,000” and inserting  
2 “\$3,333.33”.

3 (3) BIDIRECTIONAL CHARGING EQUIPMENT IN-  
4 CLUDED AS QUALIFIED ALTERNATIVE FUEL VEHI-  
5 CLE REFUELING PROPERTY.—Section 30C(e) is  
6 amended—

7 (A) by striking “For purposes of this sec-  
8 tion, the term” and inserting “For purposes of  
9 this section—

10 “(1) IN GENERAL.—The term”, and

11 (B) by adding at the end the following new  
12 paragraph:

13 “(2) BIDIRECTIONAL CHARGING EQUIPMENT.—  
14 Property shall not fail to be treated as qualified al-  
15 ternative vehicle refueling property solely because  
16 such property—

17 “(A) is capable of charging the battery of  
18 a motor vehicle propelled by electricity, and

19 “(B) allows discharging electricity from  
20 such battery to an electric load external to such  
21 motor vehicle.”.

22 (c) CERTAIN ELECTRIC CHARGING STATIONS IN-  
23 CLUDED AS QUALIFIED ALTERNATIVE FUEL VEHICLE  
24 REFUELING PROPERTY.—Section 30C is amended by re-  
25 designating subsections (f) and (g) as subsections (g) and

1 (h), respectively, and by inserting after subsection (e) the  
2 following:

3 “(f) SPECIAL RULE FOR ELECTRIC CHARGING STA-  
4 TIONS FOR CERTAIN VEHICLES WITH 2 OR 3 WHEELS.—  
5 For purposes of this section—

6 “(1) IN GENERAL.—The term ‘qualified alter-  
7 native fuel vehicle refueling property’ includes any  
8 property described in subsection (c) for the re-  
9 charging of a motor vehicle described in paragraph  
10 (2) that is propelled by electricity, but only if the  
11 property—

12 “(A) meets the requirements of subsection  
13 (a)(2), and

14 “(B) is of a character subject to deprecia-  
15 tion.

16 “(2) MOTOR VEHICLE.—A motor vehicle is de-  
17 scribed in this paragraph if the motor vehicle—

18 “(A) is manufactured primarily for use on  
19 public streets, roads, or highways (not including  
20 a vehicle operated exclusively on a rail or rails),  
21 and

22 “(B) has at least 2, but not more than 3,  
23 wheels.”.

24 (d) WAGE AND APPRENTICESHIP REQUIREMENTS.—  
25 Section 30C, as amended by this section, is further

1 amended by redesignating subsections (g) and (h) as sub-  
2 sections (h) and (i) and by inserting after subsection (f)  
3 the following new subsection:

4 “(g) WAGE AND APPRENTICESHIP REQUIRE-  
5 MENTS.—

6 “(1) BASE CREDIT AMOUNT AND INCREASED  
7 CREDIT AMOUNT.—

8 “(A) IN GENERAL.—In the case of any  
9 qualified alternative fuel vehicle refueling prop-  
10 erty which does not satisfy the requirements of  
11 subparagraph (B), the amount of the credit de-  
12 termined under subsection (a) shall be 20 per-  
13 cent of such amount (determined without re-  
14 gard to this sentence).

15 “(B) INCREASED CREDIT FOR CERTAIN  
16 QUALIFIED ALTERNATIVE FUEL VEHICLE RE-  
17 FUELING PROPERTY MEETING PROJECT RE-  
18 QUIREMENTS.—

19 “(i) IN GENERAL.—In the case of any  
20 qualified alternative fuel vehicle refueling  
21 property which meets the project require-  
22 ments of this subparagraph, subparagraph  
23 (A) shall not apply.

1           “(ii) PROJECT REQUIREMENTS.—A  
2 project meets the requirements of this sub-  
3 paragraph if it is one of the following:

4           “(I) A project which commences  
5 construction prior to the date of the  
6 enactment of this paragraph.

7           “(II) A project which satisfies  
8 the requirements of paragraphs (2)  
9 and (3).

10       “(2) PREVAILING WAGE REQUIREMENTS.—

11           “(A) IN GENERAL.—The requirements de-  
12 scribed in this subparagraph with respect to  
13 any qualified alternative fuel vehicle refueling  
14 property are that the taxpayer shall ensure that  
15 any laborers and mechanics employed by con-  
16 tractors and subcontractors in the construction  
17 of such property shall be paid wages at rates  
18 not less than the prevailing rates for construc-  
19 tion, alteration, or repair of a similar character  
20 in the locality as most recently determined by  
21 the Secretary of Labor, in accordance with sub-  
22 chapter IV of chapter 31 of title 40, United  
23 States Code.

24           “(B) CORRECTION AND PENALTY RELATED  
25 TO FAILURE TO SATISFY WAGE REQUIRE-

1           MENTS.—In the case of any taxpayer which  
2           fails to satisfy the requirement under subpara-  
3           graph (A) with respect to such qualified alter-  
4           native fuel vehicle refueling property, rules  
5           similar to the rules of section 45(b)(8)(B) shall  
6           apply for purposes of this paragraph.

7           “(3) APPRENTICESHIP REQUIREMENTS.—The  
8           requirements described in this subparagraph with re-  
9           spect to the construction of any qualified alternative  
10          fuel vehicle refueling property are as follows:

11                   “(A) LABOR HOURS.—

12                           “(i) PERCENTAGE OF TOTAL LABOR  
13                           HOURS.—All contractors and subcontrac-  
14                           tors engaged in the performance of con-  
15                           struction on any project shall, subject to  
16                           subparagraph (B), ensure that not less  
17                           than the applicable percentage of the total  
18                           labor hours of such work be performed by  
19                           qualified apprentices.

20                           “(ii) APPLICABLE PERCENTAGE.—For  
21                           purposes of paragraph (1), the applicable  
22                           percentage shall be—

23                                   “(I) in the case of any applicable  
24                                   project the construction of which be-

1 gins before January 1, 2023, 5 per-  
2 cent,

3 “(II) in the case of any applica-  
4 ble project the construction of which  
5 begins after December 31, 2022, and  
6 before January 1, 2024, 10 percent,  
7 and

8 “(III) in the case of any applica-  
9 ble project the construction of which  
10 begins after December 31, 2023, 15  
11 percent.

12 “(B) APPRENTICE TO JOURNEYWORKER  
13 RATIO.—The requirement under subparagraph  
14 (A)(i) shall be subject to any applicable require-  
15 ments for apprentice-to-journeyworker ratios of  
16 the Department of Labor or the applicable  
17 State apprenticeship agency.

18 “(C) PARTICIPATION.—Each contractor  
19 and subcontractor who employs 4 or more indi-  
20 viduals to perform construction, alteration, or  
21 repair work on an applicable project shall em-  
22 ploy 1 or more qualified apprentices to perform  
23 such work.

24 “(D) EXCEPTION.—

1           “(i) IN GENERAL.—Notwithstanding  
2 any other provision of this paragraph, this  
3 paragraph shall not apply in the case of a  
4 taxpayer who—

5                   “(I) demonstrates a lack of avail-  
6 ability of qualified apprentices in the  
7 geographic area of the construction,  
8 alteration, or repair work, and

9                   “(II) makes a good faith effort to  
10 comply with the requirements of this  
11 paragraph.

12           “(ii) GOOD FAITH EFFORT.—For pur-  
13 poses of clause (i), a taxpayer shall be  
14 deemed to have satisfied the requirements  
15 under such paragraph with respect to an  
16 applicable project if such taxpayer has re-  
17 quested qualified apprentices from a reg-  
18 istered apprenticeship program, as defined  
19 in section 3131(e)(3)(B), and such request  
20 has been denied, provided that such denial  
21 is not the result of a refusal by the con-  
22 tractors or subcontractors engaged in the  
23 performance of construction, alteration, or  
24 repair work on such applicable project to  
25 comply with the established standards and

1 requirements of such apprenticeship pro-  
2 gram.

3 “(E) DEFINITIONS.—For purposes of this  
4 paragraph—

5 “(i) LABOR HOURS.—The term ‘labor  
6 hours’ has the meaning given such term in  
7 section 45(b)(9)(E)(i).

8 “(ii) QUALIFIED APPRENTICE.—The  
9 term ‘qualified apprentice’ has the mean-  
10 ing given such term in section  
11 45(b)(9)(E)(ii).

12 “(4) REGULATIONS AND GUIDANCE.—The Sec-  
13 retary shall issue such regulations or other guidance  
14 as the Secretary determines necessary or appropriate  
15 to carry out the purposes of this subsection.”.

16 (e) EFFECTIVE DATE.—The amendment made by  
17 this section shall apply to property placed in service after  
18 December 31, 2021.

19 **SEC. 136406. REINSTATEMENT AND EXPANSION OF EM-**  
20 **PLOYER-PROVIDED FRINGE BENEFITS FOR**  
21 **BICYCLE COMMUTING.**

22 (a) REPEAL OF SUSPENSION OF EXCLUSION FOR  
23 QUALIFIED BICYCLE COMMUTING BENEFITS.—Section  
24 132(f) is amended by striking paragraph (8).

