February 4, 2021

**MEMORANDUM**

To: ENRD Section Chiefs and Deputy Section Chiefs

From: Jean E. Williams *jew*  
Deputy Assistant Attorney General

Re: Withdrawal of Memoranda and Policy Documents

On January 20, 2021, President Biden signed Executive Order 13,990, *Protecting Public Health and the Environment and Restoring Science To Tackle the Climate Crisis*, 86 Fed. Reg. 7037 (Jan. 25, 2021). Section 1 of the Executive Order states:

It is . . . the policy of my Administration to listen to the science; to improve public health and protect our environment; to ensure access to clean air and water; to limit exposure to dangerous chemicals and pesticides; to hold polluters accountable, including those who disproportionately harm communities of color and low-income communities; to reduce greenhouse gas emissions; to bolster resilience to the impacts of climate change; to restore and expand our national treasures and monuments; and to prioritize both environmental justice and the creation of the well-paying union jobs necessary to deliver on these goals.

The Executive Order directs agencies to “immediately review and, as appropriate and consistent with applicable law, take action to address” certain regulations or other agency actions “that conflict with these important national objectives, and to immediately commence work to confront the climate crisis.”

Accordingly, the following documents are hereby withdrawn, effective immediately:

1. “Enforcement Principles and Priorities,” January 14, 2021;
2. “Additional Recommendations on Enforcement Discretion,” January 14, 2021;
3. “Guidance Regarding Newly Promulgated Rule Restricting Third-Party Payments, 28 C.F.R. § 50.28,” January 13, 2021;
4. “Equitable Mitigation in Civil Environmental Enforcement Cases,” January 12, 2021;

5. “Civil Enforcement Discretion in Certain Clean Water Act Matters Involving Prior State Proceedings,” July 27, 2020;
6. “Supplemental Environmental Projects (“SEPs”) in Civil Settlements with Private Defendants,” March 12, 2020;
7. “Using Supplemental Environmental Projects (“SEPs”) in Settlements with State and Local Governments,” August 21, 2019;
8. “Enforcement Principles and Priorities,” March 12, 2018; and
9. “Settlement Payments to Third Parties in ENRD Cases,” January 9, 2018.

Because these memoranda are inconsistent with longstanding Division policy and practice and because they may impede the full exercise of enforcement discretion in the Division’s cases, I have determined that withdrawal is appropriate pursuant to Executive Order 13,990. After further assessment, the Division may issue new guidance regarding matters addressed in the now-withdrawn documents.

The Division is also undertaking a review of Title 5 of the *Justice Manual* to determine whether any current sections in Title 5 reference the now-withdrawn memoranda and should be amended or withdrawn. *See Justice Manual* § 1-1.300.

EXECUTIVE OFFICE OF THE PRESIDENT  
OFFICE OF MANAGEMENT AND BUDGET  
WASHINGTON, D.C. 20503

February 23, 2021  
(House Rules)

## STATEMENT OF ADMINISTRATION POLICY

### **H.R. 803 – Protecting America’s Wilderness and Public Lands Act**

(Rep. DeGette, D-CO, and 3 cosponsors)

The Administration calls for restoring balance to the management of our public lands and waters, creating jobs, confronting the ongoing decline of nature, and aligning the management of America’s public lands and waters with our nation’s climate, conservation, and clean energy goals. Because this legislation furthers those goals, the Administration strongly supports House passage of H.R. 803.

H.R. 803 combines eight separate measures that, among other things, permanently protect public lands and waters in Colorado, California, and Washington by designating approximately 1.5 million acres of wilderness and incorporating more than 1,000 river miles into the National Wild and Scenic Rivers System. It contains provisions to create and maintain additional recreational access by authorizing new trails, services, and facilities.

The legislation contains provisions that protect important public lands, including public lands in Colorado, through community-supported land use designations that limit inappropriate development and maintain recreational access. It designates Camp Hale as the Nation’s first National Historic Landscape to honor World War II veterans and Colorado’s military legacy. Furthermore, it provides permanent protection of more than 1 million acres around the Grand Canyon National Park from new mining claims. The Grand Canyon is a majestic national treasure, drawing Americans from across the country to visit, and numerous Tribal Nations regard it as a sacred place.

H.R. 803 puts in place protections for some of our nation’s most iconic natural and cultural resources and safeguards recreational opportunities for the benefit of current and future generations, while creating jobs and investing in the recreation economy. It is also consistent with the recommendation of scientists that, to safeguard the health and productivity of the natural systems upon which we all depend, the Nation must pursue a goal of conserving at least 30 percent of U.S. lands and ocean by 2030. The Administration looks forward to working with the Congress on this legislation to ensure the best durable management of these special areas.

PUBLIC LAW 117-2—MAR. 11, 2021

AMERICAN RESCUE PLAN ACT OF 2021

Public Law 117–2  
117th Congress

An Act

Mar. 11, 2021  
[H.R. 1319]

American Rescue  
Plan Act of 2021.  
15 USC 9001  
note.  
Appropriation  
authorizations.

To provide for reconciliation pursuant to title II of S. Con. Res. 5.

*Be it enacted by the Senate and House of Representatives of  
the United States of America in Congress assembled,*

**SECTION 1. SHORT TITLE.**

This Act may be cited as the “American Rescue Plan Act of 2021”.

**SEC. 2. TABLE OF CONTENTS.**

The table of contents for this Act is as follows:

- Sec. 1. Short title.  
Sec. 2. Table of contents.

**TITLE I—COMMITTEE ON AGRICULTURE, NUTRITION, AND FORESTRY**

Subtitle A—Agriculture

- Sec. 1001. Food supply chain and agriculture pandemic response.  
Sec. 1002. Emergency rural development grants for rural health care.  
Sec. 1003. Pandemic program administration funds.  
Sec. 1004. Funding for the USDA Office of Inspector General for oversight of COVID–19-related programs.  
Sec. 1005. Farm loan assistance for socially disadvantaged farmers and ranchers.  
Sec. 1006. USDA assistance and support for socially disadvantaged farmers, ranchers, forest land owners and operators, and groups.  
Sec. 1007. Use of the Commodity Credit Corporation for commodities and associated expenses.

Subtitle B—Nutrition

- Sec. 1101. Supplemental nutrition assistance program.  
Sec. 1102. Additional assistance for SNAP online purchasing and technology improvements.  
Sec. 1103. Additional funding for nutrition assistance programs.  
Sec. 1104. Commodity supplemental food program.  
Sec. 1105. Improvements to WIC benefits.  
Sec. 1106. WIC program modernization.  
Sec. 1107. Meals and supplements reimbursements for individuals who have not attained the age of 25.  
Sec. 1108. Pandemic EBT program.

**TITLE II—COMMITTEE ON HEALTH, EDUCATION, LABOR, AND PENSIONS**

Subtitle A—Education Matters

**PART 1—DEPARTMENT OF EDUCATION**

- Sec. 2001. Elementary and Secondary School Emergency Relief Fund.  
Sec. 2002. Emergency assistance to non-public schools.  
Sec. 2003. Higher Education Emergency Relief Fund.  
Sec. 2004. Maintenance of effort and maintenance of equity.  
Sec. 2005. Outlying areas.  
Sec. 2006. Gallaudet University.  
Sec. 2007. Student aid administration.  
Sec. 2008. Howard University.

- Sec. 2009. National Technical Institute for the Deaf.
- Sec. 2010. Institute of Education Sciences.
- Sec. 2011. Program administration.
- Sec. 2012. Office of Inspector General.
- Sec. 2013. Modification of revenue requirements for proprietary institutions of higher education.
- Sec. 2014. Funding for the Individuals with Disabilities Education Act.

## PART 2—MISCELLANEOUS

- Sec. 2021. National Endowment for the Arts.
- Sec. 2022. National Endowment for the Humanities.
- Sec. 2023. Institute of Museum and Library Services.

## Subtitle B—Labor Matters

- Sec. 2101. Funding for Department of Labor worker protection activities.

## Subtitle C—Human Services and Community Supports

- Sec. 2201. Child Care and Development Block Grant Program.
- Sec. 2202. Child Care Stabilization.
- Sec. 2203. Head Start.
- Sec. 2204. Programs for survivors.
- Sec. 2205. Child abuse prevention and treatment.
- Sec. 2206. Corporation for National and Community Service and the National Service Trust.

## Subtitle D—Public Health

- Sec. 2301. Funding for COVID-19 vaccine activities at the Centers for Disease Control and Prevention.
- Sec. 2302. Funding for vaccine confidence activities.
- Sec. 2303. Funding for supply chain for COVID-19 vaccines, therapeutics, and medical supplies.
- Sec. 2304. Funding for COVID-19 vaccine, therapeutic, and device activities at the Food and Drug Administration.
- Sec. 2305. Reduced cost-sharing.

## Subtitle E—Testing

- Sec. 2401. Funding for COVID-19 testing, contact tracing, and mitigation activities.
- Sec. 2402. Funding for SARS-CoV-2 genomic sequencing and surveillance.
- Sec. 2403. Funding for global health.
- Sec. 2404. Funding for data modernization and forecasting center.

## Subtitle F—Public Health Workforce

- Sec. 2501. Funding for public health workforce.
- Sec. 2502. Funding for Medical Reserve Corps.

## Subtitle G—Public Health Investments

- Sec. 2601. Funding for community health centers and community care.
- Sec. 2602. Funding for National Health Service Corps.
- Sec. 2603. Funding for Nurse Corps.
- Sec. 2604. Funding for teaching health centers that operate graduate medical education.
- Sec. 2605. Funding for family planning.

## Subtitle H—Mental Health and Substance Use Disorder

- Sec. 2701. Funding for block grants for community mental health services.
- Sec. 2702. Funding for block grants for prevention and treatment of substance abuse.
- Sec. 2703. Funding for mental health and substance use disorder training for health care professionals, paraprofessionals, and public safety officers.
- Sec. 2704. Funding for education and awareness campaign encouraging healthy work conditions and use of mental health and substance use disorder services by health care professionals.
- Sec. 2705. Funding for grants for health care providers to promote mental health among their health professional workforce.
- Sec. 2706. Funding for community-based funding for local substance use disorder services.
- Sec. 2707. Funding for community-based funding for local behavioral health needs.
- Sec. 2708. Funding for the National Child Traumatic Stress Network.
- Sec. 2709. Funding for Project AWARE.

- Sec. 2710. Funding for youth suicide prevention.
- Sec. 2711. Funding for behavioral health workforce education and training.
- Sec. 2712. Funding for pediatric mental health care access.
- Sec. 2713. Funding for expansion grants for certified community behavioral health clinics.

Subtitle I—Exchange Grant Program

- Sec. 2801. Establishing a grant program for Exchange modernization.

Subtitle J—Continued Assistance to Rail Workers

- Sec. 2901. Additional enhanced benefits under the Railroad Unemployment Insurance Act.
- Sec. 2902. Extended unemployment benefits under the Railroad Unemployment Insurance Act.
- Sec. 2903. Extension of waiver of the 7-day waiting period for benefits under the Railroad Unemployment Insurance Act.
- Sec. 2904. Railroad Retirement Board and Office of the Inspector General funding.

Subtitle K—Ratepayer Protection

- Sec. 2911. Funding for LIHEAP.
- Sec. 2912. Funding for water assistance program.

Subtitle L—Assistance for Older Americans, Grandfamilies, and Kinship Families

- Sec. 2921. Supporting older americans and their families.
- Sec. 2922. National Technical Assistance Center on Grandfamilies and Kinship Families.

TITLE III—COMMITTEE ON BANKING, HOUSING, AND URBAN AFFAIRS

Subtitle A—Defense Production Act of 1950

- Sec. 3101. COVID-19 emergency medical supplies enhancement.

Subtitle B—Housing Provisions

- Sec. 3201. Emergency rental assistance.
- Sec. 3202. Emergency housing vouchers.
- Sec. 3203. Emergency assistance for rural housing.
- Sec. 3204. Housing counseling.
- Sec. 3205. Homelessness assistance and supportive services program.
- Sec. 3206. Homeowner Assistance Fund.
- Sec. 3207. Relief measures for section 502 and 504 direct loan borrowers.
- Sec. 3208. Fair housing activities.

Subtitle C—Small Business (SSBCI)

- Sec. 3301. State Small Business Credit Initiative.

Subtitle D—Public Transportation

- Sec. 3401. Federal Transit Administration grants.

TITLE IV—COMMITTEE ON HOMELAND SECURITY AND GOVERNMENTAL AFFAIRS

- Sec. 4001. Emergency Federal Employee Leave Fund.
- Sec. 4002. Funding for the Government Accountability Office.
- Sec. 4003. Pandemic Response Accountability Committee funding availability.
- Sec. 4004. Funding for the White House.
- Sec. 4005. Federal Emergency Management Agency appropriation.
- Sec. 4006. Funeral assistance.
- Sec. 4007. Emergency food and shelter program funding.
- Sec. 4008. Humanitarian relief.
- Sec. 4009. Cybersecurity and Infrastructure Security Agency.
- Sec. 4010. Appropriation for the United States Digital Service.
- Sec. 4011. Appropriation for the Technology Modernization Fund.
- Sec. 4012. Appropriation for the Federal Citizen Services Fund.
- Sec. 4013. AFG and SAFER program funding.
- Sec. 4014. Emergency management performance grant funding.
- Sec. 4015. Extension of reimbursement authority for Federal contractors.
- Sec. 4016. Eligibility for workers' compensation benefits for Federal employees diagnosed with COVID-19.

TITLE V—COMMITTEE ON SMALL BUSINESS AND ENTREPRENEURSHIP

- Sec. 5001. Modifications to paycheck protection program.

- Sec. 5002. Targeted EIDL advance.
- Sec. 5003. Support for restaurants.
- Sec. 5004. Community navigator pilot program.
- Sec. 5005. Shuttered venue operators.
- Sec. 5006. Direct appropriations.

## TITLE VI—COMMITTEE ON ENVIRONMENT AND PUBLIC WORKS

- Sec. 6001. Economic adjustment assistance.
- Sec. 6002. Funding for pollution and disparate impacts of the COVID-19 pandemic.
- Sec. 6003. United States Fish and Wildlife Service.

## TITLE VII—COMMITTEE ON COMMERCE, SCIENCE, AND TRANSPORTATION

## Subtitle A—Transportation and Infrastructure

- Sec. 7101. Grants to the National Railroad Passenger Corporation.
- Sec. 7102. Relief for airports.
- Sec. 7103. Emergency FAA Employee Leave Fund.
- Sec. 7104. Emergency TSA Employee Leave Fund.

## Subtitle B—Aviation Manufacturing Jobs Protection

- Sec. 7201. Definitions.
- Sec. 7202. Payroll support program.

## Subtitle C—Airlines

- Sec. 7301. Air Transportation Payroll Support Program Extension.

## Subtitle D—Consumer Protection and Commerce Oversight

- Sec. 7401. Funding for consumer product safety fund to protect consumers from potentially dangerous products related to COVID-19.
- Sec. 7402. Funding for E-Rate support for emergency educational connections and devices.
- Sec. 7403. Funding for Department of Commerce Inspector General.
- Sec. 7404. Federal Trade Commission funding for COVID-19 related work.

## Subtitle E—Science and Technology

- Sec. 7501. National Institute of Standards and Technology.
- Sec. 7502. National Science Foundation.

## Subtitle F—Corporation for Public Broadcasting

- Sec. 7601. Support for the Corporation for Public Broadcasting.

## TITLE VIII—COMMITTEE ON VETERANS' AFFAIRS

- Sec. 8001. Funding for claims and appeals processing.
- Sec. 8002. Funding availability for medical care and health needs.
- Sec. 8003. Funding for supply chain modernization.
- Sec. 8004. Funding for State homes.
- Sec. 8005. Funding for the Department of Veterans Affairs Office of Inspector General.
- Sec. 8006. Covid-19 veteran rapid retraining assistance program.
- Sec. 8007. Prohibition on copayments and cost sharing for veterans during emergency relating to COVID-19.
- Sec. 8008. Emergency Department of Veterans Affairs Employee Leave Fund.

## TITLE IX—COMMITTEE ON FINANCE

## Subtitle A—Crisis Support for Unemployed Workers

## PART 1—EXTENSION OF CARES ACT UNEMPLOYMENT PROVISIONS

- Sec. 9011. Extension of Pandemic Unemployment Assistance.
- Sec. 9012. Extension of emergency unemployment relief for governmental entities and nonprofit organizations.
- Sec. 9013. Extension of Federal Pandemic Unemployment Compensation.
- Sec. 9014. Extension of full Federal funding of the first week of compensable regular unemployment for States with no waiting week.
- Sec. 9015. Extension of emergency State staffing flexibility.
- Sec. 9016. Extension of pandemic emergency unemployment compensation.
- Sec. 9017. Extension of temporary financing of short-time compensation payments in States with programs in law.
- Sec. 9018. Extension of temporary financing of short-time compensation agreements for States without programs in law.

## PART 2—EXTENSION OF FFCRA UNEMPLOYMENT PROVISIONS

- Sec. 9021. Extension of temporary assistance for States with advances.
- Sec. 9022. Extension of full Federal funding of extended unemployment compensation.

## PART 3—DEPARTMENT OF LABOR FUNDING FOR TIMELY, ACCURATE, AND EQUITABLE PAYMENT

- Sec. 9031. Funding for administration.
- Sec. 9032. Funding for fraud prevention, equitable access, and timely payment to eligible workers.

## PART 4—OTHER PROVISIONS

- Sec. 9041. Extension of limitation on excess business losses of noncorporate taxpayers.
- Sec. 9042. Suspension of tax on portion of unemployment compensation.

## Subtitle B—Emergency Assistance to Families Through Home Visiting Programs

- Sec. 9101. Emergency assistance to families through home visiting programs.

## Subtitle C—Emergency Assistance to Children and Families

- Sec. 9201. Pandemic Emergency Assistance.

## Subtitle D—Elder Justice and Support Guarantee

- Sec. 9301. Additional funding for aging and disability services programs.

## Subtitle E—Support to Skilled Nursing Facilities in Response to COVID-19

- Sec. 9401. Providing for infection control support to skilled nursing facilities through contracts with quality improvement organizations.
- Sec. 9402. Funding for strike teams for resident and employee safety in skilled nursing facilities.

## Subtitle F—Preserving Health Benefits for Workers

- Sec. 9501. Preserving health benefits for workers.

## Subtitle G—Promoting Economic Security

## PART 1—2021 RECOVERY REBATES TO INDIVIDUALS

- Sec. 9601. 2021 recovery rebates to individuals.

## PART 2—CHILD TAX CREDIT

- Sec. 9611. Child tax credit improvements for 2021.
- Sec. 9612. Application of child tax credit in possessions.

## PART 3—EARNED INCOME TAX CREDIT

- Sec. 9621. Strengthening the earned income tax credit for individuals with no qualifying children.
- Sec. 9622. Taxpayer eligible for childless earned income credit in case of qualifying children who fail to meet certain identification requirements.
- Sec. 9623. Credit allowed in case of certain separated spouses.
- Sec. 9624. Modification of disqualified investment income test.
- Sec. 9625. Application of earned income tax credit in possessions of the United States.
- Sec. 9626. Temporary special rule for determining earned income for purposes of earned income tax credit.

## PART 4—DEPENDENT CARE ASSISTANCE

- Sec. 9631. Refundability and enhancement of child and dependent care tax credit.
- Sec. 9632. Increase in exclusion for employer-provided dependent care assistance.

## PART 5—CREDITS FOR PAID SICK AND FAMILY LEAVE

- Sec. 9641. Payroll credits.
- Sec. 9642. Credit for sick leave for certain self-employed individuals.
- Sec. 9643. Credit for family leave for certain self-employed individuals.

## PART 6—EMPLOYEE RETENTION CREDIT

- Sec. 9651. Extension of employee retention credit.

## PART 7—PREMIUM TAX CREDIT

- Sec. 9661. Improving affordability by expanding premium assistance for consumers.

- Sec. 9662. Temporary modification of limitations on reconciliation of tax credits for coverage under a qualified health plan with advance payments of such credit.
- Sec. 9663. Application of premium tax credit in case of individuals receiving unemployment compensation during 2021.

## PART 8—MISCELLANEOUS PROVISIONS

- Sec. 9671. Repeal of election to allocate interest, etc. on worldwide basis.
- Sec. 9672. Tax treatment of targeted EIDL advances.
- Sec. 9673. Tax treatment of restaurant revitalization grants.
- Sec. 9674. Modification of exceptions for reporting of third party network transactions.
- Sec. 9675. Modification of treatment of student loan forgiveness.

## Subtitle H—Pensions

- Sec. 9701. Temporary delay of designation of multiemployer plans as in endangered, critical, or critical and declining status.
- Sec. 9702. Temporary extension of the funding improvement and rehabilitation periods for multiemployer pension plans in critical and endangered status for 2020 or 2021.
- Sec. 9703. Adjustments to funding standard account rules.
- Sec. 9704. Special financial assistance program for financially troubled multiemployer plans.
- Sec. 9705. Extended amortization for single employer plans.
- Sec. 9706. Extension of pension funding stabilization percentages for single employer plans.
- Sec. 9707. Modification of special rules for minimum funding standards for community newspaper plans.
- Sec. 9708. Expansion of limitation on excessive employee remuneration.

## Subtitle I—Child Care for Workers

- Sec. 9801. Child care assistance.

## Subtitle J—Medicaid

- Sec. 9811. Mandatory coverage of COVID-19 vaccines and administration and treatment under Medicaid.
- Sec. 9812. Modifications to certain coverage under Medicaid for pregnant and postpartum women.
- Sec. 9813. State option to provide qualifying community-based mobile crisis intervention services.
- Sec. 9814. Temporary increase in FMAP for medical assistance under State Medicaid plans which begin to expend amounts for certain mandatory individuals.
- Sec. 9815. Extension of 100 percent Federal medical assistance percentage to Urban Indian Health Organizations and Native Hawaiian Health Care Systems.
- Sec. 9816. Sunset of limit on maximum rebate amount for single source drugs and innovator multiple source drugs.
- Sec. 9817. Additional support for Medicaid home and community-based services during the COVID-19 emergency.
- Sec. 9818. Funding for State strike teams for resident and employee safety in nursing facilities.
- Sec. 9819. Special rule for the period of a declared public health emergency related to coronavirus.

## Subtitle K—Children's Health Insurance Program

- Sec. 9821. Mandatory coverage of COVID-19 vaccines and administration and treatment under CHIP.
- Sec. 9822. Modifications to certain coverage under CHIP for pregnant and postpartum women.

## Subtitle L—Medicare

- Sec. 9831. Floor on the Medicare area wage index for hospitals in all-urban States.
- Sec. 9832. Secretarial authority to temporarily waive or modify application of certain Medicare requirements with respect to ambulance services furnished during certain emergency periods.
- Sec. 9833. Funding for Office of Inspector General.

## Subtitle M—Coronavirus State and Local Fiscal Recovery Funds

- Sec. 9901. Coronavirus State and Local Fiscal Recovery Funds.

## Subtitle N—Other Provisions

- Sec. 9911. Funding for providers relating to COVID-19.  
 Sec. 9912. Extension of customs user fees.

## TITLE X—COMMITTEE ON FOREIGN RELATIONS

- Sec. 10001. Department of State operations.  
 Sec. 10002. United States Agency for International Development operations.  
 Sec. 10003. Global response.  
 Sec. 10004. Humanitarian response.  
 Sec. 10005. Multilateral assistance.

## TITLE XI—COMMITTEE ON INDIAN AFFAIRS

- Sec. 11001. Indian Health Service.  
 Sec. 11002. Bureau of Indian Affairs.  
 Sec. 11003. Housing assistance and supportive services programs for Native Americans.  
 Sec. 11004. COVID-19 response resources for the preservation and maintenance of Native American languages.  
 Sec. 11005. Bureau of Indian Education.  
 Sec. 11006. American Indian, Native Hawaiian, and Alaska Native education.

## TITLE I—COMMITTEE ON AGRICULTURE, NUTRITION, AND FORESTRY

### Subtitle A—Agriculture

7 USC 7501 note. **SEC. 1001. FOOD SUPPLY CHAIN AND AGRICULTURE PANDEMIC RESPONSE.**

(a) **APPROPRIATION.**—In addition to amounts otherwise available, there is appropriated to the Secretary of Agriculture for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$4,000,000,000, to remain available until expended, to carry out this section.

Grants.  
Loans.

(b) **USE OF FUNDS.**—The Secretary of Agriculture shall use the amounts made available pursuant to subsection (a)—

(1) to purchase food and agricultural commodities;

(2) to purchase and distribute agricultural commodities (including fresh produce, dairy, seafood, eggs, and meat) to individuals in need, including through delivery to nonprofit organizations and through restaurants and other food related entities, as determined by the Secretary, that may receive, store, process, and distribute food items;

(3) to make grants and loans for small or midsized food processors or distributors, seafood processing facilities and processing vessels, farmers markets, producers, or other organizations to respond to COVID-19, including for measures to protect workers against COVID-19; and

(4) to make loans and grants and provide other assistance to maintain and improve food and agricultural supply chain resiliency.

Determination.

(c) **ANIMAL HEALTH.**—

(1) **COVID-19 ANIMAL SURVEILLANCE.**—The Secretary of Agriculture shall conduct monitoring and surveillance of susceptible animals for incidence of SARS-CoV-2.

(2) **FUNDING.**—Out of the amounts made available under subsection (a), the Secretary shall use \$300,000,000 to carry out this subsection.

(d) OVERTIME FEES.—

(1) SMALL ESTABLISHMENT; VERY SMALL ESTABLISHMENT DEFINITIONS.—The terms “small establishment” and “very small establishment” have the meaning given those terms in the final rule entitled “Pathogen Reduction; Hazard Analysis and Critical Control Point (HACCP) Systems” published in the Federal Register on July 25, 1996 (61 Fed. Reg. 38806).

Definition.

(2) OVERTIME INSPECTION COST REDUCTION.—Notwithstanding section 10703 of the Farm Security and Rural Investment Act of 2002 (7 U.S.C. 2219a), the Act of June 5, 1948 (21 U.S.C. 695), section 25 of the Poultry Products Inspection Act (21 U.S.C. 468), and section 24 of the Egg Products Inspection Act (21 U.S.C. 1053), and any regulations promulgated by the Department of Agriculture implementing such provisions of law and subject to the availability of funds under paragraph (3), the Secretary of Agriculture shall reduce the amount of overtime inspection costs borne by federally-inspected small establishments and very small establishments engaged in meat, poultry, or egg products processing and subject to the requirements of the Federal Meat Inspection Act (21 U.S.C. 601 et seq.), the Poultry Products Inspection Act (21 U.S.C. 451 et seq.), or the Egg Products Inspection Act (21 U.S.C. 1031 et seq.), for inspection activities carried out during the period of fiscal years 2021 through 2030.

Time period.

(3) FUNDING.—Out of the amounts made available under subsection (a), the Secretary shall use \$100,000,000 to carry out this subsection.

**SEC. 1002. EMERGENCY RURAL DEVELOPMENT GRANTS FOR RURAL HEALTH CARE.**

7 USC 2204b-2 note.

(a) GRANTS.—The Secretary of Agriculture (in this section referred to as the “Secretary”) shall use the funds made available by this section to establish an emergency pilot program for rural development not later than 150 days after the date of enactment of this Act to provide grants to eligible applicants (as defined in section 3570.61(a) of title 7, Code of Federal Regulations) to be awarded by the Secretary based on rural development needs related to the COVID-19 pandemic.

Deadline.

(b) USES.—An eligible applicant to whom a grant is awarded under this section may use the grant funds for costs, including those incurred prior to the issuance of the grant, as determined by the Secretary, of facilities which primarily serve rural areas (as defined in section 343(a)(13)(C) of the Consolidated Farm and Rural Development Act (7 U.S.C. 1991(a)(13)(C)), which are located in a rural area, the median household income of the population to be served by which is less than the greater of the poverty line or the applicable percentage (determined under section 3570.63(b) of title 7, Code of Federal Regulations) of the State nonmetropolitan median household income, and for which the performance of any construction work completed with grant funds shall meet the condition set forth in section 9003(f) of the Farm Security and Rural Investment Act of 2002 (7 U.S.C. 8103(f)), to—

- (1) increase capacity for vaccine distribution;
- (2) provide medical supplies to increase medical surge capacity;

Reimbursement.

(3) reimburse for revenue lost during the COVID-19 pandemic, including revenue losses incurred prior to the awarding of the grant;

(4) increase telehealth capabilities, including underlying health care information systems;

(5) construct temporary or permanent structures to provide health care services, including vaccine administration or testing;

(6) support staffing needs for vaccine administration or testing; and

(7) engage in any other efforts to support rural development determined to be critical to address the COVID-19 pandemic, including nutritional assistance to vulnerable individuals, as approved by the Secretary.

(c) FUNDING.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$500,000,000, to remain available until September 30, 2023, to carry out this section, of which not more than 3 percent may be used by the Secretary for administrative purposes and not more than 2 percent may be used by the Secretary for technical assistance as defined in section 306(a)(26) of the Consolidated Farm and Rural Development Act (7 U.S.C. 1926(a)(26)).

**SEC. 1003. PANDEMIC PROGRAM ADMINISTRATION FUNDS.**

In addition to amounts otherwise available, there are appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$47,500,000, to remain available until expended, for necessary administrative expenses associated with carrying out this subtitle.

**SEC. 1004. FUNDING FOR THE USDA OFFICE OF INSPECTOR GENERAL FOR OVERSIGHT OF COVID-19-RELATED PROGRAMS.**

In addition to amounts otherwise made available, there is appropriated to the Office of the Inspector General of the Department of Agriculture for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$2,500,000, to remain available until September 30, 2022, for audits, investigations, and other oversight activities of projects and activities carried out with funds made available to the Department of Agriculture related to the COVID-19 pandemic.

7 USC 1921 note.

**SEC. 1005. FARM LOAN ASSISTANCE FOR SOCIALLY DISADVANTAGED FARMERS AND RANCHERS.**

(a) PAYMENTS.—

(1) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of amounts in the Treasury not otherwise appropriated, such sums as may be necessary, to remain available until expended, for the cost of loan modifications and payments under this section.

Effective date.

(2) PAYMENTS.—The Secretary shall provide a payment in an amount up to 120 percent of the outstanding indebtedness of each socially disadvantaged farmer or rancher as of January 1, 2021, to pay off the loan directly or to the socially disadvantaged farmer or rancher (or a combination of both), on each—

(A) direct farm loan made by the Secretary to the socially disadvantaged farmer or rancher; and

(B) farm loan guaranteed by the Secretary the borrower of which is the socially disadvantaged farmer or rancher.

(b) DEFINITIONS.—In this section:

(1) FARM LOAN.—The term “farm loan” means—

(A) a loan administered by the Farm Service Agency under subtitle A, B, or C of the Consolidated Farm and Rural Development Act (7 U.S.C. 1922 et seq.); and

(B) a Commodity Credit Corporation Farm Storage Facility Loan.

(2) SECRETARY.—The term “Secretary” means the Secretary of Agriculture.

(3) SOCIALLY DISADVANTAGED FARMER OR RANCHER.—The term “socially disadvantaged farmer or rancher” has the meaning given the term in section 2501(a) of the Food, Agriculture, Conservation, and Trade Act of 1990 (7 U.S.C. 2279(a)).

**SEC. 1006. USDA ASSISTANCE AND SUPPORT FOR SOCIALLY DISADVANTAGED FARMERS, RANCHERS, FOREST LAND OWNERS AND OPERATORS, AND GROUPS.**

7 USC 2279 note.

(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Secretary of Agriculture for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$1,010,000,000, to remain available until expended, to carry out this section.

(b) ASSISTANCE.—The Secretary of Agriculture shall use the amounts made available pursuant to subsection (a) for purposes described in this subsection by—

(1) using not less than 5 percent of the total amount of funding provided under subsection (a) to provide outreach, mediation, financial training, capacity building training, cooperative development training and support, and other technical assistance on issues concerning food, agriculture, agricultural credit, agricultural extension, rural development, or nutrition to socially disadvantaged farmers, ranchers, or forest landowners, or other members of socially disadvantaged groups;

(2) using not less than 5 percent of the total amount of funding provided under subsection (a) to provide grants and loans to improve land access for socially disadvantaged farmers, ranchers, or forest landowners, including issues related to heirs' property in a manner as determined by the Secretary;

(3) using not less than 0.5 percent of the total amount of funding provided under subsection (a) to fund the activities of one or more equity commissions that will address racial equity issues within the Department of Agriculture and its programs;

(4) using not less than 5 percent of the total amount of funding provided under subsection (a) to support and supplement agricultural research, education, and extension, as well as scholarships and programs that provide internships and pathways to Federal employment, by—

(A) using not less than 1 percent of the total amount of funding provided under subsection (a) at colleges or universities eligible to receive funds under the Act of August 30, 1890 (commonly known as the “Second Morrill Act”) (7 U.S.C. 321 et seq.), including Tuskegee University;

(B) using not less than 1 percent of the total amount of funding provided under subsection (a) at 1994 Institutions (as defined in section 532 of the Equity in Educational Land-Grant Status Act of 1994 (7 U.S.C. 301 note; Public Law 103-382));

(C) using not less than 1 percent of the total amount of funding provided under subsection (a) at Alaska Native serving institutions and Native Hawaiian serving institutions eligible to receive grants under subsections (a) and (b), respectively, of section 1419B of the National Agricultural Research, Extension, and Teaching Policy Act of 1977 (7 U.S.C. 3156);

(D) using not less than 1 percent of the total amount of funding provided under subsection (a) at Hispanic-serving institutions eligible to receive grants under section 1455 of the National Agricultural Research, Extension, and Teaching Policy Act of 1977 (7 U.S.C. 3241); and

(E) using not less than 1 percent of the total amount of funding provided under subsection (a) at the insular area institutions of higher education located in the territories of the United States, as referred to in section 1489 of the National Agricultural Research, Extension, and Teaching Policy Act of 1977 (7 U.S.C. 3361); and

(5) using not less than 5 percent of the total amount of funding provided under subsection (a) to provide financial assistance to socially disadvantaged farmers, ranchers, or forest landowners that are former farm loan borrowers that suffered related adverse actions or past discrimination or bias in Department of Agriculture programs, as determined by the Secretary.

(c) DEFINITIONS.—In this section:

(1) NONINDUSTRIAL PRIVATE FOREST LAND.—The term “non-industrial private forest land” has the meaning given the term in section 1201(a)(18) of the Food Security Act of 1985 (16 U.S.C. 3801(a)(18)).

(2) SOCIALLY DISADVANTAGED FARMER, RANCHER, OR FOREST LANDOWNER.—The term “socially disadvantaged farmer, rancher, or forest landowner” means a farmer, rancher, or owner or operator of nonindustrial private forest land who is a member of a socially disadvantaged group.

(3) SOCIALLY DISADVANTAGED GROUP.—The term “socially disadvantaged group” has the meaning given the term in section 2501(a) of the Food, Agriculture, Conservation, and Trade Act of 1990 (7 U.S.C. 2279(a)).

**SEC. 1007. USE OF THE COMMODITY CREDIT CORPORATION FOR COMMODITIES AND ASSOCIATED EXPENSES.**

In addition to amounts otherwise made available, there are appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$800,000,000, to remain available until September 30, 2022, to use the Commodity Credit Corporation to acquire and make available commodities under section 406(b) of the Food for Peace Act (7 U.S.C. 1736(b)) and for expenses under such section.

## Subtitle B—Nutrition

### SEC. 1101. SUPPLEMENTAL NUTRITION ASSISTANCE PROGRAM.

(a) **VALUE OF BENEFITS.**—Section 702(a) of division N of the Consolidated Appropriations Act, 2021 (Public Law 116-260) is amended by striking “June 30, 2021” and inserting “September 30, 2021”. 7 USC 2011 note.

(b) **SNAP ADMINISTRATIVE EXPENSES.**—In addition to amounts otherwise available, there is hereby appropriated for fiscal year 2021, out of any amounts in the Treasury not otherwise appropriated, \$1,150,000,000, to remain available until September 30, 2023, with amounts to be obligated for each of fiscal years 2021, 2022, and 2023, for the costs of State administrative expenses associated with carrying out this section and administering the supplemental nutrition assistance program established under the Food and Nutrition Act of 2008 (7 U.S.C. 2011 et seq.), of which—

(1) \$15,000,000 shall be for necessary expenses of the Secretary of Agriculture (in this section referred to as the “Secretary”) for management and oversight of the program; and

(2) \$1,135,000,000 shall be for the Secretary to make grants to each State agency for each of fiscal years 2021 through 2023 as follows:

(A) 75 percent of the amounts available shall be allocated to States based on the share of each State of households that participate in the supplemental nutrition assistance program as reported to the Department of Agriculture for the most recent 12-month period for which data are available, adjusted by the Secretary (as of the date of the enactment of this Act) for participation in disaster programs under section 5(h) of the Food and Nutrition Act of 2008 (7 U.S.C. 2014(h)); and

(B) 25 percent of the amounts available shall be allocated to States based on the increase in the number of households that participate in the supplemental nutrition assistance program as reported to the Department of Agriculture over the most recent 12-month period for which data are available, adjusted by the Secretary (as of the date of the enactment of this Act) for participation in disaster programs under section 5(h) of the Food and Nutrition Act of 2008 (7 U.S.C. 2014(h)). Time period.

### SEC. 1102. ADDITIONAL ASSISTANCE FOR SNAP ONLINE PURCHASING AND TECHNOLOGY IMPROVEMENTS. 7 USC 2016 note.

(a) **FUNDING.**—In addition to amounts otherwise made available, there is appropriated for fiscal year 2021, out of any amounts in the Treasury not otherwise appropriated, \$25,000,000 to remain available through September 30, 2026, to carry out this section.

(b) **USE OF FUNDS.**—The Secretary of Agriculture may use the amounts made available pursuant to subsection (a)—

(1) to make technological improvements to improve online purchasing in the supplemental nutrition assistance program established under the Food and Nutrition Act of 2008 (7 U.S.C. 2011 et seq.);

(2) to modernize electronic benefit transfer technology;

(3) to support the mobile technologies demonstration projects and the use of mobile technologies authorized under

section 7(h)(14) of the Food and Nutrition Act of 2008 (7 U.S.C. 2016(h)(14)); and

(4) to provide technical assistance to educate retailers on the process and technical requirements for the online acceptance of the supplemental nutrition assistance program benefits, for mobile payments, and for electronic benefit transfer modernization initiatives.

**SEC. 1103. ADDITIONAL FUNDING FOR NUTRITION ASSISTANCE PROGRAMS.**

134 Stat. 2095. Section 704 of division N of the Consolidated Appropriations Act, 2021 (Public Law 116-260) is amended—

(1) by striking “In addition” and inserting the following: “(a) COVID-19 RESPONSE FUNDING.—In addition”; and

(2) by adding at the end the following—

“(b) ADDITIONAL FUNDING.—In addition to any other funds made available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$1,000,000,000 to remain available until September 30, 2027, for the Secretary of Agriculture to provide grants to the Commonwealth of Northern Mariana Islands, Puerto Rico, and American Samoa for nutrition assistance, of which \$30,000,000 shall be available to provide grants to the Commonwealth of Northern Mariana Islands for such assistance.”.

**SEC. 1104. COMMODITY SUPPLEMENTAL FOOD PROGRAM.**

In addition to amounts otherwise made available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$37,000,000, to remain available until September 30, 2022, for activities authorized by section 4(a) of the Agriculture and Consumer Protection Act of 1973 (7 U.S.C. 612c note).

42 USC 1786  
note.

**SEC. 1105. IMPROVEMENTS TO WIC BENEFITS.**

(a) DEFINITIONS.—In this section:

(1) APPLICABLE PERIOD.—The term “applicable period” means a period—

(A) beginning after the date of enactment of this Act, as selected by a State agency; and

(B) ending not later than the earlier of—

(i) 4 months after the date described in subparagraph (A); or

(ii) September 30, 2021.

(2) CASH-VALUE VOUCHER.—The term “cash-value voucher” has the meaning given the term in section 246.2 of title 7, Code of Federal Regulations (as in effect on the date of the enactment of this Act).

(3) PROGRAM.—The term “program” means the special supplemental nutrition program for women, infants, and children established by section 17 of the Child Nutrition Act of 1966 (42 U.S.C. 1786).

(4) QUALIFIED FOOD PACKAGE.—The term “qualified food package” means each of the following food packages (as defined in section 246.10(e) of title 7, Code of Federal Regulations (as in effect on the date of the enactment of this Act)):

(A) Food package III—Participants with qualifying conditions.

(B) Food Package IV—Children 1 through 4 years.

(C) Food Package V—Pregnant and partially (mostly) breastfeeding women.

(D) Food Package VI—Postpartum women.

(E) Food Package VII—Fully breastfeeding.

(5) SECRETARY.—The term “Secretary” means the Secretary of Agriculture.

(6) STATE AGENCY.—The term “State agency” has the meaning given the term in section 17(b) of the Child Nutrition Act of 1966 (42 U.S.C. 1786(b)).

(b) AUTHORITY TO INCREASE AMOUNT OF CASH-VALUE VOUCHER.—During the public health emergency declared by the Secretary of Health and Human Services under section 319 of the Public Health Service Act (42 U.S.C. 247d) on January 31, 2020, with respect to the Coronavirus Disease 2019 (COVID-19), and in response to challenges relating to that public health emergency, the Secretary may, in carrying out the program, increase the amount of a cash-value voucher under a qualified food package to an amount that is less than or equal to \$35.

(c) APPLICATION OF INCREASED AMOUNT OF CASH-VALUE VOUCHER TO STATE AGENCIES.—

(1) NOTIFICATION.—An increase to the amount of a cash-value voucher under subsection (b) shall apply to any State agency that notifies the Secretary of—

(A) the intent to use that increased amount, without further application; and

(B) the applicable period selected by the State agency during which that increased amount shall apply.

(2) USE OF INCREASED AMOUNT.—A State agency that makes a notification to the Secretary under paragraph (1) shall use the increased amount described in that paragraph—

(A) during the applicable period described in that notification; and

(B) only during a single applicable period.

(d) SUNSET.—The authority of the Secretary under subsection (b), and the authority of a State agency to increase the amount of a cash-value voucher under subsection (c), shall terminate on September 30, 2021.

(e) FUNDING.—In addition to amounts otherwise made available, there is appropriated to the Secretary, out of funds in the Treasury not otherwise appropriated, \$490,000,000 to carry out this section, to remain available until September 30, 2022.

#### **SEC. 1106. WIC PROGRAM MODERNIZATION.**

In addition to amounts otherwise available, there are appropriated to the Secretary of Agriculture, out of amounts in the Treasury not otherwise appropriated, \$390,000,000 for fiscal year 2021, to remain available until September 30, 2024, to carry out outreach, innovation, and program modernization efforts, including appropriate waivers and flexibility, to increase participation in and redemption of benefits under programs established under section 17 of the Child Nutrition Act of 1966 (7 U.S.C. 1431), except that such waivers may not relate to the content of the WIC Food Packages (as defined in section 246.10(e) of title 7, Code of Federal Regulations (as in effect on the date of enactment of this Act)), or the nondiscrimination requirements under section 246.8 of title 7, Code of Federal Regulations (as in effect on the date of enactment of this Act).

42 USC 1766  
note.

**SEC. 1107. MEALS AND SUPPLEMENTS REIMBURSEMENTS FOR INDIVIDUALS WHO HAVE NOT ATTAINED THE AGE OF 25.**

(a) PROGRAM FOR AT-RISK SCHOOL CHILDREN.—Beginning on the date of enactment of this section, notwithstanding paragraph (1)(A) of section 17(r) of the Richard B. Russell National School Lunch Act (42 U.S.C. 1766(r)), during the COVID-19 public health emergency declared under section 319 of the Public Health Service Act (42 U.S.C. 247d), the Secretary shall reimburse institutions that are emergency shelters under such section 17(r) (42 U.S.C. 1766(r)) for meals and supplements served to individuals who, at the time of such service—

(1) have not attained the age of 25; and

(2) are receiving assistance, including non-residential assistance, from such emergency shelter.

(b) PARTICIPATION BY EMERGENCY SHELTERS.—Beginning on the date of enactment of this section, notwithstanding paragraph (5)(A) of section 17(t) of the Richard B. Russell National School Lunch Act (42 U.S.C. 1766(t)), during the COVID-19 public health emergency declared under section 319 of the Public Health Service Act (42 U.S.C. 247d), the Secretary shall reimburse emergency shelters under such section 17(t) (42 U.S.C. 1766(t)) for meals and supplements served to individuals who, at the time of such service have not attained the age of 25.

(c) DEFINITIONS.—In this section:

(1) EMERGENCY SHELTER.—The term “emergency shelter” has the meaning given the term under section 17(t)(1) of the Richard B. Russell National School Lunch Act (42 U.S.C. 1766(t)(1)).

(2) SECRETARY.—The term “Secretary” means the Secretary of Agriculture.

**SEC. 1108. PANDEMIC EBT PROGRAM.**

Section 1101 of the Families First Coronavirus Response Act (7 U.S.C. 2011 note; Public Law 116-127) is amended—

(1) in subsection (a)—

(A) by striking “During fiscal years 2020 and 2021” and inserting “In any school year in which there is a public health emergency designation”; and

(B) by inserting “or in a covered summer period following a school session” after “in session”;

(2) in subsection (g), by striking “During fiscal year 2020, the” and inserting “The”;

(3) in subsection (h)(1)—

(A) by inserting “either” after “at least 1 child enrolled in such a covered child care facility and”; and

(B) by inserting “or a Department of Agriculture grant-funded nutrition assistance program in the Commonwealth of the Northern Mariana Islands, Puerto Rico, or American Samoa” before “shall be eligible to receive assistance”;

(4) by redesignating subsections (i) and (j) as subsections (j) and (k), respectively;

(5) by inserting after subsection (h) the following:

“(i) EMERGENCIES DURING SUMMER.—The Secretary of Agriculture may permit a State agency to extend a State agency plan approved under subsection (b) for not more than 90 days for the purpose of operating the plan during a covered summer period, during which time schools participating in the school lunch program

Plan.  
Time period.

under the Richard B. Russell National School Lunch Act or the school breakfast program under section 4 of the Child Nutrition Act of 1966 (42 U.S.C. 1773 ) and covered child care facilities shall be deemed closed for purposes of this section.”;

(6) in subsection (j) (as so redesignated)—

(A) by redesignating paragraphs (2) through (6) as paragraphs (3) through (7), respectively;

(B) by inserting after paragraph (1) the following:

“(2) COVERED SUMMER PERIOD.—The term ‘covered summer period’ means a summer period that follows a school year during which there was a public health emergency designation.”; and

Definition.

(C) in paragraph (5) (as so redesignated), by striking “or another coronavirus with pandemic potential”; and

(7) in subsection (k) (as so redesignated), by inserting “Federal agencies,” before “State agencies”.

## TITLE II—COMMITTEE ON HEALTH, EDUCATION, LABOR, AND PENSIONS

### Subtitle A—Education Matters

#### PART 1—DEPARTMENT OF EDUCATION

##### SEC. 2001. ELEMENTARY AND SECONDARY SCHOOL EMERGENCY RELIEF FUND.

20 USC 3401  
note.

(a) IN GENERAL.—In addition to amounts otherwise available through the Education Stabilization Fund, there is appropriated to the Department of Education for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$122,774,800,000, to remain available through September 30, 2023, to carry out this section.

(b) GRANTS.—From funds provided under subsection (a), the Secretary shall—

(1) use \$800,000,000 for the purposes of identifying homeless children and youth and providing homeless children and youth with—

(A) wrap-around services in light of the challenges of COVID-19; and

(B) assistance needed to enable homeless children and youth to attend school and participate fully in school activities; and

(2) from the remaining amounts, make grants to each State educational agency in accordance with this section.

(c) ALLOCATIONS TO STATES.—The amount of each grant under subsection (b) shall be allocated by the Secretary to each State in the same proportion as each State received under part A of title I of the Elementary and Secondary Education Act of 1965 in the most recent fiscal year.

(d) SUBGRANTS TO LOCAL EDUCATIONAL AGENCIES.—

(1) IN GENERAL.—Each State shall allocate not less than 90 percent of the grant funds awarded to the State under this section as subgrants to local educational agencies (including charter schools that are local educational agencies) in the State in proportion to the amount of funds such local

educational agencies and charter schools that are local educational agencies received under part A of title I of the Elementary and Secondary Education Act of 1965 in the most recent fiscal year.

Deadline.

(2) AVAILABILITY OF FUNDS.—Each State shall make allocations under paragraph (1) to local educational agencies in an expedited and timely manner and, to the extent practicable, not later than 60 days after the receipt of such funds.

(e) USES OF FUNDS.—A local educational agency that receives funds under this section—

(1) shall reserve not less than 20 percent of such funds to address learning loss through the implementation of evidence-based interventions, such as summer learning or summer enrichment, extended day, comprehensive afterschool programs, or extended school year programs, and ensure that such interventions respond to students' academic, social, and emotional needs and address the disproportionate impact of the coronavirus on the student subgroups described in section 1111(b)(2)(B)(xi) of the Elementary and Secondary Education Act of 1965 (20 U.S.C. 6311(b)(2)(B)(xi)), students experiencing homelessness, and children and youth in foster care; and

(2) shall use the remaining funds for any of the following:

(A) Any activity authorized by the Elementary and Secondary Education Act of 1965.

(B) Any activity authorized by the Individuals with Disabilities Education Act.

(C) Any activity authorized by the Adult Education and Family Literacy Act.

(D) Any activity authorized by the Carl D. Perkins Career and Technical Education Act of 2006.

Coordination.

(E) Coordination of preparedness and response efforts of local educational agencies with State, local, Tribal, and territorial public health departments, and other relevant agencies, to improve coordinated responses among such entities to prevent, prepare for, and respond to coronavirus.

(F) Activities to address the unique needs of low-income children or students, children with disabilities, English learners, racial and ethnic minorities, students experiencing homelessness, and foster care youth, including how outreach and service delivery will meet the needs of each population.

Procedures.

(G) Developing and implementing procedures and systems to improve the preparedness and response efforts of local educational agencies.

(H) Training and professional development for staff of the local educational agency on sanitation and minimizing the spread of infectious diseases.

(I) Purchasing supplies to sanitize and clean the facilities of a local educational agency, including buildings operated by such agency.

(J) Planning for, coordinating, and implementing activities during long-term closures, including providing meals to eligible students, providing technology for online learning to all students, providing guidance for carrying out requirements under the Individuals with Disabilities Education Act and ensuring other educational services can

continue to be provided consistent with all Federal, State, and local requirements.

(K) Purchasing educational technology (including hardware, software, and connectivity) for students who are served by the local educational agency that aids in regular and substantive educational interaction between students and their classroom instructors, including low-income students and children with disabilities, which may include assistive technology or adaptive equipment.

(L) Providing mental health services and supports, including through the implementation of evidence-based full-service community schools.

(M) Planning and implementing activities related to summer learning and supplemental afterschool programs, including providing classroom instruction or online learning during the summer months and addressing the needs of low-income students, children with disabilities, English learners, migrant students, students experiencing homelessness, and children in foster care.

(N) Addressing learning loss among students, including low-income students, children with disabilities, English learners, racial and ethnic minorities, students experiencing homelessness, and children and youth in foster care, of the local educational agency, including by—

(i) administering and using high-quality assessments that are valid and reliable, to accurately assess students' academic progress and assist educators in meeting students' academic needs, including through differentiating instruction;

(ii) implementing evidence-based activities to meet the comprehensive needs of students;

(iii) providing information and assistance to parents and families on how they can effectively support students, including in a distance learning environment; and

(iv) tracking student attendance and improving student engagement in distance education.

(O) School facility repairs and improvements to enable operation of schools to reduce risk of virus transmission and exposure to environmental health hazards, and to support student health needs.

(P) Inspection, testing, maintenance, repair, replacement, and upgrade projects to improve the indoor air quality in school facilities, including mechanical and non-mechanical heating, ventilation, and air conditioning systems, filtering, purification and other air cleaning, fans, control systems, and window and door repair and replacement.

(Q) Developing strategies and implementing public health protocols including, to the greatest extent practicable, policies in line with guidance from the Centers for Disease Control and Prevention for the reopening and operation of school facilities to effectively maintain the health and safety of students, educators, and other staff.

Strategies.

(R) Other activities that are necessary to maintain the operation of and continuity of services in local educational agencies and continuing to employ existing staff of the local educational agency.

(f) STATE FUNDING.—With funds not otherwise allocated under subsection (d), a State—

(1) shall reserve not less than 5 percent of the total amount of grant funds awarded to the State under this section to carry out, directly or through grants or contracts, activities to address learning loss by supporting the implementation of evidence-based interventions, such as summer learning or summer enrichment, extended day, comprehensive afterschool programs, or extended school year programs, and ensure that such interventions respond to students' academic, social, and emotional needs and address the disproportionate impact of the coronavirus on the student subgroups described in section 1111(b)(2)(B)(xi) of the Elementary and Secondary Education Act of 1965 (20 U.S.C. 6311(b)(2)(B)(xi)), students experiencing homelessness, and children and youth in foster care, including by providing additional support to local educational agencies to fully address such impacts;

(2) shall reserve not less than 1 percent of the total amount of grant funds awarded to the State under this section to carry out, directly or through grants or contracts, the implementation of evidence-based summer enrichment programs, and ensure such programs respond to students' academic, social, and emotional needs and address the disproportionate impact of the coronavirus on the student populations described in section 1111(b)(2)(B)(xi) of the Elementary and Secondary Education Act of 1965 (20 U.S.C. 6311(b)(2)(B)(xi)), students experiencing homelessness, and children and youth in foster care;

(3) shall reserve not less than 1 percent of the total amount of grant funds awarded to the State under this section to carry out, directly or through grants or contracts, the implementation of evidence-based comprehensive afterschool programs, and ensure such programs respond to students' academic, social, and emotional needs and address the disproportionate impact of the coronavirus on the student populations described in section 1111(b)(2)(B)(xi) of the Elementary and Secondary Education Act of 1965 (20 U.S.C. 6311(b)(2)(B)(xi)), students experiencing homelessness, and children and youth in foster care; and

(4) may reserve not more than one-half of 1 percent of the total amount of grant funds awarded to the State under this section for administrative costs and the remainder for emergency needs as determined by the State educational agency to address issues responding to coronavirus, which may be addressed through the use of grants or contracts.

Deadline.

(g) REALLOCATION.—A State shall return to the Secretary any funds received under this section that the State does not award within 1 year of receiving such funds and the Secretary shall reallocate such funds to the remaining States in accordance with subsection (c).

(h) DEFINITIONS.—In this section—

(1) the terms “child”, “children with disabilities”, “distance education”, “elementary school”, “English learner”, “evidence-

based”, “secondary school”, “local educational agency”, “parent”, “Secretary”, “State educational agency”, and “technology” have the meanings given those terms in section 8101 of the Elementary and Secondary Education Act of 1965 (20 U.S.C. 7801);

(2) the term “full-service community school” has the meaning given that term in section 4622(2) of the Elementary and Secondary Education Act of 1965 (20 U.S.C. 7272(2)); and

(3) the term “State” means each of the 50 States, the District of Columbia, and the Commonwealth of Puerto Rico.

(i) SAFE RETURN TO IN-PERSON INSTRUCTION.—

(1) IN GENERAL.—A local educational agency receiving funds under this section shall develop and make publicly available on the local educational agency’s website, not later than 30 days after receiving the allocation of funds described in paragraph (d)(1), a plan for the safe return to in-person instruction and continuity of services.

(2) COMMENT PERIOD.—Before making the plan described in paragraph (1) publicly available, the local educational agency shall seek public comment on the plan and take such comments into account in the development of the plan.

(3) PREVIOUS PLANS.—If a local educational agency has developed a plan for the safe return to in-person instruction before the date of enactment of this Act that meets the requirements described in paragraphs (1) and (2), such plan shall be deemed to satisfy the requirements under this subsection.

Deadline.

#### SEC. 2002. EMERGENCY ASSISTANCE TO NON-PUBLIC SCHOOLS.

(a) IN GENERAL.—In addition to amounts otherwise available through the Emergency Assistance to Non-Public Schools Program, there is appropriated to the Department of Education for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$2,750,000,000, to remain available through September 30, 2023, for making allocations to Governors under the Emergency Assistance to Non-Public Schools Program to provide services or assistance to non-public schools that enroll a significant percentage of low-income students and are most impacted by the qualifying emergency.

(b) LIMITATIONS.—Funds provided under subsection (a) shall not be used to provide reimbursements to any non-public school.

#### SEC. 2003. HIGHER EDUCATION EMERGENCY RELIEF FUND.

In addition to amounts otherwise available, there is appropriated to the Department of Education for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$39,584,570,000, to remain available through September 30, 2023, for making allocations to institutions of higher education in accordance with the same terms and conditions of section 314 of the Coronavirus Response and Relief Supplemental Appropriations Act, 2021 (division M of Public Law 116-260), except that—

(1) subsection (a)(1) of such section 314 shall be applied by substituting “91 percent” for “89 percent”;

(2) subsection (a)(2) of such section 314 shall be applied—

(A) in the matter preceding subparagraph (A), by substituting “under the heading ‘Higher Education’ in the Department of Education Appropriations Act, 2020” for “in the Further Consolidated Appropriations Act, 2020 (Public Law 116-94)”; and

Applicability.

Applicability.

(B) in subparagraph (B), by substituting “under the heading ‘Higher Education’ in the Department of Education Appropriations Act, 2020” for “in the Further Consolidated Appropriations Act, 2020 (Public Law 116-94)”;

(3) an institution that receives an allocation apportioned in accordance with clause (iii) of subsection (a)(2)(A) of such section 314 that has a total endowment size of less than \$1,000,000 (including an institution that does not have an endowment) shall be treated by the Secretary as having a total endowment size of \$1,000,000 for the purposes of such clause (iii);

Applicability.

(4) subsection (a)(4) of such section 314 shall be applied by substituting “1 percent” for “3 percent”;

(5) except as provided in paragraphs (7) and (9) of subsection (d) of such section 314, an institution shall use a portion of funds received under this section to—

(A) implement evidence-based practices to monitor and suppress coronavirus in accordance with public health guidelines; and

(B) conduct direct outreach to financial aid applicants about the opportunity to receive a financial aid adjustment due to the recent unemployment of a family member or independent student, or other circumstances, described in section 479A of the Higher Education Act of 1965 (20 U.S.C. 1087tt);

(6) the following shall not apply to funds provided or received in accordance with this section—

(A) subsection (b) of such section 314;

(B) paragraph (2) of subsection (c) of such section 314;

(C) paragraphs (1), (2), (4), (5), (6), and (8) of subsection (d) of such section 314;

(D) subsections (e) and (f) of such section 314; and

(E) section 316 of the Coronavirus Response and Relief Supplemental Appropriations Act, 2021 (division M of Public Law 116-260); and

(7) an institution that receives an allocation under this section apportioned in accordance with subparagraphs (A) through (D) of subsection (a)(1) of such section 314 shall use not less than 50 percent of such allocation to provide emergency financial aid grants to students in accordance with subsection (c)(3) of such section 314.

#### **SEC. 2004. MAINTENANCE OF EFFORT AND MAINTENANCE OF EQUITY.**

(a) STATE MAINTENANCE OF EFFORT.—

(1) IN GENERAL.—As a condition of receiving funds under section 2001, a State shall maintain support for elementary and secondary education, and for higher education (which shall include State funding to institutions of higher education and State need-based financial aid, and shall not include support for capital projects or for research and development or tuition and fees paid by students), in each of fiscal years 2022 and 2023 at least at the proportional levels of such State’s support for elementary and secondary education and for higher education relative to such State’s overall spending, averaged over fiscal years 2017, 2018, and 2019.

(2) WAIVER.—For the purpose of relieving fiscal burdens incurred by States in preventing, preparing for, and responding

to the coronavirus, the Secretary of Education may waive any maintenance of effort requirements associated with the Education Stabilization Fund.

(b) STATE MAINTENANCE OF EQUITY.—

(1) HIGH-NEED LOCAL EDUCATIONAL AGENCIES.—As a condition of receiving funds under section 2001, a State educational agency shall not, in fiscal year 2022 or 2023, reduce State funding (as calculated on a per-pupil basis) for any high-need local educational agency in the State by an amount that exceeds the overall per-pupil reduction in State funds, if any, across all local educational agencies in such State in such fiscal year.

(2) HIGHEST POVERTY LOCAL EDUCATIONAL AGENCIES.—Notwithstanding paragraph (1), as a condition of receiving funds under section 2001, a State educational agency shall not, in fiscal year 2022 or 2023, reduce State funding (as calculated on a per-pupil basis) for any highest poverty local educational agency below the level of funding (as calculated on a per-pupil basis) provided to each such local educational agency in fiscal year 2019.

(c) LOCAL EDUCATIONAL AGENCY MAINTENANCE OF EQUITY FOR HIGH-POVERTY SCHOOLS.—

(1) IN GENERAL.—As a condition of receiving funds under section 2001, a local educational agency shall not, in fiscal year 2022 or 2023—

(A) reduce per-pupil funding (from combined State and local funding) for any high-poverty school served by such local educational agency by an amount that exceeds—

(i) the total reduction in local educational agency funding (from combined State and local funding) for all schools served by the local educational agency in such fiscal year (if any); divided by

(ii) the number of children enrolled in all schools served by the local educational agency in such fiscal year; or

(B) reduce per-pupil, full-time equivalent staff in any high-poverty school by an amount that exceeds—

(i) the total reduction in full-time equivalent staff in all schools served by such local educational agency in such fiscal year (if any); divided by

(ii) the number of children enrolled in all schools served by the local educational agency in such fiscal year.

(2) EXCEPTION.—Paragraph (1) shall not apply to a local educational agency in fiscal year 2022 or 2023 that meets at least 1 of the following criteria in such fiscal year:

(A) Such local educational agency has a total enrollment of less than 1,000 students.

(B) Such local educational agency operates a single school.

(C) Such local educational agency serves all students within each grade span with a single school.

(D) Such local educational agency demonstrates an exceptional or uncontrollable circumstance, such as unpredictable changes in student enrollment or a precipitous decline in the financial resources of such agency, as determined by the Secretary of Education.

Determination.

(d) DEFINITIONS.—In this section:

(1) **ELEMENTARY EDUCATION; SECONDARY EDUCATION.**—The terms “elementary education” and “secondary education” have the meaning given such terms under State law.

(2) **HIGHEST POVERTY LOCAL EDUCATIONAL AGENCY.**—The term “highest poverty local educational agency” means a local educational agency that is among the group of local educational agencies in the State that—

(A) in rank order, have the highest percentages of economically disadvantaged students in the State, on the basis of the most recent satisfactory data available from the Department of Commerce (or, for local educational agencies for which no such data are available, such other data as the Secretary of Education determines are satisfactory); and

(B) collectively serve not less than 20 percent of the State’s total enrollment of students served by all local educational agencies in the State.

(3) **HIGH-NEED LOCAL EDUCATIONAL AGENCY.**—The term “high-need local educational agency” means a local educational agency that is among the group of local educational agencies in the State that—

(A) in rank order, have the highest percentages of economically disadvantaged students in the State, on the basis of the most recent satisfactory data available from the Department of Commerce (or, for local educational agencies for which no such data are available, such other data as the Secretary of Education determines are satisfactory); and

(B) collectively serve not less than 50 percent of the State’s total enrollment of students served by all local educational agencies in the State.

(4) **HIGH-POVERTY SCHOOL.**—

(A) **IN GENERAL.**—The term “high-poverty school” means, with respect to a school served by a local educational agency, a school that is in the highest quartile of schools served by such local educational agency based on the percentage of economically disadvantaged students served, as determined by the State in accordance with subparagraph (B).

(B) **DETERMINATION.**—In making the determination under subparagraph (A), a State shall select a measure of poverty established for the purposes of this paragraph by the Secretary of Education and apply such measure consistently to all schools in the State.

(5) **OVERALL PER-PUPIL REDUCTION IN STATE FUNDS.**—The term “overall per-pupil reduction in State funds” means, with respect to a fiscal year—

(A) the amount of any reduction in the total amount of State funds provided to all local educational agencies in the State in such fiscal year compared to the total amount of such funds provided to all local educational agencies in the State in the previous fiscal year; divided by

(B) the aggregate number of children enrolled in all schools served by all local educational agencies in the State in the fiscal year for which the determination is being made.

(6) STATE.—The term “State” means each of the 50 States, the District of Columbia, and the Commonwealth of Puerto Rico.

**SEC. 2005. OUTLYING AREAS.**

Time period.

In addition to amounts otherwise available, there is appropriated to the Department of Education for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$850,000,000, to remain available through September 30, 2023, for the Secretary of Education to allocate awards to the outlying areas on the basis of their respective needs, as determined by the Secretary, to be allocated not more than 30 calendar days after the date of enactment of this Act.

**SEC. 2006. GALLAUDET UNIVERSITY.**

In addition to amounts otherwise available, there is appropriated to the Department of Education for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$19,250,000, to remain available through September 30, 2023, for the Kendall Demonstration Elementary School, the Model Secondary School for the Deaf, and Gallaudet University to prevent, prepare for, and respond to coronavirus, including to defray expenses associated with coronavirus (including lost revenue, reimbursement for expenses already incurred, technology costs associated with a transition to distance education, faculty and staff trainings, and payroll) and to provide financial aid grants to students, which may be used for any component of the student’s cost of attendance.

**SEC. 2007. STUDENT AID ADMINISTRATION.**

In addition to amounts otherwise available, there is appropriated to the Department of Education for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$91,130,000, to remain available through September 30, 2023, for Student Aid Administration within the Department of Education to prevent, prepare for, and respond to coronavirus including direct outreach to students and borrowers about financial aid, economic impact payments, means-tested benefits, unemployment assistance, and tax benefits, for which the students and borrowers may be eligible.

**SEC. 2008. HOWARD UNIVERSITY.**

In addition to amounts otherwise available, there is appropriated to the Department of Education for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$35,000,000, to remain available through September 30, 2023, for Howard University to prevent, prepare for, and respond to coronavirus, including to defray expenses associated with coronavirus (including lost revenue, reimbursement for expenses already incurred, technology costs associated with a transition to distance education, faculty and staff trainings, and payroll) and to provide financial aid grants to students, which may be used for any component of the student’s cost of attendance.

**SEC. 2009. NATIONAL TECHNICAL INSTITUTE FOR THE DEAF.**

In addition to amounts otherwise available, there is appropriated to the Department of Education for fiscal year 2021, out of any money in the Treasury not otherwise appropriated,

\$19,250,000, to remain available through September 30, 2023, for the National Technical Institute for the Deaf to prevent, prepare for, and respond to coronavirus, including to defray expenses associated with coronavirus (including lost revenue, reimbursement for expenses already incurred, technology costs associated with a transition to distance education, faculty and staff training, and payroll) and to provide financial aid grants to students, which may be used for any component of the student's cost of attendance.

**SEC. 2010. INSTITUTE OF EDUCATION SCIENCES.**

In addition to amounts otherwise available, there is appropriated to the Department of Education for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$100,000,000, to remain available through September 30, 2023, for the Institute of Education Sciences to carry out research related to addressing learning loss caused by the coronavirus among the student subgroups described in section 1111(b)(2)(B)(xi) of the Elementary and Secondary Education Act of 1965 (20 U.S.C. 6311(b)(2)(B)(xi)) and students experiencing homelessness and children and youth in foster care, and to disseminate such findings to State educational agencies and local educational agencies and other appropriate entities.

**SEC. 2011. PROGRAM ADMINISTRATION.**

In addition to amounts otherwise available, there is appropriated to the Department of Education for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$15,000,000, to remain available through September 30, 2024, for Program Administration within the Department of Education to prevent, prepare for, and respond to coronavirus, and for salaries and expenses necessary to implement this part.

**SEC. 2012. OFFICE OF INSPECTOR GENERAL.**

In addition to amounts otherwise available, there is appropriated to the Department of Education for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$5,000,000, to remain available until expended, for the Office of Inspector General of the Department of Education, for salaries and expenses necessary for oversight, investigations, and audits of programs, grants, and projects funded under this part carried out by the Office of Inspector General.

**SEC. 2013. MODIFICATION OF REVENUE REQUIREMENTS FOR PROPRIETARY INSTITUTIONS OF HIGHER EDUCATION.**

(a) IN GENERAL.—Section 487(a)(24) of the Higher Education Act of 1965 (20 U.S.C. 1094(a)(24)) is amended by striking “funds provided under this title” and inserting “Federal funds that are disbursed or delivered to or on behalf of a student to be used to attend such institution (referred to in this paragraph and subsection (d) as ‘Federal education assistance funds’)”.

(b) IMPLEMENTATION OF NON-FEDERAL REVENUE REQUIREMENT.—Section 487(d) of the Higher Education Act of 1965 (20 U.S.C. 1094(d)) is amended—

(1) in the subsection heading, by striking “Non-title IV” and inserting “Non-Federal”; and

(2) in paragraph (1)(C), by striking “funds for a program under this title” and inserting “Federal education assistance funds”.

(c) **EFFECTIVE DATE.**—The amendments made under this section shall—

20 USC 1094  
note.

(1) be subject to the master calendar requirements under section 482 of the Higher Education Act of 1965 (20 U.S.C. 1089) and the public involvement and negotiated rulemaking requirements under section 492 of the Higher Education Act of 1965 (20 U.S.C. 1098a), except that such negotiated rulemaking shall commence not earlier than October 1, 2021; and

(2) apply to institutional fiscal years beginning on or after January 1, 2023.

Applicability.

**SEC. 2014. FUNDING FOR THE INDIVIDUALS WITH DISABILITIES EDUCATION ACT.**

(a) **AMOUNTS FOR IDEA.**—There is appropriated to the Secretary of Education for fiscal year 2021, out of any money in the Treasury not otherwise appropriated—

(1) \$2,580,000,000 for grants to States under part B of the Individuals with Disabilities Education Act;

(2) \$200,000,000 for preschool grants under section 619 of the Individuals with Disabilities Education Act; and

(3) \$250,000,000 for programs for infants and toddlers with disabilities under part C of the Individuals with Disabilities Education Act.

(b) **GENERAL PROVISIONS.**—Any amount appropriated under subsection (a) is in addition to other amounts appropriated or made available for the applicable purpose.

**PART 2—MISCELLANEOUS**

**SEC. 2021. NATIONAL ENDOWMENT FOR THE ARTS.**

In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$135,000,000, to remain available until expended, under the National Foundation on the Arts and the Humanities Act of 1965, as follows:

(1) Forty percent shall be for grants, and relevant administrative expenses, to State arts agencies and regional arts organizations that support organizations' programming and general operating expenses to cover up to 100 percent of the costs of the programs which the grants support, to prevent, prepare for, respond to, and recover from the coronavirus.

(2) Sixty percent shall be for direct grants, and relevant administrative expenses, that support organizations' programming and general operating expenses to cover up to 100 percent of the costs of the programs which the grants support, to prevent, prepare for, respond to, and recover from the coronavirus.

**SEC. 2022. NATIONAL ENDOWMENT FOR THE HUMANITIES.**

In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$135,000,000, to remain available until expended, under the National Foundation on the Arts and the Humanities Act of 1965, as follows:

(1) Forty percent shall be for grants, and relevant administrative expenses, to State humanities councils that support humanities organizations' programming and general operating expenses to cover up to 100 percent of the costs of the programs

which the grants support, to prevent, prepare for, respond to, and recover from the coronavirus.

(2) Sixty percent shall be for direct grants, and relevant administrative expenses, that support humanities organizations' programming and general operating expenses to cover up to 100 percent of the costs of the programs which the grants support, to prevent, prepare for, respond to, and recover from the coronavirus.

**SEC. 2023. INSTITUTE OF MUSEUM AND LIBRARY SERVICES.**

In addition to amounts otherwise available, there is appropriated to the Institute of Museum and Library Services for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$200,000,000, to remain available until expended, for necessary expenses to carry out museum and library services. The Director of the Institute of Museum and Library Services shall award not less than 89 percent of such funds to State library administrative agencies by applying the formula in section 221(b) of the Museum and Library Services Act, except that—

Applicability.

(1) section 221(b)(3)(A) of such Act shall be applied by substituting “\$2,000,000” for “\$680,000” and by substituting “\$200,000” for “\$60,000”; and

(2) section 221(b)(3)(C) and subsections (b) and (c) of section 223 of such Act shall not apply to funds provided under this section.

## **Subtitle B—Labor Matters**

**SEC. 2101. FUNDING FOR DEPARTMENT OF LABOR WORKER PROTECTION ACTIVITIES.**

(a) APPROPRIATION.—In addition to amounts otherwise made available, out of any funds in the Treasury not otherwise appropriated, there are appropriated to the Secretary of Labor for fiscal year 2021, \$200,000,000, to remain available until September 30, 2023, for the Wage and Hour Division, the Office of Workers' Compensation Programs, the Office of the Solicitor, the Mine Safety and Health Administration, and the Occupational Safety and Health Administration to carry out COVID-19 related worker protection activities, and for the Office of Inspector General for oversight of the Secretary's activities to prevent, prepare for, and respond to COVID-19.

(b) ALLOCATION OF AMOUNTS.—Amounts appropriated under subsection (a) shall be allocated as follows:

(1) Not less than \$100,000,000 shall be for the Occupational Safety and Health Administration, of which \$10,000,000 shall be for Susan Harwood training grants and not less than \$5,000,000 shall be for enforcement activities related to COVID-19 at high risk workplaces including health care, meat and poultry processing facilities, agricultural workplaces and correctional facilities.

(2) \$12,500,000 shall be for the Office of Inspector General.

## Subtitle C—Human Services and Community Supports

### SEC. 2201. CHILD CARE AND DEVELOPMENT BLOCK GRANT PROGRAM.

(a) CHILD CARE AND DEVELOPMENT BLOCK GRANT FUNDING.—In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any amounts in the Treasury not otherwise appropriated, \$14,990,000,000, to remain available through September 30, 2021, to carry out the program authorized under section 658C of the Child Care and Development Block Grant Act of 1990 (42 U.S.C. 9858a) without regard to requirements in sections 658E(c)(3)(E) or 658G of such Act (42 U.S.C. 9858c(c)(3)(E), 9858e). Payments made to States, territories, Indian Tribes, and Tribal organizations from funds made available under this subsection shall be obligated in fiscal year 2021 or the succeeding 2 fiscal years. States, territories, Indian Tribes, and Tribal organizations are authorized to use such funds to provide child care assistance to health care sector employees, emergency responders, sanitation workers, and other workers deemed essential during the response to coronavirus by public officials, without regard to the income eligibility requirements of section 658P(4) of the Child Care and Development Block Grant Act (42 U.S.C. 9858n(4)).

Time period.

(b) ADMINISTRATIVE COSTS.—In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any amounts in the Treasury not otherwise appropriated, \$35,000,000, to remain available through September 30, 2025, for the costs of providing technical assistance and conducting research and for the administrative costs to carry out this section and section 2202 of this subtitle.

(c) SUPPLEMENT NOT SUPPLANT.—Amounts made available to carry out this section shall be used to supplement and not supplant other Federal, State, and local public funds expended to provide child care services for eligible individuals.

### SEC. 2202. CHILD CARE STABILIZATION.

42 USC 9858  
note.

(a) DEFINITIONS.—In this section:

(1) COVID-19 PUBLIC HEALTH EMERGENCY.—The term “COVID-19 public health emergency” means the public health emergency declared by the Secretary of Health and Human Services under section 319 of the Public Health Service Act (42 U.S.C. 247d) on January 31, 2020, with respect to COVID-19, including any renewal of the declaration.

(2) ELIGIBLE CHILD CARE PROVIDER.—The term “eligible child care provider” means—

(A) an eligible child care provider as defined in section 658P of the Child Care and Development Block Grant Act of 1990 (42 U.S.C. 9858n); or

(B) a child care provider that is licensed, regulated, or registered in the State, territory, or Indian Tribe on the date of enactment of this Act and meets applicable State and local health and safety requirements.

(b) CHILD CARE STABILIZATION FUNDING.—In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any amounts in the Treasury not otherwise appropriated, \$23,975,000,000, to remain available through September

30, 2021, for grants under this section in accordance with the Child Care and Development Block Grant Act of 1990.

(c) GRANTS.—From the amounts appropriated to carry out this section and under the authority of section 658O of the Child Care and Development Block Grant Act of 1990 (42 U.S.C. 9858m) and this section, the Secretary shall award to each lead agency a child care stabilization grant, without regard to the requirements in subparagraphs (C) and (E) of section 658E(c)(3), and in section 658G, of the Child Care and Development Block Grant Act of 1990 (42 U.S.C. 9858c(c)(3), 9858e). Such grant shall be allotted in accordance with section 658O of the Child Care and Development Block Grant Act of 1990 (42 U.S.C. 9858m).

(d) STATE RESERVATIONS AND SUBGRANTS.—

(1) RESERVATION.—A lead agency for a State that receives a child care stabilization grant pursuant to subsection (c) shall reserve not more than 10 percent of such grant funds to administer subgrants, provide technical assistance and support for applying for and accessing the subgrant opportunity, publicize the availability of the subgrants, carry out activities to increase the supply of child care, and provide technical assistance to help child care providers implement policies as described in paragraph (2)(D)(i).

(2) SUBGRANTS TO QUALIFIED CHILD CARE PROVIDERS.—

(A) IN GENERAL.—The lead agency shall use the remainder of the grant funds awarded pursuant to subsection (c) to make subgrants to qualified child care providers described in subparagraph (B), regardless of such a provider's previous receipt of other Federal assistance, to support the stability of the child care sector during and after the COVID-19 public health emergency.

(B) QUALIFIED CHILD CARE PROVIDER.—To be qualified to receive a subgrant under this paragraph, a provider shall be an eligible child care provider that on the date of submission of an application for the subgrant, was either—

(i) open and available to provide child care services;

or

(ii) closed due to public health, financial hardship, or other reasons relating to the COVID-19 public health emergency.

(C) SUBGRANT AMOUNT.—The amount of such a subgrant to a qualified child care provider shall be based on the provider's stated current operating expenses, including costs associated with providing or preparing to provide child care services during the COVID-19 public health emergency, and to the extent practicable, cover sufficient operating expenses to ensure continuous operations for the intended period of the subgrant.

(D) APPLICATION.—The lead agency shall—

(i) make available on the lead agency's website an application for qualified child care providers that includes certifications that, for the duration of the subgrant—

(I) the provider applying will, when open and available to provide child care services, implement policies in line with guidance from the corresponding State, Tribal, and local authorities, and

in accordance with State, Tribal, and local orders, and, to the greatest extent possible, implement policies in line with guidance from the Centers for Disease Control and Prevention;

(II) for each employee, the provider will pay not less than the full compensation, including any benefits, that was provided to the employee as of the date of submission of the application for the subgrant (referred to in this subclause as “full compensation”), and will not take any action that reduces the weekly amount of the employee’s compensation below the weekly amount of full compensation, or that reduces the employee’s rate of compensation below the rate of full compensation, including the involuntary furloughing of any employee employed on the date of submission of the application for the subgrant; and

(III) the provider will provide relief from co-payments and tuition payments for the families enrolled in the provider’s program, to the extent possible, and prioritize such relief for families struggling to make either type of payment; and  
 (ii) accept and process applications submitted under this subparagraph on a rolling basis, and provide subgrant funds in advance of provider expenditures, except as provided in subsection (e)(2).

(E) OBLIGATION.—The lead agency shall notify the Secretary if it is unable to obligate at least 50 percent of the funds received pursuant to subsection (c) that are available for subgrants described in this paragraph within 9 months of the date of enactment of this Act.

Notification.  
Deadline.

(e) USES OF FUNDS.—

(1) IN GENERAL.—A qualified child care provider that receives funds through such a subgrant shall use the funds for at least one of the following:

(A) Personnel costs, including payroll and salaries or similar compensation for an employee (including any sole proprietor or independent contractor), employee benefits, premium pay, or costs for employee recruitment and retention.

(B) Rent (including rent under a lease agreement) or payment on any mortgage obligation, utilities, facility maintenance or improvements, or insurance.

(C) Personal protective equipment, cleaning and sanitization supplies and services, or training and professional development related to health and safety practices.

(D) Purchases of or updates to equipment and supplies to respond to the COVID-19 public health emergency.

(E) Goods and services necessary to maintain or resume child care services.

(F) Mental health supports for children and employees.

(2) REIMBURSEMENT.—The qualified child care provider may use the subgrant funds to reimburse the provider for sums obligated or expended before the date of enactment of this Act for the cost of a good or service described in paragraph (1) to respond to the COVID-19 public health emergency.

(f) SUPPLEMENT NOT SUPPLANT.—Amounts made available to carry out this section shall be used to supplement and not supplant other Federal, State, and local public funds expended to provide child care services for eligible individuals.

**SEC. 2203. HEAD START.**

In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any amounts in the Treasury not otherwise appropriated, \$1,000,000,000, to remain available through September 30, 2022, to carry out the Head Start Act, including for Federal administrative expenses. After reserving funds for Federal administrative expenses, the Secretary shall allocate all remaining amounts to Head Start agencies for one-time grants, and shall allocate to each Head Start agency an amount that bears the same ratio to the portion available for allocations as the number of enrolled children served by the Head Start agency bears to the number of enrolled children served by all Head Start agencies.

**SEC. 2204. PROGRAMS FOR SURVIVORS.**

(a) IN GENERAL.—Section 303 of the Family Violence Prevention and Services Act (42 U.S.C. 10403) is amended by adding at the end the following:

“(d) ADDITIONAL FUNDING.—For the purposes of carrying out this title, in addition to amounts otherwise made available for such purposes, there are appropriated, out of any amounts in the Treasury not otherwise appropriated, for fiscal year 2021, to remain available until expended except as otherwise provided in this subsection, each of the following:

“(1) \$180,000,000 to carry out sections 301 through 312, to be allocated in the manner described in subsection (a)(2), except that—

“(A) a reference in subsection (a)(2) to an amount appropriated under subsection (a)(1) shall be considered to be a reference to an amount appropriated under this paragraph;

“(B) the matching requirement in section 306(c)(4) and condition in section 308(d)(3) shall not apply; and

“(C) each reference in section 305(e) to ‘the end of the following fiscal year’ shall be considered to be a reference to ‘the end of fiscal year 2025’; and

“(D) funds made available to a State in a grant under section 306(a) and obligated in a timely manner shall be available for expenditure, by the State or a recipient of funds from the grant, through the end of fiscal year 2025;

“(2) \$18,000,000 to carry out section 309.

“(3) \$2,000,000 to carry out section 313, of which \$1,000,000 shall be allocated to support Indian communities.”.

(b) COVID-19 PUBLIC HEALTH EMERGENCY DEFINED.—In this section, the term “COVID-19 public health emergency” means the public health emergency declared by the Secretary of Health and Human Services under section 319 of the Public Health Service Act (42 U.S.C. 247d) on January 31, 2020, with respect to COVID-19, including any renewal of the declaration.

(c) GRANTS TO SUPPORT CULTURALLY SPECIFIC POPULATIONS.—

(1) IN GENERAL.—In addition to amounts otherwise made available, there is appropriated, out of any amounts in the Treasury not otherwise appropriated, to the Secretary of Health

and Human Services (in this section referred to as the “Secretary”), \$49,500,000 for fiscal year 2021, to be available until expended, to carry out this subsection (excluding Federal administrative costs, for which funds are appropriated under subsection (e)).

(2) USE OF FUNDS.—From amounts appropriated under paragraph (1), the Secretary acting through the Director of the Family Violence Prevention and Services Program, shall—

(A) support culturally specific community-based organizations to provide culturally specific activities for survivors of sexual assault and domestic violence, to address emergent needs resulting from the COVID-19 public health emergency and other public health concerns; and

(B) support culturally specific community-based organizations that provide culturally specific activities to promote strategic partnership development and collaboration in responding to the impact of COVID-19 and other public health concerns on survivors of sexual assault and domestic violence.

(d) GRANTS TO SUPPORT SURVIVORS OF SEXUAL ASSAULT.—

(1) IN GENERAL.—In addition to amounts otherwise made available, there is appropriated, out of any amounts in the Treasury not otherwise appropriated, to the Secretary, \$198,000,000 for fiscal year 2021, to be available until expended, to carry out this subsection (excluding Federal administrative costs, for which funds are appropriated under subsection (e)).

(2) USE OF FUNDS.—From amounts appropriated under paragraph (1), the Secretary acting through the Director of the Family Violence Prevention and Services Program, shall assist rape crisis centers in transitioning to virtual services and meeting the emergency needs of survivors.

(e) ADMINISTRATIVE COSTS.—In addition to amounts otherwise made available, there is appropriated to the Secretary, out of any amounts in the Treasury not otherwise appropriated, \$2,500,000 for fiscal year 2021, to remain available until expended, for the Federal administrative costs of carrying out subsections (c) and (d).

#### **SEC. 2205. CHILD ABUSE PREVENTION AND TREATMENT.**

In addition to amounts otherwise available, there is appropriated to the Secretary of Health and Human Services for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, the following amounts, to remain available through September 30, 2023:

(1) \$250,000,000 for carrying out the program authorized under section 201 of the Child Abuse Prevention and Treatment Act (42 U.S.C. 5116), which shall be allocated without regard to section 204(4) of such Act (42 U.S.C. 5116d(4)) and shall be allotted to States in accordance with section 203 of such Act (42 U.S.C. 5116b), except that—

(A) in subsection (b)(1)(A) of such section 203, “70 percent” shall be deemed to be “100 percent”; and

(B) subsections (b)(1)(B) and (c) of such section 203 shall not apply; and

(2) \$100,000,000 for carrying out the State grant program authorized under section 106 of the Child Abuse Prevention and Treatment Act (42 U.S.C. 5106a), which shall be allocated without regard to section 112(a)(2) of such Act (42 U.S.C. 5106h(a)(2)).

**SEC. 2206. CORPORATION FOR NATIONAL AND COMMUNITY SERVICE AND THE NATIONAL SERVICE TRUST.**

(a) CORPORATION FOR NATIONAL AND COMMUNITY SERVICE.—In addition to amounts otherwise made available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, to the Corporation for National and Community Service, \$852,000,000, to remain available through September 30, 2024, to carry out subsection (b), except that amounts to carry out subsection (b)(7) shall remain available until September 30, 2026.

(b) ALLOCATION OF AMOUNTS.—Amounts provided by subsection (a) shall be allocated as follows:

(1) AMERICORPS STATE AND NATIONAL.—\$620,000,000 shall be used—

(A) to increase the living allowances of participants in national service programs; and

(B) to make funding adjustments to existing (as of the date of enactment of this Act) awards and award new and additional awards to entities to support programs described in paragraphs (1)(B), (2)(B), (3)(B), (4)(B), and (5)(B) of subsection (a), and subsection (b)(2), of section 122 of the National and Community Service Act of 1990 (42 U.S.C. 12572), whether or not the entities are already grant recipients under such provisions on the date of enactment of this Act, and notwithstanding section 122(a)(1)(B)(vi) of the National and Community Service Act of 1990 (42 U.S.C. 12572(a)(1)(B)(vi)), by—

(i) prioritizing entities serving communities disproportionately impacted by COVID-19 and utilizing culturally competent and multilingual strategies in the provision of services; and

(ii) taking into account the diversity of communities and participants served by such entities, including racial, ethnic, socioeconomic, linguistic, or geographic diversity.

(2) STATE COMMISSIONS.—\$20,000,000 shall be used to make adjustments to existing (as of the date of enactment of this Act) awards and new and additional awards, including awards to State Commissions on National and Community Service, under section 126(a) of the National and Community Service Act of 1990 (42 U.S.C. 12576(a)).

(3) VOLUNTEER GENERATION FUND.—\$20,000,000 shall be used for expenses authorized under section 501(a)(4)(F) of the National and Community Service Act of 1990 (42 U.S.C. 12681(a)(4)(F)), which, notwithstanding section 198P(d)(1)(B) of that Act (42 U.S.C. 12653p(d)(1)(B)), shall be for grants awarded by the Corporation for National and Community Service on a competitive basis.

(4) AMERICORPS VISTA.—\$80,000,000 shall be used for the purposes described in section 101 of the Domestic Volunteer Service Act of 1973 (42 U.S.C. 4951), including to increase

the living allowances of volunteers, described in section 105(b) of the Domestic Volunteer Service Act of 1973 (42 U.S.C. 4955(b)).

(5) NATIONAL SENIOR SERVICE CORPS.—\$30,000,000 shall be used for the purposes described in section 200 of the Domestic Volunteer Service Act of 1973 (42 U.S.C. 5000).

(6) ADMINISTRATIVE COSTS.—\$73,000,000 shall be used for the Corporation for National and Community Service for administrative expenses to carry out programs and activities funded by subsection (a).

(7) OFFICE OF INSPECTOR GENERAL.—\$9,000,000 shall be used for the Office of Inspector General of the Corporation for National and Community Service for salaries and expenses necessary for oversight and audit of programs and activities funded by subsection (a).

(c) NATIONAL SERVICE TRUST.—In addition to amounts otherwise made available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$148,000,000, to remain available until expended, for administration of the National Service Trust, and for payment to the Trust for the provision of educational awards pursuant to section 145(a)(1)(A) of the National and Community Service Act of 1990 (42 U.S.C. 12601(a)(1)(A)).

## Subtitle D—Public Health

### SEC. 2301. FUNDING FOR COVID-19 VACCINE ACTIVITIES AT THE CENTERS FOR DISEASE CONTROL AND PREVENTION.

42 USC 247d  
note.

(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Secretary of Health and Human Services (in this subtitle referred to as the “Secretary”) for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$7,500,000,000, to remain available until expended, to carry out activities to plan, prepare for, promote, distribute, administer, monitor, and track COVID-19 vaccines.

(b) USE OF FUNDS.—The Secretary, acting through the Director of the Centers for Disease Control and Prevention, and in consultation with other agencies, as applicable, shall, in conducting activities referred to in subsection (a)—

Consultation.

(1) conduct activities to enhance, expand, and improve nationwide COVID-19 vaccine distribution and administration, including activities related to distribution of ancillary medical products and supplies related to vaccines; and

(2) provide technical assistance, guidance, and support to, and award grants or cooperative agreements to, State, local, Tribal, and territorial public health departments for enhancement of COVID-19 vaccine distribution and administration capabilities, including—

(A) the distribution and administration of vaccines licensed under section 351 of the Public Health Service Act (42 U.S.C. 262) or authorized under section 564 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360bbb-3) and ancillary medical products and supplies related to vaccines;

(B) the establishment and expansion, including staffing support, of community vaccination centers, particularly in underserved areas;

(C) the deployment of mobile vaccination units, particularly in underserved areas;

(D) information technology, standards-based data, and reporting enhancements, including improvements necessary to support standards-based sharing of data related to vaccine distribution and vaccinations and systems that enhance vaccine safety, effectiveness, and uptake, particularly among underserved populations;

(E) facilities enhancements;

(F) communication with the public regarding when, where, and how to receive COVID-19 vaccines; and

(G) transportation of individuals to facilitate vaccinations, including at community vaccination centers and mobile vaccination units, particularly for underserved populations.

(c) SUPPLEMENTAL FUNDING FOR STATE VACCINATION GRANTS.—

(1) DEFINITIONS.—In this subsection:

(A) BASE FORMULA.—The term “base formula” means the allocation formula that applied to the Public Health Emergency Preparedness cooperative agreement in fiscal year 2020.

(B) ALTERNATIVE ALLOCATION.—The term “alternative allocation” means an allocation to each State, territory, or locality calculated using the percentage derived from the allocation received by such State, territory, or locality of the aggregate amount of fiscal year 2020 Public Health Emergency Preparedness cooperative agreement awards under section 319C-1 of the Public Health Service Act (42 U.S.C. 247d-3a).

(2) SUPPLEMENTAL FUNDING.—

Deadline.

(A) IN GENERAL.—Not later than 21 days after the date of enactment of this Act, the Secretary shall, out of amounts described in subsection (a), provide supplemental funding to any State, locality, or territory that received less of the amounts that were appropriated under title III of division M of Public Law 116-260 for vaccination grants to be issued by the Centers for Disease Control and Prevention than such State, locality, or territory would have received had such amounts been allocated using the alternative allocation.

(B) AMOUNT.—The amount of supplemental funding provided under this subsection shall be equal to the difference between—

(i) the amount the State, locality, or territory received, or would receive, under the base formula; and

(ii) the amount the State, locality, or territory would receive under the alternative allocation.

**SEC. 2302. FUNDING FOR VACCINE CONFIDENCE ACTIVITIES.**

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$1,000,000,000, to remain available until expended, to carry out activities, acting

through the Director of the Centers for Disease Control and Prevention—

(1) to strengthen vaccine confidence in the United States, including its territories and possessions;

(2) to provide further information and education with respect to vaccines licensed under section 351 of the Public Health Service Act (42 U.S.C. 262) or authorized under section 564 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360bbb-3); and

(3) to improve rates of vaccination throughout the United States, including its territories and possessions, including through activities described in section 313 of the Public Health Service Act, as amended by section 311 of division BB of the Consolidated Appropriations Act, 2021 (Public Law 116-260).

**SEC. 2303. FUNDING FOR SUPPLY CHAIN FOR COVID-19 VACCINES, THERAPEUTICS, AND MEDICAL SUPPLIES.**

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$6,050,000,000, to remain available until expended, for necessary expenses with respect to research, development, manufacturing, production, and the purchase of vaccines, therapeutics, and ancillary medical products and supplies to prevent, prepare, or respond to—

(1) SARS-CoV-2 or any viral variant mutating therefrom with pandemic potential; and

(2) COVID-19 or any disease with potential for creating a pandemic.

**SEC. 2304. FUNDING FOR COVID-19 VACCINE, THERAPEUTIC, AND DEVICE ACTIVITIES AT THE FOOD AND DRUG ADMINISTRATION.**

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$500,000,000, to remain available until expended, to be used for the evaluation of the continued performance, safety, and effectiveness, including with respect to emerging COVID-19 variants, of vaccines, therapeutics, and diagnostics approved, cleared, licensed, or authorized for use for the treatment, prevention, or diagnosis of COVID-19; facilitation of advanced continuous manufacturing activities related to production of vaccines and related materials; facilitation and conduct of inspections related to the manufacturing of vaccines, therapeutics, and devices delayed or cancelled for reasons related to COVID-19; review of devices authorized for use for the treatment, prevention, or diagnosis of COVID-19; and oversight of the supply chain and mitigation of shortages of vaccines, therapeutics, and devices approved, cleared, licensed, or authorized for use for the treatment, prevention, or diagnosis of COVID-19 by the Food and Drug Administration.

**SEC. 2305. REDUCED COST-SHARING.**

(a) IN GENERAL.—Section 1402 of the Patient Protection and Affordable Care Act is amended by redesignating subsection (f) as subsection (g) and by inserting after subsection (e) the following new subsection:

“(f) SPECIAL RULE FOR INDIVIDUALS WHO RECEIVE UNEMPLOYMENT COMPENSATION DURING 2021.—For purposes of this section,

in the case of an individual who has received, or has been approved to receive, unemployment compensation for any week beginning during 2021, for the plan year in which such week begins—

“(1) such individual shall be treated as meeting the requirements of subsection (b)(2), and

“(2) for purposes of subsections (c) and (d), there shall not be taken into account any household income of the individual in excess of 133 percent of the poverty line for a family of the size involved.”

42 USC 18071  
note.

(b) EFFECTIVE DATE.—The amendment made by this section shall apply to plan years beginning after December 31, 2020.

## Subtitle E—Testing

42 USC 247d  
note.

### SEC. 2401. FUNDING FOR COVID-19 TESTING, CONTACT TRACING, AND MITIGATION ACTIVITIES.

(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Secretary of Health and Human Services (in this subtitle referred to as the “Secretary”) for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$47,800,000,000, to remain available until expended, to carry out activities to detect, diagnose, trace, and monitor SARS-CoV-2 and COVID-19 infections and related strategies to mitigate the spread of COVID-19.

(b) USE OF FUNDS.—From amounts appropriated by subsection (a), the Secretary shall—

(1) implement a national, evidence-based strategy for testing, contact tracing, surveillance, and mitigation with respect to SARS-CoV-2 and COVID-19, including through activities authorized under section 319(a) of the Public Health Service Act;

(2) provide technical assistance, guidance, and support, and award grants or cooperative agreements to State, local, and territorial public health departments for activities to detect, diagnose, trace, and monitor SARS-CoV-2 and COVID-19 infections and related strategies and activities to mitigate the spread of COVID-19;

(3) support the development, manufacturing, procurement, distribution, and administration of tests to detect or diagnose SARS-CoV-2 and COVID-19, including through—

(A) support for the development, manufacture, procurement, and distribution of supplies necessary for administering tests, such as personal protective equipment; and

(B) support for the acquisition, construction, alteration, or renovation of non-federally owned facilities for the production of diagnostics and ancillary medical products and supplies where the Secretary determines that such an investment is necessary to ensure the production of sufficient amounts of such supplies;

(4) establish and expand Federal, State, local, and territorial testing and contact tracing capabilities, including—

(A) through investments in laboratory capacity, such as—

(i) academic and research laboratories, or other laboratories that could be used for processing of COVID-19 testing;

- (ii) community-based testing sites and community-based organizations; or
- (iii) mobile health units, particularly in medically underserved areas; and
- (B) with respect to quarantine and isolation of contacts;
- (5) enhance information technology, data modernization, and reporting, including improvements necessary to support sharing of data related to public health capabilities;
- (6) award grants to, or enter into cooperative agreements or contracts with, State, local, and territorial public health departments to establish, expand, and sustain a public health workforce; and
- (7) to cover administrative and program support costs necessary to conduct activities related to subparagraph (a).

**SEC. 2402. FUNDING FOR SARS-COV-2 GENOMIC SEQUENCING AND SURVEILLANCE.**

42 USC 289g-5  
note.

(a) **IN GENERAL.**—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021 out of any money in the Treasury not otherwise appropriated, \$1,750,000,000, to remain available until expended, to strengthen and expand activities and workforce related to genomic sequencing, analytics, and disease surveillance.

(b) **USE OF FUNDS.**—From amounts appropriated by subsection (a), the Secretary, acting through the Director of the Centers for Disease Control and Prevention, shall—

- (1) conduct, expand, and improve activities to sequence genomes, identify mutations, and survey the circulation and transmission of viruses and other organisms, including strains of SARS-CoV-2;
- (2) award grants or cooperative agreements to State, local, Tribal, or territorial public health departments or public health laboratories—
  - (A) to increase their capacity to sequence genomes of circulating strains of viruses and other organisms, including SARS-CoV-2;
  - (B) to identify mutations in viruses and other organisms, including SARS-CoV-2;
  - (C) to use genomic sequencing to identify outbreaks and clusters of diseases or infections, including COVID-19; and
  - (D) to develop effective disease response strategies based on genomic sequencing and surveillance data;
- (3) enhance and expand the informatics capabilities of the public health workforce; and
- (4) award grants for the construction, alteration, or renovation of facilities to improve genomic sequencing and surveillance capabilities at the State and local level.

Grants.

**SEC. 2403. FUNDING FOR GLOBAL HEALTH.**

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any amounts in the Treasury not otherwise appropriated, \$750,000,000, to remain available until expended, for activities to be conducted acting through the Director of the Centers for Disease Control and Prevention to combat SARS-CoV-2, COVID-19, and other emerging infectious disease threats globally, including efforts related to global health security, global disease detection and response, global health

protection, global immunization, and global coordination on public health.

**SEC. 2404. FUNDING FOR DATA MODERNIZATION AND FORECASTING CENTER.**

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$500,000,000, to remain available until expended, for activities to be conducted acting through the Director of the Centers for Disease Control and Prevention to support public health data surveillance and analytics infrastructure modernization initiatives at the Centers for Disease Control and Prevention, and establish, expand, and maintain efforts to modernize the United States disease warning system to forecast and track hotspots for COVID-19, its variants, and emerging biological threats, including academic and workforce support for analytics and informatics infrastructure and data collection systems.

## Subtitle F—Public Health Workforce

42 USC 295 note. **SEC. 2501. FUNDING FOR PUBLIC HEALTH WORKFORCE.**

(a) **IN GENERAL.**—In addition to amounts otherwise available, there is appropriated to the Secretary of Health and Human Services (in this subtitle referred to as the “Secretary”) for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$7,660,000,000, to remain available until expended, to carry out activities related to establishing, expanding, and sustaining a public health workforce, including by making awards to State, local, and territorial public health departments.

(b) **USE OF FUNDS FOR PUBLIC HEALTH DEPARTMENTS.**—Amounts made available to an awardee pursuant to subsection (a) shall be used for the following:

(1) Costs, including wages and benefits, related to the recruiting, hiring, and training of individuals—

(A) to serve as case investigators, contact tracers, social support specialists, community health workers, public health nurses, disease intervention specialists, epidemiologists, program managers, laboratory personnel, informaticians, communication and policy experts, and any other positions as may be required to prevent, prepare for, and respond to COVID-19; and

(B) who are employed by—

(i) the State, territorial, or local public health department involved; or

(ii) a nonprofit private or public organization with demonstrated expertise in implementing public health programs and established relationships with such State, territorial, or local public health departments, particularly in medically underserved areas.

(2) Personal protective equipment, data management and other technology, or other necessary supplies.

(3) Administrative costs and activities necessary for awardees to implement activities funded under this section.

(4) Subawards from recipients of awards under subsection (a) to local health departments for the purposes of the activities funded under this section.

**SEC. 2502. FUNDING FOR MEDICAL RESERVE CORPS.**

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$100,000,000, to remain available until expended, for carrying out section 2813 of the Public Health Service Act (42 U.S.C. 300hh-15).

**Subtitle G—Public Health Investments****SEC. 2601. FUNDING FOR COMMUNITY HEALTH CENTERS AND COMMUNITY CARE.**

42 USC 254b  
note.

(a) **IN GENERAL.**—In addition to amounts otherwise available, there is appropriated to the Secretary of Health and Human Services (in this subtitle referred to as the “Secretary”) for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$7,600,000,000, to remain available until expended, for necessary expenses for awarding grants and cooperative agreements under section 330 of the Public Health Service Act (42 U.S.C. 254b) to be awarded without regard to the time limitation in subsection (e)(3) and subsections (e)(6)(A)(iii), (e)(6)(B)(iii), and (r)(2)(B) of such section 330, and for necessary expenses for awarding grants to Federally qualified health centers, as described in section 1861(aa)(4)(B) of the Social Security Act (42 U.S.C. 1395x(aa)(4)(B)), and for awarding grants or contracts to Papa Ola Lokahi and to qualified entities under sections 4 and 6 of the Native Hawaiian Health Care Improvement Act (42 U.S.C. 11703, 11705). Of the total amount appropriated by the preceding sentence, not less than \$20,000,000 shall be for grants or contracts to Papa Ola Lokahi and to qualified entities under sections 4 and 6 of the Native Hawaiian Health Care Improvement Act (42 U.S.C. 11703, 11705).

(b) **USE OF FUNDS.**—Amounts made available to an awardee pursuant to subsection (a) shall be used—

(1) to plan, prepare for, promote, distribute, administer, and track COVID-19 vaccines, and to carry out other vaccine-related activities;

(2) to detect, diagnose, trace, and monitor COVID-19 infections and related activities necessary to mitigate the spread of COVID-19, including activities related to, and equipment or supplies purchased for, testing, contact tracing, surveillance, mitigation, and treatment of COVID-19;

(3) to purchase equipment and supplies to conduct mobile testing or vaccinations for COVID-19, to purchase and maintain mobile vehicles and equipment to conduct such testing or vaccinations, and to hire and train laboratory personnel and other staff to conduct such mobile testing or vaccinations, particularly in medically underserved areas;

(4) to establish, expand, and sustain the health care workforce to prevent, prepare for, and respond to COVID-19, and to carry out other health workforce-related activities;

(5) to modify, enhance, and expand health care services and infrastructure; and

(6) to conduct community outreach and education activities related to COVID-19.

(c) **PAST EXPENDITURES.**—An awardee may use amounts awarded pursuant to subsection (a) to cover the costs of the awardee carrying out any of the activities described in subsection (b) during

Time period.

the period beginning on the date of the declaration of a public health emergency by the Secretary under section 319 of the Public Health Service Act (42 U.S.C. 247d) on January 31, 2020, with respect to COVID-19 and ending on the date of such award.

**SEC. 2602. FUNDING FOR NATIONAL HEALTH SERVICE CORPS.**

(a) **IN GENERAL.**—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$800,000,000, to remain available until expended, for carrying out sections 338A, 338B, and 338I of the Public Health Service Act (42 U.S.C. 254l, 254l-1, 254q-1) with respect to the health workforce.

(b) **STATE LOAN REPAYMENT PROGRAMS.**—

(1) **IN GENERAL.**—Of the amount made available pursuant to subsection (a), \$100,000,000 shall be made available for providing primary health services through grants to States under section 338I(a) of the Public Health Service Act (42 U.S.C. 254q-1(a)).

(2) **CONDITIONS.**—With respect to grants described in paragraph (1) using funds made available under such paragraph:

(A) Section 338I(b) of the Public Health Service Act (42 U.S.C. 254q-1(b)) shall not apply.

(B) Notwithstanding section 338I(d)(2) of the Public Health Service Act (42 U.S.C. 254q-1(d)(2)), not more than 10 percent of an award to a State from such amounts, may be used by the State for costs of administering the State loan repayment program.

**SEC. 2603. FUNDING FOR NURSE CORPS.**

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$200,000,000, to remain available until expended, for carrying out section 846 of the Public Health Service Act (42 U.S.C. 297n).

42 USC 256h  
note.

**SEC. 2604. FUNDING FOR TEACHING HEALTH CENTERS THAT OPERATE GRADUATE MEDICAL EDUCATION.**

(a) **IN GENERAL.**—In addition to amounts otherwise available, and notwithstanding the capped amount referenced in sections 340H(b)(2) and 340H(d)(2) of the Public Health Service Act (42 U.S.C. 256h(b)(2) and (d)(2)), there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$330,000,000, to remain available until September 30, 2023, for the program of payments to teaching health centers that operate graduate medical education under section 340H of the Public Health Service Act (42 U.S.C. 256h) and for teaching health center development grants authorized under section 749A of the Public Health Service Act (42 U.S.C. 293l-1).

(b) **USE OF FUNDS.**—Amounts made available pursuant to subsection (a) shall be used for the following activities:

(1) For making payments to establish new approved graduate medical residency training programs pursuant to section 340H(a)(1)(C) of the Public Health Service Act (42 U.S.C. 256h(a)(1)(C)).

(2) To provide an increase to the per resident amount described in section 340H(a)(2) of the Public Health Service Act (42 U.S.C. 256h(a)(2)) of \$10,000.

(3) For making payments under section 340H(a)(1)(A) of the Public Health Service Act (42 U.S.C. 256h(a)(1)(A))) to qualified teaching health centers for maintenance of filled positions at existing approved graduate medical residency training programs.

(4) For making payments under section 340H(a)(1)(B) of the Public Health Service Act (42 U.S.C. 256h(a)(1)(B)) for the expansion of existing approved graduate medical residency training programs.

(5) For making awards under section 749A of the Public Health Service Act (42 U.S.C. 2931-1) to teaching health centers for the purpose of establishing new accredited or expanded primary care residency programs.

(6) To cover administrative costs and activities necessary for qualified teaching health centers receiving payments under section 340H of the Public Health Service Act (42 U.S.C. 256h) to carry out activities under such section.

**SEC. 2605. FUNDING FOR FAMILY PLANNING.**

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$50,000,000, to remain available until expended, for necessary expenses for making grants and contracts under section 1001 of the Public Health Service Act (42 U.S.C. 300).

## **Subtitle H—Mental Health and Substance Use Disorder**

**SEC. 2701. FUNDING FOR BLOCK GRANTS FOR COMMUNITY MENTAL HEALTH SERVICES.**

In addition to amounts otherwise available, there is appropriated to the Secretary of Health and Human Services (in this subtitle referred to as the “Secretary”) for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$1,500,000,000, to remain available until expended, for carrying out subpart I of part B of title XIX of the Public Health Service Act (42 U.S.C. 300x et seq.), subpart III of part B of title XIX of such Act (42 U.S.C. 300x-51 et seq.), and section 505(c) of such Act (42 U.S.C. 290aa-4(c)) with respect to mental health. Notwithstanding section 1952 of the Public Health Service Act (42 U.S.C. 300x-62), any amount awarded to a State out of amounts appropriated by this section shall be expended by the State by September 30, 2025.

**SEC. 2702. FUNDING FOR BLOCK GRANTS FOR PREVENTION AND TREATMENT OF SUBSTANCE ABUSE.**

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$1,500,000,000, to remain available until expended, for carrying out subpart II of part B of title XIX of the Public Health Service Act (42 U.S.C. 300x-21 et seq.), subpart III of part B of title XIX of such Act (42 U.S.C. 300x-51 et seq.), section 505(d) of such Act (42 U.S.C. 290aa-4(d)) with respect to substance abuse, and section 515(d) of such Act (42 U.S.C. 290bb-21(d)). Notwithstanding section 1952

Deadline.

of the Public Health Service Act (42 U.S.C. 300x-62), any amount awarded to a State out of amounts appropriated by this section shall be expended by the State by September 30, 2025.

42 USC 294n  
note prec.

**SEC. 2703. FUNDING FOR MENTAL HEALTH AND SUBSTANCE USE DISORDER TRAINING FOR HEALTH CARE PROFESSIONALS, PARAPROFESSIONALS, AND PUBLIC SAFETY OFFICERS.**

(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$80,000,000, to remain available until expended, for the purpose described in subsection (b).

Grants.  
Contracts.

(b) USE OF FUNDING.—The Secretary, acting through the Administrator of the Health Resources and Services Administration, shall, taking into consideration the needs of rural and medically underserved communities, use amounts appropriated by subsection (a) to award grants or contracts to health professions schools, academic health centers, State or local governments, Indian Tribes and Tribal organizations, or other appropriate public or private nonprofit entities (or consortia of entities, including entities promoting multidisciplinary approaches), to plan, develop, operate, or participate in health professions and nursing training activities for health care students, residents, professionals, paraprofessionals, trainees, and public safety officers, and employers of such individuals, in evidence-informed strategies for reducing and addressing suicide, burnout, mental health conditions, and substance use disorders among health care professionals.

42 USC 294n  
note prec.

**SEC. 2704. FUNDING FOR EDUCATION AND AWARENESS CAMPAIGN ENCOURAGING HEALTHY WORK CONDITIONS AND USE OF MENTAL HEALTH AND SUBSTANCE USE DISORDER SERVICES BY HEALTH CARE PROFESSIONALS.**

(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$20,000,000, to remain available until expended, for the purpose described in subsection (b).

Consultation.

(b) USE OF FUNDS.—The Secretary, acting through the Director of the Centers for Disease Control and Prevention and in consultation with the medical professional community, shall use amounts appropriated by subsection (a) to carry out a national evidence-based education and awareness campaign directed at health care professionals and first responders (such as emergency medical service providers), and employers of such professionals and first responders. Such awareness campaign shall—

(1) encourage primary prevention of mental health conditions and substance use disorders and secondary and tertiary prevention by encouraging health care professionals to seek support and treatment for their own mental health and substance use concerns; and

(2) help such professionals to identify risk factors in themselves and others and respond to such risks.

42 USC 294n  
note prec.

**SEC. 2705. FUNDING FOR GRANTS FOR HEALTH CARE PROVIDERS TO PROMOTE MENTAL HEALTH AMONG THEIR HEALTH PROFESSIONAL WORKFORCE.**

(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out

of any money in the Treasury not otherwise appropriated, \$40,000,000, to remain available until expended, for the purpose described in subsection (b).

(b) **USE OF FUNDS.**—The Secretary, acting through the Administrator of the Health Resources and Services Administration, shall, taking into consideration the needs of rural and medically underserved communities, use amounts appropriated by subsection (a) to award grants or contracts to entities providing health care, including health care providers associations and Federally qualified health centers, to establish, enhance, or expand evidence-informed programs or protocols to promote mental health among their providers, other personnel, and members.

Contracts.

**SEC. 2706. FUNDING FOR COMMUNITY-BASED FUNDING FOR LOCAL SUBSTANCE USE DISORDER SERVICES.**

42 USC 290dd-3 note.

(a) **IN GENERAL.**—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$30,000,000, to remain available until expended, to carry out the purpose described in subsection (b).

(b) **USE OF FUNDS.**—

(1) **IN GENERAL.**—The Secretary, acting through the Assistant Secretary for Mental Health and Substance Use and in consultation with the Director of the Centers for Disease Control and Prevention, shall award grants to support States; local, Tribal, and territorial governments; Tribal organizations; nonprofit community-based organizations; and primary and behavioral health organizations to support community-based overdose prevention programs, syringe services programs, and other harm reduction services.

Grants.

(2) **USE OF GRANT FUNDS.**—Grant funds awarded under this section to eligible entities shall be used for preventing and controlling the spread of infectious diseases and the consequences of such diseases for individuals with substance use disorder, distributing opioid overdose reversal medication to individuals at risk of overdose, connecting individuals at risk for, or with, a substance use disorder to overdose education, counseling, and health education, and encouraging such individuals to take steps to reduce the negative personal and public health impacts of substance use or misuse.

**SEC. 2707. FUNDING FOR COMMUNITY-BASED FUNDING FOR LOCAL BEHAVIORAL HEALTH NEEDS.**

42 USC 290aa note.

(a) **IN GENERAL.**—In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$50,000,000, to remain available until expended, to carry out the purpose described in subsection (b).

(b) **USE OF FUNDS.**—

(1) **IN GENERAL.**—The Secretary, acting through the Assistant Secretary for Mental Health and Substance Use, shall award grants to State, local, Tribal, and territorial governments, Tribal organizations, nonprofit community-based entities, and primary care and behavioral health organizations to address increased community behavioral health needs worsened by the COVID-19 public health emergency.

Grants.

(2) **USE OF GRANT FUNDS.**—Grant funds awarded under this section to eligible entities shall be used for promoting

care coordination among local entities; training the mental and behavioral health workforce, relevant stakeholders, and community members; expanding evidence-based integrated models of care; addressing surge capacity for mental and behavioral health needs; providing mental and behavioral health services to individuals with mental health needs (including co-occurring substance use disorders) as delivered by behavioral and mental health professionals utilizing telehealth services; and supporting, enhancing, or expanding mental and behavioral health preventive and crisis intervention services.

**SEC. 2708. FUNDING FOR THE NATIONAL CHILD TRAUMATIC STRESS NETWORK.**

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$10,000,000, to remain available until expended, for carrying out section 582 of the Public Health Service Act (42 U.S.C. 290hh-1) with respect to addressing the problem of high-risk or medically underserved persons who experience violence-related stress.

**SEC. 2709. FUNDING FOR PROJECT AWARE.**

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$30,000,000, to remain available until expended, for carrying out section 520A of the Public Health Service Act (42 U.S.C. 290bb-32) with respect to advancing wellness and resiliency in education.

**SEC. 2710. FUNDING FOR YOUTH SUICIDE PREVENTION.**

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$20,000,000, to remain available until expended, for carrying out sections 520E and 520E-2 of the Public Health Service Act (42 U.S.C. 290bb-36, 290bb-36b).

**SEC. 2711. FUNDING FOR BEHAVIORAL HEALTH WORKFORCE EDUCATION AND TRAINING.**

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$100,000,000, to remain available until expended, for carrying out section 756 of the Public Health Service Act (42 U.S.C. 294e-1).

**SEC. 2712. FUNDING FOR PEDIATRIC MENTAL HEALTH CARE ACCESS.**

In addition to amounts otherwise available, there is appropriated to the Secretary for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$80,000,000, to remain available until expended, for carrying out section 330M of the Public Health Service Act (42 U.S.C. 254c-19).

**SEC. 2713. FUNDING FOR EXPANSION GRANTS FOR CERTIFIED COMMUNITY BEHAVIORAL HEALTH CLINICS.**

In addition to amounts otherwise available, there is appropriated to the Secretary, acting through the Assistant Secretary for Mental Health and Substance Use, for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$420,000,000, to remain available until expended, for grants to

communities and community organizations that meet the criteria for Certified Community Behavioral Health Clinics pursuant to section 223(a) of the Protecting Access to Medicare Act of 2014 (42 U.S.C. 1396a note).

## Subtitle I—Exchange Grant Program

### SEC. 2801. ESTABLISHING A GRANT PROGRAM FOR EXCHANGE MODERNIZATION.

42 USC 18031  
note.

(a) **IN GENERAL.**—Out of funds appropriated under subsection (b), the Secretary of Health and Human Services (in this subtitle referred to as the “Secretary”) shall award grants to each American Health Benefits Exchange established under section 1311(b) of the Patient Protection and Affordable Care Act (42 U.S.C. 18031(b)) (other than an Exchange established by the Secretary under section 1321(c) of such Act (42 U.S.C. 18041(c))) that submits to the Secretary an application at such time and in such manner, and containing such information, as specified by the Secretary, for purposes of enabling such Exchange to modernize or update any system, program, or technology utilized by such Exchange to ensure such Exchange is compliant with all applicable requirements.

(b) **FUNDING.**—In addition to amounts otherwise available, there is appropriated, for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$20,000,000, to remain available until September 30, 2022, for carrying out this section.

## Subtitle J—Continued Assistance to Rail Workers

### SEC. 2901. ADDITIONAL ENHANCED BENEFITS UNDER THE RAILROAD UNEMPLOYMENT INSURANCE ACT.

(a) **IN GENERAL.**—Section 2(a)(5)(A) of the Railroad Unemployment Insurance Act (45 U.S.C. 352(a)(5)(A)) is amended—

(1) in the first sentence—

(A) by striking “March 14, 2021” and inserting “September 6, 2021”;

(B) by striking “or July 1, 2020” and inserting “July 1, 2020, or July 1, 2021”; and

(2) in the fourth sentence, by striking “March 14, 2021” and inserting “September 6, 2021”.

(b) **CLARIFICATION ON AUTHORITY TO USE FUNDS.**—Funds appropriated under subparagraph (B) of section 2(a)(5) of the Railroad Unemployment Insurance Act (45 U.S.C. 352(a)(5)) shall be available to cover the cost of recovery benefits provided under such section 2(a)(5) by reason of the amendments made by subsection (a) as well as to cover the cost of such benefits provided under such section 2(a)(5) as in effect on the day before the date of enactment of this Act.

45 USC 352 note.

### SEC. 2902. EXTENDED UNEMPLOYMENT BENEFITS UNDER THE RAILROAD UNEMPLOYMENT INSURANCE ACT.

(a) **IN GENERAL.**—Section 2(c)(2)(D) of the Railroad Unemployment Insurance Act (45 U.S.C. 352(c)(2)(D)) is amended—

(1) in clause (i)—

(A) in subclause (I), by striking “185 days” and inserting “330 days”;

(B) in subclause (II),

(i) by striking “19 consecutive 14-day periods” and inserting “33 consecutive 14-day periods”; and

(ii) by striking “6 consecutive 14-day periods” and inserting “20 consecutive 14-day periods”;

(2) in clause (ii)—

(A) by striking “120 days of unemployment” and inserting “265 days of unemployment”;

(B) by striking “12 consecutive 14-day periods” and inserting “27 consecutive 14-day periods”; and

(C) by striking “6 consecutive 14-day periods” and inserting “20 consecutive 14-day periods”;

(3) in clause (iii)—

(A) by striking “June 30, 2021” and inserting “June 30, 2022”; and

(B) by striking “the provisions of clauses (i) and (ii) shall not apply to any employee whose extended benefit period under subparagraph (B) begins after March 14, 2021, and shall not apply to any employee with respect to any registration period beginning after April 5, 2021.” and inserting “the provisions of clauses (i) and (ii) shall not apply to any employee with respect to any registration period beginning after September 6, 2021.”; and

(4) in clause (v), by adding at the end the following: “In addition to the amount appropriated by the preceding two sentences, out of any funds in the Treasury not otherwise appropriated, there are appropriated \$2,000,000 to cover the cost of additional extended unemployment benefits provided under this subparagraph, to remain available until expended.”.

45 USC 352 note.

(b) **CLARIFICATION ON AUTHORITY TO USE FUNDS.**—Funds appropriated under the first, second, or third sentence of clause (v) of section 2(c)(2)(D) of the Railroad Unemployment Insurance Act shall be available to cover the cost of additional extended unemployment benefits provided under such section 2(c)(2)(D) by reason of the amendments made by subsection (a) as well as to cover the cost of such benefits provided under such section 2(c)(2)(D) as in effect on the day before the date of enactment of this Act.

**SEC. 2903. EXTENSION OF WAIVER OF THE 7-DAY WAITING PERIOD FOR BENEFITS UNDER THE RAILROAD UNEMPLOYMENT INSURANCE ACT.**

(a) **IN GENERAL.**—Section 2112(a) of the CARES Act (15 U.S.C. 9030(a)) is amended by striking “March 14, 2021” and inserting “September 6, 2021”.

15 USC 9030 note.

(b) **CLARIFICATION ON AUTHORITY TO USE FUNDS.**—Funds appropriated under section 2112(c) of the CARES Act (15 U.S.C. 9030(c)) shall be available to cover the cost of additional benefits payable due to section 2112(a) of such Act by reason of the amendments made by subsection (a) as well as to cover the cost of such benefits payable due to such section 2112(a) as in effect on the day before the date of enactment of this Act.

**SEC. 2904. RAILROAD RETIREMENT BOARD AND OFFICE OF THE INSPECTOR GENERAL FUNDING.**

In addition to amounts otherwise made available, there are appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated—

(1) \$27,975,000, to remain available until expended, for the Railroad Retirement Board, to prevent, prepare for, and respond to coronavirus, of which—

(A) \$6,800,000 shall be for additional hiring and overtime bonuses as needed to administer the Railroad Unemployment Insurance Act; and

(B) \$21,175,000 shall be to supplement, not supplant, existing resources devoted to operations and improvements for the Information Technology Investment Initiatives of the Railroad Retirement Board; and

(2) \$500,000, to remain available until expended, for the Railroad Retirement Board Office of Inspector General for audit, investigatory and review activities.

## Subtitle K—Ratepayer Protection

**SEC. 2911. FUNDING FOR LIHEAP.**

In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any amounts in the Treasury not otherwise appropriated, \$4,500,000,000, to remain available through September 30, 2022, for additional funding to provide payments under section 2602(b) of the Low-Income Home Energy Assistance Act of 1981 (42 U.S.C. 8621(b)), except that—

(1) \$2,250,000,000 of such amounts shall be allocated as though the total appropriation for such payments for fiscal year 2021 was less than \$1,975,000,000; and

(2) section 2607(b)(2)(B) of such Act (42 U.S.C. 8626(b)(2)(B)) shall not apply to funds appropriated under this section for fiscal year 2021.

**SEC. 2912. FUNDING FOR WATER ASSISTANCE PROGRAM.**

15 USC 9058b.

(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Secretary of Health and Human Services (in this section referred to as the “Secretary”) for fiscal year 2021, out of any amounts in the Treasury not otherwise appropriated, \$500,000,000, to remain available until expended, for grants to States and Indian Tribes to assist low-income households, particularly those with the lowest incomes, that pay a high proportion of household income for drinking water and wastewater services, by providing funds to owners or operators of public water systems or treatment works to reduce arrearages of and rates charged to such households for such services.

(b) ALLOTMENT.—The Secretary shall—

(1) allot amounts appropriated in this section to a State or Indian Tribe based on—

(A) the percentage of households in the State, or under the jurisdiction of the Indian Tribe, with income equal or less than 150 percent of the Federal poverty line; and

(B) the percentage of households in the State, or under the jurisdiction of the Indian Tribe, that spend more than 30 percent of monthly income on housing; and

(2) reserve up to 3 percent of the amount appropriated in this section for Indian Tribes and tribal organizations.

(c) DEFINITION.—In this section, the term “State” means each of the 50 States of the United States, the District of Columbia, the Commonwealth of Puerto Rico, American Samoa, Guam, the United States Virgin Islands, and the Commonwealth of the Northern Mariana Islands.

## **Subtitle L—Assistance for Older Americans, Grandfamilies, and Kinship Families**

### **SEC. 2921. SUPPORTING OLDER AMERICANS AND THEIR FAMILIES.**

(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$1,434,000,000, to remain available until expended, to carry out the Older Americans Act of 1965.

(b) ALLOCATION OF AMOUNTS.—Amounts made available by subsection (a) shall be available as follows:

(1) \$750,000,000 shall be available to carry out part C of title III of such Act.

(2) \$25,000,000 shall be available to carry out title VI of such Act, including part C of such title.

(3) \$460,000,000 shall be available to carry out part B of title III of such Act, including for—

(A) supportive services of the types made available for fiscal year 2020;

(B) efforts related to COVID-19 vaccination outreach, including education, communication, transportation, and other activities to facilitate vaccination of older individuals; and

(C) prevention and mitigation activities related to COVID-19 focused on addressing extended social isolation among older individuals, including activities for investments in technological equipment and solutions or other strategies aimed at alleviating negative health effects of social isolation due to long-term stay-at-home recommendations for older individuals for the duration of the COVID-19 public health emergency.

(4) \$44,000,000 shall be available to carry out part D of title III of such Act.

(5) \$145,000,000 shall be available to carry out part E of title III of such Act.

(6) \$10,000,000 shall be available to carry out the long-term care ombudsman program under title VII of such Act.

42 USC 3020g.

### **SEC. 2922. NATIONAL TECHNICAL ASSISTANCE CENTER ON GRANDFAMILIES AND KINSHIP FAMILIES.**

(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Secretary of Health and Human Services for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$10,000,000, to remain available through September 30, 2025, for the Secretary, acting through the Administrator of the Administration for Community Living, to establish,

directly or through grants or contracts, a National Technical Assistance Center on Grandfamilies and Kinship Families (in this section referred to as the “Center”) to provide training, technical assistance, and resources for government programs, nonprofit and other community-based organizations, and Indian Tribes, Tribal organizations, and urban Indian organizations, that serve grandfamilies and kinship families to support the health and well-being of members of grandfamilies and kinship families, including caregivers, children, and their parents. The Center shall focus primarily on serving grandfamilies and kinship families in which the primary caregiver is an adult age 55 or older, or the child has one or more disabilities.

(b) ACTIVITIES OF THE CENTER.—The Center shall—

(1) engage experts to stimulate the development of new and identify existing evidence-based, evidence-informed, and exemplary practices or programs related to health promotion (including mental health and substance use disorder treatment), education, nutrition, housing, financial needs, legal issues, disability self-determination, caregiver support, and other issues to help serve caregivers, children, and their parents in grandfamilies and kinship families;

(2) encourage and support the implementation of the evidence-based, evidence-informed, and exemplary practices or programs identified under paragraph (1) to support grandfamilies and kinship families and to promote coordination of services for grandfamilies and kinship families across systems that support them;

(3) facilitate learning across States, territories, Indian Tribes, Tribal organizations, and urban Indian organizations for providing technical assistance, resources, and training related to issues described in paragraph (1) to individuals and entities across systems that directly work with grandfamilies and kinship families;

(4) help government programs, nonprofit and other community-based organizations, and Indian Tribes, Tribal organizations, and urban Indian organizations, serving grandfamilies and kinship families, to plan and coordinate responses to assist grandfamilies and kinship families during national, State, Tribal, territorial, and local emergencies and disasters; and

(5) assist government programs, and nonprofit and other community-based organizations, in promoting equity and implementing culturally and linguistically appropriate approaches as the programs and organizations serve grandfamilies and kinship families.

## **TITLE III—COMMITTEE ON BANKING, HOUSING, AND URBAN AFFAIRS**

### **Subtitle A—Defense Production Act of 1950**

#### **SEC. 3101. COVID-19 EMERGENCY MEDICAL SUPPLIES ENHANCEMENT.**

50 USC 4511  
note.

(a) SUPPORTING ENHANCED USE OF THE DEFENSE PRODUCTION ACT OF 1950.—In addition to funds otherwise available, there is appropriated, for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$10,000,000,000, to remain available

until September 30, 2025, to carry out titles I, III, and VII of such Act in accordance with subsection (b).

(b) **MEDICAL SUPPLIES AND EQUIPMENT.**—

(1) **TESTING, PPE, VACCINES, AND OTHER MATERIALS.**— Except as provided in paragraph (2), amounts appropriated in subsection (a) shall be used for the purchase, production (including the construction, repair, and retrofitting of government-owned or private facilities as necessary), or distribution of medical supplies and equipment (including durable medical equipment) related to combating the COVID-19 pandemic, including—

(A) in vitro diagnostic products for the detection of SARS-CoV-2 or the diagnosis of the virus that causes COVID-19, and the reagents and other materials necessary for producing, conducting, or administering such products, and the machinery, equipment, laboratory capacity, or other technology necessary to produce such products;

(B) face masks and personal protective equipment, including face shields, nitrile gloves, N-95 filtering face-piece respirators, and any other masks or equipment (including durable medical equipment) needed to respond to the COVID-19 pandemic, and the materials, machinery, additional manufacturing lines or facilities, or other technology necessary to produce such equipment; and

(C) drugs, devices, and biological products that are approved, cleared, licensed, or authorized for use in treating or preventing COVID-19 and symptoms related to COVID-19, and any materials, manufacturing machinery, additional manufacturing or fill-finish lines or facilities, technology, or equipment (including durable medical equipment) necessary to produce or use such drugs, biological products, or devices (including syringes, vials, or other supplies or equipment related to delivery, distribution, or administration).

Effective date.  
President.

(2) **RESPONDING TO PUBLIC HEALTH EMERGENCIES.**—After September 30, 2022, amounts appropriated in subsection (a) may be used for any activity authorized by paragraph (1), or any other activity necessary to meet critical public health needs of the United States, with respect to any pathogen that the President has determined has the potential for creating a public health emergency.

## Subtitle B—Housing Provisions

15 USC 9058c.

**SEC. 3201. EMERGENCY RENTAL ASSISTANCE.**

(a) **FUNDING.**—

(1) **APPROPRIATION.**—In addition to amounts otherwise available, there is appropriated to the Secretary of the Treasury for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$21,550,000,000, to remain available until September 30, 2027, for making payments to eligible grantees under this section—

(2) **RESERVATION OF FUNDS.**—Of the amount appropriated under paragraph (1), the Secretary shall reserve—

(A) \$305,000,000 for making payments under this section to the Commonwealth of Puerto Rico, the United States

Virgin Islands, Guam, the Commonwealth of the Northern Mariana Islands, and American Samoa;

(B) \$30,000,000 for costs of the Secretary for the administration of emergency rental assistance programs and technical assistance to recipients of any grants made by the Secretary to provide financial and other assistance to renters;

(C) \$3,000,000 for administrative expenses of the Inspector General relating to oversight of funds provided in this section; and

(D) \$2,500,000,000 for payments to high-need grantees as provided in this section.

(b) ALLOCATION OF FUNDS TO ELIGIBLE GRANTEEES.—

(1) ALLOCATION FOR STATES AND UNITS OF LOCAL GOVERNMENT.—

(A) IN GENERAL.—The amount appropriated under paragraph (1) of subsection (a) that remains after the application of paragraph (2) of such subsection shall be allocated to eligible grantees described in subparagraphs (A) and (B) of subsection (f)(1) in the same manner as the amount appropriated under section 501 of subtitle A of title V of division N of the Consolidated Appropriations Act, 2021 (Public Law 116-260) is allocated to States and units of local government under subsection (b)(1) of such section, except that section 501(b) of such subtitle A shall be applied—

Applicability.

(i) without regard to clause (i) of paragraph (1)(A);

(ii) by deeming the amount appropriated under paragraph (1) of subsection (a) of this Act that remains after the application of paragraph (2) of such subsection to be the amount deemed to apply for purposes of applying clause (ii) of section 501(b)(1)(A) of such subtitle A;

(iii) by substituting “\$152,000,000” for “\$200,000,000” each place such term appears;

(iv) in subclause (I) of such section 501(b)(1)(A)(v), by substituting “under section 3201 of the American Rescue Plan Act of 2021” for “under section 501 of subtitle A of title V of division N of the Consolidated Appropriations Act, 2021”; and

(v) in subclause (II) of such section 501(b)(1)(A)(v), by substituting “local government elects to receive funds from the Secretary under section 3201 of the American Rescue Plan Act of 2021 and will use the funds in a manner consistent with such section” for “local government elects to receive funds from the Secretary under section 501 of subtitle A of title V of division N of the Consolidated Appropriations Act, 2021 and will use the funds in a manner consistent with such section”.

(B) PRO RATA ADJUSTMENT.—The Secretary shall make pro rata adjustments in the amounts of the allocations determined under subparagraph (A) of this paragraph for entities described in such subparagraph as necessary to ensure that the total amount of allocations made pursuant to such subparagraph does not exceed the remainder appropriated amount described in such subparagraph.

## Applicability.

(2) ALLOCATIONS FOR TERRITORIES.—The amount reserved under subsection (a)(2)(A) shall be allocated to eligible grantees described in subsection (f)(1)(C) in the same manner as the amount appropriated under section 501(a)(2)(A) of subtitle A of title V of division N of the Consolidated Appropriations Act, 2021 (Public Law 116-260) is allocated under section 501(b)(3) of such subtitle A to eligible grantees described under subparagraph (C) of such section 501(b)(3), except that section 501(b)(3) of such subtitle A shall be applied—

(A) in subparagraph (A), by inserting “of section 3201 of the American Rescue Plan Act of 2021” after “the amount reserved under subsection (a)(2)(A)”; and

(B) in clause (i) of subparagraph (B), by substituting “the amount equal to 0.3 percent of the amount appropriated under subsection (a)(1)” with “the amount equal to 0.3 percent of the amount appropriated under subsection (a)(1) of section 3201 of the American Rescue Plan Act of 2021”.

(3) HIGH-NEED GRANTEEES.—The Secretary shall allocate funds reserved under subsection (a)(2)(D) to eligible grantees with a high need for assistance under this section, with the number of very low-income renter households paying more than 50 percent of income on rent or living in substandard or overcrowded conditions, rental market costs, and change in employment since February 2020 used as the factors for allocating funds.

## (c) PAYMENT SCHEDULE.—

## Deadline.

(1) IN GENERAL.—The Secretary shall pay all eligible grantees not less than 40 percent of each such eligible grantee’s total allocation provided under subsection (b) within 60 days of enactment of this Act.

Procedure.  
Requirement.

(2) SUBSEQUENT PAYMENTS.—The Secretary shall pay to eligible grantees additional amounts in tranches up to the full amount of each such eligible grantee’s total allocation in accordance with a procedure established by the Secretary, provided that any such procedure established by the Secretary shall require that an eligible grantee must have obligated not less than 75 percent of the funds already disbursed by the Secretary pursuant to this section prior to disbursement of additional amounts.

## (d) USE OF FUNDS.—

(1) IN GENERAL.—An eligible grantee shall only use the funds provided from payments made under this section as follows:

## Time period.

## (A) FINANCIAL ASSISTANCE.—

(i) IN GENERAL.—Subject to clause (ii) of this subparagraph, funds received by an eligible grantee from payments made under this section shall be used to provide financial assistance to eligible households, not to exceed 18 months, including the payment of—

(I) rent;

(II) rental arrears;

(III) utilities and home energy costs;

(IV) utilities and home energy costs arrears;

and

(V) other expenses related to housing, as defined by the Secretary.

(ii) **LIMITATION.**—The aggregate amount of financial assistance an eligible household may receive under this section, when combined with financial assistance provided under section 501 of subtitle A of title V of division N of the Consolidated Appropriations Act, 2021 (Public Law 116-260), shall not exceed 18 months.

(B) **HOUSING STABILITY SERVICES.**—Not more than 10 percent of funds received by an eligible grantee from payments made under this section may be used to provide case management and other services intended to help keep households stably housed.

(C) **ADMINISTRATIVE COSTS.**—Not more than 15 percent of the total amount paid to an eligible grantee under this section may be used for administrative costs attributable to providing financial assistance, housing stability services, and other affordable rental housing and eviction prevention activities, including for data collection and reporting requirements related to such funds.

(D) **OTHER AFFORDABLE RENTAL HOUSING AND EVICTION PREVENTION ACTIVITIES.**—An eligible grantee may use any funds from payments made under this section that are unobligated on October 1, 2022, for purposes in addition to those specified in this paragraph, provided that—

(i) such other purposes are affordable rental housing and eviction prevention purposes, as defined by the Secretary, serving very low-income families (as such term is defined in section 3(b) of the United States Housing Act of 1937 (42 U.S.C. 1437a(b))); and

(ii) prior to obligating any funds for such purposes, the eligible grantee has obligated not less than 75 percent of the total funds allocated to such eligible grantee in accordance with this section.

(2) **DISTRIBUTION OF ASSISTANCE.**—Amounts appropriated under subsection (a)(1) of this section shall be subject to the same terms and conditions that apply under paragraph (4) of section 501(c) of subtitle A of title V of division N of the Consolidated Appropriations Act, 2021 (Public Law 116-260) to amounts appropriated under subsection (a)(1) of such section 501.

(e) **REALLOCATION OF FUNDS.**—

(1) **IN GENERAL.**—Beginning March 31, 2022, the Secretary shall reallocate funds allocated to eligible grantees in accordance with subsection (b) but not yet paid in accordance with subsection (c)(2) according to a procedure established by the Secretary.

Effective date.  
Procedure.

(2) **ELIGIBILITY FOR REALLOCATED FUNDS.**—The Secretary shall require an eligible grantee to have obligated 50 percent of the total amount of funds allocated to such eligible grantee under subsection (b) to be eligible to receive funds reallocated under paragraph (1) of this subsection.

Requirement.

(3) **PAYMENT OF REALLOCATED FUNDS BY THE SECRETARY.**—The Secretary shall pay to each eligible grantee eligible for a payment of reallocated funds described in paragraph (2) of this subsection the amount allocated to such eligible grantee in accordance with the procedure established by the Secretary in accordance with paragraph (1) of this subsection.

(4) **USE OF REALLOCATED FUNDS.**—Eligible grantees may use any funds received in accordance with this subsection only for purposes specified in paragraph (1) of subsection (d).

(f) **DEFINITIONS.**—In this section:

(1) **ELIGIBLE GRANTEE.**—The term “eligible grantee” means any of the following:

(A) The 50 States of the United States and the District of Columbia.

(B) A unit of local government (as defined in paragraph (5)).

(C) The Commonwealth of Puerto Rico, the United States Virgin Islands, Guam, the Commonwealth of the Northern Mariana Islands, and American Samoa.

(2) **ELIGIBLE HOUSEHOLD.**—The term “eligible household” means a household of 1 or more individuals who are obligated to pay rent on a residential dwelling and with respect to which the eligible grantee involved determines that—

(A) 1 or more individuals within the household has—

(i) qualified for unemployment benefits; or

(ii) experienced a reduction in household income, incurred significant costs, or experienced other financial hardship during or due, directly or indirectly, to the coronavirus pandemic;

(B) 1 or more individuals within the household can demonstrate a risk of experiencing homelessness or housing instability; and

(C) the household is a low-income family (as such term is defined in section 3(b) of the United States Housing Act of 1937 (42 U.S.C. 1437a(b)).

(3) **INSPECTOR GENERAL.**—The term “Inspector General” means the Inspector General of the Department of the Treasury.

(4) **SECRETARY.**—The term “Secretary” means the Secretary of the Treasury.

(5) **UNIT OF LOCAL GOVERNMENT.**—The term “unit of local government” has the meaning given such term in section 501 of subtitle A of title V of division N of the Consolidated Appropriations Act, 2021 (Public Law 116-260).

(g) **AVAILABILITY.**—Funds provided to an eligible grantee under a payment made under this section shall remain available through September 30, 2025.

(h) **EXTENSION OF AVAILABILITY UNDER PROGRAM FOR EXISTING FUNDING.**—Paragraph (1) of section 501(e) of subtitle A of title V of division N of the Consolidated Appropriations Act, 2021 (Public Law 116-260) is amended by striking “December 31, 2021” and inserting “September 30, 2022”.

134 Stat. 2074.

42 USC 1437f  
note.

**SEC. 3202. EMERGENCY HOUSING VOUCHERS.**

(a) **APPROPRIATION.**—In addition to amounts otherwise available, there is appropriated to the Secretary of Housing and Urban Development (in this section referred to as the “Secretary”) for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$5,000,000,000, to remain available until September 30, 2030, for—

(1) incremental emergency vouchers under subsection (b);

(2) renewals of the vouchers under subsection (b);

(3) fees for the costs of administering vouchers under subsection (b) and other eligible expenses defined by notice to prevent, prepare, and respond to coronavirus to facilitate the leasing of the emergency vouchers, such as security deposit assistance and other costs related to retention and support of participating owners; and

(4) adjustments in the calendar year 2021 section 8 renewal funding allocation, including mainstream vouchers, for public housing agencies that experience a significant increase in voucher per-unit costs due to extraordinary circumstances or that, despite taking reasonable cost savings measures, would otherwise be required to terminate rental assistance for families as a result of insufficient funding.

(b) EMERGENCY VOUCHERS.—

(1) IN GENERAL.—The Secretary shall provide emergency rental assistance vouchers under subsection (a), which shall be tenant-based rental assistance under section 8(o) of the United States Housing Act of 1937 (42 U.S.C. 1437f(o)).

(2) QUALIFYING INDIVIDUALS OR FAMILIES DEFINED.—For the purposes of this section, qualifying individuals or families are those who are—

(A) homeless (as such term is defined in section 103(a) of the McKinney-Vento Homeless Assistance Act (42 U.S.C. 11302(a));

(B) at risk of homelessness (as such term is defined in section 401(1) of the McKinney-Vento Homeless Assistance Act (42 U.S.C. 11360(1)));

(C) fleeing, or attempting to flee, domestic violence, dating violence, sexual assault, stalking, or human trafficking, as defined by the Secretary; or

(D) recently homeless, as determined by the Secretary, and for whom providing rental assistance will prevent the family's homelessness or having high risk of housing instability.

(3) ALLOCATION.—The Secretary shall notify public housing agencies of the number of emergency vouchers provided under this section to be allocated to the agency not later than 60 days after the date of the enactment of this Act, in accordance with a formula that includes public housing agency capacity and ensures geographic diversity, including with respect to rural areas, among public housing agencies administering the Housing Choice Voucher program.

Notification.  
Deadline.

(4) TERMS AND CONDITIONS.—

(A) ELECTION TO ADMINISTER.—The Secretary shall establish a procedure for public housing agencies to accept or decline the emergency vouchers allocated to the agency in accordance with the formula under subparagraph (3).

Procedure.

(B) FAILURE TO USE VOUCHERS PROMPTLY.—If a public housing agency fails to lease its authorized vouchers under subsection (b) on behalf of eligible families within a reasonable period of time, the Secretary may revoke and redistribute any unleased vouchers and associated funds, including administrative fees and costs referred to in subsection (a)(3), to other public housing agencies according to the formula under paragraph (3).

(5) WAIVERS AND ALTERNATIVE REQUIREMENTS.—The Secretary may waive or specify alternative requirements for any

provision of the United States Housing Act of 1937 (42 U.S.C. 1437 et seq.) or regulation applicable to such statute other than requirements related to fair housing, nondiscrimination, labor standards, and the environment, upon a finding that the waiver or alternative requirement is necessary to expedite or facilitate the use of amounts made available in this section.

(6) **TERMINATION OF VOUCHERS UPON TURNOVER.**—After September 30, 2023, a public housing agency may not reissue any vouchers made available under this section when assistance for the family assisted ends.

(c) **TECHNICAL ASSISTANCE AND OTHER COSTS.**—The Secretary may use not more than \$20,000,000 of the amounts made available under this section for the costs to the Secretary of administering and overseeing the implementation of this section and the Housing Choice Voucher program generally, including information technology, financial reporting, and other costs. Of the amounts set aside under this subsection, the Secretary may use not more than \$10,000,000, without competition, to make new awards or increase prior awards to existing technical assistance providers to provide an immediate increase in capacity building and technical assistance to public housing agencies.

Notice.

(d) **IMPLEMENTATION.**—The Secretary may implement the provisions of this section by notice.

**SEC. 3203. EMERGENCY ASSISTANCE FOR RURAL HOUSING.**

In addition to amounts otherwise available, there is appropriated to the Secretary of Agriculture for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$100,000,000, to remain available until September 30, 2022, to provide grants under section 521(a)(2) of the Housing Act of 1949 or agreements entered into in lieu of debt forgiveness or payments for eligible households as authorized by section 502(c)(5)(D) of the Housing Act of 1949, for temporary adjustment of income losses for residents of housing financed or assisted under section 514, 515, or 516 of the Housing Act of 1949 who have experienced income loss but are not currently receiving Federal rental assistance.

42 USC 8101  
note.

**SEC. 3204. HOUSING COUNSELING.**

(a) **APPROPRIATION.**—In addition to amounts otherwise available, there is appropriated to the Neighborhood Reinvestment Corporation (in this section referred to as the “Corporation”) for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$100,000,000, to remain available until September 30, 2025, for grants to housing counseling intermediaries approved by the Department of Housing and Urban Development, State housing finance agencies, and NeighborWorks organizations for providing housing counseling services, as authorized under the Neighborhood Reinvestment Corporation Act (42 U.S.C. 8101–8107) and consistent with the discretion set forth in section 606(a)(5) of such Act (42 U.S.C. 8105(a)(5)) to design and administer grant programs. Of the grant funds made available under this subsection, not less than 40 percent shall be provided to counseling organizations that—

(1) target housing counseling services to minority and low-income populations facing housing instability; or

(2) provide housing counseling services in neighborhoods having high concentrations of minority and low-income populations.

(b) **LIMITATION.**—The aggregate amount provided to NeighborWorks organizations under this section shall not exceed 15 percent of the total of grant funds made available by subsection (a).

(c) **ADMINISTRATION AND OVERSIGHT.**—The Corporation may retain a portion of the amounts provided under this section, in a proportion consistent with its standard rate for program administration in order to cover its expenses related to program administration and oversight.

(d) **HOUSING COUNSELING SERVICES DEFINED.**— For the purposes of this section, the term “housing counseling services” means—

(1) housing counseling provided directly to households facing housing instability, such as eviction, default, foreclosure, loss of income, or homelessness;

(2) education, outreach, training, technology upgrades, and other program related support; and

(3) operational oversight funding for grantees and subgrantees that receive funds under this section.

**SEC. 3205. HOMELESSNESS ASSISTANCE AND SUPPORTIVE SERVICES PROGRAM.**

42 USC 12721  
note.

(a) **APPROPRIATION.**—In addition to amounts otherwise available, there is appropriated to the Secretary of Housing and Urban Development (in this section referred to as the “Secretary”) for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$5,000,000,000, to remain available until September 30, 2025, except that amounts authorized under subsection (d)(3) shall remain available until September 30, 2029, for assistance under title II of the Cranston-Gonzalez National Affordable Housing Act (42 U.S.C. 12721 et seq.) for the following activities to primarily benefit qualifying individuals or families:

(1) Tenant-based rental assistance.

(2) The development and support of affordable housing pursuant to section 212(a) of the Cranston-Gonzalez National Affordable Housing Act (42 U.S.C. 12742(a)) (“the Act” herein).

(3) Supportive services to qualifying individuals or families not already receiving such supportive services, including—

(A) activities listed in section 401(29) of the McKinney-Vento Homeless Assistance Act (42 U.S.C. 11360(29));

(B) housing counseling; and

(C) homeless prevention services.

(4) The acquisition and development of non-congregate shelter units, all or a portion of which may—

(A) be converted to permanent affordable housing;

(B) be used as emergency shelter under subtitle B of title IV of the McKinney-Vento Homeless Assistance Act (42 U.S.C. 11371–11378);

(C) be converted to permanent housing under subtitle C of title IV of the McKinney-Vento Homeless Assistance Act (42 U.S.C. 11381–11389); or

(D) remain as non-congregate shelter units.

(b) **QUALIFYING INDIVIDUALS OR FAMILIES DEFINED.**—For the purposes of this section, qualifying individuals or families are those who are—

(1) homeless, as defined in section 103(a) of the McKinney-Vento Homeless Assistance Act (42 U.S.C. 11302(a));

(2) at-risk of homelessness, as defined in section 401(1) of the McKinney-Vento Homeless Assistance Act (42 U.S.C. 11360(1));

(3) fleeing, or attempting to flee, domestic violence, dating violence, sexual assault, stalking, or human trafficking, as defined by the Secretary;

(4) in other populations where providing supportive services or assistance under section 212(a) of the Act (42 U.S.C. 12742(a)) would prevent the family's homelessness or would serve those with the greatest risk of housing instability; or

(5) veterans and families that include a veteran family member that meet one of the preceding criteria.

(c) TERMS AND CONDITIONS.—

(1) FUNDING RESTRICTIONS.—The cost limits in section 212(e) (42 U.S.C. 12742(e)), the commitment requirements in section 218(g) (42 U.S.C. 12748(g)), the matching requirements in section 220 (42 U.S.C. 12750), and the set-aside for housing developed, sponsored, or owned by community housing development organizations required in section 231 of the Act (42 U.S.C. 12771) shall not apply for amounts made available in this section.

(2) ADMINISTRATIVE COSTS.—Notwithstanding sections 212(c) and (d)(1) of the Act (42 U.S.C. 12742(c) and (d)(1)), of the funds made available in this section for carrying out activities authorized in this section, a grantee may use up to fifteen percent of its allocation for administrative and planning costs.

(3) OPERATING EXPENSES.—Notwithstanding sections 212(a) and (g) of the Act (42 U.S.C. 12742(a) and (g)), a grantee may use up to an additional five percent of its allocation for the payment of operating expenses of community housing development organizations and nonprofit organizations carrying out activities authorized under this section, but only if—

(A) such funds are used to develop the capacity of the community housing development organization or nonprofit organization in the jurisdiction or insular area to carry out activities authorized under this section; and

(B) the community housing development organization or nonprofit organization complies with the limitation on assistance in section 234(b) of the Act (42 U.S.C. 12774(b)).

(4) CONTRACTING.—A grantee, when contracting with service providers engaged directly in the provision of services under paragraph (a)(3), shall, to the extent practicable, enter into contracts in amounts that cover the actual total program costs and administrative overhead to provide the services contracted.

(d) ALLOCATION.—

(1) FORMULA ASSISTANCE.—Except as provided in paragraphs (2) and (3), the Secretary shall allocate amounts made available under this section pursuant to section 217 of the Act (42 U.S.C. 12747) to grantees that received allocations pursuant to that same formula in fiscal year 2021, and shall make such allocations within 30 days of enactment of this Act.

(2) TECHNICAL ASSISTANCE.—Up to \$25,000,000 of the amounts made available under this section shall be used, without competition, to make new awards or increase prior awards

Deadline.

to existing technical assistance providers to provide an immediate increase in capacity building and technical assistance available to any grantees implementing activities or projects consistent with this section.

(3) OTHER COSTS.—Up to \$50,000,000 of the amounts made available under this section shall be used for the administrative costs to oversee and administer implementation of this section and the HOME program generally, including information technology, financial reporting, and other costs.

(4) WAIVERS OR ALTERNATIVE REQUIREMENTS.—The Secretary may waive or specify alternative requirements for any provision of the Cranston-Gonzalez National Affordable Housing Act (42 U.S.C. 12701 et seq.) and titles I and IV of the McKinney-Vento Homelessness Act (42 U.S.C. 11301 et seq., 11360 et seq.) or regulation for the administration of the amounts made available under this section other than requirements related to fair housing, nondiscrimination, labor standards, and the environment, upon a finding that the waiver or alternative requirement is necessary to expedite or facilitate the use of amounts made available under this section.

**SEC. 3206. HOMEOWNER ASSISTANCE FUND.**

15 USC 9058d.

(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Secretary of the Treasury for the Homeowner Assistance Fund established under subsection (c) for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$9,961,000,000, to remain available until September 30, 2025, for qualified expenses that meet the purposes specified under subsection (c) and expenses described in subsection (d)(1).

(b) DEFINITIONS.—In this section:

(1) CONFORMING LOAN LIMIT.—The term “conforming loan limit” means the applicable limitation governing the maximum original principal obligation of a mortgage secured by a single-family residence, a mortgage secured by a 2-family residence, a mortgage secured by a 3-family residence, or a mortgage secured by a 4-family residence, as determined and adjusted annually under section 302(b)(2) of the Federal National Mortgage Association Charter Act (12 U.S.C. 1717(b)(2)) and section 305(a)(2) of the Federal Home Loan Mortgage Corporation Act (12 U.S.C. 1454(a)(2)).

(2) DWELLING.—The term “dwelling” means any building, structure, or portion thereof which is occupied as, or designed or intended for occupancy as, a residence by one or more individuals.

(3) ELIGIBLE ENTITY.—The term “eligible entity” means—  
 (A) a State; or  
 (B) any entity eligible for payment under subsection

(f).

(4) MORTGAGE.—The term “mortgage” means any credit transaction—

(A) that is secured by a mortgage, deed of trust, or other consensual security interest on a principal residence of a borrower that is (i) a 1- to 4-unit dwelling, or (ii) residential real property that includes a 1- to 4-unit dwelling; and

(B) the unpaid principal balance of which was, at the time of origination, not more than the conforming loan limit.

(5) FUND.—The term “Fund” means the Homeowner Assistance Fund established under subsection (c).

(6) SECRETARY.—The term “Secretary” means the Secretary of the Treasury.

(7) STATE.—The term “State” means any State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, American Samoa, the United States Virgin Islands, and the Commonwealth of the Northern Mariana Islands.

(c) ESTABLISHMENT OF FUND.—

Effective date.

(1) ESTABLISHMENT; QUALIFIED EXPENSES.—There is established in the Department of the Treasury a Homeowner Assistance Fund to mitigate financial hardships associated with the coronavirus pandemic by providing such funds as are appropriated by subsection (a) to eligible entities for the purpose of preventing homeowner mortgage delinquencies, defaults, foreclosures, loss of utilities or home energy services, and displacements of homeowners experiencing financial hardship after January 21, 2020, through qualified expenses related to mortgages and housing, which include—

(A) mortgage payment assistance;

(B) financial assistance to allow a homeowner to reinstate a mortgage or to pay other housing related costs related to a period of forbearance, delinquency, or default;

(C) principal reduction;

(D) facilitating interest rate reductions;

(E) payment assistance for—

(i) utilities, including electric, gas, home energy, and water;

(ii) internet service, including broadband internet access service, as defined in section 8.1(b) of title 47, Code of Federal Regulations (or any successor regulation);

(iii) homeowner’s insurance, flood insurance, and mortgage insurance; and

(iv) homeowner’s association, condominium association fees, or common charges;

Time period.

(F) reimbursement of funds expended by a State, local government, or designated entity under subsection (f) during the period beginning on January 21, 2020, and ending on the date that the first funds are disbursed by the eligible entity under the Homeowner Assistance Fund, for the purpose of providing housing or utility payment assistance to homeowners or otherwise providing funds to prevent foreclosure or post-foreclosure eviction of a homeowner or prevent mortgage delinquency or loss of housing or utilities as a response to the coronavirus disease (COVID) pandemic; and

Determination.

(G) any other assistance to promote housing stability for homeowners, including preventing mortgage delinquency, default, foreclosure, post-foreclosure eviction of a homeowner, or the loss of utility or home energy services, as determined by the Secretary.

(2) TARGETING.—Not less than 60 percent of amounts made to each eligible entity allocated amounts under subsection (d) or (f) shall be used for qualified expenses that assist homeowners having incomes equal to or less than 100 percent of the area median income for their household size or equal to or less than 100 percent of the median income for the United States, as determined by the Secretary of Housing and Urban Development, whichever is greater. The eligible entity shall prioritize remaining funds to socially disadvantaged individuals.

Determination.

(d) ALLOCATION OF FUNDS.—

(1) ADMINISTRATION.—Of any amounts made available under this section, the Secretary shall reserve—

(A) to the Department of the Treasury, an amount not to exceed \$40,000,000 to administer and oversee the Fund, and to provide technical assistance to eligible entities for the creation and implementation of State and tribal programs to administer assistance from the Fund; and

(B) to the Inspector General of the Department of the Treasury, an amount to not exceed \$2,600,000 for oversight of the program under this section.

(2) FOR STATES.—After the application of paragraphs (1), (4), and (5) of this subsection and subject to paragraph (3) of this subsection, the Secretary shall allocate the remaining funds available within the Homeowner Assistance Fund to each State of the United States, the District of Columbia, and the Commonwealth of Puerto Rico based on homeowner need, for such State relative to all States of the United States, the District of Columbia, and the Commonwealth of Puerto Rico, as of the date of the enactment of this Act, which is determined by reference to—

Determination.  
Time period.

(A) the average number of unemployed individuals measured over a period of time not fewer than 3 months and not more than 12 months; and

(B) the total number of mortgagors with—

(i) mortgage payments that are more than 30 days past due; or

(ii) mortgages in foreclosure.

(3) SMALL STATE MINIMUM.—

(A) IN GENERAL.—Each State of the United States, the District of Columbia, and the Commonwealth of Puerto Rico shall receive no less than \$50,000,000 for the purposes established in (c).

(B) PRO RATA ADJUSTMENTS.—The Secretary shall adjust on a pro rata basis the amount of the payments for each State of the United States, the District of Columbia, and the Commonwealth of Puerto Rico determined under this subsection without regard to this subparagraph to the extent necessary to comply with the requirements of subparagraph (A).

(4) TERRITORY SET-ASIDE.—Notwithstanding any other provision of this section, of the amounts appropriated under subsection (a), the Secretary shall reserve \$30,000,000 to be disbursed to Guam, American Samoa, the United States Virgin Islands, and the Commonwealth of the Northern Mariana Islands based on each such territory's share of the combined total population of all such territories, as determined by the

Determinations.

Secretary. For the purposes of this paragraph, population shall be determined based on the most recent year for which data are available from the United States Census Bureau.

(5) TRIBAL SET-ASIDE.—The Secretary shall allocate funds to any eligible entity designated under subsection (f) pursuant to the requirements of that subsection.

(e) DISTRIBUTION OF FUNDS TO STATES.—

Deadlines.

(1) IN GENERAL.—The Secretary shall make payments, beginning not later than 45 days after enactment of this Act, from amounts allocated under subsection (d) to eligible entities that have notified the Secretary that they request to receive payment from the Fund and that the eligible entity will use such payments in compliance with this section.

(2) REALLOCATION.—If a State does not request allocated funds by the 45th day after the date of enactment of this Act, such State shall not be eligible for a payment from the Secretary pursuant to this section, and the Secretary shall, by the 180th day after the date of enactment of this Act, reallocate any funds that were not requested by such State among the States that have requested funds by the 45th day after the date of enactment of this Act. For any such reallocation of funds, the Secretary shall adhere to the requirements of subsection (d), except for paragraph (1), to the greatest extent possible, provided that the Secretary shall also take into consideration in determining such reallocation a State's remaining need and a State's record of using payments from the Fund to serve homeowners at disproportionate risk of mortgage default, foreclosure, or displacement, including homeowners having incomes equal to or less than 100 percent of the area median income for their household size or 100 percent of the median income for the United States, as determined by the Secretary of Housing and Urban Development, whichever is greater, and minority homeowners.

(f) TRIBAL SET-ASIDE.—

(1) SET-ASIDE.—Notwithstanding any other provision of this section, of the amounts appropriated under subsection (a), the Secretary shall use 5 percent to make payments to entities that are eligible for payments under clauses (i) and (ii) of section 501(b)(2)(A) of subtitle A of title V of division N of the Consolidated Appropriations Act, 2021 (Public Law 116-260) for the purposes described in subsection (c).

Deadline.  
Notification.

(2) ALLOCATION AND PAYMENT.—The Secretary shall allocate the funds set aside under paragraph (1) using the allocation formulas described in clauses (i) and (ii) of section 501(b)(2)(A) of subtitle A of title V of division N of the Consolidated Appropriations Act, 2021 (Public Law 116-260), and shall make payments of such amounts beginning no later than 45 days after enactment of this Act to entities eligible for payment under clauses (i) and (ii) of section 501(b)(2)(A) of subtitle A of title V of division N of the Consolidated Appropriations Act, 2021 (Public Law 116-260) that notify the Secretary that they request to receive payments allocated from the Fund by the Secretary for purposes described under subsection (c) and will use such payments in compliance with this section.

(3) ADJUSTMENT.—Allocations provided under this subsection may be further adjusted as provided by section

501(b)(2)(B) of subtitle A of title V of division N of the Consolidated Appropriations Act, 2021 (Public Law 116-260).

**SEC. 3207. RELIEF MEASURES FOR SECTION 502 AND 504 DIRECT LOAN BORROWERS.**

(a) **APPROPRIATION.**—In addition to amounts otherwise available, there is appropriated to the Secretary of Agriculture (in this section referred to as the “Secretary”) for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$39,000,000, to remain available until September 30, 2023, for direct loans made under sections 502 and 504 of the Housing Act of 1949 (42 U.S.C. 1472, 1474).

(b) **ADMINISTRATIVE EXPENSES.**—The Secretary may use not more than 3 percent of the amounts appropriated under this section for administrative purposes.

**SEC. 3208. FAIR HOUSING ACTIVITIES.**

(a) **APPROPRIATION.**—In addition to amounts otherwise available, there is appropriated to the Secretary of Housing and Urban Development (in this section referred to as the “Secretary”) for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$20,000,000, to remain available until September 30, 2023, for the Fair Housing Initiatives Program under section 561 of the Housing and Community Development Act of 1987 (42 U.S.C. 3616a) to ensure fair housing organizations have additional resources to address fair housing inquiries, complaints, investigations, education and outreach activities, and costs of delivering or adapting services, during or relating to the coronavirus pandemic.

(b) **ADMINISTRATIVE EXPENSES.**—The Secretary may use not more than 3 percent of the amounts appropriated under this section for administrative purposes.

## Subtitle C—Small Business (SSBCI)

**SEC. 3301. STATE SMALL BUSINESS CREDIT INITIATIVE.**

(a) **STATE SMALL BUSINESS CREDIT INITIATIVE.**—

(1) **IN GENERAL.**—The State Small Business Credit Initiative Act of 2010 (12 U.S.C. 5701 et seq.) is amended—

(A) in section 3003—

12 USC 5702.

(i) in subsection (b)—

(I) by amending paragraph (1) to read as follows:

“(1) **IN GENERAL.**—Not later than 30 days after the date of enactment of subsection (d), the Secretary shall allocate Federal funds to participating States so that each State is eligible to receive an amount equal to what the State would receive under the 2021 allocation, as determined under paragraph (2).”;

Deadline.  
Allocation.

(II) in paragraph (2)—

(aa) by striking “2009” each place such term appears and inserting “2021”;

(bb) by striking “2008” each place such term appears and inserting “2020”;

(cc) in subparagraph (A), by striking “The Secretary” and inserting “With respect to States other than Tribal governments, the Secretary”;

- (dd) in subparagraph (C)(i), by striking “2007” and inserting “2019”; and  
 (ee) by adding at the end the following:  
 “(C) SEPARATE ALLOCATION FOR TRIBAL GOVERNMENTS.—
- Determination. “(i) IN GENERAL.—With respect to States that are Tribal governments, the Secretary shall determine the 2021 allocation by allocating \$500,000,000 among the Tribal governments in the proportion the Secretary determines appropriate, including with consideration to available employment and economic data regarding each such Tribal government.
- Deadlines. “(ii) NOTICE OF INTENT; TIMING OF ALLOCATION.—With respect to allocations to States that are Tribal governments, the Secretary may—  
 “(I) require Tribal governments that individually or jointly wish to participate in the Program to file a notice of intent with the Secretary not later than 30 days after the date of enactment of subsection (d); and  
 “(II) notwithstanding paragraph (1), allocate Federal funds to participating Tribal governments not later than 60 days after the date of enactment of subsection (d).
- Determination. “(D) EMPLOYMENT DATA.—If the Secretary determines that employment data with respect to a State is unavailable from the Bureau of Labor Statistics of the Department of Labor, the Secretary shall consider such other economic and employment data that is otherwise available for purposes of determining the employment data of such State.”; and  
 (III) by striking paragraph (3); and  
 (ii) in subsection (c)—  
 (I) in paragraph (1)(A)(iii), by inserting before the period the following: “that have delivered loans or investments to eligible businesses”; and  
 (II) by amending paragraph (4) to read as follows:  
 “(4) TERMINATION OF AVAILABILITY OF AMOUNTS NOT TRANSFERRED.—
- Time periods. “(A) IN GENERAL.—Any portion of a participating State’s allocated amount that has not been transferred to the State under this section may be deemed by the Secretary to be no longer allocated to the State and no longer available to the State and shall be returned to the general fund of the Treasury or reallocated as described under subparagraph (B), if—  
 “(i) the second  $\frac{1}{3}$  of a State’s allocated amount has not been transferred to the State before the end of the end of the 3-year period beginning on the date that the Secretary approves the State for participation; or  
 “(ii) the last  $\frac{1}{3}$  of a State’s allocated amount has not been transferred to the State before the end of the end of the 6-year period beginning on the date that the Secretary approves the State for participation.

“(B) REALLOCATION.—Any amount deemed by the Secretary to be no longer allocated to a State and no longer available to such State under subparagraph (A) may be reallocated by the Secretary to other participating States. In making such a reallocation, the Secretary shall not take into account the minimum allocation requirements under subsection (b)(2)(B) or the specific allocation for Tribal governments described under subsection (b)(2)(C).”;

(B) in section 3004(d), by striking “date of enactment of this Act” each place it appears and inserting “date of the enactment of section 3003(d)”;

12 USC 5703.

(C) in section 3005(b), by striking “date of enactment of this Act” each place it appears and inserting “date of the enactment of section 3003(d)”;

12 USC 5704.

(D) in section 3006(b)(4), by striking “date of enactment of this Act” and inserting “date of the enactment of section 3003(d)”;

12 USC 5705.

(E) in section 3007(b), by striking “March 31, 2011” and inserting “March 31, 2022”;

12 USC 5706.

(F) in section 3009, by striking “date of enactment of this Act” each place it appears and inserting “date of the enactment of section 3003(d)”;

12 USC 5708.

(G) in section 3011(b), by striking “date of the enactment of this Act” each place it appears and inserting “date of the enactment of section 3003(d)”.

12 USC 5710.

(2) APPROPRIATION.—

12 USC 5701 note.

(A) IN GENERAL.—In addition to amounts otherwise available, there is hereby appropriated to the Secretary of the Treasury for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$10,000,000,000, to remain available until expended, to provide support to small businesses responding to and recovering from the economic effects of the COVID-19 pandemic, ensure business enterprises owned and controlled by socially and economically disadvantaged individuals have access to credit and investments, provide technical assistance to help small businesses applying for various support programs, and to pay reasonable costs of administering such Initiative.

(B) RESCISSION.—With respect to amounts appropriated under subparagraph (A)—

(i) the Secretary of the Treasury shall complete all disbursements and remaining obligations before September 30, 2030; and

Deadline.

(ii) any amounts that remain unexpended (whether obligated or unobligated) on September 30, 2030, shall be rescinded and deposited into the general fund of the Treasury.

(b) ADDITIONAL ALLOCATIONS TO SUPPORT BUSINESS ENTERPRISES OWNED AND CONTROLLED BY SOCIALLY AND ECONOMICALLY DISADVANTAGED INDIVIDUALS.—Section 3003 of the State Small Business Credit Initiative Act of 2010 (12 U.S.C. 5702) is amended by adding at the end the following:

“(d) ADDITIONAL ALLOCATIONS TO SUPPORT BUSINESS ENTERPRISES OWNED AND CONTROLLED BY SOCIALLY AND ECONOMICALLY DISADVANTAGED INDIVIDUALS.—Of the amounts appropriated for fiscal year 2021 to carry out the Program, the Secretary shall—

- Regulations.  
Requirements.
- “(1) allocate \$1,500,000,000 to States from funds allocated under this section and, by regulation or other guidance, prescribe Program requirements that the funds be expended for business enterprises owned and controlled by socially and economically disadvantaged individuals; and
- Determination.
- “(2) allocate such amounts to States based on the needs of business enterprises owned and controlled by socially and economically disadvantaged individuals, as determined by the Secretary, in each State, and not subject to the allocation formula described under subsection (b).
- Determination.
- “(e) INCENTIVE ALLOCATIONS TO SUPPORT BUSINESS ENTERPRISES OWNED AND CONTROLLED BY SOCIALLY AND ECONOMICALLY DISADVANTAGED INDIVIDUALS.—Of the amounts appropriated for fiscal year 2021 to carry out the Program, the Secretary shall set aside \$1,000,000,000 for an incentive program under which the Secretary shall increase the second  $\frac{1}{3}$  and last  $\frac{1}{3}$  allocations for States that demonstrate robust support, as determined by the Secretary, for business concerns owned and controlled by socially and economically disadvantaged individuals in the deployment of prior allocation amounts.”
- (c) ADDITIONAL ALLOCATIONS TO SUPPORT VERY SMALL BUSINESSES.—Section 3003 of the State Small Business Credit Initiative Act of 2010 (12 U.S.C. 5702), as amended by subsection (b), is further amended by adding at the end the following:
- “(f) ADDITIONAL ALLOCATIONS TO SUPPORT VERY SMALL BUSINESSES.—
- “(1) IN GENERAL.—Of the amounts appropriated to carry out the Program, the Secretary shall allocate not less than \$500,000,000 to States from funds allocated under this section to be expended for very small businesses.
- “(2) VERY SMALL BUSINESS DEFINED.—In this subsection, the term ‘very small business’—
- “(A) means a business with fewer than 10 employees; and
- “(B) may include independent contractors and sole proprietors.”
- (d) TECHNICAL ASSISTANCE.—Section 3009 of the State Small Business Credit Initiative Act of 2010 (12 U.S.C. 5708) is amended by adding at the end the following:
- “(e) TECHNICAL ASSISTANCE.—Of the amounts appropriated for fiscal year 2021 to carry out the Program, \$500,000,000 may be used by the Secretary to—
- “(1) provide funds to States to carry out a technical assistance plan under which a State will provide legal, accounting, and financial advisory services, either directly or contracted with legal, accounting, and financial advisory firms, with priority given to business enterprises owned and controlled by socially and economically disadvantaged individuals, to very small businesses and business enterprises owned and controlled by socially and economically disadvantaged individuals applying for—
- “(A) State programs under the Program; and
- “(B) other State or Federal programs that support small businesses;
- “(2) transfer amounts to the Minority Business Development Agency, so that the Agency may use such amounts in a manner the Agency determines appropriate, including

through contracting with third parties, to provide technical assistance to business enterprises owned and controlled by socially and economically disadvantaged individuals applying to—

“(A) State programs under the Program; and

“(B) other State or Federal programs that support small businesses; and

“(3) contract with legal, accounting, and financial advisory firms (with priority given to business enterprises owned and controlled by socially and economically disadvantaged individuals), to provide technical assistance to business enterprises owned and controlled by socially and economically disadvantaged individuals applying to—

“(A) State programs under the Program; and

“(B) other State or Federal programs that support small businesses.”.

(e) INCLUSION OF TRIBAL GOVERNMENTS.—Section 3002(10) of the State Small Business Credit Initiative Act of 2010 (12 U.S.C. 5701(10)) is amended—

(1) in subparagraph (C), by striking “and” at the end;

(2) in subparagraph (D), by striking the period at the end and inserting “; and”; and

(3) by adding at the end the following:

“(E) a Tribal government, or a group of Tribal governments that jointly apply for an allocation.”.

(f) DEFINITIONS.—Section 3002 of the State Small Business Credit Initiative Act of 2010 (12 U.S.C. 5701) is amended by adding at the end the following:

“(15) BUSINESS ENTERPRISE OWNED AND CONTROLLED BY SOCIALLY AND ECONOMICALLY DISADVANTAGED INDIVIDUALS.—The term ‘business enterprise owned and controlled by socially and economically disadvantaged individuals’ means a business that—

“(A) if privately owned, 51 percent is owned by one or more socially and economically disadvantaged individuals;

“(B) if publicly owned, 51 percent of the stock is owned by one or more socially and economically disadvantaged individuals; and

“(C) in the case of a mutual institution, a majority of the Board of Directors, account holders, and the community which the institution services is predominantly comprised of socially and economically disadvantaged individuals.

“(16) COMMUNITY DEVELOPMENT FINANCIAL INSTITUTION.—The term ‘community development financial institution’ has the meaning given that term under section 103 of the Riegle Community Development and Regulatory Improvement Act of 1994.

“(17) MINORITY DEPOSITORY INSTITUTION.—The term ‘minority depository institution’ has the meaning given that term under section 308(b) of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989.

“(18) SOCIALLY AND ECONOMICALLY DISADVANTAGED INDIVIDUAL.—The term ‘socially and economically disadvantaged individual’ means an individual who is a socially disadvantaged individual or an economically disadvantaged individual, as such

terms are defined, respectively, under section 8 of the Small Business Act (15 U.S.C. 637) and the regulations thereunder.

“(19) TRIBAL GOVERNMENT.—The term ‘Tribal government’ means the recognized governing body of any Indian or Alaska Native tribe, band, nation, pueblo, village, community, component band, or component reservation, individually identified (including parenthetically) in the list published most recently as of the date of enactment of this paragraph pursuant to section 104 of the Federally Recognized Indian Tribe List Act of 1994 (25 U.S.C. 5131).”.

12 USC 5701  
note.

(g) RULE OF APPLICATION.—The amendments made by this section shall apply with respect to funds appropriated under this section and funds appropriated on and after the date of enactment of this section.

## Subtitle D—Public Transportation

49 USC 5301  
note.

### SEC. 3401. FEDERAL TRANSIT ADMINISTRATION GRANTS.

(a) FEDERAL TRANSIT ADMINISTRATION APPROPRIATION.—

(1) IN GENERAL.—In addition to amounts otherwise made available, there are appropriated for fiscal year 2021, out of any funds in the Treasury not otherwise appropriated, \$30,461,355,534, to remain available until September 30, 2024, that shall—

(A) be for grants to eligible recipients under sections 5307, 5309, 5310, and 5311 of title 49, United States Code, to prevent, prepare for, and respond to coronavirus; and

(B) not be subject to any prior restriction on the total amount of funds available for implementation or execution of programs authorized under sections 5307, 5310, or 5311 of such title.

(2) AVAILABILITY OF FUNDS FOR OPERATING EXPENSES.—

Effective date.

(A) IN GENERAL.—Notwithstanding subsection (a)(1) or (b) of section 5307 and section 5310(b)(2)(A) of title 49, United States Code, funds provided under this section, other than subsection (b)(4), shall be available for the operating expenses of transit agencies to prevent, prepare for, and respond to the coronavirus public health emergency, including, beginning on January 20, 2020—

Reimbursement.

(i) reimbursement for payroll of public transportation (including payroll and expenses of private providers of public transportation);

(ii) operating costs to maintain service due to lost revenue due as a result of the coronavirus public health emergency, including the purchase of personal protective equipment; and

Payments.

(iii) paying the administrative leave of operations or contractor personnel due to reductions in service.

(B) USE OF FUNDS.—Funds described in subparagraph (A) shall be—

(i) available for immediate obligation, notwithstanding the requirement for such expenses to be included in a transportation improvement program, long-range transportation plan, statewide transportation plan, or statewide transportation improvement

program under sections 5303 and 5304 of title 49, United States Code;

(ii) directed to payroll and operations of public transportation (including payroll and expenses of private providers of public transportation), unless the recipient certifies to the Administrator of the Federal Transit Administration that the recipient has not furloughed any employees;

(iii) used to provide a Federal share of the costs for any grant made under this section of 100 percent.

(b) ALLOCATION OF FUNDS.—

(1) URBANIZED AREA FORMULA GRANTS.—

(A) IN GENERAL.—Of the amounts made available under subsection (a), \$26,086,580,227 shall be for grants to recipients and subrecipients under section 5307 of title 49, United States Code, and shall be administered as if such funds were provided under section 5307 of such title.

(B) ALLOCATION.—Amounts made available under subparagraph (A) shall be apportioned to urbanized areas based on data contained in the National Transit Database such that—

Apportionment.

(i) each urbanized area shall receive an apportionment of an amount that, when combined with amounts that were otherwise made available to such urbanized area for similar activities to prevent, prepare for, and respond to coronavirus, is equal to 132 percent of the urbanized area's 2018 operating costs; and

(ii) for funds remaining after the apportionment described in clause (i), such funds shall be apportioned such that each urbanized area that did not receive an apportionment under clause (i) shall receive an apportionment equal to 25 percent of the urbanized area's 2018 operating costs.

(2) FORMULA GRANTS FOR THE ENHANCED MOBILITY OF SENIORS AND INDIVIDUALS WITH DISABILITIES.—

(A) IN GENERAL.—Of the amounts made available under subsection (a), \$50,000,000 shall be for grants to recipients or subrecipients eligible under section 5310 of title 49, United States Code, and shall be apportioned in accordance with such section.

Apportionment.

(B) ALLOCATION RATIO.—Amounts made available under subparagraph (A) shall be allocated in the same ratio as funds were provided under section 5310 of title 49, United States Code, for fiscal year 2020.

(3) FORMULA GRANTS FOR RURAL AREAS.—

(A) IN GENERAL.—Of the amounts made available under subsection (a), \$317,214,013 shall be for grants to recipients or subrecipients eligible under section 5311 of title 49, United States Code, and shall be administered as if the funds were provided under section 5311 of such title, and shall be apportioned in accordance with such section, except as described in paragraph (B).

Apportionment.

(B) ALLOCATION RATIO.—Amounts made available under subparagraph (A) to States, as defined in section 5302 of title 49, United States Code, shall be allocated to such States based on data contained in the National Transit Database, such that—

(i) any State that received an amount for similar activities to prevent, prepare for, and respond to coronavirus that is equal to or greater than 150 percent of the combined 2018 rural operating costs of the recipients and subrecipients in such State shall receive an amount equal to 5 percent of such State's 2018 rural operating costs;

(ii) any State that does not receive an allocation under clause (i) that received an amount for similar activities to prevent, prepare for, and respond to coronavirus that is equal to or greater than 140 percent of the combined 2018 rural operating costs of the recipients and subrecipients in that State shall receive an amount equal to 10 percent of such State's 2018 rural operating costs; and

(iii) any State that does not receive an allocation under clauses (i) or (ii) shall receive an amount equal to 20 percent of such State's 2018 rural operating costs.

(4) CAPITAL INVESTMENTS.—

(A) IN GENERAL.—Of the amounts made available under subsection (a)—

(i) \$1,425,000,000 shall be for grants administered under subsections (d) and (e) of section 5309 of title 49, United States Code; and

(ii) \$250,000,000 shall be for grants administered under subsection (h) of section 5309 of title 49, United States Code.

(B) FUNDING DISTRIBUTION.—

(i) IN GENERAL.—Of the amounts made available in subparagraph (A)(i), \$1,250,000,000 shall be provided to each recipient for all projects with existing full funding grant agreements that received allocations for fiscal year 2019 or 2020, except that recipients with projects open for revenue service are not eligible to receive a grant under this subparagraph. Funds shall be provided proportionally based on the non-capital investment grant share of the amount allocated.

(ii) ALLOCATION.—Of the amounts made available in subparagraph (A)(i), \$175,000,000 shall be provided to each recipient for all projects with existing full funding grant agreements that received an allocation only prior to fiscal year 2019, except that projects open for revenue service are not eligible to receive a grant under this subparagraph and no project may receive more than 40 percent of the amounts provided under this clause. The Administrator of the Federal Transit Administration shall proportionally distribute funds in excess of such percent to recipients for which the percent of funds does not exceed 40 percent. Funds shall be provided proportionally based on the non-capital investment grant share of the amount allocated.

(iii) ELIGIBLE RECIPIENTS.—For amounts made available in subparagraph (A)(ii), eligible recipients shall be any recipient of an allocation under subsection (h) of section 5309 of title 49, United States Code,

or an applicant in the project development phase described in paragraph (2) of such subsection.

(iv) AMOUNT.—Amounts distributed under clauses (i), (ii), and (iii) of subparagraph (A) shall be provided notwithstanding the limitation of any calculation of the maximum amount of Federal financial assistance for the project under subsection (k)(2)(C)(ii) or (h)(7) of section 5309 of title 49, United States Code.

(5) SECTION 5311(F) SERVICES.—

(A) IN GENERAL.—Of the amounts made available under subsection (a) and in addition to the amounts made available under paragraph (3), \$100,000,000 shall be available for grants to recipients for bus operators that partner with recipients or subrecipients of funds under section 5311(f) of title 49, United States Code.

(B) ALLOCATION RATIO.—Notwithstanding paragraph (3), the Administrator of the Federal Transit Administration shall allocate amounts under subparagraph (A) in the same ratio as funds were provided under section 5311 of title 49, United States Code, for fiscal year 2020.

(C) EXCEPTION.—If a State or territory does not have bus providers eligible under section 5311(f) of title 49, United States Code, funds under this paragraph may be used by such State or territory for any expense eligible under section 5311 of title 49, United States Code.

(6) PLANNING.—

(A) IN GENERAL.—Of the amounts made available under subsection (a), \$25,000,000 shall be for grants to recipients eligible under section 5307 of title 49, United States Code, for the planning of public transportation associated with the restoration of services as the coronavirus public health emergency concludes and shall be available in accordance with such section.

(B) AVAILABILITY OF FUNDS FOR ROUTE PLANNING.—Amounts made available under subparagraph (A) shall be available for route planning designed to—

(i) increase ridership and reduce travel times, while maintaining or expanding the total level of vehicle revenue miles of service provided in the planning period; or

(ii) make service adjustments to increase the quality or frequency of service provided to low-income riders and disadvantaged neighborhoods or communities.

(C) LIMITATION.—Amounts made available under subparagraph (A) shall not be used for route planning related to transitioning public transportation service provided as of the date of receipt of funds to a transportation network company or other third-party contract provider, unless the existing provider of public transportation service is a third-party contract provider.

(7) RECIPIENTS AND SUBRECIPIENTS REQUIRING ADDITIONAL ASSISTANCE.—

(A) IN GENERAL.—Of the amounts made available under subsection (a), \$2,207,561,294 shall be for grants to eligible recipients or subrecipients of funds under sections 5307 or 5311 of title 49, United States Code, that,

as a result of COVID-19, require additional assistance for costs related to operations, personnel, cleaning, and sanitization combating the spread of pathogens on transit systems, and debt service payments incurred to maintain operations and avoid layoffs and furloughs.

(B) ADMINISTRATION.—Funds made available under subparagraph (A) shall, after allocation, be administered as if provided under paragraph (1) or (3), as applicable.

(C) APPLICATION REQUIREMENTS.—

(i) IN GENERAL.—The Administrator of the Federal Transit Administration may not allocate funds to an eligible recipient or subrecipient of funds under chapter 53 of title 49, United States Code, unless the recipient provides to the Administrator—

Estimates.

(I) estimates of financial need;

Data.

(II) data on reductions in farebox or other sources of local revenue for sustained operations;

Spending plan.

(III) a spending plan for such funds; and

(IV) demonstration of expenditure of greater than 90 percent of funds available to the applicant from funds made available for similar activities in fiscal year 2020.

(ii) DEADLINES.—The Administrator of the Federal Transit Administration shall—

Notice.

(I) not later than 180 days after the date of enactment of this Act, issue a Notice of Funding Opportunity for assistance under this paragraph; and

(II) not later than 120 days after the application deadline established in the Notice of Funding Opportunity under subclause (I), make awards under this paragraph to selected applicants.

(iii) EVALUATION.—

(I) IN GENERAL.—Applications for assistance under this paragraph shall be evaluated by the Administrator of the Federal Transit Administration based on the level of financial need demonstrated by an eligible recipient or subrecipient, including projections of future financial need to maintain service as a percentage of the 2018 operating costs that has not been replaced by the funds made available to the eligible recipient or subrecipient under paragraphs (1) through (5) of this subsection when combined with the amounts allocated to such eligible recipient or subrecipient from funds previously made available for the operating expenses of transit agencies related to the response to the COVID-19 public health emergency.

(II) RESTRICTION.—Amounts made available under this paragraph shall only be available for operating expenses.

(iv) STATE APPLICANTS.—A State may apply for assistance under this paragraph on behalf of an eligible recipient or subrecipient or a group of eligible recipients or subrecipients.

(D) UNOBLIGATED FUNDS.—If amounts made available under this paragraph remain unobligated on September

30, 2023, such amounts shall be available for any purpose eligible under sections 5307 or 5311 of title 49, United States Code.