1           (4) REDETERMINATION OF FOREIGN TAXES  
2           AND RELATED CLAIMS.—The amendments made by  
3           subsection (g) shall take effect on the date which is  
4           60 days after the date of the enactment of this Act.

5           (i) REGULATIONS.—The Secretary shall prescribe  
6           rules providing for the application of subsection (e) of sec-  
7           tion 904 of the Internal Revenue Code of 1986, as added  
8           by this section, to any amounts carried over under sub-  
9           section (c) of such section from a taxable year with respect  
10          to which such subsection (e) did not apply to a taxable  
11          year with respect to which such subsection (e) does apply.

12       **SEC. 138125. FOREIGN OIL AND GAS EXTRACTION INCOME**  
13                               **AND FOREIGN OIL RELATED INCOME TO IN-**  
14                               **CLUDE OIL SHALE AND TAR SANDS.**

15          (a) IN GENERAL.—Paragraphs (1)(A) and (2)(A) of  
16          section 907(c) are each amended by inserting “(or oil  
17          shale or tar sands)” after “oil or gas wells”.

18          (b) EFFECTIVE DATE.—The amendments made by  
19          this section shall apply to taxable years of foreign corpora-  
20          tions beginning after December 31, 2021, and to taxable  
21          years of United States shareholders in which or with which  
22          such taxable years of foreign corporations end.

# DOL Proposes Rule to Support ESG Funds in Retirement Plans

The administration says climate change presents financial risks to plan participants

By Stephen Miller, CEBS

October 25, 2021

*This article has been updated.*

**T**he U.S. Department of Labor (DOL) has proposed removing barriers put in place by the prior administration that would have limited plan fiduciaries' ability to consider climate change and other environmental, social and governance (ESG) issues as risk factors affecting workers' financial security when fiduciaries select retirement plan investments and exercise shareholder proxy voting rights.

Some analysts are questioning whether the proposal, as currently worded, could *require* fiduciaries to consider the economic effects of climate change and other ESG factors when evaluating funds for retirement plans.

The proposed rule, Prudence and Loyalty in Selecting Plan Investments and Exercising Shareholder Rights (<https://www.federalregister.gov/documents/2021/10/14/2021-22263/prudence-and-loyalty-in-selecting-plan-investments-and-exercising-shareholder-rights>), would apply to investments included in 401(k) and other defined contribution plans, as well as to defined benefit pension plans. The proposal, published in the *Federal Register* on Oct. 14, follows an executive order signed in May by President Joe Biden directing the federal government to treat climate change as a threat to workers' retirement savings (<https://www.whitehouse.gov/briefing-room/presidential-actions/2021/05/20/executive-order-on-climate-related-financial-risk/>).

In 2020, the administration of former President Donald Trump had issued a final rule ([www.shrm.org/ResourcesAndTools/hr-topics/benefits/pages/final-rule-limits-401ks-from-picking-funds-based-on-nonfinancial-factors.aspx](http://www.shrm.org/ResourcesAndTools/hr-topics/benefits/pages/final-rule-limits-401ks-from-picking-funds-based-on-nonfinancial-factors.aspx)), subsequently blocked by the Biden administration, that would have required sponsors of investment-based employee plans to strictly apply the fiduciary duties of prudence under the Employee Retirement Income Security Act (ERISA) when considering plan investments that promote nonfinancial objectives, such as reducing carbon emissions. A separate Trump administration final rule ([www.shrm.org/ResourcesAndTools/hr-topics/benefits/Pages/DOL-final-rule-limits-proxy-voting-by-retirement-plan-fiduciaries.aspx](http://www.shrm.org/ResourcesAndTools/hr-topics/benefits/Pages/DOL-final-rule-limits-proxy-voting-by-retirement-plan-fiduciaries.aspx)) would have barred retirement plan fiduciaries from casting corporate-shareholder proxy votes in favor of social or political positions that don't advance the financial interests of retirement plan participants.

ACCEPT

## Duties of Prudence and Loyalty

Under the Biden administration, the DOL takes the position that ESG factors, and climate change issues in particular, pose financial risks that plan sponsors should consider as prudent fiduciaries.

According to a DOL fact sheet (<https://www.dol.gov/ebsa/~/files/EBSA/about-ebsa/our-activities/resource-center/fact-sheets/notice-of-proposed-rule-making-prudence-and-loyalty-in-selecting-plan-investments-and-exercising-shareholder-rights.pdf>), the proposed rule "retains the core principle that the duties of prudence and loyalty require ERISA plan fiduciaries to focus on material risk-return factors and not subordinate the interests of participants and beneficiaries (such as by sacrificing investment returns or taking on additional investment risk) to objectives unrelated to the provision of benefits under the plan," a position similar to the prior guidance.

The proposed rule, however, also "addresses the [DOL's] concern that the 2020 [Trump administration] rules have created uncertainty and are having the undesirable effect of discouraging ERISA fiduciaries' consideration of climate change and other ESG factors in investment decisions, even in cases when it is in the financial interest of plans to take such considerations into account."

Acting Assistant Secretary for the Employee Benefits Security Administration Ali Khawar said the new proposal "will bolster the resilience of workers' retirement savings and pensions by removing the artificial impediments—and chilling effect on environmental, social and governance investments—caused by the prior administration's rules."

He added, "A principal idea underlying the proposal is that climate change and other ESG factors can be financially material, and, when they are, considering them will inevitably lead to better long-term risk-adjusted returns, protecting the retirement savings of America's workers."

**A 'Significant Change'**

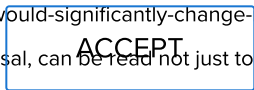

According to R. Sterling Perkinson, a partner in the Raleigh, N.C., office of law firm Kilpatrick Townsend, the proposed regulations "represent a significant change in the DOL's viewpoint of fiduciary duties that relate to ESG factors and shareholder activism (<https://www.kilpatricktownsend.com/en/Blog/ERISA/2021/10/DOL-Proposes-Rules-Regarding-ESG-Factors-and-Proxy-Voting>), but they do not fundamentally alter the fiduciary duties to make investment decisions and to vote proxies and exercise shareholder rights to enhance investment returns. They may nevertheless have an impact by removing potential barriers from selecting funds that, for example, take into account climate change impacts or corporate governance practices as part of their investment strategies."

Looking ahead, Perkinson noted, "It remains to be seen whether the DOL will go a step further in final regulations by mandating consideration of certain ESG factors, or whether they will maintain a more neutral position that they are no different than other traditional investment criteria."

Along those lines, retirement plan consultancy October Three highlighted the section of the proposal stating that a fiduciary, when evaluating a plan investment, must generally give appropriate consideration to:

"The projected return of the portfolio relative to the funding objectives of the plan, *which may often require an evaluation of the economic effects of climate change and other environmental, social, or governance factors* on the particular investment or investment course of action. [Emphasis added.]"

The firm advised (<https://www.octoberthree.com/dol-proposes-new-esg-and-proxy-voting-regulation-would-significantly-change-rules-adopted-by-the-trump-dol-at-the-end-of-2020/>) that "the italicized language, added by this new proposal, can be read not just to authorize consideration of ESG factors but to require it 'often.' "

William D. Jewett, a partner at law firm Verrill Dana in Boston, recommended that "fiduciaries should proceed with caution (<https://www.verrill-law.com/benefits-law-update/thoughts-on-the-dols-proposed-esg-regulation/>) until the DOL's back-and-forth on ESG has settled into a durable set of rules. The partisan reactions to the proposed regulation that have appeared to date suggest that the back-and-forth is far from over."

**ESG Default Investments**

The proposed rule reverses the prior rule's prohibition on using ESG funds as qualified default investment alternatives. We use cookies to make our site work, to improve your experience, and we use our information and data to help us develop and improve our products and services. [Cookie Policy](#) for more information and how to disable them. By clicking accept, or closing the message option where blackrock and natixis have products) (QDIAs), which are types of mutual funds that plan sponsors can select as the default option in automatic enrollment 401(k)-type defined contribution plans.

QDIAs can be target-date retirement funds, which automatically reset their asset mix to become less risky as the specified target retirement year nears. Mutual fund companies have begun marketing target-date funds made up of investments that meet their ESG criteria.

"This will be a huge win, if the final rule ends up looking like the proposal, for some asset managers who rolled out ESG target-date funds over the past few years," Jason Roberts, CEO of the Pension Resource Institute consultancy in San Diego, told RIABiz, an online publication for investment advisors.

### Proxy Voting by Plan Fiduciaries

Shareholder proxy votes have increasingly focused on ESG corporate issues, including climate change policies. The former ESG rule barred plan fiduciaries ([www.shrm.org/ResourcesAndTools/hr-topics/benefits/pages/dol-final-rule-limits-proxy-voting-by-retirement-plan-fiduciaries.aspx](http://www.shrm.org/ResourcesAndTools/hr-topics/benefits/pages/dol-final-rule-limits-proxy-voting-by-retirement-plan-fiduciaries.aspx)) from casting corporate-shareholder proxy votes in favor of social or political positions that didn't advance the financial interests of retirement plan participants.

As regards fiduciaries voting on behalf of plan participants in shareholder proxy initiatives, attorneys at law firm Seyfarth explained that the DOL's proposed rule "eliminates several provisions that were couched as 'safe harbors' in the [Trump administration's] rule (<https://www.beneficiallyyours.com/2021/10/25/feeling-like-a-yo-yo-latest-swing-in-esg-investments-and-erisas-fiduciary-duties/>) based on the DOL's concern that they were being construed as permission for fiduciaries to abstain [from proxy voting] without properly considering the plan's interests."

The newly proposed rule also "prohibits a fiduciary from following the recommendations of a proxy advisory firm or other service provider unless the fiduciary determines that its proxy voting guidelines are consistent with the guidance in the proposal," Seyfarth noted.

### Comments Sought

The comment period for the proposed rule will run through Dec. 13, 2021. Comments can be submitted at <https://www.regulations.gov/> (<https://www.regulations.gov/>).

### Conflicting Views on ESG Funds

In *Wall Street Journal* opposing opinion columns ([https://www.wsj.com/articles/should-esg-funds-be-in-retirement-plans-11631729292?st=5qefupdt4x4tvtat&reflink=desktopwebshare\\_permalink](https://www.wsj.com/articles/should-esg-funds-be-in-retirement-plans-11631729292?st=5qefupdt4x4tvtat&reflink=desktopwebshare_permalink)) last month, two economics professors at Northwestern University's Kellogg School of Management in Evanston, Ill., squared off over the appropriateness of ESG funds in retirement plans.

Aaron Yoon, an assistant professor of accounting and information management, wrote that "Offering employees the option of investing in [ESG] funds in their 401(k) retirement-savings plans is essential. If individuals are making clear that they want the option to invest this way, there is no good reason to deny them the opportunity to do so in their 401(k) accounts."

He wrote that research he conducted (<https://meridian.allenpress.com/accounting-review/article-abstract/91/6/1697/99330/Corporate-Sustainability-First-Evidence-on?redirectedFrom=fulltext>) with colleagues showed companies with good ESG ratings relevant to the sector in which the company operates delivered superior stock returns.

In a counter-argument, Phillip Braun, a clinical professor of finance and associate chairman of the finance department at the Kellogg School of Management, wrote that ESG funds "tend to be more expensive than other funds"—and that according to a Morningstar study (<https://www.morningstar.com/content/dam/marketing/shared/pdfs/Research/annual-us-fund-fee-study-updated.pdf>), the asset-weighted average expense ratio of U.S. ESG funds was 0.61 percent in 2020, compared with 0.41 percent for all U.S. open-end mutual funds and 0.12 percent for traditional index funds. He noted that higher fund fees are correlated over time with lower returns on dollars invested, compared to similar funds with lower fees.

"Determining whether a stock or a fund is truly advancing ESG goals is difficult because the investment industry lacks a comprehensive ESG measurement framework," Braun added. "Even those who are willing to pay extra to support sustainability and a 'green' agenda cannot be sure that ESG funds deliver on that either."

[Update]

#### ESG Proposals Generate Strong Responses

The DOL's proposed rule garnered responses (<https://www.regulations.gov/docket/EBSA-2021-0013/comments>) on both sides of the issue, as did a related Securities and Exchange Commission (SEC) request for public input on climate change disclosures (<https://www.sec.gov/news/public-statement/lee-climate-change-disclosures>) by public companies.

While proponents of ESG investments favor removing barriers they see as needlessly preventing fiduciaries from offering funds that reflect plan participants' values in 401(k)-type plans, critics have questioned whether ESG funds are a marketing ploy by investment companies.

Below are excerpts from two comment letters on ESG investments:

#### IN SUPPORT:

We use cookies to make our site work, to improve your experience, and we use our analytics and third-party cookies for advertising. Please see our [Cookie Policy](#) for more information and how to disable them. By clicking accept, or closing the message risk of exposure to extreme weather events resulting from climate change. Analyses regarding transition risks to a low-carbon economy and continuing to use this site, you agree to our use of cookies. also suggest significant impacts to companies, such as stranded assets worth trillions of dollars. ... While we have focused on climate

change in this letter, we believe that ERISA fiduciaries should be able to consider other ESG factors as well. As the DOL observed in its rule package, there are studies showing the positive correlation between social factors like workforce diversity and treatment of employees, on the one hand, and company success on the other.

-- A comment letter (<https://www.napa-net.org/sites/napa-net.org/files/1448000-1448320-comment%20letter%20iso%20dol%20proposed%20rule.pdf>) on the proposed DOL rule signed by attorney generals from California, Connecticut, Delaware, the District of Columbia, Maryland, Massachusetts, Minnesota, New Mexico, New York, North Carolina, Oregon and Vermont.

#### IN OPPOSITION:

My main worry with ESG disclosures is that they would give credence to the army of asset managers currently promoting ESG investing to retail and institutional investors as a way to "make money by doing good."... Recent ESG research by the [Center for Retirement Research at Boston College] finds that the major state and local government pension plans that have incorporated ESG factors into their investment policies underperformed those that did not. The study also finds that most retail ESG funds have higher fees and worse performance than similar index funds. At worst, ESG investing is a marketing ploy by financial services firms to repackage actively managed investments—which were becoming increasingly less appealing—in a trendy wrapper.

-- A comment letter (<https://www.sec.gov/comments/climate-disclosure/cl12-8922481-245102.pdf>) on the SEC's request for public input by Jean-Pierre Aubry, assistant director of research, the Center for Retirement Research at Boston College.

## Biden picks leading civil rights attorney for EPA

By Hannah Northey, Jeremy P. Jacobs | 02/02/2021 01:35 PM EST

Marianne Engelman-Lado giving a talk in 2019. @livablefuture/Twitter

One of the country's leading experts on environmental civil rights started serving yesterday as EPA's deputy general counsel for environmental initiatives, a move viewed as a step toward President Biden's commitment to environmental justice.

Marianne Engelman-Lado is one of three newly appointed political deputy general counsels slated to serve under EPA's Office of General Counsel, the agency's chief legal adviser. She joins Melissa Hoffer, who is serving as principal deputy general counsel and acting general counsel, and Dimple Chaudhary, EPA's deputy general counsel for nationwide resource protection programs (*Greenwire* (<https://subscriber.politicopro.com/eenews/article/eenews/1063723315>), Jan. 22).

EPA confirmed Engelman-Lado's hiring, which was outlined in an internal agency [email](https://www.eenews.net/assets/2021/02/02/document_gw_04.pdf) ([https://www.eenews.net/assets/2021/02/02/document\\_gw\\_04.pdf](https://www.eenews.net/assets/2021/02/02/document_gw_04.pdf)) E&E News obtained.

Advertisement

In a statement, Engelman-Lado said Biden is the "first president that has really committed their platform to addressing issues of inequality in the environmental sector and this is the moment to bring higher visibility to those who have been negatively impacted by environmental injustices."

Her appointment arrives on the heels of Biden's far-reaching executive order to impose a governmentwide approach to elevate environmental justice and address the disproportionate pollution burdens faced by many communities of color.

That includes the creation of an interagency council on environmental justice at the White House and a refocusing of the Justice Department on EJ issues (*Greenwire* (<https://subscriber.politicopro.com/eenews/article/eenews/1063723815>), Jan. 28).

Engelman-Lado has dedicated her career to environmental civil rights.

She has filed multiple complaints to EPA under Title VI of the Civil Rights Act, which is supposed to prohibit discrimination by entities that receive federal funds.

In theory, Title VI would be a key mechanism for communities facing disproportionate pollution burdens to seek remedies. But EPA has historically failed to take action on Title VI complaints, leading to sharp criticism — including from Engelman-Lado.

EPA has "one of the worst civil rights enforcement offices in the U.S. government," she told E&E News last year.

President Trump sought to further weaken Title VI at the Justice Department before leaving office (*Greenwire* (<https://subscriber.politicopro.com/eenews/article/eenews/1063722025>), Jan. 7).

Engelman-Lado has been a key lawyer in filing Title VI complaints stemming from power plant pollution in Michigan, as well as coal ash dumps and landfills in Alabama. And she has represented local communities in suing the agency when it didn't take action on those complaints.

Engelman-Lado is now a professor at Vermont Law School, and has previously worked at Yale Law School, Earthjustice, and the NAACP Legal Defense and Educational Fund. Vermont Law School praised her appointment yesterday in a statement, including noting that she established the school's Environmental Justice Clinic.

"Marianne is the perfect person at the perfect time to get EPA's EJ program on the right track," said Vermont Law School professor Pat Parenteau. "She is an accomplished civil rights lawyer with deep expertise in environmental law. She has earned the respect of the EJ communities by spending time with them, listening to their concerns, understanding their priorities, and designing strategies to achieve their objectives through the law."