## TITLE IV—COMMITTEE ON HOMELAND SECURITY AND GOVERNMENTAL AFFAIRS

### SEC. 4001. EMERGENCY FEDERAL EMPLOYEE LEAVE FUND.

5 USC 6301 note.

(a) **ESTABLISHMENT; APPROPRIATION.**—There is established in the Treasury the Emergency Federal Employee Leave Fund (in this section referred to as the “Fund”), to be administered by the Director of the Office of Personnel Management, for the purposes set forth in subsection (b). In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$570,000,000, which shall be deposited into the Fund and remain available through September 30, 2022. The Fund is available for reasonable expenses incurred by the Office of Personnel Management in administering this section.

(b) **PURPOSE.**—Amounts in the Fund shall be available for reimbursement to an agency for the use of paid leave under this section by any employee of the agency who is unable to work because the employee—

Reimbursement.

(1) is subject to a Federal, State, or local quarantine or isolation order related to COVID-19;

(2) has been advised by a health care provider to self-quarantine due to concerns related to COVID-19;

(3) is caring for an individual who is subject to such an order or has been so advised;

(4) is experiencing symptoms of COVID-19 and seeking a medical diagnosis;

(5) is caring for a son or daughter of such employee if the school or place of care of the son or daughter has been closed, if the school of such son or daughter requires or makes optional a virtual learning instruction model or requires or makes optional a hybrid of in-person and virtual learning instruction models, or the child care provider of such son or daughter is unavailable, due to COVID-19 precautions;

(6) is experiencing any other substantially similar condition;

(7) is caring for a family member with a mental or physical disability or who is 55 years of age or older and incapable of self-care, without regard to whether another individual other than the employee is available to care for such family member, if the place of care for such family member is closed or the direct care provider is unavailable due to COVID-19; or

(8) is obtaining immunization related to COVID-19 or is recovering from any injury, disability, illness, or condition related to such immunization.

(c) **LIMITATIONS.**—

(1) **PERIOD OF AVAILABILITY.**—Paid leave under this section may only be provided to and used by an employee during the period beginning on the date of enactment of this Act and ending on September 30, 2021.

(2) TOTAL HOURS; AMOUNT.—Paid leave under this section—

(A) shall be provided to an employee in an amount not to exceed 600 hours of paid leave for each full-time employee, and in the case of a part-time employee, employee on an uncommon tour of duty, or employee with a seasonal work schedule, in an amount not to exceed the proportional equivalent of 600 hours to the extent amounts in the Fund remain available for reimbursement;

(B) shall be paid at the same hourly rate as other leave payments; and

(C) may not be provided to an employee if the leave would result in payments greater than \$2,800 in aggregate for any biweekly pay period for a full-time employee, or a proportionally equivalent biweekly limit for a part-time employee.

(3) RELATIONSHIP TO OTHER LEAVE.—Paid leave under this section—

(A) is in addition to any other leave provided to an employee; and

(B) may not be used by an employee concurrently with any other paid leave.

(4) CALCULATION OF RETIREMENT BENEFIT.—Any paid leave provided to an employee under this section shall reduce the total service used to calculate any Federal civilian retirement benefit.

(d) EMPLOYEE DEFINED.—In this section, the term “employee” means—

(1) an individual in the executive branch for whom annual and sick leave is provided under subchapter I of chapter 63 of title 5, United States Code;

(2) an individual employed by the United States Postal Service;

(3) an individual employed by the Postal Regulatory Commission; and

(4) an employee of the Public Defender Service for the District of Columbia and the District of Columbia Courts.

**SEC. 4002. FUNDING FOR THE GOVERNMENT ACCOUNTABILITY OFFICE.**

In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$77,000,000, to remain available until September 30, 2025, for necessary expenses of the Government Accountability Office to prevent, prepare for, and respond to Coronavirus and to support oversight of the Coronavirus response and of funds provided in this Act or any other Act pertaining to the Coronavirus pandemic.

**SEC. 4003. PANDEMIC RESPONSE ACCOUNTABILITY COMMITTEE FUNDING AVAILABILITY.**

In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$40,000,000, to remain available until September 30, 2025, for the Pandemic Response Accountability Committee to support oversight of the Coronavirus response and of funds provided in this Act or any other Act pertaining to the Coronavirus pandemic.

**SEC. 4004. FUNDING FOR THE WHITE HOUSE.**

In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$12,800,000, to remain available until September 30, 2021, for necessary expenses for the White House, to prevent, prepare for, and respond to coronavirus.

**SEC. 4005. FEDERAL EMERGENCY MANAGEMENT AGENCY APPROPRIATION.**

In addition to amounts otherwise available, there is appropriated to the Federal Emergency Management Agency for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$50,000,000,000, to remain available until September 30, 2025, to carry out the purposes of the Disaster Relief Fund for costs associated with major disaster declarations.

**SEC. 4006. FUNERAL ASSISTANCE.**

(a) **IN GENERAL.**—For the emergency declaration issued by the President on March 13, 2020, pursuant to section 501(b) of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5191(b)), and for any subsequent major disaster declaration that supersedes such emergency declaration, the President shall provide financial assistance to an individual or household to meet disaster-related funeral expenses under section 408(e)(1) of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5174(e)(1)), for which the Federal cost share shall be 100 percent.

(b) **USE OF FUNDS.**—Funds appropriated under section 4005 may be used to carry out subsection (a) of this section.

42 USC 5174  
note.  
President.

**SEC. 4007. EMERGENCY FOOD AND SHELTER PROGRAM FUNDING.**

In addition to amounts otherwise made available, there is appropriated to the Federal Emergency Management Agency for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$400,000,000, to remain available until September 30, 2025, for the emergency food and shelter program.

**SEC. 4008. HUMANITARIAN RELIEF.**

In addition to amounts otherwise made available, there is appropriated to the Federal Emergency Management Agency for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$110,000,000, to remain available until September 30, 2025, for the emergency food and shelter program for the purposes of providing humanitarian relief to families and individuals encountered by the Department of Homeland Security.

**SEC. 4009. CYBERSECURITY AND INFRASTRUCTURE SECURITY AGENCY.**

In addition to amounts otherwise made available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$650,000,000, to remain available until September 30, 2023, for the Cybersecurity and Infrastructure Security Agency for cybersecurity risk mitigation.

**SEC. 4010. APPROPRIATION FOR THE UNITED STATES DIGITAL SERVICE.**

In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury

not otherwise appropriated, \$200,000,000, to remain available until September 30, 2024, for the United States Digital Service.

**SEC. 4011. APPROPRIATION FOR THE TECHNOLOGY MODERNIZATION FUND.**

In addition to amounts otherwise appropriated, there is appropriated to the General Services Administration for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$1,000,000,000, to remain available until September 30, 2025, to carry out the purposes of the Technology Modernization Fund.

**SEC. 4012. APPROPRIATION FOR THE FEDERAL CITIZEN SERVICES FUND.**

In addition to amounts otherwise available, there is appropriated to the General Services Administration for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$150,000,000, to remain available until September 30, 2024, to carry out the purposes of the Federal Citizen Services Fund.

**SEC. 4013. AFG AND SAFER PROGRAM FUNDING.**

In addition to amounts otherwise made available, there is appropriated to the Federal Emergency Management Agency for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$300,000,000, to remain available until September 30, 2025, of which \$100,000,000 shall be for assistance to firefighter grants and \$200,000,000 shall be for staffing for adequate fire and emergency response grants.

**SEC. 4014. EMERGENCY MANAGEMENT PERFORMANCE GRANT FUNDING.**

In addition to amounts otherwise made available, there is appropriated to the Federal Emergency Management Agency for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$100,000,000, to remain available until September 30, 2025, for emergency management performance grants.

**SEC. 4015. EXTENSION OF REIMBURSEMENT AUTHORITY FOR FEDERAL CONTRACTORS.**

Section 3610 of the CARES Act (Public Law 116-136; 134 Stat. 414) is amended by striking “September 30, 2020” and inserting “September 30, 2021”.

41 USC 6301  
note prec.

5 USC 8101 note.

**SEC. 4016. ELIGIBILITY FOR WORKERS’ COMPENSATION BENEFITS FOR FEDERAL EMPLOYEES DIAGNOSED WITH COVID-19.**

(a) **IN GENERAL.**—Subject to subsection (c), a covered employee shall, with respect to any claim made by or on behalf of the covered employee for benefits under subchapter I of chapter 81 of title 5, United States Code, be deemed to have an injury proximately caused by exposure to the novel coronavirus arising out of the nature of the covered employee’s employment. Such covered employee, or a beneficiary of such an employee, shall be entitled to such benefits for such claim, including disability compensation, medical services, and survivor benefits.

(b) **DEFINITIONS.**—In this section:

(1) **COVERED EMPLOYEE.**—

(A) **IN GENERAL.**—The term “covered employee” means an individual—

(i) who is an employee under section 8101(1) of title 5, United States Code, employed in the Federal

Time period.

service at anytime during the period beginning on January 27, 2020, and ending on January 27, 2023;

(ii) who is diagnosed with COVID-19 during such period; and

(iii) who, during a covered exposure period prior to such diagnosis, carries out duties that—

(I) require contact with patients, members of the public, or co-workers; or

(II) include a risk of exposure to the novel coronavirus.

(B) TELEWORKING EXCEPTION.—The term “covered employee” does not include any employee otherwise covered by subparagraph (A) who is exclusively teleworking during a covered exposure period, regardless of whether such employment is full time or part time.

(2) COVERED EXPOSURE PERIOD.—The term “covered exposure period” means, with respect to a diagnosis of COVID-19, the period beginning on a date to be determined by the Secretary of Labor.

Determination.

(3) NOVEL CORONAVIRUS.—The term “novel coronavirus” means SARS-CoV-2 or another coronavirus declared to be a pandemic by public health authorities.

(c) LIMITATION.—

(1) DETERMINATIONS MADE ON OR BEFORE THE DATE OF ENACTMENT.—This section shall not apply with respect to a covered employee who is determined to be entitled to benefits under subchapter I of chapter 81 of title 5, United States Code, for a claim described in subsection (a) if such determination is made on or before the date of enactment of this Act.

(2) LIMITATION ON DURATION OF BENEFITS.—No funds are authorized to be appropriated to pay, and no benefits may be paid for, claims approved on the basis of subsection (a) after September 30, 2030. No administrative costs related to any such claim may be paid after such date.

Termination date.

(d) EMPLOYEES’ COMPENSATION FUND.—

(1) IN GENERAL.—The costs of benefits for claims approved on the basis of subsection (a) shall not be included in the annual statement of the cost of benefits and other payments of an agency or instrumentality under section 8147(b) of title 5, United States Code.

(2) FAIR SHARE PROVISION.—Costs of administration for claims described in paragraph (1)—

(A) may be paid from the Employees’ Compensation Fund; and

(B) shall not be subject to the fair share provision in section 8147(c) of title 5, United States Code.

## **TITLE V—COMMITTEE ON SMALL BUSINESS AND ENTREPRENEURSHIP**

### **SEC. 5001. MODIFICATIONS TO PAYCHECK PROTECTION PROGRAM.**

(a) ELIGIBILITY OF CERTAIN NONPROFIT ENTITIES FOR COVERED LOANS UNDER THE PAYCHECK PROTECTION PROGRAM.—

(1) IN GENERAL.—Section 7(a)(36) of the Small Business Act (15 U.S.C. 636(a)(36)), as amended by the Economic Aid

- to Hard-Hit Small Businesses, Nonprofits, and Venues Act (title III of division N of Public Law 116-260), is amended—
- 134 Stat. 1993. (A) in subparagraph (A)—
- (i) in clause (xv), by striking “and” at the end;
  - (ii) in clause (xvi), by striking the period at the end and inserting “; and”; and
  - (iii) by adding at the end the following:
 

Definition. “(xvii) the term ‘additional covered nonprofit entity’—

    - “(I) means an organization described in any paragraph of section 501(c) of the Internal Revenue Code of 1986, other than paragraph (3), (4), (6), or (19), and exempt from tax under section 501(a) of such Code; and
    - “(II) does not include any entity that, if the entity were a business concern, would be described in section 120.110 of title 13, Code of Federal Regulations (or in any successor regulation or other related guidance or rule that may be issued by the Administrator) other than a business concern described in paragraph (a) or (k) of such section.”; and
- (B) in subparagraph (D)—
- (i) in clause (iii), by adding at the end the following:
 

“(III) ELIGIBILITY OF CERTAIN ORGANIZATIONS.—Subject to the provisions in this subparagraph, during the covered period—

    - “(aa) a nonprofit organization shall be eligible to receive a covered loan if the nonprofit organization employs not more than 500 employees per physical location of the organization; and
    - “(bb) an additional covered nonprofit entity and an organization that, but for subclauses (I)(dd) and (II)(dd) of clause (vii), would be eligible for a covered loan under clause (vii) shall be eligible to receive a covered loan if the entity or organization employs not more than 300 employees per physical location of the entity or organization.”; and
  - (ii) by adding at the end the following:
 

“(ix) ELIGIBILITY OF ADDITIONAL COVERED NON-PROFIT ENTITIES.—An additional covered nonprofit entity shall be eligible to receive a covered loan if—

    - “(I) the additional covered nonprofit entity does not receive more than 15 percent of its receipts from lobbying activities;
    - “(II) the lobbying activities of the additional covered nonprofit entity do not comprise more than 15 percent of the total activities of the organization;
    - “(III) the cost of the lobbying activities of the additional covered nonprofit entity did not exceed \$1,000,000 during the most recent tax year of the additional covered nonprofit entity that ended prior to February 15, 2020; and

“(IV) the additional covered nonprofit entity employs not more than 300 employees.”.

(2) ELIGIBILITY FOR SECOND DRAW LOANS.—Paragraph (37)(A)(i) of section 7(a) of the Small Business Act (15 U.S.C. 636(a)), as added by the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (title III of division N of Public Law 116-260), is amended by inserting “‘additional covered nonprofit entity’,” after “the terms”.

134 Stat. 2001.

(b) ELIGIBILITY OF INTERNET PUBLISHING ORGANIZATIONS FOR COVERED LOANS UNDER THE PAYCHECK PROTECTION PROGRAM.—

(1) IN GENERAL.—Section 7(a)(36)(D) of the Small Business Act (15 U.S.C. 636(a)(36)(D)), as amended by subsection (a), is further amended—

(A) in clause (iii), by adding at the end the following:

“(IV) ELIGIBILITY OF INTERNET PUBLISHING ORGANIZATIONS.—A business concern or other organization that was not eligible to receive a covered loan the day before the date of enactment of this subclause, is assigned a North American Industry Classification System code of 519130, certifies in good faith as an Internet-only news publisher or Internet-only periodical publisher, and is engaged in the collection and distribution of local or regional and national news and information shall be eligible to receive a covered loan for the continued provision of news, information, content, or emergency information if—

“(aa) the business concern or organization employs not more than 500 employees, or the size standard established by the Administrator for that North American Industry Classification code, per physical location of the business concern or organization; and

“(bb) the business concern or organization makes a good faith certification that proceeds of the loan will be used to support expenses at the component of the business concern or organization that supports local or regional news.”;

Certification.

(B) in clause (iv)—

(i) in subclause (III), by striking “and” at the end;

(ii) in subclause (IV)(bb), by striking the period at the end and inserting “; and”; and

(iii) by adding at the end the following:

“(V) any business concern or other organization that was not eligible to receive a covered loan the day before the date of enactment of this subclause, is assigned a North American Industry Classification System code of 519130, certifies in good faith as an Internet-only news publisher or Internet-only periodical publisher, and is engaged in the collection and distribution of local or regional and national news and information, if the business concern or organization—

Certification.

“(aa) employs not more than 500 employees, or the size standard established by the Administrator for that North American

Industry Classification code, per physical location of the business concern or organization; and

“(bb) is majority owned or controlled by a business concern or organization that is assigned a North American Industry Classification System code of 519130.”;

(C) in clause (v), by striking “clause (iii)(II), (iv)(IV), or (vii)” and inserting “subclause (II), (III), or (IV) of clause (iii), subclause (IV) or (V) of clause (iv), clause (vii), or clause (ix)”;

(D) in clause (viii)(II)—

(i) by striking “business concern made eligible by clause (iii)(II) or clause (iv)(IV) of this subparagraph” and inserting “business concern made eligible by subclause (II) or (IV) of clause (iii) or subclause (IV) or (V) of clause (iv) of this subparagraph”;

(ii) by inserting “or organization” after “business concern” each place it appears.

(2) ELIGIBILITY FOR SECOND DRAW LOANS.—Section 7(a)(37)(A)(iv)(II) of the Small Business Act, as amended by the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (title III of division N of Public Law 116-260), is amended by striking “clause (iii)(II), (iv)(IV), or (vii)” and inserting “subclause (II), (III), or (IV) of clause (iii), subclause (IV) or (V) of clause (iv), clause (vii), or clause (ix)”.

134 Stat. 2002.

(c) COORDINATION WITH CONTINUATION COVERAGE PREMIUM ASSISTANCE.—

(1) PAYCHECK PROTECTION PROGRAM.—Section 7A(a)(12) of the Small Business Act (as redesignated, transferred, and amended by section 304(b) of the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (Public Law 116-260)) is amended—

134 Stat. 1993.

(A) by striking “CARES Act or” and inserting “CARES Act,”; and

(B) by inserting before the period at the end the following: “, or premiums taken into account in determining the credit allowed under section 6432 of the Internal Revenue Code of 1986”.

(2) PAYCHECK PROTECTION PROGRAM SECOND DRAW.—Section 7(a)(37)(J)(iii)(I) of the Small Business Act, as amended by the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (title III of division N of Public Law 116-260), is amended—

134 Stat. 2005.

(A) by striking “or” at the end of item (aa);

(B) by striking the period at the end of item (bb) and inserting “; or”; and

(C) by adding at the end the following new item:

“(cc) premiums taken into account in determining the credit allowed under section 6432 of the Internal Revenue Code of 1986.”.

15 USC 636 note.

(3) APPLICABILITY.—The amendments made by this subsection shall apply only with respect to applications for forgiveness of covered loans made under paragraphs (36) or (37) of section 7(a) of the Small Business Act, as amended by the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (title III of division N of Public Law 116-260),

that are received on or after the date of the enactment of this Act.

(d) COMMITMENT AUTHORITY AND APPROPRIATIONS.—

(1) COMMITMENT AUTHORITY.—Section 1102(b)(1) of the CARES Act (Public Law 116-136) is amended by striking “\$806,450,000,000” and inserting “\$813,700,000,000”.

134 Stat. 293,  
660, 2019.

(2) DIRECT APPROPRIATIONS.—In addition to amounts otherwise available, there is appropriated to the Administrator of the Small Business Administration for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$7,250,000,000, to remain available until expended, for carrying out this section.

**SEC. 5002. TARGETED EIDL ADVANCE.**

15 USC 9009  
note.

(a) DEFINITIONS.—In this section—

(1) the term “Administrator” means the Administrator of the Small Business Administration; and

(2) the terms “covered entity” and “economic loss” have the meanings given the terms in section 331(a) of the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (title III of division N of Public Law 116-260).

(b) APPROPRIATIONS.—In addition to amounts otherwise available, there is appropriated to the Administrator for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$15,000,000,000—

(1) to remain available until expended; and

(2) of which, the Administrator shall use—

(A) \$10,000,000,000 to make payments to covered entities that have not received the full amounts to which the covered entities are entitled under section 331 of the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (title III of division N of Public Law 116-260); and

(B) \$5,000,000,000 to make payments under section 1110(e) of the CARES Act (15 U.S.C. 9009(e)), each of which shall be—

(i) made to a covered entity that—

(I) has suffered an economic loss of greater than 50 percent; and

(II) employs not more than 10 employees;

(ii) in an amount that is \$5,000; and

(iii) with respect to the covered entity to which the payment is made, in addition to any payment made to the covered entity under section 1110(e) of the CARES Act (15 U.S.C. 9009(e)) or section 331 of the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (title III of division N of Public Law 116-260).

**SEC. 5003. SUPPORT FOR RESTAURANTS.**

15 USC 9009c.

(a) DEFINITIONS.—In this section:

(1) ADMINISTRATOR.—The term “Administrator” means the Administrator of the Small Business Administration.

(2) AFFILIATED BUSINESS.—The term “affiliated business” means a business in which an eligible entity has an equity or right to profit distributions of not less than 50 percent, or in which an eligible entity has the contractual authority to control the direction of the business, provided that such

Determination.  
Agreement date.

affiliation shall be determined as of any arrangements or agreements in existence as of March 13, 2020.

(3) COVERED PERIOD.—The term “covered period” means the period—

(A) beginning on February 15, 2020; and

Determination.  
Deadline.

(B) ending on December 31, 2021, or a date to be determined by the Administrator that is not later than 2 years after the date of enactment of this section.

(4) ELIGIBLE ENTITY.—The term “eligible entity”—

(A) means a restaurant, food stand, food truck, food cart, caterer, saloon, inn, tavern, bar, lounge, brewpub, tasting room, taproom, licensed facility or premise of a beverage alcohol producer where the public may taste, sample, or purchase products, or other similar place of business in which the public or patrons assemble for the primary purpose of being served food or drink;

(B) includes an entity described in subparagraph (A) that is located in an airport terminal or that is a Tribally-owned concern; and

(C) does not include—

(i) an entity described in subparagraph (A) that—

(I) is a State or local government-operated business;

Agreement date.

(II) as of March 13, 2020, owns or operates (together with any affiliated business) more than 20 locations, regardless of whether those locations do business under the same or multiple names; or

(III) has a pending application for or has received a grant under section 324 of the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (title III of division N of Public Law 116-260); or

(ii) a publicly-traded company.

(5) EXCHANGE; ISSUER; SECURITY.—The terms “exchange”, “issuer”, and “security” have the meanings given those terms in section 3(a) of the Securities Exchange Act of 1934 (15 U.S.C. 78c(a)).

(6) FUND.—The term “Fund” means the Restaurant Revitalization Fund established under subsection (b).

(7) PANDEMIC-RELATED REVENUE LOSS.—The term “pandemic-related revenue loss” means, with respect to an eligible entity—

(A) except as provided in subparagraphs (B), (C), and (D), the gross receipts, as established using such verification documentation as the Administrator may require, of the eligible entity during 2020 subtracted from the gross receipts of the eligible entity in 2019, if such sum is greater than zero;

(B) if the eligible entity was not in operation for the entirety of 2019—

(i) the difference between—

(I) the product obtained by multiplying the average monthly gross receipts of the eligible entity in 2019 by 12; and

- (II) the product obtained by multiplying the average monthly gross receipts of the eligible entity in 2020 by 12; or
  - (i) an amount based on a formula determined by the Administrator; Determination.
  - (C) if the eligible entity opened during the period beginning on January 1, 2020, and ending on the day before the date of enactment of this section— Time period.
    - (i) the expenses described in subsection (c)(5)(A) that were incurred by the eligible entity minus any gross receipts received; or
    - (ii) an amount based on a formula determined by the Administrator; Determination.
  - (D) if the eligible entity has not yet opened as of the date of application for a grant under subsection (c), but has incurred expenses described in subsection (c)(5)(A) as of the date of enactment of this section—
    - (i) the amount of those expenses; or
    - (ii) an amount based on a formula determined by the Administrator. Determination.

For purposes of this paragraph, the pandemic-related revenue losses for an eligible entity shall be reduced by any amounts received from a covered loan made under paragraph (36) or (37) of section 7(a) of the Small Business Act (15 U.S.C. 636(a)) in 2020 or 2021.

(8) PAYROLL COSTS.—The term “payroll costs” has the meaning given the term in section 7(a)(36)(A) of the Small Business Act (15 U.S.C. 636(a)(36)(A)), except that such term shall not include—

(A) qualified wages (as defined in subsection (c)(3) of section 2301 of the CARES Act) taken into account in determining the credit allowed under such section 2301; or

(B) premiums taken into account in determining the credit allowed under section 6432 of the Internal Revenue Code of 1986.

(9) PUBLICLY-TRADED COMPANY.—The term “publicly-traded company” means an entity that is majority owned or controlled by an entity that is an issuer, the securities of which are listed on a national securities exchange under section 6 of the Securities Exchange Act of 1934 (15 U.S.C. 78f).

(10) TRIBALLY-OWNED CONCERN.—The term “Tribally-owned concern” has the meaning given the term in section 124.3 of title 13, Code of Federal Regulations, or any successor regulation.

(b) RESTAURANT REVITALIZATION FUND.—

(1) IN GENERAL.—There is established in the Treasury of the United States a fund to be known as the Restaurant Revitalization Fund.

(2) APPROPRIATIONS.—

(A) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Restaurant Revitalization Fund for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$28,600,000,000, to remain available until expended.

(B) DISTRIBUTION.—

(i) IN GENERAL.—Of the amounts made available under subparagraph (A)—

(I) \$5,000,000,000 shall be available to eligible entities with gross receipts during 2019 of not more than \$500,000; and

(II) \$23,600,000,000 shall be available to the Administrator to award grants under subsection (c) in an equitable manner to eligible entities of different sizes based on annual gross receipts.

(ii) ADJUSTMENTS.—The Administrator may make adjustments as necessary to the distribution of funds under clause (i)(II) based on demand and the relative local costs in the markets in which eligible entities operate.

Effective date.  
Determination.

(C) GRANTS AFTER INITIAL PERIOD.—Notwithstanding subparagraph (B), on and after the date that is 60 days after the date of enactment of this section, or another period of time determined by the Administrator, the Administrator may make grants using amounts appropriated under subparagraph (A) to any eligible entity regardless of the annual gross receipts of the eligible entity.

(3) USE OF FUNDS.—The Administrator shall use amounts in the Fund to make grants described in subsection (c).

(c) RESTAURANT REVITALIZATION GRANTS.—

(1) IN GENERAL.—Except as provided in subsection (b) and paragraph (3), the Administrator shall award grants to eligible entities in the order in which applications are received by the Administrator.

(2) APPLICATION.—

(A) CERTIFICATION.—An eligible entity applying for a grant under this subsection shall make a good faith certification that—

(i) the uncertainty of current economic conditions makes necessary the grant request to support the ongoing operations of the eligible entity; and

(ii) the eligible entity has not applied for or received a grant under section 324 of the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (title III of division N of Public Law 116-260).

(B) BUSINESS IDENTIFIERS.—In accepting applications for grants under this subsection, the Administrator shall prioritize the ability of each applicant to use their existing business identifiers over requiring other forms of registration or identification that may not be common to their industry and imposing additional burdens on applicants.

(3) PRIORITY IN AWARDING GRANTS.—

Time period.

(A) IN GENERAL.—During the initial 21-day period in which the Administrator awards grants under this subsection, the Administrator shall prioritize awarding grants to eligible entities that are small business concerns owned and controlled by women (as defined in section 3(n) of the Small Business Act (15 U.S.C. 632(n))), small business concerns owned and controlled by veterans (as defined in section 3(q) of such Act (15 U.S.C. 632(q))), or socially and economically disadvantaged small business concerns (as defined in section 8(a)(4)(A) of the Small Business Act

(15 U.S.C. 637(a)(4)(A))). The Administrator may take such steps as necessary to ensure that eligible entities described in this subparagraph have access to grant funding under this section after the end of such 21-day period.

(B) CERTIFICATION.—For purposes of establishing priority under subparagraph (A), an applicant shall submit a self-certification of eligibility for priority with the grant application.

(4) GRANT AMOUNT.—

(A) AGGREGATE MAXIMUM AMOUNT.—The aggregate amount of grants made to an eligible entity and any affiliated businesses of the eligible entity under this subsection—

(i) shall not exceed \$10,000,000; and

(ii) shall be limited to \$5,000,000 per physical location of the eligible entity.

(B) DETERMINATION OF GRANT AMOUNT.—

(i) IN GENERAL.—Except as provided in this paragraph, the amount of a grant made to an eligible entity under this subsection shall be equal to the pandemic-related revenue loss of the eligible entity.

(ii) RETURN TO TREASURY.—Any amount of a grant made under this subsection to an eligible entity based on estimated receipts that is greater than the actual gross receipts of the eligible entity in 2020 shall be returned to the Treasury.

(5) USE OF FUNDS.—During the covered period, an eligible entity that receives a grant under this subsection may use the grant funds for the following expenses incurred as a direct result of, or during, the COVID-19 pandemic:

(A) Payroll costs.

(B) Payments of principal or interest on any mortgage obligation (which shall not include any prepayment of principal on a mortgage obligation).

(C) Rent payments, including rent under a lease agreement (which shall not include any prepayment of rent).

(D) Utilities.

(E) Maintenance expenses, including—

(i) construction to accommodate outdoor seating; and

(ii) walls, floors, deck surfaces, furniture, fixtures, and equipment.

(F) Supplies, including protective equipment and cleaning materials.

(G) Food and beverage expenses that are within the scope of the normal business practice of the eligible entity before the covered period.

(H) Covered supplier costs, as defined in section 7A(a) of the Small Business Act (as redesignated, transferred, and amended by section 304(b) of the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (Public Law 116-260)).

(I) Operational expenses.

(J) Paid sick leave.

(K) Any other expenses that the Administrator determines to be essential to maintaining the eligible entity.

(6) RETURNING FUNDS.—If an eligible entity that receives a grant under this subsection fails to use all grant funds or permanently ceases operations on or before the last day of the covered period, the eligible entity shall return to the Treasury any funds that the eligible entity did not use for the allowable expenses under paragraph (5).

15 USC 9013.

**SEC. 5004. COMMUNITY NAVIGATOR PILOT PROGRAM.**

(a) DEFINITIONS.—In this section:

(1) ADMINISTRATION.—The term “Administration” means the Small Business Administration.

(2) ADMINISTRATOR.—The term “Administrator” means the Administrator of the Small Business Administration.

(3) COMMUNITY NAVIGATOR SERVICES.—The term “community navigator services” means the outreach, education, and technical assistance provided by community navigators that target eligible businesses to increase awareness of, and participation in, programs of the Small Business Administration.

(4) COMMUNITY NAVIGATOR.—The term “community navigator” means a community organization, community financial institution as defined in section 7(a)(36)(A) of the Small Business Act (15 U.S.C. 636(a)(36)(A)), or other private nonprofit organization engaged in the delivery of community navigator services.

(5) ELIGIBLE BUSINESS.—The term “eligible business” means any small business concern, with priority for small business concerns owned and controlled by women (as defined in section 3(n) of the Small Business Act (15 U.S.C. 632(n))), small business concerns owned and controlled by veterans (as defined in section 3(q) of such Act (15 U.S.C. 632(q))), and socially and economically disadvantaged small business concerns (as defined in section 8(a)(4)(A) of the Small Business Act (15 U.S.C. 637(a)(4)(A))).

(6) PRIVATE NONPROFIT ORGANIZATION.—The term “private nonprofit organization” means an entity that is described in section 501(c) of the Internal Revenue Code of 1986 and exempt from tax under section 501(a) of such Code.

(7) RESOURCE PARTNER.—The term “resource partner” means—

(A) a small business development center (as defined in section 3 of the Small Business Act (15 U.S.C. 632));

(B) a women’s business center (as described in section 29 of the Small Business Act (15 U.S.C. 656)); and

(C) a chapter of the Service Corps of Retired Executives (as defined in section 8(b)(1)(B) of the Act (15 U.S.C. 637(b)(1)(B))).

(8) SMALL BUSINESS CONCERN.—The term “small business concern” has the meaning given under section 3 of the Small Business Act (15 U.S.C. 632).

(9) STATE.—The term “State” means a State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, the Commonwealth of the Northern Mariana Islands, and Guam, or an agency, instrumentality, or fiscal agent thereof.

(10) UNIT OF GENERAL LOCAL GOVERNMENT.—The term “unit of general local government” means a county, city, town, village, or other general purpose political subdivision of a State.

## (b) COMMUNITY NAVIGATOR PILOT PROGRAM.—

(1) IN GENERAL.—The Administrator of the Small Business Administration shall establish a Community Navigator pilot program to make grants to, or enter into contracts or cooperative agreements with, private nonprofit organizations, resource partners, States, Tribes, and units of local government to ensure the delivery of free community navigator services to current or prospective owners of eligible businesses in order to improve access to assistance programs and resources made available because of the COVID-19 pandemic by Federal, State, Tribal, and local entities.

Grants.  
Contracts.

(2) APPROPRIATIONS.—In addition to amounts otherwise available, there is appropriated to the Administrator for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$100,000,000, to remain available until September 30, 2022, for carrying out this subsection.

## (c) OUTREACH AND EDUCATION.—

(1) PROMOTION.—The Administrator shall develop and implement a program to promote community navigator services to current or prospective owners of eligible businesses.

(2) CALL CENTER.—The Administrator shall establish a telephone hotline to offer information about Federal programs to assist eligible businesses and offer referral services to resource partners, community navigators, potential lenders, and other persons that the Administrator determines appropriate for current or prospective owners of eligible businesses.

Determination.

## (3) OUTREACH.—The Administrator shall—

(A) conduct outreach and education, in the 10 most commonly spoken languages in the United States, to current or prospective owners of eligible businesses on community navigator services and other Federal programs to assist eligible businesses;

(B) improve the website of the Administration to describe such community navigator services and other Federal programs; and

(C) implement an education campaign by advertising in media targeted to current or prospective owners of eligible businesses.

(4) APPROPRIATIONS.—In addition to amounts otherwise available, there is appropriated to the Administrator for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$75,000,000, to remain available until September 30, 2022, for carrying out this subsection.

(d) SUNSET.—The authority of the Administrator to make grants under this section shall terminate on December 31, 2025.

**SEC. 5005. SHUTTERED VENUE OPERATORS.**

(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$1,250,000,000, to remain available until expended, to carry out section 324 of the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (title III of division N of Public Law 116-260), of which \$500,000 shall be used to provide technical assistance to help applicants access the System for Award Management (or any successor thereto) or to assist applicants with an alternative grant application system.

(b) REDUCTION OF SHUTTERED VENUES ASSISTANCE FOR NEW PPP RECIPIENTS.—Section 324 of the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (title III of division N of Public Law 116-260), is amended—

134 Stat. 2024.

(1) in subsection (a)(1)(A)(vi)—

(A) by striking subclause (III);

(B) by redesignating subclause (IV) as subclause (III);

and

(C) in subclause (III), as so redesignated, by striking “subclauses (I), (II), and (III)” and inserting “subclauses (I) and (II)”; and

134 Stat. 2029.

(2) in subsection (c)(1)—

(A) in subparagraph (A), in the matter preceding clause (i), by striking “A grant” and inserting “Subject to subparagraphs (B) and (C), a grant”; and

(B) by adding at the end the following:

“(C) REDUCTION FOR RECIPIENTS OF NEW PPP LOANS.—

Effective date.

“(i) IN GENERAL.—The otherwise applicable amount of a grant under subsection (b)(2) to an eligible person or entity shall be reduced by the total amount of loans guaranteed under paragraph (36) or (37) of section 7(a) of the Small Business Act (15 U.S.C. 636(a)) that are received on or after December 27, 2020 by the eligible person or entity.

“(ii) APPLICATION TO GOVERNMENTAL ENTITIES.—For purposes of applying clause (i) to an eligible person or entity owned by a State or a political subdivision of a State, the relevant entity—

“(I) shall be the eligible person or entity; and

“(II) shall not include entities of the State or political subdivision other than the eligible person or entity.”.

#### SEC. 5006. DIRECT APPROPRIATIONS.

(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Administrator for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, to remain available until expended—

(1) \$840,000,000 for administrative expenses, including to prevent, prepare for, and respond to the COVID-19 pandemic, domestically or internationally, including administrative expenses related to paragraphs (36) and (37) of section 7(a) of the Small Business Act, section 324 of the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (title III of division N of Public Law 116-260), section 5002 of this title, and section 5003 of this title; and

(2) \$460,000,000 to carry out the disaster loan program authorized by section 7(b) of the Small Business Act (15 U.S.C. 636(b)), of which \$70,000,000 shall be for the cost of direct loans authorized by such section and \$390,000,000 shall be for administrative expenses to carry out such program.

(b) INSPECTOR GENERAL.—In addition to amounts otherwise available, there is appropriated to the Inspector General of the Small Business Administration for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$25,000,000, to remain available until expended, for necessary expenses of the Office of Inspector General.

## TITLE VI—COMMITTEE ON ENVIRONMENT AND PUBLIC WORKS

### SEC. 6001. ECONOMIC ADJUSTMENT ASSISTANCE.

(a) ECONOMIC DEVELOPMENT ADMINISTRATION APPROPRIATION.—In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$3,000,000,000, to remain available until September 30, 2022, to the Department of Commerce for economic adjustment assistance as authorized by sections 209 and 703 of the Public Works and Economic Development Act of 1965 (42 U.S.C. 3149 and 3233) to prevent, prepare for, and respond to coronavirus and for necessary expenses for responding to economic injury as a result of coronavirus.

(b) Of the funds provided by this section, up to 2 percent shall be used for Federal costs to administer such assistance utilizing temporary Federal personnel as may be necessary consistent with the requirements applicable to such administrative funding in fiscal year 2020 to prevent, prepare for, and respond to coronavirus and which shall remain available until September 30, 2027.

(c) Of the funds provided by this section, 25 percent shall be for assistance to States and communities that have suffered economic injury as a result of job and gross domestic product losses in the travel, tourism, or outdoor recreation sectors.

### SEC. 6002. FUNDING FOR POLLUTION AND DISPARATE IMPACTS OF THE COVID-19 PANDEMIC.

(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Environmental Protection Agency for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$100,000,000, to remain available until expended, to address health outcome disparities from pollution and the COVID-19 pandemic, of which—

(1) \$50,000,000, shall be for grants, contracts, and other agency activities that identify and address disproportionate environmental or public health harms and risks in minority populations or low-income populations under—

(A) section 103(b) of the Clean Air Act (42 U.S.C. 7403(b));

(B) section 1442 of the Safe Drinking Water Act (42 U.S.C. 300j-1);

(C) section 104(k)(7)(A) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (42 U.S.C. 9604(k)(7)(A)); and

(D) sections 791 through 797 of the Energy Policy Act of 2005 (42 U.S.C. 16131 through 16137); and

(2) \$50,000,000 shall be for grants and activities authorized under subsections (a) through (c) of section 103 of the Clean Air Act (42 U.S.C. 7403) and grants and activities authorized under section 105 of such Act (42 U.S.C. 7405).

(b) ADMINISTRATION OF FUNDS.—

(1) Of the funds made available pursuant to subsection (a)(1), the Administrator shall reserve 2 percent for administrative costs necessary to carry out activities funded pursuant to such subsection.

(2) Of the funds made available pursuant to subsection (a)(2), the Administrator shall reserve 5 percent for activities funded pursuant to such subsection other than grants.

**SEC. 6003. UNITED STATES FISH AND WILDLIFE SERVICE.**

(a) INSPECTION, INTERDICTION, AND RESEARCH RELATED TO CERTAIN SPECIES AND COVID-19.—In addition to amounts otherwise made available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$95,000,000 to remain available until expended, to carry out the provisions of the Fish and Wildlife Act of 1956 (16 U.S.C. 742a et seq.) and the Fish and Wildlife Coordination Act (16 U.S.C. 661 et seq.) through direct expenditure, contracts, and grants, of which—

(1) \$20,000,000 shall be for wildlife inspections, interdictions, investigations, and related activities, and for efforts to address wildlife trafficking;

(2) \$30,000,000 shall be for the care of captive species listed under the Endangered Species Act of 1973, for the care of rescued and confiscated wildlife, and for the care of Federal trust species in facilities experiencing lost revenues due to COVID-19; and

(3) \$45,000,000 shall be for research and extension activities to strengthen early detection, rapid response, and science-based management to address wildlife disease outbreaks before they become pandemics and strengthen capacity for wildlife health monitoring to enhance early detection of diseases that have capacity to jump the species barrier and pose a risk in the United States, including the development of a national wildlife disease database.

(b) LACEY ACT PROVISIONS.—In addition to amounts otherwise made available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$10,000,000, to remain available until expended, to carry out the provisions of section 42(a) of title 18, United States Code, and the Lacey Act Amendments of 1981 (16 U.S.C. 3371–3378).

**TITLE VII—COMMITTEE ON COMMERCE,  
SCIENCE, AND TRANSPORTATION**

**Subtitle A—Transportation and  
Infrastructure**

**SEC. 7101. GRANTS TO THE NATIONAL RAILROAD PASSENGER CORPORATION.**

(a) NORTHEAST CORRIDOR APPROPRIATION.—In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$970,388,160, to remain available until September 30, 2024, for grants as authorized under section 11101(a) of the FAST Act (Public Law 114-94) to prevent, prepare for, and respond to coronavirus.

(b) NATIONAL NETWORK APPROPRIATION.—In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$729,611,840, to remain available until September 30, 2024, for

grants as authorized under section 11101(b) of the FAST Act (Public Law 114-94) to prevent, prepare for, and respond to coronavirus.

(c) LONG-DISTANCE SERVICE RESTORATION AND EMPLOYEE RECALLS.—Not less than \$165,926,000 of the aggregate amounts made available under subsections (a) and (b) shall be for use by the National Railroad Passenger Corporation to— Effective dates.

(1) restore, not later than 90 days after the date of enactment of this Act, the frequency of rail service on long-distance routes (as defined in section 24102 of title 49, United States Code) that the National Railroad Passenger Corporation reduced the frequency of on or after July 1, 2020, and continue to operate such service at such frequency; and Deadline.

(2) recall and manage employees furloughed on or after October 1, 2020, as a result of efforts to prevent, prepare for, and respond to coronavirus. Furloughs.

(d) USE OF FUNDS IN LIEU OF CAPITAL PAYMENTS.—Not less than \$109,805,000 of the aggregate amounts made available under subsections (a) and (b)—

(1) shall be for use by the National Railroad Passenger Corporation in lieu of capital payments from States and commuter rail passenger transportation providers that are subject to the cost allocation policy under section 24905(c) of title 49, United States Code; and

(2) notwithstanding sections 24319(g) and 24905(c)(1)(A)(i) of title 49, United States Code, such amounts do not constitute cross-subsidization of commuter rail passenger transportation.

(e) USE OF FUNDS FOR STATE PAYMENTS FOR STATE-SUPPORTED ROUTES.—

(1) IN GENERAL.—Of the amounts made available under subsection (b), \$174,850,000 shall be for use by the National Railroad Passenger Corporation to offset amounts required to be paid by States for covered State-supported routes.

(2) FUNDING SHARE.—The share of funding provided under paragraph (1) with respect to a covered State-supported route shall be distributed as follows:

(A) Each covered State-supported route shall receive 7 percent of the costs allocated to the route in fiscal year 2019 under the cost allocation methodology adopted pursuant to section 209 of the Passenger Rail Investment and Improvement Act of 2008 (Public Law 110-432).

(B) Any remaining amounts after the distribution described in subparagraph (A) shall be apportioned to each covered State-supported route in proportion to the passenger revenue of such route and other revenue allocated to such route in fiscal year 2019 divided by the total passenger revenue and other revenue allocated to all covered State-supported routes in fiscal year 2019. Apportionment.

(3) COVERED STATE-SUPPORTED ROUTE DEFINED.—In this subsection, the term “covered State-supported route” means a State-supported route, as such term is defined in section 24102 of title 49, United States Code, but does not include a State-supported route for which service was terminated on or before February 1, 2020. Termination date.

(f) USE OF FUNDS FOR DEBT REPAYMENT OR PREPAYMENT.—Not more than \$100,885,000 of the aggregate amounts made available under subsections (a) and (b) shall be—

(1) for the repayment or prepayment of debt incurred by the National Railroad Passenger Corporation under financing arrangements entered into prior to the date of enactment of this Act; and

(2) to pay required reserves, costs, and fees related to such debt, including for loans from the Department of Transportation and loans that would otherwise have been paid from National Railroad Passenger Corporation revenues.

(g) PROJECT MANAGEMENT OVERSIGHT.—Not more than \$2,000,000 of the aggregate amounts made available under subsections (a) and (b) shall be for activities authorized under section 11101(c) of the FAST Act (Public Law 114-94).

15 USC 9121.

**SEC. 7102. RELIEF FOR AIRPORTS.**

(a) IN GENERAL.—

(1) IN GENERAL.—In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any funds in the Treasury not otherwise appropriated, \$8,000,000,000, to remain available until September 30, 2024, for assistance to sponsors of airports, as such terms are defined in section 47102 of title 49, United States Code, to be made available to prevent, prepare for, and respond to coronavirus.

(2) REQUIREMENTS AND LIMITATIONS.—Amounts made available under this section—

(A) may not be used for any purpose not directly related to the airport; and

(B) may not be provided to any airport that was allocated in excess of 4 years of operating funds to prevent, prepare for, and respond to coronavirus in fiscal year 2020.

Applicability.

(b) ALLOCATIONS.—The following terms shall apply to the amounts made available under this section:

(1) OPERATING EXPENSES AND DEBT SERVICE PAYMENTS.—

(A) IN GENERAL.—Not more than \$6,492,000,000 shall be made available for primary airports, as such term is defined in section 47102 of title 49, United States Code, and certain cargo airports, for costs related to operations, personnel, cleaning, sanitization, janitorial services, combating the spread of pathogens at the airport, and debt service payments.

(B) DISTRIBUTION.— Amounts made available under this paragraph—

(i) shall not be subject to the reduced apportionments under section 47114(f) of title 49, United States Code;

(ii) shall first be apportioned as set forth in sections 47114(c)(1)(A), 47114(c)(1)(C)(i), 47114(c)(1)(C)(ii), 47114(c)(2)(A), 47114(c)(2)(B), and 47114(c)(2)(E) of title 49, United States Code; and

(iii) shall not be subject to a maximum apportionment limit set forth in section 47114(c)(1)(B) of title 49, United States Code.

(C) REMAINING AMOUNTS.—Any amount remaining after distribution under subparagraph (B) shall be distributed to the sponsor of each primary airport (as such term is defined in section 47102 of title 49, United States Code) based on each such primary airport's passenger enplanements compared to the total passenger

enplanements of all such primary airports in calendar year 2019.

(2) FEDERAL SHARE FOR DEVELOPMENT PROJECTS.—

(A) IN GENERAL.—Not more than \$608,000,000 allocated under subsection (a)(1) shall be available to pay a Federal share of 100 percent of the costs for any grant awarded in fiscal year 2021, or in fiscal year 2020 with less than a 100-percent Federal share, for an airport development project (as such term is defined in section 47102 of title 49).

(B) REMAINING AMOUNTS.—Any amount remaining under this paragraph shall be distributed as described in paragraph (1)(C).

(3) NONPRIMARY AIRPORTS.—

(A) IN GENERAL.—Not more than \$100,000,000 shall be made available for general aviation and commercial service airports that are not primary airports (as such terms are defined in section 47102 of title 49, United States Code) for costs related to operations, personnel, cleaning, sanitization, janitorial services, combating the spread of pathogens at the airport, and debt service payments.

(B) DISTRIBUTION.—Amounts made available under this paragraph shall be apportioned to each non-primary airport based on the categories published in the most current National Plan of Integrated Airport Systems, reflecting the percentage of the aggregate published eligible development costs for each such category, and then dividing the allocated funds evenly among the eligible airports in each category, rounding up to the nearest thousand dollars.

(C) REMAINING AMOUNTS.—Any amount remaining under this paragraph shall be distributed as described in paragraph (1)(C).

(4) AIRPORT CONCESSIONS.—

(A) IN GENERAL.—Not more than \$800,000,000 shall be made available for sponsors of primary airports to provide relief from rent and minimum annual guarantees to airport concessions, of which at least \$640,000,000 shall be available to provide relief to eligible small airport concessions and of which at least \$160,000,000 shall be available to provide relief to eligible large airport concessions located at primary airports.

(B) DISTRIBUTION.—The amounts made available for each set-aside in this paragraph shall be distributed to the sponsor of each primary airport (as such term is defined in section 47102 of title 49, United States Code) based on each such primary airport's passenger enplanements compared to the total passenger enplanements of all such primary airports in calendar year 2019.

(C) CONDITIONS.—As a condition of approving a grant under this paragraph—

(i) the sponsor shall provide such relief from the date of enactment of this Act until the sponsor has provided relief equaling the total grant amount, to the extent practicable and to the extent permissible under State laws, local laws, and applicable trust indentures; and

(ii) for each set-aside, the sponsor shall provide relief from rent and minimum annual guarantee obligations to each eligible airport concession in an amount that reflects each eligible airport concession's proportional share of the total amount of the rent and minimum annual guarantees of those eligible airport concessions at such airport.

(c) ADMINISTRATION.—

(1) ADMINISTRATIVE EXPENSES.—The Administrator of the Federal Aviation Administration may retain up to 0.1 percent of the funds provided under this section to fund the award of, and oversight by the Administrator of, grants made under this section.

(2) WORKFORCE RETENTION REQUIREMENTS.—

Extension.  
Retention date.

(A) REQUIRED RETENTION.—As a condition for receiving funds provided under this section, an airport shall continue to employ, through September 30, 2021, at least 90 percent of the number of individuals employed (after making adjustments for retirements or voluntary employee separations) by the airport as of March 27, 2020.

Determination.

(B) WAIVER OF RETENTION REQUIREMENT.—The Secretary shall waive the workforce retention requirement if the Secretary determines that—

(i) the airport is experiencing economic hardship as a direct result of the requirement; or

(ii) the requirement reduces aviation safety or security.

(C) EXCEPTION.—The workforce retention requirement shall not apply to nonhub airports or nonprimary airports receiving funds under this section.

(D) NONCOMPLIANCE.—Any financial assistance provided under this section to an airport that fails to comply with the workforce retention requirement described in subparagraph (A), and does not otherwise qualify for a waiver or exception under this paragraph, shall be subject to clawback by the Secretary.

(d) DEFINITIONS.—In this section:

(1) ELIGIBLE LARGE AIRPORT CONCESSION.—The term “eligible large airport concession” means a concession (as defined in section 23.3 of title 49, Code of Federal Regulations), that is in-terminal and has maximum gross receipts, averaged over the previous three fiscal years, of more than \$56,420,000.

(2) ELIGIBLE SMALL AIRPORT CONCESSION.—The term “eligible small airport concession” means a concession (as defined in section 23.3 of title 49, Code of Federal Regulations), that is in-terminal and—

Time period.

(A) a small business with maximum gross receipts, averaged over the previous 3 fiscal years, of less than \$56,420,000; or

(B) is a joint venture (as defined in section 23.3 of title 49, Code of Federal Regulations).

49 USC 106 note. **SEC. 7103. EMERGENCY FAA EMPLOYEE LEAVE FUND.**

(a) ESTABLISHMENT; APPROPRIATION.—There is established in the Federal Aviation Administration the Emergency FAA Employee Leave Fund (in this section referred to as the “Fund”), to be

administered by the Administrator of the Federal Aviation Administration, for the purposes set forth in subsection (b). In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$9,000,000, which shall be deposited into the Fund and remain available through September 30, 2022.

(b) PURPOSE.—Amounts in the Fund shall be available to the Administrator for the use of paid leave under this section by any employee of the Administration who is unable to work because the employee—

(1) is subject to a Federal, State, or local quarantine or isolation order related to COVID-19;

(2) has been advised by a health care provider to self-quarantine due to concerns related to COVID-19;

(3) is caring for an individual who is subject to such an order or has been so advised;

(4) is experiencing symptoms of COVID-19 and seeking a medical diagnosis;

(5) is caring for a son or daughter of such employee if the school or place of care of the son or daughter has been closed, if the school of such son or daughter requires or makes optional a virtual learning instruction model or requires or makes optional a hybrid of in-person and virtual learning instruction models, or the child care provider of such son or daughter is unavailable, due to COVID-19 precautions;

(6) is experiencing any other substantially similar condition;

(7) is caring for a family member with a mental or physical disability or who is 55 years of age or older and incapable of self-care, without regard to whether another individual other than the employee is available to care for such family member, if the place of care for such family member is closed or the direct care provider is unavailable due to COVID-19; or

(8) is obtaining immunization related to COVID-19 or is recovering from any injury, disability, illness, or condition related to such immunization.

(c) LIMITATIONS.—

(1) PERIOD OF AVAILABILITY.—Paid leave under this section may only be provided to and used by an employee of the Administration during the period beginning on the date of enactment of this section and ending on September 30, 2021.

(2) TOTAL HOURS; AMOUNT.—Paid leave under this section—

(A) shall be provided to an employee of the Administration in an amount not to exceed 600 hours of paid leave for each full-time employee, and in the case of a part-time employee, employee on an uncommon tour of duty, or employee with a seasonal work schedule, in an amount not to exceed the proportional equivalent of 600 hours to the extent amounts in the Fund remain available for reimbursement;

(B) shall be paid at the same hourly rate as other leave payments; and

(C) may not be provided to an employee if the leave would result in payments greater than \$2,800 in aggregate for any biweekly pay period for a full-time employee, or a proportionally equivalent biweekly limit for a part-time employee.

(3) RELATIONSHIP TO OTHER LEAVE.—Paid leave under this section—

(A) is in addition to any other leave provided to an employee of the Administration; and

(B) may not be used by an employee of the Administration concurrently with any other paid leave.

(4) CALCULATION OF RETIREMENT BENEFIT.—Any paid leave provided to an employee of the Administration under this section shall reduce the total service used to calculate any Federal civilian retirement benefit.

49 USC 114 note. **SEC. 7104. EMERGENCY TSA EMPLOYEE LEAVE FUND.**

(a) ESTABLISHMENT; APPROPRIATION.—There is established in the Transportation Security Administration (in this section referred to as the “Administration”) the Emergency TSA Employee Leave Fund (in this section referred to as the “Fund”), to be administered by the Administrator of the Administration, for the purposes set forth in subsection (b). In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$13,000,000, which shall be deposited into the Fund and remain available through September 30, 2022.

(b) PURPOSE.—Amounts in the Fund shall be available to the Administration for the use of paid leave under this section by any employee of the Administration who is unable to work because the employee—

(1) is subject to a Federal, State, or local quarantine or isolation order related to COVID-19;

(2) has been advised by a health care provider to self-quarantine due to concerns related to COVID-19;

(3) is caring for an individual who is subject to such an order or has been so advised;

(4) is experiencing symptoms of COVID-19 and seeking a medical diagnosis;

(5) is caring for a son or daughter of such employee if the school or place of care of the son or daughter has been closed, if the school of such son or daughter requires or makes optional a virtual learning instruction model or requires or makes optional a hybrid of in-person and virtual learning instruction models, or the child care provider of such son or daughter is unavailable, due to COVID-19 precautions;

(6) is experiencing any other substantially similar condition;

(7) is caring for a family member with a mental or physical disability or who is 55 years of age or older and incapable of self-care, without regard to whether another individual other than the employee is available to care for such family member, if the place of care for such family member is closed or the direct care provider is unavailable due to COVID-19; or

(8) is obtaining immunization related to COVID-19 or is recovering from any injury, disability, illness, or condition related to such immunization.

(c) LIMITATIONS.—

(1) PERIOD OF AVAILABILITY.—Paid leave under this section may only be provided to and used by an employee of the Administration during the period beginning on the date of enactment of this section and ending on September 30, 2021.

(2) TOTAL HOURS; AMOUNT.—Paid leave under this section—

(A) shall be provided to an employee of the Administration in an amount not to exceed 600 hours of paid leave for each full-time employee, and in the case of a part-time employee, employee on an uncommon tour of duty, or employee with a seasonal work schedule, in an amount not to exceed the proportional equivalent of 600 hours to the extent amounts in the Fund remain available for reimbursement;

(B) shall be paid at the same hourly rate as other leave payments; and

(C) may not be provided to an employee if the leave would result in payments greater than \$2,800 in aggregate for any biweekly pay period for a full-time employee, or a proportionally equivalent biweekly limit for a part-time employee.

(3) RELATIONSHIP TO OTHER LEAVE.—Paid leave under this section—

(A) is in addition to any other leave provided to an employee of the Administration; and

(B) may not be used by an employee of the Administration concurrently with any other paid leave.

(4) CALCULATION OF RETIREMENT BENEFIT.—Any paid leave provided to an employee of the Administration under this section shall reduce the total service used to calculate any Federal civilian retirement benefit.

## **Subtitle B—Aviation Manufacturing Jobs Protection**

### **SEC. 7201. DEFINITIONS.**

15 USC 9131.

In this subtitle:

(1) ELIGIBLE EMPLOYEE GROUP.—The term “eligible employee group” means the portion of an employer’s United States workforce that—

(A) does not exceed 25 percent of the employer’s total United States workforce as of April 1, 2020; and

(B) contains only employees with a total compensation level of \$200,000 or less per year; and

(C) is engaged in aviation manufacturing activities and services, or maintenance, repair, and overhaul activities and services.

(2) AVIATION MANUFACTURING COMPANY.—The term “aviation manufacturing company” means a corporation, firm, or other business entity—

(A) that—

(i) actively manufactures an aircraft, aircraft engine, propeller, or a component, part, or systems of an aircraft or aircraft engine under a Federal Aviation Administration production approval;

(ii) holds a certificate issued under part 145 of title 14, Code of Federal Regulations, for maintenance, repair, and overhaul of aircraft, aircraft engines, components, or propellers; or

(iii) operates a process certified to SAE AS9100 related to the design, development, or provision of an

aviation product or service, including a part, component, or assembly;

(B) which—

(i) is established, created, or organized in the United States or under the laws of the United States; and

(ii) has significant operations in, and a majority of its employees engaged in aviation manufacturing activities and services, or maintenance, repair, and overhaul activities and services based in the United States;

(C) which has involuntarily furloughed or laid off at least 10 percent of its workforce in 2020 as compared to 2019 or has experienced at least a 15 percent decline in 2020 revenues as compared to 2019;

(D) that, as supported by sworn financial statements or other appropriate data, has identified the eligible employee group and the amount of total compensation level for the eligible employee group;

(E) that agrees to provide private contributions and maintain the total compensation level for the eligible employee group for the duration of an agreement under this subtitle;

(F) that agrees to provide immediate notice and justification to the Secretary of involuntary furloughs or layoffs exceeding 10 percent of the workforce that is not included in an eligible employee group for the duration of an agreement and receipt of public contributions under this subtitle;

(G) that has not conducted involuntary furloughs or reduced pay rates or benefits for the eligible employee group, subject to the employer's right to discipline or terminate an employee in accordance with employer policy, between the date of application and the date on which such a corporation, firm, or other business entity enters into an agreement with the Secretary under this subtitle; and

(H) that—

(i) in the case of a corporation, firm, or other business entity including any parent company or subsidiary of such a corporation, firm, or other business entity, that holds any type or production certificate or similar authorization issued under section 44704 of title 49, United States Code, with respect to a transport-category airplane covered under part 25 of title 14, Code of Federal Regulations, certificated with a passenger seating capacity of 50 or more, agrees to refrain from conducting involuntary layoffs or furloughs, or reducing pay rates and benefits, for the eligible employee group, subject to the employer's right to discipline or terminate an employee in accordance with employer policy from the date of agreement until September 30, 2021, or the duration of the agreement and receipt of public contributions under this subtitle, whichever period ends later; or

(ii) in the case of corporation, firm, or other business entity not specified under subparagraph (i), agrees

Time period.

to refrain from conducting involuntary layoffs or furloughs, or reducing pay rates and benefits, for the eligible employee group, subject to the employer's right to discipline or terminate an employee in accordance with employer policy for the duration of the agreement and receipt of public contributions under this subtitle.

(3) **EMPLOYEE.**—The term “employee” has the meaning given that term in section 3 of the Fair Labor Standards Act of 1938 (29 U.S.C. 203).

(4) **EMPLOYER.**—The term “employer” means an aviation manufacturing company that is an employer (as defined in section 3 of the Fair Labor Standards Act of 1938 (29 U.S.C. 203)).

(5) **PRIVATE CONTRIBUTION.**—The term “private contribution” means the contribution funded by the employer under this subtitle to maintain 50 percent of the eligible employee group's total compensation level, and combined with the public contribution, is sufficient to maintain the total compensation level for the eligible employee group as of April 1, 2020.

(6) **PUBLIC CONTRIBUTION.**—The term “public contribution” means the contribution funded by the Federal Government under this subtitle to provide 50 percent of the eligible employees group's total compensation level, and combined with the private contribution, is sufficient to maintain the total compensation level for those in the eligible employee group as of April 1, 2020.

Effective date.

(7) **SECRETARY.**—The term “Secretary” means the Secretary of Transportation.

(8) **TOTAL COMPENSATION LEVEL.**—The term “total compensation level” means the level of total base compensation and benefits being provided to an eligible employee group employee, excluding overtime and premium pay, and excluding any Federal, State, or local payroll taxes paid, as of April 1, 2020.

Effective date.

**SEC. 7202. PAYROLL SUPPORT PROGRAM.**

(a) **IN GENERAL.**—The Secretary shall establish a payroll support program and enter into agreements with employers who meet the eligibility criteria specified in subsection (b) and are not ineligible under subsection (c), to provide public contributions to supplement compensation of an eligible employee group. There is appropriated for fiscal year 2021, out of amounts in the Treasury not otherwise appropriated, \$3,000,000,000, to remain available until September 30, 2023, for the Secretary to carry out the payroll support program authorized under the preceding sentence for which 1 percent of the funds may be used for implementation costs and administrative expenses.

Contracts.  
15 USC 9132.

(b) **ELIGIBILITY.**—The Secretary shall enter into an agreement and provide public contributions, for a term no longer than 6 months, solely with an employer that agrees to use the funds received under an agreement exclusively for the continuation of employee wages, salaries, and benefits, to maintain the total compensation level for the eligible employee group as of April 1, 2020 for the duration of the agreement, and to facilitate the retention, rehire, or recall of employees of the employer, except that such funds may not be used for back pay of returning rehired or recalled employees.

Time period.  
Effective date.

(c) **INELIGIBILITY.**—The Secretary may not enter into any agreement under this section with an employer who was allowed a credit under section 2301 of the CARES Act (26 U.S.C. 3111 note) for the immediately preceding calendar quarter ending before such agreement is entered into, who received financial assistance under section 4113 of the CARES Act (15 U.S.C. 9073), or who is currently expending financial assistance under the paycheck protection program established under section 7(a)(36) of the Small Business Act (15 U.S.C. 636(a)(36)), as of the date the employer submits an application under the payroll support program established under subsection (a).

(d) **REDUCTIONS.**—To address any shortfall in assistance that would otherwise be provided under this subtitle, the Secretary shall reduce, on a pro rata basis, the financial assistance provided under this subtitle.

(e) **AGREEMENT DEADLINE.**—No agreement may be entered into by the Secretary under the payroll support program established under subsection (a) after the last day of the 6 month period that begins on the effective date of the first agreement entered into under such program.

## Subtitle C—Airlines

15 USC 9141.

### SEC. 7301. AIR TRANSPORTATION PAYROLL SUPPORT PROGRAM EXTENSION.

Applicability.

(a) **DEFINITIONS.**—The definitions in section 40102(a) of title 49, United States Code, shall apply with respect to terms used in this section, except that—

(1) the term “catering functions” means preparation, assembly, or both, of food, beverages, provisions and related supplies for delivery, and the delivery of such items, directly to aircraft or to a location on or near airport property for subsequent delivery to aircraft;

(2) the term “contractor” means—

(A) a person that performs, under contract with a passenger air carrier conducting operations under part 121 of title 14, Code of Federal Regulations—

(i) catering functions; or

(ii) functions on the property of an airport that are directly related to the air transportation of persons, property, or mail, including the loading and unloading of property on aircraft, assistance to passengers under part 382 of title 14, Code of Federal Regulations, security, airport ticketing and check-in functions, ground-handling of aircraft, or aircraft cleaning and sanitization functions and waste removal; or

(B) a subcontractor that performs such functions;

(3) the term “employee” means an individual, other than a corporate officer, who is employed by an air carrier or a contractor;

(4) the term “eligible air carrier” means an air carrier that—

(A) received financial assistance pursuant section 402(a)(1) of division N of the Consolidated Appropriations Act, 2021 (Public Law 116-260);

Effective date.

(B) provides air transportation as of March 31, 2021;

(C) has not conducted involuntary furloughs or reduced pay rates or benefits between March 31, 2021, and the date on which the air carrier makes a certification to the Secretary pursuant to subparagraph (D); and

Time period.

(D) certifies to the Secretary that such air carrier will—

Certification.  
Extensions.

(i) refrain from conducting involuntary furloughs or reducing pay rates or benefits until September 30, 2021, or the date on which assistance provided under this section is exhausted, whichever is later;

(ii) refrain from purchasing an equity security of the air carrier or the parent company of the air carrier that is listed on a national securities exchange through September 30, 2022;

(iii) refrain from paying dividends, or making other capital distributions, with respect to common stock (or equivalent interest) of such air carrier through September 30, 2022;

(iv) during the 2-year period beginning April 1, 2021, and ending April 1, 2023, refrain from paying—

Time periods.

(I) any officer or employee of the air carrier whose total compensation exceeded \$425,000 in calendar year 2019 (other than an employee whose compensation is determined through an existing collective bargaining agreement entered into prior to the date of enactment of this Act)—

(aa) total compensation that exceeds, during any 12 consecutive months of such 2-year period, the total compensation received by the officer or employee from the air carrier in calendar year 2019; or

(bb) severance pay or other benefits upon termination of employment with the air carrier which exceeds twice the maximum total compensation received by the officer or employee from the air carrier in calendar year 2019; and

(II) any officer or employee of the air carrier whose total compensation exceeded \$3,000,000 in calendar year 2019 during any 12 consecutive months of such period total compensation in excess of the sum of—

(aa) \$3,000,000; and

(bb) 50 percent of the excess over \$3,000,000 of the total compensation received by the officer or employee from the air carrier in calendar year 2019.

(5) the term “eligible contractor” means a contractor that—

(A) received financial assistance pursuant to section 402(a)(2) of division N of the Consolidated Appropriations Act, 2021 (Public Law 116-260);

(B) performs one or more of the functions described under paragraph (2) as of March 31, 2021;

Effective date.

(C) has not conducted involuntary furloughs or reduced pay rates or benefits between March 31, 2021, and the date on which the contractor makes a certification to the Secretary pursuant to subparagraph (D); and

Time period.

(D) certifies to the Secretary that such contractor will—

Certification.  
Extensions.

(i) refrain from conducting involuntary furloughs or reducing pay rates or benefits until September 30, 2021, or the date on which assistance provided under this section is exhausted, whichever is later;

(ii) refrain from purchasing an equity security of the contractor or the parent company of the contractor that is listed on a national securities exchange through September 30, 2022;

(iii) refrain from paying dividends, or making other capital distributions, with respect to common stock (or equivalent interest) of the contractor through September 30, 2022;

Time periods.

(iv) during the 2-year period beginning April 1, 2021, and ending April 1, 2023, refrain from paying—

(I) any officer or employee of the contractor whose total compensation exceeded \$425,000 in calendar year 2019 (other than an employee whose compensation is determined through an existing collective bargaining agreement entered into prior to the date of enactment of this Act)—

(aa) total compensation that exceeds, during any 12 consecutive months of such 2-year period, the total compensation received by the officer or employee from the contractor in calendar year 2019; or

(bb) severance pay or other benefits upon termination of employment with the contractor which exceeds twice the maximum total compensation received by the officer or employee from the contractor in calendar year 2019; and

(II) any officer or employee of the contractor whose total compensation exceeded \$3,000,000 in calendar year 2019 during any 12 consecutive months of such period total compensation in excess of the sum of—

(aa) \$3,000,000; and

(bb) 50 percent of the excess over \$3,000,000 of the total compensation received by the officer or employee from the contractor in calendar year 2019.

(6) the term “Secretary” means the Secretary of the Treasury.

(b) PAYROLL SUPPORT GRANTS.—

(1) IN GENERAL.—The Secretary shall make available to eligible air carriers and eligible contractors, financial assistance exclusively for the continuation of payment of employee wages, salaries, and benefits to—

(A) eligible air carriers, in an aggregate amount of \$14,000,000,000; and

(B) eligible contractors, in an aggregate amount of \$1,000,000,000.

(2) APPORTIONMENTS.—

Deadline.

(A) IN GENERAL.—The Secretary shall apportion funds to eligible air carriers and eligible contractors in accordance with the requirements of this section not later than April 15, 2021.

(B) ELIGIBLE AIR CARRIERS.—The Secretary shall apportion funds made available under paragraph (1)(A) to each eligible air carrier in the ratio that—

- (i) the amount received by the air carrier pursuant to section 403(a) of division N of the Consolidated Appropriations Act, 2021 (Public Law 116-260) bears to
- (ii) \$15,000,000,000.

(C) ELIGIBLE CONTRACTORS.—The Secretary shall apportion, to each eligible contractor, an amount equal to the total amount such contractor received pursuant to section 403(a) of division N of the Consolidated Appropriations Act, 2021 (Public Law 116-260).

(3) IN GENERAL.—

(A) FORMS; TERMS AND CONDITIONS.—The Secretary shall provide financial assistance to an eligible air carrier or eligible contractor under this section in the same form and on the same terms and conditions as determined by pursuant to section 403(b)(1)(A) of subtitle A of title IV of division N of the Consolidated Appropriations Act, 2021 (Pub. L. No. 116-260).

(B) PROCEDURES.—The Secretary shall publish streamlined and expedited procedures not later than 5 days after the date of enactment of this section for eligible air carriers and eligible contractors to submit requests for financial assistance under this section.

Publication.  
Deadline.

(C) DEADLINE FOR IMMEDIATE PAYROLL ASSISTANCE.—Not later than 10 days after the date of enactment of this section, the Secretary shall make initial payments to air carriers and contractors that submit requests for financial assistance approved by the Secretary.

Payments.

(4) TAXPAYER PROTECTION.—The Secretary shall receive financial instruments issued by recipients of financial assistance under this section in the same form and amount, and under the same terms and conditions, as determined by the Secretary under section 408 of subtitle A of title IV of division N of the Consolidated Appropriations Act, 2021 (Pub. L. No. 116-260).

Determination.

(5) ADMINISTRATIVE EXPENSES.—Of the amounts made available under paragraph (1)(A), \$10,000,000 shall be made available to the Secretary for costs and administrative expenses associated with providing financial assistance under this section.

(c) FUNDING.—In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$15,000,000,000, to remain available until expended, to carry out this section.

## Subtitle D—Consumer Protection and Commerce Oversight

15 USC 2066  
note.

### SEC. 7401. FUNDING FOR CONSUMER PRODUCT SAFETY FUND TO PROTECT CONSUMERS FROM POTENTIALLY DANGEROUS PRODUCTS RELATED TO COVID-19.

(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Consumer Product Safety Commission for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$50,000,000, to remain available until September 30, 2026, for the purposes described in subsection (b).

(b) PURPOSES.—The funds made available in subsection (a) shall only be used for purposes of the Consumer Product Safety Commission to—

(1) carry out the requirements in title XX of division FF of the Consolidated Appropriations Act, 2021 (Public Law 116-260);

(2) enhance targeting, surveillance, and screening of consumer products, particularly COVID-19 products, entering the United States at ports of entry, including ports of entry for de minimis shipments;

Coordination.

(3) enhance monitoring of internet websites for the offering for sale of new and used violative consumer products, particularly COVID-19 products, and coordination with retail and resale websites to improve identification and elimination of listings of such products;

(4) increase awareness and communication particularly of COVID-19 product related risks and other consumer product safety information; and

Data.

(5) improve the Commission's data collection and analysis system especially with a focus on consumer product safety risks resulting from the COVID-19 pandemic to socially disadvantaged individuals and other vulnerable populations.

(c) DEFINITIONS.—In this section—

(1) the term “Commission” means the Consumer Product Safety Commission;

(2) the term “violative consumer products” means consumer products in violation of an applicable consumer product safety standard under the Consumer Product Safety Act (15 U.S.C. 2051 et seq.) or any similar rule, regulation, standard, or ban under any other Act enforced by the Commission;

(3) the term “COVID-19 emergency period” means the period during which a public health emergency declared pursuant to section 319 of the Public Health Service Act (42 U.S.C. 247d) with respect to the 2019 novel coronavirus (COVID-19), including under any renewal of such declaration, is in effect; and

(4) the term “COVID-19 products” means consumer products, as defined by section 3(a)(5) of the Consumer Product Safety Act (15 U.S.C. 2052(a)(5)), whose risks have been significantly affected by COVID-19 or whose sales have materially increased during the COVID-19 emergency period as a result of the COVID-19 pandemic.

**SEC. 7402. FUNDING FOR E-RATE SUPPORT FOR EMERGENCY EDUCATIONAL CONNECTIONS AND DEVICES.** 47 USC 254 note.

(a) **REGULATIONS REQUIRED.**—Not later than 60 days after the date of the enactment of this Act, the Commission shall promulgate regulations providing for the provision, from amounts made available from the Emergency Connectivity Fund, of support under paragraphs (1)(B) and (2) of section 254(h) of the Communications Act of 1934 (47 U.S.C. 254(h)) to an eligible school or library, for the purchase during a COVID-19 emergency period of eligible equipment or advanced telecommunications and information services (or both), for use by—

Deadline.

(1) in the case of a school, students and staff of the school at locations that include locations other than the school; and

(2) in the case of a library, patrons of the library at locations that include locations other than the library.

(b) **SUPPORT AMOUNT.**—In providing support under the covered regulations, the Commission shall reimburse 100 percent of the costs associated with the eligible equipment, advanced telecommunications and information services, or eligible equipment and advanced telecommunications and information services, except that any reimbursement of a school or library for the costs associated with any eligible equipment may not exceed an amount that the Commission determines, with respect to the request by the school or library for the reimbursement, is reasonable.

Reimbursement.  
Determination.

(c) **EMERGENCY CONNECTIVITY FUND.**—

(1) **ESTABLISHMENT.**—There is established in the Treasury of the United States a fund to be known as the “Emergency Connectivity Fund”.

(2) **APPROPRIATION.**—In addition to amounts otherwise available, there is appropriated to the Emergency Connectivity Fund for fiscal year 2021, out of any money in the Treasury not otherwise appropriated—

(A) \$7,171,000,000, to remain available until September 30, 2030, for—

(i) the provision of support under the covered regulations; and

(ii) the Commission to adopt, and the Commission and the Universal Service Administrative Company to administer, the covered regulations; and

(B) \$1,000,000, to remain available until September 30, 2030, for the Inspector General of the Commission to conduct oversight of support provided under the covered regulations.

(3) **LIMITATION.**—Not more than 2 percent of the amount made available under paragraph (2)(A) may be used for the purposes described in clause (ii) of such paragraph.

(4) **RELATIONSHIP TO UNIVERSAL SERVICE CONTRIBUTIONS.**—Support provided under the covered regulations shall be provided from amounts made available from the Emergency Connectivity Fund and not from contributions under section 254(d) of the Communications Act of 1934 (47 U.S.C. 254(d)).

(d) **DEFINITIONS.**—In this section:

(1) **ADVANCED TELECOMMUNICATIONS AND INFORMATION SERVICES.**—The term “advanced telecommunications and information services” means advanced telecommunications and information services, as such term is used in section 254(h) of the Communications Act of 1934 (47 U.S.C. 254(h)).

(2) COMMISSION.—The term “Commission” means the Federal Communications Commission.

(3) CONNECTED DEVICE.—The term “connected device” means a laptop computer, tablet computer, or similar end-user device that is capable of connecting to advanced telecommunications and information services.

(4) COVERED REGULATIONS.—The term “covered regulations” means the regulations promulgated under subsection (a).

(5) COVID-19 EMERGENCY PERIOD.—The term “COVID-19 emergency period” means a period that—

(A) begins on the date of a determination by the Secretary of Health and Human Services pursuant to section 319 of the Public Health Service Act (42 U.S.C. 247d) that a public health emergency exists as a result of COVID-19; and

(B) ends on the June 30 that first occurs after the date that is 1 year after the date on which such determination (including any renewal thereof) terminates.

(6) ELIGIBLE EQUIPMENT.—The term “eligible equipment” means the following:

(A) Wi-Fi hotspots.

(B) Modems.

(C) Routers.

(D) Devices that combine a modem and router.

(E) Connected devices.

(7) ELIGIBLE SCHOOL OR LIBRARY.—The term “eligible school or library” means an elementary school, secondary school, or library (including a Tribal elementary school, Tribal secondary school, or Tribal library) eligible for support under paragraphs (1)(B) and (2) of section 254(h) of the Communications Act of 1934 (47 U.S.C. 254(h)).

(8) EMERGENCY CONNECTIVITY FUND.—The term “Emergency Connectivity Fund” means the fund established under subsection (c)(1).

(9) LIBRARY.—The term “library” includes a library consortium.

(10) WI-FI.—The term “Wi-Fi” means a wireless networking protocol based on Institute of Electrical and Electronics Engineers standard 802.11 (or any successor standard).

(11) WI-FI HOTSPOT.—The term “Wi-Fi hotspot” means a device that is capable of—

(A) receiving advanced telecommunications and information services; and

(B) sharing such services with a connected device through the use of Wi-Fi.

#### **SEC. 7403. FUNDING FOR DEPARTMENT OF COMMERCE INSPECTOR GENERAL.**

In addition to amounts otherwise available, there is appropriated to the Office of the Inspector General of the Department of Commerce for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$3,000,000, to remain available until September 30, 2022, for oversight of activities supported with funds appropriated to the Department of Commerce to prevent, prepare for, and respond to COVID-19.

**SEC. 7404. FEDERAL TRADE COMMISSION FUNDING FOR COVID-19 RELATED WORK.**

(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated to the Federal Trade Commission for fiscal year 2021, \$30,400,000, to remain available until September 30, 2026, for the purposes described in subsection (b).

(b) PURPOSES.—From the amount appropriated under subsection (a), the Federal Trade Commission shall use—

(1) \$4,400,000 to process and monitor consumer complaints received into the Consumer Sentinel Network, including increased complaints received regarding unfair or deceptive acts or practices related to COVID-19;

(2) \$2,000,000 for consumer-related education, including in connection with unfair or deceptive acts or practices related to COVID-19; and

(3) \$24,000,000 to fund full-time employees of the Federal Trade Commission to address unfair or deceptive acts or practices, including those related to COVID-19.

## **Subtitle E—Science and Technology**

**SEC. 7501. NATIONAL INSTITUTE OF STANDARDS AND TECHNOLOGY.**

In addition to amounts otherwise made available, there are appropriated to the National Institute of Standards and Technology for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$150,000,000, to remain available until September 30, 2022, to fund awards for research, development, and testbeds to prevent, prepare for, and respond to coronavirus. None of the funds provided by this section shall be subject to cost share requirements.

**SEC. 7502. NATIONAL SCIENCE FOUNDATION.**

In addition to amounts otherwise made available, there are appropriated to the National Science Foundation for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$600,000,000, to remain available until September 30, 2022, to fund or extend new and existing research grants, cooperative agreements, scholarships, fellowships, and apprenticeships, and related administrative expenses to prevent, prepare for, and respond to coronavirus.

## **Subtitle F—Corporation for Public Broadcasting**

**SEC. 7601. SUPPORT FOR THE CORPORATION FOR PUBLIC BROADCASTING.**

In addition to amounts otherwise made available, there is appropriated to the Corporation for Public Broadcasting for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$175,000,000, to remain available until expended, to prevent, prepare for, and respond to coronavirus, including for fiscal stabilization grants to public telecommunications entities, as defined in section 397 of the Communications Act of 1934 (47 U.S.C. 397), with no deduction for administrative or other costs of the Corporation, to maintain programming and services and

preserve small and rural stations threatened by declines in non-Federal revenues.

## **TITLE VIII—COMMITTEE ON VETERANS' AFFAIRS**

### **SEC. 8001. FUNDING FOR CLAIMS AND APPEALS PROCESSING.**

In addition to amounts otherwise made available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$272,000,000, to remain available until September 30, 2023, pursuant to sections 308, 310, 7101 through 7113, 7701, and 7703 of title 38, United States Code.

### **SEC. 8002. FUNDING AVAILABILITY FOR MEDICAL CARE AND HEALTH NEEDS.**

In addition to amounts otherwise made available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$14,482,000,000, to remain available until September 30, 2023, for allocation under chapters 17, 20, 73, and 81 of title 38, United States Code, of which not more than \$4,000,000,000 shall be available pursuant to section 1703 of title 38, United States Code for health care furnished through the Veterans Community Care program in sections 1703(c)(1) and 1703(c)(5) of such title.

### **SEC. 8003. FUNDING FOR SUPPLY CHAIN MODERNIZATION.**

In addition to amounts otherwise made available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$100,000,000, to remain available until September 30, 2022, for the supply chain modernization initiative under sections 308, 310, and 7301(b) of title 38, United States Code.

### **SEC. 8004. FUNDING FOR STATE HOMES.**

In addition to amounts otherwise made available, there are appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated—

(1) \$500,000,000, to remain available until expended, for allocation under sections 8131 through 8137 of title 38, United States Code: and

(2) \$250,000,000, to remain available until September 30, 2022, for a one-time only obligation and expenditure to existing State extended care facilities for veterans in proportion to each State's share of the total resident capacity in such facilities as of the date of enactment of this Act where such capacity includes only veterans on whose behalf the Department pays a per diem payment pursuant to section 1741 or 1745 of title 38, United States Code.

### **SEC. 8005. FUNDING FOR THE DEPARTMENT OF VETERANS AFFAIRS OFFICE OF INSPECTOR GENERAL.**

In addition to amounts otherwise made available, there is appropriated to the Office of Inspector General of the Department of Veterans Affairs for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$10,000,000, to remain available until expended, for audits, investigations, and other oversight

of projects and activities carried out with funds made available to the Department of Veterans Affairs.

**SEC. 8006. COVID-19 VETERAN RAPID RETRAINING ASSISTANCE PROGRAM.**

36 USC 3001  
note prec.

(a) **IN GENERAL.**—The Secretary of Veterans Affairs shall carry out a program under which the Secretary shall provide up to 12 months of retraining assistance to an eligible veteran for the pursuit of a covered program of education. Such retraining assistance shall be in addition to any other entitlement to educational assistance or benefits for which a veteran is, or has been, eligible.

(b) **ELIGIBLE VETERANS.**—

(1) **IN GENERAL.**—In this section, the term “eligible veteran” means a veteran who—

(A) as of the date of the receipt by the Department of Veterans Affairs of an application for assistance under this section, is at least 22 years of age but not more than 66 years of age;

(B) as of such date, is unemployed by reason of the covered public health emergency, as certified by the veteran;

(C) as of such date, is not eligible to receive educational assistance under chapter 30, 31, 32, 33, or 35 of title 38, United States Code, or chapter 1606 of title 10, United States Code;

(D) is not enrolled in any Federal or State jobs program;

(E) is not in receipt of compensation for a service-connected disability rated totally disabling by reason of unemployability; and

(F) will not be in receipt of unemployment compensation (as defined in section 85(b) of the Internal Revenue Code of 1986), including any cash benefit received pursuant to subtitle A of title II of division A of the CARES Act (Public Law 116-136), as of the first day on which the veteran would receive a housing stipend payment under this section.

(2) **TREATMENT OF VETERANS WHO TRANSFER ENTITLEMENT.**—For purposes of paragraph (1)(C), a veteran who has transferred all of the veteran’s entitlement to educational assistance under section 3319 of title 38, United States Code, shall be considered to be a veteran who is not eligible to receive educational assistance under chapter 33 of such title.

(3) **FAILURE TO COMPLETE.**—A veteran who receives retraining assistance under this section to pursue a program of education and who fails to complete the program of education shall not be eligible to receive additional assistance under this section.

(c) **COVERED PROGRAMS OF EDUCATION.**—

(1) **IN GENERAL.**—For purposes of this section, a covered program of education is a program of education (as such term is defined in section 3452(b) of title 38, United States Code) for training, pursued on a full-time or part-time basis—

(A) that—

(i) is approved under chapter 36 of such title;

(ii) does not lead to a bachelors or graduate degree;

and

(iii) is designed to provide training for a high-demand occupation, as determined under paragraph (3); or

(B) that is a high technology program of education offered by a qualified provider, under the meaning given such terms in section 116 of the Harry W. Colmery Veterans Educational Assistance Act of 2017 (Public Law 115-48; 38 U.S.C. 3001 note).

(2) ACCREDITED PROGRAMS.—In the case of an accredited program of education, the program of education shall not be considered a covered program of education under this section if the program has received a show cause order from the accreditor of the program during the five-year period preceding the date of the enactment of this Act.

List.

(3) DETERMINATION OF HIGH-DEMAND OCCUPATIONS.—In carrying out this section, the Secretary shall use the list of high-demand occupations compiled by the Commissioner of Labor Statistics.

(4) FULL-TIME DEFINED.—For purposes of this subsection, the term “full-time” has the meaning given such term under section 3688 of title 38, United States Code.

(d) AMOUNT OF ASSISTANCE.—

(1) RETRAINING ASSISTANCE.—The Secretary of Veterans Affairs shall provide to an eligible veteran pursuing a covered program of education under the retraining assistance program under this section an amount equal to the amount of educational assistance payable under section 3313(c)(1)(A) of title 38, United States Code, for each month the veteran pursues the covered program of education. Such amount shall be payable directly to the educational institution offering the covered program of education pursued by the veteran as follows:

(A) 50 percent of the total amount payable shall be paid when the eligible veteran begins the program of education.

(B) 25 percent of the total amount payable shall be paid when the eligible veteran completes the program of education.

(C) 25 percent of the total amount payable shall be paid when the eligible veteran finds employment in a field related to the program of education.

(2) FAILURE TO COMPLETE.—

(A) PRO-RATED PAYMENTS.—In the case of a veteran who pursues a covered program of education under the retraining assistance program under this section, but who does not complete the program of education, the Secretary shall pay to the educational institution offering such program of education a pro-rated amount based on the number of months the veteran pursued the program of education in accordance with this paragraph.

Notice.

(B) PAYMENT OTHERWISE DUE UPON COMPLETION OF PROGRAM.—The Secretary shall pay to the educational institution a pro-rated amount under paragraph (1)(B) when the veteran provides notice to the educational institution that the veteran no longer intends to pursue the program of education.

(C) NONRECOVERY FROM VETERAN.—In the case of a veteran referred to in subparagraph (A), the educational

institution may not seek payment from the veteran for any amount that would have been payable under paragraph (1)(B) had the veteran completed the program of education.

(D) PAYMENT DUE UPON EMPLOYMENT.—

Time period.

(i) VETERANS WHO FIND EMPLOYMENT.—In the case of a veteran referred to in subparagraph (A) who finds employment in a field related to the program of education during the 180-day period beginning on the date on which the veteran withdraws from the program of education, the Secretary shall pay to the educational institution a pro-rated amount under paragraph (1)(C) when the veteran finds such employment.

(ii) VETERANS WHO DO NOT FIND EMPLOYMENT.—In the case of a veteran referred to in subparagraph (A) who does not find employment in a field related to the program of education during the 180-day period beginning on the date on which the veteran withdraws from the program of education—

(I) the Secretary shall not make a payment to the educational institution under paragraph (1)(C); and

(II) the educational institution may not seek payment from the veteran for any amount that would have been payable under paragraph (1)(C) had the veteran found employment during such 180-day period.

(3) HOUSING STIPEND.—For each month that an eligible veteran pursues a covered program of education under the retraining assistance program under this section, the Secretary shall pay to the veteran a monthly housing stipend in an amount equal to—

(A) in the case of a covered program of education leading to a degree, or a covered program of education not leading to a degree, at an institution of higher learning (as that term is defined in section 3452(f) of title 38, United States Code) pursued on more than a half-time basis, the amount specified under subsection (c)(1)(B) of section 3313 of title 38, United States Code;

(B) in the case of a covered program of education other than a program of education leading to a degree at an institution other than an institution of higher learning pursued on more than a half-time basis, the amount specified under subsection (g)(3)(A)(ii) of such section; or

(C) in the case of a covered program of education pursued on less than a half-time basis, or a covered program of education pursued solely through distance learning on more than a half-time basis, the amount specified under subsection (c)(1)(B)(iii) of such section.

(4) FAILURE TO FIND EMPLOYMENT.—The Secretary shall not make a payment under paragraph (1)(C) with respect to an eligible veteran who completes or fails to complete a program of education under the retraining assistance program under this section if the veteran fails to find employment in a field related to the program of education within the 180-period beginning on the date on which the veteran withdraws from or completes the program.

Time period.

(e) **NO TRANSFERABILITY.**—Retraining assistance provided under this section may not be transferred to another individual.

(f) **LIMITATION.**—Not more than 17,250 eligible veterans may receive retraining assistance under this section.

(g) **TERMINATION.**—No retraining assistance may be paid under this section after the date that is 21 months after the date of the enactment of this Act.

(h) **FUNDING.**—In addition to amounts otherwise available there is appropriated to the Department of Veterans Affairs for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$386,000,000, to remain available until expended, to carry out this section.

38 USC 1701  
note.

**SEC. 8007. PROHIBITION ON COPAYMENTS AND COST SHARING FOR VETERANS DURING EMERGENCY RELATING TO COVID-19.**

(a) **IN GENERAL.**—The Secretary of Veterans Affairs—

(1) shall provide for any copayment or other cost sharing with respect to health care under the laws administered by the Secretary received by a veteran during the period specified in subsection (b); and

Reimbursement.

(2) shall reimburse any veteran who paid a copayment or other cost sharing for health care under the laws administered by the Secretary received by a veteran during such period the amount paid by the veteran.

(b) **PERIOD SPECIFIED.**—The period specified in this subsection is the period beginning on April 6, 2020, and ending on September 30, 2021.

(c) **FUNDING.**—In addition to amounts otherwise available, there is appropriated to the Secretary of Veterans Affairs for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$1,000,000,000, to remain available until expended, to carry out this section, except for health care furnished pursuant to section 1703(c)(2)–(c)(4) of title 38, United States Code.

38 USC 7401  
note.

**SEC. 8008. EMERGENCY DEPARTMENT OF VETERANS AFFAIRS EMPLOYEE LEAVE FUND.**

(a) **ESTABLISHMENT; APPROPRIATION.**—There is established in the Treasury the Emergency Department of Veterans Affairs Employee Leave Fund (in this section referred to as the “Fund”), to be administered by the Secretary of Veterans Affairs, for the purposes set forth in subsection (b). In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$80,000,000, which shall be deposited into the Fund and remain available through September 20, 2022.

(b) **PURPOSE.**—Amounts in the Fund shall be available for payment to the Department of Veterans Affairs for the use of paid leave by any covered employee who is unable to work because the employee—

(1) is subject to a Federal, State, or local quarantine or isolation order related to COVID-19;

(2) has been advised by a health care provider to self-quarantine due to concerns related to COVID-19;

(3) is caring for an individual who is subject to such an order or has been so advised;

(4) is experiencing symptoms of COVID-19 and seeking a medical diagnosis;

(5) is caring for a son or daughter of such employee if the school or place of care of the son or daughter has been closed, if the school of such son or daughter requires or makes optional a virtual learning instruction model or requires or makes optional a hybrid of in-person and virtual learning instruction models, or the child care provider of such son or daughter is unavailable, due to COVID-19 precautions;

(6) is experiencing any other substantially similar condition;

(7) is caring for a family member with a mental or physical disability or who is 55 years of age or older and incapable of self-care, without regard to whether another individual other than the employee is available to care for such family member, if the place of care for such family member is closed or the direct care provider is unavailable due to COVID-19; or

(8) is obtaining immunization related to COVID-19 or to recover from any injury, disability, illness, or condition related to such immunization.

(c) LIMITATIONS.—

(1) PERIOD OF AVAILABILITY.—Paid leave under this section may only be provided to and used by a covered employee during the period beginning on the date of enactment of this Act and ending on September 30, 2021.

(2) TOTAL HOURS; AMOUNT.—Paid leave under this section—

(A) shall be provided to a covered employee in an amount not to exceed 600 hours of paid leave for each full-time employee, and in the case of a part-time employee, employee on an uncommon tour of duty, or employee with a seasonal work schedule, in an amount not to exceed the proportional equivalent of 600 hours to the extent amounts in the Fund remain available for reimbursement;

(B) shall be paid at the same hourly rate as other leave payments; and

(C) may not be provided to a covered employee if the leave would result in payments greater than \$2,800 in aggregate for any biweekly pay period for a full-time employee, or a proportionally equivalent biweekly limit for a part-time employee.

(3) RELATIONSHIP TO OTHER LEAVE.—Paid leave under this section—

(A) is in addition to any other leave provided to a covered employee; and

(B) may not be used by a covered employee concurrently with any other paid leave.

(4) CALCULATION OF RETIREMENT BENEFIT.—Any paid leave provided to a covered employee under this section shall reduce the total service used to calculate any Federal civilian retirement benefit.

(d) COVERED EMPLOYEE DEFINED.—In this section, the term “covered employee” means an employee of the Department of Veterans Affairs appointed under chapter 74 of title 38, United States Code.

## TITLE IX—COMMITTEE ON FINANCE

### Subtitle A—Crisis Support for Unemployed Workers

#### PART 1—EXTENSION OF CARES ACT UNEMPLOYMENT PROVISIONS

##### SEC. 9011. EXTENSION OF PANDEMIC UNEMPLOYMENT ASSISTANCE.

(a) **IN GENERAL.**—Section 2102(c) of the CARES Act (15 U.S.C. 9021(c)) is amended—

(1) in paragraph (1)—

(A) by striking “paragraphs (2) and (3)” and inserting “paragraph (2)”; and

(B) in subparagraph (A)(ii), by striking “March 14, 2021” and inserting “September 6, 2021”; and

(2) by striking paragraph (3) and redesignating paragraph (4) as paragraph (3).

(b) **INCREASE IN NUMBER OF WEEKS.**—Section 2102(c)(2) of such Act (15 U.S.C. 9021(c)(2)) is amended—

(1) by striking “50 weeks” and inserting “79 weeks”; and

(2) by striking “50-week period” and inserting “79-week period”.

(c) **HOLD HARMLESS FOR PROPER ADMINISTRATION.**—In the case of an individual who is eligible to receive pandemic unemployment assistance under section 2102 of the CARES Act (15 U.S.C. 9021) as of the day before the date of enactment of this Act and on the date of enactment of this Act becomes eligible for pandemic emergency unemployment compensation under section 2107 of the CARES Act (15 U.S.C. 9025) by reason of the amendments made by section 9016(b) of this title, any payment of pandemic unemployment assistance under such section 2102 made after the date of enactment of this Act to such individual during an appropriate period of time, as determined by the Secretary of Labor, that should have been made under such section 2107 shall not be considered to be an overpayment of assistance under such section 2102, except that an individual may not receive payment for assistance under section 2102 and a payment for assistance under section 2107 for the same week of unemployment.

(d) **EFFECTIVE DATE.**—The amendments made by subsections (a) and (b) shall apply as if included in the enactment of the CARES Act (Public Law 116-136), except that no amount shall be payable by virtue of such amendments with respect to any week of unemployment ending on or before March 14, 2021.

##### SEC. 9012. EXTENSION OF EMERGENCY UNEMPLOYMENT RELIEF FOR GOVERNMENTAL ENTITIES AND NONPROFIT ORGANIZATIONS.

(a) **IN GENERAL.**—Section 903(i)(1)(D) of the Social Security Act (42 U.S.C. 1103(i)(1)(D)) is amended by striking “March 14, 2021” and inserting “September 6, 2021”.

(b) **INCREASE IN REIMBURSEMENT RATE.**—Section 903(i)(1)(B) of such Act (42 U.S.C. 1103(i)(1)(B)) is amended—

15 USC 9021  
note.

15 USC 9021  
note.

(1) in the first sentence, by inserting “and except as otherwise provided in this subparagraph” after “as determined by the Secretary of Labor”; and

(2) by inserting after the first sentence the following: “With respect to the amounts of such compensation paid for weeks of unemployment beginning after March 31, 2021, and ending on or before September 6, 2021, the preceding sentence shall be applied by substituting ‘75 percent’ for ‘one-half.’”.

Time period.  
Applicability.

**SEC. 9013. EXTENSION OF FEDERAL PANDEMIC UNEMPLOYMENT COMPENSATION.**

(a) **IN GENERAL.**—Section 2104(e)(2) of the CARES Act (15 U.S.C. 9023(e)(2)) is amended by striking “March 14, 2021” and inserting “September 6, 2021”.

(b) **AMOUNT.**—Section 2104(b)(3)(A)(ii) of such Act (15 U.S.C. 9023(b)(3)(A)(ii)) is amended by striking “March 14, 2021” and inserting “September 6, 2021”.

**SEC. 9014. EXTENSION OF FULL FEDERAL FUNDING OF THE FIRST WEEK OF COMPENSABLE REGULAR UNEMPLOYMENT FOR STATES WITH NO WAITING WEEK.**

(a) **IN GENERAL.**—Section 2105(e)(2) of the CARES Act (15 U.S.C. 9024(e)(2)) is amended by striking “March 14, 2021” and inserting “September 6, 2021”.

(b) **FULL REIMBURSEMENT.**—Paragraph (3) of section 2105(c) of such Act (15 U.S.C. 9024(c)) is repealed and such section shall be applied to weeks of unemployment to which an agreement under section 2105 of such Act applies as if such paragraph had not been enacted. In implementing the preceding sentence, a State may, if necessary, reenter the agreement with the Secretary under section 2105 of such Act, and retroactively pay for the first week of regular compensation without a waiting week consistent with State law (including a waiver of State law) and receive full reimbursement for weeks of unemployment that ended after December 31, 2020.

Repeal.  
Applicability.  
15 USC 9024  
note.

**SEC. 9015. EXTENSION OF EMERGENCY STATE STAFFING FLEXIBILITY.**

If a State modifies its unemployment compensation law and policies, subject to the succeeding sentence, with respect to personnel standards on a merit basis on an emergency temporary basis as needed to respond to the spread of COVID-19, such modifications shall be disregarded for the purposes of applying section 303 of the Social Security Act and section 3304 of the Internal Revenue Code of 1986 to such State law. Such modifications shall only apply through September 6, 2021, and shall be limited to engaging of temporary staff, rehiring of retirees or former employees on a non-competitive basis, and other temporary actions to quickly process applications and claims.

26 USC 3304  
note.

Applicability.

**SEC. 9016. EXTENSION OF PANDEMIC EMERGENCY UNEMPLOYMENT COMPENSATION.**

(a) **IN GENERAL.**—Section 2107(g) of the CARES Act (15 U.S.C. 9025(g)) is amended to read as follows:

“(g) **APPLICABILITY.**—An agreement entered into under this section shall apply to weeks of unemployment—

“(1) beginning after the date on which such agreement is entered into; and

“(2) ending on or before September 6, 2021.”.

Time period.

(b) INCREASE IN NUMBER OF WEEKS.—Section 2107(b)(2) of such Act (15 U.S.C. 9025(b)(2)) is amended by striking “24” and inserting “53”.

(c) COORDINATION OF PANDEMIC EMERGENCY UNEMPLOYMENT COMPENSATION WITH EXTENDED COMPENSATION.—Section 2107(a)(5)(B) of such Act (15 U.S.C. 9025(a)(5)(B)) is amended by inserting “or for the week that includes the date of enactment of the American Rescue Plan Act of 2021 (without regard to the amendments made by subsections (a) and (b) of section 9016 of such Act)” after “2020”.

(d) SPECIAL RULE FOR EXTENDED COMPENSATION.—Section 2107(a)(8) of such Act (15 U.S.C. 9025(a)(8)) is amended by striking “April 12, 2021” and inserting “September 6, 2021”.

15 USC 9025  
note.

(e) EFFECTIVE DATE.—The amendments made by this section shall apply as if included in the enactment of the CARES Act (Public Law 116-136), except that no amount shall be payable by virtue of such amendments with respect to any week of unemployment ending on or before March 14, 2021.

**SEC. 9017. EXTENSION OF TEMPORARY FINANCING OF SHORT-TIME COMPENSATION PAYMENTS IN STATES WITH PROGRAMS IN LAW.**

Section 2108(b)(2) of the CARES Act (15 U.S.C. 9026(b)(2)) is amended by striking “March 14, 2021” and inserting “September 6, 2021”.

**SEC. 9018. EXTENSION OF TEMPORARY FINANCING OF SHORT-TIME COMPENSATION AGREEMENTS FOR STATES WITHOUT PROGRAMS IN LAW.**

Section 2109(d)(2) of the CARES Act (15 U.S.C. 9027(d)(2)) is amended by striking “March 14, 2021” and inserting “September 6, 2021”.

**PART 2—EXTENSION OF FFCRA  
UNEMPLOYMENT PROVISIONS**

**SEC. 9021. EXTENSION OF TEMPORARY ASSISTANCE FOR STATES WITH ADVANCES.**

Section 1202(b)(10)(A) of the Social Security Act (42 U.S.C. 1322(b)(10)(A)) is amended by striking “March 14, 2021” and inserting “September 6, 2021”.

**SEC. 9022. EXTENSION OF FULL FEDERAL FUNDING OF EXTENDED UNEMPLOYMENT COMPENSATION.**

(a) IN GENERAL.—Section 4105 of the Families First Coronavirus Response Act (26 U.S.C. 3304 note) is amended by striking “March 14, 2021” each place it appears and inserting “September 6, 2021”.

26 USC 3304  
note.

(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply as if included in the enactment of the Families First Coronavirus Response Act (Public Law 116-127).

**PART 3—DEPARTMENT OF LABOR FUNDING  
FOR TIMELY, ACCURATE, AND EQUITABLE  
PAYMENT**

**SEC. 9031. FUNDING FOR ADMINISTRATION.**

In addition to amounts otherwise available, there is appropriated to the Employment and Training Administration of the Department of Labor for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$8,000,000, to remain available until expended, for necessary expenses to carry out Federal activities relating to the administration of unemployment compensation programs.

**SEC. 9032. FUNDING FOR FRAUD PREVENTION, EQUITABLE ACCESS,  
AND TIMELY PAYMENT TO ELIGIBLE WORKERS.**

Subtitle A of title II of division A of the CARES Act (Public Law 116-136) is amended by adding at the end the following:

**“SEC. 2118. FUNDING FOR FRAUD PREVENTION, EQUITABLE ACCESS,  
AND TIMELY PAYMENT TO ELIGIBLE WORKERS.** 15 USC 9034.

“(a) IN GENERAL.—In addition to amounts otherwise available, there is appropriated to the Secretary of Labor for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$2,000,000,000, to remain available until expended, to detect and prevent fraud, promote equitable access, and ensure the timely payment of benefits with respect to unemployment compensation programs, including programs extended under subtitle A of title IX of the American Rescue Plan Act of 2021.

“(b) USE OF FUNDS.—Amounts made available under subsection (a) may be used—

“(1) for Federal administrative costs related to the purposes described in subsection (a);

“(2) for systemwide infrastructure investment and development related to such purposes; and

“(3) to make grants to States or territories administering unemployment compensation programs described in subsection (a) (including territories administering the Pandemic Unemployment Assistance program under section 2102) for such purposes, including the establishment of procedures or the building of infrastructure to verify or validate identity, implement Federal guidance regarding fraud detection and prevention, and accelerate claims processing or process claims backlogs due to the pandemic.

“(c) RESTRICTIONS ON GRANTS TO STATES AND TERRITORIES.—As a condition of receiving a grant under subsection (b)(3), the Secretary may require that a State or territory receiving such a grant shall—

“(1) use such program integrity tools as the Secretary may specify; and

“(2) as directed by the Secretary, conduct user accessibility testing on any new system developed by the Secretary pursuant to subsection (b)(2).”.

**PART 4—OTHER PROVISIONS****SEC. 9041. EXTENSION OF LIMITATION ON EXCESS BUSINESS LOSSES OF NONCORPORATE TAXPAYERS.**

26 USC 461 note. (a) **IN GENERAL.**—Section 461(l)(1) of the Internal Revenue Code of 1986 is amended by striking “January 1, 2026” each place it appears and inserting “January 1, 2027”.

26 USC 461 note. (b) **EFFECTIVE DATE.**—The amendments made by this section shall apply to taxable years beginning after December 31, 2025.

**SEC. 9042. SUSPENSION OF TAX ON PORTION OF UNEMPLOYMENT COMPENSATION.**

26 USC 85. (a) **IN GENERAL.**—Section 85 of the Internal Revenue Code of 1986 is amended by adding at the end the following new subsection:

“(c) **SPECIAL RULE FOR 2020.**—

“(1) **IN GENERAL.**—In the case of any taxable year beginning in 2020, if the adjusted gross income of the taxpayer for such taxable year is less than \$150,000, the gross income of such taxpayer shall not include so much of the unemployment compensation received by such taxpayer (or, in the case of a joint return, received by each spouse) as does not exceed \$10,200.

“(2) **APPLICATION.**—For purposes of paragraph (1), the adjusted gross income of the taxpayer shall be determined—

“(A) after application of sections 86, 135, 137, 219, 221, 222, and 469, and

“(B) without regard to this section.”.

(b) **CONFORMING AMENDMENTS.**—

(1) Section 74(d)(2)(B) of the Internal Revenue Code of 1986 is amended by inserting “85(c),” before “86”.

(2) Section 86(b)(2)(A) of such Code is amended by inserting “85(c),” before “135”.

(3) Section 135(c)(4)(A) of such Code is amended by inserting “85(c),” before “137”.

(4) Section 137(b)(3)(A) of such Code is amended by inserting “85(c)” before “221”.

(5) Section 219(g)(3)(A)(ii) of such Code is amended by inserting “85(c),” before “135”.

(6) Section 221(b)(2)(C)(i) of such Code is amended by inserting “85(c)” before “911”.

(7) Section 222(b)(2)(C)(i) of such Code, as in effect before date of enactment of the Taxpayer Certainty and Disaster Tax Relief Act of 2020, is amended by inserting “85(c)” before “911”.

(8) Section 469(i)(3)(E)(ii) of such Code is amended by striking “135 and 137” and inserting “85(c), 135, and 137”.

26 USC 74 note. (c) **EFFECTIVE DATE.**—The amendments made by this section shall apply to taxable years beginning after December 31, 2019.

## Subtitle B—Emergency Assistance to Families Through Home Visiting Programs

### SEC. 9101. EMERGENCY ASSISTANCE TO FAMILIES THROUGH HOME VISITING PROGRAMS.

Effective 1 day after the date of enactment of this Act, title V of the Social Security Act (42 U.S.C. 701–713) is amended by inserting after section 511 the following:

Effective date.  
42 USC 711a  
note.

### “SEC. 511A. EMERGENCY ASSISTANCE TO FAMILIES THROUGH HOME VISITING PROGRAMS.

42 USC 711a.

“(a) SUPPLEMENTAL APPROPRIATION.—In addition to amounts otherwise appropriated, out of any money in the Treasury of the United States not otherwise appropriated, there are appropriated to the Secretary \$150,000,000, to remain available through September 30, 2022, to enable eligible entities to conduct programs in accordance with section 511 and subsection (c) of this section.

“(b) ELIGIBILITY FOR FUNDS.—To be eligible to receive funds made available by subsection (a) of this section, an entity shall—

“(1) as of the date of the enactment of this section, be conducting a program under section 511;

“(2) ensure the modification of grants, contracts, and other agreements, as applicable, executed under section 511 under which the program is conducted as are necessary to provide that, during the period that begins with the date of the enactment of this section and ends with the end of the 2nd succeeding fiscal year after the funds are awarded, the entity shall—

Time period.

“(A) not reduce funding for, or staffing levels of, the program on account of reduced enrollment in the program; and

“(B) when using funds to provide emergency supplies to eligible families receiving grant services under section 511, ensure coordination with local diaper banks to the extent practicable; and

“(3) reaffirm that, in conducting the program, the entity will focus on priority populations (as defined in section 511(d)(4)).

“(c) USES OF FUNDS.—An entity to which funds are provided under this section shall use the funds—

“(1) to serve families with home visits or with virtual visits, that may be conducted by the use of electronic information and telecommunications technologies, in a service delivery model described in section 511(d)(3)(A);

“(2) to pay hazard pay or other additional staff costs associated with providing home visits or administration for programs funded under section 511;

Payment.

“(3) to train home visitors employed by the entity in conducting a virtual home visit and in emergency preparedness and response planning for families served, and may include training on how to safely conduct intimate partner violence screenings, and training on safety and planning for families served to support the family outcome improvements listed in section 511(d)(2)(B);

“(4) for the acquisition by families served by programs under section 511 of such technological means as are needed to conduct and support a virtual home visit;

“(5) to provide emergency supplies (such as diapers and diapering supplies including diaper wipes and diaper cream, necessary to ensure that a child using a diaper is properly cleaned and protected from diaper rash, formula, food, water, hand soap and hand sanitizer) to an eligible family (as defined in section 511(k)(2));

Coordination.

“(6) to coordinate with and provide reimbursement for supplies to diaper banks when using such entities to provide emergency supplies specified in paragraph (5); or

“(7) to provide prepaid grocery cards to an eligible family (as defined in section 511(k)(2)) participating in the maternal, infant, and early childhood home visiting program under section 511 for the purpose of enabling the family to meet the emergency needs of the family.”

## **Subtitle C—Emergency Assistance to Children and Families**

### **SEC. 9201. PANDEMIC EMERGENCY ASSISTANCE.**

Section 403 of the Social Security Act (42 U.S.C. 603) is amended by adding at the end the following:

“(c) PANDEMIC EMERGENCY ASSISTANCE.—

“(1) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury of the United States not otherwise appropriated, \$1,000,000,000, to remain available until expended, to carry out this subsection.

“(2) RESERVATION OF FUNDS FOR TECHNICAL ASSISTANCE.—Of the amount specified in paragraph (1), the Secretary shall reserve \$2,000,000 for administrative expenses and the provision of technical assistance to States and Indian tribes with respect to the use of funds provided under this subsection.

“(3) ALLOTMENTS.—

“(A) 50 STATES AND THE DISTRICT OF COLUMBIA.—

“(i) TOTAL AMOUNT TO BE ALLOTTED.—The Secretary shall allot a total of 92.5 percent of the amount specified in paragraph (1) that is not reserved under paragraph (2) among the States that are not a territory and that are operating a program funded under this part, in accordance with clause (ii) of this subparagraph.

“(ii) ALLOTMENT FORMULA.—The Secretary shall allot to each such State the sum of the following percentages of the total amount described in clause (i):

Determination.

“(I) 50 percent, multiplied by—

“(aa) the population of children in the State, determined on the basis of the most recent population estimates as determined by the Bureau of the Census; divided by

“(bb) the total population of children in the States that are not territories, as so determined; plus

Reports.

“(II) 50 percent, multiplied by—

“(aa) the total amount expended by the State for basic assistance, non-recurrent short

term benefits, and emergency assistance in fiscal year 2019, as reported by the State under section 411; divided by

“(bb) the total amount expended by the States that are not territories for basic assistance, non-recurrent short term benefits, and emergency assistance in fiscal year 2019, as so reported by the States.

“(B) TERRITORIES AND INDIAN TRIBES.—The Secretary shall allot among the territories and Indian tribes otherwise eligible for a grant under this part such portions of 7.5 percent of the amount specified in paragraph (1) that are not reserved under paragraph (2) as the Secretary deems appropriate based on the needs of the territory or Indian tribe involved.

“(C) EXPENDITURE COMMITMENT REQUIREMENT.—To receive the full amount of funding payable under this subsection, a State or Indian tribe shall inform the Secretary as to whether it intends to use all of its allotment under this paragraph and provide that information—

Notification.  
Deadlines.

“(i) in the case of a State that is not a territory, within 45 days after the date of the enactment of this subsection; or

“(ii) in the case of a territory or an Indian tribe, within 90 days after such date of enactment.

“(4) GRANTS.—

“(A) IN GENERAL.—The Secretary shall provide funds to each State and Indian tribe to which an amount is allotted under paragraph (3), from the amount so allotted.

“(B) TREATMENT OF UNUSED FUNDS.—

“(i) REALLOTMENT.—The Secretary shall reallocate in accordance with paragraph (3) all funds provided to any State or Indian tribe under this subsection that are unused, among the other States and Indian tribes eligible for funds under this subsection. For purposes of paragraph (3), the Secretary shall treat the funds as if included in the amount specified in paragraph (1).

“(ii) PROVISION.—The Secretary shall provide funds to each such other State or Indian tribe in an amount equal to the amount so reallocated.

“(5) RECIPIENT OF FUNDS PROVIDED FOR TERRITORIES.—In the case of a territory not operating a program funded under this part, the Secretary shall provide the funds required to be provided to the territory under this subsection, to the agency that administers the bulk of local human services programs in the territory.

“(6) USE OF FUNDS.—

“(A) IN GENERAL.—A State or Indian tribe to which funds are provided under this subsection may use the funds only for non-recurrent short term benefits, whether in the form of cash or in other forms.

“(B) LIMITATION ON USE FOR ADMINISTRATIVE EXPENSES.—A State to which funds are provided under this subsection shall not expend more than 15 percent of the funds for administrative purposes.

“(C) NONSUPPLANTATION.—Funds provided under this subsection shall be used to supplement and not supplant other Federal, State, or tribal funds for services and activities that promote the purposes of this part.

“(D) EXPENDITURE DEADLINE.—

“(i) IN GENERAL.—Except as provided in clause (ii), a State or Indian tribe to which funds are provided under this subsection shall expend the funds not later than the end of fiscal year 2022.

“(ii) EXCEPTION FOR REALLOTTED FUNDS.—A State or Indian tribe to which funds are provided under paragraph (4)(B) shall expend the funds within 12 months after receipt.

“(7) SUSPENSION OF TERRITORY SPENDING CAP.—Section 1108 shall not apply with respect to any funds provided under this subsection.

“(8) DEFINITIONS.—In this subsection:

“(A) APPLICABLE PERIOD.—The term ‘applicable period’ means the period that begins with April 1, 2021, and ends with September 30, 2022.

“(B) NON-RECURRENT SHORT TERM BENEFITS.—The term ‘non-recurrent short term benefits’ has the meaning given the term in OMB approved Form ACF-196R, published on July 31, 2014.

“(C) STATE.—The term ‘State’ means the 50 States of the United States, the District of Columbia, and the territories.

“(D) TERRITORY.—The term ‘territory’ means the Commonwealth of Puerto Rico, the United States Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.”.

## Subtitle D—Elder Justice and Support Guarantee

### SEC. 9301. ADDITIONAL FUNDING FOR AGING AND DISABILITY SERVICES PROGRAMS.

Subtitle A of title XX of the Social Security Act (42 U.S.C. 1397–1397h) is amended by adding at the end the following:

42 USC 1397i.

### “SEC. 2010. ADDITIONAL FUNDING FOR AGING AND DISABILITY SERVICES PROGRAMS.

“(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$276,000,000, to remain available until expended, to carry out the programs described in subtitle B.

“(b) USE OF FUNDS.—Of the amounts made available by subsection (a)—

“(1) \$88,000,000 shall be made available to carry out the programs described in subtitle B in fiscal year 2021, of which not less than an amount equal to \$100,000,000 minus the amount previously provided in fiscal year 2021 to carry out section 2042(b) shall be made available to carry out such section; and

“(2) \$188,000,000 shall be made available to carry out the programs described in subtitle B in fiscal year 2022, of which not less than \$100,000,000 shall be for activities described in section 2042(b).”.

## **Subtitle E—Support to Skilled Nursing Facilities in Response to COVID-19**

### **SEC. 9401. PROVIDING FOR INFECTION CONTROL SUPPORT TO SKILLED NURSING FACILITIES THROUGH CONTRACTS WITH QUALITY IMPROVEMENT ORGANIZATIONS.**

Section 1862(g) of the Social Security Act (42 U.S.C. 1395y(g)) is amended—

(1) by striking “The Secretary” and inserting “(1) The Secretary”; and

(2) by adding at the end the following new paragraph:

“(2) In addition to any funds otherwise available, there are appropriated to the Secretary, out of any monies in the Treasury not otherwise obligated, \$200,000,000, to remain available until expended, for purposes of requiring multiple organizations described in paragraph (1) to provide to skilled nursing facilities (as defined in section 1819(a)), infection control and vaccination uptake support relating to the prevention or mitigation of COVID-19, as determined appropriate by the Secretary.”.

Determination.

### **SEC. 9402. FUNDING FOR STRIKE TEAMS FOR RESIDENT AND EMPLOYEE SAFETY IN SKILLED NURSING FACILITIES.**

Section 1819 of the Social Security Act (42 U.S.C. 1395i-3) is amended by adding at the end the following new subsection:

“(k) FUNDING FOR STRIKE TEAMS.—In addition to amounts otherwise available, there is appropriated to the Secretary, out of any monies in the Treasury not otherwise appropriated, \$250,000,000, to remain available until expended, for purposes of allocating such amount among the States (including the District of Columbia and each territory of the United States) for such a State to establish and implement a strike team that will be deployed to a skilled nursing facility in the State with diagnosed or suspected cases of COVID-19 among residents or staff for the purposes of assisting with clinical care, infection control, or staffing during the emergency period described in section 1135(g)(1)(B) and the 1-year period immediately following the end of such emergency period.”.

Time period.

## **Subtitle F—Preserving Health Benefits for Workers**

### **SEC. 9501. PRESERVING HEALTH BENEFITS FOR WORKERS.**

(a) PREMIUM ASSISTANCE FOR COBRA CONTINUATION COVERAGE FOR INDIVIDUALS AND THEIR FAMILIES.—

26 USC 4980B note.

(1) PROVISION OF PREMIUM ASSISTANCE.—

(A) REDUCTION OF PREMIUMS PAYABLE.—In the case of any premium for a period of coverage during the period beginning on the first day of the first month beginning after the date of the enactment of this Act, and ending

Time period.

on September 30, 2021, for COBRA continuation coverage with respect to any assistance eligible individual described in paragraph (3), such individual shall be treated for purposes of any COBRA continuation provision as having paid in full the amount of such premium.

(B) PLAN ENROLLMENT OPTION.—

Applicability.  
Deadline.

(i) IN GENERAL.—Solely for purposes of this subsection, the COBRA continuation provisions shall be applied such that any assistance eligible individual who is enrolled in a group health plan offered by a plan sponsor may, not later than 90 days after the date of notice of the plan enrollment option described in this subparagraph, elect to enroll in coverage under a plan offered by such plan sponsor that is different than coverage under the plan in which such individual was enrolled at the time, in the case of any assistance eligible individual described in paragraph (3), the qualifying event specified in section 603(2) of the Employee Retirement Income Security Act of 1974, section 4980B(f)(3)(B) of the Internal Revenue Code of 1986, or section 2203(2) of the Public Health Service Act, except for the voluntary termination of such individual's employment by such individual, occurred, and such coverage shall be treated as COBRA continuation coverage for purposes of the applicable COBRA continuation coverage provision.

(ii) REQUIREMENTS.—Any assistance eligible individual may elect to enroll in different coverage as described in clause (i) only if—

Determination.

(I) the employer involved has made a determination that such employer will permit such assistance eligible individual to enroll in different coverage as provided under this subparagraph;

(II) the premium for such different coverage does not exceed the premium for coverage in which such individual was enrolled at the time such qualifying event occurred;

(III) the different coverage in which the individual elects to enroll is coverage that is also offered to similarly situated active employees of the employer at the time at which such election is made; and

(IV) the different coverage in which the individual elects to enroll is not—

(aa) coverage that provides only excepted benefits as defined in section 9832(c) of the Internal Revenue Code of 1986, section 733(c) of the Employee Retirement Income Security Act of 1974, and section 2791(c) of the Public Health Service Act;

(bb) a qualified small employer health reimbursement arrangement (as defined in section 9831(d)(2) of the Internal Revenue Code of 1986); or

(cc) a flexible spending arrangement (as defined in section 106(c)(2) of the Internal Revenue Code of 1986).

## (2) LIMITATION OF PERIOD OF PREMIUM ASSISTANCE.—

(A) ELIGIBILITY FOR ADDITIONAL COVERAGE.—Paragraph (1)(A) shall not apply with respect to any assistance eligible individual described in paragraph (3) for months of coverage beginning on or after the earlier of—

(i) the first date that such individual is eligible for coverage under any other group health plan (other than coverage consisting of only excepted benefits (as defined in section 9832(c) of the Internal Revenue Code of 1986, section 733(c) of the Employee Retirement Income Security Act of 1974, and section 2791(c) of the Public Health Service Act), coverage under a flexible spending arrangement (as defined in section 106(c)(2) of the Internal Revenue Code of 1986), coverage under a qualified small employer health reimbursement arrangement (as defined in section 9831(d)(2) of the Internal Revenue Code of 1986)), or eligible for benefits under the Medicare program under title XVIII of the Social Security Act; or

(ii) the earlier of—

(I) the date following the expiration of the maximum period of continuation coverage required under the applicable COBRA continuation coverage provision; or

(II) the date following the expiration of the period of continuation coverage allowed under paragraph (4)(B)(ii).

(B) NOTIFICATION REQUIREMENT.—Any assistance eligible individual shall notify the group health plan with respect to which paragraph (1)(A) applies if such paragraph ceases to apply by reason of clause (i) of subparagraph (A) (as applicable). Such notice shall be provided to the group health plan in such time and manner as may be specified by the Secretary of Labor.

(3) ASSISTANCE ELIGIBLE INDIVIDUAL.—For purposes of this section, the term “assistance eligible individual” means, with respect to a period of coverage during the period beginning on the first day of the first month beginning after the date of the enactment of this Act, and ending on September 30, 2021, any individual that is a qualified beneficiary who—

(A) is eligible for COBRA continuation coverage by reason of a qualifying event specified in section 603(2) of the Employee Retirement Income Security Act of 1974, section 4980B(f)(3)(B) of the Internal Revenue Code of 1986, or section 2203(2) of the Public Health Service Act, except for the voluntary termination of such individual’s employment by such individual; and

(B) elects such coverage.

(4) EXTENSION OF ELECTION PERIOD AND EFFECT ON COVERAGE.—

(A) IN GENERAL.—For purposes of applying section 605(a) of the Employee Retirement Income Security Act of 1974, section 4980B(f)(5)(A) of the Internal Revenue Code of 1986, and section 2205(a) of the Public Health Service Act, in the case of—

(i) an individual who does not have an election of COBRA continuation coverage in effect on the first

Definition.  
Time period.

day of the first month beginning after the date of the enactment of this Act but who would be an assistance eligible individual described in paragraph (3) if such election were so in effect; or

(ii) an individual who elected COBRA continuation coverage and discontinued from such coverage before the first day of the first month beginning after the date of the enactment of this Act,

such individual may elect the COBRA continuation coverage under the COBRA continuation coverage provisions containing such provisions during the period beginning on the first day of the first month beginning after the date of the enactment of this Act and ending 60 days after the date on which the notification required under paragraph (5)(C) is provided to such individual.

(B) COMMENCEMENT OF COBRA CONTINUATION COVERAGE.—Any COBRA continuation coverage elected by a qualified beneficiary during an extended election period under subparagraph (A)—

(i) shall commence (including for purposes of applying the treatment of premium payments under paragraph (1)(A) and any cost-sharing requirements for items and services under a group health plan) with the first period of coverage beginning on or after the first day of the first month beginning after the date of the enactment of this Act, and

(ii) shall not extend beyond the period of COBRA continuation coverage that would have been required under the applicable COBRA continuation coverage provision if the coverage had been elected as required under such provision or had not been discontinued.

(5) NOTICES TO INDIVIDUALS.—

(A) GENERAL NOTICE.—

(i) IN GENERAL.—In the case of notices provided under section 606(a)(4) of the Employee Retirement Income Security Act of 1974 (29 U.S.C. 1166(4)), section 4980B(f)(6)(D) of the Internal Revenue Code of 1986, or section 2206(4) of the Public Health Service Act (42 U.S.C. 300bb-6(4)), with respect to individuals who, during the period described in paragraph (3), become entitled to elect COBRA continuation coverage, the requirements of such provisions shall not be treated as met unless such notices include an additional written notification to the recipient in clear and understandable language of—

(I) the availability of premium assistance with respect to such coverage under this subsection; and

(II) the option to enroll in different coverage if the employer permits assistance eligible individuals described in paragraph (3) to elect enrollment in different coverage (as described in paragraph (1)(B)).

(ii) ALTERNATIVE NOTICE.—In the case of COBRA continuation coverage to which the notice provision under such sections does not apply, the Secretary of Labor, in consultation with the Secretary of the

Treasury and the Secretary of Health and Human Services, shall, in consultation with administrators of the group health plans (or other entities) that provide or administer the COBRA continuation coverage involved, provide rules requiring the provision of such notice.

(iii) FORM.—The requirement of the additional notification under this subparagraph may be met by amendment of existing notice forms or by inclusion of a separate document with the notice otherwise required.

(B) SPECIFIC REQUIREMENTS.—Each additional notification under subparagraph (A) shall include—

(i) the forms necessary for establishing eligibility for premium assistance under this subsection;

(ii) the name, address, and telephone number necessary to contact the plan administrator and any other person maintaining relevant information in connection with such premium assistance;

(iii) a description of the extended election period provided for in paragraph (4)(A);

(iv) a description of the obligation of the qualified beneficiary under paragraph (2)(B) and the penalty provided under section 6720C of the Internal Revenue Code of 1986 for failure to carry out the obligation;

(v) a description, displayed in a prominent manner, of the qualified beneficiary's right to a subsidized premium and any conditions on entitlement to the subsidized premium; and

(vi) a description of the option of the qualified beneficiary to enroll in different coverage if the employer permits such beneficiary to elect to enroll in such different coverage under paragraph (1)(B).

(C) NOTICE IN CONNECTION WITH EXTENDED ELECTION PERIODS.—In the case of any assistance eligible individual described in paragraph (3) (or any individual described in paragraph (4)(A)) who became entitled to elect COBRA continuation coverage before the first day of the first month beginning after the date of the enactment of this Act, the administrator of the applicable group health plan (or other entity) shall provide (within 60 days after such first day of such first month) for the additional notification required to be provided under subparagraph (A) and failure to provide such notice shall be treated as a failure to meet the notice requirements under the applicable COBRA continuation provision.

Deadline.

(D) MODEL NOTICES.—Not later than 30 days after the date of enactment of this Act, with respect to any assistance eligible individual described in paragraph (3), the Secretary of Labor, in consultation with the Secretary of the Treasury and the Secretary of Health and Human Services, shall prescribe models for the additional notification required under this paragraph.

Deadline.  
Consultation.

(6) NOTICE OF EXPIRATION OF PERIOD OF PREMIUM ASSISTANCE.—

(A) IN GENERAL.—With respect to any assistance eligible individual, subject to subparagraph (B), the requirements of section 606(a)(4) of the Employee Retirement Income Security Act of 1974 (29 U.S.C. 1166(4)), section 4980B(f)(6)(D) of the Internal Revenue Code of 1986, or section 2206(4) of the Public Health Service Act (42 U.S.C. 300bb-6(4)), shall not be treated as met unless the plan administrator of the individual, during the period specified under subparagraph (C), provides to such individual a written notice in clear and understandable language—

(i) that the premium assistance for such individual will expire soon and the prominent identification of the date of such expiration; and

(ii) that such individual may be eligible for coverage without any premium assistance through—

(I) COBRA continuation coverage; or

(II) coverage under a group health plan.

Waiver.

(B) EXCEPTION.—The requirement for the group health plan administrator to provide the written notice under subparagraph (A) shall be waived if the premium assistance for such individual expires pursuant to clause (i) of paragraph (2)(A).

(C) PERIOD SPECIFIED.—For purposes of subparagraph (A), the period specified in this subparagraph is, with respect to the date of expiration of premium assistance for any assistance eligible individual pursuant to a limitation requiring a notice under this paragraph, the period beginning on the day that is 45 days before the date of such expiration and ending on the day that is 15 days before the date of such expiration.

Deadline.  
Consultation.

(D) MODEL NOTICES.—Not later than 45 days after the date of enactment of this Act, with respect to any assistance eligible individual, the Secretary of Labor, in consultation with the Secretary of the Treasury and the Secretary of Health and Human Services, shall prescribe models for the notification required under this paragraph.

(7) REGULATIONS.—The Secretary of the Treasury and the Secretary of Labor may jointly prescribe such regulations or other guidance as may be necessary or appropriate to carry out the provisions of this subsection, including the prevention of fraud and abuse under this subsection, except that the Secretary of Labor and the Secretary of Health and Human Services may prescribe such regulations (including interim final regulations) or other guidance as may be necessary or appropriate to carry out the provisions of paragraphs (5), (6), and (8).

(8) OUTREACH.—

Consultation.

(A) IN GENERAL.—The Secretary of Labor, in consultation with the Secretary of the Treasury and the Secretary of Health and Human Services, shall provide outreach consisting of public education and enrollment assistance relating to premium assistance provided under this subsection. Such outreach shall target employers, group health plan administrators, public assistance programs, States, insurers, and other entities as determined appropriate by such Secretaries. Such outreach shall include an initial focus on those individuals electing continuation coverage

who are referred to in paragraph (5)(C). Information on such premium assistance, including enrollment, shall also be made available on websites of the Departments of Labor, Treasury, and Health and Human Services.

Web postings.

(B) ENROLLMENT UNDER MEDICARE.—The Secretary of Health and Human Services shall provide outreach consisting of public education. Such outreach shall target individuals who lose health insurance coverage. Such outreach shall include information regarding enrollment for Medicare benefits for purposes of preventing mistaken delays of such enrollment by such individuals, including lifetime penalties for failure of timely enrollment.

(9) DEFINITIONS.—For purposes of this section:

(A) ADMINISTRATOR.—The term “administrator” has the meaning given such term in section 3(16)(A) of the Employee Retirement Income Security Act of 1974, and includes a COBRA administrator.

(B) COBRA CONTINUATION COVERAGE.—The term “COBRA continuation coverage” means continuation coverage provided pursuant to part 6 of subtitle B of title I of the Employee Retirement Income Security Act of 1974 (other than under section 609), title XXII of the Public Health Service Act, or section 4980B of the Internal Revenue Code of 1986 (other than subsection (f)(1) of such section insofar as it relates to pediatric vaccines), or under a State program that provides comparable continuation coverage. Such term does not include coverage under a health flexible spending arrangement under a cafeteria plan within the meaning of section 125 of the Internal Revenue Code of 1986.

(C) COBRA CONTINUATION PROVISION.—The term “COBRA continuation provision” means the provisions of law described in subparagraph (B).

(D) COVERED EMPLOYEE.—The term “covered employee” has the meaning given such term in section 607(2) of the Employee Retirement Income Security Act of 1974.

(E) QUALIFIED BENEFICIARY.—The term “qualified beneficiary” has the meaning given such term in section 607(3) of the Employee Retirement Income Security Act of 1974.

(F) GROUP HEALTH PLAN.—The term “group health plan” has the meaning given such term in section 607(1) of the Employee Retirement Income Security Act of 1974.

(G) STATE.—The term “State” includes the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.

(H) PERIOD OF COVERAGE.—Any reference in this subsection to a period of coverage shall be treated as a reference to a monthly or shorter period of coverage with respect to which premiums are charged with respect to such coverage.

(I) PLAN SPONSOR.—The term “plan sponsor” has the meaning given such term in section 3(16)(B) of the Employee Retirement Income Security Act of 1974.

(J) PREMIUM.—The term “premium” includes, with respect to COBRA continuation coverage, any administrative fee.

(10) IMPLEMENTATION FUNDING.—In addition to amounts otherwise made available, out of any funds in the Treasury not otherwise appropriated, there are appropriated to the Secretary of Labor for fiscal year 2021, \$10,000,000, to remain available until expended, for the Employee Benefits Security Administration to carry out the provisions of this subtitle.

(b) COBRA PREMIUM ASSISTANCE.—

(1) ALLOWANCE OF CREDIT.—

(A) IN GENERAL.—Subchapter B of chapter 65 of the Internal Revenue Code of 1986 is amended by adding at the end the following new section:

26 USC 6432.

**“SEC. 6432. CONTINUATION COVERAGE PREMIUM ASSISTANCE.**

“(a) IN GENERAL.—The person to whom premiums are payable for continuation coverage under section 9501(a)(1) of the American Rescue Plan Act of 2021 shall be allowed as a credit against the tax imposed by section 3111(b), or so much of the taxes imposed under section 3221(a) as are attributable to the rate in effect under section 3111(b), for each calendar quarter an amount equal to the premiums not paid by assistance eligible individuals for such coverage by reason of such section 9501(a)(1) with respect to such calendar quarter.

“(b) PERSON TO WHOM PREMIUMS ARE PAYABLE.—For purposes of subsection (a), except as otherwise provided by the Secretary, the person to whom premiums are payable under such continuation coverage shall be treated as being—

“(1) in the case of any group health plan which is a multi-employer plan (as defined in section 3(37) of the Employee Retirement Income Security Act of 1974), the plan,

“(2) in the case of any group health plan not described in paragraph (1)—

“(A) which is subject to the COBRA continuation provisions contained in—

“(i) the Internal Revenue Code of 1986,

“(ii) the Employee Retirement Income Security Act of 1974, or

“(iii) the Public Health Service Act, or

“(B) under which some or all of the coverage is not provided by insurance, the employer maintaining the plan, and

“(3) in the case of any group health plan not described in paragraph (1) or (2), the insurer providing the coverage under the group health plan.

“(c) LIMITATIONS AND REFUNDABILITY.—

“(1) CREDIT LIMITED TO CERTAIN EMPLOYMENT TAXES.—The credit allowed by subsection (a) with respect to any calendar quarter shall not exceed the tax imposed by section 3111(b), or so much of the taxes imposed under section 3221(a) as are attributable to the rate in effect under section 3111(b), for such calendar quarter (reduced by any credits allowed against such taxes under sections 3131, 3132, and 3134) on the wages paid with respect to the employment of all employees of the employer.

“(2) REFUNDABILITY OF EXCESS CREDIT.—

“(A) CREDIT IS REFUNDABLE.—If the amount of the credit under subsection (a) exceeds the limitation of paragraph (1) for any calendar quarter, such excess shall be treated as an overpayment that shall be refunded under sections 6402(a) and 6413(b).

“(B) CREDIT MAY BE ADVANCED.—In anticipation of the credit, including the refundable portion under subparagraph (A), the credit may be advanced, according to forms and instructions provided by the Secretary, up to an amount calculated under subsection (a) through the end of the most recent payroll period in the quarter.

“(C) TREATMENT OF DEPOSITS.—The Secretary shall waive any penalty under section 6656 for any failure to make a deposit of the tax imposed by section 3111(b), or so much of the taxes imposed under section 3221(a) as are attributable to the rate in effect under section 3111(b), if the Secretary determines that such failure was due to the anticipation of the credit allowed under this section.

Waivers.  
Determinations.

“(D) TREATMENT OF PAYMENTS.—For purposes of section 1324 of title 31, United States Code, any amounts due to an employer under this paragraph shall be treated in the same manner as a refund due from a credit provision referred to in subsection (b)(2) of such section.

“(3) OVERSTATEMENTS.—Any overstatement of the credit to which a person is entitled under this section (and any amount paid by the Secretary as a result of such overstatement) shall be treated as an underpayment by such person of the taxes described in paragraph (1) and may be assessed and collected by the Secretary in the same manner as such taxes.

“(d) GOVERNMENTAL ENTITIES.—For purposes of this section, the term ‘person’ includes the government of any State or political subdivision thereof, any Indian tribal government (as defined in section 139E(c)(1)), any agency or instrumentality of any of the foregoing, and any agency or instrumentality of the Government of the United States that is described in section 501(c)(1) and exempt from taxation under section 501(a).

Definition.

“(e) DENIAL OF DOUBLE BENEFIT.—For purposes of chapter 1, the gross income of any person allowed a credit under this section shall be increased for the taxable year which includes the last day of any calendar quarter with respect to which such credit is allowed by the amount of such credit. No credit shall be allowed under this section with respect to any amount which is taken into account as qualified wages under section 2301 of the CARES Act or section 3134 of this title or as qualified health plan expenses under section 7001(d) or 7003(d) of the Families First Coronavirus Response Act or section 3131 or 3132 of this title.

“(f) EXTENSION OF LIMITATION ON ASSESSMENT.—Notwithstanding section 6501, the limitation on the time period for the assessment of any amount attributable to a credit claimed under this section shall not expire before the date that is 5 years after the later of—

“(1) the date on which the original return which includes the calendar quarter with respect to which such credit is determined is filed, or

“(2) the date on which such return is treated as filed under section 6501(b)(2).

“(g) REGULATIONS.—The Secretary shall issue such regulations, or other guidance, forms, instructions, and publications, as may be necessary or appropriate to carry out this section, including—

“(1) the requirement to report information or the establishment of other methods for verifying the correct amounts of reimbursements under this section,

“(2) the application of this section to group health plans that are multiemployer plans (as defined in section 3(37) of the Employee Retirement Income Security Act of 1974),

“(3) to allow the advance payment of the credit determined under subsection (a), subject to the limitations provided in this section, based on such information as the Secretary shall require,

“(4) to provide for the reconciliation of such advance payment with the amount of the credit at the time of filing the return of tax for the applicable quarter or taxable year, and

“(5) allowing the credit to third party payors (including professional employer organizations, certified professional employer organizations, or agents under section 3504).”

(B) CLERICAL AMENDMENT.—The table of sections for subchapter B of chapter 65 of the Internal Revenue Code of 1986 is amended by adding at the end the following new item:

26 USC 6411  
prec.

“Sec. 6432. Continuation coverage premium assistance.”.

(C) EFFECTIVE DATE.—The amendments made by this paragraph shall apply to premiums to which subsection (a)(1)(A) applies and wages paid on or after April 1, 2021.

Applicability.  
26 USC 6432  
note.

(D) SPECIAL RULE IN CASE OF EMPLOYEE PAYMENT THAT IS NOT REQUIRED UNDER THIS SECTION.—

26 USC 4980B  
note.

(i) IN GENERAL.—In the case of an assistance eligible individual who pays, with respect any period of coverage to which subsection (a)(1)(A) applies, any amount of the premium for such coverage that the individual would have (but for this Act) been required to pay, the person to whom such payment is payable shall reimburse such individual for the amount of such premium paid.

Reimbursement.

(ii) CREDIT OF REIMBURSEMENT.—A person to which clause (i) applies shall be allowed a credit in the manner provided under section 6432 of the Internal Revenue Code of 1986 for any payment made to the employee under such clause.

Deadline.

(iii) PAYMENT OF CREDITS.—Any person to which clause (i) applies shall make the payment required under such clause to the individual not later than 60 days after the date on which such individual made the premium payment.

(2) PENALTY FOR FAILURE TO NOTIFY HEALTH PLAN OF CESSATION OF ELIGIBILITY FOR PREMIUM ASSISTANCE.—

(A) IN GENERAL.—Part I of subchapter B of chapter 68 of the Internal Revenue Code of 1986 is amended by adding at the end the following new section:

**“SEC. 6720C. PENALTY FOR FAILURE TO NOTIFY HEALTH PLAN OF CESSATION OF ELIGIBILITY FOR CONTINUATION COVERAGE PREMIUM ASSISTANCE.** 26 USC 6720C.

“(a) IN GENERAL.—Except in the case of a failure described in subsection (b) or (c), any person required to notify a group health plan under section 9501(a)(2)(B) of the American Rescue Plan Act of 2021 who fails to make such a notification at such time and in such manner as the Secretary of Labor may require shall pay a penalty of \$250 for each such failure.

“(b) INTENTIONAL FAILURE.—In the case of any such failure that is fraudulent, such person shall pay a penalty equal to the greater of—

“(1) \$250, or

“(2) 110 percent of the premium assistance provided under section 9501(a)(1)(A) of the American Rescue Plan Act of 2021 after termination of eligibility under such section.

“(c) REASONABLE CAUSE EXCEPTION.—No penalty shall be imposed under this section with respect to any failure if it is shown that such failure is due to reasonable cause and not to willful neglect.”

(B) CLERICAL AMENDMENT.—The table of sections of part I of subchapter B of chapter 68 of such Code is amended by adding at the end the following new item:

26 USC 6671  
prec.

“Sec. 6720C. Penalty for failure to notify health plan of cessation of eligibility for continuation coverage premium assistance.”

(3) COORDINATION WITH HCTC.—

(A) IN GENERAL.—Section 35(g)(9) of the Internal Revenue Code of 1986 is amended to read as follows:

26 USC 35.

“(9) CONTINUATION COVERAGE PREMIUM ASSISTANCE.—In the case of an assistance eligible individual who receives premium assistance for continuation coverage under section 9501(a)(1) of the American Rescue Plan Act of 2021 for any month during the taxable year, such individual shall not be treated as an eligible individual, a certified individual, or a qualifying family member for purposes of this section or section 7527 with respect to such month.”

(B) EFFECTIVE DATE.—The amendment made by subparagraph (A) shall apply to taxable years ending after the date of the enactment of this Act.

26 USC 35 note.

(4) EXCLUSION OF CONTINUATION COVERAGE PREMIUM ASSISTANCE FROM GROSS INCOME.—

(A) IN GENERAL.—Part III of subchapter B of chapter 1 of the Internal Revenue Code of 1986 is amended by inserting after section 139H the following new section:

**“SEC. 139I. CONTINUATION COVERAGE PREMIUM ASSISTANCE.**

26 USC 139I.

“In the case of an assistance eligible individual (as defined in subsection (a)(3) of section 9501 of the American Rescue Plan Act of 2021), gross income does not include any premium assistance provided under subsection (a)(1) of such section.”

(B) CLERICAL AMENDMENT.—The table of sections for part III of subchapter B of chapter 1 of such Code is amended by inserting after the item relating to section 139H the following new item:

26 USC 101 prec.

“Sec. 139I. Continuation coverage premium assistance.”

26 USC 139I  
note.

(C) EFFECTIVE DATE.—The amendments made by this paragraph shall apply to taxable years ending after the date of the enactment of this Act.

## Subtitle G—Promoting Economic Security

### PART 1—2021 RECOVERY REBATES TO INDIVIDUALS

#### SEC. 9601. 2021 RECOVERY REBATES TO INDIVIDUALS.

(a) IN GENERAL.—Subchapter B of chapter 65 of the Internal Revenue Code of 1986 is amended by inserting after section 6428A the following new section:

26 USC 6428B.  
Effective date.

#### “SEC. 6428B. 2021 RECOVERY REBATES TO INDIVIDUALS.

“(a) IN GENERAL.—In the case of an eligible individual, there shall be allowed as a credit against the tax imposed by subtitle A for the first taxable year beginning in 2021 an amount equal to the 2021 rebate amount determined for such taxable year.

“(b) 2021 REBATE AMOUNT.—For purposes of this section, the term ‘2021 rebate amount’ means, with respect to any taxpayer for any taxable year, the sum of—

“(1) \$1,400 (\$2,800 in the case of a joint return), plus

“(2) \$1,400 multiplied by the number of dependents of the taxpayer for such taxable year.

Definition.

“(c) ELIGIBLE INDIVIDUAL.—For purposes of this section, the term ‘eligible individual’ means any individual other than—

“(1) any nonresident alien individual,

“(2) any individual who is a dependent of another taxpayer for a taxable year beginning in the calendar year in which the individual’s taxable year begins, and

“(3) an estate or trust.

“(d) LIMITATION BASED ON ADJUSTED GROSS INCOME.—

“(1) IN GENERAL.—The amount of the credit allowed by subsection (a) (determined without regard to this subsection and subsection (f)) shall be reduced (but not below zero) by the amount which bears the same ratio to such credit (as so determined) as—

“(A) the excess of—

“(i) the taxpayer’s adjusted gross income for such taxable year, over

“(ii) \$75,000, bears to

“(B) \$5,000.

Applicability.

“(2) SPECIAL RULES.—

“(A) JOINT RETURN OR SURVIVING SPOUSE.—In the case of a joint return or a surviving spouse (as defined in section 2(a), paragraph (1) shall be applied by substituting ‘\$150,000’ for ‘\$75,000’ and ‘\$10,000’ for ‘\$5,000’.

“(B) HEAD OF HOUSEHOLD.—In the case of a head of household (as defined in section 2(b)), paragraph (1) shall be applied by substituting ‘\$112,500’ for ‘\$75,000’ and ‘\$7,500’ for ‘\$5,000’.

“(e) DEFINITIONS AND SPECIAL RULES.—

“(1) DEPENDENT DEFINED.—For purposes of this section, the term ‘dependent’ has the meaning given such term by section 152.

“(2) IDENTIFICATION NUMBER REQUIREMENT.—

“(A) IN GENERAL.—In the case of a return other than a joint return, the \$1,400 amount in subsection (b)(1) shall be treated as being zero unless the taxpayer includes the valid identification number of the taxpayer on the return of tax for the taxable year.

“(B) JOINT RETURNS.—In the case of a joint return, the \$2,800 amount in subsection (b)(1) shall be treated as being—

“(i) \$1,400 if the valid identification number of only 1 spouse is included on the return of tax for the taxable year, and

“(ii) zero if the valid identification number of neither spouse is so included.

“(C) DEPENDENTS.—A dependent shall not be taken into account under subsection (b)(2) unless the valid identification number of such dependent is included on the return of tax for the taxable year.

“(D) VALID IDENTIFICATION NUMBER.—

“(i) IN GENERAL.—For purposes of this paragraph, the term ‘valid identification number’ means a social security number issued to an individual by the Social Security Administration on or before the due date for filing the return for the taxable year.

“(ii) ADOPTION TAXPAYER IDENTIFICATION NUMBER.—For purposes of subparagraph (C), in the case of a dependent who is adopted or placed for adoption, the term ‘valid identification number’ shall include the adoption taxpayer identification number of such dependent.

“(E) SPECIAL RULE FOR MEMBERS OF THE ARMED FORCES.—Subparagraph (B) shall not apply in the case where at least 1 spouse was a member of the Armed Forces of the United States at any time during the taxable year and the valid identification number of at least 1 spouse is included on the return of tax for the taxable year.

“(F) COORDINATION WITH CERTAIN ADVANCE PAYMENTS.—In the case of any payment determined pursuant to subsection (g)(6), a valid identification number shall be treated for purposes of this paragraph as included on the taxpayer’s return of tax if such valid identification number is available to the Secretary as described in such subsection.

“(G) MATHEMATICAL OR CLERICAL ERROR AUTHORITY.—Any omission of a correct valid identification number required under this paragraph shall be treated as a mathematical or clerical error for purposes of applying section 6213(g)(2) to such omission.

“(3) CREDIT TREATED AS REFUNDABLE.—The credit allowed by subsection (a) shall be treated as allowed by subpart C of part IV of subchapter A of chapter 1.

“(f) COORDINATION WITH ADVANCE REFUNDS OF CREDIT.—

“(1) REDUCTION OF REFUNDABLE CREDIT.—The amount of the credit which would (but for this paragraph) be allowable under subsection (a) shall be reduced (but not below zero) by the aggregate refunds and credits made or allowed to the

taxpayer (or, except as otherwise provided by the Secretary, any dependent of the taxpayer) under subsection (g). Any failure to so reduce the credit shall be treated as arising out of a mathematical or clerical error and assessed according to section 6213(b)(1).

“(2) JOINT RETURNS.—Except as otherwise provided by the Secretary, in the case of a refund or credit made or allowed under subsection (g) with respect to a joint return, half of such refund or credit shall be treated as having been made or allowed to each individual filing such return.

“(g) ADVANCE REFUNDS AND CREDITS.—

“(1) IN GENERAL.—Subject to paragraphs (5) and (6), each individual who was an eligible individual for such individual’s first taxable year beginning in 2019 shall be treated as having made a payment against the tax imposed by chapter 1 for such taxable year in an amount equal to the advance refund amount for such taxable year.

“(2) ADVANCE REFUND AMOUNT.—

“(A) IN GENERAL.—For purposes of paragraph (1), the advance refund amount is the amount that would have been allowed as a credit under this section for such taxable year if this section (other than subsection (f) and this subsection) had applied to such taxable year.

“(B) TREATMENT OF DECEASED INDIVIDUALS.—For purposes of determining the advance refund amount with respect to such taxable year—

“(i) any individual who was deceased before January 1, 2021, shall be treated for purposes of applying subsection (e)(2) in the same manner as if the valid identification number of such person was not included on the return of tax for such taxable year (except that subparagraph (E) thereof shall not apply).

“(ii) notwithstanding clause (i), in the case of a joint return with respect to which only 1 spouse is deceased before January 1, 2021, such deceased spouse was a member of the Armed Forces of the United States at any time during the taxable year, and the valid identification number of such deceased spouse is included on the return of tax for the taxable year, the valid identification number of 1 (and only 1) spouse shall be treated as included on the return of tax for the taxable year for purposes of applying subsection (e)(2)(B) with respect to such joint return, and

“(iii) no amount shall be determined under subsection (e)(2) with respect to any dependent of the taxpayer if the taxpayer (both spouses in the case of a joint return) was deceased before January 1, 2021.

“(3) TIMING AND MANNER OF PAYMENTS.—The Secretary shall, subject to the provisions of this title and consistent with rules similar to the rules of subparagraphs (B) and (C) of section 6428A(f)(3), refund or credit any overpayment attributable to this subsection as rapidly as possible, consistent with a rapid effort to make payments attributable to such overpayments electronically if appropriate. No refund or credit shall be made or allowed under this subsection after December 31, 2021.

Determination.  
Termination  
date.

Effective date.

“(4) NO INTEREST.—No interest shall be allowed on any overpayment attributable to this subsection.

“(5) APPLICATION TO INDIVIDUALS WHO HAVE FILED A RETURN OF TAX FOR 2020.—

“(A) APPLICATION TO 2020 RETURNS FILED AT TIME OF INITIAL DETERMINATION.—If, at the time of any determination made pursuant to paragraph (3), the individual referred to in paragraph (1) has filed a return of tax for the individual’s first taxable year beginning in 2020, paragraph (1) shall be applied with respect to such individual by substituting ‘2020’ for ‘2019’.

“(B) ADDITIONAL PAYMENT.—

Definitions.

“(i) IN GENERAL.—In the case of any individual who files, before the additional payment determination date, a return of tax for such individual’s first taxable year beginning in 2020, the Secretary shall make a payment (in addition to any payment made under paragraph (1)) to such individual equal to the excess (if any) of—

“(I) the amount which would be determined under paragraph (1) (after the application of subparagraph (A)) by applying paragraph (1) as of the additional payment determination date, over

“(II) the amount of any payment made with respect to such individual under paragraph (1).

“(ii) ADDITIONAL PAYMENT DETERMINATION DATE.—The term ‘additional payment determination date’ means the earlier of—

“(I) the date which is 90 days after the 2020 calendar year filing deadline, or

“(II) September 1, 2021.

“(iii) 2020 CALENDAR YEAR FILING DEADLINE.—The term ‘2020 calendar year filing deadline’ means the date specified in section 6072(a) with respect to returns for calendar year 2020. Such date shall be determined after taking into account any period disregarded under section 7508A if such disregard applies to substantially all returns for calendar year 2020 to which section 6072(a) applies.

Determination.

“(6) APPLICATION TO CERTAIN INDIVIDUALS WHO HAVE NOT FILED A RETURN OF TAX FOR 2019 OR 2020 AT TIME OF DETERMINATION.—In the case of any individual who, at the time of any determination made pursuant to paragraph (3), has filed a tax return for neither the year described in paragraph (1) nor for the year described in paragraph (5)(A), the Secretary shall, consistent with rules similar to the rules of section 6428A(f)(5)(H)(i), apply paragraph (1) on the basis of information available to the Secretary and shall, on the basis of such information, determine the advance refund amount with respect to such individual without regard to subsection (d) unless the Secretary has reason to know that such amount would otherwise be reduced by reason of such subsection.

“(7) SPECIAL RULE RELATED TO TIME OF FILING RETURN.—Solely for purposes of this subsection, a return of tax shall not be treated as filed until such return has been processed by the Internal Revenue Service.

“(8) RESTRICTION ON USE OF CERTAIN PREVIOUSLY ISSUED PREPAID DEBIT CARDS.—Payments made by the Secretary to individuals under this section shall not be in the form of an increase in the balance of any previously issued prepaid debit card if, as of the time of the issuance of such card, such card was issued solely for purposes of making payments under section 6428 or 6428A.

“(h) REGULATIONS.—The Secretary shall prescribe such regulations or other guidance as may be necessary or appropriate to carry out the purposes of this section, including—

Determination.

“(1) regulations or other guidance providing taxpayers the opportunity to provide the Secretary information sufficient to allow the Secretary to make payments to such taxpayers under subsection (g) (including the determination of the amount of such payment) if such information is not otherwise available to the Secretary, and

“(2) regulations or other guidance to ensure to the maximum extent administratively practicable that, in determining the amount of any credit under subsection (a) and any credit or refund under subsection (g), an individual is not taken into account more than once, including by different taxpayers and including by reason of a change in joint return status or dependent status between the taxable year for which an advance refund amount is determined and the taxable year for which a credit under subsection (a) is determined.

“(i) OUTREACH.—The Secretary shall carry out a robust and comprehensive outreach program to ensure that all taxpayers described in subsection (h)(1) learn of their eligibility for the advance refunds and credits under subsection (g); are advised of the opportunity to receive such advance refunds and credits as provided under subsection (h)(1); and are provided assistance in applying for such advance refunds and credits.”.

26 USC 6428B  
note.

(b) TREATMENT OF CERTAIN POSSESSIONS.—

Determination.

(1) PAYMENTS TO POSSESSIONS WITH MIRROR CODE TAX SYSTEMS.—The Secretary of the Treasury shall pay to each possession of the United States which has a mirror code tax system amounts equal to the loss (if any) to that possession by reason of the amendments made by this section. Such amounts shall be determined by the Secretary of the Treasury based on information provided by the government of the respective possession.

Estimates.

(2) PAYMENTS TO OTHER POSSESSIONS.—The Secretary of the Treasury shall pay to each possession of the United States which does not have a mirror code tax system amounts estimated by the Secretary of the Treasury as being equal to the aggregate benefits (if any) that would have been provided to residents of such possession by reason of the amendments made by this section if a mirror code tax system had been in effect in such possession. The preceding sentence shall not apply unless the respective possession has a plan, which has been approved by the Secretary of the Treasury, under which such possession will promptly distribute such payments to its residents.

Plan.

(3) INCLUSION OF ADMINISTRATIVE EXPENSES.—The Secretary of the Treasury shall pay to each possession of the United States to which the Secretary makes a payment under paragraph (1) or (2) an amount equal to the lesser of—

(A) the increase (if any) of the administrative expenses of such possession—

(i) in the case of a possession described in paragraph (1), by reason of the amendments made by this section, and

(ii) in the case of a possession described in paragraph (2), by reason of carrying out the plan described in such paragraph, or

(B) \$500,000 (\$10,000,000 in the case of Puerto Rico).

The amount described in subparagraph (A) shall be determined by the Secretary of the Treasury based on information provided by the government of the respective possession.

Puerto Rico.  
Determination.

(4) COORDINATION WITH CREDIT ALLOWED AGAINST UNITED STATES INCOME TAXES.—No credit shall be allowed against United States income taxes under section 6428B of the Internal Revenue Code of 1986 (as added by this section), nor shall any credit or refund be made or allowed under subsection (g) of such section, to any person—

(A) to whom a credit is allowed against taxes imposed by the possession by reason of the amendments made by this section, or

(B) who is eligible for a payment under a plan described in paragraph (2).

(5) MIRROR CODE TAX SYSTEM.—For purposes of this subsection, the term “mirror code tax system” means, with respect to any possession of the United States, the income tax system of such possession if the income tax liability of the residents of such possession under such system is determined by reference to the income tax laws of the United States as if such possession were the United States.

Definition.  
Determination.

(6) TREATMENT OF PAYMENTS.—For purposes of section 1324 of title 31, United States Code, the payments under this subsection shall be treated in the same manner as a refund due from a credit provision referred to in subsection (b)(2) of such section.

(c) ADMINISTRATIVE PROVISIONS.—

(1) DEFINITION OF DEFICIENCY.—Section 6211(b)(4)(A) of the Internal Revenue Code of 1986 is amended by striking “6428, and 6428A” and inserting “6428, 6428A, and 6428B”.

26 USC 6211.

(2) EXCEPTION FROM REDUCTION OR OFFSET.—Any refund payable by reason of section 6428B(g) of the Internal Revenue Code of 1986 (as added by this section), or any such refund payable by reason of subsection (b) of this section, shall not be—

26 USC 6428B  
note.

(A) subject to reduction or offset pursuant to subsection (c), (d), (e), or (f) of section 6402 of the Internal Revenue Code of 1986 or any similar authority permitting offset, or

(B) reduced or offset by other assessed Federal taxes that would otherwise be subject to levy or collection.

(3) CONFORMING AMENDMENTS.—

(A) Paragraph (2) of section 1324(b) of title 31, United States Code, is amended by inserting “6428B,” after “6428A,”.

(B) The table of sections for subchapter B of chapter 65 of the Internal Revenue Code of 1986 is amended by

26 USC 6411  
prec.

inserting after the item relating to section 6428A the following new item:

“Sec. 6428B. 2021 recovery rebates to individuals.”

(d) APPROPRIATIONS.—Immediately upon the enactment of this Act, in addition to amounts otherwise available, there are appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated:

(1) \$1,464,500,000 to remain available until September 30, 2023 for necessary expenses for the Internal Revenue Service for the administration of the advance payments, the provision of taxpayer assistance, and the furtherance of integrated, modernized, and secure Internal Revenue Service systems, of which up to \$20,000,000 is available for premium pay for services related to the development of information technology as determined by the Commissioner of the Internal Revenue occurring between January 1, 2020 and December 31, 2022, and all of which shall supplement and not supplant any other appropriations that may be available for this purpose.

(2) \$7,000,000 to remain available until September 30, 2022, for necessary expenses for the Bureau of the Fiscal Service to carry out this section (and the amendments made by this section), which shall supplement and not supplant any other appropriations that may be available for this purpose, and

(3) \$8,000,000 to remain available until September 30, 2023, for the Treasury Inspector General for Tax Administration for the purposes of overseeing activities related to the administration of this section (and the amendments made by this section), which shall supplement and not supplant any other appropriations that may be available for this purpose.

## PART 2—CHILD TAX CREDIT

### SEC. 9611. CHILD TAX CREDIT IMPROVEMENTS FOR 2021.

26 USC 24. (a) IN GENERAL.—Section 24 of the Internal Revenue Code of 1986 is amended by adding at the end the following new subsection:

Puerto Rico. “(i) SPECIAL RULES FOR 2021.—In the case of any taxable year beginning after December 31, 2020, and before January 1, 2022—

“(1) REFUNDABLE CREDIT.—If the taxpayer (in the case of a joint return, either spouse) has a principal place of abode in the United States (determined as provided in section 32) for more than one-half of the taxable year or is a bona fide resident of Puerto Rico (within the meaning of section 937(a)) for such taxable year—

“(A) subsection (d) shall not apply, and

“(B) so much of the credit determined under subsection (a) (after application of subparagraph (A)) as does not exceed the amount of such credit which would be so determined without regard to subsection (h)(4) shall be allowed under subpart C (and not allowed under this subpart).

“(2) 17-YEAR-OLDS ELIGIBLE FOR TREATMENT AS QUALIFYING CHILDREN.—This section shall be applied—

“(A) by substituting ‘age 18’ for ‘age 17’ in subsection (c)(1), and

“(B) by substituting ‘described in subsection (c) (determined after the application of subsection (i)(2)(A))’ for ‘described in subsection (c)’ in subsection (h)(4)(A).

“(3) CREDIT AMOUNT.—Subsection (h)(2) shall not apply and subsection (a) shall be applied by substituting ‘\$3,000 (\$3,600 in the case of a qualifying child who has not attained age 6 as of the close of the calendar year in which the taxable year of the taxpayer begins)’ for ‘\$1,000’.

“(4) REDUCTION OF INCREASED CREDIT AMOUNT BASED ON MODIFIED ADJUSTED GROSS INCOME.—

“(A) IN GENERAL.—The amount of the credit allowable under subsection (a) (determined without regard to subsection (b)) shall be reduced by \$50 for each \$1,000 (or fraction thereof) by which the taxpayer’s modified adjusted gross income (as defined in subsection (b)) exceeds the applicable threshold amount.

“(B) APPLICABLE THRESHOLD AMOUNT.—For purposes of this paragraph, the term ‘applicable threshold amount’ means—

Definition.

“(i) \$150,000, in the case of a joint return or surviving spouse (as defined in section 2(a)),

“(ii) \$112,500, in the case of a head of household (as defined in section 2(b)), and

“(iii) \$75,000, in any other case.

“(C) LIMITATION ON REDUCTION.—

Definitions.

“(i) IN GENERAL.—The amount of the reduction under subparagraph (A) shall not exceed the lesser of—

Determinations.

“(I) the applicable credit increase amount, or

“(II) 5 percent of the applicable phaseout threshold range.

“(ii) APPLICABLE CREDIT INCREASE AMOUNT.—For purposes of this subparagraph, the term ‘applicable credit increase amount’ means the excess (if any) of—

“(I) the amount of the credit allowable under this section for the taxable year determined without regard to this paragraph and subsection (b), over

“(II) the amount of such credit as so determined and without regard to paragraph (3).

“(iii) APPLICABLE PHASEOUT THRESHOLD RANGE.—For purposes of this subparagraph, the term ‘applicable phaseout threshold range’ means the excess of—

“(I) the threshold amount applicable to the taxpayer under subsection (b) (determined after the application of subsection (h)(3)), over

“(II) the applicable threshold amount applicable to the taxpayer under this paragraph.

“(D) COORDINATION WITH LIMITATION ON OVERALL CREDIT.—Subsection (b) shall be applied by substituting ‘the credit allowable under subsection (a) (determined after the application of subsection (i)(4)(A))’ for ‘the credit allowable under subsection (a)’.”.

Applicability.  
Determination.

(b) ADVANCE PAYMENT OF CREDIT.—

(1) IN GENERAL.—Chapter 77 of such Code is amended by inserting after section 7527 the following new section:

26 USC 7527A.

**“SEC. 7527A. ADVANCE PAYMENT OF CHILD TAX CREDIT.**

Determination.

“(a) **IN GENERAL.**—The Secretary shall establish a program for making periodic payments to taxpayers which, in the aggregate during any calendar year, equal the annual advance amount determined with respect to such taxpayer for such calendar year. Except as provided in subsection (b)(3)(B), the periodic payments made to any taxpayer for any calendar year shall be in equal amounts.

Definition.

Estimate.

Determinations.

“(b) **ANNUAL ADVANCE AMOUNT.**—For purposes of this section—

“(1) **IN GENERAL.**—Except as otherwise provided in this subsection, the term ‘annual advance amount’ means, with respect to any taxpayer for any calendar year, the amount (if any) which is estimated by the Secretary as being equal to 50 percent of the amount which would be treated as allowed under subpart C of part IV of subchapter A of chapter 1 by reason of section 24(i)(1) for the taxpayer’s taxable year beginning in such calendar year if—

“(A) the status of the taxpayer as a taxpayer described in section 24(i)(1) is determined with respect to the reference taxable year,

“(B) the taxpayer’s modified adjusted gross income for such taxable year is equal to the taxpayer’s modified adjusted gross income for the reference taxable year,

“(C) the only children of such taxpayer for such taxable year are qualifying children properly claimed on the taxpayer’s return of tax for the reference taxable year, and

“(D) the ages of such children (and the status of such children as qualifying children) are determined for such taxable year by taking into account the passage of time since the reference taxable year.

Definition.

“(2) **REFERENCE TAXABLE YEAR.**—Except as provided in paragraph (3)(A), the term ‘reference taxable year’ means, with respect to any taxpayer for any calendar year, the taxpayer’s taxable year beginning in the preceding calendar year or, in the case of taxpayer who did not file a return of tax for such taxable year, the taxpayer’s taxable year beginning in the second preceding calendar year.

“(3) **MODIFICATIONS DURING CALENDAR YEAR.**—

“(A) **IN GENERAL.**—The Secretary may modify, during any calendar year, the annual advance amount with respect to any taxpayer for such calendar year to take into account—

“(i) a return of tax filed by such taxpayer during such calendar year (and the taxable year to which such return relates may be taken into account as the reference taxable year), and

“(ii) any other information provided by the taxpayer to the Secretary which allows the Secretary to determine payments under subsection (a) which, in the aggregate during any taxable year of the taxpayer, more closely total the Secretary’s estimate of the amount treated as allowed under subpart C of part IV of subchapter A of chapter 1 by reason of section 24(i)(1) for such taxable year of such taxpayer.

“(B) **ADJUSTMENT TO REFLECT EXCESS OR DEFICIT IN PRIOR PAYMENTS.**—In the case of any modification of the annual advance amount under subparagraph (A), the Secretary may adjust the amount of any periodic payment

made after the date of such modification to properly take into account the amount by which any periodic payment made before such date was greater than or less than the amount that such payment would have been on the basis of the annual advance amount as so modified.

“(4) DETERMINATION OF STATUS.—If information contained in the taxpayer’s return of tax for the reference taxable year does not establish the status of the taxpayer as being described in section 24(i)(1), the Secretary shall, for purposes of paragraph (1)(A), determine such status based on information known to the Secretary.

“(5) TREATMENT OF CERTAIN DEATHS.—A child shall not be taken into account in determining the annual advance amount under paragraph (1) if the death of such child is known to the Secretary as of the beginning of the calendar year for which the estimate under such paragraph is made.

Determination.

“(c) ON-LINE INFORMATION PORTAL.—The Secretary shall establish an on-line portal which allows taxpayers to—

“(1) elect not to receive payments under this section, and

“(2) provide information to the Secretary which would be relevant to a modification under subsection (b)(3)(B) of the annual advance amount, including information regarding—

“(A) a change in the number of the taxpayer’s qualifying children, including by reason of the birth of a child,

“(B) a change in the taxpayer’s marital status,

“(C) a significant change in the taxpayer’s income,

and

“(D) any other factor which the Secretary may provide.

“(d) NOTICE OF PAYMENTS.—Not later than January 31 of the calendar year following any calendar year during which the Secretary makes one or more payments to any taxpayer under this section, the Secretary shall provide such taxpayer with a written notice which includes the taxpayer’s taxpayer identity (as defined in section 6103(b)(6)), the aggregate amount of such payments made to such taxpayer during such calendar year, and such other information as the Secretary determines appropriate.

Deadlines.

“(e) ADMINISTRATIVE PROVISIONS.—

“(1) APPLICATION OF ELECTRONIC FUNDS PAYMENT REQUIREMENT.—The payments made by the Secretary under subsection (a) shall be made by electronic funds transfer to the same extent and in the same manner as if such payments were Federal payments not made under this title.

“(2) APPLICATION OF CERTAIN RULES.—Rules similar to the rules of subparagraphs (B) and (C) of section 6428A(f)(3) shall apply for purposes of this section.

“(3) EXCEPTION FROM REDUCTION OR OFFSET.—Any payment made to any individual under this section shall not be—

“(A) subject to reduction or offset pursuant to subsection (c), (d), (e), or (f) of section 6402 or any similar authority permitting offset, or

“(B) reduced or offset by other assessed Federal taxes that would otherwise be subject to levy or collection.

“(4) APPLICATION OF ADVANCE PAYMENTS IN THE POSSESSIONS OF THE UNITED STATES.—

“(A) IN GENERAL.—The advance payment amount determined under this section shall be determined—

Determination.

Puerto Rico.

“(i) by applying section 24(i)(1) without regard to the phrase ‘or is a bona fide resident of Puerto Rico (within the meaning of section 937(a))’, and

“(ii) without regard to section 24(k)(3)(C)(ii)(I).

“(B) MIRROR CODE POSSESSIONS.—In the case of any possession of the United States with a mirror code tax system (as defined in section 24(k)), this section shall not be treated as part of the income tax laws of the United States for purposes of determining the income tax law of such possession unless such possession elects to have this section be so treated.

“(C) ADMINISTRATIVE EXPENSES OF ADVANCE PAYMENTS.—

Plan.

“(i) MIRROR CODE POSSESSIONS.—In the case of any possession described in subparagraph (B) which makes the election described in such subparagraph, the amount otherwise paid by the Secretary to such possession under section 24(k)(1)(A) with respect to taxable years beginning in 2021 shall be increased by \$300,000 if such possession has a plan, which has been approved by the Secretary, for making advance payments consistent with such election.

“(ii) AMERICAN SAMOA.—The amount otherwise paid by the Secretary to American Samoa under subparagraph (A) of section 24(k)(3) with respect to taxable years beginning in 2021 shall be increased by \$300,000 if the plan described in subparagraph (B) of such section includes a program, which has been approved by the Secretary, for making advance payments under rules similar to the rules of this section.

“(iii) TIMING OF PAYMENT.—The Secretary may pay, upon the request of the possession of the United States to which the payment is to be made, the amount of the increase determined under clause (i) or (ii) immediately upon approval of the plan referred to in such clause, respectively.

Time periods.

“(f) APPLICATION.—No payments shall be made under the program established under subsection (a) with respect to—

“(1) any period before July 1, 2021, or

“(2) any period after December 31, 2021.

Determination.

“(g) REGULATIONS.—The Secretary shall issue such regulations or other guidance as the Secretary determines necessary or appropriate to carry out the purposes of this section and subsections (i)(1) and (j) of section 24, including regulations or other guidance which provides for the application of such provisions where the filing status of the taxpayer for a taxable year is different from the status used for determining the annual advance amount.”.

26 USC 24.

(2) RECONCILIATION OF CREDIT AND ADVANCE CREDIT.—Section 24 of such Code, as amended by the preceding provision of this Act, is amended by adding at the end the following new subsection:

“(j) RECONCILIATION OF CREDIT AND ADVANCE CREDIT.—

“(1) IN GENERAL.—The amount of the credit allowed under this section to any taxpayer for any taxable year shall be reduced (but not below zero) by the aggregate amount of payments made under section 7527A to such taxpayer during such

taxable year. Any failure to so reduce the credit shall be treated as arising out of a mathematical or clerical error and assessed according to section 6213(b)(1).

“(2) EXCESS ADVANCE PAYMENTS.—

“(A) IN GENERAL.—If the aggregate amount of payments under section 7527A to the taxpayer during the taxable year exceeds the amount of the credit allowed under this section to such taxpayer for such taxable year (determined without regard to paragraph (1)), the tax imposed by this chapter for such taxable year shall be increased by the amount of such excess. Any failure to so increase the tax shall be treated as arising out of a mathematical or clerical error and assessed according to section 6213(b)(1).

“(B) SAFE HARBOR BASED ON MODIFIED ADJUSTED GROSS INCOME.— Definitions.

“(i) IN GENERAL.—In the case of a taxpayer whose modified adjusted gross income (as defined in subsection (b)) for the taxable year does not exceed 200 percent of the applicable income threshold, the amount of the increase determined under subparagraph (A) with respect to such taxpayer for such taxable year shall be reduced (but not below zero) by the safe harbor amount.

“(ii) PHASE OUT OF SAFE HARBOR AMOUNT.—In the case of a taxpayer whose modified adjusted gross income (as defined in subsection (b)) for the taxable year exceeds the applicable income threshold, the safe harbor amount otherwise in effect under clause (i) shall be reduced by the amount which bears the same ratio to such amount as such excess bears to the applicable income threshold.

“(iii) APPLICABLE INCOME THRESHOLD.—For purposes of this subparagraph, the term ‘applicable income threshold’ means—

“(I) \$60,000 in the case of a joint return or surviving spouse (as defined in section 2(a)),

“(II) \$50,000 in the case of a head of household, and

“(III) \$40,000 in any other case.

“(iv) SAFE HARBOR AMOUNT.—For purposes of this subparagraph, the term ‘safe harbor amount’ means, with respect to any taxable year, the product of—

“(I) \$2,000, multiplied by

“(II) the excess (if any) of the number of qualified children taken into account in determining the annual advance amount with respect to the taxpayer under section 7527A with respect to months beginning in such taxable year, over the number of qualified children taken into account in determining the credit allowed under this section for such taxable year.”. Determinations.

(3) COORDINATION WITH WAGE WITHHOLDING.—Section 3402(f)(1)(C) of such Code is amended by striking “section 24(a)” and inserting “section 24 (determined after application of subsection (j) thereof)”. 26 USC 3402.

(4) CONFORMING AMENDMENTS.—

26 USC 26.

(A) Section 26(b)(2) of such Code is amended by striking “and” at the end of subparagraph (X), by striking the period at the end of subparagraph (Y) and inserting “, and”, and by adding at the end the following new subparagraph:

“(Z) section 24(j)(2) (relating to excess advance payments).”.

(B) Section 6211(b)(4)(A) of such Code, as amended by the preceding provisions of this subtitle, is amended—

(i) by striking “24(d)” and inserting “24 by reason of subsections (d) and (i)(1) thereof”, and

(ii) by striking “and 6428B” and inserting “6428B, and 7527A”.

(C) Paragraph (2) of section 1324(b) of title 31, United States Code, is amended—

(i) by inserting “24,” before “25A”, and

(ii) by striking “ or 6431” and inserting “6431, or 7527A”.

26 USC 7501  
prec.

(D) The table of sections for chapter 77 of the Internal Revenue Code of 1986 is amended by inserting after the item relating to section 7527 the following new item:

“Sec. 7527A. Advance payment of child tax credit.”.

(5) APPROPRIATIONS TO CARRY OUT ADVANCE PAYMENTS.—Immediately upon the enactment of this Act, in addition to amounts otherwise available, there are appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated:

(A) \$397,200,000 to remain available until September 30, 2022, for necessary expenses for the Internal Revenue Service to carry out this section (and the amendments made by this section), which shall supplement and not supplant any other appropriations that may be available for this purpose, and

(B) \$16,200,000 to remain available until September 30, 2022, for necessary expenses for the Bureau of the Fiscal Service to carry out this section (and the amendments made by this section), which shall supplement and not supplant any other appropriations that may be available for this purpose.

(c) EFFECTIVE DATE.—

26 USC 24 note.

(1) IN GENERAL.—The amendments made by this section shall apply to taxable years beginning after December 31, 2020.

26 USC 7527A  
note.

(2) ESTABLISHMENT OF ADVANCE PAYMENT PROGRAM.—The Secretary of the Treasury (or the Secretary’s designee) shall establish the program described in section 7527A of the Internal Revenue Code of 1986 as soon as practicable after the date of the enactment of this Act, except that the Secretary shall ensure that the timing of the establishment of such program does not interfere with carrying out section 6428B(g) as rapidly as possible.

#### SEC. 9612. APPLICATION OF CHILD TAX CREDIT IN POSSESSIONS.

26 USC 24.

(a) IN GENERAL.—Section 24 of the Internal Revenue Code of 1986, as amended by the preceding provisions of this Act, is amended by adding at the end the following new subsection:

“(k) APPLICATION OF CREDIT IN POSSESSIONS.—

## “(1) MIRROR CODE POSSESSIONS.—

“(A) IN GENERAL.—The Secretary shall pay to each possession of the United States with a mirror code tax system amounts equal to the loss (if any) to that possession by reason of the application of this section (determined without regard to this subsection) with respect to taxable years beginning after 2020. Such amounts shall be determined by the Secretary based on information provided by the government of the respective possession.

“(B) COORDINATION WITH CREDIT ALLOWED AGAINST UNITED STATES INCOME TAXES.—No credit shall be allowed under this section for any taxable year to any individual to whom a credit is allowable against taxes imposed by a possession of the United States with a mirror code tax system by reason of the application of this section in such possession for such taxable year.

“(C) MIRROR CODE TAX SYSTEM.—For purposes of this paragraph, the term ‘mirror code tax system’ means, with respect to any possession of the United States, the income tax system of such possession if the income tax liability of the residents of such possession under such system is determined by reference to the income tax laws of the United States as if such possession were the United States.

Definition.

## “(2) PUERTO RICO.—

“(A) APPLICATION TO TAXABLE YEARS IN 2021.—

“(i) For application of refundable credit to residents of Puerto Rico, see subsection (i)(1).

“(ii) For nonapplication of advance payment to residents of Puerto Rico, see section 7527A(e)(4)(A).

“(B) APPLICATION TO TAXABLE YEARS AFTER 2021.—In the case of any bona fide resident of Puerto Rico (within the meaning of section 937(a)) for any taxable year beginning after December 31, 2021—

“(i) the credit determined under this section shall be allowable to such resident, and

“(ii) subsection (d)(1)(B)(ii) shall be applied without regard to the phrase ‘in the case of a taxpayer with 3 or more qualifying children’.

## “(3) AMERICAN SAMOA.—

“(A) IN GENERAL.—The Secretary shall pay to American Samoa amounts estimated by the Secretary as being equal to the aggregate benefits that would have been provided to residents of American Samoa by reason of the application of this section for taxable years beginning after 2020 if the provisions of this section had been in effect in American Samoa (applied as if American Samoa were the United States and without regard to the application of this section to bona fide residents of Puerto Rico under subsection (i)(1)).

Estimates.

“(B) DISTRIBUTION REQUIREMENT.—Subparagraph (A) shall not apply unless American Samoa has a plan, which has been approved by the Secretary, under which American Samoa will promptly distribute such payments to its residents.

Plan.

“(C) COORDINATION WITH CREDIT ALLOWED AGAINST UNITED STATES INCOME TAXES.—

“(i) IN GENERAL.—In the case of a taxable year with respect to which a plan is approved under subparagraph (B), this section (other than this subsection) shall not apply to any individual eligible for a distribution under such plan.

Effective dates.

“(ii) APPLICATION OF SECTION IN EVENT OF ABSENCE OF APPROVED PLAN.—In the case of a taxable year with respect to which a plan is not approved under subparagraph (B)—

“(I) if such taxable year begins in 2021, subsection (i)(1) shall be applied by substituting ‘bona fide resident of Puerto Rico or American Samoa’ for ‘bona fide resident of Puerto Rico’, and

“(II) if such taxable year begins after December 31, 2021, rules similar to the rules of paragraph (2)(B) shall apply with respect to bona fide residents of American Samoa (within the meaning of section 937(a)).

“(4) TREATMENT OF PAYMENTS.—For purposes of section 1324 of title 31, United States Code, the payments under this subsection shall be treated in the same manner as a refund due from a credit provision referred to in subsection (b)(2) of such section.”.

26 USC 24 note.

(b) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 2020.

### PART 3—EARNED INCOME TAX CREDIT

#### SEC. 9621. STRENGTHENING THE EARNED INCOME TAX CREDIT FOR INDIVIDUALS WITH NO QUALIFYING CHILDREN.

26 USC 32.

(a) SPECIAL RULES FOR 2021.—Section 32 of the Internal Revenue Code of 1986 is amended by adding at the end the following new subsection:

“(n) SPECIAL RULES FOR INDIVIDUALS WITHOUT QUALIFYING CHILDREN.—In the case of any taxable year beginning after December 31, 2020, and before January 1, 2022—

Definitions.

“(1) DECREASE IN MINIMUM AGE FOR CREDIT.—

Applicability.

“(A) IN GENERAL.—Subsection (c)(1)(A)(ii)(II) shall be applied by substituting ‘the applicable minimum age’ for ‘age 25’.

“(B) APPLICABLE MINIMUM AGE.—For purposes of this paragraph, the term ‘applicable minimum age’ means—

“(i) except as otherwise provided in this subparagraph, age 19,

“(ii) in the case of a specified student (other than a qualified former foster youth or a qualified homeless youth), age 24, and

“(iii) in the case of a qualified former foster youth or a qualified homeless youth, age 18.

“(C) SPECIFIED STUDENT.—For purposes of this paragraph, the term ‘specified student’ means, with respect to any taxable year, an individual who is an eligible student (as defined in section 25A(b)(3)) during at least 5 calendar months during the taxable year.

“(D) QUALIFIED FORMER FOSTER YOUTH.—For purposes of this paragraph, the term ‘qualified former foster youth’ means an individual who—

“(i) on or after the date that such individual attained age 14, was in foster care provided under the supervision or administration of an entity administering (or eligible to administer) a plan under part B or part E of title IV of the Social Security Act (without regard to whether Federal assistance was provided with respect to such child under such part E), and

Effective date.

“(ii) provides (in such manner as the Secretary may provide) consent for entities which administer a plan under part B or part E of title IV of the Social Security Act to disclose to the Secretary information related to the status of such individual as a qualified former foster youth.

“(E) QUALIFIED HOMELESS YOUTH.—For purposes of this paragraph, the term ‘qualified homeless youth’ means, with respect to any taxable year, an individual who certifies, in a manner as provided by the Secretary, that such individual is either an unaccompanied youth who is a homeless child or youth, or is unaccompanied, at risk of homelessness, and self-supporting.

Certification.

“(2) ELIMINATION OF MAXIMUM AGE FOR CREDIT.—Subsection (c)(1)(A)(ii)(II) shall be applied without regard to the phrase ‘but not attained age 65’.

“(3) INCREASE IN CREDIT AND PHASEOUT PERCENTAGES.—The table contained in subsection (b)(1) shall be applied by substituting ‘15.3’ for ‘7.65’ each place it appears therein.

“(4) INCREASE IN EARNED INCOME AND PHASEOUT AMOUNTS.—

“(A) IN GENERAL.—The table contained in subsection (b)(2)(A) shall be applied—

“(i) by substituting ‘\$9,820’ for ‘\$4,220’, and

“(ii) by substituting ‘\$11,610’ for ‘\$5,280’.

“(B) COORDINATION WITH INFLATION ADJUSTMENT.—Subsection (j) shall not apply to any dollar amount specified in this paragraph.”.

(b) INFORMATION RETURN MATCHING.—As soon as practicable, the Secretary of the Treasury (or the Secretary’s delegate) shall develop and implement procedures to use information returns under section 6050S (relating to returns relating to higher education tuition and related expenses) to check the status of individuals as specified students for purposes of section 32(n)(1)(B)(ii) of the Internal Revenue Code of 1986 (as added by this section).

Procedures.  
26 USC 32 note.

(c) EFFECTIVE DATE.—The amendment made by this section shall apply to taxable years beginning after December 31, 2020.

26 USC 32 note.

**SEC. 9622. TAXPAYER ELIGIBLE FOR CHILDLESS EARNED INCOME CREDIT IN CASE OF QUALIFYING CHILDREN WHO FAIL TO MEET CERTAIN IDENTIFICATION REQUIREMENTS.**

(a) IN GENERAL.—Section 32(c)(1) of the Internal Revenue Code of 1986 is amended by striking subparagraph (F).

26 USC 32.

(b) EFFECTIVE DATE.—The amendment made by this section shall apply to taxable years beginning after December 31, 2020.

26 USC 32 note.

**SEC. 9623. CREDIT ALLOWED IN CASE OF CERTAIN SEPARATED SPOUSES.**

(a) IN GENERAL.—Section 32(d) of the Internal Revenue Code of 1986 is amended—

26 USC 32.

(1) by striking “MARRIED INDIVIDUALS.—In the case of” and inserting the following: “MARRIED INDIVIDUALS.—

“(1) IN GENERAL.—In the case of”, and

(2) by adding at the end the following new paragraph:

“(2) DETERMINATION OF MARITAL STATUS.—For purposes of this section—

“(A) IN GENERAL.—Except as provided in subparagraph (B), marital status shall be determined under section 7703(a).

Time periods.

“(B) SPECIAL RULE FOR SEPARATED SPOUSE.—An individual shall not be treated as married if such individual—

“(i) is married (as determined under section 7703(a)) and does not file a joint return for the taxable year,

“(ii) resides with a qualifying child of the individual for more than one-half of such taxable year, and

“(iii)(I) during the last 6 months of such taxable year, does not have the same principal place of abode as the individual’s spouse, or

“(II) has a decree, instrument, or agreement (other than a decree of divorce) described in section 121(d)(3)(C) with respect to the individual’s spouse and is not a member of the same household with the individual’s spouse by the end of the taxable year.”.

(b) CONFORMING AMENDMENTS.—

26 USC 32.

(1) Section 32(c)(1)(A) of such Code is amended by striking the last sentence.

(2) Section 32(c)(1)(E)(ii) of such Code is amended by striking “(within the meaning of section 7703)”.

(3) Section 32(d)(1) of such Code, as amended by subsection (a), is amended by striking “(within the meaning of section 7703)”.

26 USC 32 note.

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 2020.

**SEC. 9624. MODIFICATION OF DISQUALIFIED INVESTMENT INCOME TEST.**

26 USC 32.

(a) IN GENERAL.—Section 32(i) of the Internal Revenue Code of 1986 is amended by striking “\$2,200” and inserting “\$10,000”.