Engelman-Lado and others sent the Biden transition team a [list](https://www.eenews.net/assets/2021/02/02/document_gw_03.pdf) ([https://www.eenews.net/assets/2021/02/02/document\\_gw\\_03.pdf](https://www.eenews.net/assets/2021/02/02/document_gw_03.pdf)) of executive and legislative recommendations before the presidential inauguration to reverse Trump administration policies and "move the nation closer to the constitutionally-guaranteed promise of equal protection before the law to achieve environmental justice."

The groups are calling on the Biden administration to take concrete steps to support community-based monitoring in fence-line communities, ensure that resources are reaching the communities most affected and overhaul civil rights enforcement.

For example, federal agencies must develop robust policy and enforcement strategies to implement environmental justice, expand federal grants and cross-agency coordination, and conduct meaningful analyses of EJ protections in permitting and policymaking.

"Communities of Black, Indigenous, and People of Color (BIPOC), as well as low-income communities, are confronting the cumulative impacts of public health and economic crises, on top of environmental and climate risks and perpetual state-sanctioned violence," they wrote.

*Reporter Kevin Bogardus contributed.*

## EPA launches civil rights revamp

By Kelsey Brugger, Hannah Northey | 12/14/2021 01:46 PM EST

Lilian Dorka is director of EPA's Office of External Civil Rights Compliance. Eric Vance/EPA via AP

EPA will soon move to revamp internal policies for handling civil rights complaints across the nation, marking the agency's first steps toward tackling an issue it has all but flouted for decades.

The upcoming changes to EPA's Office of Civil Rights, tucked into the agency's strategic agenda, could mark a notable shift in agency policy.

Despite facing a backlog of civil rights complaints for decades, the office made its first and only formal finding of discrimination in 2017 on the last day of the Obama administration. The case, tied to air pollution complaints from a Michigan power plant, was initially filed more than two decades prior.

Advertisement

But now the agency says it is taking Title VI civil rights complaints much more seriously.

“Under this administration our investigations are more rigorous, and our enforcement is more vigorous,” Lilian Dorka, EPA’s director of the External Civil Rights Compliance Office, or ECRCO, told E&E News in a recent interview. “We are going to use all of our regulatory authority,”

Dorka — who worked on civil rights for nearly three decades at the Department of Education — started at EPA in 2014 when the civil rights office lagged behind other agencies’ ability to respond to external Title VI complaints.

For years, the agency’s civil rights office had been plagued with a sizable backlog, and it largely rejected complaints ([https://www.epa.gov/system/files/documents/2021-11/complaints-received-in-fy-2022-to-date-11-12-2021-thru-fy2014\\_0.pdf](https://www.epa.gov/system/files/documents/2021-11/complaints-received-in-fy-2022-to-date-11-12-2021-thru-fy2014_0.pdf)) from marginalized communities that have long faced disproportional environmental perils.

“Communities wanted the agency to do better,” said Mustafa Santiago Ali, a former environmental justice senior adviser. “When it came to environmental utilization, [the civil rights office] continued to fall short of the needs and expectations inside environmental justice communities.”

Ali said difficulties surrounding staffing and the office’s level of authority contributed to the problem.

The agency is now on the brink of a number of changes. The first is a deadline by the end of the month to issue guidance to create new requirements for how EPA grants must be used in a nondiscriminatory way.

Second, in the coming weeks, EPA says it will be opening an agency-initiated investigation known as a “compliance review” to focus on “substantive high priority issues affecting overburdened and disadvantaged communities.”

And within a year, the agency will issue guidance that clarifies existing law on how to address civil rights in the permitting context — particularly how the agency handles cumulative impacts, a key question that the administrator has been asked lately in the context of environmental justice (*E&E News PM* (<https://subscriber.politicopro.com/article/eenews/2020/09/28/ig-calls-for-more-civil-rights-oversight-010370>), (<https://subscriber.politicopro.com/article/eenews/2020/09/28/ig-calls-for-more-civil-rights-oversight-010370>) Sept. 28, 2020).

Dorka called the new focus on civil rights “incredible.”

“For me, after 34 years in civil rights enforcement, it is incredibly significant that there is a goal in the agency’s strategic plan for advancing EJ and civil rights and specific agencywide commitment,” she said.

## Response to IG

EPA’s planned changes stem in part from a blistering inspector general report last September that found the civil rights office had failed to fully implement an oversight system to ensure the \$4 billion in funds doled out each year prevents racial discrimination.

The office is currently housed within EPA’s Office of General Counsel, according to the report, and has about a dozen full-time employees.

While the public can lodge complaints of alleged discrimination by recipients of EPA funding, the office has authority to withdraw financial assistance to compel the recipient to comply.

The IG found ([https://www.epa.gov/sites/default/files/2020-09/documents/\\_epaoig\\_20200928-20-e-0333.pdf](https://www.epa.gov/sites/default/files/2020-09/documents/_epaoig_20200928-20-e-0333.pdf)) ECRCO was not proactively conducting reviews to ensure recipients of federal funding were complying with the Civil Rights Act of 1964, which prohibits any recipient from discriminating based on race, color or national origin when carrying out programs for the government.

Further, the watchdog found the EPA office wasn't collecting data from funding recipients to target programs with weaknesses outside the investigation process. The IG also found some states needed more training and guidance to help them address discrimination complaints tied to permits and cumulative impacts.

The IG did, however, note that the office had moved to tackle a backlog of complaints since taking responsibility for external civil rights in the waning days of the Obama administration. Before then, such functions were housed in the Office of the Administrator, according to the report.

Since taking over in December 2016, the office had resolved a backlog of 61 cases from fiscal years 2017 through 2019, according to the report.

But the IG emphasized that improved oversight could prevent future case backlogs at EPA and help ensure funding recipients comply with Title VI.

“Despite elimination of the case backlog, additional improvements in the EPA’s oversight of Title VI funding recipients could prevent discrimination,” the IG wrote.

The IG called on EPA’s Office of the Administrator to develop a cross-agency plan and to develop guidance on permitting and cumulative impacts.

The watchdog also laid out a number of steps for the civil rights office to take to ensure it was collecting the right data from states in a systematic manner, training state staff and ensuring programs were nondiscriminatory.

Ali, now a vice president at the National Wildlife Federation, said he always advocated for a senior adviser for civil rights who could communicate directly with the administrator.

In June, EPA Administrator Michael Regan said he would soon name an environmental justice adviser but to date has made no formal announcement. Separately, President Biden’s budget proposal calls for the creation of an environmental justice assistant administrator, a post that would require congressional funding ([Greenwire \(https://subscriber.politicopro.com/article/eenews/2021/06/25/regan-unveils-50m-in-grants-with-eye-on-environmental-justice-000232\)](https://subscriber.politicopro.com/article/eenews/2021/06/25/regan-unveils-50m-in-grants-with-eye-on-environmental-justice-000232), June 25).

## ‘It’s long overdue’

Environmental advocates and residents who have filed civil rights complaints — and waited years for a response — say the agency’s potential reforms are a step in the right direction.

In Michigan alone, three such complaints have been filed this year, and environmental groups and residents are eagerly waiting to see what EPA decides.

Those complaints focus on the state’s approval of permits for facilities that have been tied to odors and other violations, including an automobile plant in Detroit, a cardboard recycling plant in the city of Kalamazoo and a hot mix asphalt plant in the city of Flint, which is still reeling from lead contamination of drinking water there.

Nick Leonard, executive director of the Great Lakes Environmental Law Center, said there’s no legal recourse if EPA rejects a case — that under Supreme Court precedent, advocates cannot sue to enforce civil rights regulations. That, he said, makes it even more important that EPA’s work to tackle racism is successful.

“It’s long overdue, to take a comprehensive look at how that office is doing the work of ensuring states are complying with nondiscriminatory regulations,” he said. “It’s very clear that the system we have right now, which is largely based on advocates submitting a complaint to EPA, and EPA conducting an investigation, that framework is not working.”

Leonard said EPA needs to figure out how to proactively ensure compliance and explain to states what compliance with anti-discriminatory regulations means.

Environmental justice concerns, he added, are only going to continue to emerge in the wake of Democrats’ vows to address environmental inequity and that advocates are pushing for permanent reforms.

“I think it’s happening a lot in Michigan because you have a governor and now a presidential administration that has said environmental justice is a priority,” he said. “Advocates are trying to put meat on the bone.”

But Leonard added that there’s also little relief under the current system because EPA’s office isn’t proactive, and advocates can only lodge a complaint after a facility is built and pollution is affecting nearby communities.

## Biden Administration Halts New Drilling in Legal Fight Over Climate Costs

The Interior Department is pausing new federal oil and gas leases and permits after a judge blocked the government from weighing the cost of climate damage in decisions.

By Lisa Friedman

Published Feb. 20, 2022 Updated Feb. 22, 2022

WASHINGTON — The Biden administration is indefinitely freezing decisions about new federal oil and gas drilling as part of a legal brawl with Republican-led states that could significantly impact President Biden's plans to tackle climate change.

The move, which came Saturday, was a response to a recent federal ruling that blocked the way the Biden administration was calculating the real cost of climate change, a figure that guides a range of government decisions, from pollution regulation to whether to permit new oil, gas or coal extraction on public lands and in federal waters.