(b) INFLATION ADJUSTMENT.—Section 32(j)(1) of such Code is amended—

(1) in the matter preceding subparagraph (A), by inserting “(2021 in the case of the dollar amount in subsection (i)(1))” after “2015”,

(2) in subparagraph (B)(i)—

(A) by striking “subsections (b)(2)(A) and (i)(1)” and inserting “subsection (b)(2)(A)”, and

(B) by striking “and” at the end,

(3) by striking the period at the end of subparagraph (B)(ii) and inserting “, and”, and

(4) by inserting after subparagraph (B)(ii) the following new clause:

“(iii) in the case of the \$10,000 amount in subsection (i)(1), ‘calendar year 2020’ for ‘calendar year 2016’.”.

26 USC 32 note.

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 2020.

**SEC. 9625. APPLICATION OF EARNED INCOME TAX CREDIT IN POSSESSIONS OF THE UNITED STATES.**

(a) IN GENERAL.—Chapter 77 of the Internal Revenue Code of 1986 is amended by adding at the end the following new section:

**“SEC. 7530. APPLICATION OF EARNED INCOME TAX CREDIT TO POSSESSIONS OF THE UNITED STATES.** 26 USC 7530.

“(a) PUERTO RICO.—

“(1) IN GENERAL.—With respect to calendar year 2021 and each calendar year thereafter, the Secretary shall, except as otherwise provided in this subsection, make payments to Puerto Rico equal to—

“(A) the specified matching amount for such calendar year, plus

“(B) in the case of calendar years 2021 through 2025, the lesser of—

“(i) the expenditures made by Puerto Rico during such calendar year for education efforts with respect to individual taxpayers and tax return preparers relating to the earned income tax credit, or

“(ii) \$1,000,000.

“(2) REQUIREMENT TO REFORM EARNED INCOME TAX CREDIT.—The Secretary shall not make any payments under paragraph (1) with respect to any calendar year unless Puerto Rico has in effect an earned income tax credit for taxable years beginning in or with such calendar year which (relative to the earned income tax credit which was in effect for taxable years beginning in or with calendar year 2019) increases the percentage of earned income which is allowed as a credit for each group of individuals with respect to which such percentage is separately stated or determined in a manner designed to substantially increase workforce participation.

“(3) SPECIFIED MATCHING AMOUNT.—For purposes of this subsection—

“(A) IN GENERAL.—The term ‘specified matching amount’ means, with respect to any calendar year, the lesser of—

“(i) the excess (if any) of—

“(I) the cost to Puerto Rico of the earned income tax credit for taxable years beginning in or with such calendar year, over

“(II) the base amount for such calendar year,

or

“(ii) the product of 3, multiplied by the base amount for such calendar year.

“(B) BASE AMOUNT.—

“(i) BASE AMOUNT FOR 2021.—In the case of calendar year 2021, the term ‘base amount’ means the greater of—

“(I) the cost to Puerto Rico of the earned income tax credit for taxable years beginning in or with calendar year 2019 (rounded to the nearest multiple of \$1,000,000), or

“(II) \$200,000,000.

“(ii) INFLATION ADJUSTMENT.—In the case of any calendar year after 2021, the term ‘base amount’ means

Definitions.

Determination.

the dollar amount determined under clause (i) increased by an amount equal to—

“(I) such dollar amount, multiplied by—

“(II) the cost-of-living adjustment determined under section 1(f)(3) for such calendar year, determined by substituting ‘calendar year 2020’ for ‘calendar year 2016’ in subparagraph (A)(ii) thereof.

Any amount determined under this clause shall be rounded to the nearest multiple of \$1,000,000.

“(4) RULES RELATED TO PAYMENTS.—

“(A) TIMING OF PAYMENTS.—The Secretary shall make payments under paragraph (1) for any calendar year—

Determination.

“(i) after receipt of such information as the Secretary may require to determine such payments, and

“(ii) except as provided in clause (i), within a reasonable period of time before the due date for individual income tax returns (as determined under the laws of Puerto Rico) for taxable years which began on the first day of such calendar year.

Requirements.

“(B) INFORMATION.—The Secretary may require the reporting of such information as the Secretary may require to carry out this subsection.

“(C) DETERMINATION OF COST OF EARNED INCOME TAX CREDIT.—For purposes of this subsection, the cost to Puerto Rico of the earned income tax credit shall be determined by the Secretary on the basis of the laws of Puerto Rico and shall include reductions in revenues received by Puerto Rico by reason of such credit and refunds attributable to such credit, but shall not include any administrative costs with respect to such credit.

“(b) POSSESSIONS WITH MIRROR CODE TAX SYSTEMS.—

Time periods.  
Territories.

“(1) IN GENERAL.—With respect to calendar year 2021 and each calendar year thereafter, the Secretary shall, except as otherwise provided in this subsection, make payments to the Virgin Islands, Guam, and the Commonwealth of the Northern Mariana Islands equal to—

“(A) the cost to such possession of the earned income tax credit for taxable years beginning in or with such calendar year, plus

“(B) in the case of calendar years 2021 through 2025, the lesser of—

“(i) the expenditures made by such possession during such calendar year for education efforts with respect to individual taxpayers and tax return preparers relating to such earned income tax credit, or

“(ii) \$50,000.

“(2) APPLICATION OF CERTAIN RULES.—Rules similar to the rules of subparagraphs (A), (B), and (C) of subsection (a)(4) shall apply for purposes of this subsection.

“(c) AMERICAN SAMOA.—

“(1) IN GENERAL.—With respect to calendar year 2021 and each calendar year thereafter, the Secretary shall, except as otherwise provided in this subsection, make payments to American Samoa equal to—

“(A) the lesser of—

“(i) the cost to American Samoa of the earned income tax credit for taxable years beginning in or with such calendar year, or

“(ii) \$16,000,000, plus

“(B) in the case of calendar years 2021 through 2025, the lesser of—

“(i) the expenditures made by American Samoa during such calendar year for education efforts with respect to individual taxpayers and tax return preparers relating to such earned income tax credit, or

“(ii) \$50,000.

“(2) REQUIREMENT TO ENACT AND MAINTAIN AN EARNED INCOME TAX CREDIT.—The Secretary shall not make any payments under paragraph (1) with respect to any calendar year unless American Samoa has in effect an earned income tax credit for taxable years beginning in or with such calendar year which allows a refundable tax credit to individuals on the basis of the taxpayer’s earned income which is designed to substantially increase workforce participation.

“(3) INFLATION ADJUSTMENT.—In the case of any calendar year after 2021, the \$16,000,000 amount in paragraph (1)(A)(ii) shall be increased by an amount equal to—

Determinations.

“(A) such dollar amount, multiplied by—

“(B) the cost-of-living adjustment determined under section 1(f)(3) for such calendar year, determined by substituting ‘calendar year 2020’ for ‘calendar year 2016’ in subparagraph (A)(ii) thereof.

Any increase determined under this clause shall be rounded to the nearest multiple of \$100,000.

“(4) APPLICATION OF CERTAIN RULES.—Rules similar to the rules of subparagraphs (A), (B), and (C) of subsection (a)(4) shall apply for purposes of this subsection.

“(d) TREATMENT OF PAYMENTS.—For purposes of section 1324 of title 31, United States Code, the payments under this section shall be treated in the same manner as a refund due from a credit provision referred to in subsection (b)(2) of such section.”.

(b) CLERICAL AMENDMENT.—The table of sections for chapter 77 of the Internal Revenue Code of 1986 is amended by adding at the end the following new item:

26 USC 7501 prec.

“Sec. 7530. Application of earned income tax credit to possessions of the United States.”.

**SEC. 9626. TEMPORARY SPECIAL RULE FOR DETERMINING EARNED INCOME FOR PURPOSES OF EARNED INCOME TAX CREDIT.**

26 USC 32 note.

(a) IN GENERAL.—If the earned income of the taxpayer for the taxpayer’s first taxable year beginning in 2021 is less than the earned income of the taxpayer for the taxpayer’s first taxable year beginning in 2019, the credit allowed under section 32 of the Internal Revenue Code of 1986 may, at the election of the taxpayer, be determined by substituting—

Determination.

(1) such earned income for the taxpayer’s first taxable year beginning in 2019, for

(2) such earned income for the taxpayer’s first taxable year beginning in 2021.

(b) EARNED INCOME.—

- Definition. (1) **IN GENERAL.**—For purposes of this section, the term “earned income” has the meaning given such term under section 32(c) of the Internal Revenue Code of 1986.
- (2) **APPLICATION TO JOINT RETURNS.**—For purposes of subsection (a), in the case of a joint return, the earned income of the taxpayer for the first taxable year beginning in 2019 shall be the sum of the earned income of each spouse for such taxable year.
- (c) **SPECIAL RULES.**—
- (1) **ERRORS TREATED AS MATHEMATICAL ERRORS.**—For purposes of section 6213 of the Internal Revenue Code of 1986, an incorrect use on a return of earned income pursuant to subsection (a) shall be treated as a mathematical or clerical error.
- Applicability. (2) **NO EFFECT ON DETERMINATION OF GROSS INCOME, ETC.**—Except as otherwise provided in this subsection, the Internal Revenue Code of 1986 shall be applied without regard to any substitution under subsection (a).
- (d) **TREATMENT OF CERTAIN POSSESSIONS.**—
- (1) **PAYMENTS TO POSSESSIONS WITH MIRROR CODE TAX SYSTEMS.**—The Secretary of the Treasury shall pay to each possession of the United States which has a mirror code tax system amounts equal to the loss (if any) to that possession by reason of the application of the provisions of this section (other than this subsection) with respect to section 32 of the Internal Revenue Code of 1986. Such amounts shall be determined by the Secretary of the Treasury based on information provided by the government of the respective possession.
- Determination. (2) **PAYMENTS TO OTHER POSSESSIONS.**—The Secretary of the Treasury shall pay to each possession of the United States which does not have a mirror code tax system amounts estimated by the Secretary of the Treasury as being equal to the aggregate benefits (if any) that would have been provided to residents of such possession by reason of the provisions of this section (other than this subsection) with respect to section 32 of the Internal Revenue Code of 1986 if a mirror code tax system had been in effect in such possession. The preceding sentence shall not apply unless the respective possession has a plan, which has been approved by the Secretary of the Treasury, under which such possession will promptly distribute such payments to its residents.
- Estimates. (3) **MIRROR CODE TAX SYSTEM.**—For purposes of this section, the term “mirror code tax system” means, with respect to any possession of the United States, the income tax system of such possession if the income tax liability of the residents of such possession under such system is determined by reference to the income tax laws of the United States as if such possession were the United States.
- Plan. (4) **TREATMENT OF PAYMENTS.**—For purposes of section 1324 of title 31, United States Code, the payments under this section shall be treated in the same manner as a refund due from a credit provision referred to in subsection (b)(2) of such section.
- Definition. (3) **MIRROR CODE TAX SYSTEM.**—For purposes of this section, the term “mirror code tax system” means, with respect to any possession of the United States, the income tax system of such possession if the income tax liability of the residents of such possession under such system is determined by reference to the income tax laws of the United States as if such possession were the United States.
- Determination. (4) **TREATMENT OF PAYMENTS.**—For purposes of section 1324 of title 31, United States Code, the payments under this section shall be treated in the same manner as a refund due from a credit provision referred to in subsection (b)(2) of such section.

**PART 4—DEPENDENT CARE ASSISTANCE****SEC. 9631. REFUNDABILITY AND ENHANCEMENT OF CHILD AND DEPENDENT CARE TAX CREDIT.**

(a) IN GENERAL.—Section 21 of the Internal Revenue Code of 1986 is amended by adding at the end the following new subsection: 26 USC 21.

“(g) SPECIAL RULES FOR 2021.—In the case of any taxable year beginning after December 31, 2020, and before January 1, 2022— Applicability.

“(1) CREDIT MADE REFUNDABLE.—If the taxpayer (in the case of a joint return, either spouse) has a principal place of abode in the United States (determined as provided in section 32) for more than one-half of the taxable year, the credit allowed under subsection (a) shall be treated as a credit allowed under subpart C (and not allowed under this subpart).

“(2) INCREASE IN DOLLAR LIMIT ON AMOUNT CREDITABLE.— Subsection (c) shall be applied—

“(A) by substituting ‘\$8,000’ for ‘\$3,000’ in paragraph (1) thereof, and

“(B) by substituting ‘\$16,000’ for ‘\$6,000’ in paragraph (2) thereof.

“(3) INCREASE IN APPLICABLE PERCENTAGE.—Subsection (a)(2) shall be applied—

“(A) by substituting ‘50 percent’ for ‘35 percent’, and  
“(B) by substituting ‘\$125,000’ for ‘\$15,000’.

“(4) APPLICATION OF PHASEOUT TO HIGH INCOME INDIVIDUALS.—

“(A) IN GENERAL.—Subsection (a)(2) shall be applied by substituting ‘the phaseout percentage’ for ‘20 percent’.

“(B) PHASEOUT PERCENTAGE.—The term ‘phaseout percentage’ means 20 percent reduced (but not below zero) by 1 percentage point for each \$2,000 (or fraction thereof) by which the taxpayer’s adjusted gross income for the taxable year exceeds \$400,000.”. Definition.

(b) APPLICATION OF CREDIT IN POSSESSIONS.—Section 21 of such Code, as amended by subsection (a), is amended by adding at the end the following new subsection:

“(h) APPLICATION OF CREDIT IN POSSESSIONS.—

“(1) PAYMENT TO POSSESSIONS WITH MIRROR CODE TAX SYSTEMS.—The Secretary shall pay to each possession of the United States with a mirror code tax system amounts equal to the loss (if any) to that possession by reason of the application of this section (determined without regard to this subsection) with respect to taxable years beginning in or with 2021. Such amounts shall be determined by the Secretary based on information provided by the government of the respective possession.

“(2) PAYMENTS TO OTHER POSSESSIONS.—The Secretary shall pay to each possession of the United States which does not have a mirror code tax system amounts estimated by the Secretary as being equal to the aggregate benefits that would have been provided to residents of such possession by reason of this section with respect to taxable years beginning in or with 2021 if a mirror code tax system had been in effect in such possession. The preceding sentence shall not apply unless the respective possession has a plan, which has been Plan.

approved by the Secretary, under which such possession will promptly distribute such payments to its residents.

“(3) COORDINATION WITH CREDIT ALLOWED AGAINST UNITED STATES INCOME TAXES.—In the case of any taxable year beginning in or with 2021, no credit shall be allowed under this section to any individual—

“(A) to whom a credit is allowable against taxes imposed by a possession with a mirror code tax system by reason of this section, or

“(B) who is eligible for a payment under a plan described in paragraph (2).

Definition.

“(4) MIRROR CODE TAX SYSTEM.—For purposes of this subsection, the term ‘mirror code tax system’ means, with respect to any possession of the United States, the income tax system of such possession if the income tax liability of the residents of such possession under such system is determined by reference to the income tax laws of the United States as if such possession were the United States.

“(5) TREATMENT OF PAYMENTS.—For purposes of section 1324 of title 31, United States Code, the payments under this subsection shall be treated in the same manner as a refund due from a credit provision referred to in subsection (b)(2) of such section.”

(c) CONFORMING AMENDMENTS.—

26 USC 6211.

(1) Section 6211(b)(4)(A) of such Code, as amended by the preceding provisions of this Act, is amended by inserting “21 by reason of subsection (g) thereof,” before “24”.

(2) Section 1324(b)(2) of title 31, United States Code (as amended by the preceding provisions of this title), is amended by inserting “21,” before “24”.

26 USC 21 note.

(d) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 2020.

**SEC. 9632. INCREASE IN EXCLUSION FOR EMPLOYER-PROVIDED DEPENDENT CARE ASSISTANCE.**

26 USC 129.

(a) IN GENERAL.—Section 129(a)(2) of the Internal Revenue Code of 1986 is amended by adding at the end the following new subparagraph:

“(D) SPECIAL RULE FOR 2021.—In the case of any taxable year beginning after December 31, 2020, and before January 1, 2022, subparagraph (A) shall be applied by substituting ‘\$10,500 (half such dollar amount) for ‘\$5,000 (\$2,500’.”

26 USC 129 note.

(b) EFFECTIVE DATE.—The amendment made by this section shall apply to taxable years beginning after December 31, 2020.

26 USC 129 note.

(c) RETROACTIVE PLAN AMENDMENTS.—A plan that otherwise satisfies all applicable requirements of sections 125 and 129 of the Internal Revenue Code of 1986 (including any rules or regulations thereunder) shall not fail to be treated as a cafeteria plan or dependent care assistance program merely because such plan is amended pursuant to a provision under this section and such amendment is retroactive, if—

Deadline.

(1) such amendment is adopted no later than the last day of the plan year in which the amendment is effective, and

Time period.

(2) the plan is operated consistent with the terms of such amendment during the period beginning on the effective date

of the amendment and ending on the date the amendment is adopted.

## **PART 5—CREDITS FOR PAID SICK AND FAMILY LEAVE**

### **SEC. 9641. PAYROLL CREDITS.**

(a) **IN GENERAL.**—Chapter 21 of the Internal Revenue Code of 1986 is amended by adding at the end the following new subchapter:

26 USC 3131  
prec.

### **“Subchapter D—Credits**

“Sec. 3131. Credit for paid sick leave.  
“Sec. 3132. Payroll credit for paid family leave.  
“Sec. 3133. Special rule related to tax on employers.

### **“SEC. 3131. CREDIT FOR PAID SICK LEAVE.**

26 USC 3131.

“(a) **IN GENERAL.**—In the case of an employer, there shall be allowed as a credit against applicable employment taxes for each calendar quarter an amount equal to 100 percent of the qualified sick leave wages paid by such employer with respect to such calendar quarter.

“(b) **LIMITATIONS AND REFUNDABILITY.**—

“(1) **WAGES TAKEN INTO ACCOUNT.**—The amount of qualified sick leave wages taken into account under subsection (a), plus any increases under subsection (e), with respect to any individual shall not exceed \$200 (\$511 in the case of any day any portion of which is paid sick time described in paragraph (1), (2), or (3) of section 5102(a) of the Emergency Paid Sick Leave Act, applied with the modification described in subsection (c)(2)(A)(i)) for any day (or portion thereof) for which the individual is paid qualified sick leave wages.

“(2) **OVERALL LIMITATION ON NUMBER OF DAYS TAKEN INTO ACCOUNT.**—The aggregate number of days taken into account under paragraph (1) for any calendar quarter shall not exceed the excess (if any) of—

“(A) 10, over

“(B) the aggregate number of days so taken into account during preceding calendar quarters in such calendar year (other than the first quarter of calendar year 2021).

“(3) **CREDIT LIMITED TO CERTAIN EMPLOYMENT TAXES.**—The credit allowed by subsection (a) with respect to any calendar quarter shall not exceed the applicable employment taxes for such calendar quarter on the wages paid with respect to the employment of all employees of the employer.

“(4) **REFUNDABILITY OF EXCESS CREDIT.**—

“(A) **CREDIT IS REFUNDABLE.**—If the amount of the credit under subsection (a) exceeds the limitation of paragraph (3) for any calendar quarter, such excess shall be treated as an overpayment that shall be refunded under sections 6402(a) and 6413(b).

“(B) **ADVANCING CREDIT.**—In anticipation of the credit, including the refundable portion under subparagraph (A), the credit shall be advanced, according to forms and instructions provided by the Secretary, up to an amount

calculated under subsection (a), subject to the limits under paragraph (1) and (2), all calculated through the end of the most recent payroll period in the quarter.

“(c) QUALIFIED SICK LEAVE WAGES.—For purposes of this section—

Definition.  
Effective date.

“(1) IN GENERAL.—The term ‘qualified sick leave wages’ means wages paid by an employer which would be required to be paid by reason of the Emergency Paid Sick Leave Act as if such Act applied after March 31, 2021.

Determination.

“(2) RULES OF APPLICATION.—For purposes of determining whether wages are qualified sick leave wages under paragraph (1)—

“(A) IN GENERAL.—The Emergency Paid Sick Leave Act shall be applied—

“(i) by inserting ‘, the employee is seeking or awaiting the results of a diagnostic test for, or a medical diagnosis of, COVID-19 and such employee has been exposed to COVID-19 or the employee’s employer has requested such test or diagnosis, or the employee is obtaining immunization related to COVID-19 or recovering from any injury, disability, illness, or condition related to such immunization’ after ‘medical diagnosis’ in section 5102(a)(3) thereof, and

“(ii) by applying section 5102(b)(1) of such Act separately with respect to each calendar year after 2020 (and, in the case of calendar year 2021, without regard to the first quarter thereof).

“(B) LEAVE MUST MEET REQUIREMENTS.—If an employer fails to comply with any requirement of such Act (determined without regard to section 5109 thereof) with respect to paid sick time (as defined in section 5110 of such Act), amounts paid by such employer with respect to such paid sick time shall not be taken into account as qualified sick leave wages. For purposes of the preceding sentence, an employer which takes an action described in section 5104 of such Act shall be treated as failing to meet a requirement of such Act.

“(d) ALLOWANCE OF CREDIT FOR CERTAIN HEALTH PLAN EXPENSES.—

“(1) IN GENERAL.—The amount of the credit allowed under subsection (a) shall be increased by so much of the employer’s qualified health plan expenses as are properly allocable to the qualified sick leave wages for which such credit is so allowed.

Definition.

“(2) QUALIFIED HEALTH PLAN EXPENSES.—For purposes of this subsection, the term ‘qualified health plan expenses’ means amounts paid or incurred by the employer to provide and maintain a group health plan (as defined in section 5000(b)(1)), but only to the extent that such amounts are excluded from the gross income of employees by reason of section 106(a).

“(3) ALLOCATION RULES.—For purposes of this section, qualified health plan expenses shall be allocated to qualified sick leave wages in such manner as the Secretary may prescribe. Except as otherwise provided by the Secretary, such allocation shall be treated as properly made if made on the basis of being pro rata among covered employees and pro rata

on the basis of periods of coverage (relative to the time periods of leave to which such wages relate).

“(e) ALLOWANCE OF CREDIT FOR AMOUNTS PAID UNDER CERTAIN COLLECTIVELY BARGAINED AGREEMENTS.— Definitions.

“(1) IN GENERAL.—The amount of the credit allowed under subsection (a) shall be increased by the sum of—

“(A) so much of the employer’s collectively bargained defined benefit pension plan contributions as are properly allocable to the qualified sick leave wages for which such credit is so allowed, plus

“(B) so much of the employer’s collectively bargained apprenticeship program contributions as are properly allocable to the qualified sick leave wages for which such credit is so allowed.

“(2) COLLECTIVELY BARGAINED DEFINED BENEFIT PENSION PLAN CONTRIBUTIONS.—For purposes of this subsection—

“(A) IN GENERAL.—The term ‘collectively bargained defined benefit pension plan contributions’ means, with respect to any calendar quarter, contributions which—

“(i) are paid or incurred by an employer during the calendar quarter on behalf of its employees to a defined benefit plan (as defined in section 414(j)), which meets the requirements of section 401(a),

“(ii) are made based on a pension contribution rate, and

“(iii) are required to be made pursuant to the terms of a collective bargaining agreement in effect with respect to such calendar quarter.

“(B) PENSION CONTRIBUTION RATE.—The term ‘pension contribution rate’ means the contribution rate that the employer is obligated to pay on behalf of its employees under the terms of a collective bargaining agreement for benefits under a defined benefit plan under such agreement, as such rate is applied to contribution base units (as defined by section 4001(a)(11) of the Employee Retirement Income Security Act of 1974 (29 U.S.C. 1301(a)(11)).

“(C) ALLOCATION RULES.—The amount of collectively bargained defined benefit pension plan contributions allocated to qualified sick leave wages for any calendar quarter shall be the product of—

“(i) the pension contribution rate (expressed as an hourly rate), and

“(ii) the number of hours for which qualified sick leave wages were provided to employees covered under the collective bargaining agreement described in subparagraph (A)(iii) during the calendar quarter.

“(3) COLLECTIVELY BARGAINED APPRENTICESHIP PROGRAM CONTRIBUTIONS.—For purposes of this section—

“(A) IN GENERAL.—The term ‘collectively bargained apprenticeship program contributions’ means, with respect to any calendar quarter, contributions which—

“(i) are paid or incurred by an employer on behalf of its employees with respect to the calendar quarter to a registered apprenticeship program,

“(ii) are made based on an apprenticeship program contribution rate, and

“(iii) are required to be made pursuant to the terms of a collective bargaining agreement that is in effect with respect to such calendar quarter.

“(B) REGISTERED APPRENTICESHIP PROGRAM.—The term ‘registered apprenticeship program’ means an apprenticeship registered under the Act of August 16, 1937 (commonly known as the ‘National Apprenticeship Act’; 50 Stat. 664, chapter 663; 29 U.S.C. 50 et seq.) that meets the standards of subpart A of part 29 and part 30 of title 29, Code of Federal Regulations.

“(C) APPRENTICESHIP PROGRAM CONTRIBUTION RATE.—The term ‘apprenticeship program contribution rate’ means the contribution rate that the employer is obligated to pay on behalf of its employees under the terms of a collective bargaining agreement for benefits under a registered apprenticeship program under such agreement, as such rate is applied to contribution base units (as defined by section 4001(a)(11) of the Employee Retirement Income Security Act of 1974 (29 U.S.C. 1301(a)(11)).

“(D) ALLOCATION RULES.—The amount of collectively bargained apprenticeship program contributions allocated to qualified sick leave wages for any calendar quarter shall be the product of—

“(i) the apprenticeship program contribution rate (expressed as an hourly rate), and

“(ii) the number of hours for which qualified sick leave wages were provided to employees covered under the collective bargaining agreement described in subparagraph (A)(iii) during the calendar quarter.

“(f) DEFINITIONS AND SPECIAL RULES.—

“(1) APPLICABLE EMPLOYMENT TAXES.—For purposes of this section, the term ‘applicable employment taxes’ means the following:

“(A) The taxes imposed under section 3111(b).

“(B) So much of the taxes imposed under section 3221(a) as are attributable to the rate in effect under section 3111(b).

“(2) WAGES.—For purposes of this section, the term ‘wages’ means wages (as defined in section 3121(a), determined without regard to paragraphs (1) through (22) of section 3121(b)) and compensation (as defined in section 3231(e), determined without regard to the sentence in paragraph (1) thereof which begins ‘Such term does not include remuneration’).

“(3) DENIAL OF DOUBLE BENEFIT.—For purposes of chapter 1, the gross income of the employer, for the taxable year which includes the last day of any calendar quarter with respect to which a credit is allowed under this section, shall be increased by the amount of such credit. Any wages taken into account in determining the credit allowed under this section shall not be taken into account for purposes of determining the credit allowed under sections 45A, 45P, 45S, 51, 3132, and 3134. In the case of any credit allowed under section 2301 of the CARES Act or section 41 with respect to wages taken into account under this section, the credit allowed under this section shall be reduced by the portion of the credit allowed under such section 2301 or section 41 which is attributable to such wages.

“(4) ELECTION TO NOT TAKE CERTAIN WAGES INTO ACCOUNT.—This section shall not apply to so much of the qualified sick leave wages paid by an eligible employer as such employer elects (at such time and in such manner as the Secretary may prescribe) to not take into account for purposes of this section.

“(5) CERTAIN GOVERNMENTAL EMPLOYERS.—No credit shall be allowed under this section to the Government of the United States or to any agency or instrumentality thereof. The preceding sentence shall not apply to any organization described in section 501(c)(1) and exempt from tax under section 501(a).

“(6) EXTENSION OF LIMITATION ON ASSESSMENT.—Notwithstanding section 6501, the limitation on the time period for the assessment of any amount attributable to a credit claimed under this section shall not expire before the date that is 5 years after the later of—

“(A) the date on which the original return which includes the calendar quarter with respect to which such credit is determined is filed, or

“(B) the date on which such return is treated as filed under section 6501(b)(2).

“(7) COORDINATION WITH CERTAIN PROGRAMS.—

“(A) IN GENERAL.—This section shall not apply to so much of the qualified sick leave wages paid by an eligible employer as are taken into account as payroll costs in connection with—

“(i) a covered loan under section 7(a)(37) or 7A of the Small Business Act,

“(ii) a grant under section 324 of the Economic Aid to Hard-Hit Small Businesses, Non-Profits, and Venues Act, or

“(iii) a restaurant revitalization grant under section 5003 of the American Rescue Plan Act of 2021.

“(B) APPLICATION WHERE PPP LOANS NOT FORGIVEN.—The Secretary shall issue guidance providing that payroll costs paid during the covered period shall not fail to be treated as qualified sick leave wages under this section by reason of subparagraph (A)(i) to the extent that—

“(i) a covered loan of the taxpayer under section 7(a)(37) of the Small Business Act is not forgiven by reason of a decision under section 7(a)(37)(J) of such Act, or

“(ii) a covered loan of the taxpayer under section 7A of the Small Business Act is not forgiven by reason of a decision under section 7A(g) of such Act.

Terms used in the preceding sentence which are also used in section 7A(g) or 7(a)(37)(J) of the Small Business Act shall, when applied in connection with either such section, have the same meaning as when used in such section, respectively.

“(g) REGULATIONS.—The Secretary shall prescribe such regulations or other guidance as may be necessary to carry out the purposes of this section, including—

“(1) regulations or other guidance to prevent the avoidance of the purposes of the limitations under this section,

“(2) regulations or other guidance to minimize compliance and record-keeping burdens under this section,

“(3) regulations or other guidance providing for waiver of penalties for failure to deposit amounts in anticipation of the allowance of the credit allowed under this section,

“(4) regulations or other guidance for recapturing the benefit of credits determined under this section in cases where there is a subsequent adjustment to the credit determined under subsection (a),

“(5) regulations or other guidance to ensure that the wages taken into account under this section conform with the paid sick time required to be provided under the Emergency Paid Sick Leave Act,

“(6) regulations or other guidance to permit the advancement of the credit determined under subsection (a), and

“(7) regulations or other guidance with respect to the allocation, reporting, and substantiation of collectively bargained defined benefit pension plan contributions and collectively bargained apprenticeship program contributions.

Time period.

“(h) APPLICATION OF SECTION.—This section shall apply only to wages paid with respect to the period beginning on April 1, 2021, and ending on September 30, 2021.

Waiver.  
Determination.

“(i) TREATMENT OF DEPOSITS.—The Secretary shall waive any penalty under section 6656 for any failure to make a deposit of applicable employment taxes if the Secretary determines that such failure was due to the anticipation of the credit allowed under this section.

“(j) NON-DISCRIMINATION REQUIREMENT.—No credit shall be allowed under this section to any employer for any calendar quarter if such employer, with respect to the availability of the provision of qualified sick leave wages to which this section otherwise applies for such calendar quarter, discriminates in favor of highly compensated employees (within the meaning of section 414(q)), full-time employees, or employees on the basis of employment tenure with such employer.

26 USC 3132.

**“SEC. 3132. PAYROLL CREDIT FOR PAID FAMILY LEAVE.**

“(a) IN GENERAL.—In the case of an employer, there shall be allowed as a credit against applicable employment taxes for each calendar quarter an amount equal to 100 percent of the qualified family leave wages paid by such employer with respect to such calendar quarter.

“(b) LIMITATIONS AND REFUNDABILITY.—

“(1) WAGES TAKEN INTO ACCOUNT.—The amount of qualified family leave wages taken into account under subsection (a), plus any increases under subsection (e), with respect to any individual shall not exceed—

“(A) for any day (or portion thereof) for which the individual is paid qualified family leave wages, \$200, and

“(B) in the aggregate with respect to all calendar quarters, \$12,000.

“(2) CREDIT LIMITED TO CERTAIN EMPLOYMENT TAXES.—The credit allowed by subsection (a) with respect to any calendar quarter shall not exceed the applicable employment taxes for such calendar quarter (reduced by any credits allowed under section 3131) on the wages paid with respect to the employment of all employees of the employer.

“(3) REFUNDABILITY OF EXCESS CREDIT.—

“(A) CREDIT IS REFUNDABLE.—If the amount of the credit under subsection (a) exceeds the limitation of paragraph (2) for any calendar quarter, such excess shall be treated as an overpayment that shall be refunded under sections 6402(a) and 6413(b).

“(B) ADVANCING CREDIT.—In anticipation of the credit, including the refundable portion under subparagraph (A), the credit shall be advanced, according to forms and instructions provided by the Secretary, up to an amount calculated under subsection (a), subject to the limits under paragraph (1) and (2), all calculated through the end of the most recent payroll period in the quarter.

“(c) QUALIFIED FAMILY LEAVE WAGES.—

“(1) IN GENERAL.—For purposes of this section, the term ‘qualified family leave wages’ means wages paid by an employer which would be required to be paid by reason of the Emergency Family and Medical Leave Expansion Act (including the amendments made by such Act) as if such Act (and amendments made by such Act) applied after March 31, 2021.

Definition.  
Effective date.

“(2) RULES OF APPLICATION.—

“(A) IN GENERAL.—For purposes of determining whether wages are qualified family leave wages under paragraph (1)—

Determinations.

“(i) section 110(a)(2)(A) of the Family and Medical Leave Act of 1993 shall be applied by inserting ‘or any reason for leave described in section 5102(a) of the Families First Coronavirus Response Act, or the employee is seeking or awaiting the results of a diagnostic test for, or a medical diagnosis of, COVID-19 and such employee has been exposed to COVID-19 or the employee’s employer has requested such test or diagnosis, or the employee is obtaining immunization related to COVID-19 or recovering from any injury, disability, illness, or condition related to such immunization’ after ‘public health emergency’, and

“(ii) section 110(b) of such Act shall be applied—

“(I) without regard to paragraph (1) thereof,

“(II) by striking ‘after taking leave after such section for 10 days’ in paragraph (2)(A) thereof, and

“(III) by substituting ‘\$12,000’ for ‘\$10,000’ in paragraph (2)(B)(ii) thereof.

“(B) LEAVE MUST MEET REQUIREMENTS.—For purposes of determining whether wages would be required to be paid under paragraph (1), if an employer fails to comply with any requirement of the Family and Medical Leave Act of 1993 or the Emergency Family and Medical Leave Expansion Act (determined without regard to any time limitation under section 102(a)(1)(F) of the Family and Medical Leave Act of 1994) with respect to any leave provided for a qualifying need related to a public health emergency (as defined in section 110 of such Act, applied as described in subparagraph (A)(i)), amounts paid by such employer with respect to such leave shall not be taken into account as qualified family leave wages. For purposes of the preceding sentence, an employer which takes an action described in section 105 of the Family and Medical

Leave Act of 1993 shall be treated as failing to meet a requirement of such Act.

“(d) ALLOWANCE OF CREDIT FOR CERTAIN HEALTH PLAN EXPENSES.—

“(1) IN GENERAL.—The amount of the credit allowed under subsection (a) shall be increased by so much of the employer’s qualified health plan expenses as are properly allocable to the qualified family leave wages for which such credit is so allowed.

Definition.

“(2) QUALIFIED HEALTH PLAN EXPENSES.—For purposes of this subsection, the term ‘qualified health plan expenses’ means amounts paid or incurred by the employer to provide and maintain a group health plan (as defined in section 5000(b)(1)), but only to the extent that such amounts are excluded from the gross income of employees by reason of section 106(a).

“(3) ALLOCATION RULES.—For purposes of this section, qualified health plan expenses shall be allocated to qualified family leave wages in such manner as the Secretary may prescribe. Except as otherwise provided by the Secretary, such allocation shall be treated as properly made if made on the basis of being pro rata among covered employees and pro rata on the basis of periods of coverage (relative to the time periods of leave to which such wages relate).

“(e) ALLOWANCE OF CREDIT FOR AMOUNTS PAID UNDER CERTAIN COLLECTIVELY BARGAINED AGREEMENTS.—

“(1) IN GENERAL.—The amount of the credit allowed under subsection (a) shall be increased by so much of the sum of—

“(A) so much of the employer’s collectively bargained defined benefit pension plan contributions as are properly allocable to the qualified family leave wages for which such credit is so allowed, plus

“(B) so much of the employer’s collectively bargained apprenticeship program contributions as are properly allocable to the qualified family leave wages for which such credit is so allowed.

“(2) COLLECTIVELY BARGAINED DEFINED BENEFIT PENSION PLAN CONTRIBUTIONS.—For purposes of this subsection—

Definition.

“(A) IN GENERAL.—The term ‘collectively bargained defined benefit pension plan contributions’ has the meaning given such term under section 3131(e)(2).

“(B) ALLOCATION RULES.—The amount of collectively bargained defined benefit pension plan contributions allocated to qualified family leave wages for any calendar quarter shall be the product of—

“(i) the pension contribution rate (as defined in section 3131(e)(2)), expressed as an hourly rate, and

“(ii) the number of hours for which qualified family leave wages were provided to employees covered under the collective bargaining agreement described in section 3131(e)(2)(A)(iii) during the calendar quarter.

“(3) COLLECTIVELY BARGAINED APPRENTICESHIP PROGRAM CONTRIBUTIONS.—For purposes of this section—

Definition.

“(A) IN GENERAL.—The term ‘collectively bargained apprenticeship program contributions’ has the meaning given such term under section 3131(e)(3).

“(B) ALLOCATION RULES.—For purposes of this section, the amount of collectively bargained apprenticeship program contributions allocated to qualified family leave wages for any calendar quarter shall be the product of—

“(i) the apprenticeship contribution rate (as defined in section 3131(e)(3)), expressed as an hourly rate, and

“(ii) the number of hours for which qualified family leave wages were provided to employees covered under the collective bargaining agreement described in section 3131(e)(3)(A)(iii) during the calendar quarter.

“(f) DEFINITIONS AND SPECIAL RULES.—

“(1) APPLICABLE EMPLOYMENT TAXES.—For purposes of this section, the term ‘applicable employment taxes’ means the following:

“(A) The taxes imposed under section 3111(b).

“(B) So much of the taxes imposed under section 3221(a) as are attributable to the rate in effect under section 3111(b).

“(2) WAGES.—For purposes of this section, the term ‘wages’ means wages (as defined in section 3121(a), determined without regard to paragraphs (1) through (22) of section 3121(b)) and compensation (as defined in section 3231(e), determined without regard to the sentence in paragraph (1) thereof which begins ‘Such term does not include remuneration’).

“(3) DENIAL OF DOUBLE BENEFIT.—For purposes of chapter 1, the gross income of the employer, for the taxable year which includes the last day of any calendar quarter with respect to which a credit is allowed under this section, shall be increased by the amount of such credit. Any wages taken into account in determining the credit allowed under this section shall not be taken into account for purposes of determining the credit allowed under sections 45A, 45P, 45S, 51, 3131, and 3134. In the case of any credit allowed under section 2301 of the CARES Act or section 41 with respect to wages taken into account under this section, the credit allowed under this section shall be reduced by the portion of the credit allowed under such section 2301 or section 41 which is attributable to such wages.

Determination.

“(4) ELECTION TO NOT TAKE CERTAIN WAGES INTO ACCOUNT.—This section shall not apply to so much of the qualified family leave wages paid by an eligible employer as such employer elects (at such time and in such manner as the Secretary may prescribe) to not take into account for purposes of this section.

“(5) CERTAIN GOVERNMENTAL EMPLOYERS.—No credit shall be allowed under this section to the Government of the United States or to any agency or instrumentality thereof. The preceding sentence shall not apply to any organization described in section 501(c)(1) and exempt from tax under section 501(a).

“(6) EXTENSION OF LIMITATION ON ASSESSMENT.—Notwithstanding section 6501, the limitation on the time period for the assessment of any amount attributable to a credit claimed under this section shall not expire before the date that is 5 years after the later of—

Time period.

“(A) the date on which the original return which includes the calendar quarter with respect to which such credit is determined is filed, or

“(B) the date on which such return is treated as filed under section 6501(b)(2).

“(7) COORDINATION WITH CERTAIN PROGRAMS.—

“(A) IN GENERAL.—This section shall not apply to so much of the qualified family leave wages paid by an eligible employer as are taken into account as payroll costs in connection with—

“(i) a covered loan under section 7(a)(37) or 7A of the Small Business Act,

“(ii) a grant under section 324 of the Economic Aid to Hard-Hit Small Businesses, Non-Profits, and Venues Act, or

“(iii) a restaurant revitalization grant under section 5003 of the American Rescue Plan Act of 2021.

“(B) APPLICATION WHERE PPP LOANS NOT FORGIVEN.—The Secretary shall issue guidance providing that payroll costs paid during the covered period shall not fail to be treated as qualified family leave wages under this section by reason of subparagraph (A)(i) to the extent that—

“(i) a covered loan of the taxpayer under section 7(a)(37) of the Small Business Act is not forgiven by reason of a decision under section 7(a)(37)(J) of such Act, or

“(ii) a covered loan of the taxpayer under section 7A of the Small Business Act is not forgiven by reason of a decision under section 7A(g) of such Act.

Terms used in the preceding sentence which are also used in section 7A(g) or 7(a)(37)(J) of the Small Business Act shall, when applied in connection with either such section, have the same meaning as when used in such section, respectively.

“(g) REGULATIONS.—The Secretary shall prescribe such regulations or other guidance as may be necessary to carry out the purposes of this section, including—

“(1) regulations or other guidance to prevent the avoidance of the purposes of the limitations under this section,

“(2) regulations or other guidance to minimize compliance and record-keeping burdens under this section,

“(3) regulations or other guidance providing for waiver of penalties for failure to deposit amounts in anticipation of the allowance of the credit allowed under this section,

“(4) regulations or other guidance for recapturing the benefit of credits determined under this section in cases where there is a subsequent adjustment to the credit determined under subsection (a),

“(5) regulations or other guidance to ensure that the wages taken into account under this section conform with the paid leave required to be provided under the Emergency Family and Medical Leave Expansion Act (including the amendments made by such Act),

“(6) regulations or other guidance to permit the advancement of the credit determined under subsection (a), and

“(7) regulations or other guidance with respect to the allocation, reporting, and substantiation of collectively bargained

defined benefit pension plan contributions and collectively bargained apprenticeship program contributions.

“(h) APPLICATION OF SECTION.—This section shall apply only to wages paid with respect to the period beginning on April 1, 2021, and ending on September 30, 2021. Time period.

“(i) TREATMENT OF DEPOSITS.—The Secretary shall waive any penalty under section 6656 for any failure to make a deposit of applicable employment taxes if the Secretary determines that such failure was due to the anticipation of the credit allowed under this section. Waiver. Determination.

“(j) NON-DISCRIMINATION REQUIREMENT.—No credit shall be allowed under this section to any employer for any calendar quarter if such employer, with respect to the availability of the provision of qualified family leave wages to which this section otherwise applies for such calendar quarter, discriminates in favor of highly compensated employees (within the meaning of section 414(q)), full-time employees, or employees on the basis of employment tenure with such employer.

**“SEC. 3133. SPECIAL RULE RELATED TO TAX ON EMPLOYERS.** 26 USC 3133.

“(a) IN GENERAL.—The credit allowed by section 3131 and the credit allowed by section 3132 shall each be increased by the amount of the taxes imposed by subsections (a) and (b) of section 3111 and section 3221(a) on qualified sick leave wages, or qualified family leave wages, for which credit is allowed under such section 3131 or 3132 (respectively).

“(b) DENIAL OF DOUBLE BENEFIT.—For denial of double benefit with respect to the credit increase under subsection (a), see sections 3131(f)(3) and 3132(f)(3).”.

(b) REFUNDS.—Paragraph (2) of section 1324(b) of title 31, United States Code, is amended by inserting “3131, 3132,” before “6428”.

(c) CLERICAL AMENDMENT.—The table of subchapters for chapter 21 of the Internal Revenue Code of 1986 is amended by adding at the end the following new item: 26 USC 3101 prec.

“SUBCHAPTER D—CREDITS”.

(d) EFFECTIVE DATE.—The amendments made by this section shall apply to amounts paid with respect to calendar quarters beginning after March 31, 2021. 26 USC 3131 note.

**SEC. 9642. CREDIT FOR SICK LEAVE FOR CERTAIN SELF-EMPLOYED INDIVIDUALS.** 26 USC 1401 note.

(a) IN GENERAL.—In the case of an eligible self-employed individual, there shall be allowed as a credit against the tax imposed by chapter 1 of the Internal Revenue Code of 1986 for any taxable year an amount equal to the qualified sick leave equivalent amount with respect to the individual.

(b) ELIGIBLE SELF-EMPLOYED INDIVIDUAL.—For purposes of this section—

(1) IN GENERAL.—The term “eligible self-employed individual” means an individual who— Definition.

(A) regularly carries on any trade or business within the meaning of section 1402 of the Internal Revenue Code of 1986, and

(B) would be entitled to receive paid leave during the taxable year pursuant to the Emergency Paid Sick Leave Act if—

- (i) the individual were an employee of an employer (other than himself or herself), and
- (ii) such Act applied after March 31, 2021.
- Effective date.  
Determination.
- (2) RULES OF APPLICATION.—For purposes of paragraph (1)(B), in determining whether an individual would be entitled to receive paid leave under the Emergency Paid Sick Leave Act, such Act shall be applied—
- (A) by inserting “, the employee is seeking or awaiting the results of a diagnostic test for, or a medical diagnosis of, COVID-19 and such employee has been exposed to COVID-19 or is unable to work pending the results of such test or diagnosis, or the employee is obtaining immunization related to COVID-19 or recovering from any injury, disability, illness, or condition related to such immunization” after “medical diagnosis” in section 5102(a)(3) of such Act, and
- (B) by applying section 5102(b)(1) of such Act separately with respect to each taxable year.
- Definitions.
- (c) QUALIFIED SICK LEAVE EQUIVALENT AMOUNT.—For purposes of this section—
- (1) IN GENERAL.—The term “qualified sick leave equivalent amount” means, with respect to any eligible self-employed individual, an amount equal to—
- (A) the number of days during the taxable year (but not more than 10) that the individual is unable to perform services in any trade or business referred to in section 1402 of the Internal Revenue Code of 1986 for a reason with respect to which such individual would be entitled to receive sick leave as described in subsection (b), multiplied by
- (B) the lesser of—
- (i) \$200 (\$511 in the case of any day of paid sick time described in paragraph (1), (2), or (3) of section 5102(a) of the Emergency Paid Sick Leave Act, applied with the modification described in subsection (b)(2)(A) of this section, or
- (ii) 67 percent (100 percent in the case of any day of paid sick time described in paragraph (1), (2), or (3) of section 5102(a) of the Emergency Paid Sick Leave Act) of the average daily self-employment income of the individual for the taxable year.
- (2) AVERAGE DAILY SELF-EMPLOYMENT INCOME.—For purposes of this subsection, the term “average daily self-employment income” means an amount equal to—
- (A) the net earnings from self-employment of the individual for the taxable year, divided by
- (B) 260.
- Applicability.
- (3) ELECTION TO USE PRIOR YEAR NET EARNINGS FROM SELF-EMPLOYMENT INCOME.—In the case of an individual who elects (at such time and in such manner as the Secretary may provide) the application of this paragraph, paragraph (2)(A) shall be applied by substituting “the prior taxable year” for “the taxable year”.
- (4) ELECTION TO NOT TAKE DAYS INTO ACCOUNT.—Any day shall not be taken into account under paragraph (1)(A) if the eligible self-employed individual elects (at such time and in

such manner as the Secretary may prescribe) to not take such day into account for purposes of such paragraph.

(d) CREDIT REFUNDABLE.—

(1) IN GENERAL.—The credit determined under this section shall be treated as a credit allowed to the taxpayer under subpart C of part IV of subchapter A of chapter 1 of such Code.

(2) TREATMENT OF PAYMENTS.—For purposes of section 1324 of title 31, United States Code, any refund due from the credit determined under this section shall be treated in the same manner as a refund due from a credit provision referred to in subsection (b)(2) of such section.

(e) SPECIAL RULES.—

(1) DOCUMENTATION.—No credit shall be allowed under this section unless the individual maintains such documentation as the Secretary may prescribe to establish such individual as an eligible self-employed individual.

(2) DENIAL OF DOUBLE BENEFIT.—In the case of an individual who receives wages (as defined in section 3121(a) of the Internal Revenue Code of 1986) or compensation (as defined in section 3231(e) of such Code) paid by an employer which are required to be paid by reason of the Emergency Paid Sick Leave Act, the qualified sick leave equivalent amount otherwise determined under subsection (c) of this section shall be reduced (but not below zero) to the extent that the sum of the amount described in such subsection and in section 3131(b)(1) of such Code exceeds \$2,000 (\$5,110 in the case of any day any portion of which is paid sick time described in paragraph (1), (2), or (3) of section 5102(a) of the Emergency Paid Sick Leave Act).

(f) APPLICATION OF SECTION.—Only days occurring during the period beginning on April 1, 2021, and ending on September 30, 2021, may be taken into account under subsection (c)(1)(A).

Time period.

(g) APPLICATION OF CREDIT IN CERTAIN POSSESSIONS.—

(1) PAYMENTS TO POSSESSIONS WITH MIRROR CODE TAX SYSTEMS.—The Secretary shall pay to each possession of the United States which has a mirror code tax system amounts equal to the loss (if any) to that possession by reason of the application of the provisions of this section. Such amounts shall be determined by the Secretary based on information provided by the government of the respective possession.

Determination.

(2) PAYMENTS TO OTHER POSSESSIONS.—The Secretary shall pay to each possession of the United States which does not have a mirror code tax system amounts estimated by the Secretary as being equal to the aggregate benefits (if any) that would have been provided to residents of such possession by reason of the provisions of this section if a mirror code tax system had been in effect in such possession. The preceding sentence shall not apply unless the respective possession has a plan, which has been approved by the Secretary, under which such possession will promptly distribute such payments to its residents.

Estimates.

Plan.

(3) MIRROR CODE TAX SYSTEM.—For purposes of this section, the term “mirror code tax system” means, with respect to any possession of the United States, the income tax system of such possession if the income tax liability of the residents

Definition.  
Determination.

of such possession under such system is determined by reference to the income tax laws of the United States as if such possession were the United States.

(4) TREATMENT OF PAYMENTS.—For purposes of section 1324 of title 31, United States Code, the payments under this subsection shall be treated in the same manner as a refund due from a credit provision referred to in subsection (b)(2) of such section.

(h) REGULATIONS.—The Secretary shall prescribe such regulations or other guidance as may be necessary to carry out the purposes of this section, including—

(1) regulations or other guidance to effectuate the purposes of this section, and

(2) regulations or other guidance to minimize compliance and record-keeping burdens under this section.

26 USC 1401  
note.

**SEC. 9643. CREDIT FOR FAMILY LEAVE FOR CERTAIN SELF-EMPLOYED INDIVIDUALS.**

(a) IN GENERAL.—In the case of an eligible self-employed individual, there shall be allowed as a credit against the tax imposed by chapter 1 of the Internal Revenue Code of 1986 for any taxable year an amount equal to 100 percent of the qualified family leave equivalent amount with respect to the individual.

(b) ELIGIBLE SELF-EMPLOYED INDIVIDUAL.—For purposes of this section—

Definitions.

(1) IN GENERAL.—The term “eligible self-employed individual” means an individual who—

(A) regularly carries on any trade or business within the meaning of section 1402 of the Internal Revenue Code of 1986, and

(B) would be entitled to receive paid leave during the taxable year pursuant to the Emergency Family and Medical Leave Expansion Act if—

(i) the individual were an employee of an employer (other than himself or herself),

Effective date.

(ii) section 102(a)(1)(F) of the Family and Medical Leave Act of 1993 applied after March 31, 2021.

(2) RULES OF APPLICATION.—For purposes of paragraph (1)(B), in determining whether an individual would be entitled to receive paid leave under the Emergency Family and Medical Leave Act—

(A) section 110(a)(2)(A) of the Family and Medical Leave Act of 1993 shall be applied by inserting “or any reason for leave described in section 5102(a) of the Families First Coronavirus Response Act, or the employee is seeking or awaiting the results of a diagnostic test for, or a medical diagnosis of, COVID-19 and such employee has been exposed to COVID-19 or is unable to work pending the results of such test or diagnosis, or the employee is obtaining immunization related to COVID-19 or recovering from any injury, disability, illness, or condition related to such immunization” after “public health emergency”, and

(B) section 110(b) of such Act shall be applied—

(i) without regard to paragraph (1) thereof, and

(ii) by striking “after taking leave after such section for 10 days” in paragraph (2)(A) thereof.

- (c) **QUALIFIED FAMILY LEAVE EQUIVALENT AMOUNT.**—For purposes of this section—
- Definitions.
- (1) **IN GENERAL.**—The term “qualified family leave equivalent amount” means, with respect to any eligible self-employed individual, an amount equal to the product of—
- Time period.
- (A) the number of days (not to exceed 60) during the taxable year that the individual is unable to perform services in any trade or business referred to in section 1402 of the Internal Revenue Code of 1986 for a reason with respect to which such individual would be entitled to receive paid leave as described in subsection (b) of this section, multiplied by
- (B) the lesser of—
- (i) 67 percent of the average daily self-employment income of the individual for the taxable year, or
- (ii) \$200.
- (2) **AVERAGE DAILY SELF-EMPLOYMENT INCOME.**—For purposes of this subsection, the term “average daily self-employment income” means an amount equal to—
- (A) the net earnings from self-employment income of the individual for the taxable year, divided by
- (B) 260.
- (3) **ELECTION TO USE PRIOR YEAR NET EARNINGS FROM SELF-EMPLOYMENT INCOME.**—In the case of an individual who elects (at such time and in such manner as the Secretary may provide) the application of this paragraph, paragraph (2)(A) shall be applied by substituting “the prior taxable year” for “the taxable year”.
- Applicability.
- (4) **COORDINATION WITH CREDIT FOR SICK LEAVE.**—Any day taken into account in determining the qualified sick leave equivalent amount with respect to any eligible-self employed individual under section 9642 shall not be taken into account in determining the qualified family leave equivalent amount with respect to such individual under this section.
- Determination.
- (d) **CREDIT REFUNDABLE.**—
- (1) **IN GENERAL.**—The credit determined under this section shall be treated as a credit allowed to the taxpayer under subpart C of part IV of subchapter A of chapter 1 of such Code.
- (2) **TREATMENT OF PAYMENTS.**—For purposes of section 1324 of title 31, United States Code, any refund due from the credit determined under this section shall be treated in the same manner as a refund due from a credit provision referred to in subsection (b)(2) of such section.
- (e) **SPECIAL RULES.**—
- (1) **DOCUMENTATION.**—No credit shall be allowed under this section unless the individual maintains such documentation as the Secretary may prescribe to establish such individual as an eligible self-employed individual.
- (2) **DENIAL OF DOUBLE BENEFIT.**—In the case of an individual who receives wages (as defined in section 3121(a) of the Internal Revenue Code of 1986) or compensation (as defined in section 3231(e) of such Code) paid by an employer which are required to be paid by reason of the Emergency Family and Medical Leave Expansion Act, the qualified family leave equivalent amount otherwise described in subsection (c) of this section shall be reduced (but not below zero) to the extent

that the sum of the amount described in such subsection and in section 3132(b)(1) of such Code exceeds \$12,000.

(3) REFERENCES TO EMERGENCY FAMILY AND MEDICAL LEAVE EXPANSION ACT.—Any reference in this section to the Emergency Family and Medical Leave Expansion Act shall be treated as including a reference to the amendments made by such Act.

Time period. (f) APPLICATION OF SECTION.—Only days occurring during the period beginning on April 1, 2021 and ending on September 30, 2021, may be taken into account under subsection (c)(1)(A).

(g) APPLICATION OF CREDIT IN CERTAIN POSSESSIONS.—

Determination. (1) PAYMENTS TO POSSESSIONS WITH MIRROR CODE TAX SYSTEMS.—The Secretary shall pay to each possession of the United States which has a mirror code tax system amounts equal to the loss (if any) to that possession by reason of the application of the provisions of this section. Such amounts shall be determined by the Secretary based on information provided by the government of the respective possession.

Estimates. (2) PAYMENTS TO OTHER POSSESSIONS.—The Secretary shall pay to each possession of the United States which does not have a mirror code tax system amounts estimated by the Secretary as being equal to the aggregate benefits (if any) that would have been provided to residents of such possession by reason of the provisions of this section if a mirror code tax system had been in effect in such possession. The preceding sentence shall not apply unless the respective possession has a plan, which has been approved by the Secretary, under which such possession will promptly distribute such payments to its residents.

Definition. Determination. (3) MIRROR CODE TAX SYSTEM.—For purposes of this section, the term “mirror code tax system” means, with respect to any possession of the United States, the income tax system of such possession if the income tax liability of the residents of such possession under such system is determined by reference to the income tax laws of the United States as if such possession were the United States.

(4) TREATMENT OF PAYMENTS.—For purposes of section 1324 of title 31, United States Code, the payments under this subsection shall be treated in the same manner as a refund due from a credit provision referred to in subsection (b)(2) of such section.

(h) REGULATIONS.—The Secretary shall prescribe such regulations or other guidance as may be necessary to carry out the purposes of this section, including—

(1) regulations or other guidance to prevent the avoidance of the purposes of this section, and

(2) regulations or other guidance to minimize compliance and record-keeping burdens under this section.

## PART 6—EMPLOYEE RETENTION CREDIT

### SEC. 9651. EXTENSION OF EMPLOYEE RETENTION CREDIT.

(a) IN GENERAL.—Subchapter D of chapter 21 of subtitle C of the Internal Revenue Code of 1986, as added by section 9641, is amended by adding at the end the following:

**“SEC. 3134. EMPLOYEE RETENTION CREDIT FOR EMPLOYERS SUBJECT TO CLOSURE DUE TO COVID-19.**Time periods.  
26 USC 3134.

“(a) **IN GENERAL.**—In the case of an eligible employer, there shall be allowed as a credit against applicable employment taxes for each calendar quarter an amount equal to 70 percent of the qualified wages with respect to each employee of such employer for such calendar quarter.

“(b) **LIMITATIONS AND REFUNDABILITY.**—

“(1) **IN GENERAL.**—

“(A) **WAGES TAKEN INTO ACCOUNT.**—The amount of qualified wages with respect to any employee which may be taken into account under subsection (a) by the eligible employer for any calendar quarter shall not exceed \$10,000.

“(B) **RECOVERY STARTUP BUSINESSES.**—In the case of an eligible employer which is a recovery startup business (as defined in subsection (c)(5)), the amount of the credit allowed under subsection (a) (after application of subparagraph (A)) for any calendar quarter shall not exceed \$50,000.

“(2) **CREDIT LIMITED TO EMPLOYMENT TAXES.**—The credit allowed by subsection (a) with respect to any calendar quarter shall not exceed the applicable employment taxes (reduced by any credits allowed under sections 3131 and 3132) on the wages paid with respect to the employment of all the employees of the eligible employer for such calendar quarter.

“(3) **REFUNDABILITY OF EXCESS CREDIT.**—If the amount of the credit under subsection (a) exceeds the limitation of paragraph (2) for any calendar quarter, such excess shall be treated as an overpayment that shall be refunded under sections 6402(a) and 6413(b).

“(c) **DEFINITIONS.**—For purposes of this section—

“(1) **APPLICABLE EMPLOYMENT TAXES.**—The term ‘applicable employment taxes’ means the following:

“(A) The taxes imposed under section 3111(b).

“(B) So much of the taxes imposed under section 3221(a) as are attributable to the rate in effect under section 3111(b).

“(2) **ELIGIBLE EMPLOYER.**—

“(A) **IN GENERAL.**—The term ‘eligible employer’ means any employer—

“(i) which was carrying on a trade or business during the calendar quarter for which the credit is determined under subsection (a), and

“(ii) with respect to any calendar quarter, for which—

“(I) the operation of the trade or business described in clause (i) is fully or partially suspended during the calendar quarter due to orders from an appropriate governmental authority limiting commerce, travel, or group meetings (for commercial, social, religious, or other purposes) due to the coronavirus disease 2019 (COVID-19),

“(II) the gross receipts (within the meaning of section 448(c)) of such employer for such calendar quarter are less than 80 percent of the gross receipts of such employer for the same calendar quarter in calendar year 2019, or

“(III) the employer is a recovery startup business (as defined in paragraph (5)).

With respect to any employer for any calendar quarter, if such employer was not in existence as of the beginning of the same calendar quarter in calendar year 2019, clause (ii)(II) shall be applied by substituting ‘2020’ for ‘2019’.

Applicability.

“(B) ELECTION TO USE ALTERNATIVE QUARTER.—At the election of the employer—

“(i) subparagraph (A)(ii)(II) shall be applied—

“(I) by substituting ‘for the immediately preceding calendar quarter’ for ‘for such calendar quarter’, and

“(II) by substituting ‘the corresponding calendar quarter in calendar year 2019’ for ‘the same calendar quarter in calendar year 2019’, and

“(ii) the last sentence of subparagraph (A) shall be applied by substituting ‘the corresponding calendar quarter in calendar year 2019’ for ‘the same calendar quarter in calendar year 2019’.

An election under this subparagraph shall be made at such time and in such manner as the Secretary shall prescribe.

“(C) TAX-EXEMPT ORGANIZATIONS.—In the case of an organization which is described in section 501(c) and exempt from tax under section 501(a)—

Applicability.

“(i) clauses (i) and (ii)(I) of subparagraph (A) shall apply to all operations of such organization, and

“(ii) any reference in this section to gross receipts shall be treated as a reference to gross receipts within the meaning of section 6033.

“(3) QUALIFIED WAGES.—

“(A) IN GENERAL.—The term ‘qualified wages’ means—

“(i) in the case of an eligible employer for which the average number of full-time employees (within the meaning of section 4980H) employed by such eligible employer during 2019 was greater than 500, wages paid by such eligible employer with respect to which an employee is not providing services due to circumstances described in subclause (I) or (II) of paragraph (2)(A)(ii), or

“(ii) in the case of an eligible employer for which the average number of full-time employees (within the meaning of section 4980H) employed by such eligible employer during 2019 was not greater than 500—

“(I) with respect to an eligible employer described in subclause (I) of paragraph (2)(A)(ii), wages paid by such eligible employer with respect to an employee during any period described in such clause, or

“(II) with respect to an eligible employer described in subclause (II) of such paragraph, wages paid by such eligible employer with respect to an employee during such quarter.

Applicability.

“(B) SPECIAL RULE FOR EMPLOYERS NOT IN EXISTENCE IN 2019.—In the case of any employer that was not in

existence in 2019, subparagraph (A) shall be applied by substituting ‘2020’ for ‘2019’ each place it appears.

“(C) SEVERELY FINANCIALLY DISTRESSED EMPLOYERS.—

“(i) IN GENERAL.—Notwithstanding subparagraph (A)(i), in the case of a severely financially distressed employer, the term ‘qualified wages’ means wages paid by such employer with respect to an employee during any calendar quarter.

“(ii) DEFINITION.—The term ‘severely financially distressed employer’ means an eligible employer as defined in paragraph (2), determined by substituting ‘less than 10 percent’ for ‘less than 80 percent’ in subparagraph (A)(ii)(II) thereof.

“(D) EXCEPTION.—The term ‘qualified wages’ shall not include any wages taken into account under sections 41, 45A, 45P, 45S, 51, 1396, 3131, and 3132.

“(4) WAGES.—

“(A) IN GENERAL.—The term ‘wages’ means wages (as defined in section 3121(a)) and compensation (as defined in section 3231(e)). For purposes of the preceding sentence, in the case of any organization or entity described in subsection (f)(2), wages as defined in section 3121(a) shall be determined without regard to paragraphs (5), (6), (7), (10), and (13) of section 3121(b) (except with respect to services performed in a penal institution by an inmate thereof).

Determination.

“(B) ALLOWANCE FOR CERTAIN HEALTH PLAN EXPENSES.—

“(i) IN GENERAL.—Such term shall include amounts paid by the eligible employer to provide and maintain a group health plan (as defined in section 5000(b)(1)), but only to the extent that such amounts are excluded from the gross income of employees by reason of section 106(a).

“(ii) ALLOCATION RULES.—For purposes of this section, amounts treated as wages under clause (i) shall be treated as paid with respect to any employee (and with respect to any period) to the extent that such amounts are properly allocable to such employee (and to such period) in such manner as the Secretary may prescribe. Except as otherwise provided by the Secretary, such allocation shall be treated as properly made if made on the basis of being pro rata among periods of coverage.

“(5) RECOVERY STARTUP BUSINESS.—The term ‘recovery startup business’ means any employer—

“(A) which began carrying on any trade or business after February 15, 2020,

Effective date.

“(B) for which the average annual gross receipts of such employer (as determined under rules similar to the rules under section 448(c)(3)) for the 3-taxable-year period ending with the taxable year which precedes the calendar quarter for which the credit is determined under subsection (a) does not exceed \$1,000,000, and

Determination.  
Time period.

“(C) which, with respect to such calendar quarter, is not described in subclause (I) or (II) of paragraph (2)(A)(ii).

“(6) OTHER TERMS.—Any term used in this section which is also used in this chapter or chapter 22 shall have the same meaning as when used in such chapter.

“(d) AGGREGATION RULE.—All persons treated as a single employer under subsection (a) or (b) of section 52, or subsection (m) or (o) of section 414, shall be treated as one employer for purposes of this section.

“(e) CERTAIN RULES TO APPLY.—For purposes of this section, rules similar to the rules of sections 51(i)(1) and 280C(a) shall apply.

“(f) CERTAIN GOVERNMENTAL EMPLOYERS.—

“(1) IN GENERAL.—This credit shall not apply to the Government of the United States, the government of any State or political subdivision thereof, or any agency or instrumentality of any of the foregoing.

“(2) EXCEPTION.—Paragraph (1) shall not apply to—

“(A) any organization described in section 501(c)(1) and exempt from tax under section 501(a), or

“(B) any entity described in paragraph (1) if—

“(i) such entity is a college or university, or

“(ii) the principal purpose or function of such entity is providing medical or hospital care.

In the case of any entity described in subparagraph (B), such entity shall be treated as satisfying the requirements of subsection (c)(2)(A)(i).

“(g) ELECTION TO NOT TAKE CERTAIN WAGES INTO ACCOUNT.—This section shall not apply to so much of the qualified wages paid by an eligible employer as such employer elects (at such time and in such manner as the Secretary may prescribe) to not take into account for purposes of this section.

“(h) COORDINATION WITH CERTAIN PROGRAMS.—

“(1) IN GENERAL.—This section shall not apply to so much of the qualified wages paid by an eligible employer as are taken into account as payroll costs in connection with—

“(A) a covered loan under section 7(a)(37) or 7A of the Small Business Act,

“(B) a grant under section 324 of the Economic Aid to Hard-Hit Small Businesses, Non-Profits, and Venues Act, or

“(C) a restaurant revitalization grant under section 5003 of the American Rescue Plan Act of 2021.

“(2) APPLICATION WHERE PPP LOANS NOT FORGIVEN.—The Secretary shall issue guidance providing that payroll costs paid during the covered period shall not fail to be treated as qualified wages under this section by reason of paragraph (1) to the extent that—

“(A) a covered loan of the taxpayer under section 7(a)(37) of the Small Business Act is not forgiven by reason of a decision under section 7(a)(37)(J) of such Act, or

“(B) a covered loan of the taxpayer under section 7A of the Small Business Act is not forgiven by reason of a decision under section 7A(g) of such Act.

Terms used in the preceding sentence which are also used in section 7A(g) or 7(a)(37)(J) of the Small Business Act shall, when applied in connection with either such section, have the same meaning as when used in such section, respectively.

“(i) THIRD PARTY PAYORS.—Any credit allowed under this section shall be treated as a credit described in section 3511(d)(2).

“(j) ADVANCE PAYMENTS.—

“(1) IN GENERAL.—Except as provided in paragraph (2), no advance payment of the credit under subsection (a) shall be allowed.

“(2) ADVANCE PAYMENTS TO SMALL EMPLOYERS.—

“(A) IN GENERAL.—Under rules provided by the Secretary, an eligible employer for which the average number of full-time employees (within the meaning of section 4980H) employed by such eligible employer during 2019 was not greater than 500 may elect for any calendar quarter to receive an advance payment of the credit under subsection (a) for such quarter in an amount not to exceed 70 percent of the average quarterly wages paid by the employer in calendar year 2019.

“(B) SPECIAL RULE FOR SEASONAL EMPLOYERS.—In the case of any employer who employs seasonal workers (as defined in section 45R(d)(5)(B)), the employer may elect to apply subparagraph (A) by substituting ‘the wages for the calendar quarter in 2019 which corresponds to the calendar quarter to which the election relates’ for ‘the average quarterly wages paid by the employer in calendar year 2019’.

“(C) SPECIAL RULE FOR EMPLOYERS NOT IN EXISTENCE IN 2019.—In the case of any employer that was not in existence in 2019, subparagraphs (A) and (B) shall each be applied by substituting ‘2020’ for ‘2019’ each place it appears.

Applicability.

“(3) RECONCILIATION OF CREDIT WITH ADVANCE PAYMENTS.—

“(A) IN GENERAL.—The amount of credit which would (but for this subsection) be allowed under this section shall be reduced (but not below zero) by the aggregate payment allowed to the taxpayer under paragraph (2). Any failure to so reduce the credit shall be treated as arising out of a mathematical or clerical error and assessed according to section 6213(b)(1).

“(B) EXCESS ADVANCE PAYMENTS.—If the advance payments to a taxpayer under paragraph (2) for a calendar quarter exceed the credit allowed by this section (determined without regard to subparagraph (A)), the tax imposed under section 3111(b) or so much of the tax imposed under section 3221(a) as is attributable to the rate in effect under section 3111(b) (whichever is applicable) for the calendar quarter shall be increased by the amount of such excess.

“(k) TREATMENT OF DEPOSITS.—The Secretary shall waive any penalty under section 6656 for any failure to make a deposit of any applicable employment taxes if the Secretary determines that such failure was due to the reasonable anticipation of the credit allowed under this section.

Waiver.  
Determination.

“(l) EXTENSION OF LIMITATION ON ASSESSMENT.—Notwithstanding section 6501, the limitation on the time period for the assessment of any amount attributable to a credit claimed under this section shall not expire before the date that is 5 years after the later of—

Time period.

“(1) the date on which the original return which includes the calendar quarter with respect to which such credit is determined is filed, or

“(2) the date on which such return is treated as filed under section 6501(b)(2).

“(m) REGULATIONS AND GUIDANCE.—The Secretary shall issue such forms, instructions, regulations, and other guidance as are necessary—

“(1) to allow the advance payment of the credit under subsection (a) as provided in subsection (j)(2), subject to the limitations provided in this section, based on such information as the Secretary shall require,

“(2) with respect to the application of the credit under subsection (a) to third party payors (including professional employer organizations, certified professional employer organizations, or agents under section 3504), including regulations or guidance allowing such payors to submit documentation necessary to substantiate the eligible employer status of employers that use such payors, and

“(3) to prevent the avoidance of the purposes of the limitations under this section, including through the leaseback of employees.

Any forms, instructions, regulations, or other guidance described in paragraph (2) shall require the customer to be responsible for the accounting of the credit and for any liability for improperly claimed credits and shall require the certified professional employer organization or other third party payor to accurately report such tax credits based on the information provided by the customer.

Time period.

“(n) APPLICATION.—This section shall only apply to wages paid after June 30, 2021, and before January 1, 2022.”

(b) REFUNDS.—Paragraph (2) of section 1324(b) of title 31, United States Code, is amended by inserting “3134,” before “6428”.

26 USC 3131  
prec.

(c) CLERICAL AMENDMENT.—The table of sections for subchapter D of chapter 21 of subtitle C of the Internal Revenue Code of 1986 is amended by adding at the end the following:

“Sec. 3134. Employee retention credit for employers subject to closure due to COVID-19.”

Applicability.  
26 USC 3134  
note.

(d) EFFECTIVE DATE.—The amendments made by this section shall apply to calendar quarters beginning after June 30, 2021.

## PART 7—PREMIUM TAX CREDIT

### SEC. 9661. IMPROVING AFFORDABILITY BY EXPANDING PREMIUM ASSISTANCE FOR CONSUMERS.

26 USC 36B.

(a) IN GENERAL.—Section 36B(b)(3)(A) of the Internal Revenue Code of 1986 is amended by adding at the end the following new clause:

“(iii) TEMPORARY PERCENTAGES FOR 2021 AND 2022.—In the case of a taxable year beginning in 2021 or 2022—

“(I) clause (ii) shall not apply for purposes of adjusting premium percentages under this subparagraph, and

Applicability.

“(II) the following table shall be applied in lieu of the table contained in clause (i):

“In the case of household income (expressed as a percent of poverty line) within the following income tier:	The initial premium percentage is—	The final premium percentage is—
Up to 150.0 percent .....	0.0	0.0
150.0 percent up to 200.0 percent .....	0.0	2.0
200.0 percent up to 250.0 percent .....	2.0	4.0
250.0 percent up to 300.0 percent .....	4.0	6.0
300.0 percent up to 400.0 percent .....	6.0	8.5
400.0 percent and higher .....	8.5	8.5”.

(b) CONFORMING AMENDMENT.—Section 36B(c)(1) of the Internal Revenue Code of 1986 is amended by adding at the end the following new subparagraph: 26 USC 36B.

“(E) TEMPORARY RULE FOR 2021 AND 2022.—In the case of a taxable year beginning in 2021 or 2022, subparagraph (A) shall be applied without regard to ‘but does not exceed 400 percent’.” Applicability.

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 2020. 26 USC 36B note.

**SEC. 9662. TEMPORARY MODIFICATION OF LIMITATIONS ON RECONCILIATION OF TAX CREDITS FOR COVERAGE UNDER A QUALIFIED HEALTH PLAN WITH ADVANCE PAYMENTS OF SUCH CREDIT.**

(a) IN GENERAL.—Section 36B(f)(2)(B) of the Internal Revenue Code of 1986 is amended by adding at the end the following new clause:

“(iii) TEMPORARY MODIFICATION OF LIMITATION ON INCREASE.—In the case of any taxable year beginning in 2020, for any taxpayer who files for such taxable year an income tax return reconciling any advance payment of the credit under this section, the Secretary shall treat subparagraph (A) as not applying.”

(b) EFFECTIVE DATE.—The amendment made by this section shall apply to taxable years beginning after December 31, 2019. 26 USC 36B note.

**SEC. 9663. APPLICATION OF PREMIUM TAX CREDIT IN CASE OF INDIVIDUALS RECEIVING UNEMPLOYMENT COMPENSATION DURING 2021.**

(a) IN GENERAL.—Section 36B of the Internal Revenue Code of 1986 is amended by redesignating subsection (g) as subsection (h) and by inserting after subsection (f) the following new subsection:

“(g) SPECIAL RULE FOR INDIVIDUALS WHO RECEIVE UNEMPLOYMENT COMPENSATION DURING 2021.—

“(1) IN GENERAL.—For purposes of this section, in the case of a taxpayer who has received, or has been approved to receive, unemployment compensation for any week beginning during 2021, for the taxable year in which such week begins—

“(A) such taxpayer shall be treated as an applicable taxpayer, and

- Definition. “(B) there shall not be taken into account any household income of the taxpayer in excess of 133 percent of the poverty line for a family of the size involved.
- “(2) UNEMPLOYMENT COMPENSATION.—For purposes of this subsection, the term ‘unemployment compensation’ has the meaning given such term in section 85(b).
- “(3) EVIDENCE OF UNEMPLOYMENT COMPENSATION.—For purposes of this subsection, a taxpayer shall not be treated as having received (or been approved to receive) unemployment compensation for any week unless such taxpayer provides self-attestation of, and such documentation as the Secretary shall prescribe which demonstrates, such receipt or approval.
- “(4) CLARIFICATION OF RULES REMAINING APPLICABLE.—
- “(A) JOINT RETURN REQUIREMENT.—Paragraph (1)(A) shall not affect the application of subsection (c)(1)(C).
- “(B) HOUSEHOLD INCOME AND AFFORDABILITY.—Paragraph (1)(B) shall not apply to any determination of household income for purposes of paragraph (2)(C)(i)(II) or (4)(C)(ii) of subsection (c)”.
- 26 USC 36B note. (b) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 2020.

## PART 8—MISCELLANEOUS PROVISIONS

### SEC. 9671. REPEAL OF ELECTION TO ALLOCATE INTEREST, ETC. ON WORLDWIDE BASIS.

- 26 USC 864. (a) IN GENERAL.—Section 864 of the Internal Revenue Code of 1986 is amended by striking subsection (f).
- (b) EFFECTIVE DATE.—The amendment made by this section shall apply to taxable years beginning after December 31, 2020.

15 USC 9009b note.

### SEC. 9672. TAX TREATMENT OF TARGETED EIDL ADVANCES.

For purposes of the Internal Revenue Code of 1986—

(1) amounts received from the Administrator of the Small Business Administration in the form of a targeted EIDL advance under section 331 of the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (title III of division N of Public Law 116-260) shall not be included in the gross income of the person that receives such amounts,

(2) no deduction shall be denied, no tax attribute shall be reduced, and no basis increase shall be denied, by reason of the exclusion from gross income provided by paragraph (1), and

(3) in the case of a partnership or S corporation that receives such amounts—

(A) any amount excluded from income by reason of paragraph (1) shall be treated as tax exempt income for purposes of sections 705 and 1366 of the Internal Revenue Code of 1986, and

Regulations.  
Determinations.

(B) the Secretary of the Treasury (or the Secretary’s delegate) shall prescribe rules for determining a partner’s distributive share of any amount described in subparagraph (A) for purposes of section 705 of the Internal Revenue Code of 1986.

15 USC 9009c note.

### SEC. 9673. TAX TREATMENT OF RESTAURANT REVITALIZATION GRANTS.

For purposes of the Internal Revenue Code of 1986—

(1) amounts received from the Administrator of the Small Business Administration in the form of a restaurant revitalization grant under section 5003 shall not be included in the gross income of the person that receives such amounts,

(2) no deduction shall be denied, no tax attribute shall be reduced, and no basis increase shall be denied, by reason of the exclusion from gross income provided by paragraph (1), and

(3) in the case of a partnership or S corporation that receives such amounts—

(A) except as otherwise provided by the Secretary of the Treasury (or the Secretary's delegate), any amount excluded from income by reason of paragraph (1) shall be treated as tax exempt income for purposes of sections 705 and 1366 of the Internal Revenue Code of 1986, and

(B) the Secretary of the Treasury (or the Secretary's delegate) shall prescribe rules for determining a partner's distributive share of any amount described in subparagraph (A) for purposes of section 705 of the Internal Revenue Code of 1986.

Regulations.  
Determinations.

**SEC. 9674. MODIFICATION OF EXCEPTIONS FOR REPORTING OF THIRD PARTY NETWORK TRANSACTIONS.**

(a) IN GENERAL.—Section 6050W(e) of the Internal Revenue Code of 1986 is amended to read as follows:

“(e) DE MINIMIS EXCEPTION FOR THIRD PARTY SETTLEMENT ORGANIZATIONS.—A third party settlement organization shall not be required to report any information under subsection (a) with respect to third party network transactions of any participating payee if the amount which would otherwise be reported under subsection (a)(2) with respect to such transactions does not exceed \$600.”

26 USC 6050W.

(b) CLARIFICATION THAT REPORTING IS NOT REQUIRED ON TRANSACTIONS WHICH ARE NOT FOR GOODS OR SERVICES.—Section 6050W(c)(3) of such Code is amended by inserting “described in subsection (d)(3)(A)(iii)” after “any transaction”.

(c) EFFECTIVE DATE.—

(1) IN GENERAL.—The amendment made by subsection (a) shall apply to returns for calendar years beginning after December 31, 2021.

(2) CLARIFICATION.—The amendment made by subsection (b) shall apply to transactions after the date of the enactment of this Act.

Applicability.  
26 USC 6050W  
note.

**SEC. 9675. MODIFICATION OF TREATMENT OF STUDENT LOAN FORGIVENESS.**

(a) IN GENERAL.—Section 108(f) of the Internal Revenue Code of 1986 is amended by striking paragraph (5) and inserting the following:

“(5) SPECIAL RULE FOR DISCHARGES IN 2021 THROUGH 2025.—Gross income does not include any amount which (but for this subsection) would be includible in gross income by reason of the discharge (in whole or in part) after December 31, 2020, and before January 1, 2026, of—

“(A) any loan provided expressly for postsecondary educational expenses, regardless of whether provided through the educational institution or directly to the borrower, if such loan was made, insured, or guaranteed by—

“(i) the United States, or an instrumentality or agency thereof,

“(ii) a State, territory, or possession of the United States, or the District of Columbia, or any political subdivision thereof, or

“(iii) an eligible educational institution (as defined in section 25A),

“(B) any private education loan (as defined in section 140(a)(7) of the Truth in Lending Act),

“(C) any loan made by any educational organization described in section 170(b)(1)(A)(ii) if such loan is made—

“(i) pursuant to an agreement with any entity described in subparagraph (A) or any private education lender (as defined in section 140(a) of the Truth in Lending Act) under which the funds from which the loan was made were provided to such educational organization, or

“(ii) pursuant to a program of such educational organization which is designed to encourage its students to serve in occupations with unmet needs or in areas with unmet needs and under which the services provided by the students (or former students) are for or under the direction of a governmental unit or an organization described in section 501(c)(3) and exempt from tax under section 501(a), or

“(D) any loan made by an educational organization described in section 170(b)(1)(A)(ii) or by an organization exempt from tax under section 501(a) to refinance a loan to an individual to assist the individual in attending any such educational organization but only if the refinancing loan is pursuant to a program of the refinancing organization which is designed as described in subparagraph (C)(ii).

The preceding sentence shall not apply to the discharge of a loan made by an organization described in subparagraph (C) or made by a private education lender (as defined in section 140(a)(7) of the Truth in Lending Act) if the discharge is on account of services performed for either such organization or for such private education lender.”

26 USC 108.

(b) **EFFECTIVE DATE.**—The amendment made by this section shall apply to discharges of loans after December 31, 2020.

## Subtitle H—Pensions

26 USC 432 note.

### **SEC. 9701. TEMPORARY DELAY OF DESIGNATION OF MULTIEMPLOYER PLANS AS IN ENDANGERED, CRITICAL, OR CRITICAL AND DECLINING STATUS.**

(a) **IN GENERAL.**—Notwithstanding the actuarial certification under section 305(b)(3) of the Employee Retirement Income Security Act of 1974 and section 432(b)(3) of the Internal Revenue Code of 1986, if a plan sponsor of a multiemployer plan elects the application of this section, then, for purposes of section 305 of such Act and section 432 of such Code—

Time period.

(1) the status of the plan for its first plan year beginning during the period beginning on March 1, 2020, and ending on February 28, 2021, or the next succeeding plan year (as designated by the plan sponsor in such election), shall be the

same as the status of such plan under such sections for the plan year preceding such designated plan year, and

(2) in the case of a plan which was in endangered or critical status for the plan year preceding the designated plan year described in paragraph (1), the plan shall not be required to update its plan or schedules under section 305(c)(6) of such Act and section 432(c)(6) of such Code, or section 305(e)(3)(B) of such Act and section 432(e)(3)(B) of such Code, whichever is applicable, until the plan year following the designated plan year described in paragraph (1).

(b) EXCEPTION FOR PLANS BECOMING CRITICAL DURING ELECTION.—If—

(1) an election was made under subsection (a) with respect to a multiemployer plan, and

(2) such plan has, without regard to such election, been certified by the plan actuary under section 305(b)(3) of the Employee Retirement Income Security Act of 1974 and section 432(b)(3) of the Internal Revenue Code of 1986 to be in critical status for the designated plan year described in subsection (a)(1), then such plan shall be treated as a plan in critical status for such plan year for purposes of applying section 4971(g)(1)(A) of such Code, section 302(b)(3) of such Act (without regard to the second sentence thereof), and section 412(b)(3) of such Code (without regard to the second sentence thereof).

(c) ELECTION AND NOTICE.—

(1) ELECTION.—An election under subsection (a)—

(A) shall be made at such time and in such manner as the Secretary of the Treasury or the Secretary's delegate may prescribe and, once made, may be revoked only with the consent of the Secretary, and

(B) if made—

(i) before the date the annual certification is submitted to the Secretary or the Secretary's delegate under section 305(b)(3) of such Act and section 432(b)(3) of such Code, shall be included with such annual certification, and

(ii) after such date, shall be submitted to the Secretary or the Secretary's delegate not later than 30 days after the date of the election.

(2) NOTICE TO PARTICIPANTS.—

(A) IN GENERAL.—Notwithstanding section 305(b)(3)(D) of the Employee Retirement Income Security Act of 1974 and section 432(b)(3)(D) of the Internal Revenue Code of 1986, if, by reason of an election made under subsection (a), the plan is in neither endangered nor critical status—

(i) the plan sponsor of a multiemployer plan shall not be required to provide notice under such sections, and

(ii) the plan sponsor shall provide to the participants and beneficiaries, the bargaining parties, the Pension Benefit Guaranty Corporation, and the Secretary of Labor a notice of the election under subsection (a) and such other information as the Secretary of the Treasury (in consultation with the Secretary of Labor) may require—

(I) if the election is made before the date the annual certification is submitted to the Secretary

Certification.  
Applicability.

Deadline.

Consultation.  
Deadlines.

or the Secretary's delegate under section 305(b)(3) of such Act and section 432(b)(3) of such Code, not later than 30 days after the date of the certification, and

(II) if the election is made after such date, not later than 30 days after the date of the election.

Certification.

(B) NOTICE OF ENDANGERED STATUS.—Notwithstanding section 305(b)(3)(D) of such Act and section 432(b)(3)(D) of such Code, if the plan is certified to be in critical status for any plan year but is in endangered status by reason of an election made under subsection (a), the notice provided under such sections shall be the notice which would have been provided if the plan had been certified to be in endangered status.

26 USC 432 note.

**SEC. 9702. TEMPORARY EXTENSION OF THE FUNDING IMPROVEMENT AND REHABILITATION PERIODS FOR MULTIEMPLOYER PENSION PLANS IN CRITICAL AND ENDANGERED STATUS FOR 2020 OR 2021.**

(a) IN GENERAL.—If the plan sponsor of a multiemployer plan which is in endangered or critical status for a plan year beginning in 2020 or 2021 (determined after application of section 9701) elects the application of this section, then, for purposes of section 305 of the Employee Retirement Income Security Act of 1974 and section 432 of the Internal Revenue Code of 1986, the plan's funding improvement period or rehabilitation period, whichever is applicable, shall be extended by 5 years.

(b) DEFINITIONS AND SPECIAL RULES.—For purposes of this section—

Consultation.

(1) ELECTION.—An election under this section shall be made at such time, and in such manner and form, as (in consultation with the Secretary of Labor) the Secretary of the Treasury or the Secretary's delegate may prescribe.

(2) DEFINITIONS.—Any term which is used in this section which is also used in section 305 of the Employee Retirement Income Security Act of 1974 and section 432 of the Internal Revenue Code of 1986 shall have the same meaning as when used in such sections.

Applicability.

(c) EFFECTIVE DATE.—This section shall apply to plan years beginning after December 31, 2019.

**SEC. 9703. ADJUSTMENTS TO FUNDING STANDARD ACCOUNT RULES.**

(a) ADJUSTMENTS.—

(1) AMENDMENT TO EMPLOYEE RETIREMENT INCOME SECURITY ACT OF 1974.—Section 304(b)(8) of the Employee Retirement Income Security Act of 1974 (29 U.S.C. 1084(b)) is amended by adding at the end the following new subparagraph:

Effective date.  
Applicability.

“(F) RELIEF FOR 2020 AND 2021.—A multiemployer plan with respect to which the solvency test under subparagraph (C) is met as of February 29, 2020, may elect to apply this paragraph (without regard to whether such plan previously elected the application of this paragraph)—

“(i) by substituting ‘February 29, 2020’ for ‘August 31, 2008’ each place it appears in subparagraphs (A)(i), (B)(i)(I), and (B)(i)(II),

Determination.

“(ii) by inserting ‘and other losses related to the virus SARS-CoV-2 or coronavirus disease 2019 (COVID-19) (including experience losses related to

reductions in contributions, reductions in employment, and deviations from anticipated retirement rates, as determined by the plan sponsor’ after ‘net investment losses’ in subparagraph (A)(i), and

“(iii) by substituting ‘this subparagraph or subparagraph (A)’ for ‘this subparagraph and subparagraph (A) both’ in subparagraph (B)(iii).

The preceding sentence shall not apply to a plan to which special financial assistance is granted under section 4262. For purposes of the application of this subparagraph, the Secretary of the Treasury shall rely on the plan sponsor’s calculations of plan losses unless such calculations are clearly erroneous.”.

(2) AMENDMENT TO INTERNAL REVENUE CODE OF 1986.—Section 431(b)(8) of the Internal Revenue Code of 1986 is amended by adding at the end the following new subparagraph:

26 USC 431.

“(F) RELIEF FOR 2020 AND 2021.—A multiemployer plan with respect to which the solvency test under subparagraph (C) is met as of February 29, 2020, may elect to apply this paragraph (without regard to whether such plan previously elected the application of this paragraph)—

Effective date.  
Applicability.

“(i) by substituting ‘February 29, 2020’ for ‘August 31, 2008’ each place it appears in subparagraphs (A)(i), (B)(i)(I), and (B)(i)(II),

“(ii) by inserting ‘and other losses related to the virus SARS-CoV-2 or coronavirus disease 2019 (COVID-19) (including experience losses related to reductions in contributions, reductions in employment, and deviations from anticipated retirement rates, as determined by the plan sponsor)’ after ‘net investment losses’ in subparagraph (A)(i), and

“(iii) by substituting ‘this subparagraph or subparagraph (A)’ for ‘this subparagraph and subparagraph (A) both’ in subparagraph (B)(iii).

The preceding sentence shall not apply to a plan to which special financial assistance is granted under section 4262 of the Employee Retirement Income Security Act of 1974. For purposes of the application of this subparagraph, the Secretary shall rely on the plan sponsor’s calculations of plan losses unless such calculations are clearly erroneous.”.

(b) EFFECTIVE DATES.—

Applicability.  
26 USC 431 note.

(1) IN GENERAL.—The amendments made by this section shall take effect as of the first day of the first plan year ending on or after February 29, 2020, except that any election a plan makes pursuant to this section that affects the plan’s funding standard account for the first plan year beginning after February 29, 2020, shall be disregarded for purposes of applying the provisions of section 305 of the Employee Retirement Income Security Act of 1974 and section 432 of the Internal Revenue Code of 1986 to such plan year.

(2) RESTRICTIONS ON BENEFIT INCREASES.—Notwithstanding paragraph (1), the restrictions on plan amendments increasing benefits in sections 304(b)(8)(D) of such Act and 431(b)(8)(D) of such Code, as applied by the amendments made by this section, shall take effect on the date of enactment of this Act.

**SEC. 9704. SPECIAL FINANCIAL ASSISTANCE PROGRAM FOR FINANCIALLY TROUBLED MULTIEMPLOYER PLANS.**

(a) APPROPRIATION.—Section 4005 of the Employee Retirement Income Security Act of 1974 (29 U.S.C. 1305) is amended by adding at the end the following:

“(i)(1) An eighth fund shall be established for special financial assistance to multiemployer pension plans, as provided under section 4262, and to pay for necessary administrative and operating expenses of the corporation relating to such assistance.

“(2) There is appropriated from the general fund such amounts as are necessary for the costs of providing financial assistance under section 4262 and necessary administrative and operating expenses of the corporation. The eighth fund established under this subsection shall be credited with amounts from time to time as the Secretary of the Treasury, in conjunction with the Director of the Pension Benefit Guaranty Corporation, determines appropriate, from the general fund of the Treasury, but in no case shall such transfers occur after September 30, 2030.”.

(b) FINANCIAL ASSISTANCE AUTHORITY.—The Employee Retirement Income Security Act of 1974 is amended by inserting after section 4261 of such Act (29 U.S.C. 1431) the following:

Determination.  
Termination  
date.

29 USC 1432.

**“SEC. 4262. SPECIAL FINANCIAL ASSISTANCE BY THE CORPORATION.**

“(a) SPECIAL FINANCIAL ASSISTANCE.—

“(1) IN GENERAL.—The corporation shall provide special financial assistance to an eligible multiemployer plan under this section, upon the application of a plan sponsor of such a plan for such assistance.

“(2) INAPPLICABILITY OF CERTAIN REPAYMENT OBLIGATION.—A plan receiving special financial assistance pursuant to this section shall not be subject to repayment obligations with respect to such special financial assistance.

“(b) ELIGIBLE MULTIEMPLOYER PLANS.—

Time period.

“(1) IN GENERAL.—For purposes of this section, a multiemployer plan is an eligible multiemployer plan if—

“(A) the plan is in critical and declining status (within the meaning of section 305(b)(6)) in any plan year beginning in 2020 through 2022;

“(B) a suspension of benefits has been approved with respect to the plan under section 305(e)(9) as of the date of the enactment of this section;

Certification.

“(C) in any plan year beginning in 2020 through 2022, the plan is certified by the plan actuary to be in critical status (within the meaning of section 305(b)(2)), has a modified funded percentage of less than 40 percent, and has a ratio of active to inactive participants which is less than 2 to 3; or

“(D) the plan became insolvent for purposes of section 418E of the Internal Revenue Code of 1986 after December 16, 2014, and has remained so insolvent and has not been terminated as of the date of enactment of this section.

Definition.

“(2) MODIFIED FUNDED PERCENTAGE.—For purposes of paragraph (1)(C), the term ‘modified funded percentage’ means the percentage equal to a fraction the numerator of which is current value of plan assets (as defined in section 3(26) of such Act) and the denominator of which is current liabilities (as defined

in section 431(c)(6)(D) of such Code and section 304(c)(6)(D) of such Act).

“(c) APPLICATIONS FOR SPECIAL FINANCIAL ASSISTANCE.—Within 120 days of the date of enactment of this section, the corporation shall issue regulations or guidance setting forth requirements for special financial assistance applications under this section. In such regulations or guidance, the corporation shall—

Deadline.  
Regulations.  
Requirements.

“(1) limit the materials required for a special financial assistance application to the minimum necessary to make a determination on the application;

“(2) specify effective dates for transfers of special financial assistance following approval of an application, based on the effective date of the supporting actuarial analysis and the date on which the application is submitted; and

“(3) provide for an alternate application for special financial assistance under this section, which may be used by a plan that has been approved for a partition under section 4233 before the date of enactment of this section.

“(d) TEMPORARY PRIORITY CONSIDERATION OF APPLICATIONS.—

“(1) IN GENERAL.—The corporation may specify in regulations or guidance under subsection (c) that, during a period no longer than the first 2 years following the date of enactment of this section, applications may not be filed by an eligible multiemployer plan unless—

Regulations.  
Time period.

“(A) the eligible multiemployer plan is insolvent or is likely to become insolvent within 5 years of the date of enactment of this section;

Time period.

“(B) the corporation projects the eligible multiemployer plan to have a present value of financial assistance payments under section 4261 that exceeds \$1,000,000,000 if the special financial assistance is not ordered;

“(C) the eligible multiemployer plan has implemented benefit suspensions under section 305(e)(9) as of the date of the enactment of this section; or

“(D) the corporation determines it appropriate based on other similar circumstances.

Determination.

“(e) ACTUARIAL ASSUMPTIONS.—

“(1) ELIGIBILITY.—For purposes of determining eligibility for special financial assistance, the corporation shall accept assumptions incorporated in a multiemployer plan’s determination that it is in critical status or critical and declining status (within the meaning of section 305(b)) for certifications of plan status completed before January 1, 2021, unless such assumptions are clearly erroneous. For certifications of plan status completed after December 31, 2020, a plan shall determine whether it is in critical or critical and declining status for purposes of eligibility for special financial assistance by using the assumptions that the plan used in its most recently completed certification of plan status before January 1, 2021, unless such assumptions (excluding the plan’s interest rate) are unreasonable.

Determinations.  
Termination  
date.

Certifications.  
Effective date.

“(2) AMOUNT OF FINANCIAL ASSISTANCE.—In determining the amount of special financial assistance in its application, an eligible multiemployer plan shall—

Termination  
date.

“(A) use the interest rate used by the plan in its most recently completed certification of plan status before

	<p>January 1, 2021, provided that such interest rate may not exceed the interest rate limit; and</p> <p>“(B) for other assumptions, use the assumptions that the plan used in its most recently completed certification of plan status before January 1, 2021, unless such assumptions are unreasonable.</p>
Time period.	<p>“(3) INTEREST RATE LIMIT.—The interest rate limit for purposes of this subsection is the rate specified in section 303(h)(2)(C)(iii) (disregarding modifications made under clause (iv) of such section) for the month in which the application for special financial assistance is filed by the eligible multiemployer plan or the 3 preceding months, with such specified rate increased by 200 basis points.</p>
Determinations. Disclosure.	<p>“(4) CHANGES IN ASSUMPTIONS.—If a plan determines that use of one or more prior assumptions is unreasonable, the plan may propose in its application to change such assumptions, provided that the plan discloses such changes in its application and describes why such assumptions are no longer reasonable. The corporation shall accept such changed assumptions unless it determines the changes are unreasonable, individually or in the aggregate. The plan may not propose a change to the interest rate otherwise required under this subsection for eligibility or financial assistance amount.</p>
	<p>“(f) APPLICATION DEADLINE.—Any application by a plan for special financial assistance under this section shall be submitted to the corporation (and, in the case of a plan to which section 432(k)(1)(D) of the Internal Revenue Code of 1986 applies, to the Secretary of the Treasury) no later than December 31, 2025, and any revised application for special financial assistance shall be submitted no later than December 31, 2026.</p>
Notifications. Deadlines.	<p>“(g) DETERMINATIONS ON APPLICATIONS.—A plan’s application for special financial assistance under this section that is timely filed in accordance with the regulations or guidance issued under subsection (c) shall be deemed approved unless the corporation notifies the plan within 120 days of the filing of the application that the application is incomplete, any proposed change or assumption is unreasonable, or the plan is not eligible under this section. Such notice shall specify the reasons the plan is ineligible for special financial assistance, any proposed change or assumption is unreasonable, or information is needed to complete the application. If a plan is denied assistance under this subsection, the plan may submit a revised application under this section. Any revised application for special financial assistance submitted by a plan shall be deemed approved unless the corporation notifies the plan within 120 days of the filing of the revised application that the application is incomplete, any proposed change or assumption is unreasonable, or the plan is not eligible under this section.</p>
Revisions.	<p>Special financial assistance issued by the corporation shall be effective on a date determined by the corporation, but no later than 1 year after a plan’s special financial assistance application is approved by the corporation or deemed approved. The corporation shall not pay any special financial assistance after September 30, 2030.</p>
Effective date. Determination. Deadline.	<p>“(h) MANNER OF PAYMENT.—The payment made by the corporation to an eligible multiemployer plan under this section shall be made as a single, lump sum payment.</p>
Termination date.	<p>“(i) AMOUNT AND MANNER OF SPECIAL FINANCIAL ASSISTANCE.—</p>

“(1) IN GENERAL.—Special financial assistance under this section shall be a transfer of funds in the amount necessary as demonstrated by the plan sponsor on the application for such special financial assistance, in accordance with the requirements described in subsection (j). Special financial assistance shall be paid to such plan as soon as practicable upon approval of the application by the corporation.

“(2) NO CAP.—Special financial assistance granted by the corporation under this section shall not be capped by the guarantee under 4022A.

“(j) DETERMINATION OF AMOUNT OF SPECIAL FINANCIAL ASSISTANCE.—

“(1) IN GENERAL.—The amount of financial assistance provided to a multiemployer plan eligible for financial assistance under this section shall be such amount required for the plan to pay all benefits due during the period beginning on the date of payment of the special financial assistance payment under this section and ending on the last day of the plan year ending in 2051, with no reduction in a participant’s or beneficiary’s accrued benefit as of the date of enactment of this section, except to the extent of a reduction in accordance with section 305(e)(8) adopted prior to the plan’s application for special financial assistance under this section, and taking into account the reinstatement of benefits required under subsection (k).

Time period.

“(2) PROJECTIONS.—The funding projections for purposes of this section shall be performed on a deterministic basis.

“(k) REINSTATEMENT OF SUSPENDED BENEFITS.—The Secretary, in coordination with the Secretary of the Treasury, shall ensure that an eligible multiemployer plan that receives special financial assistance under this section—

Coordination.  
Effective dates.

“(1) reinstates any benefits that were suspended under section 305(e)(9) or section 4245(a) in accordance with guidance issued by the Secretary of the Treasury pursuant to section 432(k)(1)(B) of the Internal Revenue Code of 1986, effective as of the first month in which the effective date for the special financial assistance occurs, for participants and beneficiaries as of such month; and

“(2) provides payments equal to the amount of benefits previously suspended under section 305(e)(9) or 4245(a) to any participants or beneficiaries in pay status as of the effective date of the special financial assistance, payable, as determined by the eligible multiemployer plan—

Determination.  
Deadlines.

“(A) as a lump sum within 3 months of such effective date; or

“(B) in equal monthly installments over a period of 5 years, commencing within 3 months of such effective date, with no adjustment for interest.

Time period.

“(l) RESTRICTIONS ON THE USE OF SPECIAL FINANCIAL ASSISTANCE.—Special financial assistance received under this section and any earnings thereon may be used by an eligible multiemployer plan to make benefit payments and pay plan expenses. Special financial assistance and any earnings on such assistance shall be segregated from other plan assets. Special financial assistance shall be invested by plans in investment-grade bonds or other investments as permitted by the corporation.

“(m) CONDITIONS ON PLANS RECEIVING SPECIAL FINANCIAL ASSISTANCE.—

Consultation.  
Regulations.

“(1) IN GENERAL.—The corporation, in consultation with the Secretary of the Treasury, may impose, by regulation or other guidance, reasonable conditions on an eligible multiemployer plan that receives special financial assistance relating to increases in future accrual rates and any retroactive benefit improvements, allocation of plan assets, reductions in employer contribution rates, diversion of contributions to, and allocation of expenses to, other benefit plans, and withdrawal liability.

“(2) LIMITATION.—The corporation shall not impose conditions on an eligible multiemployer plan as a condition of, or following receipt of, special financial assistance under this section relating to—

“(A) any prospective reduction in plan benefits (including benefits that may be adjusted pursuant to section 305(e)(8));

“(B) plan governance, including selection of, removal of, and terms of contracts with, trustees, actuaries, investment managers, and other service providers; or

“(C) any funding rules relating to the plan receiving special financial assistance under this section.

Continuance.

“(3) PAYMENT OF PREMIUMS.—An eligible multiemployer plan receiving special financial assistance under this section shall continue to pay all premiums due under section 4007 for participants and beneficiaries in the plan.

“(4) ASSISTANCE NOT CONSIDERED FOR CERTAIN PURPOSES.—An eligible multiemployer plan that receives special financial assistance shall be deemed to be in critical status within the meaning of section 305(b)(2) until the last plan year ending in 2051.

“(5) INSOLVENT PLANS.—An eligible multiemployer plan receiving special financial assistance under this section that subsequently becomes insolvent will be subject to the current rules and guarantee for insolvent plans.

“(6) INELIGIBILITY FOR OTHER ASSISTANCE.—An eligible multiemployer plan that receives special financial assistance under this section is not eligible to apply for a new suspension of benefits under section 305(e)(9)(G).

Consultations.

“(n) COORDINATION WITH SECRETARY OF THE TREASURY.—In prescribing the application process for eligible multiemployer plans to receive special financial assistance under this section and reviewing applications of such plans, the corporation shall coordinate with the Secretary of the Treasury in the following manner:

Determinations.

“(1) In the case of a plan which has suspended benefits under section 305(e)(9)—

“(A) in determining whether to approve the application, the corporation shall consult with the Secretary of the Treasury regarding the plan’s proposed method of reinstating benefits, as described in the plan’s application and in accordance with guidance issued by the Secretary of the Treasury, and

“(B) the corporation shall consult with the Secretary of the Treasury regarding the amount of special financial assistance needed based on the projected funded status of the plan as of the last day of the plan year ending in 2051, whether the plan proposes to repay benefits over

5 years or as a lump sum, as required by subsection (k)(2), and any other relevant factors, as determined by the corporation in consultation with the Secretary of the Treasury, to ensure the amount of assistance is sufficient to meet such requirement and is sufficient to pay benefits as required in subsection (j)(1).

“(2) In the case of any plan which proposes in its application to change the assumptions used, as provided in subsection (e)(4), the corporation shall consult with the Secretary of the Treasury regarding such proposed change in assumptions.

“(3) If the corporation specifies in regulations or guidance that temporary priority consideration is available for plans which are insolvent within the meaning of section 418E of the Internal Revenue Code of 1986 or likely to become so insolvent or for plans which have suspended benefits under section 305(e)(9), or that availability is otherwise based on the funded status of the plan under section 305, as permitted by subsection (d), the corporation shall consult with the Secretary of the Treasury regarding any granting of priority consideration to such plans.”.

Regulations.

(c) PREMIUM RATE INCREASE.—Section 4006(a)(3) of the Employee Retirement Income Security Act of 1974 (29 U.S.C. 1306(a)(3)) is amended—

(1) in subparagraph (A)—

(A) in clause (vi)—

(i) by inserting “, and before January 1, 2031” after “December 31, 2014,”; and

(ii) by striking “or” at the end;

(B) in clause (vii)—

(i) by moving the margin 2 ems to the left; and

(ii) in subclause (II), by striking the period and inserting “, or”; and

(C) by adding at the end the following:

“(viii) in the case of a multiemployer plan, for plan years beginning after December 31, 2030, \$52 for each individual who is a participant in such plan during the applicable plan year.”; and

Effective date.

(2) by adding at the end the following:

“(N) For each plan year beginning in a calendar year after 2031, there shall be substituted for the dollar amount specified in clause (viii) of subparagraph (A) an amount equal to the greater of—

Effective date.

“(i) the product derived by multiplying such dollar amount by the ratio of—

“(I) the national average wage index (as defined in section 209(k)(1) of the Social Security Act) for the first of the 2 calendar years preceding the calendar year in which such plan year begins, to

“(II) the national average wage index (as so defined) for 2029; and

“(ii) such dollar amount for plan years beginning in the preceding calendar year.

If the amount determined under this subparagraph is not a multiple of \$1, such product shall be rounded to the nearest multiple of \$1.”.

(d) AMENDMENTS TO INTERNAL REVENUE CODE OF 1986.—

26 USC 432.	<p>(1) IN GENERAL.—Section 432(a) of the Internal Revenue Code of 1986 is amended—</p> <p style="padding-left: 2em;">(A) by striking “and” at the end of paragraph (2)(B),</p> <p style="padding-left: 2em;">(B) by striking the period at the end of paragraph (3)(B) and inserting “, and”, and</p> <p style="padding-left: 2em;">(C) by adding at the end the following new paragraph:</p> <p style="padding-left: 2em;">“(4) if the plan is an eligible multiemployer plan which is applying for or receiving special financial assistance under section 4262 of the Employee Retirement Income Security Act of 1974, the requirements of subsection (k) shall apply to the plan.”.</p> <p>(2) PLANS RECEIVING SPECIAL FINANCIAL ASSISTANCE TO BE IN CRITICAL STATUS.—Section 432(b) of the Internal Revenue Code of 1986 is amended by adding at the end the following new paragraph:</p> <p style="padding-left: 2em;">“(7) PLANS RECEIVING SPECIAL FINANCIAL ASSISTANCE.—If an eligible multiemployer plan receiving special financial assistance under section 4262 of the Employee Retirement Income Security Act of 1974 meets the requirements of subsection (k)(2), notwithstanding the preceding paragraphs of this subsection, the plan shall be deemed to be in critical status for plan years beginning with the plan year in which the effective date for such assistance occurs and ending with the last plan year ending in 2051.”.</p> <p>(3) RULES RELATING TO ELIGIBLE MULTIEMPLOYER PLANS.—Section 432 of the Internal Revenue Code of 1986 is amended by adding at the end the following new subsection:</p> <p style="padding-left: 2em;">“(k) RULES RELATING TO ELIGIBLE MULTIEMPLOYER PLANS.—</p> <p style="padding-left: 4em;">“(1) PLANS APPLYING FOR SPECIAL FINANCIAL ASSISTANCE.—In the case of an eligible multiemployer plan which applies for special financial assistance under section 4262 of such Act—</p> <p style="padding-left: 6em;">“(A) IN GENERAL.—Such application shall be submitted in accordance with the requirements of such section, including any guidance issued thereunder by the Pension Benefit Guaranty Corporation.</p> <p style="padding-left: 6em;">“(B) REINSTATEMENT OF SUSPENDED BENEFITS.—In the case of a plan for which a suspension of benefits has been approved under subsection (e)(9), the application shall describe the manner in which suspended benefits will be reinstated in accordance with paragraph (2)(A) and guidance issued by the Secretary if the plan receives special financial assistance.</p> <p style="padding-left: 6em;">“(C) AMOUNT OF FINANCIAL ASSISTANCE.—</p> <p style="padding-left: 8em;">“(i) IN GENERAL.—In determining the amount of special financial assistance to be specified in its application, an eligible multiemployer plan shall—</p> <p style="padding-left: 10em;">“(I) use the interest rate used by the plan in its most recently completed certification of plan status before January 1, 2021, provided that such interest rate does not exceed the interest rate limit, and</p> <p style="padding-left: 10em;">“(II) for other assumptions, use the assumptions that the plan used in its most recently completed certification of plan status before January 1, 2021, unless such assumptions are unreasonable.</p>
Requirements. Applicability.	
Time period.	
Requirements.	
Determination. Termination date.	

“(ii) INTEREST RATE LIMIT.—For purposes of clause (i), the interest rate limit is the rate specified in section 430(h)(2)(C)(iii) (disregarding modifications made under clause (iv) of such section) for the month in which the application for special financial assistance is filed by the eligible multiemployer plan or the 3 preceding months, with such specified rate increased by 200 basis points.

Time period.

“(iii) CHANGES IN ASSUMPTIONS.—If a plan determines that use of one or more prior assumptions is unreasonable, the plan may propose in its application to change such assumptions, provided that the plan discloses such changes in its application and describes why such assumptions are no longer reasonable. The plan may not propose a change to the interest rate otherwise required under this subsection for eligibility or financial assistance amount.

Determination.  
Disclosure.

“(D) PLANS APPLYING FOR PRIORITY CONSIDERATION.—

In the case of a plan applying for special financial assistance under rules providing for temporary priority consideration, as provided in paragraph (4)(C), such plan’s application shall be submitted to the Secretary in addition to the Pension Benefit Guaranty Corporation.

“(2) PLANS RECEIVING SPECIAL FINANCIAL ASSISTANCE.—In the case of an eligible multiemployer plan receiving special financial assistance under section 4262 of the Employee Retirement Income Security Act of 1974—

“(A) REINSTATEMENT OF SUSPENDED BENEFITS.—The plan shall—

Effective dates.

“(i) reinstate any benefits that were suspended under subsection (e)(9) or section 4245(a) of the Employee Retirement Income Security Act of 1974, effective as of the first month in which the effective date for the special financial assistance occurs, for participants and beneficiaries as of such month, and

“(ii) provide payments equal to the amount of benefits previously suspended to any participants or beneficiaries in pay status as of the effective date of the special financial assistance, payable, as determined by the plan—

Determination.  
Deadlines.

“(I) as a lump sum within 3 months of such effective date; or

“(II) in equal monthly installments over a period of 5 years, commencing within 3 months of such effective date, with no adjustment for interest.

Time period.

“(B) RESTRICTIONS ON THE USE OF SPECIAL FINANCIAL ASSISTANCE.—Special financial assistance received by the plan may be used to make benefit payments and pay plan expenses. Such assistance shall be segregated from other plan assets, and shall be invested by the plan in investment-grade bonds or other investments as permitted by regulations or other guidance issued by the Pension Benefit Guaranty Corporation.

“(C) CONDITIONS ON PLANS RECEIVING SPECIAL FINANCIAL ASSISTANCE.—

Consultation.  
Regulations.

“(i) IN GENERAL.—The Pension Benefit Guaranty Corporation, in consultation with the Secretary, may impose, by regulation or other guidance, reasonable conditions on an eligible multiemployer plan receiving special financial assistance relating to increases in future accrual rates and any retroactive benefit improvements, allocation of plan assets, reductions in employer contribution rates, diversion of contributions and allocation of expenses to other benefit plans, and withdrawal liability.

“(ii) LIMITATION.—The Pension Benefit Guaranty Corporation shall not impose conditions on an eligible multiemployer plan as a condition of, or following receipt of, special financial assistance relating to—

“(I) any prospective reduction in plan benefits (including benefits that may be adjusted pursuant to subsection (e)(8)),

“(II) plan governance, including selection of, removal of, and terms of contracts with, trustees, actuaries, investment managers, and other service providers, or

“(III) any funding rules relating to the plan.

“(D) ASSISTANCE DISREGARDED FOR CERTAIN PURPOSES.—

“(i) FUNDING STANDARDS.—Special financial assistance received by the plan shall not be taken into account for determining contributions required under section 431.

Applicability.

“(ii) INSOLVENT PLANS.—If the plan becomes insolvent within the meaning of section 418E after receiving special financial assistance, the plan shall be subject to all rules applicable to insolvent plans.

“(E) INELIGIBILITY FOR SUSPENSION OF BENEFITS.—The plan shall not be eligible to apply for a new suspension of benefits under subsection (e)(9)(G).

“(3) ELIGIBLE MULTIEMPLOYER PLAN.—

Time periods.

“(A) IN GENERAL.—For purposes of this section, a multiemployer plan is an eligible multiemployer plan if—

“(i) the plan is in critical and declining status in any plan year beginning in 2020 through 2022,

“(ii) a suspension of benefits has been approved with respect to the plan under subsection (e)(9) as of the date of the enactment of this subsection;

Certification.

“(iii) in any plan year beginning in 2020 through 2022, the plan is certified by the plan actuary to be in critical status, has a modified funded percentage of less than 40 percent, and has a ratio of active to inactive participants which is less than 2 to 3, or

Effective date.

“(iv) the plan became insolvent within the meaning of section 418E after December 16, 2014, and has remained so insolvent and has not been terminated as of the date of enactment of this subsection.

Definition.

“(B) MODIFIED FUNDED PERCENTAGE.—For purposes of subparagraph (A)(iii), the term ‘modified funded percentage’ means the percentage equal to a fraction the numerator of which is current value of plan assets (as defined in

section 3(26) of the Employee Retirement Income Security Act of 1974) and the denominator of which is current liabilities (as defined in section 431(c)(6)(D)).

“(4) COORDINATION WITH PENSION BENEFIT GUARANTY CORPORATION.—In prescribing the application process for eligible multiemployer plans to receive special financial assistance under section 4262 of the Employee Retirement Income Security Act of 1974 and reviewing applications of such plans, the Pension Benefit Guaranty Corporation shall coordinate with the Secretary in the following manner:

Consultations.

“(A) In the case of a plan which has suspended benefits under subsection (e)(9)—

Determinations.

“(i) in determining whether to approve the application, such corporation shall consult with the Secretary regarding the plan’s proposed method of reinstating benefits, as described in the plan’s application and in accordance with guidance issued by the Secretary, and

“(ii) such corporation shall consult with the Secretary regarding the amount of special financial assistance needed based on the projected funded status of the plan as of the last day of the plan year ending in 2051, whether the plan proposes to repay benefits over 5 years or as a lump sum, as required by paragraph (2)(A)(ii), and any other relevant factors, as determined by such corporation in consultation with the Secretary, to ensure the amount of assistance is sufficient to meet such requirement and is sufficient to pay benefits as required in section 4262(j)(1) of such Act.

Time period.

“(B) In the case of any plan which proposes in its application to change the assumptions used, as provided in paragraph (1)(C)(iii), such corporation shall consult with the Secretary regarding such proposed change in assumptions.

“(C) If such corporation specifies in regulations or guidance that temporary priority consideration is available for plans which are insolvent within the meaning of section 418E or likely to become so insolvent or for plans which have suspended benefits under subsection (e)(9), or that availability is otherwise based on the funded status of the plan under this section, as permitted by section 4262(d) of such Act, such corporation shall consult with the Secretary regarding any granting of priority consideration to such plans.”

Regulations.

**SEC. 9705. EXTENDED AMORTIZATION FOR SINGLE EMPLOYER PLANS.** Effective dates.

(a) 15-YEAR AMORTIZATION UNDER THE INTERNAL REVENUE CODE OF 1986.—Section 430(c) of the Internal Revenue Code of 1986 is amended by adding at the end the following new paragraph: 26 USC 430.

“(8) 15-YEAR AMORTIZATION.—With respect to plan years beginning after December 31, 2021 (or, at the election of the plan sponsor, plan years beginning after December 31, 2018, December 31, 2019, or December 31, 2020)—

“(A) the shortfall amortization bases for all plan years preceding the first plan year beginning after December 31, 2021 (or after whichever earlier date is elected pursuant

to this paragraph), and all shortfall amortization installments determined with respect to such bases, shall be reduced to zero, and

“(B) subparagraphs (A) and (B) of paragraph (2) shall each be applied by substituting ‘15-plan-year period’ for ‘7-plan-year period’.”.

29 USC 1083. (b) 15-YEAR AMORTIZATION UNDER THE EMPLOYEE RETIREMENT INCOME SECURITY ACT OF 1974.—Section 303(c) of the Employee Retirement Income Security Act of 1974 (29 U.S.C. 1083(c)) is amended by adding at the end the following new paragraph:

“(8) 15-YEAR AMORTIZATION.—With respect to plan years beginning after December 31, 2021 (or, at the election of the plan sponsor, plan years beginning after December 31, 2018, December 31, 2019, or December 31, 2020)—

“(A) the shortfall amortization bases for all plan years preceding the first plan year beginning after December 31, 2021 (or after whichever earlier date is elected pursuant to this paragraph), and all shortfall amortization installments determined with respect to such bases, shall be reduced to zero, and

“(B) subparagraphs (A) and (B) of paragraph (2) shall each be applied by substituting ‘15-plan-year period’ for ‘7-plan-year period’.”.

26 USC 430 note. (c) EFFECTIVE DATE.—The amendments made by this section shall apply to plan years beginning after December 31, 2018.

**SEC. 9706. EXTENSION OF PENSION FUNDING STABILIZATION PERCENTAGES FOR SINGLE EMPLOYER PLANS.**

(a) AMENDMENT TO INTERNAL REVENUE CODE OF 1986.—

26 USC 430. (1) IN GENERAL.—The table contained in subclause (II) of section 430(h)(2)(C)(iv) of the Internal Revenue Code of 1986 is amended to read as follows:

“If the calendar year is:	The applicable minimum percentage is:	The applicable maximum percentage is:
Any year in the period starting in 2012 and ending in 2019 .....	90%	110%
Any year in the period starting in 2020 and ending in 2025 .....	95%	105%
2026 .....	90%	110%
2027 .....	85%	115%
2028 .....	80%	120%
2029 .....	75%	125%
After 2029 .....	70%	130%.”.

(2) FLOOR ON 25-YEAR AVERAGES.—Subclause (I) of section 430(h)(2)(C)(iv) of such Code is amended by adding at the end the following: “Notwithstanding anything in this subclause, if the average of the first, second, or third segment rate for any 25-year period is less than 5 percent, such average shall be deemed to be 5 percent.”.

(b) AMENDMENTS TO EMPLOYEE RETIREMENT INCOME SECURITY ACT OF 1974.—

(1) IN GENERAL.—The table contained in subclause (II) of section 303(h)(2)(C)(iv) of the Employee Retirement Income Security Act of 1974 (29 U.S.C. 1083(h)(2)(C)(iv)(II)) is amended to read as follows:

“If the calendar year is:	The appli- cable min- imum per- centage is:	The appli- cable max- imum per- centage is:
Any year in the period starting in 2012 and ending in 2019 .....	90%	110%
Any year in the period starting in 2020 and ending in 2025 .....	95%	105%
2026 .....	90%	110%
2027 .....	85%	115%
2028 .....	80%	120%
2029 .....	75%	125%
After 2029 .....	70%	130%.”.

(2) FLOOR ON 25-YEAR AVERAGES.—Subclause (I) of section 303(h)(2)(C)(iv) of such Act (29 U.S.C. 1083(h)(2)(C)(iv)(I)) is amended by adding at the end the following: “Notwithstanding anything in this subclause, if the average of the first, second, or third segment rate for any 25-year period is less than 5 percent, such average shall be deemed to be 5 percent.”.

(3) CONFORMING AMENDMENTS.—

(A) IN GENERAL.—Section 101(f)(2)(D) of such Act (29 U.S.C. 1021(f)(2)(D)) is amended—

(i) in clause (i) by striking “and the Bipartisan Budget Act of 2015” both places it appears and inserting “, the Bipartisan Budget Act of 2015, and the American Rescue Plan Act of 2021”, and

(ii) in clause (ii) by striking “2023” and inserting “2029”.

(B) STATEMENTS.—The Secretary of Labor shall modify the statements required under subclauses (I) and (II) of section 101(f)(2)(D)(i) of such Act to conform to the amendments made by this section.

29 USC 1021 note.

(c) EFFECTIVE DATE.—

(1) IN GENERAL.—The amendments made by this section shall apply with respect to plan years beginning after December 31, 2019.

26 USC 430 note.

(2) ELECTION NOT TO APPLY.—A plan sponsor may elect not to have the amendments made by this section apply to any plan year beginning before January 1, 2022, either (as specified in the election)—

(A) for all purposes for which such amendments apply, or

(B) solely for purposes of determining the adjusted funding target attainment percentage under sections 436 of the Internal Revenue Code of 1986 and 206(g) of the

Determination.

Employee Retirement Income Security Act of 1974 for such plan year.

A plan shall not be treated as failing to meet the requirements of sections 204(g) of such Act and 411(d)(6) of such Code solely by reason of an election under this paragraph.

Definitions.	<b>SEC. 9707. MODIFICATION OF SPECIAL RULES FOR MINIMUM FUNDING STANDARDS FOR COMMUNITY NEWSPAPER PLANS.</b>
29 USC 430.	(a) AMENDMENT TO INTERNAL REVENUE CODE OF 1986.—Subsection (m) of section 430 of the Internal Revenue Code of 1986 is amended to read as follows:
Effective date.	“(m) SPECIAL RULES FOR COMMUNITY NEWSPAPER PLANS.— “(1) IN GENERAL.—An eligible newspaper plan sponsor of a plan under which no participant has had the participant’s accrued benefit increased (whether because of service or compensation) after April 2, 2019, may elect to have the alternative standards described in paragraph (4) apply to such plan.
Effective date.	“(2) ELIGIBLE NEWSPAPER PLAN SPONSOR.—The term ‘eligible newspaper plan sponsor’ means the plan sponsor of— “(A) any community newspaper plan, or “(B) any other plan sponsored, as of April 2, 2019, by a member of the same controlled group of a plan sponsor of a community newspaper plan if such member is in the trade or business of publishing 1 or more newspapers.
Applicability.	“(3) ELECTION.—An election under paragraph (1) shall be made at such time and in such manner as prescribed by the Secretary. Such election, once made with respect to a plan year, shall apply to all subsequent plan years unless revoked with the consent of the Secretary. “(4) ALTERNATIVE MINIMUM FUNDING STANDARDS.—The alternative standards described in this paragraph are the following: “(A) INTEREST RATES.— “(i) IN GENERAL.—Notwithstanding subsection (h)(2)(C) and except as provided in clause (ii), the first, second, and third segment rates in effect for any month for purposes of this section shall be 8 percent.
Determination.	“(ii) NEW BENEFIT ACCRUALS.—Notwithstanding subsection (h)(2), for purposes of determining the funding target and normal cost of a plan for any plan year, the present value of any benefits accrued or earned under the plan for a plan year with respect to which an election under paragraph (1) is in effect shall be determined on the basis of the United States Treasury obligation yield curve for the day that is the valuation date of such plan for such plan year. “(iii) UNITED STATES TREASURY OBLIGATION YIELD CURVE.—For purposes of this subsection, the term ‘United States Treasury obligation yield curve’ means, with respect to any day, a yield curve which shall be prescribed by the Secretary for such day on interest-bearing obligations of the United States.
Applicability.	“(B) SHORTFALL AMORTIZATION BASE.— “(i) PREVIOUS SHORTFALL AMORTIZATION BASES.—The shortfall amortization bases determined under subsection (c)(3) for all plan years preceding the first plan year to which the election under paragraph (1)

applies (and all shortfall amortization installments determined with respect to such bases) shall be reduced to zero under rules similar to the rules of subsection (c)(6).

“(ii) NEW SHORTFALL AMORTIZATION BASE.—Notwithstanding subsection (c)(3), the shortfall amortization base for the first plan year to which the election under paragraph (1) applies shall be the funding shortfall of such plan for such plan year (determined using the interest rates as modified under subparagraph (A)).

“(C) DETERMINATION OF SHORTFALL AMORTIZATION INSTALLMENTS.—

“(i) 30-YEAR PERIOD.—Subparagraphs (A) and (B) of subsection (c)(2) shall be applied by substituting ‘30-plan-year’ for ‘7-plan-year’ each place it appears.

“(ii) NO SPECIAL ELECTION.—The election under subparagraph (D) of subsection (c)(2) shall not apply to any plan year to which the election under paragraph (1) applies.

“(D) EXEMPTION FROM AT-RISK TREATMENT.—Subsection (i) shall not apply.

“(5) COMMUNITY NEWSPAPER PLAN.—For purposes of this subsection—

“(A) IN GENERAL.—The term ‘community newspaper plan’ means any plan to which this section applies maintained as of December 31, 2018, by an employer which—

“(i) maintains the plan on behalf of participants and beneficiaries with respect to employment in the trade or business of publishing 1 or more newspapers which were published by the employer at any time during the 11-year period ending on December 20, 2019,

“(ii)(I) is not a company the stock of which is publicly traded (on a stock exchange or in an over-the-counter market), and is not controlled, directly or indirectly, by such a company, or

“(II) is controlled, directly or indirectly, during the entire 30-year period ending on December 20, 2019, by individuals who are members of the same family, and does not publish or distribute a daily newspaper that is carrier-distributed in printed form in more than 5 States, and

“(iii) is controlled, directly or indirectly—

“(I) by 1 or more persons residing primarily in a State in which the community newspaper has been published on newsprint or carrier-distributed,

“(II) during the entire 30-year period ending on December 20, 2019, by individuals who are members of the same family,

“(III) by 1 or more trusts, the sole trustees of which are persons described in subclause (I) or (II), or

“(IV) by a combination of persons described in subclause (I), (II), or (III).

Effective date.  
Time periods.

	<p>“(B) NEWSPAPER.—The term ‘newspaper’ does not include any newspaper (determined without regard to this subparagraph) to which any of the following apply:</p> <p>“(i) Is not in general circulation.</p> <p>“(ii) Is published (on newsprint or electronically) less frequently than 3 times per week.</p> <p>“(iii) Has not ever been regularly published on newsprint.</p> <p>“(iv) Does not have a bona fide list of paid subscribers.</p> <p>“(C) CONTROL.—A person shall be treated as controlled by another person if such other person possesses, directly or indirectly, the power to direct or cause the direction and management of such person (including the power to elect a majority of the members of the board of directors of such person) through the ownership of voting securities.</p>
Time period.	
Effective date.	<p>“(6) CONTROLLED GROUP.—For purposes of this subsection, the term ‘controlled group’ means all persons treated as a single employer under subsection (b), (c), (m), or (o) of section 414 as of December 20, 2019.”</p> <p>(b) AMENDMENT TO EMPLOYEE RETIREMENT INCOME SECURITY ACT OF 1974.—Subsection (m) of section 303 of the Employee Retirement Income Security Act of 1974 (29 U.S.C. 1083(m)) is amended to read as follows:</p> <p>“(m) SPECIAL RULES FOR COMMUNITY NEWSPAPER PLANS.—</p> <p>“(1) IN GENERAL.—An eligible newspaper plan sponsor of a plan under which no participant has had the participant’s accrued benefit increased (whether because of service or compensation) after April 2, 2019, may elect to have the alternative standards described in paragraph (4) apply to such plan.</p> <p>“(2) ELIGIBLE NEWSPAPER PLAN SPONSOR.—The term ‘eligible newspaper plan sponsor’ means the plan sponsor of—</p> <p>“(A) any community newspaper plan, or</p> <p>“(B) any other plan sponsored, as of April 2, 2019, by a member of the same controlled group of a plan sponsor of a community newspaper plan if such member is in the trade or business of publishing 1 or more newspapers.</p> <p>“(3) ELECTION.—An election under paragraph (1) shall be made at such time and in such manner as prescribed by the Secretary of the Treasury. Such election, once made with respect to a plan year, shall apply to all subsequent plan years unless revoked with the consent of the Secretary of the Treasury.</p> <p>“(4) ALTERNATIVE MINIMUM FUNDING STANDARDS.—The alternative standards described in this paragraph are the following:</p> <p>“(A) INTEREST RATES.—</p> <p>“(i) IN GENERAL.—Notwithstanding subsection (h)(2)(C) and except as provided in clause (ii), the first, second, and third segment rates in effect for any month for purposes of this section shall be 8 percent.</p> <p>“(ii) NEW BENEFIT ACCRUALS.—Notwithstanding subsection (h)(2), for purposes of determining the funding target and normal cost of a plan for any plan year, the present value of any benefits accrued or earned under the plan for a plan year with respect to which an election under paragraph (1) is in effect</p>
Effective date. Applicability.	
Effective date.	
Applicability.	
Determination.	

shall be determined on the basis of the United States Treasury obligation yield curve for the day that is the valuation date of such plan for such plan year.

“(iii) UNITED STATES TREASURY OBLIGATION YIELD CURVE.—For purposes of this subsection, the term ‘United States Treasury obligation yield curve’ means, with respect to any day, a yield curve which shall be prescribed by the Secretary of the Treasury for such day on interest-bearing obligations of the United States.

“(B) SHORTFALL AMORTIZATION BASE.—

Applicability.

“(i) PREVIOUS SHORTFALL AMORTIZATION BASES.—The shortfall amortization bases determined under subsection (c)(3) for all plan years preceding the first plan year to which the election under paragraph (1) applies (and all shortfall amortization installments determined with respect to such bases) shall be reduced to zero under rules similar to the rules of subsection (c)(6).

“(ii) NEW SHORTFALL AMORTIZATION BASE.—Notwithstanding subsection (c)(3), the shortfall amortization base for the first plan year to which the election under paragraph (1) applies shall be the funding shortfall of such plan for such plan year (determined using the interest rates as modified under subparagraph (A)).

“(C) DETERMINATION OF SHORTFALL AMORTIZATION INSTALLMENTS.—

“(i) 30-YEAR PERIOD.—Subparagraphs (A) and (B) of subsection (c)(2) shall be applied by substituting ‘30-plan-year’ for ‘7-plan-year’ each place it appears.

Applicability.

“(ii) NO SPECIAL ELECTION.—The election under subparagraph (D) of subsection (c)(2) shall not apply to any plan year to which the election under paragraph (1) applies.

“(D) EXEMPTION FROM AT-RISK TREATMENT.—Subsection (i) shall not apply.

“(5) COMMUNITY NEWSPAPER PLAN.—For purposes of this subsection—

“(A) IN GENERAL.—The term ‘community newspaper plan’ means a plan to which this section applies maintained as of December 31, 2018, by an employer which—

Effective date.  
Time periods.

“(i) maintains the plan on behalf of participants and beneficiaries with respect to employment in the trade or business of publishing 1 or more newspapers which were published by the employer at any time during the 11-year period ending on December 20, 2019,

“(ii)(I) is not a company the stock of which is publicly traded (on a stock exchange or in an over-the-counter market), and is not controlled, directly or indirectly, by such a company, or

“(II) is controlled, directly, or indirectly, during the entire 30-year period ending on December 20, 2019, by individuals who are members of the same family, and does not publish or distribute a daily newspaper that is carrier-distributed in printed form in more than 5 States, and

“(iii) is controlled, directly, or indirectly—

“(I) by 1 or more persons residing primarily in a State in which the community newspaper has been published on newsprint or carrier-distributed,

“(II) during the entire 30-year period ending on December 20, 2019, by individuals who are members of the same family,

“(III) by 1 or more trusts, the sole trustees of which are persons described in subclause (I) or (II), or

“(IV) by a combination of persons described in subclause (I), (II), or (III).

“(B) NEWSPAPER.—The term ‘newspaper’ does not include any newspaper (determined without regard to this subparagraph) to which any of the following apply:

“(i) Is not in general circulation.

Time period.

“(ii) Is published (on newsprint or electronically) less frequently than 3 times per week.

“(iii) Has not ever been regularly published on newsprint.

“(iv) Does not have a bona fide list of paid subscribers.

“(C) CONTROL.—A person shall be treated as controlled by another person if such other person possesses, directly or indirectly, the power to direct or cause the direction and management of such person (including the power to elect a majority of the members of the board of directors of such person) through the ownership of voting securities.

Effective date.

“(6) CONTROLLED GROUP.—For purposes of this subsection, the term ‘controlled group’ means all persons treated as a single employer under subsection (b), (c), (m), or (o) of section 414 of the Internal Revenue Code of 1986 as of December 20, 2019.

“(7) EFFECT ON PREMIUM RATE CALCULATION.—In the case of a plan for which an election is made to apply the alternative standards described in paragraph (3), the additional premium under section 4006(a)(3)(E) shall be determined as if such election had not been made.”

26 USC 430 note.

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to plan years ending after December 31, 2017.

**SEC. 9708. EXPANSION OF LIMITATION ON EXCESSIVE EMPLOYEE REMUNERATION.**

26 USC 162.

Paragraph (3) of section 162(m) of the Internal Revenue Code of 1986 is amended—

(1) by redesignating subparagraph (C) as subparagraph (D),

(2) by striking “or” at the end of subparagraph (B),

(3) by inserting after subparagraph (B) the following new subparagraph:

“(C) in the case of taxable years beginning after December 31, 2026, such employee is among the 5 highest compensated employees for the taxable year other than any individual described in subparagraph (A) or (B), or”, and

(4) by striking “employee” in subparagraph (D), as so redesignated, and inserting “employee described in subparagraph (A) or (B)”.

## Subtitle I—Child Care for Workers

### SEC. 9801. CHILD CARE ASSISTANCE.

(a) APPROPRIATION.—

(1) IN GENERAL.—Section 418(a)(3) of the Social Security Act (42 U.S.C. 618(a)(3)) is amended to read as follows:

“(3) APPROPRIATION.—For grants under this section, there are appropriated \$3,550,000,000 for each fiscal year, of which—

“(A) \$3,375,000,000 shall be available for grants to States;

“(B) \$100,000,000 shall be available for grants to Indian tribes and tribal organizations; and

“(C) \$75,000,000 shall be available for grants to territories.”.

(2) CONFORMING AMENDMENT.—Section 418(a)(2)(A) of such Act (42 U.S.C. 618(a)(2)(A)) is amended by striking “paragraph (3), and remaining after the reservation described in paragraph (4) and” and inserting “paragraph (3)(A).”.

(b) MODIFICATION OF STATE MATCH REQUIREMENT FOR FUNDING INCREASES IN FISCAL YEARS 2021 AND 2022.—With respect to the amounts made available by section 418(a)(3) of the Social Security Act for each of fiscal years 2021 and 2022, section 418(a)(2)(C) of such Act shall be applied and administered with respect to any State that is entitled to receive the entire amount that would be allotted to the State under section 418(a)(2)(B) of such Act for the fiscal year in the manner authorized for fiscal year 2020, as if the Federal medical assistance percentage for the State for the fiscal year were 100 percent.

(c) FUNDING FOR THE TERRITORIES.—Section 418(a)(4) of such Act (42 U.S.C. 618(a)(4)) is amended to read as follows:

“(4) TERRITORIES.—

“(A) GRANTS.—The Secretary shall use the amounts made available by paragraph (3)(C) to make grants to the territories under this paragraph.

“(B) ALLOTMENTS.—The amount described in subparagraph (A) shall be allotted among the territories in proportion to their respective needs.

“(C) REDISTRIBUTION.—The 1st sentence of clause (i) and clause (ii) of paragraph (2)(D) shall apply with respect to the amounts allotted to the territories under this paragraph, except that the 2nd sentence of paragraph (2)(D) shall not apply and the amounts allotted to the territories that are available for redistribution for a fiscal year shall be redistributed to each territory that applies for the additional amounts, to the extent that the Secretary determines that the territory will be able to use the additional amounts to provide child care assistance, in an amount that bears the same ratio to the amount so available for redistribution as the amount allotted to the territory for the fiscal year bears to the total amount allotted to all the territories receiving redistributed funds under this paragraph for the fiscal year.

Applicability.  
26 USC 618 note.

Applicability.  
Determination.

Definition. “(D) INAPPLICABILITY OF PAYMENT LIMITATION.— Section 1108(a) shall not apply with respect to any amount paid under this paragraph.  
“(E) TERRITORY.—In this paragraph, the term ‘territory’ means the Commonwealth of Puerto Rico, the United States Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.”.

## Subtitle J—Medicaid

### SEC. 9811. MANDATORY COVERAGE OF COVID-19 VACCINES AND ADMINISTRATION AND TREATMENT UNDER MEDICAID.

Time periods.

#### (a) COVERAGE.—

(1) IN GENERAL.—Section 1905(a)(4) of the Social Security Act (42 U.S.C. 1396d(a)(4)) is amended by striking the semicolon at the end and inserting “; and (E) during the period beginning on the date of the enactment of the American Rescue Plan Act of 2021 and ending on the last day of the first calendar quarter that begins one year after the last day of the emergency period described in section 1135(g)(1)(B), a COVID-19 vaccine and administration of the vaccine; and (F) during the period beginning on the date of the enactment of the American Rescue Plan Act of 2021 and ending on the last day of the first calendar quarter that begins one year after the last day of the emergency period described in section 1135(g)(1)(B), testing and treatments for COVID-19, including specialized equipment and therapies (including preventive therapies), and, without regard to the requirements of section 1902(a)(10)(B) (relating to comparability), in the case of an individual who is diagnosed with or presumed to have COVID-19, during the period such individual has (or is presumed to have) COVID-19, the treatment of a condition that may seriously complicate the treatment of COVID-19, if otherwise covered under the State plan (or waiver of such plan);”.

(2) MAKING COVID-19 VACCINE AVAILABLE TO ADDITIONAL ELIGIBILITY GROUPS AND TREATMENT AVAILABLE TO CERTAIN UNINSURED.—Section 1902(a)(10) of such Act (42 U.S.C. 1396a(a)(10)) is amended in the matter following subparagraph (G)—

(A) by striking “and to other conditions which may complicate pregnancy, (VIII)” and inserting “; medical assistance for services related to other conditions which may complicate pregnancy, and medical assistance for vaccines described in section 1905(a)(4)(E) and the administration of such vaccines during the period described in such section, (VIII)”;

(B) by inserting “and medical assistance for vaccines described in section 1905(a)(4)(E) and the administration of such vaccines during the period described in such section” after “(described in subsection (z)(2))”;

(C) by inserting “and medical assistance for vaccines described in section 1905(a)(4)(E) and the administration of such vaccines during the period described in such section” after “described in subsection (k)(1)”;

(D) by inserting “and medical assistance for vaccines described in section 1905(a)(4)(E) and the administration

of such vaccines during the period described in such section” after “family planning setting”;

(E) by striking “and any visit described in section 1916(a)(2)(G) that is furnished during any such portion” and inserting “, any service described in section 1916(a)(2)(G) that is furnished during any such portion, any vaccine described in section 1905(a)(4)(E) (and the administration of such vaccine) that is furnished during any such portion, and testing and treatments for COVID-19, including specialized equipment and therapies (including preventive therapies), and, in the case of an individual who is diagnosed with or presumed to have COVID-19, during the period such individual has (or is presumed to have) COVID-19, the treatment of a condition that may seriously complicate the treatment of COVID-19, if otherwise covered under the State plan (or waiver of such plan)”;

(F) by striking the semicolon at the end and inserting “, and (XIX) medical assistance shall be made available during the period described in section 1905(a)(4)(E) for vaccines described in such section and the administration of such vaccines, for any individual who is eligible for and receiving medical assistance under the State plan or under a waiver of such plan (other than an individual who is eligible for medical assistance consisting only of payment of premiums pursuant to subparagraph (E) or (F) or section 1933), notwithstanding any provision of this title or waiver under section 1115 impacting such individual’s eligibility for medical assistance under such plan or waiver to coverage for a limited type of benefits and services that would not otherwise include coverage of a COVID-19 vaccine and its administration;”.

(3) PROHIBITION OF COST SHARING.—

(A) IN GENERAL.—Subsections (a)(2) and (b)(2) of section 1916 of the Social Security Act (42 U.S.C. 1396o) are each amended—

(i) in subparagraph (F), by striking “or” at the end;

(ii) in subparagraph (G), by striking “; and”; and

(iii) by adding at the end the following subparagraphs:

“(H) during the period beginning on the date of the enactment of this subparagraph and ending on the last day of the first calendar quarter that begins one year after the last day of the emergency period described in section 1135(g)(1)(B), a COVID-19 vaccine and the administration of such vaccine (for any individual eligible for medical assistance for such vaccine (and administration)); or

“(I) during the period beginning on the date of the enactment of this subparagraph and ending on the last day of the first calendar quarter that begins one year after the last day of the emergency period described in section 1135(g)(1)(B), testing and treatments for COVID-19, including specialized equipment and therapies (including preventive therapies), and, in the case of an individual who is diagnosed with or presumed to have COVID-19, during the period during which such individual

has (or is presumed to have) COVID-19, the treatment of a condition that may seriously complicate the treatment of COVID-19, if otherwise covered under the State plan (or waiver of such plan); and”.

(B) APPLICATION TO ALTERNATIVE COST SHARING.—Section 1916A(b)(3)(B) of the Social Security Act (42 U.S.C. 1396o-1(b)(3)(B)) is amended—

(i) in clause (xi), by striking “any visit” and inserting “any service”; and

(ii) by adding at the end the following clauses:

“(xii) During the period beginning on the date of the enactment of this clause and ending on the last day of the first calendar quarter that begins one year after the last day of the emergency period described in section 1135(g)(1)(B), a COVID-19 vaccine and the administration of such vaccine (for any individual eligible for medical assistance for such vaccine (and administration)).

“(xiii) During the period beginning on the date of the enactment of this clause and ending on the last day of the first calendar quarter that begins one year after the last day of the emergency period described in section 1135(g)(1)(B), testing and treatments for COVID-19, including specialized equipment and therapies (including preventive therapies), and, in the case of an individual who is diagnosed with or presumed to have COVID-19, during the period during which such individual has (or is presumed to have) COVID-19, the treatment of a condition that may seriously complicate the treatment of COVID-19, if otherwise covered under the State plan (or waiver of such plan).”.

(4) INCLUSION IN THE MEDICAID DRUG REBATE PROGRAM OF COVERED OUTPATIENT DRUGS USED FOR COVID-19 TREATMENT.—

(A) IN GENERAL.—The requirements of section 1927 of the Social Security Act (42 U.S.C. 1396r-8) shall apply to any drug or biological product to which subparagraph (F) of section 1905(a)(4) of such Act, as added by paragraph (1), applies or to which the subclause (XVIII) in the matter following subparagraph (G) of section 1902(a)(10) of such Act, as added by paragraph (2), applies that is—

(i) furnished as medical assistance in accordance with section 1902(a)(10)(A) of such Act and such subparagraph (F) or subclause (XVIII) and section 1902(a)(10)(A) of such Act, as applicable, for the treatment, or prevention, of COVID-19, as described in such subparagraph or subclause, respectively; and

(ii) a covered outpatient drug (as defined in section 1927(k) of such Act, except that, in applying paragraph (2)(A) of such section to a drug to which such subparagraph (F) or such subclause (XVIII) applies, such drug shall be deemed a prescribed drug for purposes of section 1905(a)(12) of such Act).

(B) CONFORMING AMENDMENT.—Section 1927(d)(7) of the Social Security Act (42 U.S.C. 1396r-8(d)(7)) is

Applicability.  
42 USC 1396r-8  
note.

amended by adding at the end the following new subparagraph:

“(E) Drugs and biological products to which section 1905(a)(4)(F) and subclause (XVIII) in the matter following subparagraph (G) of section 1902(a)(10) apply that are furnished as medical assistance in accordance with such section or clause, respectively, for the treatment or prevention, of COVID-19, as described in such subparagraph or subclause, respectively, and section 1902(a)(10)(A).”.

(5) ALTERNATIVE BENEFIT PLANS.—Section 1937(b) of the Social Security Act (42 U.S.C. 1396u-7(b)) is amended by adding at the end the following new paragraph:

“(8) COVID-19 VACCINES, TESTING, AND TREATMENT.—Notwithstanding the previous provisions of this section, a State may not provide for medical assistance through enrollment of an individual with benchmark coverage or benchmark-equivalent coverage under this section unless, during the period beginning on the date of the enactment of the American Rescue Plan Act of 2021 and ending on the last day of the first calendar quarter that begins one year after the last day of the emergency period described in section 1135(g)(1)(B), such coverage includes (and does not impose any deduction, cost sharing, or similar charge for)—

“(A) COVID-19 vaccines and administration of the vaccines; and

“(B) testing and treatments for COVID-19, including specialized equipment and therapies (including preventive therapies), and, in the case of such an individual who is diagnosed with or presumed to have COVID-19, during the period such individual has (or is presumed to have) COVID-19, the treatment of a condition that may seriously complicate the treatment of COVID-19, if otherwise covered under the State plan (or waiver of such plan).”.

(b) TEMPORARY INCREASE IN FEDERAL PAYMENTS FOR COVERAGE AND ADMINISTRATION OF COVID-19 VACCINES.—Section 1905 of the Social Security Act (42 U.S.C. 1396d) is amended—

(1) in subsection (b), by striking “and (ff)” and inserting “(ff), and (hh)”;

(2) in subsection (ff), in the matter preceding paragraph (1), by inserting “, subject to subsection (hh)” after “or (z)(2)” and

(3) by adding at the end the following new subsection:  
“(hh) TEMPORARY INCREASED FMAP FOR MEDICAL ASSISTANCE FOR COVERAGE AND ADMINISTRATION OF COVID-19 VACCINES.—

“(1) IN GENERAL.—Notwithstanding any other provision of this title, during the period described in paragraph (2), the Federal medical assistance percentage for a State, with respect to amounts expended by the State for medical assistance for a vaccine described in subsection (a)(4)(E) (and the administration of such a vaccine), shall be equal to 100 percent.

“(2) PERIOD DESCRIBED.—The period described in this paragraph is the period that—

“(A) begins on the first day of the first quarter beginning after the date of the enactment of this subsection; and

“(B) ends on the last day of the first quarter that begins one year after the last day of the emergency period described in section 1135(g)(1)(B).

“(3) EXCLUSION OF EXPENDITURES FROM TERRITORIAL CAPS.—Any payment made to a territory for expenditures for medical assistance under subsection (a)(4)(E) that are subject to the Federal medical assistance percentage specified under paragraph (1) shall not be taken into account for purposes of applying payment limits under subsections (f) and (g) of section 1108.”

**SEC. 9812. MODIFICATIONS TO CERTAIN COVERAGE UNDER MEDICAID FOR PREGNANT AND POSTPARTUM WOMEN.**

(a) STATE OPTION.—Section 1902(e) of the Social Security Act (42 U.S.C. 1396a(e)) is amended by adding at the end the following new paragraph:

Time periods.

“(16) EXTENDING CERTAIN COVERAGE FOR PREGNANT AND POSTPARTUM WOMEN.—

“(A) IN GENERAL.—At the option of the State, the State plan (or waiver of such State plan) may provide, that an individual who, while pregnant, is eligible for and has received medical assistance under the State plan approved under this title (or a waiver of such plan) (including during a period of retroactive eligibility under subsection (a)(34)) shall, in addition to remaining eligible under paragraph (5) for all pregnancy-related and postpartum medical assistance available under the State plan (or waiver) through the last day of the month in which the 60-day period (beginning on the last day of her pregnancy) ends, remain eligible under the State plan (or waiver) for medical assistance for the period beginning on the first day occurring after the end of such 60-day period and ending on the last day of the month in which the 12-month period (beginning on the last day of her pregnancy) ends.

“(B) FULL BENEFITS DURING PREGNANCY AND THROUGHOUT THE 12-MONTH POSTPARTUM PERIOD.—The medical assistance provided for a pregnant or postpartum individual by a State making an election under this paragraph, without regard to the basis on which the individual is eligible for medical assistance under the State plan (or waiver), shall—

“(i) include all items and services covered under the State plan (or waiver) that are not less in amount, duration, or scope, or are determined by the Secretary to be substantially equivalent, to the medical assistance available for an individual described in subsection (a)(10)(A)(i); and

“(ii) be provided for the individual while pregnant and during the 12-month period that begins on the last day of the individual’s pregnancy and ends on the last day of the month in which such 12-month period ends.

“(C) COVERAGE UNDER CHIP.—A State making an election under this paragraph that covers under title XXI child health assistance for targeted low-income children who are pregnant or targeted low-income pregnant women, as

applicable, shall also make the election under section 2107(e)(1)(J) of such title.”.

(b) **EFFECTIVE DATE.**—The amendment made by subsection (a) shall apply with respect to State elections made under paragraph (16) of section 1902(e) of the Social Security Act (42 U.S.C. 1396a(e)), as added by subsection (a), during the 5-year period beginning on the 1st day of the 1st fiscal year quarter that begins one year after the date of the enactment of this Act.

Applicability.  
Time period.  
42 USC 1396a  
note.

**SEC. 9813. STATE OPTION TO PROVIDE QUALIFYING COMMUNITY-BASED MOBILE CRISIS INTERVENTION SERVICES.**

Title XIX of the Social Security Act is amended by adding after section 1946 (42 U.S.C. 1396w-5) the following new section:

**“SEC. 1947. STATE OPTION TO PROVIDE QUALIFYING COMMUNITY-BASED MOBILE CRISIS INTERVENTION SERVICES.**

42 USC 1396w-6.

“(a) **IN GENERAL.**—Notwithstanding section 1902(a)(1) (relating to Statewideness), section 1902(a)(10)(B) (relating to comparability), section 1902(a)(23)(A) (relating to freedom of choice of providers), or section 1902(a)(27) (relating to provider agreements), a State may, during the 5-year period beginning on the first day of the first fiscal year quarter that begins on or after the date that is 1 year after the date of the enactment of this section, provide medical assistance for qualifying community-based mobile crisis intervention services.

Time period.

“(b) **QUALIFYING COMMUNITY-BASED MOBILE CRISIS INTERVENTION SERVICES DEFINED.**—For purposes of this section, the term ‘qualifying community-based mobile crisis intervention services’ means, with respect to a State, items and services for which medical assistance is available under the State plan under this title or a waiver of such plan, that are—

“(1) furnished to an individual otherwise eligible for medical assistance under the State plan (or waiver of such plan) who is—

“(A) outside of a hospital or other facility setting; and

“(B) experiencing a mental health or substance use disorder crisis;

“(2) furnished by a multidisciplinary mobile crisis team—

“(A) that includes at least 1 behavioral health care professional who is capable of conducting an assessment of the individual, in accordance with the professional’s permitted scope of practice under State law, and other professionals or paraprofessionals with appropriate expertise in behavioral health or mental health crisis response, including nurses, social workers, peer support specialists, and others, as designated by the State through a State plan amendment (or waiver of such plan);

“(B) whose members are trained in trauma-informed care, de-escalation strategies, and harm reduction;

“(C) that is able to respond in a timely manner and, where appropriate, provide—

“(i) screening and assessment;

“(ii) stabilization and de-escalation; and

“(iii) coordination with, and referrals to, health, social, and other services and supports as needed, and health services as needed;

“(D) that maintains relationships with relevant community partners, including medical and behavioral

health providers, primary care providers, community health centers, crisis respite centers, and managed care organizations (if applicable); and

“(E) that maintains the privacy and confidentiality of patient information consistent with Federal and State requirements; and

“(3) available 24 hours per day, every day of the year.

“(c) PAYMENTS.—Notwithstanding section 1905(b) or 1905(ff) and subject to subsections (y) and (z) of section 1905, during each of the first 12 fiscal quarters occurring during the period described in subsection (a) that a State meets the requirements described in subsection (d), the Federal medical assistance percentage applicable to amounts expended by the State for medical assistance for qualifying community-based mobile crisis intervention services furnished during such quarter shall be equal to 85 percent. In no case shall the application of the previous sentence result in the Federal medical assistance percentage applicable to amounts expended by a State for medical assistance for such qualifying community-based mobile crisis intervention services furnished during a quarter being less than the Federal medical assistance percentage that would apply to such amounts expended by the State for such services furnished during such quarter without application of the previous sentence.

“(d) REQUIREMENTS.—The requirements described in this subsection are the following:

“(1) The State demonstrates, to the satisfaction of the Secretary that it will be able to support the provision of qualifying community-based mobile crisis intervention services that meet the conditions specified in subsection (b).

“(2) The State provides assurances satisfactory to the Secretary that—

“(A) any additional Federal funds received by the State for qualifying community-based mobile crisis intervention services provided under this section that are attributable to the increased Federal medical assistance percentage under subsection (c) will be used to supplement, and not supplant, the level of State funds expended for such services for the fiscal year preceding the first fiscal quarter occurring during the period described in subsection (a);

“(B) if the State made qualifying community-based mobile crisis intervention services available in a region of the State in such fiscal year, the State will continue to make such services available in such region under this section during each month occurring during the period described in subsection (a) for which the Federal medical assistance percentage under subsection (c) is applicable with respect to the State.

“(e) FUNDING FOR STATE PLANNING GRANTS.—There is appropriated, out of any funds in the Treasury not otherwise appropriated, \$15,000,000 to the Secretary for purposes of implementing, administering, and making planning grants to States as soon as practicable for purposes of developing a State plan amendment or section 1115, 1915(b), or 1915(c) waiver request (or an amendment to such a waiver) to provide qualifying community-based mobile crisis intervention services under this section, to remain available until expended.”

**SEC. 9814. TEMPORARY INCREASE IN FMAP FOR MEDICAL ASSISTANCE UNDER STATE MEDICAID PLANS WHICH BEGIN TO EXPEND AMOUNTS FOR CERTAIN MANDATORY INDIVIDUALS.**

Section 1905 of the Social Security Act (42 U.S.C. 1396d), as amended by section 9811 of this subtitle, is further amended—

(1) in subsection (b), in the first sentence, by striking “and (hh)” and inserting “(hh), and (ii)”;

(2) in subsection (ff), by striking “subject to subsection (hh)” and inserting “subject to subsections (hh) and (ii)”;

(3) by adding at the end the following new subsection:

“(ii) TEMPORARY INCREASE IN FMAP FOR MEDICAL ASSISTANCE UNDER STATE MEDICAID PLANS WHICH BEGIN TO EXPEND AMOUNTS FOR CERTAIN MANDATORY INDIVIDUALS.—

“(1) IN GENERAL.—For each quarter occurring during the 8-quarter period beginning with the first calendar quarter during which a qualifying State (as defined in paragraph (3)) expends amounts for all individuals described in section 1902(a)(10)(A)(i)(VIII) under the State plan (or waiver of such plan), the Federal medical assistance percentage determined under subsection (b) for such State shall, after application of any increase, if applicable, under section 6008 of the Families First Coronavirus Response Act, be increased by 5 percentage points, except for any quarter (and each subsequent quarter) during such period during which the State ceases to provide medical assistance to any such individual under the State plan (or waiver of such plan).

Time periods.

“(2) SPECIAL APPLICATION RULES.—Any increase described in paragraph (1) (or payment made for expenditures on medical assistance that are subject to such increase)—

“(A) shall not apply with respect to disproportionate share hospital payments described in section 1923;

“(B) shall not be taken into account in calculating the enhanced FMAP of a State under section 2105;

“(C) shall not be taken into account for purposes of part A, D, or E of title IV; and

“(D) shall not be taken into account for purposes of applying payment limits under subsections (f) and (g) of section 1108.

“(3) DEFINITION.—For purposes of this subsection, the term ‘qualifying State’ means a State which has not expended amounts for all individuals described in section 1902(a)(10)(A)(i)(VIII) before the date of the enactment of this subsection.”.

**SEC. 9815. EXTENSION OF 100 PERCENT FEDERAL MEDICAL ASSISTANCE PERCENTAGE TO URBAN INDIAN HEALTH ORGANIZATIONS AND NATIVE HAWAIIAN HEALTH CARE SYSTEMS.**

Section 1905(b) of the Social Security Act (42 U.S.C. 1396d(b)) is amended by inserting after “(as defined in section 4 of the Indian Health Care Improvement Act)” the following: “; for the 8 fiscal year quarters beginning with the first fiscal year quarter beginning after the date of the enactment of the American Rescue Plan Act of 2021, the Federal medical assistance percentage shall also be 100 per centum with respect to amounts expended as medical assistance for services which are received through an Urban

Time periods.

Indian organization (as defined in paragraph (29) of section 4 of the Indian Health Care Improvement Act) that has a grant or contract with the Indian Health Service under title V of such Act; and, for such 8 fiscal year quarters, the Federal medical assistance percentage shall also be 100 per centum with respect to amounts expended as medical assistance for services which are received through a Native Hawaiian Health Center (as defined in section 12(4) of the Native Hawaiian Health Care Improvement Act) or a qualified entity (as defined in section 6(b) of such Act) that has a grant or contract with the Papa Ola Lokahi under section 8 of such Act”.

**SEC. 9816. SUNSET OF LIMIT ON MAXIMUM REBATE AMOUNT FOR SINGLE SOURCE DRUGS AND INNOVATOR MULTIPLE SOURCE DRUGS.**

Section 1927(c)(2)(D) of the Social Security Act (42 U.S.C. 1396r-8(c)(2)(D)) is amended by inserting after “December 31, 2009,” the following: “and before January 1, 2024.”.

42 USC 1396d  
note.

**SEC. 9817. ADDITIONAL SUPPORT FOR MEDICAID HOME AND COMMUNITY-BASED SERVICES DURING THE COVID-19 EMERGENCY.**

(a) INCREASED FMAP.—

(1) IN GENERAL.—Notwithstanding section 1905(b) of the Social Security Act (42 U.S.C. 1396d(b)) or section 1905(ff), in the case of a State that meets the HCBS program requirements under subsection (b), the Federal medical assistance percentage determined for the State under section 1905(b) of such Act (or, if applicable, under section 1905(ff) and, if applicable, increased under subsection (y), (z), (aa), or (ii) of section 1905 of such Act (42 U.S.C. 1396d), section 1915(k) of such Act (42 U.S.C. 1396n(k)), or section 6008(a) of the Families First Coronavirus Response Act (Public Law 116-127), shall be increased by 10 percentage points with respect to expenditures of the State under the State Medicaid program for home and community-based services (as defined in paragraph (2)(B)) that are provided during the HCBS program improvement period (as defined in paragraph (2)(A)). In no case may the application of the previous sentence result in the Federal medical assistance percentage determined for a State being more than 95 percent with respect to such expenditures. Any payment made to Puerto Rico, the Virgin Islands, Guam, the Northern Mariana Islands, or American Samoa for expenditures on medical assistance that are subject to the Federal medical assistance percentage increase specified under the first sentence of this paragraph shall not be taken into account for purposes of applying payment limits under subsections (f) and (g) of section 1108 of the Social Security Act (42 U.S.C. 1308).

Territories.

(2) DEFINITIONS.—In this section:

Time period.

(A) HCBS PROGRAM IMPROVEMENT PERIOD.—The term “HCBS program improvement period” means, with respect to a State, the period—

(i) beginning on April 1, 2021; and

(ii) ending on March 31, 2022.

(B) HOME AND COMMUNITY-BASED SERVICES.—The term “home and community-based services” means any of the following:

(i) Home health care services authorized under paragraph (7) of section 1905(a) of the Social Security Act (42 U.S.C. 1396d(a)).

(ii) Personal care services authorized under paragraph (24) of such section.

(iii) PACE services authorized under paragraph (26) of such section.

(iv) Home and community-based services authorized under subsections (b), (c), (i), (j), and (k) of section 1915 of such Act (42 U.S.C. 1396n), such services authorized under a waiver under section 1115 of such Act (42 U.S.C. 1315), and such services through coverage authorized under section 1937 of such Act (42 U.S.C. 1396u-7).

(v) Case management services authorized under section 1905(a)(19) of the Social Security Act (42 U.S.C. 1396d(a)(19)) and section 1915(g) of such Act (42 U.S.C. 1396n(g)).

(vi) Rehabilitative services, including those related to behavioral health, described in section 1905(a)(13) of such Act (42 U.S.C. 1396d(a)(13)).

(vii) Such other services specified by the Secretary of Health and Human Services.

(C) ELIGIBLE INDIVIDUAL.—The term “eligible individual” means an individual who is eligible for and enrolled for medical assistance under a State Medicaid program and includes an individual who becomes eligible for medical assistance under a State Medicaid program when removed from a waiting list.

(D) MEDICAID PROGRAM.—The term “Medicaid program” means, with respect to a State, the State program under title XIX of the Social Security Act (42 U.S.C. 1396 et seq.) (including any waiver or demonstration under such title or under section 1115 of such Act (42 U.S.C. 1315) relating to such title).

(E) STATE.—The term “State” has the meaning given such term for purposes of title XIX of the Social Security Act (42 U.S.C. 1396 et seq.).

(b) STATE REQUIREMENTS FOR FMAP INCREASE.—As conditions for receipt of the increase under subsection (a) to the Federal medical assistance percentage determined for a State, the State shall meet each of the following requirements (referred to in subsection (a) as the HCBS program requirements):

(1) SUPPLEMENT, NOT SUPPLANT.—The State shall use the Federal funds attributable to the increase under subsection (a) to supplement, and not supplant, the level of State funds expended for home and community-based services for eligible individuals through programs in effect as of April 1, 2021.

(2) REQUIRED IMPLEMENTATION OF CERTAIN ACTIVITIES.—The State shall implement, or supplement the implementation of, one or more activities to enhance, expand, or strengthen home and community-based services under the State Medicaid program.

Effective date.

**SEC. 9818. FUNDING FOR STATE STRIKE TEAMS FOR RESIDENT AND EMPLOYEE SAFETY IN NURSING FACILITIES.**

Section 1919 of the Social Security Act (42 U.S.C. 1396r) is amended by adding at the end the following new subsection:

Time period.

“(k) **FUNDING FOR STATE STRIKE TEAMS.**—In addition to amounts otherwise available, there is appropriated to the Secretary, out of any monies in the Treasury not otherwise appropriated, \$250,000,000, to remain available until expended, for purposes of allocating such amount among the States (including the District of Columbia and each territory of the United States) for such a State to establish and implement a strike team that will be deployed to a nursing facility in the State with diagnosed or suspected cases of COVID-19 among residents or staff for the purposes of assisting with clinical care, infection control, or staffing during the emergency period described in section 1135(g)(1)(B) and the 1-year period immediately following the end of such emergency period.”.

**SEC. 9819. SPECIAL RULE FOR THE PERIOD OF A DECLARED PUBLIC HEALTH EMERGENCY RELATED TO CORONAVIRUS.**

(a) **IN GENERAL.**—Section 1923(f)(3) of the Social Security Act (42 U.S.C. 1396r-4(f)(3)) is amended—

(1) in subparagraph (A), by striking “subparagraph (E)” and inserting “subparagraphs (E) and (F)” ; and

(2) by adding at the end the following new subparagraph:

“(F) **ALLOTMENTS DURING THE CORONAVIRUS TEMPORARY MEDICAID FMAP INCREASE.**—

“(i) **IN GENERAL.**—Notwithstanding any other provision of this subsection, for any fiscal year for which the Federal medical assistance percentage applicable to expenditures under this section is increased pursuant to section 6008 of the Families First Coronavirus Response Act, the Secretary shall recalculate the annual DSH allotment, including the DSH allotment specified under paragraph (6)(A)(vi), to ensure that the total DSH payments (including both Federal and State shares) that a State may make related to a fiscal year is equal to the total DSH payments that the State could have made for such fiscal year without such increase to the Federal medical assistance percentage.

Determination.

“(ii) **NO APPLICATION TO ALLOTMENTS BEGINNING AFTER COVID-19 EMERGENCY PERIOD.**—The DSH allotment for any State for the first fiscal year beginning after the end of the emergency period described in section 1135(g)(1)(B) or any succeeding fiscal year shall be determined under this paragraph without regard to the DSH allotments determined under clause (i).”.

42 USC 1396r-4 note.

(b) **EFFECTIVE DATE.**—The amendment made by subsection (a) shall take effect and apply as if included in the enactment of the Families First Coronavirus Response Act (Public Law 116-127).

## Subtitle K—Children’s Health Insurance Program

### SEC. 9821. MANDATORY COVERAGE OF COVID-19 VACCINES AND ADMINISTRATION AND TREATMENT UNDER CHIP.

(a) COVERAGE.—

(1) IN GENERAL.—Section 2103(c) of the Social Security Act (42 U.S.C. 1397cc(c)) is amended by adding at the end the following paragraph:

“(11) REQUIRED COVERAGE OF COVID-19 VACCINES AND TREATMENT.—Regardless of the type of coverage elected by a State under subsection (a), the child health assistance provided for a targeted low-income child, and, in the case of a State that elects to provide pregnancy-related assistance pursuant to section 2112, the pregnancy-related assistance provided for a targeted low-income pregnant woman (as such terms are defined for purposes of such section), shall include coverage, during the period beginning on the date of the enactment of this paragraph and ending on the last day of the first calendar quarter that begins one year after the last day of the emergency period described in section 1135(g)(1)(B), of—

Time period.

“(A) a COVID-19 vaccine (and the administration of the vaccine); and

“(B) testing and treatments for COVID-19, including specialized equipment and therapies (including preventive therapies), and, in the case of an individual who is diagnosed with or presumed to have COVID-19, during the period during which such individual has (or is presumed to have) COVID-19, the treatment of a condition that may seriously complicate the treatment of COVID-19, if otherwise covered under the State child health plan (or waiver of such plan).”

(2) PROHIBITION OF COST SHARING.—Section 2103(e)(2) of the Social Security Act (42 U.S.C. 1397cc(e)(2)), as amended by section 6004(b)(3) of the Families First Coronavirus Response Act, is amended—

(A) in the paragraph header, by inserting “A COVID-19 VACCINE, COVID-19 TREATMENT,” before “OR PREGNANCY-RELATED ASSISTANCE”; and

(B) by striking “visits described in section 1916(a)(2)(G), or” and inserting “services described in section 1916(a)(2)(G), vaccines described in section 1916(a)(2)(H) administered during the period described in such section (and the administration of such vaccines), testing or treatments described in section 1916(a)(2)(I) furnished during the period described in such section, or”.

(b) TEMPORARY INCREASE IN FEDERAL PAYMENTS FOR COVERAGE AND ADMINISTRATION OF COVID-19 VACCINES.—Section 2105(c) of the Social Security Act (42 U.S.C. 1397ee(c)) is amended by adding at the end the following new paragraph:

“(12) TEMPORARY ENHANCED PAYMENT FOR COVERAGE AND ADMINISTRATION OF COVID-19 VACCINES.—During the period described in section 1905(hh)(2), notwithstanding subsection (b), the enhanced FMAP for a State, with respect to payments under subsection (a) for expenditures under the State child health plan (or a waiver of such plan) for a vaccine described

in section 1905(a)(4)(E) (and the administration of such a vaccine), shall be equal to 100 percent.”

(c) ADJUSTMENT OF CHIP ALLOTMENTS.—Section 2104(m) of the Social Security Act (42 U.S.C. 1397dd(m)) is amended—

(1) in paragraph (2)(B), in the matter preceding clause (i), by striking “paragraphs (5) and (7)” and inserting “paragraphs (5), (7), and (12)”; and

(2) by adding at the end the following new paragraph:

Effective date.

“(12) ADJUSTING ALLOTMENTS TO ACCOUNT FOR INCREASED FEDERAL PAYMENTS FOR COVERAGE AND ADMINISTRATION OF COVID-19 VACCINES.—If a State, commonwealth, or territory receives payment for a fiscal year (beginning with fiscal year 2021) under subsection (a) of section 2105 for expenditures that are subject to the enhanced FMAP specified under subsection (c)(12) of such section, the amount of the allotment determined for the State, commonwealth, or territory under this subsection—

“(A) for such fiscal year shall be increased by the projected expenditures for such year by the State, commonwealth, or territory under the State child health plan (or a waiver of such plan) for vaccines described in section 1905(a)(4)(E) (and the administration of such vaccines); and

“(B) once actual expenditures are available in the subsequent fiscal year, the fiscal year allotment that was adjusted by the amount described in subparagraph (A) shall be adjusted on the basis of the difference between—

“(i) such projected amount of expenditures described in subparagraph (A) for such fiscal year described in such subparagraph by the State, commonwealth, or territory; and

“(ii) the actual amount of expenditures for such fiscal year described in subparagraph (A) by the State, commonwealth, or territory under the State child health plan (or waiver of such plan) for vaccines described in section 1905(a)(4)(E) (and the administration of such vaccines).”

**SEC. 9822. MODIFICATIONS TO CERTAIN COVERAGE UNDER CHIP FOR PREGNANT AND POSTPARTUM WOMEN.**

(a) MODIFICATIONS TO COVERAGE.—

(1) IN GENERAL.—Section 2107(e)(1) of the Social Security Act (42 U.S.C. 1397gg(e)(1)) is amended—

(A) by redesignating subparagraphs (J) through (S) as subparagraphs (K) through (T), respectively; and

(B) by inserting after subparagraph (I) the following new subparagraph:

Time period.  
Requirement.

“(J) Paragraphs (5) and (16) of section 1902(e) (relating to the State option to provide medical assistance consisting of full benefits during pregnancy and throughout the 12-month postpartum period under title XIX), if the State provides child health assistance for targeted low-income children who are pregnant or to targeted low-income pregnant women and the State has elected to apply such paragraph (16) with respect to pregnant women under title XIX, the provision of assistance under the State child health plan or waiver for targeted low-income children

or targeted low-income pregnant women during pregnancy and the 12-month postpartum period shall be required and not at the option of the State and shall include coverage of all items or services provided to a targeted low-income child or targeted low-income pregnant woman (as applicable) under the State child health plan or waiver.”.

(2) OPTIONAL COVERAGE OF TARGETED LOW-INCOME PREGNANT WOMEN.—Section 2112(d)(2)(A) of the Social Security Act (42 U.S.C. 1397ll(d)(2)(A)) is amended by inserting after “60-day period” the following: “, or, in the case that subparagraph (A) of section 1902(e)(16) applies to the State child health plan (or waiver of such plan), pursuant to section 2107(e)(1), the 12-month period.”.

(b) EFFECTIVE DATE.—The amendments made by subsection (a), shall apply with respect to State elections made under paragraph (16) of section 1902(e) of the Social Security Act (42 U.S.C. 1396a(e)), as added by section 9812(a) of subtitle J of this title, during the 5-year period beginning on the 1st day of the 1st fiscal year quarter that begins one year after the date of the enactment of this Act.

Applicability.  
Time period.  
42 USC 1397gg  
note.

## Subtitle L—Medicare

### SEC. 9831. FLOOR ON THE MEDICARE AREA WAGE INDEX FOR HOSPITALS IN ALL-URBAN STATES.

(a) IN GENERAL.—Section 1886(d)(3)(E) of the Social Security Act (42 U.S.C. 1395ww(d)(3)(E)) is amended—

(1) in clause (i), in the first sentence, by striking “or (iii)” and inserting “, (iii), or (iv)”;

(2) by adding at the end the following new clause:

“(iv) FLOOR ON AREA WAGE INDEX FOR HOSPITALS IN ALL-URBAN STATES.—

“(I) IN GENERAL.—For discharges occurring on or after October 1, 2021, the area wage index applicable under this subparagraph to any hospital in an all-urban State (as defined in subclause (IV)) may not be less than the minimum area wage index for the fiscal year for hospitals in that State, as established under subclause (II).

“(II) MINIMUM AREA WAGE INDEX.—For purposes of subclause (I), the Secretary shall establish a minimum area wage index for a fiscal year for hospitals in each all-urban State using the methodology described in section 412.64(h)(4)(vi) of title 42, Code of Federal Regulations, as in effect for fiscal year 2018.

“(III) WAIVING BUDGET NEUTRALITY.—Pursuant to the fifth sentence of clause (i), this clause shall not be applied in a budget neutral manner.

“(IV) ALL-URBAN STATE DEFINED.—In this clause, the term ‘all-urban State’ means a State in which there are no rural areas (as defined in paragraph (2)(D)) or a State in which there are no hospitals classified as rural under this section.”.

Effective date.

(b) **WAIVING BUDGET NEUTRALITY.**—Section 1886(d)(3)(E)(i) of the Social Security Act (42 U.S.C. 1395ww(d)(3)(E)(i)) is amended, in the fifth sentence—

(1) by striking “and the amendments” and inserting “, the amendments”; and

(2) by inserting “, and the amendments made by section 9831(a) of the American Rescue Plan Act of 2021” after “Care Act”.

**SEC. 9832. SECRETARIAL AUTHORITY TO TEMPORARILY WAIVE OR MODIFY APPLICATION OF CERTAIN MEDICARE REQUIREMENTS WITH RESPECT TO AMBULANCE SERVICES FURNISHED DURING CERTAIN EMERGENCY PERIODS.**

(a) **WAIVER AUTHORITY.**—Section 1135(b) of the Social Security Act (42 U.S.C. 1320b-5(b)) is amended—

(1) in the first sentence—

(A) in paragraph (7), by striking “and” at the end;

(B) in paragraph (8), by striking the period at the end and inserting “; and”; and

(C) by inserting after paragraph (8) the following new paragraph:

“(9) any requirement under section 1861(s)(7) or section 1834(l) that an ambulance service include the transport of an individual to the extent necessary to allow payment for ground ambulance services furnished in response to a 911 call (or the equivalent in areas without a 911 call system) in cases in which an individual would have been transported to a destination permitted under Medicare regulations (as described in section 410.40 to title 42, Code of Federal Regulations (or successor regulations)) but such transport did not occur as a result of community-wide emergency medical service (EMS) protocols due to the public health emergency described in subsection (g)(1)(B).”; and

(2) in the flush matter at the end, by adding at the end the following: “Ground ambulance services for which payment is made pursuant to paragraph (9) shall be paid at the base rate that would have been paid under the fee schedule established under 1834(l) (excluding any mileage payment) if the individual had been so transported and, with respect to ambulance services furnished by a critical access hospital or an entity described in paragraph (8) of such section, at the amount that otherwise would be paid under such paragraph.”.

(b) **EMERGENCY PERIOD EXCEPTION.**—Section 1135(g)(1)(B) of the Social Security Act (42 U.S.C. 1320b-5(g)(1)(B)) is amended, in the matter preceding clause (i), by striking “subsection (b)(8)” and inserting “paragraphs (8) and (9) of subsection (b)”.

**SEC. 9833. FUNDING FOR OFFICE OF INSPECTOR GENERAL.**

In addition to amounts otherwise available, there is appropriated to the inspector general of the Department of Health and Human Services for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$5,000,000, to remain available until expended, for oversight of activities supported with funds appropriated to the Department of Health and Human Services to prevent, prepare for, and respond to coronavirus 2019 or COVID-19, domestically or internationally.

## Subtitle M—Coronavirus State and Local Fiscal Recovery Funds

### SEC. 9901. CORONAVIRUS STATE AND LOCAL FISCAL RECOVERY FUNDS.

(a) IN GENERAL.—Title VI of the Social Security Act (42 U.S.C. 801 et seq.) is amended by adding at the end the following:

#### “SEC. 602. CORONAVIRUS STATE FISCAL RECOVERY FUND.

42 USC 802.

“(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated—

“(1) \$219,800,000,000, to remain available through December 31, 2024, for making payments under this section to States, territories, and Tribal governments to mitigate the fiscal effects stemming from the public health emergency with respect to the Coronavirus Disease (COVID-19); and

“(2) \$50,000,000, to remain available until expended, for the costs of the Secretary for administration of the funds established under this title.

“(b) AUTHORITY TO MAKE PAYMENTS.—

“(1) PAYMENTS TO TERRITORIES.—

“(A) IN GENERAL.—The Secretary shall reserve \$4,500,000,000 of the amount appropriated under subsection (a)(1) to make payments to the territories.

“(B) ALLOCATION.—Of the amount reserved under subparagraph (A)—

“(i) 50 percent of such amount shall be allocated by the Secretary equally to each territory; and

“(ii) 50 percent of such amount shall be allocated by the Secretary as an additional amount to each territory in an amount which bears the same proportion to  $\frac{1}{2}$  of the total amount reserved under subparagraph (A) as the population of the territory bears to the total population of all such territories.

“(C) PAYMENT.—The Secretary shall pay each territory the total of the amounts allocated for the territory under subparagraph (B) in accordance with paragraph (6).

“(2) PAYMENTS TO TRIBAL GOVERNMENTS.—

“(A) IN GENERAL.—The Secretary shall reserve \$20,000,000,000 of the amount appropriated under subsection (a)(1) to make payments to Tribal governments.

“(B) ALLOCATION.—Of the amount reserved under subparagraph (A)—

“(i) \$1,000,000,000 shall be allocated by the Secretary equally among each of the Tribal governments; and

“(ii) \$19,000,000,000 shall be allocated by the Secretary to the Tribal governments in a manner determined by the Secretary.

“(C) PAYMENT.—The Secretary shall pay each Tribal government the total of the amounts allocated for the Tribal government under subparagraph (B) in accordance with paragraph (6).

“(3) PAYMENTS TO EACH OF THE 50 STATES AND THE DISTRICT OF COLUMBIA.—

“(A) IN GENERAL.—The Secretary shall reserve \$195,300,000,000 of the amount appropriated under subsection (a)(1) to make payments to each of the 50 States and the District of Columbia.

“(B) ALLOCATIONS.—Of the amount reserved under subparagraph (A)—

“(i) \$25,500,000,000 of such amount shall be allocated by the Secretary equally among each of the 50 States and the District of Columbia;

“(ii) an amount equal to \$1,250,000,000 less the amount allocated for the District of Columbia pursuant to section 601(c)(6) shall be allocated by the Secretary as an additional amount to the District of Columbia; and

“(iii) an amount equal to the remainder of the amount reserved under subparagraph (A) after the application of clauses (i) and (ii) of this subparagraph shall be allocated by the Secretary as an additional amount to each of the 50 States and the District of Columbia in an amount which bears the same proportion to such remainder as the average estimated number of seasonally-adjusted unemployed individuals (as measured by the Bureau of Labor Statistics Local Area Unemployment Statistics program) in the State or District of Columbia over the 3-month period ending with December 2020 bears to the average estimated number of seasonally-adjusted unemployed individuals in all of the 50 States and the District of Columbia over the same period.

“(C) PAYMENT.—

“(i) IN GENERAL.—Subject to clause (ii), the Secretary shall pay each of the 50 States and the District of Columbia, from the amount reserved under subparagraph (A), the total of the amounts allocated for the State and District of Columbia under subparagraph (B) in accordance with paragraph (6).

“(ii) MINIMUM PAYMENT REQUIREMENT.—

“(I) IN GENERAL.—The sum of—

“(aa) the total amounts allocated for 1 of the 50 States or the District of Columbia under subparagraph (B) (as determined without regard to this clause); and

“(bb) the amounts allocated under section 603 to the State (for distribution by the State to nonentitlement units of local government in the State) and to metropolitan cities and counties in the State;

shall not be less than the amount allocated to the State or District of Columbia for fiscal year 2020 under section 601, including any amount paid directly to a unit of local government in the State under such section.

“(II) PRO RATA ADJUSTMENT.—The Secretary shall adjust on a pro rata basis the amount of the allocations for each of the 50 States and the District of Columbia determined under subparagraph (B)(iii) (without regard to this clause) to

Estimates.  
Time period.

Determination.  
Compliance.

the extent necessary to comply with the requirement of subclause (I).

“(4) PRO RATA ADJUSTMENT AUTHORITY.—The amounts otherwise determined for allocation and payment under paragraphs (1), (2), and (3) may be adjusted by the Secretary on a pro rata basis to the extent necessary to ensure that all available funds are allocated to States, territories, and Tribal governments in accordance with the requirements specified in each such paragraph (as applicable).

“(5) POPULATION DATA.—For purposes of determining allocations for a territory under this section, the population of the territory shall be determined based on the most recent data available from the Bureau of the Census.

Determination.

“(6) TIMING.—

Deadlines.

“(A) STATES AND TERRITORIES.—

“(i) IN GENERAL.—To the extent practicable, subject to clause (ii), with respect to each State and territory allocated a payment under this subsection, the Secretary shall make the payment required for the State or territory not later than 60 days after the date on which the certification required under subsection (d)(1) is provided to the Secretary.

“(ii) AUTHORITY TO SPLIT PAYMENT.—

“(I) IN GENERAL.—The Secretary shall have the authority to withhold payment of up to 50 percent of the amount allocated to each State and territory (other than payment of the amount allocated under paragraph (3)(B)(ii) to the District of Columbia) for a period of up to 12 months from the date on which the State or territory provides the certification required under subsection (d)(1). The Secretary shall exercise such authority with respect to a State or territory based on the unemployment rate in the State or territory as of such date.

Time period.

“(II) PAYMENT OF WITHHELD AMOUNT.—Before paying to a State or territory the remainder of an amount allocated to the State or territory (subject to subclause (III)) that has been withheld by the Secretary under subclause (I), the Secretary shall require the State or territory to submit a second certification under subsection (d)(1), in addition to such other information as the Secretary may require.

Requirement.

“(III) RECOVERY OF AMOUNTS SUBJECT TO RECOUPMENT.—If a State or territory is required under subsection (e) to repay funds for failing to comply with subsection (c), the Secretary may reduce the amount otherwise payable to the State or territory under subclause (II) by the amount that the State or territory would otherwise be required to repay under such subsection (e).

“(B) TRIBAL GOVERNMENTS.—To the extent practicable, with respect to each Tribal government for which an amount is allocated under this subsection, the Secretary shall make the payment required for the Tribal government

not later than 60 days after the date of enactment of this section.

“(C) INITIAL PAYMENT TO DISTRICT OF COLUMBIA.—The Secretary shall pay the amount allocated under paragraph (3)(B)(ii) to the District of Columbia not later than 15 days after the date of enactment of this section.

“(c) REQUIREMENTS.—

Deadline.

“(1) USE OF FUNDS.—Subject to paragraph (2), and except as provided in paragraph (3), a State, territory, or Tribal government shall only use the funds provided under a payment made under this section, or transferred pursuant to section 603(c)(4), to cover costs incurred by the State, territory, or Tribal government, by December 31, 2024—

“(A) to respond to the public health emergency with respect to the Coronavirus Disease 2019 (COVID-19) or its negative economic impacts, including assistance to households, small businesses, and nonprofits, or aid to impacted industries such as tourism, travel, and hospitality;

Grants.

“(B) to respond to workers performing essential work during the COVID-19 public health emergency by providing premium pay to eligible workers of the State, territory, or Tribal government that are performing such essential work, or by providing grants to eligible employers that have eligible workers who perform essential work;

“(C) for the provision of government services to the extent of the reduction in revenue of such State, territory, or Tribal government due to the COVID-19 public health emergency relative to revenues collected in the most recent full fiscal year of the State, territory, or Tribal government prior to the emergency; or

“(D) to make necessary investments in water, sewer, or broadband infrastructure.

“(2) FURTHER RESTRICTION ON USE OF FUNDS.—

“(A) IN GENERAL.—A State or territory shall not use the funds provided under this section or transferred pursuant to section 603(c)(4) to either directly or indirectly offset a reduction in the net tax revenue of such State or territory resulting from a change in law, regulation, or administrative interpretation during the covered period that reduces any tax (by providing for a reduction in a rate, a rebate, a deduction, a credit, or otherwise) or delays the imposition of any tax or tax increase.

“(B) PENSION FUNDS.—No State or territory may use funds made available under this section for deposit into any pension fund.

“(3) TRANSFER AUTHORITY.—A State, territory, or Tribal government receiving a payment from funds made available under this section may transfer funds to a private nonprofit organization (as that term is defined in paragraph (17) of section 401 of the McKinney-Vento Homeless Assistance Act (42 U.S.C. 11360(17)), a Tribal organization (as that term is defined in section 4 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5304)), a public benefit corporation involved in the transportation of passengers or cargo, or a special-purpose unit of State or local government.

“(d) CERTIFICATIONS AND REPORTS.—

“(1) IN GENERAL.—In order for a State or territory to receive a payment under this section, or a transfer of funds under section 603(c)(4), the State or territory shall provide the Secretary with a certification, signed by an authorized officer of such State or territory, that such State or territory requires the payment or transfer to carry out the activities specified in subsection (c) of this section and will use any payment under this section, or transfer of funds under section 603(c)(4), in compliance with subsection (c) of this section.

“(2) REPORTING.—Any State, territory, or Tribal government receiving a payment under this section shall provide to the Secretary periodic reports providing a detailed accounting of—

“(A) the uses of funds by such State, territory, or Tribal government, including, in the case of a State or a territory, all modifications to the State’s or territory’s tax revenue sources during the covered period; and

“(B) such other information as the Secretary may require for the administration of this section.

“(e) RECOUPMENT.—Any State, territory, or Tribal government that has failed to comply with subsection (c) shall be required to repay to the Secretary an amount equal to the amount of funds used in violation of such subsection, provided that, in the case of a violation of subsection (c)(2)(A), the amount the State or territory shall be required to repay shall be lesser of—

Requirement.

“(1) the amount of the applicable reduction to net tax revenue attributable to such violation; and

“(2) the amount of funds received by such State or territory pursuant to a payment made under this section or a transfer made under section 603(c)(4).

“(f) REGULATIONS.—The Secretary shall have the authority to issue such regulations as may be necessary or appropriate to carry out this section.

“(g) DEFINITIONS.—In this section:

“(1) COVERED PERIOD.—The term ‘covered period’ means, with respect to a State, territory, or Tribal government, the period that—

“(A) begins on March 3, 2021; and

“(B) ends on the last day of the fiscal year of such State, territory, or Tribal government in which all funds received by the State, territory, or Tribal government from a payment made under this section or a transfer made under section 603(c)(4) have been expended or returned to, or recovered by, the Secretary.

“(2) ELIGIBLE WORKERS.—The term ‘eligible workers’ means those workers needed to maintain continuity of operations of essential critical infrastructure sectors and additional sectors as each Governor of a State or territory, or each Tribal government, may designate as critical to protect the health and well-being of the residents of their State, territory, or Tribal government.

“(3) PREMIUM PAY.—The term ‘premium pay’ means an amount of up to \$13 per hour that is paid to an eligible worker, in addition to wages or remuneration the eligible worker otherwise receives, for all work performed by the eligible worker during the COVID-19 public health emergency. Such

amount may not exceed \$25,000 with respect to any single eligible worker.

“(4) SECRETARY.—The term ‘Secretary’ means the Secretary of the Treasury.

“(5) STATE.—The term ‘State’ means each of the 50 States and the District of Columbia.

“(6) TERRITORY.—The term ‘territory’ means the Commonwealth of Puerto Rico, the United States Virgin Islands, Guam, the Commonwealth of the Northern Mariana Islands, and American Samoa.

“(7) TRIBAL GOVERNMENT.—The term ‘Tribal Government’ means the recognized governing body of any Indian or Alaska Native tribe, band, nation, pueblo, village, community, component band, or component reservation, individually identified (including parenthetically) in the list published most recently as of the date of enactment of this Act pursuant to section 104 of the Federally Recognized Indian Tribe List Act of 1994 (25 U.S.C. 5131).

42 USC 803.

**“SEC. 603. CORONAVIRUS LOCAL FISCAL RECOVERY FUND.**

“(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$130,200,000,000, to remain available through December 31, 2024, for making payments under this section to metropolitan cities, nonentitlement units of local government, and counties to mitigate the fiscal effects stemming from the public health emergency with respect to the Coronavirus Disease (COVID-19).

“(b) AUTHORITY TO MAKE PAYMENTS.—

“(1) METROPOLITAN CITIES.—

“(A) IN GENERAL.—Of the amount appropriated under subsection (a), the Secretary shall reserve \$45,570,000,000 to make payments to metropolitan cities.

“(B) ALLOCATION AND PAYMENT.—From the amount reserved under subparagraph (A), the Secretary shall allocate and, in accordance with paragraph (7), pay to each metropolitan city an amount determined for the metropolitan city consistent with the formula under section 106(b) of the Housing and Community Development Act of 1974 (42 U.S.C. 5306(b)), except that, in applying such formula, the Secretary shall substitute ‘all metropolitan cities’ for ‘all metropolitan areas’ each place it appears.

“(2) NONENTITLEMENT UNITS OF LOCAL GOVERNMENT.—

“(A) IN GENERAL.—Of the amount appropriated under subsection (a), the Secretary shall reserve \$19,530,000,000 to make payments to States for distribution by the State to nonentitlement units of local government in the State.

“(B) ALLOCATION AND PAYMENT.—From the amount reserved under subparagraph (A), the Secretary shall allocate and, in accordance with paragraph (7), pay to each State an amount which bears the same proportion to such reserved amount as the total population of all areas that are non-metropolitan cities in the State bears to the total population of all areas that are non-metropolitan cities in all such States.

Deadlines.

“(C) DISTRIBUTION TO NONENTITLEMENT UNITS OF LOCAL GOVERNMENT.—

“(i) IN GENERAL.—Not later than 30 days after a State receives a payment under subparagraph (B), the State shall distribute to each nonentitlement unit of local government in the State an amount that bears the same proportion to the amount of such payment as the population of the nonentitlement unit of local government bears to the total population of all the nonentitlement units of local government in the State, subject to clause (iii).

“(ii) DISTRIBUTION OF FUNDS.—

“(I) EXTENSION FOR DISTRIBUTION.—If an authorized officer of a State required to make distributions under clause (i) certifies in writing to the Secretary before the end of the 30-day distribution period described in such clause that it would constitute an excessive administrative burden for the State to meet the terms of such clause with respect to 1 or more such distributions, the authorized officer may request, and the Secretary shall grant, an extension of such period of not more than 30 days to allow the State to make such distributions in accordance with clause (i).

Time period.  
Certification.

“(II) ADDITIONAL EXTENSIONS.—

“(aa) IN GENERAL.—If a State has been granted an extension to the distribution period under subclause (I) but is unable to make all the distributions required under clause (i) before the end of such period as extended, an authorized officer of the State may request an additional extension of the distribution period of not more than 30 days. The Secretary may grant a request for an additional extension of such period only if—

“(AA) the authorized officer making such request provides a written plan to the Secretary specifying, for each distribution for which an additional extension is requested, when the State expects to make such distribution and the actions the State has taken and will take in order to make all such distributions before the end of the distribution period (as extended under subclause (I) and this subclause); and

Plan.

“(BB) the Secretary determines that such plan is reasonably designed to distribute all such funds to nonentitlement units of local government by the end of the distribution period (as so extended).

Determination.

“(bb) FURTHER ADDITIONAL EXTENSIONS.—

If a State granted an additional extension of the distribution period under item (aa) requires any further additional extensions of such period, the request only may be made and granted subject to the requirements specified in item (aa).

“(iii) CAPPED AMOUNT.—The total amount distributed to a nonentitlement unit of local government

under this paragraph may not exceed the amount equal to 75 percent of the most recent budget for the non-entitlement unit of local government as of January 27, 2020.

“(iv) RETURN OF EXCESS AMOUNTS.—Any amounts not distributed to a nonentitlement unit of local government as a result of the application of clause (iii) shall be returned to the Secretary.

Time period.

“(D) PENALTY FOR NONCOMPLIANCE.—If, by the end of the 120-day period that begins on the date a State receives a payment from the amount allocated under subparagraph (B) or, if later, the last day of the distribution period for the State (as extended with respect to the State under subparagraph (C)(ii)), such State has failed to make all the distributions from such payment in accordance with the terms of subparagraph (C) (including any extensions of the distribution period granted in accordance with such subparagraph), an amount equal to the amount of such payment that remains undistributed as of such date shall be booked as a debt of such State owed to the Federal Government, shall be paid back from the State’s allocation provided under section 602(b)(3)(B)(iii), and shall be deposited into the general fund of the Treasury.

“(3) COUNTIES.—

“(A) AMOUNT.—From the amount appropriated under subsection (a), the Secretary shall reserve and allocate \$65,100,000,000 of such amount to make payments directly to counties in an amount which bears the same proportion to the total amount reserved under this paragraph as the population of each such county bears to the total population of all such entities and shall pay such allocated amounts to such counties in accordance with paragraph (7).

“(B) SPECIAL RULES.—

“(i) URBAN COUNTIES.—No county that is an ‘urban county’ (as defined in section 102 of the Housing and Community Development Act of 1974 (42 U.S.C. 5302)) shall receive less than the amount the county would otherwise receive if the amount paid under this paragraph were allocated to metropolitan cities and urban counties under section 106(b) of the Housing and Community Development Act of 1974 (42 U.S.C. 5306(b)).

Distribution.

“(ii) COUNTIES THAT ARE NOT UNITS OF GENERAL LOCAL GOVERNMENT.—In the case of an amount to be paid to a county that is not a unit of general local government, the amount shall instead be paid to the State in which such county is located, and such State shall distribute such amount to each unit of general local government within such county in an amount that bears the same proportion to the amount to be paid to such county as the population of such units of general local government bears to the total population of such county.

“(iii) DISTRICT OF COLUMBIA.—For purposes of this paragraph, the District of Columbia shall be considered to consist of a single county that is a unit of general local government.

“(4) CONSOLIDATED GOVERNMENTS.—A unit of general local government that has formed a consolidated government, or that is geographically contained (in full or in part) within the boundaries of another unit of general local government may receive a distribution under each of paragraphs (1), (2), and (3), as applicable, based on the respective formulas specified in such paragraphs.

“(5) PRO RATA ADJUSTMENT AUTHORITY.—The amounts otherwise determined for allocation and payment under paragraphs (1), (2), and (3) may be adjusted by the Secretary on a pro rata basis to the extent necessary to ensure that all available funds are distributed to metropolitan cities, counties, and States in accordance with the requirements specified in each paragraph (as applicable) and the certification requirement specified in subsection (d).

“(6) POPULATION.—For purposes of determining allocations under this section, the population of an entity shall be determined based on the most recent data are available from the Bureau of the Census or, if not available, from such other data as a State determines appropriate.

Determination.

“(7) TIMING.—

“(A) FIRST TRANCHE AMOUNT.—To the extent practicable, with respect to each metropolitan city for which an amount is allocated under paragraph (1), each State for which an amount is allocated under paragraph (2) for distribution to nonentitlement units of local government, and each county for which an amount is allocated under paragraph (3), the Secretary shall pay from such allocation the First Tranche Amount for such city, State, or county not later than 60 days after the date of enactment of this section.

Deadline.

“(B) SECOND TRANCHE AMOUNT.—The Secretary shall pay to each metropolitan city for which an amount is allocated under paragraph (1), each State for which an amount is allocated under paragraph (2) for distribution to nonentitlement units of local government, and each county for which an amount is allocated under paragraph (3), the Second Tranche Amount for such city, State, or county not earlier than 12 months after the date on which the First Tranche Amount is paid to the city, State, or county.

Time period.

“(c) REQUIREMENTS.—

“(1) USE OF FUNDS.—Subject to paragraph (2), and except as provided in paragraphs (3) and (4), a metropolitan city, nonentitlement unit of local government, or county shall only use the funds provided under a payment made under this section to cover costs incurred by the metropolitan city, nonentitlement unit of local government, or county, by December 31, 2024—

Deadline.

“(A) to respond to the public health emergency with respect to the Coronavirus Disease 2019 (COVID-19) or its negative economic impacts, including assistance to households, small businesses, and nonprofits, or aid to impacted industries such as tourism, travel, and hospitality;

“(B) to respond to workers performing essential work during the COVID-19 public health emergency by providing premium pay to eligible workers of the metropolitan city, nonentitlement unit of local government, or county that are performing such essential work, or by providing grants to eligible employers that have eligible workers who perform essential work;

“(C) for the provision of government services to the extent of the reduction in revenue of such metropolitan city, nonentitlement unit of local government, or county due to the COVID-19 public health emergency relative to revenues collected in the most recent full fiscal year of the metropolitan city, nonentitlement unit of local government, or county prior to the emergency; or

“(D) to make necessary investments in water, sewer, or broadband infrastructure.

“(2) PENSION FUNDS.—No metropolitan city, nonentitlement unit of local government, or county may use funds made available under this section for deposit into any pension fund.

“(3) TRANSFER AUTHORITY.—A metropolitan city, nonentitlement unit of local government, or county receiving a payment from funds made available under this section may transfer funds to a private nonprofit organization (as that term is defined in paragraph (17) of section 401 of the McKinney-Vento Homeless Assistance Act (42 U.S.C. 11360(17))), a public benefit corporation involved in the transportation of passengers or cargo, or a special-purpose unit of State or local government.

“(4) TRANSFERS TO STATES.—Notwithstanding paragraph (1), a metropolitan city, nonentitlement unit of local government, or county receiving a payment from funds made available under this section may transfer such funds to the State in which such entity is located.

“(d) REPORTING.—Any metropolitan city, nonentitlement unit of local government, or county receiving funds provided under a payment made under this section shall provide to the Secretary periodic reports providing a detailed accounting of the uses of such funds by such metropolitan city, nonentitlement unit of local government, or county and including such other information as the Secretary may require for the administration of this section.

Requirement.

“(e) RECOUPMENT.—Any metropolitan city, nonentitlement unit of local government, or county that has failed to comply with subsection (c) shall be required to repay to the Secretary an amount equal to the amount of funds used in violation of such subsection.

“(f) REGULATIONS.—The Secretary shall have the authority to issue such regulations as may be necessary or appropriate to carry out this section.

“(g) DEFINITIONS.—In this section:

“(1) COUNTY.—The term ‘county’ means a county, parish, or other equivalent county division (as defined by the Bureau of the Census).

“(2) ELIGIBLE WORKERS.—The term ‘eligible workers’ means those workers needed to maintain continuity of operations of essential critical infrastructure sectors and additional sectors as each chief executive officer of a metropolitan city, nonentitlement unit of local government, or county may designate as critical to protect the health and well-being of the residents

of their metropolitan city, nonentitlement unit of local government, or county.

“(3) **FIRST TRANCHE AMOUNT.**—The term ‘First Tranche Amount’ means, with respect to each metropolitan city for which an amount is allocated under subsection (b)(1), each State for which an amount is allocated under subsection (b)(2) for distribution to nonentitlement units of local government, and each county for which an amount is allocated under subsection (b)(3), 50 percent of the amount so allocated to such metropolitan city, State, or county (as applicable).

“(4) **METROPOLITAN CITY.**—The term ‘metropolitan city’ has the meaning given that term in section 102(a)(4) of the Housing and Community Development Act of 1974 (42 U.S.C. 5302(a)(4)) and includes cities that relinquish or defer their status as a metropolitan city for purposes of receiving allocations under section 106 of such Act (42 U.S.C. 5306) for fiscal year 2021.

“(5) **NONENTITLEMENT UNIT OF LOCAL GOVERNMENT.**—The term ‘nonentitlement unit of local government’ means a ‘city’, as that term is defined in section 102(a)(5) of the Housing and Community Development Act of 1974 (42 U.S.C. 5302(a)(5)), that is not a metropolitan city.

“(6) **PREMIUM PAY.**—The term ‘premium pay’ has the meaning given such term in section 602(g).

“(7) **SECOND TRANCHE AMOUNT.**—The term ‘Second Tranche Amount’ means, with respect to each metropolitan city for which an amount is allocated under subsection (b)(1), each State for which an amount is allocated under subsection (b)(2) for distribution to nonentitlement units of local government, and each county for which an amount is allocated under subsection (b)(3), an amount not to exceed 50 percent of the amount so allocated to such metropolitan city, State, or county (as applicable).

“(8) **SECRETARY.**—The term ‘Secretary’ means the Secretary of the Treasury.

“(9) **STATE.**—The term ‘State’ means each of the 50 States, the District of Columbia, the Commonwealth of Puerto Rico, the United States Virgin Islands, Guam, the Commonwealth of the Northern Mariana Islands, and American Samoa.

“(10) **UNIT OF GENERAL LOCAL GOVERNMENT.**—The term ‘unit of general local government’ has the meaning given that term in section 102(a)(1) of the Housing and Community Development Act of 1974 (42 U.S.C. 5302(a)(1)).

**“SEC. 604. CORONAVIRUS CAPITAL PROJECTS FUND.**

42 USC 804.

“(a) **APPROPRIATION.**—In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$10,000,000,000, to remain available until expended, for making payments to States, territories, and Tribal governments to carry out critical capital projects directly enabling work, education, and health monitoring, including remote options, in response to the public health emergency with respect to the Coronavirus Disease (COVID-19).

“(b) **PAYMENTS.**—

“(1) **MINIMUM AMOUNTS.**—From the amount appropriated under subsection (a)—

“(A) the Secretary shall pay \$100,000,000 to each State;

“(B) the Secretary shall pay \$100,000,000 of such amount in equal shares to the United States Virgin Islands, Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, the Republic of the Marshall Islands, the Federated States of Micronesia, and the Republic of Palau; and

“(C) the Secretary shall pay \$100,000,000 of such amount in equal shares to Tribal governments and the State of Hawaii (in addition to the amount paid to the State of Hawaii under subparagraph (A)), of which—

“(i) not less than \$50,000 shall be paid to each Tribal government; and

“(ii) not less than \$50,000, and not more than \$200,000, shall be paid to the State of Hawaii for the exclusive use of the Department of Hawaiian Home Lands and the Native Hawaiian Education Programs to assist Native Hawaiians in accordance with this section.

“(2) REMAINING AMOUNTS.—

Allocations.

“(A) IN GENERAL.—From the amount of the appropriation under subsection (a) that remains after the application of paragraph (1), the Secretary shall make payments to States based on population such that—

“(i) 50 percent of such amount shall be allocated among the States based on the proportion that the population of each State bears to the population of all States;

“(ii) 25 percent of such amount shall be allocated among the States based on the proportion that the number of individuals living in rural areas in each State bears to the number of individuals living in rural areas in all States; and

“(iii) 25 percent of such amount shall be allocated among the States based on the proportion that the number of individuals with a household income that is below 150 percent of the poverty line applicable to a family of the size involved in each State bears to the number of such individuals in all States.

Determinations.

“(B) DATA.—In determining the allocations to be made to each State under subparagraph (A), the Secretary of the Treasury shall use the most recent data available from the Bureau of the Census.

Grants.  
Deadline.

“(c) TIMING.—The Secretary shall establish a process of applying for grants to access funding made available under section (b) not later than 60 days after enactment of this section.

“(d) DEFINITIONS.—In this section:

“(1) SECRETARY.—The term ‘Secretary’ means the Secretary of the Treasury.

“(2) STATE.—The term ‘State’ means each of the 50 States, the District of Columbia, and Puerto Rico.

“(3) TRIBAL GOVERNMENT.—The term ‘Tribal government’ has the meaning given such term in section 602(g).

42 USC 805.

“**SEC. 605. LOCAL ASSISTANCE AND TRIBAL CONSISTENCY FUND.**

“(a) APPROPRIATION.—In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$2,000,000,000 to

remain available until September 30, 2023, with amounts to be obligated for each of fiscal years 2022 and 2023 in accordance with subsection (b), for making payments under this section to eligible revenue sharing counties and eligible Tribal governments.

“(b) AUTHORITY TO MAKE PAYMENTS.—

“(1) PAYMENTS TO ELIGIBLE REVENUE SHARING COUNTIES.—

For each of fiscal years 2022 and 2023, the Secretary shall reserve \$750,000,000 of the total amount appropriated under subsection (a) to allocate and pay to each eligible revenue sharing county in amounts that are determined by the Secretary taking into account economic conditions of each eligible revenue sharing county, using measurements of poverty rates, household income, land values, and unemployment rates as well as other economic indicators, over the 20-year period ending with September 30, 2021.

“(2) PAYMENTS TO ELIGIBLE TRIBAL GOVERNMENTS.—For each of fiscal years 2022 and 2023, the Secretary shall reserve \$250,000,000 of the total amount appropriated under subsection (a) to allocate and pay to eligible Tribal governments in amounts that are determined by the Secretary taking into account economic conditions of each eligible Tribe.

“(c) USE OF PAYMENTS.—An eligible revenue sharing county or an eligible Tribal government may use funds provided under a payment made under this section for any governmental purpose other than a lobbying activity.

“(d) REPORTING REQUIREMENT.—Any eligible revenue sharing county receiving a payment under this section shall provide to the Secretary periodic reports providing a detailed accounting of the uses of fund by such eligible revenue sharing county and such other information as the Secretary may require for the administration of this section.

“(e) RECOUPMENT.—Any eligible revenue sharing county that has failed to submit a report required under subsection (d) or failed to comply with subsection (c), shall be required to repay to the Secretary an amount equal to—

“(1) in the case of a failure to comply with subsection (c), the amount of funds used in violation of such subsection; and

“(2) in the case of a failure to submit a report required under subsection (d), such amount as the Secretary determines appropriate, but not to exceed 5 percent of the amount paid to the eligible revenue sharing county under this section for all fiscal years.

“(f) DEFINITIONS.—In this section:

“(1) ELIGIBLE REVENUE SHARING COUNTY.—The term ‘eligible revenue sharing county’ means—

“(A) a county, parish, or borough—

“(i) that is independent of any other unit of local government; and

“(ii) that, as determined by the Secretary, is the principal provider of government services for the area within its jurisdiction; and

“(iii) for which, as determined by the Secretary, there is a negative revenue impact due to implementation of a Federal program or changes to such program; and

Allocations.  
Determinations.  
Time period.

Lobbying

Requirement.

Determination.

Determinations.

“(B) the District of Columbia, the Commonwealth of Puerto Rico, Guam, and the United States Virgin Islands.

“(2) ELIGIBLE TRIBAL GOVERNMENT.—The term ‘eligible Tribal government’ means the recognized governing body of an eligible Tribe.

“(3) ELIGIBLE TRIBE.—The term ‘eligible Tribe’ means any Indian or Alaska Native tribe, band, nation, pueblo, village, community, component band, or component reservation, individually identified (including parenthetically) in the list published most recently as of the date of enactment of this section pursuant to section 104 of the Federally Recognized Indian Tribe List Act of 1994 (25 U.S.C. 5131).

“(4) SECRETARY.—The term ‘Secretary’ means the Secretary of the Treasury.”

(b) CONFORMING AMENDMENT.—The heading for title VI of the Social Security Act (42 U.S.C. 801 et seq.) is amended by striking “FUND” and inserting “, FISCAL RECOVERY, AND CRITICAL CAPITAL PROJECTS FUNDS”.

## Subtitle N—Other Provisions

### SEC. 9911. FUNDING FOR PROVIDERS RELATING TO COVID-19.

Part A of title XI of the Social Security Act (42 U.S.C. 1301 et seq.) is amended by adding at the end the following:

#### “SEC. 1150C. FUNDING FOR PROVIDERS RELATING TO COVID-19.

“(a) FUNDING.—In addition to amounts otherwise available, there is appropriated to the Secretary, for fiscal year 2021, out of any monies in the Treasury not otherwise appropriated, \$8,500,000,000 for purposes of making payments to eligible health care providers for health care related expenses and lost revenues that are attributable to COVID-19. Amounts appropriated under the preceding sentence shall remain available until expended.

“(b) APPLICATION REQUIREMENT.—To be eligible for a payment under this section, an eligible health care provider shall submit to the Secretary an application in such form and manner as the Secretary shall prescribe. Such application shall contain the following:

“(1) A statement justifying the need of the provider for the payment, including documentation of the health care related expenses attributable to COVID-19 and lost revenues attributable to COVID-19.

“(2) The tax identification number of the provider.

“(3) Such assurances as the Secretary determines appropriate that the eligible health care provider will maintain and make available such documentation and submit such reports (at such time, in such form, and containing such information as the Secretary shall prescribe) as the Secretary determines is necessary to ensure compliance with any conditions imposed by the Secretary under this section.

“(4) Any other information determined appropriate by the Secretary.

“(c) LIMITATION.—Payments made to an eligible health care provider under this section may not be used to reimburse any expense or loss that—

“(1) has been reimbursed from another source; or

42 USC  
1320b-26.

Reports.

“(2) another source is obligated to reimburse.

“(d) APPLICATION OF REQUIREMENTS, RULES, AND PROCEDURES.—The Secretary shall apply any requirements, rules, or procedures as the Secretary deems appropriate for the efficient execution of this section.

“(e) DEFINITIONS.—In this section:

“(1) ELIGIBLE HEALTH CARE PROVIDER.—The term ‘eligible health care provider’ means—

“(A) a provider of services (as defined in section 1861(u)) or a supplier (as defined in section 1861(d)) that—

“(i) is enrolled in the Medicare program under title XVIII under section 1866(j) (including temporarily enrolled during the emergency period described in section 1135(g)(1)(B) for such period);

“(ii) provides diagnoses, testing, or care for individuals with possible or actual cases of COVID-19; and

“(iii) is a rural provider or supplier; or

“(B) a provider or supplier that—

“(i) is enrolled with a State Medicaid plan under title XIX (or a waiver of such plan) in accordance with subsections (a)(77) and (kk) of section 1902 (including enrolled pursuant to section 1902(a)(78) or section 1932(d)(6)) or enrolled with a State child health plan under title XXI (or a waiver of such plan) in accordance with subparagraph (G) of section 2107(e)(1) (including enrolled pursuant to subparagraph (D) or (Q) of such section);

“(ii) provides diagnoses, testing, or care for individuals with possible or actual cases of COVID-19; and

“(iii) is a rural provider or supplier.

“(2) HEALTH CARE RELATED EXPENSES ATTRIBUTABLE TO COVID-19.—The term ‘health care related expenses attributable to COVID-19’ means health care related expenses to prevent, prepare for, and respond to COVID-19, including the building or construction of a temporary structure, the leasing of a property, the purchase of medical supplies and equipment, including personal protective equipment and testing supplies, providing for increased workforce and training (including maintaining staff, obtaining additional staff, or both), the operation of an emergency operation center, retrofitting a facility, providing for surge capacity, and other expenses determined appropriate by the Secretary.

“(3) LOST REVENUE ATTRIBUTABLE TO COVID-19.—The term ‘lost revenue attributable to COVID-19’ has the meaning given that term in the Frequently Asked Questions guidance released by the Department of Health and Human Services in June 2020, including the difference between such provider’s budgeted and actual revenue if such budget had been established and approved prior to March 27, 2020.

“(4) PAYMENT.—The term ‘payment’ includes, as determined appropriate by the Secretary, a pre-payment, a prospective payment, a retrospective payment, or a payment through a grant or other mechanism.

“(5) RURAL PROVIDER OR SUPPLIER.—The term ‘rural provider or supplier’ means—

“(A) a—

“(i) provider or supplier located in a rural area (as defined in section 1886(d)(2)(D)); or

“(ii) provider treated as located in a rural area pursuant to section 1886(d)(8)(E);

“(B) a provider or supplier located in any other area that serves rural patients (as defined by the Secretary), which may include, but is not required to include, a metropolitan statistical area with a population of less than 500,000 (determined based on the most recently available data);

“(C) a rural health clinic (as defined in section 1861(aa)(2));

“(D) a provider or supplier that furnishes home health, hospice, or long-term services and supports in an individual’s home located in a rural area (as defined in section 1886(d)(2)(D)); or

“(E) any other rural provider or supplier (as defined by the Secretary).”.

**SEC. 9912. EXTENSION OF CUSTOMS USER FEES.**

(a) **IN GENERAL.**—Section 13031(j)(3) of the Consolidated Omnibus Budget Reconciliation Act of 1985 (19 U.S.C. 58c(j)(3)) is amended—

(1) in subparagraph (A), by striking “October 21, 2029” and inserting “September 30, 2030”; and

(2) in subparagraph (B)(i), by striking “October 21, 2029” and inserting “September 30, 2030”.

(b) **RATE FOR MERCHANDISE PROCESSING FEES.**—Section 503 of the United States-Korea Free Trade Agreement Implementation Act (Public Law 112-41; 19 U.S.C. 3805 note) is amended by striking “October 21, 2029” and inserting “September 30, 2030”.

## **TITLE X—COMMITTEE ON FOREIGN RELATIONS**

**SEC. 10001. DEPARTMENT OF STATE OPERATIONS.**

In addition to amounts otherwise available, there is authorized and appropriated to the Secretary of State for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$204,000,000, to remain available until September 30, 2022, for necessary expenses of the Department of State to carry out the authorities, functions, duties, and responsibilities in the conduct of the foreign affairs of the United States, to prevent, prepare for, and respond to coronavirus domestically or internationally, which shall include maintaining Department of State operations.

**SEC. 10002. UNITED STATES AGENCY FOR INTERNATIONAL DEVELOPMENT OPERATIONS.**

In addition to amounts otherwise available, there is authorized and appropriated to the Administrator of the United States Agency for International Development for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$41,000,000, to remain available until September 30, 2022, to carry out the provisions of section 667 of the Foreign Assistance Act of 1961 (22 U.S.C. 2427) for necessary expenses of the United States Agency for International Development to prevent, prepare for, and respond to

coronavirus domestically or internationally, and for other operations and maintenance requirements related to coronavirus.

**SEC. 10003. GLOBAL RESPONSE.**

(a) **IN GENERAL.**—In addition to amounts otherwise available, there is authorized and appropriated to the Secretary of State for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$8,675,000,000, to remain available until September 30, 2022, for necessary expenses to carry out the provisions of section 531 of chapter 4 of part II of the Foreign Assistance Act of 1961 (22 U.S.C. 2346) as health programs to prevent, prepare for, and respond to coronavirus, which shall include recovery from the impacts of such virus and shall be allocated as follows—

(1) \$905,000,000 to be made available to the United States Agency for International Development for global health activities to prevent, prepare for, and respond to coronavirus, which shall include a contribution to a multilateral vaccine development partnership to support epidemic preparedness;

(2) \$3,750,000,000 to be made available to the Department of State to support programs for the prevention, treatment, and control of HIV/AIDS in order to prevent, prepare for, and respond to coronavirus, including to mitigate the impact on such programs from coronavirus and support recovery from the impacts of the coronavirus, of which not less than \$3,500,000,000 shall be for a United States contribution to the Global Fund to Fight AIDS, Tuberculosis and Malaria;

(3) \$3,090,000,000 to be made available to the United States Agency for International Development to prevent, prepare for, and respond to coronavirus, which shall include support for international disaster relief, rehabilitation, and reconstruction, for health activities, and to meet emergency food security needs; and

(4) \$930,000,000 to be made available to prevent, prepare for, and respond to coronavirus, which shall include activities to address economic and stabilization requirements resulting from such virus.

(b) **WAIVER OF LIMITATION.**—Any contribution to the Global Fund to Fight AIDS, Tuberculosis and Malaria made pursuant to subsection (a)(2) shall be made available notwithstanding section 202(d)(4)(A)(i) of the United States Leadership Against HIV/AIDS, Tuberculosis, and Malaria Act of 2003 (22 U.S.C. 7622(d)(4)(A)(i)), and such contribution shall not be considered a contribution for the purpose of applying such section 202(d)(4)(A)(i).

**SEC. 10004. HUMANITARIAN RESPONSE.**

(a) **IN GENERAL.**—In addition to amounts otherwise available, there is authorized and appropriated to the Secretary of State for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$500,000,000, to remain available until September 30, 2022, to carry out the provisions of section 2(a) and (b) of the Migration and Refugee Assistance Act of 1962 (22 U.S.C. 2601(a) and (b)) to prevent, prepare for, and respond to coronavirus.

(b) **USE OF FUNDS.**—Funds appropriated pursuant to this section shall not be made available for the costs of resettling refugees in the United States.

Refugee  
resettlement.

**SEC. 10005. MULTILATERAL ASSISTANCE.**

In addition to amounts otherwise available, there is authorized and appropriated to the Secretary of State for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$580,000,000, to remain available until September 30, 2022, to carry out the provisions of section 301(a) of the Foreign Assistance Act of 1961 (22 U.S.C. 2221(a)) to prevent, prepare for, and respond to coronavirus, which shall include support for the priorities and objectives of the United Nations Global Humanitarian Response Plan COVID-19 through voluntary contributions to international organizations and programs administered by such organizations.

## **TITLE XI—COMMITTEE ON INDIAN AFFAIRS**

**SEC. 11001. INDIAN HEALTH SERVICE.**

(a) In addition to amounts otherwise available, there is appropriated to the Secretary of Health and Human Services (in this section referred to as the “Secretary”) for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$6,094,000,000, to remain available until expended, of which—

(1) \$5,484,000,000 shall be for carrying out the Act of August 5, 1954 (42 U.S.C. 2001 et seq.) (commonly referred to as the Transfer Act), the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5301 et seq.), the Indian Health Care Improvement Act (25 U.S.C. 1601 et seq.), and titles II and III of the Public Health Service Act (42 U.S.C. 201 et seq. and 241 et seq.) with respect to the Indian Health Service, of which—

(A) \$2,000,000,000 shall be for lost reimbursements, in accordance with section 207 of the Indian Health Care Improvement Act (25 U.S.C. 1621f);

(B) \$500,000,000 shall be for the provision of additional health care services, services provided through the Purchased/Referred Care program, and other related activities;

(C) \$140,000,000 shall be for information technology, telehealth infrastructure, and the Indian Health Service electronic health records system;

(D) \$84,000,000 shall be for maintaining operations of the Urban Indian health program, which shall be in addition to other amounts made available under this subsection for Urban Indian organizations (as defined in section 4 of the Indian Health Care Improvement Act (25 U.S.C. 1603));

(E) \$600,000,000 shall be for necessary expenses to plan, prepare for, promote, distribute, administer, and track COVID-19 vaccines, for the purposes described in subparagraphs (F) and (G), and for other vaccine-related activities;

(F) \$1,500,000,000 shall be for necessary expenses to detect, diagnose, trace, and monitor COVID-19 infections, activities necessary to mitigate the spread of COVID-19, supplies necessary for such activities, for the purposes described in subparagraphs (E) and (G), and for other related activities;

(G) \$240,000,000 shall be for necessary expenses to establish, expand, and sustain a public health workforce to prevent, prepare for, and respond to COVID-19, other public health workforce-related activities, for the purposes described in subparagraphs (E) and (F), and for other related activities; and

(H) \$420,000,000 shall be for necessary expenses related to mental health and substance use prevention and treatment services, for the purposes described in subparagraph (C) and paragraph (2) as related to mental health and substance use prevention and treatment services, and for other related activities;

(2) \$600,000,000 shall be for the lease, purchase, construction, alteration, renovation, or equipping of health facilities to respond to COVID-19, and for maintenance and improvement projects necessary to respond to COVID-19 under section 7 of the Act of August 5, 1954 (42 U.S.C. 2004a), the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5301 et seq.), the Indian Health Care Improvement Act (25 U.S.C. 1601 et seq.), and titles II and III of the Public Health Service Act (42 U.S.C. 202 et seq.) with respect to the Indian Health Service; and

(3) \$10,000,000 shall be for carrying out section 7 of the Act of August 5, 1954 (42 U.S.C. 2004a) for expenses relating to potable water delivery.

(b) Funds appropriated by subsection (a) shall be made available to restore amounts, either directly or through reimbursement, for obligations for the purposes specified in this section that were incurred to prevent, prepare for, and respond to COVID-19 during the period beginning on the date on which the public health emergency was declared by the Secretary on January 31, 2020, pursuant to section 319 of the Public Health Service Act (42 U.S.C. 247d) with respect to COVID-19 and ending on the date of the enactment of this Act.

Reimbursement.  
Time period.

(c) Funds made available under subsection (a) to Tribes and Tribal organizations under the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5301 et seq.) shall be available on a one-time basis. Such non-recurring funds shall not be part of the amount required by section 106 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5325), and such funds shall only be used for the purposes identified in this section.

**SEC. 11002. BUREAU OF INDIAN AFFAIRS.**

(a) **IN GENERAL.**—In addition to amounts otherwise made available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$900,000,000 to remain available until expended, pursuant to the Snyder Act (25 U.S.C. 13), of which—

(1) \$100,000,000 shall be for Tribal housing improvement;

(2) \$772,500,000 shall be for Tribal government services, public safety and justice, social services, child welfare assistance, and for other related expenses;

(3) \$7,500,000 shall be for related Federal administrative costs and oversight; and

(4) \$20,000,000 shall be to provide and deliver potable water.

(b) **EXCLUSIONS FROM CALCULATION.**—Funds appropriated under subsection (a) shall be excluded from the calculation of funds received by those Tribal governments that participate in the “Small and Needy” program.

(c) **ONE-TIME BASIS FUNDS.**—Funds made available under subsection (a) to Tribes and Tribal organizations under the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5301 et seq.) shall be available on a one-time basis. Such non-recurring funds shall not be part of the amount required by section 106 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5325), and such funds shall only be used for the purposes identified in this section.

**SEC. 11003. HOUSING ASSISTANCE AND SUPPORTIVE SERVICES PROGRAMS FOR NATIVE AMERICANS.**

(a) **APPROPRIATION.**—In addition to amounts otherwise available, there is appropriated to the Secretary of Housing and Urban Development (in this section referred to as the “Secretary”) for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$750,000,000, to remain available until September 30, 2025, to prevent, prepare for, and respond to coronavirus, for activities and assistance authorized under title I of the Native American Housing Assistance and Self-Determination Act of 1996 (NAHASDA) (25 U.S.C. 4111 et seq.), under title VIII of NAHASDA (25 U.S.C. 4221 et seq.), and under section 106(a)(1) of the Housing and Community Development Act of 1974 with respect to Indian tribes (42 U.S.C. 5306(a)(1)), which shall be made available as follows:

(1) **HOUSING BLOCK GRANTS.**—\$455,000,000 shall be available for the Native American Housing Block Grants and Native Hawaiian Housing Block Grant programs, as authorized under titles I and VIII of NAHASDA, subject to the following terms and conditions:

(A) **FORMULA.**—Of the amounts made available under this paragraph, \$450,000,000 shall be for grants under title I of NAHASDA and shall be distributed according to the same funding formula used in fiscal year 2021.

(B) **NATIVE HAWAIIANS.**—Of the amounts made available under this paragraph, \$5,000,000 shall be for grants under title VIII of NAHASDA.

(C) **USE.**—Amounts made available under this paragraph shall be used by recipients to prevent, prepare for, and respond to coronavirus, including to maintain normal operations and fund eligible affordable housing activities under NAHASDA during the period that the program is impacted by coronavirus. In addition, amounts made available under subparagraph (B) may be used to provide rental assistance to eligible Native Hawaiian families both on and off the Hawaiian Home Lands.

(D) **TIMING OF OBLIGATIONS.**—Amounts made available under this paragraph shall be used, as necessary, to cover or reimburse allowable costs to prevent, prepare for, and respond to coronavirus that are incurred by a recipient, including for costs incurred after January 21, 2020.

(E) **WAIVERS OR ALTERNATIVE REQUIREMENTS.**—The Secretary may waive or specify alternative requirements for any provision of NAHASDA (25 U.S.C. 4101 et seq.)

Reimbursement.

or regulation applicable to the Native American Housing Block Grants or Native Hawaiian Housing Block Grant program other than requirements related to fair housing, nondiscrimination, labor standards, and the environment, upon a finding that the waiver or alternative requirement is necessary to expedite or facilitate the use of amounts made available under this paragraph.

(F) UNOBLIGATED AMOUNTS.—Amounts made available under this paragraph which are not accepted, are voluntarily returned, or otherwise recaptured for any reason shall be used to fund grants under paragraph (2).

(2) INDIAN COMMUNITY DEVELOPMENT BLOCK GRANTS.—\$280,000,000 shall be available for grants under title I of the Housing and Community Development Act of 1974, subject to the following terms and conditions:

(A) USE.—Amounts made available under this paragraph shall be used for emergencies that constitute imminent threats to health and safety and are designed to prevent, prepare for, and respond to coronavirus.

(B) PLANNING.—Not to exceed 20 percent of any grant made with funds made available under this paragraph shall be expended for planning and management development and administration.

(C) TIMING OF OBLIGATIONS.—Amounts made available under this paragraph shall be used, as necessary, to cover or reimburse allowable costs to prevent, prepare for, and respond to coronavirus incurred by a recipient, including for costs incurred after January 21, 2020.

Reimbursement.

(D) INAPPLICABILITY OF PUBLIC SERVICES CAP.—Indian tribes may use up to 100 percent of any grant from amounts made available under this paragraph for public services activities to prevent, prepare for, and respond to coronavirus.

(E) WAIVERS OR ALTERNATIVE REQUIREMENTS.—The Secretary may waive or specify alternative requirements for any provision of title I of the Housing and Community Development Act of 1974 (42 U.S.C. 5301 et seq.) or regulation applicable to the Indian Community Development Block Grant program other than requirements related to fair housing, nondiscrimination, labor standards, and the environment, upon a finding that the waiver or alternative requirement is necessary to expedite or facilitate the use of amounts made available under this paragraph.

(3) TECHNICAL ASSISTANCE.—\$10,000,000 shall be used to make new awards or increase prior awards to existing technical assistance providers to provide an immediate increase in training and technical assistance to Indian tribes, Indian housing authorities, tribally designated housing entities, and recipients under title VIII of NAHASDA for activities under this section.

(4) OTHER COSTS.—\$5,000,000 shall be used for the administrative costs to oversee and administer the implementation of this section, and pay for associated information technology, financial reporting, and other costs.

**SEC. 11004. COVID-19 RESPONSE RESOURCES FOR THE PRESERVATION AND MAINTENANCE OF NATIVE AMERICAN LANGUAGES.**

(a) Section 816 of the Native American Programs Act of 1974 (42 U.S.C. 2992d) is amended by adding at the end the following:

“(f) In addition to amounts otherwise available, there is appropriated for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$20,000,000 to remain available until expended, to carry out section 803C(g) of this Act.”.

(b) Section 803C of the Native American Programs Act of 1974 (42 U.S.C. 2991b-3) is amended by adding at the end the following:

Deadline.

“(g) EMERGENCY GRANTS FOR NATIVE AMERICAN LANGUAGE PRESERVATION AND MAINTENANCE.—Not later than 180 days after the effective date of this subsection, the Secretary shall award grants to entities eligible to receive assistance under subsection (a)(1) to ensure the survival and continuing vitality of Native American languages during and after the public health emergency declared by the Secretary pursuant to section 319 of the Public Health Service Act (42 U.S.C. 247d) with respect to the COVID-19 pandemic.”.

**SEC. 11005. BUREAU OF INDIAN EDUCATION.**

Deadline.

In addition to amounts otherwise available, there is appropriated to the Bureau of Indian Education for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$850,000,000, to remain available until expended, to be allocated by the Director of the Bureau of Indian Education not more than 45 calendar days after the date of enactment of this Act, for programs or activities operated or funded by the Bureau of Indian Education, for Bureau-funded schools (as defined in section 1141(3) of the Education Amendments of 1978 (25 U.S.C. 2021(3)), and for Tribal Colleges or Universities (as defined in section 316(b)(3) of the Higher Education Act of 1965 (20 U.S.C. 1059c(b)(3))).

**SEC. 11006. AMERICAN INDIAN, NATIVE HAWAIIAN, AND ALASKA NATIVE EDUCATION.**

Determination.  
Deadline.

In addition to amounts otherwise available, there is appropriated to the Department of Education for fiscal year 2021, out of any money in the Treasury not otherwise appropriated, \$190,000,000, to remain available until expended, for awards, which shall be determined by the Secretary of Education not more than 180 calendar days after the date of enactment of this Act, of which—

(1) \$20,000,000 shall be for awards for Tribal education agencies for activities authorized under section 6121(c) of the Elementary and Secondary Education Act of 1965 (20 U.S.C. 7441(c));

(2) \$85,000,000 shall be for awards to entities eligible to receive grants under section 6205(a)(1) of the Elementary and Secondary Education Act of 1965 (20 U.S.C. 7515(a)(1)) for activities authorized under section 6205(a)(3) of the Elementary and Secondary Education Act of 1965 (20 U.S.C. 7515(a)(3)); and

(3) \$85,000,000 shall be for awards to entities eligible to receive grants under section 6304(a)(1) of the Elementary and Secondary Education Act of 1965 (20 U.S.C. 7544(a)(1)) for activities authorized under section 6304(a)(2-3) of the

Elementary and Secondary Education Act of 1965 (20 U.S.C. 7544(a)(2-3)) and other related activities.

Approved March 11, 2021.

---

LEGISLATIVE HISTORY—H.R. 1319:

HOUSE REPORTS: No. 117-7 (Comm. on the Budget).

CONGRESSIONAL RECORD, Vol. 167 (2021):

Feb. 26, considered and passed House.

Mar. 4, 5, considered and passed Senate, amended.

Mar. 10, House concurred in Senate amendment.

DAILY COMPILATION OF PRESIDENTIAL DOCUMENTS (2021):

Mar. 11, Presidential remarks.

1 **“SEC. 136. METHANE EMISSIONS AND WASTE REDUCTION**  
2 **INCENTIVE PROGRAM FOR PETROLEUM AND**  
3 **NATURAL GAS SYSTEMS.**

4 “(a) INCENTIVES FOR METHANE MITIGATION AND  
5 MONITORING.—In addition to amounts otherwise avail-  
6 able, there is appropriated to the Administrator for fiscal  
7 year 2022, out of any money in the Treasury not otherwise  
8 appropriated, \$775,000,000, to remain available until  
9 September 30, 2028—

10 “(1) for grants, rebates, contracts, loans, and  
11 other activities of the Environmental Protection  
12 Agency for the purposes of providing financial and  
13 technical assistance to owners and operators of ap-  
14 plicable facilities to prepare and submit greenhouse  
15 gas reports under subpart W of part 98 of title 40,  
16 Code of Federal Regulations (or any successor regu-  
17 lations);

18 “(2) for grants, rebates, contracts, loans, and  
19 other activities of the Environmental Protection  
20 Agency authorized under subsections (a) through (c)  
21 of section 103 for methane emissions monitoring;

22 “(3) for grants, rebates, contracts, loans, and  
23 other activities of the Environmental Protection  
24 Agency for the purposes of providing financial and  
25 technical assistance to reduce methane and other  
26 greenhouse gas emissions from petroleum and nat-

1        ural gas systems, mitigate legacy air pollution from  
2        petroleum and natural gas systems, and provide sup-  
3        port for communities, including funding for—

4                “(A) improving climate resiliency of com-  
5                munities and petroleum and natural gas sys-  
6                tems;

7                “(B) improving and deploying industrial  
8                equipment and processes that reduce methane  
9                and other greenhouse gas emissions and waste;

10               “(C) supporting innovation in reducing  
11               methane and other greenhouse gas emissions  
12               and waste from petroleum and natural gas sys-  
13               tems;

14               “(D) mitigating health effects of methane  
15               and other greenhouse gas emissions, and legacy  
16               air pollution from petroleum and natural gas  
17               systems in low-income and disadvantaged com-  
18               munities; and

19               “(E) supporting environmental restoration;  
20               and

21               “(4) to cover all direct and indirect costs re-  
22               quired to administer this section, including the costs  
23               of implementing the waste emissions charge under  
24               subsection (b), preparing inventories, gathering em-  
25               pirical data, and tracking emissions.

1           “(b) WASTE EMISSIONS CHARGE.—The Adminis-  
2 trator shall impose and collect a charge on methane emis-  
3 sions that exceed an applicable waste emissions threshold  
4 under subsection (e) from an owner or operator of an ap-  
5 plicable facility that is required to report methane emis-  
6 sions pursuant to subpart W of part 98 of title 40, Code  
7 of Federal Regulations (or any successor regulations).

8           “(c) APPLICABLE FACILITY.—For purposes of this  
9 section, the term ‘applicable facility’ means a facility with-  
10 in the following industry segments, as defined in subpart  
11 W of part 98 of title 40, Code of Federal Regulations (or  
12 any successor regulations):

13           “(1) Offshore petroleum and natural gas pro-  
14 duction.

15           “(2) Onshore petroleum and natural gas pro-  
16 duction.

17           “(3) Onshore natural gas processing,

18           “(4) Onshore natural gas transmission com-  
19 pression.

20           “(5) Underground natural gas storage.

21           “(6) Liquefied natural gas storage.

22           “(7) Liquefied natural gas import and export  
23 equipment.

24           “(8) Onshore petroleum and natural gas gath-  
25 ering and boosting.

1           “(9) Onshore natural gas transmission pipeline.

2           “(d) CHARGE AMOUNT.—The amount of a charge  
3 under subsection (b) for an applicable facility shall be  
4 equal to the product obtained by multiplying—

5           “(1) the number of tons of methane emissions  
6 reported pursuant to subpart W of part 98 of title  
7 40, Code of Federal Regulations (or any successor  
8 regulations) for the applicable facility that exceed  
9 the applicable annual waste emissions threshold list-  
10 ed in subsection (e) during the previous reporting  
11 period; and

12           “(2)(A) \$900 for emissions reported for cal-  
13 endar year 2023;

14           “(B) \$1200 for emissions reported for calendar  
15 year 2024; or

16           “(C) \$1500 for emissions reported for calendar  
17 year 2025 and each year thereafter.

18           “(e) WASTE EMISSIONS THRESHOLD.—

19           “(1) PETROLEUM AND NATURAL GAS PRODUC-  
20 TION.—With respect to imposing and collecting the  
21 charge under subsection (b) for an applicable facility  
22 in an industry segment listed in paragraph (1) or  
23 (2) of subsection (c), the Administrator shall impose  
24 and collect the charge on the reported tons of meth-  
25 ane emissions that exceed—

1           “(A) 0.20 percent of the natural gas sent  
2           to sale from such facility; or

3           “(B) 10 metric tons of methane per million  
4           barrels of oil sent to sale from such facility, if  
5           such facility sent no natural gas to sale.

6           “(2) NONPRODUCTION PETROLEUM AND NAT-  
7           URAL GAS SYSTEMS.—With respect to imposing and  
8           collecting the charge under subsection (b) for an ap-  
9           plicable facility in an industry segment listed in  
10          paragraph (3), (6), (7), or (8) of subsection (c), the  
11          Administrator shall impose and collect the charge on  
12          the reported tons of methane emissions that exceed  
13          0.05 percent of the natural gas sent to sale from  
14          such facility.

15          “(3) NATURAL GAS TRANSMISSION.—With re-  
16          spect to imposing and collecting the charge under  
17          subsection (b) for an applicable facility in an indus-  
18          try segment listed in paragraph (4), (5), or (9) of  
19          subsection (c), the Administrator shall impose and  
20          collect the charge on the reported tons of methane  
21          emissions that exceed 0.11 percent of the natural  
22          gas sent to sale from such facility.

23          “(4) EXEMPTION.—Charges shall not be im-  
24          posed pursuant to paragraph (1) on emissions that  
25          exceed the waste emissions threshold specified in

1       such paragraph if such emissions are caused by un-  
2       reasonable delay in environmental permitting of  
3       gathering infrastructure.

4       “(f) PERIOD.—The charge under subsection (b) shall  
5       be imposed and collected beginning with respect to emis-  
6       sions reported for calendar year 2023 and for each year  
7       thereafter.

8       “(g) IMPLEMENTATION.—In addition to other au-  
9       thorities in this Act addressing air pollution from the oil  
10      and natural gas sectors, the Administrator may issue  
11      guidance or regulations as necessary to carry out this sec-  
12      tion.

13      “(h) REPORTING.—Not later than 2 years after the  
14      date of enactment of this section, and as necessary there-  
15      after, the Administrator shall revise the requirements of  
16      subpart W of part 98 of title 40, Code of Federal Regula-  
17      tions—

18             “(1) to reduce the facility emissions threshold  
19             for reporting under such subpart and for paying the  
20             charge imposed under this section to 10,000 metric  
21             tons of carbon dioxide equivalent of greenhouse  
22             gases emitted per year; and

23             “(2) to ensure the reporting under such sub-  
24             part, and calculation of charges under subsections  
25             (d) and (e) of this section, are based on empirical

1 data and accurately reflect the total methane emis-  
2 sions and waste emissions from the applicable facili-  
3 ties.

4 “(i) LIABILITY FOR CHARGE PAYMENT.—A facility  
5 owner or operator’s liability for payment of the charge  
6 under subsection (b) is not affected in any way by emis-  
7 sion standards, permit fees, penalties, or other require-  
8 ments under this Act or any other legal authorities.”.

9 **SEC. 30115. FUNDING FOR THE OFFICE OF THE INSPECTOR**  
10 **GENERAL OF THE ENVIRONMENTAL PROTEC-**  
11 **TION AGENCY.**

12 In addition to amounts otherwise made available,  
13 there is appropriated to the Office of the Inspector Gen-  
14 eral of the Environmental Protection Agency for fiscal  
15 year 2022, out of any money in the Treasury not otherwise  
16 appropriated, \$50,000,000, to remain available until Sep-  
17 tember 30, 2031, for oversight of activities supported with  
18 funds appropriated to the Environmental Protection Agen-  
19 cy in this Act.

20 **SEC. 30116. CLIMATE POLLUTION REDUCTION GRANTS.**

21 The Clean Air Act is amended by inserting after sec-  
22 tion 136 of such Act, as added by section 30114 of this  
23 Act, the following:

1     **Subtitle H—Responsibly Funding**  
2                     **Our Priorities**

3     **SEC. 138001. AMENDMENT OF 1986 CODE.**

4             Except as otherwise expressly provided, whenever in  
5 this subtitle an amendment or repeal is expressed in terms  
6 of an amendment to, or repeal of, a section or other provi-  
7 sion, the reference shall be considered to be made to a  
8 section or other provision of the Internal Revenue Code  
9 of 1986.

10    **PART 1—CORPORATE AND INTERNATIONAL TAX**  
11                     **REFORMS**

12                     **Subpart A—Corporate Provisions**

13    **SEC. 138101. CORPORATE ALTERNATIVE MINIMUM TAX.**

14             (a) IMPOSITION OF TAX.—

15                     (1) IN GENERAL.—Paragraph (2) of section  
16             55(b) is amended to read as follows:

17                     “(2) CORPORATIONS.—

18                             “(A) APPLICABLE CORPORATIONS.—In the  
19             case of an applicable corporation, the tentative  
20             minimum tax for the taxable year shall be the  
21             excess of—

22                                     “(i) 15 percent of the adjusted finan-  
23             cial statement income for the taxable year  
24             (as determined under section 56A), over

1                   “(ii) the corporate AMT foreign tax  
2                   credit for the taxable year.

3                   “(B) OTHER CORPORATIONS.—In the case  
4                   of any corporation which is not an applicable  
5                   corporation, the tentative minimum tax for the  
6                   taxable year shall be zero.”.

7                   (2) APPLICABLE CORPORATION.—Section 59 is  
8                   amended by adding at the end the following new  
9                   subsection:

10                  “(k) APPLICABLE CORPORATION.—For purposes of  
11 this part—

12                  “(1) APPLICABLE CORPORATION DEFINED.—

13                         “(A) IN GENERAL.—The term ‘applicable  
14                         corporation’ means, with respect to any taxable  
15                         year, any corporation (other than an S corpora-  
16                         tion, a regulated investment company, or a real  
17                         estate investment trust) which meets the aver-  
18                         age annual adjusted financial statement income  
19                         test of subparagraph (B) for one or more tax-  
20                         able years which—

21                                 “(i) are prior to such taxable year,

22   and

23                                 “(ii) end after December 31, 2021.

1           “(B) AVERAGE ANNUAL ADJUSTED FINAN-  
2           CIAL STATEMENT INCOME TEST.—For purposes  
3           of this subsection—

4                   “(i) a corporation meets the average  
5                   annual adjusted financial statement income  
6                   test for any taxable year if the average an-  
7                   nual adjusted financial statement income  
8                   of such corporation for the 3-taxable-year  
9                   period ending with such taxable year ex-  
10                  ceeds \$1,000,000,000, and

11                   “(ii) in the case of a corporation de-  
12                   scribed in paragraph (2), such corporation  
13                   meets the average annual adjusted finan-  
14                   cial statement income test if—

15                           “(I) the corporation meets the re-  
16                           quirements of clause (i) (determined  
17                           after the application of paragraph  
18                           (2)), and

19                           “(II) the average annual adjusted  
20                           financial statement income of such  
21                           corporation (determined without re-  
22                           gard to the application of paragraph  
23                           (2)) for the 3-taxable-year-period end-  
24                           ing with such taxable year is  
25                           \$100,000,000 or more.

1           “(C) EXCEPTION.—Notwithstanding sub-  
2 paragraph (A), the term ‘applicable corporation’  
3 shall not include any corporation which other-  
4 wise meets the requirements of subparagraph  
5 (A) if—

6           “(i) such corporation—

7                   “(I) has a change in ownership,  
8 or

9                   “(II) has a specified number (to  
10 be determined by the Secretary and  
11 which shall, as appropriate, take into  
12 account the facts and circumstances  
13 of the taxpayer) of consecutive taxable  
14 years, including the most recent tax-  
15 able year, in which the corporation  
16 does not meet the average annual ad-  
17 justed financial statement income test  
18 of subparagraph (B), and

19           “(ii) the Secretary determines that it  
20 would not be appropriate to continue to  
21 treat such corporation as an applicable cor-  
22 poration.

23           The preceding sentence shall not apply to any  
24 corporation if, after the Secretary makes the  
25 determination described in clause (ii), such cor-

1           poration meets the average annual adjusted fi-  
2           nancial statement income test for any taxable  
3           year beginning after the first taxable year for  
4           which the determination applies.

5           “(D) SPECIAL RULES FOR DETERMINING  
6           AVERAGE ANNUAL ADJUSTED FINANCIAL  
7           STATEMENT INCOME.—Solely for purposes of  
8           determining whether a corporation is an appli-  
9           cable corporation under paragraph (1)—

10           “(i) all persons treated as a single em-  
11           ployer under subsection (a) or (b) of sec-  
12           tion 52 shall be treated as 1 person, and

13           “(ii) in the case of a foreign corpora-  
14           tion, only income described in paragraph  
15           (3) or (4) of section 56A(c) shall be taken  
16           into account.

17           “(E) OTHER SPECIAL RULES.—

18           “(i) CORPORATIONS IN EXISTENCE  
19           FOR LESS THAN 3 YEARS.—If the corpora-  
20           tion was in existence for less than 3-tax-  
21           able years, subparagraph (B) shall be ap-  
22           plied on the basis of the period during  
23           which such corporation was in existence.

24           “(ii) SHORT TAXABLE YEARS.—Ad-  
25           justed financial statement income for any

1 taxable year of less than 12 months shall  
2 be annualized by multiplying the adjusted  
3 financial statement income for the short  
4 period by 12 and dividing the result by the  
5 number of months in the short period.

6 “(iii) TREATMENT OF PREDE-  
7 CESSORS.—Any reference in this subpara-  
8 graph to a corporation shall include a ref-  
9 erence to any predecessor of such corpora-  
10 tion.

11 “(2) SPECIAL RULE FOR FOREIGN-PARENTED  
12 CORPORATIONS.—

13 “(A) IN GENERAL.—Solely for purposes of  
14 determining whether a corporation meets the  
15 average annual adjusted financial statement in-  
16 come test under paragraph (1)(B)(i), notwith-  
17 standing paragraph (1)(D)(ii), any corporation  
18 which for any taxable year is a member of an  
19 international financial reporting group the com-  
20 mon parent of which is a foreign corporation  
21 shall include in the adjusted financial statement  
22 income of such corporation for such taxable  
23 year the adjusted financial statement income of  
24 all foreign members of such group.

1           “(B) INTERNATIONAL FINANCIAL REPORT-  
2           ING GROUP.—For purposes of subparagraph  
3           (A), the term ‘international financial reporting  
4           group’ shall have the meaning given such term  
5           by section 163(n)(3).

6           “(3) REGULATIONS OR OTHER GUIDANCE.—  
7           The Secretary shall provide regulations or other  
8           guidance for the purposes of carrying out this sub-  
9           section, including regulations or other guidance—

10           “(A) providing a simplified method for de-  
11           termining whether a corporation meets the re-  
12           quirements of paragraph (1), and

13           “(B) addressing the application of this  
14           subsection to a corporation that experiences a  
15           change in ownership.”.

16           (3) REDUCTION FOR BASE EROSION AND ANTI-  
17           ABUSE TAX.—Section 55(a)(2) is amended by insert-  
18           ing “plus, in the case of an applicable corporation  
19           (as defined in subsection (b)(2)), the tax imposed by  
20           section 59A” before the period at the end.

21           (4) CONFORMING AMENDMENTS.—

22           (A) Section 55(a) is amended by striking  
23           “In the case of a taxpayer other than a cor-  
24           poration, there” and inserting “There”.

25           (B)(i) Section 55(b)(1) is amended—

1 (I) by striking so much as precedes  
2 subparagraph (A) and inserting the fol-  
3 lowing:

4 “(1) NONCORPORATE TAXPAYERS.—In the case  
5 of a taxpayer other than a corporation—”, and

6 (II) by adding at the end the fol-  
7 lowing new subparagraph:

8 “(D) ALTERNATIVE MINIMUM TAXABLE IN-  
9 COME.—The term ‘alternative minimum taxable  
10 income’ means the taxable income of the tax-  
11 payer for the taxable year—

12 “(i) determined with the adjustments  
13 provided in section 56 and section 58, and

14 “(ii) increased by the amount of the  
15 items of tax preference described in section  
16 57.

17 If a taxpayer is subject to the regular tax, such  
18 taxpayer shall be subject to the tax imposed by  
19 this section (and, if the regular tax is deter-  
20 mined by reference to an amount other than  
21 taxable income, such amount shall be treated as  
22 the taxable income of such taxpayer for pur-  
23 poses of the preceding sentence).”.

1           (ii) Section 860E(a)(4) is amended by  
2 striking “55(b)(2)” and inserting  
3 “55(b)(1)(D)”.

4           (iii) Section 897(a)(2)(A)(i) is amended by  
5 striking “55(b)(2)” and inserting  
6 “55(b)(1)(D)”.

7           (C) Section 11(d) is amended by striking  
8 “the tax imposed by subsection (a)” and insert-  
9 ing “the taxes imposed by subsection (a) and  
10 section 55”.

11           (D) Section 12 is amended by adding at  
12 the end the following new paragraph:

13           “(5) For alternative minimum tax, see section  
14 55.”.

15           (E) Section 882(a)(1) is amended by in-  
16 serting “, 55,” after “section 11”.

17           (F) Section 6425(c)(1)(A) is amended to  
18 read as follows:

19           “(A) the sum of—

20               “(i) the tax imposed by section 11 or  
21 subchapter L of chapter 1, whichever is  
22 applicable, plus

23               “(ii) the tax imposed by section 55,  
24 plus

1 “(iii) the tax imposed by section 59A,  
2 over”.

3 (G) Section 6655(e)(2) is amended by in-  
4 serting “, adjusted financial statement income  
5 (as defined in section 56A),” before “and modi-  
6 fied taxable income” each place it appears in  
7 subparagraphs (A)(i) and (B)(i).

8 (H) Section 6655(g)(1)(A) is amended by  
9 redesignating clauses (ii) and (iii) as clauses  
10 (iii) and (iv), respectively, and by inserting  
11 after clause (i) the following new clause:

12 “(ii) the tax imposed by section 55,”.

13 (b) ADJUSTED FINANCIAL STATEMENT INCOME.—

14 (1) IN GENERAL.—Part VI of subchapter A of  
15 chapter 1 is amended by inserting after section 56  
16 the following new section:

17 **“SEC. 56A. ADJUSTED FINANCIAL STATEMENT INCOME.**

18 “(a) IN GENERAL.—For purposes of this part, the  
19 term ‘adjusted financial statement income’ means, with re-  
20 spect to any corporation for any taxable year, the net in-  
21 come or loss of the taxpayer set forth on the taxpayer’s  
22 applicable financial statement for such taxable year, ad-  
23 justed as provided in this section.

24 “(b) APPLICABLE FINANCIAL STATEMENT.—For  
25 purposes of this section, the term ‘applicable financial

1 statement' means, with respect to any taxable year, an ap-  
2 plicable financial statement (as defined in section  
3 451(b)(3) or as specified by the Secretary in regulations  
4 or other guidance) which covers such taxable year.

5 “(c) GENERAL ADJUSTMENTS.—

6 “(1) STATEMENTS COVERING DIFFERENT TAX-  
7 ABLE YEARS.—Appropriate adjustments shall be  
8 made in adjusted financial statement income in any  
9 case in which an applicable financial statement cov-  
10 ers a period other than the taxable year.

11 “(2) SPECIAL RULES FOR RELATED ENTI-  
12 TIES.—

13 “(A) CONSOLIDATED FINANCIAL STATE-  
14 MENTS.—If the financial results of a taxpayer  
15 are reported on the applicable financial state-  
16 ment for a group of entities, rules similar to the  
17 rules of section 451(b)(5) shall apply.

18 “(B) CONSOLIDATED RETURNS.—Except  
19 as provided in regulations prescribed by the  
20 Secretary, if the taxpayer files a consolidated  
21 return for any taxable year, adjusted financial  
22 statement income of the taxpayer for such tax-  
23 able year shall take into account items on the  
24 taxpayer's applicable financial statement which

1 are properly allocable to members of such group  
2 included on such return.

3 “(C) TREATMENT OF DIVIDENDS AND  
4 OTHER AMOUNTS.—In the case of any corpora-  
5 tion which is not included on a consolidated re-  
6 turn with the taxpayer, adjusted financial state-  
7 ment income of the taxpayer shall take into ac-  
8 count the earnings of such other corporation  
9 only to the extent of the sum of the dividends  
10 received from such other corporation (reduced  
11 to the extent provided by the Secretary in regu-  
12 lations or other guidance) and other amounts  
13 required to be included in gross income under  
14 this chapter (other than amounts required to be  
15 included under sections 951 and 951A) in re-  
16 spect of the earnings of such other corporation.

17 “(D) GROUP INCLUDING ONE OR MORE  
18 PARTNERSHIPS.—Under rules prescribed by the  
19 Secretary, if the financial results of a taxpayer  
20 are reported on the applicable financial state-  
21 ment for a group of entities that includes one  
22 or more partnerships, adjusted financial state-  
23 ment income shall take into account the earn-  
24 ings of such partnerships in the same propor-  
25 tion as the taxpayer’s distributive share of

1 items from the partnerships required to be in-  
2 cluded in gross income under this chapter.

3 “(3) ADJUSTMENTS TO TAKE INTO ACCOUNT  
4 CERTAIN ITEMS OF FOREIGN INCOME.—

5 “(A) IN GENERAL.—If, for any taxable  
6 year, a taxpayer is a United States shareholder  
7 of one or more controlled foreign corporations,  
8 the adjusted financial statement income of such  
9 taxpayer shall be adjusted to take into account  
10 such taxpayer’s pro rata share (determined  
11 under rules similar to the rules under section  
12 951(a)(2)) of items taken into account in com-  
13 puting the net income or loss set forth on the  
14 applicable financial statement of each such con-  
15 trolled foreign corporation with respect to which  
16 such taxpayer is a United States shareholder.

17 “(B) NEGATIVE ADJUSTMENTS.—In any  
18 case in which the adjustment determined under  
19 subparagraph (A) would result in a negative ad-  
20 justment for such taxable year—

21 “(i) no adjustment shall be made  
22 under this paragraph for such taxable  
23 year, and

24 “(ii) the amount of the adjustment  
25 determined under this paragraph for the

1           succeeding taxable year (determined with-  
2           out regard to this paragraph) shall be re-  
3           duced by an amount equal to the negative  
4           adjustment for such taxable year.

5           “(4) EFFECTIVELY CONNECTED INCOME.—In  
6           the case of a foreign corporation, to determine ad-  
7           justed financial statement income, the principles of  
8           section 882 shall apply.

9           “(5) ADJUSTMENTS FOR CERTAIN TAXES.—Ad-  
10          justed financial statement income shall be appro-  
11          priately adjusted to disregard any Federal income  
12          taxes, or income, war profits, or excess profits taxes  
13          (within the meaning of section 901) with respect to  
14          a foreign country or possession of the United States,  
15          which are taken into account on the taxpayer’s ap-  
16          plicable financial statement. To the extent provided  
17          by the Secretary, the preceding sentence shall not  
18          apply to income, war profits, or excess profits taxes  
19          (within the meaning of section 901) that are im-  
20          posed by a foreign country or possession of the  
21          United States and taken into account on the tax-  
22          payer’s applicable financial statement if the taxpayer  
23          does not choose to take the benefits of section 901.  
24          The Secretary shall prescribe such regulations or  
25          other guidance as may be necessary and appropriate

1 to provide for the proper treatment of current and  
2 deferred taxes for purposes of this paragraph, in-  
3 cluding the time at which such taxes are properly  
4 taken into account.

5 “(6) ADJUSTMENT WITH RESPECT TO DIS-  
6 REGARDED ENTITIES.—Adjusted financial statement  
7 income shall be adjusted to take into account any  
8 adjusted financial statement income of a disregarded  
9 entity owned by the taxpayer.

10 “(7) SPECIAL RULE FOR COOPERATIVES.—In  
11 the case of a cooperative to which section 1381 ap-  
12 plies, the adjusted financial statement income (deter-  
13 mined without regard to this paragraph) shall be re-  
14 duced by the amounts referred to in section 1382(b)  
15 (relating to patronage dividends and per-unit retain  
16 allocations) to the extent such amounts were not  
17 otherwise taken into account in determining ad-  
18 justed financial statement income.

19 “(8) RULES FOR ALASKA NATIVE CORPORA-  
20 TIONS.—Adjusted financial statement income shall  
21 be appropriately adjusted to allow—

22 “(A) cost recovery and depletion attrib-  
23 utable to property the basis of which is deter-  
24 mined under section 21(c) of the Alaska Native

1 Claims Settlement Act (43 U.S.C. 1620(c)),  
2 and

3 “(B) deductions for amounts payable made  
4 pursuant to section 7(i) or section 7(j) of such  
5 Act (43 U.S.C. 1606(i) and 1606(j)) only at  
6 such time as the deductions are allowed for tax  
7 purposes.

8 “(9) AMOUNTS ATTRIBUTABLE TO ELECTIONS  
9 FOR DIRECT PAYMENT OF CERTAIN CREDITS.—Ad-  
10 justed financial statement income shall be appro-  
11 priately adjusted to disregard any amount received  
12 as a refund of taxes which is attributable to an elec-  
13 tion under section 6417.

14 “(10) CONSISTENT TREATMENT OF MORTGAGE  
15 SERVICING INCOME OF TAXPAYER OTHER THAN A  
16 REGULATED INVESTMENT COMPANY.—

17 “(A) IN GENERAL.—Adjusted financial  
18 statement income shall be adjusted so as not to  
19 include any item of income in connection with  
20 a mortgage servicing contract any earlier than  
21 when such income is included in gross income  
22 under any other provision of this chapter.

23 “(B) RULES FOR AMOUNTS NOT REP-  
24 RESENTING REASONABLE COMPENSATION.—  
25 The Secretary shall provide regulations to pre-

1 vent the avoidance of taxes imposed by this  
2 chapter with respect to amounts not rep-  
3 resenting reasonable compensation (as deter-  
4 mined by the Secretary) with respect to a mort-  
5 gage servicing contract.

6 “(11) SECRETARIAL AUTHORITY TO ADJUST  
7 ITEMS.—The Secretary shall issue regulations or  
8 other guidance to provide for such adjustments to  
9 adjusted financial statement income as the Secretary  
10 determines necessary to carry out the purposes of  
11 this section, including adjustments—

12 “(A) to prevent the omission or duplication  
13 of any item,

14 “(B) to take into account the ownership of  
15 a member of a group by a corporation or part-  
16 nership which is not a member of such group,  
17 and

18 “(C) to carry out the principles of part II  
19 of subchapter C of this chapter (relating to cor-  
20 porate liquidations), part III of subchapter C of  
21 this chapter (relating to corporate organizations  
22 and reorganizations), and part II of subchapter  
23 K of this chapter (relating to partnership con-  
24 tributions and distributions).

1       “(d) DEDUCTION FOR FINANCIAL STATEMENT NET  
2 OPERATING LOSS.—

3           “(1) IN GENERAL.—Adjusted financial state-  
4 ment income (determined after application of sub-  
5 section (e) and without regard to this subsection)  
6 shall be reduced by an amount equal to the lesser  
7 of—

8           “(A) the aggregate amount of financial  
9 statement net operating loss carryovers to the  
10 taxable year, or

11           “(B) 80 percent of adjusted financial  
12 statement income computed without regard to  
13 the deduction allowable under this subsection.

14           “(2) FINANCIAL STATEMENT NET OPERATING  
15 LOSS CARRYOVER.—A financial statement net oper-  
16 ating loss for any taxable year shall be a financial  
17 statement net operating loss carryover to each tax-  
18 able year following the taxable year of the loss. The  
19 portion of such loss which shall be carried to subse-  
20 quent taxable years shall be the amount of such loss  
21 remaining (if any) after the application of paragraph  
22 (1).

23           “(3) FINANCIAL STATEMENT NET OPERATING  
24 LOSS DEFINED.—For purposes of this subsection,  
25 the term ‘financial statement net operating loss’

1 means the amount of the net loss (if any) set forth  
2 on the corporation's applicable financial statement  
3 (determined after application of subsection (c) and  
4 without regard to this subsection) for taxable years  
5 ending after December 31, 2019.

6 “(e) REGULATIONS AND OTHER GUIDANCE.—The  
7 Secretary shall provide for such regulations and other  
8 guidance as necessary to carry out the purposes of this  
9 section, including regulations and other guidance relating  
10 to the effect of the rules of this section on partnerships  
11 with income taken into account by an applicable corpora-  
12 tion.”.

13 (2) CLERICAL AMENDMENT.—The table of sec-  
14 tions for part VI of subchapter A of chapter 1 is  
15 amended by inserting after the item relating to sec-  
16 tion 56 the following new item:

“Sec. 56A. Adjusted financial statement income.”.

17 (c) CORPORATE AMT FOREIGN TAX CREDIT.—Sec-  
18 tion 59, as amended by this section, is amended by adding  
19 at the end the following new subsection:

20 “(1) CORPORATE AMT FOREIGN TAX CREDIT.—

21 “(1) IN GENERAL.—For purposes of this part,  
22 if an applicable corporation chooses to have the ben-  
23 efits of subpart A of part III of subchapter N for  
24 any taxable year, the corporate AMT foreign tax

1 credit for the taxable year of the applicable corpora-  
2 tion is an amount equal to sum of—

3 “(A) the lesser of—

4 “(i) the aggregate of the applicable  
5 corporation’s pro rata share (as deter-  
6 mined under section 56A(c)(3)) of the  
7 amount of income, war profits, and excess  
8 profits taxes (within the meaning of sec-  
9 tion 901) imposed by any foreign country  
10 or possession of the United States which  
11 are—

12 “(I) taken into account on the  
13 applicable financial statement of each  
14 controlled foreign corporation with re-  
15 spect to which the applicable corpora-  
16 tion is a United States shareholder,  
17 and

18 “(II) paid or accrued (for Fed-  
19 eral income tax purposes) by each  
20 such controlled foreign corporation, or

21 “(ii) the product of the amount of the  
22 adjustment under section 56A(c)(3) and  
23 the percentage specified in section  
24 55(b)(2)(A)(i), and

1           “(B) the amount of income, war profits,  
2           and excess profits taxes (within the meaning of  
3           section 901) imposed by any foreign country or  
4           possession of the United States to the extent  
5           such taxes are—

6                   “(i) taken into account on the applica-  
7                   ble corporation’s applicable financial state-  
8                   ment, and

9                   “(ii) paid or accrued (for Federal in-  
10                  come tax purposes) by the applicable cor-  
11                  poration.

12           “(2) CARRYOVER OF EXCESS TAX PAID.—For  
13           any taxable year for which an applicable corporation  
14           chooses to have the benefits of subpart A of part III  
15           of subchapter N, the excess of the amount described  
16           in paragraph (1)(A)(i) over the amount described in  
17           paragraph (1)(A)(ii) shall increase the amount de-  
18           scribed in paragraph (1)(A)(i) in any of the first 5  
19           succeeding taxable years to the extent not taken into  
20           account in a prior taxable year.

21           “(3) REGULATIONS OR OTHER GUIDANCE.—  
22           The Secretary shall provide for such regulations or  
23           other guidance as is necessary to carry out the pur-  
24           poses of this subsection.”.

1 (d) TREATMENT OF GENERAL BUSINESS CREDIT.—

2 Section 38(c)(6)(E) is amended to read as follows:

3 “(E) CORPORATIONS.—In the case of a  
4 corporation—

5 “(i) the first sentence of paragraph  
6 (1) shall be applied by substituting ‘25  
7 percent of the taxpayer’s net income tax as  
8 exceeds \$25,000’ for ‘the greater of’ and  
9 all that follows,

10 “(ii) paragraph (2)(A) shall be applied  
11 without regard to clause (ii)(I) thereof,  
12 and

13 “(iii) paragraph (4)(A) shall be ap-  
14 plied without regard to clause (ii)(I) there-  
15 of.”.

16 (e) CREDIT FOR PRIOR YEAR MINIMUM TAX LIABIL-  
17 ITY.—

18 (1) IN GENERAL.—Section 53(e) is amended to  
19 read as follows:

20 “(e) APPLICATION TO APPLICABLE CORPORA-  
21 TIONS.—In the case of a corporation—

22 “(1) subsection (b)(1) shall be applied by sub-  
23 stituting ‘the net minimum tax for all prior taxable  
24 years beginning after 2022’ for ‘the adjusted net

1 minimum tax imposed for all prior taxable years be-  
2 ginning after 1986’, and

3 “(2) the amount determined under subsection  
4 (c)(1) shall be increased by the amount of tax im-  
5 posed under section 59A for the taxable year.”.

6 (2) CONFORMING AMENDMENTS.—Section  
7 53(d) is amended—

8 (A) in paragraph (2), by striking “, except  
9 that in the case” and all that follows through  
10 “treated as zero”, and

11 (B) by striking paragraph (3).

12 (f) EFFECTIVE DATE.—The amendments made by  
13 this section shall apply to taxable years beginning after  
14 December 31, 2022.

15 **SEC. 138102. EXCISE TAX ON REPURCHASE OF CORPORATE**  
16 **STOCK.**

17 (a) IN GENERAL.—Subtitle D is amended by insert-  
18 ing after chapter 36 the following new chapter:

19 **“CHAPTER 37—REPURCHASE OF**  
20 **CORPORATE STOCK**

“Sec. 4501. Repurchase of corporate stock.

21 **“SEC. 4501. REPURCHASE OF CORPORATE STOCK.**

22 “(a) GENERAL RULE.—There is hereby imposed on  
23 each covered corporation a tax equal to 1 percent of the  
24 fair market value of any stock of the corporation which

1 gains, and losses are properly taken into account  
2 shall be made at the entity level.

3 (5) DEFINITIONS OF CERTAIN TERMS.—Terms  
4 used in this subsection which are also used in sec-  
5 tion 1(h) of such Code shall have the respective  
6 meanings that such terms have in such section.

7 **SEC. 138203. APPLICATION OF NET INVESTMENT INCOME**  
8 **TAX TO TRADE OR BUSINESS INCOME OF**  
9 **CERTAIN HIGH INCOME INDIVIDUALS.**

10 (a) IN GENERAL.—Section 1411 is amended by add-  
11 ing at the end the following new subsection:

12 “(f) APPLICATION TO CERTAIN HIGH INCOME INDI-  
13 VIDUALS.—

14 “(1) IN GENERAL.—In the case of any indi-  
15 vidual whose modified adjusted gross income for the  
16 taxable year exceeds the high income threshold  
17 amount, subsection (a)(1) shall be applied by sub-  
18 stituting ‘the greater of specified net income or net  
19 investment income’ for ‘net investment income’ in  
20 subparagraph (A) thereof.

21 “(2) PHASE-IN OF INCREASE.—The increase in  
22 the tax imposed under subsection (a)(1) by reason of  
23 the application of paragraph (1) of this subsection  
24 shall not exceed the amount which bears the same

1 ratio to the amount of such increase (determined  
2 without regard to this paragraph) as—

3 “(A) the excess described in paragraph (1),

4 bears to

5 “(B) \$100,000 ( $\frac{1}{2}$  such amount in the  
6 case of a married taxpayer (as defined in sec-  
7 tion 7703) filing a separate return).

8 “(3) HIGH INCOME THRESHOLD AMOUNT.—For  
9 purposes of this subsection, the term ‘high income  
10 threshold amount’ means—

11 “(A) except as provided in subparagraph  
12 (B) or (C), \$400,000,

13 “(B) in the case of a taxpayer making a  
14 joint return under section 6013 or a surviving  
15 spouse (as defined in section 2(a)), \$500,000,  
16 and

17 “(C) in the case of a married taxpayer (as  
18 defined in section 7703) filing a separate re-  
19 turn,  $\frac{1}{2}$  of the dollar amount determined under  
20 subparagraph (B).

21 “(4) SPECIFIED NET INCOME.—For purposes of  
22 this section, the term ‘specified net income’ means  
23 net investment income determined—

24 “(A) without regard to the phrase ‘other  
25 than such income which is derived in the ordi-

1 nary course of a trade or business not described  
2 in paragraph (2),’ in subsection (c)(1)(A)(i),

3 “(B) without regard to the phrase ‘de-  
4 scribed in paragraph (2)’ in subsection  
5 (c)(1)(A)(ii),

6 “(C) without regard to the phrase ‘other  
7 than property held in a trade or business not  
8 described in paragraph (2)’ in subsection  
9 (c)(1)(A)(iii),

10 “(D) without regard to paragraphs (2),  
11 (3), and (4) of subsection (c), and

12 “(E) by treating paragraphs (5) and (6) of  
13 section 469(c) as applying for purposes of sub-  
14 section (c) of this section.”.

15 (b) APPLICATION TO TRUSTS AND ESTATES.—Sec-  
16 tion 1411(a)(2)(A) is amended by striking “undistributed  
17 net investment income” and inserting “the greater of un-  
18 distributed specified net income or undistributed net in-  
19 vestment income”.

20 (c) CLARIFICATIONS WITH RESPECT TO DETER-  
21 MINATION OF NET INVESTMENT INCOME.—

22 (1) WAGES SUBJECT TO FICA NOT TAKEN INTO  
23 ACCOUNT.—Section 1411(c)(6) is amended by in-  
24 serting “or wages received with respect to employ-

1       ment on which a tax is imposed under section  
2       3101(b)” before the period at the end.

3           (2) NET OPERATING LOSSES NOT TAKEN INTO  
4       ACCOUNT.—Section 1411(c)(1)(B) is amended by in-  
5       serting “(other than section 172)” after “this sub-  
6       title”.

7           (3) INCLUSION OF CERTAIN FOREIGN IN-  
8       COME.—

9           (A) IN GENERAL.—Section 1411(c)(1)(A)  
10       is amended by striking “and” at the end of  
11       clause (ii), by striking “over” at the end of  
12       clause (iii) and inserting “and”, and by adding  
13       at the end the following new clause:

14                   “(iv) any amount includible in gross  
15                   income under section 951, 951A, 1293, or  
16                   1296, over”.

17           (B) PROPER TREATMENT OF CERTAIN  
18       PREVIOUSLY TAXED INCOME.—Section 1411(c)  
19       is amended by adding at the end the following  
20       new paragraph:

21           “(7) CERTAIN PREVIOUSLY TAXED INCOME.—  
22       The Secretary shall issue regulations or other guid-  
23       ance providing for the treatment of distributions of  
24       amounts previously included in gross income for pur-

1 poses of chapter 1 but not previously subject to tax  
2 under this section.”.

3 (d) EFFECTIVE DATE.—The amendments made by  
4 this section shall apply to taxable years beginning after  
5 December 31, 2021.

6 (e) TRANSITION RULE.—The regulations or other  
7 guidance issued by the Secretary under section 1411(e)(7)  
8 of the Internal Revenue Code of 1986 (as added by this  
9 section) shall include provisions which provide for the  
10 proper coordination and application of clauses (i) and (iv)  
11 of section 1411(e)(1)(A) with respect to—

12 (1) taxable years beginning on or before De-  
13 cember 31, 2021, and

14 (2) taxable years beginning after such date.

15 **SEC. 138204. LIMITATION ON DEDUCTION OF QUALIFIED**  
16 **BUSINESS INCOME FOR CERTAIN HIGH IN-**  
17 **COME INDIVIDUALS.**

18 (a) IN GENERAL.—Section 199A(a) is amended by  
19 striking “or” at the end of paragraph (1), by striking the  
20 period at the end of paragraph (2) and inserting “, or”,  
21 and by adding at the end the following new paragraph:

22 “(3) the following amount:

23 “(A) \$500,000 in the case of a joint return  
24 or surviving spouse (as defined in section 2(a)),

## 1 **Subtitle N—Fossil Fuel Resources**

### 2 **SEC. 71401. ONSHORE FOSSIL FUEL ROYALTY RATES.**

3 All new onshore oil and gas leases issued by the Sec-  
4 retary of the Interior shall be conditioned upon the pay-  
5 ment of a royalty at a rate of 18.75 percent in amount  
6 or value of the production from the lease. Before a termi-  
7 nated or cancelled oil or gas lease may be reinstated by  
8 the Secretary of the Interior, back royalties must be paid,  
9 and future royalties shall be at a rate of 25 percent in  
10 amount or value of the production from the lease.

### 11 **SEC. 71402. OFFSHORE OIL AND GAS ROYALTY RATE.**

12 All new offshore oil and gas leases on submerged  
13 lands of the outer Continental Shelf granted by the Sec-  
14 retary of the Interior shall be conditioned upon the pay-  
15 ment of a royalty at a rate of not less than 14 percent  
16 in amount or value of the production from the lease.

### 17 **SEC. 71403. OIL AND GAS MINIMUM BID.**

18 The onshore minimum acceptable bid charged by the  
19 Secretary of the Interior shall be \$10 per acre on Federal  
20 lands in the contiguous United States authorized to be  
21 leased by the Secretary for production of oil and gas. The  
22 Secretary of the Interior shall by regulation, at least once  
23 every 4 years, adjust the dollar amount to reflect the  
24 change in inflation.

# THE BUDGET DOCUMENTS

*Budget of the United States Government, Fiscal Year 2022* contains the Budget Message of the President, information on the President's priorities, and summary tables.

*Analytical Perspectives, Budget of the United States Government, Fiscal Year 2022* contains analyses that are designed to highlight specified subject areas or provide other significant presentations of budget data that place the budget in perspective. This volume includes economic and accounting analyses, information on Federal receipts and collections, analyses of Federal spending, information on Federal borrowing and debt, baseline or current services estimates, and other technical presentations.

Supplemental tables and other materials that are part of the *Analytical Perspectives* volume are available at <https://whitehouse.gov/omb/analytical-perspectives/>.

*Appendix, Budget of the United States Government, Fiscal Year 2022* contains detailed information on the various appropriations and funds that constitute the budget and is designed primarily for the use of the Appropriations Committees. The *Appendix* contains more detailed financial information on individual programs and appropriation accounts than any of the other budget documents. It includes for each agency: the proposed text of

appropriations language; budget schedules for each account; legislative proposals; narrative explanations of each budget account; and proposed general provisions applicable to the appropriations of entire agencies or group of agencies. Information is also provided on certain activities whose transactions are not part of the budget totals.

## **BUDGET INFORMATION AVAILABLE ONLINE**

The President's Budget and supporting materials are available online at <https://whitehouse.gov/omb/budget/>. This link includes electronic versions of all the budget volumes, supplemental materials that are part of the *Analytical Perspectives* volume, spreadsheets of many of the budget tables, and a public use budget database. This link also includes *Historical Tables* that provide data on budget receipts, outlays, surpluses or deficits, Federal debt, and Federal employment over an extended time period, generally from 1940 or earlier to 2022 or 2026. Also available are links to documents and materials from budgets of prior years.

For more information on access to electronic versions of the budget documents, call (202) 512-1530 in the D.C. area or toll-free (888) 293-6498. To purchase the printed documents call (202) 512-1800.

### **GENERAL NOTES**

1. All years referenced for budget data are fiscal years unless otherwise noted. All years referenced for economic data are calendar years unless otherwise noted.
2. Detail in this document may not add to the totals due to rounding.

# THE BUDGET MESSAGE OF THE PRESIDENT

TO THE CONGRESS OF THE UNITED STATES:

Where we choose to invest speaks to what we value as a Nation.

This year's Budget, the first of my Presidency, is a statement of values that define our Nation at its best. It is a Budget for what our economy can be, who our economy can serve, and how we can build it back better by putting the needs, goals, ingenuity, and strength of the American people front and center.

The Budget is built around a fundamental understanding of how our economy works and why, for too long and for too many, it has not. It is a Budget that reflects the fact that trickle-down economics has never worked, and that the best way to grow our economy is not from the top down, but from the bottom up and the middle out. Our prosperity comes from the people who get up every day, work hard, raise their family, pay their taxes, serve their Nation, and volunteer in their communities. If we make that understanding our foundation, everything we build upon it will be strong.

And we have already seen how that economic vision is working. When I took office, America was a Nation in crisis. A once-in-a-century pandemic was raging, claiming thousands of American lives each day. A punishing economic crisis had erased 22 million jobs in just 2 months in the spring of 2020 and upended the lives of millions more. The pain these crises caused was visible not just in the data, but in the lives of millions of Americans: Americans who faced an empty chair at the dinner table where a loved one once sat; who had to shut down the family business; who lined up for miles in their cars waiting for a box of food to be put in the trunk; who went to bed staring at the ceiling wondering how they would get through tomorrow.

Through the American Rescue Plan, we answered the emergency and provided desperately needed relief to hundreds of millions of Americans. Immediately, the law began delivering shots in arms and checks in pockets.

The American Rescue Plan is also helping schools reopen safely, helping child care centers stay in business, and helping families pay for child care. In fact, it is providing the largest investment in American child care since World War II. It is delivering food and nutrition assistance to millions of Americans facing hunger. It is providing rental assistance to keep people from being evicted from their homes. It is helping small businesses and restaurants stay open or re-open. It is making healthcare more affordable. It is supporting the recovery of State and local governments. And it is putting us on track to cut child poverty in half this year.

With the resources provided by the American Rescue Plan, we are turning the corner on the pandemic, and powering an equitable economic recovery. In my first 100 days in office, our economy created more than 1.5 million jobs, the most in the first 100 days of any President on record. But more work remains—not simply to emerge from the immediate crises we inherited, but to build back better.

The Budget lays out the essential investments that my Administration has proposed through the American Jobs Plan and the American Families Plan.

The American Jobs Plan puts millions of Americans to work to build our Nation back not just to the way it was before the pandemic, but back better. Americans will rebuild America's transportation infrastructure, water infrastructure, and broadband connectivity infrastructure. Americans will build a clean energy future while investing in communities at risk of being left behind during our energy transition. American workers and American farmers will make unprecedented progress in our effort to tackle climate change. And, thanks to the biggest increase in non-defense research and development spending on record, Americans will boost America's innovative edge in markets where global leadership is up for grabs—markets like battery technology, biotechnology, computer chips, and clean energy. Finally, the American Jobs Plan will create new and better jobs for caregiving workers who have been underpaid and undervalued for far too long.

The American Families Plan addresses four of the biggest challenges facing American families today, and lays the groundwork for individual, family, community, and national success tomorrow. It guarantees four additional years of education for every American, beginning with 2 years of universal high-quality pre-school for every 3- and 4-year old in America, and adding 2 years of free community college. It would make college more affordable and tackle equity gaps with increased Pell grants and investments in institutions serving low-income, first generation students, and students of color. And it provides access to quality, affordable child care to low- and middle-income families, expanded access to healthy meals because no child in America should be hungry or under-nourished, comprehensive paid family and medical leave, and expanded game-changing tax credits for families and workers.

The Budget complements these historic plans with additional proposals to reinvest in the foundations of our Nation's strength—expanding economic opportunity, improving education, tackling the climate crisis, and ensuring a strong national defense while restoring America's place in the world. In the 1950s, our Department of Defense created a Defense Advanced Research Projects Agency (DARPA) to enhance our national security, and DARPA's work helped lead to the creation of the internet, Global Positioning System, and more. The Budget would create an Advanced Research Projects Agency for Health tasked with developing a new generation of medical breakthroughs—marshalling our Nation's incredible scientific capacity to help prevent, detect, and treat diseases like cancer, diabetes, and Alzheimer's. And it calls on the Congress to make progress on healthcare by cutting prescription drug costs and expanding and improving the Affordable Care Act, Medicaid, and Medicare coverage.

The Budget invests directly in the American people and will strengthen our Nation's economy and improve our long-run fiscal health. It reforms our broken tax code to reward work instead of wealth, while also fully paying for the American Jobs Plan and the American Families Plan over 15 years. It will help us build a recovery that is broad-based, inclusive, sustained, and strong. And it will demonstrate to the American people that we value them and that we recognize that they are the key to our shared prosperity; that their Government sees them, hears them, and is able to deliver for them again.

It will send to the world the message that I shared with a Joint Session of the Congress in April: that America is on the move again, and that our democracy is proving it can deliver for our people and is poised to win the competition for the 21st Century.

There are many challenges ahead. But every time America has faced moments of testing, we have emerged stronger. And I believe this Budget will help us become stronger than ever.

I look forward to working with the Congress to deliver on this agenda this year.

JOSEPH R. BIDEN, JR.

THE WHITE HOUSE.

# CONFRONTING THE PANDEMIC AND RESCUING THE ECONOMY

America has always been defined by the grit and determination of its people, and our capacity to come together in common purpose at moments of great challenge. Across the generations, that spirit of resilience has seen us through war and depression, natural disasters and disease, and countless crises that have tested the Nation's strength, persistence, and commitment to core values and to one another. For more than a year, we have confronted a confluence of challenges that have called on that resilience like never before.

## *Inheriting Historic Challenges*

When the President took office, America was in the grips of the worst pandemic in a century and a painful economic downturn that had upended virtually every aspect of American life. By January, more than 24 million Americans across the Nation had contracted COVID-19. Infection rates and hospitalizations were soaring. More than 400,000 Americans had lost their lives and thousands were dying every single day. A more contagious variant of the virus had begun appearing in communities across America.

Meanwhile, the Administration inherited a disorganized and ineffective national vaccination effort that was struggling to get off the ground. When the President took office, only eight percent of America's seniors—and very few working-age adults—had received their first shot. At the same time, more than 10 months into the COVID-19 pandemic, the Nation still lacked adequate testing capacity and faced shortages of supplies like basic protective equipment for those working on the frontlines.

The broad failure to control the spread of COVID-19 in the months before the President took office had devastating and far-reaching consequences. Millions of students and parents were forced to navigate the challenges of remote learning—straining countless families and disproportionately affecting Black, Hispanic, Asian, and Native American students, as well as students with disabilities and English language learners. Disruptive changes in people's daily lives also took a significant toll on both mental and physical health. Medically fragile individuals and those with chronic diseases such as hypertension, obesity, and diabetes had to make the decision to either protect their health and avoid a negative outcome from COVID-19, or risk losing their jobs. More Americans reported experiencing symptoms of anxiety, overdose deaths rose, and domestic violence surged. Moreover, the COVID-19 pandemic exposed and exacerbated deeply rooted health inequities in the Nation and laid bare gaps and weaknesses in America's public health infrastructure.

As the virus tore across America, it left enormous economic damage in its wake. In January, more than 10 million Americans were out of work, with a national unemployment rate of 6.3 percent. After accounting for workers who either dropped out of the labor force or could not find full-time work, the unemployment rate was over 12 percent. More than 52 percent of America's unemployed had been jobless for more than 15 weeks, a level of long-term unemployment unseen since the depths of the Great Recession. In addition, 1 in 11 Black workers and 1 in 12 Latino workers were unemployed.

Thousands of small businesses closed their doors—many permanently—with many others struggling to stay afloat.

The jobs crisis was particularly severe among women. When the President took office, a staggering 2.5 million women had dropped out of the labor force due to the COVID-19 pandemic—many to help care for their children, with potential lifetime consequences in terms of economic security. Between February 2020 and January 2021, the labor force participation rate for women dropped by 3.7 percent overall, 6.4 percent for Black women, and 6.6 percent for Hispanic women, eviscerating more than 35 years of progress in labor force participation in just one year. The economy was hit hardest in female dominated industries like retail and restaurants. On top of the job loss in those sectors, women working on the frontlines of the COVID-19 pandemic in nursing homes and hospitals—many of whom are often low-paid women of color—risked their health and scrambled to take care of their own families so they could care for others. Early childhood and child care providers—a significant share of which are owned by women and people of color—have also been devastated by the COVID-19 pandemic. Estimates suggest that among child care providers open at the beginning of the COVID-19 pandemic, as of December 2020, roughly one in four were closed.

As a result of this enormous economic disruption, countless Americans who were financially stretched even before the COVID-19 pandemic were plunged into an economic emergency. One in three households struggled to afford basic expenses. Millions of households reported not having enough to eat. Millions of Americans fell behind on their rent or mortgage payments, with more than 15 million households reporting overdue payments when the President took office. Roughly two to three million people lost employer sponsored health insurance between March and September. Further, going into the COVID-19 pandemic, about 30 million people lacked coverage, limiting their access to the healthcare system when the COVID-19 pandemic struck.

### ***Delivering Immediate Relief: Passing the American Rescue Plan Act of 2021***

In the face of these twin public health and economic crises, the President took immediate, bold action to deliver relief to the American people. The President proposed and signed into law the American Rescue Plan Act of 2021 (the American Rescue Plan)—a historic, comprehensive package designed to help change the course of the COVID-19 pandemic, deliver desperately needed support to millions of workers, families, and small businesses, and build a bridge to a robust, equitable economic recovery.

The American Rescue Plan advanced three critical priorities. First, it included urgently needed resources to help families and businesses weather the worst of the COVID-19 pandemic, including: \$1,400 per-person rescue payments for households across America; extended unemployment insurance; housing and nutrition assistance; increased access to safe and reliable child care and affordable healthcare; historic expansions of middle class tax relief for working families; a solution to the crisis in America's multi-employer pension system; and support for hard-hit small businesses. Second, it provided vital resources to help safely reopen K-8 schools in communities across the Nation and address the needs of students. Third, it provided resources to help mount an unprecedented Government-wide effort to defeat the COVID-19 pandemic, including funding to: set up community vaccination sites nationwide; dramatically scale up testing and tracing; eliminate supply shortage problems; support community health centers; and address health disparities.

The resources included in the American Rescue Plan, coupled with the President's whole-of-Government response, have already begun to change the course of the COVID-19 pandemic and bolster the economy. In a matter of months, the Administration turned the slow-moving and underperforming vaccination effort it inherited into one of the most effective vaccination systems anywhere in the world. The Administration exceeded

the President's initial goal of administering 100 million shots in his first 100 days, ultimately administering 220 million shots in the President's first 100 days in office—an unprecedented national mobilization. As of May 17, nearly 60 percent of American adults had received at least one shot; nearly 85 percent of all seniors had received at least one shot and nearly 73 percent were fully vaccinated; and daily deaths were down more than 80 percent since January 20. All Americans 12 and older are now eligible for a COVID-19 vaccine. In addition, the Administration met the President's goal to reopen a majority of K-8 schools within the first 100 days.

As the Administration has ramped up the national COVID-19 pandemic response, the economy has started to get back on track. The President oversaw the creation of more than 1.5 million new jobs in his first 100 days in office—more than any president on record. Economists have raised their Gross Domestic Product growth forecasts for 2021 to 6.6 percent, which would be the fastest pace of economic growth in America in nearly four decades. Consumer confidence and spending are on the rise. Business activity is rebounding.

Moreover, the Administration is ensuring the American Rescue Plan reaches families, communities, and small businesses. The Department of the Treasury has already delivered more than 165 million relief payments of up to \$1,400 per person. The American Rescue Plan is delivering nutrition assistance to millions of Americans facing hunger, rental assistance and mortgage relief to help families stay in their homes, and loans to small businesses to help keep their doors open. It includes the largest investment in child care since World War II, which will especially benefit women of color. It is reducing healthcare premiums, expanding access to insurance coverage, and addressing persistent health disparities. It ensures that millions of American workers and retirees will receive the pensions they earned. In addition,

it is projected to reduce poverty by 32 percent, lifting a total of nearly 13 million Americans out of poverty—this would mean a 38-percent drop in the Black poverty rate, a 43-percent drop in the Hispanic poverty rate, a 23-percent drop in the Asian American and Pacific Islander poverty rate, and a 50-percent drop in the child poverty rate.

### ***Emerging from Crises and Focusing on the Future***

While significant challenges remain, the American Rescue Plan has succeeded by virtually every measure in helping address the immediate economic and public health crises the Administration inherited. However, even as the Administration makes significant strides to get the Nation back on track, the President believes it is not enough to go back to the way things were before the COVID-19 pandemic struck, or to settle for a shrunken view of what America can be. The President believes this is a moment to build back better and to rise to meet the full range of challenges and opportunities before us—from rebuilding America's crumbling physical and care infrastructure and creating millions of good-paying jobs, to combatting climate change and revitalizing American manufacturing, to expanding access to both early childhood and higher education and addressing systemic inequities, and more.

None of this work will be easy. Many of the challenges America faces have been years or decades in the making. These challenges do not lend themselves to quick or easy solutions, nor will they be fully resolved in a single year or with a single budget. But it is precisely at the moments of greatest consequence that Americans have shown their capacity to think big and do the hard work of charting a new and better course for the future. Our charge now is to carry that legacy forward.

## BUILDING BACK BETTER

Under the President's leadership, America is getting back on track. We have begun turning the tide on the pandemic. Our economy is growing and creating jobs. Students are getting back into classrooms. And we have shown yet again there is no quit in America. But our work has only begun.

For all of the hard-won progress our Nation has made in recent months, we cannot afford to simply return to the way things were before the pandemic and economic downturn, with the old economy's structural weaknesses and inequities still in place. We must seize this moment to reimagine and rebuild a new American economy—an economy that invests in the promise and potential of every single American; that leaves no one out and no one behind; and that makes it easier for families to break into the middle class and stay in the middle class.

The Budget details the President's proposals to advance that agenda this year. It includes the two historic plans the President has already put forward—the American Jobs Plan and the American Families Plan—and outlines a package of discretionary proposals to help restore core functions of Government and reinvest in the foundations of the Nation's strength. It also calls on the Congress to reduce prescription drug costs and expand and improve health coverage. Enacting the Budget policies into law this year would strengthen our Nation's economy and lay the foundation for shared prosperity, while also putting the Nation on a sound fiscal course. Importantly, even as the Administration pursues this historic agenda, the President also believes that there will be more to accomplish in

the coming years. This year's Budget gives a full accounting of the first, critical steps our Nation must take to begin the work of building back better.

### *The American Jobs Plan*

The Budget begins with the American Jobs Plan—an investment in America that would create millions of good jobs, rebuild the Nation's infrastructure, and position the United States to out-compete China. Public domestic investment as a share of the economy has fallen by more than 40 percent since the 1960s. The American Jobs Plan would invest in America in a way that has not occurred since the interstate highways were built and the Space Race was won.

The United States is the wealthiest Nation in the world, yet ranks 13<sup>th</sup> when it comes to the overall quality of the Nation's infrastructure. After decades of disinvestment, America's roads, bridges, and water systems are crumbling. The electric grid is vulnerable to catastrophic outages. Too many lack access to affordable, high-speed internet and to quality housing. The past year has led to job losses and threatened economic security, eroding more than 30 years of progress in women's labor force participation. It has unmasked the fragility of America's caregiving infrastructure. In addition, the Nation is falling behind its biggest competitors in research and development (R&D), manufacturing, and training. It has never been more important to invest in strengthening the Nation's infrastructure and competitiveness, and in creating the good-paying, union jobs of the future.

As with great projects of the past, the President's plan would unify and mobilize the Nation to meet the great challenges of our time: the climate crisis and the ambitions of an autocratic China. It would invest in Americans and deliver the jobs and opportunities they deserve. Unlike past major investments, the plan prioritizes addressing long-standing and persistent racial injustice. The plan targets 40 percent of the benefits of climate and clean infrastructure investments to disadvantaged communities. In addition, the plan invests in rural communities and communities impacted by the market-based transition to clean energy. Specifically, the President's plan:

**Fixes Highways, Rebuilds Bridges, and Upgrades Ports, Airports, and Transit Systems.** The President's plan would: modernize 20,000 miles of highways, roads, and main-streets; fix the 10 most economically significant bridges in the Nation in need of reconstruction; repair the worst 10,000 smaller bridges, providing critical linkages to communities; replace thousands of buses and rail cars; repair hundreds of stations; renew airports; modernize ports of entry; and expand transit and rail into new communities.

**Delivers Clean Drinking Water, a Renewed Electric Grid, and High-Speed Broadband to All Americans.** The President's plan would eliminate all lead pipes and service lines in drinking water systems, improving the health of the Nation's children and communities of color. It would put hundreds of thousands of people to work laying thousands of miles of transmission lines and capping hundreds of thousands of orphan oil and gas wells and abandoned mines. It would also bring affordable, reliable, high-speed broadband to every household, including the more than 35 percent of rural families who lack access to broadband infrastructure, the millions of families paying too much for broadband, and the millions of low-income and marginalized communities left behind by digital redlining and the digital divide.

**Builds, Preserves, and Retrofits More than Two Million Homes and Commercial Buildings, Modernizes the Nation's Schools and Child Care Facilities, and Upgrades Veterans' Hospitals and Federal Buildings.** The President's plan would create good jobs by building, rehabilitating, and retrofitting affordable, accessible, energy efficient, and resilient housing, commercial buildings, schools, and child care facilities all over the Nation while also vastly improving the Nation's Federal facilities, especially those that serve veterans.

**Solidifies the Infrastructure of America's Care Economy by Creating Jobs and Raising Wages and Benefits for Essential Home Care Workers.** These workers—the majority of whom are women of color—have been underpaid and undervalued for too long. The President's plan makes substantial investments in the infrastructure of America's care economy, starting by creating new and better jobs for caregiving workers. It would provide home and community-based care for individuals who otherwise would need to wait as many as five years to get the services they badly need. The President also looks forward to working with the Congress on other policies to improve economic security and access to health-care for seniors and people with disabilities.

**Revitalizes Manufacturing, Secures U.S. Supply Chains, Invests in R&D, and Trains Americans for the Jobs of the Future.** The President's plan would ensure that the best, diverse minds in America are put to work creating the innovations of the future while creating hundreds of thousands of quality jobs today. American workers would build and make things in every part of the Nation, and they would be trained for well-paying, middle-class jobs using evidence-based approaches such as sector-based training and registered apprenticeships.

**Creates Good-Quality Jobs that Pay Prevailing Wages in Safe and Healthy Workplaces while Ensuring Workers Have a Free and Fair Choice to Organize, Join a**

**Union, and Bargain Collectively with Their Employers.** To ensure that American taxpayers' dollars benefit working families and their communities, and not multinational corporations or foreign governments, the plan requires that goods and materials are made in America and shipped on U.S.-flag, U.S.-crewed vessels. The plan also would ensure that Americans, especially those who have endured systemic discrimination and exclusion for generations, finally have a fair shot at obtaining good-paying jobs with: a choice to join a union; higher and equal pay; safe and healthy workplaces; and workplaces free from racial, gender, and other forms of discrimination and harassment.

**Restructures the Corporate Tax Code to Ensure that Wealthy Corporations Pay Their Fair Share and Invest Here at Home.** Alongside the American Jobs Plan, the President has put forward a Made in America tax plan that would reward investment at home, stop profit shifting, and ensure other nations would not gain a competitive edge by becoming tax havens. The key components of the Made in America tax plan include a 28-percent corporate tax rate and a global minimum tax alongside a strong incentive for other countries to enact reasonable minimum taxes as well. The plan also includes measures to prevent corporate inversions and offshoring, as well as a new minimum tax on corporate book income to ensure that massive, profitable companies can no longer get away with paying no Federal income tax. In addition, the plan also eliminates tax preferences for fossil fuels. This is a generational opportunity to fundamentally shift how countries around the world tax corporations so that big corporations cannot escape or eliminate the taxes they owe by offshoring jobs and profits.

### ***The American Families Plan***

To complement the American Jobs Plan and help extend the benefits of economic growth to all Americans, the Budget also includes the American Families Plan—a historic investment to: help families cover the basic expenses that so many struggle with now; lower health insurance

premiums; and continue the historic reductions in child poverty in the American Rescue Plan Act of 2021 (American Rescue Plan). Together, these plans reinvest in the future of the American economy and American workers and would help the Nation out-compete China and other countries around the world. Specifically, the President's American Families Plan:

**Adds at Least Four Years of Free Education.** Investing in education is a down payment on the future of America. As access to high school became more widely available at the turn of the 20<sup>th</sup> Century, it made America the best-educated and best-prepared Nation in the world. Yet, everyone knows that 12 years is not enough today. The American Families Plan would make transformational investments from early childhood to postsecondary education so that all children and young people are able to grow, learn, and gain the skills they need to succeed. It would provide universal access to high-quality preschool to all three- and four-year-olds, led by a well-trained and well-compensated workforce. It would provide Americans two years of free community college. It would invest in making college more affordable for low- and middle-income students, including students at Historically Black Colleges and Universities (HBCUs), Tribal Colleges and Universities (TCUs), and Minority-Serving Institutions (MSIs) such as Hispanic-Serving Institutions (HSIs) and Asian American and Native American Pacific Islander-Serving Institutions. It would also invest in America's teachers and students, improving teacher training and support so that schools become engines of growth at every level.

**Provides Direct Support to Children and Families.** The Nation is strongest when everyone has the opportunity to join the workforce and contribute to the economy. However, many workers struggle to both hold a full-time job and care for themselves and their families. The American Families Plan would provide direct support to families to ensure that low- and middle-income families spend no more than seven percent of their income on child care, and that the child care they access is of high-quality and provided by a

well-trained and well-compensated child care workforce. It would also provide direct support to workers and families by creating a national comprehensive paid family and medical leave program that would bring the American system in line with competitor nations that offer paid leave programs. A comprehensive paid family and medical leave program would allow workers to take the time they need to bond with a new child, to care for their own serious illness, and to care for a seriously ill loved one. The system would also allow people to manage their health and the health of their families. The plan would also make investments to improve maternal health and provide critical nutrition assistance to families who need it most and expand access to healthy meals to the Nation's students—dramatically reducing childhood hunger.

**Extends Tax Cuts for Families with Children and American Workers.** While the American Rescue Plan provided critical help to hundreds of millions of Americans, too many families and workers feel the squeeze of too-low wages and the high costs of meeting their basic needs and aspirations. At the same time, the wealthiest Americans continue to get further and further ahead. The American Families Plan would extend key tax cuts in the American Rescue Plan that benefit lower- and middle-income workers and families, including the expansions of the Child Tax Credit, the Earned Income Tax Credit, and the Child and Dependent Care Tax Credit. In addition to making it easier for families to make ends meet, tax credits for working families have been shown to boost child academic and economic performance over time. The American Families Plan would also extend the expanded health insurance tax credits in the American Rescue Plan. These credits are providing premium relief that is lowering health insurance costs by an average of \$50 per person per month for more than nine million people, and would enable millions of uninsured people to gain coverage.

Leading economic research has shown that the investments proposed in the American Families Plan would yield significant economic returns—boosting productivity and economic growth,

producing a larger, more productive, and healthier workforce on a sustained basis, and generating savings to States and the Federal Government. A recent review indicates that every dollar invested in early childhood programs resulted in an estimated range of \$2.50 to \$10.80 in benefits as children grew up healthier, were more likely to graduate high school and college, and earned more as adults. A 2020 study by Nobel Laureate James Heckman found that every dollar invested in a high-quality, birth until age five program for the most economically disadvantaged children resulted in \$7.30 in benefits. Paid leave has been shown to keep mothers in the workforce, increasing labor force participation and boosting economic growth. In addition, sustained tax credits for families with children have been found to yield a lifetime of benefits, ranging from higher educational attainment to higher lifetime earnings.

**Supports Tax Reform that Rewards Work—Not Wealth.** The American Families Plan also includes commonsense reforms to the income tax code that would rebalance the tax system away from special preferences for wealth and toward fair treatment regardless of the type of income. The President's tax agenda would not only reverse some of the biggest 2017 tax law giveaways, but would reform the tax code so that the wealthy have to play by the same rules as everyone else. It would ensure that high-income Americans pay the tax they owe under the law—ending the unfair system of enforcement that collects almost all taxes due on wages, while regularly collecting a smaller share of business and capital income. The plan would also eliminate long-standing loopholes, including lower taxes on capital gains and dividends for the wealthy, which reward wealth over work. Importantly, these reforms would also rein in the ways that the tax code widens racial disparities in income and wealth.

### ***Reinvesting in the Foundations of the Nation's Strength***

The American Jobs Plan and the American Families Plan represent once-in-a-generation investments in the Nation's future that would create jobs, grow the middle class, and expand the

benefits of economic growth to all Americans. To truly build back better, the Nation must also begin to reinvest in core functions of Government and the foundations of the Nation's strength—and that is exactly what the Budget does.

Over the past decade, due in large measure to overly restrictive budget caps, the Nation significantly underinvested in crucial public services, benefits, and protections. Since 2010, non-defense discretionary funding has shrunk significantly as a share of the economy.

The consequences of this broad disinvestment are plain to see. Anticipating, preparing for, and fighting a global pandemic requires a robust public health infrastructure. Yet, going into the COVID-19 pandemic, funding for the Centers for Disease Control and Prevention (CDC) was 10 percent lower than a decade ago, adjusted for inflation. Creating an economy that works for everyone—including rural, urban, and tribal communities—requires investments in working families who drive growth and prosperity. However, the Government has chronically underinvested in crucial programs such as Head Start, which serves 95,000 fewer children today than it did a decade ago. Responding to the climate crisis

depends on helping communities transition to a cleaner future. Instead of investing in climate science and technology at the Environmental Protection Agency (EPA), funding has been reduced by 27 percent since 2010, adjusted for inflation.

The President believes now is the time to begin reversing this trend—and the expiration of nearly a decade of budget caps presents a unique opportunity to do so. That is why the Budget includes targeted discretionary investments across a range of key areas—from improving America's public health infrastructure and improving education, to tackling the climate crisis and fostering economic growth and security, to restoring America's global standing and confronting 21<sup>st</sup> Century security challenges.

Overall, the Budget would restore non-defense discretionary funding to 3.3 percent of Gross Domestic Product, roughly equal to the historical average over the last 30 years, while providing robust funding for national defense as well as for other instruments of national power—including diplomacy, development, and economic statecraft—that enhance the effectiveness of national defense spending and promote national security.

## EXPANDING OPPORTUNITY

The American Jobs Plan and the American Families Plan would boost worker productivity, invest in American ingenuity, create good-paying jobs, and provide real opportunity and security for millions of families. Those plans are complemented by the Budget's additional foundational investments. Together, this suite of policies would contribute to a stronger, more inclusive economy over the long term by: advancing economic dignity, equity, and security for all Americans; expanding opportunity; and creating good-paying jobs.

### *Improving Education*

**Makes Historic Investments in High-Poverty Schools.** Addressing entrenched disparities

in education is both a moral and economic imperative. That is why the Budget proposes a historic \$36.5 billion investment in Title I grants, a \$20 billion increase from the 2021 enacted level. This investment would provide under-resourced schools with the funding needed to deliver a high-quality education to all of their students by ensuring teachers at Title I schools are paid competitively, providing equitable access to a rigorous curriculum, increasing access to preschool, and providing meaningful incentives for States to examine and address inequalities in school funding systems.

**Expands Access to Affordable Early Child Care and Learning.** To lay the foundation for

the major long-term investments in the American Families Plan, the Budget includes \$7.4 billion for the Child Care and Development Block Grant, an increase of \$1.5 billion from the 2021 enacted level, to expand access to quality, affordable child care for families across the Nation, as well as an \$11.9 billion investment in Head Start, a \$1.2 billion increase, which would ensure more children start kindergarten ready to learn on day one. The Administration would also work with States to ensure that these resources support increased wages for early educators and family child care providers, the majority of whom are women of color.

**Boosts Support for Children with Disabilities.** To ensure that children with disabilities have the opportunity to thrive, the Budget includes \$16 billion, a \$2.7 billion increase from the 2021 enacted level, for Individuals with Disabilities Education Act (IDEA) grants that would support special education and related services for more than 7.6 million preschool through grade 12 students. This is a significant first step toward fully funding IDEA. The Budget also provides \$732 million for early intervention services for infants and toddlers with disabilities or delays, funding services that have a proven record of improving academic and developmental outcomes. The \$250 million increase for early intervention services would be paired with reforms to expand access to these services for underserved children, including children of color and children from low-income families.

**Prioritizes the Physical and Mental Well-Being of Students.** Recognizing the profound effect of physical and mental health on academic achievement, the Budget provides \$1 billion in addition to the resources in the American Rescue Plan, to increase the number of counselors, nurses, and mental health professionals in schools. In addition, the Budget provides \$443 million for Full Service Community Schools, which play a critical role in providing comprehensive wrap-around services to students and their families, from afterschool programs, to adult education opportunities, to health and nutrition services.

**Increases Pell Grants and Expands Institutional and Student Supports.** The Budget provides discretionary funding to increase the maximum Pell Grant by \$400—the largest one-time increase since 2009. This increase, together with the \$1,475 Pell Grant increase in the American Families Plan, represents a significant first step to deliver on the President’s goal to double the grant. The Budget also increases discretionary funding, and provides funding first proposed under the American Families Plan, to expand institutional and student supports at community colleges, HBCUs, TCUs, and MSIs. The Administration also looks forward to working with the Congress on changes to the Higher Education Act of 1965 that ease the burden of student debt, including through improvements to the Income Driven Repayment and Public Service Loan Forgiveness programs.

### *Advancing Dignity, Equity, and Security*

**Expands Opportunities for Minority-Owned Businesses.** To help address longstanding racial inequity and eliminate barriers for minority-owned firms, the Budget includes \$70 million, an increase of \$22 million, to fund investments in economic development grants and research to ensure policies effectively support the minority business community. In addition, the Budget provides \$330 million, an increase of 22.2 percent above the 2021 enacted level, to support expanding the role of Community Development Financial Institutions (CDFIs), which offer loans to start-ups and small businesses to promote the production of affordable housing and community revitalization projects. This investment builds on an unprecedented level of support for the CDFI industry in 2021, including more than \$3 billion in direct funding, \$9 billion for investments in depository and credit union CDFIs and Minority Depository Institutions, and provisions in the American Rescue Plan encouraging CDFI participation in the \$10 billion State Small Business Credit Initiative.

**Increases Rural Outreach and Connectivity.** The Budget provides \$32 million for a renewed and expanded initiative, StrikeForce, to

help people in high poverty rural communities tap into Federal resources. The Budget also provides an increase of \$65 million from the 2021 enacted level for the Rural e-Connectivity Program “Reconnect” for rural broadband. The Budget also includes \$318 million for regional commissions, which provide economic development assistance in distressed, rural communities through infrastructure investments, workforce development, and other activities.

**Spurs Infrastructure Modernization and Rehabilitation in Marginalized Communities.** The Budget provides \$3.8 billion for the Community Development Block Grant program, which includes a targeted increase of \$295 million for the modernization and rehabilitation of public infrastructure and facilities, such as recreational centers and commercial corridor improvements, in historically underfunded and marginalized communities facing persistent poverty.

**Supports Transportation Equity.** The Budget includes significant funding for major discretionary competitive grant programs, including Rebuilding American Infrastructure with Sustainability and Equity transit Capital Investment Grants, and Port Infrastructure Development grants. In addition, the Budget invests in rail as a down-payment to the President’s commitment to passenger rail. The Budget also proposes \$110 million for a new Thriving Communities initiative, which would foster transportation equity by providing capacity building grants to underserved communities. These programs would ensure that more communities have cleaner, robust, and affordable transportation options, including high-quality transit, equitable transit-oriented development, and other enhancements to improve neighborhood quality of life and address climate change.

**Ensures Workers’ Health, Safety, and Rights Are Protected.** The Budget provides increased funding to the worker protection agencies in the Department of Labor to ensure workers are treated with dignity and respect in the workplace.

The Administration is also committed to ending the abusive practice of misclassifying employees as independent contractors, which deprives these workers of critical protections and benefits. In addition to including funding in the Budget for stronger enforcement, the Administration intends to work with the Congress to develop comprehensive legislation to strengthen and extend protections against misclassification across appropriate Federal statutes.

**Strengthens the Unemployment Insurance System.** The COVID-19 pandemic triggered an economic crisis that has left millions of Americans relying on unemployment insurance and exposed major flaws and gaps in how the system is administered. To correct for these weaknesses and address chronic delays, the Budget includes significant support to modernize and improve States’ administration of the program and to help unemployed workers return to work, building on investments included in the American Rescue Plan and setting the stage for broad changes to modernize the program. This includes reforming the unemployment insurance system so it provides adequate benefits in every State, automatically responds to downturns, reflects the modern economy and labor force, uses more equitable and progressive financing mechanisms, and provides expanded reemployment services. Reform must also ensure that unemployment insurance benefits are both more accessible and less vulnerable to fraud, including from sophisticated criminal rings.

**Advances Equity in Child Welfare.** The Budget proposes \$100 million in new competitive grants to advance racial equity in the child welfare system and reduce unnecessary child removals. The Budget also increases funding for State and local child abuse prevention programs by over 30 percent compared to the 2021 enacted level. The Administration is also interested in working with the Congress to enact further child welfare reforms that advance equity, improve children’s well-being, and ensure all children, birth families, and prospective kinship, foster, and adoptive parents are served equitably and with dignity.

### ***Expanding Housing Opportunity and Reducing the Racial Wealth Gap***

**Extends Housing Vouchers to 200,000 More Families.** At a time when millions of families are struggling to pay their rent or mortgage, the Budget proposes to provide \$30.4 billion for Housing Choice Vouchers, expanding vital housing assistance to 200,000 more families with a focus on those who are homeless or fleeing domestic violence. The President looks forward to working with the Congress to build on this investment and achieve the long-term goal of providing housing vouchers to all eligible households, while increasing the program's impact on equity and poverty alleviation.

**Accelerates Efforts to End Homelessness.** The Budget builds on important provisions included in the American Rescue Plan by providing a \$500 million increase for Homeless Assistance Grants to support more than 100,000 households—including survivors of domestic violence and homeless youth, helping prevent and reduce homelessness.

**Enhances Household Mobility and Neighborhood Choice.** In addition to expanding the Housing Choice Voucher program to serve 200,000 more families, the Budget includes funding for mobility-related supportive services to provide low-income families who live in concentrated areas of poverty with greater options to move to higher-opportunity neighborhoods.

**Supports Access to Homeownership and Pandemic Relief.** The Budget supports access to homeownership for underserved borrowers through the Federal Housing Administration's (FHA) mortgage insurance programs. FHA is a crucial source of mortgage financing for first-time and minority homebuyers, who accounted for 83 percent and 37 percent, respectively, of FHA home purchase loans in 2020. In addition, through its expanded and streamlined loss mitigation program, FHA continues to provide urgent relief to homeowners suffering financially due to the COVID-19 pandemic.

**Invests in Affordable Housing in Tribal Communities.** Native Americans are seven times more likely to live in overcrowded conditions and five times more likely to have plumbing, kitchen, or heating problems than all U.S. households. The Budget helps address the poor housing conditions in tribal areas by providing \$900 million to fund tribal efforts to expand affordable housing, improve housing conditions and infrastructure, and increase economic opportunities for low-income families.

### ***Creating Jobs and Growth—Now and for the Future***

**Supports a Future Made in America.** The President is committed to ensuring the future is made in America by all of America's workers. The American Jobs Plan proposes transformative new funding for manufacturing programs at the National Institute of Standards and Technology (NIST), and the Budget complements those investments with additional discretionary funding, enabling the establishment of two new Manufacturing Innovation Institutes, in addition to institutes previously launched by the Departments of Defense (DOD) and Energy (DOE). The Budget also nearly doubles funding for the Manufacturing Extension Partnership to boost the competitiveness of small and medium manufacturers.

**Renews America's Commitment to R&D.** The Budget proposes historic increases in funding for foundational R&D across a range of scientific agencies—including the National Science Foundation (NSF), the National Aeronautics and Space Administration (NASA), DOE, NIST, and others—to help spur innovation across the economy and renew America's global leadership. These investments would: accelerate discoveries that would transform America's understanding of the solar system and universe; launch the next generation of satellites to study and improve life on Earth; and support upgrades to cutting-edge scientific user facilities at DOE national laboratories to build climate and clean energy research programs and train the next generation of scientists at HBCUs and MSIs. This funding, combined

with the investments proposed as part of the American Jobs Plan, would firmly reestablish the United States as a global leader in R&D.

### ***Committing to Criminal Justice Reform and Redressing Longstanding Injustice***

**Reforms the Federal Criminal Justice System.** The Budget supports key investments in First Step Act of 2018 (FSA) implementation, advancing the provision of high-quality substance use disorder treatment, reentry services, and recidivism reduction programming. Building on the bipartisan FSA, the Budget also incorporates savings from prison population reduction measures that prioritize incarceration alternatives for low-risk offenders.

**Invests in Community Policing, Police Reform, and Other Efforts to Address Systemic Inequities.** The Administration will take bold action to root out systemic inequities in the Nation's justice system. In addition to investing in programs that support community-oriented policing and practices, the Budget also proposes to expand grants that support efforts to reform State and local criminal justice systems, including funding to support juvenile justice programs, drug courts and alternative court programs, public defenders, and Second Chance Act of 2007 programs.

**Invests in Civil Rights Offices across Government.** The Budget supports significant increases for civil rights offices and activities across Federal agencies to ensure that the Nation's laws are enforced fairly and equitably.

**Promotes State and Local Efforts to Prevent and Redress Housing Discrimination.** The Budget provides \$85 million in grants to support State and local fair housing enforcement organizations and to further education, outreach, and training on rights and responsibilities under Federal fair housing laws. The Budget also invests in the Department of Housing and Urban Development (HUD) staff and operations capacity to deliver on the President's housing priorities, including commitments outlined in the Presidential Memorandum on Redressing Our Nation's and the Federal Government's History of Discriminatory Housing Practices and Policies.

**Makes Major Investments in Environmental Justice.** For decades, low-income and marginalized communities have been overburdened with air pollution and other environmental hazards. The Budget includes a 44-percent increase in funding for EPA's Brownfields program, which would enable States to clean up contaminated properties and assist them in turning idle properties into hubs for economic revitalization. The Budget provides \$400 million for HUD's Lead Hazard and Healthy Homes grants, which enable State and local governments and nonprofits to reduce lead-based paint and other health hazards in the homes of low-income families with young children. The Budget provides \$5 million to the Department of Justice (DOJ) to allow the Environment and Natural Resources Division to increase affirmative casework related to environmental justice.

## **INVESTING IN PUBLIC HEALTH INFRASTRUCTURE**

The United States faces no more urgent task than defeating the COVID-19 pandemic. That is why the American Rescue Plan included vital funding to set up community vaccination sites nationwide, scale up testing and tracing, reduce supply shortage problems, support community health centers, address health disparities, and safely

reopen schools. The Budget builds on this foundation by proposing investments to build a healthier, more resilient Nation over the long term, including funding to ensure the Nation is better positioned to prevent and respond to future public health crises, help defeat other diseases and epidemics, and invest in cutting-edge medical research.

### ***Strengthening Public Health Infrastructure and Meeting Crisis-Related Needs***

**Improves Readiness for Future Public Health Crises.** The Budget includes \$8.7 billion in discretionary funding for CDC—the largest budget authority increase in nearly two decades—to restore capacity at the world’s preeminent public health agency. Building on the investments in the American Rescue Plan, CDC would use this additional funding to support core public health capacity improvements in States and Territories, modernize public health data collection nationwide, train new epidemiologists and other public health experts, and rebuild international capacity to detect, prepare for, and respond to emerging global threats.

**Expands Access to Mental Healthcare.** The COVID-19 pandemic has helped expose the strain on the Nation’s mental healthcare system and the need for additional sustained resources. The Budget builds on mental health resources included in the American Rescue Plan by: calling for historic investments, including \$1.6 billion, more than double the 2021 enacted level, for the Community Mental Health Services Block Grant; additional funding to support the needs of those who are involved in the criminal justice system; resources to partner mental health providers with law enforcement; and funds to expand suicide prevention activities.

**Invests in Efforts to End Gender-Based Violence.** The COVID-19 pandemic has exacerbated domestic violence and sexual assault and has compounded the barriers to safety and economic security, creating a “shadow pandemic” for many women and girls who are largely confined to their home with their abuser. To help address this growing crisis, the Budget provides \$1 billion for DOJ Violence Against Women Act of 1994 programs, nearly double the 2021 level, including funding for new programs to expand restorative justice efforts, protect transgender survivors, and support women at HBCUs, HSIs, and TCUs to ensure these institutions have the same resources as other schools to address this pervasive issue.

The Budget also provides a significant increase in funding at the Department of Health and Human Services (HHS) for domestic violence shelters and community-based programs, hotlines, cash assistance for survivors, medical support, and integrated healthcare services. The Administration also looks forward to working with the Congress to expand the new cash assistance program for survivors of domestic violence by providing additional resources beyond 2022.

**Promotes Health Equity for American Indians and Alaska Natives.** To begin redressing long-standing, stark health inequities experienced by American Indians and Alaska Natives, the Budget proposes to dramatically increase funding for the Indian Health Service (IHS) by \$2.2 billion. In addition, to ensure a more predictable funding stream for IHS, the Budget for the first time includes an advance appropriation for IHS in 2023.

**Addresses Racial Disparities in Healthcare.** Building on efforts in the American Rescue Plan to advance equity and reduce health disparities in all healthcare programs, the Budget includes additional funding to expand access to culturally competent care. The Budget also includes \$153 million for CDC’s Social Determinants of Health program to support States and Territories in improving health equity and data collection for racial and ethnic populations. The Administration also looks forward to working with the Congress to advance the President’s goal of doubling the Federal investment in community health centers, which would help reduce health disparities by expanding access to care.

**Reduces Maternal Mortality Rate and Ends Race-Based Disparities in Maternal Mortality.** The United States has the highest maternal mortality rate among developed nations, with an unacceptably high mortality rate for Black, American Indian/Alaska Native, and other women of color. To help end this high rate of maternal mortality and race-based disparities in outcomes among birthing people—and in addition to the investment in maternal health included in the American Families Plan—the

Budget includes more than \$200 million to: reduce maternal mortality and morbidity rates nationwide; bolster Maternal Mortality Review Committees; expand the Rural Maternity and Obstetrics Management Strategies program; help cities place early childhood development experts in pediatrician offices with a high percentage of Medicaid and Children’s Health Insurance Program patients; implement implicit bias training for healthcare providers; and create State pregnancy medical home programs.

### ***Defeating Other Diseases and Epidemics***

**Launches Advanced Research Projects Agency for Health (ARPA-H).** The Budget includes a major investment of \$6.5 billion to launch ARPA-H, which would provide significant increases in direct Federal R&D spending in health. With an initial focus on cancer and other diseases such as diabetes and Alzheimer’s, this major investment in Federal R&D would drive transformational innovation in health research and speed application and implementation of health breakthroughs. This funding is part of a \$51 billion request for the National Institutes of Health (NIH) to continue to support research that enhances health, lengthens life, and reduces illness and disability.

**Makes a Major Investment to Help End the Opioid Epidemic.** The opioid epidemic has shattered families, claimed lives, and ravaged communities across the Nation—and the COVID-19 pandemic has only deepened this crisis. That is why the Budget includes a historic investment of \$10.7 billion in discretionary funding in HHS, an increase of \$3.9 billion over the 2021 enacted level, to support research, prevention, treatment, and recovery support services, with targeted investments to support populations with unique needs, including Native Americans, older Americans, and rural populations. The Budget also includes \$621 million specific to the Department of Veterans Affairs’ (VA’s) Opioid

Prevention and Treatment programs, including programs in support of the Jason Simcakoski Memorial and Promise Act.

**Combats the Gun Violence Public Health Epidemic.** The Budget includes \$2.1 billion, an increase of \$232 million above the 2021 enacted level, for DOJ to address the gun violence public health crisis plaguing communities across the Nation. Investments include \$401 million in State and local grants, an increase of \$162 million or 68 percent. This level supports existing programs to improve background check systems, and invests in new programs to incentivize State adoption of gun licensing laws and establish voluntary gun buyback pilot programs. In addition, a total of \$1.6 billion is provided to the Bureau of Alcohol, Tobacco, Firearms, and Explosives, an increase of \$70 million or five percent over the 2021 enacted level, to oversee the safe sale, storage, and ownership of firearms and to support the Agency’s other work to fight violent crime. The Budget request for HHS doubles funding for firearm violence prevention research at CDC and NIH. Combined, the Budget includes \$200 million in discretionary resources for DOJ and HHS to support a new Community Violence Intervention initiative to implement evidence-based community violence interventions locally, which may include hospital-based interventions. In addition to these amounts, the Budget supports the American Jobs Plan proposal for \$5 billion in total mandatory resources from 2023 to 2029 to provide long-term support for the Community Violence Intervention initiative.

**Commits to Ending the HIV/AIDS Epidemic.** To help accelerate and strengthen efforts to end the HIV/AIDS epidemic in the United States, the Budget includes \$670 million within HHS to help aggressively reduce new HIV cases while increasing access to treatment, expanding the use of pre-exposure prophylaxis, also known as PrEP, and ensuring equitable access to services and supports.

## TACKLING THE CLIMATE CRISIS

Climate change is one of the greatest challenges of our time. It is also an opportunity to create new industries and good-paying jobs with a free and fair choice to join a union, revitalize America's energy communities and the economy, and position America as the world's clean energy superpower. In addition to the American Jobs Plan, the Budget includes more than \$36 billion of investments to combat climate change—an increase of more than \$14 billion compared to 2021—by investing in resilience and clean energy, enhancing U.S. competitiveness, and putting America on a path to achieve net-zero emissions no later than 2050—all while supporting communities that have been left behind and ensuring that 40 percent of the benefits from tackling the climate crisis are targeted toward addressing the disproportionately high cumulative impacts on disadvantaged communities.

### *Building Clean Energy Projects and Investing in Resilience*

**Improves Energy Efficiency, Safety, and Resilience of Low-Income Homes and Public Buildings.** The Budget invests \$1.7 billion in energy saving retrofits to homes, schools, and Federal buildings. This investment includes \$800 million in new investments across HUD programs for rehabilitation and modernization to further climate resilience and energy efficiency, which would lower the costs and improve the quality of public and HUD-assisted housing, and \$400 million at DOE for the weatherization of low-income homes.

**Creates Good-Paying Jobs Building Clean Energy Projects.** Transforming the U.S. electricity sector—and electrifying an increasing share of the economy—represents one of the biggest job creation and economic opportunity engines of the 21<sup>st</sup> Century. That is why the Budget provides \$2 billion to put welders, electricians, and other skilled laborers to work building clean energy projects across the Nation. This investment supports a historic energy efficiency and clean electricity standard that would transform

the electric sector to be carbon-pollution free by 2035 while creating good-paying union jobs.

**Invests in Climate Resilience and Disaster Planning.** The Budget provides \$815 million—a \$540 million increase above the 2021 enacted level—to incorporate climate impacts into pre-disaster planning and projects to ensure that the Nation is rebuilding smarter and safer for the future. The Budget also provides more than \$1.2 billion above the 2021 enacted level to increase the resilience of ecosystems and communities across the Nation to wildfires, flooding, and drought, including an additional \$100 million for CDC's Climate and Health program. Consistent with the President's national conservation goal and the America the Beautiful initiative, the Budget also makes critical investments to help communities conserve important lands and waters, expand access to the outdoors for underserved communities, and deploy natural solutions to climate change.

**Helps Tribal Nations Address the Climate Crisis.** Tribal communities are particularly vulnerable to the impacts of climate change, which threatens their cultural and economic well-being. The Budget provides an increase of more than \$450 million to facilitate climate mitigation, resilience, adaptation, and environmental justice projects in Indian Country, including investment to begin the process of transitioning tribal colleges to renewable energy.

**Increases Demand for American Made, Zero-Emission Vehicles through Federal Procurement.** To provide an immediate, clear, and stable source of demand to help accelerate American industrial capacity to produce clean vehicles and components, the Budget includes \$600 million for electric vehicles and charging infrastructure in the individual budgets of 18 Federal agencies, including dedicated funds at the General Services Administration for other agencies and for the United States Postal Service charging infrastructure. This discretionary investment is one component of an overarching effort—combined with funding in the American

Jobs Plan—to leverage Federal procurement to create good-paying union jobs, and enable a clean transportation future.

### ***Helping Communities Left Behind***

**Makes the Largest Investment in Environmental Justice in History.** To support marginalized and overburdened communities across the Nation, the Budget invests more than \$1.4 billion, including \$936 million toward a new Accelerating Environmental and Economic Justice initiative at EPA. The initiative would create good-paying union jobs, clean up pollution, and secure environmental justice for communities that have been left behind. In order to hold polluters accountable, the initiative includes \$100 million to develop a new community air quality monitoring and notification program, which would provide real-time data in the places with the highest levels of exposure to pollution.

**Propels an Effort to Create 250,000 Jobs Remediating Abandoned Wells and Mines.** The Budget includes over \$580 million to remediate thousands of abandoned oil and gas wells and reclaim abandoned mines. This more than triples the current annual discretionary funding, building on the President’s commitment to create 250,000 good-paying union jobs for skilled technicians and operators in some of the hardest hit communities in the Nation, while cleaning up hazardous sites. In line with the stated goals of this Administration, the Budget more than doubles funding for the Economic Development Administration’s (EDA) Assistance to Coal Communities program. EDA’s efforts are part of the work of the new Interagency Working Group on Coal and Power Plant Communities and Economic Revitalization, and complement other targeted investments across the Federal Government to help spur economic revitalization, create jobs, and support workers in hard-hit coal, oil and gas, and power plant communities.

**Creates Jobs Improving Critical Water Infrastructure.** Clean, safe drinking water should be a right in all communities—rural and urban, rich and poor. That is why the American

Jobs Plan would replace every lead service line in America. The Budget also includes significant funding—\$3.6 billion—that could be used to advance water infrastructure improvement efforts for community water systems, schools, and households. These water infrastructure improvement efforts include repairing up to 180,000 septic systems, as well as broader efforts to improve drinking water and waste water infrastructure, while creating good-paying construction jobs that pay at least the prevailing wage across the Nation and in tribal communities.

**Partners with Rural America to Grow Rural Economies and Tackle Rural Poverty.** The Budget includes a number of proposals to invest in and create opportunities for rural Americans. This includes more than \$300 million in new investments in the next generation of agriculture and conservation, including support for voluntary private lands conservation as part of the America the Beautiful initiative, renewable energy grants and loans, and the creation of a Civilian Climate Corps to create a new pathway to good-paying jobs in rural America. The Budget also supports \$6.5 billion in lending to support additional clean energy, energy storage, and transmission projects in rural communities.

### ***Increasing Competitiveness through Investments in Innovation and Science***

**Advances Climate Science and Sustainability Research.** The Budget proposes over \$4 billion to fund a broad portfolio of research across multiple agencies including the Department of the Interior, NASA, NSF, and others to improve understanding of the changing climate and inform adaptation and resilience measures.

**Spurs Innovation in Clean Energy Technologies.** The Budget invests more than \$10 billion—a nearly 30-percent increase over 2021—in clean energy innovation across non-defense agencies. These investments would help transform the Nation’s electric, transportation, buildings, and industrial sectors to achieve a net-zero carbon economy by 2050.

**Drives Breakthrough Solutions in Climate Innovation.** The Budget includes a total of \$1 billion to create a new Advanced Research Projects Agency for Climate and invests in the existing Advanced Research Projects Agency-Energy. Together, these initiatives would support high-risk, high-reward solutions for adaptation, mitigation, and resilience against the climate crisis and enable robust investments in clean energy technology R&D.

**Expands Observations, Research, and Climate Services.** The Budget includes \$7 billion for the National Oceanic and Atmospheric Administration (NOAA), an increase of \$1.5 billion from the 2021 enacted level. These additional funds would allow NOAA to: expand its climate observation and forecasting work and provide better data and information to decisionmakers; support coastal resilience programs that would help protect communities from the economic and environmental impacts of climate change; and

invest in modern infrastructure to enable these critical efforts.

### *Leading the World toward Achieving the Objectives of the Paris Agreement on Climate*

**Supports Global Emissions Reductions.** To accelerate progress toward the Paris Agreement targets, the Budget includes a \$1.2 billion contribution to the Green Climate Fund—the first American contribution since 2017—to help developing countries reduce emissions and adapt to climate change. The Budget also proposes \$485 million to support other multilateral climate initiatives, including \$100 million for international climate adaptation programs. The Budget provides approximately \$700 million for the Department of State and U.S. Agency for International Development to assist developing countries in adapting to climate disruptions, expanding clean energy production, and reducing landscape emissions.

## CONFRONTING 21<sup>ST</sup> CENTURY SECURITY CHALLENGES

From the COVID-19 pandemic to climate change, from the growing ambitions of China to the many global threats to democracy, successfully addressing global challenges will require working alongside and in partnership with other nations. After years of neglect, the Budget makes critical investments in diplomacy and development that would restore the health and morale of the Nation’s foreign policy institutions, as well as America’s relationships with key partners and allies. Diplomacy would once again be a centerpiece of American foreign policy, and America would once again be a leader on the world stage.

**Renews American Leadership and Mobilizes Global Action.** The Budget proposes re-investing in the Nation’s diplomatic corps and providing funding to support U.S. commitments to the World Health Organization, the United Nations (UN) Population Fund, and the UN High Commissioner for Human Rights, while continuing to press for needed reforms. The Budget also

provides \$1 billion in foreign assistance to bring an end to the COVID-19 pandemic and expand global health security activities, including to establish Global Health Security Agenda capacity-building programs in additional nations and increase investments in crosscutting research and viral discovery programs to detect and stamp out future infectious disease outbreaks. These funds would also support a new health security financing mechanism, developed alongside U.S. partners and allies, to ensure global readiness to respond to the next outbreak. In addition, recognizing that no single nation can meet the challenge of climate change alone, the Budget provides \$2.5 billion for international climate programs to help rally the world against this urgent threat, restore U.S. leadership, and catalyze new climate pledges.

**Counters 21<sup>st</sup> Century Challenges and Threats.** The Budget prioritizes the need to counter the threat from China while also deterring destabilizing behavior by Russia. Leveraging the

Pacific Deterrence Initiative and working together with allies and partners in the Indo-Pacific region and the North Atlantic Treaty Organization, DOD would ensure that the United States builds the concepts, capabilities, and posture necessary to meet these challenges. To ensure the United States plays a lead role in defending democracy, freedom, and the rule of law, the Budget also includes a significant increase in resources to: strengthen and defend democracies throughout the world; advance human rights; fight corruption; and counter authoritarianism. In addition, to support agencies as they modernize, strengthen, and secure antiquated information systems and bolster Federal cybersecurity, the Budget provides \$500 million for the Technology Modernization Fund, an additional \$110 million for the Cybersecurity and Infrastructure Security Agency, and \$750 million in additional investments tailored to respond to lessons learned from the SolarWinds incident.

**Strengthens the Nation’s Immigration and Asylum Systems.** The Budget proposes resources to implement a fair, orderly, and humane immigration system. This includes resources necessary to fulfill the President’s commitment to rebuild the Nation’s badly damaged refugee admissions program and support up to 125,000 admissions in 2022. In addition, the Budget provides over \$10 billion in humanitarian assistance to support vulnerable people abroad, including refugees and conflict victims. The Budget also

includes resources to address the naturalization and asylum backlogs, support non-profit legal service providers to help vulnerable populations, and fund non-profit case management programs. The Budget would also revitalize U.S. leadership in Central America as part of a comprehensive strategy to address the root causes of irregular migration from Central America to the United States, providing \$861 million in assistance to the region. These specific investments complement the President’s legislative efforts to provide a path to citizenship for undocumented immigrants and implement an immigration system that welcomes all communities

**Upholds the Nation’s Sacred Obligation to America’s Veterans.** Building on significant investments included in the American Rescue Plan, the Budget proposes \$97.5 billion to improve access to VA healthcare, an increase of \$3.3 billion above the 2022 enacted advance appropriations level, including increases in funding for women’s health, mental health, suicide prevention, and veterans’ homeless programs. The Budget also proposes \$882 million for medical and prosthetic research—including the largest increase in recent history—to advance VA’s understanding of traumatic brain injury, the effects of toxic exposure on long-term health outcomes, and the needs of disabled veterans. In addition, the Budget includes \$394 million to ensure veterans and their families have access to world-class memorial benefits.

## THE PRESIDENT’S HEALTHCARE AGENDA TO LOWER COSTS AND EXPAND AND IMPROVE COVERAGE

The Patient Protection and Affordable Care Act (ACA) made historic progress in expanding and improving health coverage and lowering health costs. The American Rescue Plan built on that progress with the most substantial improvement in healthcare affordability since 2010. For people who obtain coverage through the ACA marketplaces, the American Rescue Plan increased premium tax credits—and extended them to families with incomes above 400 percent of the Federal

poverty level—for two years. These improvements are lowering premiums for more than nine million current enrollees by an average of \$50 per person per month, and would enable millions of uninsured people to gain coverage.

The American Rescue Plan was only a first step to lowering costs and expanding coverage. Building on that progress, the American Jobs Plan invests \$400 billion in strengthening

home- and community-based services for older people and people with disabilities and strengthening the workforce that provides this vital care. The American Families Plan makes permanent the American Rescue Plan's expansion of premium tax credits and makes a historic investment to improve maternal health and mortality.

Beyond these steps, the President also calls on the Congress to take action this year to reduce prescription drug costs and to further expand and improve health coverage. The President's healthcare agenda in these areas includes the following additional policies:

**Lowering the Costs of Prescription Drugs.**

The President supports reforms that would bring down drug prices by letting Medicare negotiate payment for certain high-cost drugs and requiring manufacturers to pay rebates when drug prices rise faster than inflation. These reforms would lower drug costs and save money for Medicare beneficiaries and people with job-based insurance. The reforms could also yield over half a trillion in Federal savings over 10 years, which could help pay for coverage expansions and improvements.

**Improving Medicare, Medicaid, and ACA Coverage.**

Medicare, Medicaid, and the ACA marketplaces provide critical coverage to tens of millions of Americans, but should be strengthened through measures like improving access to dental, hearing, and vision coverage in Medicare, making it easier for eligible people to get and stay covered in Medicaid, and reducing deductibles

for marketplace plans. The President also supports eliminating Medicaid funding caps for Puerto Rico and other Territories while aligning their matching rate with States (and moving toward parity for other critical Federal programs including Supplemental Security Income and the Supplemental Nutrition Assistance Program). Further, evidence shows that we can reform Medicare payments to insurers and certain providers to reduce overpayments and strengthen incentives to deliver value-based care, extending the life of the Medicare Trust Fund, lowering premiums for beneficiaries, and reducing Federal costs.

**Creating Additional Public Coverage Options.**

The President supports providing Americans with additional, lower-cost coverage choices by: creating a public option that would be available through the ACA marketplaces; and giving people age 60 and older the option to enroll in the Medicare program with the same premiums and benefits as current beneficiaries, but with financing separate from the Medicare Trust Fund. In States that have not expanded Medicaid, the President has proposed extending coverage to millions of people by providing premium-free, Medicaid-like coverage through a Federal public option, paired with financial incentives to ensure States maintain their existing expansions.

Healthcare is a right, not a privilege. Families need the financial security and peace of mind that comes with quality, affordable health coverage. In collaboration with the Congress, the President's healthcare agenda would achieve this promise.

## THE IMPACT OF THE PRESIDENT'S POLICIES ON THE NATION'S ECONOMIC AND BUDGET OUTLOOK

The Budget makes the investments needed for economic growth and shared prosperity, while also putting the Nation on a sound fiscal course.

### *Generating Economic Growth and Shared Prosperity*

The Budget makes historic investments that would increase economic prosperity over the coming decade and beyond by increasing American productivity and the number of good-paying American jobs. The President's investments are targeted to the everyday Americans who drive the economy forward. The Budget reflects the basic understanding that workers and families all over the Nation are the engines of America's prosperity and including more people in that prosperity is how the Nation thrives.

The Budget's investments in infrastructure, research, and other areas would make American businesses and workers more productive, and more productive businesses would increase hiring and pay higher wages. Rebuilding the Nation's infrastructure would bridge income and racial gaps in transportation and housing opportunities, create good union jobs, and enable businesses to deliver goods and services more affordably and operate anywhere, including in rural areas that currently lack broadband. Investments in R&D would ensure that the technologies of the future would be created in America by American businesses with American workers. Investments in manufacturing supply chains would make it more profitable to produce critical goods here at home and put more Americans to work in good jobs. In addition, investments to reverse climate change and develop climate resilience would drive technology growth, create millions of well-paying jobs with a free and fair choice to join a union, and mitigate the risk of electricity blackouts and other environmental disasters that disrupt work and cause enormous economic damage.

In addition to raising workers' wages, the Budget makes critical investments that would

increase the total number of American jobs and ensure more of them are good-quality union jobs. A generational investment in America's caregiving infrastructure would enable millions of Americans—disproportionately women—to succeed in the workforce and receive the better pay they deserve as they raise children or care for ailing parents. Long overdue paid family and medical leave would ensure that no American worker is one pregnancy or illness away from losing their paycheck and reduce racial disparities in paid leave. Expanding the Earned Income Tax Credit would make it possible for more people to join and remain in the workforce. Health investments—from providing clean water to upgrading the public health system to expanding health insurance tax credits so that millions of people gain coverage and access to care—would lower mortality and disability and enable more Americans to work long healthy fulfilling careers.

The Budget also makes historic investments in children that would improve their health and well-being in the near term while contributing to economic growth and shared prosperity in the long term. Universal preschool, child nutrition expansions, and tax cuts that lift millions of families with children out of poverty would ensure that all children—not only those from privileged backgrounds or advantaged communities—are set up for success in school and beyond. Historic investments in Title I school funding would help millions of children in low-income families to compete through high school and beyond. Free community college and Pell Grants, along with investments in registered apprenticeships, other labor-management training programs, and other workforce training investments in the American Jobs Plan, would give students the support to build skills directly applicable to good-paying jobs. A large and growing body of research shows that these and similar investments not only yield immediate benefits for children and their families but also improve children's health and well-being and increase their earnings when they reach adulthood, strengthening America's future economy.

Overall, the Budget represents a comprehensive strategy to build an economy that works for everyone, not only the wealthy and well-connected. These investments would pay dividends for decades to come and would help build a high-skilled workforce, spur faster growth, and create more jobs, higher wages, more security, less poverty, less racial inequity, and broader prosperity.

### ***Putting the Nation on a Fiscally Responsible Path***

The Budget charts a fiscally responsible path for delivering a stronger, more prosperous economy. Under the Budget's proposals, the cost of Federal debt payments would remain well below historical levels throughout the coming decade. In response to the Nation's longer-term fiscal challenges, the Budget's proposals would reduce the deficit in later years.

Over the past several decades, interest rates have fallen, even as debt has risen. This has been a widespread, persistent, and global phenomenon, and it has meant that the burden associated with debt has decreased. Given these structural dynamics, the level of interest payments, rather than the size of the debt, is the most relevant benchmark for whether debt is burdening the economy.

Real interest—the Federal Government's annual interest payments after adjusting for inflation—directly measures the economic cost of the debt: the real resources that are going toward paying off old debt, instead of investing in the future.

Real interest has averaged about one percent of the economy since 1980 and was about two percent in the 1990s. Since then, the effective real interest rate on Federal debt has fallen 10-fold, from over 4 percent to 0.4 percent.

As a result, real interest has fallen. Strikingly, in 2021, real interest costs are expected to be negative, due to negative real interest rates. The Budget's economic forecast

anticipates that real interest rates would likely rise over the coming decade, using projections in line with private forecasters. Nonetheless, under the President's policies, including the American Jobs Plan and the American Families Plan, real interest would remain at or below 0.5 percent of the economy throughout the next 10 years, well below the historical average.

In the current economic environment, the Federal Government has the fiscal space to make critical investments to expand the productive capacity of the economy, while also keeping real interest cost burdens low by historical standards. In fact, failing to make investments now that support growth and shared prosperity would leave future generations worse off.

Over the long term, the United States does face fiscal challenges, driven principally by underlying demographic pressures on health and retirement programs and inadequate revenue levels. There is also uncertainty about the interest rate outlook. The Budget's proposals prudently address these future challenges by making sure that new proposals are not only fully offset, but reduce deficits in the long run and improve the long-term fiscal outlook.

The Budget achieves this through reforms to the tax system. The Budget provides reforms to the corporate tax code to incentivize job creation and investment in the United States, stop unfair and wasteful profit shifting to tax havens, ensure that large corporations are paying their fair share, and stop a race-to-the-bottom in corporate tax rates around the world. The Budget also proposes to revitalize tax enforcement to ensure that high-income Americans pay the tax they owe under the law—ending the unfair system of enforcement that collects almost all taxes due on wages, while regularly collecting a smaller share of business and capital income. The plan would eliminate long-standing loopholes, including lower taxes on capital gains and dividends for the wealthy, which reward wealth over work.

Over time, the savings from these reforms would exceed the cost of the investments, and by large and growing amounts. The American Jobs Plan and American Families Plan together are paid for over 15 years. The full set of proposals in the Budget reduce the annual deficit by the end of the 10-year budget window and every year thereafter. In the second decade, the Budget's proposals reduce deficits by over \$2 trillion.

A Budget that added to long-term deficits would worsen fiscal health, while a Budget that reduced deficits today by underinvesting in the American people would result in slower, more stratified growth that would cause more damage than one that invests appropriately. The Budget responsibly balances these needs and risks by charting an economically and fiscally sound course for the near term and the long term.

# DELIVERING RESULTS FOR ALL AMERICANS THROUGH AN EQUITABLE, EFFECTIVE, AND ACCOUNTABLE GOVERNMENT

In order to build back better and meet the full range of challenges and opportunities before us, the Nation needs an equitable, effective, and accountable Government that delivers results for all Americans. The President is committed to ensuring the Government works for all Americans—and the Budget makes crucial progress toward achieving that goal. The Budget ensures Federal agencies are sufficiently resourced and effectively equipped to carry out their missions. The Budget would help bolster the Administration’s efforts to: center equity across the Federal Government; empower, rebuild, and protect the Federal workforce; restore public trust in the Federal Government; deliver services effectively and efficiently; enhance Federal information technology (IT) and cybersecurity; advance America’s clean energy future; and help ensure the future is made in America by all of America’s workers. Taken together, these actions will support the President’s Management Agenda as it takes shape in the coming months.

## ***Centering Equity in Management and Policymaking Processes***

The Administration is committed to delivering on the President’s promise to advance equity across the entire Federal Government, including for people of color and other underserved communities that have been historically denied fair, just, and equitable treatment.

On January 26, 2021, the President said, “we need to make the issue of racial equity not just an issue for any one department of [G]overnment; it has to be the business of the whole of [G]overnment. That’s why I issued, among the first days,

my whole-of-[G]overnment [E]xecutive [O]rder that will, for the first time, advance equity for all throughout our [F]ederal policies and institutions.” Through this action, the President has made embedding equity in Government decision-making a mandate for the leadership and staff of every department and agency. At the President’s direction, agencies are working to recognize and redress inequities in their systems, policies, programs, and processes. Agencies are directed to review policies and activities to assess whether underserved communities and their members face systemic barriers in accessing benefits and opportunities available pursuant to those policies and programs. The President also issued an Executive Order creating the Gender Policy Council and laying out a whole-of-Government approach to ensure that all policies and programs promote gender equity and advance rights and opportunity for women and girls. As discussed in the previous chapter, the Budget makes wide-ranging investments in improving the delivery of Government programs for all Americans, including funding for critical work to redress longstanding inequities in health, education, housing, and other areas.

## ***Empowering, Rebuilding, and Protecting the Federal Workforce***

The Administration is committed to respecting and partnering with career civil servants who form the backbone of the Federal Government. That is why during his first month in office, the President restored collective bargaining rights and worker protections for Federal employees. The President eliminated Schedule F, which threatened the foundations of the civil service,

and made clear that the Administration will protect scientists and other career civil servants from political interference. The President also signed an Executive Order to ensure that the Federal Government interprets Title VII of the Civil Rights Act of 1964 as prohibiting workplace discrimination on the basis of sexual orientation and gender identity.

The Budget builds on these efforts to empower and protect the Federal workforce by:

**Supporting Career Civil Servants as the Backbone of the Federal Workforce.** To help departments and agencies recruit and retain a diverse and inclusive Federal workforce, the Budget ensures more Federal employees are eligible for a \$15 per hour wage, and provides funding for a pay increase averaging 2.7 percent across the Federal civilian workforce, in parity with the military pay increase. The President also took steps on his first day in office to protect the health and safety of Federal employees and contractors during the COVID-19 pandemic, including enforcing the Centers for Disease Control and Prevention’s science-based guidelines and directing agencies to finalize and implement workplace health and safety plans. The President also made clear that he encourages union organizing and collective bargaining by revoking Executive Orders 13836, 13837, and 13839 that made it harder for Federal workers to unionize and bargain. The President’s Executive Order on Protecting the Federal Workforce also directs agencies to bargain over additional subjects of bargaining, so that workers have a greater voice in their working conditions.

**Achieving Better Hiring Outcomes.** The Budget supports agency efforts to expand and enhance recruitment and hiring of top talent, and to deploy more effective qualifying assessments to improve hiring outcomes. Specifically, agencies would be required to revitalize their internship programs to begin to reverse the decline in the percentage of the workforce under 30, create and fund agency talent teams, and contribute funding to a new office that would support centralized Government-wide hiring actions that improve hiring outcomes for critical positions. Further, the President’s Memorandum on

Revitalizing America’s Foreign Policy and National Security Workforce, Institutions, and Partnerships ordered a series of actions agencies must take to ensure that the national security workforce reflects and draws on the richness and diversity of the Nation it represents.

**Modernizing the Personnel Vetting System.** The Administration is leading efforts to reform how the Executive Branch conducts background checks for its workforce through the Security Clearance, Suitability, and Credentialing Performance Accountability Council (PAC). The PAC is spearheading several transformative reforms through the Trusted Workforce 2.0 initiative that will introduce continuous vetting, reduce the time required to conduct background checks for new hires, and improve the mobility of the workforce, all while ensuring the Nation’s security.

### ***Promoting Public Trust in the Federal Government***

As the President has said, “[w]e have to prove to the American people that their [G]overnment can deliver for them...” The Administration is making important progress in promoting trust in Government, and the Budget advances these efforts.

**Recommitting to Good Government.** As part of the Administration’s commitment to good government, Federal agencies are working with external stakeholders and their own workforces to develop goals and track progress to improve the delivery of Government services in key priority areas. As the President’s Management Agenda takes shape and agency goals are established and pursued, the public will be able to follow progress on Performance.gov, which will be updated quarterly. By being clear about the Administration’s goals, showing the public plans to get there, and being transparent about results, the Administration will continue building trust with the American public.

**Ensuring Effective Implementation of COVID-19 Pandemic Relief Funds and Stewardship of Taxpayer Resources.** The Administration will administer COVID-19

pandemic relief funding—including funding provided through the American Rescue Plan Act of 2021 (the American Rescue Plan)—with maximum accountability and transparency and a focus on achieving results. This requires designing programs and service delivery models that achieve equitable results while promoting transparency and supporting long-term outcomes that benefit the American people. These goals can be achieved while minimizing burden to agencies and recipients through sound financial management, a focus on program integrity, and accurate and timely reporting on data about the use of taxpayer funds.

**Fostering Scientific Integrity and Evidence-Based Decision-Making.** The President has made clear that it is the policy of this Administration to make decisions guided by the best available science and data. On January 27, 2021, when signing a Presidential Memorandum charging agencies to advance scientific integrity and evidence-based policymaking, the President committed that his Administration would “protect our world-class scientists from political interference and ensure they can think, research, and speak freely and directly to me, the Vice President, and the American people.” Evidence-based policy-making and program evaluation are critical in addressing systemic inequities and injustices and maintaining the public’s trust. The Administration’s commitment to evidence-based policy-making and program evaluation is reflected in the prioritization and design of the Budget’s historic investments in addressing climate change, environmental justice, health security, and pandemic preparedness and will be equally central to implementing these initiatives. Agencies’ Learning Agendas and Annual Evaluation Plans should reflect their plans to build evidence in these and other priority areas.

### ***Delivering Government Services Effectively and Efficiently***

**Improving Customer Experience.** The Federal Government administers a wide array of programs on behalf of the American people, but implementation efforts often fail to adopt a

human, customer-focused mindset—preventing these programs from reaching all those they are intended to benefit and serve. The Administration is implementing a comprehensive approach to improving the access, equity, and overall delivery of Federal services, which includes improving customer experience management. The Budget supports the Nation’s highest impact service providers across a variety of agencies to deliver on their annual Customer Experience Action Plans. This includes, for example: increasing the use of remote inspection capabilities to enable families to send the Federal Emergency Management Agency digital video and images of disaster property damage for verification and validation; making it possible for individuals to request a call back, rather than waiting on the phone, for more Internal Revenue Service functions; collecting customer feedback on interactions with the Transportation Security Administration from passengers that experience secondary screening; and adapting the design of new “journey to discharge” approaches at the Veterans Health Administration for patient information to reduce preventable adverse events within three weeks of discharge.

**Delivering Better Services through Design and Technology.** Too often, outdated tools, systems, and practices make interacting with the Federal Government cumbersome and frustrating. The COVID-19 pandemic laid bare and exacerbated the Government’s technology and service delivery challenges in a time of immediate need. Recognizing this, the Administration requested and received \$200 million through the American Rescue Plan for the United States Digital Service (USDS) for a multiyear investment in the USDS mission to use design and technology to deliver better services to the American people. USDS quickly deployed teams of seasoned operational engineers, service designers, product managers, and procurement experts to bring best practices and new approaches to these technology challenges, ensure access and equity are integrated into products and processes, and help agencies modernize their systems for long-term stability. USDS is integrally engaged on American Rescue Plan projects and Administration priorities for

COVID-19 pandemic vaccines and testing, economic rescue and recovery, environmental justice, and immigration reform.

### ***Enhancing Federal IT and Cybersecurity***

**Modernizing Federal IT Systems.** In a world of constantly evolving technology and expanding cybersecurity threats, the Administration recognizes the critical need for additional investment in enhancing Federal IT to improve service delivery to the American public. To support agencies as they modernize, strengthen, and secure outdated information systems, the Budget includes \$500 million for the Technology Modernization Fund (TMF). This builds on the substantial down-payment provided by the Congress in the American Rescue Plan to address urgent IT modernization challenges, bolster cybersecurity defenses, and improve the delivery of COVID-19 pandemic relief. The TMF would continue to serve as the predominant vehicle for delivering improvements to public-facing digital services, enhancements to cross-government collaboration, and modern technology designed with security and privacy in mind.

**Bolstering Federal Cybersecurity.** Cybersecurity will continue to be a key focus in protecting this Nation's security, and recent, significant cybersecurity incidents highlight the long-standing need to modernize Federal IT systems and augment cybersecurity capabilities. The Budget contains \$9.8 billion in cybersecurity funding to secure Federal civilian networks, protect the Nation's infrastructure, and support efforts to share information, standards, and best practices with critical infrastructure partners and American businesses. This funding includes \$110 million for the Cybersecurity and Infrastructure Security Agency (CISA) and \$750 million to agencies affected by recent, significant cyber incidents to address exigent gaps in security capability. These resources would better enable Federal agencies to protect technology and safeguard citizen's sensitive information from the threats posed by cyber criminals and adversaries. Agencies will continue to improve

cybersecurity practices, implement supply chain risk management programs, develop coordinated vulnerability disclosure programs, and improve cyber threat intelligence analysis. The Budget also provides \$15 million to support the Office of the National Cyber Director established in the William M. (Mac) Thornberry National Defense Authorization Act for Fiscal Year 2021.

**Improving the Federal IT Workforce.** To support the Federal IT and cybersecurity portfolio, the Budget proposes to identify and address critical skills gaps across the IT and cybersecurity workforce. The Budget invests in innovative programs that improve the Government's ability to recruit, retain, and train a workforce that can build, maintain, and secure Federal information and information systems. The Administration is focused on continuing the use of reskilling and upskilling training programs to address critical knowledge skills gaps by reinvesting in existing employees. Moreover, the American Rescue Plan includes resources for USDS and CISA to hire information technology and cybersecurity experts.

### ***Ensuring the Future Is Made in All of America by All of America's Workers***

**Supporting America's Workers and America's Clean Energy Future through Federal Contracting.** The Administration will leverage over \$600 billion in annual Federal contracting and other Federal assistance—nearly \$260 billion of which is spent on manufactured goods each year—to provide good-quality jobs to American workers in manufacturing by strengthening domestic sourcing requirements. This includes the establishment of a Made in America Office within the Office of Management and Budget that works with the Office of Federal Procurement Policy to ensure taxpayer dollars support American manufacturing. Agencies will also leverage their vast buying power to advance racial equity using procurement strategies to expand and strengthen the Government's contracting base, especially in underserved communities, and drive forward America's clean energy future. For example, the Budget invests \$600 million to assist agencies in transitioning to clean and zero-emission

vehicles for Government fleets and associated infrastructure, leading the way for a cleaner transportation network across America. The President also issued an Executive Order on April 27, 2021 requiring Federal contractors pay their employees—hundreds of thousands of workers who are working on Federal contracts—a minimum wage of at least \$15 per hour. These workers are critical to the functioning of the Federal Government: from cleaning professionals and maintenance workers who ensure Federal employees have safe and clean places to work; to nursing assistants who care for the Nation’s veterans; to cafeteria and other food service workers who ensure military members have healthy and nutritious food to eat; to laborers who build and repair Federal infrastructure.

**Providing for a Modern and Diverse Federal Acquisition System.** The Federal Government’s ability to effectively meet its many missions requires support from a diverse and resilient contractor base of small, medium, and large entities that consistently produce

high-quality products and services with strong customer satisfaction. The purchasing power of the Federal Government has the potential to have a transformative impact on women-, veteran-, and minority-owned small businesses and create generational wealth for business owners from traditionally underserved communities. To meet this dual challenge, the Administration will pursue agile, innovative, outcome-based, and equity-focused, acquisition processes. This will include a dedicated effort to eliminate barriers that small businesses in underserved communities face when competing for contracts. In addition, the Administration will provide the acquisition workforce with supplier and market intelligence data at the point of need, so they can work productively with contractors from across the Nation to achieve more for each taxpayer dollar by, among other things, promoting buying as an organized entity and using strategic business practices. Additional emphasis will be placed on partnering with entities that leverage domestic supply chains, and sources that apply climate-friendly and sustainable practices.

<b>American Jobs Plan</b>													
Build world-class transportation infrastructure:													
Transform our crumbling transportation infrastructure:													
Repair roads and bridges .....		5,124	13,385	17,416	19,650	21,626	16,958	7,895	4,523	3,310	2,408	77,201	112,295
Improve road safety for all users .....		414	1,427	2,279	3,062	3,872	3,404	1,696	1,174	948	746	11,054	19,022
Modernize public transit .....		1,830	4,225	6,085	7,090	9,395	11,765	13,400	10,855	7,455	4,540	28,625	76,640
Invest in reliable passenger and freight rail .....		1,600	2,850	4,880	7,497	10,209	11,209	11,725	10,453	7,898	5,279	27,036	73,600
Create good jobs electrifying vehicles:													
Spark widespread adoption of electric vehicles (EVs) .....		795	2,328	6,436	13,468	25,971	26,612	25,397	20,952	13,685	1,723	48,998	137,367
Invest in electric school buses .....		2,000	3,200	3,800	4,000	4,000	2,000	800	200	.....	.....	17,000	20,000
Improve ports, waterways, and airports:													
Invest in ports .....		.....	5	95	310	680	1,090	1,360	1,230	855	375	1,090	6,000
Make our airports the best in the world .....		1,235	3,460	4,145	4,455	4,630	4,270	1,705	615	335	150	17,925	25,000
Improve coastal ports and inland waterways .....		3,488	1,411	1,406	1,060	635	.....	.....	.....	.....	.....	8,000	8,000
Invest in the Federally owned Land Ports of Entry portfolio .....		15	80	250	515	750	765	475	150	.....	.....	1,610	3,000
Redress historic inequities and build the future of transportation infrastructure:													
Restore and reconnect thriving communities .....		236	964	1,860	2,684	3,575	4,104	3,868	3,219	2,244	1,242	9,319	23,996
Accelerate transformational projects .....		367	1,014	2,658	4,496	6,185	7,058	7,133	5,878	4,118	2,636	14,720	41,543
Total, transform our crumbling transportation infrastructure .....		17,104	34,349	51,310	68,287	91,528	89,235	75,454	59,249	40,848	19,099	262,578	546,463
Make our infrastructure more resilient:													
Safeguard critical infrastructure and services:													
Enhance electric grid resilience, including cyber ... ..		40	180	420	600	460	190	80	30	.....	.....	1,700	2,000
Urban Heat Stress:													
Map heat stress .....		30	30	30	30	30	30	30	30	30	30	150	300
Mitigate heat stress .....		120	192	228	240	240	120	48	12	.....	.....	1,020	1,200
Community health and hospital resilience:													
Increase resilience of hospitals and critical infrastructure .....		270	580	90	60	.....	.....	.....	.....	.....	.....	1,000	1,000
Fund health emergency preparedness .....		22	195	20	8	5	.....	.....	.....	.....	.....	250	250
Build resilience against climate effects .....		68	145	22	15	.....	.....	.....	.....	.....	.....	250	250
Maximize the resilience of land and water resources to protect communities and the environment:													
Ecosystem resilience, green infrastructure, and conservation on Federal, Tribal and partner lands:													
Deploy green and conservation-based infrastructure .....		240	600	960	1,200	1,200	960	600	240	.....	.....	4,200	6,000
Invest in Tribal fuels management .....		40	100	140	170	200	160	100	60	30	.....	650	1,000
Invest in natural resource restoration grants and partnerships .....		160	400	640	800	800	640	400	160	.....	.....	2,800	4,000
Improve coastal resilience .....		250	250	250	250	250	250	250	250	250	250	1,250	2,500

**Table S-6. Mandatory and Receipt Proposals—Continued**

(Deficit increases (+) or decreases (-) in millions of dollars)

	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	Totals	
												2022-2026	2022-2031
Increase the resilience of large landscape ecosystems .....		400	400	400	400	400	400	400	200			2,000	3,000
Increase western water resilience .....		300	500	500	500	500	200					2,300	2,500
Community resilience and equity:													
Support disadvantaged community investment in hazard mitigation projects, including incentives for building above existing codes and standards:													
Invest in disadvantaged communities through the Building Resilient Infrastructure in Communities grant program .....					40	300	380	480	460	200	120	340	1,980
Provide Community Development Block Grants for resilience .....		5	165	340	435	470	485	330	160	65	30	1,415	2,485
Invest in a National resilient communities challenge .....			21	91	197	320	433	487	420	284	146	629	2,399
Improve transportation infrastructure resilience (PROTECT grants) .....		75	262	425	613	825	800	475	438	378	295	2,200	4,586
Flood and drought resilience for vulnerable communities:													
Establish an affordability program for the National Flood Insurance Program .....		194	235	349	400	471	523	568	591	587	626	1,649	4,544
Invest in watershed protection and flood prevention .....		5	30	90	96	99	100	100	100	100	100	320	820
Invest in technology to increase drought resilience for agricultural producers .....		18	32	40	44	48	50	50	50	50	50	182	432
Support agriculture resource management and improve irrigation for Tribes and insular areas ....		50	80	100	100	100	50	20				430	500
Provide pre-development grants for resilient infrastructure .....		140	400	400	400	400	260					1,740	2,000
Provide community transition and relocation assistance .....		80	200	320	400	400	320	200	80			1,400	2,000
Support resilience tools to build back better:													
Hazard mapping:													
Update flood and hazard maps in disadvantaged communities .....		60	105	105	30							300	300
Expand ocean and coastal mapping .....		50	50	50	50	50	50	50	50	50	50	250	500
Improve digital high-resolution elevation collection mapping .....		40	50	40	40	30						200	200
Improve climate forecast capabilities and information products for the public and monitoring the impacts of climate change:													
Provide localized information to help communities respond to climate change .....		32	80	128	160	160	128	80	32			560	800
Improve local air and water quality monitoring/modeling .....		20	32	38	40	40	20	8	2			170	200
Develop decision support tools .....		50	50	50	50	50	50	50	50	50	50	250	500
Invest in resilience financing mechanisms .....		70	200	200	200	200	130					870	1,000
Total, make our infrastructure more resilient .....		2,829	5,564	6,466	7,568	8,048	6,729	4,806	3,415	2,074	1,747	30,475	49,246
Total, build world-class transportation infrastructure .....		19,933	39,913	57,776	75,855	99,576	95,964	80,260	62,664	42,922	20,846	293,053	595,709

Build, preserve, and retrofit more than two million homes and commercial buildings; modernize our Nation's schools, community colleges, and early learning facilities; and upgrade veterans' hospitals and Federal buildings:														
Build, preserve, and retrofit more than two million homes and commercial buildings to address the affordable housing crisis:														
Capitalize a clean energy accelerator .....		27,000											27,000	27,000
Provide efficiency/electrification block grants .....		1,600	2,800	3,200	2,900	1,600	700	200					12,100	13,000
Expand weatherization .....		1,750	5,050	6,100	3,400	1,200							17,500	17,500
Retrofit Housing and Urban Development multifamily properties .....		55	80	90	100	100	45	20	10				425	500
Expand the Capital Magnet Fund .....		2,400	2,400	2,400	2,400	2,400							12,000	12,000
Increase the Housing Trust Fund .....			90	1,260	4,140	6,840	8,640	8,820	7,740	4,860	2,160		12,330	44,550
Support housing and community development in Indian Country .....		2	46	134	240	328	370	342	266	160	72		750	1,960
Provide project-based rental assistance .....		130	200	200	200	200	200	200	200	200	200		930	1,930
Invest in the public housing stock .....		1,200	12,000	14,000	7,200	4,400	800	400					38,800	40,000
Construct housing for the elderly .....		2	46	134	240	328	370	342	266	160	72		750	1,960
Stimulate additional rural housing grants, loans, and loan guarantees .....		460	485	485	350	220							2,000	2,000
Incentivize zoning reform .....		30	330	680	860	970	960	670	320	140	30		2,870	4,990
Invest in Home Online Performance-Based Energy-Efficiency (HOPE) for homes .....		800	1,400	1,800	2,000	2,000	1,200	600	200				8,000	10,000
Provide HOME grants .....		35	805	2,345	4,200	5,740	6,475	5,985	4,655	2,800	1,260		13,125	34,300
Total, build, preserve, and retrofit more than two million homes and commercial buildings to address the affordable housing crisis .....		35,464	25,732	32,828	28,230	26,326	19,760	17,579	13,657	8,320	3,794		148,580	211,690
Modernize our Nation's schools and early learning facilities:														
Invest in child care infrastructure .....		2,500	4,000	4,750	5,000	5,000	2,500	1,000	250				21,250	25,000
Invest in community college infrastructure .....		240	888	2,064	2,400	2,400	2,160	1,512	336				7,992	12,000
Invest in K-12 school infrastructure .....		1,000	3,700	8,600	10,000	10,000	9,000	6,300	1,400				33,300	50,000
Total, modernize our Nation's schools and early learning facilities .....		3,740	8,588	15,414	17,400	17,400	13,660	8,812	1,986				62,542	87,000
Upgrade Federal hospitals and buildings:														
Invest in the General Service Administration Federal Buildings portfolio .....		100	450	850	1,000	1,000	900	550	150				3,400	5,000
Establish and capitalize the Federal Capital Revolving Fund .....		966	2,264	1,132	133	-133	117	-150	67	-13	-90		4,362	4,293
Veterans Affairs facility maintenance and modernization to deliver 21 <sup>st</sup> Century care:														
Recapitalize long-term facilities .....		622	511	470	4,222	3,894	3,724	1,319	116	64	58		9,719	15,000
Perform short-term upgrades to facilities .....		6	23	62	149	410	878	752	419	231	70		650	3,000
Total, upgrade Federal hospitals and buildings .....		1,694	3,248	2,514	5,504	5,171	5,619	2,471	752	282	38		18,131	27,293
Total, build, preserve, and retrofit more than two million homes and commercial buildings; modernize our Nation's schools, community colleges, and early learning facilities; and upgrade veterans' hospitals and Federal buildings .....		40,898	37,568	50,756	51,134	48,897	39,039	28,862	16,395	8,602	3,832		229,253	325,983

**Table S-6. Mandatory and Receipt Proposals—Continued**

(Deficit increases (+) or decreases (-) in millions of dollars)

	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	Totals	
												2022–2026	2022–2031
Solidify the infrastructure of our care economy by creating jobs and raising wages and benefits for essential home care workers:													
Expand Medicaid home and community based services and strengthen the home care workforce .....		53,000	53,000	53,000	53,000	53,000	44,000	36,000	27,000	18,000	10,000	265,000	400,000
Total, solidify the infrastructure of our care economy by creating jobs and raising wages and benefits for essential home care workers .....		53,000	53,000	53,000	53,000	53,000	44,000	36,000	27,000	18,000	10,000	265,000	400,000
Invest in research and development (R&D), revitalize manufacturing and small businesses, and train Americans for the jobs of the future:													
Invest in R&D and the technologies of the future:													
Advance U.S. leadership in critical technologies and upgrade America’s research infrastructure:													
Fund research infrastructure, including Historically Black Colleges and Universities (HBCU) set-aside .....		2,000	5,800	7,200	7,400	7,100	5,540	2,740	1,340	640	240	29,500	40,000
Increase research and development for existing programs .....		600	2,100	3,600	5,100	6,630	6,090	3,090	1,590	840	360	18,030	30,000
Transform the National Science Foundation by adding a technology directorate .....		1,200	4,000	6,400	8,600	10,760	9,720	4,920	2,520	1,320	560	30,960	50,000
Establish the United States as a leader in climate science, innovation, and R&D:													
Increase climate-focused research .....		100	400	800	1,250	1,230	630	330	180	80	.....	3,780	5,000
Increase demonstration funding at energy programs .....		500	1,250	3,250	4,000	3,750	1,750	500	.....	.....	.....	12,750	15,000
Launch Advanced Research Projects Agency-Climate .....		600	2,100	2,700	3,000	3,000	2,400	900	300	.....	.....	11,400	15,000
Eliminate racial and gender inequities in research and development and science, technology, engineering, and math:													
Fund research and development grants at HBCUs/ Minority Serving Institutions (MSIs) .....		200	700	1,200	1,700	2,210	2,030	1,030	530	280	120	6,010	10,000
Create Science, Technology, Engineering, Math (STEM) centers of excellence .....		200	700	1,200	1,700	2,210	2,030	1,030	530	280	120	6,010	10,000
Fund STEM education and training .....		160	500	720	880	1,018	886	446	226	116	48	3,278	5,000
Total, invest in R&D and the technologies of the future .....		5,560	17,550	27,070	33,630	37,908	31,076	14,986	7,216	3,556	1,448	121,718	180,000
Retool and revitalize American manufacturers and small businesses:													
Strengthen manufacturing supply chains for critical goods:													
Create a Critical Supply Chain Resilience Fund ...		5,000	10,000	20,000	10,000	5,000	.....	.....	.....	.....	.....	50,000	50,000
Provide incentives for semiconductor manufacturing and research .....		750	4,000	7,750	12,000	13,000	8,500	4,000	.....	.....	.....	37,500	50,000
Prepare Americans for future pandemics .....		1,650	6,485	7,145	7,520	5,815	995	390	.....	.....	.....	28,615	30,000
<i>Prepare Americans for future pandemics—Department of Health and Human Services (HHS) (non-add) .....</i>		<i>1,620</i>	<i>5,100</i>	<i>5,640</i>	<i>6,000</i>	<i>4,380</i>	<i>900</i>	<i>360</i>	.....	.....	.....	<i>22,740</i>	<i>24,000</i>
<i>Prepare Americans for future pandemics—Department of Defense (non-add) .....</i>		.....	<i>1,250</i>	<i>1,250</i>	<i>1,250</i>	<i>1,250</i>	.....	.....	.....	.....	.....	<i>5,000</i>	<i>5,000</i>
<i>Prepare Americans for future pandemics—Department of Energy (non-add) .....</i>		<i>30</i>	<i>135</i>	<i>255</i>	<i>270</i>	<i>185</i>	<i>95</i>	<i>30</i>	.....	.....	.....	<i>875</i>	<i>1,000</i>

**Table S-6. Mandatory and Receipt Proposals—Continued**

(Deficit increases (+) or decreases (-) in millions of dollars)

	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	Totals	
												2022-2026	2022-2031
Jumpstart clean energy manufacturing through Federal procurement:													
Procure advanced nuclear power .....		100	150	250	500	2,500	1,250	250	.....	.....	.....	3,500	5,000
Procure low carbon materials .....		400	1,800	2,200	2,900	3,000	3,000	2,400	300	.....	.....	10,300	16,000
Electrify the Federal vehicle fleet and support the necessary charging infrastructure .....		250	250	500	1,000	1,000	1,000	1,000	.....	.....	.....	3,000	5,000
Electrify the Postal Service fleet .....		800	800	800	.....	.....	.....	.....	.....	.....	.....	2,400	2,400
Procure carbon-free power and sustainable buildings .....		400	2,000	3,200	4,000	4,000	3,600	2,000	800	.....	.....	13,600	20,000
Make it in all of America:													
Expand Manufacturing USA .....		300	600	1,200	600	300	.....	.....	.....	.....	.....	3,000	3,000
Invest in research at the National Institute of Standards and Technology (NIST) labs .....		800	800	800	800	800	.....	.....	.....	.....	.....	4,000	4,000
Expand the Manufacturing Extension Partnership .....		700	1,400	2,800	1,400	700	.....	.....	.....	.....	.....	7,000	7,000
Establish regional innovation hubs .....		3,500	1,500	3,500	750	750	.....	.....	.....	.....	.....	10,000	10,000
Invest in a community revitalization fund .....		.....	20	80	360	660	1,020	1,400	1,920	1,640	1,340	1,120	8,440
Increase access to capital for domestic manufacturers:													
Modernize the auto supply chain .....		1,100	3,300	4,950	5,500	4,400	2,200	550	.....	.....	.....	19,250	22,000
Establish a manufacturing financing facility ...		3,650	3,050	3,055	50	45	40	35	30	25	20	9,850	10,000
Finance clean energy manufacturing .....		80	400	640	800	800	720	400	160	.....	.....	2,720	4,000

<sup>1</sup> The 2021 enacted level includes changes that occur after appropriations are enacted that are part of budget execution such as transfers, reestimates, and the rebasing as mandatory any changes in mandatory programs (CHIMPs) enacted in appropriations bills. The 2021 levels are adjusted to include OMB’s scoring of CHIMPs enacted in 2021 appropriations Acts for a better illustrative comparison with the 2022 request.

<sup>2</sup> The 2023 Budget will be accompanied by a Future Years Defense Program that reflects this Administration’s policy judgments and National Security and National Defense strategies. Because these strategy documents are currently under development, out-year defense funding levels in the 2022 budget are mechanical extrapolations. After 2022, defense programs are provided with current services growth through 2026 followed by one-percent increases through 2031, a proxy for long-run efficiencies the Administration believes may be achieved in the defense budget.

<sup>3</sup> The 2022 Budget proposes two reclassifications of programs that historically have been funded as discretionary. This first proposal reclassifies the appropriations for the Contract Support Costs and Section 105(l) lease accounts in the Department of Health and Human Services’ Indian Health Service and the Department of the Interior’s (DOI) Bureau of Indian Affairs. The second proposal reclassifies DOI’s Indian water rights settlements funding. The Budget proposes to offset the increase in mandatory funding resulting from both reclassifications by reducing base discretionary funding by amounts equal to current services inflation of the programs. See the Budget Concepts chapter of the *Analytical Perspectives* volume of the Budget for more information on these proposals.

<sup>4</sup> With the expiration of the discretionary caps in 2022, the Administration’s 2022 Budget presents funding differently than under the recent discretionary cap framework. The Administration shifts funds that had been designated as Overseas Contingency Operations (OCO) to the base. Funds for anomalous or above-base activities such as emergency requirements, program integrity, disaster relief, wildfire suppression, and 21st Century Cures appropriations continue to be presented outside of base allocations. In addition, major offsets resulting from proposed changes in mandatory programs are also presented outside of the base.

\* \$50 million or less.