**Climate Fwd** There's an ongoing crisis — and tons of news. Our newsletter keeps you up to date. [Get it in your inbox.](#)

Under President Barack Obama, the government estimated that the damage from wildfires, floods and rising sea levels was \$51 for every ton of carbon dioxide generated by burning fossil fuels. President Donald J. Trump lowered that number considerably, setting it at \$7 or less per ton. Upon taking office, Mr. Biden revived the \$51 level and set about updating it further — work that is underway.

Known as the “social cost of carbon,” the metric is designed to underline the potential economic threats from greenhouse gas emissions so they can be compared to the economic benefits from acts like oil drilling. Economists and climate scientists say it is needed because climate-fueled heat waves, storms, wildfires and flooding already cost the United States billions of dollars annually but those costs are often not taken into account by policymakers. Factoring in those costs could make it harder for fossil fuel projects to win federal approval.

But 10 Republican-led states sued the government, and on Feb. 11, Judge James D. Cain Jr. of the U.S. District Court for the Western District of Louisiana found that the Biden administration's calculations “artificially increase the cost estimates” of oil and gas drilling.

Judge Cain, a Trump appointee, said using the social cost of carbon in decision-making would harm his native Louisiana and other energy producing states. He issued an injunction preventing the administration from considering the metric. The Justice Department said it intends to appeal.

In an ironic twist, the fallout from the judge's ruling — at least initially — is that the federal government has stopped work on new oil and gas leases, as well as permits to drill on federal lands and waters.

“Work surrounding public-facing rules, grants, leases, permits and other projects has been delayed or stopped altogether so that agencies can assess whether and how they can proceed,” the Department of Justice wrote in a legal filing late Saturday asking the court to stay the injunction against using a climate metric.

Melissa Schwartz, a spokeswoman for the Interior Department, added in a statement that “delays are expected in permitting and leasing for the oil and gas programs.” She said the agency “is committed to ensuring its programs account for climate impacts.”

That has angered states with significant oil and gas drilling on federal land.

Most immediately, it means a lease sale for drilling across 179,001 acres in Wyoming will not happen any time soon. The Bureau of Land Management missed a deadline last week for announcing that sale. The environmental assessment for the lease sale had incorporated the social cost of carbon metric.

The Petroleum Association of Wyoming accused the Biden administration of “a dereliction of duty” by delaying a sale that could be worth millions of dollars in revenue to the state. Senator Cynthia Lummis, Republican of Wyoming, called the missed deadline “a conscious decision to continue to attack Wyoming and our domestic energy industry in favor of progressive, unrealistic climate policies.”

Senator Cynthia Lummis's home state of Wyoming could lose revenue due to the delayed sale of drilling sites. Erin Scott for The New York Times

Senator Lummis said in a statement that Mr. Biden “has prioritized the agenda of radical environmentalists in his administration over the needs of people in Wyoming and the rest of the country.”

Neither the Petroleum Association Wyoming nor the American Petroleum Institute responded to a request for comment.

Mr. Biden has vowed to cut U.S. greenhouse gas emissions by at least 50 percent from 2005 levels by the end of this decade. Fossil fuel extraction on public land and in federal waters accounts for 25 percent of the greenhouse gases generated by the United States. Global emissions must be cut in half by 2030 to avoid catastrophic impacts from a warming planet, scientists say.

Environmental activists said they were pleased by the pause in new leases and permits but worried that Judge Cain’s ruling would ultimately weaken the administration’s ability to issue aggressive climate policies.

“It’s a mixed bag,” said Brett Hartl, director of government affairs for the nonprofit Center for Biological Diversity. “They will have to issue the leases at some point, and they won’t be able to use the social cost of carbon.”

The Louisiana attorney general, Jeff Landry, who has called the social cost of carbon “voodoo economics,” argued that Mr. Biden exceeded his authority by applying the social cost of carbon to decision-making. He was joined by the attorneys general of Alabama, Florida, Georgia, Kentucky, Mississippi, South Dakota, Texas, West Virginia and Wyoming.

Judge Cain sided with the Republican attorneys general, arguing that using a social cost of carbon is unconstitutional because Congress never passed legislation authorizing it.

Yet Congress has passed virtually no legislation addressing how an administration should conduct economic analyses, something it has done for decades. In a statement mocked by some legal experts, the judge cited a “separation of powers clause” in the Constitution. There is no such clause.

“That term in the opinion is one of the most embarrassing parts of a highly embarrassing opinion,” said Amit Narang, an expert on federal regulatory issues with the government watchdog group Public Citizen. He called the judge’s opinion “a partisan political hit job dressed up as a legal opinion.”

In the meantime, the decision has put an abrupt stop to the administration’s work. The interagency working group that was updating the social cost of carbon is on hold, according to an email from the Environmental Protection Agency, and the Justice Department warned other policies could also be delayed. An organization opposed to addressing climate change, the Competitive Enterprise Institute, wants the E.P.A. to revoke a new regulation of vehicle tailpipe emissions, arguing that the analysis using the social cost of carbon is now flawed based on Judge Cain’s ruling.

“Pending rulemakings in separate agencies throughout the government — none of which were actually challenged here — will now be delayed,” the Justice Department wrote.

The Biden administration accused Judge Cain of “judicial micromanagement,” particularly since the metric being blocked is only an interim one. “Other agency actions may now be abandoned due to an inability to redo related environmental analyses in time to meet mandatory deadlines,” it added.

The legal spat is one in a barrage of conflicting rulings facing the administration over the issue of oil and gas drilling on public lands and in federal waters.

When he first took office, Mr. Biden suspended new federal oil and gas leases. Mr. Landry and other Republican-led states challenged the ban, and a different Louisiana federal judge ruled in their favor — forcing the Biden administration to move forward with lease sales. It complied, opening more than 80 million acres in the Gulf of Mexico to oil and gas drilling, a record amount.

Then environmental groups sued to block that lease sale in a different federal court and won. In that ruling, a judge in the U.S. District Court for the District of Columbia said the Biden administration did not do enough to account for the impacts of drilling on climate change and invalidated the sale and the leases.

## WHITE HOUSE

### Raskin withdraws as Biden's Fed nominee

Sarah Bloom Raskin had been stuck in the Senate Banking Committee amid a GOP boycott of a committee vote on her nomination.

Raskin, whom the president tapped to be the Fed's vice chair for supervision, faced fierce resistance from the oil and gas industry over her position on how the central bank should do more to help tackle climate change. Her nomination had been stuck in the Senate Banking Committee after a GOP boycott of a vote, effectively blocking her confirmation from advancing to the floor of the chamber.

Four other nominees, including Fed Chair Jerome Powell, were also being held up because of the impasse over Raskin. Powell, chosen by Biden for a second term, is now serving as chair on an acting basis.

Sen. Joe Manchin (D-W.Va.), who hails from the second-biggest coal-producing state in the country, and moderate Republicans Susan Collins and Lisa Murkowski had said Monday they would not support Raskin's nomination, all but dooming her chances of confirmation. Raskin's withdrawal was first reported by the New Yorker.

Raskin, a former Fed governor and deputy Treasury secretary during the Obama administration, had been confirmed twice before for those posts with no opposition from Republicans. But she faced blowback this time from GOP lawmakers and Manchin over her calls for regulators to more closely scrutinize bank lending to fossil fuel companies and help mitigate climate-related risks to the financial system.

"Their point of contention was my frank public discussion of climate change and the economic costs associated with it," she wrote in a letter to Biden obtained by POLITICO. "It was – and is – my considered view that the perils of climate change must be added to the list of serious risks that the Federal Reserve considers as it works to ensure the stability and resiliency of our economy and financial system."

AD

While the financial industry raised no public objections to Raskin's nomination, Republicans such as Sen. Pat Toomey of Pennsylvania expressed fear that she might pursue measures that would make it more expensive for banks to lend to oil companies. She wrote in an op-ed last September that regulators should "ask themselves how their existing instruments can be used to incentivize a rapid, orderly, and just transition away from high-emission and biodiversity-destroying investments."

Sen. Sherrod Brown (D-Ohio), the chair of the Senate Banking Committee, in a statement Tuesday said "too many of my colleagues" ignored the wide, bipartisan support Raskin enjoyed, and instead "fell for talking points written by the oil and gas industry."

"Republicans engaged in a disingenuous smear campaign, distorting Ms. Raskin's views beyond recognition and made unsubstantiated attacks on her character," he said.

Toomey, the top Republican on the committee, said many Democrats are pushing for the central bank to go far beyond its role. The "bipartisan rejection" of Raskin's nomination "sends a powerful message to the Fed, and to all financial regulators, that it is not their job to allocate capital or stray from their mission to pursue extraneous or politically charged campaigns."

"The Biden administration should nominate in her place an individual who will focus exclusively on implementing the Fed's statutory mandates of stable prices, full employment, and supervision of bank holding companies," he said in the statement.