<sup>1</sup> The 2021 enacted level includes changes that occur after appropriations are enacted that are part of budget execution such as transfers, reestimates, and the rebasing as mandatory any changes in mandatory programs (CHIMPs) enacted in appropriations bills. The 2021 levels are adjusted to include OMB's scoring of CHIMPs enacted in 2021 appropriations Acts for a better illustrative comparison with the 2022 request.

<sup>2</sup> Funding for Food for Peace Title II Grants is included in the State and International Programs total. Although the funds are appropriated to the Department of Agriculture, the funds are administered by the U.S. Agency for International Development (USAID).

<sup>3</sup> The Department of Energy base total in 2021 includes an appropriation of \$2.3 billion that had been designated as emergency in Public Law 116-260 since the activities were for regular operations and not emergency purposes.

<sup>4</sup> Funding from the Hospital Insurance and Supplementary Medical Insurance trust funds for administrative expenses incurred by the Social Security Administration that support the Medicare program are included in the Health and Human Services total and not in the Social Security Administration total.

<sup>5</sup> The State and International Programs total includes funding for the Department of State, USAID, Treasury International, and 11 international agencies while the Treasury total excludes Treasury's International Programs.

<sup>6</sup> The DOT General Fund Transfer to Mandatory Programs line reflects General Fund appropriations to programs that traditionally receive mandatory funding out of the Highway and Airport and Airway Trust Funds.

<sup>7</sup> The 2022 Budget shifts the Formerly Utilized Sites Remedial Action Program (FUSRAP) from the Corps to DOE; setting aside the FUSRAP shift, the change from 2021 is a 10-percent decrease to the Corps non-defense budget.

<sup>8</sup> The limitation enacted and proposed in the Justice Department's Crime Victims Fund program and cancellations in the Children's Health Insurance Program in HHS make up the bulk of these offsets.

<sup>9</sup> Funding enacted in division N of the Consolidated Appropriations Act, 2021 (Public Law 116-260) for otherwise discretionary programs has been rebased from mandatory and is included here along with other emergency requirements provided in 2021. The division N amounts were not designated as emergency but are considered non-base funding.

\* \$500 million or less.

<sup>1</sup> A decrease in the Treasury operating cash balance (which is an asset) is a means of financing a deficit and therefore has a negative sign. An increase in checks outstanding (which is a liability) is also a means of financing a deficit and therefore also has a negative sign. More information on the levels and changes to the operating cash balance is available in Chapter 4, "Federal Borrowing and Debt" in the *Analytical Perspectives* volume of the Budget.

<sup>2</sup> Includes checks outstanding, accrued interest payable on Treasury debt, uninvested deposit fund balances, allocations of special drawing rights, and other liability accounts; and, as an offset, cash and monetary assets (other than the Treasury operating cash balance), other asset accounts, and profit on sale of gold.

<sup>3</sup> Consists mainly of debt issued by the Federal Financing Bank (which is not subject to limit), the unamortized discount (less premium) on public issues of Treasury notes and bonds (other than zero-coupon bonds), and the unrealized discount on Government account series securities.

<sup>4</sup> Legislation enacted August 2, 2019 (P.L. 116-37), temporarily suspends the debt limit through July 31, 2021.

<sup>5</sup> Treasury securities held by the public and zero-coupon bonds held by Government accounts are almost all measured at sales price plus amortized discount or less amortized premium. Agency debt securities are almost all measured at face value. Treasury securities in the Government account series are otherwise measured at face value less unrealized discount (if any).

<sup>6</sup> At the end of 2020, the Federal Reserve Banks held \$4,445.5 billion of Federal securities and the rest of the public held \$16,571.2 billion. Debt held by the Federal Reserve Banks is not estimated for future years.

<sup>7</sup> Treasury's warrants to purchase 79.9 percent of the common stock of the enterprises expire after September 7, 2028. The warrants were valued at \$13 billion at the end of 2020.

<sup>8</sup> Of the notes and warrants issued under Air carrier worker support (Payroll support program), \$0.5 billion are scheduled to expire by the end of 2026, \$0.6 billion are scheduled to expire by the end of 2027, and \$5.3 billion are scheduled to expire by the end of 2031.

# OMB CONTRIBUTORS TO THE 2022 BUDGET

The following personnel contributed to the preparation of this publication. Hundreds, perhaps thousands, of others throughout the Government also deserve credit for their valuable contributions.

EXECUTIVE OFFICE OF THE PRESIDENT  
OFFICE OF MANAGEMENT AND BUDGET

WASHINGTON, D.C. 20503

THE WHITE HOUSE  
WASHINGTON

1 (2) ADJUSTMENT FOR INFLATION.—

2 (A) Section 4611(c)(2)(A) is amended by  
3 striking “9.7 cents” and inserting “16.4 cents”.

4 (B) Section 4611(c) is amended by adding  
5 at the end the following:

6 “(3) ADJUSTMENT FOR INFLATION.—

7 “(A) IN GENERAL.—In the case of a year  
8 beginning after 2022, the amount in paragraph  
9 (2)(A) shall be increased by an amount equal  
10 to—

11 “(i) such amount, multiplied by

12 “(ii) the cost-of-living adjustment de-  
13 termined under section 1(f)(3) for the cal-  
14 endar year, determined by substituting  
15 ‘calendar year 2021’ for ‘calendar year  
16 2016’ in subparagraph (A)(ii) thereof.

17 “(B) ROUNDING.—If any amount as ad-  
18 justed under subparagraph (A) is not a multiple  
19 of \$0.01, such amount shall be rounded to the  
20 next lowest multiple of \$0.01.”.

21 (b) AUTHORITY FOR ADVANCES.—Section  
22 9507(d)(3)(B) is amended by striking “December 31,  
23 1995” and inserting “December 31, 2031”.

24 (c) EFFECTIVE DATE.—The amendments made by  
25 this section shall take effect on January 1, 2022.

U.S. DEPARTMENT OF THE INTERIOR  
**BUREAU OF LAND  
MANAGEMENT**

## BUREAU OF LAND MANAGEMENT ANNOUNCES NEXT STEPS, NEW ANALYSES FOR UPCOMING OIL AND GAS LEASE SALES

---

### Assessments will analyze greenhouse gas emissions, social cost of greenhouse gases

The Bureau Land Management today announced that state offices will issue draft environmental assessments over the coming days to solicit feedback from the public, Tribes, and state agencies regarding proposed oil and gas lease sales to be held in early 2022.

For the first time, the environmental assessments will [analyze greenhouse gas emissions](#) on a national scale and consider the social cost of greenhouse gases. The environmental assessments will also analyze impacts of potential energy development on air and water quality, wildlife habitat, the quality of life for nearby communities, and other factors.

“The BLM is committed to responsible development on public lands, including ensuring that our environmental reviews consider the climate impacts of energy development on lands and communities. We will continue to exercise the authority and discretion provided under law to conduct leasing in a manner that fulfills the Interior Department’s legal responsibilities,” said BLM Director Tracy Stone-Manning.

Environmental assessments for Colorado, Eastern States, Montana and the Dakotas, Nevada, New Mexico, Utah and Wyoming will be made available for public comment for 30 days. Each state office will distribute a [news release](#) and post to the [state’s lease sale pages](#) with instructions to access the assessments and to provide comment.

The BLM is also releasing a comprehensive analysis of cumulative greenhouse gas emissions from coal, oil, and gas activities on public lands, titled, “[2020 BLM Specialist Report on Annual Greenhouse Gas Emissions and Climate Trends from Coal, Oil, and Gas Exploration and Development on the Federal Mineral Estate](#),” which helped to inform the greenhouse gas analysis for the proposed lease sales. The Specialist Report uses long-term projections from the Energy Information Administration to analyze expected lifetime emissions from existing and potential new fossil fuel leases on BLM-managed lands.

The scoping period for the proposed sales ended on October 1. A number of nominated parcels were deferred from further consideration for reasons ranging from the need to prioritize leasing outside of priority habitat for Greater Sage-Grouse, to determining that there was insufficient environmental analysis in pre-existing supporting documents. Additional parcels may be deferred based on public comment on the draft environmental assessments.

The recently completed public scoping and preparations for planned lease sales in 2022 are consistent with the district court’s preliminary injunction, [issued over the summer and pending appeal](#), which enjoins the Department’s implementation of Section 208 of Executive Order 14008. Parcels for scoping included those that were deferred in the first and second quarters of 2021.

---

*The BLM manages more than 245 million acres of public land located primarily in 12 western states, including Alaska, on behalf of the American people. The BLM also administers 700 million acres of sub-surface mineral estate throughout the nation. Our mission is to sustain the health, diversity, and productivity of America’s public lands for the use and enjoyment of present and future generations.*

Sources: Congressional Budget Office; staff of the Joint Committee on Taxation.

AWARE = Advancing Wellness and Resiliency in Education; CHIP = Children's Health Insurance Program; DOE = Department of Energy; FMAP = federal medical assistance percentage; HCBS = home and community-based services; \* = between -\$500,000 and \$500,000.

- a. This section would affect both direct spending and revenues, which are shown separately.
- b. Sections 30441 and 30444 would allow borrowers to pay the subsidy cost for credit assistance authorized in those sections, subject to certain conditions. The estimated budget authority and outlays shown reflect CBO's expectation that it would be difficult to set the fee paid by the borrower to entirely cover the estimated cost to the government of certain infrastructure projects. Therefore, CBO estimates the subsidy costs would exceed the budget authority allocated for such loans or loan guarantees.
- c. The estimated budget authority and outlays shown for sections 30441 and 30451 reflect CBO's expectation that subsidy costs would exceed the budget authority allocated for loans or loan guarantees for projects where the federal government is a counterparty to the project.
- d. Estimate accounts for the effects of title XIII, section 137301.
- e. Estimate includes interactions with Medicare Advantage payments and Medicare Part B premiums.

Components may not sum to totals because of rounding.

Estimates for title III reflect the enactment of H.R. 3684, the Infrastructure Investment and Jobs Act.

Budget authority reflects appropriations specifically provided in title III or amounts estimated by CBO.

The revenues and outlays of the Social Security trust funds and the net cash flow of the Postal Service are classified as off-budget.

Outlay and revenue amounts may be the net effect of multiple provisions that cause annual amounts within the budget window to be uneven. That is particularly the case for sections 30602, 30741, and 30801.

CBO estimates that spending for many provisions in title III would be less than the budget authority provided. For example, the estimated spending for the Greenhouse Gas Reduction Fund is \$7 billion lower than the \$29 billion that would be provided by section 30103. Those differences are primarily attributable to CBO's assessment that it would be difficult for federal agencies to obligate the full amount of funding during the period of availability; for section 30103, that period runs through fiscal year 2024.

The costs of title III fall within budget functions 270 (energy), 300 (natural resources and environment), 370 (commerce and housing credit), 500 (education, training, employment, and social services), 550 (health), 570 (Medicare), and 800 (general government).

The Budget Control Act of 2011 (BCA) requires the annual sequestration of nonexempt mandatory spending programs. The Office of Management and Budget determines which accounts are subject to reductions under the BCA. Some of the accounts affected by title III are subject to sequestration; this estimate reflects the effects of sequestration on those accounts.

Title III would increase on-budget deficits after 2031.

Title III would impose a private-sector and intergovernmental mandate as defined in the Unfunded Mandates Reform Act (UMRA) by levying new charges on private and publicly owned facilities in all oil and natural gas industry sectors required to report on their methane emissions levels to the Environmental Protection Agency. The title also would impose private-sector mandates by capping the amount that certain group and individual health insurance plans may require enrollees to pay out of pocket for insulin products and by requiring pharmacy benefit managers to provide reports about drug costs, fees, beneficiaries, and rebates.

# Clean Energy Corps

## Careers

[Careers](#) » Clean Energy Corps

DOE's Clean Energy Corps is comprised of the staff from more than a dozen offices across DOE – current staff and new hires – all working together to research, develop, demonstrate, and deploy solutions to the world's greatest challenge. The Clean Energy Corps is a diverse group of talented individuals committed to public service and with a mission of supercharging the clean energy revolution. This is YOUR opportunity to join us in making that future a reality. Regardless of whether you are new to clean energy, or have been doing this work for years – we want YOU as part of our Clean Energy Corps.

Apply Now to the Clean Energy  
Corps!

DOE offers YOU the chance to be a part of the clean energy revolution and make a difference in the fight against the climate crisis. Join us!

DOE is collecting resumes for candidates interested in becoming part of the Clean Energy Corps via our [Applicant Portal](#). The Applicant Portal is a streamlined application process which will allow applicants to align their talents with their passion by indicating specific areas of interest and allow hiring managers throughout the agency to review candidate resumes simultaneously to find the best fit for YOU in DOE.

As the largest funder of clean energy technology in the country, DOE has led the way on the innovations that have brought us the wind, solar, and energy efficient technology we know today. Now, with the investments from the Bipartisan Infrastructure Law, DOE's Clean Energy Corps will be able to do even more. With a focus on deploying next generation clean energy technology, the Clean Energy Corps will help America meet its goals of a carbon-free power sector in 2035 and a decarbonized economy in 2050. But we can't do it without YOU.

**The Clean Energy Corps is hiring NOW.** We need talented, diverse, kind, and hardworking people like you to join this team.

With the passage of the Bipartisan Infrastructure Law, the Clean Energy Corps is charged with investing more than \$62 billion **to deliver a more equitable clean energy future** for the American people by:

- Investing in American manufacturing
- Creating good paying jobs

- Expanding access to energy efficiency and clean energy for families, communities, and businesses
- Delivering reliable, clean, and affordable power to more Americans
- And building the technologies of tomorrow through clean energy research, development, and demonstrations

We are looking for new team members from every community in America who are passionate about solving the climate crisis, are team players, and are willing to give their all to this fight. We know the only way we'll be able to bring the innovative solutions we need to the massive challenges we face is with a diverse team ready to serve. That starts with YOU.

Staff positions are available across the country and many opportunities offer the ability to work remotely. And, as a Federal employer, we welcome candidates that have served our country in other capacities such as the military and the Peace Corps. Learn more about the [Benefits of Working at Energy](#).

As the nation's Solutions Department, there is no better institution than the Department of Energy to take on this challenge and help our nation transform our energy system for the 21st century.

**We're Hiring - Join the Clean Energy Corps**

Join DOE on Monday, January 24, 1pm ET for a live conversation with Secretary of Energy Jennifer Granholm, Chief of Staff Tarak Shah, and Chief Human Capital Officer Erin Moore to learn more about the Clean Energy Corps. Watch live here, or on [energy.gov/live](https://energy.gov/live).

US Department of Energy

## Who We're Looking For

Addressing the climate crisis will require a large, ambitious, and talented team of America's best and brightest. The Clean Energy Corps is dedicated to fighting climate change through public service and supporting American competitiveness on a global scale. **To meet this challenge, DOE is hiring a team of industry veterans, experienced technical experts, and the next generation of climate leaders.** We're looking for individuals who are ready to act at this critical moment, we need YOU.

While not an exhaustive list, DOE is looking for candidates in the following career fields to support the implementation of the Bipartisan Infrastructure Law:

- Business Administration
- Communications
- Engineering
- Finance/Accounting
- Grants/Contract Management
- Human Resources
- Information Technology/Cybersecurity
- Legal
- Legislative Affairs
- Physical Science
- Program and Portfolio Management
- Project Management
- Public Policy
- Safety and Occupational Health

Whether you've been working on Clean Energy issues for decades or are just starting out - we want you as part of the Clean Energy Corps. [Apply Now!](#)

NOTE: The Department of Energy (DOE) will utilize the Applicant Portal to staff the Clean Energy Corps in support of the Bipartisan Infrastructure Law (BIL). As vacancies become available, lists of qualified respondents who have submitted resumes through the Applicant Portal, will be provided to multiple Selecting Officials throughout the Department in various organizations for consideration under direct hire authority. DOE will fill vacancies in the following family or singular job series: 0800, 0201, 0301, 0340, 0343, 0510, 0560, 1101, 1102, 1109, 1301 & 2210 in grades GS-09 to GS-15 via single graded or career ladder positions, if applicable.

U.S. DEPARTMENT OF AGRICULTURE

# ACTION PLAN FOR CLIMATE ADAPTATION AND RESILIENCE

In accordance with Federal civil rights law and U.S. Department of Agriculture (USDA) civil rights regulations and policies, the USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Persons with disabilities who require alternative means of communication for program information (e.g., Braille, large print, audiotape, American Sign Language, etc.) should contact the responsible Agency or USDA's TARGET Center at (202) 720-2600 (voice and TTY) or contact USDA through the Federal Relay Service at (800) 877-8339. Additionally, program information may be made available in languages other than English.

To file a program discrimination complaint, complete the USDA Program Discrimination Complaint Form, AD-3027, found online at [How to File a Program Discrimination Complaint](#) and at any USDA office or write a letter addressed to USDA and provide in the letter all of the information requested in the form. To request a copy of the complaint form, call (866) 632-9992. Submit your completed form or letter to USDA by: (1) mail: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue, SW, Washington, D.C. 20250-9410; (2) fax: (202) 690-7442; or (3) email: [program.intake@usda.gov](mailto:program.intake@usda.gov).

USDA is an equal opportunity provider, employer, and lender.

# A Message from Secretary Vilsack

Dear Reader,

As evidenced by the historic drought in the western United States, vast wildfires, and soaring temperatures across the country, climate change is already on our doorstep, and America's producers are on the front lines. We are operating in new territory, and the changing climate creates immense uncertainty and threatens the resilience of the American agriculture and forestry sectors. Not only does climate change have a direct impact on a producer's ability to plan and manage risk, it has wider impacts on the natural systems we rely on to support production of food and fiber, keep our waters clean, and maintain cultural resources.

As the "People's Department," USDA is preparing to help communities across the United States, both rural and urban, plan for and build resilience to the impacts of climate change. Answering President Biden's call for a whole-of-government approach to climate, USDA is taking a whole-of-Department approach to address the challenges and opportunities posed by climate change. In USDA's recent Climate-Smart Agriculture and Forestry Strategy: 90-Day Progress Report, we laid out our mitigation strategy to ensure that farmers, ranchers, and landowners can seize on these opportunities and contribute to greenhouse gas emissions reductions and sequestration. Alongside those actions, we must make sure that we provide producers, landowners, and communities with the tools to manage risk and adapt to this changing reality.

This Action Plan for Climate Adaptation and Resilience outlines how USDA will provide relevant information, tools, and resources to its stakeholders and target programs and activities to increase resilience to climate impacts. USDA will prioritize equity, promote environmental justice through a focus on healthy communities,

and target adaptation actions with co-benefits for climate mitigation, conservation, and sustainability.

In addressing the climate crisis, the USDA research enterprise will develop innovative tools and practices for farmers and land managers of the future. USDA will tailor its climate outreach and assistance to be regionally specific through its vast field operations and innovative partnerships and enhance department-wide coordination through its ten regional Climate Hubs. Building climate literacy across all levels will enable USDA staff to best serve its stakeholders in the decades ahead.

Our plan will serve as the foundation for iterative climate adaptation across the Department. Taking these steps to prepare American farmers, ranchers, forest landowners, resource managers, and communities for the effects of climate change will help ensure that our agriculture and forestry sectors continue to provide healthy food and fiber for America and the world, and that we conserve our soil, air, and water for generations to come.

Sincerely,

Secretary Tom Vilsack

## I. INTRODUCTION

On January 27, 2021, in Executive Order (E.O.) 14008 Tackling the Climate Crisis at Home and Abroad, President Biden laid out a vision for a United States government-wide approach and a set of coordinated domestic actions to address the risks and opportunities posed by climate change. One of these actions directs the U.S. Department of Agriculture (USDA) to submit an action plan of steps to bolster adaptation and increase resilience to the impacts of climate change across our mission and operations.

Climate change poses a significant risk to agriculture, forests, and grasslands across the United States and the communities that support and depend upon them. This risk is disproportionately high for disadvantaged communities, including Tribal nations, low-income, and minority communities. USDA is unique among federal departments in the breadth of its Mission Areas and its reach across the United States to urban, rural, and Tribal communities. Steps to reduce the vulnerability and increase the adaptive capacity of American farmers, ranchers, forest owners, and other stakeholders to climate change are needed to maintain competitiveness and sustainability in the coming decades. Through climate change adaptation planning, USDA will increase the resilience of these sectors and communities to climate change.

Agricultural producers and forest landowners have extensive experience dealing with uncertain conditions, yet climate change is producing new challenges. Adaptation actions by USDA and our stakeholders can reduce the impacts of climate change while creating opportunities or co-benefits for mitigation, sustainable production, and conservation. The co-benefits of adaptation actions may also stretch as far as the social welfare of rural and urban communities by improving economic opportunities, infrastructure, and equity. The research and development necessary to support agricultural and forestry climate adaptation have the potential to spur new tools, practices, and technologies that may underpin the future of these sectors.

USDA last undertook extensive climate adaptation planning in 2014 in response to E.O. 13653 Preparing the United States for the Impacts of Climate Change. In that plan, USDA laid out a vision for how to integrate consideration of climate change into agency operations and overall mission objectives in the context of USDA's strategic goals. USDA provided progress and strategic updates to its climate adaptation planning via USDA's annual Strategic Sustainability Performance Plan, most recently in 2017.

FY 2021 is a transition year for USDA as its leadership develops a 2022-2026 USDA Strategic Plan, to align with the Biden-Harris Administration's priorities, which include addressing climate change. At the same time, USDA is tracking key performance indicators (KPIs) for the 2018-2022 Strategic Plan. A draft of the new goals was provided to the Office of Management and Budget (OMB) in June 2021. From June to September 2021, a cross-departmental working group will establish KPIs to gauge progress towards specific performance goals that are in alignment with the new strategic plan. A full draft strategic plan will be provided to OMB in September 2021. USDA's 2021 Annual Performance Report and 2023 Annual Performance Plan, due to OMB in November

2021, will close the 2018-2022 performance cycle's KPIs and, where possible, reflect the new draft KPIs. Finally, for FY 2021, USDA's Risk Profile will be updated to incorporate risks and risk mitigation strategies that reflect the Biden-Harris Administration's priorities, like climate change, where possible.

The complete package of this USDA Action Plan for Climate Adaptation and Resilience includes:

- This Action Plan for Climate Adaptation and Resilience that builds on prior adaptation plans,
- An update to USDA Departmental Regulation 1070-001 USDA Policy Statement on Climate Change Adaptation, and
- Identification of the Director of the Office of Energy and Environmental Policy (OEEP) in the Office of the Chief Economist (OCE) as the senior agency official responsible for carrying out the climate adaptation activities described in this Plan.

This Plan, which aligns with guidance from the White House Council on Environmental Quality (CEQ), includes:

- Five vulnerabilities due to climate change that USDA has identified and must address;
- Five actions USDA will implement in its mission, programs, operations, and management in anticipation of and in response to a changing climate;
- A description of efforts to enhance the climate literacy of USDA's workforce; and
- Descriptions of how climate adaptation and preparedness is built into management and decision-points for USDA climate-ready sites, facilities, products, and services.

## II. CLIMATE VULNERABILITIES

Climate change presents many challenges to USDA and its stakeholders. The five

vulnerabilities below build on prior vulnerability assessments of the Department and draw from our best understanding of the threats posed by climate change and its impacts in the Fourth National Climate Assessment. The potential climate impacts to agricultural productivity, water quantity and quality, vulnerable communities, public lands and infrastructure, and as a result of extreme events will have broad Department-wide effects. For each vulnerability, we describe the threat and propose adaptation actions to address it. Some of these actions overlap with the cross-cutting actions outlined in section III, while others specifically target the vulnerabilities described below.

### 1. Decreased agricultural productivity

Climate change threatens growth in agricultural productivity through direct effects such as changes in temperature and precipitation patterns, and secondary effects, such as increased pest and disease pressures, decline in pollinator health, reduced crop and forage quantity and quality, and infrastructure damage. Agricultural productivity is additionally threatened by impacts to water supply and increased frequency and intensity of extreme weather events, which are described in more detail in Vulnerabilities #2 and #4. Agricultural productivity is vulnerable to the impacts of climate change via:

- **Crop and livestock production.** With variation at local, regional, and continental scales, climate change is projected overall to impact crop production by reducing both quantity and quality of yields, altering optimal growing season periods, and increasing likelihood of crop failure and damage. Similarly, livestock production will be impacted by reducing the quantity and quality of pasture and forage, lowering the yield of feed grain, affecting livestock health, and fostering the spread and resilience of pathogens and parasites that affect livestock development.

- **Reduced soil quality.** Agricultural, forest, and grassland soils are sensitive to long term changes in temperature and precipitation, management practices, and multiple uses like recreation. The interactive effects of these stressors can increase erosion rates, reduce soil quality, and alter soil composition that supports plant growth. Additionally, increases in temperature, changes in moisture levels, and disturbances like wildfire, pests, and disease can release carbon stored in soil organic matter.
- **Pest and disease pressure.** Climate change may expand or shift the range of a pest, pathogen, or vector organism, increasing its ability to establish in areas not previously considered at risk, elevating the risks to agriculture and forestry. Climate change may also lead to changes in wildlife migratory patterns, diseases, disease life cycles, predator-livestock interactions, and mass mortality events. These increased pressures may impact the Animal and Plant Health Inspection Service's (APHIS) ability to monitor for animal and plant pests and diseases in traded and domestically produced goods.
- **Pollinator health.** Pollinator health, which is essential to successful crop production and highly correlated with floral landscapes, is threatened by climate-driven temperature

and rainfall extremes. Areas vulnerable to climate change include the commercial beekeeping industry, non-managed pollinator populations, and the subsequent threats to specialty crop industries.

- **Crop insurance.** Agricultural producers purchase crop insurance for protection against numerous production and price risks, which can include climate and weather-related losses from hurricanes, flood, drought, hail, and wildfires. Forecasts of more rapid changes in climatic conditions have raised concerns that these risks will increase relative to historical conditions. In addition to implications for landowner decisions regarding land use, crop mix, and production practices, changing agricultural risks could affect the performance of the Federal Crop Insurance Program (FCIP), managed by the Risk Management Agency (RMA). Economic Research Service (ERS) analysis suggests that even with some adaptation actions taken by producers, climate change could lower domestic production of major commodities, leading to higher prices, higher premiums and, consequently, higher FCIP subsidies. Without adaptation actions on the part of farmers, these potential cost increases are likely to be even greater.

In response to the threats and impacts to agricultural productivity described above, USDA has identified several key adaptation actions:

- **Increase implementation of on-farm adaptation strategies and practices.** The Farm Service Agency (FSA) and the Natural Resources Conservation Service (NRCS) can leverage existing programs to support farmers, ranchers, and landowners in understanding the vulnerabilities of their operations to a changing climate and implementing adaptive practices and management strategies. NRCS programs, such as the Conservation Stewardship Program (CSP) and Environmental Quality Incentives Program (EQIP), and initiatives, such as the Soil Health Initiative, can

provide financial and technical assistance and resources for implementing practices, like cover crops, reduced and no tillage, and improved irrigation systems, that contribute to more resilient landscapes. FSA loan programs, including Operating Loans, the Farm Ownership Loan Program, and the Conservation Loan Program, can also provide funds for a wide range of purposes, including short-term equipment or operating needs or long-term infrastructure enhancements to support increased resilience. USDA agencies will continue to evaluate and modify existing programs, like the Conservation Reserve Program (CRP), the Emergency Conservation Program (ECP), and the Emergency Forest Restoration Program (EFRP), for climate risks and adaptation opportunities. In administering disaster-related programs, USDA will aim to build resilience and adaptive capacity to future shocks whenever possible. Barriers to scaling up the adoption of adaptation practices include high costs of implementation, insufficient incentives, and need for additional technical assistance to aid decision-making and implementation.

- **Support active landscape-scale management and disturbance responses.** Supporting healthy landscapes starts with ensuring that whole ecosystems are managed at the landscape scale, considering multiple components, interactions, and timescales. For example, the Forest Service's (FS) Burned Area Emergency Response (BAER) teams assess post-wildfire disturbances and implement short-term treatments to stabilize soils to minimize threats to built and natural infrastructure, helping to ensure long-term ecosystem integrity. On private working lands, NRCS's area-wide and watershed planning processes bring together state agencies, soil and water conservation districts, regional planning commissions, counties, and other governmental entities to coordinate long-term resource management

at the landscape level. Current barriers include capacity to translate science into practice and ensuring sufficient workforce and public education around these topics.

- **Improve access to climate data and tools.** Improved access to climate and climate-related data can help producers better understand changing conditions and adjust their management decisions accordingly. The USDA Climate Hubs play a pivotal role in developing and curating data and tools for producers and the public. USDA's Office of the Chief Economist (OCE) will continue to partner with the National Drought Mitigation Center (NDMC) to improve their capacity to provide actionable information to the public and record observed drought impacts.
- **Enhance systems for monitoring and mitigating vector and disease spread.** APHIS and FS will improve current monitoring systems and responses to vector and disease spread, incorporate state-of-the-art modeling to inform surveillance, develop early warning systems, and identify better options for vector control and animal protection. APHIS will also evaluate its regulatory framework for biotechnology and genome editing as use of these technologies increases to support the development of climate-adapted crops and livestock.
- **Continue research into climate impacts on agricultural productivity and adaptation strategies and practices.** Further research is needed to understand the full range of potential impacts, inform implementation of adaptation strategies, and identify barriers to access. The Agricultural Research Service (ARS) and the National Institute of Food and Agriculture (NIFA) support research on adaptation strategies, including adapted cultivars and crops, enhanced water and input-use efficiency, optimal production efficiency, and improved resistance to diseases and pests. ARS's Long-Term

Agroecosystem Research (LTAR) sites will continue landscape and regional-scale approaches to investigate sustainable intensification of U.S. agriculture. The Office of the Chief Scientist (OCS) will continue to coordinate research into pollinator health, including changes in plant pollen ranges, co-benefits of resilient plant species to pollinators and carbon sequestration, co-location of pollinator habitat with renewable energy sites, and practices to address increased stress on pollinator health.

- **Provide climate-smart risk management products.** New and continuing actions that RMA will take to help producers manage climate-related production risks include:
  - Evaluation and monitoring of climate risks to the FCIP and update of program parameters, like earliest and final planting dates and sales closing dates, based on these analyses;
  - Implementation of state-funded incentives to encourage cover crop planting;
  - Use of the Whole Farm Revenue Protection product to support farmers who use crop diversification to reduce risk;
  - Continued insurance coverage for crops that accommodate new agronomic practices that minimize water use;
  - Implementation of procedures that facilitate access to insurance coverage to accommodate climate-driven shifts in production areas;
  - Application of recently revised premium rating methodology so that rates more quickly reflect changes in risk; and
  - Monitoring of premium rating methodology, loss adjustment standards, underwriting standards, and other insurance program materials to ensure they are appropriate for new production regions or practice changes within regions.In parallel with these efforts, the Climate

Hubs will continue to provide information and tools to support producers' capacity to manage for impacts to crop insurance, such as the AgRisk Viewer, a decision-support tool that provides historic crop insurance data to assess climate risk.

Many of the actions described above are in-progress or positioned to begin soon through coordinated Department-level efforts and creative applications of existing USDA resources and programs. Additional investments directed towards these efforts will enable USDA to more effectively address actions that rely on new data or expertise or require significant program enhancements. In the near-term, progress can be measured using existing systems that correlate well with target outcomes, like data from the North American Long-Term Soil Productivity study, led by Forest Service Research & Development (FS R&D). Agency record-keeping can also support progress measurement, including loan funds use, technical and financial assistance disbursed, and programmatic changes or additional investments made considering assessed climate risks.

## 2. Threat to water quantity and quality

Climate change impacts on the water cycle are resulting in earlier snowmelt, reduced water supply, more intense and frequent drought, degraded water quality, excess soil moisture, and greater flooding, all of which will alter crop and animal production and quality and management of forest and rangeland systems. In 2021, producers in areas like the Klamath River Basin and the Colorado River Basin are again experiencing severe drought conditions resulting in historically low water allocations. Key threats and impacts related to water supply include:

- **Water quantity and drought.** With climate change, producers are confronting greater intra- and interannual variability in the distribution, quantity, and timing of precipitation. Drought has become more

persistent and widespread with impacts on soil moisture and health, groundwater recharge, runoff, and ultimately agricultural productivity. Changes in snowpack also impact water supply and seasonal runoff timing. These changes in the water supply have the potential to drastically shift the geographic distribution of agriculture and exert greater pressure on finite groundwater resources.

- **Water quality.** Precipitation extremes can cause excessive runoff and soil erosion, which lead to field production issues and downstream impacts on quality of water resources, including eutrophication and hypoxia.
- **Riparian and aquatic ecosystems.** Changes in climate and the water cycle are affecting aquatic and riparian ecosystem structure and function, potentially resulting in loss of at-risk species, new species being put at risk, the introduction of additional or expansion of existing invasive species, and the establishment of new diseases and pathogens.
- **Forest resilience.** Declines in forest health because of drought, excess soil moisture and flooding will lead to increased vulnerability to disasters (see Vulnerability #4) such as wildfires, severe storms, and forest insect and pathogen outbreaks. These disasters will impact communities through decreases in ecosystem health and delivery of ecosystem services.

Priority actions that can be taken to respond to these risks to water quantity and quality include:

- **Target existing programs to support water issues.** Projected changes in water availability will require programmatic shifts that specifically integrate climate adaptation and resilience-building. FSA currently delivers several assistance programs for producers who have experienced hardships due to water-related impacts including the Noninsured Crop Disaster Assistance Program (NAP), the Emergency

Conservation Program (ECP), the Tree Assistance Program (TAP), the Livestock Forage Program (LFP), and ad hoc programs like the Quality Loss Adjustment program (QLA). USDA will evaluate the existing programs within legislative authority to ensure that coverage or grazing periods accurately represent when threats to water quantity and quality could occur. For example, FSA programs could adapt to support water quantity and quality issues by broadening support to annual cropping systems that increase water use efficiency. NRCS's Regional Conservation Partnership Program (RCPP) and EQIP can provide financial and technical assistance to the irrigated agricultural sector in support of additional water storage infrastructure and soil enhancing practices.

- **Build resilience by enhancing soil health.** Through a variety of conservation practices, soils can be enhanced to promote water infiltration and be less prone to surface runoff and downstream flooding. Building soil health is a slow process that can take a number of years and requires changes in cropping systems and management practices. Programs like EQIP, RCPP, and the Soil Health Initiative help promote practices such as cover crops, reduced tillage, and prescribed grazing that can improve soil health and

build more resilient landscapes. Adaptation Action #1, below, further highlights the impact that improvements to soil health can make on long-term sustainability.

- **Use a landscape approach in addressing water issues.** Successful adaptation will require an integrated, landscape scale approach, including managing water resources across private and public lands, restoring terrestrial and aquatic ecosystems to enhance their resilience to climate stressors, and addressing the effects of pathogens and invasive species. Heterogeneous land cover makes developing resilience strategies for water resources on this scale complicated and requires participation, cooperation, and coordination of diverse stakeholders.
- **Explore innovative technology and approaches.** Drought-adapted varieties, dynamic and data-driven irrigation technology, and increasingly efficient delivery, storage, and recycling of water will be important adaptation tools. Improved and integrated climate, groundwater, and surface water measurements and modeling will help predict vulnerability in water availability and identify priority areas for reduced water use. Innovative translation of water management research and technology to on-field realities through extension and education will be essential to support user adoption and alleviate producer and land manager concerns.
- **Invest in water management infrastructure and adaptive irrigation systems.** Investing in additional water storage infrastructure, such as new reservoirs and managed aquifer recharge, and increasing the ability of water-related infrastructure to survive extreme events, can help irrigated agriculture adapt to a variable future and expand availability of seasonal runoff. In traditional rainfed agricultural regions, producers may adapt to more variable growing season precipitation by beginning to irrigate or practicing

supplemental irrigation. Barriers to these actions include the need to address the ecosystem impacts of dams, the relative lack of institutions to guide the development of managed aquifer recharge, and the high cost to build on-farm irrigation infrastructure.

- **Leverage existing federal coordination mechanisms.** USDA will continue to play a leading role in existing interagency drought coordination networks including the National Oceanic and Atmospheric Administration's (NOAA) National Integrated Drought Information System (NIDIS) and National Drought Resilience Partnership (NDRP). OCE and NDMC will continue to leverage their partnership to support Climate Hub projects that provide useful and usable drought products to end users. Moreover, the Climate Hubs will continue supporting NIDIS in their regional Drought Early Warning Systems (DEWS). A Drought Learning Network (DLN) was jointly developed by the Climate Hubs, NDMC, and NIDIS, and allows stakeholders to share experiences in preparing for, responding to, and recovering from drought.

Many current USDA programs are well-suited to address these water-related threats and can provide a strong foundation for completing the necessary actions. It will also take new and reinforced partnerships within federal government and with Tribes, states, non-governmental organizations (NGOs), and businesses to tackle the significant challenge of addressing the long-term sustainability of the Nation's water supply. Much of this work will take years to complete and therefore requires five- or ten-year timelines to measure progress. USDA's National Agricultural Statistics Service (NASS) data on the market value attributable to irrigated farms and irrigated land, which is collected in the Census of Agriculture, will be used to assess the efficacy of future adaptation efforts in the irrigated agricultural sector. U.S. Geological Survey's (USGS) water use reports, which are released at 5-year intervals, will serve as another useful

tool to measure changes in water use over time. Improvements in monitoring, infrastructure, and research could be realized with additional investments to further minimize the climate risks to water for soil and forest ecosystems.

### 3. Disproportionate impacts on vulnerable communities

Socially disadvantaged, low-income, minority, and rural populations as well as American Indians, Alaska Natives, and sovereign Tribal governments are more likely to be vulnerable to the impacts of climate change. These communities' ability to adapt to a changing climate is often limited by financial, social, and other constraints. Climate change is likely to disproportionately impact these communities via several pathways:

- **Health.** Many communities who are exposed to the impacts of climate change are already burdened by air and water pollution and other environmental health hazards. Health risks of climate change may compound existing health issues in Tribal and Alaska Native communities, including risks from the loss of traditional food and practices, community displacement, new infectious diseases, and other effects of climate change.
- **Food.** Climate change poses risks for the U.S. food system, including production risks (as described in Vulnerability #1), transport and trade vulnerabilities, the potential for increased food loss and waste, and diminished food safety. These vulnerabilities challenge USDA's mission to provide leadership on food, nutrition, and related issues.
- **Ecosystem services and livelihoods.** Climate change threatens ecosystem services that many communities depend on including clean air and water, subsistence foods, medicine, fiber, fuel, and cultural services, such as cultural heritage and identity, spiritual, aesthetic, and educational values,

and recreation and tourism opportunities. Rural communities, many of whose livelihoods are tightly tied to the agriculture and forestry sectors, and migrant workers, who provide a large share of agricultural labor in some regions, are particularly vulnerable to climate change impacts.

- **Extreme weather event impacts.** As described further in Vulnerability #4, the impacts of extreme weather events influenced by climate change are expected to have a disproportionate impact on populations lacking resources to cope with economic and environmental shocks and uncertainty. Communities in risk-prone areas can face cumulative exposure to multiple pollutants and climate event impacts. Without action, the adverse effects of extreme weather events, severe wildfire, flooding, drought, and invasive species on these populations and Tribal communities will only intensify.

USDA actions to help the most vulnerable communities adapt to climate change will include:

- **Increase equity and environmental justice awareness, skills, and abilities of USDA staff.** USDA will take additional steps to educate its staff on environmental justice, including disproportionate impacts from climate change, and how it relates to USDA agencies, programs, and activities. This will

enable the Department to assess its current and future activities, identify areas and strategies for improvement, and develop metrics to ensure progress in supporting communities most vulnerable to the impacts of climate change.

- **Engage meaningfully with impacted and vulnerable communities.** The Department will leverage existing relationships and build off past and on-going Tribal consultation and stakeholder engagement processes, including those recently initiated to seek input on the Department's climate-smart agriculture and forestry strategy. As the Department and individual agencies continue to develop adaptation and environmental justice strategies, they should engage directly with environmental justice leaders and communities impacted by climate change to understand vulnerabilities and risks, identify barriers to and resources for adaptation, and collaboratively develop solutions and responses, including through participatory adaptation planning.
- **Evaluate programs and activities for risks to communities.** In carrying out actions to address climate risks, USDA should develop robust processes to ensure disproportionately high impacts and maladaptation are avoided or mitigated. FS has developed guidance for incorporating analysis and consideration of impacted communities during Land Management Planning and National Environmental Policy Act (NEPA) processes and has established a robust Urban Forestry program to address environmental justice issues in urban areas. Evaluating risks to vulnerable communities may involve leveraging new and updated vulnerability assessments and existing and emerging tools, such as the proposed Climate and Economic Justice Screening Tool, to identify communities at risk.
- **Provide assistance and resources.** USDA will continue work to ensure its programs

and resources are distributed equitably and are accessible to those most at risk of climate change impacts and in need of adaptation support. Several USDA programs have special provisions or dedicated funding for historically underserved producers—which may include socially disadvantaged, beginning, limited resource, and veteran farmers and ranchers—who are among the most vulnerable to impacts. Activities to integrate environmental justice and equity into existing programs will require removing barriers to participation, establishing trust, transparency, and accountability, identifying opportunities for broader inclusivity, and targeting education and outreach. Additional areas for advancing equity and environmental justice are described within USDA's Climate-Smart Agriculture and Forestry Strategy: 90-Day Progress Report.

Ensuring environmental justice and equity is an ongoing activity for USDA. The actions presented here can build on recent outreach efforts that have resulted in increases in program participation by historically underserved producers. Agencies will need to prioritize environmental justice in their planning and budget processes and when implementing new programs and policies. Indicators of success will be identified in coordination with the White House Environmental Justice Interagency Council's forthcoming performance metrics.

## 4. Shocks due to extreme climate events

Climate change is causing more frequent and intense disruptive events including hurricanes, floods, drought (see Vulnerability #2), and fires, which can have significant impacts on agriculture and forestry. Rural and vulnerable communities will be disproportionately impacted by these events while lacking the resources to adequately prepare for and respond to them. Key areas of impact associated with extreme climate events include:

- Hurricanes, floods, and other extreme weather events.** Extreme weather events are not new, but recent increases in frequency and severity of these events, like hurricanes, floods, tornadoes, hail, and other severe storms, have negatively affected working lands. Hurricanes and floods are expected to increasingly affect U.S. agriculture and forests leading to crop loss and production delays, degradation of soil and water resources, damage to infrastructure, alteration of forest health and productivity, and impacts to community health and safety. As hurricanes become more frequent and severe, wind, rain, and debris damage to buildings, power grids, and telecommunications will be increasingly common. Landslides, stream washouts, and downed trees can threaten water quality and community and animal safety, and frequently require targeted restoration and salvage efforts.
- Wildfire.** Climate change is expected to continue to alter fire regimes, increasing the frequency and extent of wildfire. As the wildland-urban interface expands, wildfire presents increased risks to human health and infrastructure. Severe wildfire can leave forests in need of reforestation and restoration and heighten the risk of secondary disturbances such as erosion, landslides, and invasive species.
- Vulnerability of rural communities.** As mentioned in Vulnerability #3, rural communities are particularly vulnerable to extreme weather events due to a greater direct dependence on agriculture, forestry, and outdoor recreation for income and

employment, existing challenges with infrastructure and connectivity, and limited capacity to prepare and respond to these events. Severe weather events threaten ongoing rural development efforts, negatively impacting projects, destroying properties, delaying construction, and disrupting revenue for existing loans. Increasing climate variability will result in increasing uncertainty in agricultural and forest industries in rural communities, likely leading to long-lasting shifts in community structure and composition. Current declining trends in population and employment tend to also reduce resources available to local government and community associations to deal with climate change variability.

In addition to the resilience-building actions described in Vulnerabilities #1 and #2, further actions can be taken to adapt to the risks from extreme climate events:

- Update vulnerability assessments.** With the support of the USDA Research, Education, and Economics (REE) agencies and FS R&D, in 2015 the Climate Hubs conducted vulnerability assessments for each of their ten regions based on the Fourth National Climate Assessment. Likewise, FS engaged in science management partnerships to develop vulnerability assessments in over 100 national forests and grasslands, including other public and private lands, with applications in land management and project plans. The Hubs will update their vulnerability assessments for the forthcoming Fifth National Climate Assessment and continue to support the development of

more place-based assessments that identify climate-smart practices to build resilience.

- **Use monitoring tools to build resilience.** NASS has developed a series of geospatial agricultural monitoring portals that can be used to identify and quantify impacts from extreme climatic events. These portals can provide near real-time updates on major storm disaster events, crop condition and soil moisture, decision-support system capabilities, and annual planted crop area to inform agricultural adaptation strategies. Examples of these NASS portals and other USDA-supported decision-support tools include:
  - NASS Disaster Analysis Program, which captures impacts from major storm events,
  - The joint vegetative condition and soil moisture monitoring portal,
  - AgroClimate, a weather and climate-based decision support system for agriculture, and
  - After Fire: Toolkit for the Southwest, a resource to assess post-fire risks.
- **Build forest and grassland resilience through management, planning, and responses.** Active management to build resilience to wildfire, insects, and disease is a high priority for the FS. USDA's Climate-Smart Agriculture and Forestry Strategy: 90-Day Progress Report and Adaptation Action #1, below, discuss these efforts further. Specific actions related to extreme events include development of information on disaster preparedness and response, support for forest products and markets for salvage and small-diameter timber, and support for post-disturbance emergency stabilization and rehabilitation. Wildfire and hurricanes can provide opportunities to increase climate resilience through species selection and soils restoration in disturbed areas. Barriers to implementation include underdeveloped markets and feedstock sources that slow use

of hurricane salvage and small-diameter timber.

- **Strengthen disaster assistance and relief programs.** In addition to assistance programs mentioned in Vulnerability #2 (NAP, ECP, TAP, LFP, and QLA), FSA offers the Livestock Indemnity Program (LIP), Emergency Assistance for Livestock, Honeybees and Farm-raised Fish (ELAP), and Wildfire and Hurricane Indemnity Program and Program Plus (WHIP and WHIP+) to help producers cope with impacts of extreme events and natural disasters. FSA also provides Emergency Loans for producers who might otherwise be forced to terminate operations, and Disaster Set-Aside options, which allow direct loan borrowers to forego an installment until the end of the loan term to reduce short-term financial strain due to a disaster.
- **Enhance the adaptive capacity of rural communities.** Resilience to extreme events and other climate impacts will require increasing local capacity to make adaptive improvements to community resources and expanding options for economic opportunities. USDA's Climate-Smart Agriculture and Forestry Strategy: 90-Day Progress Report highlights ways in which USDA can support new and better for markets for agriculture and forestry products while simultaneously building the resilience of rural communities. Examples of actions include supporting participation in voluntary carbon markets, renewable energy development and energy efficiency activities, and loans and grants to expand broadband access.

Many measures to build resilience to extreme events are long term investments whereas some programs will have distinct timelines triggered by the occurrence of such events. For example, while loan assistance is on-going, Emergency Loan and Disaster Set-Aside assistance is only available after a declared disaster. The level of support proposed in the FY 2022 budget and other

mechanisms will be used to address the backlog of National Forest System (NFS) restoration projects and enhance current work on risk identification, vulnerability assessment, adaptation planning, and disaster preparedness and recovery. Program records, including FSA's loan disbursement records and NRCS's reporting on conservation and investments, can be used to track activities. Progress on NFS lands will be monitored through the FS Climate Scorecard and the number of acres restored.

## 5. Stress on infrastructure & public lands

The increasing frequency, severity, and extent of disturbances with climate change can have far-reaching consequences on natural and built infrastructure on public lands. Changes in flood frequency, wildfire intensity, sea level, and extreme precipitation events can cause damage to low-elevation infrastructure, threaten utilities and air quality, endanger coastal communities, and increase erosion and landslides. For the NFS, in the absence of any climate adaptation action, reforestation and restoration needs will continue to increase, ecosystem services will be lost or diminished, aging infrastructure will deteriorate, and social and economic benefits will be disrupted. Roads and bridges damaged or lost because of increased flooding can limit access to Federal lands, create safety hazards, and reduce the availability of water resources. Actions USDA can take regarding built infrastructure and forest resilience include:

- **Increase resilience of built infrastructure.** Infrastructure must be upgraded, or newly designed, to withstand increasing extreme events and disturbances. The FS is using decision support tools and climate change vulnerability assessments to identify when and where to relocate or decommission vulnerable infrastructure and improve transportation infrastructure to reduce erosion and sedimentation. Other adaptation

actions include improving streamflow forecasting and expanding streamflow and snowpack monitoring networks to help managers respond to extreme events and ensure water allocation downstream. Barriers to implementation include funding to upgrade existing infrastructure and uncertainty in future flood projections.

- **Address forest restoration needs.** FS will need to increase the pace of restoration to address 1 to 4 million acres of restoration needs on national forests as described in the FS reforestation strategy. This action will require the use of planning tools and decision-making frameworks to enable collaborative planning and implementation of large restoration treatments across management boundaries.
- **Build resilience to severe wildfires and their effects.** Building resilience to wildfire necessitates the accelerated use of prescribed fire and the strategic implementation of hazardous fuel treatments to reduce wildfire impacts. Following severe wildfires, FS will prioritize public safety, forest rehabilitation, and slope stabilization. Rural Development (RD) and FS will work together to identify opportunities to link post wildfire restoration efforts with bioenergy generation. Barriers to implementing this action include limited

capacity and competing priorities during periods of widespread wildfire activity, State and local air quality compliance for prescribed fires, and public resistance to wildfire and fuels management.

Addressing the growing reforestation and restoration backlog over the next 10 years will require a four-fold increase in planting and a 30 percent increase in certification of natural regeneration, resulting in 3.6 million acres reforested. Given the importance of forest health and resilience to the long-term sustainability of forest landowners and surrounding communities, these efforts are described in further in Adaptation Action #1 below. For infrastructure like roads, bridges, and facilities, their long service life means that adaptation will be a long-term effort. Long-term monitoring will help detect potential climate change effects and evaluate the effectiveness of adaptation options. Existing FS monitoring efforts include the Climate Scorecard (biennially through 2025), the Key Performance Indicator for Terrestrial Condition Assessment (annually for all NFS lands), the Watershed Condition Framework, Biennial Monitoring Reports, and Forest Inventory and Analysis.

Already, the Great American Outdoors Act (GAOA) is being leveraged to develop more resilient infrastructure. In March 2021, USDA announced investment via GAOA's National Parks and Public Land Legacy Restoration Fund,

which will enable implementation of more than 500 infrastructure improvements across national forests and grasslands. The Forest Service also continues to use Land and Water Conservation Fund (LWCF) programs to strategically conserve forests on private and public lands. Future investments to address the reforestation backlog and wildfire risk could be targeted towards nurseries and natural infrastructure, accelerated project planning, building expertise, and improving management strategies to build resilience to wildfire. Continued and expanded cross-boundary collaboration with other federal agencies, Tribes, states, and partners will help achieve the requisite scale of response.

### III. USDA'S ADAPTATION ACTIONS

Building on the vulnerabilities identified above, USDA will take cross-cutting adaptation actions to prepare the American agriculture and forestry sectors and rural and urban communities to be resilient in a changing climate. These actions aim to bridge the gap between innovative science and technology for climate adaptation and preparedness and in-field and on-site practices to build soil and forest health. These actions will reduce producers' vulnerability to climate change through increased access to relevant climate data and expanded education and outreach efforts.

The Fourth National Climate Assessment outlines the key challenges associated with adaptation planning for USDA consideration. The first challenge is that adaptation planning must be a sustained, iterative process. Mainstreaming the climate preparedness thought process rather than making it an additive step in decision-making will lead to greater success. Secondly, it is essential that USDA considers both current and projected climate change and variability in its planning and decision-making. Supporting climate literacy within the USDA workforce, as discussed later in this Plan, can support this new mode of thinking.

A third challenge is ensuring that climate adaptation actions are not limited to the stages of awareness, assessment, and planning but are implemented, monitored, and re-evaluated, which will require sustained attention and measures of success. Finally, the impacts of climate change on USDA and its stakeholders will vary regionally and locally, requiring climate adaptation actions at relevant scales.

USDA proposes adaptation actions to:

1. Build resilience across landscapes with investments in soil and forest health;
2. Increase outreach and education to promote adoption and application of climate-smart adaptation strategies;
3. Broaden access to and availability of climate data at regional and local scales for USDA Mission Areas, producers, land managers, and other stakeholders;
4. Increase support for research and development of climate-smart practices and technologies to inform USDA and help producers and land managers adapt to a changing climate; and
5. Leverage the USDA Climate Hubs as a framework to support USDA Mission Areas in delivering adaptation science, technology, and tools.

## 1. Build resilience to climate change across landscapes with investments in soil and forest health

Economic vitality and quality of life throughout America depends on healthy, climate-adapted agricultural and forest systems. Proactive investments in soil and forest health will build resilience to climate change into these systems. This action includes efforts to build resilience via conservation practices, improved

water management and efficiency, climate-informed reforestation and forest management, and ecosystem restoration and management. Enhancing soil and forest health will protect ecosystem functions that support the long-term resilience of working lands and forests and enable producers to successfully and sustainably enhance productivity to meet growing global demand in a changing climate.

Climate change threatens to increase the degradation of soil and water resources, including via increases in extreme precipitation events that lead to soil erosion, degraded water quality in lakes and streams, damage to infrastructure, and diminished crop production. On forest land, a combination of acute disturbances and shifts due to gradual climate change are expected to alter forest structure, function, productivity, and health, which will decrease the ability of forests to provide important ecosystem services. The rate at which restoration services are needed across the landscape is currently outpacing the capacity of land management agencies and their partners.

A variety of conservation management practices to restore soil structure and hydrologic function of agricultural landscapes can be adopted to improve resilience, including no till and reduced till, cover crops and crop rotations, improved nutrient management, agroforestry practices such as windbreaks and buffers, and prescribed grazing. These practices help to reduce erosion and

increase organic matter in the soil, which improve water holding capacity and water infiltration, thereby increasing resilience to drought, heavy precipitation, and extreme temperatures. Current adoption of these practices varies by practice, region, and crop. For example, U.S. farmers have rapidly expanded their use of cover crops, a 50 percent increase from 2012 to 2017, yet their use spans only 5 percent of total harvested cropland. Active forest management, including thinning forests and treating fire-deficient landscapes by prescribed burning, and climate-smart reforestation can increase resilience and reduce risks of wildfire, insect, and disease related mortality.

Many of these practices provide co-benefits for climate change mitigation via enhanced soil carbon sequestration and reduced emissions and for water quality and quantity through reduced erosion and runoff. Improvements in forest health can mitigate emissions from increased wildfire, increase soil carbon sequestration, mitigate risks to communities in the wildland-urban interface, and maintain other valuable forest ecosystem services.

Recent and ongoing USDA activities to promote resilience via enhanced soil and forest health include:

- Creation of The Adaptation Workbook, which producers can use to assess threats and document management choices to minimize climate change impacts to their operations. The workbook uses menus of adaptation strategies and approaches for forests, urban ecosystems, forested watershed and water resources management, agriculture and working lands, and recently published menus focusing on Tribal perspectives, forest carbon, and recreation. The workbook has been used to generate hundreds of adaptation demonstration projects using real-world examples of forest and farm management.
- Curation and continued growth of an online compendium of nearly 500 adaptation approaches with numerous associated examples on the FS Climate Change Resource Center (CCRC).

- Awards through NIFA's Agriculture and Food Research Initiative (AFRI) to fund 14 Soil Health grants and 7 Signals in Soil grants, an interagency program with the National Science Foundation (NSF).
- Investment in NRCS's Conservation Innovation Grants (CIG) to support the development of innovative tools, approaches, practices, and technologies to further natural resource conservation on private lands. The Soil Health Demonstration Trial, part of the CIG On-Farm Conservation Innovation Trials, will focus extensively on implementation of conservation practices and systems that improve soil health.
- Commitment of NRCS resources to fund 85 locally driven, public-private partnerships via the Regional Conservation Partnership Program (RCPP) to address climate change, improve water quality, combat drought, enhance soil health, support wildlife habitat, and protect agricultural viability.
- Encouraging enrollment in the Conservation Reserve Program (CRP) with new incentives and other adjustments to payments and a focus on the program's role in climate change mitigation. CRP provides annual payments to producers in exchange for removing environmentally sensitive lands from production and implementing practices to improve soil health and provide other benefits. In addition to general and continuous CRP sign-up, FSA offers CRP Grasslands and pilot programs focused on soil health and clean water, such as Clean Lakes, Estuaries and Rivers 30-year contracts (CLEAR30). FSA administers CRP on behalf of the Commodity Credit Corporation.
- Investments in the FS and NRCS's Joint Chiefs' Landscape Restoration Partnership, which includes projects to mitigate wildfire risk, improve water quality, and restore healthy forest ecosystems on public and private lands.

- Release of a new fire mapping tool, Southeast FireMap, to enable resource managers to improve their approaches to managing wildfire risk and fire management needs through targeted prescribed burns and training.

Building on the efforts described above and in conjunction with the objectives of the Climate-Smart Agriculture and Forestry Strategy: 90-Day Progress Report, USDA will use strategic investments to carry out climate-informed forest management and restoration activities, provide wildfire mitigation response, incentivize and scale up voluntary adoption of soil and forest health enhancing practices, and support markets that value the enhanced resilience of producers and ecosystems. Climate-adaptation practices will need to fit the geographic context and align with the interests of farmers and land managers. This is especially important because implementation costs are usually incurred on shorter timescales than the soil and forest health benefits are realized. A combined effort from NRCS, FSA, FS, USDA research agencies, the Climate Hubs and other USDA agencies will be essential to implement these actions effectively and address these challenges.

NRCS will play a key role by providing technical and financial assistance to farmers to implement and incentivize conservation practices through several existing programs and initiatives, including EQIP, CSP, RCPP, CIG, and the Soil Health Initiative. The backbone of NRCS data for designing assistance is the National Cooperative Soil Survey Program, which provides information on soil and ecological site resources of farms and ranches across the United States. FSA aims to increase enrollment in CRP by 4 million acres or more over the coming year, with the long-term goal to establish valuable land cover to improve water quality, soil health and carbon sequestration, and prevent soil erosion and loss of wildlife habitat. REE agencies and other programs, like the National Agroforestry Center, will provide the science and innovations that will underpin the management choices taken by the program

agencies, as described in Adaptation Action #4.

FS will scale up its activities to accelerate the strategic implementation of hazardous fuel treatments and prescribed fire to reduce wildfire risks and to increase forest restoration and reforestation. To significantly reduce the risk of high intensity wildfire, over the next 10 years, the FS will need to treat an additional 20 million acres of NFS land and 30 million acres of other Federal, State, Tribal and private land, especially in the Western United States. These goals are consistent with the recommendations outlined in USDA's Climate Smart Agriculture and Forestry Strategy: 90-Day Progress Report and current

budget priorities. A number of FS programs and initiatives will be engaged to build resilience on forests and grasslands including the Forest Legacy Program, which supports easements and land purchases for private-land conservation, as well as the Community Forest Program (CFP), Forest Stewardship Program (FSP), Sustainable Forestry African American Land Retention Program (SFLR), and Urban and Community Forestry (UCF) Program. Planning and decision-making in these programs and management activities will be based on climate-smart principles informed by FS R&D and the Climate Hubs.

The Climate Hubs will support efforts to build soil and forest health through ongoing work to empower land managers to incorporate climate adaptation into their land management planning. Further details of the Hubs' outward and inward-facing efforts are included in Adaptation Actions #2 and #5, respectively.

#### *Scope, Performance, and Resources*

- This action will work to build resilience across diverse landscapes at local to national scales, with a particular emphasis on supporting producers and land managers most vulnerable to climate change impacts. While conservation practices are often implemented at the field, farm, and stand levels, conservation planning can also be coordinated at the area and watershed levels. Large-scale forest treatment and restoration often spans management boundaries.
- USDA will track and estimate benefits of soil health practices using national survey data and program data. These data can be used to estimate soil carbon benefits and other co-benefits of soil health practices. USDA is planning to improve conservation data collection and reporting by implementing new surveys, which will provide more information on the adoption and benefits of soil health practices.
- FS will use its Climate Scorecard, particularly the Adaptation element, to monitor progress.

- Active forest management treatments to reduce wildfire risk on Federal, State, Tribal and private lands will require cross-government coordination.
- The President's FY 2022 Discretionary Funding Request includes significant investments within FS, NRCS, and other USDA agencies to enhance soil and forest health and resilience on public and private lands, including through support for voluntary conservation on working lands and for high-priority hazardous fuels and forest resilience projects.

## **2. Increase outreach and education to promote adoption and application of climate-smart adaptation strategies**

The Nation's farmers, foresters, and ranchers face increased vulnerability of their operations to extreme weather and long-term changes in climate. Low-income, minority, and Tribal communities as well as small-scale, beginning, young, underrepresented, and underserved farmers and foresters will bear the brunt of negative climate change impacts, made more difficult by lack of accessible and useful information sources. Maladapted agriculture and forestry sectors could lead to a less diverse and resilient food system, degraded natural resources, and missed economic opportunities.

The goal of this action is to promote adoption and application of climate-smart adaptation strategies. USDA's Climate Hubs and NIFA, in partnership with the Cooperative Extension Service, Historically Black Colleges and Universities, Tribal colleges, Hispanic Serving Institutions, additional university partners, NGOs, and others, can provide resources to farmers, ranchers, and forest landowners to increase awareness of and engagement in opportunities to address climate change. Investments in the Climate Hubs program will allow the network to scale up their efforts to

develop and deliver science-based, region-specific information and technologies. The Climate Hubs will strengthen partnerships to enhance support for science-based decision-making and facilitate knowledge sharing of climate risks, vulnerabilities, and adaptation strategies. NIFA will evaluate the inclusiveness of climate in its education and extension portfolio and leverage its resources to encourage stakeholders to partner with the Climate Hubs to develop and deliver resources to America's farmers, ranchers, and landowners. Together, the Climate Hubs and NIFA can strengthen the role of extension as a force multiplier in increasing adoption and application of climate-smart practices. With a presence in nearly all of the more than 3,000 counties of the United States, the Cooperative Extension System's network of agents and specialists will be essential to expanding the use of climate-smart strategies described in Adaptation Action #1.

Recent accomplishments by NIFA and the Climate Hubs towards this goal include:

- NIFA support for Cooperative Extension professionals who are actively engaged in the National Extension Climate Initiative (NECI), which promotes the recognition of the climate crisis, coordination and management of climate-smart agriculture and forestry outreach activities, and sharing of program materials;
- A NIFA solicitation for extension and education projects that include partnerships with the USDA Climate Hubs through AFRI's Foundational and Applied Science Request for Applications (RFA);
- Through the Climate Hubs, development of 11 curricula reaching 402 students, production of 118 in-person or virtual workshops with an estimated 7,800 participants, 214 presentations, and 439 engagements with Tribes or Tribal organizations in FY 2020.

The Climate Hubs are a focal point for outreach and education efforts around climate impacts and risk management on working lands. Moreover,

the Hubs act as conveners helping to gather information from Tribal and stakeholder groups to understand regional issues and deliver actionable, relevant information to enhance climate-informed decision making. While many of the Climate Hubs already engage with local communities, states, and Tribes, the Hubs' capacity to increase climate outreach and education could be enhanced through dedicated Tribal and state liaisons. In addition, the Climate Hubs can expand their reach into under-resourced and underserved communities through delivery of timely, relevant, and credible information, data, and tools. NIFA can leverage existing and new funding sources to support colleges and universities, especially minority-serving institutions, in developing partnerships with the Climate Hubs. NIFA will also increase consultations with community colleges and minority-serving institutions to ensure widely accessible climate education and outreach opportunities.

Implementation will be accomplished through an expansion of the USDA Climate Hubs program and establishment of NIFA funding opportunities to address this Adaptation Action. USDA intends to leverage opportunities for enhanced technology transfer and implementation of climate-smart practices by linking USDA staff with other federal climate change coordination efforts such as the Department of the Interior's Climate Adaptation Science Centers (CASCs), NOAA's Regional

Climate Centers and Regional Integrated Sciences and Assessments (RISAs), and U.S. Global Change Research Program (USGCRP) working groups.

The Climate Hubs will evaluate success based on activities including vulnerability assessments, adaptation planning and menus, jointly developing decision-support tools, building technology to support climate resilience, and stakeholder workshops/listening sessions. Key metrics for NIFA include number of RFAs published that include climate change language and projects funded that support climate outreach and education.

#### *Scope, Performance, and Resources*

- The USDA Climate Hubs are located at five ARS and five FS research stations comprising ten regions spanning the United States and its territories. The Climate Hubs support local, state, and regional efforts including cross-region and national initiatives when there are common interests or technology needs.
- The Climate Hubs are overseen at the national level by an Executive Committee (EC) comprised of senior program leaders from across the Department who provide leadership on action development, implementation, monitoring, evaluation, and oversight. The National Lead, a 2-year rotating position among ARS, FS, and NRCS, works through the EC to ensure national coordination to capitalize on synergies and efficiencies.
- New NIFA programmatic support for climate extension and education is expected in FY 2022. NIFA will need to balance climate with other priorities across its research, education, and extension portfolio. Additional National Program Leaders with social and behavioral science expertise will help develop effective climate outreach and education programs.

- The President's FY 2022 Discretionary Funding Request for the Climate Hubs will support an expansion of climate science tools and landowner awareness and engagement in climate adaptation practices.

### **3. Broaden access to and availability of climate data at regional and local scales for USDA Mission Areas, producers, land managers, and other stakeholders**

Increasing access to and use of climate data, models, and decision support tools at the regional and local scales for producers, land managers, state and local policymakers, and USDA Mission Areas is a critical and ongoing priority for supporting timely responses to the impacts of climate change. This action necessitates organizing, streamlining, and coordinating data access points and online data delivery. Ensuring that climate adaptation strategies are accessible to all farmers, ranchers, forest landowners, and communities will require that USDA address internet access and other infrastructure or resource issues that limit access and use of climate data.

The Department aims to increase access to reliable climate data by supporting the collection and curation of scientific information on climate change and translating that information into user-friendly decision support tools, models, and recommendations to provide guidance on benefits and outcomes associated with agronomic decisions. To accomplish this goal, the Department must also provide equitable access to technical assistance and training for climate data end users.

Ways in which USDA already collects and provides data for improved resource management in a changing climate include:

- ARS's development of the Agricultural Collaborative Research Outcomes System

(AgCROS) database to provide data to the public research and development community and its Partnerships for Data Innovation (PDI) program to implement sensors and other data collection, integration, and sharing systems that will help farmers get the most from their limited resources;

- ERS's regular evaluation of its Agricultural Resources and Management Survey data products;
- NRCS, which delivers data on conservation practices and is modernizing its Plant List of Accepted Nomenclature, Taxonomy, and Symbols (PLANTS) database;
- FS's Forest Inventory and Analysis (FIA), which provides annual data on forests to assess sustainability of management practices, monitor forest health, productivity and carbon stock change, and predict the effects of climate change;
- NIFA with its AFRI Data Science for Food and Agricultural Systems program area that supports projects that harness data science to aid land managers in decision-making and a collaboration with the National Agriculture Library on an open data framework; and
- The Climate Hubs, which have improved the discoverability and usability of RMA crop insurance data for enhanced climate risk management with the AgRisk Viewer.

This action provides an opportunity to deliver credible science and user-friendly decision-making tools that can help producers and land managers apply climate change and weather-related information to their operations. Reliable data can inform planting decisions, farming practices, and business decisions. By improving current data access, this action enables USDA to provide support and incentives for agricultural data standards and to encourage partnerships with public and private data trusts. Additionally, this action presents the opportunity to create a USDA-wide open access agricultural, rangeland and

forestry database to drive development of more advanced tools for producers and land managers.

The Department will identify existing or emerging issues with data access as well as opportunities for improvement, with a particular focus on access for low-income, socially disadvantaged and historically underserved communities. Consistent financial support will be key to ensure that the necessary infrastructure exists for data access. The lack of a cohesive and consistent cloud computing environment will restrict the ability to deliver spatial data sets, and Chief Information Officer restrictions on research and development application development may delay delivery of user-friendly climate dashboards and tools. Other challenges include the availability of temporally resolved geospatial imagery, the need for additional data science expertise, and the capacity to incorporate social and behavioral sciences to evaluate human dimensions of the food system. Data and decision-support tools need to be accessible to rural communities, which may be challenging with current broadband and internet infrastructure in some communities. Collaborations with federal funding agencies to provide research support will aid in understanding complex climate issues and allow the Department to craft models and decision-making products essential for the sustainability of economic and natural resource systems.

#### *Scope, Performance, and Resources*

- Increasing access to climate data is an ongoing priority in the Department, and a reasonable timeframe for achieving the goal will be FY 2021 through FY 2025. The first key milestone of this action will be leveraging new technologies and computing resources to effectively deliver additional climate data through online tools in FY 2022 and FY 2023.
- This action will require contributions and support from ARS, ERS, FS, NASS, NIFA, NRCS, and OCS.
- Maintaining current levels of delivery and data access will likely be possible with existing resources. Direction of additional investments and technical capacity towards this action could further improve data quality, timeliness of delivery and ease of access by users.
- Increased access to and consistency of climate data should be addressed at the national, regional, and local scales.
- Supporting information tools that provide resolution across multiple scales will be critical to allow users to adjust output based on their specific need.
- Increased availability of technical assistance to support climate data and tools, increased access and use of climate and climate-related data, feedback from user communities on the usefulness of information and data, and the reduction in gaps of science and science delivery for agriculture will serve as useful performance measures.
- USDA will work to better understand Tribe and stakeholder needs for climate data, particularly in underserved communities.
- The Department will coordinate with science agencies across the federal government, including the NSF, the Department of Energy, the National Aeronautics and Space Administration, and NOAA to ensure that

federal climate-related data are accessible to those in the agriculture, rangeland, and forestry sectors.

## **4. Increase support for research and development of climate-smart practices and technologies to inform USDA and help producers and land managers adapt to a changing climate**

USDA will continue to support and coordinate the efforts of its research agencies to develop innovations in climate-smart agriculture and forestry. Evaluating the efficacy of adaptive practices and technologies on working lands, including productivity synergies and tradeoffs and mitigation co-benefits on soil carbon storage and GHG emission reductions, is a research priority. Other key topics for climate research include improved fertilizer technologies, genetic studies to identify climate resilient plants and trees, and studies of the impacts of climate change on pollinator communities and vector-borne livestock diseases. Modeling efforts can project the affordability of climate-smart activities, infer adoption likelihood, and project pest and disease outbreaks under different climate change scenarios. USDA's long-term monitoring networks for snowpack, precipitation, and soil moisture provide data to investigate trends and develop management options.

The Department's research activities form the basis for validating existing climate adaptation options and identifying and developing new ones, while ensuring the actions are regionally relevant and economically viable. USDA's research integrates climate and socioeconomic change with production and land-management outcomes, while considering the secondary effects of climate's influence on pollinators, pests, diseases, invasive species, and extreme events such as flooding and drought. New scientific information and tools, contextualized and implemented locally, can help

land and resource managers increase the resilience of those systems and the communities that depend on them. To date, however, implementation has been slow. Increasing partner engagement, science co-production, and delivery will ensure that the best available science is understood and put into practice.

USDA's efforts to understand and minimize climate risks for its stakeholders have yielded important accomplishments, a few of which are highlighted here:

- In July 2020, USDA published a report documenting 20 Climate Indicators for Agriculture to support decision making and to understand the larger climate context of U.S. agriculture.
- NIFA currently supports approximately 400 active projects related to climate change representing an investment of approximately \$200 million.
- Scientists at ARS are developing a Grand Challenge Synergy Project proposal "Creating pollinator landscapes and beekeeping practices for a changing climate," to synergize efforts across ARS and other federal and state agencies to find solutions to the climate change challenges experienced by pollinators. In May 2021, Project Leaders held a workshop to obtain perspectives from scientists and stakeholders and build collaborations required to generate and implement solutions to pollinator loss from climate change.
- FS has developed national and regional syntheses of climate effects on forests, agroforestry, non-timber forest products, forest and rangeland soils, invasive species, and the wildland urban interface and identified management opportunities and adaptation practices.
- In collaboration with ARS, NRCS, NDMC, and university partners, the Climate Hubs developed Grass-Cast to provide enhanced decision support to ranchers and grassland

managers by estimating forage productivity during the growing season.

- FS's FIA program has successfully led to practical tools for forest carbon assessment and monitoring climate change effects on forest species composition and abundance.
- NRCS's Snow Survey and Water Supply Forecasting and Soil Climate Analysis Network data are used to manage water resources and plan for water shortages in the Western United States.

Managing competing research priorities will require a coordinated effort at the Department and agency levels. As described in Adaptation Action #3, translating experimental data into information and decision tools is a complex process that is required for the adoption of climate-smart practices and technologies. Evaluating the effectiveness, tradeoffs, and synergies of climate-smart practices will require a multidisciplinary systems approach.

USDA anticipates that existing organizational, administrative, and coordination capacity will rapidly and efficiently integrate many of the new research and development priorities outlined in this Plan. As described in Adaptation Actions #2 and #5, USDA will work through the Climate Hubs, extension, and other means to understand stakeholder needs and deploy new information, data, practices, tools, and technologies to private landowners and managers for implementation. Relationships with land-grant universities, technical service providers, and other cooperators will be leveraged to achieve this goal. Finally, USDA will use internal and interagency working

groups and review of existing funding authorities to identify research opportunities and increase support where appropriate for climate-smart research activities.

Many ongoing USDA research projects with climate adaptation applications will continue into the foreseeable future, for example:

- ARS has numerous climate adaptation research projects throughout its crop, animal, natural resource, and food nutrition programs.
- FS activities to increase support for applied climate science to develop and evaluate practices and technologies, engage in the development and co-production of science, and use social science to identify adoption barriers will be initiated in FY 2022 and continue at least through FY 2026.
- NIFA will support new Artificial Intelligence Research Institutes focused on climate change in FY 2022 and continue to support climate science in the AFRI Sustainable Agricultural Systems (SAS) RFA.
- FSA's evaluation of the soil benefits of the Conservation Reserve Program will undergo a significant expansion in FY 2021 and will continue for at least five years, with the potential to go beyond 15 years.

Existing monitoring efforts and those developed by USDA's research agencies during adaptation planning will be used to track the outcomes of science implementation and adaptation actions. These efforts will consider the outcomes of focused listening sessions, adaptation case studies, dissemination and training workshops, new tools and tool improvements, research partnerships and measures like adoption rates, publications, data usage, fellowships, and funding levels.

#### *Scope, Performance, and Resources*

- OEEP coordinates USDA's climate change activities, including execution of this Plan, through the monthly USDA Global Change Task Force (GCTF) and represents USDA to the interagency USGCRP. OCS

provides Department-wide coordination of agricultural research, education, and extension needs.

- USDA's research spans field-scale practices, whole-farm or forest systems, regional monitoring networks, and national-scale analysis and assessment.
- Coordination is generally a national headquarters activity, while primary research activities largely occur in the field to capture diversity in environmental conditions, production types, and management.
- USDA will continue its participation in the USGCRP's Federal Adaptation and Resilience Group to ensure that climate-driven challenges are anticipated by new information, practices, technologies, and tools.
- Outside of the federal government, shared stewardship agreements between the FS and states will facilitate implementation of adaptive actions and support monitoring efforts.
- USDA agencies will increase consultations with Tribal communities to incorporate traditional ecological knowledge into climate-smart practices.
- Additional consultations with community colleges and minority-serving institutions will be used to make research opportunities under this effort widely accessible.
- International partnerships and dialogues allow USDA's expertise to improve global outcomes beyond U.S. borders.
- USDA research agencies are already or planning to realign personnel time and resources towards USDA's climate priorities. Additional investments would permit expansion of essential research efforts, climate-related program analysis, monitoring networks, and technology transfer.

## 5. Leverage the USDA Climate Hubs as a framework to support USDA Mission Areas in delivering climate adaptation science, technology, and tools

The Climate Hubs provide necessary USDA infrastructure to deliver climate adaptation science, technology, and tools to USDA agencies who, through their missions, support farmers, ranchers, and forest landowners. The Hubs were established in 2014 with the aim to develop and deliver science-based information and technologies to enable producers and natural resource managers to make climate-smart decisions and minimize risk to their operations. In January 2020, the Hubs completed a five-year review to assess their effectiveness and provided recommendations to inform a new, forthcoming, strategic plan. Over a five-year period (2014-2019), the Climate Hubs and partners hosted over 435 in-person workshops and training events and engaged over 16,000 stakeholders on critical climate issues and adaptation opportunities. The Hubs provided technical expertise through 237 webinars, podcasts, and other digital communication reaching over 17,000 people, and developed more than 25 web-based decision-support tools, including Grass-Cast and AgRisk Viewer.

To integrate climate-smart agriculture and forestry in USDA's mission, programs, operations, and management, USDA will take advantage of the Climate Hubs' unique position to work across organizational boundaries and engage their expertise and awareness of regional priorities. The Climate Hubs and USDA Mission Areas will work together within the three Hubs workstreams:

### Workstream 1: Science and Data Synthesis

- The Hubs will promote coordination and joint production of resources and tools between USDA science and program agencies.

- Hubs' applied vulnerability assessments for fire, flood, drought, extreme temperatures, and hurricanes will be used to make recommendations to USDA Mission Areas to increase landscape and community resilience to extreme climate events.
- Using an adaptive management approach, the Climate Hubs plan, implement and monitor actions, analyze and synthesize results, and share their learning. USDA will use the Hubs' regional expertise and awareness of climate-smart agriculture and forestry successes to inform Mission Area management and decision-making.

### Workstream 2: Technology and Tool Development and Implementation Support

- The Climate Hubs will leverage their co-production model to produce tools relevant to USDA agencies that use existing technologies and data.
- To promote co-production of tools and resources with stakeholders, the Hubs will pass back local and regional knowledge and climate adaptation needs to ensure that USDA's work is relevant and usable by farmers, ranchers, and landowners.

### Workstream 3: Outreach, convening, and training

- The Hubs will provide a platform for USDA agencies to convene and work on common issues and expand their outreach.

- The Hubs will develop new partnerships and strengthen existing relationships with USDA agencies to enhance uptake of existing tools and jointly develop new products. Opportunities to partner with APHIS, FS, FSA, NRCS, RD, RMA, and other agencies will be sought.
- To build a practice of climate-thinking across USDA, the Hubs will integrate the best available science into messaging tools like research publications, gray literature, social and other media communications, and video and podcast products.
- To reach specific agency staff, the Climate Hubs will jointly develop and curate relevant educational modules, webinars, workshops, and trainings.

*Scope, Performance, and Resources*

- Resources to support the Hubs program are contained within the President’s FY 2022 Discretionary Funding Request. These investments will allow the program to expand to meet growing demand from within and outside USDA.
- Indicators relevant to this action will include training or capacity building activities provided to USDA staff, an increase in intra-agency research or program collaborations, and development of tools, resources, and research to support Mission Area objectives. The Hubs will continue to track webinars, trainings, and other interactions with the public.
- The Climate Hubs report on their progress through quarterly reports to the Executive Committee, newsletters, and annual reports.
- The Climate Hubs have built strong relationships with external partners from local to national scales and across sectors, providing opportunities for collaboration with NGOs and other stakeholder communities to develop adaptation resources and tools to enhance USDA activities.

- The Climate Hubs will share climate adaptation science, tools, and technologies through partnerships with other federal climate service networks including the RISAs, CASCs, and NIDIS DEWS. The Hubs can assess how to adapt these interagency efforts for USDA use to increase efficiency and avoid duplication of efforts.

## IV. ENHANCING CLIMATE LITERACY IN USDA’S WORKFORCE

A climate-informed and capable workforce underpins the success of the adaptation actions outlined in the sections above. Enhancing climate literacy across USDA’s workforce is an essential element of integrating climate preparedness into USDA’s mission, programs, operations, and management. USDA has nearly 100,000 employees at more than 4,500 locations across the United States and abroad with a diverse range of roles, responsibilities, and backgrounds. To prepare USDA’s current and future workforce for the impacts of climate change, USDA will expand opportunities for education focused on how climate change affects the mission of the Department and its work. Core education and training should be accessible to staff at all levels in all locations.

Examples of ongoing activities to build climate literacy include:

- The Office of Property and Environmental Management’s (OPEM) Sustainable Practices team convenes working groups on Facilities, Sustainable Buildings, Green Purchasing, Fleet Management, and Real Property to discuss policies, goals, best practices, challenges, and progress in achieving sustainability and climate goals.
- OPEM also hosts events and issues a quarterly newsletter, The EnviroPost, to increase employee awareness of sustainability and climate issues by highlighting agency

successes, best practices, awards, and training opportunities.

- The CCRC, a joint online platform of FS R&D and FS Office of Sustainability and Climate (OSC), hosts a series of three modules on climate change and natural resource management. The modules cover basic climate change science and modeling, climate change effects on forests and grasslands, and responses to climate change.
- FS OSC hosts webinar series on topics related to its mission; its current series is focused on topics related to environmental justice, including Tribes and climate adaptation, water, air, and recreation.
- FS R&D and OSC, the Climate Hubs, and NRCS regularly host webinars and training at various technical levels on topics related to climate that are accessible to USDA staff.

To build on these existing efforts, USDA can:

- Form a climate literacy working group. Coordinated by the Climate Hubs, this group would survey USDA agencies and offices for prior and ongoing climate education activities, identify climate literacy training needs for staff, including environmental justice issues, and suggest how to use existing frameworks to enhance climate literacy. Recognizing the Climate Hubs' intra-agency reach and experience in innovative and interactive methods to increase climate literacy, this working group will suggest how the Hubs can build climate capacity within USDA agencies, including how to reach regional and local offices.
- Expand information dissemination and training access. OEEP and the Climate Hubs will develop a sustainable strategy to disseminate climate science information from REE agencies, FS R&D, and USGCRP to relevant USDA staff. Building off the Climate Hubs' social science insights on encouraging knowledge co-production, USDA can ensure information sharing and

training is relevant, useful, and equitable. USDA can ensure access to and expand the CCRC modules described above to equip staff with an understanding and common vocabulary of climate change and adaptation and mitigation responses.

- Establish a USDA climate seminar series. OEEP will continue development of a yearlong, monthly seminar series that will be at a level accessible to a diverse audience of USDA staff and develops climate literacy with progressively complex topics. The series will be science-focused, for experts and non-experts, and will provide opportunities throughout to ask questions that help dispel misconceptions related to climate. Potential subjects include GHGs in agriculture, climate impacts on crop production and animal agriculture, and options for climate adaptation and mitigation.
- Consider early climate literacy development. Hiring, training, and maintaining a climate literate workforce can start with students before they become USDA staff. Working with land-grant and other university partners, NIFA will continue to play an important role funding training and education. With investments from NIFA and assistance from the Climate Hubs, youth organizations like 4-H could be supported to deliver early climate literacy and promote positive youth development. In addition, USDA could look for opportunities to develop climate-tracks within its Internship and Recent Graduates Programs.

Performance measures developed during agency and office-level adaptation planning should include workforce climate literacy targets. Current means of evaluating climate literacy include annual Sustainability Plans, OMB Scorecards for Efficient Federal Operations and Management, and, at the Forest Service, climate-related training can support progress towards Climate Scorecard elements.

## V. USDA ACTIONS FOR CLIMATE-READY SITES AND FACILITIES

USDA will continue to improve the climate resilience of sites, fleet, and facilities and implement its Departmental Regulations and Directives for sustainable and climate adaptive operations of sites, fleet, and facilities. OPEM is responsible for coordinating with agencies, setting annual strategic goals, developing actions, and measuring progress by creating agency scorecards for improvement.

### **Construct and Operate Climate-Ready Real Property**

The Department implements Department of Homeland Security structural integrity guidance to prepare for increasingly frequent and intense natural hazards, such as extreme weather and wildfires. Recent vulnerability assessments indicate many FS dams are vulnerable to large storm events for which they were not originally designed. To enhance resilience, USDA will evaluate needs to increase capacities of spillways to handle extreme storm events.

USDA is raising its standards for design, construction, operation, and maintenance of facilities and infrastructure by applying climate adaptive technologies, increasing renewable energy use and equipment efficiencies to conserve

energy, and reducing its GHG footprint. New buildings are performing 30 percent more energy efficiently than the industry standard and over 45 percent of USDA-owned buildings 10,000 gross square feet and larger meet the Guiding Principles for Sustainable Federal Buildings. USDA uses third-party certification systems such as LEED or Green Globes to validate its green buildings. For construction materials, USDA prefers wood for new buildings due to its capacity for energy savings and ability to sequester carbon. Equipment performance is monitored throughout system lifecycles.

For leased buildings, USDA increasingly seeks out third-party certified green and ENERGY STAR facilities with access to public transit. However, USDA often leases facilities in remote and rural markets with limited options for green buildings. USDA will work to build climate adaptation, resilience, and sustainability awareness in these communities to achieve further facilities-related emissions reductions and climate resilience in the future. In new leases, USDA will follow the General Service Administration's green leasing guidance. By requiring sustainable and resilient buildings in all new leases, the Department would increase availability of these sustainable and resilient buildings in remote and rural markets.

To raise facility performance levels nationwide in sustainability and resilience, USDA also plans to develop a Departmental Manual to guide staff to align sustainable and resilient facility operations with the USDA Departmental Regulations on Climate Change Adaptation and Sustainable Operations.

USDA chooses locations for utility equipment and central data centers to improve operational resilience to flooding and rising sea levels. These centers feature direct digital controls, thermal aisle design, emergency power, and redundant cooling for continuity, lower operating costs, and higher capacities.

### **Increase Facilities' Energy and Water Resilience**

USDA will take the following actions related to facilities energy and water management that

enhance climate adaptation and resilience or have adaptation and resilience co-benefits:

- **Increase onsite renewable energy capacity and installation of microgrids.** The energy and power supply at many USDA facilities are susceptible to the increased frequency and severity of storms. Accordingly, USDA will work to increase onsite renewable energy capacity and install microgrids to improve resilience at its facilities. This may include transitioning from propane/diesel generators to mobile solar energy systems with battery backup at remote sites and installing solar panels to enable facilities to operate off-grid. Exploring the use of energy performance contracts to install solar energy equipment, geothermal energy systems, and microgrids at remote facilities to mitigate impacts from future storms will also be considered. These climate adaptation actions will reduce the cost of electricity and eliminate the dependence on unreliable and poor-quality power at remote sites.
- **Improve the condition and resilience of government-owned infrastructure.** USDA owns miles of aging overhead and underground electrical wiring, steam pipes, natural gas pipes, and domestic water and sewer lines, which are vulnerable to severe weather events. This infrastructure requires periodic maintenance to improve and maintain reliability, functionality, and resilience. To address this issue, agencies will implement actions that have co-benefits to climate adaptation and resilience. Specifically, agencies will perform leak tests on water systems that show inconsistent consumption or lack of integrity, conduct cost-effective maintenance and repair on equipment and infrastructure, and establish and maintain good communications with local utility providers.
- **Switch fuel types, use dual fuel equipment, and reduce the carbon footprint of facilities.** Dual fuel equipment is critical

for USDA's remote buildings that rely on heat from fossil fuels because interruptible natural gas supply requires secondary fuels as a backup, is subject to supply shortages, and can result in extremely high costs and damage to heating equipment. To address this issue, agencies will convert to dual fuel heating equipment, select secondary fuel types with the best GHG emission ratings, and convert heating equipment from fossil fuels to electric heat pumps that can be powered by solar panels.

### **Optimize Fleet Inventory and Efficiency**

USDA is committed to maintaining an optimal fleet inventory and reducing its fleet's carbon footprint for climate adaptation and resilience. This effort includes developing standardized acquisition strategies that identify and eliminate inefficient vehicles and replace them, with safer, more efficient vehicles that use less petroleum per mile, alternative fuels, and electric and hybrid-electric vehicle technology. A focus on efficiency will encourage climate adaptation management actions and sustainable behaviors. Looking ahead, USDA plans to incorporate a standardized fleet replacement planning initiative to transition from primarily fossil fuel vehicles to a combination of biofuels, fully dedicated electric, and hybrid-electric vehicles to reduce costs, improve fleet efficiency, and meet environmental goals. USDA will also identify locations to install biofuel, alternative fueling, and electric vehicle charging infrastructure to better support non-petroleum vehicles.

## **VI. USDA ACTIONS TO ENSURE A CLIMATE-READY SUPPLY OF PRODUCTS AND SERVICES**

Through its Office of Contracting and Procurement (OCP), USDA supports E.O. 14008 Sec. 206 and E.O. 14005 Ensuring the Future Is Made in All of America by All of America's Workers, issued January 25, 2021. USDA is

committed to adhering to the requirements of the Made in America Laws in making clean energy, energy efficiency, and clean energy procurement decisions. Consistent with applicable law, USDA is applying and enforcing the Davis-Bacon Act and prevailing wage and benefit requirements. USDA will stay vigilant should the Secretary of Labor take steps to update prevailing wage requirements or should the Federal Acquisition Regulatory Council develop regulatory amendments to promote increased contractor attention to climate adaptation and resilience with co-benefits of reduced carbon emissions and federal sustainability. Focusing on these adaptation areas can help prevent disruption of supplies and services for mission critical activities. Furthermore, USDA procurement leadership seeks to use contracting as a lever to promote protection of communities and ecosystems where USDA has a presence. Our efforts will focus on the effects of climate change while also building long-term resilience to evolving environmental conditions.

The Department has implemented policies and practices to purchase energy efficient, sustainable, and USDA-designated biobased products in compliance with requirements in the Federal Acquisition Regulation to support climate adaptation efforts. Energy efficiency contributes to climate adaptation by reducing peak energy demand as more energy is required for air conditioning and to address uncertainty in energy generation and use resulting from extreme weather events. USDA is committed to increasing the use of sustainability criteria in its purchasing. For example, USDA continues to use blanket purchase agreements that provide efficient electronic equipment that is registered with the Electronic Product Environmental Assessment Tool (EPEAT). Purchasing EPEAT-

registered equipment reduces GHG emissions, hazardous waste, and water pollutants over the life of the equipment. Procurement requirements to promote resilience apply to contracts for design, construction, operations, and maintenance. USDA selects materials made with post-consumer and pre-consumer recycled materials including carpet, gypsum board, ceiling tiles, millwork, furniture, and furnishings. In addition, the BioPreferred Program continues to support climate adaptation, working with CEQ, OMB's Office of Federal Procurement Policy, and other federal agencies, to develop guidance for establishing annual biobased-only procurement targets.

The five critical areas where procurement processes are at risk due to acute or chronic climate change impacts are:

- 1. Facility upgrades.** USDA facilities need modernization to improve energy efficiency and provide resilient infrastructure. Energy efficiency, water conservation, and sustainability are all considerations for new construction and modernization. To the extent possible, USDA will expand the Solar ARS program, which is based on a contract template that was developed to be customized for performance contracts and appropriate funds projects.
- 2. Forest Service infrastructure.** Forest Service infrastructure is highly susceptible to climate change and large storm events, for which it was not originally designed. For dam infrastructure, actions to address this include an inventory assessment of dam spillway capacity and a spillway rehabilitation plan.
- 3. Puerto Rico infrastructure.** Puerto Rico and its infrastructure are vulnerable to the impacts of climate change particularly increased frequency and severity of storms. At ARS Mayaguez and Isabela facilities, a project to install a microgrid has been developed but remains unfunded. It can be implemented with a performance contract with sufficient capital infusion. The microgrid would eliminate the dependence of the research program on the local electrical grid.

**4. Growth of net-zero facilities.** ARS has one net-zero electricity facility and another under construction that align with current budget priorities. In 2019 an Energy Conservation Measure at the Jornada Experimental Range in Las Cruces, New Mexico, was awarded an Energy and Water Management Award by the Department of Energy's Federal Energy Management Program. A net-zero project carried out this year, at the Fort Collins Research Farm in Colorado, is complete and awaiting final connection. As energy is saved, environmental sustainability will improve due to decreasing GHG emissions and conservation of limited resources.

**5. Forest restoration.** Four Forest Restoration Initiative (4FRI) is accelerating a large-scale restoration program across 2 million acres in northern Arizona to improve forest and watershed health so forests are more resilient to climate change. 4FRI has embarked on an ambitious project to award a 20-year contract to provide forest restoration treatments on over 500,000 acres. Increased certainty of supply will help stimulate investment in restoration to reduce the impacts of climate change while supporting forest industries that strengthen local economies and conserving natural resources and aesthetic values.

## VII. NEXT STEPS

Concurrent with the release of this plan, USDA will develop guidance for agencies and offices to prepare new climate adaptation plans in line with updated Departmental Regulation 1070-001 with the aim of completing these plans by spring 2022. Agencies and offices will identify how climate change is likely to affect their ability to achieve mission, operations, and program objectives. Through adaptation planning, they will develop, prioritize, implement, and evaluate actions to integrate climate risks into strategic planning and decision-making. Agencies and offices will identify alignment with the vulnerabilities identified in

this Plan and how they might contribute to the vulnerability-specific and cross-cutting adaptation actions. This process will provide the opportunity to identify knowledge gaps or programmatic needs that can be addressed through coordination with OEEP, the Climate Hubs, and intra-agency collaborations.

To measure progress towards achieving climate adaptation goals, during adaptation plan formulation, USDA agencies and offices will develop metrics relevant to their missions and adaptation strategies. The Forest Service Climate Scorecard is one model internal to USDA that can be emulated for each agency's unique needs. These agency-relevant frameworks will be used for measuring, sharing, and learning from adaptation successes and enable USDA to demonstrate how adaptation actions are making the Department and its stakeholders more resilient. Through iterative climate risk management, USDA will address emerging and future climate risks, adjust efforts and resources, and prepare American agriculture, forestry, and rural and urban communities to be resilient in a changing climate.

## APPENDIX

U.S. DEPARTMENT OF AGRICULTURE  
WASHINGTON, D.C. 20250

<b>DEPARTMENTAL REGULATION</b>	NUMBER: DR 1070-001
SUBJECT: U.S. Department of Agriculture Policy Statement on Climate Change Adaptation	DATE: May 26, 2021
OPI: Office of the Secretary	EXPIRATION DATE: May 26, 2026

### 1. PURPOSE

This Departmental Regulation (DR) provides guidance on the establishment and periodic revision of the United States Department of Agriculture’s (USDA) *Climate Change Adaptation Plan*. It is consistent with guidance from the Council on Environmental Quality (CEQ) for the implementation of Executive Order ([E.O. 14008](#), *Executive Order on Tackling the Climate Crisis at Home and Abroad*, issued on January 27, 2021).

Climate change poses a significant risk to the agriculture and forestry sectors and the communities that support and depend upon them. Through climate adaptation planning and implementation, USDA will identify how climate change is likely to affect its ability to achieve its mission, operations, and policy and program objectives. Climate change adaptation is a critical complement to mitigation; both are required to address the causes and consequences of climate change. Through climate adaptation planning, USDA will develop, prioritize, implement, and evaluate actions to minimize climate risks, and exploit new opportunities that climate change may bring. Climate adaptation planning and implementation should align with USDA efforts to ensure equity and environmental justice. By integrating climate change adaptation strategies into USDA’s programs and operations, USDA better ensures that taxpayer resources are invested wisely, and that USDA services and operations remain effective under current and future climate conditions. Through climate adaptation planning, USDA is taking a leadership role in ensuring the vision of a resilient, healthy, and prosperous Nation in the face of a changing climate.

### 2. ACTIONS ORDERED

This policy establishes the USDA directive to integrate climate change adaptation planning, implementing actions, and performance metrics into USDA programs, policies, and operations in accordance with executive orders and additional guidance from CEQ.

- a. The Chief Economist, with the full support and participation of USDA Mission Areas, agencies, and staff offices, will:

- (1) Develop a *USDA Climate Change Adaptation Plan* in accordance with E.O. 14008 and CEQ guidance;
  - (2) Issue guidance in accordance with CEQ guidance to Mission Areas, agencies, and staff offices to complete or update their climate adaptation plans, as well as required interim deliverables; and
  - (3) Update the *USDA Climate Change Adaptation Plan* as appropriate and provide progress reports on the status of implementation efforts annually in accordance with CEQ guidance.
- b. USDA Mission Area, agency, and staff office heads, in developing organization-specific contributions, will:
- (1) Analyze how climate change may affect the ability of their organization to achieve its mission and policy, program, and operational objectives and authorities to:
    - (a) Identify potential impacts of climate change on their organization's areas of responsibility;
    - (b) Prioritize, implement, and integrate response actions into their Mission Area's, agency's, or staff office's operation, contingent on the availability of resources;
    - (c) Continuously assess and improve the capacity to adapt to current and future changes in the climate; and
    - (d) Prepare contributions to the Department's *Climate Change Adaptation Plan*.
  - (2) Identify, as appropriate, key performance measures to evaluate progress in climate change adaptation in the annual Departmental and Mission Area, agency, and staff office budget material, to include measures in the Summary of Budget and Performance section of the explanatory notes, submitted as part of the Congressional justification.
    - (a) Identify, to the extent possible, the costs associated with the accomplishment of Mission Area, agency, or staff office performance measures and provide accessible information to producers; and
    - (b) Identify returns to Mission Area, agency, or staff office end-users for climate adaptation actions in terms of a list of expected accomplishments.
  - (3) Identify, as part of the annual budget process, to the Office of Budget and Program Analysis (OBPA), areas where budget adjustments would be necessary to carry out actions identified under this DR;

- (4) Identify, as appropriate, for USDA's Office of the General Counsel, areas where legal analysis is needed to carry out actions identified under this DR; and
- (5) Identify the point of contact for and coordinate actions with the USDA's Global Change Task Force, as appropriate.
- c. USDA Mission Areas, agencies, and staff offices will integrate information that reflects the current understanding of global climate change and its projected impacts when undertaking long-term planning exercises, setting priorities for scientific research and investigations, developing performance metrics, and making decisions affecting Mission Area, agency, or staff office resources, programs, and operations.

### 3. EFFECTIVE DATE AND TERMINATION

- a. The provisions of this DR are effective immediately and will remain in effect until superseded or revoked.
- b. This policy supersedes and replaces DR 1070-001, *U.S. Department of Agriculture (USDA) Policy Statement on Climate Change Adaptation*, dated June 15, 2015.

/s/ THOMAS J. VILSACK  
SECRETARY OF AGRICULTURE

US Department of Education  
Climate Adaptation Plan  
September 2021

OFO/ OCO	3.0	ED Clearance and DoD comments incorporated	8/5/2021
OFO	3.0	OMB comments incorporated	8/24/2021

## Executive Summary

The mission of the U.S. Department of Education (Department or ED) is to promote student achievement and preparation for global competitiveness. Fulfilling this mission requires that we confront the rapidly changing climate, its impact on students, educators, and infrastructure, as well as its implications for the future world in which the United States competes.

The Department's vision for enhancing resilience in the face of the challenges presented by climate change, in response to E.O. 14008, includes leadership to support educator, parent, and student communities that are climate literate and prepared to act in support of climate change mitigation and adaptation, with a particular emphasis on equity. This vision will continue to develop through collaboration with other Federal, state, and local educational agencies as well as non-governmental organizations.

The Department's actions must also include supporting the resilience of state and local educational agencies, schools, and institutions of higher education. This work will emphasize the relationship between climate and equity, particularly equitable access to safe, healthy, sustainable, and resilient 21<sup>st</sup> century learning environments. This 2021 Climate Adaptation Plan provides a framework to integrate adaptation into management decisions and operations and identifies new opportunities to inform a management, leadership, and policy response based on the identified effects of climate change now and in the future. This Plan is a living document and will be updated as necessary.

## Mission

ED's mission is to promote student achievement and preparation for global competitiveness by fostering educational excellence and ensuring equal access. It does this by:

1. Strengthening the Federal commitment to ensuring access to equal educational opportunities for every individual;
2. Supplementing and complementing the efforts of states, local school systems and other instrumentalities of states, the private sector, public and private nonprofit educational research institutions, community-based organizations, parents, and students to improve the quality of education, while encouraging the increased involvement of the public, parents, and students in Federal education programs;
3. Promoting improvements in the quality and usefulness of education through Federally supported research, evaluation, and sharing of information;
4. Improving the coordination of Federal education programs;
5. Improving the management of Federal education activities; and
6. Increasing the accountability of Federal education programs to the President, the Congress, and the public.

The Department's FY 2014 Climate Change Adaptation Plan articulated the potential for climate change to affect the Department's mission.

"Climate change could have an effect on the Department's overall mission of promoting student achievement and preparation for global competitiveness. Climate change could have

an effect on the Department’s ability to ensure equal access to educational opportunity for every individual. Climate change could have an effect on the Department’s efforts to supplement and complement the efforts of states, local school systems, and other instrumentalities of the states.”

With this FY 2021 Climate Adaptation Plan, the Department acknowledges that climate change is affecting the Department’s mission and the need for comprehensive and urgent action to promote adaptation and resilience through the Department’s programs and operations.

Past ED sustainability action plans, climate change adaptation plans, and environmental justice plans were designed to bring ED into this work.<sup>1</sup> This plan builds upon the lessons learned from those earlier plans to offer new actions that the Department can undertake to better adapt to climate change and develop both agency resilience as well as resilience across the nation’s schools.

## **U.S. Department of Education Policy Statement on Climate Change Adaptation**

### **I. Background:**

- a) In 2020, the United States experienced a record-breaking 22 natural disasters that each resulted in at least \$1 billion in damages, including a record 7 linked to landfalling hurricanes or tropical storms. As these extreme weather events experienced across the United States have shown, climate change is affecting communities, school districts, and institutions of higher education. Moreover, certain disadvantaged communities bear disproportionately high and adverse human health, environmental, and climate-related impacts.<sup>2</sup> Climate change adaptation is a critical complement to mitigation; both are required to address the causes and consequences of climate change.
- b) Adaptation planning will allow the Department to minimize negative impacts of climate change that are already occurring and take advantage of any new science or technologies that may mitigate or moderate climate change in its operations. Furthermore, through its example, the Department can reinforce the importance of climate adaptation planning to states, districts, schools, and institutions of higher education.
- c) Through adaptation planning, the Department will deepen its understanding of how climate change is impacting its ability to operate its facilities and meet its policy and program objectives. Through adaptation planning, the Department will develop, prioritize, implement, and evaluate actions to moderate climate change risks and explore new potential opportunities that are consistent with the Department’s mission and the changing world around us.
- d) By integrating climate change adaptation strategies into our programs and operations, the Department better ensures that taxpayer resources are invested wisely, and Department services and operations respond effectively to current and future climate conditions.
- e) Through climate adaptation planning, the Department is contributing to the Federal Government’s leadership role in sustainability and pursuing the vision of a resilient, healthy, just, and prosperous nation in the face of a changing climate.

**II. Directive:**

- a) The goal of this policy is to ensure that the Department:
  - i. executes and adapts its mission and operations securely, effectively, and efficiently as the climate continues to change,
  - ii. exhibits leadership in the areas of climate adaptation planning,
  - iii. advances educational equity and justice in the context of climate adaptation, and
  - iv. complies with E.O. 14008, which directs agencies to take action to address the climate crisis at home and abroad.
- b) This policy reaffirms the need to integrate climate change adaptation planning and actions into Department programs, policies, and operations.
- c) The Department shall take on climate change adaptation planning and action measures making use of the best available data and information.
- d) The Department shall develop and publish a Department-wide climate adaptation plan no later than September 2021. The plan shall include consideration of each of the Department's Principal Offices, as appropriate, and incorporate this policy statement. The plan will identify how climate change is impacting the Department's ability to achieve its mission, effectively operate its programs, promulgate effective policies, and manage its operations. The plan will identify priority adaptation actions and establish mechanisms to evaluate progress toward continually improving the Department's capacity to effectively adapt to current and future changes in the climate. The Department shall produce progress reports on the status of implementation efforts. The Department shall make progress reports public and post them on the Department's website, to the extent consistent with applicable law.
- e) The Department shall fully consider the Interim Instructions for Preparing Draft Climate Action Plans issued by the White House Council on Environmental Quality under Executive Order 14008, Tackling the Climate Crisis at Home and Abroad, and other applicable authorities.
- f) The Department shall, in a manner consistent and compatible with its mission, analyze how climate change and environmental justice are impacting its ability to achieve its mission, promulgate effective policy, operate its programs, and meet its operational objectives by reviewing existing programs, operations, policies, and authorities to: (1) identify potential impacts of climate change and environmental justice on Principal Office areas of responsibility; (2) prioritize and plan for implementation of response actions; and (3) assess and improve capacity to adapt to current and future changes in the climate and advance environmental justice.
- g) In particular, the Department shall: 1) leverage its leadership to inform the education sector in promoting climate adaptation; and 2) consider appropriate inclusion of climate change vulnerabilities, impacts, and adaptation strategies in policies, programs, guidance, technical assistance, and data initiatives.

The Department will coordinate with other agencies and interagency efforts, including the National Climate Task Force and the Environmental Justice Interagency Council, on climate change adaptation and environmental justice issues that cut across agency missions, including areas where national adaptation plans are being or have been developed, and will identify a process for sharing climate change adaptation planning information throughout the Department and with the public.

### **III. Department Coordination and Implementation**

- a) The Deputy Secretary is responsible for ensuring implementation of all aspects of this policy. This policy does not alter or affect any existing duty or authority of individual components or Principal Offices.
- b) The Department Climate Change Adaptation Work Group will coordinate Department-wide climate change adaptation planning and implementation. The Work Group will be chaired by the Deputy Secretary and will include representation from Principal Offices, as appropriate.
- c) This policy is effective immediately and will remain in effect until it is amended, superseded, or revoked.

Date: 09/09/2021

---

Miguel A. Cardona, Ed.D.

### **Agency Responsibility**

The Chief Adaptation Officer for the U.S. Department of Education is the Deputy Secretary. The Deputy Secretary is responsible for ensuring implementation of all aspects of the Climate Adaptation Plan and associated laws, guidance, and policies. As such, the Chief Adaptation Officer has been given authority to review the laws, establish program responsibilities, monitor climate change adaptation actions, evaluate the need to adjust activities as new information becomes available, and review and update the climate plan. The Climate Change Adaptation Work Group will collaborate with internal and external stakeholders to evaluate programs and operations related to this plan, as appropriate.

### **Identified Climate Change Risks to ED Mission**

The Fourth National Climate Assessment details a range of climate change impacts that affect the Department's ability to carry out its missions, operations, and programs.<sup>1</sup> Major climate change events include flooding, hurricanes, tornadoes, extreme heat, extreme cold, wildfires, and drought.

---

<sup>1</sup> USG CRP, 2018: Impacts, Risks, and Adaptation in the United States: Fourth National Climate Assessment, Volume II [Reidmiller, D.R., C.W. Avery, D.R. Easterling, K.E. Kunkel, K.L.M. Lewis, T.K. Maycock, and B.C. Stewart (eds.)]. U.S. Global Change Research Program, Washington, DC, USA, 1515 pp. doi: 10.7930/NCA4.2018.

In 2020, the United States experienced a record \$22 billion in damage from weather and climate disasters.<sup>2</sup>

Climate change is impacting students, schools, and communities across the country. In California, in the 2018-2019 school year, more than 1 million students were impacted by school closures due to wildfires.<sup>3</sup> After Hurricanes Maria and Irma in Puerto Rico, students missed an average of 78 days of school.<sup>4</sup> Reporting in 2017 found that 6,353 schools serving 4 million children are in a floodplain.<sup>5</sup> As just one example, flooding in West Virginia in June 2016 caused \$130 million in damage to schools.<sup>6</sup>

Climate change impacts on students, families, schools, and communities across the country are present, severe, and worsening. Pathways through which climate change affects student achievement include school closures due to extreme weather or unsafe conditions, poor environmental conditions within schools that impede learning, students' own personal health and safety, increased social and emotional anxiety related to climate change and extreme weather events, and increased migration and economic disruption for households and communities.

Students and schools in certain disadvantaged communities are particularly exposed to climate change impacts. The Fourth National Climate Assessment lays out a clear nexus between equity and climate change: "People who are already vulnerable, including lower-income and other marginalized communities, have lower capacity to prepare for and cope with extreme weather and climate-related events and are expected to experience greater impacts. Prioritizing adaptation actions for the most vulnerable populations would contribute to a more equitable future within and across communities." Schools with higher enrollment of low-income students are far more likely to have permanent buildings that are in poor or only fair condition than other schools.<sup>7</sup> According to the Federal Emergency Management Agency (FEMA), aging buildings are particularly vulnerable to natural disasters.<sup>8</sup> Students' performance is negatively affected by elevated temperatures in classrooms, and extreme heat days are responsible for school closures where facilities are not equipped with air-conditioning.<sup>9</sup>

<sup>9</sup> Greenberg, Zoe (2018) "Is the Heat Day the New Snow Day?" The New York Times, September 6. Available at: <https://www.nytimes.com/2018/09/06/nyregion/heat-day-schools-extreme-climate-change.html>

Evidence suggests that hot weather days disproportionately affect students of color and are responsible for approximately 5% of the racial achievement gap.<sup>10</sup> Beyond navigating and responding to the physical impacts of climate change, the Department must respond to the changing set of skills and mindsets required to prepare the people of today to live sustainably and thrive in a rapidly changing climate. All students deserve to attend sustainable schools that enhance their health and wellness, prepare them for 21st century careers, and support a thriving planet. The Department's Climate Adaptation Plan looks to implement strategies that put the nation on the path toward sustainable, healthy, resilient, and equitable learning environments.

## Priority Adaptation Actions

### Priority Adaptation #1: Leadership and Public Engagement

#### Description

[Existing Effort] Leverage ED leadership to activate the education sector in promoting climate adaptation, environmental and sustainability literacy, and environmental justice.

#### Goal

Help educators, students, and parents to understand and adopt ways to combat climate change through the education system.

#### Agency Lead

Office of the Deputy Secretary and Office of Communications and Outreach (OCO).

#### Opportunities

- Embrace the role of education in the climate emergency and inspire others to do the same.
- Elevate the connections between education and climate adaptation and the opportunities for addressing climate change adaptation within the education sector.
- Leverage expertise and a track record of leadership related to sustainable schools within the Department.
- Leverage OCO's expertise in sustainable schools from developing and overseeing the existing U.S. Department of Education Green Ribbon Schools (ED-GRS) recognition award. (This program also provides ED with some state education agency contacts related to infrastructure and environmental learning and examples of success to highlight in messaging.)
- Develop staff knowledge and the familiarity of ED staff with climate change concepts so the agency is prepared and able to embark on this work.

---

<sup>10</sup> Park, R. Jisung, Joshua Goodman, Michael Hurwitz, and Jonathan Smith. 2020. "Heat and Learning." *American Economic Journal: Economic Policy*, 12 (2): 306-39.

## Risks

The education community may not see a direct connection between this issue and providing educational opportunity to all students.

Scale - National

Timeframe - Ongoing public outreach and engagement events.

## Implementation Methods

- Consistently communicate the importance of climate adaptation and mitigation.
- Conduct regular visits to sustainable and resilient schools.
- Support Federal, state, and local efforts related to sustainable and resilient schools.
- Conduct self-assessments to align climate vulnerability assessments with disaster planning, COOP planning, and ED publication standards. (The review process will include the collaboration of leadership across ED.)

## Performance

- Media coverage promoting ED efforts to support and promote sustainable, resilient schools.
- Growth in applications to the ED-Green Ribbon Schools recognition award.
- Participation in environment, sustainability, and climate related events by senior leadership.

## Intergovernmental Coordination

ED will work with the White House as well as other Federal agencies to coordinate and support efforts related to climate adaptation and mitigation. ED will work with the General Services Administration (GSA) to identify the vulnerabilities in each of the buildings and/or regions in its leased portfolio. This collaboration will assist ED to develop informed responses to disasters with the goal to minimize the impact to operations, address potential problems before they occur, create redundancy in critical systems or sites, and identify projects to increase the use of sustainable products or services.

## Resource Implications

ED could leverage existing staff knowledge and pro bono technical assistance from stakeholders. Travel funds would not likely exceed what is normally required of the Office of the Secretary and OCO, and some gift travel is available in this area with outside entities offering to cover the cost of travel.

## Challenges/Further Considerations

Balancing these issues with other pressing demands related to reopening schools and managing the ongoing pandemic.

## Highlights of Accomplishments to Date

- The Secretary and Deputy Secretary are engaged in public discussions regarding climate and sustainable, healthy schools. Their efforts are leading to a broader focus within the agency.
- ED leadership has played a visible and supportive role for schools and communities experiencing negative impacts from climate change.
- ED-GRS for more than 10 years has highlighted the practices of schools, districts, and postsecondary institutions making efficiency, conservation, health, and environmental education a priority.

## Priority Adaptation #2: Policy, Guidance, and Programs

### Description

[New Action] Imbue agency guidance, policies, and program design with an understanding of climate change vulnerabilities, impacts, and adaptation strategies.

### Goal

The Department's guidance, policies, and program designs promote climate adaptation, environmental and sustainability literacy, and equitable access to healthy, safe, sustainable, resilient, 21<sup>st</sup> century learning environments (environmental justice).

### Lead

Office of Planning, Evaluation, and Policy Development in partnership with grantmaking or policy offices (e.g., Office of Elementary and Secondary Education, Office of English Language Acquisition, Office of Special Education and Rehabilitative Services, Office of Postsecondary Education, Office of Career, Technical, and Adult Education, and Office for Civil Rights).

### Opportunities

- ED's policy, guidance, and programs inform and support states, districts, schools, institutions of higher education, and other partners in the private and nonprofit sectors.
- This work supports the climate change commitments of the Biden Administration (e.g., greenhouse gas emission reductions, Justice40 initiative).
- There is a robust and growing community of supportive advocates for climate change work in states and nongovernmental organizations who will welcome and could provide pro bono technical assistance and feedback on this effort.
- ED will begin to improve climate literacy among a broad range of agency staff, so the agency is prepared and able to embark on this work. Due to the multidisciplinary nature of the work, ED will need to identify and collaborate with appropriate partners.
- The White House Council on Environmental Quality, the National Climate Taskforce, and the Office of the National Climate Advisor represent knowledgeable allies.

## Risks

- ED has only a handful of small grant programs that fund school infrastructure or relate directly to climate change.

Scale: National

Timeframe: Immediate start and aligned with climate adaptation by FY 2025.

## Implementation Methods

- Initiate agency effort to enhance climate literacy in its management workforce (Topic Area 2).
- Hold stakeholder meetings to immediately identify high-leverage opportunities to update guidance, technical assistance, and other policies.
- Develop policies and procedures to consistently apply a climate adaptation lens to the agency's guidance and policies.
- Develop the knowledge and familiarity of ED staff with climate change concepts so the agency is prepared and able to embark on this work.

## Performance

- The Office of Human Resources will develop a strategy and execute a plan to enhance climate literacy and capacity related to climate change adaptation within ED.
- New processes will reflect the intention of the agency to consistently and appropriately incorporate climate change into guidance, policies, and programs.
- Guidance and requirements for existing programs will be reviewed and updated to appropriately incorporate environmental and sustainability literacy.
- ED will collect feedback from stakeholders to inform actions.

## Intergovernmental Coordination

Given the multidisciplinary nature of the work, ED will benefit from ongoing communication with knowledgeable individuals and teams at the White House Council on Environmental Quality, Environmental Protection Agency, Department of Energy, Department of Transportation, Department of Agriculture, and National Oceanic and Atmospheric Administration, among others.

## Resource Implications

A time commitment of existing ED employees to consider guidance, policies, and programs with a climate lens. Possible hiring of new expertise or training of existing employees in these areas.

## Challenges/Further Considerations

- Effective design and implementation of agency human capital development programs to increase climate literacy will be essential to enable and support this work throughout the agency.

- The President’s American Jobs Plan proposal would provide \$112 billion to modernize K-12 schools and institutions of higher education, which would require ED to develop new policies and guidance, where appropriate.

### Highlights of Accomplishments to Date

- Since Hurricanes Katrina and Rita in 2005, ED has assisted state educational agencies, local educational agencies, and institutions of higher education (IHEs) in post-disaster related activities through programs supported through emergency appropriations, including emergency aid to IHEs and schools, and through Project School Emergency Response to Violence (Project SERV), which is funded annually. School closures due to major disasters disrupt educational opportunities for students, and the Department has partnered with states, schools, and institutions of higher education to support their recovery.
- Another example is the Department of Education Disaster Recovery Unit, which provides resources to K-12 and higher education communities following natural disasters, such as the Texas ice storm of 2021 and wildfires in 2020 and 2021.

### Priority Adaptation #3: Technical Assistance

#### Description

[New Action] Enhance the capabilities and knowledge of the Department related to climate adaptation in educational settings.

#### Goal

Address the needs of state and local educational agencies for specialized knowledge related to climate adaptation strategies.

#### Agency Lead

Office of Elementary and Secondary Education, Office of Postsecondary Education, Office of Career, Technical, and Adult Education, with the Institute of Education Sciences (IES).

#### Opportunities

- Schools are currently experiencing the impacts of climate change and require adaptation to enhance resilience. In other words, there is an urgent need for specialized knowledge related to climate change adaptation in schools. ED has an opportunity (and responsibility) to develop capacity related to this existential challenge facing schools and communities.
- Climate change vulnerabilities and adaptation strategies vary based on geography (i.e., climate change adaptation in the Northeast region differs from climate change adaptation in the Southwest region). ED has an opportunity to build capacity related to specific adaptation strategies for schools in different geographies.
- Leading states have accumulated experience and expertise related to climate literacy. This capacity may be leveraged to share examples from across the country for consideration by state and local leaders.

- Building on the U.S. Department of Education Green Ribbon Schools recognition award and Green Strides School Sustainability Resource Hub, ED will increase its capacity to support states, districts, schools, and institutions of higher education by disseminating resources related to school facilities and climate education.
- ED will explore which current ED-funded technical assistance providers are positioned and suited to provide technical assistance to states, districts, schools, and institutions of higher education regarding climate adaptation strategies.

## Risks

- ED's technical assistance centers would need to incorporate work related to climate adaptation within existing responsibilities.

## Scale – National

## Timeframe – Beginning in 2022 and Ongoing

## Implementation Methods

- Assess current capacity within ED to provide technical assistance to address the needs of states and local educational agencies (LEAs) within their geographies.
- Develop new partnerships with technical assistance providers to enhance support for states and LEAs.
- Explore opportunities to enhance data efforts within IES, along with other evidence-building partners within and beyond the Department, to inform climate adaptation work and the promotion of equitable access to healthy, safe, sustainable, resilient, 21<sup>st</sup> century learning environments (environmental justice).
- Develop a plan to leverage and enhance existing capacity within the Department.
- Leverage the Green Ribbon Schools recognition award and the Green Strides School Sustainability Resource Hub to provide technical assistance more broadly.
- Develop Dear Colleague Letters with recommendations and resources for states and districts related to climate change adaptation and literacy.
- Review existing National Center for Education Statistics (NCES) mapping projects to evaluate them for superimposition with data from the Environmental Protection Agency (EPA), National Oceanic and Atmospheric Administration (NOAA), and Energy Information Administration (EIA) to form the basis for monitoring environmental conditions.

## Performance Measures

- ED has developed a strategy for internal capacity-building related to education and climate change.
- ED has identified and developed partnerships with relevant bodies (including other Federal agencies, state agencies, research organizations, and other nongovernmental organizations) to complement and enrich ED expertise.
- ED has issued research, reports, newsletters, and/or other work products related to climate change.

- Other Federal agencies, state and local education agencies, schools, and other stakeholders see ED as a resource at the intersection of climate change and education.

### Intergovernmental Coordination

- ED will coordinate with the Departments of Energy, Labor, Transportation, and Agriculture to understand emerging workforce development needs, as well as technical subject matter expertise related to climate adaptation, transportation, and agriculture sectors.
- Coordination with NOAA will provide subject matter expertise on climate change vulnerabilities, current and forecasted.
- Coordination with FEMA will inform technical assistance related to pre-disaster mitigation activities as well as post-disaster recovery.
- Coordination with EPA will inform environmental conditions affecting students and potential regulatory matters.

### Resource Implications

A time commitment of existing ED employees to consider guidance, policies, and programs with climate considerations in mind.

### Highlights of Accomplishments to Date

- Developed the Green Strides School Sustainability Resource Hub in coordination with the Center for Green Schools at the U.S. Green Building Council.
- Provided emergency/disaster-related responses and support for impacted states and districts. (Since Hurricanes Katrina and Rita in 2005, ED has assisted state educational agencies (SEAs) and LEAs in post-disaster related activities through programs supported through emergency appropriations, including emergency aid to restart schools, and through Project SERV, which is funded annually. School closures due to major disasters disrupt educational opportunities for students, and the Department has partnered with states, schools, and institutions of higher education to support their recovery. Under the Readiness and Emergency Management for Schools (REMS) program, the Department provided grant funding to support efforts by LEAs to create, strengthen, and improve emergency management plans at the district and school-building levels, including training school personnel on emergency management procedures; communicating with parents about emergency plans and procedures; and coordinating with local law enforcement, public safety or emergency management, public health, mental health agencies, and local government. Grant funds could be used for: reviewing and revising emergency management plans; training school staff; conducting building and facilities audits; communicating emergency response policies to parents and guardians; implementing the National Incident Management System (NIMS); developing an infectious disease plan; developing or revising food defense plans; purchasing school safety equipment (to a limited extent); conducting drills and tabletop simulation exercises; and preparing and distributing copies of emergency management plans.

## TOPIC AREAS

### Topic 1: Update Climate Vulnerability Assessments

While ED has not yet updated its vulnerability assessment, building on prior adaptation actions and climate vulnerability assessments outlined in the FY 2012 ED Climate Change Adaptation Plan and subsequent internal working groups, ED will update the agency's most recent assessment using the latest climate information included or referenced in the Fourth National Climate Assessment. This update will begin with identifying and assessing five vulnerabilities directly tied to management functions and decision points for managing procurement, real property, and financial programs as suggested by the Council on Environmental Quality (CEQ).

These vulnerability assessments will include descriptions of 1) the climate threat and the expected impact, including the impact of no action; 2) the determined adaptation action, including the known barriers to implementation; 3) an estimate of the timeline and any measures for indicating progress over time and success; 4) a determination if managing the risk and overcoming the barrier are achievable within existing agency resources or consistent with the agency's budget request; and 5) identification of how the vulnerability either is or will be disclosed in annual agency financial reporting and integrated into the agency's enterprise risk management process.

ED will update its Guide to School Vulnerability Assessments<sup>11</sup> to include updated climate change information and resources provided by the US Global Change Research Program and the Fourth National Climate Assessment. The guide describes the key elements to be considered when selecting an assessment tool appropriate for school environments and provides guidance for conducting an assessment that will inform school emergency management activities.

### Topic 2: Efforts to Enhance Climate Literacy in Its Management Workforce

The Department is considering the following efforts to enhance climate literacy:

- Develop ED employee rewards and recognition programming for leadership in climate adaptation, resilience, and sustainability.
- Launch climate literacy education and communications programs to mainstream adaptation actions and integrate adaptation actions into the management of programs and operations.
- Update its Human Capital Operating Plan (HCOP) to ensure agency capacity to bring climate adaptation and resilience leadership to agency programming and operations.
- Establish major key milestone date(s) in 2022 to initiate efforts to create the learning platform.
- Engage and leverage the work of other government agencies and nonprofits that have developed tools for climate literacy that will benefit ED's employees.
- Use an incremental approach to pilot classes among a select group of managers in the agency for the purpose of obtaining feedback, applying lessons learned, and addressing challenges.

---

<sup>11</sup> [https://rems.ed.gov/docs/Guide\\_for\\_Developing\\_High-Quality\\_School\\_Emergency\\_Operations\\_PlansResources07172013R.pdf](https://rems.ed.gov/docs/Guide_for_Developing_High-Quality_School_Emergency_Operations_PlansResources07172013R.pdf)

- Develop the action plan to roll out the training to every manager and ultimately to every employee once the trial period has ended.

### **Topic 3A: Agency Actions to Enhance Climate Resilience (Climate-Ready Sites and Facilities)**

ED leases all its facilities and, therefore, does not have control over many of the factors that go into climate-ready sites and facilities. ED will work with GSA in its modernization and lease renewal process to ensure/enhance climate adaptation. Agency actions to enhance climate-ready sites and facilities will build on previous success in the ED Space Modernization Program (ESMP), Federal Real Property Portfolio Programs, and ED-GRS recognition award. ED will review current programs and initiatives and update all programming requirements, standards, and criteria. This information will support a determination of whether and how adaptation criteria and requirements are integrated into management functions and decision points for these processes. ED will also develop criteria to advance the equitable distribution of environmental risks and benefits and to avoid maladaptation (i.e., increasing the environmental burden on vulnerable communities) in accordance with E.O 13985 and E.O. 14008.

The ESMP is continuously working to reduce ED's footprint and implement facility space initiatives to meet this goal. In conjunction with GSA, ESMP requires compliance with standards in construction and furniture procurements to build high-performance sustainable office space. This effort begins with design practices, construction, and building operations, to protect occupants' health, wellness, and productivity. ED is committed to meet or exceed Executive Order 13834, Planning for Federal Sustainability in the Next Decade, to achieve a more sustainable design for its newly modernized office space.

Compliance: Beginning with sustainable acquisition, ED supports GSA in its efforts to ensure that applicable contracts contain the appropriate requirements to meet standards set by, but not limited to:

- Environmental Protection Agency (EPA)
- National Institute of Standards and Technology (NIST)
- Federal Energy Management Program (FEMP)
- US Green Building Council (USBC)
- Leadership in Energy and Environmental Design (LEED)

Construction: LEED is the most widely used green building rating system in the world. GSA and ESMP require that all new leases follow LEED as a framework for healthy, highly efficient, and cost-saving green buildings. Contractors must submit product data as official Environmental Requirements Declarations (EPD) and Health Product Declarations (HPD).

All products and services purchased by GSA, and used in ED facilities, must meet strict sustainability requirements including:

- Low Volatile Organic Compounds (VOCs)
- Indoor Water Use reduction (plumbing and appliances)
- Chain of Custody (transport/shipping/flow of materials)
- Forest Stewardship Council (FSC) (point of harvest/extraction/recovery)

- Waste management (divert construction debris from landfills and incinerators)
- Low Emitting Diodes (LED) fixtures with automatic lighting controls
- Building Monitoring & Controls (BMC) for Heating, Ventilation, and Air Conditioning (HVAC)

Furnishings, Fixtures, and Equipment: Additionally, ED's Contract Acquisition Management (CAM) group and GSA's Integrated Workplace Acquisition Center (IWAC) have established Blanket Purchase Agreements (BPAs) for Furnishings, Fixtures, and Equipment (FF&E). Only environmentally responsible products, which support ED's commitment to conserving materials and natural resources and use clean technologies in manufacturing processes and achieve certifications from third-party organizations such as those listed below, will be procured or allowed in ED facilities.

- Business and Institutional Furniture Manufacturers Association (BIFMA) certification
- Forest Stewardship Council (FSC)
- GREENGUARD Environmental Institute
- Cradle to Cradle Certified
- International Organization for Standardization (ISO) 14001
- SCS Indoor Advantage Gold
- MTS, a SMaRT Certification

Real Estate Portfolio: ED is a tenant in all the buildings it occupies, and energy, water, and waste management services are all included in its leases and thus paid by GSA. However, working with GSA, through the ESMP, ED is 1) reducing the size and number of leased locations; 2) redesigning spaces to support different work patterns and activities, including innovative space layouts, increased natural lighting, and enhanced technology integration; and 3) meeting OMB guidelines to achieve an average of 150-180 useable square feet per person. Below are highlights of recent ESMP Projects:

- ED's strategic priorities are currently focused on the Headquarters Consolidation Project, which includes increasing the density and modernizing the Lyndon Baines Johnson (LBJ) Headquarters (HQ) Building and Potomac Center Plaza (PCP) to vacate 216,600 square feet of space at Union Center Plaza by 2026.
- The ED Dallas relocation project was completed in 2021, with a 50% reduction in square footage. New York and Philadelphia relocation projects will also lower the agency's overall environmental impact. New York will have a 38% reduction in square footage in FY 2023, and Philadelphia will have a 30% reduction in square footage in FY 2024.
- As a result of heavy teleworking in 2020 and 2021 due to the COVID pandemic, ED recognized the opportunity to support a long-term teleworking plan and continue the momentum of reducing the size of the portfolio. All remaining ED facilities are undergoing evaluation in FY 2022 for opportunities to save space, cost, and greenhouse (GHG) emissions.

Other ED initiatives include:

- The Office of the Chief Information Officer (OCIO) will review operational procedures to reduce energy usage for IT equipment. One example includes reducing the amount of equipment for each user. As the agency implements new telework policies, OCIO will play a significant role in designing facilities to incorporate energy efficient printers, monitors, etc., to

support ED's workforce and address climate adaptation in technology investments. OCIO works closely with ESMP on all new construction and renovation projects in all ED facilities.

- The Office of the Secretary and Deputy Secretary will build infrastructure employing strategies/decisions that minimize the impact on future successors' ability to sustain the initiatives, services, or programs that are implemented in response to E.O. 14008.

An additional consideration for climate-ready sites and facilities is that systems to address adaptation, physical infrastructure, and natural environments can be very costly, especially when retrofitting existing buildings. Managing expectations appropriately will reduce the risks when executing long-term facilities investments. ED leadership will need to support and fund new initiatives to meet the objectives of climate adaptation, making projects a priority in capital planning.

The capital planning process is linked to the budget available to support making incremental changes to ED's environments. Each project is evaluated based on merit and the long-term return on investment as well as other OMB Directives to reduce the footprint. Although the projects are highlighted in the 2020 Sustainability Report and the 2021 Capital Plan, they are interlinked with this Climate Action Plan. ED will ensure that there are consistent management decisions and/or review of the projects that are still in the planning phases to increase opportunities to address products and services that will adapt to climate change objectives. The long-term strategy is to make incremental changes in all the buildings to include adding infrastructure for climate resilience and at the same time provide co-benefits for the future use of electric vehicles, water stations, and HVAC updates that include filtration for harmful bacteria or other contaminants

#### Highlights of Accomplishments to Date

- To date, ED has utilized innovative space design and technology enhancements in all new renovated space. Wherever possible, lowering operating costs is the focus for each project. This is done by increasing natural light flooding the space, lowering panel heights, and using glass partitions for additional protection and surfaces that do not dampen light penetration. ED also includes touchless fixtures in restrooms and pantries helping to reduce water consumption and energy bills. Working with GSA, to date modernization projects have been implemented in Chicago and Dallas (regional offices) and two floors in the LBJ and PCP HQ buildings.
- ED has already researched the impact of adding electric charging stations in GSA-owned HQ facilities with the objective to start this project in FY 2022.

#### **Topic 3B: Enhance Climate Resilience (Climate-Ready Supply of Products and Services)**

The Office of Acquisitions and Grants Administration is the lead for actions to support a climate-ready supply of products and services. ED follows the Federal Acquisition Regulations (FAR) for purchasing products and services. This existing effort by ED includes climate change adaptation components in grants and contract awards as feasible, consistent with statute and regulations. Contract policies and language are updated to mandate GREEN purchasing to the maximum extent practicable for all applicable procurements in the planning, award, and execution phases of acquisitions. ED will review current programs and initiatives and update programming requirements, standards, and criteria with the goal to leverage the Federal Government's ability to lead by policy and example.

ED will develop tools and methods to assist management with decisions that include anticipating climate change. Performance will be based on the number of grants awarded and the dollar amount of each award to each grantee. ED designs contracts to include GREEN purchasing requirements for all new applicable contracts and agreement vehicles, where applicable.

In terms of ED purchases, the Department will continue to benchmark GREEN purchasing with GSA and other agencies of similar size. ED also will continue to meet with national education leaders and Federal and state governments with the purpose of sharing information about how climate change events may be limiting equitable education opportunities and how to address those issues.

ED will review its supply chain to determine the critical areas that may have an impact on the performance of its mission and assess operational resiliency during climate change events. For example, operational components may be shifted when regional areas are impacted by extreme heat, power outages, or internet outages. These types of events may affect the IT infrastructure, staff capabilities to perform duties, school closings, and communities that are served by ED. These potential impacts will be included in the Department's vulnerability assessments to prepare management for proactive responses.

ED's Contract Management Division may include training on GREEN Procurement for existing contract professionals. Position Descriptions for new hires may also be updated, as appropriate, to include GREEN purchasing.

ED will establish an implementation schedule for a climate-ready supply chain that will allow for incremental review of, and updates to, the GREEN purchasing policies and all grants and contracts. The level of effort, particularly in the pandemic environment, is significant. Consideration of the major impact on workload to meet these goals is necessary. Management buy-in and clear decisions are also necessary to redirect resources appropriately.

---

# U.S. Department of Justice

## Climate Action Plan

Prepared by:

U.S. Department of Justice  
Justice Management Division  
Facilities and Administrative Services Staff  
Environmental and Sustainability Services

July 2021

---

## EXECUTIVE SUMMARY

This document presents the Department of Justice (DOJ) Climate Action Plan, to be submitted to the National Climate Task Force and the Federal Chief Sustainability Officer. Collectively with other Federal agencies, DOJ is required to comply with the directives included in Executive Order (EO) 14008, *Tackling the Climate Crisis at Home and Abroad*, to combat the climate crisis.

In accordance with these requirements, this Climate Action Plan documents an updated DOJ Policy for Climate Change Adaptation and Resilience, designates the DOJ Official Responsible for Implementation of the Climate Action Plan, and outlines a streamlined action plan for climate adaptation and climate resilience:

- DOJ commits to the following five priority adaptation actions:
  - Incorporate climate adaptation and resilience concepts, principles, and guidelines into real property actions
  - Revisit and update DOJ’s vulnerability assessment of its most mission-critical supplies and services
  - Comprehensively consider environmental justice in DOJ’s climate adaptation efforts
  - Complete a study to determine the potential for electrification of DOJ’s vehicle fleet
  - Incorporate climate adaptation considerations into DOJ’s strategic planning and risk profile processes
- DOJ has identified the following five climate-related vulnerabilities, for which it has established initial adaptation actions:
  - Continued availability of workforce
  - Continued operation of mission-critical facilities
  - Supply chain disruptions
  - Limited knowledge and understanding of climate adaptation concepts and best practices for enhancing adaptive capacity
  - Need to enhance systematic and formalized internal processes and guidance
- To enhance climate literacy across DOJ’s management workforce, DOJ will:
  - Enhance climate literacy among Department-wide staff, with a focus on senior management personnel
  - Broadly disseminate outreach materials and training content among Department personnel
- To ensure climate-ready sites and facilities, DOJ will work to establish processes to more systematically ensure that adaptation criteria and requirements are properly integrated into management functions and decision points for the procurement for design, construction, operations, and maintenance of DOJ facilities.
- To ensure a climate-ready supply of products and services, DOJ will work to establish processes to more systematically ensure that adaptation criteria and requirements are properly integrated into the acquisition of mission-critical supplies and services.

## AGENCY POLICY FOR CLIMATE ADAPTATION AND RESILIENCE

**Purpose:** This policy establishes a Department-wide directive to integrate climate change adaptation planning and actions into Department of Justice (DOJ) policies, programs, and operations.

**Authorities:** Section 211 of Executive Order (EO) 14008, *Tackling the Climate Crisis at Home and Abroad*, requires that Federal agencies submit a Climate Action Plan that describes the steps the agency can take to bolster adaptation and increase resilience to the impacts of climate change. Specifically, EO 14008 requires each agency to describe the agency's climate vulnerabilities and the agency's plan to use the power of procurement to increase the energy and water efficiency of agency buildings and facilities and ensure they are climate ready.

**Background:** According to the Fourth National Climate Assessment prepared by the United States (U.S.) Global Change Research Program, the Earth's climate is now changing faster than at any point in the history of modern civilization. Increasing greenhouse gas concentrations in our atmosphere are contributing to—among other things—record high temperatures, regionalized drought, increased frequency of heavy precipitation events, increased wildfire, warming and rising seas, and more frequent flooding. Future impacts associated with these climate-induced stressors could have important consequences on the Department's ability to fulfill its mission and manage critical assets. DOJ's commitment to climate change adaptation and resilience planning will increase the capacity to systematically identify and mitigate risks to its critical mission, programs, and operations.

**Scope:** Coordination for climate change preparedness planning across the Department will be led by the Justice Management Division (JMD). To facilitate this critical coordination, JMD's Facilities and Administrative Services Staff (FASS), Environment and Sustainability Services (ESS) will chair DOJ's Climate Adaptation Team. Comprised of representatives from DOJ's five bureaus, JMD, and the Environment and Natural Resources Division (ENRD), the Climate Adaptation Team will work collaboratively to identify and implement priority actions that enhance the Department's capacity for adapting to a changing climate.

**Policy:** DOJ is committed to contributing to the Federal government leadership role to combat the climate crisis by integrating the most current climate science and assessment of climate-related risks into the management of its procurement, real property, and financial programs. In response to EO 14008, DOJ prepared a Climate Action Plan that commits the Department to continue pursuing the following activities to bolster DOJ's adaptive capacity, enhance climate literacy, and ensure climate-ready facilities and a climate-ready supply of products and services:

- Systematically integrate climate adaptation and resilience principles into DOJ's programs, processes, operations, and management of procurement, real property, and financial programs.
- Ensure that climate adaptation and resilience policies and programs integrate climate information that reflects the most current understanding of global climate change.
- Identify facilities, utilities infrastructure, and critical assets that are most vulnerable to the broad range of potential impacts of a changing climate.

- Continue to identify, prioritize, and implement measures that reduce the energy and water loads of DOJ-occupied facilities as a means of making them more climate-ready.
- Create and update climate adaptation and resilience outreach and educational materials for broad distribution across agency personnel, with a particular focus on DOJ's management workforce.
- Identify current climate resiliency best practices and lessons learned from within DOJ and throughout the Federal government.
- Continue to collaborate with other Federal agencies, state, local, tribal and territorial partners in climate adaptation and resilience planning efforts.
- Consider and appropriately incorporate environmental justice across DOJ's collective actions to enhance the Department's capacity for adapting to a changing climate.

## 1. AGENCY OFFICIAL RESPONSIBLE FOR IMPLEMENTATION OF THE PLAN

Lee Lofthus, Assistant Attorney General for Administration/Chief Sustainability Officer, is the senior agency official responsible for the implementation of Department of Justice's (DOJ) enclosed Climate Action Plan.

## 2. PRIORITY ADAPTATION ACTIONS

This section describes the five priority actions that DOJ will implement across its mission, programs, operations, and management of procurement, real property, and risk assessment to enhance the Department's capacity for adapting to a changing climate. The five adaptation actions described below leverage and build on progress from prior climate adaptation and resilience actions (previously required by Executive Order [EO] 13514, *Federal Leadership in Environmental, Energy, and Economic Performance*, and EO 13653, *Preparing the United States for the Impacts of Climate Change*), while also considering DOJ's evolving needs and vulnerabilities to a changing climate.

Each priority adaptation action is described in a separate table that describes the action, goal, agency lead(s), scale, timeframe, risks and/or opportunities, implementation methods, milestones, performance measures, needs for interagency coordination, resource implications, challenges, and accomplishments to date.

<b>Priority Action #1: Incorporate Climate Adaptation and Resilience Principles and Best Practices into Existing Buildings/Assets and Real Property Actions</b>
<p><b>Action Description:</b> Continue to more universally incorporate climate adaptation and resilience principles and best practices into:</p> <ul style="list-style-type: none"> <li>(1) Existing DOJ-owned and leased buildings/assets identified as high risk;</li> <li>(2) The design and construction specifications for new construction and renovation/modernization projects in DOJ-owned and leased buildings; and</li> <li>(3) The solicitation process for future leased buildings.</li> </ul> <p><i>Continuation of Existing Effort</i>    <input checked="" type="checkbox"/>    <i>New Action</i>    <input type="checkbox"/></p>
<p><b>Action Goal:</b> Enhance DOJ's existing knowledge and awareness of the Department's mission-critical real property assets most vulnerable to the impacts of climate change and address these vulnerabilities to enhance the collective climate readiness of DOJ's existing and future facility and infrastructure portfolio.</p>

<p><b>Agency Lead(s):</b></p> <ul style="list-style-type: none"> <li>Justice Management Division (JMD), Environmental and Sustainability Services (ESS)</li> <li>Bureau Sustainability/Energy Program Managers</li> <li>Bureau procurement staff</li> <li>JMD, Real Property Management Services (RPMS)</li> </ul>	<p><b>Scale:</b></p> <p>Department-wide/National</p>	<p><b>Timeframe:</b></p> <p>Expected start: Fiscal Year (FY) 2021</p> <p>Expected completion: FY 2022</p>
<p><b>Risk or Opportunity:</b></p> <p>Climate change impacts pose a range of risks to DOJ’s facilities that support mission-critical or mission-dependent operations and mission readiness. DOJ has the opportunity to leverage existing and proven processes and tools and develop and implement new tools and processes to more systematically incorporate resilient design and operational strategies into its existing and future real property. Options could include evaluating capital improvements plans for opportunities to incorporate adaptive designs (e.g., hardening facilities to better withstand the impacts of climate change; relocating critical equipment and/or infrastructure to prevent the potential for operational downtime and costly damage), updating design/build and lease solicitation processes and documents to require climate adaptation considerations, and examining lease terms for possible renovation or relocation options.</p>		
<p><b>Implementation Methods:</b></p> <p><u>Approach:</u></p> <p>DOJ will revisit and build on prior efforts to <i>understand</i> the Department’s risks associated with the full range of impacts of climate change on its most mission-critical real property assets and develop and implement an approach to systematically <i>address</i> these risks.</p> <p><u>Key Milestones:</u></p> <ul style="list-style-type: none"> <li>Evaluate readily available resources and tools that enable a more sophisticated and precise analysis of expected climate impacts for a given location to better inform appropriate actions to address climate impacts and associated risks; if appropriate, update DOJ’s Facility Climate Adaptation Checklist to incorporate references to newly available tools/resources for more precisely evaluating vulnerabilities.</li> <li>Re-evaluate all DOJ-owned facilities for vulnerabilities to coastal and inland flooding, extreme heat, drought, and wildfire using the revised DOJ Facility Climate Adaptation Checklist.</li> <li>Evaluate DOJ’s mission-critical leased facilities for vulnerabilities to coastal and inland flooding, extreme heat, drought, and wildfire using the revised DOJ Facility Climate Adaptation Checklist.</li> <li>Compile a summary of best practices for enhancing facility resiliency for use by bureau Sustainability/Energy Program Managers and facilities staff for resiliency planning efforts.</li> <li>Designate at least one meeting of DOJ’s Climate Adaptation Team to facilitate the exchange of proven processes, approaches, and tools among bureaus/stakeholders for incorporating facility resiliency into real property actions.</li> <li>Convene at least one meeting with the General Services Administration (GSA) to discuss: <ul style="list-style-type: none"> <li>Options for enhancing the climate resiliency of DOJ’s mission-critical GSA-leased facilities determined to be at high risk of experiencing impacts associated with climate change.</li> <li>GSA’s solicitation process for future facility leases that ensure the incorporation of climate resiliency principles (e.g., siting and adaptive design considerations).</li> </ul> </li> </ul>		

**Performance:**

To measure performance related to this priority action, DOJ plans to monitor and track the following metrics:

- Completion date and results of the evaluation of readily available resources and tools that enable a more sophisticated and precise analysis of expected climate impacts for a given location.
- Completion dates of re-evaluating DOJ-owned facilities and evaluating DOJ’s mission-critical leased facilities for vulnerabilities to coastal and inland flooding, extreme heat, drought, and wildfire using the revised DOJ Facility Climate Adaptation Checklist.
- Completion date of summary of best practices for enhancing facility resiliency.
- Completion date(s) and results of the Climate Adaptation Team meeting designated for the exchange of information between bureaus/stakeholders.
- Completion date(s) and results of the meeting(s) with GSA.

**Inter-governmental Coordination:**

DOJ anticipates the need to further coordinate with GSA to better understand DOJ’s opportunities for enhancing adaptive capacity in both existing and future GSA-leased facilities. DOJ also anticipates coordination with other federal agencies to exchange knowledge, processes, approaches, and tools related to incorporating climate resilience principles and guidelines into the design and construction of new facilities and major renovations and the solicitation process for direct leases.

**Resource Implications:**

This action will be prioritized within available resources.

**Challenges/Further Considerations:**

- DOJ will specifically consider the increased exposure to wildfire and drought especially in the western United States (U.S.).
- Options to address vulnerabilities at leased facilities could be constrained by existing lease terms and could require coordination and working with GSA.
- DOJ has identified several instances where the Department and/or components have limited control over location-specific vulnerabilities and must work with other offices, agencies, and organizations to encourage climate resilient considerations. For example, the Federal Bureau of Prisons (BOP) and the U.S. Marshals Service (USMS) have limited control over the location of their facilities. BOP prison facility locations are often determined by Congress and USMS offices must be co-located with the courts.

**Highlights of Accomplishments to Date:**

- In September 2015, JMD issued the DOJ Facility Climate Adaptation Checklist to Bureau Sustainability Program Managers and facilities personnel.
- In 2016, JMD collaborated with Bureau Sustainability Program Managers and facilities personnel to evaluate all DOJ-owned facilities for vulnerabilities to coastal and inland flooding, extreme heat, drought, and wildfire using the DOJ Facility Climate Adaptation Checklist.
- Federal Bureau of Investigation (FBI) is updating the FBI Sustainable Design and Construction Specifications (FBI Specs) to reflect the 2020 Guiding Principles—specifically Guiding Principles 6.1 and 6.2, which address facility resilience and adaptation.
- FBI is evaluating options for incorporating microgrid capabilities for the north portion of the Bureau’s Redstone campus in Huntsville, Alabama, which will enhance operational resiliency in the event of grid outages. For the south campus at Redstone, FBI’s master planning team is

mapping out a process to ensure that climate resilience features are incorporated into building and infrastructure designs at the outset of the design process.

- FBI has partnered with the Department of Energy's (DOE's) Federal Energy Management Program (FEMP) and the National Renewable Energy Laboratory (NREL) to pilot the Technical Resilience Navigator (TRN) to assess the energy resilience of the Quantico campus and develop an energy resilience strategy to address potential areas of vulnerability.

## Priority Action #2: Revisit and Update DOJ's Vulnerability Assessment of its Most Mission-Critical Supplies and Services

**Action Description:** DOJ has a wide-ranging mission encompassing numerous operations that are vital to the safety and security of the U.S. Each of these operations requires a reliable supply of products and services, many of which have the potential to experience disruptions in supply due to climate-related stressors. To enhance the resilience of its supply chain, DOJ will revisit and build on prior efforts to better understand the climate change-related vulnerabilities of DOJ's most mission-critical supplies and services.

*Continuation of Existing Effort*  *New Action*

### Action Goal:

Improve knowledge and understanding of DOJ's current supply chain vulnerabilities to inform efforts to bolster supply chain resiliency.

### Agency Lead(s):

- JMD, Office of Acquisition Management (OAM)
- JMD, ESS
- Bureau Sustainability Program Managers
- Bureau Procurement Officials

### Scale:

Department-wide/National

### Timeframe:

Expected start: 1<sup>st</sup> Quarter (Q) FY 2022

Expected completion: 4Q FY 2022

**Risk or Opportunity:** Numerous acute extreme weather events and long-term climate stressors have the potential to threaten DOJ's secure supply of various mission-critical goods and services such as medical supplies and food for inmates housed BOP institutions and utilities and telecommunications. Improving awareness and understanding of these vulnerabilities will continue to inform DOJ's future actions to further bolster the Department's supply chain resiliency.

### Implementation Methods:

#### Approach:

The updated vulnerability assessment of DOJ's supply chain will be informed by numerous resources within the federal community, including:

- GSA's Supply Chain Risk Management Framework;
- Continued active participation in the Interagency Sustainable Acquisition and Materials Management Practices (SAMM) Working Group; and
- Collective knowledge and experience across the Federal acquisition community.

<p><b>Key Milestones:</b></p> <ul style="list-style-type: none"> <li>• Obtain and analyze spending data (by category) for the most recent complete FY for each of DOJ’s five bureaus and other select components to inform the identification and prioritization of the Department’s mission-critical supplies and services that are most vulnerable to potential disruptions associated with the impacts of climate change.</li> <li>• Utilize the compiled component-level spending data and input provided in April 2021 by bureaus about their most critical supplies and service, paired with GSA’s Supply Chain Risk Management Framework to identify and prioritize the portions of DOJ’s supply chain at greatest risk to climate change-related threats.</li> </ul>	
<p><b>Performance:</b></p> <p>To measure performance related to this priority action, DOJ plans to monitor and track the following metrics:</p> <ul style="list-style-type: none"> <li>• Receipt of component-level spending data for the most recent complete FY</li> <li>• Completion date and results of supply chain vulnerability analysis using GSA’s Supply Chain Risk Management Framework</li> </ul>	<p><b>Inter-governmental Coordination:</b></p> <p>DOJ anticipates that its success relative to this priority may require collaboration with and/or guidance from GSA related to the use of GSA’s Supply Chain Risk Management Framework, as well as with other federal agencies for the exchange of knowledge, tools, and best practices.</p>
<p><b>Resource Implications:</b></p> <p>This action will be prioritized within available resources.</p>	
<p><b>Challenges/Further Considerations:</b></p> <ul style="list-style-type: none"> <li>• None at this time.</li> </ul>	
<p><b>Highlights of Accomplishments to Date:</b></p> <ul style="list-style-type: none"> <li>• In May 2015, DOJ provided input for the U.S. Government Accountability Office’s survey on climate-related risks to federal supply chains. The purpose of this survey was to determine the extent to which key agencies have identified (and taken action to mitigate) climate-related risks to their critical supply chains.</li> <li>• DOJ held an internal meeting with DOJ procurement managers to discuss DOJ supply chains and climate change adaptation.</li> <li>• DOJ acquired Bureau-level spending data to help identify critical supply chains with vulnerabilities related to climate change.</li> <li>• DOJ met with GSA in October 2015 to discuss approaches for evaluating DOJ’s climate change-related supply chain vulnerabilities.</li> <li>• Throughout 2016, DOJ met with Bureau Sustainability Program Managers and procurement officials to discuss bureau-specific climate change-related supply chain vulnerabilities.</li> <li>• For several years, DOJ has provided mandatory sustainable acquisitions training to contracting professionals in the General Schedule (GS)-1102 and GS-1105 job series, Contracting Officer’s Representatives, and purchase cardholders.</li> <li>• Some DOJ components have started to proactively increase the flexibility of supply contracts to enable substitutions that might be necessary under emergency circumstances. For example, DOJ’s Procurement Services Staff, which fulfills the acquisition needs of the Department’s Offices, Boards and Divisions, allows “equipment swaps” without a formal modification under some of its hardware contracts.</li> </ul>	

- BOP has started to utilize telehealth to provide remote medical care and treatment for its inmate population. This relatively new practice circumvents the need for inmate transport, which could be impacted by acute severe weather events.
- BOP incorporates adaptive capacity and resiliency concepts into continuity of operations planning to address food and water supplies, evacuation plans, and plans for bringing in additional staff during emergencies.
- Many of DOJ’s service contracts provide flexibility for support contractors to provide “on-site/off-site” support.

**Priority Action #3: Comprehensively Consider Environmental Justice in DOJ’s Climate Adaptation Efforts**

**Action Description:**

DOJ will seek to better understand how the Department’s climate adaptation strategies may impact environmental justice issues by addressing questions such as:

- (1) Where existing environmental justice problems under DOJ’s jurisdiction increase a population’s vulnerability to a particular climate-related hazard;
- (2) How existing environmental justice problems under DOJ’s jurisdiction could be exacerbated by climate change; and
- (3) How DOJ’s response to climate-related risk may cause an environmental justice issue itself.

*Continuation of Existing Effort*        *New Action*   

**Action Goal:**

Identify opportunities to maximize DOJ’s positive impact on vulnerable communities as part of the Department’s broader strategy for enhancing its adaptive capacity.

<p><b>Agency Lead(s):</b></p> <ul style="list-style-type: none"> <li>• DOJ’s Director of Environmental Justice (DOEJ)<sup>1</sup></li> <li>• JMD</li> <li>• Environment and Natural Resources Division (ENRD) (supporting role)</li> </ul>	<p><b>Scale:</b> Department-wide/National</p>	<p><b>Timeframe:</b> Expected start: To be determined Expected completion: To be determined</p>
--	---	---

<sup>1</sup> The Department’s 2014 Environmental Justice Strategy specifies that the Director of Environmental Justice, assigned by the Associate Attorney General, is tasked with leading the Department’s Environmental Justice Working Group and other coordination functions in this area. Executive Order 14008 directs the Attorney General to “ensure comprehensive attention to environmental justice throughout the Department of Justice, including by considering creating an Office of Environmental Justice within the Department to coordinate environmental justice activities among Department of Justice components and United States Attorneys’ Offices nationwide.” This Action may be revisited depending on the outcome of the Attorney General’s deliberations.

**Risk or Opportunity:**

EO 14008 includes a specific requirement that the Attorney General “ensure comprehensive attention to environmental justice throughout the Department of Justice.” Under this mandate, DOJ recognizes its responsibility to systematically evaluate and ensure that its Department-wide climate adaptation planning efforts not only avoid maladaptation (i.e., increasing the environmental burden on vulnerable communities), but also comprehensively consider opportunities to positively impact vulnerable communities.

**Implementation Methods:**

Approach:

DOJ’s DOEJ, JMD, and ENRD will leverage existing internal communities of practice, such as DOJ’s Environmental Justice Working Group and Climate Adaptation Team, to convene relevant stakeholders to collectively enhance the Department’s understanding of the intersection of environmental justice and its climate adaptation efforts.

Key Milestones:

- Convene cross-collaborative meeting(s) of DOJ’s Environmental Justice Working Group and Climate Adaptation Team.
- Gain familiarity with and disseminate the geospatial Climate and Economic Justice Screening Tool (which Section 222 of EO 14008 requires that the White House Council on Environmental Quality [CEQ] develop by late July 2021) to relevant DOJ stakeholders to aid in identifying disadvantaged communities.
- Summarize findings from the questions outlined in this priority action that can be used to inform and guide the Department’s future environmental justice practices with respect to climate adaptation.

**Performance:**

To measure performance related to this priority action, DOJ plans to monitor and track the following metrics:

- Resulting actions from the internal meetings of DOJ’s Environmental Justice Working Group and Climate Adaptation Team
- DOJ’s familiarity with and use of the U.S. Environmental Protection Agency’s (EPA’s) existing EJSCREEN Tool and the pending CEQ-developed geospatial Climate and Economic Justice Screening Tool
- Incorporation of findings from this priority action into future updates of DOJ’s Environmental Justice Strategy

**Inter-governmental Coordination:**

DOJ anticipates that this priority action may adjust to ensure concurrence with further direction and guidance provided by the White House Environmental Justice Interagency Council (EJ IAC).

**Resource Implications:**

This action will be prioritized within available resources.

**Challenges/Further Considerations:**

- The White House EJ IAC guidance to the member agencies regarding their Environmental Justice strategies will further inform DOJ’s efforts to comprehensively consider environmental justice in its Department-wide climate adaptation efforts.
- DOJ leadership has not yet designated a DOEJ.

**Highlights of Accomplishments to Date:**

- In 1995, DOJ first established an internal Environmental Justice Working Group.
- In 2014, Environmental Justice Working Group updated and reissued the Department’s Environmental Justice Strategy and Guidance documents.
- In 2016, ENRD developed an EJ toolkit on the DOJ intranet for use by U.S. Attorneys’ Offices and ENRD staff.
- In 2018, ENRD worked with the National Advocacy Center (operated by the Executive Office for United States Attorneys) to develop a webinar course focused on environmental justice.

**Priority Action #4: Complete Study to Determine the Potential for Electrification of DOJ’s Vehicle Fleet**

**Action Description:**

DOJ’s Fleet Management Office will conduct a Department-wide study to evaluate the potential for electrifying its fleet of more than 40,000 law enforcement and non-law enforcement vehicles, balancing the Department’s unique mission requirements, technical feasibility, and cost-effectiveness.

*Continuation of Existing Effort*        *New Action*   

**Action Goal:**

Better understand the potential for electrifying DOJ’s Department-wide vehicle fleet to ensure the resiliency of DOJ’s mission-critical mobility requirements. Investigate how DOJ’s fleet can be more secure to climate change-related impacts and the potential pathway(s), notable obstacles, and associated costs while continuing to meet its mission.

<b>Agency Lead(s):</b>	<b>Scale:</b>	<b>Timeframe:</b>
<ul style="list-style-type: none"> <li>• JMD Fleet Management Office</li> </ul>	Department-wide/National	Expected start: FY 2021 Expected completion: FY 2022

<p><b>Risk or Opportunity:</b></p> <p>DOJ recognizes that both acute severe weather and longer-term climate stressors have the potential to limit DOJ’s mission-critical mobility requirements. For example, during Superstorm Sandy, the garage of FBI’s New York Field Office flooded, destroying about 80 vehicles. Such events can also contribute to regional fuel supply shortages, which has the potential to limit DOJ’s mission critical mobility. The electrification of DOJ’s vehicle fleet may mitigate the risk of limited fuel supplies and present an opportunity to think critically about how to optimize the siting of vehicles and support infrastructure to prevent future damage and/or loss due to climate stressors. DOJ’s efforts to electrify its vehicle fleet must, however, be balanced with the ability to meet the Department’s critical law enforcement mission.</p>	
<p><b>Implementation Methods:</b></p> <p><u>Approach:</u></p> <p>DOJ’s Fleet Management Office regularly convenes an internal Fleet Management Working Group with representatives from all bureaus and will utilize this group to inform the completion of the study. DOJ’s Fleet Management Office will also continue to participate in interagency working groups, such as FEMP’s Interagency Committee on Alternative Fuels and Low Emission Vehicles (INTERFUEL) and Federal Electric Vehicle Agency Roundtable (FEVAR), to stay abreast of emerging trends, technologies, and best practices related to fleet electrification.</p> <p><u>Key Milestones:</u></p> <ul style="list-style-type: none"> <li>• Ongoing participation in interagency meetings and working groups.</li> <li>• Ongoing meetings of DOJ’s internal Fleet Management Working Group.</li> <li>• Representative(s) from DOJ’s Fleet Management Office will join a future DOJ Energy Management Team meeting (comprised of Bureau Energy Program Managers and facility management staff) to present updates on/results from the DOJ’s Fleet Electrification study and discuss areas of overlap with Bureau Energy Program Managers (e.g., the use of performance contracts to install electric vehicle [EV] supply equipment.)</li> <li>• Draft report containing findings of study.</li> <li>• Final report containing findings of study.</li> </ul>	
<p><b>Performance:</b></p> <p>To measure performance related to this priority action, DOJ plans to monitor and track the following metrics:</p> <ul style="list-style-type: none"> <li>• Dates and actions resulting from interagency meetings</li> <li>• Dates and actions resulting from internal DOJ Fleet Management Working Group meetings</li> <li>• Date(s) and outcomes from participation in DOJ Energy Management Team meeting(s)</li> <li>• Milestones and dates for completing draft and final study components</li> </ul>	<p><b>Inter-governmental Coordination:</b></p> <p>DOJ anticipates that its success relative to this priority action will require continued collaboration with GSA to evaluate options for expanding DOJ’s fleet of EVs through GSA-leases. DOJ will also rely on further direction and guidance provided by FEMP and the FEVAR.</p>

**Resource Implications:**

This action will be prioritized within available resources.

**Challenges/Further Considerations:**

- A large portion of DOJ’s existing vehicle fleet is comprised of DOJ-owned vehicles. A critical component of DOJ’s strategy for fleet electrification will be the transition from DOJ-owned vehicles to GSA-leased vehicles.
- Many of DOJ’s owned fleet vehicles are law enforcement vehicles, which presents a collection of unique challenges when considering a shift to GSA-leased EVs, including:
  - Individual DOJ bureaus have existing “in-house” vehicle maintenance programs, staff, infrastructure, and funding, and will need to determine how a shift to GSA-leased EVs will impact these existing resources.
  - DOJ has existing sunk costs in vehicles that require customized modifications. There are both financial and logistical concerns regarding the feasibility of replacing these with GSA-leased EVs.

**Highlights of Accomplishments to Date:**

- DOJ’s Fleet Management Working Group has initiated the process of comprehensively evaluating and identifying candidate vehicles to transition from DOJ-owned to GSA-leased.
- Two of DOJ’s bureaus have already begun to transition certain types of vehicles from owned to leased.
- Bureaus with well-established EV charging station programs for employee-owned EVs hope to leverage this experience to efficiently deploy EV supply equipment for government owned/operated EVs.

### **Priority Action #5: Incorporate Climate Adaptation Considerations into DOJ’s Strategic Planning and Risk Profile Processes**

**Action Description:**

Office of Management and Budget (OMB) Circular A-123 (“Management’s Responsibility for Enterprise Risk Management and Internal Control”) and A-11, Part 6 (“The Federal Performance Framework for Improving Program and Service Delivery”) emphasizes the importance of using enterprise risk management to identify challenges early, bring them to the attention of agency leadership, and develop solutions to the issues facing agencies.

To that regard, DOJ’s Strategic Planning and Performance Staff (SPPS) has implemented an Enterprise Risk Management (ERM) program to proactively identify and manage the full spectrum of risks, events, or circumstances that may significantly impact its ability to achieve strategic goals and objectives.

For FY 2021, DOJ will take a multi-prong approach to facilitate discussions and activities related to climate change adaption/resiliency. DOJ will:

- Incorporate climate change considerations during this year’s strategic planning process to ensure DOJ is appropriately addressing the issues in the Department’s Strategic Plan for FY 2022-2026. DOJ anticipates that climate change and associated uncertainties (risks) will be an important part of the Department’s strategic planning process moving forward.

<ul style="list-style-type: none"> <li>• Convene ad hoc meeting(s) of the ERM Workgroup to revisit climate change threats potentially impacting DOJ component operations, and to identify opportunities to develop strategies and share lessons learned that reflect the current understanding of global climate change as it relates to the Department’s management of its procurement, real property, public lands, waters, and financial programs.</li> <li>• Conduct an assessment of climate change risk(s) to determine whether climate change should be included in the Department-level risk profile.</li> </ul>		
<p><i>Continuation of Existing Effort</i>    <input type="checkbox"/>    <i>New Action</i>    <input checked="" type="checkbox"/></p>		
<p><b>Action Goal:</b>                  Incorporate climate adaptation considerations into DOJ’s strategic planning and risk assessment processes.</p>		
<p><b>Agency Lead(s):</b></p> <ul style="list-style-type: none"> <li>• JMD, SPPS</li> <li>• JMD, ESS</li> </ul>	<p><b>Scale:</b>                  Department-wide/National</p>	<p><b>Timeframe:</b>                  Expected start: FY 2021                  Expected completion: FY 2022</p>
<p><b>Risk or Opportunity:</b>                  This action intends to address the full spectrum of possible climate change-related risks to DOJ’s ability to execute its mission by ensuring that these risks are appropriately and explicitly incorporated into DOJ’s enterprise risk assessment and strategic planning processes.</p>		
<p><b>Implementation Methods:</b>  <u>Approach:</u>                  DOJ will use a multi-prong approach to incorporate climate adaptation into its strategic planning process to inform the Department’s FY 2022-2026 Strategic Plan. First, as part of the strategic planning process for DOJ’s FY 2022-2026 Strategic Plan, SPPS will engage with DOJ leadership in JMD to develop Department-wide strategies that appropriately consider climate change adaption and resiliency. Second, once strategies are developed, SPPS will work with DOJ components to identify and rank climate-related risks and opportunities to manage/mitigate these risks. Third, SPPS will work with DOJ components to develop the Department’s Learning Agenda—a multi-year set of priority research questions—to include priority questions related to climate change in alignment with strategic and operational objectives over the short and long term.</p> <p><u>Key Milestones:</u></p> <ul style="list-style-type: none"> <li>• Convene an ERM Workgroup meeting to discuss climate adaption/challenges and to assist components in better understanding the range of possible risks associated with climate change.</li> <li>• Develop strategies to manage/mitigate risks associated with climate change.</li> <li>• Determine if there are SMART (Specific, Measurable, Achievable, Relevant, and Timely) performance metrics that can produce data to track progress that aligns to program outcomes.</li> <li>• Determine whether to recommend a climate-related Department-level risk statement for senior leadership approval as part of the Department Risk Profile process.</li> </ul>		

<p><b>Performance:</b></p> <p>To measure performance related to this priority action, SPPS plans to coordinate with performance staff in each relevant DOJ component to obtain climate-related performance measures that align with DOJ strategic objectives. SPPS will monitor the status of the following:</p> <ul style="list-style-type: none"> <li>• Results of performance metrics (trends and likely outcomes)</li> <li>• Actions resulting from the internal meetings of DOJ’s ERM Workgroup</li> </ul>	<p><b>Inter-governmental Coordination:</b></p> <p>DOJ does not currently have any specific interagency coordination needs identified, however anticipates that interagency coordination would be beneficial to discuss challenges, share best practices, and, where possible, collaborate on strategies for addressing climate risks in agencywide enterprise risk management.</p>
<p><b>Resource Implications:</b></p> <p>DOJ has not yet been able to comprehensively evaluate and identify the expected resource implications of this action.</p>	
<p><b>Challenges/Further Considerations:</b></p> <ul style="list-style-type: none"> <li>• The timelines for DOJ’s strategic planning and risk profile processes are both dependent on senior leadership availability.</li> </ul>	
<p><b>Highlights of Accomplishments to Date:</b></p> <ul style="list-style-type: none"> <li>• DOJ’s SPPS has established an ERM Workgroup, comprised of representatives from each of the law enforcement, litigating, and grant-making components. During the April 2021 meeting of the Workgroup, SPPS provided an overview of EO 14008 and requested that Workgroup members start thinking about and identifying potential climate-related risks to their respective missions that DOJ might consider designating as enterprise-wide risks.</li> </ul>	

### 3. SPECIFIC TOPIC AREAS

#### 3.1 Topic 1: Update Climate Vulnerability Assessments

Since 2011, DOJ has used a structured process to organize its approach to climate change preparedness planning and evaluation. This process has allowed DOJ to identify and explore climate change vulnerabilities and prioritize actions to better understand and address these vulnerabilities. In 2011-2012, DOJ prepared a high-level climate vulnerability assessment, whereby JMD and representatives from DOJ’s five bureaus evaluated agency mission activities with respect to climate change impacts on critical assets and infrastructure. Through this evaluation, DOJ identified buildings, utilities infrastructure (including telecommunications, data, voice, power, and water), and personnel as the three most vulnerable critical assets.

Building on this prior vulnerability assessment and incorporating updated input from DOJ components,<sup>2</sup> DOJ has identified five vulnerabilities tied to management functions and decision points for managing procurement, real property, and financial programs. In some instances, the vulnerabilities overlap with the priority adaptation actions identified in Section 2.

<b>Vulnerability #1: Availability of Workforce</b>	
<b>Description of Vulnerability:</b>	Continued availability of workforce to support mission-critical and mission-dependent operations during climate-related and extreme weather events.
<b>Climate Threat and Expected Impact:</b>	Climate-related stressors, such as wildfire and drought, and extreme weather events affect the availability of workforce to support mission-critical and mission-dependent operations. Some of DOJ's operations can be conducted remotely or via telework capabilities. Other operational teams, however, such as FBI's evidence response, SWAT, and hostage rescue teams, and BOP's institutional and medical staff cannot conduct operations remotely. For this workforce, there are certain employees that must have access to mobility to be present in specific locations to ensure continuity of operations. The availability of the workforce could be negatively impacted by stressors that limit mobility such as severe storms, coastal and inland flooding, and heavy snowfall.
<b>Impact of No Action:</b>	During climate events and extreme weather events, the availability of workforce to support mission-critical and mission-dependent operations could be limited. Some operations could be performed remotely while other operations that require an on-site workforce could be hindered. The effectiveness and success of these operations could be drastically diminished.
<b>Determined Adaptation Action:</b>	Enhance existing systems, programs, risk management practices, emergency plans, continuity of operations plans, training, and telework plans to improve the adaptive capacity of personnel and address potential vulnerabilities. Solicit and document input and best practices on workforce vulnerability from components and bureaus.
<b>Known Barriers to Implementation:</b>	None.
<b>Estimate of Timeline:</b>	Ongoing

<sup>2</sup> While DOJ did not have adequate time to perform an exhaustive update to its 2012 climate vulnerability assessment for the purposes of informing this Climate Action Plan, JMD did conduct a comprehensive request for information in April 2021 to compile input from DOJ components about updates to the climate vulnerabilities previously identified in 2011-2012. DOJ expects to more comprehensively revisit its previous vulnerability assessment (see vulnerability #2) to consider and incorporate more recent climate data.

**Metrics:**Progress:

- Number of components and bureaus providing input by FY 2022.
- Completion date of receiving and compiling input from components and bureaus.

Success:

- Implementation of workforce best practices across components and bureaus.

**Feasibility of Managing Risk with Existing Agency Resources:**

Identifying deficiencies and implementing enhancements to improve the adaptive capacity of personnel and address potential vulnerabilities could be accomplished within available resources.

**Disclosure in Financial Reporting and Integration into Enterprise Risk Management:**

As part of DOJ's internal process for preparing the Department's FY 2023 budget request, DOJ's Budget Staff has included new language in guidance circulated to all components emphasizing the need to prioritize climate change considerations as part of the budget development process. DOJ is commencing an effort to specifically integrate the Department's climate vulnerabilities into DOJ's ERM processes (see Section 3, Priority Action #5, SPPS for additional details).

**Vulnerability #2: Continued Operation of Mission-Critical Facilities****Description of Vulnerability:**

Continued operation of mission-critical facilities during energy and/or water supply shortages.

**Climate Threat and Expected Impact:**

Climate and extreme weather events such as flooding, hurricanes, drought, wildfire, and extreme temperatures could affect DOJ's ability to provide continuous operations of mission-critical facilities. For example, DEA's South-Central Laboratory in Dallas, TX, had its operations shut down for over a week in the February 2021 Texas deep freeze. BOP facilities must consider food and water supplies and implement contingencies for drought, floods, and water and food shortages. The severity and type of impact on the operation of mission-critical facilities varies on several factors including the agency's mission, adaptive capacity and resiliency of the facility and personnel, and then length of the climate or extreme weather event.

**Impact of No Action:**

The shortage or unavailability of energy and/or water supplies could impact the continuity of the agency's mission, availability of workforce, and operation of mission-critical facilities.

**Determined Adaptation Action:**

Increase the adaptive capacity of facilities, infrastructure, and utilities to reduce risks and vulnerabilities. Comprehensively revisit DOJ's previous vulnerability assessment to specifically consider the increased exposure to wildfire and drought especially in the western U.S.

**Known Barriers to Implementation:**

None.

**Estimate of Timeline:** Ongoing

**Metrics:**Progress:

- Number of high-risk facilities evaluated for potential to increase adaptive capacity by FY 2022.
- Update of DOJ's vulnerability assessment to consider the exposure to wildfire and drought in the western U.S.

Success:

- Performance will be measured by the number of previously classified high-risk facilities and utilities infrastructure that have implemented climate adaptation and resilience measures.

**Feasibility of Managing Risk with Existing Agency Resources:**

Implementation of climate adaptation and resiliency measures will be accomplished within available resources.

**Disclosure in Financial Reporting and Integration into Enterprise Risk Management:**

As part of DOJ's internal process for preparing the Department's FY 2023 budget request, DOJ's Budget Staff has included new language in guidance circulated to all components emphasizing the need to prioritize climate change considerations as part of the budget development process. DOJ is commencing an effort to specifically integrate the Department's climate vulnerabilities into DOJ's ERM processes (see Section 3, Priority Action #5, SPPS for additional details).

**Vulnerability #3: Supply Chain Disruptions****Description of Vulnerability:**

Supply chain disruptions for critical or priority supplies such as building operation equipment (heating, ventilation, air conditioning, chillers, etc.), medical equipment, sanitation supplies, and food.

**Climate Threat and Expected Impact:**

Critical or priority supplies and services are vulnerable to acute extreme weather events and long-term climate change. Extreme weather events can disrupt telecommunications, power and energy supply, fuel supply, transportation and delivery routes which disrupt logistics and supply chain activities and the availability and cost of critical supplies.

**Impact of No Action:**

Supply chain activities would be vulnerable to extreme weather events and long-term climate change. The magnitude of the disruptions would depend on several factors including the length of the event, availability of the critical supply, and agency mission.

**Determined Adaptation Action:**

Conduct vulnerability assessments with the five bureaus (and other select components, where determined appropriate) to identify the most vulnerable mission-critical supplies (see Priority Action #2 in Section 2). Document and disseminate best practices for modifying the procurement process minimizing supply chain disruptions.

**Known Barriers to Implementation:**

None.

**Estimate of Timeline:** Begin in FY 2022

**Metrics:**Progress:

- Completion of supply chain vulnerability assessments for five bureaus and other select components, where determined appropriate.

Success:

- No incidents of disruption to mission-critical supply chain.

**Feasibility of Managing Risk with Existing Agency Resources:**

Conducting risk assessments and documenting best practices could be accomplished within available resources.

**Disclosure in Financial Reporting and Integration into Enterprise Risk Management:**

As part of DOJ's internal process for preparing the Department's FY 2023 budget request, DOJ's Budget Staff has included new language in guidance circulated to all components emphasizing the need to prioritize climate change considerations as part of the budget development process DOJ is commencing an effort to specifically integrate the Department's climate vulnerabilities into DOJ's ERM processes (see Section 3, Priority Action #5, SPPS for additional details).

#### **Vulnerability #4: Limited Knowledge and Understanding of Climate Adaptation Concepts and Best Practices for Enhancing Adaptive Capacity**

##### **Description of Vulnerability:**

Limited knowledge and understanding of climate adaptation concepts and best practices for enhancing adaptive capacity.

##### **Climate Threat and Expected Impact:**

Climate stressors and extreme weather events pose a risk to the DOJ mission, operations, assets, facilities, and infrastructure. The DOJ workforce would benefit from increased climate literacy, especially related to the anticipated impacts of climate change, applying climate adaptation concepts, enhancing the understanding of adaptive capacity, and the possible consequences of not addressing DOJ's climate change vulnerabilities at the mission, facility, and personnel level.

##### **Impact of No Action:**

There would continue to be a need to increase the knowledge and understanding of climate adaption concepts. This could lead to a hesitancy or resistance among DOJ components to adopt climate adaptation concepts and policies.

##### **Determined Adaptation Action:**

In collaboration with the Climate Adaptation Team, JMD/ESS will distribute outreach materials highlighting climate adaptation concepts and best practices for enhancing adaptive capacity for broad distribution among agency personnel.

##### **Known Barriers to Implementation:**

Limited availability of personnel in some components to support climate literacy initiatives.

**Estimate of Timeline:** Ongoing

##### **Metrics:**

###### Progress:

- Completion date of collaboration between JMD/ Facilities and Administrative Services Staff (FASS) and the Climate Adaptation Team to establish a plan of creating and updating outreach materials and trainings.
- Enumeration of outreach materials and trainings created and updated in FY 2022.

###### Success:

- DOJ does not currently have a mechanism for evaluating success in the area of enhancing climate literacy but will consider the feasibility of developing tool(s) to do so (e.g., surveys, competency evaluations as part of training modules).

##### **Feasibility of Managing Risk with Existing Agency Resources:**

Creating and updating outreach materials to enhance climate literacy could be accomplished within available resources.

**Disclosure in Financial Reporting and Integration into Enterprise Risk Management:**

As part of DOJ's internal process for preparing the Department's FY 2023 budget request, DOJ's Budget Staff has included new language in guidance circulated to all components emphasizing the need to prioritize climate change considerations as part of the budget development process. DOJ is commencing an effort to specifically integrate the Department's climate vulnerabilities into DOJ's ERM processes (see Section 3, Priority Action #5, SPPS for additional details).

**Vulnerability #5: Need to Enhance Systematic and Formalized Internal Processes and Guidance****Description of Vulnerability:**

The need to enhance systematic and formalized DOJ-wide processes and guidance for appropriately planning and budgeting for climate adaptation and resilience considerations across operations.

**Climate Threat and Expected Impact:**

Increased climate and extreme weather events increase the demand for fiscal resources to fund emergency, management activities, maintenance actions, and climate resiliency measures.

**Impact of No Action:**

There would continue to be a need to systematically plan, budget, and track fiscal resources allocated to climate adaptation and resilience measures and initiatives. Long-term climate change and extreme weather events could negatively affect the agency mission and operations.

**Determined Adaptation Action:**

Prepare a strategy for systematically integrating climate adaptation and resilience considerations into Department-wide project planning, budgeting, and funding request processes—especially those related to infrastructure and facilities.

**Known Barriers to Implementation:**

None.

**Estimate of Timeline:** Begin in FY 2022

**Metrics:**Progress:

- Completion date of strategy for systematically integrating climate adaptation and resilience considerations into Department-wide project planning, budgeting, and funding request processes.

Success:

- The availability of revised and clearly communicated guidance and process that enable all DOJ components to consistently and systematically incorporate climate adaptation and resilience considerations into project planning, budgeting, and funding requests.

**Feasibility of Managing Risk with Existing Agency Resources:**

Preparing a strategy will be accomplished within available resources.

**Disclosure in Financial Reporting and Integration into Enterprise Risk Management:**

As part of DOJ's internal process for preparing the Department's FY 2023 budget request, DOJ's Budget Staff has included new language in guidance circulated to all components emphasizing the need to prioritize climate change considerations as part of the budget development process. DOJ is commencing an effort to specifically integrate the Department's climate vulnerabilities into DOJ's ERM processes (see Section 3, Priority Action #5, SPPS for additional details).

**3.2 Topic 2: Efforts to Enhance Climate Literacy in DOJ's Management Workforce**

DOJ is committed to enhancing climate literacy across the Department. Since 2011, DOJ has implemented several climate literacy efforts to increase awareness, share information about climate resiliency, and describe potential impacts from climate change. The efforts included a variety of methods, including the organization of the working groups, fact sheets, checklists, one-on-one meetings with components, and evaluation of components' needs for climate literacy, training, and technical assistance (see Table 1 for additional details).

**Table 1. DOJ's Climate Literacy Initiatives and Accomplishments Since 2011**

<b>Year</b>	<b>Initiatives/Accomplishments</b>
2011	<ul style="list-style-type: none"> <li>Established DOJ's first Climate Change Adaptation Policy Statement</li> <li>Created an internal DOJ climate change adaptation planning fact sheet</li> </ul>
2012	<ul style="list-style-type: none"> <li>Established DOJ's first Climate Adaptation Team (active until 2017)</li> <li>Updated the DOJ climate change adaptation planning fact sheet</li> </ul>
2014	<ul style="list-style-type: none"> <li>Refreshed the DOJ climate change adaptation planning fact sheet</li> </ul>
2015	<ul style="list-style-type: none"> <li>Developed and distributed an internal informational document outlining relevant climate adaptation requirements, the latest climate change research, and key resources and terminology</li> <li>Developed the facility climate adaptation checklist</li> <li>Collected input from DOJ components about their respective experiences managing and responding to extreme weather events</li> </ul>
2016	<ul style="list-style-type: none"> <li>Completed bureau-specific facility climate adaptation checklists</li> </ul>
2017	<ul style="list-style-type: none"> <li>Evaluated DOJ's needs for climate literacy, training, and technical assistance</li> <li>Completed bureau facility climate vulnerability fact sheets</li> </ul>

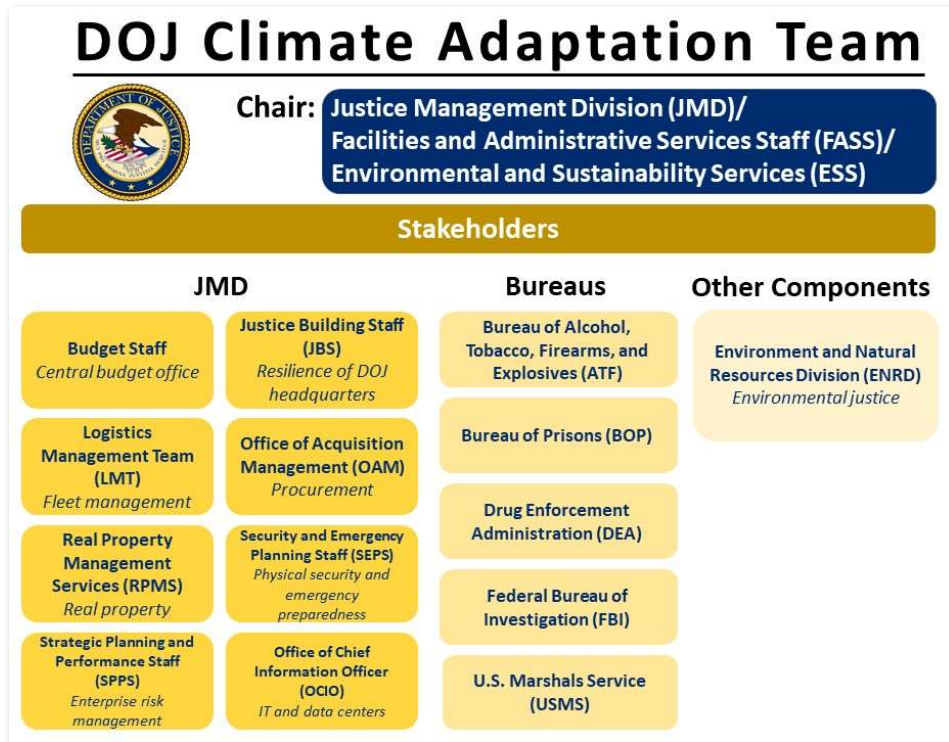

Year	Initiatives/Accomplishments
2021	<ul style="list-style-type: none"> <li>• Reconvened DOJ’s Climate Adaptation Team</li> <li>• Requested input from DOJ components on climate literacy needs as part of compilation of 2021 Climate Action Plan</li> <li>• Initiated participation in the FEVAR, which will provide important guidance and best practices to inform DOJ’s efforts to electrify its fleet.</li> <li>• Established a DOJ Sustainable Acquisition Workgroup that will serve as an important forum for disseminating outreach and guidance related to enhancing the climate resiliency of DOJ’s supply chain</li> </ul>

In 2017, DOJ implemented a focused effort to request input on climate literacy needs from JMD and the five DOJ Bureaus. JMD/FASS requested feedback on climate-related topics for training, outreach, and technical assistance; the preferred methods for distributing the climate literacy information; key staff and stakeholders who would benefit from the climate literacy information; and suggestions to improve DOJ’s efforts to improve climate preparedness and resiliency. Following receipt of the input, however, progress was paused due to changes in priorities of the administration.

Across DOJ’s components, there are ongoing efforts to improve the knowledge and understanding of environmental topics and issues. While not specifically focused on enhancing climate literacy, these outreach efforts touch on environmental awareness, climate mitigation efforts, sustainability, energy efficiency, and water conservation. Examples of these outreach efforts include DEA’s Green Notes newsletter, Earth Day activities, recognition of Energy Action Month, and DOJ green procurement training. DOJ can leverage and build on these ongoing efforts to expand the knowledge and understanding of climate adaptation concepts and best practices for enhancing adaptive capacity.

Initially established in 2012, DOJ’s internal Climate Adaptation Team was formed to ensure a cohesive DOJ-wide strategy for increasing adaptive capacity to climate impacts and to facilitate exchanging information and best practices. The group actively met and collaborated to implement components of the Department’s prior Climate Adaptation Plan, before disbanding in 2017 due to changes in priorities of the administration. In April 2021, DOJ reconvened the Department’s Climate Adaptation Team in response to EO 14008. Figure 1 illustrates the current composition and organization of the Climate Adaptation Team.

In April 2021, JMD/FASS requested input from the five bureaus and additional components about the need for enhanced climate literacy, including a request for information about priority stakeholder groups (including management) with the most critical need for climate literacy training. Responses universally suggested a need to refresh and enhance climate literacy efforts across management and the workforce. Bureaus emphasized the need to directly link environmental initiatives, directives, and climate literacy to mission-oriented messaging in order to be most effective. Climate literacy should be enriched to increase the workforce’s understanding of potential climate change impacts, mitigation actions, and possible consequences of not addressing climate change vulnerabilities at the mission, facility, and personnel levels.

**Figure 1. Climate Adaption Team Organization Chart**

Topics to address through climate literacy efforts vary widely. Bureaus described the need to encourage energy conservation applicable to daily operations and steps that can be taken to mitigate climate change and its impacts. Across DOJ, bureaus and components requested outreach regarding recent Executive Orders, Administration priorities, and best practices from other agencies. Input from DOJ bureaus and components identified the need for training on how to implement low-cost changes to enhance climate adaptation and resiliency prior to committing to larger and more resource-intensive projects.

DOJ has identified several climate literacy needs to enhance understanding and incorporate climate change risks into investment and planning decisions. DOJ components recommended that JMD distribute materials and visuals from the most recent National Climate Assessment on the location and extent of projected extreme heat, extreme rainfall, drought, sea level rise, disease vectors, wildlife, and other impacts of climate change. Climate Adaptation Team stakeholders also requested better information on Federal Emergency Management Agency-established floodplain boundaries and more detailed flood modeling that incorporates both rainfall and sea level rise projections. This information would provide a better baseline above which to assess risk and vulnerabilities, harden facilities and infrastructure, and plan for flood-related contingencies.

DOJ is committed to enhancing climate literacy among Department-wide staff, with a particular focus on management personnel responsible for key decisions that impact the Department’s collective capacity for adapting to a changing climate. Consistent with vulnerability #4 (outlined above in Section 3.1), JMD/ESS—in collaboration with DOJ’s Climate Adaptation Team—will

lead the action to broadly disseminate guidance, outreach materials, and training content highlighting climate adaptation concepts and best practices for enhancing adaptive capacity.

### **3.3 Topic 3: Actions to Enhance Climate Resilience**

This section outlines DOJ's existing and planned processes and actions to enhance the climate resilience of the Department's facilities and critical supply chain.

#### **a) Actions for Climate-Ready Sites and Facilities**

As a result of DOJ's 2012 Climate Vulnerability Analysis, the Department included numerous actions in its 2014 Climate Adaptation Plan and subsequent Climate Adaptation Progress Reports that centered on enhancing the resilience of DOJ facilities, including examining capital improvement plans for opportunities to incorporate adaptive designs and examining lease terms for possible renovation or relocation options. In subsequent years, however, as climate mitigation and adaptation were deprioritized by the administration, DOJ paused formal implementation of its 2014 Climate Adaptation Plan.

Despite this shift in focus across the federal community, DOJ components have continued to think critically about and consider the impacts of climate change on the design, construction, and operation of their facilities. For example:

- BOP has considered design and construction of facilities that are more self-sustaining during climate and emergency events. These design and construction concepts would make BOP facilities inherently more resilient to climate and extreme weather events because it would increase the ability to defend in place under a wide range of conditions.
- FBI developed and actively utilizes the FBI Specs to ensure that FBI's procurement of all new facility construction and major renovation projects requires the incorporation of a range of sustainability aspects. FBI is currently updating the FBI Specs to reflect the 2020 Guiding Principles—specifically Guiding Principles 6.1 and 6.2, which address facility resilience and adaptation.
- FBI has recently established the National Crisis Coordination Center (NC3)—a framework within which FBI Headquarters components come together in the Strategic Information and Operations Center during critical incidents. NC3 serves as an important single point of coordination during large-scale critical incidents for the purpose of enabling FBI headquarters components to assist field offices more effectively and efficiently. In parallel, FBI has identified a Crisis Manager within the Facilities and Finance Division to act as a liaison between the facilities and operational personnel when the NC3 is activated. While this construct was established to respond to critical operational crises nationwide, this mechanism could be a significant future nexus for preparedness planning for climate change impacts to mission readiness as a result of extreme weather events.
- In 2016, DEA identified the water supply to a leased data center as a key vulnerability and is exploring—with GSA and the lessor—the feasibility of an air-cooled system to mitigate the risks of a single water supply. With respect to new construction, DEA is

in the early planning stage for a new laboratory in New Hampshire. The project planning group has adopted the motto “lean and green,” and DEA management has directed staff to design the facility as a “lab of the future.” Planning group members are hoping to add climate resiliency measures into the site selection and design.

As DOJ moves into the implementation phase of this revived Climate Action Plan, the Department will work to establish processes to more systematically ensure that adaptation criteria and requirements are properly integrated into management functions and decision points for the procurement for design, construction, operations, and maintenance of DOJ facilities (see vulnerability #5 in Section 3.1 above).

DOJ has established and routinely updates a Department-wide Environmental Management Policy that includes discrete sections related to facility energy and water management. This overarching policy includes specific mandates for each DOJ bureau to achieve reductions of facility energy and water consumption, but ultimately defers to each bureau to develop their own respective processes and strategies for identifying, prioritizing, and implementing measures to reduce facility energy and water loads.

- ATF utilizes onsite operations and maintenance contractor support to continuously identify opportunities for optimizing facility energy performance. The Bureau also actively partners with its electric utility providers to identify and implement demand-side management projects using funding provided by utility energy efficiency rebate programs. ATF is in the process of establishing energy management systems for its three owned facilities through participation in the DOE’s 50001 Ready program. ATF expects participation in 50001 Ready will enable the bureau to more systematically manage and reduce energy and water consumption and also provide a framework through which ATF can strategically incorporate climate adaptation considerations to make its facilities more climate ready.
- Historically, BOP has largely relied on energy savings performance contracts (ESPCs) and utility energy service contracts (UESCs) to fund energy conservation measures (ECMs). To the maximum extent possible, BOP leverages these contract vehicles to pursue opportunities for implementing onsite renewable energy as a means to increase facility resiliency and reduce operating costs. Since 2003, BOP has executed 34 ESPCs and three UESCs, 19 of which have included onsite renewable energy. BOP is in the process of pursuing four additional performance contracts—one through the ESPC ENABLE program and three UESCs. As funding permits, BOP supplements its portfolio of performance contracts with the implementation of directly funded projects having short payback periods, such as lighting upgrades.
- Using an energy sales agreement (ESA) via an ESPC ENABLE contract, DEA successfully implemented a 2.5-megawatt solar photovoltaic (PV) system that provides 100 percent of the electricity demand at the El Paso Intelligence Center—a project that FEMP used as a case study for successful implementation of onsite renewable energy using the ESA framework.<sup>3</sup> DEA has also been a model for success in pursuing and securing grant funding for the implementation of facility

---

<sup>3</sup> <https://www.energy.gov/sites/default/files/2019/10/f68/espc-esa-case-study.pdf>

resiliency projects. The Bureau has received two grants from DOE's Assisting Federal Facilities with Energy Conservation Technologies grant program—a 2019 grant for a rooftop solar PV project at DEA's Aviation Operations Center in Fort Worth, TX, and a 2020 grant that DEA plans to use to fund a suite of ECMs across five of its Regional Laboratories through participation in DOE's Smart Labs Accelerator Program. DEA hopes to leverage this opportunity to incorporate resilience best practices where possible, including innovative concepts for emergency backup power.

- In FY 2018, FBI established the internal FBI Energy and Water Conservation Investment Program (FEWCIP), whereby FBI evaluates, selects, and funds energy and water projects at FBI-owned/operated facilities through an internal competitive process. FEWCIP supports FBI's goal to be a leader in sustainability and energy resilience by funding projects that may otherwise be deferred or not as highly prioritized in the standard budgeting process. FBI also actively utilizes numerous FEMP-sponsored programs and resources to implement demand-side management of energy and water in its facilities:
  - FBI is actively piloting the implementation of FEMP's 50001Ready program at the FBI-Redstone campus in Huntsville, AL, and the FBI Academy in Quantico, VA.
  - FBI is participating in FEMP's Re-Tuning Challenge to demonstrate the use of building- and system-level controls to improve energy performance and provide hands-on training for facility managers at the FBI Academy.
  - FBI has partnered with FEMP and NREL to pilot the TRN to assess the energy resilience of the Quantico campus and develop an energy resilience strategy to address potential areas of vulnerability.
- While USMS has no owned or operated facilities in its portfolio (and thus has limited opportunities to directly influence the resilience of its facilities), USMS is engaged in DOJ's Climate Adaptation Team and committed to actively exploring opportunities to work with GSA and private lessors to enhance the resilience of its facilities.

While DOJ has an internal Environmental Justice Working Group that has previously contributed to efforts to incorporate environmental justice considerations as part of the Department's climate adaptation strategy, DOJ has not yet established formal criteria to advance equitable distribution of environmental risks and benefits associated with procurement processes for facility design, construction, operations, and maintenance. DOJ plans to address this, however, as part of priority action #4 (outlined in Section 3.1).

## **b) Actions to Ensure a Climate-Ready Supply of Products and Services**

In 2015 and 2016, DOJ initiated numerous efforts to better understand its critical supply chains with potential vulnerabilities related to climate change. DOJ met with GSA to discuss GSA's Supply Chain Risk Management Framework, obtained bureau-level spending data, and met individually with bureau Sustainability Program Managers and procurement officials to discuss bureau-specific critical supply chains. In April 2021, JMD solicited input from bureaus related to their respective critical supply chains. Based on DOJ's collective efforts to evaluate its supply chain, DOJ believes the following are

the Department's current top five most critical supplies and services vulnerable to the impacts of climate change:

- Utilities – Grid-provided electricity and water are most critical to the operations of DOJ's data centers and BOP facilities.
- Telecommunications
- Fuel – Diesel for onsite emergency power generation and gasoline for fleet vehicles
- Disaster response supplies – Includes personal protective equipment (e.g., gloves, waders), bottled water, food, medical equipment and supplies, and cleaning supplies
- Human capital – Includes contractor resources

For several years, DOJ's OAM has provided mandatory sustainable acquisitions training to select contracting professionals, Contracting Officer's Representatives, and purchase cardholders. DOJ will strive to develop Department-wide processes to broadly and systematically advance a more climate-robust supply of goods and services and hopes that the Office of Federal Procurement Policy will aid in this effort by developing and distributing guidance and best practices across the federal community. In 2021, OAM established a DOJ Sustainable Acquisition Workgroup, which will serve as forum for disseminating outreach and guidance related to enhancing the climate resiliency of DOJ's supply chain. To this point, however, OAM has deferred to each DOJ component to independently consider climate resiliency as part of their procurement processes. For example:

- Some DOJ components have started to proactively increase the flexibility of supply contracts to enable substitutions that might be necessary under emergency circumstances. DOJ's Procurement Services Staff, which fulfills the acquisition needs of the Departments Offices, Boards and Divisions, allows "equipment swaps" without a formal modification under some of its hardware contracts.
- BOP has started to utilize telehealth to provide remote medical care and treatment for its inmate population. This relatively new practice circumvents the need for inmate transport, which could be impacted by acute severe weather events.
- As part of FBI's NC3, the Bureau's Facilities and Finance Division is evaluating how to access critical supplies and services in the event of a crisis, which could include a climate-related severe weather event.

As DOJ moves into the implementation phase of this revived Climate Action Plan, the Department will work to establish processes to more systematically ensure that adaptation criteria and requirements are properly integrated into the acquisition of mission-critical supplies and services (see vulnerability #5 in Section 3.1 above).

While DOJ has an internal Environmental Justice Working Group that has previously contributed to efforts to incorporate environmental justice considerations as part of the Department's climate adaptation strategy, DOJ has not yet established formal criteria to advance equitable distribution of environmental risks and benefits associated with the acquisition of mission-critical supplies and services. DOJ plans to address this, however, as part of priority action #4 (outlined in Section 3.1).

September 2021

THE UNITED STATES DEPARTMENT OF LABOR

# Climate Action Plan

The Department of Labor is committed to deliberate and strategic climate change resilience and adaptive action to protect our planet.

**SECRETARY OF LABOR  
WASHINGTON, D.C. 20210**

September 9, 2021

Dear Colleagues,

On January 27, 2021, President Joseph R. Biden issued Executive Order (EO) 14008, “Tackling the Climate Crisis at Home and Abroad,” charting definitive public policy that will reduce the federal government’s carbon footprint, increase our climate resilience, and boldly lead by example in protecting our environment.

At the Department of Labor (DOL), we affirm our support for EO 14008, and we embrace it as an opportunity to advance our mission. Given the many threats that climate change poses to working people in America and around the world – and given the many opportunities to prepare workers for good, green jobs that support families and strengthen communities – climate action is essential to our shared vision of empowering all workers morning, noon, and night.

Attached is our Climate Action Plan, which details our approach and commitment to these ambitious goals.

DOL leadership is committed to strengthening our mitigation, adaptation and resilience efforts. As a team, we will lead by example in all that we do, from DOL procurement and acquisition, to energy efficiency, mission resilience, innovation, and workforce training.

Below is our Agency Policy for Climate Change and Adaptation:

“The Department of Labor is committed to deliberate and strategic climate change mitigation and adaptive action to protect our planet and its people. Consistent with our existing missions, we will collaboratively model best practices to ensure that our nation’s workforce has a sustainable and bright future as we empower workers, employers, and industries to foster environmental justice, establish measurable and sustainable mitigation progress, and improve climate resilience.”

Implementing this policy and Climate Action Plan will take the collaborative efforts of every single Department employee, and I want to thank you in advance for all of your work. Together we will make the DOL a visible leader that models best environmental practices for our peer agencies and private industry, and we will help make a better and safer world for today’s workers and for the next generation of workers and families who inherit our planet.

Sincerely,

MARTIN J. WALSH

# Introduction

The Department of Labor (DOL) fosters and promotes the welfare of job seekers, wage earners and retirees of the United States by improving their working conditions, advancing their opportunities for profitable employment, and protecting their retirement, health care, and other benefits. To fulfill this mission, the Department must be prepared and resilient to adapt to changing climate conditions across the Nation.

## **Policy for Climate Change and Adaptation:**

DOL is committed to deliberate and strategic climate change mitigation and adaptive action to protect our planet and its people. Consistent with our existing missions, we will collaboratively model best practices to ensure that our nation's workforce has a sustainable and bright future as we empower workers, employers, and industries to foster environmental justice, establish measurable and sustainable mitigation progress, and improve climate resilience.

## **Agency Official Responsible for Implementation of the Climate Action Plan:**

Julia Tritz, Director, Business Operations Center (BOC), within the Office of the Assistant Secretary for Administration and Management (OASAM), is the Agency Official (AO) responsible for implementation of the Climate Adaptation Plan (CAP). DOL's National Contact Center phone number is 1-866-487-2365.

## **Statement of Intent:**

In response to Executive Order (EO) 14008 and the growing significance of climate change on economic prosperity and the delivery of federal services, the Department of Labor has established a Climate Action Plan to adapt to changing climate conditions and provide innovative and progressive federal leadership to address this growing threat to national security. The intent of this plan is to build on the 2014 Climate Change Adaptation Plan, assess and update vulnerabilities to DOL mission success, and construct clear adaptive measures to ensure resilience to climate change.

The CAP identifies key vulnerabilities, resilience opportunities, priority adaptation actions, and procurement challenges for our agencies and articulates our leadership plan for both immediate and long-term transformation. DOL's ability to pursue these opportunities to combat the climate crisis and lead by example will require either additional fiscal and personnel resources or the realignment of existing resources.

The Secretary of Labor, as a member of the National Climate Taskforce, the Interagency Working Group on Coal and Power Plant Communities and Economic Revitalization, Interagency Working Group on Extreme Heat, Interagency Working Group on Flood Resilience, and the White House Environmental Justice Interagency Council, will promote environmental equity and robust labor adaptation to all federal efforts on climate change.

DOL's Chief Sustainability Officer (CSO) is responsible for assessment of DOL assets for vulnerabilities to climate change and determination of appropriate adaptive measures to meet our resilience requirements. The CSO will also provide leadership to ensure that environmental justice and sustainable best practices are exemplified across all DOL agencies.

# Priority Adaptation Actions:

Because DOL operates campuses and mission efforts in all 50 States and Puerto Rico, our exposure to potential climate related risk varies significantly from campus to campus and include both acutely disruptive events (storms, hurricanes, wild fires, etc.) and long-term challenges (sea-level rise, water and energy security, facility resilience, adaptive workforce program changes, economic shifts, etc.). With that perspective, DOL has identified five priority adaptation actions (PAAs) that inclusively address gaps in both our short-term and long-term climate resilience posture.

## **Ensuring Worker Safety (PAA #1):**

**The Occupational Safety and Health Administration (OSHA) at DOL has prioritized worker safety as a serious climate resilience issue. Due to climate change, workers face increasing risks of injury, illness, and death while working in extreme weather conditions (e.g., exposure to hazardous heat) or while exposed to health and safety risks during response and recovery to extreme weather events (e.g., hurricanes, wildfires, tornadoes, floods, and severe winter weather). Due to increased adverse outcomes from climate change events, employers must consider preparedness and mitigation for tolerances previously considered safe in construction, industrial and chemical engineering, transportation, and other critical infrastructure industries. OSHA is committed to stronger policies, guidance, and interagency coordination to protect workers as their working conditions change.**

This action is a national effort and our goals include:

- Reducing worker injuries, illnesses and deaths from occupational exposure to hazardous heat or health and safety risks during emergency response and recovery.
- Raising awareness, educating employers and workers on strategies, and providing practical tools for employers and workers to implement these strategies to prevent worker injuries, illnesses, and death from hazardous heat and emergency response efforts as climate conditions change.
- Engaging stakeholders to understand challenges and promote current best practices to respond to climate change related hazards and trends.
- Tracking and analyzing climate change related hazard trends to address policy gaps.

OSHA will be the lead agency to address this action and agency efforts will result in:

- Providing stronger technical assistance and supporting workplace safety during and after extreme weather events.
- Fewer injuries, illnesses, and deaths of workers from hazardous heat or health and safety risks during emergency response and recovery.
- Increased employer and worker knowledge of strategies and implementation of those strategies to prevent injuries, illnesses, and deaths from hazardous heat or health and safety risks during emergency response and recovery.

**Risks and challenges associated with these actions include:**

- Extreme weather preparedness and training can be time consuming and resource intensive.
- Concurrent OSHA staffing limitations as we balance the need for preparedness activities while also conducting maximum enforcement operations.
- Multiple climate and other emergency/disaster response efforts ongoing simultaneously (e.g. the COVID-19 pandemic, wildfire response, and acute extreme heat events all happening at once).
- Reaching workers that are most vulnerable to hazardous heat exposures. These workers are difficult to reach due to a number of factors (e.g., language barriers, lack of access to technology, transient nature of work).
- Regulatory efforts to address hazardous heat face numerous technical issues and considerations (e.g., heat stress thresholds, heat acclimatization planning, exposure monitoring, and medical monitoring).
- The scope of policy, guidance, regulatory, and enforcement efforts to protect workers from climate change related hazards is extremely broad.

Since the passage of the Occupational Safety and Health Act of 1970, OSHA has consistently led efforts across Federal, State, Local, Territorial, and Tribal governments as well as public partners and stakeholders to protect the safety and health of workers. Our mission continues as we now face the challenges of climate change. OSHA will adapt policy, guidance, regulatory, and enforcement efforts to continue to protect workers during and after acute and long-term climate events.

**To accomplish these goals, OSHA will coordinate with:**

- The White House National Security Council.
- Federal, State, Local, Territorial, and Tribal governments and agencies to coordinate and amplify messaging and promote tools and resources for protecting workers from climate change related hazards.
- DOL agencies (e.g., Wage and Hour, Bureau of International Labor Affairs) to expand the reach of these efforts to key stakeholders.
- OSHA Cooperative Program participants including public employers, non-governmental agencies and voluntary organizations, and unions and labor organizations.
- Congress to provide technical assistance to establish laws to protect workers before, during, and after extreme weather events and to consider the development of an enforceable federal standard to ensure workers and employers can recognize and respond to the signs of heat stress in indoor and outdoor work environments.

**We anticipate the following timeline for this Priority Adaptation Action:**

- OSHA worker safety efforts began in 1970.
- Planning specific to the climate crisis began in Q4 FY2021.
- Development of the action plan and metrics to track success by Q4 FY2021.
- Implementation of the action plan will begin by Q4 FY2023.
- Completion of the effort will be ongoing.

## **Facilities Resilience and Mission Readiness (Paa #2):**

**Adapt DOL owned Mine Safety and Health Administration (MSHA), Job Corps Center (JCC), and Conservation Corps Center (CCC) facilities to bolster climate resiliency and maintain robust mission capacity during acute and long-term climate disruptions. DOL will also collaborate closely with the General Services Administration (GSA) to ensure that leased facilities are resilient and mission capable.**

**It is important to note that while DOL owned facilities comprise 89.3% of our 24.8 million square feet of facilities space, most of these facilities are associated with JCC and CCC campus operations and are managed separately from DOL employee space management and Future of Work planning efforts.**

**The goals of this action are national and include:**

- Assessment of potential physical vulnerabilities and risks that could result from climate events across our 2,600 facility assets.
- Identification of potential adaptive measures to ensure facility resilience to climate events.
- Balancing adaptive measures to optimize resiliency with additional consideration of GHG reductions and environmental justice.
- Improving health and safety for employees and visitors to DOL facilities.
- Maintaining robust 24/7 Information Technology (IT) and Communications infrastructure.

**OASAM and the BOC will be the lead agencies to address this action and our efforts will result in:**

- Increased resilience of facility assets.
- Modernized facilities that are both climate resilient and energy efficient.
- Secure and capable IT and communications during normal and emergency conditions.
- Improved health, safety, and comfort for employees and visitors using our facilities.
- Campuses prepared for electrified fleet operations.
- Active efforts to achieve EO 14008's net-zero electricity procurement goal by 2035.

**Risks and challenges associated with these actions include:**

- Staff and resource bandwidth to plan and manage these renewed efforts.
- Availability of renewable energy sources to replace petroleum based options.
- Facility resilience during acute climate and other emergencies without petroleum based contingency resources.

**BOC began action on this priority more than a decade ago as we:**

- Actively integrated and prioritized sustainability and energy efficiencies into our new construction and modernization efforts.
- Engaged professional services to pursue stronger energy audits and actions on those audit findings with our JCCs.
- Renewed our interest in financed energy projects to accomplish energy efficiency and modernization efforts from a budget neutral position.

**To accomplish these goals, DOL will coordinate with:**

- The Federal Energy Management Program (FEMP) for expertise in financed energy projects and other energy efficiency opportunities.

**We anticipate the following timeline:**

- Strategic planning began in Q2 FY2020.
- Development of the action plan and metrics to track success by Q4 FY2023.
- Implementation of the action plan will begin by Q1 FY2024.
- Completion of the effort is anticipated by Q4 FY2035.

### **Competitive Employment and Training (PAA #3):**

**Strengthen competitive employment and training grant opportunities focused on equitable, energy sector strategies that prepare workers for high-quality jobs in occupations and industries critical to delivering a clean energy future.**

**This action is a national effort and our goals include:**

- Leveraging competitive grants, including Workforce Opportunity for Rural Communities (WORC) grants and Veteran Clean Energy Training grants, to prepare workers for clean energy sector jobs.
- Providing intensive and ongoing technical assistance focused on increasing completion rates of participants entering training to ensure that they receive the skills and certifications needed to contribute to a net-zero emission economy.
- Collecting and disseminating information on occupations related to clean energy, including new and emerging tasks and technology skills to help individuals make informed training and career choices.
- Reviewing Job Corps' career technical training offerings and identifying opportunities to promote educational training programs in renewable and clean energy and incorporate "green" training elements into other programs.

**The Employment and Training Administration (ETA) will be the lead agency to address this action and our efforts will result in:**

- Participants enrolled in and completing training programs in environmentally sustainable sectors or occupations essential to "greening" the economy.
- More robust occupational data on environmentally sustainable jobs.
- Additional Job Corps students selecting clean energy career technical training offerings or receiving instruction in skills that contribute to reducing carbon emissions.

**ETA's history of action on this priority includes:**

- Past Green Jobs Grant Programs funded by the American Recovery and Reinvestment Act of 2009 (Recovery Act):
  - Energy Training Partnerships (ETP) Grants
  - Pathways out of Poverty (POP) Grants
  - State Energy Sector Partnership and Training (SESP) Grants

- State Labor Market Improvement (LMII) Grants
- Green Capacity Building Grants (GCBG)
- Collaboration with the Department of Commerce/EDA, NIST/MEP, and the Delta Regional Authority on the following initiatives:
  - Jobs and Innovation Accelerator Challenge
  - Make it in America Challenge
- Job Corps instituted a number of measures to “green” its job training programs and facilities. Recovery Act funding was used to:
  - Incorporate “green” training elements into the automotive, advanced manufacturing, and construction trades at Job Corps centers nationwide.
  - Pilot three new “green” training programs at selected Job Corps centers: Solar Panel Installation, Weatherization, and SmartGrid technology.
- Collaboration, in 2021, with the Treasury Department to award a SIPPPRA grant to the New York State Energy Research and Development Authority (NYSERDA) for clean energy job training.

**To accomplish this Priority Adaptation Action, DOL will coordinate with:**

- The National Science Foundation (NSF)
- The Treasury Department
- The Environmental Protection Agency (EPA)
- Other federal agencies including those serving as ex-officio members of the Advisory Committee on Apprenticeship (Commerce, Education, HUD, HSS, Transportation and Energy) to coordinate on joint actions and opportunities for collaboration.

**We anticipate the following timeline to incorporate these efforts into our FY2022 Agency Management Plan (AMP):**

- Strategic planning began in Q3 FY2021.
- Development of the AMP action plan and metrics to track success by Q4 FY2021.
- Implementation of the AMP action plan will begin by Q1 FY2022.
- Completion of AMP integration is anticipated by Q4 FY2022.

### **Community Economic Resilience (PAA #4):**

**Assist communities negatively impacted by the transition to renewable energy to retrain and adapt their workforce for high-quality jobs in non-carbon intensive industries. This includes continuing to work with the Interagency Working Group on Coal and Power Plant Communities and Economic Revitalization for a clean and resilient energy future.**

**This action is a national effort and our goals include:**

- Developing and awarding grants for communities that have been impacted or are likely to be impacted by coal mining and coal power plant employment loss. These grants will prepare dislocated workers for good jobs in high-demand occupations aligned with regional or community economic development.

- Identifying opportunities to assist the Interagency Working Group on Coal and Power Plant Communities and Economic Revitalization (“the Working Group”) efforts to support and revitalize the economies of coal and power plant communities.
- Implementing the Working Group’s recommendations on how to best deploy grants, technical assistance, financing, procurement, and other programs to achieve these aims.

**ETA will be the lead agency to address this action and our efforts will result in:**

- Expanded opportunities for workers in fossil-fuel dependent communities to switch to jobs that contribute to the transition to a net-zero future.
- Economic development and revitalization in coal and fossil fuel-dependent regions affected by the clean energy transition.
- Ecologically and economically stronger and resilient communities.

**Risks and challenges associated with these actions include:**

- Market forces, the business cycle, and the technological developments may create challenges to matching newly trained workers to clean energy sector opportunities.

ETA began action on this priority in 2021 when ETA issued a funding notice for Workforce Opportunity for Rural Communities (WORC) demonstration grants, which included an additional emphasis on Energy Communities and will be administered in partnership with the Appalachian Regional Commission (ARC) and the Delta Regional Authority (DRA).

**To accomplish these goals, DOL will coordinate with:**

- The Working Group to identify opportunities to support and revitalize the economies of coal and power plant communities.
- Other agencies as directed by the Working Group.
- The Economic Development Administration (EDA) to ensure that grants are aligned with economic development strategies.

**We anticipate the following timeline to incorporate these objectives into ETA’s FY2022 Agency Management Plan:**

- Strategic planning began in Q3 FY2021.
- Development of the action plan and metrics to track success by Q4 FY2021.
- Implementation of the action plan will begin by Q1 FY2022.
- Completion of the effort is anticipated by Q4 FY2022.

**Procurement and Acquisition Resilience (PAA #5):**

**Adapt our procurement policies and specifications to evolving best practices in resilience that will support nimble mission continuity and preparation for acute and long-term climate disruptions to upstream and downstream supply chains.**

**This action is a national effort and our goals include:**

- Assessment of potential vulnerabilities and risks to procurement processes.
- Developing climate literacy and informing the acquisition community of resiliency provisions necessary to strengthen our long-term climate change preparedness.

- Identifying supply-chain vulnerabilities and contracting options ahead of acute disruptions and develop robust strategies to manage those challenges to best support mission resilience.
- Reducing Agency cradle-to-grave carbon footprint by ensuring applicable resilient and sustainable terms and conditions are included in relevant contract actions.

**The Office of the Senior Procurement Executive (OSPE) will be the lead agency to address this action and our efforts will result in:**

- Responsive flexibility and capacity during climate emergencies.
- Greater understanding of responsible sourcing and its impact on climate change.
- Assurance that prospective vendors have the requirements necessary to provide DOL with environmentally responsible goods and services.
- Stronger use of federal procurement regulations to draw contractors' attention to their impact on the environment as they provide goods and services.

**Risks and challenges associated with these actions include:**

- Potentially significant increases in the costs of goods and services for DOL.
- Longer delivery time(s) leading to delays or missed deadlines.
- Increased regulation may narrow options for suppliers of goods and services.

OSPE began action on this priority in 2019 by increasing acquisition training and compliance with clauses to elevate progressive contractor support of our resilience goals. We will continue to ramp up our compliance and contractor expectations in FY 2022- FY2025 while concurrently supporting Federal Acquisition Regulations (FAR) requirements.

**To accomplish this Priority Adaptation Action, DOL will coordinate and collaborate with:**

- The Federal Acquisition Institute's Cornerstone on Demand to align training efforts.
- All DOL program activities to ensure they are aware of the training resources available for their staff to be supportive of the initiative.

**We anticipate the following timeline:**

- Strategic planning will begin in Q1 FY2022.
- Development of the action plan and metrics to track success by Q1 FY2022.
- Implementation of the action plan will begin by Q2 FY2022.
- This priority adaptation action will be ongoing and, therefore, no completion date has been set.

# Updating Climate Vulnerability Assessments (Topic 1):

This Climate Action Plan is our first step in renewing efforts for systematic assessment and action on climate risks to our Agency missions. We have identified five key climate related vulnerabilities to mission success and are in the process of developing metrics to define milestones to measure progress in addressing these challenges.

While the first three vulnerabilities focus on Washington DC (where our Headquarters facilities are located), they are also national vulnerabilities as these issues are common to several of our regional facilities in cities across the country.

## **Vulnerability 1: Temperature Shifts**

**Temperature shifts due to climate change are threats to DOL Headquarters and regional assets across the United States. This vulnerability may increase power outages and brownouts at DOL Headquarters and regional assets. An unstable electrical grid may also negatively affect telework options that would otherwise support mission critical efforts.**

In 2016, the Department of Energy and Environment (DDOE), within the District of Columbia, completed a Climate Vulnerability and Risk Assessment (VRA)<sup>1</sup> and identified this infrastructure issue. DDOE has primary responsibility to address adaptation efforts in collaboration with Congress and GSA. DOL will coordinate with DDOE and collaborate on adaptive action.

In order to maintain mission readiness during acute climate related events, DOL Headquarters will maintain existing back-up power capabilities for essential services and improve our energy infrastructure to maximize renewable energy and minimize petroleum based generation solutions.

Meaningful implementation of renewable energy capacity at Headquarters will take 5-8 years. In the interim, DOL has sufficient diesel generation capacity to support essential operations.

Barriers to implementation may include potential DDOE or GSA adaptation delays that may alter our ability to minimize the disruptive nature of these vulnerabilities.

DOL will be evaluating each of our facility assets across the country for similar temperature vulnerabilities and prepare resilience strategies accordingly to each region's unique circumstances.

DOL does not anticipate a financial disclosure or risk management requirement for this work (beyond normative budget and worker safety efforts) but will maintain records sufficient to articulate the cost and/or savings of adaptation and expanded use of renewable energy.

---

<sup>1</sup>Page 24, VRA, Climate Change Adaptation Plan for the District of Columbia (2016)

## Vulnerability 2: Sea Level Rise and Flooding

**Sea level rise will increase risks of flooding along coasts and rivers near DOL assets. This vulnerability cascades into threats to utility services (power, water, sanitation, and steam) for DOL facility assets and employees. Loss of utilities and/or sanitation service could force temporary closures of DOL facilities by making them uninhabitable. These vulnerabilities could hamper mission readiness and force maximum telework postures more frequently.**

DOL Headquarters are in Washington DC, where the DDOE VRA<sup>2</sup> identified flooding and tidal rise as a serious infrastructure threat. While the District of Columbia has primary responsibility to address flooding adaptation efforts, DOL will be significantly impacted by any DDOE action. Thus, DOL will collaborate with GSA and coordinate with DDOE on adaptive action. Likewise, DOL will coordinate with local and state agencies in other regions where our assets are at risk.

In FY2022, DOL will review and adjust telework policy to include climate change contingency planning and be prepared to implement adaptive telework policies across the Agency beginning in FY2023. DOL is confident that implementation is possible by Q2 FY2023 due to our recent experience and lessons learned with the COVID 19 Pandemic.

**Barriers to adaptation may include:**

- Negotiating changes with bargaining units and the renewal cycles of these agreements.
- Potential DDOE or GSA adaptation delays that may alter our ability to minimize the disruptive nature of these vulnerabilities.

DOL will work closely with Human Resources to maintain an open and transparent process to this policy adaptation with employees and bargaining units.

## Vulnerability 3: Transportation Infrastructure

**The Fourth National Climate Assessment (FNCA)<sup>3</sup> identified increased flooding as a threat to both above-grade and below-grade transportation infrastructure. This is likely to affect DOL operations across the country and may create DOL workforce transportation issues that will disrupt normal operations and force maximum telework postures more frequently.**

DOL will work with GSA and local municipalities to address transportation infrastructure issues for continuity of operations. DOL will adapt telework policy and provide resources to be agile in deploying maximum telework posture while maintaining mission performance during transportation disruptions.

In FY2022, in coordination with Vulnerability 1 and 2, DOL will review and adjust telework policy to include climate change contingency planning and be prepared to implement adaptive telework policies across the Agency in FY2023. DOL is confident that implementation is possible by Q2 FY2023.

---

<sup>2</sup>Page 19, VRA, Climate Change Adaptation Plan for the District of Columbia (2016)

<sup>3</sup>Page 449, Fourth National Climate Assessment, Volume II (2018)

**Barriers to implementation may include:**

- Negotiating changes with bargaining units, contractor services, and the renewal cycles of these agreements.
- Potential state, local, and/or GSA adaptation delays that may alter our ability to minimize the disruptive nature of these vulnerabilities.

DOL will work closely with Human Resources and OSPE to maintain an open and transparent process to this policy adaptation with employees and contractors.

## **Vulnerability 4: Job Corps Centers and Conservation Corps Centers**

**The 121 Job Corps Centers and Conservation Corps Centers owned by DOL across the United States and Puerto Rico have a wide variety of facility vulnerabilities that may threaten their suitability of use, habitability, and mission capacity in the event of acute or prolonged climate events.**

Coordinated by the Job Corps National Office (OJC), the Employment and Training Administration (ETA) will develop Regional climate action strategies to identify, assess, and address climate related threats and options to preserve mission capacity and resilience. DOL will use the vulnerabilities identified for FNCA National Climate Assessment Regions<sup>4</sup> as guidance for framing priority efforts.

Having experienced the challenges of suspending nearly all Job Corps Center training programs for months during the recent pandemic and closing, realigning, and rebuilding facilities in Puerto Rico, Texas, and along the Gulf Coast due to acute climate events, OJC understands the threat climate change presents to the economically disadvantaged workers and communities we serve. We intend to strengthen our resilience across all OJC programs with special focus on our most vulnerable economic and environmentally unstable regions.

Building on previous momentum, ETA climate action strategies will be updated in FY2022-2023 and be ready to deploy by Q3 FY2024. DOL anticipates piloting strategy development with the Philadelphia Region in FY2022 and using lessons learned from the pilot to expedite development for the remaining five Regions in FY2023. DOL will update the Climate Action Plan as regional efforts evolve.

**Barriers to implementation may include:**

- Expertise at Regional levels.
- Potential local, state, or other agency adaptation delays beyond DOL control.

DOL will disclose these plans via publication of our Annual Sustainability Plan and incorporate discussion of the opportunities and challenges as routine public relations activities within the Agency.

---

<sup>4</sup> Page 5 & Pages 669-1278, Fourth National Climate Assessment, Volume II (2018)

## **Vulnerability 5: DOL Leased Space**

**DOL has 2.7 million square feet of leased office space, primarily through General Services Administration (GSA), across all 50 States. Climate change may threaten suitability of use and habitability in the event of acute or prolonged climate events. These vulnerabilities vary considerably by location.**

Coordinated by OASAM, the BOC Asset Management team will develop Regional climate action strategies to identify, assess, and address climate related threats and options to preserve mission capacity and resilience in all leased facilities. DOL will also collaborate with GSA on action plans and facility resilience priorities. DOL will update the Climate Action Plan as these efforts evolve and use the vulnerabilities identified in the FNCA<sup>5</sup> as guidance for framing priority efforts.

Regional climate action strategies for leased facilities will be developed in FY2022-2023 and be prepared to deploy in FY2024.

### **Barriers to implementation may include:**

- Lease contracts may require renegotiations and concessions.
- Potential local, state, or other agency adaptation delays beyond DOL control.

DOL will disclose these plans via publication of our Annual Sustainability Plan and incorporate discussion of the opportunities and challenges as routine public relations activities within the Agency.

---

<sup>5</sup> Page 5 & Pages 669-1278, Fourth National Climate Assessment, Volume II (2018)

# Improving Climate Literacy (Topic 2):

Strengthening management climate literacy at DOL serves three key purposes:

- Well-informed leadership and management teams are prepared to prioritize, coordinate, and integrate resilience and adaptation efforts into Agency-wide strategic planning.
- Leadership and management have significant influence on the tone and pace of change for an organization.
- Informed leadership consensus promotes opportunities for interagency synergy at all levels.

Initially, climate literacy is essential for our OASAM, BOC, OSPE, and ETA management teams to drive well-informed consensus as we address the five PAAs identified in this plan:

- PAA #1 - Ensuring Worker Safety
- PAA #2 - Facility and Campus Resilience
- PAA #3 - Workforce Training Adaptation
- PAA #4 - Community Economic Resilience
- PAA #5 - Procurement and Acquisition Resilience

The Chief Sustainability Officer (CSO) and Sustainability team will prepare and disseminate a leadership training course focused on management considerations and environmental justice for climate change by Q4 FY2022. The CSO will also provide regular input at senior staff meetings on the needs and progress of climate change efforts.

Climate literacy will be essential at all levels as we seamlessly integrate our existing missions with our PAAs. From the basics of understanding how the ecosystem drives availability and needs for products and services to the complex interaction between workforce adaptability and community economic resilience, climate literacy training for all DOL employees will drive our holistic approach to adaptation. In collaboration with DOL's Human Resources office, the Sustainability team will develop an all-hands training course to be available on Learning Link by Q4 FY2022 and add climate literacy to new employee orientation sessions beginning in Q2 FY2022.

**While training topics will vary by professional audience, focus elements may include:**

## **Understanding our Fragile, yet Resilient, Ecosystem**

- Nature, Community, and Industry are Interconnected.
- The Environmental Costs of Products, Services, Energy, and Indifference.

## **Embracing the Intent and Ambitious Challenge of Executive Order 14008**

- Incorporating Environmental Stewardship into our Missions.
  - Interconnected Stakeholders to Local, National, and Global Choices.
  - Valuing and Empowering all Stakeholders.
- Understanding “Net-Zero” in Balancing Mission and Environmental Stewardships.
- Environmental Justice in Our Interconnected World.

- Understanding and Avoiding Disproportionate Negative Consequences.  
Promoting Positive Change within our Professional Scope of Influence
- Holistic Cost Considerations.

### **360 Degree Perspectives - Making a Difference at Home, at Work, and at Play**

- Safe, Secure, and Environmentally Responsible Leadership
- Commitment to Cradle-to-Grave Environmental Stewardship:
  - Reduce, Reuse, Recycle – Leaving the Campground better than we found it.
  - Passing it On –Generational Opportunities for Change.
- Resilient Facilities
  - Design Considerations
  - Sustainable Utilization
  - Sustainable Modernization

# Enhancing Climate Resilience (Topic 3):

Overseen by OASAM and coordinated through the BOC, determination of climate change policy, criteria, and priorities are a team effort at DOL. Leadership from BOC, OJC, ETA, OSPE, and the Office of Worker Safety and Health (OWSH) collaborate to establish climate action requirements for Sustainability, Facilities, and Asset Management to execute within budget capacity.

Equity is a paramount consideration at every level of mission engagement at DOL. As we develop our environmental justice strategy, equitable distribution of environmental risk and the benefits of climate action initiatives will be emphasized across all phases of our work and will be a strategic emphasis in upcoming OJC Regional Climate Action Strategies (being developed in FY2022-2023).

## Actions for Climate-Ready Sites and Facilities

Through robust planning and execution of design, construction, modernization, and recommissioning opportunities, DOL will reduce carbon emissions at our campuses and foster sustainable best practices through the following efforts:

Engage Energy Savings Performance Contracting (ESPC) and Utility Energy Savings Contracts (UESC) to improve energy efficiency, electrification, and resilience across DOL facilities. Specifically, DOL will target the following timeline for executing modernization ESPC/UESC opportunities at the following locations:

- MSHA Triadelphia by Q4 FY2023
- DOL Headquarters by Q2 FY2023
- OJC Regions 1-3 by Q4 FY2024
- OJC Regions 4-6 by Q4 FY2025

Transition DOL Fleet Vehicles from petroleum fueled vehicles to increasing the use of hybrid and electric vehicles between FY2024 and FY2035. This will include:

- Re-examining fleet replacements for appropriate electric vehicles and hybrids that can meet mission requirements while reducing our carbon footprint. DOL leases approximately 3,639 vehicles from GSA and replaces approximately 12% of the fleet each year.
- Improving electric vehicle charging station access at DOL facilities (including JCCs and CCCs) for both government and privately owned vehicles.

Increase the use of renewable energy (solar/wind/geothermal) at DOL owned or operated facilities by 400% by FY2026.

Improve preventive maintenance and recommissioning efforts to optimize energy efficiency and performance of existing energy intensive systems (primarily HVAC, Chiller, and Boiler Operations) at all DOL maintained facilities.

Reinvigorate “Green Teams” across our 121 JCC and CCC properties to identify energy and sustainability targets that can be included in modernization efforts.

## **Actions To Ensure Climate-Ready Supply of Products and Services**

DOL's mission is "to foster, promote, and develop the welfare of the wage earners, job seekers, and retirees of the United States; improve working conditions; advance opportunities for profitable employment; and assure work related benefits and rights."<sup>6</sup> When job markets and communities become disrupted by evolving climate actions or a force majeure, our ability to fulfill these missions are compromised and challenged. These challenges require more than contingency planning for maintaining operations. DOL must be prepared to assist at-risk communities in adapting their job markets to changing climate conditions and prevent damage to the continuity of robust business and industry labor opportunities.

DOL serves and supports our labor communities. Acute extreme weather events and/or long-term climate change pose significant risks to our ability to deliver on our mission in five critical areas:

1. Ability to secure lawful wages and working conditions for America's workers.
2. Ability to secure safe and healthful working conditions for America's workers.
3. Support timely and accurate benefits for unemployed workers.
4. Provide equitable training programs at Mine Safety and Health Administration (MSHA), Job Corps Centers (JCCs), and Conservation Corp Centers (CCCs) across America.
5. Promote a fair global playing field for America's workers and businesses.

As we prepare and execute climate adaptation efforts, our foremost priorities are to lead and deliver on our mission to promote and secure a bright future for American workers.

## **Conclusion:**

Through assessing climate vulnerabilities with our assets and equities, we will develop adaptive measures to support climate resilience. Our actions will emphasize responsible planning, leveraging adaptive strengths, and collaborating with business and industry to optimize mission resilience, embrace a robust environmental justice strategy, and lead by example. With thoughtful attention to science and social accountability, DOL will engage projects and strategies that shift us from a risk management posture to a prepared resilience capable of effectively serving our citizens today and tomorrow.

Final implementation decisions will be based on the priorities outlined in this Climate Action Plan, the evolving science on climate change, and resource levels.

---

**DEPARTMENT OF ENERGY**

[EERE-2020-BT-DET-0017]

**Final Determination Regarding Energy Efficiency Improvements in ANSI/ASHRAE/IES Standard 90.1-2019**

**AGENCY:** Office of Energy Efficiency and Renewable Energy, Department of Energy.

**ACTION:** Notification of determination.

**SUMMARY:** The U.S. Department of Energy (DOE) has reviewed ANSI/ASHRAE/IES Standard 90.1-2019: *Energy Standard for Buildings, Except Low-Rise Residential Buildings* and determined the updated edition would improve energy efficiency in commercial buildings subject to the code. DOE analysis indicates that buildings meeting Standard 90.1-2019, as compared with buildings meeting the 2016 edition, would result in national site energy savings of 4.7 percent, source energy savings of 4.3 percent, and energy cost savings of approximately 4.3 percent of commercial building energy consumption. Upon publication of this affirmative determination, each State is required to review the provisions of their commercial building code regarding energy efficiency, and, as necessary, update their codes to meet or exceed Standard 90.1-2019. Additionally, this notice provides guidance on state code review processes and associated certifications.

**DATES:** Certification statements provided by States shall be submitted by July 28, 2023.

**ADDRESSES:** A copy of the supporting analysis, as well as links to the Federal docket and public comments received, are available at: <https://www.energycodes.gov/development/determinations>.

Certification Statements must be addressed to the Building Technologies Office—Building Energy Codes Program Manager, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, 1000 Independence Avenue SW, EE-5B, Washington, DC 20585.

**FOR FURTHER INFORMATION CONTACT:**

Jeremiah Williams; U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, 1000 Independence Avenue SW, EE-5B, Washington, DC 20585; (202) 441-1288; [Jeremiah.Williams@ee.doe.gov](mailto:Jeremiah.Williams@ee.doe.gov).

**SUPPLEMENTARY INFORMATION:**

- I. Background
- II. Public Participation
- III. Determination Statement
- IV. State Certification

**I. Background**

Title III of the Energy Conservation and Production Act, as amended (ECPA), establishes requirements for DOE to review consensus-based building energy conservation standards. (42 U.S.C. 6831 *et seq.*) Section 304(b), as amended, of ECPA provides that whenever the ANSI/ASHRAE/IESNA<sup>1</sup> Standard 90.1-1989 (Standard 90.1-1989 or 1989 edition), or any successor to that code, is revised, the Secretary of Energy (Secretary) must make a determination, not later than 12 months after such revision, whether the revised code would improve energy efficiency in commercial buildings, and must publish notice of such determination in the **Federal Register**. (42 U.S.C. 6833(b)(2)(A)) If the Secretary makes an affirmative determination, within two years of the publication of the determination, each State is required to certify that it has reviewed and updated the provisions of its commercial building code regarding energy efficiency with respect to the revised or successor code and include in its certification a demonstration that the provisions of its commercial building code, regarding energy efficiency, meet or exceed the revised Standard. (42 U.S.C. 6833(b)(2)(B)(i)) Standard 90.1-2019, the most recent edition, was published in October 2019, triggering the statutorily required DOE review process. The Standard is developed under ANSI-approved consensus procedures,<sup>2</sup> and is under continuous maintenance under the purview of an ASHRAE Standing Standard Project Committee (commonly referenced as SSPC 90.1). ASHRAE has an established program for regular publication of addenda, or revisions, including procedures for timely, documented, consensus action on requested changes to the Standard. More information on the consensus process and ANSI/ASHRAE/IES Standard 90.1-2019 is available at <https://www.ashrae.org/technical-resources/bookstore/standard-90-1>.

<sup>1</sup> ANSI—American National Standards Institute; ASHRAE—American Society of Heating, Refrigerating, and Air-Conditioning Engineers; IES—Illuminating Engineering Society.

<sup>2</sup> See <https://www.ansi.org/american-national-standards/info-for-standards-developers/standards-developers>.

In addition, on January 20, 2021, the President issued Executive Order 13990, “Protecting Public Health and the Environment and Restoring Science to Tackle the Climate Crisis.” 86 FR 7037 (Jan. 25, 2021). The Executive Order directed DOE to consider publishing for notice and comment a proposed rule suspending, revising, or rescinding the final technical determination regarding the ASHRAE Standard 90.1-2016 by May 2021. *Id.* at 86 FR 7038. In response, DOE has reviewed the current Standard 90.1-2019 so that DOE’s determination under section 304(b) of ECPA reflects the most recent version of Standard 90.1, and to facilitate State and local adoption of the Standard, which will improve energy efficiency in the nation’s commercial buildings.

To meet the statutory requirement, and to satisfy the directive issued under Executive Order 13990, DOE issued a preliminary determination and published supporting analysis to quantify the expected energy savings associated with Standard 90.1-2019 relative to the previous 2016 version. The preliminary determination and analysis are available at: <https://www.regulations.gov/document/EERE-2020-BT-DET-0017-0001>.

**II. Public Participation**

In an April 21, 2021 **Federal Register** notice, DOE requested public comments on its preliminary analysis of Standard 90.1-2019. (82 FR 34513) DOE received eight public comments, all of which DOE considered in arriving at its final determination. DOE has now issued the final analysis of the expected energy savings associated with Standard 90.1-2019 as compared to Standard 90.1-2016. A summary of public comments received, and DOE responses, is included in Appendix A of this Notice. The final analysis is available at: <https://www.energycodes.gov/development/determinations>.

**III. Determination Statement**

Commercial buildings meeting Standard 90.1-2019 (compared to the previous 2016 edition) are expected to result in the following savings on a weighted national average basis:

- 4.7 percent *site* energy savings
- 4.3 percent *source* energy savings
- 4.3 percent energy *cost* savings

DOE has rendered the conclusion that Standard 90.1-2019 will improve energy efficiency in commercial buildings, and, therefore, receives an affirmative determination under Section 304(a) of ECPA. States can experience significant benefits by updating their codes to reflect current construction

standards, a total estimated \$63.80 billion in energy cost savings and 476.77 MMT of avoided CO<sub>2</sub> emissions in commercial buildings (cumulative 2010 through 2040), or \$2.80 billion in annual energy cost savings and 21.16 MMT in annual avoided CO<sub>2</sub> emissions (annually by 2030). These benefits, including emissions reductions, are estimated in a revised 2021 interim report addressing building code impacts.<sup>3</sup> Though not quantified in the interim report, there may also be costs to regulated entities as a result of updated commercial building codes.

#### IV. State Certification

Upon publication of this affirmative determination, each State is required to review and update, as necessary, the provisions of its commercial building energy code to meet or exceed the provisions of the 2019 edition of Standard 90.1. (42 U.S.C. 6833(b)(2)(B)(i)) This action is required not later than 2 years from the date the final Notice of Determination is published in the **Federal Register**, unless an extension is provided.

##### *State Review & Update*

DOE recognizes that some States do not have a State commercial building energy code, or have a State code that does not apply to all commercial buildings. States may base their certifications on reasonable actions by units of general-purpose local government. Each such State must review the information obtained from the local governments, and gather any additional data and testimony in preparing its own certification.

The applicability of any State revisions to new or existing buildings would be governed by the State building codes. States should be aware that the scope of Standard 90.1 includes high-rise (greater than three stories) multi-family residential buildings, and hotels, motels, and other transient residential building types of any height, as commercial buildings for energy code purposes. Consequently, commercial buildings, for the purposes of certification to DOE, would include high-rise multi-family residential buildings, hotels, motels, and other transient residential building types of any height.

<sup>3</sup> See [https://www.pnnl.gov/main/publications/external/technical\\_reports/PNNL-31437.pdf](https://www.pnnl.gov/main/publications/external/technical_reports/PNNL-31437.pdf) for the 2021 interim code impact report. Financial benefits are calculated by applying historical and future fuel prices to site energy savings and by discounting future savings to 2020 dollars. Historical and future real fuel prices are obtained through EIA's AEO 2015 report (EIA 2015).

##### *State Certification Statements*

Section 304(b) of ECPA, as amended, requires each State to certify to the Secretary of Energy that it has reviewed and updated the provisions of its commercial building energy code regarding energy efficiency to meet or exceed the Standard 90.1–2019. (42 U.S.C. 6833(b)) The certification must include a demonstration that the provisions of the State's commercial building energy code regarding energy efficiency meets or exceeds Standard 90.1–2019. If a State intends to certify that its commercial building energy code already meets or exceeds the requirements of Standard 90.1–2019, the State should provide an explanation of the basis for this certification (*e.g.*, Standard 90.1–2019 is incorporated by reference in the State's building code regulations). The chief executive of the State (*e.g.*, the governor), or a designated State official (*e.g.*, director of the State energy office, State code commission, utility commission, or equivalent State agency having primary responsibility for commercial building energy codes), would provide the certification to the Secretary. Such a designated State official would also provide the certifications regarding the codes of units of general purpose local government based on information provided by responsible local officials.

The DOE Building Energy Codes Program tracks and reports State code adoption and certification.<sup>4</sup> Once a State has adopted a new commercial energy code, DOE typically provides software, training, and support for the new code as long as the new code is based on the national model code (*i.e.*, ASHRAE Standard 90.1–2019). DOE has issued previous guidance on how it intends to respond to technical assistance requests related to implementation resources, such as building energy code compliance software. (79 FR 15112) DOE Secretary is required to provide incentive funding to States to implement the requirements of section 304, and to improve and implement State residential and commercial building energy efficiency codes, including increasing and verifying compliance with such codes. (See 42 U.S.C. 6833(e)) Some States develop their own codes that are only loosely related to the national model codes, and DOE may not be able to provide technical support for those codes. DOE does not prescribe how each State adopts and enforces its energy codes.

<sup>4</sup> Available at <https://www.energycodes.gov/adoption/states>.

##### *Requests for Extensions*

Section 304(c) of ECPA requires that the Secretary permit an extension of the deadline for complying with the certification requirements described previously, if a State can demonstrate that it has made a good faith effort to comply with such requirements and that it has made significant progress toward meeting its certification obligations. (42 U.S.C. 6833(c)) Such demonstrations could include one or both of the following: (1) A plan for response to the requirements stated in Section 304; or (2) a statement that the State has appropriated or requested funds (within State funding procedures) to implement a plan that would respond to the requirements of Section 304 of ECPA. This list is not exhaustive. Requests are to be sent to the address provided in the **ADDRESSES** section, or may be submitted to [BuildingEnergyCodes@ee.doe.gov](mailto:BuildingEnergyCodes@ee.doe.gov).

#### Appendix A

DOE received comments on its preliminary determination and supporting analysis of Standard 90.1–2019 from the following stakeholders:

- U.S. Army
- U.S. Air Force
- Responsible Energy Codes Alliance (RECA)
- Edison Electric Institute (EEI)
- Air-Conditioning, Heating, and Refrigeration Institute (AHRI)
- Three individual commenters

The comments are summarized below and are available at: <https://www.regulations.gov/document/EERE-2020-BT-DET-0017-0001/comment>. DOE responded to all comments received. Several issues raised by commenters are distinct from the energy efficiency analysis DOE has undertaken pursuant to its statutory obligations. These include the social cost of carbon, life-cycle cost, and cost effectiveness; among these issues, social cost of carbon garnered the most attention from commenters and is therefore emphasized in the responses below.

*Comment:* The anonymous submitter of comment ID EERE–2020–BT–DET–0017–0002 stated that the reduction in emissions is low for a five-year code cycle and the standards should be stricter.

*DOE response:* DOE notes that the reported savings estimates represent a 3-year code cycle—Standard 90.1–2019 compared to the 2016 edition—and not 5 years as stated by the commenter. The stringency of each version of 90.1 is determined by the ANSI consensus process used to revise Standard 90.1, as administered by ASHRAE. While DOE is directed to participate in the ASHRAE consensus process, the Department holds no special status. DOE's role in code review and consensus processes for commercial energy codes, including Standard 90.1, is further described at <https://www.energycodes.gov/development/commercial/codes>.

*Comment:* The U.S. Army stated that some of the requirements are not “reasonable” or “practicable” and that requirements should

be operable and maintainable with typical maintenance staff and budgets.

*DOE response:* DOE notes that, in making its determination, its directive under ECPA is to assess whether updated editions of Standard 90.1 would improve *energy efficiency* in commercial buildings. DOE believes that the issue of whether code provisions are “reasonable” and “practicable” is complex and most appropriately addressed directly by the established code development process, as administered by ASHRAE, used for Standard 90.1. That process is inclusive of a wide range and variety of stakeholders, and features a robust public comment process to ensure that the concepts evaluated for inclusion in new versions of Standard 90.1 are indeed reasonable, practicable, feasible and cost effective, among many other considerations.

*Comment:* The anonymous submitter of comment ID EERE–2020–BT–DET–0017–0004 asked, for buildings that are already using 100% renewable energy, whether the source energy and CO<sub>2</sub> savings are going to be zero.

*DOE response:* DOE’s determination is focused on a typical new building meeting the minimum requirements of ASHRAE Standard 90.1–2019. A building that is using 100% renewable energy was not contemplated in DOE’s analysis.

*Comment:* The anonymous submitter of comment ID EERE–2020–BT–DET–0017–0005 asked why DOE shows building-only savings for natural gas and building plus upstream savings for electricity. The commenter suggested DOE should account for regional variations in gas and electricity production.

*DOE response:* Both gas and electricity savings are expressed as both site energy and source energy. The source energy factors for natural gas and electricity are shown on pages 16 and 17 of the technical support document referenced in the preliminary determination notice. The source energy emissions for electricity include both the losses in terms of generation as well as losses in transmission and distribution. For natural gas, the source energy factor of 1.088 includes losses due to both pipeline leakage and transmission energy (compression) and the derivations are documented in the technical support document. Regarding regional variation in production, DOE considers use of national assumptions for gas and electricity production the most appropriate way to estimate the national energy impact of one edition of a model standard compared to the previous edition, which is consistent with DOE’s directive under ECPA.

*Comment:* The U.S. Air Force’s first comment stated that the determination does not address institutional, industrial, or campus buildings that often have mass walls and reduced window area.

*DOE response:* The suite of prototype building models relied upon by the Standard 90.1 development committee and applied in DOE’s analysis of ASHRAE Standard 90.1–2019 represents approximately 76% of U.S. new non-residential construction volume and includes mass walls, steel framed, metal

building, and wood frame construction. Window-to-wall ratio varies in these models from 1% to 40%, as is commonly the case in the commercial building stock, as represented by the prototype models. While the prototypes cannot address every possible combination of building type and building construction types in the analysis, they do include a representative range of building construction types, and are relied upon by established decision-making processes, including the Standard 90.1 development process.

*Comment:* The U.S. Air Force also recommended that the life-cycle cost analysis (LCCA) should not use U.S. average utility rates.

*DOE response:* In making its determination, DOE’s directive under ECPA is to assess whether updated editions of Standard 90.1 would improve *energy efficiency* in commercial buildings. 42 U.S.C. 6833(b)(2)(A) With respect to the energy cost savings calculation, DOE considers use of a national average utility rate the most appropriate way to estimate the national energy cost savings of one edition of a model energy standard compared to the previous edition, which is consistent with DOE’s directive under ECPA. The range of utility tariffs available in the U.S. numbers in the thousands, and DOE is ultimately charged with issuing a national determination. DOE notes that it does apply more specific rates in other analyses, where appropriate, such as in estimating energy code impacts at the state level.

*Comment:* The U.S. Air Force’s final comment stated it does not appear that maintenance tail expenses for mechanical requirements such as enthalpy wheels were incorporated into the LCCA.

*DOE response:* In making its determination, DOE’s directive under ECPA is to assess whether updated editions of Standard 90.1 would improve *energy efficiency* in commercial buildings. 42 U.S.C. 6833(b)(2)(A) Concepts such as life-cycle cost and cost effectiveness represent economic analysis and are distinct from the energy efficiency analysis that DOE is directed to assess through its determination. However, DOE recognizes the value of such analysis in informing state and local decisions surrounding code review and update processes, as well as design decisions associated with specific buildings and systems. DOE provides a variety of additional analysis, including cost-effectiveness analysis, outside the scope of DOE’s determination, and in response to the Department’s separate directive to provide technical assistance to support state code implementation. When conducting analysis such as cost-effectiveness analysis, DOE does indeed rely upon a life-cycle perspective and accounts for costs associated with the maintenance and replacement of building systems and components.

*Comment:* RECA’s first comment recommended that DOE provide technical support for Standard 90.1.

*DOE response:* DOE is directed under ECPA to provide technical assistance supporting the implementation of building energy codes. Consistent with this directive,

DOE intends to continue providing robust technical assistance supporting state and local implementation of buildings energy codes. DOE recognizes the importance of supporting the states and local governments who ultimately adopt and implement codes, as well as the wide range of industry stakeholders who rely upon energy codes and strive to achieve compliance in practice.

*Comment:* RECA’s second comment recommended that DOE provide cost-effectiveness analysis.

*DOE response:* As outlined in previous responses, DOE notes that the current determination is focused solely on whether the revised Standard would improve energy efficiency in commercial buildings. However, DOE recognizes the value of additional forms of technical analysis supporting building energy codes to support the implementation of state building energy codes (42 U.S.C. 6833(d)), and intends to continue to provide both national and state-level cost-effectiveness analysis of Standard 90.1–2019 in the future.

*Comment:* RECA’s third comment recommended that DOE provide state-level energy and cost analyses.

*DOE response:* Consistent with the previous comment response, DOE intends to provide state-level energy and cost analyses in the future.

*Comment:* RECA’s fourth comment recommended that DOE compare 90.1–2019 to the 2021 IECC.

*DOE response:* DOE recognizes that adopting states and local governments often review the commercial provisions of the International Energy Conservation Code (IECC), and can benefit from knowing how the IECC compares to Standard 90.1 (*i.e.*, the model energy code established under ECPA). DOE has provided such analysis in the past and intends to prepare similar analysis in the future.

*Comment:* RECA’s fifth comment recommended that DOE remove old versions of Standard 90.1 from COMcheck.

*DOE response:* In maintaining its compliance resources, such as the COMcheck software<sup>5</sup>, DOE typically supports the three most recent editions of the model codes. (79 FR 15112) Following the current determination, and in accordance with established DOE policy, this will include the 2019, 2016 and 2013 editions of Standard 90.1, which represents the range of recent code editions, and helps ensure limited federal resources remain focused on the latest model codes. DOE intends to maintain consistency with this approach.

*Comment:* RECA’s sixth comment recommended that DOE provide implementation support for 90.1–2019.

*DOE response:* Consistent with previous comment responses, DOE intends to continue providing robust support for states and local governments implementing building energy codes. DOE notes that several resources, including training on Standard 90.1–2019, are already available via the DOE Building

<sup>5</sup> COMcheck is a software tool developed and maintained by DOE for the purpose of verifying compliance in commercial buildings. Learn more at <https://www.energycodes.gov/comcheck>.

Energy Codes Program technical assistance website, <https://www.energycodes.gov>. DOE intends to provide additional resources supporting Standard 90.1 implementation in the future.

*Comment:* RECA's seventh comment recommended that DOE find new opportunities to support model code adoption, compliance, and enforcement.

*DOE response:* DOE appreciates RECA's support in seeking new opportunities to support code adoption and implementation. DOE intends to continue to explore new and innovative means of supporting code implementation and welcomes additional suggestions in this area.

*Comment:* RECA's eighth comment stated that RECA agrees with and supports DOE's positive determination.

*DOE response:* DOE appreciates the support.

*Comment:* EEI's first comment stated that the EPA greenhouse gas equivalencies calculator overstates the emissions impact.

*DOE response:* As outlined in previous responses, DOE notes that the current determination is focused solely on whether the revised Standard would improve energy efficiency in commercial buildings. However, DOE recognizes the value of additional forms of technical analysis supporting state implementation of building energy codes, including emissions analyses. DOE relies on greenhouse gas emission coefficients established by the Environmental Protection Agency (EPA) in estimating current year CO<sub>2</sub> savings. EPA's emission coefficients are designed to reflect marginal CO<sub>2</sub> savings from electricity savings occurring on the building site, which DOE considers appropriate for evaluating the carbon savings stemming from an improved energy standard. This approach is consistent with how DOE has performed similar calculations in previous determinations.

*Comment:* EEI's second comment recommended that DOE's determination should take into account the commitments utilities have made to reduce carbon emissions.

*DOE response:* As outlined in previous responses, DOE notes that the current determination is focused solely on whether the revised Standard would improve energy efficiency in commercial buildings. However, DOE recognizes the value of additional forms of technical analysis supporting state implementation of building energy codes, including emissions analyses. DOE's analysis is based on several metrics—energy cost, site energy, source energy—and in addition reports the corresponding carbon emissions on a first-year basis. DOE recognizes the progress being made by utilities in decarbonizing the electric grid, and emphasizes that estimates provided in the supporting technical analysis are based on current emission levels and are subject to change in the future.

*Comment:* AHRI, p. 2–5. AHRI commented that historically DOE did not estimate emission reductions or apply a value to emission reductions as part of the results and basis for the determination. They further stated that including emission reductions or their value, including the SCC, as part of the

basis for determination was outside DOE's authority to consider (42 U.S.C. 6833(b)(2)(A)), because EPCA is an energy conservation statute and excludes environmental objectives (see 42 U.S.C. 6312 which excludes environmental objectives), and that DOE does not have the statutory authority to consider greenhouse gas estimates in determinations regarding commercial building codes. AHRI opined that the SCC should only be included for rulemakings where DOE has clear statutory authority to do so and stated that it lacks such statutory authority as to building energy codes.

*DOE response:* In making its determination, DOE's directive under EPCA is to assess whether updated editions of Standard 90.1 would improve energy efficiency in commercial buildings. 42 U.S.C. 6833(b)(2)(A) DOE emphasizes that the estimates pertaining to CO<sub>2</sub> are provided only as supplemental information and are not considered as part of the final determination, which is based on energy efficiency as required under 42 U.S.C. 6833(b)(2)(A). DOE's analysis includes an estimate of a one-year reduction in CO<sub>2</sub> emissions on a normalized per square foot basis for buildings constructed to 90.1–2019 versus those constructed to 90.1–2016. Climate benefits associated with the expected CO<sub>2</sub> emissions reductions are monetized using estimates of the social cost of carbon (SC–CO<sub>2</sub>) presented in the *Technical Support Document: Social Cost of Carbon, Methane, and Nitrous Oxide Interim Estimates under Executive Order 13990* ("February 2021 TSD").<sup>6</sup>

DOE has determined that the estimates from the February 2021 TSD are based upon sound analysis and provide well founded estimates for DOE's analysis of the impacts of CO<sub>2</sub> related to the reductions of emissions from updating the 90.1 Standard to the 2019 edition. However, DOE emphasizes that DOE is reporting estimates related to CO<sub>2</sub> only because information on the carbon emissions associated with buildings are valued by many stakeholders, including states and local governments who ultimately implement building codes, and who have expressed a need for this information. These estimates are not considered as part of DOE's ultimate determination of whether Standard 90.1–2019 will improve energy efficiency.

*Comment:* AHRI, p. 2, 5. AHRI stated that DOE is ignoring clear Congressional intent in including emissions in the narrowly scoped building energy code review defined in the statutory text (42 U.S.C. 6833(b)(1)). It further stated that Congress could have added global climate change as a variable to weigh in the determination, but did not do so and so DOE should not include this in the determination.

*DOE response:* See response to previous AHRI comment.

*Comment:* AHRI, p. 2. AHRI requested that DOE remove carbon emissions from the determination for building energy codes, including ASHRAE 90.1–2019.

*DOE response:* See previous response to AHRI comment.

*Comment:* AHRI p. 2. Irrespective of the authority consideration, AHRI requested that DOE must act to remedy inaccurate assumptions and conclusions on the SC–CO<sub>2</sub> benefits analysis. AHRI opined that the benefits claimed from full fuel cycle and global impact of emissions and SCC are speculative and tangential and that these are calculated over a time period (100 years) that greatly exceeds that used to measure economic costs.

*DOE response:* In making its determination, DOE's directive under EPCA is to assess whether updated editions of Standard 90.1 would improve energy efficiency in commercial buildings. 42 U.S.C. 6833(b)(2)(A). DOE emphasizes that the estimates pertaining to CO<sub>2</sub> are provided only as supplemental information and are not considered as part of the final determination, which is based on energy efficiency as required under 42 U.S.C. 6833(b)(2)(A).

In calculating related CO<sub>2</sub> impacts, DOE used the estimates for the SC–CO<sub>2</sub> from February 2021 TSD. DOE has determined that the estimates from the February 2021 TSD, as described more below, are based upon sound analysis and provide well founded estimates for DOE's analysis of the impacts of CO<sub>2</sub> related to the reductions of emissions from updating the 90.1 Standard to the 2019 edition. The SC–CO<sub>2</sub> estimates in the February 2021 TSD are interim values developed under Executive Order (E.O.) 13990 for use until an improved estimate of the impacts of climate change can be developed based on the best available science and economics. The SC–CO<sub>2</sub> estimates used in this analysis were developed over many years, using a transparent process, peer-reviewed methodologies, the best science available at the time of that process, and with input from the public. Specifically, an interagency working group (IWG) that included DOE, the EPA and other executive branch agencies and offices used three integrated assessment models (IAMs) to develop the SC–CO<sub>2</sub> estimates and recommended four global values for use in regulatory analyses. Those estimates were subject to public comment in the context of dozens of proposed rulemakings as well as in a dedicated public comment period in 2013.

The SC–CO<sub>2</sub> estimates were first released in February 2010 and updated in 2013 using new versions of each IAM. In 2015, as part of the response to public comments received to a 2013 solicitation for comments on the SC–CO<sub>2</sub> estimates, the IWG announced a National Academies of Sciences, Engineering, and Medicine review of the SC–CO<sub>2</sub> estimates to offer advice on how to approach future updates to ensure that the estimates continue to reflect the best available science and methodologies. In January 2017, the National Academies released their final report, *Valuing Climate Damages: Updating Estimation of the Social Cost of Carbon Dioxide*, and recommended specific criteria for future updates to the SC–CO<sub>2</sub> estimates, a modeling framework to satisfy the specified criteria, and both near-term updates and longer-term research needs pertaining to various components of the estimation process (National Academies 2017). On January 20, 2021, President Biden

<sup>6</sup> For more information on DOE's use of the estimates from this document, please section 4.2 and 5 of the TSD for the final determination.

issued Executive Order 13990, which directed the IWG to ensure that the U.S. Government's (USG) estimates of the SC-CO<sub>2</sub> and other greenhouse gases reflect the best available science and the recommendations of the National Academies (2017). The IWG was tasked with first reviewing the estimates currently used by the USG and publishing interim estimates within 30 days of E.O. 13990 that reflect the full impact of GHG emissions, including taking global damages into account.<sup>7</sup> The interim SC-CO<sub>2</sub> estimates published in February 2021 are used here to estimate the climate benefits associated with this determination and related model building energy code updates.

DOE acknowledges that there are a number of challenges in attempting to assess the incremental economic impacts of CO<sub>2</sub> emissions. The science and economic understanding of climate change and its impacts is improving over time; research focused on the assessment of climate damages and socioeconomic emissions projections is particularly important for reducing uncertainty in the calculation of the social cost of greenhouse gases (SC-GHG),<sup>8</sup> as is quantifying and being transparent about where key uncertainties in the models remain.<sup>9</sup> But contrary to AHRI's suggestion that uncertainty should cause DOE to discount or abandon monetization of the social benefits of reducing CO<sub>2</sub> emissions, as stated by the interagency working group ("IWG") that performed the review described in the February 2021 TSD, due to a number of sources of uncertainty, there is a likelihood that the social cost of greenhouse gases (SC-GHG) is an underestimate of the true social cost of emissions.<sup>10</sup> Despite the limits of both quantification and monetization, SC-CO<sub>2</sub> estimates can be useful in estimating the social benefits of reducing CO<sub>2</sub> emissions. As a result, DOE has used the IWG's SC-CO<sub>2</sub> estimates in monetizing the social benefits of reducing CO<sub>2</sub> emissions. However, as discussed in previous comments, DOE's SC-CO<sub>2</sub> analysis

using these estimates was not considered in DOE's ultimate determination of whether Standard 90.1-2019 will improve energy efficiency.

*Comment:* AHRI p. 2, 3. As part of the rationale for not including SCC, AHRI further commented that DOE has acknowledged the uncertainty of SCC estimates and stated that these are both provisional and revisable. Further, they noted that the interagency working group developing the SCC noted that the underlying models were imperfect and incomplete and notes that the intergovernmental panel on climate change (IPCC) which the IWG relied on also stated in 2013 that no best estimate for equilibrium climate sensitivity could then be given because of the lack of agreement on values across assessed lines of evidence and studies.

*DOE response:* In making its determination, DOE's directive under ECPA is to assess whether updated editions of Standard 90.1 would improve *energy efficiency* in commercial buildings. 42 U.S.C. 6833(b)(2)(A) DOE emphasizes that the estimates pertaining to CO<sub>2</sub> are provided only as supplemental information and are not considered as part of the final determination, which is based on energy efficiency as required under 42 U.S.C. 6833(b)(2)(A).

As noted previously, DOE determined that the estimates from the February 2021 TSD are based upon sound analysis and provide well founded estimates for DOE's analysis of the impacts of CO<sub>2</sub> related to the reductions of emissions from updating the 90.1 Standard to the 2019 edition. As explained in the February 2021 TSD and while the IWG works to assess how best to incorporate the latest, peer reviewed science to develop an updated set of SC-GHG estimates, the IWG has determined that it is appropriate for agencies to revert to the same set of four values drawn from the SC-GHG distributions based on three discount rates as were used in regulatory analyses between 2010 and 2016 and subject to public comment. For each discount rate, the IWG combined the distributions across models and socioeconomic emissions scenarios (applying equal weight to each) and then selected a set of four values for use in benefit-cost analyses: An average value resulting from the model runs for each of three discount rates (2.5%, 3%, and 5%), plus a fourth value, selected as the 95th percentile of estimates based on a 3 percent discount rate. The fourth value was included to provide information on potentially higher-than-expected economic impacts from climate change, conditional on the 3% estimate of the discount rate. As explained in the February 2021 TSD, this update reflects the immediate need to have an operational SC-GHG for use in regulatory benefit-cost analyses and other applications that was developed using a transparent process, peer-reviewed methodologies, and the science available at the time of that process. Those estimates were subject to public comment in the context of dozens of proposed rulemakings as well as in a dedicated public comment period in 2013. However, as discussed in previous comments, DOE's SC-CO<sub>2</sub> analysis using these estimates was not considered in DOE's ultimate determination of whether Standard 90.1-2019 will improve energy efficiency.

*Comment:* AHRI, p. 3.5. AHRI commented that EPCA's focus is on benefits accruing with this nation, hence incorporation of SCC at the global level is beyond the scope and authority of DOE. See 42 U.S.C.

6833(b)(2)(B)(I). They further noted that EPCA originally arose out of the 1970's oil embargo and that nothing in the subsequent amendments suggests a different statutory focus other than improving the energy economics within the United States. AHRI notes that DOE analyzes expected national [domestic] energy savings, but does not scale back reported SCC calculations to reflect domestic impacts only.

*DOE response:* In making its determination, DOE's directive under ECPA is to assess whether updated editions of Standard 90.1 would improve *energy efficiency* in commercial buildings. 42 U.S.C. 6833(b)(2)(A) DOE emphasizes that the estimates pertaining to CO<sub>2</sub> are provided only as supplemental information and are not considered as part of the final determination, which is based on energy efficiency as required under 42 U.S.C. 6833(b)(2)(A). As to the use of a SC-CO<sub>2</sub> value that includes impacts outside the boundaries of the United States, the February 2021 TSD provides a complete discussion of the IWG's initial review conducted under E.O. 13990. In particular, the IWG found that a global perspective is essential for SC-GHG estimates because climate impacts occurring outside U.S. borders can directly and indirectly affect the welfare of U.S. citizens and residents. Thus, U.S. interests are affected by the climate impacts that occur outside U.S. borders. Examples of affected interests include: Direct effects on U.S. citizens and assets located abroad, international trade, and tourism, and spillover pathways such as economic and political destabilization and global migration. In addition, assessing the benefits of U.S. GHG mitigation activities requires consideration of how those actions may affect mitigation activities by other countries, as those international mitigation actions will provide a benefit to U.S. citizens and residents by mitigating climate impacts that affect U.S. citizens and residents.

As noted previously, DOE determined that the estimates from the February 2021 TSD are based upon sound analysis, and therefore, in analyzing the impacts of CO<sub>2</sub> related to the reductions of emissions from updating the 90.1 Standard to the 2019 edition, DOE has focused on a global measure of SC-GHG. As noted in the February 2021 TSD, the IWG will continue to review developments in the literature, including more robust methodologies for estimating SC-GHG values based on purely domestic damages, and explore ways to better inform the public of the full range of carbon impacts, both global and domestic. As a member of the IWG, DOE will likewise continue to follow developments in the literature pertaining to this issue. However, as discussed in previous comments, DOE's SC-CO<sub>2</sub> analysis using these estimates was not considered in DOE's ultimate determination of whether Standard 90.1-2019 will improve energy efficiency.

*Comment:* AHRI, p.3.4. AHRI stated that DOE wrongly assumes that SCC values

<sup>7</sup> The E.O. instructs the IWG to undertake a fuller update of the SC-GHG estimates by January 2022.

<sup>8</sup> The social cost of greenhouse gases (SC-GHG) is the monetary value of the net harm to society associated with adding a small amount of that GHG to the atmosphere in a given year and, therefore, should reflect the societal value of reducing emissions of the gas in question by one metric ton. The marginal estimate of social costs will differ by the type of greenhouse gas (such as carbon dioxide, methane, and nitrous oxide) and by the year in which the emissions change occurs. The estimates of the social cost of carbon (SC-CO<sub>2</sub>), social cost of methane (SC-CH<sub>4</sub>), and social cost of nitrous oxide (SC-N<sub>2</sub>O) published in the February 2021 TSD allow agencies to understand the social benefits of reducing emissions of each of these greenhouse gases, or the social costs of increasing such emissions, in the policy making process. Collectively, these values are referenced as the "social cost of greenhouse gases" (SC-GHG).

<sup>9</sup> National Academy of Sciences, Engineering, and Medicine, *Valuing Climate Damages: Updating Estimation of the Social Cost of Carbon Dioxide*, National Academies Press: Washington, DC, 2017.

<sup>10</sup> See Interagency Working Group on Social Cost of Greenhouse Gases, *Technical Support Document: Social Cost of Carbon, Methane, and Nitrous Oxide. Interim Estimates Under Executive Order 13990*, Washington, DC, February 2021.

increase over time in real dollars and states that this is contrary to “historical experience and to economic development science” and that the more economic development that occurs, the more adaptation and mitigation efforts a population living in a growing economy can afford to undertake (AHRI cites the IWG indicating that developed countries can eliminate 90% of the economic impacts and developing countries could eventually eliminate 50% of the economic impacts of climate change). They comment that they see no indication that DOE considered this separately.

**DOE response:** In making its determination, DOE’s directive under ECPA is to assess whether updated editions of Standard 90.1 would improve *energy efficiency* in commercial buildings. 42 U.S.C. 6833(b)(2)(A) DOE emphasizes that the estimates pertaining to CO<sub>2</sub> are provided only as supplemental information and are not considered as part of the final determination, which is based on energy efficiency as required under 42 U.S.C. 6833(b)(2)(A).

The model scenarios reported by the IWG demonstrate that the damage assessments and corresponding valuation (SC–CO<sub>2</sub>), adjusted for inflation, increase through time. As explained in the February 2021 TSD, “[the SC–GHG estimates increase over time within the models—*i.e.*, the societal harm from one metric ton emitted in 2030 is higher than the harm caused by one metric ton emitted in 2025—because future emissions produce larger incremental damages as physical and economic systems become more stressed in response to greater climatic change, and because GDP is growing over time and many damage categories are modeled as proportional to GDP.” As noted previously, DOE determined that the estimates from the February 2021 TSD are based upon sound analysis and provide well founded estimates for DOE’s analysis of the impacts of CO<sub>2</sub> related to the reductions of emissions from updating the 90.1 Standard to the 2019 edition in its building codes impact analysis. Accordingly, DOE incorporated the IWG’s considerations in its analysis. However, as discussed in previous comments, DOE’s SC–CO<sub>2</sub> analysis using these estimates was not considered in DOE’s ultimate determination of whether Standard 90.1–2019 will improve energy efficiency.

**Comment:** AHRI, p. 4. AHRI argued that it is arbitrary and capricious to use different timeframes and assumptions for costs and benefits and notes that DOE must clarify precisely why and how it believes it has statutory authority under 42 U.S.C. 6833(b) to consider SCC issues and cites why such action is legally arbitrary without sufficient documented reason for treating similar situations differently. AHRI notes that DOE, in clarifying why it believes it has such authority, can establish how it is acting consistently in terms of the analysis of benefits.

**DOE response:** See previous response to AHRI comment on the issue of authority. On the issue of costs and benefits, DOE reemphasizes that its determination analysis is not assessing the costs and benefits associated with the updated Standard 90.1, that the determination is solely based on

energy efficiency, and that the reported carbon emissions are reported only as supplemental information for the benefit of interested parties and in support of the directives of Executive Order 12866. To clarify the issue of timeframe, the emission estimates are based on a one-year time period (*i.e.*, the annual energy consumption estimated via the energy efficiency analysis). However, the step of projecting the associated CO<sub>2</sub> impacts captures the longer-term impact of those single-year emissions, as they persist in the atmosphere (and drive the damage impacts over the time they persist), which is then discounted to present value for the year when the emissions occur. DOE does not find an economic inconsistency in this approach to reporting emission benefits. Such a calculation is similar to life-cycle analysis, for instance, which is performed in a similar fashion, where a single year event occurs (*e.g.*, a purchase of more efficient equipment), but the energy savings are calculated over the time they exist (*e.g.*, the life of the equipment), and discounted back to the present value to reflect an overall life-cycle cost. DOE’s reporting here of discounted damage impacts is consistent with that general approach.

#### Signing Authority

This document of the Department of Energy was signed on July 19, 2021, by Kelly Speakes-Backman, Principal Deputy Assistant Secretary and Acting Assistant Secretary for Energy Efficiency and Renewable Energy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on July 22, 2021.

**Treana V. Garrett,**

*Federal Register Liaison Officer, U.S. Department of Energy.*

## DEPARTMENT OF ENERGY

[Case Number 2020–003; EERE–2020–BT–WAV–0020]

### Energy Conservation Program: Notification of Petition for Waiver of Hussmann Corporation From the Department of Energy Commercial Refrigerators, Freezers and Refrigerator-Freezers Test Procedure and Notification of Grant of Interim Waiver

**AGENCY:** Office of Energy Efficiency and Renewable Energy, Department of Energy.

**ACTION:** Notification of petition for waiver and grant of an interim waiver; request for comments.

**SUMMARY:** This notification announces receipt of and publishes a petition for waiver and interim waiver from Hussmann Corporation (“Hussmann”), which seeks a waiver for specified Commercial Refrigerator, Freezer, and Refrigerator-Freezer (“CRE”) basic models from the U.S. Department of Energy (“DOE”) test procedure used for determining the energy consumption of CRE. DOE also gives notification of an Interim Waiver Order that requires Hussmann to test and rate the specified CRE basic models in accordance with the alternate test procedure set forth in the Interim Waiver Order. DOE solicits comments, data, and information concerning Hussmann’s petition, its suggested alternate test procedure, and the alternate test procedure required under the Interim Waiver Order so as to inform DOE’s final decision on Hussmann’s waiver request.

**DATES:** Written comments and information are requested and will be accepted on or before August 27, 2021.

**ADDRESSES:** Interested persons are encouraged to submit comments using the Federal eRulemaking Portal at <https://www.regulations.gov>. Alternatively, interested persons may submit comments, identified by docket number EERE–2020–BT–WAV–0020, by any of the following methods:

- **Federal eRulemaking Portal:** <https://www.regulations.gov>. Follow the instructions for submitting comments.

- **Email:** to [HussmannCRE2020WAV0020@ee.doe.gov](mailto:HussmannCRE2020WAV0020@ee.doe.gov). Include docket number EERE–2020–BT–WAV–0020 in the subject line of the message.

No telefacsimilies (“faxes”) will be accepted. For detailed instructions on submitting comments and additional information on this process, see the **SUPPLEMENTARY INFORMATION** section of this document.

# **REPORT ON THE FEDERAL OIL AND GAS LEASING PROGRAM**

## I. INTRODUCTION

This report responds to Executive Order 14008, *Tackling the Climate Crisis at Home and Abroad*, which directed the Department of the Interior (DOI) to conduct a review of Federal oil and gas leasing and permitting practices.<sup>1</sup> This report considers both onshore and offshore oil and gas leasing programs in light of the Secretary of the Interior's broad stewardship responsibilities over public lands and Federal offshore waters.

The review found a Federal oil and gas program that fails to provide a fair return to taxpayers, even before factoring in the resulting climate-related costs that must be borne by taxpayers; inadequately accounts for environmental harms to lands, waters, and other resources; fosters speculation by oil and gas companies to the detriment of competition and American consumers; extends leasing into low potential lands that may have competing higher value uses; and leaves communities out of important conversations about how they want their public lands and waters managed.

The fiscal components of the onshore Federal oil and gas program are particularly outdated, with royalty rates that have not been raised for 100 years. States with leading oil and gas production apply royalty rates on State lands that are significantly higher than those assessed on Federal lands. The Texas royalty rate, for example, can be double the Federal rate. Likewise, bonding levels have not been raised for 50 years. Federal minimum bids and rents have been the same for over 30 years. These antiquated approaches hurt not only the Federal taxpayer but also State budgets because States receive a significant share of Federal oil and gas revenues.

For decades, the Government Accountability Office (GAO) and DOI's Office of Inspector General (OIG) have sounded the alarm bell on the Federal oil and gas program. The GAO, a non-partisan independent agency that works for Congress, has consistently called for Congress and the Executive Branch to reform oil and gas leasing on Federal lands. The OIG, which provides independent oversight of DOI, has regularly highlighted energy management in its annual reports on major management and performance challenges,<sup>2</sup> saying, "many of DOI's energy programs are vulnerable to waste, fraud, and mismanagement, which can jeopardize public safety and environmental integrity and increase the financial burden on the American public."<sup>3</sup>

To inform this report, DOI reviewed studies, some going back decades, of the Federal oil and gas program's deficiencies, including from GAO and OIG. The DOI also conducted formal Tribal consultations; held a forum with expert panelists; reviewed public feedback; and met with States, members of Congress, and representatives from the oil and gas industry, labor organizations, conservation organizations, Indigenous organizations, environmental justice organizations, and academics. Issues were identified across all steps of Federal oil and gas development, from land use planning to decommissioning.

This review and outreach reconfirmed well-documented and long reported deficiencies in the Federal oil and gas program that support this report's findings and recommendations related to fiscal terms and bonding. This report identifies a number of recommendations that begin to modernize Federal land management. The reforms serve three main programmatic goals:

- Providing a fair return to the American public and States from Federal management of public lands and waters, including for development of energy resources;
- Designing more responsible leasing and development processes that prioritize areas that are most suitable for development and ensure lessees and operators have the financial and technical capacity to comply with all applicable laws and regulations; and
- Creating a more transparent, inclusive, and just approach to leasing and permitting that provides meaningful opportunity for public engagement and Tribal consultation.

These recommendations represent an overdue reform agenda, which is urgent even as the Interior Department begins to take into account new stressors and new opportunities for our public lands and waters, including addressing biodiversity loss, tackling climate change, and deploying new technology ranging from harnessing offshore wind in public waters, to sequestering carbon on public lands. Accordingly, this report focuses primarily on necessary reforms to the fiscal terms, leasing process, and remediation requirements related to deficiencies with the Federal oil and gas program, which are well documented as detailed below.

As the Department considers how to best implement the recommendations contained in this report,<sup>4</sup> the Administration will continue to work closely with Congress, State, Tribal and local officials, industry, labor organizations, environmental justice communities, and stakeholders to ensure that proper consideration is given to creating jobs, harnessing American ingenuity, and building a brighter, more sustainable future.

## **Overview: The Federal Oil and Gas Program**

### *Onshore*

The Bureau of Land Management (BLM) oversees 245 million acres of Federal public lands, including lands that are managed for outdoor recreation; development of oil, gas, coal, and renewable energy resources; grazing and timber production; safeguarding treasured cultural heritage and sacred sites; and supporting wildlife habitat and ecosystem functions.

In 1976, the Federal Land Policy and Management Act (FLPMA) established particular land and resource management authorities for BLM, bringing to the forefront multiple-use, sustained yield, and environmental protection as the guiding principles for public land management.<sup>5</sup> The FLPMA directs BLM to manage some areas for conservation to consider the best use of public lands in a broader context than economic return, and to take action necessary to prevent unnecessary or undue degradation of the lands. One of the many uses that BLM oversees is the management of energy and mineral resource development on approximately 245 million acres of Federal onshore lands and 700 million acres of subsurface Federal minerals, which is guided by the Mineral Leasing Act.<sup>6</sup>

Federal onshore oil and gas production accounts for approximately seven percent of domestically produced oil and eight percent of domestically produced natural gas. The BLM currently manages 37,496 Federal oil and gas leases covering 26.6 million acres with nearly 96,100 wells.<sup>7</sup> Of the more than 26 million onshore acres under lease today to the oil and gas industry, nearly 13.9 million (or 53 percent) of those acres are non-producing.<sup>8</sup>

The oil and gas industry has a substantial number of unused permits to drill onshore. As of September 30, 2021, the oil and gas industry holds more than 9,600 approved permits that are available to drill. In fiscal year (FY) 2021, BLM approved more than 5,000 drilling permits, and more than 4,400 are still being processed.<sup>9</sup> Industry suggests that the significant surplus of leases and permits is necessary for a successful business model, but this speculative approach contributes to unbalanced land management. When land is under contract for potential oil and gas activity, the shared public lands cannot be managed for other purposes, such as conservation or recreation.

### Offshore

The Bureau of Ocean Energy Management (BOEM) and Bureau of Safety and Environmental Enforcement (BSEE) work to ensure the development of energy and mineral resources on the U.S. Outer Continental Shelf (OCS) is done in a safe and environmentally and economically responsible way. The OCS is comprised of submerged lands generally starting three nautical miles offshore the United States<sup>10</sup>—totaling nearly 2.3 billion acres in the Pacific, Atlantic, Gulf of Mexico and offshore Alaska and Hawaii. These offshore areas also have shared uses, such as supporting marine wildlife habitat, coastal tourism, subsistence uses, recreational and commercial fishing, and national defense activities.

The Outer Continental Shelf Lands Act (OCSLA) explains that the OCS is a “vital natural resource reserve held by the Federal Government for the public,”<sup>11</sup> and establishes policies and procedures to develop and manage OCS oil and gas resources, achieve national economic and energy policy goals, enhance national security, and reduce dependence on foreign sources of energy.<sup>12</sup> In recognition of the significant impacts on coastal and non-coastal areas that exploration, development, and production of OCS resources can have, OCSLA requires that development be conducted in a safe manner and subject to environmental safeguards. Amendments made to OCSLA in 1978 established the policy that oil and natural gas resources on the OCS should be preserved, protected, and developed in a manner that is consistent with the need to meet the nation’s energy needs; balance development with protection of the human, marine, and coastal environments; and ensure a fair and equitable return on resources through a competitive leasing process.

In FY 2020, the OCS produced approximately 642 million barrels of oil and 910 million cubic feet of gas, accounting for 16 percent of all oil production and 3 percent of natural gas production in the United States.<sup>13</sup> Most of this production is in the Gulf of Mexico, where the amount of acreage under lease has declined by more than two-thirds over the last 10 years.<sup>14</sup> This decline is mostly driven by market conditions and changes in companies’ strategic approach to leasing. Of the more than 12 million acres under lease, about 45 percent is either producing oil and gas or is subject to approved exploration or development plans, which are preliminary steps leading to production. The 55 percent of the leased acreage that is non-producing may be in an earlier stage of the development process, or being held for speculative reasons, indicating a sufficient inventory of leased acreage to sustain development for years to come.

## The Need for Reform

In recent decades, the nation’s energy needs and the mix of resources available on domestic and global energy markets have materially changed, while the statutes and policies underpinning the nation’s oil and gas program have remained largely static. Utility-scale renewable energy production has emerged as a viable source of energy that can be generated on public lands and in offshore waters. The direct and indirect impacts associated with oil and gas development on our nation’s land, water, wildlife, and the health and security of communities—particularly communities of color, who bear a disproportionate burden of pollution—merit a fundamental rebalancing of the Federal oil and gas program.

The Federal oil and gas program has been identified on GAO’s “High Risk List” for more than a decade, which notes programs and operations that are “vulnerable to waste, fraud, abuse, or mismanagement, or in need of transformation.”<sup>15</sup> As far back as 1989, GAO noted that BLM “is not exercising balanced stewardship over the public lands.”<sup>16</sup> In 1990, GAO observed that BLM would approve “some drilling permits without first completing the environmental studies.”<sup>17</sup> This Administration has taken action to stop that practice. Indeed, GAO has issued frequent reports outlining serious concerns with the onshore oil and gas leasing program. In just the last three years, GAO has highlighted deficiencies with noncompetitive leasing (GAO-21-138), royalty relief policies (GAO-21-169T), data collection (GAO-21-209), ensuring a fair return (GAO-19-718T), and bonding and reclamation practices (GAO-19-615). Offshore, GAO has raised recent concerns about decommissioning liabilities (GAO-16-40), safety and environmental oversight (GAO-17-293), fiscal returns from the leasing program (GAO-19-531), and pipeline safety and decommissioning (GAO-21-293).

Internally, OIG has regularly highlighted energy management in its annual reports of “Major Management and Performance Challenges facing the U.S. Department of the Interior,” stating, “many of DOI’s energy programs are vulnerable to waste, fraud, and mismanagement, which can jeopardize public safety and environmental integrity and increase the financial burden on the American public.”<sup>18</sup> In recent years, OIG has identified specific concerns with the collection, verification, and distribution of energy resource revenues; issues arising from aging onshore and offshore infrastructure; oversight and management of oil and gas production; and offshore environmental compliance and enforcement, among other issues.<sup>19</sup>

Members of Congress from both sides of the aisle have also introduced various bills in recent years to reform and reimagine the Federal leasing programs. The bills include proposals to raise royalty rates to provide a fair return to taxpayers; address bonding deficiencies to ensure that companies properly restore public lands following extractive activities; support non-extractive uses of public lands and waters; restore community input in leasing decisions; and set emissions reductions strategies, among other reforms.

## II. RECOMMENDATIONS

What follows is a high-level blueprint to begin to modernize the onshore and offshore oil and gas leasing programs in order to better restore balance and transparency to public land and ocean management and deliver a fair and equitable return to American taxpayers.<sup>20</sup>

## Providing a Fair Return to American Taxpayers and States

### Onshore

Adjusting and modernizing the fiscal terms used in the Federal onshore oil and gas program increases returns to the public and disincentivizes speculators or less responsible actors. The GAO has reported extensively that taxpayers have not received a fair rate of return due to outdated fiscal terms.<sup>21</sup> For example, Federal onshore oil and gas royalty rates are consistently lower than on State-issued leases and Federal offshore leases (see Tables 1 and 2); in fact, onshore royalty rates have never been raised. Likewise, bonding levels have not been raised for 60 years, and minimum bids and rents have been the same for over 30 years. If a lease is not sold competitively at auction, for two years it can be sold non-competitively for a modest administrative fee, with no bonus bid required. These noncompetitive leases are frequently less diligently developed as competitively issued leases. From 2013 to 2019, average revenues from competitive leases were nearly three times greater than revenues from noncompetitive leases.<sup>22</sup>

Such low prices for leases, coupled with generous 10-year lease initial terms that are frequently extended, encourage speculators to purchase leases with the intent of waiting for increases in resource prices, adding assets to their balance sheets, or even reselling leases at a profit rather than attempting to produce oil or gas. In one particularly egregious recent case, an individual purchased nearly 300 oil and gas leases and resold many of them almost immediately for up to 13 times the original purchase price.<sup>23</sup> Speculators, not taxpayers, receive the profits from these resales. Because information on lease resales is not easily accessible, local communities are often in the dark when it comes to who has the right to develop oil and gas nearby.

The BLM should improve the return to taxpayers and create an oil and gas program that is more consistent with BLM's multiple-use and sustained yield mandates. Consideration should be given to raising royalty rates and, to the extent allowed by statute, to increasing the current minimum levels for bids, rents, royalties, and bonds. Congressional passage of pending bipartisan legislation could further modernize fiscal terms. States will also benefit from a modernized fiscal system since they receive 49 percent of all oil and gas revenues generated from public lands within their borders.<sup>24</sup> Onshore revenues also fund water reclamation projects throughout the West through contributions to the Reclamation Fund, and may also contribute to the National Parks and Public Land Legacy Restoration Fund.

### *Royalties*

The Mineral Leasing Act was passed in 1920 and set royalties at a minimum of 12.5 percent for oil and gas produced from public lands. Today, 100 years later, leases are still being sold using these low rates, which are out of step with modern times. Numerous public reports provide support for raising royalty rates for leasing on public lands, and nearly all State and private lands require that operators pay a royalty rate higher than 12.5 percent.<sup>25</sup> In June 2017, GAO reported that studies showed that raising Federal royalty rates for onshore oil and gas could “decrease production on federal lands by a small amount or not at all but could increase overall federal revenue.”<sup>26</sup>

**Table 1: Oil and Gas Royalty Rates across Federal Public, Private, and State Lands<sup>27</sup>**

<b>Leasing Jurisdiction</b>	<b>Oil &amp; Gas Royalty Rate</b>
California	Negotiated lease-by-lease, but generally no less than 16.67 percent
Colorado	20 percent
Montana	16.67 percent
New Mexico	18.75-20 percent
North Dakota	16.67 or 18.75 percent depending on the county
Oklahoma	18.75 percent
Texas	20-25 percent
Utah	16.67 percent
Wyoming	16.67 percent
Private Lands	Generally, 12.5-25 percent
Federal Lands	12.5 percent, sometimes less

This table shows the oil and gas royalty rate based on jurisdiction.

Taxpayers for Common Sense released a report last year stating that the Federal Government “lost up to \$12.4 billion in revenue from oil and gas drilling on federal lands from 2010 through 2019” because Federal royalty rates are too low.<sup>28</sup> Additionally, the same report found little evidence supporting claims that increasing the Federal onshore royalty rate would drive developers away and reduce overall revenues. This finding aligns with the results seen in Colorado and Texas, where there was no significant effect on production from State lands after State royalty rates were raised.<sup>29</sup>

The BLM should begin to adjust royalties for competitive leases offered in individual lease sales and initiate a rulemaking to establish a higher minimum royalty for onshore oil and gas leases. The BLM also should consider limiting discretionary royalty relief, which it has provided extensively to lessees in the recent past, while it updates its current royalty relief guidance and reassesses the economic assumptions used during royalty relief application evaluations.

#### *Bonus Bids*

A bonus bid is the price paid at a lease sale for an oil and gas lease. The minimum bonus bid is set at \$2 per acre—an amount that has not been changed since 1987.<sup>30</sup> If an area offered for lease does not receive a bid during the lease sale, the bonus bid is waived, and the area can be acquired during the next two years by the first party that pays a nominal application fee.

The GAO found that leases purchased with a higher bonus bid of more than \$100 per acre are over 20 times more likely to be developed in their first lease term than leases purchased with the minimum bid of \$2 per acre.<sup>31</sup> The BLM should initiate rulemaking to increase the minimum bid to discourage speculators and to provide a better return to the taxpayer.

### *Rental Rates*

Companies pay rent until the lease is in production, and then they pay royalties on the oil and gas produced. The rental rates, which have not changed since 1987, are \$1.50 per acre per year for the first five years, then \$2 per acre per year for the next five years, at which point a non-producing lease would expire. The lease is automatically extended as long as production continues.

A GAO report from 2009 concluded that:

Interior does less to encourage development of federal oil and gas leases than some state and private landowners. Interior officials cited one lease provision that may encourage development—escalating rental rates. ... Compared to Interior, the eight states we reviewed undertook more efforts to encourage development on their oil and gas leases, using increasing rental rates as well as shorter lease terms and escalating royalty rates. Some states also do more than Interior to structure leases to reflect the likelihood of oil and gas production, which may encourage faster development.<sup>32</sup>

The BLM should initiate a rulemaking in order to increase rental rates for future lease sales.

### *Bonding*

Current regulations require financial assurance from all lessees to ensure compliance with lease terms and requirements, which is generally provided in the form of a lease surety bond. A lease surety bond remains in place until all lease obligations have been met, including decommissioning, which can extend beyond the expiration of the lease. A surety bond can be issued as a lease-specific bond, a statewide bond, or a nationwide bond, and additional bonds may be necessary to ensure compliance with lease obligations and regulations.

Insufficient bonding levels provide an inadequate incentive for companies to meet their reclamation obligations and increase the risk that taxpayers will be required to cover the cost of reclaiming wells in the event that the operator refuses to do so or declares bankruptcy. According to a 2019 GAO report:

... weaknesses with bonds for coal mining and for oil and gas development pose a financial risk to the federal government as laws, regulations, or agency practices have not been adjusted to reflect current economic circumstances. We have also reported that BLM has no mechanism to pay for reclaiming well sites that operators have not reclaimed.<sup>33</sup>

The risks associated with low bonding rates have become more apparent in light of the recent increase in bankruptcies. Company liquidations often result in wells becoming orphaned, which then fall to the Federal Government or States to address, while some companies have used Chapter 11 restructuring to get out of reclamation obligations.<sup>34</sup>

According to the same 2019 GAO report, oil and gas lease bonds do not provide sufficient financial assurance because, among other things, most individual, statewide, and nationwide lease bonds are set at regulatory minimum values that have not been adjusted for inflation since the 1950s and 1960s.<sup>35</sup> These minimum bond amounts and the year calculated are: individual lease, \$10,000—1960; statewide, \$25,000—1951; nationwide, \$150,000—1951.<sup>36</sup> The National Petroleum Reserve—Alaska bonds were set in 1981; an individual lease is \$100,000, and a

reserve-wide bond is \$300,000.<sup>37</sup> While individual States have bonding levels that are often too low to fully reclaim modern horizontally-drilled wells, most States require significantly higher bonds than the Federal Government, often with bonding requirements that adjust based on the depth and number of wells covered.<sup>38</sup>

The BLM should increase minimum bond amounts and set the appropriate levels taking into consideration changes in technology, the complexity and depth of modern wells, inflation, and the risk of abandonment. While such regulations are being developed, BLM should adjust bonds for individual, high risk leases through adequacy reviews and when leases are reinstated or applications for permits to drill are extended.

Offshore

*Royalties and Royalty Relief*

The BOEM evaluates lease terms on a sale-by-sale basis to ensure they are consistent with current market or resource conditions. The OCSLA sets the minimum offshore royalty rate at 12.5 percent and directs that leasing be conducted in a way that ensures the government receives fair market value (FMV). OCSLA also directs that management of the OCS be conducted in a way that considers economic, social, and environmental values, and protects the human, marine, and coastal environments.

A 2019 GAO report that assessed BOEM’s process to evaluate whether it was receiving FMV for offshore leases recommended that BOEM take steps to reform its methodology to ensure that it was capturing the full value of the lease tracts it was offering.<sup>39</sup> The BOEM is in the process of responding to several of GAO’s recommendations concerning oil and gas valuation procedures.

**Table 2: Offshore Oil and Gas Royalty Rates (BOEM)**

<b>Water Depth (meters)</b>	<b>Royalty Rate Prior to 2007<sup>40</sup></b>	<b>Royalty Rate 2007</b>	<b>Royalty Rate 2008-March 2017</b>	<b>Royalty Rate August 2017-2020 (Sale 256)</b>
0 to < 200m	16.67%	16.67%	18.75%	12.5%
200 to < 400m	16.67%	16.67%	18.75%	18.75%
400m+	12.5%	16.67%	18.75%	18.75%

This table shows the royalty rate based on water depth. Fiscal terms are evaluated and set on a sale-by-sale basis. Date ranges indicate the years in which sales were held using those terms.

Revenues from lease sales, royalties on production, and rental fees are distributed to the U.S. Treasury, several coastal States through OCSLA section 8(g) and the Gulf of Mexico Energy Security Act, the Historic Preservation Fund, the Land and Water Conservation Fund, and Legacy Restoration Fund.<sup>41</sup>

As with BLM, BOEM, and BSEE will be continuing to study the most appropriate method for revising royalty rates and other fiscal terms to monetarily account for the costs of carbon dioxide, methane, and nitrous oxide.

Also similar to BLM, BOEM and BSEE have the authority to provide discretionary royalty relief depending on economic circumstances, and those agencies likewise will be reevaluating existing royalty relief guidance and the economic assumptions used to evaluate royalty relief applications,<sup>42</sup> insofar as royalty relief can have the effect of subsidizing uneconomic production at taxpayers' expense. The BSEE recently determined, for example, that the April 2020 Special Case Royalty Relief guidance neither formalized application and evaluation procedures nor provided adequate training to implement them, and BSEE has discontinued this specific royalty relief option.

*Financial Assurances*

Financial assurance requirements for operators offshore are similar to those onshore: all lessees must provide a general lease surety bond, which covers all terms and conditions of a lease and remains in place until all lease obligations have been met, including decommissioning, which can extend beyond the expiration of the lease. A surety bond can be issued as a lease-specific bond or as an area-wide bond that guarantees obligations on all leases held by a lessee within a specified area. Additional bonds may be necessary to ensure compliance with lease obligations and regulations.

**Table 3. Bonding Amounts for Offshore Oil and Gas Activity<sup>43</sup>**

<b>Lease Activity</b>	<b>Lease-Specific Bond Amount</b>	<b>Area-Wide Bond Amounts</b>
No approved operational activity	\$50,000	\$300,000
Exploration Plan	\$200,000	\$1,000,000
Development Production Plan	\$500,000	\$3,000,000
Pipeline Right of Way (ROW)	N/A	\$300,000

This table shows the amounts for lease-specific and area-wide bonds.

Lessees, owners of operating rights, and ROW holders are jointly and severally responsible for decommissioning obligations and are required to perform this duty in a timely manner, consistent with regulations and guidance.

Recent bankruptcies have in some cases resulted in companies being unable to cover their decommissioning liabilities, leading to orphaned wells and idle infrastructure. The BSEE estimates that the liability for currently orphaned infrastructure on the OCS is approximately \$65 million, with the potential to increase if more companies go bankrupt and create additional orphaned infrastructure. The GAO recently found that there were approximately \$2.3 billion in decommissioning liabilities on the OCS that were not covered by bonds, and roughly \$33 billion in liabilities had bonds waived because the financial condition of the leaseholder was considered

strong enough.<sup>44</sup> The current regulatory structure governing financial assurances does not have the appropriate checks to intervene in advance of bankruptcies to require additional financial assurances. Financial assurance coverage should be strengthened to protect the Federal Government and taxpayers and to ensure that companies are financially able to meet their lease and decommissioning obligations.

In 2020, BOEM and BSEE published a notice of proposed rulemaking to address this issue.<sup>45</sup> The agencies will carefully consider comments received on both the proposed rule and this review to inform their approach for improving financial assurance requirements to better manage the risks associated with industry activities on the OCS.

### *Fitness to Operate*

Offshore leases are significantly more expensive to acquire than onshore leases, which, among other reasons, results in less of a role for speculators in the leasing process. However, companies with poor environmental, safety, or reclamation histories are still allowed to bid for leases or acquire them from other companies. The BOEM plans to develop a “Fitness to Operate” standard for companies seeking to be designated as oil and gas operators and evaluate how to apply such a standard to potential new lessees or current lessees seeking to gain additional properties. The Fitness to Operate standard will establish criteria that companies would need to meet in order to operate on the U.S. OCS. Requiring companies to meet minimal fitness to operate standards will ensure companies can meet their safety, environmental, and financial responsibilities.

## **Designing More Responsible Processes**

### *Onshore*

Through the land use planning process, BLM determines what lands may be available for oil and gas leasing, what lease stipulations will be applied to protect other resources and values, and what “conditions of approval” may be necessary on permits to drill for additional protection. The land use planning process requires extensive collaboration with Tribal, State, and local governments and the public regarding how Federal lands will be used and minerals will be extracted at specific locations.

As an overarching policy, BLM should ensure that oil and gas is not prioritized over other land uses, consistent with BLM’s mandate of multiple-use and sustained yield. The BLM should carefully consider what lands make the most sense to lease in terms of expected yields of oil and gas, prospects of earning a fair return for U.S. taxpayers, and conflicts with other uses, such as outdoor recreation and wildlife habitat. The BLM should always ensure it is considering the views of local communities, Tribes, businesses, State and local governments, and other stakeholders.

### *Low Potential Lands*

Common practice in BLM land use planning has been to leave the majority of Federal lands open for leasing and allow industry to drive decisions on what areas will be nominated for oil and gas leasing. Since there is no cost to nominate parcels of land for leasing, there is little disincentive for companies to identify large amounts of acreage regardless of the resource potential of that

land or how seriously the nominator is considering bidding for the nominated parcels. The burden and expense then fall on BLM to process those parcels, triggering the dedication of BLM staff resources to analyze marginal lands that companies may not be interested in bidding on and that may never be leased, much less developed. At the same time, sales of large amounts of low-potential land often ignite local community concerns (particularly since low-potential lands are more likely to be in areas that are not accustomed to local oil and gas development) and result in protests that are time-consuming and resource-intensive to adjudicate.

The BLM should evaluate operational adjustments to its leasing program that will avoid nomination or leasing of low potential lands and instead focus on areas that have moderate or high potential for oil and gas resources and which are in proximity to existing oil and gas infrastructure.

### *Bidding Requirements*

The current leasing process does not thoroughly screen buyers, which creates the potential for widespread speculative leasing, unqualified buyers, and large numbers of leases that may be issued noncompetitively. Indeed, speculative leasing has been observed in the leasing program as far back as 1980, when GAO wrote, “We found much inactive land being held by individuals who were not affiliated with oil companies and were, therefore, presumably speculators.”<sup>46</sup>

Unlike the offshore or coal leasing programs, the onshore oil and gas program does not pre-clear bidders based on their ability to responsibly and diligently pursue development. Combined with artificially low minimum bids and rental rates, the system is easily taken advantage of by speculators seeking to re-sell leases at higher prices later, and it allows bidders to shield the identity of companies purchasing leases, leaving communities in the dark as to who is seeking to develop oil and gas on nearby public lands.

The BLM should consider reforms that ensure that bidders—and any subsequent proposed leaseholders or operators—are publicly identified and financially and technically qualified to develop leases.

### *Offshore*

For future National OCS Oil and Gas Leasing Programs, BOEM should consider advancing alternatives to the practice of area-wide leasing, under which the entire planning area is offered with few exclusions for a lease sale. Area-wide leasing is not required under OCSLA; it was first implemented by Interior Secretary James Watt in 1982 and has since been applied during the majority of OCS lease sales. An early assessment of the practice by GAO in 1985 found that the first 10 area-wide lease sales resulted in an estimated loss of \$7 billion to the Federal Government,<sup>47</sup> and a review of the process published in 2006 found that area-wide leasing significantly reduced the amount of competition and the value of bids for each lease tract.<sup>48</sup> Moving to a leasing model where smaller areas are offered according to a number of criteria—including environmental protection, subsistence use needs, resource potential and financial considerations—will help ensure that American taxpayers are receiving a fair return for offshore oil and gas resources.

## **Creating a More Inclusive and Just Approach to Managing Public Lands and Waters**

The stewardship mission of DOI mandates processes for outreach and receipt of public input, including from communities that may be most affected by DOI activities. These processes have not always been adequate, fair, or equitable, which thus perpetuates environmental injustice. Practices such as allowing anonymous lease nominations and recent efforts to restrict or eliminate public notice and comment periods can leave local community voices—including, in particular, Tribal voices—out of leasing and permitting processes. The DOI should undertake meaningful Tribal consultations and solicit public input more generally regarding its leasing and permitting processes.

### **III. CONCLUSION**

Modernization of the Federal oil and gas program has been delayed for decades to the detriment of the American public, their public lands and waters, the environment, wildlife, and more. In its current form, the program falls short of serving the public interest in a number of important respects. It provides insufficient opportunities for public input, shortchanges taxpayers and States, and tilts toward opening up low potential lands without adequately considering competing multiple-use opportunities.

This report lays out actions that the Administration is considering taking, consistent with legal authorities and the Executive Branch's broad discretion, to provide a fair return to taxpayers and to steward shared resources. It also encourages Congress to act on pending legislation to provide fundamental reforms to the onshore and offshore oil and gas programs.

The DOI will continue to seek out honest and pragmatic paths forward—in concert with communities; Federal, State, local, and Tribal leaders; businesses and labor; and other stakeholders—to bring a common purpose to the management of America's public lands and waters, and the value they hold.

**DEPARTMENT OF TRANSPORTATION**

**National Highway Traffic Safety Administration**

**49 CFR Parts 531, 533, 536, and 537**

[NHTSA–2021–0053]

RIN 2127–AM34

**Corporate Average Fuel Economy Standards for Model Years 2024–2026 Passenger Cars and Light Trucks**

**AGENCY:** National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).  
**ACTION:** Notice of proposed rulemaking.

**SUMMARY:** NHTSA, on behalf of the Department of Transportation, is proposing revised fuel economy standards for passenger cars and light trucks for model years 2024–2026. On January 20, 2021, President Biden signed an Executive order (E.O.) entitled, “Protecting Public Health and the Environment and Restoring Science To Tackle the Climate Crisis.” In it, the President directed that “The Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Years 2021–2026 Passenger Cars and Light Trucks” (hereafter, “the 2020 final rule”) be immediately reviewed for consistency with our Nation’s abiding commitment to empower our workers and communities; promote and protect our public health and the environment; and conserve our national treasures and monuments, places that secure our national memory. President Biden further directed that the 2020 final rule be reviewed at once and that (in this case) the Secretary of Transportation consider “suspending, revising, or rescinding” it, via a new proposal, by July 2021. Because of the President’s direction in the E.O., NHTSA reexamined the 2020 final rule under its authority to set corporate average fuel economy (CAFE) standards. In doing so, NHTSA tentatively concluded that the fuel economy standards set in 2020 should be revised so that they increase at a rate of 8 percent year over year for each model year from 2024 through 2026, for both passenger cars and light trucks. This responds to the agency’s statutory mandate to improve energy

conservation. This proposal also makes certain minor changes to fuel economy reporting requirements.

**DATES:** *Comments:* Comments are requested on or before October 26, 2021. In compliance with the Paperwork Reduction Act, NHTSA is also seeking comment on a revision to an existing information collection. For additional information, see the Paperwork Reduction Act Section under Section IX, below. All comments relating to the information collection requirements should be submitted to NHTSA and to the Office of Management and Budget (OMB) at the address listed in the **ADDRESSES** section on or before October 26, 2021. See the **SUPPLEMENTARY INFORMATION** section on “Public Participation,” below, for more information about written comments.

*Public Hearings:* NHTSA will hold one virtual public hearing during the public comment period. The agency will announce the specific date and web address for the hearing in a supplemental **Federal Register** notification. The agency will accept oral and written comments on the rulemaking documents and will also accept comments on the Supplemental Environmental Impact Statement (SEIS) at this hearing. The hearing will start at 9 a.m. Eastern standard time and continue until everyone has had a chance to speak. See the **SUPPLEMENTARY INFORMATION** section on “Public Participation,” below, for more information about the public hearing.

**ADDRESSES:** You may send comments, identified by Docket No. NHTSA–2021–0053, by any of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.
- *Fax:* (202) 493–2251.
- *Mail:* Docket Management Facility, M–30, U.S. Department of Transportation, West Building, Ground Floor, Rm. W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Docket Management Facility, M–30, U.S. Department of Transportation, West Building, Ground Floor, Rm. W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 4 p.m. Eastern Time, Monday through Friday, except Federal holidays.

Comments on the proposed information collection requirements should be submitted to: Office of Management and Budget at [www.reginfo.gov/public/do/PRAMain](http://www.reginfo.gov/public/do/PRAMain). To find this particular information collection, select “Currently under Review—Open for Public Comment” or use the search function. NHTSA requests that comments sent to the OMB also be sent to the NHTSA rulemaking docket identified in the heading of this document.

*Instructions:* All submissions received must include the agency name and docket number or Regulatory Information Number (RIN) for this rulemaking. All comments received will be posted without change to <http://www.regulations.gov>, including any personal information provided. For detailed instructions on sending comments and additional information on the rulemaking process, see the “Public Participation” heading of the **SUPPLEMENTARY INFORMATION** section of this document.

*Docket:* For access to the dockets or to read background documents or comments received, please visit <http://www.regulations.gov>, and/or Docket Management Facility, M–30, U.S. Department of Transportation, West Building, Ground Floor, Rm. W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590. The Docket Management Facility is open between 9 a.m. and 4 p.m. Eastern Time, Monday through Friday, except Federal holidays.

**FOR FURTHER INFORMATION CONTACT:** Rebecca Schade, NHTSA Office of Chief Counsel, National Highway Traffic Safety Administration, 1200 New Jersey Avenue SE, Washington, DC 20590; email: [rebecca.schade@dot.gov](mailto:rebecca.schade@dot.gov).

**SUPPLEMENTARY INFORMATION:**

**Does this action apply to me?**

This action affects companies that manufacture or sell new passenger automobiles (passenger cars) and non-passenger automobiles (light trucks) as defined under NHTSA’s CAFE regulations.<sup>1</sup> Regulated categories and entities include:

<sup>1</sup> “Passenger car” and “light truck” are defined in 49 CFR part 523.

Category	NAICS Codes <sup>A</sup>	Examples of potentially regulated entities
Industry .....	335111	Motor Vehicle Manufacturers.
Industry .....	336112	
Industry .....	811111	Commercial Importers of Vehicles and Vehicle Components.
	811112	
	811198	
	423110	
Industry .....	335312	Alternative Fuel Vehicle Converters.
	336312	
	336399	
	811198	

<sup>A</sup> North American Industry Classification System (NAICS).

This list is not intended to be exhaustive, but rather provides a guide regarding entities likely to be regulated by this action. To determine whether particular activities may be regulated by this action, you should carefully examine the regulations. You may direct questions regarding the applicability of this action to the person listed in **FOR FURTHER INFORMATION CONTACT**.

**I. Executive Summary**

NHTSA, on behalf of the Department of Transportation, is proposing to amend standards regulating corporate average fuel economy (CAFE) for passenger cars and light trucks for model years (MYs) 2024–2026. This proposal responds to NHTSA’s statutory obligation to set maximum feasible CAFE standards to improve energy conservation, and to President Biden’s directive in Executive Order 13990 of January 20, 2021 that “The Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Years 2021–2026 Passenger Cars and Light Trucks”,

2020 final rule or 2020 CAFE rule (85 FR 24174 (April 30, 2020)), be immediately reviewed for consistency with our Nation’s abiding commitment to promote and protect our public health and the environment, among other things. NHTSA undertook that review immediately, and this proposal is the result of that process.

The proposed amended CAFE standards would increase in stringency from MY 2023 levels by 8 percent per year, for both passenger cars and light trucks over MYs 2024–2026. NHTSA tentatively concludes that this level is maximum feasible for these model years, as discussed in more detail in Section VI, and seeks comment on that conclusion. The proposal considers a range of regulatory alternatives, consistent with NHTSA’s obligations under the National Environmental Policy Act (NEPA) and Executive Order 12866. While E.O. 13990 directed the review of CAFE standards for MYs 2021–2026, statutory lead time requirements mean that the soonest

model year that can currently be amended in the CAFE program is MY 2024. The proposed standards would remain vehicle footprint-based, like the CAFE standards in effect since MY 2011. Recognizing that many readers think about CAFE standards in terms of the miles per gallon (mpg) values that the standards are projected to eventually require, NHTSA currently projects that the proposed standards would require, on an average industry fleet-wide basis, roughly 48 mpg in MY 2026. NHTSA notes both that real-world fuel economy is generally 20–30 percent lower than the estimated required CAFE level stated above, and also that the actual CAFE standards are the footprint target curves for passenger cars and light trucks, meaning that ultimate fleet-wide levels will vary depending on the mix of vehicles that industry produces for sale in those model years. Table I–1 shows the incremental differences in stringency levels for passenger cars and light trucks, by regulatory alternative, in the model years subject to regulation.

**Table I-1 – Incremental Stringency Levels (mpg above Baseline) for Passenger Cars and Light Trucks, by Regulatory Alternative**

Model Year	Alternative 0 (Baseline/No Action)	Alternative 1	Alternative 2	Alternative 3
<b>Passenger cars</b>				
2024	-	3.9	3.3	4.3
2025	-	4.9	6.8	9.2
2026	-	5.9	10.8	14.7
<b>Light trucks</b>				
2024	-	3.5	2.2	3.0
2025	-	4.2	4.7	6.4
2026	-	5.1	7.6	10.4
<b>Total</b>				
2024	-	3.7	2.6	3.5
2025	-	4.5	5.5	7.5
2026	-	5.3	8.7	11.9

This proposal is significantly different from the conclusion that NHTSA reached in the 2020 final rule, but this is because important facts have changed, and because NHTSA has reconsidered how to balance the relevant statutory considerations in light of those facts. NHTSA tentatively concludes that significantly more stringent standards are maximum feasible. Contrary to the 2020 final rule, NHTSA recognizes that the need of the United States to conserve energy must include serious consideration of the energy security risks of continuing to consume oil, which more stringent fuel economy standards can reduce. Reducing our Nation's climate impacts can also benefit our national security. Additionally, at least part of the automobile industry appears increasingly convinced that improving fuel economy and reducing greenhouse gas (GHG) emissions is a growth market for them, and that the market rewards investment in advanced technology. Nearly all auto manufacturers have announced forthcoming new higher fuel-economy and electric vehicle models, and five major manufacturers voluntarily bound themselves to stricter GHG requirements than set forth by NHTSA and the Environmental Protection Agency (EPA) in 2020 through contractual agreements with the State of California, which will result in their achieving fuel economy levels well above the standards set forth in the 2020 final rule. These companies are sophisticated, for-profit enterprises. If they are taking these steps, NHTSA can be more confident than the agency was in 2020 that the market is getting ready to make the leap to significantly higher

fuel economy. The California Framework and the clear planning by industry to migrate toward more advanced fuel economy technologies are evidence of the practicability of more stringent standards. Moreover, more stringent CAFE standards will help to encourage industry to continue improving the fuel economy of all vehicles, rather than simply producing a few electric vehicles, such that all Americans can benefit from higher fuel economy and save money on fuel. NHTSA cannot consider the fuel economy of dedicated alternative fuel vehicles like battery electric vehicles when determining maximum feasible standards, but the fact that industry increasingly appears to believe that there is a market for these vehicles is broader evidence of market (and consumer) interest in fuel economy, which is relevant to NHTSA's determination of whether more stringent standards would be economically practicable. For all of these reasons, NHTSA tentatively concludes that standards that increase at 8 percent per year are maximum feasible.

This proposal is also different from the 2020 final rule in that it is issued by NHTSA alone, and EPA has issued a separate proposal. The primary reason for this is the difference in statutory authority—EPA does not have the same lead time requirements as NHTSA and is thus able to amend MY 2023 in addition to MYs 2024–2026. An important consequence of this is that EPA's proposed rate of stringency increase, after taking a big leap in MY 2023, looks slower than NHTSA's over the same time period. NHTSA emphasizes, however, that the proposed

standards are what NHTSA believes best fulfills our statutory directive of energy conservation, and in the context of the EPA standards, the analysis we have done is tackling the core question of whether compliance with both standards should be achievable with the same vehicle fleet, after manufacturers fully understand the requirements from both proposals. The differences in what the two agencies' standards require become smaller each year, until alignment is achieved. While NHTSA recognizes that the last several CAFE standard rulemakings have been issued jointly with EPA, and that issuing separate proposals represents a change in approach, the agencies worked together to avoid inconsistencies and to create proposals that would continue to allow manufacturers to build a single fleet of vehicles to meet both agencies' proposed standards. Additionally, and importantly, NHTSA has also considered and accounted for California's Zero Emission Vehicle (ZEV) program (and its adoption by a number of other states) in developing the baseline for this proposal, and has accounted for the aforementioned "Framework Agreements" between California and BMW, Ford, Honda, Volkswagen of America (VWA), and Volvo, which are national-level GHG standards to which these companies committed for several model years.

A number of other improvements and updates have been made to the analysis since the 2020 final rule. Table I–2 summarizes these, and they are discussed in much more detail below and in the documents accompanying this preamble.

**BILLING CODE 4910–59–P**

**Table I-2 – Key Analytical Updates from 2020 Final Rule**

<b>Key Updates</b>
In all regulatory alternatives, account for the Zero Emission Vehicle (ZEV) mandates applicable in California and the States that have adopted them.
In all regulatory alternatives, account for some vehicle manufacturers' (BMW, Ford, Honda, VWA, and Volvo) voluntary commitments to the State of California to continued annual nation-wide reductions of vehicle greenhouse gas emissions through model year (MY) 2026, with greater rates of electrification than would have been required under the 2020 final rule.
In all regulatory alternatives, account for manufacturers' responses to both CAFE (alternatives) and baseline carbon dioxide standards jointly (rather than only separately).
Procedures to ensure that modeled technology application and production volumes are the same across all regulatory alternatives in the earliest model years.
Procedures to focus application of the Energy Policy and Conservation Act's (EPCA) "standard setting constraints" (i.e., regarding the consideration of compliance credits and additional dedicated alternative fueled vehicles) more precisely to only those model years for which NHTSA is proposing or finalizing new standards.
More accurate accounting for compliance treatment of flex-fuel vehicles (FFVs) and plug-in hybrid electric vehicles (PHEVs).
Include CAFE civil penalties in the "effective cost" metric used when simulating manufacturers' potential application of fuel-saving technologies.
COVID adjustment to vehicle miles traveled (VMT) model inputs (per Federal Highway Administration estimate of 2020 national VMT).
Embed Federal Highway Administration's VMT model in CAFE Model (dynamic model).
Criteria pollutant health effects reported separately for refining and electricity generation.
New procedures to estimate the impacts and corresponding monetized damages of highway vehicle crashes that do not result in fatalities, now based on historical data and future trend models that reflect the impacts of advanced crash avoidance technologies.
Social cost of carbon and damage costs for methane and nitrous oxide (interim guidance February 19, 2021).
Fuel and electricity prices using Energy Information Administration's Annual Energy Outlook 2021.
Analysis fleet updated to MY 2020.
Updated large scale simulation using Argonne National Laboratory's Autonomie model.
Inclusion of 400- and 500-mile battery electric vehicles (BEVs).
Updated battery and battery management unit size and costs using BatPaC version 4.0 (October 2020).
Updated hybrid electric vehicles, PHEV, and BEV electric machine and battery sizing.
Inclusion of high compression ratio (HCR) engines with cylinder deactivation.
Expanded turbo-downsizing to include reducing low-powered 4-cylinder naturally aspirated engines to 3-cylinder turbocharged engines.
Updated 10-speed automatic transmission efficiency characteristics based on benchmarking data from Southwest Research Institute.
Updated cold start offset assumptions using MY 2020 compliance data.
Updated mass regression analysis values for engines and electric motors.
More accurate accounting for off-cycle incremental costs relative to MY 2020 baseline fleet.
Updated fuel cell vehicle technology inputs.

**BILLING CODE 4910-59-C**

NHTSA estimates that this proposal could reduce average undiscounted fuel outlays over the lifetimes of MY 2029 vehicles by about \$1,280, while increasing the average cost of those vehicles by about \$960 over the baseline described above. With the social cost of

carbon (SCC) discounted at 2.5 percent and other benefits and costs discounted at 3 percent, for the three affected model years NHTSA finds \$65.8 billion in benefits attributable to the proposed standards and \$37.4 billion in proposed costs so that present net benefits could

be \$28.4 billion.<sup>2</sup> Applied to the entire fleet for MYs 1981–2029, NHTSA estimates \$120 billion in costs and \$121

<sup>2</sup> As discussed in Section III.G.2.b), NHTSA has discounted the SCC at 2.5% when other benefits and costs are discounted at 3% but seeks comment on this approach.

billion in benefits attributable to the proposed standards, such that the present value of aggregate net benefits to society could be \$1 billion. Like any analysis of this magnitude attempting to forecast future effects of current policies, significant uncertainty exists about many key inputs. Changes in the price of fuel or in the social cost of carbon could dramatically change benefits, for example, and readers should expect that the eventual final rule will reflect any updates made to those (and many other) values that occur between now and then. It is also worth stressing that NHTSA's statutory authority requires that its standards be maximum feasible, taking into account four statutory factors. While NHTSA's estimates of costs and benefits are important considerations, it is the maximum feasible analysis that controls the setting of CAFE standards.

Like many other types of regulations, CAFE standards apply only to new vehicles. The costs attributable to new CAFE standards are thus "front-loaded," because they result primarily from the application of fuel-saving technology to new vehicles. On the other hand, the impact of new CAFE standards on fuel consumption and greenhouse gases—

and the associated benefits to society—occur over an extended time, as drivers buy, use, and eventually scrap these new vehicles. By accounting for many model years and extending well into the future (2050), our analysis accounts for these differing patterns in impacts, benefits, and costs. Our analysis also accounts for the potential that, by changing new vehicle prices and fuel economy levels, CAFE standards could indirectly impact the operation of vehicles produced before or after the model years (2024–2026) for which we are proposing new CAFE standards. This means that some of the proposal's impacts and corresponding benefits and costs are actually attributable to indirect impacts on vehicles produced before and after model years 2024–2026.

The bulk of our analysis considers a "model year" (MY) perspective that considers the lifetime impacts attributable to all vehicles produced prior to model year 2030, accounting for the operation of these vehicles over their entire useful lives (with some model year 2029 vehicles estimated to be in service as late as 2068). This approach emphasizes the role of model years 2024–2026, while accounting for the potential that it may take

manufacturers a few additional years to produce fleets fully responsive to the proposed MY 2026 standards, and for the potential that the proposal could induce some changes in the operation of vehicles produced prior to MY 2024.

Our analysis also considers a "calendar year" (CY) perspective that includes the annual impacts attributable to all vehicles estimated to be in service in each calendar year for which our analysis includes a representation of the entire registered light-duty fleet. For this NPRM, this calendar year perspective covers each of calendar years 2021–2050, with differential impacts accruing as early as model year 2023. Compared to the "model year" perspective, this calendar year perspective emphasizes model years of vehicles produced in the longer term, beyond those model years for which standards are currently being proposed. Table I–3 summarizes estimates of selected physical impacts viewed from each of these two perspectives, as well as corresponding estimates of the present values of cumulative benefits, costs, and net benefits.

**BILLING CODE 4910–59–P**

**Table I-3 – Selected Cumulative Impacts - Model and Calendar Year Perspectives**

	Alt. 1	Alt. 2	Alt. 3
Avoided Gasoline Consumption (b. gal)

MYs 1981-2029	2	-15	-25
CYs 2023-2050	36	37	46

Finally, for purposes of comparing the benefits and costs of new CAFE standards to the benefits and costs of other Federal regulations, policies, and

programs, we have computed “annualized” benefits and costs. These are the annual averages of the cumulative benefits and costs over the

covered model or calendar years, after expressing these in present value terms.

**Table I-4 – Estimated Costs, Benefits, and Net Benefits Across MYs 1981-2029 (billions of dollars), Total Fleet for Alternative 1**

Net Benefits	131.7	45.9	6.72	3.70

As discussed in detail below, the monetized estimated costs and benefits

of this proposal are relevant and important to the agency's tentative

conclusion, but they are not the whole of the conclusion.

Additionally, although NHTSA is prohibited from considering the availability of certain flexibilities in making our determination about the levels of CAFE standards that would be

maximum feasible, manufacturers have a variety of flexibilities available to them to reduce their compliance burden. Table I-10 through Table I-13 below summarizes available compliance

flexibilities. NHTSA seeks comment on whether to retain non-statutory flexibilities for the final rule.

**Table I-10 – Statutory Flexibilities for Over-compliance with Standards**

Regulatory Item	NHTSA	
	Authority	Current Program
Credit Earning	49 U.S.C. 32903(a)	Denominated in tenths of a mpg
Credit “Carry-forward”	49 U.S.C. 32903(a)(2)	5 MYs into the future
Credit “Carryback” (AKA “deficit carry-forward”)*	49 U.S.C. 32903(a)(1)	3 MYs into the past
Credit Transfer	49 U.S.C. 32903(g)	Up to 2 mpg per fleet; transferred credits may not be used to meet minimum domestic passenger car standard (MDPCS)
Credit Trade*	49 U.S.C. 32903(f)	Unlimited quantity; traded credits may not be used to meet MDPCS

\*NHTSA did not expressly model credit carryback, and credit trades were only modeled for credits that existed at the beginning of the modeling simulation. All other credits in this table were modeled.

**Table I-11 – Current and Proposed Flexibilities that Address Gaps in Compliance Test Procedures**

Regulatory Item	NHTSA	
	Authority	Current and <i>Proposed</i> Program
Air conditioning efficiency	49 U.S.C. 32904	Allows manufacturers to earn “fuel consumption improvement values” (FCIVs) equivalent to EPA credits starting in MY 2017
Off-cycle	49 U.S.C. 32904	Allows manufacturers to earn “fuel consumption improvement values” (FCIVs) equivalent to EPA credits starting in MY 2017 <i>For MY 2020 and beyond, NHTSA proposes to implement CAFE provisions equivalent to the EPA proposed changes</i>

**Table I-12 – Incentives that Encourage Application of Technologies**

Regulatory Item	NHTSA	
	Authority	<i>Proposed</i> Program
Full-size pickup trucks with HEV or overperforming target*	49 U.S.C. 32904	Allows manufacturers to earn FCIVs equivalent to EPA credits for MYs 2017-2021 <i>NHTSA proposes to reinstate incentives for strong hybrid OR overperforming target by 20% for MYs 2022-2025</i>

\*These credits were not modeled for the NPRM analysis.

**Table I-13 – Incentives that Encourage Alternative Fuel Vehicles**

Regulatory Item	NHTSA	
	Authority	Current Program
Dedicated alternative fuel vehicle	49 U.S.C. 32905(a) and (c)	Fuel economy calculated assuming gallon of liquid or gallon equivalent gaseous alt fuel = 0.15 gallons of gasoline; for EVs petroleum equivalency factor
Dual-fueled vehicles	49 U.S.C. 32905(b), (d), and (e); 32906(a)	Fuel economy calculated using 50% operation on alt fuel and 50% on gasoline through MY 2019. Starting with MY 2020, NHTSA uses the Society of Automotive Engineers (SAE) defined "Utility Factor" methodology to account for actual potential use, and "F-factor" for FFV; NHTSA will continue to incorporate the 0.15 incentive factor

**BILLING CODE 4910-59-C**

NHTSA recognizes that the lead time for this proposal is shorter than past rulemakings have provided, and that the economy and the country are in the process of recovering from a global pandemic and the resulting economic distress. At the same time, NHTSA also recognizes that at least parts of the industry are nonetheless stepping up their product offerings and releasing more and more high fuel-economy vehicle models, and many companies did not deviate significantly from product plans established in response to the standards set forth in the 2012 final rule (77 FR 62624, Oct. 15, 2012) and confirmed by EPA in its January 2017 Final Determination. With these considerations in mind, NHTSA is proposing to amend the CAFE standards for MYs 2024–2026. NHTSA, like any other Federal agency, is afforded an opportunity to reconsider prior views and, when warranted, to adopt new positions. Indeed, as a matter of good governance, agencies *should* revisit their positions when appropriate, especially to ensure that their actions and regulations reflect legally sound interpretations of the agency’s authority and remain consistent with the agency’s views and practices. As a matter of law, “an Agency is entitled to change its interpretation of a statute.”<sup>3</sup> Nonetheless, “[w]hen an Agency adopts a materially changed interpretation of a statute, it must in addition provide a ‘reasoned analysis’ supporting its decision to revise its interpretation.”<sup>4</sup> The analysis presented in this preamble

and in the accompanying Technical Support Document (TSD), Preliminary Regulatory Impact Analysis (PRIA), Supplemental Environmental Impact Statement (SEIS), CAFE Model documentation, and extensive rulemaking docket fully supports the proposed decision and revised balancing of the statutory factors for MYs 2024–2026 standards. NHTSA seeks comment on the entirety of the rulemaking record.

**II. Introduction**

In this notice of proposed rulemaking (NPRM), NHTSA is proposing to revise CAFE standards for model years (MYs) 2024–2026. On January 20, 2021, the President signed Executive Order (E.O.) 13990, “Protecting Public Health and the Environment and Restoring Science To Tackle the Climate Crisis.”<sup>5</sup> In it, the President directed that “The Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Years 2021–2026 Passenger Cars and Light Trucks” (hereafter, “the 2020 final rule”), 85 FR 24174 (April 30, 2020), must be immediately reviewed for consistency with our Nation’s abiding commitment to empower our workers and communities; promote and protect our public health and the environment; and conserve our national treasures and monuments, places that secure our national memory. E.O. 13990 states expressly that the Administration prioritizes listening to the science, improving public health and protecting the environment, reducing greenhouse gas emissions, and improving environmental justice while creating well-paying union jobs. The E.O. thus directs that the 2020 final rule be reviewed at once and that (in this case) the Secretary of Transportation consider

“suspending, revising, or rescinding” it, via an NPRM, by July 2021.<sup>6</sup>

Section 32902(g)(1) of Title 49, United States Code allows the Secretary (by delegation to NHTSA) to prescribe regulations amending an average fuel economy standard prescribed under 49 U.S.C. 32902(a), like those prescribed in the 2020 final rule, if the amended standard meets the requirements of 32902(a). The Secretary’s authority to set fuel economy standards is delegated to NHTSA at 49 CFR 1.95(a); therefore, in this NPRM, NHTSA proposes revised fuel economy standards for MYs 2024–2026. Section 32902(g)(2) states that when the amendment makes an average fuel economy standard more stringent, it must be prescribed at least 18 months before the beginning of the model year to which the amendment applies. NHTSA generally calculates the 18-month lead time requirement as April of the calendar year prior to the start of the model year. Thus, 18 months before MY 2023 would be April 2021, because MY 2023 begins in September 2022. Because of this lead time requirement, NHTSA is not proposing to amend the CAFE standards for MYs 2021–2023, even though the 2020 final rule also covered those model years. For purposes of the CAFE program, the 2020 final rule’s standards for MYs 2021–2023 will remain in effect.

For the MYs for which there is statutory lead time to amend the standards, however, NHTSA is proposing amendments to the currently applicable fuel economy standards. Although only one year has passed since the 2020 final rule, the agency believes it is reasonable and appropriate to revisit the CAFE standards for MYs 2024–2026. In particular, the agency has further considered the serious adverse effects on energy conservation that the standards finalized in 2020 would cause

<sup>3</sup>Phoenix Hydro Corp. v. FERC, 775 F.2d 1187, 1191 (D.C. Cir. 1985).  
<sup>4</sup>Alabama Educ. Ass’n v. Chao, 455 F.3d 386, 392 (D.C. Cir. 2006) (quoting Motor Vehicle Mfrs. Ass’n of U.S., Inc. v. State Farm Mut. Auto. Ins. Co., 463 U.S. 29, 57 (1983)); see also Encino Motorcars, LLC v. Navarro, 136 S.Ct. 2117, 2125 (2016) (“Agencies are free to change their existing policies as long as they provide a reasoned explanation for the change.”) (citations omitted).

<sup>5</sup>86 FR 7037 (Jan. 25, 2021).

<sup>6</sup>Id., Sec. 2(a)(ii).

as compared to the proposed standards. The need of the U.S. to conserve energy is greater than understood in the 2020 final rule. In addition, standards that are more stringent than those that were finalized in 2020 appear economically practicable. Nearly all auto manufacturers have announced forthcoming new advanced technology vehicle models with higher fuel economy, making strong public commitments that mirror those of the Administration. Five major manufacturers voluntarily bound themselves to stricter national-level GHG requirements as part of the California Framework agreement. Meanwhile, certain facts on the ground remain similar to what was before NHTSA in the prior analysis—gas prices still remain relatively low in the U.S., for example, and while light-duty vehicle sales fell sharply in MY 2020, the vehicles that *did* sell tended to be, on average, larger, heavier, and more powerful, all factors that increase fuel consumption. However, the renewed focus on addressing energy conservation and the industry's apparent ability to meet more stringent standards show that

a rebalancing of the EPCA factors, and the proposal of more stringent standards, is appropriate for model years 2024–2026.

The following sections introduce the proposal in more detail.

#### A. *What is NHTSA proposing?*

NHTSA is proposing to set CAFE standards for passenger cars and light trucks manufactured for sale in the United States in MYs 2024–2026. Passenger cars are generally sedans, station wagons, and two-wheel drive crossovers and sport utility vehicles (CUVs and SUVs), while light trucks are generally four-wheel drive vehicles, larger/heavier two-wheel drive sport utility vehicles, pickups, minivans, and passenger/cargo vans.<sup>7</sup> The proposed standards would increase at 8 percent per year for both cars and trucks, and are represented by regulatory Alternative 2 in the agency's analysis. The proposed standards would be defined by a mathematical equation that represents a constrained linear function relating vehicle footprint to fuel

<sup>7</sup> "Passenger car" and "light truck" are defined at 49 CFR part 523.

economy targets for both cars and trucks; vehicle footprint is roughly measured as the rectangle that is made by the four points where the vehicle's tires touch the ground. Generally, passenger cars will have more stringent targets than light trucks regardless of footprint, and smaller vehicles will have more stringent targets than larger vehicles. No individual vehicle or vehicle model need meet its target exactly, but a manufacturer's compliance is determined by how its average fleet fuel economy compares to the average fuel economy of the targets of the vehicles it manufactures.

The proposed target curves<sup>8</sup> for passenger cars and light trucks are as follows; curves for MYs 2020–2023 are included in Figure II–1 and Figure II–2 for context.

#### **BILLING CODE 4910–59–P**

<sup>8</sup> NHTSA underscores that the equations and coefficients defining the curves are what the agency is proposing, and not the mpg numbers that the agency currently estimates could result from manufacturers complying with the curves. Because the estimated mpg numbers are an *effect* of the proposed curves, they are presented in the following section.

Figure II-1 – Passenger Car Fuel Economy, Proposed Target Curves

**Figure II-2 – Light Truck Fuel Economy, Proposed Target Curves**

**BILLING CODE 4910-59-C**

NHTSA is also proposing to amend the minimum domestic passenger car CAFE standards for MYs 2024–2026. The provision at 49 U.S.C. 32902(b)(4)

requires NHTSA to project the minimum standard when it promulgates passenger car standards for a model year, so it is appropriate to revisit the minimum standards at this time.

NHTSA is proposing to retain the 1.9 percent offset used in the 2020 final rule, such that the minimum domestic passenger car standard would be as shown in Table II-1.

**Table II-1 – Proposed Minimum Domestic Passenger Car Standards**

2024	2025	2026
44.4 mpg	48.2 mpg	52.4 mpg

The next section describes some of the effects that NHTSA estimates would follow from this proposal, including how the curves shown above translate to estimated average mile per gallon requirements for the industry.

*B. What does NHTSA estimate the effects of proposing this would be?*

As for past CAFE rulemakings, NHTSA has used the CAFE Model to estimate the effects of proposed CAFE standards, and of other regulatory alternatives under consideration. Some inputs to the CAFE Model are derived from other models, such as Argonne National Laboratory’s “Autonomie”

vehicle simulation tool and Argonne’s Greenhouse gases, Regulated Emissions, and Energy use in Transportation (GREET) fuel-cycle emissions analysis model, the U.S. Energy Information Administration’s (EIA’s) National Energy Modeling System (NEMS), and EPA’s Motor Vehicle Emission Simulator (MOVES) vehicle emissions model. Especially given the scope of the

NHTSA’s analysis (through model years 2050, with driving of model year 2029 vehicles accounted for through calendar year 2068), these inputs involve a multitude of uncertainties. For example, a set of inputs with significant uncertainty could include future population and economic growth, future gasoline and electricity prices, future petroleum market characteristics (e.g., imports and exports), future battery costs, manufacturers’ future responses to standards and fuel prices, buyers’

future responses to changes in vehicle prices and fuel economy levels, and future emission rates for “upstream” processes (e.g., refining, finished fuel transportation, electricity generation). Considering that all of this is uncertain from a 2021 vantage point, NHTSA underscores that all results of this analysis are, in turn, uncertain, and simply represent the agency’s best estimates based on the information currently before us.

NHTSA estimates that this proposal would increase the eventual<sup>9</sup> average of manufacturers’ CAFE requirements to about 48 mpg by 2026 rather than, under the No-Action Alternative (i.e., the baseline standards issued in 2020), about 40 mpg. For passenger cars, the average in 2026 is estimated to reach about 58 mpg, and for light trucks, about 42. This compares with 47 mpg and 34 mpg for cars and trucks, respectively, under the No-Action Alternative.

**Table II-2 – Estimated Average of CAFE Levels (mpg) Required Under Proposal**

Fleet	2024	2025	2026	2027	2028	2029
Passenger Cars	49	53	58	58	58	58
Light Trucks	35	38	42	42	42	42
Overall Fleet	41	44	48	48	48	48

Because manufacturers do not comply exactly with each standard in each model year, but rather focus their compliance efforts when and where it is most cost-effective to do so, “estimated

achieved” fuel economy levels differ somewhat from “estimated required” levels for each fleet, for each year. NHTSA estimates that the industry-wide average fuel economy achieved in

MY 2029 could increase from about 44 mpg under the No-Action Alternative to about 49 mpg under the proposal.

**Table II-3 – Estimated Average of CAFE Levels (mpg) Achieved Under Proposal**

Fleet	2024	2025	2026	2027	2028	2029
Passenger Cars	54	57	60	61	61	61
Light Trucks	37	38	40	41	41	41
Overall Fleet	43	45	48	48	49	49

As discussed above, NHTSA’s analysis—unlike its previous CAFE analyses—estimates manufacturers’ potential responses to the combined effect of CAFE standards and separate CO<sub>2</sub> standards (including agreements some manufacturers have reached with California), ZEV mandates, and fuel prices. Together, the aforementioned

regulatory programs are more binding than any single program considered in isolation, and this analysis, like past analyses, shows some estimated overcompliance with the proposed CAFE standards, albeit by much less than what was shown in the NPRM that preceded the 2020 final rule, and any

overcompliance is highly manufacturer-dependent.

Expressed as equivalent required and achieved average CO<sub>2</sub> levels (using 8887 grams of CO<sub>2</sub> per gallon of gasoline vehicle certification fuel), the above CAFE levels appear as shown in Table II-4 and Table II-5.

**Table II-4 – Estimated Average of CAFE Levels Required Under Proposal (as Equivalent Gram per Mile CO<sub>2</sub> Levels)**

Fleet	2024	2025	2026	2027	2028	2029
Passenger Cars	181	166	153	153	153	153
Light Trucks	253	233	214	214	214	214
Overall Fleet	219	201	185	185	185	184

<sup>9</sup>Here, “eventual” means by MY 2029, after most of the fleet will have been redesigned under the MY 2026 standards. NHTSA allows the CAFE Model to

continue working out compliance solutions for the regulated model years for three model years after the last regulated model year, in recognition of the

fact that manufacturers do not comply perfectly with CAFE standards in each model year.

**Table II-5 – Estimated Average of CAFE Levels Achieved Under Proposal (as Equivalent Gram per Mile CO<sub>2</sub> Levels)**

Fleet	2024	2025	2026	2027	2028	2029
Passenger Cars	165	156	149	147	145	145
Light Trucks	243	234	221	218	216	215
Overall Fleet	206	197	187	184	182	181

Average requirements and achieved CAFE levels would ultimately depend on manufacturers' and consumers' responses to standards, technology developments, economic conditions, fuel prices, and other factors.

NHTSA estimates that over the lives of vehicles produced prior to MY 2030, the proposal would save about 50 billion gallons of gasoline and increase electricity consumption (as the percentage of electric vehicles increases

over time) by about 275 terawatts (TWh), compared to levels of gasoline and electricity consumption NHTSA projects would occur under the baseline standards (*i.e.*, the No-Action Alternative).

**Table II-6 – Estimated Changes in Energy Consumption vs. No-Action Alternative**

Energy Source	Change in Consumption
Gasoline	-50 billion gallons
Electricity	+275 TWh

NHTSA's analysis also estimates total annual consumption of fuel by the entire on-road fleet from calendar year 2020 through calendar year 2050. On this basis, gasoline and electricity

consumption by the U.S. light-duty vehicle fleet evolves as shown in Figure II-3 and Figure II-4, each of which shows projections for the No-Action Alternative (Alternative 0, *i.e.*, the

baseline), Alternative 1, Alternative 2 (the proposal), and Alternative 3.

**BILLING CODE 4910-59-P**

Figure II-3 – Estimated Annual Gasoline Consumption by Light-Duty On-Road Fleet

**Figure II-4 – Estimated Electricity Consumption by Light-Duty On-Road Fleet**

Accounting for emissions from both vehicles and upstream energy sector processes (e.g., petroleum refining and electricity generation), NHTSA

estimates that the proposal would reduce greenhouse gas emissions by about 465 million metric tons of carbon dioxide (CO<sub>2</sub>), about 500 thousand

metric tons of methane (CH<sub>4</sub>), and about 12 thousand tons of nitrous oxide (N<sub>2</sub>O).

**Table II-7 – Estimated Changes in Greenhouse Gas Emissions (Metric Tons) vs. No-Action Alternative**

Greenhouse Gas	Change in Emissions
Carbon Dioxide (CO <sub>2</sub> )	-465 million tons
Methane (CH <sub>4</sub> )	-500 thousand tons
Nitrous Oxide (N <sub>2</sub> O)	-12 thousand tons

As for fuel consumption, NHTSA’s analysis also estimates annual emissions attributable to the entire on-road fleet from calendar year 2020 through

calendar year 2050. Also accounting for both vehicles and upstream processes, NHTSA estimates that CO<sub>2</sub> emissions could evolve over time as shown in

Figure II-5, which accounts for both emissions from both vehicles and upstream processes.

**Figure II-5 – Estimated Annual CO<sub>2</sub> Emissions Attributable to Light-Duty On-Road Fleet**

Estimated emissions of methane and nitrous oxides follow similar trends. As discussed in the TSD, PRIA, and this NPRM, NHTSA has performed two types of supporting analysis. This NPRM and PRIA focus on the “standard setting” analysis, which sets aside the potential that manufacturers could respond to standards by using compliance credits or introducing new alternative fuel vehicle (including BEVs) models during the “decision years” (for this NPRM, 2024, 2025, and 2026). The accompanying SEIS focuses on an

“unconstrained” analysis, which does not set aside these potential manufacturer actions. The SEIS presents much more information regarding projected GHG emissions, as well as model-based estimates of corresponding impacts on several measures of global climate change.

Also accounting for vehicular and upstream emissions, NHTSA has estimated annual emissions of most criteria pollutants (*i.e.*, pollutants for which EPA has issued National Ambient Air Quality Standards).

NHTSA estimates that under each regulatory alternative, annual emissions of carbon monoxide (CO), volatile organic compounds (VOC), nitrogen oxide (NO<sub>x</sub>), and fine particulate matter (PM<sub>2.5</sub>) attributable to the light-duty on-road fleet will decline dramatically between 2020 and 2050, and that emissions in any given year could be very nearly the same under each regulatory alternative. For example, Figure II-6 shows NHTSA’s estimate of future NO<sub>x</sub> emissions under each alternative.

**Figure II-6 – Estimated Annual NO<sub>x</sub> Emissions Attributable to Light-Duty On-Road Fleet**

**BILLING CODE 4910-59-C**

On the other hand, as discussed in the PRIA and SEIS, NHTSA projects that annual SO<sub>2</sub> emissions attributable to the light-duty on-road fleet could increase modestly under the action alternatives, because, as discussed above, NHTSA projects that each of the action alternatives could lead to greater use of electricity (for PHEVs and BEVs). The adoption of actions—such as actions prompted by President Biden’s Executive order directing agencies to develop a Federal Clean Electricity and Vehicle Procurement Strategy—to reduce electricity generation emission rates beyond projections underlying NHTSA’s analysis (discussed in the TSD) could dramatically reduce SO<sub>2</sub> emissions under all regulatory alternatives considered here.<sup>10</sup>

For the “standard setting” analysis, the PRIA accompanying this NPRM provides additional detail regarding projected criteria pollutant emissions and health effects, as well as the inclusion of these impacts in this benefit-cost analysis. For the “unconstrained” or “EIS” type of analysis, the SEIS accompanying this NPRM presents much more information regarding projected criteria pollutant emissions, as well as model-based estimates of corresponding impacts on several measures of urban air quality and public health. As mentioned above, these estimates of criteria pollutant emissions are based on a complex analysis involving interacting simulation techniques and a myriad of input estimates and assumptions. Especially extending well past 2040, the

analysis involves a multitude of uncertainties. Therefore, actual criteria pollutant emissions could ultimately be different from NHTSA’s current estimates.

To illustrate the effectiveness of the technology added in response to this proposal, Table II-8 presents NHTSA’s estimates for increased vehicle cost and lifetime fuel expenditures if we assumed the behavioral response to the lower cost of driving were zero.<sup>11</sup> These numbers are presented in lieu of NHTSA’s primary estimate of lifetime fuel savings, which would give an incomplete picture of technological effectiveness because the analysis accounts for consumers’ behavioral response to the lower cost-per-mile of driving a more fuel-efficient vehicle.

<sup>10</sup> <https://www.whitehouse.gov/briefing-room/presidential-actions/2021/01/27/executive-order-on-tackling-the-climate-crisis-at-home-and-abroad/>, accessed June 17, 2021.

<sup>11</sup> While this comparison illustrates the effectiveness of the technology added in response to this proposal, it does not represent a full consumer welfare analysis, which would account for drivers’ likely response to the lower cost-per-

mile of driving, as well as a variety of other benefits and costs they will experience. The agency’s complete analysis of the proposal’s likely impacts on passenger car and light truck buyers appears in the PRIA, Appendix I, Table A-23-1.

**Table II-8 – Estimated Impact on Average MY 2029 Vehicle Costs vs. No-Action Alternative<sup>12</sup>**

Consumer Impact	Dollar Value
Price Increase	\$960
Lifetime Fuel Savings	\$1,280

With the SCC discounted at 2.5% and other benefits and costs discounted at 3%, NHTSA estimates that costs and benefits could be approximately \$120 billion and \$121 billion, respectively, such that the present value of aggregate

net benefits to society could be somewhat less than \$1 billion. With the social cost of carbon (SCC) discounted at 3% and other benefits and costs discounted at 7%, NHTSA estimates approximately \$90 billion in costs and

\$76 billion in benefits could be attributable to vehicles produced prior to MY 2030 over the course of their lives, such that the present value of aggregate net costs to society could be approximately \$15 billion.<sup>13</sup>

**Table II-9 – Present Value of Estimated Benefits and Costs vs. No-Action Alternative for MYs through 2029**

	3% Discount Rate (2.5% for SCC)	7% Discount Rate (3% for SCC)
Benefits	\$121b	\$76b
Costs	\$121b	\$91b
Net Benefits	<\$1b	-\$15b

Model results can be viewed many different ways, and NHTSA’s rulemaking considers both “model year” and “calendar year” perspectives. The “model year” perspective, above, considers vehicles projected to be produced in some range of model years, and accounts for impacts, benefits, and costs attributable to these vehicles from the present (from the model year’s perspective, 2020) until they are projected to be scrapped. The bulk of NHTSA’s analysis considers vehicles produced prior to model year 2030, accounting for the estimated indirect impacts new standards could have on the remaining operation of vehicles already in service. This perspective

emphasizes impacts on those model years nearest to those (2024–2026) for which NHTSA is proposing new standards. NHTSA’s analysis also presents some results focused only on model years 2024–2026, setting aside the estimated indirect impacts on earlier model years, and the impacts estimated to occur during model years 2027–2029, as some manufacturers and products “catch up” to the standards. Another way to present the benefits and costs of the proposal is the “calendar year” perspective shown in Table II-10, which is similar to how EPA presents benefits and costs in its proposal for GHG standards for MYs 2023–2026. The calendar year

perspective considers all vehicles projected to be in service in each of some range of future calendar years. NHTSA’s presentation of results from this perspective considers calendar years 2020–2050, because the model’s representation of the full on-road fleet extends through 2050. Unlike the model year perspective, this perspective includes vehicles projected produced during model years 2030–2050. This perspective emphasizes longer-term impacts that could accrue if standards were to continue without change. Table II-10 shows costs and benefits for MYs 2023–2026 while Table II-9 shows costs and benefits through MY 2029.

<sup>12</sup> Assumes no rebound effect.  
<sup>13</sup> NHTSA interprets the 2021 IWG draft guidance as indicating that a 2.5% discount rate for the SCC is consistent with discounting near-term benefits and costs of the proposal at the OMB-recommended

consumption discount rate of 3%. For the OMB-recommended discount rate of 7%, NHTSA concluded that a 3% discount rate for the SCC was reasonable given that the IWG draft guidance suggested that the appropriate discount rate for the SCC was likely lower than 3%. NHTSA refers

readers specifically to pp. 16–17 of that guidance, available at [https://www.whitehouse.gov/wp-content/uploads/2021/02/TechnicalSupportDocument\\_SocialCostofCarbonMethaneNitrousOxide.pdf?source=email](https://www.whitehouse.gov/wp-content/uploads/2021/02/TechnicalSupportDocument_SocialCostofCarbonMethaneNitrousOxide.pdf?source=email).

**Table II-10 – Estimates of Benefits and Costs of the Preferred Alternative for Model Years 2023 through 2026, 3% Discount Rate**

MY	Cost	Benefit	Net Benefits
	Present Values		
2023	\$5.6	\$3.5	-\$2.1
2024	\$8.9	\$13.6	\$4.7
2025	\$10.7	\$21.2	\$10.5
2026	\$12.2	\$27.5	\$15.3
Sum	\$37.4	\$65.8	\$28.4

Though based on the exact same model results, these two perspectives provide considerably different views of estimated costs and benefits. Because technology costs account for a large share of overall estimated costs, and are also projected to decline over time (as manufacturers gain more experience with new technologies), costs tend to be “front loaded”—occurring early in a vehicle’s life and tending to be higher in earlier model years than in later model years. Conversely, because social benefits of standards occur as vehicles are driven, and because both fuel prices and the social cost of CO<sub>2</sub> emissions are projected to increase in the future, benefits tend to be “back loaded.” As a result, estimates of future fuel savings, CO<sub>2</sub> reductions, and net social benefits are higher under the calendar year perspective than under the model year perspective. On the other hand, with longer-term impacts playing a greater role, the calendar year perspective is more subject to uncertainties regarding, for example, future technology costs and fuel prices.

Even though NHTSA and EPA estimate benefits, costs, and net benefits using similar methodologies and achieve similar results, different approaches to accounting may give the false appearance of significant divergences. Table II–10 above presents NHTSA’s results using comparable accounting to EPA’s preamble Table 5. EPA also presents cost and benefit information in its RIA over calendar years 2021 through 2050. The numbers most comparable to those presented in EPA’s RIA are those NHTSA developed to complete its Supplemental Environmental Impact Statement (SEIS) using an identical accounting approach. This is because the statutory limitations constraining NHTSA’s standard setting analysis, such as those in 49 U.S.C. 32902(h) prohibiting consideration of full vehicle electrification during the rulemaking timeframe, or consideration

of the trading or transferring of overcompliance credits, do not similarly apply to its EIS analysis.<sup>14</sup> NHTSA’s EIS analysis estimates \$312 billion in costs, \$443 billion in benefits, and \$132 billion in net benefits using a 3% discount rate over calendar years 2021 through 2050.<sup>15</sup> NHTSA describes its cost and benefit accounting approach in Section V of this preamble.

*C. Why does NHTSA tentatively believe the proposal would be maximum feasible, and how and why is this tentative conclusion different from the 2020 final rule?*

NHTSA’s tentative conclusion, after consideration of the factors described below and information in the administrative record for this action, is that 8 percent increases in stringency for MYs 2024–2026 (Alternative 2 of this analysis) are maximum feasible. The Department of Transportation is deeply committed to working aggressively to improve energy conservation and reduce security risks associated with energy use, and higher standards appear increasingly likely to be economically practicable given almost-daily announcements by major automakers about forthcoming new high-fuel-economy vehicle models, as described in more detail below. Despite only one year having passed since the 2020 final rule, enough has changed in the U.S. and the world that revisiting the CAFE standards for MYs 2024–2026, and raising their stringency considerably, is both appropriate and reasonable.

The 2020 final rule set CAFE standards that increased at 1.5 percent

<sup>14</sup> As the EIS analysis contains information that NHTSA is statutorily prevented from considering, the agency does not rely on this analysis in regulatory decision-making.

<sup>15</sup> See PRIA Chapter 6.5 for more information regarding NHTSA’s estimates of annual benefits and costs using NHTSA’s standard setting analysis. See Tables B–7–25 through B–7–30 in Appendix II of the PRIA for a more detailed breakdown of NHTSA’s EIS analysis.

per year for cars and trucks for MYs 2021–2026, in large part because it prioritized industry concerns and reducing vehicle purchase costs to consumers and manufacturers. This proposed rule acknowledges the priority of energy conservation, consistent with NHTSA’s statutory authority. Moreover, NHTSA is also legally required to consider the environmental implications of this action under NEPA, and while the 2020 final rule did undertake a NEPA analysis, it did not prioritize the environmental considerations aspects of the statutory need of the U.S. to conserve energy.

NHTSA recognizes that the amount of lead time available before MY 2024 is less than what was provided in the 2012 rule. As will be discussed further in Section VI, NHTSA believes that the evidence suggests that the proposed standards are still economically practicable.

We note further that while this proposal is different from the 2020 final rule (and also from the 2012 final rule), NHTSA, like any other Federal agency, is afforded an opportunity to reconsider prior views and, when warranted, to adopt new positions. Indeed, as a matter of good governance, agencies *should* revisit their positions when appropriate, especially to ensure that their actions and regulations reflect legally sound interpretations of the agency’s authority and remain consistent with the agency’s views and practices. As a matter of law, “an Agency is entitled to change its interpretation of a statute.”<sup>16</sup> Nonetheless, “[w]hen an Agency adopts a materially changed interpretation of a statute, it must in addition provide a ‘reasoned analysis’ supporting its decision to revise its interpretation.”<sup>17</sup>

<sup>16</sup> Phoenix Hydro Corp. v. FERC, 775 F.2d 1187, 1191 (D.C. Cir. 1985).

<sup>17</sup> Alabama Educ. Ass’n v. Chao, 455 F.3d 386, 392 (D.C. Cir. 2006) (quoting Motor Vehicle Mfrs. Ass’n of U.S., Inc. v. State Farm Mut. Auto. Ins. Co.,

This preamble and the accompanying TSD and PRIA all provide extensive detail on the agency's updated analysis, and Section VI contains the agency's explanation of how the agency has considered that analysis and other relevant information in tentatively determining that the proposed CAFE standards are maximum feasible for MYs 2024–2026 passenger cars and light trucks.

*D. How is this proposal consistent with EPA's proposal and with California's programs?*

The NHTSA and EPA proposals remain coordinated despite being issued as separate regulatory actions. Because NHTSA and EPA are regulating the exact same vehicles and manufacturer will use the same technologies to meet both sets of standards, NHTSA and EPA coordinated during the development of each agency's independent proposal to revise the standards set forth in the 2020 final rule. The NHTSA-proposed CAFE and EPA-proposed CO<sub>2</sub> standards for MY 2026 represent roughly equivalent levels of stringency and may serve as a coordinated starting point for subsequent standards. While the proposed CAFE and CO<sub>2</sub> standards for MYs 2024–2025 are different, this is largely due to the difference in the “start year” for the revised regulations—EPA is proposing to revise standards for MY 2023, while EPCA's lead time requirements, which do not apply to EPA, prevent NHTSA from proposing revised standards until MY 2024. In order to set standards for MY 2023, EPA intends to issue its final rule by December 31, 2021, whereas NHTSA has until April 2022 to finalize standards for MY 2024. The difference in timing makes separate rulemaking actions reasonable and prudent. The specific differences in what the two agencies' standards require become smaller each year, until alignment is achieved. The agencies still have coordinated closely to minimize inconsistency between the programs and will continue to do so through the final rule stage.

While NHTSA's and EPA's programs differ in certain other respects, like programmatic flexibilities, those differences are not new in this proposal. Some parts of the programs are harmonized, and others differ, often as a result of statute. Since NHTSA and EPA began regulating together under President Obama, differences in

programmatic flexibilities have meant that manufacturers have had (and will have) to plan their compliance strategies considering both the CAFE standards and the GHG standards and assure that they are in compliance with both, while still building a single fleet of vehicles to accomplish that goal. NHTSA is proposing CAFE standards that increase at 8 percent per year over MYs 2024–2026 because that is what NHTSA has tentatively concluded is maximum feasible in those model years, under the EPCA factors, and is confident that industry would still be able to build a single fleet of vehicles to meet both the NHTSA and EPA standards. Auto manufacturers are extremely sophisticated companies, well-able to manage complex compliance strategies that account for multiple regulatory programs concurrently. If different agencies' standards are more binding for some companies in certain years, this does not mean that manufacturers must build *multiple* fleets of vehicles, simply that they will have to be more strategic about *how* they build their fleet.

NHTSA has also considered and accounted for California's ZEV mandate (and its adoption by a number of other states) in developing the baseline for this proposal, and has also accounted for the Framework Agreements between California, BMW, Ford, Honda, VWA, and Volvo. NHTSA believes that it is reasonable to include ZEV in the baseline for this proposal regardless of whether California receives a waiver of preemption under the Clean Air Act (CAA) because, according to California, industry overcompliance with the ZEV mandate has been extensive, which indicates that whether or not a waiver exists, many companies intend to produce ZEVs in volumes comparable to what a ZEV mandate would require. Because no decision has yet been made on a CAA waiver for California, and because modeling a sub-national fleet is not currently an analytical option for NHTSA, NHTSA has not expressly accounted for California GHG standards in the analysis for this proposal, although we seek comment on whether and how to account for them in the final rule. Chapter 6 of the accompanying PRIA shows the estimated effects of all of these programs simultaneously.

### III. Technical Foundation for NPRM Analysis

#### A. Why does NHTSA conduct this analysis?

NHTSA is proposing to establish revised CAFE standards for passenger cars and light trucks produced for model years (MYs) 2024–2026.

NHTSA's review of the existing standards is consistent with Executive Order 13990, Protecting Public Health and the Environment and Restoring Science to Tackle the Climate Crisis, signed on January 20, 2021, directing the review of the 2020 final rule that established CAFE standards for MYs 2021–2026 and the consideration of whether to suspend, revise, or rescind that action by July 2021.<sup>18</sup> NHTSA establishes CAFE standards under the Energy Policy and Conservation Act, as amended, and this proposal is undertaken pursuant to that authority. This proposal would require CAFE stringency for both passenger cars and light trucks to increase at a rate of 8 percent per year annually from MY 2024 through MY 2026. NHTSA estimates that over the useful lives of vehicles produced prior to MY 2030, the proposal would save about 50 billion gallons of gasoline and increase electricity consumption by about 275 TWh. Accounting for emissions from both vehicles and upstream energy sector processes (*e.g.*, petroleum refining and electricity generation), NHTSA estimates that the proposal would reduce greenhouse gas emissions by about 465 million metric tons of carbon dioxide (CO<sub>2</sub>), about 500 thousand tons metric tons of methane (CH<sub>4</sub>), and about 12 thousand tons of nitrous oxide (N<sub>2</sub>O).

When NHTSA promulgates new regulations, it generally presents an analysis that estimates the impacts of such regulations, and the impacts of other regulatory alternatives. These analyses derive from statutes such as the Administrative Procedure Act (APA) and National Environmental Policy Act (NEPA), from Executive orders (such as Executive Order 12866 and 13653), and from other administrative guidance (*e.g.*, Office of Management Budget Circular A–4). For CAFE, the Energy Policy and Conservation Act (EPCA), as amended by the Energy Independence and Security Act (EISA), contains a variety of provisions that require NHTSA to consider certain compliance elements in certain ways and avoid considering other things, in determining maximum feasible CAFE standards. Collectively, capturing all of these requirements and guidance elements analytically means that, at least for CAFE, NHTSA presents an analysis that spans a meaningful range of regulatory alternatives, that quantifies a range of technological, economic, and environmental impacts, and that does so in a manner that accounts for EPCA's express requirements for the CAFE program

463 U.S. 29, 57 (1983)); *see also* Encino Motorcars, LLC v. Navarro, 136 S.Ct. 2117, 2125 (2016) (“Agencies are free to change their existing policies as long as they provide a reasoned explanation for the change.”) (Citations omitted).

<sup>18</sup> 86 FR 7037 (Jan. 25, 2021).

(e.g., passenger cars and light trucks are regulated separately, and the standard for each fleet must be set at the maximum feasible level in each model year).

NHTSA's decision regarding the proposed standards is thus supported by extensive analysis of potential impacts of the regulatory alternatives under consideration. Along with this preamble, a Technical Support Document (TSD), a Preliminary Regulatory Impact Analysis (PRIA), and a Supplemental Environmental Impact Statement (SEIS), together provide an extensive and detailed enumeration of related methods, estimates, assumptions, and results. NHTSA's analysis has been constructed specifically to reflect various aspects of governing law applicable to CAFE standards and has been expanded and improved in response to comments received to the prior rulemaking and based on additional work conducted over the last year. Further improvements may be made based on comments received to this proposal, the 2021 NAS Report,<sup>19</sup> and other additional work generally previewed in these rulemaking documents. The

<sup>19</sup> National Academies of Sciences, Engineering, and Medicine (NASEM), 2021. *Assessment of Technologies for Improving Fuel Economy of Light-Duty Vehicles—2025–2035*, Washington, DC: The National Academies Press (hereafter, "2021 NAS Report"). Available at <https://www.nationalacademies.org/our-work/assessment-of-technologies-for-improving-fuel-economy-of-light-duty-vehicles-phase-3> and for hard-copy review at DOT headquarters.

analysis for this proposal aided NHTSA in implementing its statutory obligations, including the weighing of various considerations, by reasonably informing decision-makers about the estimated effects of choosing different regulatory alternatives.

NHTSA's analysis makes use of a range of data (*i.e.*, observations of things that have occurred), estimates (*i.e.*, things that may occur in the future), and models (*i.e.*, methods for making estimates). Two examples of *data* include (1) records of actual odometer readings used to estimate annual mileage accumulation at different vehicle ages and (2) CAFE compliance data used as the foundation for the "analysis fleet" containing, among other things, production volumes and fuel economy levels of specific configurations of specific vehicle models produced for sale in the U.S. Two examples of *estimates* include (1) forecasts of future GDP growth used, with other estimates, to forecast future vehicle sales volumes and (2) the "retail price equivalent" (RPE) factor used to estimate the ultimate cost to consumers of a given fuel-saving technology, given accompanying estimates of the technology's "direct cost," as adjusted to account for estimated "cost learning effects" (*i.e.*, the tendency that it will cost a manufacturer less to apply a technology as the manufacturer gains more experience doing so).

NHTSA uses the CAFE Compliance and Effects Modeling System (usually shortened to the "CAFE Model") to

estimate manufacturers' potential responses to new CAFE and CO<sub>2</sub> standards and to estimate various impacts of those responses. DOT's Volpe National Transportation Systems Center (often simply referred to as the "Volpe Center") develops, maintains, and applies the model for NHTSA. NHTSA has used the CAFE Model to perform analyses supporting every CAFE rulemaking since 2001. The 2016 rulemaking regarding heavy-duty pickup and van fuel consumption and CO<sub>2</sub> emissions also used the CAFE Model for analysis (81 FR 73478, October 25, 2016).

The basic design of the CAFE Model is as follows: the system first estimates how vehicle manufacturers might respond to a given regulatory scenario, and from that potential compliance solution, the system estimates what impact that response will have on fuel consumption, emissions, and economic externalities. In a highly-summarized form, Figure III–1 shows the basic categories of CAFE Model procedures and the sequential flow between different stages of the modeling. The diagram does not present specific model inputs or outputs, as well as many specific procedures and model interactions. The model documentation accompanying this preamble presents these details, and Chapter 1 of the TSD contains a more detailed version of this flow diagram for readers who are interested.

BILLING CODE 4910–59–P

**Figure III-1 – CAFE Model Procedures and Logical Flow**

**BILLING CODE 4910-59-C**

More specifically, the model may be characterized as an integrated system of models. For example, one model estimates manufacturers' responses, another estimates resultant changes in total vehicle sales, and still another estimates resultant changes in fleet turnover (*i.e.*, scrappage). Additionally, and importantly, the model does not determine the form or stringency of the standards. Instead, the model applies inputs specifying the form and stringency of standards to be analyzed and produces outputs showing the impacts of manufacturers working to meet those standards, which become the basis for comparing between different potential stringencies. A regulatory scenario, meanwhile, involves specification of the form, or shape, of

the standards (*e.g.*, flat standards, or linear or logistic attribute-based standards), scope of passenger car and truck regulatory classes, and stringency of the CAFE standards for each model year to be analyzed. For example, a regulatory scenario may define CAFE standards that increase in stringency by 8 percent per year for 3 consecutive years.

Manufacturer compliance simulation and the ensuing effects estimation, collectively referred to as compliance modeling, encompass numerous subsidiary elements. Compliance simulation begins with a detailed user-provided<sup>20</sup> initial forecast of the vehicle

<sup>20</sup> Because the CAFE Model is publicly available, anyone can develop their own initial forecast (or other inputs) for the model to use. The DOT-

models offered for sale during the simulation period. The compliance simulation then attempts to bring each manufacturer into compliance with the standards<sup>21</sup> defined by the regulatory scenario contained within an input file developed by the user.

Estimating impacts involves calculating resultant changes in new vehicle costs, estimating a variety of costs (*e.g.*, for fuel) and effects (*e.g.*, CO<sub>2</sub> emissions from fuel combustion) occurring as vehicles are driven over their lifetimes before eventually being

developed market data file that contains the forecast used for this proposal is available on NHTSA's website.

<sup>21</sup> With appropriate inputs, the model can also be used to estimate impacts of manufacturers' potential responses to new CO<sub>2</sub> standards and to California's ZEV program.

scrapped, and estimating the monetary value of these effects. Estimating impacts also involves consideration of consumer responses—*e.g.*, the impact of vehicle fuel economy, operating costs, and vehicle price on consumer demand for passenger cars and light trucks. Both basic analytical elements involve the application of many analytical inputs. Many of these inputs are developed *outside* of the model and not *by* the model. For example, the model *applies* fuel prices; it does not *estimate* fuel prices.

NHTSA also uses EPA's MOVES model to estimate "tailpipe" (a.k.a. "vehicle" or "downstream") emission factors for criteria pollutants,<sup>22</sup> and uses four Department of Energy (DOE) and DOE-sponsored models to develop inputs to the CAFE Model, including three developed and maintained by DOE's Argonne National Laboratory. The agency uses the DOE Energy Information Administration's (EIA's) National Energy Modeling System (NEMS) to estimate fuel prices,<sup>23</sup> and uses Argonne's Greenhouse gases, Regulated Emissions, and Energy use in Transportation (GREET) model to estimate emissions rates from fuel production and distribution processes.<sup>24</sup> DOT also sponsored DOE/Argonne to use Argonne's Autonomie full-vehicle modeling and simulation system to estimate the fuel economy impacts for roughly a million combinations of technologies and vehicle types.<sup>25</sup> <sup>26</sup> The TSD and PRIA describe details of the agency's use of these models. In

<sup>22</sup> See <https://www.epa.gov/moves>. This proposal uses version MOVES3, available at <https://www.epa.gov/moves/latest-version-motor-vehicle-emission-simulator-moves>.

<sup>23</sup> See [https://www.eia.gov/outlooks/aeo/info\\_nems\\_archive.php](https://www.eia.gov/outlooks/aeo/info_nems_archive.php). This proposal uses fuel prices estimated using the Annual Energy Outlook (AEO) 2021 version of NEMS (see <https://www.eia.gov/outlooks/aeo/pdf/02%20AEO2021%20Petroleum.pdf>).

<sup>24</sup> Information regarding GREET is available at <https://greet.es.anl.gov/index.php>. This NPRM uses the 2020 version of GREET.

<sup>25</sup> As part of the Argonne simulation effort, individual technology combinations simulated in Autonomie were paired with Argonne's BatPaC model to estimate the battery cost associated with each technology combination based on characteristics of the simulated vehicle and its level of electrification. Information regarding Argonne's BatPaC model is available at <https://www.anl.gov/cse/batpac-model-software>.

<sup>26</sup> In addition, the impact of engine technologies on fuel consumption, torque, and other metrics was characterized using GT-POWER simulation modeling in combination with other engine modeling that was conducted by IAV Automotive Engineering, Inc. (IAV). The engine characterization "maps" resulting from this analysis were used as inputs for the Autonomie full-vehicle simulation modeling. Information regarding GT-POWER is available at <https://www.gtisoft.com/gt-suite-applications/propulsion-systems/gt-power-engine-simulation-software>.

addition, as discussed in the SEIS accompanying this NPRM, DOT relied on a range of climate models to estimate impacts on climate, air quality, and public health. The SEIS discusses and describes the use of these models.

To prepare for analysis supporting this proposal, DOT has refined and expanded the CAFE Model through ongoing development. Examples of such changes, some informed by past external comments, made since early 2020 include:

- Inclusion of 400- and 500-mile BEVs;
- Inclusion of high compression ratio (HCR) engines with cylinder deactivation;
- Accounting for manufacturers' responses to both CAFE and CO<sub>2</sub> standards jointly (rather than only separately)
- Accounting for the ZEV mandates applicable in California and the "Section 177" states;
- Accounting for some vehicle manufacturers' (BMW, Ford, Honda, VW, and Volvo) voluntary agreement with the State of California to continued annual national-level reductions of vehicle greenhouse gas emissions through MY 2026, with greater rates of electrification than would have been required under the 2020 Federal final rule;<sup>27</sup>

- Inclusion of CAFE civil penalties in the "effective cost" metric used when simulating manufacturers' potential application of fuel-saving technologies;
- Refined procedures to estimate health effects and corresponding monetized damages attributable to criteria pollutant emissions;
- New procedures to estimate the impacts and corresponding monetized damages of highway vehicle crashes that do not result in fatalities;
- Procedures to ensure that modeled technology application and production volumes are the same across all regulatory alternatives in the earliest model years; and
- Procedures to more precisely focus application of EPCA's "standard setting constraints" (*i.e.*, regarding the consideration of compliance credits and additional dedicated alternative fueled vehicles) to only those model years for which NHTSA is proposing or finalizing new standards.

These changes reflect DOT's long-standing commitment to ongoing refinement of its approach to estimating

<sup>27</sup> For more information on the Framework Agreements for Clean Cars, including the specific agreements signed by individual manufacturers, see <https://www2.arb.ca.gov/news/framework-agreements-clean-cars>.

the potential impacts of new CAFE standards.

NHTSA underscores that this analysis exercises the CAFE Model in a manner that explicitly accounts for the fact that in producing a single fleet of vehicles for sale in the United States, manufacturers face the *combination* of CAFE standards, EPA CO<sub>2</sub> standards, and ZEV mandates, and for five manufacturers, the voluntary agreement with California to more stringent CO<sub>2</sub> reduction requirements (also applicable to these manufacturers' total production for the U.S. market) through model year 2026. These regulations and contracts have important structural and other differences that affect the strategy a manufacturer could use to comply with each of the above.

As explained, the analysis is designed to reflect a number of statutory and regulatory requirements applicable to CAFE and tailpipe CO<sub>2</sub> standard-setting. EPCA contains a number of requirements governing the scope and nature of CAFE standard setting. Among these, some have been in place since EPCA was first signed into law in 1975, and some were added in 2007, when Congress passed EISA and amended EPCA. EPCA/EISA requirements regarding the technical characteristics of CAFE standards and the analysis thereof include, but are not limited to, the following, and the analysis reflects these requirements as summarized:

**Corporate Average Standards:** The provision at 49 U.S.C. 32902 requires standards that apply to the average fuel economy levels achieved by each corporation's fleets of vehicles produced for sale in the U.S.<sup>28</sup> The CAFE Model calculates the CAFE and CO<sub>2</sub> levels of each manufacturer's fleets based on estimated production volumes and characteristics, including fuel economy levels, of distinct vehicle models that could be produced for sale in the U.S.

**Separate Standards for Passenger Cars and Light Trucks:** The provision at 49 U.S.C. 32902 requires the Secretary of Transportation to set CAFE standards separately for passenger cars and light trucks. The CAFE Model accounts separately for passenger cars and light trucks when it analyzes CAFE or CO<sub>2</sub> standards, including differentiated standards and compliance.

<sup>28</sup> This differs from safety standards and traditional emissions standards, which apply separately to each vehicle. For example, every vehicle produced for sale in the U.S. must, on its own, meet all applicable Federal motor vehicle safety standards (FMVSS), but no vehicle produced for sale must, on its own, meet Federal fuel economy standards. Rather, each manufacturer is required to produce a mix of vehicles that, taken together, achieve an average fuel economy level no less than the applicable minimum level.

*Attribute-Based Standards:* The provision at 49 U.S.C. 32902 requires the Secretary of Transportation to define CAFE standards as mathematical functions expressed in terms of one or more vehicle attributes related to fuel economy. This means that for a given manufacturer's fleet of vehicles produced for sale in the U.S. in a given regulatory class and model year, the applicable minimum CAFE requirement (*i.e.*, the numerical value of the requirement) is computed based on the applicable mathematical function, and the mix and attributes of vehicles in the manufacturer's fleet. The CAFE Model accounts for such functions and vehicle attributes explicitly.

*Separately Defined Standards for Each Model Year:* The provision at 49 U.S.C. 32902 requires the Secretary to set CAFE standards (separately for passenger cars and light trucks<sup>29</sup>) at the maximum feasible levels in each model year. The CAFE Model represents each model year explicitly, and accounts for the production relationships between model years.<sup>30</sup>

*Separate Compliance for Domestic and Imported Passenger Car Fleets:* The provision at 49 U.S.C. 32904 requires the EPA Administrator to determine CAFE compliance separately for each manufacturer's fleets of domestic passenger cars and imported passenger cars, which manufacturers must consider as they decide how to improve the fuel economy of their passenger car fleets. The CAFE Model accounts explicitly for this requirement when simulating manufacturers' potential responses to CAFE standards, and combines any given manufacturer's domestic and imported cars into a single fleet when simulating that manufacturer's potential response to CO<sub>2</sub> standards (because EPA does not have separate standards for domestic and imported passenger cars).

*Minimum CAFE Standards for Domestic Passenger Car Fleets:* The provision at 49 U.S.C. 32902 requires that domestic passenger car fleets meet a minimum standard, which is calculated as 92 percent of the industry-wide average level required under the applicable attribute-based CAFE standard, as projected by the Secretary

<sup>29</sup> 49 U.S.C. chapter 329 uses the term "non-passenger automobiles," while NHTSA uses the term "light trucks" in its CAFE regulations. The terms' meanings are identical.

<sup>30</sup> For example, a new engine first applied to given vehicle model/configuration in model year 2020 will most likely be "carried forward" to model year 2021 of that same vehicle model/configuration, in order to reflect the fact that manufacturers do not apply brand-new engines to a given vehicle model every single year. The CAFE Model is designed to account for these real-world factors.

at the time the standard is promulgated. The CAFE Model accounts explicitly for this requirement for CAFE standards and sets this requirement aside for CO<sub>2</sub> standards.

*Civil Penalties for Noncompliance:* The provision at 49 U.S.C. 32912 (and implementing regulations) prescribes a rate (in dollars per tenth of a mpg) at which the Secretary is to levy civil penalties if a manufacturer fails to comply with a CAFE standard for a given fleet in a given model year, after considering available credits. Some manufacturers have historically demonstrated a willingness to pay civil penalties rather than achieving full numerical compliance across all fleets. The CAFE Model calculates civil penalties for CAFE shortfalls and provides means to estimate that a manufacturer might stop adding fuel-saving technologies once continuing to do so would be effectively more "expensive" (after accounting for fuel prices and buyers' willingness to pay for fuel economy) than paying civil penalties. The CAFE Model does not allow civil penalty payment as an option for CO<sub>2</sub> standards.