Raskin's withdrawal is a further blow to the president's efforts to fill financial regulatory jobs. Saule Omarova, Biden's nominee to be the comptroller of the currency, which regulates national banks, withdrew last year following a bitter and at times nasty nomination fight that ended after several moderate

Democrats made clear they could not support her confirmation. The agency is being run by Acting Comptroller Michael Hsu, and the White House has no immediate plans to announce a new nominee.

AD

Progressives had high hopes for Raskin but may now be forced to choose between a more moderate nominee or risk being unable to fill the job at all if Republicans take back the Senate next year.

In the near term, Raskin's withdrawal also likely breaks the logjam on Biden's remaining Fed nominees at a critical time for the central bank, which is set to begin raising interest rates this week in a bid to fight surging inflation.

Powell's first term as chair officially expired in February. Fed board member Lael Brainard is waiting to be confirmed to a promotion as Powell's No. 2, while two other candidates — Lisa Cook and Philip Jefferson — would fill vacant seats.

Biden urged the Senate to swiftly confirm the other Fed nominees. Brown said the committee would vote on the remaining four picks, but did not announce when.

# U.S. agrees to end fossil fuel financing abroad

By Sara Schonhardt | 11/04/2021 07:06 AM EDT

Climate envoy John Kerry talks with President Biden at COP 26 on Monday. The U.S. and other nations said today they will stop providing public financing for fossil fuel projects. Erin Schaff/The New York Times via AP

*This story was updated at 10:40 a.m. EDT.*

The United States committed today with other countries to stop financing fossil fuel projects abroad by the end of next year, in a seismic shift that could stem the construction of natural gas and oil facilities in lower-income nations.

The pledge, announced at the global climate summit in Glasgow, Scotland, could take billions of dollars away from future fossil fuel production and redistribute it to low-carbon energy projects such as wind and solar. The agreement covers “unabated” projects, which generally refers to fossil fuel facilities that don’t capture carbon dioxide emissions.

Advertisement

“The signing of this statement represents a step forward very much in the right direction,” said Jonathan Wilkinson, Canada’s minister of natural resources.

The announcement goes beyond a separate agreement by the world’s largest economies last weekend to end public financing for international coal power development.

But the organizers of today’s commitment failed to attract every nation in the Group of 20, meaning some of the biggest financiers of fossil fuels, including Japan, South Korea and China, could continue building oil and gas infrastructure abroad.

And it only covers new investments, so projects already in the pipeline would continue to be built. The pledge does not include liquefied natural gas that countries produce domestically and export to be burned outside of their borders. U.S. exports of LNG have surged in recent years.

In addition to the U.S. and U.K., signatories include Costa Rica, Denmark, Canada, Italy and Mali. Several development banks also signed the agreement, including the East African Development Bank and the European Investment Bank.

Natural gas is considered a lower-carbon fuel than coal and proponents argue that it can serve as a bridge fuel in countries that are trying to bring more clean energy online as they expand electricity access to populations without it. Environmentalists say burning any fossil fuel is harmful, and fails to abide by the commitments countries made to limit global warming.

That the pledge was embraced by developing countries sends a message that renewable energy can help poorer nations strengthen their economies, said Maria Pastukhova, a senior political adviser at E3G in Berlin.

“It’s just a very powerful signal that a prerequisite and a priority for sustainable growth and economic development are really not investments in fossil fuels but investments in clean energy,” she said.

Justin Guay, director for global climate strategy at the Sunrise Project, said it’s one of the more meaningful announcements he has seen amid a flurry of pledges and agreements rolled out at the annual climate conference, known as COP 26.

“Given how important public finance is for de-risking and crowding in private capital for fossil fuel projects, especially in emerging markets, it’s quite a big deal,” he said.

Between 2018 and 2020, G-20 countries and the multilateral development banks they support provided \$63 billion a year on average in public finance for international fossil fuel projects, according to a recent [report \(http://priceofoil.org/2021/10/28/new-report-g20-governments-have-bankrolled-more-than-188-billion-in-fossil-fuels-since-2018/\)](http://priceofoil.org/2021/10/28/new-report-g20-governments-have-bankrolled-more-than-188-billion-in-fossil-fuels-since-2018/) by two environmental groups, Friends of the Earth and Oil Change International. About half of that went to gas projects.

The top four financiers — Canada, Japan, Korea and China — provided nearly half of that amount. The United States was fifth.

The U.S. has been a large contributor to oil and gas projects historically, said Guay. Recently, its investments have been smaller because the Export-Import Bank — the official U.S. export credit agency — has been prevented from funding fossil fuel projects overseas because it lacks a quorum.

That means there’s a backlog of projects that won’t be funded following this announcement, he noted.

A preliminary estimate from Oil Change International found that the deal could shift around \$15 billion in fossil fuel finance to clean energy. That might look modest compared to what has been channeled into fossil fuels, said Pastukhova of E3G.

“But this is a start – and a much-needed start.”

## Sidestepping Manchin

Today's announcement expands on an Obama-era policy to end public international coal financing. At the time, there was no global consensus that coal had to go, Guay said.

"Fast forward to today and every other announcement in Glasgow feels like it's about retiring coal, phasing out coal, moving beyond coal," he added. "When you think about it with that lens, I think this is an important start to the process that will lead to the world moving beyond oil and gas."

The U.S. has made gradual moves to end financing for fossil fuel development outside its borders. In August, the Treasury Department issued guidance for multilateral development banks that was aimed at squeezing off fossil fuel financing except in certain circumstances (*Climatewire* (<https://subscriber.politicopro.com/article/eenews/2021/08/17/treasury-seeks-to-curb-fossil-fuel-financing-by-world-bank-279662>), Aug. 17).

At the same time, the Biden administration has come under scrutiny in Glasgow for not having passed the landmark climate legislation it has been touting. Guay said joining today's agreement may have been seen as one of the few place where the U.S. could unilaterally act without the support of lawmakers like Sen. Joe Manchin (D-W.Va.), who has slowed Biden's legislative agenda in Congress.

It may not be without geopolitical implications, said Pastukhova, from E3G. A lot of U.S. government financing for oil and gas goes to middle-income countries in Eastern Europe, as a way to reduce Russian gas imports, she said.

The announcement comes as Denmark and Costa Rica launch the Beyond Oil and Gas Alliance, and as more countries and financial institutions sign up to an alliance to phase out coal globally (*see related story* (<https://subscriber.politicopro.com/article/eenews/2021/11/04/cop-26-bankers-join-climate-fight-skepticism-abounds-282813>)).

A separate initiative launched by the U.K. this morning commits members to end all investment — domestic and international — in new coal power.

The Global Coal to Clean Power Transition covers a coalition of 190 countries and organizations, including 23 nations that committed today to phase out coal power. Indonesia, the world's largest coal exporter, and Poland, the E.U.'s major coal-powered economy, were among them.

"This announcement moves the goal posts of ambition from 'no new coal' to 'phasing out coal' altogether," said Dave Jones, an analyst at climate and energy think tank Ember, in a statement.

Ending fossil fuel subsidies is seen as another move that could help contain global warming. But that's trickier. Despite pledges to move toward net zero by midcentury, G-20 countries have continued to subsidize fossil fuel production and consumption.

A report (<https://assets.bbhub.io/professional/sites/24/BloombergNEF-Climate-Policy-Factbook-COP26-Edition.pdf>) by BloombergNEF found that G-20 nations provided nearly \$600 billion in fossil fuel subsidies and other financial support in 2020. The countries also allocated more than \$100 billion in stimulus funding to oil, gas and coal projects.

In the past, when governments adjusted gasoline prices or lowered electricity subsidies, "that's when you're most likely to have people showing up in the streets in yellow vests," said Ethan Zindler, head of the Americas at BloombergNEF. "Because they so obviously affect consumers' pocketbooks, they're often the most difficult to scale back."

In addition to phasing out support for fossil fuels, countries will also need to put a price on carbon emissions and disclose their climate risks, the report said.

# Who Gets Hit by the Book Minimum Tax?

November 18, 2021

Cody Kallen

The current version of the reconciliation bill—the Build Back Better Act—attempts to walk a fine (politically imposed) line: raising hundreds of billions of dollars from higher corporate taxes without raising the corporate tax rate. The centerpiece of this effort is the book minimum tax, a new alternative minimum tax applied to the financial statement income (i.e., book income) that companies report to their investors.

Recent Tax Foundation analyses considered some of the problems created by the structure of the proposed minimum tax. But in addition to these problems, it will have disproportionate effects on specific industries, including its ineffectiveness as a stable revenue raiser, its distortionary impacts on investment, and apparently unintended penalties for various company- and industry-specific expenses ranging from spectrum leases to pension plans. As such, it is important to understand how the book minimum tax would impact different industries.

Utilizing Compustat financial statement data on public companies and incorporating intermediate results from Tax Foundation's Multinational Tax Model, we are able to identify the different industry effects of the book minimum tax and refine our earlier estimate for the aggregate impact.