*Dual-Fueled and Dedicated Alternative Fuel Vehicles:* For purposes of calculating CAFE levels used to determine compliance, 49 U.S.C. 32905 and 32906 specify methods for calculating the fuel economy levels of vehicles operating on alternative fuels to gasoline or diesel through MY 2020. After MY 2020, methods for calculating alternative fuel vehicle (AFV) fuel economy are governed by regulation. The CAFE Model is able to account for these requirements explicitly for each vehicle model. However, 49 U.S.C. 32902 prohibits consideration of the fuel economy of dedicated alternative fuel vehicle (AFV) models when NHTSA determines what levels of CAFE standards are maximum feasible. The CAFE Model therefore has an option to be run in a manner that excludes the additional application of dedicated AFV technologies in model years for which maximum feasible standards are under consideration. As allowed under NEPA for analysis appearing in EISs informing decisions regarding CAFE standards, the CAFE Model can also be run without this analytical constraint. The CAFE Model does account for dual- and alternative fuel vehicles when simulating manufacturers' potential responses to CO<sub>2</sub> standards. For natural gas vehicles, both dedicated and dual-fueled, EPA has a multiplier of 2.0 for model years 2022–2026.<sup>31</sup>

<sup>31</sup> While EPA is proposing changes to this and other flexibility provisions in its separate NPRM,

*ZEV Mandates:* The CAFE Model can simulate manufacturers' compliance with ZEV mandates applicable in California and "Section 177"<sup>32</sup> states. The approach involves identifying specific vehicle model/configurations that could be replaced with PHEVs or BEVs, and immediately making these changes in each model year, before beginning to consider the potential that other technologies could be applied toward compliance with CAFE or CO<sub>2</sub> standards.

*Creation and Use of Compliance Credits:* The provision at 49 U.S.C. 32903 provides that manufacturers may earn CAFE "credits" by achieving a CAFE level beyond that required of a given fleet in a given model year, and specifies how these credits may be used to offset the amount by which a different fleet falls short of its corresponding requirement. These provisions allow credits to be "carried forward" and "carried back" between model years, transferred between regulated classes (domestic passenger cars, imported passenger cars, and light trucks), and traded between manufacturers. However, credit use is also subject to specific statutory limits. For example, CAFE compliance credits can be carried forward a maximum of five model years and carried back a maximum of three model years. Also, EPCA/EISA caps the amount of credit that can be transferred between passenger car and light truck fleets and prohibits manufacturers from applying traded or transferred credits to offset a failure to achieve the applicable minimum standard for domestic passenger cars. The CAFE Model explicitly simulates manufacturers' potential use of credits carried forward from prior model years or transferred from other fleets.<sup>33</sup> The provision at 49

for purposes of this NPRM, the CAFE Model only reflects the current EPA regulatory flexibilities.

<sup>32</sup> The term "Section 177" states refers to states which have elected to adopt California's standards in lieu of Federal requirements, as allowed under Section 177 of the CAA.

<sup>33</sup> The CAFE Model does not explicitly simulate the potential that manufacturers would carry CAFE or CO<sub>2</sub> credits back (*i.e.*, borrow) from future model years, or acquire and use CAFE compliance credits from other manufacturers. At the same time, because EPA has currently elected not to limit credit trading, the CAFE Model can be exercised in a manner that simulates unlimited (a.k.a. "perfect") CO<sub>2</sub> compliance credit trading throughout the industry (or, potentially, within discrete trading "blocs"). NHTSA believes there is significant uncertainty in how manufacturers may choose to employ these particular flexibilities in the future: For example, while it is reasonably foreseeable that a manufacturer who over-complies in one year may "coast" through several subsequent years relying on those credits rather than continuing to make technology improvements, it is harder to assume with confidence that manufacturers will rely on

U.S.C. 32902 prohibits consideration of manufacturers' potential application of CAFE compliance credits when setting maximum feasible CAFE standards. The CAFE Model can be operated in a manner that excludes the application of CAFE credits for a given model year under consideration for standard setting. For modeling CO<sub>2</sub> standards, the CAFE Model does not limit transfers. Insofar as the CAFE Model can be exercised in a manner that simulates trading of CO<sub>2</sub> compliance credits, such simulations treat trading as unlimited.<sup>34</sup>

*Statutory Basis for Stringency:* The provision at 49 U.S.C. 32902 requires the Secretary to set CAFE standards at the maximum feasible levels, considering technological feasibility, economic practicability, the need of the United States to conserve energy, and the impact of other motor vehicle standards of the Government. EPCA/EISA authorizes the Secretary to interpret these factors, and as the Department's interpretation has evolved, NHTSA has continued to expand and refine its qualitative and quantitative analysis to account for these statutory factors. For example, one of the ways that economic practicability considerations are incorporated into the analysis is through the technology effectiveness determinations: The Autonomie simulations reflect the agency's judgment that it would not be economically practicable for a manufacturer to "split" an engine

future technology investments to offset prior-year shortfalls, or whether/how manufacturers will trade credits with market competitors rather than making their own technology investments. Historically, carry-back and trading have been much less utilized than carry-forward, for a variety of reasons including higher risk and preference not to 'pay competitors to make fuel economy improvements we should be making' (to paraphrase one manufacturer), although NHTSA recognizes that carry-back and trading are used more frequently when standards increase in stringency more rapidly. Given the uncertainty just discussed, and given also the fact that the agency has yet to resolve some of the analytical challenges associated with simulating use of these flexibilities, the agency considers borrowing and trading to involve sufficient risk that it is prudent to support this proposal with analysis that sets aside the potential that manufacturers could come to depend widely on borrowing and trading. While compliance costs in real life may be somewhat different from what is modeled today as a result of this analytical decision, that is broadly true no matter what, and the agency does not believe that the difference would be so great that it would change the policy outcome. Furthermore, a manufacturer employing a trading strategy would presumably do so because it represents a lower-cost compliance option. Thus, the estimates derived from this modeling approach are likely to be conservative in this respect, with real-world compliance costs possibly being lower.

<sup>34</sup>To avoid making judgments about possible future trading activity, the model simulates trading by combining all manufacturers into a single entity, so that the most cost-effective choices are made for the fleet as a whole.

shared among many vehicle model/configurations into myriad versions each optimized to a single vehicle model/configuration.

*National Environmental Policy Act:* In addition, NEPA requires the Secretary to issue an EIS that documents the estimated impacts of regulatory alternatives under consideration. The SEIS accompanying this NPRM documents changes in emission inventories as estimated using the CAFE Model, but also documents corresponding estimates—based on the application of other models documented in the SEIS, of impacts on the global climate, on tropospheric air quality, and on human health.

*Other Aspects of Compliance:* Beyond these statutory requirements applicable to DOT and/or EPA are a number of specific technical characteristics of CAFE and/or CO<sub>2</sub> regulations that are also relevant to the construction of this analysis. For example, EPA has defined procedures for calculating average CO<sub>2</sub> levels, and has revised procedures for calculating CAFE levels, to reflect manufacturers' application of "off-cycle" technologies that increase fuel economy (and reduce CO<sub>2</sub> emissions). Although too little information is available to account for these provisions explicitly in the same way that the agency has accounted for other technologies, the CAFE Model does include and makes use of inputs reflecting the agency's expectations regarding the extent to which manufacturers may earn such credits, along with estimates of corresponding costs. Similarly, the CAFE Model includes and makes use of inputs regarding credits EPA has elected to allow manufacturers to earn toward CO<sub>2</sub> levels (not CAFE) based on the use of air conditioner refrigerants with lower global warming potential (GWP), or on the application of technologies to reduce refrigerant leakage. In addition, the CAFE Model accounts for EPA "multipliers" for certain alternative fueled vehicles, based on current regulatory provisions or on alternative approaches. Although these are examples of regulatory provisions that arise from the exercise of discretion rather than specific statutory mandate, they can materially impact outcomes.

Besides the updates to the model described above, any analysis of regulatory actions that will be implemented several years in the future, and whose benefits and costs accrue over decades, requires a large number of assumptions. Over such time horizons, many, if not most, of the relevant assumptions in such an analysis are inevitably uncertain. Each successive

CAFE analysis seeks to update assumptions to reflect better the current state of the world and the best current estimates of future conditions.

A number of assumptions have been updated since the 2020 final rule for this proposal. While NHTSA would have made these updates as a matter of course, we note that the COVID-19 pandemic has been profoundly disruptive, including in ways directly material to major analytical inputs such as fuel prices, gross domestic product (GDP), vehicle production and sales, and highway travel. As discussed below, NHTSA has updated its "analysis fleet" from a model year 2017 reference to a model year 2020 reference, updated estimates of manufacturers' compliance credit "holdings," updated fuel price projections to reflect the U.S. Energy Information Administration's (EIA's) 2021 Annual Energy Outlook (AEO), updated projections of GDP and related macroeconomic measures, and updated projections of future highway travel. In addition, through Executive Order 13990, President Biden has required the formation of an Interagency Working Group (IWG) on the Social Cost of Greenhouse Gases and charged this body with updating estimates of the social costs of carbon, nitrous oxide, and methane. As discussed in the TSD, NHTSA has applied the IWG's interim guidance, which contains cost estimates (per ton of emissions) considerably greater than those applied in the analysis supporting the 2020 SAFE rule. These and other updated analytical inputs are discussed in detail in the TSD. NHTSA seeks comment on the above discussion.

#### B. What is NHTSA analyzing?

As in the CAFE and CO<sub>2</sub> rulemakings in 2010, 2012, and 2020, NHTSA is proposing to set attribute-based CAFE standards defined by a mathematical function of vehicle footprint, which has observable correlation with fuel economy. EPCA, as amended by EISA, expressly requires that CAFE standards for passenger cars and light trucks be based on one or more vehicle attributes related to fuel economy and be expressed in the form of a mathematical function.<sup>35</sup> Thus, the proposed standards (and regulatory alternatives) take the form of fuel economy targets expressed as functions of vehicle footprint (the product of vehicle wheelbase and average track width) that are separate for passenger cars and light trucks. Chapter 1.2.3 of the TSD discusses in detail NHTSA's continued

<sup>35</sup> 49 U.S.C. 32902(a)(3)(A).

reliance on footprint as the relevant attribute in this proposal.

Under the footprint-based standards, the function defines a fuel economy performance target for each unique footprint combination within a car or truck model type. Using the functions, each manufacturer thus will have a CAFE average standard for each year that is almost certainly unique to each of its fleets,<sup>36</sup> based upon the footprints and production volumes of the vehicle models produced by that manufacturer. A manufacturer will have separate footprint-based standards for cars and for trucks, consistent with 49 U.S.C.

32902(b)'s direction that NHTSA must set separate standards for cars and for trucks. The functions are mostly sloped, so that generally, larger vehicles (*i.e.*, vehicles with larger footprints) will be subject to lower mpg targets than smaller vehicles. This is because, generally speaking, smaller vehicles are more capable of achieving higher levels of fuel economy, mostly because they tend not to have to work as hard (and therefore require as much energy) to perform their driving task. Although a manufacturer's fleet average standards could be estimated throughout the model year based on the projected

production volume of its vehicle fleet (and are estimated as part of EPA's certification process), the standards with which the manufacturer must comply are determined by its final model year production figures. A manufacturer's calculation of its fleet average standards, as well as its fleets' average performance at the end of the model year, will thus be based on the production-weighted average target and performance of each model in its fleet.<sup>37</sup>

For passenger cars, consistent with prior rulemakings, NHTSA is proposing to define fuel economy targets as shown in Equation III-1.

$$TARGET_{FE} = \frac{1}{MIN \left[ MAX \left( c \times FOOTPRINT + d, \frac{1}{a} \right), \frac{1}{b} \right]}$$

**Equation III-1 – Passenger Car Fuel Economy Footprint Target Curve**

Where:

$TARGET_{FE}$  is the fuel economy target (in mpg) applicable to a specific vehicle model type with a unique footprint combination,

$a$  is a minimum fuel economy target (in mpg),

$b$  is a maximum fuel economy target (in mpg),

$c$  is the slope (in gallons per mile per square foot, or gpm, per square foot) of a line relating fuel consumption (the inverse of fuel economy) to footprint, and

$d$  is an intercept (in gpm) of the same line.

Here,  $MIN$  and  $MAX$  are functions that take the minimum and maximum values, respectively, of the set of included

values. For example,  $MIN[40, 35] = 35$  and  $MAX(40, 25) = 40$ , such that  $MIN[MAX(40, 25), 35] = 35$ .

For the preferred alternative, this equation is represented graphically as the curves in Figure III-2.

**BILLING CODE 4910-59-P**

<sup>36</sup> EPCA/EISA requires NHTSA and EPA to separate passenger cars into domestic and import passenger car fleets for CAFE compliance purposes (49 U.S.C. 32904(b)), whereas EPA combines all passenger cars into one fleet.

<sup>37</sup> As discussed in prior rulemakings, a manufacturer may have some vehicle models that exceed their target and some that are below their target. Compliance with a fleet average standard is determined by comparing the fleet average standard

(based on the production-weighted average of the target levels for each model) with fleet average performance (based on the production-weighted average of the performance of each model).

**Figure III-2 – Preferred Alternative, Fuel Economy Target Curves, Passenger Cars**

For light trucks, also consistent with prior rulemakings, NHTSA is proposing to define fuel economy targets as shown in Equation III-2.

$TARGET_{FE}$

$$= MAX \left( \frac{1}{MIN \left[ MAX \left( c \times FOOTPRINT + d, \frac{1}{a} \right), \frac{1}{b} \right]}, \frac{1}{MIN \left[ MAX \left( g \times FOOTPRINT + h, \frac{1}{e} \right), \frac{1}{f} \right]} \right)$$

**Equation III-2 – Light Truck Fuel Economy Target Curve**

Where:

$TARGET_{FE}$  is the fuel economy target (in mpg) applicable to a specific vehicle model type with a unique footprint combination,  $a, b, c,$  and  $d$  are as for passenger cars, but taking values specific to light trucks,

$e$  is a second minimum fuel economy target (in mpg),  $f$  is a second maximum fuel economy target (in mpg),  $g$  is the slope (in gpm per square foot) of a second line relating fuel consumption (the inverse of fuel economy) to footprint, and

$h$  is an intercept (in gpm) of the same second line.

For the preferred alternative, this equation is represented graphically as the curves in Figure III-3.

**Figure III-3 – Preferred Alternative, Fuel Economy Target Curves, Light Trucks**

**BILLING CODE 4910-59-C**

Although the general model of the target function equation is the same for each vehicle category (passenger cars and light trucks) and each model year, the parameters of the function equation differ for cars and trucks. The actual parameters for both the preferred alternative and the other regulatory alternatives are presented in Section IV.B of this preamble.

As has been the case since NHTSA began establishing attribute-based standards, no vehicle need meet the specific applicable fuel economy target, because compliance with CAFE

standards is determined based on corporate average fuel economy. In this respect, CAFE standards are unlike, for example, Federal Motor Vehicle Safety Standards (FMVSS) and certain vehicle criteria pollutant emissions standards where each car must meet the requirements. CAFE standards apply to the average fuel economy levels achieved by manufacturers' entire fleets of vehicles produced for sale in the U.S. Safety standards apply on a vehicle-by-vehicle basis, such that every single vehicle produced for sale in the U.S. must, on its own, comply with minimum FMVSS. When first

mandating CAFE standards in the 1970s, Congress specified a more flexible averaging-based approach that allows some vehicles to "under comply" (*i.e.*, fall short of the overall flat standard, or fall short of their target under attribute-based standards) as long as a manufacturer's overall fleet is in compliance.

The required CAFE level applicable to a given fleet in a given model year is determined by calculating the production-weighted harmonic average of fuel economy targets applicable to specific vehicle model configurations in the fleet, as shown in Equation III-3.

$$CAFE_{required} = \frac{\sum_i PRODUCTION_i}{\sum_i \frac{PRODUCTION_i}{TARGET_{FE,i}}}$$

### Equation III-3 – Calculation for Required CAFE Level

Where:

$CAFE_{required}$  is the CAFE level the fleet is required to achieve,

$i$  refers to specific vehicle model/configurations in the fleet,

$PRODUCTION_i$  is the number of model configuration  $i$  produced for sale in the U.S., and

$TARGET_{FE,i}$  is the fuel economy target (as defined above) for model configuration  $i$ .

Chapter 1 of the TSD describes the use of attribute-based standards, generally, and explains the specific decision, in past rules and for the current rule, to continue to use vehicle footprint as the attribute over which to vary stringency. That chapter also discusses the policy in selecting the specific mathematical function; the methodologies used to develop the current attribute-based standards; and methodologies previously used to reconsider the mathematical function for CAFE standards. NHTSA refers readers to the TSD for a full discussion of these topics.

While Chapter 1 of the TSD explains why the proposed standards for MYs 2024–2026 continue to be footprint-based, the question has arisen periodically of whether NHTSA should instead consider multi-attribute standards, such as those that also depend on weight, torque, power, towing capability, and/or off-road capability. To date, every time NHTSA has considered options for which attribute(s) to select, the agency has concluded that a properly-designed footprint-based approach provides the best means of achieving the basic policy goals (*i.e.*, by increasing the likelihood of improved fuel economy across the entire fleet of vehicles; by reducing disparities between manufacturers' compliance burdens; and by reducing incentives for manufacturers to respond to standards in ways that could compromise overall highway safety) involved in applying an attribute-based standard. At the same time, footprint-based standards need also to be structured in a way that furthers the energy and environmental policy goals of EPCA without creating inappropriate incentives to increase vehicle size in ways that could increase fuel consumption or compromise safety. That said, as NHTSA moves forward

with the CAFE program, and continues to refine our understanding of the light-duty vehicle market and trends in vehicle and highway safety, NHTSA will also continue to revisit whether other approaches (or other ways of applying the same basic approaches) could foreseeably provide better means of achieving policy goals.

For example, in the 2021 NAS Report, the committee recommended that if Congress does not act to remove the prohibition at 49 U.S.C. 32902(h) on considering the fuel economy of dedicated alternative fuel vehicles (like BEVs) in determining maximum feasible CAFE standards, then NHTSA should account for the fuel economy benefits of ZEVs by “setting the standard as a function of a second attribute in addition to footprint—for example, the expected market share of ZEVs in the total U.S. fleet of new light-duty vehicles—such that the standards increase as the share of ZEVs in the total U.S. fleet increases.”<sup>38</sup> DOE seconded this suggestion in its comments during interagency review of this proposal. Chapter 1 of the TSD contains an examination of this suggestion, and NHTSA seeks comment on whether and how NHTSA might consider adding electrification as an attribute on which to base CAFE standards.

Changes in the market that have occurred since NHTSA last examined the appropriateness of the footprint curves have been, for the most part, consistent with the trends that the agency identified in 2018. For the most part, the fleet has continued to grow somewhat in vehicle size, as vehicle manufacturers have continued over the past several years to reduce their offerings of smaller footprint vehicles and increase their sales of larger footprint vehicles and continue to sell many small to mid-size crossovers and SUVs, some of which are classified as passenger cars and some of which are

light trucks. Although this trend has had the effect of reducing the achieved fuel economy of the fleet (and thus increasing its carbon dioxide emissions) as compared to if vehicles had instead remained the same size or gotten smaller, NHTSA does not believe that there have been sufficiently major changes in the relationship between footprint and fuel economy over the last three years to warrant a detailed re-examination of that relationship as part of this proposal. Moreover, changes to the footprint curves can significantly affect manufacturers' ability to comply. Given the available lead time between now and the beginning of MY 2024, NHTSA believes it is unlikely any potential benefit of changing the shape of the footprint curves (when we are already proposing to change standard stringency) would outweigh the costs of doing so.

NHTSA seeks comment on the choice of footprint as the attribute on which the proposed standards are based, and particularly seeks comment on the 2021 NAS report recommendation described above. If commenters wish to provide comments on possible changes to the attribute(s) on which fuel economy standards should be based, including approaches for considering vehicle electrification in ways that would further a zero emissions fleet as discussed in Chapter 1 of the TSD, NHTSA would appreciate commenters including a discussion of the timeframe in which those changes should be made—for example, whether and how much lead time would be preferable for making such changes, particularly recognizing the available lead time for MY 2024. NHTSA also seeks comment on whether, to the extent that vehicle upsizing trends and fuel economy curves are causally related instead of correlated, it is the curve shape versus the choice of footprint that creates this relationship (or, alternatively, whether the relationship if any derives from vehicle classification). Again, if commenters wish to provide comments on possible changes to the curve shapes, NHTSA would appreciate commenters including a discussion of the timeframe in which those changes should be made.

NHTSA seeks comment on the discussion above and in the TSD.

Available at <https://www.nationalacademies.org/our-work/assessment-of-technologies-for-improving-fuel-economy-of-light-duty-vehicles-phase-3> and for hard-copy review at DOT headquarters.

### C. What inputs does the compliance analysis require?

The CAFE Model applies various technologies to different vehicle models in each manufacturer's product line to simulate how each manufacturer might make progress toward compliance with the specified standard. Subject to a variety of user-controlled constraints, the model applies technologies based on their relative cost-effectiveness, as determined by several input assumptions regarding the cost and effectiveness of each technology, the cost of compliance (determined by the change in CAFE or CO<sub>2</sub> credits, CAFE-related civil penalties, or value of CO<sub>2</sub> credits, depending on the compliance program being evaluated), and the value of avoided fuel expenses. For a given manufacturer, the compliance simulation algorithm applies technologies either until the manufacturer runs out of cost-effective technologies,<sup>39</sup> until the manufacturer exhausts all available technologies, or, if the manufacturer is assumed to be willing to pay civil penalties or acquire credits from another manufacturer, until paying civil penalties or purchasing credits becomes more cost-effective than increasing vehicle fuel economy. At this stage, the system assigns an incurred technology cost and updated fuel economy to each vehicle model, as well as any civil penalties incurred/credits purchased by each manufacturer. This compliance simulation process is repeated for each model year included in the study period (through model year 2050 in this analysis).

At the conclusion of the compliance simulation for a given regulatory scenario the system transitions between compliance simulation and effects calculations. This is the point where the system produces a full representation of the registered light-duty vehicle population in the United States. The CAFE Model then uses this fleet to generate estimates of the following (for each model year and calendar year included in the analysis): Lifetime travel, fuel consumption, carbon dioxide and criteria pollutant emissions, the magnitude of various economic externalities related to vehicular travel (e.g., congestion and noise), and energy consumption (e.g., the economic costs of short-term increases in petroleum prices, or social damages associated

<sup>39</sup> Generally, the model considers a technology cost-effective if it pays for itself in fuel savings within 30 months. Depending on the settings applied, the model can continue to apply technologies that are *not* cost-effective rather than choosing other compliance options; if it does so, it will apply those additional technologies in order of cost-effectiveness (i.e., most cost-effective first).

with GHG emissions). The system then uses these estimates to measure the benefits and costs associated with each regulatory alternative (relative to the no-action alternative).

To perform this analysis, the CAFE Model uses millions of data points contained in several input files that have been populated by engineers, economists, and safety and environmental program analysts at both NHTSA and the DOT's Volpe National Transportation Systems Center (Volpe). In addition, some of the input data comes from modeling and simulation analysis performed by experts at Argonne National Laboratory using their Autonomie full vehicle simulation model and BatPaC battery cost model. Other inputs are derived from other models, such as the U.S. Energy Information Administration's (EIA's) National Energy Modeling System (NEMS), Argonne's "GREET" fuel-cycle emissions analysis model, and U.S. EPA's "MOVES" vehicle emissions analysis model. As NHTSA and Volpe are both organizations within DOT, we use DOT throughout these sections to refer to the collaborative work performed for this analysis.

This section and Section III.D describe the inputs that the compliance simulation requires, including an in-depth discussion of the technologies used in the analysis, how they are defined in the CAFE Model, how they are characterized on vehicles that already exist in the market, how they can be applied to realistically simulate manufacturer's decisions, their effectiveness, and their cost. The inputs and analyses for the effects calculations, including economic, safety, and environmental effects, are discussed later in Sections III.C through III.H. NHTSA seeks comment on the following discussion.

#### 1. Overview of Inputs to the Analysis

As discussed above, the current analysis involves estimating four major swaths of effects. First, the analysis estimates how the application of various combinations of technologies could impact vehicles' costs and fuel economy levels (and CO<sub>2</sub> emission rates). Second, the analysis estimates how vehicle manufacturers might respond to standards by adding fuel-saving technologies to new vehicles. Third, the analysis estimates how changes in new vehicles might impact vehicle sales and operation. Finally, the analysis estimates how the combination of these changes might impact national-scale energy consumption, emissions, highway safety, and public health.

There are several CAFE Model input files important to the discussion these first two steps, and these input files are discussed in detail later in this section and in Section III.D. The Market Data file contains the detailed description of the vehicle models and model configurations each manufacturer produces for sale in the U.S. The file also contains a range of other inputs that, though not specific to individual vehicle models, may be specific to individual manufacturers. The Technologies file identifies about six dozen technologies to be included in the analysis, indicates when and how widely each technology can be applied to specific types of vehicles, provides most of the inputs involved in estimating what costs will be incurred, and provides some of the inputs involved in estimating impacts on vehicle fuel consumption and weight.

The CAFE Model also makes use of databases of estimates of fuel consumption impacts and, as applicable, battery costs for different combinations of fuel saving technologies.<sup>40</sup> These databases are termed the FE1 and FE2 Adjustments databases (the main database and the database specific to plug-in hybrid electric vehicles, applicable to those vehicles' operation on electricity) and the Battery Costs database. DOT developed these databases using a large set of full vehicle and accompanying battery cost model simulations developed by Argonne National Laboratory. The Argonne simulation outputs, battery costs, and other reference materials are also discussed in the following sections.<sup>41</sup>

The following discussion in this section and in Section III.D expands on the inputs used in the compliance analysis. Further detail is included in Chapters 2 and 3 of the TSD accompanying this proposal, and all input values relevant to the compliance analysis can be seen in the Market Data, Technologies, fuel consumption and battery cost database files, and Argonne

<sup>40</sup> To be used as files provided separately from the model and loaded every time the model is executed, these databases are prohibitively large, spanning more than a million records and more than half a gigabyte. To conserve memory and speed model operation, DOT has integrated the databases into the CAFE Model executable file. When the model is run, however, the databases are extracted and placed in an accessible location on the user's disk drive.

<sup>41</sup> The Argonne workbooks included in the docket for this proposal include ten databases that contain the outputs of the Autonomie full vehicle simulations, two summary workbooks of assumptions used for the full vehicle simulations, a data dictionary, and the lookup tables for battery costs generated using the BatPaC battery cost model.

summary files included in the docket for this proposal. As previously mentioned, other model input files underlie the effects analysis, and these are discussed in detail in Sections III.C through III.H. NHTSA seeks comment on the above discussion.

## 2. The Market Data File

The Market Data file contains the detailed description of the vehicle models and model configurations each manufacturer produces for sale in the U.S. This snapshot of the recent light duty vehicle market, termed the analysis fleet, or baseline fleet, is the starting point for the evaluation of different stringency levels for future fuel economy standards. The analysis fleet provides a reference from which to project how manufacturers could apply additional technologies to vehicles to cost-effectively improve vehicle fuel economy, in response to regulatory action and market conditions.<sup>42</sup> For this analysis, the MY 2020 light duty fleet was selected as the baseline for further evaluation of the effects of different fuel economy standards. The Market Data file also contains a range of other inputs that, though not specific to individual vehicle models, may be specific to individual manufacturers.

The Market Data file is an Excel spreadsheet that contains five worksheets. Three worksheets, the Vehicles worksheet, Engines worksheet, and Transmissions worksheet, characterize the baseline fleet for this analysis. The three worksheets contain a characterization of every vehicle sold in MY 2020 and their relevant technology content, including the engines and transmissions that a manufacturer uses in its vehicle platforms and how those technologies are shared across platforms. In addition, the Vehicles worksheet includes

baseline economic and safety inputs linked to each vehicle that allow the CAFE Model to estimate economic and safety impacts resulting from any simulated compliance pathway. The remaining two worksheets, the Manufacturers worksheet and Credits and Adjustments worksheet, include baseline compliance positions for each manufacturer, including each manufacturer's starting CAFE credit banks and whether the manufacturer is willing to pay civil penalties for noncompliance with CAFE standards, among other inputs.

New inputs have been added for this analysis in the Vehicles worksheet and Manufacturers worksheet. The new inputs indicate which vehicles a manufacturer may reasonably be expected to convert to a zero emissions vehicle (ZEV) at first redesign opportunity, to comply with several States' ZEV program provisions. The new inputs also indicate if a manufacturer has entered into an agreement with California to achieve more stringent CO<sub>2</sub> emissions reductions targets than those promulgated in the 2020 final rule.

The following sections discuss how we built the Market Data file, including characterizing vehicles sold in MY 2020 and their technology content, and baseline safety, economic, and manufacturer compliance positions. A detailed discussion of the Market Data file development process is in TSD Chapter 2.2. NHTSA seeks comment on the below discussion and the agency's approach to developing the Market Data file for this proposal.

### (a) Characterizing Vehicles and Their Technology Content

The Market Data file integrates information from many sources, including manufacturer compliance submissions, publicly available information, and confidential business information. At times, DOT must populate inputs using analyst judgment, either because information is still incomplete or confidential, or because

the information does not yet exist.<sup>43</sup> For this analysis DOT uses mid-model year 2020 compliance data as the basis of the analysis fleet. The compliance data is supplemented for each vehicle nameplate with manufacturer specification sheets, usually from the manufacturer media website, or from online marketing brochures.<sup>44</sup> For additional information about how specification sheets inform MY 2020 vehicle technology assignments, see the technology specific assignments sections in Section III.D.

DOT uses the mid-model year 2020 compliance data to create a row on the Vehicles worksheet in the Market Data file for each vehicle (or vehicle variant<sup>45</sup>) that lists a certification fuel economy, sales volume, regulatory class, and footprint. DOT identifies which combination of modeled technologies reasonably represents the fuel saving technologies already on each vehicle, and assigns those technologies to each vehicle, either on the Vehicles worksheet, the Engines worksheet, or the Transmissions worksheet. The fuel saving technologies considered in this analysis are listed in Table III-1.

#### BILLING CODE 4910-59-P

<sup>43</sup> Forward looking refresh/redesign cycles are one example of when analyst judgement is necessary.

<sup>44</sup> The catalogue of reference specification sheets (broken down by manufacturer, by nameplate) used to populate information in the market data file is available in the docket.

<sup>45</sup> The market data file often includes a few rows for vehicles that may have identical certification fuel economies, regulatory classes, and footprints (with compliance sales volumes divided out among rows), because other pieces of information used in the CAFE Model may be dissimilar. For instance, in the reference materials used to create the Market Data file, for a nameplate curb weight may vary by trim level (with premium trim levels often weighing more on account of additional equipment on the vehicle), or a manufacturer may provide consumers the option to purchase a larger fuel tank size for their vehicle. These pieces of information may not impact the observed compliance position directly, but curb weight (in relation to other vehicle attributes) is important to assess mass reduction technology already used on the vehicle, and fuel tank size is directly relevant to saving time at the gas pump, which the CAFE Model uses when calculating the value of avoided time spent refueling.

<sup>42</sup> The CAFE Model does not generate compliance paths a manufacturer should, must, or will deploy. It is intended as a tool to demonstrate a compliance pathway a manufacturer *could* choose. It is almost certain all manufacturers will make compliance choices differing from those projected by the CAFE Model.

**Table III-1 – Fuel Saving Technologies that the CAFE Model May Apply**

**BILLING CODE 4910-59-C**

For additional information on the characterization of these technologies (including the cost, prevalence in the 2020 fleet, effectiveness estimates, and considerations for their adoption) see the appropriate technology section in Section III.D or TSD Chapter 3.

DOT also assigns each vehicle a technology class. The CAFE Model uses the technology class (and engine class, discussed below) in the Market Data file

to reference the most relevant technology costs for each vehicle, and fuel saving technology combinations. We assign each vehicle in the fleet a technology class using a two-step algorithm that takes into account key characteristics of vehicles in the fleet compared to the baseline characteristics

of each technology class.<sup>46</sup> As discussed further in Section III.C.4.b), there are ten technology classes used in the CAFE analysis that span five vehicle types and two performance variants. The

<sup>46</sup> Baseline 0 to 60 mph accelerations times are assumed for each technology class as part of the Autonomie full vehicle simulations. DOT calculates class baseline curb weights and footprints by averaging the curb weights and footprints of vehicles within each technology class as assigned in previous analyses.

technology class algorithm and assignment process is discussed in more detail in TSD Chapter 2.4.2.

We also assign each vehicle an engine technology class so that the CAFE Model can reference the powertrain costs in the Technologies file that most reasonably align with the observed vehicle. DOT assigns engine technology classes for all vehicles, including electric vehicles. If an electric powertrain replaces and internal combustion engine, the electric motor specifications may be different (and hence costs may be different) depending on the capabilities of the internal combustion engine it is replacing, and the costs in the technologies file (on the engine tab) account for the power output and capability of the gasoline or electric drivetrain.

Parts sharing helps manufacturers achieve economies of scale, deploy capital efficiently, and make the most of shared research and development expenses, while still presenting a wide array of consumer choices to the market. The CAFE Model simulates part sharing by implementing shared engines, shared transmissions, and shared mass reduction platforms. Vehicles sharing a part (as recognized in the CAFE Model), will adopt fuel saving technologies affecting that part together. To account for parts sharing across products, vehicle model/configurations that share engines are assigned the same engine code,<sup>47</sup> vehicle model/configurations that share transmissions have the same transmission code, and vehicles that adopt mass reduction technologies together share the same platform. For more information about engine codes, transmission codes, and mass reduction platforms see TSD Chapter 3.

Manufacturers often introduce fuel saving technologies at a major redesign of their product or adopt technologies at minor refreshes in between major product redesigns. To support the CAFE Model accounting for new fuel saving technology introduction as it relates to product lifecycle, the Market Data file includes a projection of redesign and refresh years for each vehicle. DOT projects future redesign years and refresh years based on the historical cadence of that vehicle's product lifecycle. For new nameplates, DOT considers the manufacturer's treatment

of product lifecycles for past products in similar market segments. When considering year-by-year analysis of standards, the sizing of redesign and refresh intervals will affect projected compliance pathways and how quickly manufacturers can respond to standards. TSD Chapter 2.2.1.7 includes additional information about the product design cycles assumed for this proposal based on historical manufacturer product design cycles.

The Market Data file also includes information about air conditioning (A/C) and off-cycle technologies, but the information is not currently broken out at a row level, vehicle by vehicle.<sup>48</sup> Instead, historical data (and forecast projections, which are used for analysis regardless of regulatory scenario) are listed by manufacturer, by fleet on the Credits and Adjustments worksheet of the Market Data file. Section III.D.8 shows model inputs specifying estimated adjustments (all in grams/mile) for improvements to air conditioner efficiency and other off-cycle energy consumption, and for reduced leakage of air conditioner refrigerants with high global warming potential (GWP). DOT estimated future values based on an expectation that manufacturers already relying heavily on these adjustments would continue to do so, and that other manufacturers would, over time, also approach the limits on adjustments allowed for such improvements.

#### (b) Characterizing Baseline Safety, Economic, and Compliance Positions

In addition to characterizing vehicles and their technology content, the Market Data file contains a range of other inputs that, though not specific to individual vehicle models, may be specific to individual manufacturers, or that characterize baseline safety or economic information.

First, the CAFE Model considers the potential safety effect of mass reduction technologies and crash compatibility of different vehicle types. Mass reduction technologies lower the vehicle's curb weight, which may improve crash compatibility and safety, or not, depending on the type of vehicle. DOT assigns each vehicle in the Market Data file a safety class that best aligns with the mass-size-safety analysis. This

analysis is discussed in more detail in Section III.H of this proposal and TSD Chapter 7.

The CAFE Model also includes procedures to consider the direct labor impacts of manufacturer's response to CAFE regulations, considering the assembly location of vehicles, engines, and transmissions, the percent U.S. content (that reflects percent U.S. and Canada content),<sup>49</sup> and the dealership employment associated with new vehicle sales. The Market Data file therefore includes baseline labor information, by vehicle. Sales volumes also influence total estimated direct labor projections in the analysis.

We hold the percent U.S. content constant for each vehicle row for the duration of the analysis. In practice, this may not be the case. Changes to trade policy and tariff policy may affect percent U.S. content in the future. Also, some technologies may be more or less likely to be produced in the U.S., and if that is the case, their adoption could affect future U.S. content. NHTSA does not have data at this time to support varying the percent U.S. content.

We also hold the labor hours projected in the Market Data file per unit transacted at dealerships, per unit produced for final assembly, per unit produced for engine assembly, and per unit produced for transmission assembly constant for the duration of the analysis, and project that the origin of these activities to remain unchanged. In practice, it is reasonable to expect that plants could move locations, or engine and transmission technologies are replaced by another fuel saving technology (like electric motors and fixed gear boxes) that could require a meaningfully different amount of assembly labor hours. NHTSA does not have data at this time to support varying labor hours projected in the Market Data file, but we will continue to explore methods to estimate the direct labor impacts of manufacturer's responses to CAFE standards in future analyses.

As observed from Table III-2, manufacturers employ U.S. labor with varying intensity. In many cases, vehicles certifying in the light truck (LT) regulatory class have a larger percent U.S. content than vehicles certifying in the passenger car (PC) regulatory class.

<sup>47</sup> Engines (or transmissions) may not be exactly identical, as specifications or vehicle integration features may be different. However, the architectures are similar enough that it is likely the powertrain systems share research and development (R&D), tooling, and production resources in a meaningful way.

<sup>48</sup> Regulatory provisions regarding off-cycle technologies are new, and manufacturers have only recently begun including related detailed information in compliance reporting data. For this analysis, though, such information was not sufficiently complete to support a detailed representation of the application of off-cycle

technology to specific vehicle model/configurations in the MY 2020 fleet.

<sup>49</sup> Percent U.S. content was informed by the 2020 Part 583 American Automobile Labeling Act Reports, appearing on NHTSA's website.

**Table III-2 – Sales Weighted Percent U.S. Content by Manufacturer, by Regulatory Class**

Manufacturer	PC	LT	Total MY 2020 Sales Weighted Percent U.S. Content	Portion of Vehicles Assembled in the U.S.	Portion of Engines Assembled in the U.S.	Portion of Transmissions Assembled in the U.S.
BMW	7.1%	29.3%	15.4%	42.4%	0.0%	0.0%
Daimler	19.1%	36.2%	28.1%	41.2%	39.8%	0.0%

<b>TOTAL</b>	<b>32.4%</b>	<b>41.2%</b>	<b>37.4%</b>	<b>57.1%</b>	<b>44.1%</b>	<b>44.1%</b>

Next, manufacturers may over-comply with CAFE standards and bank so-called over compliance credits. As discussed further in Section III.C.7, manufacturers may use these credits later, sell them to other manufacturers, or let them expire. The CAFE Model does not explicitly trade credits between and among manufacturers, but staff have adjusted starting credit banks in the Market Data file to reflect trades that are likely to happen when the simulation begins (in MY 2020). Considering information manufacturers have reported regarding compliance credits, and considering recent manufacturers' compliance

positions, DOT estimates manufacturers' potential use of compliance credits in earlier MYs. This aligns to an extent that represents how manufacturers could deplete their credit banks rather than producing high volume vehicles with fuel saving technologies in earlier MYs. This also avoids the unrealistic application of technologies for manufacturers in early analysis years that typically rely on credits. For a complete discussion about how this data is collected and assigned in the Market Data file, see TSD Chapter 2.2.2.3.

The Market Data file also includes assumptions about a vehicle manufacturer's preferences towards civil penalty payments. EPCA requires that if a manufacturer does not achieve compliance with a CAFE standard in a

given model year and cannot apply credits sufficient to cover the compliance shortfall, the manufacturer must pay civil penalties (*i.e.*, fines) to the Federal Government. If inputs indicate that a manufacturer treats civil penalty payment as an economic choice (*i.e.*, one to be taken if doing so would be economically preferable to applying further technology toward compliance), the CAFE Model, when evaluating the manufacturer's response to CAFE standards in a given model year, will apply fuel-saving technology only up to the point beyond which doing so would be more expensive (after subtracting the value of avoided fuel outlays) than paying civil penalties.

For this analysis, DOT exercises the CAFE Model with inputs treating all manufacturers as treating civil penalty

<sup>50</sup> Tesla does not have internal combustion engines, or multi-speed transmissions, even though they are identified as producing engine and transmission systems in the United States in the Market Data file.

payment as an economic choice through model year 2023. While DOT expects that only manufacturers with some history of paying civil penalties would actually treat civil penalty payment as an acceptable option, the CAFE Model does not currently simulate compliance credit trading between manufacturers, and DOT expects that this treatment of civil penalty payment will serve as a reasonable proxy for compliance credit purchases some manufacturers might actually make through model year 2023. These input assumptions for model years through 2023 reduce the potential that the model will overestimate technology application in the model years leading up to those for which the agency is proposing new standards. As in past CAFE rulemaking analyses (except that supporting the 2020 final rule), DOT has treated manufacturers with some history of civil penalty payment (*i.e.*, BMW, Daimler, FCA, Jaguar-Land Rover, Volvo, and Volkswagen) as continuing to treat civil penalty payment as an acceptable option beyond model year 2023, but has treated all other manufacturers as unwilling to do so beyond model year 2023.

Next, the CAFE Model uses an “effective cost” metric to evaluate options to apply specific technologies to specific engines, transmissions, and vehicle model configurations. Expressed on a \$/gallon basis, the analysis computes this metric by subtracting the estimated values of avoided fuel outlays and civil penalties from the corresponding technology costs, and then dividing the result by the quantity of avoided fuel consumption. The analysis computes the value of fuel outlays over a “payback period” representing the manufacturer’s expectation that the market will be willing to pay for some portion of fuel savings achieved through higher fuel economy. Once the model has applied enough technology to a manufacturer’s fleet to achieve compliance with CAFE standards (and CO<sub>2</sub> standards and ZEV mandates) in a given model year, the model will apply any further fuel economy improvements estimated to produce a negative effective cost (*i.e.*, any technology applications for which avoided fuel outlays during the payback period are larger than the corresponding technology costs). As discussed above in Section III.A and below in Section III.C, DOT anticipates that manufacturers are likely to act as if the market is willing to pay for avoided fuel outlays expected during the first 30 months of vehicle operation.

We seek comment on whether this expectation is appropriate, or whether

some other amount of time should be used. If commenters believe a different amount of time should be used for the payback assumption, it would be most helpful if commenters could define the amount of time, provide an explanation of why that amount of time is preferable, provide any data or information on which the amount of time is based, and provide any discussion of how changing this assumption would interact with other elements in the analysis.

In addition, the Market Data file includes two new sets of inputs for this analysis. In 2020, five vehicle manufacturers reached a voluntary commitment with the state of California to improve the fuel economy of their future nationwide fleets above levels required by the 2020 final rule. For this analysis, compliance with this agreement is in the baseline case for designated manufacturers. The Market Data file contains inputs indicating whether each manufacturer has committed to exceed Federal requirements per this agreement.

Finally, when considering other standards that may affect fuel economy compliance pathways, DOT includes projected zero emissions vehicles (ZEV) that would be required for manufacturers to meet standards in California and Section 177 States, per the waiver granted under the Clean Air Act. To support the inclusion of the ZEV program in the analysis, DOT identifies specific vehicle model/configurations that could adopt BEV technology in response to the ZEV program, independent of CAFE standards, at the first redesign opportunity. These ZEVs are identified in the Market Data file as future BEV200s, BEV300s, or BEV400s. Not all announced BEV nameplates appear in the MY 2020 Market Data file; in these cases, in consultation with CARB, DOT used the volume from a comparable vehicle in the manufacturer’s Market Data file portfolio as a proxy. The Market Data file also includes information about the portion of each manufacturer’s sales that occur in California and Section 177 states, which is helpful for determining how many ZEV credits each manufacturer will need to generate in the future to comply with the ZEV program with their own portfolio in the rulemaking timeframe. These new procedures are described in detail below and in TSD Chapter 2.3.

### 3. Simulating the Zero Emissions Vehicle Program

California’s Zero Emissions Vehicle (ZEV) program is one part of a program of coordinated standards that the

California Air Resources Board (CARB) has enacted to control emissions of criteria pollutants and greenhouse gas emissions from vehicles. The program began in 1990, within the low-emission vehicle (LEV) regulation,<sup>51</sup> and has since expanded to include eleven other states.<sup>52</sup> These states may be referred to as Section 177 states, in reference to Section 177 of the Clean Air Act’s grant of authority to allow these states to adopt California’s air quality standards,<sup>53</sup> but it is important to note that not all Section 177 states have adopted the ZEV program component.<sup>54</sup> In the following discussion of the incorporation of the ZEV program into the CAFE Model, any reference to the Section 177 states refers to those states that have adopted California’s ZEV program requirements.

To account for the ZEV program, and particularly as other states have recently adopted California’s ZEV standards, DOT includes the main provisions of the ZEV program in the CAFE Model’s analysis of compliance pathways. As explained below, incorporating the ZEV program into the model includes converting vehicles that have been identified as potential ZEV candidates into battery-electric vehicles (BEVs) at the first redesign opportunity, so that a manufacturer’s fleet meets calculated ZEV credit requirements. Since ZEV program compliance pathways happen independently from the adoption of fuel saving technology in response to increasing CAFE standards, the ZEV program is considered in the baseline of the analysis, and in all other regulatory alternatives.

Through its ZEV program, California requires that all manufacturers that sell cars within the state meet ZEV credit standards. The current credit requirements are calculated based on manufacturers’ California sales volumes. Manufacturers primarily earn ZEV credits through the production of BEVs, fuel cell vehicles (FCVs), and

<sup>51</sup> California Air Resource Board (CARB), Zero-Emission Vehicle Program. California Air Resources Board. Accessed April 12, 2021. <https://ww2.arb.ca.gov/our-work/programs/zero-emission-vehicle-program/about>.

<sup>52</sup> At the time of writing, the Section 177 states that have adopted the ZEV program are Colorado, Connecticut, Maine, Maryland, Massachusetts, New Jersey, New York, Oregon, Rhode Island, Vermont, and Washington. Accessed April 12, 2021. <https://dec.vermont.gov/air-quality/mobile-sources/zev#:~:text=To%20date%2C%2012%20states%20have,ZEVs%20over%20the%20next%20decade>.

<sup>53</sup> Section 177 of the Clean Air Act allows other states to adopt California’s air quality standards.

<sup>54</sup> At the time of writing, Delaware and Pennsylvania are the two states that have adopted the LEV standards, but not the ZEV portion.

transitional zero-emissions vehicles (TZEVs), which are vehicles with partial electrification, namely plug-in hybrids (PHEVs). Total credits are calculated by multiplying the credit value each ZEV receives by the vehicle's volume.

The ZEV and PHEV/TZEV credit value per vehicle is calculated based on the vehicle's range; ZEVs may earn up to 4 credits each and PHEVs with a US06 all-electric range capability of 10 mi or higher receive an additional 0.2 credits on top of the credits received based on all-electric range.<sup>55</sup> The maximum PHEV credit amount available per vehicle is 1.10.<sup>56</sup> Note however that CARB only allows intermediate-volume manufacturers to meet their ZEV credit requirements through PHEV production.<sup>57</sup>

DOT's method for simulating the ZEV program involves several steps; first, DOT calculates an approximate ZEV credit target for each manufacturer based on the manufacturer's national sales volumes, share of sales in Section 177 states, and the CARB credit requirements. Next, DOT identifies a general pathway to compliance that involves accounting for manufacturers' potential use of ZEV overcompliance credits or other credit mechanisms, and the likelihood that manufacturers would choose to comply with the requirements with BEVs rather than PHEVs or other types of compliant vehicles, in addition to other factors. For this analysis, as discussed further below, DOT consulted with CARB to determine reasonable assumptions for this compliance pathway. Finally, DOT identifies vehicles in the MY 2020 analysis fleet that manufacturers could reasonably adapt to comply with the ZEV standards at the first opportunity for vehicle redesign, based on publicly announced product plans and other information. Each of these steps is discussed in turn, below, and a more detailed description of DOT's simulation of the ZEV program is included in TSD Chapter 2.3.

The CAFE Model is designed to present outcomes at a national scale, so the ZEV analysis considers the Section 177 states as a group as opposed to estimating each state's ZEV credit requirements individually. To capture the appropriate volumes subject to the ZEV requirement, DOT calculates each manufacturer's total market share in Section 177 states. DOT also calculates

the overall market share of ZEVs in Section 177 states, in order to estimate as closely as possible the number of predicted ZEVs we expect all manufacturers to sell in those states. These shares are then used to scale down national-level information in the CAFE Model to ensure that we represent only Section 177 states in the final calculation of ZEV credits that we project each manufacturer to earn in future years.

DOT uses model year 2019 National Vehicle Population Profile (NVPP) from IHS Markit—Polk to calculate these percentages.<sup>58</sup> These data include vehicle characteristics such as powertrain, fuel type, manufacturer, nameplate, and trim level, as well as the state in which each vehicle is sold, which allows staff to identify the different types of ZEVs manufacturers sell in the Section 177 state group. DOT may make use of future Polk data in updating the analysis for the final rule and may include other states that join the ZEV program after the publication of this proposal, if necessary.

We calculate sales volumes for the ZEV credit requirement based on each manufacturer's future assumed market share in Section 177 states. DOT decided to carry each manufacturer's ZEV market shares forward to future years, after examination of past market share data from model year 2016, from the 2017 version of the NVPP.<sup>59</sup> Comparison of these data to the 2020 version showed that manufacturers' market shares remain fairly constant in terms of geographic distribution. Therefore, we determined that it was reasonable to carry forward the recently calculated market shares to future years.

We calculate total credits required for ZEV compliance by multiplying the percentages from CARB's ZEV requirement schedule by the Section 177 state volumes. CARB's credit percentage requirement schedule for the years covered in this analysis begins at 9.5% in 2020 and ramps up in increments to 22% by 2025.<sup>60</sup> Note that the requirements do not currently change after 2025.<sup>61</sup>

We generate national sales volume predictions for future years using the

Compliance Report, a CAFE Model output file that includes simulated sales by manufacturer, fleet, and model year. We use a Compliance Report that corresponds to the baseline scenario of 1.5% per year increases in standards for both passenger car and light truck fleets. The resulting national sales volume predictions by manufacturer are then multiplied by each manufacturer's total market share in the Section 177 states to capture the appropriate volumes in the ZEV credits calculation. Required credits by manufacturer, per year, are determined by multiplying the Section 177 state volumes by CARB's ZEV credit percentage requirement. These required credits are subsequently added to the CAFE Model inputs as targets for manufacturer compliance with ZEV standards in the CAFE baseline.

The estimated ZEV credit requirements serve as a target for simulating ZEV compliance in the baseline. To achieve this, DOT determines a modeling philosophy for ZEV pathways, reviews various sources for information regarding upcoming ZEV programs, and inserts those programs into the analysis fleet inputs. As manufacturers can meet ZEV standards in a variety of different ways, using various technology combinations, the analysis must include certain simplifying assumptions in choosing ZEV pathways. We made these assumptions in conjunction with guidance from CARB staff. The following sections discuss the approach used to simulate a pathway to ZEV program compliance in this analysis.

First, DOT targeted 2025 compliance, as opposed to assuming manufacturers would perfectly comply with their credit requirements in each year prior to 2025. This simplifying assumption was made upon review of past history of ZEV credit transfers, existing ZEV credit banks, and redesign schedules. DOT focused on integrating ZEV technology throughout that timeline with the target of meeting 2025 obligations; thus, some manufacturers are estimated to over-comply or under-comply, depending on their individual situations, in the years 2021–2024.

Second, DOT determined that the most reasonable way to model ZEV compliance would be to allow under-compliance in certain cases and assume that some manufacturers would not meet their ZEV obligation on their own in 2025. Instead, these manufacturers were assumed to prefer to purchase credits from another manufacturer with a credit surplus. Reviews of past ZEV credit transfers between manufacturers informed the decision to make this

<sup>55</sup> US06 is one of the drive cycles used to test fuel economy and all-electric range, specifically for the simulation of aggressive driving. <sup>56</sup> 13 CCR 1962.2(c)(3).

<sup>57</sup> 13 CCR 1962.2(c)(3).

<sup>58</sup> National Vehicle Population Profile (NVPP) 2020, IHS Markit—Polk. At the time of the analysis, model year 2019 data from the NVPP contained the most current estimate of market shares by manufacturer, and best represented the registered vehicle population on January 1, 2020.

<sup>59</sup> National Vehicle Population Profile (NVPP) 2017, IHS Markit—Polk.

<sup>60</sup> See 13 CCR 1962.2(b). The percentage credit requirements are as follows: 9.5% in 2020, 12% in 2021, 14.5% in 2022, 17% in 2023, 19.5% in 2024, and 22% in 2025 and onward.

<sup>61</sup> 13 CCR 1962.2(b).

simplifying assumption.<sup>62</sup> CARB advised that for these manufacturers, the CAFE Model should still project that each manufacturer meet approximately 80% of their ZEV requirements with technology included in their own portfolio. Manufacturers that were observed to have generated many ZEV credits in the past or had announced major upcoming BEV initiatives were projected to meet 100% of their ZEV requirements on their own, without purchasing ZEV credits from other manufacturers.<sup>63</sup>

Third, DOT agreed that manufacturers would meet their ZEV credit requirements in 2025 though the production of BEVs. As discussed above, manufacturers may choose to build PHEVs or FCVs to earn some portion of their required ZEV credits. However, DOT projected that manufacturers would rely on BEVs to meet their credit requirements, based on reviews of press releases and industry news, as well as discussion with CARB. Since nearly all manufacturers have announced some plans to produce BEVs at a scale meaningful to future ZEV requirements, DOT agreed that this was a reasonable assumption.<sup>64</sup> Furthermore, as CARB only allows intermediate-volume manufacturers to meet their ZEV credit requirements through the production of PHEVs, and the volume status of these few manufacturers could change over the years, assuming BEV production for ZEV compliance is the most straightforward path.

Fourth, to account for the new BEV programs announced by some manufacturers, DOT identified vehicles in the 2020 fleet that closely matched the upcoming BEVs, by regulatory class, market segment, and redesign schedule. DOT made an effort to distribute ZEV candidate vehicles by CAFE regulatory class (light truck, passenger car), by manufacturer, in a manner consistent with the 2020 manufacturer fleet mix. Since passenger car and light truck mixes by manufacturer could change in response to the CAFE policy alternative under consideration, this effort was deemed necessary in order to avoid redistributing the fleet mix in an

unrealistic manner. However, there were some exceptions to this assumption, as some manufacturers are already closer to meeting their ZEV obligation through 2025 with BEVs currently produced, and some manufacturers underperform their compliance targets more so in one fleet than another. In these cases, DOT deviated from keeping the LT/PC mix of BEVs evenly distributed across the manufacturer's portfolio.<sup>65</sup>

DOT then identified future ZEV programs that could plausibly contribute towards the ZEV requirements for each manufacturer by 2025. To obtain this information, DOT examined various sources, including trade press releases, industry announcements, and investor reports. In many cases, these BEV programs are in addition to programs already in production.<sup>66</sup> Some manufacturers have not yet released details of future electric vehicle programs at the time of writing, but have indicated goals of reaching certain percentages of electric vehicles in their portfolios by a specified year. In these cases, DOT reviewed the manufacturer's current fleet characteristics as well as the aspirational information in press releases and other news in order to make reasonable assumptions about the vehicle segment and range of those future BEVs. DOT may reassign some manufacturer's ZEV programs in the analysis fleet for the final rule based on stakeholder comments or other public information releases that occur in time for the final rule analysis.

Overall, analysts assumed that manufacturers would lean towards producing BEV300s rather than BEV200s, based on the information reviewed and an initial conversation with CARB.<sup>67</sup> Phase-in caps were also considered, especially for BEV200, with the understanding that the CAFE Model will always pick BEV200 before BEV300 or BEV400, until the quantity of BEV200s is exhausted. See Section III.D.3.c) for details regarding BEV phase-in caps.

BEVs, especially BEVs with smaller battery packs and less range, are less likely to meet all the performance needs of traditional pickup truck owners today. However, new markets for BEVs may emerge, potentially in the form of

electric delivery trucks and some light-duty electric truck applications in state and local government. The extent to which BEVs will be used in these and other new markets is difficult to project. DOT did identify certain trucks as upcoming BEVs for ZEV compliance, and these BEVs were expected to have higher ranges, due to the specific performance needs associated with these vehicles. Outside of the ZEV inputs described here, the CAFE Model does not handle the application of BEV technology with any special considerations as to whether the vehicle is a pickup truck or not. Comments from manufacturers are solicited on this issue.

Finally, in order to simulate manufacturers' compliance with their particular ZEV credits target, 142 rows in the analysis fleet were identified as substitutes for future ZEV programs. As discussed above, the analysis fleet summarizes the roughly 13.6 million light-duty vehicles produced and sold in the United States in the 2020 model year with more than 3,500 rows, each reflecting information for one vehicle type observed. Each row includes the vehicle's nameplate and trim level, the sales volume, engine, transmission, drive configuration, regulatory class, projected redesign schedule, and fuel saving technologies, among other attributes.

As the goal of the ZEV analysis is to simulate compliance with the ZEV program in the baseline, and the analysis fleet only contains vehicles produced during model year 2020, DOT identified existing models in the analysis fleet that shared certain characteristics with upcoming BEVs. DOT also focused on identifying substitute vehicles with redesign years similar to the future BEV's introduction year. The sales volumes of those existing models, as predicted for 2025, were then used to simulate production of the upcoming BEVs. DOT identified a combination of rows that would meet the ZEV target, could contribute productively towards CAFE program obligations (by manufacturer and by fleet), and would introduce BEVs in each manufacturer's portfolio in a way that reasonably aligned with projections and announcements. DOT tagged each of these rows with information in the Market Data file, instructing the CAFE Model to apply the specified BEV technology to the row at the first redesign year, regardless of the scenario or type of CAFE or GHG simulation.

The CAFE Model does not optimize compliance with the ZEV mandate; it relies upon the inputs described in this section in order to estimate each

<sup>62</sup> See <https://ww2.arb.ca.gov/our/work/programs/advanced-clean-cars-program/zev-program-zero-emission-vehicle-credit-balances> for past credit balances and transfer information.

<sup>63</sup> The following manufacturers were assumed to meet 100% ZEV compliance: Ford, General Motors, Hyundai, Kia, Jaguar Land Rover, and Volkswagen Automotive. Tesla was also assumed to meet 100% of its required standards, but the analyst team did not need to add additional ZEV substitutes to the baseline for this manufacturer.

<sup>64</sup> See TSD Chapter 2.3 for a list of potential BEV programs recently announced by manufacturers.

<sup>65</sup> The GM light truck and passenger car distribution is one such example.

<sup>66</sup> Examples of BEV programs already in production include the Nissan Leaf and the Chevrolet Bolt.

<sup>67</sup> BEV300s are 300-mile range battery-electric vehicles. See Section III.D.3.b) for further information regarding electrification fleet assignments.

manufacturer's resulting ZEV credits. The resulting amount of ZEV credits earned by manufacturer for each model year can be found in the CAFE Model's Compliance file.

Not all ZEV-qualifying vehicles in the U.S. earn ZEV credits, as they are not all sold in states that have adopted ZEV regulations. In order to reflect this in the CAFE Model, which only estimates sales volumes at the national level, the percentages calculated for each manufacturer are used to scale down the national-level volumes. Multiplying national-level ZEV sales volumes by these percentages ensures that only the ZEVs sold in Section 177 states count towards the ZEV credit targets of each manufacturer.<sup>68</sup> See Section 5.8 of the CAFE Model Documentation for a detailed description of how the model applied these ZEV technologies and any changes made to the model's programming for the incorporation of the ZEV program into the baseline.

As discussed above, DOT made an effort to distribute the newly identified ZEV candidates between CAFE regulatory classes (light truck and passenger car) in a manner consistent with the proportions seen in the 2020 analysis fleet, by manufacturer. As mentioned previously, there were a few exceptions to this assumption in cases where manufacturers' regulatory class distribution of current or planned ZEV programs clearly differed from their regulatory class distribution as a whole.

In some instances, the regulatory distribution of flagged ZEV candidates leaned towards a higher portion of PCs. The reasoning behind this differs in each case, but there is an observed pattern in the 2020 analysis fleet of fewer BEVs being light trucks, especially pickups. The 2020 analysis fleet contains no BEV pickups in the light truck segment. The slow emergence of electric pickups could be linked to the specific performance needs associated with pickup trucks. However, the market for BEVs may emerge in unexpected ways that are difficult to project. Examples of this include anticipated electric delivery trucks and light-duty electric trucks used by state and local governments. Due to these considerations, DOT tagged some trucks as BEVs for ZEV, and expected that

<sup>68</sup>The single exception to this assumption is Mazda, as Mazda has not yet produced any ZEV-qualifying vehicles at the time of writing. Thus, the percentage of ZEVs sold in Section 177 states cannot be calculated from existing data. However, Mazda has indicated its intention to produce ZEV-qualifying vehicles in the future, so DOT assumed that 100% of future ZEVs would be sold in Section 177 states for the purposes of estimating ZEV credits in the CAFE Model.

these would generally be of higher ranges.

TSD Chapter 2.3 includes more information about the process we use to simulate ZEV program compliance in this analysis.

#### 4. Technology Effectiveness Values

The next input we use to simulate manufacturers' decision-making processes for the year-by-year application of technologies to specific vehicles are estimates of how effective each technology would be at reducing fuel consumption. For this analysis, we use full-vehicle modeling and simulation to estimate the fuel economy improvements manufacturers could make to a fleet of vehicles, considering the vehicles' technical specifications and how combinations of technologies interact. Full-vehicle modeling and simulation uses physics-based models to predict how combinations of technologies perform as a full system under defined conditions. We use full vehicle simulations performed in Autonomie, a physics-based full-vehicle modeling and simulation software developed and maintained by the U.S. Department of Energy's Argonne National Laboratory.<sup>69</sup>

A model is a mathematical representation of a system, and simulation is the behavior of that mathematical representation over time. In this analysis, the model is a mathematical representation of an entire vehicle,<sup>70</sup> including its individual components such as the engine and transmission, overall vehicle characteristics such as mass and aerodynamic drag, and the environmental conditions, such as ambient temperature and barometric pressure. We simulate the model's behavior over test cycles, including the 2-cycle laboratory compliance tests (or 2-cycle tests),<sup>71</sup> to determine how the individual components interact.

<sup>69</sup>Islam, E. S., A. Moawad, N. Kim, R. Vijayagopal, and A. Rousseau. *A Detailed Vehicle Simulation Process to Support CAFE Standards for the MY 2024–2026 Analysis*. ANL/ESD–21/9 [hereinafter Autonomie model documentation].

<sup>70</sup>Each full vehicle model in this analysis is composed of sub-models, which is why the full vehicle model could also be referred to as a full system model, composed of sub-system models.

<sup>71</sup>EPA's compliance test cycles are used to measure the fuel economy of a vehicle. For readers unfamiliar with this process, it is like running a car on a treadmill following a program—or more specifically, two programs. The "programs" are the "urban cycle," or Federal Test Procedure (abbreviated as "FTP"), and the "highway cycle," or Highway Fuel Economy Test (abbreviated as "HFET" or "HWFET"), and they have not changed substantively since 1975. Each cycle is a designated speed trace (of vehicle speed versus time) that all certified vehicles must follow during testing. The FTP is meant roughly to simulate stop and go city

Using full-vehicle modeling and simulation to estimate technology efficiency improvements has two primary advantages over using single or limited point estimates. An analysis using single or limited point estimates may assume that, for example, one fuel economy-improving technology with an effectiveness value of 5 percent by itself and another technology with an effectiveness value of 10 percent by itself, when applied together achieve an additive improvement of 15 percent. Single point estimates generally do not provide accurate effectiveness values because they do not capture complex relationships among technologies. Technology effectiveness often differs significantly depending on the vehicle type (e.g., sedan versus pickup truck) and the way in which the technology interacts with other technologies on the vehicle, as different technologies may provide different incremental levels of fuel economy improvement if implemented alone or in combination with other technologies. Any oversimplification of these complex interactions leads to less accurate and often overestimated effectiveness estimates.

In addition, because manufacturers often implement several fuel-saving technologies simultaneously when redesigning a vehicle, it is difficult to isolate the effect of individual technologies using laboratory measurement of production vehicles alone. Modeling and simulation offer the opportunity to isolate the effects of individual technologies by using a single or small number of baseline vehicle configurations and incrementally adding technologies to those baseline configurations. This provides a consistent reference point for the incremental effectiveness estimates for each technology and for combinations of technologies for each vehicle type. Vehicle modeling also reduces the potential for overcounting or undercounting technology effectiveness.

An important feature of this analysis is that the incremental effectiveness of each technology and combinations of technologies should be accurate and relative to a consistent baseline vehicle. For this analysis, the baseline absolute fuel economy value for each vehicle in the analysis fleet is based on CAFE compliance data for each make and model.<sup>72</sup> The absolute fuel economy values of the full vehicle simulations are

driving, and the HFET is meant roughly to simulate steady flowing highway driving at about 50 mph.

<sup>72</sup>See Section III.C.2 for further discussion of CAFE compliance data in the Market Data file.

used only to determine incremental effectiveness and are never used directly to assign an absolute fuel economy value to any vehicle model or configuration. For subsequent technology changes, we apply the incremental effectiveness values of one or more technologies to the baseline fuel economy value to determine the absolute fuel economy achieved for applying the technology change.

As an example, if a Ford F-150 2-wheel drive crew cab and short bed in the analysis fleet has a fuel economy value of 30 mpg for CAFE compliance, 30 mpg will be considered the reference absolute fuel economy value. A similar full vehicle model node in the Autonomie simulation may begin with an average fuel economy value of 32 mpg, and with incremental addition of a specific technology X its fuel economy improves to 35 mpg, a 9.3 percent improvement. In this example, the incremental fuel economy improvement (9.3 percent) from technology X would be applied to the F-150's 30 mpg absolute value.

We determine the incremental effectiveness of technologies as applied to the thousands of unique vehicle and technology combinations in the analysis fleet. Although, as mentioned above, full-vehicle modeling and simulation reduces the work and time required to assess the impact of moving a vehicle from one technology state to another, it would be impractical—if not impossible—to build a unique vehicle model for every individual vehicle in the analysis fleet. Therefore, as discussed in the following sections, the Autonomie analysis relies on ten vehicle technology class models that are representative of large portions of the analysis fleet vehicles. The vehicle technology classes ensure that key vehicle characteristics are reasonably represented in the full vehicle models. The next sections discuss the details of the technology effectiveness analysis input specifications and assumptions. NHTSA seeks comment on the following discussion.

#### (a) Full Vehicle Modeling and Simulation

As discussed above, for this analysis we use Argonne's full vehicle modeling tool, Autonomie, to build vehicle models with different technology combinations and simulate the performance of those models over regulatory test cycles. The difference in the simulated performance between full vehicle models, with differing technology combination, is used to determine effectiveness values. We consider over 50 individual

technologies as inputs to the Autonomie modeling.<sup>73</sup> These inputs consist of engine technologies, transmission technologies, powertrain electrification, lightweighting, aerodynamic improvements, and tire rolling resistance improvements. Section III.D broadly discusses each of the technology groupings definitions, inputs, and assumptions. A deeper discussion of the Autonomie modeled subsystems, and how inputs feed the sub models resulting in outputs, is contained in the Autonomie model documentation that accompanies this analysis. The 50 individual technologies, when considered with the ten vehicle technology classes, result in over 1.1 million individual vehicle technology combination models. For additional discussion on the full vehicle modeling used in this analysis see TSD Chapter 2.

While Argonne built full-vehicle models and ran simulations for many combinations of technologies, it did not simulate literally every single vehicle model/configuration in the analysis fleet. Not only would it be impractical to assemble the requisite detailed information specific to each vehicle/model configuration, much of which would likely only be provided on a confidential basis, doing so would increase the scale of the simulation effort by orders of magnitude. Instead, Argonne simulated ten different vehicle types, corresponding to the five "technology classes" generally used in CAFE analysis over the past several rulemakings, each with two performance levels and corresponding vehicle technical specifications (*e.g.*, small car, small performance car, pickup truck, performance pickup truck, etc.).

Technology classes are a means of specifying common technology input assumptions for vehicles that share similar characteristics. Because each vehicle technology class has unique characteristics, the effectiveness of technologies and combinations of technologies is different for each technology class. Conducting Autonomie simulations uniquely for each technology class provides a specific set of simulations and effectiveness data for each technology class. In this analysis the technology classes are compact cars, midsize cars, small SUVs, large SUVs, and pickup trucks. In addition, for each vehicle class there are two levels of performance attributes (for a total of 10 technology

classes). The high performance and low performance vehicles classifications allow for better diversity in estimating technology effectiveness across the fleet.

For additional discussion on the development of the vehicle technology classes used in this analysis and the attributes used to characterize each vehicle technology class, see TSD Chapter 2.4 and the Autonomie model documentation.

Before any simulation is initiated in Autonomie, Argonne must "build" a vehicle by assigning reference technologies and initial attributes to the components of the vehicle model representing each technology class. The reference technologies are baseline technologies that represent the first step on each technology pathway used in the analysis. For example, a compact car is built by assigning it a baseline engine (DOHC, VVT, port fuel injection (PFI)), a baseline transmission (AT5), a baseline level of aerodynamic improvement (AERO0), a baseline level of rolling resistance improvement (ROLL0), a baseline level of mass reduction technology (MR0), and corresponding attributes from the Argonne vehicle assumptions database like individual component weights. A baseline vehicle will have a unique starting point for the simulation and a unique set of assigned inputs and attributes, based on its technology class. Argonne collected over a hundred baseline vehicle attributes to build the baseline vehicle for each technology class. In addition, to account for the weight of different engine sizes, like 4-cylinder versus 8-cylinder or turbocharged versus naturally aspirated engines, Argonne developed a relationship curve between peak power and engine weight based on the A2Mac1 benchmarking data. Argonne uses the developed relationship to estimate mass for all engines. For additional discussion on the development and optimization of the baseline vehicle models and the baseline attributes used in this analysis see TSD Chapter 2.4 and the Autonomie model documentation.

The next step in the process is to run a powertrain sizing algorithm that ensures the built vehicle meets or exceeds defined performance metrics, including low-speed acceleration (time required to accelerate from 0–60 mph), high-speed passing acceleration (time required to accelerate from 50–80 mph), gradeability (the ability of the vehicle to maintain constant 65 miles per hour speed on a six percent upgrade), and towing capacity. Together, these performance criteria are widely used by the automotive industry as metrics to quantify vehicle performance attributes

<sup>73</sup> See Autonomie model documentation; ANL—All Assumptions\_Summary\_NPRM\_022021.xlsx; ANL—Data Dictionary\_January 2021.xlsx.

that consumers observe and that are important for vehicle utility and customer satisfaction.

As with conventional vehicle models, electrified vehicle models were also built from the ground up. For MY 2020, the U.S. market has an expanded number of available hybrid and electric vehicle models. To capture improvements for electrified vehicles for this analysis, DOT applied a mass regression analysis process that considers electric motor weight versus electric motor power (similar to the regression analysis for internal combustion engine weights) for vehicle models that have adopted electric motors. Benchmarking data for hybrid and electric vehicles from the A2Mac1 database were analyzed to develop a regression curve of electric motor peak power versus electric motor weight.<sup>74</sup>

We maintain performance neutrality in the full vehicle simulations by resizing engines, electric machines, and hybrid electric vehicle battery packs at specific incremental technology steps. To address product complexity and economies of scale, engine resizing is limited to specific incremental technology changes that would typically be associated with a major vehicle or engine redesign. This is intended to reflect manufacturers' comments to DOT on how they consider engine resizing and product complexity, and DOT's observations on industry product complexity. A detailed discussion on powertrain sizing can be found in TSD Chapter 2.4 and in the Autonomie model documentation.

After all vehicle class and technology combination models have been built, Autonomie simulates the vehicles' performance on test cycles to calculate the effectiveness improvement of adding fuel-economy-improving technologies to the vehicle. Simulating vehicles' performance using tests and procedures specified by Federal law and regulations minimizes the potential variation in determining technology effectiveness.

For vehicles with conventional powertrains and micro hybrids, Autonomie simulates the vehicles per EPA 2-cycle test procedures and guidelines.<sup>75</sup> For mild and full hybrid electric vehicles and FCVs, Autonomie simulates the vehicles using the same EPA 2-cycle test procedure and guidelines, and the drive cycles are repeated until the initial and final state of charge are within a SAE J1711 tolerance. For PHEVs, Autonomie simulates vehicles per similar

procedures and guidelines as prescribed in SAE J1711.<sup>76</sup> For BEVs Autonomie simulates vehicles per similar procedures and guidelines as prescribed in SAE J1634.<sup>77</sup>

#### (b) Performance Neutrality

The purpose of the CAFE analysis is to examine the impact of technology application that can improve fuel economy. When the fuel economy-improving technology is applied, often the manufacturer must choose how the technology will affect the vehicle. The advantages of the new technology can either be completely applied to improving fuel economy or be used to increase vehicle performance while maintaining the existing fuel economy, or some mix of the two effects. Historically, vehicle performance has improved over the years as more technology is applied to the fleet. The average horsepower is the highest that it has ever been; all vehicle types have improved horsepower by at least 42 percent compared to the 1978 model year, and pickup trucks have improved by 48 percent.<sup>78</sup> Fuel economy has also improved, but the horsepower and acceleration trends show that not 100 percent of technological improvements have been applied to fuel savings. While future trends are uncertain, the past trends suggest vehicle performance is unlikely to *decrease*, as it seems reasonable to assume that customers will, at a minimum, demand vehicles that offer the same utility as today's fleet.

For this rulemaking analysis, DOT analyzed technology pathways manufacturers could use for compliance that attempt to maintain vehicle attributes, utility, and performance. Using this approach allows DOT to assess the costs and benefits of potential standards under a scenario where consumers continue to get the similar vehicle attributes and features, other than changes in fuel economy. The purpose of constraining vehicle attributes is to simplify the analysis and reduce variance in other attributes that consumers may value across the analyzed regulatory alternatives. This allows for a streamlined accounting of costs and benefits by not requiring the

<sup>76</sup> PHEV testing is broken into several phases based on SAE J1711: Charge-sustaining on the city cycle and HWFET cycle, and charge-depleting on the city and HWFET cycles.

<sup>77</sup> SAE J1634. "Battery Electric Vehicle Energy Consumption and Range Test Procedure." July 12, 2017.

<sup>78</sup> "The 2020 EPA Automotive Trends Report, Greenhouse Gas Emissions, Fuel Economy, and Technology since 1975," EPA-420-R-21-003, January 2021 [hereinafter 2020 EPA Automotive Trends Report].

values of other vehicle attributes that trade off with fuel economy.

To confirm minimal differences in performance metrics across regulatory alternatives, DOT analyzed the sales-weighted average 0–60 mph acceleration performance of the entire simulated vehicle fleet for MYs 2020 and 2029. The analysis compared performance under the baseline standards and preferred alternative. This analysis identified that the analysis fleet under no action standards in MY 2029 had a 0.77 percent worse 0–60 mph acceleration time than under the preferred alternative, indicating there is minimal difference in performance between the alternatives. This assessment shows that for this analysis, the performance difference is minimal across regulatory alternatives and across the simulated model years, which allows for fair, direct comparison among the alternatives. Further details about this assessment can be found in TSD Chapter 2.4.5.

#### (c) Implementation in the CAFE Model

The CAFE Model uses two elements of information from the large amount of data generated by the Autonomie simulation runs: Battery costs, and fuel consumption on the city and highway cycles. DOT combines the fuel economy information from the two cycles to produce a composite fuel economy for each vehicle, and for each fuel used in dual fuel vehicles. The fuel economy information for each simulation run is converted into a single value for use in the CAFE Model.

In addition to the technologies in the Autonomie simulation, the CAFE Model also incorporated a handful of technologies not explicitly simulated in Autonomie. These technologies' performance either could not be captured on the 2-cycle test, or there was no robust data usable as an input for full-vehicle modeling and simulation. The specific technologies are discussed in the individual technology sections below and in TSD Chapter 3. To calculate fuel economy improvements attributable to these additional technologies, estimates of fuel consumption improvement factors were developed and scale multiplicatively when applied together. See TSD Chapter 3 for a complete discussion on how these factors were developed. The Autonomie-simulated results and additional technologies are combined, forming a single dataset used by the CAFE Model.

Each line in the CAFE Model dataset represents a unique combination of technologies. DOT organizes the records using a unique technology state vector,

<sup>74</sup> See Autonomie model documentation, Chapter 5.2.10 Electric Machines System Weight.

<sup>75</sup> 40 CFR part 600.

or technology key (tech key), that describes the technology content associated with each unique record. The modeled 2-cycle fuel economy (miles per gallon) of each combination is converted into fuel consumption (gallons per mile) and then normalized relative to a baseline tech key. The improvement factors used by the model are a given combination's fuel consumption improvement relative to the baseline tech key in its technology class.

The tech key format was developed by recognizing that most of the technology pathways are unrelated and are only logically linked to designate the direction in which technologies are allowed to progress. As a result, it is possible to condense the paths into groups based on the specific technology. These groups are used to define the technology vector, or tech key. The following technology groups defined the tech key: Engine cam configuration (CONFIG), VVT engine technology (VVT), VVL engine technology (VVL), SGDI engine technology (SGDI), DEAC engine technology (DEAC), non-basic engine technologies (ADVENG), transmission technologies (TRANS), electrification and hybridization (ELEC), low rolling resistance tires (ROLL), aerodynamic improvements (AERO), mass reduction levels (MR), EFR engine technology (EFR), electric accessory improvement technologies (ELECACC), LDB technology (LDB), and SAX technology (SAX). This summarizes to a tech key with the following fields: CONFIG; VVT; VVL; SGDI; DEAC; ADVENG; TRANS; ELEC; ROLL; AERO; MR; EFR; ELECACC; LDB; SAX. It should be noted that some of the fields may be blank for some tech key combinations. These fields will be left visible for the examples below, but blank fields may be omitted from tech keys shown elsewhere in the documentation.

As an example, a technology state vector describing a vehicle with a SOHC engine, variable valve timing (only), a 6-speed automatic transmission, a belt-integrated starter generator, rolling resistance (level 1), aerodynamic improvements (level 2), mass reduction (level 1), electric power steering, and low drag brakes, would be specified as "SOHC; VVT; ; ; ; AT6; BISG; ROLL10; AERO20; MR1; ; EPS; LDB ; ." <sup>79</sup>

<sup>79</sup>In the example tech key, the series of semicolons between VVT and AT6 correspond to the engine technologies which are not included as part of the combination, while the gap between MR1 and EPS corresponds to EFR and the omitted technology after LDB is SAX. The extra semicolons for omitted technologies are preserved in this

Once a vehicle is assigned (or mapped) to an appropriate tech key, adding a new technology to the vehicle simply represents progress from a previous tech key to a new tech key. The previous tech key refers to the technologies that are currently in use on a vehicle. The new tech key is determined, in the simulation, by adding a new technology to the combination represented by the previous state vector while simultaneously removing any technologies that are superseded by the newly added one.

For example, start with a vehicle with the tech key: SOHC; VVT; AT6; BISG; ROLL10; AERO20; MR1; EPS; LDB. Assume the simulation is evaluating PHEV20 as a candidate technology for application on this vehicle. The new tech key for this vehicle is computed by removing SOHC, VVT, AT6, and BISG technologies from the previous state vector,<sup>80</sup> and adding PHEV20, resulting a tech key that looks like this: PHEV20; ROLL10; AERO20; MR1; EPS; LDB.

From here, the simulation obtains a fuel economy improvement factor for the new combination of technologies and applies that factor to the fuel economy of a vehicle in the analysis fleet. The resulting improvement is applied to the original compliance fuel economy value for a discrete vehicle in the MY 2020 analysis fleet.

##### 5. Defining Technology Adoption in the Rulemaking Timeframe

As discussed in Section III.C.2, starting with a fixed analysis fleet (for this analysis, the model year 2020 fleet indicated in manufacturers' early CAFE compliance data), the CAFE Model estimates ways each manufacturer could potentially apply specific fuel-saving technologies to specific vehicle model/configurations in response to, among other things (such as fuel prices), CAFE standards, CO<sub>2</sub> standards, commitments some manufacturers have made to CARB's "Framework Agreement", and ZEV mandates imposed by California and several other States. The CAFE Model follows a year-by-year approach to simulating manufacturers' potential decisions to apply technology, accounting for multiyear planning within the context of estimated schedules for future vehicle redesigns and refreshes during which significant technology changes may most practicably be implemented.

example for clarity and emphasis and will not be included in future examples.

<sup>80</sup>For more discussion of how the CAFE Model handles technology supersession, see S4.5 of the CAFE Model Documentation.

The modeled technology adoption for each manufacturer under each regulatory alternative depends on this representation of multiyear planning, and on a range of other factors represented by other model characteristics and inputs, such as the logical progression of technologies defined by the model's technology pathways; the technologies already present in the analysis fleet; inputs directing the model to "skip" specific technologies for specific vehicle model/configurations in the analysis fleet (e.g., because secondary axle disconnect cannot be applied to 2-wheel-drive vehicles, and because manufacturers already heavily invested in engine turbocharging and downsizing are unlikely to abandon this approach in favor of using high compression ratios); inputs defining the sharing of engines, transmissions, and vehicle platforms in the analysis fleet; the model's logical approach to preserving this sharing; inputs defining each regulatory alternative's specific requirements; inputs defining expected future fuel prices, annual mileage accumulation, and valuation of avoided fuel consumption; and inputs defining the estimated efficacy and future cost (accounting for projected future "learning" effects) of included technologies; inputs controlling the maximum pace the simulation is to "phase in" each technology; and inputs further defining the availability of each technology to specific technology classes.

Two of these inputs—the "phase-in cap" and the "phase-in start year"—apply to the manufacturer's entire estimated production and, for each technology, define a share of production in each model year that, once exceeded, will stop the model from further applying that technology to that manufacturer's fleet in that model year. The influence of these inputs varies with regulatory stringency and other model inputs. For example, setting the inputs to allow immediate 100% penetration of a technology will not guarantee any application of the technology if stringency increases are low and the technology is not at all cost effective. Also, even if these are set to allow only very slow adoption of a technology, other model aspects and inputs may nevertheless force more rapid application than these inputs, alone, would suggest (e.g., because an engine technology propagates quickly due to sharing across multiple vehicles, or because BEV application must increase quickly in response to ZEV requirements). For this analysis, nearly

all of these inputs are set at levels that do not limit the simulation at all.

As discussed below, for the most advanced engines (advanced cylinder deactivation, variable compression ratio, variable turbocharger geometry, and turbocharging with cylinder deactivation), DOT has specified phase-in caps and phase-in start years that limit the pace at which the analysis shows the technology being adopted in the rulemaking timeframe. For example, this analysis applies a 34% phase-in cap and MY 2019 phase-in start year for advanced cylinder deactivation (ADEAC), meaning that in MY 2021 (using a MY 2020 fleet, the analysis begins simulating further technology application in MY 2021), the model will stop adding ADEAC to a manufacturer's MY 2021 fleet once ADEAC reaches more than 68% penetration, because  $34\% \times (2021 - 2019) = 34\% \times 2 = 68\%$ .

This analysis also applies phase-in caps and corresponding start years to prevent the simulation from showing inconceivable rates of applying battery-electric vehicles (BEVs), such as showing that a manufacturer producing very few BEVs in MY 2020 could plausibly replace every product with a 300- or 400-mile BEV by MY 2025. Also, as discussed in Section III.D.4, this analysis applies phase-in caps and corresponding start years intended to ensure that the simulation's plausible application of the highest included levels of mass reduction (20% and 28.2% reductions of vehicle "glider" weight) do not, for example, outpace plausible supply of raw materials and development of entirely new manufacturing facilities.

These model logical structures and inputs act together to produce estimates of ways each manufacturer could potentially shift to new fuel-saving technologies over time, reflecting some measure of protection against rates of change not reflected in, for example, technology cost inputs. This does not mean that every modeled solution would necessarily be economically practicable. Using technology adoption features like phase-in caps and phase-in start years is one mechanism that can be used so that the analysis better represents the potential costs and benefits of technology application in the rulemaking timeframe.

## 6. Technology Costs

DOT estimates present and future costs for fuel-saving technologies taking into consideration the type of vehicle, or type of engine if technology costs vary by application. These cost estimates are based on three main inputs. First, direct manufacturing costs (DMCs), or the

component and labor costs of producing and assembling the physical parts and systems, are estimated assuming high volume production. DMCs generally do not include the indirect costs of tools, capital equipment, financing costs, engineering, sales, administrative support or return on investment. DOT accounts for these indirect costs via a scalar markup of direct manufacturing costs (the retail price equivalent, or RPE). Finally, costs for technologies may change over time as industry streamlines design and manufacturing processes. To reflect this, DOT estimates potential cost improvements with learning effects (LE). The retail cost of equipment in any future year is estimated to be equal to the product of the DMC, RPE, and LE. Considering the retail cost of equipment, instead of merely direct manufacturing costs, is important to account for the real-world price effects of a technology, as well as market realities. Absent a Government mandate, motor vehicle manufacturers will not undertake expensive development and production efforts to implement technologies without realistic prospects of consumers being willing to pay enough for such technology to allow for the manufacturers to recover their investment.

### (a) Direct Manufacturing Costs

Direct manufacturing costs (DMCs) are the component and assembly costs of the physical parts and systems that make up a complete vehicle. The analysis used agency-sponsored tear-down studies of vehicles and parts to estimate the DMCs of individual technologies, in addition to independent tear-down studies, other publications, and confidential business information. In the simplest cases, the agency-sponsored studies produced results that confirmed third-party industry estimates and aligned with confidential information provided by manufacturers and suppliers. In cases with a large difference between the tear-down study results and credible independent sources, DOT scrutinized the study assumptions, and sometimes revised or updated the analysis accordingly.

Due to the variety of technologies and their applications, and the cost and time required to conduct detailed tear-down analyses, the agency did not sponsor teardown studies for every technology. In addition, some fuel-saving technologies were considered that are pre-production or are sold in very small pilot volumes. For those technologies, DOT could not conduct a tear-down study to assess costs because the

product is not yet in the marketplace for evaluation. In these cases, DOT relied upon third-party estimates and confidential information from suppliers and manufacturers; however, there are some common pitfalls with relying on confidential business information to estimate costs. The agency and the source may have had incongruent or incompatible definitions of "baseline." The source may have provided DMCs at a date many years in the future, and assumed very high production volumes, important caveats to consider for agency analysis. In addition, a source, under no contractual obligation to DOT, may provide incomplete and/or misleading information. In other cases, intellectual property considerations and strategic business partnerships may have contributed to a manufacturer's cost information and could be difficult to account for in the CAFE Model as not all manufacturers may have access to proprietary technologies at stated costs. The agency carefully evaluates new information in light of these common pitfalls, especially regarding emerging technologies.

While costs for fuel-saving technologies reflect the best estimates available today, technology cost estimates will likely change in the future as technologies are deployed and as production is expanded. For emerging technologies, DOT uses the best information available at the time of the analysis and will continue to update cost assumptions for any future analysis. The discussion of each category of technologies in Section III.D (e.g., engines, transmissions, electrification) and corresponding TSD Chapter 3 summarizes the specific cost estimates DOT applied for this analysis.

### (b) Indirect Costs (Retail Price Equivalent)

As discussed above, direct costs represent the cost associated with acquiring raw materials, fabricating parts, and assembling vehicles with the various technologies manufacturers are expected to use to meet future CAFE standards. They include materials, labor, and variable energy costs required to produce and assemble the vehicle. However, they do not include overhead costs required to develop and produce the vehicle, costs incurred by manufacturers or dealers to sell vehicles, or the profit manufacturers and dealers make from their investments. All of these items contribute to the price consumers ultimately pay for the vehicle. These components of retail prices are illustrated in Table III-3 below.

Table III-3 – Retail Price Components

Direct Costs	
Manufacturing Cost	Cost of materials, labor, and variable energy needed for production
Indirect Costs	
Production Overhead	
Warranty	Cost of providing product warranty
Research and Development	Cost of developing and engineering the product
Depreciation and amortization	Depreciation and amortization of manufacturing facilities and equipment
Maintenance, repair, operations	Cost of maintaining and operating manufacturing facilities and equipment
Corporate Overhead	
General and Administrative	Salaries of nonmanufacturing labor, operations of corporate offices, etc.
Retirement	Cost of pensions for nonmanufacturing labor
Health Care	Cost of health care for nonmanufacturing labor
Selling Costs	
Transportation	Cost of transporting manufactured goods
Marketing	Manufacturer costs of advertising manufactured goods
Dealer Costs	
Dealer selling expense	Dealer selling and advertising expense
Dealer profit	Net Income to dealers from sales of new vehicles
Net income	Net income to manufacturers from production and sales of new vehicles

To estimate the impact of higher vehicle prices on consumers, both direct and indirect costs must be considered. To estimate total consumer costs, DOT multiplies direct manufacturing costs by an indirect cost factor to represent the average price for fuel-saving technologies at retail.

Historically, the method most commonly used to estimate indirect costs of producing a motor vehicle has been the retail price equivalent (RPE). The RPE markup factor is based on an examination of historical financial data contained in 10-K reports filed by manufacturers with the Securities and Exchange Commission (SEC). It represents the ratio between the retail price of motor vehicles and the direct

costs of all activities that manufacturers engage in.

Figure III-4 indicates that for more than three decades, the retail price of motor vehicles has been, on average, roughly 50 percent above the direct cost expenditures of manufacturers. This ratio has been remarkably consistent, averaging roughly 1.5 with minor variations from year to year over this period. At no point has the RPE markup exceeded 1.6 or fallen below 1.4.<sup>81</sup> During this time frame, the average annual increase in real direct costs was 2.5 percent, and the average annual increase in real indirect costs was also 2.5 percent. Figure III-4 illustrates the historical relationship between retail prices and direct manufacturing costs.<sup>82</sup>

An RPE of 1.5 does not imply that manufacturers automatically mark up each vehicle by exactly 50 percent. Rather, it means that, over time, the competitive marketplace has resulted in pricing structures that average out to this relationship across the entire industry. Prices for any individual model may be marked up at a higher or lower rate depending on market demand. The consumer who buys a popular vehicle may, in effect, subsidize the installation of a new technology in a less marketable vehicle. But, on average, over time and across the vehicle fleet, the retail price paid by consumers has risen by about \$1.50 for each dollar of direct costs incurred by manufacturers.

<sup>81</sup> Based on data from 1972–1997 and 2007. Data were not available for intervening years, but results for 2007 seem to indicate no significant change in the historical trend.

**Figure III-4 – Historical Data for Retail Price Equivalent (RPE), 1972-1997 and 2007**

It is also important to note that direct costs associated with any specific technology will change over time as some combination of learning and resource price changes occurs. Resource costs, such as the price of steel, can fluctuate over time and can experience real long-term trends in either direction, depending on supply and demand. However, the normal learning process generally reduces direct production costs as manufacturers refine production techniques and seek out less costly parts and materials for increasing production volumes. By contrast, this learning process does not generally influence indirect costs. The implied RPE for any given technology would thus be expected to grow over time as direct costs decline relative to indirect costs. The RPE for any given year is

based on direct costs of technologies at different stages in their learning cycles, and that may have different implied RPEs than they did in previous years. The RPE averages 1.5 across the lifetime of technologies of all ages, with a lower average in earlier years of a technology's life, and, because of learning effects on direct costs, a higher average in later years.

The RPE has been used in all NHTSA safety and most previous CAFE rulemakings to estimate costs. In 2011, the National Academy of Sciences recommended RPEs of 1.5 for suppliers and 2.0 for in-house production be used to estimate total costs.<sup>83</sup> The Alliance of Automobile Manufacturers also advocates these values as appropriate markup factors for estimating costs of technology changes.<sup>84</sup> In their 2015

report, the National Academy of Sciences recommend 1.5 as an overall RPE markup.<sup>85</sup> An RPE of 2.0 has also been adopted by a coalition of environmental and research groups (Northeast States Center for a Clean Air Future (NESCCAF), International Council on Clean Transportation (ICCT), Southwest Research Institute, and TIAX-LLC) in a report on reducing heavy truck emissions, and 2.0 is recommended by the U.S. Department of Energy for estimating the cost of hybrid-electric and automotive fuel cell costs (see Vyas et al. (2000) in Table III-4 below). Table III-4 below also lists other estimates of the RPE. Note that all RPE estimates vary between 1.4 and 2.0, with most in the 1.4 to 1.7 range.

**Table III-4 – Alternate Estimates of the RPE<sup>86</sup>**

Author and Year	Value, Comments
Jack Faucett Associates for EPA, 1985	1.26 initial value, later corrected to 1.7+ by Sierra research
Vyas et al., 2000	1.5 for outsourced, 2.0 for original equipment manufacturer (OEM), electric, and hybrid vehicles
NRC, 2002	1.4 (corrected to > by Duleep)
McKinsey and Company, 2003	1.7 based on European study
CARB, 2004	1.4 (derived using the JFA initial 1.26 value, not the corrected 1.7+ value)
Sierra Research for AAA, 2007	2.0 or >, based on Chrysler data
Duleep, 2008	1.4, 1.56, 1.7 based on integration complexity
NRC, NAS 2011	1.5 for Tier 1 supplier, 2.0 for OEM
NRC, NAS 2015	1.5 for OEM

The RPE has thus enjoyed widespread use and acceptance by a variety of governmental, academic, and industry organizations.

In past rulemakings, a second type of indirect cost multiplier has also been examined. Known as the “Indirect Cost Multiplier” (ICM) approach, ICMs were first examined alongside the RPE approach in the 2010 rulemaking regarding standards for MYs 2012–2016 (75 FR 25324, May 7, 2010). Both methods have been examined in subsequent rulemakings.

Consistent with the 2020 final rule, we continue to employ the RPE approach to account for indirect manufacturing costs. The RPE accounts for indirect costs like engineering, sales, and administrative support, as well as other overhead costs, business expenses, warranty costs, and return on capital considerations. A detailed discussion of indirect cost methods and the basis for our use of the RPE to reflect these costs is available in the Final Regulatory Impact Analysis (FRIA) for the 2020 final rule.<sup>87</sup>

#### (c) Stranded Capital Costs

The idea behind stranded capital is that manufacturers amortize research, development, and tooling expenses over many years, especially for engines and transmissions. The traditional production life-cycles for transmissions and engines have been a decade or longer. If a manufacturer launches or updates a product with fuel-saving technology, and then later replaces that technology with an unrelated or different fuel-saving technology before the equipment and research and

development investments have been fully paid off, there will be unrecouped, or stranded, capital costs. Quantifying stranded capital costs accounts for such lost investments.

As DOT has observed previously, manufacturers may be shifting their investment strategies in ways that may alter how stranded capital could be considered. For example, some suppliers sell similar transmissions to multiple manufacturers. Such arrangements allow manufacturers to share in capital expenditures or amortize expenses more quickly. Manufacturers share parts on vehicles around the globe, achieving greater scale and greatly affecting tooling strategies and costs.

As a proxy for stranded capital in recent CAFE analyses, the CAFE Model has accounted for platform and engine sharing and includes redesign and refresh cycles for significant and less significant vehicle updates. This analysis continues to rely on the CAFE Model’s explicit year-by-year accounting for estimated refresh and redesign cycles, and shared vehicle platforms and engines, to moderate the cadence of technology adoption and thereby limit the implied occurrence of stranded capital and the need to account for it explicitly. In addition, confining some manufacturers to specific advanced technology pathways through technology adoption features acts as a proxy to indirectly account for stranded capital. Adoption features specific to each technology, if applied on a manufacturer-by-manufacturer basis, are discussed in each technology section. The agency will monitor these trends to assess the role of stranded capital moving forward.

#### (d) Cost Learning

Manufacturers make improvements to production processes over time, which often result in lower costs. “Cost learning” reflects the effect of experience and volume on the cost of production, which generally results in better utilization of resources, leading to higher and more efficient production. As manufacturers gain experience through production, they refine production techniques, raw material and component sources, and assembly methods to maximize efficiency and reduce production costs. Typically, a representation of this cost learning, or learning curves, reflects initial learning rates that are relatively high, followed by slower learning as additional improvements are made and production efficiency peaks. This eventually produces an asymptotic shape to the learning curve, as small percent decreases are applied to gradually declining cost levels. These learning curve estimates are applied to various technologies that are used to meet CAFE standards.

We estimate cost learning by considering methods established by T.P. Wright and later expanded upon by J.R. Crawford.<sup>88 89</sup> Wright, examining aircraft production, found that every doubling of cumulative production of airplanes resulted in decreasing labor hours at a fixed percentage. This fixed percentage is commonly referred to as the progress rate or progress ratio, where a lower rate implies faster learning as cumulative

<sup>88</sup> Wright, T.P., Factors Affecting the Cost of Airplanes. *Journal of Aeronautical Sciences*, Vol. 3 (1936), at 124–25. Available at <http://www.uvm.edu/pdodds/research/papers/others/1936/wright1936a.pdf>.

<sup>89</sup> Crawford, J.R., *Learning Curve, Ship Curve, Ratios, Related Data*, Burbank, California-Lockheed Aircraft Corporation (1944).

<sup>87</sup> Final Regulatory Impact Analysis, The Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Year 2021–2026 Passenger Cars and Light Trucks, USDOT, EPA, March 2020, at 354–76.

production increases. J.R. Crawford expanded upon Wright's learning curve theory to develop a single unit cost model, that estimates the cost of the *n*th unit produced given the following information is known: (1) Cost to produce the first unit; (2) cumulative production of *n* units; and (3) the progress ratio.

As pictured in Figure III-5, Wright's learning curve shows the first unit is produced at a cost of \$1,000. Initially cost per unit falls rapidly for each successive unit produced. However, as production continues, cost falls more gradually at a decreasing rate. For each doubling of cumulative production at any level, cost per unit declines 20

percent, so that 80 percent of cost is retained. The CAFE Model uses the basic approach by Wright, where cost reduction is estimated by applying a fixed percentage to the projected cumulative production of a given fuel economy technology.

**Figure III-5 – Wright's Learning Curve (Progress Ratio = 0.8)**

The analysis accounts for learning effects with model year-based cost learning forecasts for each technology that reduces direct manufacturing costs over time. We evaluate the historical use of technologies, and reviews industry forecasts to estimate future volumes to develop the model year-based technology cost learning curves.

The following section discusses the development of model year-based cost learning forecasts for this analysis, including how the approach has evolved from the 2012 rulemaking for MY 2017–2025 vehicles, and how the progress ratios were developed for different technologies considered in the analysis. Finally, we discuss how these learning effects are applied in the CAFE Model.

#### (1) Time Versus Volume-Based Learning

For the 2012 joint CAFE and GHG rulemaking, DOT developed learning curves as a function of vehicle model year.<sup>90</sup> Although the concept of this methodology is derived from Wright's cumulative production volume-based learning curve, its application for CAFE technologies was more of a function of time. More than a dozen learning curve schedules were developed, varying

between fast and slow learning, and assigned to each technology corresponding to its level of complexity and maturity. The schedules were applied to the base year of direct manufacturing cost and incorporate a percentage of cost reduction by model year, declining at a decreasing rate through the technology's production life. Some newer technologies experience 20 percent cost reductions for introductory model years, while mature or less complex technologies experience 0–3 percent cost reductions over a few years.

In their 2015 report to Congress, the National Academy of Sciences (NAS) recommended NHTSA should "continue to conduct and review empirical evidence for the cost reductions that occur in the automobile industry with volume, especially for large-volume technologies that will be relied on to meet the CAFE/GHG standards."<sup>91</sup>

In response, we incorporated statically projected cumulative volume production data of fuel economy-

improving technologies, representing an improvement over the previously used time-based method. Dynamic projections of cumulative production are not feasible with current CAFE Model capabilities, so one set of projected cumulative production data for most vehicle technologies was developed for the purpose of determining cost impact. We obtained historical cumulative production data for many technologies produced and/or sold in the U.S. to establish a starting point for learning schedules. Groups of similar technologies or technologies of similar complexity may share identical learning schedules.

The slope of the learning curve, which determines the rate at which cost reductions occur, has been estimated using research from an extensive literature review and automotive cost tear-down reports (see below). The slope of the learning curve is derived from the progress ratio of manufacturing automotive and other mobile source technologies.

#### (2) Deriving the Progress Ratio Used in This Analysis

Learning curves vary among different types of manufactured products. Progress ratios can range from 70 to 100

<sup>90</sup> 77 FR 62624 (Oct. 15, 2012).

<sup>91</sup> National Research Council 2015. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles. Washington, DC: The National Academies Press. <https://doi.org/10.17226/21744>.

percent, where 100 percent indicates no learning can be achieved.<sup>92</sup> Learning effects tend to be greatest in operations where workers often touch the product, while effects are less substantial in operations consisting of more automated processes. As automotive manufacturing plant processes become increasingly automated, a progress ratio towards the higher end would seem more suitable. We incorporated findings from automotive cost-teardown studies with EPA's 2015 literature review of learning-related studies to estimate a progress ratio used to determine learning schedules of fuel economy-improving technologies.

EPA's literature review examined and summarized 20 studies related to

learning in manufacturing industries and mobile source manufacturing.<sup>93</sup> The studies focused on many industries, including motor vehicles, ships, aviation, semiconductors, and environmental energy. Based on several criteria, EPA selected five studies providing quantitative analysis from the mobile source sector (progress ratio estimates from each study are summarized in Table III-5, below). Further, those studies expand on Wright's learning curve function by using cumulative output as a predictor variable, and unit cost as the response variable. As a result, EPA determined a best estimate of 84 percent as the progress ratio in mobile source industries. However, of those five

studies, EPA at the time placed less weight on the Epple et al. (1991) study, because of a disruption in learning due to incomplete knowledge transfer from the first shift to introduction of a second shift at a North American truck plant. While learning may have decelerated immediately after adding a second shift, we note that unit costs continued to fall as the organization gained experience operating with both shifts. We recognize that disruptions are an essential part of the learning process and should not, in and of themselves, be discredited. For this reason, the analysis uses a re-estimated average progress ratio of 85 percent from those five studies (equally weighted).

**Table III-5 – Progress Ratios from EPA's Literature Review**

Author (Publication Date)	Industry	Progress Ratio (Cumulative Output Approach)
Argote et al. (1997) <sup>94</sup>	Trucks	85%
Benkard (2000) <sup>95</sup>	Aircraft (commercial)	82%
Epple et al. (1991) <sup>96</sup>	Trucks	90%
Epple et al. (1996) <sup>97</sup>	Trucks	85%
Levitt et al. (2013) <sup>98</sup>	Automobiles	82%

In addition to EPA's literature review, this progress ratio estimate was informed based on findings from automotive cost-teardown studies. NHTSA routinely performs evaluations of costs of previously issued Federal Motor Vehicle Safety Standards (FMVSS) for new motor vehicles and equipment. NHTSA engages contractors to perform detailed engineering "tear-down" analyses for representative

samples of vehicles, to estimate how much specific FMVSS add to the weight and retail price of a vehicle. As part of the effort, the agency examines cost and production volume for automotive safety technologies. In particular, we estimated costs from multiple cost tear-down studies for technologies with actual production data from the *Cost and weight added by the Federal Motor*

*Vehicle Safety Standards for MY 1968–2012 passenger cars and LTVs* (2017).<sup>99</sup>

We chose five vehicle safety technologies with sufficient data to estimate progress ratios of each, because these technologies are large-volume technologies and are used by almost all vehicle manufacturers. Table III-6 includes these five technologies and yields an average progress rate of 92 percent.

**Table III-6 – Progress Ratios Researched by NHTSA**

Technology	Progress Ratio
Anti-lock Brake Systems	87%
Driver Airbags	93%
Manual 3-pt lap shoulder safety belts	96%
Adjustable Head Restraints	91%
Dual Master Cylinder	95%

For the final progress ratio used in the CAFE Model, the five progress rates from EPA’s literature review and five progress rates from NHTSA’s evaluation of automotive safety technologies results were averaged. This resulted in an average progress rate of approximately 89 percent. We placed equal weight on progress ratios from all 10 sources. More specifically, we placed equal weight on the *Epple et al. (1991)* study, because disruptions have more recently been recognized as an essential part in the learning process, especially in an effort to increase the rate of output.

**(3) Obtaining Appropriate Baseline Years for Direct Manufacturing Costs**

DOT obtained direct manufacturing costs for each fuel economy-improving technology from various sources, as discussed above. To establish a consistent basis for direct manufacturing costs in the rulemaking analysis, we adjusted each technology cost to MY 2018 dollars. For each technology, the DMC is associated with a specific model year, and sometimes a specific production volume, or cumulative production volume. The base model year is established as the MY in which direct manufacturing costs were assessed (with learning factor of 1.00). With the aforementioned data on cumulative production volume for each technology and the assumption of a 0.89 progress ratio for all automotive technologies, we can solve for an implied cost for the first unit produced. For some technologies, we used modestly different progress ratios to match detailed cost projections if available from another source (for instance, batteries for plug-in hybrids and battery electric vehicles).

This approach produces reasonable estimates for technologies already in production, and some additional steps are required to set appropriate learning rates for technologies not yet in production. Specifically, for technologies not yet in production in MY 2017, the cumulative production volume in MY 2017 is zero, because

manufacturers have not yet produced the technologies. For pre-production cost estimates in previous CAFE rulemakings, we often relied on confidential business information sources to predict future costs. Many sources for pre-production cost estimates include significant learning effects, often providing cost estimates assuming high volume production, and often for a timeframe late in the first production generation or early in the second generation of the technology. Rapid doubling and re-doubling of a low cumulative volume base with Wright’s learning curves can provide unrealistic cost estimates. In addition, direct manufacturing cost projections can vary depending on the initial production volume assumed. Accordingly, we carefully examined direct costs with learning, and made adjustments to the starting point for those technologies on the learning curve to better align with the assumptions used for the initial direct cost estimate.

**(4) Cost Learning Applied in the CAFE Model**

For this analysis, we applied learning effects to the incremental cost over the null technology state on the applicable technology tree. After this step, we calculated year-by-year incremental costs over preceding technologies on the tech tree to create the CAFE Model inputs.<sup>100</sup> The shift from incremental cost accounting to absolute cost accounting in recent CAFE analyses made cost inputs more transparently relatable to detailed model output, and relevant to this discussion, made it easier to apply learning curves in the course of developing inputs to the CAFE Model.

We grouped certain technologies, such as advanced engines, advanced transmissions, and non-battery electric components and assigned them to the same learning schedule. While these grouped technologies differ in operating

<sup>100</sup> These costs are located in the CAFE Model Technologies file.

characteristics and design, we chose to group them based on their complexity, technology integration, and economies of scale across manufacturers. The low volume of certain advanced technologies, such as hybrid and electric technologies, poses a significant issue for suppliers and prevents them from producing components needed for advanced transmissions and other technologies at more efficient high scale production. The technology groupings consider market availability, complexity of technology integration, and production volume of the technologies that can be implemented by manufacturers and suppliers. For example, technologies like ADEAC and VCR are grouped together; these technologies were not in production or were only in limited introduction in MY 2017 and are planned to be introduced in limited production by a few manufacturers. The details of these technologies are discussed in Section III.D.

In addition, we expanded model inputs to extend the explicit simulation of technology application through MY 2050. Accordingly, we updated the learning curves for each technology group to cover MYs through 2050. For MYs 2017–2032, we expect incremental improvements in all technologies, particularly in electrification technologies because of increased production volumes, labor efficiency, improved manufacturing methods, specialization, network building, and other factors. While these and other factors contribute to continual cost learning, we believe that many fuel economy-improving technologies considered in this rule will approach a flat learning level by the early 2030s. Specifically, older and less complex internal combustion engine technologies and transmissions will reach a flat learning curve sooner when compared to electrification technologies, which have more opportunity for improvement. For batteries and non-battery electrification components, we estimated a steeper learning curve that

will gradually flatten after MY 2040. For a more detailed discussion of the electrification learning curves, see Section III.D.3.

Each technology in the CAFE Model is assigned a learning schedule developed from the methodology explained previously. For example, the following chart shows learning rates for several technologies applicable to midsize sedans, demonstrating that while we estimate that such learning effects have already been almost entirely realized for engine turbocharging (a

technology that has been in production for many years), we estimate that significant opportunities to reduce the cost of the greatest levels of mass reduction (e.g., MR5) remain, and even greater opportunities remain to reduce the cost of batteries for HEVs, PHEVs, BEVs. In fact, for certain advanced technologies, we determined that the results predicted by the standard learning curves progress ratio was not realistic, based on unusual market price and production relationships. For these

technologies, we developed specific learning estimates that may diverge from the 0.89 progress rate. As shown in Figure III-6, these technologies include: turbocharging and downsizing level 1 (TURBO1), variable turbo geometry electric (VTGE), aerodynamic drag reduction by 15 percent (AERO15), mass reduction level 5 (MR5), 20 percent improvement in low-rolling resistance tire technology (ROLL20) over the baseline, and battery integrated starter/generator (BISG).

Figure III-6 – Examples of Year-by-Year Cost Learning Effects (Midsize Sedan)

(e) Cost Accounting

To facilitate specification of detailed model inputs and review of detailed model outputs, the CAFE Model continues to use absolute cost inputs relative to a known base component cost, such that the estimated cost of each technology is specified relative to a common reference point for the relevant technology pathway. For example, the cost of a 7-speed transmission is specified relative to a 5-speed transmission, as is the cost of every other transmission technology.

Conversely, in some earlier versions of the CAFE Model, *incremental cost* inputs were estimated relative to the technology immediately preceding on the relevant technology pathway. For our 7-speed transmission example, the incremental cost would be relative to a 6-speed transmission. This change in the structure of cost inputs does not, by itself, change model results, but it does make the connection between these inputs and corresponding outputs more transparent. The CAFE Model Documentation accompanying our

analysis presents details of the structure for model cost inputs.<sup>101</sup> The individual technology sections in Section III.D provide a detailed discussion of cost accounting for each technology.

7. Manufacturer’s Credit Compliance Positions

This proposed rule involves a variety of provisions regarding “credits” and other compliance flexibilities. Some regulatory provisions allow a manufacturer to earn “credits” that will

<sup>101</sup> CAFE Model Documentation, S4.7.

be counted toward a vehicle's rated CO<sub>2</sub> emissions level, or toward a fleet's rated average CO<sub>2</sub> or CAFE level, without reference to required levels for these average levels of performance. Such flexibilities effectively modify emissions and fuel economy test procedures or methods for calculating fleets' CAFE and average CO<sub>2</sub> levels. Other provisions (for CAFE, statutory provisions) allow manufacturers to earn credits by achieving CAFE or average CO<sub>2</sub> levels beyond required levels; these provisions may hence more appropriately be termed "compliance credits." We described in the 2020 final rule how the CAFE Model simulates these compliance credit provisions for both the CAFE program and for EPA's CO<sub>2</sub> standards.<sup>102</sup> For this analysis, we modeled the no-action and action alternatives as a set of CAFE standards in place simultaneously with EPA baseline (*i.e.*, 2020 final) CO<sub>2</sub> standards, related CARB agreements with five manufacturers, and ZEV mandates in place in California and some other states. The modeling of CO<sub>2</sub> standards and standard-like contractual obligations includes our representation of applicable credit provisions.

EPCA has long provided that, by exceeding the CAFE standard applicable to a given fleet in a given model year, a manufacturer may earn corresponding "credits" that the same manufacturer may, within the same regulatory class, apply toward compliance in a different model year. EISA amended these provisions by providing that manufacturers may, subject to specific statutory limitations, transfer compliance credits between regulatory classes and trade compliance credits with other manufacturers. The CAA provides the EPA with broad standard-setting authority for the CO<sub>2</sub> program, with no specific directives regarding CO<sub>2</sub> standards or CO<sub>2</sub> compliance credits.

EPCA also specifies that NHTSA may not consider the availability of CAFE credits (for transfer, trade, or direct application) toward compliance with new standards when establishing the standards themselves.<sup>103</sup> Therefore, this analysis excludes model years 2024–2026 from those in which carried-forward or transferred credits can be applied for the CAFE program.

The "unconstrained" perspective acknowledges that these flexibilities exist as part of the program and, while not considered by NHTSA in setting standards, are nevertheless important to consider when attempting to estimate

the real impact of any alternative. Under the "unconstrained" perspective, credits may be earned, transferred, and applied to deficits in the CAFE program throughout the full range of model years in the analysis. The Draft Supplemental Environmental Impact Statement (SEIS) accompanying this proposed rule, like the corresponding SEIS analysis, presents "unconstrained" modeling results. Also, because the CAA provides no direction regarding consideration of any CO<sub>2</sub> credit provisions, this analysis includes simulation of carried-forward and transferred CO<sub>2</sub> credits in all model years.

The CAFE Model, therefore, does provide means to simulate manufacturers' potential application of some compliance credits, and both the analysis of CO<sub>2</sub> standards and the NEPA analysis of CAFE standards do make use of this aspect of the model. On the other hand, 49 U.S.C. 32902(h) prevents NHTSA from, in its standard setting analysis, considering the potential that manufacturers could use compliance credits in model years for which the agency is establishing maximum feasible CAFE standards. Further, as discussed below, we also continue to find it appropriate for the analysis largely to refrain from simulating two of the mechanisms allowing the use of compliance credits.

The CAFE Model's approach to simulating compliance decisions accounts for the potential to earn and use CAFE credits as provided by EPCA/EISA. The model similarly accumulates and applies CO<sub>2</sub> credits when simulating compliance with EPA's standards. Like past versions, the current CAFE Model can simulate credit carry-forward (*i.e.*, banking) between model years and transfers between the passenger car and light truck fleets but not credit carry-back (*i.e.*, borrowing) from future model years or trading between manufacturers.

While NHTSA's "unconstrained" evaluation can consider the potential to carry back compliance credits from later to earlier model years, past examples of failed attempts to carry back CAFE credits (*e.g.*, a MY 2014 carry back default leading to a civil penalty payment) underscore the riskiness of such "borrowing." Recent evidence indicates manufacturers are disinclined to take such risks, and we find it reasonable and prudent to refrain from attempting to simulate such "borrowing" in rulemaking analysis.

Like the previous version, the current CAFE Model provides a basis to specify (in model inputs) CAFE credits available from model years earlier than those being explicitly simulated. For

example, with this analysis representing model years 2020–2050 explicitly, credits earned in the model year 2015 are made available for use through the model year 2020 (given the current five-year limit on carry-forward of credits). The banked credits are specific to both the model year and fleet in which they were earned.

To increase the realism with which the model transitions between the early model years (MYs 2020–2023) and the later years that are the subject of this action, we have accounted for the potential that some manufacturers might trade credits earned prior to 2020 to other manufacturers. However, the analysis refrains from simulating the potential that manufacturers might continue to trade credits during and beyond the model years covered by this action. In 2018 and 2020, the analysis included idealized cases simulating "perfect" (*i.e.*, wholly unrestricted) trading of CO<sub>2</sub> compliance credits by treating all vehicles as being produced by a single manufacturer. Even for CO<sub>2</sub> compliance credit trading, these scenarios were not plausible, because it is exceedingly unlikely that some pairs of manufacturers would trade compliance credits. NHTSA did not include such cases for CAFE compliance credits, because EPCA provisions (such as the minimum domestic passenger car standard requirement) make such scenarios impossible. At this time, we remain concerned that any realistic simulation of such trading would require assumptions regarding which specific pairs of manufacturers might trade compliance credits, and the evidence to date makes it clear that the credit market is far from fully "open."

We also remain concerned that to set standards based on an analysis that presumes the use of program flexibilities risks making the corresponding actions mandatory. Some flexibilities—credit carry-forward (banking) and transfers between fleets in particular—involve little risk because they are internal to a manufacturer and known in advance. As discussed above, credit carry-back involves significant risk because it amounts to borrowing against future improvements, standards, and production volume and mix. Similarly, credit trading also involves significant risk, because the ability of manufacturer A to acquire credits from manufacturer B depends not just on manufacturer B actually earning the expected amount of credit, but also on manufacturer B being willing to trade with manufacturer A, and on potential interest by other manufacturers. Manufacturers' compliance plans have

<sup>102</sup> See 85 FR 24174, 24303 (April 30, 2020).

<sup>103</sup> 49 U.S.C. 32902(h)(3).

already evidenced cases of compliance credit trades that were planned and subsequently aborted, reinforcing our judgment that, like credit banking, credit trading involves too much risk to be included in an analysis that informs decisions about the stringency of future standards.

As discussed in the CAFE Model Documentation, the model's default logic attempts to maximize credit carry-forward—that is, to “hold on” to credits for as long as possible. If a manufacturer needs to cover a shortfall that occurs when insufficient opportunities exist to add technology to achieve compliance with a standard, the model will apply credits. Otherwise, the manufacturer carries forward credits until they are about to expire, at which point it will use them before adding technology that is not considered cost-effective. The model attempts to use credits that will expire within the next three years as a means to smooth out technology applications over time to avoid both compliance shortfalls and high levels of over-compliance that can result in a surplus of credits. Although it remains impossible precisely to predict the manufacturer's actual earning and use of compliance credits, and this aspect of the model may benefit from future refinement as manufacturers and regulators continue to gain experience with these provisions, this approach is generally consistent with manufacturers' observed practices.

NHTSA introduced the CAFE Public Information Center (PIC) to provide public access to a range of information regarding the CAFE program,<sup>104</sup> including manufacturers' credit balances. However, there is a data lag in the information presented on the CAFE PIC that may not capture credit actions across the industry for as much as several months. Furthermore, CAFE credits that are traded between manufacturers are adjusted to preserve the gallons saved that each credit represents.<sup>105</sup> The adjustment occurs at the time of application rather than at the time the credits are traded. This means that a manufacturer who has acquired credits through trade, but has not yet applied them, may show a credit balance that is either considerably higher or lower than the real value of the credits when they are applied. For example, a manufacturer that buys 40

million credits from Tesla may show a credit balance in excess of 40 million. However, when those credits are applied, they may be worth only 1/10 as much—making that manufacturer's true credit balance closer to 4 million than 40 million (e.g., when another manufacturer uses credits acquired from Tesla, the manufacturer may only be able to offset a 1 mpg compliance shortfall, even though the credits' “face value” suggests the manufacturer could offset a 10 mpg compliance shortfall).

Specific inputs accounting for manufacturers' accumulated compliance credits are discussed in TSD Chapter 2.2.2.3.

In addition to the inclusion of these existing credit banks, the CAFE Model also updated its treatment of credits in the rulemaking analysis. EPCA requires that NHTSA set CAFE standards at maximum feasible levels for each model year without consideration of the program's credit mechanisms. However, as recent CAFE rulemakings have evaluated the effects of standards over longer time periods, the early actions taken by manufacturers required more nuanced representation. Accordingly, the CAFE Model now provides means to exclude the simulated application of CAFE compliance credits only from specific model years for which standards are being set (for this analysis, 2024–2026), while allowing CAFE credits to be applied in other model years.

In addition to more rigorous accounting of CAFE and CO<sub>2</sub> compliance credits, the model also accounts for air conditioning efficiency and off-cycle adjustments. NHTSA's program considers those adjustments in a manufacturer's compliance calculation starting in MY 2017, and specific estimates of each manufacturer's reliance on these adjustments are discussed above in Section III.C.2.a). Because air conditioning efficiency and off-cycle adjustments are not credits in NHTSA's program, but rather adjustments to compliance fuel economy, they may be included under either a “standard setting” or “unconstrained” analysis perspective.

The manner in which the CAFE Model treats the EPA and CAFE A/C efficiency and off-cycle credit programs is similar, but the model also accounts for A/C leakage (which is not part of NHTSA's program). When determining the compliance status of a manufacturer's fleet (in the case of EPA's program, PC and LT are the only fleet distinctions), the CAFE Model weighs future compliance actions against the presence of existing (and expiring) CO<sub>2</sub> credits resulting from

over-compliance with earlier years' standards, A/C efficiency credits, A/C leakage credits, and off-cycle credits.

The model currently accounts for any off-cycle adjustments associated with technologies that are included in the set of fuel-saving technologies explicitly simulated as part of this proposal (for example, start-stop systems that reduce fuel consumption during idle or active grille shutters that improve aerodynamic drag at highway speeds) and accumulates these adjustments up to the cap. As discussed further in Section III.D.8, this analysis considers that some manufacturers may apply up to 15.0 g/mi of off-cycle credit by MY 2032. We considered the potential to model the application of off-cycle technologies explicitly. However, doing so would require data regarding which vehicle models already possess these improvements as well as the cost and expected value of applying them to other models in the future. Such data are currently too limited to support explicit modeling of these technologies and adjustments.

When establishing maximum feasible fuel economy standards, NHTSA is prohibited from considering the availability of alternatively fueled vehicles,<sup>106</sup> and credit provisions related to AFVs that significantly increase their fuel economy for CAFE compliance purposes. Under the “standard setting” perspective, these technologies (pure battery electric vehicles and fuel cell vehicles<sup>107</sup>) are not available in the compliance simulation to improve fuel economy. Under the “unconstrained” perspective, such as is documented in the SEIS, the CAFE Model considers these technologies in the same manner as other available technologies and may apply them if they represent cost-effective compliance pathways. However, under both perspectives, the analysis continues to include dedicated AFVs that could be produced in response to CAFE standards outside the model years for which standards are being set, or for other reasons (e.g., ZEV mandates, as accounted for in this analysis).

EPCA also provides that CAFE levels may, subject to limitations, be adjusted upward to reflect the sale of flexible fuel vehicles (FFVs). Because these adjustments ended in model year 2020, this analysis assumes no manufacturer

<sup>104</sup> CAFE Public Information Center, [https://one.nhtsa.gov/cape\\_pic/cape\\_pic\\_home.htm](https://one.nhtsa.gov/cape_pic/cape_pic_home.htm) (last visited May 11, 2021).

<sup>105</sup> CO<sub>2</sub> credits for EPA's program are denominated in metric tons of CO<sub>2</sub> rather than gram/mile compliance credits and require no adjustment when traded between manufacturers or fleets.

<sup>106</sup> 49 U.S.C. 32902(h).

<sup>107</sup> Dedicated compressed natural gas (CNG) vehicles should also be excluded in this perspective but are not considered as a compliance strategy under any perspective in this analysis.

will earn FFV credits within the modeling horizon.

Also, the CAA provides no direction regarding consideration of alternative fuels, and EPA has provided that manufacturers selling PHEVs, BEVs, and FCVs may, when calculating fleet average CO<sub>2</sub> levels, “count” each unit of production as more than a single unit. The CAFE Model accounts for these “multipliers.” For example, under EPA’s current regulation, when calculating the average CO<sub>2</sub> level achieved by its MY 2019 passenger car fleet, a manufacturer may treat each 1,000 BEVs as 2,000 BEVs. When calculating the average level required of this fleet, the manufacturer must use the actual production volume (in this example, 1,000 units). Similarly, the manufacturer must use the actual production volume when calculating compliance credit balances.

There were no natural gas vehicles in the baseline fleet, and the analysis did not apply natural gas technology due to cost effectiveness. The application of a 2.0 multiplier for natural gas vehicles for MYs 2024–2026 would have no impact on the analysis because given the state of natural gas vehicle refueling infrastructure, the cost to equip vehicles with natural gas tanks, the outlook for petroleum prices, and the outlook for battery prices, we have little basis to project more than an inconsequential response to this incentive in the foreseeable future.

#### *D. Technology Pathways, Effectiveness, and Cost*

Vehicle manufacturers meet increasingly more stringent fuel economy standards by applying increasing levels of fuel-economy-improving technologies to their vehicles. An appropriate characterization of the technologies available to manufacturers to meet fuel economy standards is, therefore, an important input required to assess the levels of standards that manufacturers can achieve. Like previous CAFE standards analyses, this proposal considers over 50 fuel-economy-improving technologies that manufacturers could apply to their MY 2020 fleet of vehicles to meet proposed levels of CAFE standards in MYs 2024–2026. The characterization of these technologies, the technology effectiveness values, and technology cost assumptions build on work performed by DOT, EPA, the National Academy of Sciences, and other Federal and state government agencies including the Department of Energy’s Argonne National Laboratory and the California Air Resources Board.

After spending approximately a decade refining the technology pathways, effectiveness, and cost assumptions used in successive CAFE Model analyses, DOT has developed guiding principles to ensure that the CAFE Model’s simulation of manufacturer compliance pathways results in impacts that we would reasonably expect to see in the real world. These guiding principles are as follows:

*Even though the analysis considers over 50 individual technologies, the fuel economy improvement from any individual technology must be considered in conjunction with the other fuel-economy-improving technologies applied to the vehicle.* For example, there is an obvious fuel economy benefit that results from converting a vehicle with a traditional internal combustion engine to a battery electric vehicle; however, the benefit of the electrification technology depends on the other road load reducing technologies (*i.e.*, mass reduction, aerodynamic, and rolling resistance) on the vehicle.

*Technologies added in combination to a vehicle will not result in a simply additive fuel economy improvement from each individual technology.* As discussed in Section III.C.4, full vehicle modeling and simulation provides the required degree of accuracy to project how different technologies will interact in the vehicle system. For example, as discussed further in Sections III.D.1 and III.D.3, a parallel hybrid architecture powertrain improves fuel economy, in part, by allowing the internal combustion engine to spend more time operating at efficient engine speed and load conditions. This reduces the advantage of adding advanced internal combustion engine technologies, which also improve fuel economy, by broadening the range of speed and load conditions for the engine to operate at high efficiency. This redundancy in fuel savings mechanism results in a reduced effectiveness improvement when the technologies are added to each other.

*The effectiveness of a technology depends on the type of vehicle the technology is being applied to.* For example, applying mass reduction technology results in varying effectiveness as the absolute mass reduced is a function of the starting vehicle mass, which varies across technology classes. See Section III.D.4 for more details.

*The cost and effectiveness values for each technology should be reasonably representative of what can be achieved across the entire industry.* Each technology model employed in the

analysis is designed to be representative of a wide range of specific technology applications used in industry. Some vehicle manufacturer’s systems may perform better and cost less than our modeled systems and some may perform worse and cost more. However, employing this approach will ensure that, on balance, the analysis captures a reasonable level of costs and benefits that would result from any manufacturer applying the technology.

*The baseline for cost and effectiveness values must be identified before assuming that a cost or effectiveness value could be employed for any individual technology.* For example, as discussed further in Section III.D.1.d) below, this analysis uses a set of engine map models that were developed by starting with a small number of baseline engine configurations, and then, in a very systematic and controlled process, adding specific well-defined technologies to create a new map for each unique technology combination.

The following sections discuss the engine, transmission, electrification, mass reduction, aerodynamic, tire rolling resistance, and other vehicle technologies considered in this analysis. Each section discusses how we define the technology in the CAFE Model,<sup>108</sup> how we assigned the technology to vehicles in the MY 2020 analysis fleet used as a starting point for this analysis, any adoption features applied to the technology so the analysis better represents manufacturers’ real-world decisions, the technology effectiveness values, and technology cost.

Please note that the following technology effectiveness sections provide *examples* of the *range* of effectiveness values that a technology could achieve when applied to the entire vehicle system, in conjunction with the other fuel-economy-improving technologies already on or also applied at the same time to the vehicle. To see the incremental effectiveness values for any particular vehicle moving from one technology key to a more advanced technology key, see the FE\_1 and FE\_2 Adjustments files that are integrated in the CAFE Model executable file. Similarly, the technology costs provided in each section are *examples* of absolute costs seen in specific model years (MYs 2020, 2025, and 2030 for most technologies), for specific vehicle classes. To see all absolute technology costs used in the analysis across all model years, see the Technologies file.

<sup>108</sup> Note, due to the diversity of definitions industry sometimes employs for technology terms, or in describing the specific application of technology, the terms defined here may differ from how the technology is defined in the industry.

NHTSA seeks comment on the following discussion.

1. Engine Paths

For this analysis, the extensive variety of light duty vehicle internal combustion (IC) engine technologies are classified into discrete engine technology paths. These paths are used to model the most representative characteristics, costs, and performance of the fuel-economy improving technologies most likely available during the rulemaking time frame, MYs 2024–2026. Due to uncertainties in the cost and capabilities of emerging technologies, some new and pre-production technologies are not part of this analysis. We did not include technologies unlikely to be feasible in the rulemaking timeframe, technologies unlikely to be compatible with U.S. fuels, or technologies for which there was not appropriate data available to allow the simulation of effectiveness

across all vehicle technology classes in this analysis.

The following sections discuss IC engine technologies considered in this analysis, general technology categories used by the CAFE Model, and how the engine technologies are assigned in the MY 2020 analysis fleet. The following sections also discuss adoption features applicable to engine technologies, engine technologies’ effectiveness when combined in a full vehicle model, and the engine technologies’ costs.

(a) Engine Modeling in the CAFE Model

DOT models IC engine technologies that manufacturers can use to improve fuel economy. Some engine technologies can be incorporated into existing engines with minor or moderate changes to the engines, but many engine technologies require an entirely new engine architecture.

We divide engine technologies into two categories, “basic engine technologies” and “advanced engine

technologies.” “Basic engine technologies” refer to technologies adaptable to an existing engine with minor or moderate changes to the engine. “Advanced engine technologies” refer to technologies that generally require significant changes or an entirely new engine architecture. The words “basic” and “advanced” are not meant to confer any information about the level of sophistication of the technology. Many advanced engine technology definitions also include some basic engine technologies, and these basic technologies are accounted for in the costs and effectiveness values of the advanced engine. Figure III–7 shows how the basic and other engines are laid out on pathways evaluated in the compliance simulation. Each engine technology is briefly described, below. It is important to note the “Basic Engine Path” shows that every engine starts with VVT and can add one, some, or all the technologies in the dotted box, as discussed in Section III.D.1.a)(1).

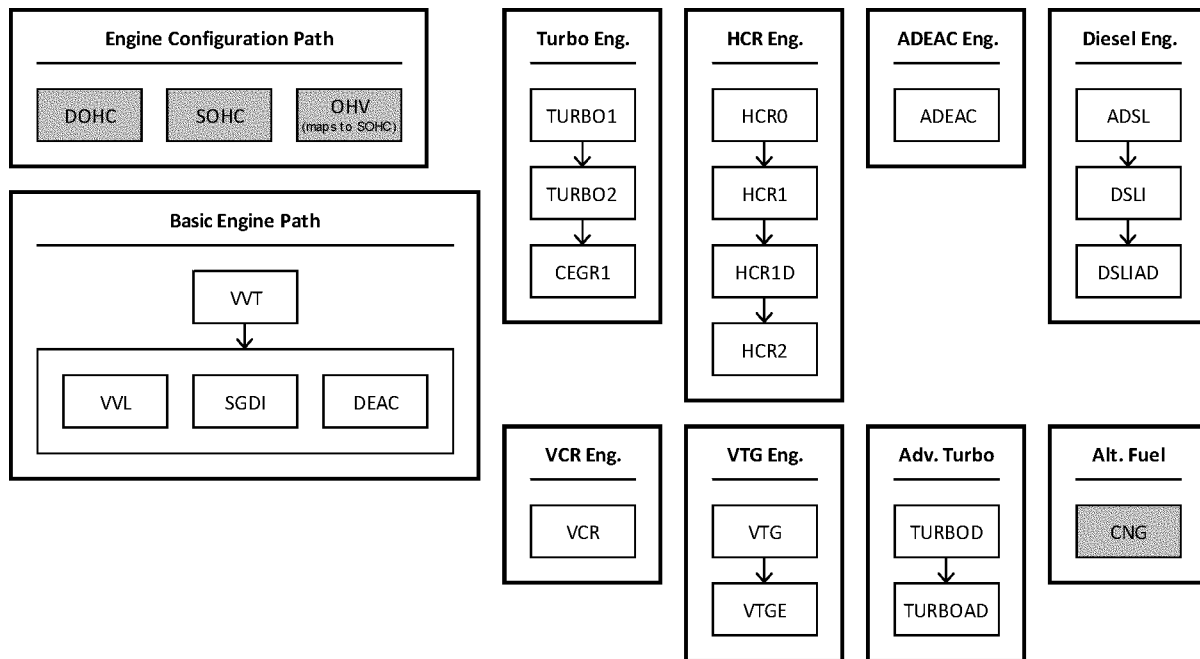

Figure III-7 – Engine Technology Paths in the CAFE Model

(1) Basic Engines

In the CAFE Model, basic engine technologies may be applied individually or in combination with other basic engine technologies. The basic engine technologies include variable valve timing (VVT), variable valve lift (VVL), stoichiometric gasoline direct injection (SGDI), and cylinder deactivation. Cylinder deactivation

includes a basic level (DEAC) and an advanced level (ADEAC). DOT applies the basic engine technologies across two engine architectures: dual over-head camshaft (DOHC) engine architecture and single over-head camshaft (SOHC) engine architecture.

VVT: Variable valve timing is a family of valve-train designs that dynamically adjusts the timing of the intake valves, exhaust valves, or both, in relation to

piston position. VVT can reduce pumping losses, provide increased engine torque and horsepower over a broad engine operating range, and allow unique operating modes, such as Atkinson cycle operation, to further enhance efficiency.<sup>109</sup> VVT is nearly universally used in the MY 2020 fleet. VVT enables more control of in-cylinder

<sup>109</sup> 2015 NAS report, at 31.

air flow for exhaust scavenging and combustion relative to fixed valve timing engines. Engine parameters such as volumetric efficiency, effective compression ratio, and internal exhaust gas recirculation (iEGR) can all be enabled and accurately controlled by a VVT system.

*VVL*: Variable valve lift dynamically adjusts the distance a valve travels from the valve seat. The dynamic adjustment can optimize airflow over a broad range of engine operating conditions. The technology can increase effectiveness by reducing pumping losses and by affecting the fuel and air mixture motion and combustion in-cylinder.<sup>110</sup> VVL is less common in the MY 2020 fleet than VVT, but still prevalent. Some manufacturers have implemented a limited, discrete approach to VVL. The discrete approach allows only limited (e.g., two) valve lift profiles versus allowing a continuous range of lift profiles.

*SGDI*: Stoichiometric gasoline direct injection sprays fuel at high pressure directly into the combustion chamber, which provides cooling of the in-cylinder charge via in-cylinder fuel vaporization to improve spark knock tolerance and enable an increase in compression ratio and/or more optimal spark timing for improved efficiency.<sup>111</sup> SGDI is common in the MY 2020 fleet, and the technology is used in many advanced engines as well.

*DEAC*: Basic cylinder deactivation disables intake and exhaust valves and turns off fuel injection for the deactivated cylinders during light load operation. DEAC is characterized by a small number of discrete operating configurations.<sup>112</sup> The engine runs temporarily as though it were a smaller engine, reducing pumping losses and improving efficiency. DEAC is present in the MY 2020 baseline fleet.

*ADEAC*: Advanced cylinder deactivation systems, also known as rolling or dynamic cylinder deactivation systems, allow a further degree of cylinder deactivation than the base DEAC. ADEAC allows the engine to vary the percentage of cylinders deactivated and the sequence in which cylinders are deactivated, essentially providing “displacement on demand” for low load operations. A small number of vehicles have ADEAC in the MY 2020 baseline fleet.

Section III.D.1.d) contains additional information about each basic engine technology used in this analysis, including information about the engine

map models used in the full vehicle technology effectiveness modeling.

## (2) Advanced Engines

DOT defines advanced engine technologies in the analysis as technologies that require significant changes in engine structure, or an entirely new engine architecture.<sup>113</sup> The advanced engine technologies represent the application of alternate combustion cycles or changes in the application of forced induction to the engine. Each advanced engine technology has a discrete pathway for progression to improved versions of the technology, as seen above in Figure III–7. The advanced engine technology pathways include a turbocharged pathway, a high compression ratio (Atkinson) engine pathway, a variable turbo geometry (Miller Cycle) engine pathway, a variable compression ratio pathway, and a diesel engine pathway. Although the CAFE Model includes a compressed natural gas (CNG) pathway, that technology is a baseline-only technology and was not included in the analysis; currently, there are no dedicated CNG vehicles in the MY 2020 analysis fleet.

*TURBO*: Forced induction engines, or turbocharged downsized engines, are characterized by technology that can create greater-than-atmospheric pressure in the engine intake manifold when higher output is needed. The raised pressure results in an increased amount of airflow into the cylinder supporting combustion, increasing the specific power of the engine. Increased specific power means the engine can generate more power per unit of cylinder volume. The higher power per cylinder volume allows the overall engine volume to be reduced, while maintaining performance. The overall engine volume decrease results in an increase in fuel efficiency by reducing parasitic loads associated with larger engine volumes.<sup>114</sup>

Cooled exhaust gas recirculation is also part of the advanced forced induction technology path. The basic recycling of exhaust gases using VVT is called internal EGR (iEGR) and is included as part of the performance improvements provided by the VVT basic engine technology. Cooled EGR (cEGR) is a second method for diluting the incoming air that takes exhaust gases, passes them through a heat exchanger to reduce their temperature, and then mixes them with incoming air

in the intake manifold.<sup>115</sup> As discussed in Section III.D.1.d), many advanced engine maps include EGR.

Five levels of turbocharged engine downsizing technologies are considered in this analysis: A ‘basic’ level of turbocharged downsized technology (TURBO1), an advanced turbocharged downsized technology (TURBO2), an advanced turbocharged downsized technology with cooled exhaust gas recirculation applied (cEGR), a turbocharged downsized technology with basic cylinder deactivation applied (TURBOD), and a turbocharged downsized technology with advanced cylinder deactivation applied (TURBOAD).

*HCR*: Atkinson engines, or high compression ratio engines, represent a class of engines that achieve a higher level of fuel efficiency by implementing an alternate combustion cycle.<sup>116</sup> Historically, the Otto combustion cycle has been used by most gasoline-based spark ignition engines. Increased research into improving fuel economy has resulted in the development of alternate combustion cycles that allow for greater levels of thermal efficiency. One such alternative combustion cycle is the Atkinson cycle. Atkinson cycle operation is achieved by allowing the expansion stroke of the engine to overextend allowing the combustion products to achieve the lowest possible pressure before the exhaust stroke.<sup>117 118 119</sup>

Descriptions of Atkinson cycle engines and Atkinson mode or Atkinson-enabled engine technologies have been used interchangeably in association with high compression ratio (HCR) engines, for past rulemaking analyses. Both technologies achieve a higher thermal efficiency than traditional Otto cycle-only engines, however, the two engine types operate differently. For purposes of this analysis, Atkinson technologies can be categorized into two groups to reduce confusion: (1) Atkinson-enabled engines and (2) Atkinson engines.

Atkinson-enabled engines, or high compression ratio engines (HCR),

<sup>115</sup> 2015 NAS report, at 35.

<sup>116</sup> See the 2015 NAS report, Appendix D, for a short discussion on thermodynamic engine cycles.

<sup>117</sup> Otto cycle is a four-stroke cycle that has four piston movements over two engine revolutions for each cycle. First stroke: Intake or induction; second stroke: Compression; third stroke: Expansion or power stroke; and finally, fourth stroke: Exhaust.

<sup>118</sup> Compression ratio is the ratio of the maximum to minimum volume in the cylinder of an internal combustion engine.

<sup>119</sup> Expansion ratio is the ratio of maximum to minimum volume in the cylinder of an IC engine when the valves are closed (i.e., the piston is traveling from top to bottom to produce work).

<sup>114</sup> 2015 NAS report, at 34.

dynamically swing between operating closer to an Otto cycle or an Atkinson cycle based on engine loads. During high loads the engine will use the lower-efficiency, power-dense Otto cycle mode, while at low loads the engine will use the higher-efficiency, lower power-dense Atkinson cycle mode. The hybrid combustion cycle operation is used to address the low power density issues that can limit the Atkinson-only engine and allow for a wider application of the technology.

The level of efficiency improvement experienced by a vehicle employing Atkinson cycle operation is directly related to how much of the engine's operation time is spent in Atkinson mode. Vehicles that can experience operation at a high load for long portions of their operating cycle will see little to no benefit from this technology. This limitation to performance results in manufacturers typically limiting the application of this technology to vehicles with a use profile that can take advantage of the technology's behavior.

Three HCR or Atkinson-enabled engines are available in the analysis: (1) The baseline Atkinson-enabled engine (HCR0), (2) the enhanced Atkinson enabled engine (HCR1), and finally, (3) the enhanced Atkinson enabled engine with cylinder deactivation (HCR1D).

In contrast, Atkinson engines in this analysis are defined as engines that operate full-time in the Atkinson cycle. The most common method of achieving Atkinson operation is the use of late intake valve closing. This method allows backflow from the combustion chamber into the intake manifold, reducing the dynamic compression ratio, and providing a higher expansion ratio. The higher expansion ratio improves thermal efficiency but reduces power density. The low power density generally relegates these engines to hybrid vehicle (SHEVPS) applications only in this analysis. Coupling the engines to electric motors and significantly reducing road loads can compensate for the lower power density and maintain desired performance levels for the vehicle.<sup>120</sup> The Toyota Prius is an example of a vehicle that uses an Atkinson engine. The 2017 Toyota Prius achieved a peak thermal efficiency of 40 percent.<sup>121</sup>

<sup>120</sup> Toyota. "Under the Hood of the All-new Toyota Prius." Oct. 13, 2015. Available at <https://global.toyota/en/detail/9827044>. Last accessed Nov. 22, 2019.

<sup>121</sup> Matsuo, S., Ikeda, E., Ito, Y., and Nishiura, H., "The New Toyota Inline 4 Cylinder 1.8L ESTEC 2ZR-FXE Gasoline Engine for Hybrid Car," SAE Technical Paper 2016-01-0684, 2016, <https://doi.org/10.4271/2016-01-0684>.

NHTSA seeks comment on whether and how to consider "HCR2" in the analysis for the final rule.

*VTG*: The Miller cycle is another type of overexpansion combustion cycle, similar to the Atkinson cycle. The Miller cycle, however, operates in combination with a forced induction system that helps address the impacts of reduced power density during high load operating conditions. Miller cycle-enabled engines use a similar technology approach as seen in Atkinson-enabled engines to effectively create an expanded expansion stroke of the combustion cycle.

In the analysis, the baseline Miller cycle-enabled engine includes the application of a variable turbo geometry technology (VTG). The advanced Miller cycle enabled system includes the application of a 48V-based electronic boost system (VTGE). VTG technology allows the system to vary boost level based on engine operational needs. The use of a variable geometry turbocharger also supports the use of cooled exhaust gas recirculation.<sup>122</sup> An electronic boost system has an electric motor added to assist a turbocharger at low engine speeds. The motor assist mitigates turbocharger lag and low boost pressure at low engine speeds. The electronic assist system can provide extra boost needed to overcome the torque deficits at low engine speeds.<sup>123</sup>

*VCR*: Variable compression ratio (VCR) engines work by changing the length of the piston stroke of the engine to optimize the compression ratio and improve thermal efficiency over the full range of engine operating conditions. Engines using VCR technology are currently in production, but appear to be targeted primarily towards limited production, high performance applications. Nissan is the only manufacturer to use this technology in the MY 2020 baseline fleet. Few manufacturers and suppliers provided information about VCR technologies, and DOT reviewed several design concepts that could achieve a similar functional outcome. In addition to design concept differences, intellectual property ownership complicates the ability to define a VCR hardware system that could be widely adopted across the industry. Because of these issues, adoption of the VCR engine technology is limited to Nissan only.

*ADSL*: Diesel engines have several characteristics that result in superior fuel efficiency over traditional gasoline engines. These advantages include reduced pumping losses due to lack of

(or greatly reduced) throttling, high pressure direct injection of fuel, a more efficient combustion cycle,<sup>124</sup> and a very lean air/fuel mixture relative to an equivalent-performance gasoline engine.<sup>125</sup> However, diesel technologies require additional enablers, such as a NOx adsorption catalyst system or a urea/ammonia selective catalytic reduction system, for control of NOx emissions.

DOT considered three levels of diesel engine technology: the baseline diesel engine technology (ADSL) is based on a standard 2.2L turbocharged diesel engine; the more advanced diesel engine (DSLII) starts with the ADSL system and incorporates a combination of low pressure and high pressure EGR, reduced parasitic loss, friction reduction, a highly-integrated exhaust catalyst with low temp light off temperatures, and closed loop combustion control; and finally the most advanced diesel system (DSLIIAD) is the DSLI system with advanced cylinder deactivation technology added.

*EFR*: Engine friction reduction technology is a general engine improvement meant to represent future technologies that reduce the internal friction of an engine. EFR technology is not available for application until MY 2023. The future technologies do not significantly change the function or operation of the engine but reduce the energy loss due to the rotational or rubbing friction experienced in the bearings or cylinder during normal operation. These technologies can include improved surface coatings, lower-tension piston rings, roller cam followers, optimal thermal management and piston surface treatments, improved bearing design, reduced inertial loads, improved materials, or improved geometry.

#### (b) Engine Analysis Fleet Assignments

As a first step in assigning baseline levels of engine technologies in the analysis fleet, DOT used data for each manufacturer to determine which platforms shared engines. Within each manufacturer's fleet, DOT assigned unique identification designations (engine codes) based on configuration, technologies applied, displacement, compression ratio, and power output. DOT used power output to distinguish between engines that might have the same displacement and configuration

<sup>124</sup> Diesel cycle is also a four-stroke cycle like the Otto Cycle, except in the intake stroke no fuel is injected and fuel is injected late in the compression stroke at higher pressure and temperature.

<sup>125</sup> See the 2015 NAS report, Appendix D, for a short discussion on thermodynamic engine cycles.

<sup>122</sup> 2015 NAS report, at 116.

<sup>123</sup> 2015 NAS report, at 62.

but significantly different horsepower ratings.

The CAFE Model identifies leaders and followers for a manufacturer’s vehicles that use the same engine, indicated by sharing the same engine code. The model automatically determines which engines are leaders by using the highest sales volume row of the highest sales volume nameplate that is assigned an engine code. This leader-follower relationship allows the CAFE Model simulation to maintain engine sharing as more technology is applied to engines.

DOT accurately represents each engine using engine technologies and engine technology classes. The first step is to assign engine technologies to each engine code. Technology assignment is based on the identified characteristics of the engine being modeled, and based on technologies assigned, the engine will be aligned with an engine map model that most closely corresponds.

The engine technology classes are a second identifier used to accurately account for engine costs. The engine technology class is formatted as number of cylinders followed by the letter C,

number of banks followed by the letter B, and an engine head configuration designator, which is \_SOHC for single overhead cam, \_ohv for overhead valve, or blank for dual overhead cam. As an example, one variant of the GMC Acadia has a naturally aspirated DOHC inline 4-cylinder engine, so DOT assigned the vehicle to the ‘4C1B’ engine technology class and assigned the technology VVT and SGDI. Table III–7 shows examples of observed engines with their corresponding assigned engine technologies as well as engine technology classes.

**Table III-7 – Examples of Observed Engines and Their Corresponding Engine Technology Class and Technology Assignments**

Vehicle	Engine Observed	Engine Technology Class Assigned	Engine Technology Assigned
GMC Acadia	Naturally Aspirated DOHC Inline 4 cylinder	4C1B	VVT, SGDI
VW Arteon	Turbocharged DOHC Inline 4 cylinder	6C2B	TURBO1
Bentley Bentayga	Turbocharged DOHC W12 w/ cylinder deactivation	16C4B	TURBOD
Honda Passport	Naturally Aspirated SOHC V6	6C2B_SOHC	VVT, VVL, SGDI, DEAC
Honda Civic	Turbocharged DOHC Inline 4 cylinder	4C1B	TURBO1
Cadillac CT5	Turbocharged DOHC V6 w/ cylinder deactivation	8C2B	TURBOD
Ford Escape	Turbocharged DOHC Inline 3 cylinder	4C1B_L	TURBO1
Chevrolet Silverado	Naturally Aspirated OHV V8 w/ skip fire	8C2B_ohv	ADEAC

The cost tables for a given engine class include downsizing (to an engine architecture with fewer cylinders) when turbocharging technology is applied, and therefore, the turbocharged engines observed in the 2020 fleet (that have already been downsized) often map to an engine class with more cylinders. For instance, an observed TURBO1 V6 engine would map to an 8C2B (V8) engine class, because the turbo costs on the 8C2B engine class worksheet assume a V6 (6C2B) engine architecture. Diesel engines map to engine technology classes that match the observed cylinder count since naturally aspirated diesel engines are not found in new light duty vehicles in the U.S. market. Similarly, as indicated above, the TURBO1 I3 in the Ford Escape maps to the 4C1B\_L (I4) engine class, because the turbo costs on

the 4C1B\_L engine class worksheet assume a I3 (3C1B) engine architecture. Some instances can be more complex, including low horsepower variants for 4-cylinder engines, and are shown in Table III–8.

For this analysis, we have allowed additional downsizing beyond what has been previously modeled. We allow enhanced downsizing because manufacturers have downsized low output naturally aspirated engines to turbo engines with smaller architectures than traditionally observed.<sup>126 127 128</sup> To

capture this new level of turbo downsizing we created a new category of low output naturally aspirated engines, which is only applied to 4-cylinder engines in the MY 2020 fleet. These engines use the costing tabs in the Technologies file with the ‘L’ designation and are assumed to downsize to turbocharged 3-cylinder engines for costing purposes. We seek comment regarding the expected further application of this technology to larger cylinder count engines, such as 8-cylinder engines that may be turbo

TSD Chapter 3.1.2 includes more details about baseline engine technology assignment logic, and details about the levels of engine technology penetration in the MY 2020 fleet.

#### (c) Engine Adoption Features

Engine adoption features are defined through a combination of (1) refresh and redesign cycles, (2) technology path logic, (3) phase-in capacity limits, and (4) SKIP logic. Figure III-7 above shows the technology paths available for engines in the CAFE Model. Engine technology development and application typically results in an engine design moving from the basic engine tree to one of the advanced engine trees. Once an engine design moves to the advanced engine tree it is not allowed to move to alternate advanced engine trees. Specific path logic, phase-in caps, and SKIP logic applied to each engine technology are discussed by engine technology, in turn.

Refresh and redesign cycles dictate when engine technology can be applied. Technologies applicable only during a platform redesign can be applied during a platform refresh if another vehicle platform that shares engine codes (uses the same engine) has already applied the technology during a redesign. For example, models of the GMC Acadia and the Cadillac XT4 use the same engine (assigned engine code 112011 in the Market Data file); if the XT4 adds a new engine technology during a redesign, then the Acadia may also add the same engine technology during the

next refresh or redesign. This allows the model to maintain engine sharing relationships while also maintaining refresh and redesign schedules.<sup>129</sup> For engine technologies, DOHC, OHV, VVT, and CNG engine technologies are baseline only, while all other engine technologies can only be applied at a vehicle redesign.

Basic engine technologies in the CAFE Model are represented by four technologies: VVT, VVL, SGDI, and DEAC. DOT assumes that 100% of basic engine platforms use VVT as a baseline, based on wide proliferation of the technology in the U.S. fleet. The remaining three technologies, VVL, SGDI, and DEAC, can all be applied individually or in any combination of the three. An engine can jump from the basic engines path to any other engine path except the Alternative Fuel Engine Path.

Turbo downsizing allows manufacturers to maintain vehicle performance characteristics while reducing engine displacement and cylinder count. Any basic engine can adopt one of the turbo engine technologies (TURBO1, TURBO2 and CEGR1). Vehicles that have turbocharged engines in the baseline fleet will stay on the turbo engine path to prevent unrealistic engine technology change in the short timeframe considered in the rulemaking analysis. Turbo technology is a mutually

<sup>129</sup> See Section III.C.2.a) for more discussion on platform refresh and redesign cycles.

exclusive technology in that it cannot be adopted for HCR, diesel, ADEAC, or CNG engines.

Non-HEV Atkinson mode engines are a collection of engines in the HCR engine pathway (HCR0, HCR1, HCR1D and HCR2). Atkinson engines excel in lower power applications for lower load conditions, such as driving around a city or steady state highway driving without large payloads, thus their adoption is more limited than some other technologies. DOT expanded the availability of HCR technology compared to the 2020 final rule because of new observed applications in the market.<sup>130</sup> However, there are three categories of adoption features specific to the HCR engine pathway:<sup>131</sup>

- DOT does not allow vehicles with 405 or more horsepower to adopt HCR engines due to their prescribed duty cycle being more demanding and likely not supported by the lower power density found in HCR-based engines.<sup>132</sup>
- Pickup trucks and vehicles that share engines with pickup trucks are

<sup>130</sup> For example, the Hyundai Palisade and Kia Telluride have a 291 hp V6 HCR1 engine. The specification sheets for these vehicles are located in the docket for this action.

<sup>131</sup> See Section III.D.1.d)(1) Engine Maps, for a discussion of why HCR2 and P2HCR2 were not used in the central analysis. "SKIP" logic was used to remove this engine technology from application, however as discussed below, we maintain HCR2 and P2HCR2 in the model architecture for sensitivity analysis and for future engine map model updates.

<sup>132</sup> Heywood, John B. Internal Combustion Engine Fundamentals. McGraw-Hill Education, 2018. Chapter 5.

also excluded from receiving HCR engines; the duty cycle for these heavy vehicles, particularly when hauling cargo or towing, are likely unable to take full advantage of Atkinson cycle use, and would ultimately spend the majority of operation as an Otto cycle engine, negating the benefits of HCR technology.<sup>133</sup>

- HCR engine application is also restricted for some manufacturers that are heavily performance-focused and have demonstrated a significant commitment to power dense technologies such as turbocharged downsizing.<sup>134</sup> NHTSA seeks comment on the appropriateness of these restrictions for the final rule.

Advanced cylinder deactivation technology (ADEAC), or dynamic cylinder deactivation (*e.g.*, Dynamic Skip Fire), can be applied to any engine with basic technology. This technology represents a naturally aspirated engine with ADEAC. Additional technology can be applied to these engines by moving to the Advanced Turbo Engine Path.

Miller cycle (VTG and VTGE) engines can be applied to any basic and turbocharged engine. VTGE technology is enabled by the use of a 48V system that presents an improvement from traditional turbocharged engines, and accordingly VTGE includes the application of a mild hybrid (BISG) system.

VCR engines can be applied to basic and turbocharged engines, but the technology is limited to Nissan and Mitsubishi.<sup>135</sup> VCR technology requires a complete redesign of the engine, and in the analysis fleet, only two of Nissan's models had incorporated this technology. The agency does not believe any other manufacturers will invest to develop and market this technology in their fleet in the rulemaking time frame.

Advanced turbo engines are becoming more prevalent as the technologies mature. TURBOD combines TURBO1 and DEAC technologies and represents the first advanced turbo. TURBOAD combines TURBO1 and ADEAC technologies and is the second and last level of advanced turbos. Engines from either the Turbo Engine Path or the

ADEAC Engine Path can adopt these technologies.

Any basic engine technologies (VVT, VVL, SGDI, and DEAC) can adopt ADSL and DSLI engine technologies. Any basic engine and diesel engine can adopt DSLIAD technology in this analysis; however, DOT applied a phase in cap and year for this technology at 34 percent and MY 2023, respectively. In DOT's engineering judgement, this is a rather complex and costly technology to adopt and it would take significant investment for a manufacturer to develop. For more than a decade, diesel engine technologies have been used in less than one percent of the total light-duty fleet production and have been found mostly on medium and heavy-duty vehicles.

Finally, DOT allows the CAFE Model to apply EFR to any engine technology except for DSLI and DSLIAD. DSLI and DSLIAD inherently have incorporated engine friction technologies from ADSL. In addition, friction reduction technologies that apply to gasoline engines cannot necessarily be applied to diesel engines due to the higher temperature and pressure operation in diesel engines.

#### (d) Engine Effectiveness Modeling

Effectiveness values used for engine technologies were simulated in two ways. The value was either calculated based on the difference in full vehicle simulation results created using the Autonomie modeling tool, or effectiveness values were determined using an alternate calculation method, including analogous improvement or fuel economy improvement factors.

##### (1) Engine Maps

Most effectiveness values used as inputs for the CAFE Model were determined by comparing results of full vehicle simulations using the Autonomie simulation tool. For a full discussion about how Autonomie was used, see Section III.C.4 and TSD Chapter 2.4, in addition to the Autonomie model documentation. Engine map models were the primary inputs used to simulate the effects of different engine technologies in the Autonomie full vehicle simulations.

Engine maps provide a three-dimensional representation of engine performance characteristics at each engine speed and load point across the operating range of the engine. Engine maps have the appearance of topographical maps, typically with engine speed on the horizontal axis and engine torque, power, or brake mean

effective pressure (BMEP)<sup>136</sup> on the vertical axis. A third engine characteristic, such as brake-specific fuel consumption (BSFC),<sup>137</sup> is displayed using contours overlaid across the speed and load map. The contours provide the values for the third characteristic in the regions of operation covered on the map. Other characteristics typically overlaid on an engine map include engine emissions, engine efficiency, and engine power. The engine maps developed to model the behavior of the engines used in this analysis are referred to as engine map models.

The engine map models used in this analysis are representative of technologies that are currently in production or are expected to be available in the rulemaking timeframe, MYs 2024–2026. The engine map models were developed to be representative of the performance achievable across industry for a given technology and are not intended to represent the performance of a single manufacturer's specific engine. The broadly representative performance level was targeted because the same combination of technologies produced by different manufacturers will have differences in performance, due to manufacturer-specific designs for engine hardware, control software, and emissions calibration.

Accordingly, DOT expects that the engine maps developed for this analysis will differ from engine maps for manufacturers' specific engines. However, DOT intends and expects that the incremental changes in performance modeled for this analysis, due to changes in technologies or technology combinations, will be similar to the incremental changes in performance observed in manufacturers' engines for the same changes in technologies or technology combinations.

The analysis never applies absolute BSFC levels from the engine maps to any vehicle model or configuration for the rulemaking analysis. The absolute fuel economy values from the full vehicle Autonomie simulations are used only to determine incremental effectiveness for switching from one technology to another technology. The incremental effectiveness is applied to the absolute fuel economy of vehicles in the analysis fleet, which are based on CAFE compliance data. For subsequent

<sup>133</sup> This is based on CBI conversation with manufacturers that currently employ HCR-based technology but saw no benefit when the technology was applied to truck platforms in their fleet.

<sup>134</sup> There are three manufacturers that met the criteria (near 100% turbo downsized fleet, and future hybrid systems are based on turbo-downsized engines) described and were excluded: BMW, Daimler, and Jaguar Land Rover.

<sup>135</sup> Nissan and Mitsubishi are strategic partners and members of the Renault-Nissan-Mitsubishi Alliance.

<sup>136</sup> Brake mean effective pressure is an engineering measure, independent of engine displacement, that indicates the actual work an engine performs.

<sup>137</sup> Brake-specific fuel consumption is the rate of fuel consumption divided by the power being produced.

technology changes, incremental effectiveness is applied to the absolute fuel economy level of the previous technology configuration. Therefore, for a technically sound analysis, it is most important that the differences in BSFC among the engine maps be accurate, and not the absolute values of the individual engine maps. However, achieving this can be challenging.

For this analysis, DOT used a small number of baseline engine configurations with well-defined BSFC maps, and then, in a very systematic and controlled process, added specific well-defined technologies to create a BSFC map for each unique technology combination. This could theoretically be done through engine or vehicle testing, but testing would need to be conducted on a single engine, and each configuration would require physical parts and associated engine calibrations to assess the impact of each technology configuration, which is impractical for the rulemaking analysis because of the extensive design, prototype part fabrication, development, and laboratory resources that are required to evaluate each unique configuration. Modeling is an approach used by industry to assess an array of technologies with more limited testing. Modeling offers the opportunity to isolate the effects of individual technologies by using a single or small number of baseline engine

configurations and incrementally adding technologies to those baseline configurations. This provides a consistent reference point for the BSFC maps for each technology and for combinations of technologies that enables the differences in effectiveness among technologies to be carefully identified and quantified.

The Autonomie model documentation provides a detailed discussion on how the engine map models were used as inputs to the full vehicle simulations performed using the Autonomie tool. The Autonomie model documentation contains the engine map model topographic figures, and additional engine map model data can be found in the Autonomie input files.<sup>138</sup>

Most of the engine map models used in this analysis were developed by IAV GmbH (IAV) Engineering. IAV is one of the world's leading automotive industry engineering service partners with an over 35-year history of performing research and development for powertrain components, electronics, and vehicle design.<sup>139</sup> The primary outputs of IAV's work for this analysis are engine maps that model the operating characteristics of engines equipped with specific technologies.

<sup>138</sup> See additional Autonomie supporting materials in docket number NHTSA-2021-0053 for this proposal.

<sup>139</sup> IAV Automotive Engineering, <https://www.iav.com/en/>.

The generated engine maps were validated against IAV's global database of benchmarked data, engine test data, single cylinder test data, prior modeling studies, technical studies, and information presented at conferences.<sup>140</sup> The effectiveness values from the simulation results were also validated against detailed engine maps produced from the Argonne engine benchmarking programs, as well as published information from industry and academia, ensuring reasonable representation of simulated engine technologies.<sup>141</sup> The engine map models used in this analysis and their specifications are shown in Table III-9.

analysis. The Eng24 and Eng25 engine maps are equivalent to the ATK and ATK2 models developed for the 2016 Draft Technical Assessment Report (TAR), EPA Proposed Determination, and Final Determination.<sup>142</sup> The ATK1 engine model is based directly on the 2.0L 2014 Mazda SkyActiv-G (ATK) engine. The ATK2 represents an Atkinson engine concept based on the Mazda engine, adding cEGR, cylinder deactivation, and an increased compression ratio (14:1). In this analysis, Eng24 and Eng25 correspond to the HCR1 and HCR2 technologies.

The HCR2 engine map model application in this analysis follows the approach of the 2020 final rule.<sup>143</sup> The agency believes the use of HCR0, HCR1, and the new addition of HCR1D reasonably represents the application of Atkinson Cycle engine technologies within the current light-duty fleet and the anticipated applications of Atkinson Cycle technology in the MY 2024–2026 timeframe.

We are currently developing an updated family of HCR engine map models that will include cEGR, cylinder deactivation and a combination thereof. The new engine map models will closely align with the baseline assumptions used in the other IAV-based HCR engine map models used for the agency's analysis. The updated

engine map models will likely not be available for the final rule associated with this proposal because of engine map model testing and validation requirements but will be available for future CAFE analyses. We believe the timing for including the new engine map models is reasonable, because a manufacturer that could apply this technology in response to CAFE standards is likely not do so before MY 2026, as the application of this technology will require an engine redesign. We also believe this is reasonable given manufacturer's statements that there are diminishing returns to additional conventional engine technology improvements considering vehicle electrification commitments.

NHTSA seeks comment on whether and how to change our engine maps for HCR2 in the analysis for the final rule.

#### (2) Analogous Engine Effectiveness Improvements and Fuel Economy Improvement Factors

For some technologies, the effectiveness for applying an incremental engine technology was determined by using the effectiveness values for applying the same engine technology to a reasonably similar base engine. An example of this can be seen in the determination of the application

of SGDI to the baseline SOHC engine. Currently there is no engine map model for the SOHC+VVT+SGDI engine configuration. To create the effectiveness data required as an input to the CAFE Model, first, a pairwise comparison between technology configurations that included the DOHC+VVT engine (Eng1) and the DOHC+VVT+SGDI (Eng18) engine was conducted. Then, the results of that comparison were used to generate a data set of emulated performance values for adding the SGDI technology to the SOHC+VVT engine (Eng5b) systems.

The pairwise comparison is performed by finding the difference in fuel consumption performance between every technology configuration using the analogous base technology (*e.g.*, Eng1) and every technology configuration that only changes to the analogous technology (*e.g.*, Eng18). The individual changes in performance between all the technology configurations are then added to the same technology configurations that use the new base technology (*e.g.*, Eng5b) to create a new set of performance values for the new technology (*e.g.*, SOHC+VVT+SGDI). Table III–10 shows the engine technologies where analogous effectiveness values were used.

**Table III-10 – Engine Technology Performance Values Determined by Analogous Effectiveness Values**

Analogous Baseline	Analogous Technology	New Base Technology	New Technology
Eng1 DOHC+VVT	Eng18 DOHC+VVT+SGDI	Eng5b SOHC+VVT	SOHC+VVT+SGDI
Eng1 DOHC+VVT	Eng19 SOHC+VVT+DEAC	Eng5b SOHC+VVT	SOHC+VVT+DEAC
Eng1 DOHC+VVT	Eng20 DOHC+VVT+VVL+ DEAC	Eng5b SOHC+VVT	SOHC+VVT+VVL+ DEAC
Eng1 DOHC+VVT	Eng21 DOHC+VVT+SGDI+DE AC	Eng5b SOHC+VVT	SOHC+VVT+SGDI+ DEAC
Eng12 (TURBO1)	Eng12DEAC (TURBOD)	Eng24 (HCR1)	HCR1D

DOT also developed a static fuel efficiency improvement factor to simulate applying an engine technology for some technologies where there was

either no appropriate analogous technology or there were not enough data to create a full engine map model. The improvement factors were generally

developed based on literature review or confidential business information (CBI) provided by stakeholders. Table III–11 provides a summary of the technology

<sup>142</sup> Ellies, B., Schenk, C., and Dekraker, P., "Benchmarking and Hardware-in-the-Loop Operation of a 2014 MAZDA SkyActiv 2.0L 13:1

Compression Ratio Engine," SAE Technical Paper 2016-01-1007, 2016, doi:10.4271/2016-01-1007.

<sup>143</sup> 85 FR 24425–27 (April 30, 2020).

effectiveness values simulated using improvement factors, and the value and rules for how the improvement factors were applied. Advanced cylinder deactivation (ADEAC, TURBOAD, DSLIAD), advanced diesel engines (DSLIA) and engine friction reduction (EFR) are the three technologies modeled using improvement factors.

The application of the advanced cylinder deactivation is responsible for three of the five technologies using an improvement factor in this analysis. The initial review of the advanced cylinder deactivation technology was based on a technical publication that used a MY 2010 SOHC VVT basic engine.<sup>144</sup> Additional information about the technology effectiveness came from a benchmarking analysis of pre-production 8-cylinder OHV prototype systems.<sup>145</sup> However, at the time of the analysis no studies of production versions of the technology were available, and the only available technology effectiveness came from existing studies, not operational information. Thus, only estimates of effect could be developed and not a full model of operation. No engine map model could be developed, and no other technology pairs were analogous.

To model the effects of advanced cylinder deactivation, an improvement factor was determined based on the

information referenced above and applied across the engine technologies. The effectiveness values for naturally aspirated engines were predicted by using full vehicle simulations of a basic engine with DEAC, SGDI, VVL, and VVT, and adding 3 percent or 6 percent improvement based on engine cylinder count: 3 percent for engines with 4 cylinders or less and 6 percent for all other engines. Effectiveness values for turbocharged engines were predicted using full vehicle simulations of the TURBOD engine and adding 1.5 percent or 3 percent improvement based on engine cylinder count: 1.5 percent for engines with 4 cylinders or less and 3 percent for all other engines. For diesel engines, effectiveness values were predicted by using the DSLI effectiveness values and adding 4.5 percent or 7.5 percent improvement based on vehicle technology class: 4.5 percent improvement was applied to small and medium non-performance cars, small performance cars, and small non-performance SUVs. 7.5 percent improvement was applied to all other vehicle technology classes.

The analysis modeled advanced engine technology application to the baseline diesel engine by applying an improvement factor to the ADSL engine technology combinations. A 12.8 percent improvement factor was applied to the ADSL technology combinations to create the DSLI technology combinations. The improvement in performance was based on the application of a combination of low pressure and high pressure EGR, reduced parasitic loss, advanced friction reduction, incorporation of highly-integrated exhaust catalyst with low temp light off temperatures, and closed loop combustion control.<sup>146 147 148 149</sup>

As discussed above, the application of the EFR technology does not simulate the application of a specific technology, but the application of an array of potential improvements to an engine. All reciprocating and rotating components in the engine are potential candidates for friction reduction, and minute improvements in several components can add up to a measurable fuel economy improvement.<sup>150 151 152 153</sup> Because of the incremental nature of this analysis, a range of 1–2 percent improvement was identified initially, and narrowed further to a specific 1.39 percent improvement. The final value is likely representative of a typical value industry may be able to achieve in future years.

(3) Engine Effectiveness Values

The effectiveness values for the engine technologies, for all ten vehicle technology classes, are shown in Figure III-8. Each of the effectiveness values shown is representative of the improvements seen for upgrading only the listed engine technology for a given

combination of other technologies. In other words, the range of effectiveness values seen for each specific technology (e.g., TURBO1) represents the addition of the TURBO1 technology to every technology combination that could select the addition of TURBO1. See Table III-12 for several specific examples. It must be emphasized, the

change in fuel consumption values between entire technology keys is used,<sup>154</sup> and not the individual technology effectiveness values. Using the change between whole technology keys captures the complementary or non-complementary interactions among technologies.

**Table III-12 – Example of Effectiveness Calculations Shown in Figure III-8\***

Tech	Vehicle Tech Class	Initial Technology Key	Fuel Consumption		Effectiveness (%)
			Initial (gal/mile)	New (gal/mile)	
TURBO1	Medium Car	DOHC;VVT;;;;;AT8L2;SS12V;ROLL10;AERO5;MR2	0.0282	0.0248	12.15
TURBO1	Medium Car	DOHC;VVT;;;;;AT8L2;CONV;ROLL10;AERO5;MR2	0.0292	0.0254	13.13
TURBO1	Medium Car	DOHC;VVT;;;;;AT8L2;BISG;ROLL10;AERO5;MR2	0.0275	0.0237	13.80
TURBO1	Medium Car	DOHC;VVT;;;;;AT6;SS12V;ROLL10;AERO5;MR2	0.0312	0.0269	13.80

\*The ‘Tech’ is added to the ‘Initial Technology Key’ replacing the existing engine technology, resulting in the new fuel consumption value. The percent effectiveness is found by determining the percent improved fuel consumption of the new value versus the initial value.<sup>155</sup>

Some of the advanced engine technologies have values that indicate seemingly low effectiveness. Investigation of these values shows the low effectiveness was a result of applying the advanced engines to existing SHEVP2 architectures. This effect is expected and illustrates the importance of using the full vehicle

modeling to capture interactions between technologies and capture instances of both complimentary technologies and non-complimentary technologies. In this instance, the SHEVP2 powertrain improves fuel economy, in part, by allowing the engine to spend more time operating at efficient engine speed and load

conditions. This reduces the advantage of adding advanced engine technologies, which also improve fuel economy, by broadening the range of speed and load conditions for the engine to operate at high efficiency. This redundancy in fuel savings mechanism results in a lower effectiveness when the technologies are added to each other.

<sup>154</sup> Technology key is the unique collection of technologies that constitutes a specific vehicle, see Section III.C.4.c).

<sup>155</sup> The full data set we used to generate this example can be found in the FE\_1 Improvements file.

**Figure III-8 – Engine Technologies Effectiveness Values for all Vehicle Technology Classes<sup>156</sup>**

(e) Engine Costs

The CAFE Model considers both cost and effectiveness in selecting any technology changes. We have allocated considerable resources to sponsoring research to determine direct manufacturing costs (DMCs) for fuel saving technologies. As discussed in detail in TSD Chapter 3.1.5, the engine costs used in this analysis build on estimates from the 2015 NAS report, agency-funded teardown studies, and work performed by non-government organizations.<sup>157</sup>

Absolute costs of the engine technology are used in this analysis

instead of relative costs, which were used prior to the 2020 final rule. The absolute costs are used to ensure the full cost of the IC engine is removed when electrification technologies are applied specifically for the transition to BEVs. This analysis models the cost of adoption of BEV technology by first removing the costs associated with IC powertrain systems, then applying the BEV systems costs. Relative costs can still be determined through comparison of the absolute costs for the initial technology combination and the new technology combination.

As discussed in detail in TSD Chapter 3.1.5, engine costs are assigned based on

the number of cylinders in the engine and whether the engine is naturally aspirated or turbocharged and downsized. Table III-13 below shows an example of absolute costs for engine technologies in 2018\$. The example costs are shown for a straight 4-cylinder DOHC engine and V-6-cylinder DOHC engine. The table shows costs declining across successive years due to the learning rate applied to each engine technology. For a full list of all absolute engine costs used in the analysis across all model years, see the Technologies file.

<sup>156</sup> The box shows the inner quartile range (IQR) of the effectiveness values and whiskers extend out 1.5 × IQR. The dots outside this range show effectiveness values outside those thresholds. The

data used to create this figure can be found in the FE\_1 Improvements file.

<sup>157</sup> FEV prepared several cost analysis studies for EPA on subjects ranging from advanced 8-speed transmissions to belt alternator starters or start/stop

systems. NHTSA contracted Electricore, EDAG, and Southwest Research for teardown studies evaluating mass reduction and transmissions. The 2015 NAS report also evaluated technology costs developed based on these teardown studies.

**Table III-13 – Examples of Absolute Costs for Engine Technologies in 2018\$ for a Straight 4-Cylinder DOHC Engine and a V-6-Cylinder DOHC Engine for Select Model Years**

## 2. Transmission Paths

For this analysis, DOT classified all light duty vehicle transmission technologies into discrete transmission technology paths. These paths are used to model the most representative characteristics, costs, and performance of the fuel-economy improving transmissions most likely available during the rulemaking time frame, MYs 2024–2026.

The following sections discuss how transmission technologies considered in this analysis are defined, the general technology categories used by the CAFE Model, and the transmission technologies' relative effectiveness and costs. The following sections also provide an overview of how the transmission technologies were assigned to the MY 2020 fleet, as well as the adoption features applicable to the transmission technologies.

### (a) Transmission Modeling in the CAFE Model

DOT modeled two major categories of transmissions for this analysis: Automatic and manual. Automatic transmissions are characterized by automatically selecting and shifting between transmission gears for the driver during vehicle operation. Automatic transmissions are further subdivided into four subcategories: Traditional automatic transmissions (AT), dual clutch transmissions (DCT), continuously variable transmissions (CVT), and direct drive transmissions (DD).

ATs and CVTs also employ different levels of high efficiency gearbox (HEG) technology. HEG improvements for transmissions represent incremental advancement in technology that improve efficiency, such as reduced friction seals, bearings and clutches, super finishing of gearbox parts, and improved lubrication. These advancements are all aimed at reducing

frictional and other parasitic loads in transmissions to improve efficiency. DOT considered three levels of HEG improvements in this analysis, based on 2015 recommendations by the National Academy of Sciences and CBI data.<sup>158</sup> HEG efficiency improvements are applied to ATs and CVTs, as those transmissions inherently have higher friction and parasitic loads related to hydraulic control systems and greater component complexity, compared to MTs and DCTs. HEG technology improvements are noted in the transmission technology pathways by increasing “levels” of a transmission technology; for example, the baseline 8-speed automatic transmission is termed “AT8”, while an AT8 with level 2 HEG technology is “AT8L2” and an AT8 with level 3 HEG technology is “AT8L3.”

AT: Conventional planetary gear automatic transmissions are the most

<sup>158</sup> 2015 NAS report, at 191.

popular transmission.<sup>159</sup> ATs typically contain three or four planetary gear sets that provide the various gear ratios. Gear ratios are selected by activating solenoids which engage or release multiple clutches and brakes as needed. ATs are packaged with torque converters, which provide a fluid coupling between the engine and the driveline and provide a significant increase in launch torque. When transmitting torque through this fluid coupling, energy is lost due to the churning fluid. These losses can be eliminated by engaging the torque converter clutch to directly connect the engine and transmission (“lockup”). For the Draft TAR and 2020 final rule, EPA and DOT surveyed automatic transmissions in the market to assess trends in gear count and purported fuel economy improvements.<sup>160</sup> Based on that survey, and also EPA’s more recent 2019 and 2020 Automotive Trends Reports,<sup>161</sup> DOT concluded that modeling ATs with a range of 5 to 10 gears, with three levels of HEG technology for this analysis was reasonable.

**CVT:** Conventional continuously variable transmissions consist of two cone-shaped pulleys, connected with a belt or chain. Moving the pulley halves allows the belt to ride inward or outward radially on each pulley, effectively changing the speed ratio between the pulleys. This ratio change is smooth and continuous, unlike the step changes of other transmission varieties.<sup>162</sup> DOT modeled two types of CVT systems in the analysis, the baseline CVT and a CVT with HEG technology applied.

**DCT:** Dual clutch transmissions, like automatic transmissions, automate shift and launch functions. DCTs use separate clutches for even-numbered and odd-numbered gears, allowing the next gear needed to be pre-selected, resulting in faster shifting. The use of multiple clutches in place of a torque converter results in lower parasitic losses than ATs.<sup>163</sup> Because of a history of limited appeal,<sup>164</sup> DOT constrains application of additional DCT technology to vehicles already using DCT technology, and only models two types of DCTs in the analysis.

**MT:** Manual transmissions are transmissions that require direct control by the driver to operate the clutch and shift between gears. In a manual transmission, gear pairs along an output shaft and parallel layshaft are always engaged. Gears are selected via a shift lever, operated by the driver. The lever operates synchronizers, which speed match the output shaft and the selected gear before engaging the gear with the shaft. During shifting operations (and during idle), a clutch between the engine and transmission is disengaged to decouple engine output from the transmission. Automakers today offer a minimal selection of new vehicles with manual transmissions.<sup>166</sup> As a result of reduced market presence, DOT only included three variants of manual transmissions in the analysis.

The transmission model paths used in this analysis are shown in Figure III–9. Baseline-only technologies (MT5, AT5, AT7L2, AT9L2, and CVT) are grayed and can only be assigned as initial vehicle transmission configurations. Further details about transmission path modeling can be found in TSD Chapter 3.2.

### (b) Transmission Analysis Fleet Assignments

The wide variety of transmissions on the market are classified into discrete transmission technology paths for this analysis. These paths are used to model the most representative characteristics, costs, and performance of the fuel economy-improving technologies most likely available during the rulemaking time frame.

For the 2020 analysis fleet, DOT gathered data on transmissions from manufacturer mid-model year CAFE compliance submissions and publicly available manufacturer specification sheets. These data were used to assign transmissions in the analysis fleet and determine which platforms shared transmissions.

Transmission type, number of gears, and high-efficiency gearbox (HEG) level are all specified for the baseline fleet assignment. The number of gears in the assignments for automatic and manual transmissions usually match the number of gears listed by the data sources, with some exceptions. Four-speed transmissions were not modeled in Autonomie for this analysis due to their rarity and low likelihood of being used in the future, so DOT assigned 2020 vehicles with an AT4 or MT4 to an AT5 or MT5 baseline, respectively. Some dual-clutch transmissions were also an exception; dual-clutch transmissions with seven gears were assigned to DCT6.

For automatic and continuously variable transmissions, the identification of the most appropriate transmission path required additional steps; this is because high-efficiency gearboxes are considered in the analysis but identifying HEG level from specification sheets alone was not always straightforward. DOT conducted a review of the age of the transmission design, relative performance versus previous designs, and technologies incorporated and used the information obtained to assign an HEG level. No automatic transmissions in the MY 2020 analysis fleet were determined to be at HEG Level 3. In addition, no six-speed automatic transmissions were assigned HEG Level 2. However, DOT found all 7-speed, all 9-speed, all 10-speed, and some 8-speed automatic transmissions to be advanced transmissions operating at HEG Level 2 equivalence. Eight-speed automatic transmissions developed after MY 2017 are assigned HEG Level 2. All other transmissions are assigned to their respective transmission's baseline level. The baseline (HEG level 1) technologies available include AT6, AT8, and CVT.

DOT assigned any vehicle in the analysis fleet with a hybrid or electric

powertrain a direct drive (DD) transmission. This designation is for informational purposes; if specified, the transmission will not be replaced or updated by the model.

In addition to technology type, gear count, and HEG level, transmissions are characterized in the analysis fleet by drive type and vehicle architecture. Drive types considered in the analysis include front-, rear-, all-, and four-wheel drive. The definition of drive types in the analysis does not always align with manufacturers' drive type designations; see the end of this subsection for further discussion. These characteristics, supplemented by information such as gear ratios and production locations, showed that manufacturers use transmissions that are the same or similar on multiple vehicle models. Manufacturers have told the agency they do this to control component complexity and associated costs for development, manufacturing, assembly, and service. If multiple vehicle models share technology type, gear count, drive configuration, internal gear ratios, and production location, the transmissions are treated as a single group for the analysis. Vehicles in the analysis fleet with the same transmission configuration adopt additional fuel-saving transmission technology together, as described in Section III.C.2.a).

Shared transmissions are designated and tracked in the CAFE Model input files using transmission codes. Transmission codes are six-digit numbers that are assigned to each transmission and encode information about them. This information includes the manufacturer, drive configuration, transmission type, and number of gears. TSD Chapter 3.2.2 includes more information on the transmission codes designated in the MY 2020 analysis fleet.

Different transmission codes are assigned to variants of a transmission that may have appeared to be similar based on the characteristics considered in the analysis but are not mechanically identical. DOT analysts distinguish among transmission variants by comparing their internal gear ratios and production locations. For example, several Ford nameplates carry a rear-wheel drive, 10-speed automatic transmission. These nameplates comprise a wide variety of body styles and use cases, and so DOT assigned different transmission codes to these different nameplates. Because they have different transmission codes, they are not treated as "shared" for the purposes of the analysis and have the opportunity

to adopt transmission technologies independently.

Note that when determining the drive type of a transmission, the assignment of all-wheel drive versus four-wheel drive is determined by vehicle architecture. This assignment does not necessarily match the drive type used by the manufacturer in specification sheets and marketing materials. Vehicles with a powertrain capable of providing power to all wheels and a transverse engine (front-wheel drive architecture) are assigned all-wheel drive. Vehicles with power to all four wheels and a longitudinal engine (rear-wheel drive architecture) are assigned four-wheel drive.

### (c) Transmission Adoption Features

Transmission technology pathways are designed to prevent "branch hopping"—changes in transmission type that would correspond to significant changes in transmission architecture—for vehicles that are relatively advanced on a given pathway. For example, any automatic transmission with more than five gears cannot move to a dual-clutch transmission. For a more detailed discussion of path logic applied in the analysis, including technology supersession logic and technology mutual exclusivity logic, please see CAFE Model Documentation S4.5 Technology Constraints (Supersession and Mutual Exclusivity). Additionally, the CAFE Model prevents "branch hopping" to prevent stranded capital associated with moving from one transmission architecture to another. Stranded capital is discussed in Section III.C.6.

Some technologies that are modeled in the analysis are not yet in production, and therefore are not assigned in the baseline fleet. Nonetheless, these technologies, which are projected to be available in the analysis timeframe, are available for future adoption. For instance, an AT10L3 is not observed in the baseline fleet, but it is plausible that manufacturers that employ AT10L2 technology may improve the efficiency of those AT10L2s in the rulemaking timeframe.

The following sections discuss specific adoption features applied to each type of transmission technology.

When electrification technologies are adopted, the transmissions associated with those technologies will supersede the existing transmission on a vehicle. The transmission technology is superseded if P2 hybrids, plug-in hybrids, or battery electric vehicle technologies are applied. For more information, see Section III.D.3.c).

The automatic transmission path precludes adoption of other transmission types once a platform progresses past an AT6. This restriction is used to avoid the significant level of stranded capital loss that could result from adopting a completely different transmission type shortly after adopting an advanced transmission, which would occur if a different transmission type were adopted after AT6 in the rulemaking timeframe.

Vehicles that did not start out with AT7L2 or AT9L2 transmissions cannot adopt those technologies in the model. The agency observed that MY 2017 vehicles with those technologies were primarily luxury performance vehicles and concluded that other vehicles would likely not adopt those technologies. DOT concluded that this was also a reasonable assumption for the MY 2020 analysis fleet because vehicles that have moved to more advanced automatic transmissions have overwhelmingly moved to 8-speed and 10-speed transmissions.<sup>167</sup>

CVT adoption is limited by technology path logic. CVTs cannot be adopted by vehicles that do not originate with a CVT or by vehicles with multispeed transmissions beyond AT6 in the baseline fleet. Vehicles with multispeed transmissions greater than AT6 demonstrate increased ability to operate the engine at a highly efficient speed and load. Once on the CVT path, the platform is only allowed to apply improved CVT technologies. The analysis restricts the application of CVT technology on larger vehicles because of the higher torque (load) demands of those vehicles and CVT torque limitations based on durability constraints. Additionally, this restriction is used to avoid the significant level of stranded capital.

The analysis allows vehicles in the baseline fleet that have DCTs to apply an improved DCT and allows vehicles with an AT5 to consider DCTs.