While the book tax itself raises hundreds of billions of dollars over the 10-year budget window, a substantial portion of that revenue is offset by the prior year minimum tax credit (for previous book tax liability, which can be used to reduce ordinary corporate income tax liability). On net, the book minimum tax increases firms' tax liabilities by \$219.4 billion over the budget window, although part of this revenue is offset by reduced revenue from the capital gains and dividend taxes paid by owners of these firms.

However, the burden of this tax is not spread evenly across industries. Table 1 presents the net tax raised from 30 industries, both in dollar terms and as a share of the total pretax income of firms required to calculate the tax.

## Net Tax Hikes by Industry from the Build Back Better Book Minimum Tax over the Budget Window

Industry	\$ millions	% of income
Coal	60	7.2
Automobiles and Trucks	10,817	5.1
Utilities	43,348	4.4
Everything Else	32,291	3.9
Construction and Construction Materials	2,865	3.4
Tobacco Products	12,017	2.5
Recreation	991	2.3
Printing and Publishing	353	2.3
Communication	30,581	2.3
Beer & Liquor	3,780	2.2
Wholesale	3,241	2
Transportation	11,019	1.7
Healthcare, Medical Equipment, Pharmaceutical Products	11,129	1
Textiles	44	0.9
Steel Works, etc.	91	0.8
Banking, Insurance, Real Estate, Trading	24,278	0.8
Business Equipment	12,368	0.7
Fabricated Products and Machinery	1,552	0.6
Petroleum and Natural Gas	9,250	0.6
Food Products	1,833	0.4
Aircraft, ships, and railroad equipment	1,161	0.4
Business Supplies and Shipping Containers	407	0.3
Retail	3,743	0.3
Apparel	74	0.1
Personal and Business Services	1914	0.1
Restaurants, Hotels, Motels	81	0
Chemicals	57	0
Consumer Goods	49	0
Electrical Equipment	0	0
Precious Metals, Non-Metallic, and Industrial Metal Mining	0	0

Source: Author calculations.

Notes: Industry classifications follow the Fama-French 30-industry classification system. The first column displays the net tax hike in the industry, as book minimum tax liabilities less prior year minimum tax credits. The second column presents the net tax hike as a share of total pretax income of the affected firms. Consistent with the legal definition in the proposed minimum tax, a firm is considered affected by the tax if its adjusted financial statement income averaged over the previous three years exceeds \$1 billion; once the firm becomes affected by the tax, it remains affected for all subsequent years. The book minimum tax computations are stacked on top of international tax changes in the Build Back Better Act.

Industry	\$ millions	% of income
<b>Total</b>	<b>219,394</b>	<b>1.3</b>

Source: Author calculations.

Notes: Industry classifications follow the Fama-French 30-industry classification system. The first column displays the net tax hike in the industry, as book minimum tax liabilities less prior year minimum tax credits. The second column presents the net tax hike as a share of total pretax income of the affected firms. Consistent with the legal definition in the proposed minimum tax, a firm is considered affected by the tax if its adjusted financial statement income averaged over the previous three years exceeds \$1 billion; once the firm becomes affected by the tax, it remains affected for all subsequent years. The book minimum tax computations are stacked on top of international tax changes in the Build Back Better Act.

As a share of its income, the coal industry faces the heaviest burden of the book minimum tax, facing a net tax hike of 7.2 percent of its pretax book income, followed by automobile and truck manufacturing, which faces a 5.1 percent tax hike. In dollar terms, the industries that would account for the largest book minimum tax liabilities are utilities, at \$43.3 billion, followed by communication at \$30.6 billion.

These industries are especially heavily impacted because they are at the intersection of the different book-tax gaps targeted by the book minimum tax: permanent discrepancies between the two measures from firms paying low taxes (the intended target); temporary timing differences between financial and taxable income; deliberate tax incentives created by Congress (e.g., bonus depreciation); and special items that show up in one income definition but not the other, such as amortizing investment in spectrum or mark-to-market accounting for pensions.

The book minimum tax affects industries very differently, some of which may be unintended, reflecting a tax proposal that has not been fully vetted. Before introducing a new tax on book income, and asking the IRS to administer it and taxpayers to comply with it, lawmakers should consider whether these disparate impacts by industry are consistent with their tax policy goals.

**December 17th update:** An updated version of the Build Back Better plan modifies the book minimum tax to exempt mark-to-market pension accounting adjustments. The analysis above refers to the House Build Back Better Act originally passed on November 19th.

## Democrat frontrunner Joe Biden (D) told a concerned activist in New Hampshire Friday that he guarantees that “we are going to end fossil fuel.”

Biden took questions from a group in New Castle, New Hampshire, Friday. One woman associated with the environmental group 350 New Hampshire Action, Rebecca Beaulieu, asked Biden how voters can trust him if he continues to associate himself with fossil fuel executives.

“How can we trust that you’re going to act on climate — on the climate crisis — if you’re still attending fundraisers that fossil fuel executives are attending?” Beaulieu [asked](#), according to the *Daily Mail*.

Video shows Biden walking over to the woman, taking her hand, and making a solemn promise to “end fossil fuel ... before 2050, God willing.”

“Kiddo, I want you to just take a look. I want you to look into my eyes,” Biden began.

“I guarantee you, I guarantee you, we are going to end fossil fuel, and I am not going to cooperate with them. Before 2050, God willing,” Biden continued, adding that 2030 is not a realistic goal:

No it can't be done by 2030. No, not one single person is arguing it can be done by that. But it can be done by 2050. Maybe 2045? And as the science increases, we may be able to move more quickly. But we have to we can fundamentally change things in the next 10 years, though, so that we set a path? I promise you, I promise you. OK.

Biden: “I Guarantee You We’re Going To End Fossil F...

“Just a little patronizing, because I want to be an adult at the table when it comes to conversations about climate, and what we’re going to do about it, and I don’t want to be like someone who’s sitting on the sidelines waiting for other people to act,” she [said](#), according to the *Daily Mail*.

“I’m also like actively doing something to try to combat this climate crisis as it stands. Being called a kid is a little patronizing when I’m trying to do so much work,” she added.

She also said she was unsatisfied with Biden’s refusal to bend his 2050 goal.

“But I hope that he takes the climate crisis as seriously as he tried to make it seem and that if he’s going to keep moving forward with his plans, he needs to reevaluate because 2050 is too late,” she said.

Biden recently came under fire for [attending](#) a fundraiser hosted by Andrew Goldman, a founder of the natural gas company Western LNG. The former vice president dismissed concerns, telling viewers of CNN’s climate change town hall Wednesday that Goldman is “not a fossil fuel executive.”

“He is not a fossil fuel executive,” Biden [said](#). “And the fact of the matter is that — what we talk about is, what are we going to do about those corporations? What have we done?”

“And everywhere along the way — for example, I’ve argued and pushed for us suing those executives who are engaged in pollution, those companies engaged in pollution,” he added. “I’ve never walked away from that.”

## Appeals court revives key climate measure rejected by Trump judge

The judges also rejected the argument that states can demonstrate the social cost of carbon figures caused any injury or could be redressed via an injunction.

EPA Administrator Michael Regan is pictured. The stay allows EPA, among other federal agencies, to resume using the interim social cost of carbon figures in rulemakings and other decisions. | Kevin Dietsch/Getty Images

By **ALEX GUILLÉN**

03/16/2022 08:13 PM EDT

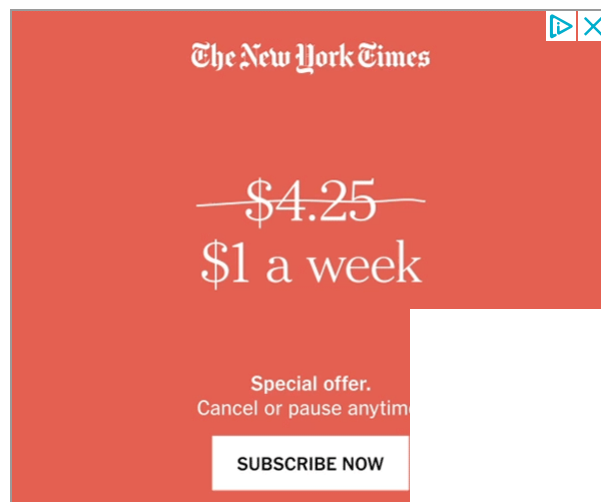

Updated: 03/16/2022 08:07 PM EDT

The 5th Circuit Court of Appeals on Wednesday stayed a district judge's injunction against President Joe Biden's social cost of carbon, reinstating the metric used to measure the climate impacts of rulemakings and projects.

The social cost of carbon, which is used by the federal government when issuing regulations, approving infrastructure projects or taking other actions, is an estimate of the present and future damages resulting from emitting one ton of the greenhouse gas into the atmosphere. Climate activists hope a higher estimate will significantly increase the value assigned to pollution reductions, which in turn will help justify stronger climate regulations.

Advertisement

The Biden administration warned of mass chaos caused by the injunction, including delayed or derailed rulemakings, project approvals, grant funds and even oil and gas lease sales.

While the stay is technically temporary, the three-judge panel's order cast serious doubt on the underlying lawsuit brought by Louisiana and other red states.

**Details:** In a nine-page order, the panel rejected the legal arguments made by Louisiana that the interim social cost of carbon metric could cause them a real injury.

“The Plaintiff States’ claimed injury is ‘increased regulatory burdens’ that *may* result from the consideration of [the social cost of greenhouse gases], and the Interim Estimates specifically. This injury, however, hardly meets the standards for [constitutional] standing because it is, at this point, merely hypothetical,” wrote Judges Leslie Southwick, a George W. Bush appointee, and James E. Graves Jr. and Gregg Costa, both Barack Obama appointees.

At a 3 percent discount rate, the social cost of carbon dioxide was set at \$51 per ton, or the same as the Obama administration’s adjusted for inflation, as well as higher figures for methane and nitrous oxide.

The judges also rejected the argument that the states can demonstrate the SCC figures caused any injury or could be redressed via an injunction.

AD

“The increased regulatory burdens the Plaintiff States fear will come from the Interim Estimates appear untraceable because agencies consider a great

number of other factors in determining when, what, and how to regulate or take agency action (and the Plaintiff States do not challenge a specific regulation or action),” they wrote.

The claims amount to a “generalized grievance” about the Biden administration’s policies — which doesn’t meet the constitutional requirements for standing, they concluded.

The panel also took aim at the preliminary injunction issued in February by Judge James Cain of the U.S. District Court for the Western District of Louisiana, a Trump appointee.

Even if the states had standing to challenge the interim estimates, the panel wrote it was “unclear” how that justified stopping the Interagency Working Group from completing work on a broader update, as Cain did.

“All of this effectively stops or delays agencies in considering SC-GHG in the manner the current administration has prioritized within the bounds of applicable law,” they wrote. “The preliminary injunction’s directive for the current administration to comply with prior administrations’ policies on regulatory analysis absent a specific agency action to review also appears outside the authority of the federal courts.”

Ultimately, the states are too early in bringing a legal challenge, they wrote.

“In sum, the Plaintiff States’ claims are based on a generalized grievance of the use of Interim Estimates in cost-benefit analyses of regulations and agency action. But their claimed injury does not stem from the Interim Estimates themselves, it stems from any forthcoming, speculative, and unknown regulation that *may* place increased burdens on them and *may* result from consideration of SC-GHG,” they wrote. “We conclude the standing inquiry shows the Government Defendants’ likelihood of success on the merits in this appeal, and the other factors, including the public interest, favor granting a stay of the injunction.”

AD

The White House, Department of Justice and Louisiana attorney general who led the challenge could not be immediately reached for comment.

**Context:** The stay allows EPA, the Departments of the Interior, Energy and Transportation and other federal agencies to resume using the interim SCC figures in rulemakings and other decisions. At least one major rule, regarding emissions from heavy-duty trucks, Reg. 2060-AU41, was published without quantifying its climate benefits because of the injunction.

**What's next:** The stay is pending a fuller appeal of the injunction, but the order issued on Wednesday indicates the appellate court is not amenable to Louisiana's arguments.

## 'We Want Them to Go Bankrupt'

Biden's nominee for Comptroller has an idea on climate change.

Saule Omarova continues to make the case against her nomination to be Comptroller of the Currency, as critics need only to quote her own words. The latest example is a video interview she gave in February in which the Cornell professor opined on “the case for a U.S. national investment authority.”

The conversation at one point turned to climate change and its impact on fossil-fuel producers, and Ms. Omarova was on the case. “A lot of the smaller players in that industry are going to, probably, go bankrupt in short order—at least, we want them to go bankrupt if we want to tackle climate change,” she said in the [session](#) that was part of the Jain Family Institute’s “Social Wealth Seminar” series.

She went on to say “that creates a lot of this sort of loss of jobs, a lot of displacement, and economic fallback that we cannot afford, really,” which is nice of her to concede.

Bankruptcy isn’t painless, especially when the government drives you out of business.

But then she adds that the response would be to set up a National Capital Management Corporation that would “become a kind of equity investor at that point, taking over management of those companies and basically leading them through restructuring to a new technological basis and to a new technological business model.”

So first put private companies out of business “in short order,” then put government central planners to work to restructure them as the political class wants. Give Ms. Omarova credit for candor. Most progressives disguise their real intentions.

All of this matters because as Comptroller Ms. Omarova would have enormous authority to regulate banks. It’s clear from this interview that one of her policy ambitions is to deny capital to certain companies that she wants to go bankrupt. Senators will have to decide if they want the Comptroller to be a one-person systemic risk to the banking system.

# Biden administration won't appeal invalidation of offshore oil leases

BY RACHEL FRAZIN - 03/01/22 1:36 PM ET

In a new court filing, the administration said it would not appeal the ruling. The decision was not a surprise, since the administration has argued that it was compelled to sell the leases in the first place by a different court order.

Other parties, namely the state of Louisiana and oil and gas lobbying group the American Petroleum Institute, have indicated that they would appeal. But they won't have the federal government behind them.

In its new filing, the Biden administration also argued that if the decision to vacate the leases sold in Lease Sale 257 is reversed, it had wide discretion on whether to dole out the leases that would enable companies to drill in the Gulf of Mexico.

“Interior agrees with the other parties that, in the event this Court reverses the district court’s vacatur, the expiration of the five year program on June 30, 2022, does not prevent Interior from awarding leases pursuant to Lease Sale 257 after that date—although, as discussed herein ... Interior has the authority to decline to award the leases at that juncture,” it said in the filing.

In November, Interior held the sale, and companies purchased the rights to drill on up to 1.7 million acres in the Gulf.

In January, Judge Rudolph Contreras vacated the sale, saying that Trump-era calculations behind it “arbitrarily” excluded the impacts the sale would have on foreign energy consumption when calculating its greenhouse gas emissions.

The Interior Department has indicated that it would like to make changes to the current system, including through higher fees on companies and greater efforts to account for climate change impacts.

## Trump revokes waiver for California to set higher auto emissions standards

By [Kevin Liptak](#) and [Gregory Wallace](#), CNN

Updated 5:09 PM EDT, Wed September 18, 2019

*been updated to correctly spell Jeff Alson's name.*

**Washington (CNN)** — President [Donald Trump](#) announced Wednesday he was revoking California's authority to set its own vehicle emission standards, the latest move in the Trump administration's ongoing fight with the Golden State and attempts to chip away at former President Barack Obama's environmental legacy.

"The Trump Administration is revoking California's Federal Waiver on emissions in order to produce far less expensive cars for the consumer, while at the same time making the cars substantially SAFER," [Trump tweeted](#).

The President made the announcement while visiting California for fundraisers. He was in his hotel in Los Angeles when he sent the tweets.

California's waiver under the Clean Air Act allowed it to set standards tighter than the federal standards, which have been adopted by more than a dozen states and became the de-facto nationwide standard, because automakers do not design different sets of vehicles to meet different standards in different states.

The Trump administration has long been at odds with California, especially on environmental issues. Talks between California environmental regulators and the administration broke down earlier this year. Yet this summer, the state negotiated an agreement with several automakers to design cars to meet standards higher than those set by the federal government.

Gov. Gavin Newsom, a Democrat, said on Tuesday the Trump administration "has abdicated its responsibility to the rest of the world on cutting emissions and fighting global warming" and is acting "on a political vendetta."

The state's attorney general threatened a lawsuit if the administration goes through with the plan.

Attorney General Xavier Becerra said at a news conference following the announcement that the administration's plan is "desperate."

The Trump administration is also working on replacing Obama-era federal vehicle-emission standards.

"This will lead to more production because of this pricing and safety advantage, and also due to the fact that older, highly polluting cars, will be replaced by new, extremely environmentally friendly cars," Trump wrote in an additional tweet. "There will be very little difference in emissions between the California Standard and the new U.S. Standard, but the cars will be far safer and much less expensive."

"Many more cars will be produced under the new and uniform standard, meaning significantly more JOBS, JOBS, JOBS! Automakers should seize this opportunity because without this alternative to California, you will be out of business," he added.

**RELATED ARTICLE**

Trump's rollback of climate change regulations will be felt far beyond his presidency

"We embrace federalism and the role of the states, but federalism does not mean that one state can dictate standards for the nation," Environmental Protection Agency Administrator Andrew Wheeler said Tuesday.

The Auto Alliance, an industry group that contends the Obama-era standards were unrealistic, said it would take a closer look at the Trump administration's approach.

"Automakers support year-over-year increases in fuel economy standards that align with marketplace realities, and we support one national program as the best path to preserve good auto jobs, keep new vehicles affordable for more Americans and avoid a marketplace with different standards," said Dave Schwieter, the group's interim CEO and president.

Jeff Alson, who spent four decades at the EPA including in the Office of Transportation and Air Quality, said "there is no legal basis" for revoking the waiver.

"If the courts allow this unprecedented reversal, and the Trump EPA massively rolls back the federal Clean Car Standards, then President Trump will have done more to destroy the planet than any other president in history," said Alson, who is now with the Environmental Protection Network, a group of former agency employees.