Drivability and durability issues with some DCTs have resulted in a low relative adoption rate over the last decade; this is also broadly consistent with manufacturers' technology choices.<sup>168</sup>

Manual transmissions can only move to more advanced manual transmissions for this analysis, because other transmission types do not provide a similar driver experience (utility). Manual transmissions cannot adopt AT, CVT, or DCT technologies under any circumstance. Other transmissions cannot move to MT because manual transmissions lack automatic shifting associated with the other transmission types (utility) and in recognition of the low customer demand for manual transmissions.<sup>169</sup>

#### (d) Transmission Effectiveness Modeling

For this analysis, DOT used the Autonomie full vehicle simulation tool to model the interaction between transmissions and the full vehicle system to improve fuel economy, and how changes to the transmission subsystem influence the performance of the full vehicle system. The full vehicle simulation approach clearly defines the contribution of individual transmission technologies and separates those contributions from other technologies in the full vehicle system. The modeling approach follows the recommendations of the National Academy of Sciences in its 2015 light duty vehicle fuel economy technology report to use full vehicle modeling supported by application of collected improvements at the sub-model level.<sup>170</sup> See TSD Chapter 3.2.4 for more details on transmission modeling inputs and results.

The only technology effectiveness results that were not directly calculated using the Autonomie simulation results were for the AT6L2. DOT determined that the model for this specific technology was inconsistent with the

other transmission models and overpredicted effectiveness results. Evaluation of the AT6L2 transmission model revealed an overestimated efficiency map was developed for the AT6L2 model. The high level of efficiency assigned to the transmission surpassed benchmarked advanced transmissions.<sup>171</sup> To address the issue, DOT replaced the effectiveness values of the AT6L2 model. DOT replaced the effectiveness for the AT6L2 technology with analogous effectiveness values from the AT7L2 transmission model. For additional discussion on how analogous effectiveness values are determined please see Section III.D.1.d)(2).

The effectiveness values for the transmission technologies, for all ten vehicle technology classes, are shown in Figure III–10. Each of the effectiveness values shown is representative of the improvements seen for upgrading only the listed transmission technology for a given combination of other technologies. In other words, the range of effectiveness values seen for each specific technology, *e.g.*, AT10L3, represents the addition of the AT10L3 technology to every technology combination that could select the addition of AT10L3. It must be emphasized that the graph shows the change in fuel consumption values between entire technology keys,<sup>172</sup> and not the individual technology effectiveness values. Using the change between whole technology keys captures the complementary or non-complementary interactions among technologies. In the graph, the box shows the inner quartile range (IQR) of the effectiveness values and whiskers extend out  $1.5 \times \text{IQR}$ . The dots outside of the whiskers show values for effectiveness that are outside these bounds.

<sup>171</sup> Autonomie model documentation, Chapter 5.3.4. Transmission Performance Data.

<sup>172</sup> Technology key is the unique collection of technologies that constitutes a specific vehicle, *see* Section III.C.4.c).

<sup>167</sup> 2020 EPA Automotive Trends Report, at 64, figure 4.18.

<sup>168</sup> *Ibid.*

<sup>169</sup> *Ibid.*

<sup>170</sup> 2015 NAS report, at 292.

**Figure III-10 – Transmission Technologies Effectiveness Values for all Vehicle Technology Classes<sup>173</sup>**

Note that the effectiveness for the MT5, AT5 and DD technologies are not shown. The DD transmission does not have a standalone effectiveness because it is only implemented as part of electrified powertrains. The MT5 and AT5 also have no effectiveness values because both technologies are baseline technologies against which all other technologies are compared.

(e) Transmission Costs

This analysis uses transmission costs drawn from several sources, including the 2015 NAS report and NAS-cited studies. TSD Chapter 3.2.5 provides a detailed description of the cost sources used for each transmission technology. Table III-14 shows an example of absolute costs for transmission technologies in 2018\$ across select

model years, which demonstrates how cost learning is applied to the transmission technologies over time. Note, because transmission hardware is often shared across vehicle classes, transmission costs are the same for all vehicle classes. For a full list of all absolute transmission costs used in the analysis across all model years, see the Technologies file.

<sup>173</sup> The data used to create this figure can be found in the FE\_1 Improvements file.

**Table III-14 – Examples of Absolute Costs for Transmission Technologies in 2018\$ for Select Model Years**

Technology	MY 2020	MY 2025	MY 2030
MT5	1,563.97	1,563.97	1,563.97
MT6	1,928.41	1,917.08	1,910.70
MT7	2,226.75	2,100.64	2,034.88
AT5	2,085.30	2,085.30	2,085.30
AT6	2,063.19	2,063.19	2,063.19
AT6L2	2,331.44	2,303.65	2,293.25
AT7L2	2,298.63	2,276.53	2,268.26
AT8	2,195.36	2,195.18	2,195.15
AT8L2	2,442.32	2,405.33	2,391.49

CVT	2,332.83	2,322.63	2,315.25
CVTL2	2,518.80	2,500.94	2,488.02

### 3. Electrification Paths

The electric paths include a large set of technologies that share the common element of using electrical power for certain vehicle functions that were traditionally powered mechanically by engine power. Electrification technologies thus can range from electrification of specific accessories (for example, electric power steering to reduce engine loads by eliminating parasitic losses) to electrification of the entire powertrain (as in the case of a battery electric vehicle).

The following subsections discuss how each electrification technology is defined in the CAFE Model and the electrification pathways down which a vehicle can travel in the compliance simulation. The subsections also discuss how the agency assigned electrified vehicle technologies to vehicles in the MY 2020 analysis fleet, any limitations on electrification technology adoption, and the specific effectiveness and cost

assumptions used in the Autonomie and CAFE Model analysis.

#### (a) Electrification Modeling in the CAFE Model

The CAFE Model defines the technology pathway for each type of electrification grouping in a logical progression. Whenever the CAFE Model converts a vehicle model to one of the available electrified systems, both effectiveness and costs are updated according to the specific components' modeling algorithms. Additionally, all technologies on the different electrification paths are mutually exclusive and are evaluated in parallel. For example, the model may evaluate PHEV20 technology prior to having to apply 12-volt stop-start (SS12V) or strong hybrid technology. The specific set of algorithms and rules are discussed further in the sections below, and more detailed discussions are included in the CAFE Model Documentation. The

specifications for each electrification technology used in the analysis is discussed below.

The technologies that are included on the three vehicle-level paths pertaining to the electrification and electric improvements defined within the modeling system are illustrated in Figure III-11. As shown in the Electrification path, the baseline-only CONV technology is grayed out. This technology is used to denote whether a vehicle comes in with a conventional powertrain (*i.e.*, a vehicle that does not include any level of hybridization) and to allow the model to properly map to the Autonomie vehicle simulation database results. If multiple branches converge on a single technology, the subset of technologies that will be disabled from further adoption is extended only up the point of convergence.

**BILLING CODE 4910-59-P**

**Figure III-11 – Electrification Paths in the CAFE Model**

**BILLING CODE 4910-59-C**

*SS12V*: 12-volt stop-start (SS12V), sometimes referred to as start-stop, idle-stop, or a 12-volt micro hybrid system, is the most basic hybrid system that facilitates idle-stop capability. In this system, the integrated starter generator is coupled to the internal combustion (IC) engine. When the vehicle comes to an idle-stop the IC engine completely shuts off, and, with the help of the 12-volt battery, the engine cranks and starts again in response to throttle to move the vehicle, application or release of the brake pedal to move the vehicle. The 12-volt battery used for the start-stop system is an improved unit compared to a traditional 12-volt battery, and is capable of higher power, increased life cycle, and capable of minimizing voltage drop on restart. This technology is beneficial to reduce fuel consumption

and emissions when the vehicle frequently stops, such as in city driving conditions or in stop and go traffic. 12VSS can be applied to all vehicle technology classes.

*BISG*: The belt integrated starter generator, sometimes referred to as a mild hybrid system or P0 hybrid, provides idle-stop capability and uses a higher voltage battery with increased energy capacity over conventional automotive batteries. These higher voltages allow the use of a smaller, more powerful and efficient electric motor/generator which replaces the standard alternator. In BISG systems, the motor/generator is coupled to the engine via belt (similar to a standard alternator). In addition, these motor/generators can assist vehicle braking and recover braking energy while the vehicle slows down (regenerative braking) and in turn

can propel the vehicle at the beginning of launch, allowing the engine to be restarted later. Some limited electric assist is also provided during acceleration to improve engine efficiency. Like the micro hybrids, BISG can be applied to all vehicles in the analysis except for Engine 26a (VCR). We assume all mild hybrids are 48-volt systems with engine belt-driven motor/generators.

*SHEVP2/SHEVPS*: A strong hybrid vehicle is a vehicle that combines two or more propulsion systems, where one uses gasoline (or diesel), and the other captures energy from the vehicle during deceleration or braking, or from the engine and stores that energy for later used by the vehicle. This analysis evaluated the following strong hybrid systems: Hybrids with “P2” parallel

drivetrain architectures (SHEVP2),<sup>174</sup> and hybrids with power-split architectures (SHEVPS). Both types provide start-stop or idle-stop functionality, regenerative braking capability, and vehicle launch assist. A SHEVPS has a higher potential for fuel economy improvement than a SHEVP2, although its cost is also higher and engine power density is lower.<sup>175</sup>

P2 parallel hybrids (SHEVP2) are a type of hybrid vehicle that use a transmission-integrated electric motor placed between the engine and a gearbox or CVT, with a clutch that allows decoupling of the motor/transmission from the engine. Although similar to the configuration of the crank mounted integrated starter generator (CISG) system discussed previously, a P2 hybrid is typically equipped with a larger electric motor and battery in comparison to the CISG. Disengaging the clutch allows all-electric operation and more efficient brake-energy recovery. Engaging the clutch allows coupling of the engine and electric motor and, when combined with a transmission, reduces gear-train losses relative to power-split or 2-mode hybrid systems. P2 hybrid systems typically rely on the internal combustion engine to deliver high, sustained power levels.

Electric-only mode is used when power demands are low or moderate.

An important feature of the SHEVP2 system is that it can be applied in conjunction with most engine technologies. Accordingly, once a vehicle is converted to a SHEVP2 powertrain in the compliance simulation, the CAFE Model allows the vehicle to adopt the conventional engine technology that is most cost effective, regardless of relative location of the existing engine on the engine technology path. For example, a vehicle in the MY 2020 analysis fleet that starts with a TURBO2 engine could adopt a TURBO1 engine with the SHEVP2 system, if that TURBO1 engine allows the vehicle to meet fuel economy standards more cost effectively.

The power-split hybrid (SHEVPS) is a hybrid electric drive system that replaces the traditional transmission with a single planetary gear set (the power-split device) and a motor/generator. This motor/generator uses the engine either to charge the battery or to supply additional power to the drive motor. A second, more powerful motor/generator is connected to the vehicle's final drive and always turns with the wheels. The planetary gear splits engine power between the first motor/generator and the drive motor either to charge the

battery or to supply power to the wheels. During vehicle launch, or when the battery state of charge (SOC) is high, the engine is turned off and the electric motor propels the vehicle.<sup>176</sup> During normal driving, the engine output is used both to propel the vehicle and to generate electricity. The electricity generated can be stored in the battery and/or used to drive the electric motor. During heavy acceleration, both the engine and electric motor (by consuming battery energy) work together to propel the vehicle. When braking, the electric motor acts as a generator to convert the kinetic energy of the vehicle into electricity to charge the battery.

Table III–15 below shows the configuration of conventional engines and transmissions used with strong hybrids for this analysis. The SHEVPS powertrain configuration was paired with a planetary transmission (eCVT) and Atkinson engine (Eng26). This configuration was designed to maximize efficiency at the cost of reduced towing capability and real-world acceleration performance.<sup>177</sup> In contrast, the SHEVP2 powertrains were paired with an advanced 8-speed automatic transmissions (AT8L2) and could be paired with most conventional engines.<sup>178</sup>

**Table III-15 – Configuration of Strong Hybrid Architectures with Transmissions and Engines**

CAFE Model Technologies	Transmission Options	Engine Options (PC/SUV)	Engine Options (LT)
SHEVPS	Planetary - eCVT	Eng 26 - Atkinson	N/A
SHEVP2 <sup>179</sup>	AT8L2	All Engines except for VTGE and VCR	All Engines except for VTGE and VCR

*PHEV:* Plug-in hybrid electric vehicles are hybrid electric vehicles with the means to charge their battery packs from an outside source of electricity (usually the electric grid). These vehicles have larger battery packs with more energy storage and a greater capability to be discharged than other non-plug-in

hybrid electric vehicles. PHEVs also generally use a control system that allows the battery pack to be substantially depleted under electric-only or blended mechanical/electric operation and batteries that can be cycled in charge-sustaining operation at a lower state of charge than non-plug-in

hybrid electric vehicles. These vehicles generally have a greater all-electric range than typical strong HEVs. Depending on how these vehicles are operated, they can use electricity exclusively, operate like a conventional hybrid, or operate in some combination of these two modes.

<sup>174</sup> Depending on the location of electric machine (motor with or without inverter), the parallel hybrid technologies are classified as P0-motor located at the primary side of the engine, P1-motor located at the flywheel side of the engine, P2-motor located between engine and transmission, P3-motor located at the transmission output, and P4-motor located on the axle.

SAE International Journal of Alternative Powertrains 6 (1): 68–76. <https://doi.org/10.4271/2017-01-1154>.

<sup>178</sup> We did not model SHEVP2s with VTGE (Eng23c) and VCR (Eng26a).

<sup>179</sup> Engine 01, 02, 03, 04, 5b, 6a, 7a, 8a, 12, 12-DEAC, 13, 14, 17, 18, 19, 20, 21, 22b, 23b, 24, 24-Deac. See Section III.D.1 for these engine specifications.

There are four PHEV architectures included in this analysis that reflect combinations of two levels of all-electric range (AER) and two engine types. DOT selected 20 miles AER and 50 miles AER to reasonably span the various AER in the market, and their effectiveness and cost. DOT selected an Atkinson engine and a turbocharged downsized engine to span the variety of engines in the market.

PHEV20/PHEV20H and PHEV50/PHEV50H are essentially a SHEVPS with a larger battery and the ability to drive with the engine turned off. In the CAFE Model, the designation for “H” in PHEVxH could represent another type of engine configuration, but for this analysis DOT used the same

effectiveness values as PHEV20 and PHEV50 to represent PHEV20H and PHEV50H, respectively. The PHEV20/PHEV20H represents a “blended-type” plug-in hybrid, which can operate in all-electric (engine off) mode only at light loads and low speeds, and must blend electric motor and engine power together to propel the vehicle at medium or high loads and speeds. The PHEV50/PHEV50H represents an extended range electric vehicle (EREV), which can travel in all-electric mode even at higher speeds and loads. Further discussion of engine sizing, batteries, and motors for these PHEVs is discussed in Section III.D.3.d).

PHEV20T and PHEV50T are 20 mile and 50 mile AER vehicles based on the

SHEVP2 engine architecture. The PHEV versions of these architectures include larger batteries and motors to meet performance in charge sustaining mode at higher speeds and loads as well as similar performance and range in all electric mode in city driving, at higher speeds and loads. For this analysis, the CAFE Model considers these PHEVs to have an advanced 8-speed automatic transmission (AT8L2) and TURBO1 (Eng12) in the powertrain configuration. Further discussion of engine sizing, batteries, and motors for these PHEVs is discussed in Section III.D.3.d).

Table III–16 shows the different PHEV configurations used in this analysis.

**Table III-16 – Configuration of Plug-in Hybrid Architectures with Transmissions and Engines**

CAFE Model Technologies	Transmission Options	Engine Options (PC/SUV)	Engine Options (LT)
PHEV20/PHEV20H	Planetary - eCVT	Eng 26 – Atkinson Engine	N/A
PHEV20T	AT8L2	Eng 12 - TURBO1	Eng 12 - TURBO1
PHEV50/PHEV50H	Planetary - eCVT	Eng 26 - Atkinson	N/A
PHEV50T	AT8L2	Eng 12 - TURBO1	Eng 12 - TURBO1

*BEV*: Battery electric vehicles are equipped with all-electric drive systems powered by energy-optimized batteries charged primarily by electricity from the grid. BEVs do not have a combustion engine or traditional transmission. Instead, BEVs rely on all electric powertrains, with an advanced transmission packaged with the powertrain. The range of battery electric vehicles vary by vehicle and battery pack size.

DOT simulated BEVs with ranges of 200, 300, 400, and 500 miles in the CAFE Model. BEV range is measured pursuant to EPA test procedures and guidance.<sup>180</sup> The CAFE Model assumes that BEVs transmissions are unique to each vehicle (*i.e.*, the transmissions are not shared by any other vehicle) and

that no further improvements are available.

A key note about the BEVs offered in this analysis is that the CAFE Model does not account for vehicle range when considering additional BEV technology adoption. That is, the CAFE Model does not have an incentive to build BEV300, 400, and 500s, because the BEV200 is just as efficient as those vehicles and counts the same toward compliance, but at a significantly lower cost because of the smaller battery. While manufacturers have been building 200-mile range BEVs, those vehicles have generally been passenger cars. Manufacturers have told DOT that greater range is important for meeting the needs of broader range of consumers and to increase consumer demand. More recently, there has been a trend towards manufacturers building higher range BEVs in the market, and manufacturers building CUV/SUV and pickup truck BEVs. To simulate the potential relationship of BEV range to consumer demand, DOT has included several

adoption features for BEVs. These are discussed further in Section III.D.3.c).

*Fuel cell electric vehicle (FCEV)*: Fuel cell electric vehicles are equipped with an all-electric drivetrain, but unlike BEVs, FCEVs do not solely rely on batteries; rather, electricity to run the FCEV electric motor is mainly generated by an onboard fuel cell system. FCEV architectures are similar to series hybrids,<sup>181</sup> but with the engine and generator replaced by a fuel cell. Commercially available FCEVs consume hydrogen to generate electricity for the fuel cell system, with most automakers using high pressure gaseous hydrogen storage tanks. FCEVs are currently produced in limited numbers and are available in limited geographic areas where hydrogen refueling stations are accessible. For reference, in MY 2020, only four FCV models were offered for

<sup>180</sup> BEV electric ranges are determined per EPA guidance Document. “EPA Test Procedure for Electric Vehicles and Plug-in Hybrids.” <https://fuel-economy.gov/feg/pdfs/EPA%20test%20procedure%20for%20EVs-PHEVs-11-14-2017.pdf>. November 14, 2017. Last Accessed May 3, 2021.

<sup>181</sup> Series hybrid architecture is a strong hybrid that has the engine, electric motor and transmission in series. The engine in a series hybrid drives a generator that charges the battery.

sale, and since 2014 only 9,975 FCVs have been sold.<sup>182 183</sup>

For this analysis, the CAFE Model simulates a FCEV with a range of 320 miles. Any type of powertrain could adopt a FCEV powertrain; however, to account for limited market penetration and unlikely increased adoption in the rulemaking timeframe, technology phase in caps were used to control how many FCEVs a manufacturer could build. The details of this concept are further discussed in Section III.D.3.c).

(b) Electrification Analysis Fleet Assignments

DOT identified electrification technologies present in the baseline fleet and used these as the starting point for the regulatory analysis. These assignments were based on manufacturer-submitted CAFE compliance information, publicly available technical specifications, marketing brochures, articles from

reputable media outlets, and data from Wards Intelligence.<sup>184</sup>

Table III–17 gives the baseline fleet penetration rates of electrification technologies eligible to be assigned in the baseline fleet. Over half the fleet had some level of electrification, with the vast majority of these being micro hybrids. BEVs represented less than 2% of MY 2020 baseline fleet; BEV300 was the most common BEV technology, while no BEV500s were observed.

**Table III-17 – Penetration Rate of Electrification Technologies in the MY 2020 Fleet**

Electrification Technology	Sales Volume with this Technology	Penetration Rate in 2020 Baseline Fleet
None	5,791,220	42.61%
SS12V	6,837,257	50.30%
BISG	258,629	1.90%
SHEVP2	6,409	0.05%
SHEVPS	378,523	2.78%
PHEV20	46,393	0.34%
PHEV20T	18,943	0.14%
PHEV50	2,392	0.02%
PHEV50T	18	0.0001%
BEV200	72,123	0.53%
BEV300	145,900	1.07%
BEV400	34,000	0.25%
BEV500	0	0%
FCV	744	0.005%

Micro and mild hybrids refer to the presence of SS12V and BISG, respectively. The data sources discussed above were used to identify the presence of these technologies on vehicles in the fleet. Vehicles were assigned one of these technologies only if its presence could be confirmed with manufacturer brochures or technical specifications.

Strong hybrid technologies included SHEVPS and SHEVP2. Note that P2HCR0, P2HCR1, P2HCR1D, and P2HCR2 are not assigned in the fleet and are only available to be applied by the model. When possible, manufacturer specifications were used to identify the strong hybrid architecture type. In the absence of more sophisticated information, hybrid architecture was

determined by number of motors. Hybrids with one electric motor were assigned P2, and those with two were assigned power-split (PS). DOT seeks comment on additional ways the agency could perform initial hybrid assignments based on publicly available information.

Plug-in hybrid technologies PHEV20/20T and PHEV50/50T are assigned in the baseline fleet. PHEV20H and PHEV50H are not assigned in the fleet and are only available to be applied by the model. Vehicles with an electric-only range of 40 miles or less were assigned PHEV20; those with a range above 40 miles were assigned PHEV50. They were respectively assigned PHEV20T/50T if the engine was turbocharged (i.e., if it would qualify for

one of technologies on the turbo engine technology pathway). DOT also had to calculate baseline fuel economy values for PHEV technologies as part of the PHEV analysis fleet assignments; that process is described in detail in TSD Chapter 3.3.2.

Fuel cell and battery electric vehicle technologies included BEV200/300/400/500 and FCV. Vehicles with all-electric powertrains that used hydrogen fuel were assigned FCV. The BEV technologies were assigned to vehicles based on range thresholds that best account for vehicles' existing range capabilities while allowing room for the model to potentially apply more advanced electrification technologies.

For more detail about the electrification analysis fleet assignment process, see TSD Chapter 3.3.2.

### (c) Electrification Adoption Features

Multiple types of adoption features applied to the electrification technologies. The hybrid/electric technology path logic dictated how vehicles could adopt different levels of electrification technology. Broadly speaking, more advanced levels of hybridization or electrification superseded all prior levels, with certain technologies within each level being mutually exclusive. The analysis modeled (from least to most electrified) micro hybrids, mild hybrids, strong hybrids, plug-in hybrids, and fully electric vehicles.

As discussed further below, SKIP logic—restrictions on the adoption of certain technologies—applied to plug-in (PHEV) and strong hybrid vehicles (SHEV). Some technologies on these pathways were “skipped” if a vehicle was high performance, required high towing capabilities as a pickup truck, or belonged to certain manufacturers who have demonstrated that their future product plans will more than likely not include the technology. The specific criteria for SKIP logic for each applicable electrification technology will be expanded on later in this section.

This section also discusses the supersession of engines and transmissions on vehicles that adopt SHEV or PHEV powertrains. To manage the complexity of the analysis, these types of hybrid powertrains were modeled with several specific engines and transmissions, rather than in multiple configurations. Therefore, the cost and effectiveness values SHEV and PHEV technologies take into account these specific engines and transmissions.

Finally, phase-in caps limited the adoption rates of battery electric (BEV) and fuel cell vehicles (FCV). These phase-in caps were set by DOT, taking into account current market share, scalability, and reasonable consumer adoption rates of each technology. TSD Chapter 3.3.3 discusses the electrification phase-in caps and the reasoning behind them in detail.

The only adoption feature applicable to micro and mild hybrid technologies was path logic. The pathway consists of a linear progression starting with a conventional powertrain with no electrification at all, which is superseded by SS12V, which in turn is

superseded by BISG. Vehicles could only adopt micro and mild hybrid technology if the vehicle did not already have a more advanced level of electrification.

The adoption features applied to strong hybrid technologies included path logic, powertrain substitution, and vehicle class restrictions. Per the defined technology pathways, SHEVPS, SHEVP2, and the P2HCR technologies were considered mutually exclusive. In other words, when the model applies one of these technologies, the others are immediately disabled from future application. However, all vehicles on the strong hybrid pathways could still advance to one or more of the plug-in hybrid technologies.

When the model applied any strong hybrid technology to a vehicle, the transmission technology on the vehicle was superseded. Regardless of the transmission originally present, P2 hybrids adopt an 8-speed automatic transmission (AT8L2), and PS hybrids adopt a continuously variable transmission (eCVT).

When the model applies the SHEVP2 technology, the model can consider various engine options to pair with the SHEVP2 architecture according to existing engine path constraints, taking into account relative cost effectiveness. For SHEVPS technology, the existing engine was replaced with Eng26, a full Atkinson cycle engine.

SKIP logic was also used to constrain adoption for SHEVPS, P2HCR0, P2HCR1, and P2HCR1D. No SKIP logic applied to SHEVP2; P2HCR2 was restricted from all vehicles in the 2020 fleet, as discussed further in Section III.D.1.d)(1). These technologies were “skipped” for vehicles with engines<sup>185</sup> that met one of the following conditions:

- The engine belonged to an excluded manufacturer;<sup>186</sup>
- The engine belonged to a pickup truck (*i.e.*, the engine was on a vehicle assigned the “pickup” body style);
- The engine’s peak horsepower was more than 405 HP; or if
- The engine was on a non-pickup vehicle but was shared with a pickup.

The reasons for these conditions are similar to those for the SKIP logic applied to HCR engine technologies, discussed in more detail above. In the real world, pickups and performance vehicles with certain powertrain configurations cannot adopt the technologies listed above and maintain vehicle performance without redesigning the entire powertrain. SKIP

logic was put in place to prevent the model from pursuing compliance pathways that are ultimately unrealistic.

PHEV technologies superseded the micro, mild, and strong hybrids, and could only be replaced by full electric technologies. Plug-in hybrid technology paths were also mutually exclusive, with the PHEV20 technologies able to progress to the PHEV50 technologies.

The engine and transmission technologies on a vehicle were superseded when PHEV technologies were applied to a vehicle. For all plug-in technologies, the model applied an AT8L2 transmission. For PHEV20/50 and PHEV20H/50H, the vehicle received a full Atkinson cycle engine, Eng26. For PHEV20T/50T, the vehicle received a TURBO1 engine, Eng12.

SKIP logic applied to PHEV20/20H and PHEV50/50H under the same four conditions listed for the strong hybrid technologies in the previous section, for the same reasons previously discussed.

For the analysis, the adoption of BEVs and FCEVs was limited by both path logic and phase in caps. BEV200/300/400/500 and FCEV were applied as end-of-path technologies that superseded previous levels of electrification.

The main adoption feature applicable to BEVs and FCEVs is phase-in caps, which are defined in the CAFE Model input files as percentages that represent the maximum rate of increase in penetration rate for a given technology. They are accompanied by a phase-in start year, which determines the first year the phase-in cap applies. Together, the phase-in cap and start year determine the maximum penetration rate for a given technology in a given year; the maximum penetration rate equals the phase-in cap times the number of years elapsed since the phase-in start year. Note that phase-in caps *do not* inherently dictate how much a technology is applied by the model. Rather, they represent how much of the fleet *could* have a given technology by a given year. Because BEV200 costs less and has higher effectiveness values than other advanced electrification technologies,<sup>187</sup> the model will have vehicles adopt it first, until it is restricted by the phase-in cap.

Table III–18 shows the phase-in caps, phase-in year, and maximum penetration rate through 2050 for BEV and FCEV technologies. For comparison, the actual penetration rate of each technology in the 2020 baseline fleet is also listed in the fourth column from the left.

<sup>185</sup> This refers to the engine assigned to the vehicle in the 2020 baseline fleet.

<sup>186</sup> Excluded manufacturers included BMW, Daimler, and Jaguar Land Rover.

<sup>187</sup> This is because BEV200 uses fewer batteries and weighs less than BEVs with greater ranges.

**Table III-18 – Phase-In Caps for Fuel Cell and Battery Electric Vehicle Technologies**

Technology Name	Phase-In Cap	Phase-In Start Year	Actual Penetration Rate in 2020 (Baseline Fleet)	Maximum Penetration Rate in 2020	Maximum Penetration Rate in 2025	Maximum Penetration Rate in 2030	Maximum Penetration Rate in 2035	Maximum Penetration Rate in 2040	Maximum Penetration Rate in 2045	Maximum Penetration Rate in 2050
BEV200	0.09%	1998	0.53%	1.98%	2.43%	2.88%	3.33%	3.78%	4.23%	4.68%
BEV300	0.70%	2009	1.07%	7.70%	11.20%	14.70%	18.20%	21.70%	25.20%	28.70%
BEV400	1.25%	2016	0.25%	5.00%	11.25%	17.50%	23.75%	30.00%	36.25%	42.50%
BEV500	4.25%	2021	-	-	17.00%	38.25%	59.50%	80.75%	102.00%	123.25%
FCV	0.018%	2016	0.005%	0.072%	0.162%	0.252%	0.342%	0.432%	0.522%	0.612%

The BEV200 phase-in cap was informed by manufacturers’ tendency to move away from low-range vehicle offerings, in part because of consumer hesitancy to adopt this technology. The advertised range on most electric vehicles does not reflect extreme cold and hot real-world driving conditions, affecting the utility of already low-range vehicles.<sup>188</sup> Many manufacturers have told DOT that the portion of consumers willing to accept a vehicle with less than 300 miles of electric range is extremely small, and many manufacturers do not plan to offer vehicles with less than 300 miles of electric range. For example, in February 2021, Tesla, the U.S.’ highest-selling BEV manufacturer, discontinued the Standard Range Model Y because its range did not meet the company’s “standard of excellence.”<sup>189</sup> Tesla does sell long-range versions of many of its vehicles.

Furthermore, the average BEV range has steadily increased over the past decade,<sup>190</sup> perhaps in part as batteries become more cost effective. EPA observed in its 2020 Automotive Trends Report that “the average range of new EVs has climbed substantially. In model year 2019 the average new EV is projected to have a 252-mile range, or

about three and a half times the range of an average EV in 2011. This difference is largely attributable to higher production of new EVs with much longer ranges.”<sup>191</sup> The maximum growth rate for BEV200 in the model was set accordingly low to less than 0.1% per year. While this rate is significantly lower than that of the other BEV technologies, the BEV200 phase-in cap allows the penetration rate of low-range BEVs to grow by a multiple of what is currently observed in the market.

For BEV300, 400, and 500, phase-in caps are largely a reflection of the challenges facing the scalability of BEV manufacturing, and implementing BEV technology on many vehicle configurations, including larger vehicles. In the short term, the penetration of BEVs is largely limited by battery availability.<sup>192</sup> For example, Tesla has struggled to scale production of new cells for its vehicles, and it remains a bottleneck in the company’s production capability.<sup>193</sup> The Director of Energy and Environmental Research at Toyota acknowledged in March 2021 that BEV adoption faces many challenges beyond battery availability, including “the cost of batteries, the need for national infrastructure, long recharging times, limited driving range

and the need for consumer behavioral change.”<sup>194</sup> Incorporating battery packs that provide greater amounts of electric range into vehicles also poses its own engineering challenges. Heavy batteries and large packs may be difficult to integrate for many vehicle configurations. Pickup trucks and large SUVs in particular require higher levels of energy as the number of passengers and/or payload increases, for towing and other high-torque applications. DOT selected the BEV400 and 500 phase-in caps to reflect these concerns.

The phase-in cap for FCEVs was assigned based on existing market share as well as historical trends in FCEV production. FCEV production share in the past five years has been extremely low, and DOT set the phase-in cap accordingly.<sup>195</sup> As with BEV200, however, the phase-in cap still allows for the market share of FCVs to grow several times over.

(d) Electrification Effectiveness Modeling

For this analysis, DOT considers a range of electrification technologies which, when modeled, result in varying levels of effectiveness at reducing fuel consumption. As discussed above, the modeled electrification technologies include micro hybrids, mild hybrids, two different strong hybrids, two different plug-in hybrids with two separate all electric ranges, full electric vehicles and FCEVs. Each electrification technology consists of many complex sub-systems with unique component

characteristics and operational modes. As discussed further below, the systems that contribute to the effectiveness of an electrified powertrain in the analysis include the vehicle's battery, electric motors, power electronics, and accessory loads. Procedures for modeling each of these sub-systems are broadly discussed below, in Section III.C.4, and the Autonomie model documentation.

Argonne used data from their Advanced Mobility Technology Laboratory (AMTL) to develop Autonomie's electrified powertrain models. The modeled powertrains are not intended to represent any specific manufacturer's architecture but are intended to act as surrogates predicting representative levels of effectiveness for each electrification technology.

Autonomie determines the effectiveness of each electrified powertrain type by modeling the basic components, or building blocks, for each powertrain, and then combining the components modularly to determine the overall efficiency of the entire powertrain. The basic building blocks that comprise an electrified powertrain in the analysis include the battery, electric motors, power electronics, and accessory loads. Autonomie identifies components for each electrified powertrain type, and then interlinks those components to create a powertrain architecture. Autonomie then models each electrified powertrain architecture and provides an effectiveness value for each architecture. For example, Autonomie determines a BEV's overall efficiency by considering the efficiencies of the battery, the electric traction drive system (the electric machine and power electronics) and

mechanical power transmission devices. Or, for a SHEVP2, Autonomie combines a very similar set of components to model the electric portion of the hybrid powertrain, and then also includes the combustion engine and related power for transmission components. See TSD Chapter 3.3.4 for a complete discussion of electrification component modeling.

As discussed earlier in Section III.C.4, Autonomie applies different powertrain sizing algorithms depending on the type of vehicle considered because different types of vehicles not only contain different powertrain components to be optimized, but they must also operate in different driving modes. While the conventional powertrain sizing algorithm must consider only the power of the engine, the more complex algorithm for electrified powertrains must simultaneously consider multiple factors, which could include the engine power, electric machine power, battery power, and battery capacity. Also, while the resizing algorithm for all vehicles must satisfy the same performance criteria, the algorithm for some electric powertrains must also allow those electrified vehicles to operate in certain driving cycles, like the US06 cycle, without assistance of the combustion engine, and ensure the electric motor/generator and battery can handle the vehicle's regenerative braking power, all-electric mode operation, and intended range of travel.

To establish the effectiveness of the technology packages, Autonomie simulates the vehicles' performance on compliance test cycles, as discussed in Section III.C.4.<sup>196</sup><sup>197</sup><sup>198</sup> The range of

<sup>196</sup> See U.S. EPA, "How Vehicles are Tested." [https://www.fueleconomy.gov/feg/how\\_tested.shtml](https://www.fueleconomy.gov/feg/how_tested.shtml). Last accessed May 6, 2021.

effectiveness for the electrification technologies in this analysis is a result of the interactions between the components listed above and how the modeled vehicle operates on its respective test cycle. This range of values will result in some modeled effectiveness values being close to real-world measured values, and some modeled values that will depart from measured values, depending on the level of similarity between the modeled hardware configuration and the real-world hardware and software configurations. This modeling approach comports with the National Academy of Science 2015 recommendation to use full vehicle modeling supported by application of lumped improvements at the sub-model level.<sup>199</sup> The approach allows the isolation of technology effects in the analysis supporting an accurate assessment.

The range of effectiveness values for the electrification technologies, for all ten vehicle technology classes, is shown in Figure III-12. In the graph, the box shows the inner quartile range (IQR) of the effectiveness values and whiskers extend out 1.5 x IQR. The dots outside of the whiskers show values outside these bounds.

(e) Electrification Costs

The total cost to electrify a vehicle in this analysis is based on the battery the vehicle requires, the non-battery electrification component costs the vehicle requires, and the traditional powertrain components that must be added or removed from the vehicle to build the electrified powertrain.

We worked collaboratively with the experts at Argonne National Laboratory to generate battery costs using BatPaC, which is a model designed to calculate the cost of a vehicle battery for a specified battery power, energy, and type. Argonne used BatPaC v4.0 (October 2020 release) to create lookup tables for battery cost and mass that the Autonomie simulations referenced when a vehicle received an electrified powertrain. The BatPaC battery cost estimates are generated for a base year, in this case for MY 2020. Accordingly, our BatPaC inputs characterized the state of the market in MY 2020 and employed a widely utilized cell

chemistry (NMC622),<sup>201</sup> average estimated battery pack production volume per plant (25,000), and a plant efficiency or plant cell yield value of 95%.

For two specific electrified vehicle applications, BEV400 and BEV500, we did not use BatPaC to generate battery pack costs. Rather, we scaled the BatPaC-generated BEV300 costs to match the range of BEV400 and BEV500 vehicles to compute a direct manufacturing cost for those vehicles' batteries. We initially examined using BatPaC to model the cost and weight of BEV400 and BEV500 packs, however, initial values from the model could not

be validated and were based on assumptions for smaller sized battery packs. The initial results provided cost and weight estimates for BEV400 battery packs out of alignment with current examples of BEV400s in the market, and there are currently no examples of BEV500 battery packs in the market against which to validate the pack results.

Finally, to reflect how we expect batteries could fall in cost over the timeframe considered in the analysis, we applied a learning rate to the direct manufacturing cost. Broadly, the learning rate applied in this analysis reflects middle-of-the-road year-over-year improvements until MY 2032, and then the learning rates incrementally become shallower as battery technology is expected to mature in MY 2033 and beyond. Applying learning curves to the battery pack DMC in subsequent analysis years lowers the cost such that the cost of a battery pack in any future model year could be representative of the cost to manufacture a battery pack, regardless of potentially diverse parameters such as cell chemistry, cell format, or production volume.

<sup>200</sup> The data used to create this figure can be found in the FE\_1 Adjustments file.

<sup>201</sup> Autonomie model documentation, Chapter 5.9. Argonne surveyed A2Mac1 and TBS teardown reports for electrified vehicle batteries and of the five fully electrified vehicles surveyed, four of those vehicles used NMC622 and one used NMC532. See also Georg Bieker, A Global Comparison of the Life-Cycle Greenhouse Gas Emissions of Combustion Engine and Electric Passenger Cars, International Council on Clean Transportation (July 2021), [https://theicct.org/sites/default/files/publications/Global-LCA-passenger-cars-jul2021\\_0.pdf](https://theicct.org/sites/default/files/publications/Global-LCA-passenger-cars-jul2021_0.pdf) ("For cars registered in 2021, the GHG emission factors of the battery production are based on the most common battery chemistry, NMC622-graphite batteries. . . ."); 2021 NAS report, at 5-92 (" . . . NMC622 is the most common cathode chemistry in 2019. . . .").

TSD Chapter 3.3.5.1 includes more detail about the process we used to develop battery costs for this analysis. In addition, all BatPaC-generated direct manufacturing costs for all technology keys can be found in the CAFE Model's Battery Costs file, and the Argonne BatPaC Assumptions file includes the assumptions used to generate the costs,

and pack costs, pack mass, cell capacity, \$/kW at the pack level, and W/kg at the pack level for all vehicle classes.

Table III-19 and Table III-20 show an example of our battery pack direct manufacturing costs per kilowatt hour for BEV300s for all vehicle classes for the base year, MY 2020. The tables shown here demonstrate how the cost

per kWh varies with the size of the battery pack. While the overall cost of a battery pack will go up for larger kWh battery packs, the cost per kWh goes down. The amortization of costs for components required in all battery packs across a larger number of cells results in this reduced cost per kWh.

**BILLING CODE 4910-59-C**

A range of parameters can ultimately influence battery pack manufacturing costs, including other vehicle improvements (e.g., mass reduction technology, aerodynamic improvements, or tire rolling resistance improvements all affect the size and energy of a battery required to propel a vehicle where all else is equal), and the availability of materials required to manufacture the battery.<sup>202</sup> Or, if manufacturers adopt more electrification technology than projected in this analysis, increases in battery pack production volume will likely lower actual battery pack costs.

Like the 2020 final rule, we compared our battery pack costs in future years to battery pack costs from other sources that may or may not account for some of these additional parameters, including varying potential future battery chemistry and learning rates. As

discussed in TSD Chapter 3.3.5.1.4, our battery pack costs in 2025 and 2030 fell fairly well in the middle of other sources’ cost projections, with Bloomberg New Energy Finance (BNEF) projections presenting the highest year-over-year cost reductions,<sup>204</sup> and MIT’s Insights into Future Mobility report providing an upper bound of potential future costs.<sup>205</sup> ICCT presented a similar comparison of costs from several sources in its 2019 working paper, Update on Electric Vehicle Costs in the United States through 2030, and predicted battery pack costs in 2025 and 2030 would drop to approximately \$104/kWh and \$72/kWh, respectively,<sup>206</sup> which put their projections slightly higher than BNEF’s 2019 projections. BNEF’s more recent 2020 Electric Vehicle Outlook projected average pack cost to fall below \$100/kWh by 2024,<sup>207</sup> while the 2021 NAS

report projected that pack costs are projected to reach \$90–115 kWh by 2025.<sup>208</sup>

That our projected costs seem to fall between several projections gives us some confidence that the costs in this NPRM could reasonably represent future battery pack costs across the industry during the rulemaking time frame. That said, we recognize that battery technology is currently under intensive development, and that characteristics such as cost and capability are rapidly changing. These advances are reflected in recent aggressive projections, like those from ICCT, BNEF, and the 2021 NAS report. As a result, we would like to seek comments, supported by data elements as outlined below, on these characteristics.

We seek comment on the input assumptions used to generate battery pack costs in BatPaC and the BatPaC-generated direct manufacturing costs for the base year (MY 2020). If commenters believe that different input assumptions should be used for battery chemistry,<sup>209</sup>

<sup>202</sup> The cost of raw material also has a meaningful influence on the future cost of the battery pack. As the production volume goes up, the demand for battery critical raw materials also goes up, which has an offsetting impact on the efficiency gains achieved through economies of scale, improved plant efficiency, and advanced battery cell chemistries. We do not consider future battery raw material price fluctuations for this analysis, however that may be an area for further exploration in future analyses.

<sup>207</sup> Bloomberg New Energy Finance (BNEF), “Electric Vehicle Outlook 2020,” <https://>

[about.bnef.com/electric-vehicle-outlook/](https://about.bnef.com/electric-vehicle-outlook/), last accessed July 29, 2021.

<sup>208</sup> 2021 NAS report, at 5–121. The 2021 NAS report assumed a 7 percent cost reduction per year from 2018 through 2030.

<sup>209</sup> Note that stakeholders had commented to the 2020 final rule that batteries using NMC811 chemistry had either recently come into the market or was imminently coming into the market, and therefore DOT should have selected NMC811 as the

plant manufacturing volume, or plant efficiency in MY 2020, they should provide data or other information validating such assumptions. In addition, commenters should explain how these assumptions reasonably represent applications across the industry in MY 2020. This is important to align with our guiding principles to ensure that the CAFE Model's simulation of manufacturer compliance pathways results in impacts that we would reasonably expect to see in the real world. As discussed above, each technology model employed in the analysis is designed to be representative of a wide range of specific technology applications used in industry. Some vehicle manufacturer's systems may perform better and cost less than our modeled systems and some may perform worse and cost more. However, employing this approach will ensure that, on balance, the analysis captures a reasonable level of costs and benefits that would result from any manufacturer applying the technology. In this case, vehicle and battery manufacturers use different chemistries, cell types, and production processes to manufacture electric vehicle battery packs. Any proposed alternative costs for base year direct manufacturing costs should be able to represent the range of costs across the industry in MY 2020 based on different manufacturers using different approaches.

We also seek comment on the scaling used to generate direct manufacturing costs for BEV400 and BEV500 technologies. If commenters have additional data or information on the relationship between cost and weight for heavier battery packs used for these higher-range BEV applications, particularly in light truck vehicle segments, that would be helpful as well.

In addition, we seek comment on the learning rates applied to the battery pack costs and on the battery pack costs in future years. Recognizing that any battery pack cost projections for future

appropriate chemistry for modeling battery pack costs. Similar to the other technologies considered in this analysis, DOT endeavors to use technology that is a reasonable representation of what the industry could achieve in the model year or years under consideration, in this case the base DMC year of 2020, as discussed above. At the time of this current analysis, the referenced A2Mac1 teardown reports and other reports provided the best available information about the range of battery chemistry actually employed in the industry. At the time of writing, DOT still has not found examples of NMC811 in commercial application across the industry in a way that DOT believes selecting NMC811 would have represented industry average performance in MY 2020. As discussed in TSD Chapter 3.3.5.1.4, DOT did analyze the potential future cost of NMC811 in the composite learning curve generated to ensure the battery learning curve projections are reasonable.

years from our analysis or external analyses will involve assumptions that may or may not come to pass, it would be most helpful if commenters thoroughly explained the basis for any recommended learning rates, including references to publicly available data or models (and if such models are peer reviewed) where appropriate. Similarly, it would be helpful for commenters to note where external analyses may or may not take into account certain parameters in their battery pack cost projections, and whether we should attempt to incorporate those parameters in our analysis. For example, as discussed above, our analysis does not consider raw material price fluctuations; however, the price of battery pack raw materials will put a lower bound on NMC-based battery prices.<sup>210</sup>

It would also be helpful if commenters explained how learning rates or future cost projections could represent the state of battery technology across the industry. Like other technologies considered in this analysis, some battery and vehicle manufacturers have more experience manufacturing electric vehicle battery packs, and some have less, meaning that different manufacturers will be at different places along the learning curve in future years. Note also that comments should specify whether their referenced costs, either for MY 2020 or for future years, are for the battery cell or the battery pack.

Ensuring our learning rates encompass these diverse parameters will ensure that the analysis best predicts the costs and benefits associated with future standards. We will incorporate any new information received to the extent possible for the final rule and future analyses.

Recognizing again that battery technology is a rapidly evolving field and there are a range of external analyses that project battery pack costs declining at different rates across the next decade, as discussed above and further in the TSD, we performed four sensitivity studies around battery pack costs that are described in PRIA Chapter 7.2.2.5. The sensitivity studies examined the impacts of increasing and decreasing the direct cost of batteries and battery learning costs by 20 percent from central analysis levels, based on our survey of external analyses' battery pack cost projections that fell generally within +/- 20% of our central analysis costs. We found that changing the battery direct manufacturing costs in

<sup>210</sup> See, e.g., MIT Energy Initiative. 2019. *Insights into Future Mobility*. Cambridge, MA: MIT Energy Initiative. Available at <http://energy.mit.edu/insightsintofuturemobility>, at 78–9.

MY 2020 without changing the learning rate did not produce meaningfully different outcomes for electric vehicle technology penetration in later years, although it resulted in the lowest technology costs. Keeping the same direct manufacturing costs and using a steeper battery learning rate produced slightly higher technology costs, compared to the sensitivity results that changed battery pack direct manufacturing cost and kept learning rate the same.

We seek comment on these conclusions, their implications for any potential updates to battery pack costs for the final rule, and any other external analyses that the agency should consider when validating future battery pack cost projections.

Next, each vehicle powertrain type also receives different non-battery electrification components. When researching costs for different non-battery electrification components, DOT found that different reports vary in components considered and cost breakdown. This is not surprising, as vehicle manufacturers use different non-battery electrification components in different vehicle's systems, or even in the same vehicle type, depending the application.<sup>211</sup> DOT developed costs for the major non-battery electrification components on a dollar per kilowatt hour basis using the costs presented in two reports. DOT used a \$/kW cost metric for non-battery components to align with the normalized costs for a system's peak power rating as presented in U.S. DRIVE's Electrical and Electronics Technical Team (EETT) Roadmap report.<sup>212</sup> This approach captures components in some manufacturer's systems, but not all systems; however, DOT believes this is a reasonable metric and approach to use for this analysis given the differences in non-battery electrification component systems. This approach allows us to scale the cost of non-battery electrification components based on the requirements of the system. We also relied on a teardown study of a MY 2016 Chevrolet Bolt for non-battery component costs that were not explicitly estimated in the EETT Roadmap report.<sup>213</sup>

<sup>211</sup> For example, the MY 2020 Nissan Leaf does not have an active cooling system whereas Chevy Bolt uses an active cooling system.

<sup>212</sup> U.S. DRIVE, Electrical and Electronics Technical Team Roadmap (Oct. 2017), available at <https://www.energy.gov/sites/prod/files/2017/11/f39/EETT%20Roadmap%2010-27-17.pdf>.

<sup>213</sup> Hummel et al., UBS Evidence Lab Electric Car Teardown—Disruption Ahead?, UBS (May 18, 2017), <https://neo.ubs.com/shared/d1wkuDIIEYpJf/>.

To develop the learning curves for non-battery electrification components, DOT used cost information from Argonne’s 2016 Assessment of Vehicle Sizing, Energy Consumption, and Cost through Large-Scale Simulation of Advanced Vehicle Technologies report.<sup>214</sup> The report provided estimated cost projections from the 2010 lab year to the 2045 lab year for individual vehicle components.<sup>215</sup> DOT considered the component costs used in electrified vehicles, and determined the learning curve by evaluating the year

over year cost change for those components. Argonne recently published a 2020 version of the same report that included high and low cost estimates for many of the same components, that also included a learning rate.<sup>217</sup> DOT’s learning estimates generated using the 2016 report fall fairly well in the middle of these two ranges, and therefore staff decided that continuing to apply the learning curve estimates based on the 2016 report was reasonable. There are many sources that DOT staff could have

picked to develop learning curves for non-battery electrification component costs, however given the uncertainty surrounding extrapolating costs out to MY 2050, DOT believes these learning curves provide a reasonable estimate.

Table III–21 shows an example of how the non-battery electrification component costs are computed for the Medium Car and Medium SUV non-performance vehicle classes.

TSD Chapter 3.3.5.2 contains more information about the non-battery electrification components relevant to each specific electrification technology and the sources used to develop these costs. We seek comment on these costs, the appropriateness of the sources used to develop these costs, and the \$/kW

metric used to size specific non-battery electrification components. In addition, we seek comment on the learning rate applied to non-battery electrification components.

Finally, the cost of electrifying a vehicle depends on the other powertrain components that must be added or

removed from a vehicle with the addition of the electrification technology. Table III–22 below provides a breakdown of each electrification component included for each electrification technology type, as well as where to find the costs in each CAFE Model input file.

**Table III–22 – Breakdown of the Electrification Costs by Electrification Technology Type**

Electrification Technology Type	Technologies File Vehicle Tabs	Technologies File Engine Tabs	Battery Cost File
Micro Hybrid	Motor/generator	-N/A	Battery Pack
Mild Hybrid	Motor/generator, DC/DC converter, other components	-N/A	Battery Pack
P2 Strong Hybrid	DC/DC converter, on-board charger, high voltage cables, e-motor, AT8L2 transmission, and power electronics	IC engine*	Battery Pack
PS Strong Hybrid	DC/DC converter, on-board charger, high voltage cables, e-motor, CVTL2 transmission, and power electronics	IC engine	Battery Pack
Plug-in Hybrid (PHEV 20T/50T)	DC/DC converter, on-board charger, high voltage cables, e-motor, AT8L2 transmission, and power electronics	IC engine	Battery Pack
Plug-in Hybrid (PHEV 20/50 and 20H/50H)	DC/DC converter, on-board charger, high voltage cables, e-motor, CVTL2 transmission, and power electronics	IC engine	Battery Pack
BEVs	DC/DC converter, on-board charger, high voltage cables, e-motor	ETD System	Battery Pack
FCEVs	Fuel cell system, e-motor, H <sub>2</sub> Tank, transmission, and power electronics	-N/A	N/A

\*The engine cost for a P2 Hybrid is based on engine technology that is used in the conventional powertrain.

As shown in Table III–22, DOT used the cost of the CVTL2 as a proxy for the cost of an eCVT used in PS hybrid vehicles. In its recent 2021 report, the NAS estimated the cost of eCVTs to be lower than DOT's cost estimate for CVTL2.<sup>218</sup> DOT is investigating the cost assumptions used for the PS hybrid transmission and may update those costs for the final rule depending on

information submitted by stakeholders or other research. DOT seeks comment on the appropriateness of the cost estimate for eCVTs in the 2021 NAS report, or any other data that could be made public on the costs of eCVTs.

The following example in Table III–23 shows how the costs are computed for a vehicle that progresses from a lower level to a higher level of electrified powertrain. The table shows the

components that are removed and the components that are added as a GMC Acadia progresses from a MY 2024 vehicle with only SS12V electrification technology to a BEV300 in MY 2025. The total cost in MY 2025 is a net cost addition to the vehicle. The same methodology could be used for any other technology advancement in the electric technology tree path.<sup>219</sup>

<sup>218</sup> A detailed cost comparison between our costs and the 2021 NAS report costs is discussed in TSD Chapter 3.3.5.3.3.

<sup>219</sup> Please note that in this calculation the CAFE Model accounts for the air conditioning and off-cycle technologies (g/mile) applied to each vehicle model. The cost for the AC/OC adjustments are

located in the CAFE Model Scenarios file. The air conditioning and off-cycle cost values are discussed further in TSD Chapter 3.8.

**Table III-23 – Technology Cost Change for GMC Acadia Example**

	Technology Removed	Technology Added	MY 2025 Cost of Technology (2018\$)	MY 2025 Overall Technology Cost (2018\$)
MY 2024				888.7
Removed Technologies	Engine (DOHC)		(5830.76)	(5482.2)
	VVT		(221.54)	(5703.74)
	SGDI		(501.67)	(6205.41)
	DEAC		(203.35)	(6408.76)
	Transmission (AT9L2)		(2498.29)	(8907.05)
	EPS		(117.28)	(9024.33)
	SS12V		(247.43)	(9271.76)
	SS12V battery		(308.44)	(9580.2)
	AERO0		(0)	(9580.2)
Added Technologies		BEV300 - ETDS	3581.65	(5998.55)
		IACC	146.68	(5851.87)
		Non-battery components	1137.67	(4714.2)
		Battery Pack Cost	17955.29	13241.09
		AERO20	248.9	13489.99
	Total Air Conditioning/Off-Cycle (AC/OC) Adjustments <sup>219</sup>	72.71	13562.7	
MY 2025				13562.7

**BILLING CODE 4910-59-C**

TSD Chapter 3.3.5.3 includes more details about how the costs associated with the internal combustion engine, transmission, electric machine(s), non-battery electrification components, and battery pack for each electrified technology type are combined to create a full electrification system cost.

**4. Mass Reduction**

Mass reduction is a relatively cost-effective means of improving fuel economy, and vehicle manufacturers are expected to apply various mass reduction technologies to meet fuel economy standards. Reducing vehicle mass can be accomplished through several different techniques, such as modifying and optimizing vehicle component and system designs, part consolidation, and adopting lighter weight materials (advanced high strength steel, aluminum, magnesium, and plastics including carbon fiber reinforced plastics).

The cost for mass reduction depends on the type and amount of materials used, the manufacturing and assembly processes required, and the degree to which changes to plants and new manufacturing and assembly equipment

is needed. In addition, manufacturers may develop expertise and invest in certain mass reduction strategies that may affect the approaches for mass reduction they consider and the associated costs. Manufacturers may also consider vehicle attributes like noise-vibration-harshness (NVH), ride quality, handling, crash safety and various acceleration metrics when considering how to implement any mass reduction strategy. These are considered to be aspects of performance, and for this analysis any identified pathways to compliance are intended to maintain performance neutrality. Therefore, mass reduction via elimination of, for example, luxury items such as climate control, or interior vanity mirrors, leather padding, etc., is not considered in the mass reduction pathways for this analysis.

The automotive industry uses different metrics to measure vehicle weight. Some commonly used measurements are vehicle curb weight,<sup>220</sup> gross vehicle weight

<sup>220</sup> This is the weight of the vehicle with all fluids and components but without the drivers, passengers, and cargo.

(GVW),<sup>221</sup> gross vehicle weight rating (GVWR),<sup>222</sup> gross combined weight (GCVW),<sup>223</sup> and equivalent test weight (ETW),<sup>224</sup> among others. The vehicle curb weight is the most commonly used measurement when comparing vehicles. A vehicle’s curb weight is the weight of the vehicle including fluids, but without a driver, passengers, and cargo. A vehicle’s glider weight, which is vehicle curb weight minus the powertrain weight, is used to track the potential opportunities for weight reduction not including the powertrain. A glider’s subsystems may consist of the vehicle body, chassis, interior, steering,

<sup>221</sup> This weight includes all cargo, extra added equipment, and passengers aboard.

<sup>222</sup> This is the maximum total weight of the vehicle, passengers, and cargo to avoid damaging the vehicle or compromising safety.

<sup>223</sup> This weight includes the vehicle and a trailer attached to the vehicle, if used.

<sup>224</sup> For the EPA two-cycle regulatory test on a dynamometer, an additional weight of 300 lbs is added to the vehicle curb weight. This additional 300 lbs represents the weight of the driver, passenger, and luggage. Depending on the final test weight of the vehicle (vehicle curb weight plus 300 lbs), a test weight category is identified using the table published by EPA according to 40 CFR 1066.805. This test weight category is called “Equivalent Test Weight” (ETW).

electrical accessory, brake, and wheels systems. The percentage of weight assigned to the glider will remain constant for any given rule but may change overall. For example, as electric powertrains including motors, batteries, inverters, etc. become a greater percent of the fleet, glider weight percentage will change compared to earlier fleets with higher dominance of internal combustion engine (ICE) powertrains.

For this analysis, DOT considered six levels of mass reduction technology that include increasing amounts of advanced materials and mass reduction techniques applied to the glider. The mass change associated with powertrain changes is accounted for separately. The following sections discuss the assumptions for the six mass reduction technology levels, the process used to assign initial analysis fleet mass reduction assignments, the effectiveness

for applying mass reduction technology, and mass reduction costs.

(a) Mass Reduction in the CAFE Model

The CAFE Model considers six levels of mass reduction technologies that manufacturers could use to comply with CAFE standards. The magnitude of mass reduction in percent for each of these levels is shown in Table III–24 for mass reductions for light trucks, passenger cars and for gliders.

**Table III-24 – Mass Reduction Technology Level and Associated Glider and Curb Mass Reduction**

MR Level	Percent Glider Weight	Percent Vehicle Curb Weight (Passenger Cars)	Percent Vehicle Curb Weight (Light Trucks)
MR0	0%	0.00%	0.00%
MR1	5%	3.55%	3.55%
MR2	7.5%	5.33%	5.33%
MR3	10%	7.10%	7.10%
MR4	15%	10.65%	10.65%
MR5	20%	14.20%	14.20%
MR6	28%	20.00%	20.00%

For this analysis, DOT considers mass reduction opportunities from the glider subsystems of a vehicle first, and then consider associated opportunities to downsize the powertrain, which are accounted for separately.<sup>225</sup> As explained below, in the Autonomie simulations, the glider system includes both primary and secondary systems from which a percentage of mass is reduced for different glider weight reduction levels; specifically, the glider includes the body, chassis, interior, electrical accessories, steering, brakes and wheels. In this analysis, DOT assumed the glider share is 71% of vehicle curb weight. The Autonomie model sizes the powertrain based on the glider weight and the mass of some of the powertrain components in an iterative process. The mass of the powertrain depends on the powertrain size. Therefore, the weight of the glider impacts the weight of the powertrain.<sup>226</sup>

<sup>225</sup> When the mass of the vehicle is reduced by an appropriate amount, the engine may be downsized to maintain performance. See Section III.C.4 for more details.

<sup>226</sup> Since powertrains are sized based on the glider weight for the analysis, glider weight reduction beyond a threshold amount during a redesign will lead to re-sizing of the powertrain. For the analysis, the glider was used as a base for the application of any type of powertrain. A conventional powertrain consists of an engine, transmission, exhaust system, fuel tank, radiator and associated components. A hybrid powertrain also includes a battery pack, electric motor(s),

generator, high voltage wiring harness, high voltage connectors, inverter, battery management system(s), battery pack thermal system, and electric motor thermal system.

DOT uses glider weight to apply non-powertrain mass reduction technology in the CAFE Model and use Autonomie simulations to determine the size of the powertrain and corresponding powertrain weight for the respective glider weight. The combination of glider weight (after mass reduction) and re-sized powertrain weight equal the vehicle curb weight. While there are a range of specific mass reduction technologies that may be applied to vehicles to achieve each of the six mass reduction levels, there are some general trends that are helpful to illustrate some of the more widely used approaches. Typically, MR0 reflects vehicles with widespread use of mild steel structures and body panels, and very little or no use of high strength steel or aluminum. MR0 reflects materials applied to average vehicles in the MY 2008 timeframe. MR1–MR3 can be achieved with a steel body structure. In going from MR1 to MR3, expect that mild steel to be replaced by high strength and then advanced high strength steels. In going from MR3 to MR4 aluminum is required. This will start at using aluminum closure panels and then to get to MR4 the vehicle's primary structure will need to be mostly

made from aluminum. In the vast majority of cases, carbon fiber technology is necessary to reach MR5, perhaps with a mix of some aluminum. MR6 can really only be attained in anything resembling a passenger car by make nearly every structural component from carbon fiber. This means the body structure and closure panels like hoods and door skins are wholly made from carbon fiber. There may be some use of aluminum in the suspension. TSD Chapter 3.4 includes more discussion of the challenges involved with adopting large amounts of carbon fiber in the vehicle fleet in the coming years.

As discussed further below, the cost studies used to generate the cost curves assume mass can be reduced in levels that require different materials and different components to be utilized, in a specific order. DOT's mass reduction levels are loosely based on what materials and components that would be required to be used for each percent of mass reduction, based on the conclusions of those studies.

(b) Mass Reduction Analysis Fleet Assignments

To assign baseline mass reduction levels (MR0 through MR6) for vehicles in the MY 2020 analysis fleet, DOT used previously developed regression models to estimate curb weight for each vehicle based on observable vehicle attributes.

DOT used these models to establish a baseline (MR0) curb weight for each vehicle, and then determined the existing mass reduction technology level by finding the difference between the vehicles actual curb weight to the estimated regression-based value, and comparing the difference to the values in Table III–24. DOT originally developed the mass reduction regression models using MY 2015 fleet data; for this analysis, DOT used MY 2016 and 2017 analysis fleet data to update the models.

DOT believes the regression methodology is a technically sound approach for estimating mass reduction levels in the analysis fleet. For a detailed discussion about the regression development and use please see TSD Chapter 3.4.2.

Manufacturers generally apply mass reduction technology at a vehicle platform level (*i.e.*, using the same components across multiple vehicle models that share a common platform) to leverage economies of scale and to manage component and manufacturing complexity, so conducting the regression analysis at the platform level leads to more accurate estimates for the real-world vehicle platform mass reduction levels. The platform approach also addresses the impact of potential weight variations that might exist for specific vehicle models, as all the individual vehicle models are aggregated into the platform group, and are effectively averaged using sales weighting, which minimizes the impact of any outlier vehicle configurations.

#### (c) Mass Reduction Adoption Features

Given the degree of commonality among the vehicle models built on a single platform, manufacturers do not have complete freedom to apply unique technologies to each vehicle that shares the platform. While some technologies (*e.g.*, low rolling resistance tires) are very nearly “bolt-on” technologies, others involve substantial changes to the structure and design of the vehicle, and therefore affect all vehicle models that share a platform. In most cases, mass reduction technologies are applied to platform level components and therefore the same design and components are used on all vehicle models that share the platform.

Each vehicle in the analysis fleet is associated with a specific platform. Similar to the application of engine and transmission technologies, the CAFE Model defines a platform “leader” as the vehicle variant of a given platform that has the highest level of observed mass reduction present in the analysis fleet. If there is a tie, the CAFE Model

begins mass reduction technology on the vehicle with the highest sales volume in model year 2020. If there remains a tie, the model begins by choosing the vehicle with the highest manufacturer suggested retail price (MSRP) in MY 2020. As the model applies technologies, it effectively levels up all variants on a platform to the highest level of mass reduction technology on the platform. For example, if the platform leader model is already at MR3 in MY 2020, and a “follower” platform model starts at MR0 in MY 2020, the follower platform model will get MR3 at its next redesign, assuming no further mass reduction technology is applied to the leader model before the follower models next redesign.

In addition to the platform-sharing logic employed in the model, DOT applied phase-in caps for MR5 and MR6 (15 percent and 20 percent reduction of a vehicle’s curb weight, respectively), based on the current state of mass reduction technology. As discussed above, for nearly every type of vehicle, with the exception of the smallest sports cars, a manufacturer’s strategy to achieve mass reduction consistent with MR5 and MR6 will require extensive use of carbon fiber technologies in the vehicles’ primary structures. For example, one way of using carbon fiber technology to achieve MR6 is to develop a carbon fiber monocoque structure. A monocoque structure is one where the outer most skins support the primary loads of the vehicle. For example, they do not have separate non-load bearing aero surfaces. All of the vehicle’s primary loads are supported by the monocoque. In the most structurally efficient automotive versions, the monocoque is made from multiple well-consolidated plies of carbon fiber infused with resin. Such structures can require low hundreds of pounds of carbon fiber for most passenger vehicles. Add to this another roughly equivalent mass of petroleum-derived resins and even at aspirational prices for dry carbon fiber of \$10–20 per pound it is easy to see how direct materials alone can easily climb into the five-figure dollar range per vehicle.

High CAFE stringency levels will push the CAFE Model to select compliance pathways that include these higher levels of mass reduction for vehicles produced in the mid and high hundreds of thousands of vehicles per year. DOT assumes, based on material costs and availability, that achieving MR6 levels of mass reduction will cost tens of thousands of dollars per car. Therefore, application of such technology to high volume vehicles is

unrealistic today and will, with certainty, remain so for the next several years.

The CAFE Model applies technologies to vehicles that provide a cost-effective pathway to compliance. In some cases, the direct manufacturing cost, indirect costs, and applied learning factor do not capture all the considerations that make a technology more or less costly for manufacturers to apply in the real world. For example, there are direct labor, R&D overhead, manufacturing overhead, and amortized tooling costs that will likely be higher for carbon fiber production than current automotive steel production, due to fiber handling complexities. In addition, R&D overhead will also increase because of the knowledge base for composite materials in automotive applications is simply not as deep as it is for steel and aluminum. Indeed, the intrinsic anisotropic mechanical properties of composite materials compared to the isotropic properties of metals complicates the design process. Added testing of these novel anisotropic structures and their associated costs will be necessary for decades. Adding up all these contributing costs, the price tag for a passenger car or truck monocoque would likely be multiple tens of thousands of dollars per vehicle. This would be significantly more expensive than transitioning to hybrid or fully electric powertrains and potentially less effective at achieving CAFE compliance.

In addition, the CAFE Model does not currently enable direct accounting for the stranded capital associated with a transition away from stamped sheet metal construction to molded composite materials construction. For decades, or in some cases half-centuries, car manufacturers have invested billions of dollars in capital for equipment that supports the industry’s sheet metal forming paradigm. A paradigm change to tooling and equipment developed to support molding carbon fiber panels and monocoque chassis structures would leave that capital stranded in equipment that would be rendered obsolete. Doing this is possible, but the financial ramifications are not currently reflected in the CAFE Model for MR5 and MR6 compliance pathways.

Financial matters aside, carbon fiber technology and how it is best used to produce lightweight primary automotive structures is far from mature. In fact, no car company knows for sure the best way to use carbon fiber to make a passenger car’s primary structure. Using this technology in passenger cars is far more complex than using it in racing cars where passenger egress, longevity, corrosion protection, crash protection,

etc. are lower on the list of priorities for the design team. BMW may be the manufacturer most able accurately opine on the viability of carbon fiber technology for primary structure on high-volume passenger cars, and even it decided to use a mixed materials solution for their next generation of EVs (the iX and i4) after the i3, thus eschewing a wholly carbon fiber monocoque structure.

Another factor limiting the application of carbon fiber technology to mass volume passenger vehicles is indeed the availability of dry carbon fibers. There is high global demand from a variety of industries for a limited supply of carbon fibers. Aerospace, military/defense, and industrial applications demand most of the carbon fiber currently produced. Today, only roughly 10% of the global dry fiber supply goes to the automotive industry, which translates to the global supply base only being able to support approximately 70k cars.<sup>227</sup>

To account for these cost and production considerations, including the limited global supply of dry carbon fiber, DOT applied phase-in caps that limited the number of vehicles that can achieve MR5 and M6 levels of mass reduction in the CAFE Model. DOT applied a phase-in cap for MR5 level technology so that 75 percent of the vehicle fleet starting in 2020 could employ the technology, and the technology could be applied to 100 percent of the fleet by MY 2022. DOT also applied a phase-in cap for MR6 technology so that five percent of the vehicle fleet starting in MY 2020 could employ the technology, and the technology could be applied to 10 percent of the fleet by MY 2025.

To develop these phase-in caps, DOT chose a 40,000 unit thresholds for both MR5 and MR6 technology (80,000 units total), because it roughly reflects the number of BMW i3 cars produced per year worldwide.<sup>228</sup> As discussed above, the BMW i3 is the only high-volume vehicle currently produced with a primary structure mostly made from carbon fiber (except the skateboard, which is aluminum). Because mass

reduction is applied at the platform level (meaning that every car of a given platform would receive the technology, not just special low volume versions of that platform), only platforms representing 40,000 vehicles or less are eligible to apply MR5 and MR6 toward CAFE compliance. Platforms representing high volume sales, like a Chevrolet Traverse, for example, where hundreds of thousands are sold per year, are therefore blocked from access to MR5 and MR6 technology. There are no phase in caps for mass reduction levels MR1, MR2, MR3, or MR4.

In addition to determining that the caps were reasonable based on current global carbon fiber production, DOT determined that the MR5 phase-in cap is consistent with the DOT lightweighting study that found that a 15 percent curb weight reduction for the fleet is possible within the rulemaking timeframe.<sup>229</sup>

These phase-in caps appropriately function as a proxy for the cost and complexity currently required (and that likely will continue to be required until manufacturing processes evolve) to produce carbon fiber components. Again, MR6 technology in this analysis reflects the use of a significant share of carbon fiber content, as seen through the BMW i3 and Alfa Romeo 4c as discussed above.

Given the uncertainty and fluid nature of knowledge around higher levels of mass reduction technology, DOT welcomes comments on how to most cost effectively use carbon fiber technology in high-volume passenger cars. Financial implementation estimates for this technology are equally as welcome.

#### (d) Mass Reduction Effectiveness Modeling

As discussed in Section III.C.4, Argonne developed a database of vehicle attributes and characteristics for each vehicle technology class that included over 100 different attributes. Some examples from these 100 attributes include frontal area, drag coefficient, fuel tank weight, transmission housing weight, transmission clutch weight, hybrid vehicle components, and weights for components that comprise engines and electric machines, tire rolling resistance, transmission gear ratios, and final drive ratio. Argonne used these attributes to “build” each vehicle that it used for the effectiveness modeling and simulation.

Important for precisely estimating the effectiveness of different levels of mass reduction is an accurate list of initial component weights that make up each vehicle subsystem, from which Autonomie considered potential mass reduction opportunities.

As stated above, glider weight, or the vehicle curb weight minus the powertrain weight, is used to determine the potential opportunities for weight reduction irrespective of the type of powertrain.<sup>230</sup> This is because weight reduction can vary depending on the type of powertrain. For example, an 8-speed transmission may weigh more than a 6-speed transmission, and a basic engine without variable valve timing may weigh more than an advanced engine with variable valve timing. Autonomie simulations account for the weight of the powertrain system inherently as part of the analysis, and the powertrain mass accounting is separate from the application and accounting for mass reduction technology levels that are applied to the glider in the simulations. Similarly, Autonomie also accounts for battery and motor mass used in hybrid and electric vehicles separately. This secondary mass reduction is discussed further below.

Accordingly, in the Autonomie simulations, mass reduction technology is simulated as a percentage of mass removed from the specific subsystems that make up the glider, as defined for that set of simulations (including the non-powertrain secondary mass systems such as the brake system). For the purposes of determining a reasonable percentage for the glider, DOT in consultation with Argonne examined glider weight data available in the A2Mac1 database,<sup>231</sup> in addition to the NHTSA MY 2014 Chevrolet Silverado lightweighting study (discussed further below). Based on these studies, DOT assumed that the glider weight comprised 71 percent of the vehicle curb weight. TSD Chapter 3.4.4 includes a detailed breakdown of the components that DOT considered to arrive at the conclusion that a glider, on average, represents 71% of a vehicle’s curb weight.

Any mass reduction due to powertrain improvements is accounted for separately from glider mass reduction. Autonomie considers several components for powertrain mass reduction, including engine downsizing,

<sup>227</sup> J. Sloan, “Carbon Fiber Suppliers Gear up for Next Generation Growth,” *compositesworld.com*, February 11, 2020.

<sup>228</sup> However, even this number is optimistic because only a small fraction of i3 cars are sold in the U.S. market, and combining MR5 and MR6 allocations equates to 80k vehicles, not 40k. Regardless, if the auto industry ever seriously committed to using carbon fiber in mainstream high-volume vehicles, competition with the other industries would rapidly result in a dramatic increase in price for dry fiber. This would further stymie the deployment of this technology in the automotive industry.

<sup>229</sup> Singh, Harry. (2012, August). Mass Reduction for Light-Duty Vehicles for Model Years 2017–2025. (Report No. DOT HS 811 666). Program Reference: DOT Contract DTNH22–11–C–00193. Contract Prime: Electricore, Inc, at 356, Figure 397.

<sup>230</sup> Depending on the powertrain combination, the total curb weight of the vehicle includes glider, engine, transmission and/or battery pack and motor(s).

<sup>231</sup> A2Mac1: Automotive Benchmarking, <https://a2mac1.com>.

and transmission, fuel tank, exhaust systems, and cooling system lightweighting.

The 2015 NAS report suggested an engine downsizing opportunity exists when the glider mass is lightweighted by at least 10%. The 2015 NAS report also suggested that 10% lightweighting of the glider mass alone would boost fuel economy by 3% and any engine downsizing following the 10% glider mass reduction would provide an additional 3% increase in fuel economy.<sup>232</sup> The 2011 Honda Accord and 2014 Chevrolet Silverado lightweighting studies applied engine downsizing (for some vehicle types but not all) when the glider weight was reduced by 10 percent. Accordingly, this analysis limited engine resizing to several specific incremental technology steps as in the 2018 CAFE NPRM (83 FR 42986, Aug. 24, 2018) and 2020 final rule; important for this discussion, engines in the analysis were only resized when mass reduction of 10% or greater was applied to the glider mass, or when one powertrain architecture was replaced with another architecture.

Specifically, we allow engine resizing upon adoption of 7.1%, 10.7%, 14.2%, and 20% curb weight reduction, but not at 3.6% and 5.3%.<sup>233</sup> Resizing is also allowed upon changes in powertrain type or the inheritance of a powertrain from another vehicle in the same platform. The increments of these higher levels of mass reduction, or complete powertrain changes, more appropriately match the typical engine displacement increments that are available in a manufacturer's engine portfolio.

Argonne performed a regression analysis of engine peak power versus weight for a previous analysis based on attribute data taken from the A2Mac1 benchmarking database, to account for the difference in weight for different engine types. For example, to account for weight of different engine sizes like

4-cylinder versus 8-cylinder, Argonne developed a relationship curve between peak power and engine weight based on the A2Mac1 benchmarking data. We use this relationship to estimate mass for all engine types regardless of technology type (e.g., variable valve lift and direct injection). DOT applied weight associated with changes in engine technology by using this linear relationship between engine power and engine weight from the A2Mac1 benchmarking database. When a vehicle in the analysis fleet with an 8-cylinder engine adopted a more fuel-efficient 6-cylinder engine, the total vehicle weight would reflect the updated engine weight with two less cylinders based on the peak power versus engine weight relationship.

When Autonomie selects a powertrain combination for a lightweighted glider, the engine and transmission are selected such that there is no degradation in the performance of the vehicle relative to the baseline vehicle. The resulting curb weight is a combination of the lightweighted glider with the resized and potentially new engine and transmission. This methodology also helps in accurately accounting for the cost of the glider and cost of the engine and transmission in the CAFE Model.

Secondary mass reduction is possible from some of the components in the glider after mass reduction has been incorporated in primary subsystems (body, chassis, and interior). Similarly, engine downsizing and powertrain secondary mass reduction is possible after certain level of mass reduction is incorporated in the glider. For the analysis, the agencies include both primary mass reduction, and when there is sufficient primary mass reduction, additional secondary mass reduction. The Autonomie simulations account for the aggregate of both primary and secondary glider mass reduction, and separately for powertrain mass.

Note that secondary mass reduction is integrated into the mass reduction cost curves. Specifically, the NHTSA studies, upon which the cost curves depend, first generated costs for lightweighting the vehicle body, chassis, interior, and other primary components, and then calculated costs for lightweighting secondary components. Accordingly, the cost curves reflect that, for example, secondary mass reduction

for the brake system is only applied after there has been sufficient primary mass reduction to allow the smaller brake system to provide safe braking performance and to maintain mechanical functionality.

DOT enhanced the accuracy of estimated engine weights by creating two curves to represent separately naturally aspirated engine designs and turbocharged engine designs.<sup>234</sup> This achieves two benefits. First, small naturally aspirated 4-cylinder engines that adopted turbocharging technology reflected the increased weight of associated components like ducting, clamps, the turbocharger itself, a charged air cooler, wiring, fasteners, and a modified exhaust manifold. Second, larger cylinder count engines like naturally aspirated 8-cylinder and 6-cylinder engines that adopted turbocharging and downsized technologies would have lower weight due to having fewer engine cylinders. For this analysis, a naturally aspirated 8-cylinder engine that adopts turbocharging technology and is downsized to a 6-cylinder turbocharged engine appropriately reflects the added weight of the turbocharging components, and the lower weight of fewer cylinders.

The range of effectiveness values for the mass reduction technologies, for all ten vehicle technology classes are shown in Figure III–13. In the graph, the box shows the inner quartile range (IQR) of the effectiveness values and whiskers extend out  $1.5 \times$  IQR. The dots outside of the whiskers show a few values outside these ranges. As discussed earlier, Autonomie simulates all possible combinations of technologies for fuel consumption improvements. For a few technology combinations mass reduction has minimal impact on effectiveness on the regulatory 2-cycle test. For example, if an engine is operating in an efficient region of the fuel map on the 2-cycle test further reduction of mass may have smaller improvement on the regulatory cycles. Figure III–13 shows the range improvements based on the full range of other technology combinations considered in the analysis.

<sup>232</sup> National Research Council. 2015. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles. Washington, DC—The National Academies Press. <https://doi.org/10.17226/21744>.

<sup>233</sup> These curb weight reductions equate to the following levels of mass reduction as defined in the analysis: MR3, MR4, MR5 and MR6, but not MR1 and MR2; additional discussion of engine resizing for mass reduction can be found in Section III.C.4 and TSD Chapter 2.4.

<sup>234</sup> See Autonomie model documentation, Chapter 5.2.9. Engine Weight Determination.

**Figure III-13 – Mass Reduction Technologies Effectiveness Values for all the Vehicle Technology Classes**

#### (e) Mass Reduction Costs

The CAFE Model analysis handles mass reduction technology costs differently than all other technology costs. Mass reduction costs are calculated as an average cost per pound over the baseline (MR0) for a vehicle's glider weight. While the definitions of glider may vary, DOT referenced the same dollar per pound of curb weight to develop costs for different glider definitions. In translating these values, DOT took care to track units (\$/kg vs. \$/lb) and the reference for percentage improvements (glider vs. curb weight).

DOT calculated the cost of mass reduction on a glider weight basis so that the weight of each powertrain configuration could be directly and separately accounted for. This approach provides the true cost of mass reduction without conflating the mass change and costs associated with downsizing a powertrain or adding additional advanced powertrain technologies. Hence, the mass reduction costs in this proposal reflect the cost of mass reduction in the glider and do not

include the mass reduction associated with engine downsizing. The mass reduction and costs associated with engine downsizing are accounted for separately.

A second reason for using glider share instead of curb weight is that it affects the absolute amount of curb weight reduction applied, and therefore cost per pound for the mass reduction changes with the change in the glider share. The cost for removing 20 percent of the glider weight when the glider represents 75 percent of a vehicle's curb weight is not the same as the cost for removing 20 percent of the glider weight when the glider represents 50 percent of the vehicle's curb weight. For example, the glider share of 79 percent of a 3,000-pound curb weight vehicle is 2,370 lbs, while the glider share of 50 percent of a 3,000-pound curb weight vehicle is 1,500 lbs, and the glider share of 71 percent of a 3,000-pound curb weight vehicle is 2,130 lbs. The mass change associated with 20 percent mass reduction is 474 lbs for 79 percent glider share ( $= [3,000 \text{ lbs} \times 79\% \times 20\%]$ ), 300 lbs for 50 percent glider share ( $= [3,000$

$\text{lbs} \times 50\% \times 20\%]$ , and 426 lbs for 71 percent glider share ( $= [3,000 \text{ lbs} \times 71\% \times 20\%]$ ). The mass reduction cost studies that DOT relied on to develop mass reduction costs for this analysis show that the cost for mass reduction varies with the amount of mass reduction. Therefore, for a fixed glider mass reduction percentage, different glider share assumptions will have different costs.

DOT considered several sources to develop the mass reduction technology cost curves. Several mass reduction studies have used either a mid-size passenger car or a full-size pickup truck as an exemplar vehicle to demonstrate the technical and cost feasibility of mass reduction. While the findings of these studies may not apply directly to different vehicle classes, the cost estimates derived for the mass reduction technologies identified in these studies can be useful for formulating general estimates of costs. As discussed further below, the mass reduction cost curves developed for this analysis are based on two lightweighting studies, and DOT also updated the curves based on more

recent studies to better account for the cost of carbon fiber needed for the highest levels of mass reduction technology. The two studies used for MR1 through MR4 costs included the teardown of a MY 2011 Honda Accord and a MY 2014 Chevrolet Silverado pickup truck, and the carbon fiber costs required for MR5 and MR6 were updated based on the 2021 NAS report.<sup>235</sup>

Both teardown studies are structured to derive the estimated cost for each of the mass reduction technology levels. DOT relied on the results of those studies because they considered an extensive range of material types, material gauge, and component redesign while taking into account real world constraints such as manufacturing and assembly methods and complexity, platform-sharing, and maintaining vehicle utility, functionality and attributes, including safety, performance, payload capacity, towing capacity, handling, NVH, and other characteristics. In addition, DOT determined that the baseline vehicles and mass reduction technologies assessed in the studies are still reasonably representative of the technologies that may be applied to vehicles in the MY 2020 analysis fleet to achieve up to MR4 level mass reduction in the rulemaking timeframe. DOT adjusted the cost estimates derived from the two studies to reflect the assumption that a vehicle's glider

weight consisted of 71% of the vehicle's curb weight, and mass reduction as it pertains to achieving MR0–MR6 levels would only come from the glider.

As discussed above, achieving the highest levels of mass reduction often necessitates extensive use of advanced materials like higher grades of aluminum, magnesium, or carbon fiber. For the 2020 final rule, DOT provided a survey of information available regarding carbon fiber costs compared to the costs DOT presented in the final rule based on the Honda Accord and Chevrolet Silverado teardown studies. In the Honda Accord study, the estimated cost of carbon fiber was \$5.37/kg, and the cost of carbon fiber used in the Chevy Silverado study was \$15.50/kg. The \$15.50 estimate closely matched the cost estimates from a BMW i3 teardown analysis,<sup>236</sup> the cost figures provided by Oak Ridge National Laboratory for a study from the IACMI Composites Institute,<sup>237</sup> and from a Ducker Worldwide presentation at the CAR Management Briefing Seminar.<sup>238</sup>

For this analysis, DOT relied on the cost estimates for carbon fiber construction that the National Academies detailed in the 2021 Assessment of Technologies for Improving Fuel Economy of Light-Duty Vehicles—Phase 3 recently completed by the National Academies.<sup>239</sup> The study indicates that the sum of direct materials costs plus manufacturing costs for carbon fiber composite automotive

components is \$25.97 per pound in high volume production. In order to use this cost in the CAFE Model it must be put in terms of dollars per pound saved. Using an average vehicle curb weight of 4000 lbs, a 71% glider share and the percent mass savings associated with MR5 and MR6, it is possible to calculate the number of pounds to be removed to attain MR5 and MR6. Also taken from the NAS study is the assertion that carbon fiber substitution for steel in an automotive component results in a 50% mass reduction. Combining all this together, carbon fiber technology offers weight savings at \$24.60 per pound saved. This dollar per pound savings figure must also be converted to a retail price equivalent (RPE) to account for various commercial costs associated with all automotive components. This is accomplished by multiplying \$24.60 by the factor 1.5. This brings the cost per pound saved for using carbon fiber to \$36.90 per pound saved.<sup>240</sup> The analysis uses this cost for achieving MR5 and MR6.

Table III–25 and Table III–26 show the cost values (in dollars per pound) used in the CAFE Model with MR1–4 costs based on the cost curves developed from the MY 2011 Honda Accord and MY 2014 Chevrolet Silverado studies, and the updated MR5 and MR6 values that account for the updated carbon fiber costs from the 2021 NAS report. Both tables assume a 71% glider share.

**Table III-25 – Mass Reduction Costs for MY 2020 in CAFE Model for Small Car, Small Car Performance, Medium Car, Medium Car Performance, Small SUV, Small SUV Performance**

	Percentage Reduction in Glider Weight	Percentage Reduction in Curb Weight	Cost of Mass Reduction (\$/lbs)
MR0	0.00%	0.00%	0.00
MR1	5.00%	3.55%	0.46
MR2	7.50%	5.33%	0.86
MR3	10.00%	7.10%	1.22
MR4	15.00%	10.65%	1.59
MR5	20.00%	14.20%	36.90
MR6	28.00%	20%	36.90

<sup>235</sup> This analysis applied the cost estimates per pound derived from passenger cars to all passenger car segments, and the cost estimates per pound derived from full-size pickup trucks to all light-duty truck and SUV segments. The cost estimates per pound for carbon fiber (MR5 and MR6) were the same for all segments.

<sup>239</sup> 2021 NAS report, at 7–242–3.

<sup>240</sup> See MR5 and MR6 CFRP Cost Increase Calculator.xlsx in the docket for this action.

There is a dramatic increase in cost going from MR4 to MR5 and MR6 for all classes of vehicles. However, while the increase in cost going from MR4 to MR5 and MR6 is dramatic, the MY 2011 Honda Accord study, the MY 2014 Chevrolet Silverado study, and the 2021 NAS report all included a steep increase to achieve the highest levels of mass

reduction technology. As noted above, DOT seeks comment on any additional information about the costs of achieving the highest levels of mass reduction technology, including from publicly available sources or data that could be made publicly available.

Table III–27 provides an example of mass reduction costs in 2018\$ over

select model years for the medium car and pickup truck technology classes as a dollar per pound value. The table shows how the \$/lb value for each mass reduction level decreases over time because of cost learning. For a full list of the \$/lb mass reduction costs used in the analysis across all model years, see the Technologies file.

**Table III-27 – Examples of the \$/lb Mass Reduction Costs in 2018\$ for Medium Car and Pickup Truck Vehicle Classes**

Technology	Medium Car Costs (2018\$)/lbs			Pickup Costs (2018\$)/lbs		
	MY 2020	MY 2025	MY 2030	MY 2020	MY 2025	MY 2030
MR0	0.00	0.00	0.00	0.00	0.00	0.00
MR1	0.46	0.42	0.39	0.30	0.27	0.25
MR2	0.86	0.78	0.73	0.70	0.63	0.59
MR3	1.22	1.11	1.03	1.25	1.13	1.06
MR4	1.59	1.34	1.21	1.70	1.44	1.30
MR5	36.90	31.44	26.93	36.90	31.44	26.93
MR6	36.90	31.44	26.93	36.90	31.44	26.93

## 5. Aerodynamics

The energy required to overcome aerodynamic drag accounts for a significant portion of the energy consumed by a vehicle and can become the dominant factor for a vehicle's energy consumption at high speeds. Reducing aerodynamic drag can, therefore, be an effective way to reduce fuel consumption and emissions.

Aerodynamic drag is proportional to the frontal area ( $A$ ) of the vehicle and coefficient of drag ( $C_d$ ), such that aerodynamic performance is often expressed as the product of the two values,  $C_dA$ , which is also known as the drag area of a vehicle. The coefficient of drag ( $C_d$ ) is a dimensionless value that essentially represents the aerodynamic efficiency of the vehicle shape. The frontal area ( $A$ ) is the cross-sectional area of the vehicle as viewed from the front. It acts with the coefficient of drag as a sort of scaling factor, representing the relative size of the vehicle shape that the coefficient of drag describes. The force imposed by aerodynamic drag increases with the square of vehicle velocity, accounting for the largest contribution to road loads at higher speeds.

Aerodynamic drag reduction can be achieved via two approaches, either by reducing the drag coefficient or

reducing vehicle frontal area, with two different categories of technologies, passive and active aerodynamic technologies. Passive aerodynamics refers to aerodynamic attributes that are inherent to the shape and size of the vehicle, including any components of a fixed nature. Active aerodynamics refers to technologies that variably deploy in response to driving conditions. These include technologies such as active grille shutters, active air dams, and active ride height adjustment. It is important to note that manufacturers may employ both passive and active aerodynamic technologies to achieve aerodynamic drag values.

The greatest opportunity for improving aerodynamic performance is during a vehicle redesign cycle when significant changes to the shape and size of the vehicle can be made. Incremental improvements may also be achieved during mid-cycle vehicle refresh using restyled exterior components and add-on devices. Some examples of potential technologies applied during mid-cycle refresh are restyled front and rear fascia, modified front air dams and rear valances, addition of rear deck lips and underbody panels, and low-drag exterior mirrors. While manufacturers may nudge the frontal area of the vehicle during redesigns, large changes in frontal area are typically not possible

without impacting the utility and interior space of the vehicle. Similarly, manufacturers may improve  $C_d$  by changing the frontal shape of the vehicle or lowering the height of the vehicle, among other approaches, but the form drag of certain body styles and airflow needs for engine cooling often limit how much  $C_d$  may be improved.

The following sections discuss the four levels of aerodynamic improvements considered in the CAFE Model, how the agency assigned baseline aerodynamic technology levels to vehicles in the MY 2020 fleet, the effectiveness improvements for the addition of aerodynamic technologies to vehicles, and the costs for adding that aerodynamic technology.

### (a) Aerodynamic Technologies in the CAFE Model

DOT bins aerodynamic improvements into four levels—5%, 10%, 15% and 20% aerodynamic drag improvement values over a baseline computed for each vehicle body style—which correspond to AERO5, AERO10, AERO15, and AERO20, respectively.

The aerodynamic improvements technology pathway consists of a linear progression, with each level superseding all previous levels, as seen in Figure III–14.

**Figure III-14 – Technology Pathway for Levels of Aerodynamic Drag Reduction**

While the four levels of aerodynamic improvements are technology-agnostic, DOT built a pathway to compliance for each level based on aerodynamic data from a National Research Council (NRC) of Canada-sponsored wind tunnel testing program. The program included an extensive review of production vehicles utilizing these technologies, and industry comments.<sup>241 242</sup> Again, these technology combinations are intended to show a *potential* way for a manufacturer to achieve each aerodynamic improvement level; however, in the real world,

manufacturers may implement different combinations of aerodynamic technologies to achieve a percentage improvement over their baseline vehicles.

Table III-28 and Table III-29 show the aerodynamic technologies that could be used to achieve 5%, 10%, 15% and 20% improvements in passenger cars, SUVs, and pickup trucks. As discussed further in Section III.D.5.c, AERO20 cannot be applied to pickup trucks in the model, which is why there is no pathway to AERO20 shown in Table III-29. While some aerodynamic

improvement technologies can be applied across vehicle classes, like active grille shutters (used in the 2015 Chevrolet Colorado),<sup>243</sup> DOT determined that there are limitations that make it infeasible for vehicles with some body styles to achieve a 20% reduction in the coefficient of drag from their baseline. This technology path is an example of how a manufacturer *could* reach each AERO level, but they would not necessarily be *required* to use the technologies.

**Table III-28 – Combinations of Technologies That Could Achieve Aerodynamic Improvements Used in the Current Analyses for Passenger Cars and SUVs**

Aero Improvement Level	Components	Effectiveness (%)
AERO5	Front Styling	2.0%
	Roof Line raised at forward of B-pillar	0.5%
	Faster A pillar rake angle	0.5%
	Shorter C pillar	1.0%
	Low drag wheels	1.0%
AERO10	Rear Spoiler	1.0%
	Wheel Deflector / Air outlet inside wheel housing	1.0%
	Bumper Lip	1.0%
	Rear Diffuser	2.0%
AERO15	Underbody Cover Incl. Rear axle cladding)	3.0%
	Lowering ride height by 10mm	2.0%
AERO20	Active Grill Shutters	3.0%
	Extend Air dam	2.0%

**Table III-29 – Combinations of Technologies That Could Achieve Aerodynamic Improvements Used in the Current Analyses for Pickup Trucks**

Aero Improvement Level	Components	Effectiveness (%)
AERO5	Whole Body Styling (Shape Optimization)	1.5%
	Faster A pillar rake angle	0.5%
	Rear Spoiler	1.0%
	Wheel Deflector / Air outlet inside wheel housing	1.0%
	Bumper Lip	1.0%
AERO10	Rear Diffuser	2.0%
	Underbody Cover Incl. Rear axle cladding)	3.0%
AERO15	Active Grill Shutters	3.0%
	Extend Air dam	2.0%

**BILLING CODE 4910-59-C**

As discussed further in Section III.D.8, this analysis assumes manufacturers apply off-cycle technology at rates defined in the Market Data file. While the AERO levels in the analysis are technology-agnostic, achieving AERO20 improvements does assume the use of active grille shutters, which is an off-cycle technology.

**(b) Aerodynamics Analysis Fleet Assignments**

DOT uses a relative performance approach to assign an initial level of aerodynamic drag reduction technology

to each vehicle. Each AERO level represents a percent reduction in a vehicle's aerodynamic drag coefficient ( $C_d$ ) from a baseline value for its body style. For a vehicle to achieve AERO5, the  $C_d$  must be at least 5% below the baseline for the body style; for AERO10, 10% below the baseline, and so on. Baseline aerodynamic assignment is therefore a three step process: Each vehicle in the fleet is assigned a body style, the average drag coefficient is calculated for each body style, and the drag coefficient for each vehicle model

is compared to the average for the body style.

Every vehicle in the fleet is assigned a body style; available body styles included convertible, coupe, sedan, hatchback, wagon, SUV, pickup, minivan, and van. These assignments do not necessarily match the body styles used by manufacturers for marketing purposes. Instead, they are assigned based on analyst judgement, taking into account how a vehicle's AERO and vehicle technology class assignments are affected. Different body styles offer different utility and have varying levels

of baseline form drag. In addition, frontal area is a major factor in aerodynamic forces, and the frontal area varies by vehicle. This analysis considers both frontal area and body style as utility factors affecting aerodynamic forces; therefore, the analysis assumes all reduction in aerodynamic drag forces come from improvement in the drag coefficient.

Average drag coefficients for each body style were computed using the MY 2015 drag coefficients published by manufacturers, which were used as the baseline values in the analysis. DOT harmonizes the Autonomie simulation baselines with the analysis fleet assignment baselines to the fullest extent possible.<sup>244</sup>

The drag coefficients used for each vehicle in the MY 2020 analysis fleet are sourced from manufacturer specification sheets, when possible. However, drag coefficients for the MY 2020 vehicles were not consistently reported publicly. If no drag coefficient was reported, analyst judgment is sometimes used to assign an AERO level. If no level was manually assigned, the drag coefficient obtained from manufacturers to build the MY 2016 fleet,<sup>245</sup> was used, if available. The MY 2016 drag coefficient values may not accurately reflect the current technology content of newer vehicles but are, in many cases, the most recent data available.

#### (c) Aerodynamics Adoption Features

As already discussed, DOT engineers use a relative performance approach to assign current aerodynamic technology (AERO) level to a vehicle. For some body styles with different utility, such as pickup trucks, SUVs and minivans, frontal area can vary, and this can affect the overall aerodynamic drag forces. In order to maintain vehicle utility and functionality related to passenger space and cargo space, we assume all technologies that improve aerodynamic drag forces do so by reducing  $C_d$  while maintaining frontal area.

Technology pathway logic for levels of aerodynamic improvement consists of a linear progression, with each level superseding all previous ones. Technology paths for AERO are illustrated in Figure III–14.

The highest levels of AERO are not considered for certain body styles. In

these cases, this means that AERO20, and sometimes AERO15, can neither be assigned in the baseline fleet nor adopted by the model. For these body styles, there are no commercial examples of drag coefficients that demonstrate the required AERO15 or AERO20 improvement over baseline levels. DOT also deemed the most advanced levels of aerodynamic drag simulated as not technically practicable given the form drag of the body style and costed technology, especially given the need to maintain vehicle functionality and utility, such as interior volume, cargo area, and ground clearance. In short, DOT ‘skipped’ AERO15 for minivan body styles, and ‘skipped’ AERO20 for convertible, minivan, pickup, and wagon body styles.

DOT also does not allow application of AERO15 and AERO20 technology to vehicles with more than 780 horsepower. There are two main types of vehicles that informed this threshold: performance internal combustion engine (ICE) vehicles and high-power battery electric vehicles (BEVs). In the case of the former, the agency recognizes that manufacturers tune aerodynamic features on these vehicles to provide desirable downforce at high speeds and to provide sufficient cooling for the powertrain, rather than reducing drag, resulting in middling drag coefficients despite advanced aerodynamic features. Therefore, manufacturers may have limited ability to improve aerodynamic drag coefficients for high performance vehicles with internal combustion engines without reducing horsepower. The baseline fleet includes 1,655 units of sales volume with limited application of aerodynamic technologies because of ICE vehicle performance.<sup>246</sup>

In the case of high-power battery electric vehicles, the 780-horsepower threshold is set above the highest peak system horsepower present on a BEV in the 2020 fleet. BEVs have different aerodynamic behavior and considerations than ICE vehicles, allowing for features such as flat underbodies that significantly reduce drag.<sup>247</sup> BEVs are therefore more likely to achieve higher AERO levels, so the horsepower threshold is set high enough that it does not restrict AERO15 and AERO20 application. Note that the

CAFE Model does not force high levels of AERO adoption; rather, higher AERO levels are usually adopted organically by BEVs because significant drag reduction allows for smaller batteries and, by extension, cost savings. BEVs represent 252,023 units of sales volume in the baseline fleet.<sup>248</sup>

#### (d) Aerodynamics Effectiveness Modeling

To determine aerodynamic effectiveness, the CAFE Model and Autonomie used individually assigned road load technologies for each vehicle to appropriately assign initial road load levels and appropriately capture benefits of subsequent individual road load improving technologies.

The current analysis included four levels of aerodynamic improvements, AERO5, AERO10, AERO15, and AERO20, representing 5, 10, 15, and 20 percent reduction in drag coefficient ( $C_d$ ), respectively. DOT assumed that aerodynamic drag reduction could only come from reduction in  $C_d$  and not from reduction of frontal area, to maintain vehicle functionality and utility, such as passenger space, ingress/egress ergonomics, and cargo space.

The effectiveness values for the aerodynamic improvement levels relative to AERO0, for all ten vehicle technology classes, are shown in Figure III–15. Each of the effectiveness values shown is representative of the improvements seen for upgrading only the listed aerodynamic technology level for a given combination of other technologies. In other words, the range of effectiveness values seen for each specific technology (*e.g.*, AERO 15) represents the addition of AERO15 technology (relative to AERO0 level) for every technology combination that could select the addition of AERO15. It must be emphasized that the change in fuel consumption values between entire technology keys is used,<sup>249</sup> and not the individual technology effectiveness values. Using the change between whole technology keys captures the complementary or non-complementary interactions among technologies. The box shows the inner quartile range (IQR) of the effectiveness values and whiskers extend out 1.5 x IQR. The dots outside the whiskers show effectiveness values outside those thresholds.

<sup>244</sup> See TSD Chapter 2.4.1 for a table of vehicle attributes used to build the Autonomie baseline vehicle models. That table includes a drag coefficient for each vehicle class.

<sup>245</sup> See 83 FR 42986 (Aug. 24, 2018). The MY 2016 fleet was built to support the 2018 NPRM.

<sup>249</sup> Technology key is the unique collection of technologies that constitutes a specific vehicle, see TSD Chapter 2.4.7 for more detail.

**Figure III-15 – AERO Technology Effectiveness<sup>250</sup>**

(e) Aerodynamics Costs

This analysis uses the AERO technology costs established in the 2020 final rule that are based on confidential business information submitted by the automotive industry in advance of the 2018 NPRM,<sup>251</sup> and on DOT's assessment of manufacturing costs for specific aerodynamic technologies.<sup>252</sup> DOT received no additional comments

from stakeholders regarding the costs established in the 2018 NPRM, and continued to use the established costs for the 2020 final rule and this analysis.

Table III-30 shows examples of costs for AERO technologies as applied to the medium car and pickup truck vehicle classes in select model years. The cost to achieve AERO5 is relatively low, as most of the improvements can be made through body styling changes. The cost

to achieve AERO10 is higher than AERO5, due to the addition of several passive aerodynamic technologies, and the cost to achieve AERO15 and AERO20 is higher than AERO10 due to use of both passive and active aerodynamic technologies. For a full list of all absolute aerodynamic technology costs used in the analysis across all model years see the Technologies file.

<sup>250</sup> The data used to create this figure can be found in the FE\_1 Improvements file.

<sup>251</sup> See the PRIA accompanying the 2018 NPRM, Chapter 6.3.10.1.2.1.2 for a discussion of these cost estimates.

<sup>252</sup> See the FRIA accompanying the 2020 final rule, Chapter VI.C.5.e.

**Table III-30 – Examples of Costs for Aerodynamic Reduction Technologies in 2018\$ for Medium Cars and Pickup Trucks for Select Model Years**

Technology	Medium Car Costs (2018\$)			Pickup Costs (2018\$)		
	MY 2020	MY 2025	MY 2030	MY 2020	MY 2025	MY 2030
AERO0	0.00	0.00	0.00	0.00	0.00	0.00
AERO5	53.96	48.70	45.73	53.96	48.70	45.73
AERO10	110.32	99.56	93.49	110.32	99.56	93.49

AERO20	275.80	248.90	233.72	-	-	-

6. Tire Rolling Resistance

Tire rolling resistance is a road load force that arises primarily from the energy dissipated by elastic deformation of the tires as they roll. Tire design characteristics (for example, materials, construction, and tread design) have a strong influence on the amount and type of deformation and the energy it dissipates. Designers can select these characteristics to minimize rolling resistance. However, these characteristics may also influence other performance attributes, such as durability, wet and dry traction, handling, and ride comfort.

Lower-rolling-resistance tires have characteristics that reduce frictional losses associated with the energy dissipated mainly in the deformation of the tires under load, thereby improving fuel economy. Low rolling resistance tires are increasingly specified by OEMs in new vehicles and are also increasingly available from aftermarket tire vendors. They commonly include attributes such as higher inflation pressure, material changes, tire construction optimized for lower hysteresis, geometry changes (e.g.,

reduced aspect ratios), and reduced sidewall and tread deflection. These changes are commonly accompanied by additional changes to vehicle suspension tuning and/or suspension design to mitigate any potential impact on other performance attributes of the vehicle.

DOT continues to assess the potential impact of tire rolling resistance changes on vehicle safety. DOT has been following the industry developments and trends in application of rolling resistance technologies to light duty vehicles. As stated in the National Academies Press (NAP) special report on Tires and Passenger Vehicle Fuel Economy,<sup>253</sup> national crash data does not provide data about tire structural failures specifically related to tire rolling resistance, because the rolling resistance of a tire at a crash scene cannot be determined. However, other metrics like brake performance compliance test data are helpful to show trends like that stopping distance has

<sup>253</sup> Tires and Passenger Vehicle Fuel Economy: Informing Consumers, Improving Performance—Special Report 286 (2006), available at <https://www.nap.edu/read/11620/chapter/6>.

not changed in the last ten years,<sup>254</sup> during which time many manufacturers have installed low rolling resistance tires in their fleet—meaning that manufacturers were successful in improving rolling resistance while maintaining stopping distances through tire design, tire materials, and/or braking system improvements. In addition, NHTSA has addressed other tire-related issues through rulemaking,<sup>255</sup> and continues to research tire problems such as blowouts, flat tires, tire or wheel deficiency, tire or wheel failure, and tire degradation.<sup>256</sup> However, there are currently no data connecting low rolling resistance tires to accident or fatality rates.

<sup>254</sup> See, e.g., NHTSA Office of Vehicle Safety Compliance, Compliance Database, <https://one.nhtsa.gov/cars/problems/comply/index.cfm>.

<sup>255</sup> 49 CFR 571.138, Tire pressure monitoring systems.

<sup>256</sup> Tire-Related Factors in the Pre-Crash Phase, DOT HS 811 617 (April 2012), available at <https://crashstats.nhtsa.dot.gov/Api/Public/ViewPublication/811617>.

NHTSA conducted tire rolling resistance tests and wet grip index tests on original equipment tires installed on new vehicles. The tests showed that there is no degradation in wet grip index values (no degradation in traction) for tires with improved rolling resistance technology. With better tire design, tire compound formulations and improved tread design, tire manufacturers have tools to balance stopping distance and reduced rolling resistance. Tire manufacturers can use “higher performance materials in the tread compound, more silica as reinforcing fillers and advanced tread design features” to mitigate issues related to stopping distance.<sup>257</sup>

The following sections discuss levels of tire rolling resistance technology considered in the CAFE Model, how the technology was assigned in the analysis fleet, adoption features specified to maintain performance, effectiveness, and cost.

#### (a) Tire Rolling Resistance in the CAFE Model

DOT continues to consider two levels of improvement for low rolling resistance tires in the analysis: The first level of low rolling resistance tires considered reduced rolling resistance 10 percent from an industry-average baseline rolling resistance coefficient (RRC) value, while the second level reduced rolling resistance 20 percent from the baseline.<sup>258</sup>

DOT selected the industry-average RRC baseline of 0.009 based on a CONTROLTEC study prepared for the California Air Resources Board,<sup>259</sup> in addition to confidential business information submitted by manufacturers prior to the 2018 NPRM analysis. The average RRC from the CONTROLTEC study, which surveyed 1,358 vehicle models, was 0.009.<sup>260</sup> CONTROLTEC also compared the findings of their survey with values provided by Rubber Manufacturers Association (renamed as USTMA–U.S. Tire Manufacturers Association) for original equipment

<sup>257</sup> Jesse Snyder, A big fuel saver: Easy-rolling tires (but watch braking) (July 21, 2008), <https://www.autonews.com/article/20080721/OEM01/307219960/a-big-fuel-saver-easy-rolling-tires-but-watch-braking>. Last visited December 3, 2019.

<sup>258</sup> To achieve ROLL10, the tire rolling resistance must be at least 10 percent better than baseline (.0081 or better). To achieve ROLL20, the tire rolling resistance must be at least 20 percent better than baseline (.0072 or better).

<sup>259</sup> Technical Analysis of Vehicle Load Reduction by CONTROLTEC for California Air Resources Board (April 29, 2015).

<sup>260</sup> The RRC values used in this study were a combination of manufacturer information, estimates from coast down tests for some vehicles, and application of tire RRC values across other vehicles on the same platform.

tires. The average RRC from the data provided by RMA was 0.0092,<sup>261</sup> compared to average of 0.009 from CONTROLTEC.

In past agency actions, commenters have argued that based on available data on current vehicle models and the likely possibility that there would be additional tire improvements over the next decade, DOT should consider ROLL30 technology, or a 30 percent reduction of tire rolling resistance over the baseline.<sup>262</sup>

As stated in the Joint TSD for the MY 2017–2025 final rule (77 FR 62624, Oct. 15, 2012) and 2020 final rule, tire technologies that enable rolling resistance improvements of 10 and 20 percent have been in existence for many years.<sup>263</sup> Achieving improvements of up to 20 percent involves optimizing and integrating multiple technologies, with a primary contributor being the adoption of a silica tread technology. Tire suppliers have indicated that additional innovations are necessary to achieve the next level of low rolling resistance technology on a commercial basis, such as improvements in material to retain tire pressure, tread design to manage both stopping distance and wet traction, and development of carbon black material for low rolling resistance without the use of silica to reduce cost and weight.<sup>264</sup>

The agency believes that the tire industry is in the process of moving automotive manufacturers towards higher levels of rolling resistance technology in the vehicle fleet. Importantly, as shown below, the MY 2020 fleet does include a higher percentage of vehicles with ROLL20 technology than the MY 2017 fleet. However, DOT believes that at this time, the emerging tire technologies that would achieve 30 percent improvement in rolling resistance, like changing tire profile, stiffening tire walls, or adopting improved tires along with active chassis control,<sup>265</sup> among other technologies, will not be available for widespread commercial adoption in the fleet during the rulemaking timeframe. As a result, the agency continues to not to incorporate 30 percent reduction in rolling resistance technology. DOT will consider adding an advanced level of

<sup>261</sup> Technical Analysis of Vehicle Load Reduction by CONTROLTEC for California Air Resources Board (April 29, 2015) at page 40.

<sup>265</sup> Mohammad Mehdi Davari, Rolling resistance and energy loss in tyres (May 20, 2015), available at [https://www.sveafordon.com/media/42060/SVEA-Presentation\\_Davari\\_public.pdf](https://www.sveafordon.com/media/42060/SVEA-Presentation_Davari_public.pdf). Last visited December 30, 2019.

tire rolling resistance technology to future analyses, and invites comment on any updated information on manufacturers’ capabilities to add tires with higher levels of rolling resistance to their vehicles, and consumers’ willingness to accept these tires on their vehicles.

#### (b) Tire Rolling Resistance Analysis Fleet Assignments

Tire rolling resistance is not a part of tire manufacturers’ publicly released specifications and thus it is difficult to assign this technology to the analysis fleet. Manufacturers also often offer multiple wheel and tire packages for the same nameplates, further increasing the complexity of this assignment. DOT employed an approach consistent with previous rulemaking in assigning this technology. DOT relied on previously submitted rolling resistance values that were supplied by manufacturers in the process of building older fleets and bolstered it with agency-sponsored tire rolling testing by Smithers.<sup>266</sup>

DOT carried over rolling resistance assignments for nameplates where manufacturers had submitted data on the vehicles’ rolling resistance values, even if the vehicle was redesigned. If Smithers data was available, DOT replaced any older or missing values with that updated data. Those vehicles for which no information was available from either previous manufacturer submission or Smithers data were assigned to ROLL0. All vehicles under the same nameplate were assigned the same rolling resistance technology level even if manufacturers do outfit different trim levels with different wheels and tires.

The MY 2020 analysis fleet includes the following breakdown of rolling resistance technology: 44% at ROLL0, 20% at ROLL10, and 36% at ROLL20, which shows that the majority of the fleet has now adopted some form of improved rolling resistance technology. The majority of the change from the MY 2017 analysis fleet has been in implementing ROLL20 technology. There is likely more proliferation of rolling resistance technology, but we would need further information from manufacturers in order to account for it. DOT invites comment from manufacturers on whether these rolling

<sup>266</sup> See memo to Docket No. NHTSA–2021–0053, Evaluation of Rolling Resistance and Wet Grip Performance of OEM Stock Tires Obtained from NCAP Crash Tested Vehicles Phase One and Two. NHTSA used tire rolling resistance coefficient values from this project to assign baseline tire rolling resistance technology in the MY 2020 analysis fleet and is therefore providing the draft project appendices for public review and comment.

resistance values are still applicable, or any updated rolling resistance values that could be incorporated in a publicly available analysis fleet. If manufacturers submit updated information on baseline rolling resistance assignments DOT may update those assignments for the final rule.

#### (c) Tire Rolling Resistance Adoption Features

Rolling resistance technology can be adopted with either a vehicle refresh or redesign. In some cases, low rolling resistance tires can affect traction, which may adversely impact acceleration, braking, and handling characteristics for some high-performance vehicles. Similar to past rulemakings, the agency recognizes that to maintain performance, braking, and handling functionality, some high-performance vehicles would not adopt low rolling resistance tire technology. For cars and SUVs with more than 405 horsepower (hp), the agency restricted the application of ROLL20. For cars and SUVs with more than 500 hp, the agency restricted the application of any additional rolling resistance technology (ROLL10 or ROLL20). The agency developed these cutoffs based on a review of confidential business

information and the distribution of rolling resistance values in the fleet.

#### (d) Tire Rolling Resistance Effectiveness Modeling

As discussed above, the baseline rolling resistance value from which rolling resistance improvements are measured is 0.009, based on a thorough review of confidential business information submitted by industry, and a review of other literature. To achieve ROLL10, the tire rolling resistance must be at least 10 percent better than baseline (.0081 or better). To achieve ROLL20, the tire rolling resistance must be at least 20 percent better than baseline (.0072 or better).

DOT determined effectiveness values for rolling resistance technology adoption using Autonomie modeling. Figure III-16 below shows the range of effectiveness values used for adding tire rolling resistance technology to a vehicle in this analysis. The graph shows the change in fuel consumption values between entire technology keys,<sup>267</sup> and not the individual technology effectiveness values. Using the change between whole technology

<sup>267</sup> Technology key is the unique collection of technologies that constitutes a specific vehicle, *see* TSD Chapter 2.4.7 for more information.

keys captures the complementary or non-complementary interactions among technologies. In the graph, the box shows the interquartile range (IQR) of the effectiveness values and whiskers extend out 1.5 x IQR. The dots outside of the whiskers show values for effectiveness that are outside these bounds.

The data points with the highest effectiveness values are almost all exclusively BEV and FCV technology combinations for medium sized nonperformance cars. The effectiveness for these vehicles, when the low rolling resistance technology is applied, is amplified by a complementary effect, where the lower rolling resistance reduces road load and allows a smaller battery pack to be used (and still meet range requirements). The smaller battery pack reduces the overall weight of the vehicle, further reducing road load, and improving fuel efficiency. This complimentary effect is experience by all the vehicle technology classes, but the strongest effect is on the midsized vehicle non-performance classes and is only captured in the analysis through the use of full vehicle simulations, demonstrating the full interactions of the technologies.

**Figure III-16 – ROLL Technology Effectiveness**

(e) Tire Rolling Resistance Costs

DOT continues to use the same DMC values for ROLL technology that were used for the 2020 final rule which are based on NHTSA’s MY 2011 CAFE final

rule (74 FR 14196, March 30, 2009) and the 2006 NAS/NRC report.<sup>268</sup> Table III-31 shows the different levels of tire rolling resistance technology cost for all vehicle classes across select model

years, which shows how the learning rate for ROLL technologies impacts the cost. For all ROLL absolute technology costs used in the analysis across all model years see the Technologies file.

**Table III-31 – Examples of Costs for Rolling Resistance Reduction Technologies in 2018\$ for Select Model Years**

Technology	MY 2020	MY 2025	MY 2030
ROLL0	0.00	0.00	0.00
ROLL10	7.13	6.52	6.16
ROLL20	51.18	44.04	40.70

7. Other Vehicle Technologies

Four other vehicle technologies were included in the analysis—electric power steering (EPS), improved accessory devices (IACC), low drag brakes (LDB), and secondary axle disconnect (SAX). The effectiveness of these technologies was applied directly in the CAFE Model with unique effectiveness values for

each technology and for each technology class, rather than using Autonomie effectiveness estimates. This methodology was used in these four cases because the effectiveness of these technologies varies little with combinations of other technologies. Also, applying these technologies directly in the CAFE Model significantly

reduces the number of Autonomie simulations that are needed.

(a) Electric Power Steering

Electric power steering reduces fuel consumption by reducing load on the engine. Specifically, it reduces or eliminates the parasitic losses associated with engine-driven power

<sup>268</sup> “Tires and Passenger Vehicle Fuel Economy,” Transportation Research Board Special Report 286,

National Research Council of the National

Academies, 2006, Docket No. EPA-HQ-OAR-2009-0472-0146.

steering pumps, which pump hydraulic fluid continuously through the steering actuation system even when no steering input is present. By selectively powering the electric assist only when steering input is applied, the power consumption of the system is reduced in comparison to the traditional “always-on” hydraulic steering system. Power steering may be electrified on light duty vehicles with standard 12V electrical systems and is also an enabler for vehicle electrification because it provides power steering when the engine is off (or when no combustion engine is present).

Power steering systems can be electrified in two ways. Manufacturers may choose to eliminate the hydraulic portion of the steering system and provide electric-only power steering (EPS) driven by an independent electric motor, or they may choose to move the

hydraulic pump from a belt-driven configuration to a stand-alone electrically driven hydraulic pump. The latter system is commonly referred to as electro-hydraulic power steering (EHPS). As discussed in the rulemakings, manufacturers have informed DOT that full EPS systems are being developed for all types of light-duty vehicles, including large trucks.

DOT described in past rulemakings that, like low drag brakes, EPS can be difficult to observe and assign to the analysis fleet, however, it is found more frequently in publicly available information than low drag brakes. Based on comments received during the 2020 rulemaking, the agency increased EPS application rate to nearly 90 percent for the 2020 final rule. The agency is maintaining this level of EPS fleet penetration for this analysis, recognizing that some specialized,

unique vehicle types or configurations still implement hydraulically actuated power steering systems for the baseline fleet model year.

The effectiveness of both EPS and EHPS is derived from the decoupling of the pump from the crankshaft and is considered to be practically the same for both. Thus, a single effectiveness value is used for both EPS and EHPS. As indicated in the following table, the effectiveness of EPS and EHPS varies based on the vehicle technology class it is being applied to. This variance is a direct result of vehicle size and the amount of energy required to turn the vehicle’s two front wheels about their vertical axis. More simply put, more energy is required for vehicles that weigh more and, typically, have larger tire contact patches.

**Table III-32 – Fuel Consumption Improvement Values for Electric Power Steering**

(b) Improved Accessories

Engine accessories typically include the alternator, coolant pump, cooling fan, and oil pump, and are traditionally mechanically driven via belts, gears, or directly by other rotating engine components such as camshafts or the crankshaft. These can be replaced with improved accessories (IACC), which may include high efficiency alternators, electrically driven (*i.e.*, on-demand) coolant pumps, electric cooling fans, variable geometry oil pumps, and a mild regeneration strategy. Replacing lower-efficiency and/or mechanically-driven components with these improved accessories results in a reduction in fuel consumption, as the improved accessories can conserve energy by being turned on/off “on demand” in some cases, driven at partial load as needed, or by operating more efficiently.

For example, electric coolant pumps and electric powertrain cooling fans

provide better control of engine cooling. Flow from an electric coolant pump can be varied, and the cooling fan can be shut off during engine warm-up or cold ambient temperature conditions, reducing warm-up time, fuel enrichment requirements, and, ultimately reducing parasitic losses.

IACC technology is difficult to observe and therefore there is uncertainty in assigning it to the analysis fleet. As in the past, DOT relies on industry-provided information and comments to assess the level of IACC technology applied in the fleet. DOT believes there continues to be opportunity for further implementation of IACC. The MY 2020 analysis fleet has an IACC fleet penetration of approximately eight percent compared to the six percent value in the MY 2017 analysis fleet used for the 2020 final rule analysis.

The agency believes improved accessories may be incorporated in coordination with powertrain related changes occurring at either a vehicle refresh or vehicle redesign. This coordination with powertrain changes enables related design and tooling changes to be implemented and systems development, functionality and durability testing to be conducted in a single product change program to efficiently manage resources and costs.

This analysis carries forward work on the effectiveness of IACC systems conducted in the Draft TAR and EPA Proposed Determination that is originally founded in the 2002 NAS Report<sup>269</sup> and confidential manufacturer data. This work involved gathering information by monitoring

<sup>269</sup> National Research Council 2002. *Effectiveness and Impact of Corporate Average Fuel Economy (CAFE) Standards*. Washington, DC: The National Academies Press. <https://doi.org/10.17226/10172>.

press reports, holding meetings with suppliers and OEMs, and attending industry technical conferences. The resulting effectiveness estimates we use are shown below. As indicated in the following table, the effectiveness of IACC is simulated with differing values

based on the vehicle technology class it is being applied to. This variance, like EPS, is a direct result of vehicle size and the amount of energy required perform the work necessary for the vehicle to operate as expected. This variance is related to the amount energy generated

by the alternator, the size of the coolant pump to the cool the necessary systems, the size of the cooling fan required, among other characteristics and it directed related to a vehicle size and mass.

(c) Low Drag Brakes

Since 2009, for the MY 2011 CAFE final rule, DOT has defined low drag brakes (LDB) as brakes that reduce the sliding friction of disc brake pads on rotors when the brakes are not engaged because the brake pads are pulled away from the rotating disc either by mechanical or electric methods.<sup>270</sup> DOT estimated the effectiveness of LDB technology to be a range from 0.5–1.0 percent, based on CBI data. DOT applied a learning curve to the estimated cost for LDB, but noted that the technology was considered high volume, mature, and stable. DOT explained that confidential manufacturer comments in response to the NPRM for MY 2011 (73 FR 24352, May 2, 2008) indicated that most passenger cars have already adopted LDB technology, but ladder frame trucks have not.

DOT and EPA continued to use the same definition for LDB in the MY 2012–2016 rule (75 FR 25324, May 7, 2010), with an estimated effectiveness of up to 1 percent based on CBI data.<sup>271</sup> DOT only allowed LDB technology to be applied to large car, minivan, medium

and large truck, and SUV classes because the agency determined the technology was already largely utilized in most other subclasses. The 2011 NAS committee also utilized NHTSA and EPA's definition for LDB and added that most new vehicles have low-drag brakes.<sup>272</sup> The committee confirmed that the impact over conventional brakes may be about a 1 percent reduction of fuel consumption.

For the MY 2017–2025 rule, however, DOT and EPA updated the effectiveness estimate for LDB to 0.8 percent based on a 2011 Ricardo study and updated lumped-parameter model.<sup>273</sup> The agencies considered LDB technology to be off the learning curve (*i.e.*, the DMC does not change year-over-year). The 2015 NAS report continued to use the agencies' definition for LDB and commented that the 0.8 percent effectiveness estimate is a reasonable estimate.<sup>274</sup> The 2015 NAS committee did not opine on the application of LDB technology in the fleet. The agencies used the same definition, cost, and effectiveness estimates for LDB in the Draft TAR, but also noted the existence of zero drag brake systems which use

electrical actuators that allow brake pads to move farther away from the rotor.<sup>275</sup> However, the agencies did not include zero drag brake technology in either compliance simulation. EPA continued with this approach in its first 2017 Final Determination that the standards through 2025 were appropriate.<sup>276</sup>

In the 2020 final rule, the agencies applied LDB sparingly in the MY 2017 analysis fleet using the same cost and effectiveness estimates from the 2011 Ricardo study, with approximately less than 15% of vehicles being assigned the technology. In addition, DOT noted the existence of zero drag brakes in production for some BEVs, similar to the summary in the Draft TAR, but did not opine on the existence of zero drag brakes in the fleet. Some stakeholders commented to the 2020 final rule that other vehicle technologies, including LDB, were actually overapplied in the analysis fleet.

For this action, DOT considered the conflicting statements that LDB were both universally applied in new vehicles and that the new vehicle fleet still had space to improve LDB technology. DOT determined that LDB technology as previously defined going back to the MY 2011 rule (74 FR 14196, March 30, 2009) was universally

<sup>270</sup> Final Regulatory Impact Analysis, Corporate Average Fuel Economy for MY 2011 Passenger Cars and Light Trucks (March 2009), at V–135.

applied in the MY 2020 fleet. However, DOT determined that zero drag brakes, the next level of brake technology, was sparingly applied in the MY 2020 analysis fleet. Currently, DOT does not believe that zero drag brake systems will be available for wide scale application in the rulemaking timeframe and did not include it as a technology for this analysis. DOT will consider how to define a new level of low drag brake technology that either encompasses the definition of zero drag brakes or similar technology in future rulemakings. We invite comment on the issue, and any available data regarding use of such systems on current and forthcoming production vehicles, any available data regarding system costs and efficacy in reducing drag (*i.e.*, force at different speeds) and vehicle fuel economy levels (*i.e.*, through coastdown testing).

#### (d) Secondary Axle Disconnect

All-wheel drive (AWD) and four-wheel drive (4WD) vehicles provide improved traction by delivering torque to the front and rear axles, rather than just one axle. When a second axle is rotating, it tends to consume more energy because of additional losses related to lubricant churning, seal friction, bearing friction, and gear train inefficiencies.<sup>277</sup> Some of these losses may be reduced by providing a secondary axle disconnect function that disconnects one of the axles when driving conditions do not call for torque to be delivered to both.

The terms AWD and 4WD are often used interchangeably, although they have also developed a colloquial distinction, and are two separate systems. The term AWD has come to be associated with light-duty passenger vehicles providing variable operation of one or both axles on ordinary roads. The term 4WD is often associated with larger truck-based vehicle platforms providing a locked driveline configuration and/or a low range gearing meant primarily for off-road use.

Many 4WD vehicles provide for a single-axle (or two-wheel) drive mode that may be manually selected by the user. In this mode, a primary axle

(usually the rear axle) will be powered, while the other axle (known as the secondary axle) is not. However, even though the secondary axle and associated driveline components are not receiving engine power, they are still connected to the non-driven wheels and will rotate when the vehicle is in motion. This unnecessary rotation consumes energy,<sup>278</sup> and leads to increased fuel consumption that could be avoided if the secondary axle components were completely disconnected and not rotating.

Light-duty AWD systems are often designed to divide variably torque between the front and rear axles in normal driving to optimize traction and handling in response to driving conditions. However, even when the secondary axle is not necessary for enhanced traction or handling, in traditional AWD systems it typically remains engaged with the driveline and continues to generate losses that could be avoided if the axle was instead disconnected. The SAX technology observed in the marketplace disengages one axle (typically the rear axle) for two-wheel drive (2WD) operation but detects changes in driving conditions and automatically engages AWD mode when it is necessary. The operation in 2WD can result in reduced fuel consumption. For example, Chrysler has estimated the secondary axle disconnect feature in the Jeep Cherokee reduces friction and drag attributable to the secondary axle by 80% when in disconnect mode.<sup>279</sup>

Observing SAX technology on actual vehicles is very difficult. Manufacturers do not typically identify the technology on technical specifications or other widely available information. The agency employed an approach consistent with previous rulemaking in assigning this technology. Specifically, the agency assigned SAX technology based on a combination of publicly available information and previously submitted confidential information. In the analysis fleet, 38% of the vehicles that had AWD or 4WD are determined to have SAX technology. All vehicles in the analysis fleet with front-wheel drive

(FWD) or rear-wheel drive (RWD) have SAX skipped since SAX technology is a way to emulate FWD or RWD in AWD and 4WD vehicles, respectively. The agency does not allow for the application of SAX technology to FWD or RWD vehicles because they do not have a secondary driven axle to disconnect.

SAX technology can be adopted by any vehicle in the analysis fleet, including those with a HEV or BEV powertrain,<sup>280</sup> which was identified as having AWD or 4WD. It does not supersede any technology or result in any other technology being excluded for future implementation for that vehicle. SAX technology can be applied during any refresh or redesign. DOT seeks comment on whether it is appropriate for SAX technology to be allowed to be applied to BEVs, or if the technology only provides benefits to ICE vehicles.

This analysis carries forward work on the effectiveness of SAX systems conducted in the Draft TAR and EPA Proposed Determination.<sup>281</sup> This work involved gathering information by monitoring press reports, holding meetings with suppliers and OEMs, and attending industry technical conferences. DOT does not simulate SAX effectiveness in the Autonomie modeling because, similar to LDB, IACC, and EFR, the fuel economy benefits from the technology are not fully captured on the two-cycle test. The secondary axle disconnect effectiveness values, for the most part, have been accepted as plausible based on the rulemaking record and absence of contrary comments. As such, the agency has prioritized its extensive Autonomie vehicle simulation work toward other technologies that are emerging or considered more critical for total system effectiveness. The resulting effectiveness estimates we use are shown below. The agency welcomes comment on these effectiveness values and will consider any material data providing revised, or confirmatory, values for those being used in the analysis.

<sup>278</sup> Any time a drivetrain component spins it consumes some energy, primarily to overcome frictional forces.

**(e) Other Vehicle Technology Costs**

The cost estimates for EPS, IACC, SAX, and LDB<sup>282</sup> rely on previous work published as part of past rulemakings with learning applied to those cost

values which is founded in the 2002 NAS report.<sup>283</sup> The cost values are the same values that were used for the Draft TAR and 2020 final rule, updated to 2018 dollars. Table III-35 shows examples of costs for these technologies

across select model years. Note that these costs are the same for all vehicle technology classes. For all absolute EPS, IACC, LDB, and SAX technology costs across all model years, see the Technologies file.

**Table III-35 – Examples of Costs for EPS, IACC, LDB, and SAX Technologies in 2018\$ for Select Model Years**

Technology	MY 2020	MY 2025	MY 2030
EPS	126.53	117.28	110.90
IACC	169.70	146.67	135.17
LDB	86.42	78.35	73.12
SAX	88.69	80.34	75.15

**8. Simulating Air Conditioning Efficiency and Off-Cycle Technologies**

Off-cycle and air conditioning (A/C) efficiency technologies can provide fuel economy benefits in real-world vehicle operation, but those benefits cannot be fully captured by the traditional 2-cycle test procedures used to measure fuel economy.<sup>284</sup> Off-cycle technologies include technologies like high efficiency alternators and high efficiency exterior lighting.<sup>285</sup> A/C efficiency technologies

are technologies that reduce the operation of or the loads on the compressor, which pressurizes A/C refrigerant. The less the compressor operates or the more efficiently it operates, the less load the compressor places on the engine, resulting in better fuel efficiency.

Vehicle manufacturers have the option to generate credits for off-cycle technologies and improved A/C systems under the EPA's CO<sub>2</sub> program and

receive a fuel consumption improvement value (FCIV) equal to the value of the benefit not captured on the 2-cycle test under NHTSA's CAFE program. The FCIV is not a "credit" in the NHTSA CAFE program,<sup>286</sup> but the FCIVs increase the reported fuel economy of a manufacturer's fleet, which is used to determine compliance. EPA applies FCIVs during determination of a fleet's final average fuel economy reported to NHTSA.<sup>287</sup>

<sup>282</sup> Note that because LDB technology is applied universally as a baseline technology in the MY 2020 fleet, there is functionally zero costs for this technology associated with this proposed rulemaking.

<sup>283</sup> National Research Council 2002. *Effectiveness and Impact of Corporate Average Fuel Economy (CAFE) Standards*. Washington, DC: The National Academies Press. <https://doi.org/10.17226/10172>.

<sup>284</sup> See 49 U.S.C. 32904(c) ("The Administrator shall measure fuel economy for each model and calculate average fuel economy for a manufacturer under testing and calculation procedures prescribed by the Administrator. . . . the Administrator shall use the same procedures for passenger automobiles the Administrator used for model year 1975 (weighted 55 percent urban cycle and 45 percent highway cycle), or procedures that give comparable results.").

<sup>285</sup> 40 CFR 86.1869-12(b)—Credit available for certain off-cycle technologies.

<sup>286</sup> Unlike, for example, the statutory overcompliance credits prescribed in 49 U.S.C. 32903.

<sup>287</sup> 49 U.S.C. 32904(c)-(e). EPCA granted EPA authority to establish fuel economy testing and calculation procedures. See Section VII for more information.

FCIVs are only calculated and applied at a fleet level for a manufacturer and are based on the volume of the manufacturer's fleet that contain qualifying technologies.<sup>288</sup>

There are three pathways that can be used to determine the value of A/C efficiency and off-cycle adjustments. First, manufacturers can use a predetermined list or "menu" of g/mi values that EPA established for specific off-cycle technologies.<sup>289</sup> Second, manufacturers can use 5-cycle testing to demonstrate off-cycle CO<sub>2</sub> benefit;<sup>290</sup> the additional tests allow emissions benefits to be demonstrated over some elements of real-world driving not captured by the 2-cycle compliance tests, including high speeds, rapid accelerations, hot temperatures, and cold temperatures. Third, manufacturers can seek EPA approval, through a notice and comment process, to use an alternative methodology other than the menu or 5-cycle methodology for determining the off-cycle technology improvement values.<sup>291</sup> For further discussion of the A/C and off-cycle compliance and application process, see Section VII.

DOT and EPA have been collecting data on the application of these technologies since implementing the A/C and off-cycle programs.<sup>292 293</sup> Most manufacturers are applying A/C efficiency and off-cycle technologies; in MY 2019, 17 manufacturers employed A/C efficiency technologies and 20 manufacturers employed off-cycle

technologies, though the level of deployment varies by manufacturer.<sup>294</sup>

Manufacturers have only recently begun including detailed information on off-cycle and A/C efficiency technologies equipped on vehicles in compliance reporting data. For this analysis, though, such information was not sufficiently complete to support a detailed representation of the application of off-cycle technology to specific vehicle model/configurations in the MY 2020 fleet. To account for the A/C and off-cycle technologies equipped on vehicles and the potential that manufacturers will apply additional A/C and off-cycle technologies in the rulemaking timeframe, DOT specified model inputs for A/C efficiency and off-cycle fuel consumption improvement values in grams/mile for each manufacturer's fleet in each model year. DOT estimated future values based on an expectation that manufacturers already relying heavily on these adjustments would continue to do so, and that other manufacturers would, over time, also approach the limits on adjustments allowed for such improvements.

The next sections discuss how the CAFE Model simulates the effectiveness and cost for A/C efficiency and off-cycle technology adjustments.

#### (a) A/C and Off-Cycle Effectiveness Modeling in the CAFE Model

In this analysis, the CAFE Model applies A/C and off-cycle flexibilities to manufacturer's CAFE regulatory fleet performance in a similar way to the regulation.<sup>295</sup> In the analysis and after the first MY, A/C efficiency and off-cycle FCIVs apply to each manufacturer's regulatory fleet after the CAFE Model applies conventional technologies for a given standard. That is, conventional technologies are applied to each manufacturers' vehicles in each MY to assess the 2-cycle sales weighted harmonic average CAFE rating. Then, the CAFE Model assesses the CAFE rating to use for a manufacturer's compliance value after applying the A/C efficiency and off-cycle FCIVs designated in the Market Data file. This assessment of adoption of conventional technology and the A/C efficiency and off-cycle technology occurs on a year-by-year basis in the CAFE Model. The CAFE Model attempts to apply technologies and flexibilities in a way that both minimizes cost and allows the manufacturer to meet their

standards without over or under complying.

To determine how manufacturers might adopt A/C efficiency and off-cycle technologies in the rulemaking timeframe, DOT began with data from EPA's 2020 Trends Report and CBI compliance material from manufacturers.<sup>296 297</sup> DOT used manufacturer's MY 2020 A/C efficiency and off-cycle FCIVs as a starting point, and then extrapolated values in each MY until MY 2026, for light trucks to the proposed regulatory cap, for each manufacturer's fleets by regulatory class.

To determine the rate at which to extrapolate the addition of A/C and off-cycle technology adoption for each manufacturer, DOT reviewed historical A/C and off-cycle technology applications, each manufacturer's fleet composition (*i.e.*, breakdown between passenger cars (PCs) and light trucks (LTs)), availability of A/C and off-cycle technologies that manufacturers could still use, and CBI compliance data. Different manufacturers showed different levels of historical A/C efficiency and off-cycle technology adoption; therefore, different manufacturers hit the proposed regulatory caps for A/C efficiency technology for both their PC and LT fleets, and different manufacturers hit caps for off-cycle technologies in the LT regulatory class. DOT declined to extrapolate off-cycle technology adoption for PCs to the proposed regulatory cap for a few reasons. First, past EPA Trends Reports showed that many manufacturers did not adopt off-cycle technology to their passenger car fleets. Next, manufacturers limited PC offerings in MY 2020 as compared to historical trends. Last, CBI compliance data available to DOT indicated a lower adoption of menu item off-cycle technologies to PCs compared to LTs. DOT accordingly limited the application of off-cycle FCIVs to 10 g/mi for PCs but allowed LTs to apply 15 g/mi of off-cycle FCIVs. The inputs for A/C efficiency technologies were set to 5 g/mi and 7.2 g/mi for PCs and LTs, respectively. DOT allowed A/C efficiency technologies to reach the regulatory caps by MY 2024, which is the first year of standards assessed in this analysis.

DOT decided to apply the FCIVs in this way because the A/C and off-cycle

<sup>296</sup> Vehicle and Engine Certification. Compliance Information for Light-Duty Gas (GHG) Standards. Compliance Information for Light-Duty Greenhouse Gas (GHG) Standards | Certification and Compliance for Vehicles and Engines | U.S. EPA. Last Accessed May 24, 2021.

<sup>297</sup> 49 U.S.C. 32907.

<sup>288</sup> 40 CFR 600.510–12(c).

<sup>289</sup> See 40 CFR 86.1869–12(b). The TSD for the 2012 final rule for MYs 2017 and beyond provides technology examples and guidance with respect to the potential pathways to achieve the desired physical impact of a specific off-cycle technology from the menu and provides the foundation for the analysis justifying the credits provided by the menu. The expectation is that manufacturers will use the information in the TSD to design and implement off-cycle technologies that meet or exceed those expectations in order to achieve the real-world benefits of off-cycle technologies from the menu.

<sup>290</sup> See 40 CFR 86.1869–12(c). EPA proposed a correction for the 5-cycle pathway in a separate technical amendments rulemaking. See 83 FR 49344 (Oct. 1, 2019). EPA is not approving credits based on the 5-cycle pathway pending the finalization of the technical amendments rule.

<sup>291</sup> See 40 CFR 86.1869–12(d).

<sup>292</sup> See 77 FR at 62832, 62839 (Oct. 15, 2012). EPA introduced A/C and off-cycle technology credits for the CO<sub>2</sub> program in the MY 2012–2016 rule and revised the program in the MY 2017–2025 rule and NHTSA adopted equivalent provisions for MYs 2017 and later in the MY 2017–2025 rule.

<sup>293</sup> Vehicle and Engine Certification. Compliance Information for Light-Duty Gas (GHG) Standards. Compliance Information for Light-Duty Greenhouse Gas (GHG) Standards | Certification and Compliance for Vehicles and Engines | U.S. EPA. Last Accessed May 24, 2021.

<sup>294</sup> See 2020 EPA Automotive Trends Report, at 91.

<sup>295</sup> 49 CFR 531.6 and 49 CFR 533.6 Measurement and Calculation procedures.

technologies are generally more cost-effective than other technologies. The details of this assessment (and the calculation) are further discussed in the CAFE Model Documentation.<sup>298</sup> The A/C efficiency and off-cycle adjustment schedules used in this analysis are shown in TSD Chapter 3.8 and in the Market Data file's Credits and Adjustments worksheet.

(b) A/C and Off-Cycle Costs

For this analysis, A/C and off-cycle technologies are applied independently of the decision trees using the extrapolated values shown above, so it is necessary to account for the costs of those technologies independently. Table III-36 shows the costs used for A/C and off-cycle FCIVs in this analysis. The

costs are shown in dollars per gram of CO<sub>2</sub> per mile (\$ per g/mile). The A/C efficiency and off-cycle technology costs are the same costs used in the EPA Proposed Determination and described in the EPA Proposed Determination TSD.<sup>299</sup>

To develop the off-cycle technology costs, DOT selected the 2nd generic 3 gram/mile package estimated to cost \$170 (in 2015\$) to apply in this analysis in \$ per gram/mile. DOT updated the costs used in the Proposed Determination TSD from 2015\$ to 2018\$, adjusted the costs for RPE, and applied a relatively flat learning rate. We seek comment on whether these costs are still appropriate, or whether a different \$ per gram/mile cost should be used. If commenters believe a different

\$ per gram/mile cost should be used, we request commenters provide any data or information on which any alternative costs are based. This should include a description of how the alternative costs are representative of costs across the industry, and whether the \$ per gram/mile estimate is based on a package of specific off-cycle technologies.

Similar to off-cycle technology costs, DOT used the cost estimates from EPA Proposed Determination TSD for A/C efficiency technologies that relied on the 2012 rulemaking TSD.<sup>300</sup> DOT updated these costs to 2018\$ and adjusted for RPE for this analysis, and applied the same mature learning rate that DOT applied for off-cycle technologies.

**Table III-36 – Estimated Costs (\$ per g/mi) for A/C and Off-Cycle Adjustments**

Model Year	A/C Efficiency	A/C Leakage	Off-Cycle
2020	4.30	10.76	83.79
2025	3.89	9.72	77.47
2030	3.52	8.79	71.83

*E. Consumer Responses to Manufacturer Compliance Strategies*

The previous subsections in Section III have so far discussed how manufacturers might respond to changes to the standards. While the technology analysis is informative of the different compliance strategies available to manufactures, the tangible costs and benefits that accrue because of CAFE standards are dependent on how consumers respond to the decisions made by manufacturers. Many, if not most, of the benefits and costs resulting from changes to CAFE standards are private benefits that accrue to the buyers of new cars and trucks, produced in the model years under consideration. These benefits and costs largely flow from the changes to vehicle ownership and operating costs that result from improved fuel economy, and the cost of the technology required to achieve those improvements. The remaining external benefits are also derived from how consumers use—or do not use—vehicles. The next few subsections walk through how the analysis models consumer responses to changing vehicles and prices. NHTSA requests comment on the following discussion.

1. Macroeconomic and Consumer Behavior Assumptions

This proposal includes a comprehensive economic analysis of the impacts of altering the CAFE standards. Most of the effects measured are influenced by macroeconomic conditions that are exogenous to the agency's influence. For example, fuel prices are mainly determined by global demand, and yet they determine how much fuel efficiency technology manufacturers will apply to U.S.-bound vehicles, how much consumers are willing to pay for a new vehicle, the amount of travel in which all users engage, and the value of each gallon saved from higher CAFE standards. Constructing these forecasts requires robust projections of macroeconomic variables that span the timeframe of the analysis, including real U.S. Gross Domestic Product (GDP), consumer confidence, U.S. population, and real disposable personal income.

In order to ensure internal consistency within the analysis, relevant economic assumptions are derived from the same source. The analysis presented in this analysis employs forecasts developed by DOT using the U.S. Energy Information Administration's (EIA's) National

Energy Model System (NEMS). EIA is an agency within the U.S. Department of Energy (DOE) which collects, analyzes, and disseminates independent and impartial energy information to promote sound policymaking, efficient markets, and public understanding of energy and its interaction with the economy and the environment. EIA uses NEMS to produce its Annual Energy Outlook (AEO), which presents forecasts of future fuel prices, among many other energy-related variables. The analysis employs forecasts of fuel prices, real U.S. GDP, real disposable personal income, U.S. population, and fuel prices from the AEO 2021 Reference Case. The agency also uses a forecast of consumer confidence to project sales from the IHS Markit Global Insight long-term macroeconomic model. The IHS Markit Global Insight model is also used by EIA for the AOE.

While these macroeconomic assumptions are some of the most critical inputs to the analysis, they are also subject to the most uncertainty—particularly over the full lifetimes of the vehicles affected by this proposed rule. The agency uses low and high cases from the AEO as bounding cases for sensitivity analyses. The purpose of the sensitivity analyses, discussed in greater

<sup>298</sup> CAFE Model Documentation, S5.

<sup>299</sup> EPA PD TSD. EPA-420-R-16-021. November 2016. At 2-423-2-245. <https://nepis.epa.gov/Exe/>

[ZyPDF.cgi?Dockey=P100Q3L4.pdf](https://www.eia.gov/analysis/zy/pdf.cgi?Dockey=P100Q3L4.pdf). Last accessed May 24, 2021.

<sup>300</sup> Joint NHTSA and EPA 2012 TSD, *see* Section 5.1.

detail in PRIA Chapter 6 and PRIA Chapter 7, is not to posit a more credible future state of the world than the central case assumes—we assume the central case is the most likely future state of the world—but rather to measure the degree to which important outcomes can change under different assumptions about fuel prices.

The first year simulated in this analysis is 2020, though it is based on observational data (rather than forecasts) to the greatest extent possible. The elements of the analysis that rely most heavily on the macroeconomic inputs—aggregate demand for VMT, new vehicle sales, used vehicle retirement rates—all reflect the relatively rapid climb back to pre-pandemic growth rates (in all the regulatory alternatives).

See TSD Chapter 4.1 for a more complete discussion of the macroeconomic assumptions made for the analysis.

Another key assumption that permeates throughout the analysis is how much consumers are willing to pay for fuel economy. Increased fuel efficiency offers vehicle owners significant savings; in fact, the analysis shows that fuel savings exceed the technology cost to comply with even the most stringent standards analyzed by this proposal at a 3% discount rate. It would be reasonable to assume that consumers value the full value of fuel savings as they would be better off not having to spend more of their disposable income on fuel. If consumers did value the full amount of fuel savings, fuel-efficient vehicles would functionally be *cheaper* for consumers to own when considering both purchasing and operational costs, and thus making the vehicles offered under the stricter alternatives more attractive than similar models offered in the baseline. Recent econometric research remains divided between studies that conclude has shown that consumers may value most, if not all of potential fuel savings, and those that conclude that consumers significantly undervalue expected fuel savings (NASEM, 2021, p. 11–351).<sup>301 302 303</sup>

<sup>301</sup> There is a great deal of work attempting to test the question whether consumers are adequately informed about, and sufficiently attentive to, potential fuel savings at the time of purchase. The existing research is not conclusive and leaves many open questions. On the one hand, there is significant support for the proposition that consumers are responsive to changes in fuel costs. See, e.g., Busse et al.; Sallee, et al. On the other hand, there is also support for the proposition that many consumers do not, in fact, give full or sufficient attention to potential savings from fuel-efficient vehicles, and thus make suboptimal decisions. See Duncan et al.; Gillingham et al.

<sup>302</sup> Allcott, H. and C. Knittel, 2019. “Are Consumers Poorly Informed about Fuel Economy?

If buyers fully value the savings in fuel costs that result from higher fuel economy, manufacturers would be expected to supply the improvements that buyers demand, and vehicle demand would be expected to fully consider both future fuel cost savings consumers would realize from owning—and potentially re-selling—more fuel-efficient models and increased cost of vehicles due to technological and design changes made to increase fuel economy. If instead, consumers systematically undervalue future fuel savings, the result would be an underinvestment in fuel-saving technology. In that case, more stringent fuel economy standards would also lead manufacturers to adopt improvements in fuel economy that improve consumer welfare (e.g., Allcott et al., 2014; Heutel, 2015).

There is substantial evidence that consumers do not fully value lifetime fuel savings. Even though the average fuel economy of new vehicles reached an all-time high in MY 2020 of 25.7 MPG,<sup>304</sup> this is still significantly below the fuel economy of the fleet’s most efficient vehicles that are readily available to consumers.<sup>305</sup> Manufacturers have repeatedly informed the agency that consumers only value between 2 to 3 years-worth of fuel savings when making purchasing decisions. The potential for car buyers voluntarily to forego improvements in fuel economy that offer savings exceeding their initial costs is one example of what is often termed the “energy-efficiency gap.” This appearance of such a gap, between the level of energy efficiency that would minimize consumers’ overall expenses and what they actually purchase, is typically based on engineering calculations that compare the initial cost for providing higher energy efficiency to the discounted present value of the resulting savings in future energy costs. There has long been an active debate about why such a gap might arise and whether it actually exists. Economic theory predicts that economically rational individuals will purchase more energy-efficient products only if the savings in future energy costs they offer promise to offset their higher initial costs. On the other hand,

Evidence from Two Experiments”, AEJ: Economic Policy, 11(1): 1–37.

behavioral economics has documented numerous situations in which the decision-making of consumers differs in important ways from the predictions of economic consumer model (e.g., Dellavigna, 2009).

A behavioral explanation of such ‘undervaluation’ of the savings from purchasing higher-mpg models is myopia or present bias; consumers may give undue focus to short-term costs and insufficient attention to long-term benefits.<sup>306</sup> This situation could arise because they are unsure of the fuel savings that will be achieved in real-world driving, what future fuel prices will be, how long they will own a new vehicle, whether they will drive it enough to realize the promised savings. As a consequence, they may view choosing to purchase or not purchase a fuel-efficient technology as a risky bet; behavioral economics has demonstrated that faced with the decision to accept or reject a risky choice, some consumers weigh potential losses approximately twice as heavily as potential gains, significantly undervaluing the choice relative to its expected value (e.g., Kahneman and Tversky, 1979; Kahneman, 2011). In the context of a choice to pay more for a fuel-saving technology, loss aversion has been shown to have the potential to cause undervaluation of future fuel savings similar to that reported by manufacturers (Greene, 2011; Greene et al., 2013).<sup>307</sup> The behavioral model holds that consumers’ decisions are affected by the context, or framing, of choices. As explained in NASEM (2021), Ch. 11.3.3, it is possible that consumers respond to changes in fuel economy regulations differently than they respond to manufacturers voluntarily offering the option to purchase fuel economy technology to new car buyers. We explain this differential more thoroughly in TSD Chapter 4.2.1.1, but here is the contextual explanation for the differential valuation. If a consumer is thinking about buying a new car and is looking at two models, one that includes voluntarily added fuel economy technology and is more expensive and another that does not, she may buy the cheaper, less fuel efficient version even if the more expensive model will save

<sup>306</sup> Gillingham et al., 2021, which is an AEJ: Economic Policy paper, just published on consumer myopia in vehicle purchases; a standard reference on present bias generally is O’Donoghue and Rabin, AER: Papers and Proceedings, 2015.

<sup>307</sup> Application of investment under uncertainty will yield similar results as costs may be more certain and up front while the fuel savings or benefits of the investment may be perceived as more uncertain and farther into future, thereby reducing investments in fuel saving technologies.

money in the long run. But if, instead, the consumer is faced with whether to buy a new car at all as opposed to keeping an older one, if all new cars contain technology to meet fuel economy standards, then she may view the decision differently. Will, for example, an extra \$1,000 for a new car—a \$1,000 that the consumer will more than recoup in fuel savings—deter her from buying the new car, especially when most consumers finance cars over a number of years rather than paying the \$1,000 cost up front (therefore any increase in monthly payment would be partly or entirely offset with lower fuel costs)? In addition, the fact that standards generally increase gradually over a period of years allows time for consumers and other information sources to verify that fuel savings are real and of substantial value.

Another alternative is that consumers view the increase in immediate costs associated with fuel economy technology in the context of tradeoffs they must make amongst their purchasing decisions. American households must choose how to spend their income amongst many competing goods and services, including how much to spend on a new vehicle. They may also decide to opt for another form of transportation. While a consumer may recognize and value the potential long-term value of fuel savings, they may also prefer to spend their money on other items, either in the form of other vehicle attributes—such as picking a truck with a larger flatbed or upgrading to a more luxurious trim package—or other unrelated goods and services. The same technologies that can be used to increase fuel economy can also be used to enable increased vehicle power or weight while maintaining fuel economy. While increased fuel efficiency will free up disposable income throughout the lifetime of the vehicle (and may even exceed the additional upfront costs to purchase a more expensive fuel-efficient vehicle), the value of owning a different good sooner may provide consumers even more benefit.

As explained more thoroughly in TSD Chapter 4.2.1.1, the analysis assumes that potential car and light truck buyers value only the undiscounted savings in fuel costs from purchasing a higher-mpg model they expect to realize over the first 30 months they own it. Depending on the discount rate buyers are assumed to apply, this amounts to 25–30% of the expected savings in fuel costs over its entire lifetime. These savings would offset only a fraction of the expected increase in new car and light truck prices that the agency estimates will be required for manufacturers to recover

their increased costs for making required improvements to fuel economy. The agency seeks comment on whether 30 months of undiscounted fuel savings is an appropriate measure for the analysis of consumer willingness to pay for fuel economy. The assumption also has important implications for other outcomes of the model, including for VMT, safety, and air pollution emissions projections. If NHTSA is incorrect about the undervaluation of fuel economy in the context of regulatory standards and its effect on car sales, correcting the assumption should result in improved safety outcomes and additional declines in conventional air pollutants. If commenters believe a different amount of time should be used for the payback assumption, it would be most helpful to NHTSA if commenters could define the amount of time, provide an explanation of why that amount of time is preferable, provide any data or information on which the amount of time is based, and provide any discussion of how changing this assumption would interact with other elements in the analysis.

## 2. Fleet Composition

The composition of the on-road fleet—and how it changes in response to CAFE standards—determines many of the costs and benefits of the proposal. For example, how much fuel the light-duty consumes is dependent on the number of new vehicles sold, older (and less efficient) vehicles retired, and how much those vehicles are driven.

Prior to the 2020 CAFE standards, all previous CAFE rulemaking analyses used static fleet forecasts that were based on a combination of manufacturer compliance data, public data sources, and proprietary forecasts (or product plans submitted by manufacturers). When simulating compliance with regulatory alternatives, those analyses projected identical sales and retirements across the alternatives, for each manufacturer down to the make/model level—where the exact same number of each model variant was assumed to be sold in a given model year under both the least stringent alternative (typically the baseline) and the most stringent alternative considered (intended to represent “maximum technology” scenarios in some cases). To the extent that an alternative matched the assumptions made in the production of the proprietary forecast, using a static fleet based upon those assumptions may have been warranted.

However, a fleet forecast is unlikely to be representative of a broad set of regulatory alternatives with significant

variation in the cost of new vehicles. A number of commenters on previous regulatory actions and peer reviewers of the CAFE Model encouraged consideration of the potential impact of fuel efficiency standards on new vehicle prices and sales, the changes to compliance strategies that those shifts could necessitate, and the downstream impact on vehicle retirement rates. In particular, the continued growth of the utility vehicle segment causes changes within some manufacturers’ fleets as sales volumes shift from one region of the footprint curve to another, or as mass is added to increase the ride height of a vehicle on a sedan platform to create a crossover utility vehicle, which exists on the same place of the footprint curve as the sedan upon which it might be based.

The analysis now dynamically simulates changes in the vehicle fleet’s size, composition, and usage as manufacturers and consumers respond to regulatory alternatives, fuel prices, and macroeconomic conditions. The analysis of fleet composition is comprised of two forces, how new vehicle sales—the flow of new vehicles into the registered population—changes in response to regulatory alternatives, and the influence of economic and regulatory factors on vehicle retirement (otherwise known as scrappage). Below are brief descriptions that of how the agency models sales and scrappage. For a full explanation, refer to TSD Chapter 4.2. Particularly given the broad uncertainty discussed in TSD Chapter 4.2, NHTSA seeks comment on the discussion below and the associated discussions in the TSD, on the internal structure of the sales and scrappage modules, and whether and how to change the sales and scrappage analyses for the final rule.

### (a) Sales

For the purposes of regulatory evaluation, the relevant sales metric is the difference between alternatives rather than the absolute number of sales in any of the alternatives. As such, the sales response model currently contains three parts: A nominal forecast that provides the level of sales in the baseline (based upon macroeconomic inputs, exclusively), a price elasticity that creates sales differences relative to that baseline in each year, and a fleet share model that produces differences in the passenger car and light truck market share in each alternative. The nominal forecast does not include price and is merely a (continuous) function of several macroeconomic variables that are provided to the model as inputs. The price elasticity is also specified as an

input, but this analysis assumes a unit elastic response of  $-1.0$ —meaning that a one percent increase in the average price of a new vehicle produces a one percent decrease in total sales. NHTSA seeks comment on this assumption. The price change on which the elasticity acts is calculated net of some portion of the future fuel savings that accrue to new vehicle buyers (2.5 years' worth, in this analysis, as discussed in the previous section).

The current baseline sales module reflects the idea that total new vehicle sales are primarily driven by conditions in the economy that are exogenous to the automobile industry. Over time, new vehicle sales have been cyclical—rising when prevailing economic conditions are positive (periods of growth) and falling during periods of economic contraction. While the kinds of changes to vehicle offerings that occur as a result of manufacturers' compliance actions exert some influence on the total volume of new vehicle sales, they are not determinative. Instead, they drive the kinds of marginal differences between regulatory alternatives that the current sales module is designed to simulate—more expensive vehicles, generally, reduce total sales but only marginally.

The first component of the sales response model is the nominal forecast, which is a function (with a small set of inputs) that determines the size of the new vehicle market in each calendar year in the analysis for the baseline. It is of some relevance that this statistical model is intended only as a means to project a baseline sales series. Past reviewers expressed concerns about the possibility of econometrically estimating an industry average price elasticity in a way that isolates the causal effect of new vehicle prices on new vehicle sales (and properly addresses the issue of endogeneity between sales and price). The nominal forecast model does not include prices and is not intended for statistical inference around the question of price response in the new vehicle market. The economic response to the pandemic has created uncertainty, particularly in the near-term, around pace at which the market for automobiles will recover—and the scale and timing of the recovery's peak—before returning to its long-term trend. DOT will continue to monitor macroeconomic data and new vehicle sales and update its baseline forecast as appropriate.

The second component of the sales response model captures how price changes affect the number of vehicles sold. The price elasticity is applied to the percentage change in average price

(in each year). The price change does not represent an increase/decrease over the last observed year, but rather the percentage change relative to the baseline for that year. In the baseline, the average price is defined as the observed new vehicle price in 2019 (the last historical year before the simulation begins) plus the average regulatory cost associated with the baseline alternative.<sup>308</sup> The central analysis in this proposal simulates multiple programs simultaneously (CAFE final standards, EPA final greenhouse gas standards, ZEV, and the California Framework Agreement), and the regulatory cost includes both technology costs and civil penalties paid for non-compliance (with CAFE standards) in a model year. Because the elasticity assumes no perceived change in the quality of the product, and the vehicles produced under different regulatory scenarios have inherently different operating costs, the price metric must account for this difference. The price to which the unit elasticity is applied in this analysis represents the residual price change *between scenarios* after accounting for 2.5 years' worth of fuel savings to the new vehicle buyer.

The third and final component of the sales model is the dynamic fleet share module (DFS). Some commenters to previous rules noted that the market share of SUVs continues to grow, while conventional passenger car body-styles continue to lose market share. For instance, in the 2012 final rule, the agencies projected fleet shares based on the continuation of the baseline standards (MYs 2012–2016) and a fuel price forecast that was much higher than the realized prices since that time. As a result, that analysis assumed passenger car body-styles comprising about 70 percent of the new vehicle market by 2025, which was internally consistent. The reality, however, has been quite different. The CAFE Model includes the DFS model in an attempt to address these market realities.

The DFS distributes the total industry sales across two different body-types: “cars” and “light trucks.” While there are specific definitions of “passenger cars” and “light trucks” that determine a vehicle's regulatory class, the distinction used in this phase of the analysis is more simplistic. All body-

styles that are obviously cars—sedans, coupes, convertibles, hatchbacks, and station wagons—are defined as “cars” for the purpose of determining fleet share. Everything else—SUVs, smaller SUVs (crossovers), vans, and pickup trucks—are defined as “light trucks”—even though they may not be treated as such for compliance purposes. The DFS uses two functions from the National Energy Modeling System (NEMS) used in the 2017 AEO to independently estimate the share of passenger cars and light trucks, respectively, given average new market attributes (fuel economy, horsepower, and curb weight) for each group and current fuel prices, as well as the prior year's market share and prior year's attributes. The two independently estimated shares are then normalized to ensure that they sum to one.

These shares are applied to the total industry sales derived in the first stage of the sales response. This produces total industry volumes of car and light truck body styles. Individual model sales are then determined from there based on the following sequence: (1) Individual manufacturer shares of each body style (either car or light truck) times the total industry sales of that body style, then (2) each vehicle within a manufacturer's volume of that body-style is given the same percentage of sales as appear in the 2020 fleet. This implicitly assumes that consumer preferences for particular styles of vehicles are determined in the aggregate (at the industry level), but that manufacturers' sales shares of those body styles are consistent with MY 2020 sales. Within a given body style, a manufacturer's sales shares of individual models are also assumed to be constant over time. This approach implicitly assumes that manufacturers are currently pricing individual vehicle models within market segments in a way that maximizes their profit. Without more information about each OEM's true cost of production and operation, fixed and variables costs, and both desired and achievable profit margins on individual vehicle models, there is no basis to assume that strategic shifts within a manufacturer's portfolio will occur in response to standards.

The DFS model show passenger car styles gaining share with higher fuel prices and losing them when prices are decline. Similarly, as fuel economy increases in light truck models, which offer consumers other desirable attributes beyond fuel economy (ride height or interior volume, for example) their relative share increases. However, this approach does not suggest that consumers dislike fuel economy in passenger cars, but merely recognizes

<sup>308</sup> The CAFE Model currently operates as if all costs incurred by the manufacturer as a consequence of meeting regulatory requirements, whether those are the cost of additional technology applied to vehicles in order to improve fleetwide fuel economy or civil penalties paid when fleets fail to achieve their standard, are “passed through” to buyers of new vehicles in the form of price increases.

the fact that fuel economy has diminishing returns in terms of fuel savings. As the fuel economy of light trucks increases, the tradeoff between passenger car and light truck purchases increasingly involves a consideration of other attributes. The coefficients also show a relatively stronger preference for power improvements in cars than light trucks because that is an attribute where trucks have typically outperformed cars, just as cars have outperformed trucks for fuel economy.

For years, some commenters encouraged the agency to consider vehicle attributes beyond price and fuel economy when estimating a sales response to fuel economy standards, and suggested that a more detailed representation of the new vehicle market would allow the agency to simulate strategic mix shifting responses from manufacturers and diverse attribute preferences among consumers. Doing so would have required a discrete choice model (at some level). Discrete models are highly sensitive on their inputs and typically fit well on a single year of data (a cross-section of vehicles and buyers). This approach misses relevant trends that build over time, such as rising GDP or shifting consumer sentiment toward emerging technologies and are better used for analysis as opposed to prediction. While the agency believes that these challenges provide a reasonable basis for not employing a discrete choice model in the current CAFE Model, the agency also believes these challenges are not insurmountable, and that some suitable variant of such models may yet be developed for use in future fuel economy rulemakings. The agency has not abandoned the idea and plans to continue experimenting with econometric specifications that address heterogeneous consumer preferences in the new vehicle market as they further refine the analytical tools used for regulatory analysis. The agency seeks suggestions on how to incorporate other vehicle attributes into the current analysis, or, alternatively, methods to implement a discrete choice model that can capture changing technologies and consumer trends over an extended time-period.

#### (b) Scrappage

New and used vehicles are substitutes. When the price of a good's substitute increases/decreases, the demand curve for that good shifts upwards/downwards and the equilibrium price and quantity supplied also increases/decreases. Thus, increasing the quality-adjusted price of new vehicles will result in an increase

in equilibrium price and quantity of used vehicles. Since, by definition, used vehicles are not being "produced" but rather "supplied" from the existing fleet, the increase in quantity must come via a reduction in their scrappage rates. Practically, when new vehicles become more expensive, demand for used vehicles increases (and they become more expensive). Because used vehicles are more valuable in such circumstances, they are scrapped at a lower rate, and just as rising new vehicle prices push marginal prospective buyers into the used vehicle market, rising used vehicle prices force marginal prospective buyers of used vehicles to acquire older vehicles or vehicles with fewer desired attributes. The effect of fuel economy standards on scrappage is partially dependent on how consumers value future fuel savings and our assumption that consumers value only the first 30 months of fuel savings.

Many competing factors influence the decision to scrap a vehicle, including the cost to maintain and operate it, the household's demand for VMT, the cost of alternative means of transportation, and the value that can be attained through reselling or scrapping the vehicle for parts. A car owner will decide to scrap a vehicle when the value of the vehicle is less than the value of the vehicle as scrap metal, plus the cost to maintain or repair the vehicle. In other words, the owner gets more value from scrapping the vehicle than continuing to drive it, or from selling it. Typically, the owner that scraps the vehicle is not the first owner.

While scrappage decisions are made at the household level, the agency is unaware of sufficient household data to sufficiently capture scrappage at that level. Instead, the agency uses aggregate data measures that capture broader market trends. Additionally, the aggregate results are consistent with the rest of the CAFE Model as the model does not attempt to model how manufacturers will price new vehicles; the model instead assumes that all regulatory costs to make a particular vehicle compliant are passed onto the purchaser who buys the vehicle. It is more likely that manufacturers will defray a portion of the increased regulatory cost across its vehicles or to other manufacturers' buyers through the sale of credits.

The most predictive element of vehicle scrappage is 'engineering scrappage.' This source of scrappage is largely determined by the age of a vehicle and the durability of a specific model year vintage, which the agency uses proprietary vehicle registration data from IHS/Polk to collect vehicle

age and durability. Other factors include fuel economy and new vehicle prices. For historical data on new vehicle transaction prices, the agency uses National Automobile Dealers Association (NADA) Data.<sup>309</sup> The data consists of the average transaction price of all light-duty vehicles; since the transaction prices are not broken-down by body style, the model may miss unique trends within a particular vehicle body style. The transaction prices are the amount consumers paid for new vehicles and exclude any trade-in value credited towards the purchase. This may be particularly relevant for pickup trucks, which have experienced considerable changes in average price as luxury and high-end options entered the market over the past decade. Future models will further consider incorporating price series that consider the price trends for cars, SUVs and vans, and pickups separately. The other source of vehicle scrappage is from cyclical effects, which the model captures using forecasts of GDP and fuel prices.

Vehicle scrappage follows a roughly logistic function with age—that is, when a vintage is young, few vehicles in the cohort are scrapped, as they age, more and more of the cohort are retired and the instantaneous scrappage (the rate at which vehicles are scrapped) reaches a peak, and then scrappage declines as vehicles enter their later years as fewer and fewer of the cohort remains on the road. The analysis uses a logistic function to capture this trend of vehicle scrappage with age. The data shows that the durability of successive model years generally increases over time, or put another way, historically newer vehicles last longer than older vintages. However, this trend is not constant across all vehicle ages—the instantaneous scrappage rate of vehicles is generally lower for later vintages up to a certain age, but increases thereafter so that the final share of vehicles remaining converges to a similar share remaining for historically observed vintages.<sup>310</sup> The agency uses fixed effects to capture potential changes in durability across model years and to ensure that vehicles approaching the end of their life are scrapped in the analysis, the agency applies a decay function to vehicles after they reach age 30. The macroeconomic conditions variables discussed above are included

<sup>309</sup> The data can be obtained from NADA. For reference, the data for MY 2020 may be found at <https://www.nada.org/nadadata/>.

<sup>310</sup> Examples of why durability may have changed are new automakers entering the market or general changes to manufacturing practices like switching some models from a car chassis to a truck chassis.

in the logistic model to capture cyclical effects. Finally, the change in new vehicle prices projected in the model (technology costs minus 30 months of fuel savings) are included which generates differing scrappage rates across the alternatives.

In addition to the variables included in the scrappage model, the agency considered several other variables that likely either directly or indirectly influence scrappage in the real world including, maintenance and repair costs, the value of scrapped metal, vehicle characteristics, the quantity of new vehicles purchased, higher interest rates, and unemployment. These variables were excluded from the model either because of a lack of underlying data or modeling constraints. Their exclusion from the model is not intended to diminish their importance, but rather highlights the practical constraints of modeling intricate decisions like scrappage.

### 3. Changes in Vehicle Miles Traveled (VMT)

In the CAFE Model, VMT is the product of average usage per vehicle in the fleet and fleet composition, which is itself a function of new vehicle sales and vehicle retirement decisions, otherwise known as scrappage. These three components—average vehicle usage, new vehicle sales, and older vehicle scrappage—jointly determine total VMT projections for each alternative. VMT directly influences many of the various effects of fuel economy standards that decision-makers consider in determining what levels of standards to set. For example, the value of fuel savings is a function of a vehicle's efficiency, miles driven, and fuel price. Similarly, factors like criteria pollutant emissions, congestion, and fatalities are direct functions of VMT.

It is the agency's perspective that the total demand for VMT should not vary excessively across alternatives. The basic travel needs for an average household are unlikely to be influenced heavily by the stringency of the CAFE standards, as the daily need for a vehicle will remain the same. That said, it is reasonable to assume that fleets with differing age distributions and inherent cost of operation will have slightly different annual VMT (even without considering VMT associated with rebound miles); however, the difference could conceivably be small. Based on the structure of the CAFE Model, the combined effect of the sales and scrappage responses would create small percentage differences in total VMT across the range of regulatory alternatives if steps are not taken to

constrain VMT. Because VMT is related to many of the costs and benefits of the program, even small magnitude differences in VMT across alternatives can have meaningful impacts on the incremental net benefit analysis. Furthermore, since decisions about alternative stringencies look at the incremental costs and benefits across alternatives, it is more important that the analysis capture the variation of VMT across alternatives than to accurately predict total VMT within a scenario.

To ensure that travel demand remains consistent across the different regulatory scenarios, the CAFE Model begins with a model of aggregate VMT developed by the Federal Highway Administration (FHWA) that is used to produce their official annual VMT forecasts. These estimates provide the aggregate VMT of all model years and body styles for any given calendar year and are same across regulatory alternatives for each year in the analysis.

Since vehicles of different ages and body styles carry different costs and benefits, to account properly for the average value of consumer and societal costs and benefits associated with vehicle usage under various CAFE alternatives, it is necessary to partition miles by age and body type. The agency created "mileage accumulation schedules" using IHS-Polk odometer data to construct mileage accumulation schedules as an initial estimate of how much a vehicle expected to drive at each age throughout its life. The agency uses simulated new vehicle sales, annual rates of retirement for used vehicles, and the mileage accumulation schedules to distribute VMT across the age distribution of registered vehicles in each calendar year to preserve the non-rebound VMT constraint.

The fuel economy rebound effect—a specific example of the well-documented energy efficiency rebound effect for energy-consuming capital goods—refers to the tendency of motor vehicles' use (as measured by VMT) to increase when their fuel economy is improved and, as a result, the cost per mile (CPM) of driving declines. Establishing more stringent CAFE standards than the baseline level will lead to comparatively higher fuel economy for new cars and light trucks, thus decreasing the amount of fuel consumed and increasing the amount of travel in which new car and truck buyers engage. The agency recognizes that the value selected for the rebound effect influences overall costs and benefits associated with the regulatory alternatives under consideration as well as the estimates of lives saved under

various regulatory alternatives, and that the rebound estimate, along with fuel prices, technology costs, and other analytical inputs, is part of the body of information that agency decision-makers have considered in determining the appropriate levels of the CAFE standards in this proposal. We also note that the rebound effect diminishes the economic and environmental benefits associated with increased fuel efficiency.

The agency conducted a review of the literature related to the fuel economy rebound effect, which is extensive and covers multiple decades and geographic regions. The totality of evidence, without categorically excluding studies on grounds that they fail to meet certain criteria, and evaluating individual studies based on their particular strengths, suggests that a plausible range for the rebound effect is 10–50 percent. The central tendency of this range appears to be at or slightly above its midpoint, which is 30 percent. Considering only those studies that the agency believes are derived from extremely robust and reliable data, employ identification strategies that are likely to prove effective at isolating the rebound effect, and apply rigorous estimation methods suggests a range of approximately 10–45 percent, with most of their estimates falling in the 15–30 percent range.

A case can also be made to support values of the rebound effect falling in the 5–15 percent range. There is empirical evidence supported by theory, that the rebound effect has been declining over time due to factors such as increasing income that affects the value of time, increasing fuel economy that makes the fuel cost of driving a smaller share of the total costs of vehicle travel, as well as diminishing impacts of increased car ownership and rates of license holding on vehicle travel. Lower rebound estimates are associated with studies that include recently published analyses using U.S. data, and to accord the most weight to research that relies on measures of vehicle use derived from odometer readings, controls for the potential endogeneity of fuel economy, and estimates the response of vehicle use to variation in fuel economy itself, rather than to fuel cost per distance driven or fuel prices. This approach suggests that the rebound effect is likely in the range from 5–15 percent and is more likely to lie toward the lower end of that range.

The agency selected a rebound magnitude of 15% for the analysis because it was well-supported by the totality of the evidence and aligned well with FHWA's estimated elasticity for

travel (14.6%). However, recognizing the uncertainty surrounding the rebound value, we also examine the sensitivity of estimated impacts to values of the rebound ranging from 10 percent to 20 percent. NHTSA seeks comment on the above discussion, and whether to consider a different value for the rebound effect for the final rule analysis.

In order to calculate total VMT *with* rebound, the CAFE Model applies the price elasticity of VMT (taken from the FHWA forecasting model) to the full change in CPM and the initial VMT schedule, but applies the (user defined) rebound parameter to the incremental percentage change in CPM between the non-rebound and full CPM calculations to the miles applied to each vehicle during the reallocation step that ensured adjusted non-rebound VMT matched the non-rebound VMT constraint.

The approach in the model is a combination of top-down (relying on the FHWA forecasting model to determine total light-duty VMT in a given calendar year), and bottom-up (where the composition and utilization of the on-road fleet determines a base level of VMT in a calendar year, which is constrained to match the FHWA model). While the agency and the model developers agree that a joint household consumer choice model—if one could be developed adequately and reliably to capture the myriad circumstances under which families and individuals make decisions relating to vehicle purchase, use, and disposal—would reflect decisions that are made at the household level, it is not obvious, or necessarily appropriate, to model the national program at that scale in order to produce meaningful results that can be used to inform policy decisions.

The most useful information for policymakers relates to national impacts of potential policy choices. No other element of the rulemaking analysis occurs at the household level, and the error associated with allocating specific vehicles to specific households over the course of three decades would easily dwarf any error associated with the estimation of these effects in aggregate. We have attempted to incorporate estimates of changes to the new and used vehicle markets at the highest practical levels of aggregation, and worked to ensure that these effects produce fleetwide VMT estimates that are consistent with the best, current projections given our economic assumptions. While future work will always continue to explore approaches to improve the realism of CAFE policy simulation, there are important differences between small-scale

econometric studies and the kind of flexibility that is required to assess the impacts of a broad range of regulatory alternatives over multiple decades. To assist with creating even more precise estimates of VMT, the agency requests comment on alternative approaches to simulate VMT demand.

See TSD Chapter 4.3 for a complete accounting of how the agency models VMT.

#### 4. Changes to Fuel Consumption

The agency uses the fuel economy and age and body-style VMT estimates to determine changes in fuel consumption. The agency divides the expected vehicle use by the anticipated MPG to calculate the gallons consumed by each simulated vehicle, and when aggregated, the total fuel consumed in each alternative.

#### F. Simulating Environmental Impacts of Regulatory Alternatives

This proposal includes the adoption of electric vehicles and other fuel-saving technologies, which produce additional co-benefits. These co-benefits include reduced vehicle tailpipe emissions during operation as well as reduced upstream emissions during petroleum extraction, transportation, refining, and finally fuel transportation, storage, and distribution. This section provides an overview of how we developed input parameters for criteria pollutants, greenhouse gases, and air toxics. This section also describes how we generated estimates of how these emissions could affect human health, in particular criteria pollutants known to cause poor air quality and damage human health when inhaled.

The rule implements an emissions inventory methodology for estimating impacts. Vehicle emissions inventories are often described as three-legged stools, comprised of activity (*i.e.*, miles traveled, hours operated, or gallons of fuel burned), population (or number of vehicles), and emission factors. An emissions factor is a representative rate that attempts to relate the quantity of a pollutant released to the atmosphere per unit of activity.<sup>311</sup>

In this rulemaking, upstream emission factors are on a fuel volume basis and tailpipe emission factors are on a distance basis. Simply stated, the rule's upstream emission inventory is the product of the per-gallon emission factor and the corresponding number of gallons of gasoline or diesel consumed.

Similarly, the tailpipe emission inventory is the product of the per-mile emission factor and the appropriate miles traveled estimate. The only exceptions are that tailpipe sulfur oxides (SO<sub>x</sub>) and carbon dioxide (CO<sub>2</sub>) also use a per-gallon emission factor in the CAFE Model. The activity levels—both miles traveled and fuel consumption—are generated by the CAFE Model, while the emission factors have been incorporated from other Federal models.

For this rule, vehicle tailpipe (downstream) and upstream emission factors and subsequent inventories were developed independently from separate data sources. Upstream emission factors are estimated from a lifecycle emissions model developed by the U.S. Department of Energy's (DOE) Argonne National Laboratory, the Greenhouse gases, Regulated Emissions, and Energy use in Transportation (GREET) Model.<sup>312</sup> Tailpipe emission factors are estimated from the regulatory highway emissions inventory model developed by the U.S. Environmental Protection Agency's (EPA) National Vehicle and Fuel Emissions Laboratory, the Motor Vehicle Emission Simulator (MOVES3). Data from GREET and MOVES3 have been utilized to update the CAFE Model for this rulemaking.

The changes in adverse health outcomes due to criteria pollutants emitted, such as differences in asthmatic episodes and hospitalizations due to respiratory or cardiovascular distress, are generally reported in incidence per ton values. Incidence values were developed using several EPA studies and recently updated from the 2020 final rule to better account for the emissions source sectors used in the CAFE Model analysis.

Chapter 5 of the TSD accompanying this proposal includes the detailed discussion of the procedures we used to simulate the environmental impact of regulatory alternatives, and the implementation of these procedures into the CAFE Model is discussed in detail in the CAFE Model Documentation. Further discussion of how the health impacts of upstream and tailpipe criteria pollutant emissions have been monetized in the analysis can be found in Section III.G.2.b)(2). The Supplemental Environmental Impact Statement accompanying this analysis also includes a detailed discussion of both criteria pollutant and GHG emissions and their impacts. NHTSA

seeks comment on the following discussion.

### 1. Activity Levels Used To Calculate Emissions Impacts

Emission inventories in this rule vary by several key activity parameters, especially relating to the vehicle's model year and relative age. Most importantly, the CAFE Model accounts for vehicle sales, turnover, and scrappage as well as travel demands over its lifetime. Like other models, the CAFE Model includes procedures to estimate annual rates at which new vehicles are purchased, driven, and subsequently scrapped. Together, these procedures result in, for each vehicle model in each model year, estimates of the number remaining in service in each calendar year, as well as the annual mileage accumulation (*i.e.*, VMT) at each age. Inventories by model year are derived from the annual mileage accumulation rates and corresponding emission factors.

As discussed in Section III.C.2, for each vehicle model/configuration in each model year from 2020 to 2050 for upstream estimates and 2060 for tailpipe estimates, the CAFE Model estimates and records the fuel type (*e.g.*, gasoline, diesel, electricity), fuel economy, and number of units sold in the U.S. The model also makes use of an aggregated representation of vehicles sold in the U.S. during 1975–2019. The model estimates the numbers of each cohort of vehicles remaining in service in each calendar year, and the amount of driving accumulated by each such cohort in each calendar year.

The CAFE Model estimates annual vehicle-miles of travel (VMT) for each individual car and light truck model produced in each model year at each age of their lifetimes, which extend for a maximum of 40 years. Since a vehicle's age is equal to the current calendar year minus the model year in which it was originally produced, the age span of each vehicle model's lifetime corresponds to a sequence of 40 calendar years beginning in the calendar year corresponding to the model year it was produced.<sup>313</sup> These estimates reflect the gradual decline in the fraction of each car and light truck model's original model year production volume that is expected to remain in

<sup>313</sup>In practice, many vehicle models bearing a given model year designation become available for sale in the preceding calendar year, and their sales can extend through the following calendar year as well. However, the CAFE Model does not attempt to distinguish between model years and calendar years; vehicles bearing a model year designation are assumed to be produced and sold in that same calendar year.

service during each year of its lifetime, as well as the well-documented decline in their typical use as they age. Using this relationship, the CAFE Model calculates fleet-wide VMT for cars and light trucks in service during each calendar year spanned in this analysis.

Based on these estimates, the model also calculates quantities of each type of fuel or energy, including gasoline, diesel, and electricity, consumed in each calendar year. By combining these with estimates of each model's fuel or energy efficiency, the model also estimates the quantity and energy content of each type of fuel consumed by cars and light trucks at each age, or viewed another way, during each calendar year of their lifetimes. As with the accounting of VMT, these estimates of annual fuel or energy consumption for each vehicle model and model year combination are combined to calculate the total volume of each type of fuel or energy consumed during each calendar year, as well as its aggregate energy content.

The procedures the CAFE Model uses to estimate annual VMT for individual car and light truck models produced during each model year over their lifetimes and to combine these into estimates of annual fleet-wide travel during each future calendar year, together with the sources of its estimates of their survival rates and average use at each age, are described in detail in Section III.E.2. The data and procedures it employs to convert these estimates of VMT to fuel and energy consumption by individual model, and to aggregate the results to calculate total consumption and energy content of each fuel type during future calendar years, are also described in detail in that same section.

The model documentation accompanying this NPRM describes these procedures in detail.<sup>314</sup> The quantities of travel and fuel consumption estimated for the cross section of model years and calendar years constitutes a set of "activity levels" based on which the model calculates emissions. The model does so by multiplying activity levels by emission factors. As indicated in the previous section, the resulting estimates of vehicle use (VMT), fuel consumption, and fuel energy content are combined with emission factors drawn from various sources to estimate emissions of GHGs, criteria air pollutants, and airborne toxic compounds that occur throughout the fuel supply and distribution process, as well as during

<sup>314</sup>CAFE Model documentation is available at <https://www.nhtsa.gov/corporate-average-fuel-economy/compliance-and-effects-modeling-system>.

vehicle operation, storage, and refueling. Emission factors measure the mass of each GHG or criteria pollutant emitted per vehicle-mile of travel, gallon of fuel consumed, or unit of fuel energy content. The following sections identifies the sources of these emission factors and explains in detail how the CAFE Model applies them to its estimates of vehicle travel, fuel use, and fuel energy consumption to estimate total annual emissions of each GHG, criteria pollutant, and airborne toxic.

### 2. Simulating Upstream Emissions Impacts

Building on the methodology for simulating upstream emissions impacts used in prior CAFE rules, this analysis uses emissions factors developed with the U.S. Department of Energy's Greenhouse gases, Regulated Emissions, and Energy use in Transportation (GREET) Model, specifically GREET 2020.<sup>315</sup> The analysis includes emissions impacts estimates for regulated criteria pollutants,<sup>316</sup> greenhouse gases,<sup>317</sup> and air toxics.<sup>318</sup>

The upstream emissions factors included in the CAFE Model input files include parameters for 2020 through 2050 in five-year intervals (*e.g.*, 2020, 2025, 2030, and so on). For gasoline and diesel fuels, each analysis year includes upstream emissions factors for the four following upstream emissions processes: Petroleum extraction, petroleum transportation, petroleum refining, and fuel transportation, storage, and distribution (TS&D). In contrast, the upstream electricity emissions factor is only a single value per analysis year. We briefly discuss the components included in each upstream emissions factor here, and a more detailed discussion is included in Chapter 5 of the TSD accompanying this proposal and the CAFE Model Documentation.

The first step in the process for calculating upstream emissions includes any emissions related to the extraction, recovery, and production of petroleum-based feedstocks, namely conventional crude oil, oil sands, and shale oils. Then, the petroleum transportation process accounts for the transport

<sup>315</sup>U.S. Department of Energy, Argonne National Laboratory, Greenhouse gases, Regulated Emissions, and Energy use in Transportation (GREET) Model, Last Update: 9 Oct. 2020, <https://greet.es.anl.gov/>.

<sup>316</sup>Carbon monoxide (CO), volatile organic compounds (VOCs), nitrogen oxides (NO<sub>x</sub>), sulfur oxides (SO<sub>x</sub>), and particulate matter with 2.5-micron (µm) diameters or less (PM<sub>2.5</sub>).

<sup>317</sup>Carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), and nitrous oxide (N<sub>2</sub>O).

<sup>318</sup>Acetaldehyde, acrolein, benzene, butadiene, formaldehyde, diesel particulate matter with 10-micron (µm) diameters or less (PM<sub>10</sub>).

processes of crude feedstocks sent for domestic refining. The petroleum refining calculations are based on the aggregation of fuel blendstock processes rather than the crude feedstock processes, like the petroleum extraction and petroleum transportation calculations. The final upstream process after refining is the transportation, storage, and distribution (TS&D) of the finished fuel product.

The upstream gasoline and diesel emissions factors are aggregated in the CAFE Model based on the share of fuel savings leading to reduced domestic oil fuel refining and the share of reduced domestic refining from domestic crude oil. The CAFE Model applies a fuel savings adjustment factor to the petroleum refining process and a combined fuel savings and reduced domestic refining adjustment to both the petroleum extraction and petroleum transportation processes for both gasoline and diesel fuels and for each pollutant. These adjustments are consistent across fuel types, analysis years, and pollutants, and are unchanged from the 2020 final rule. Additional discussion of the methodology for estimating the share of fuel savings leading to reduced domestic oil refining is located in Chapter 6.2.4.3 of the TSD. NHTSA seeks comment on the methodology used and specifically whether all of the change in refining would happen domestically, rather than the current division between domestic and non-domestic refining.

Upstream electricity emissions factors are also calculated using GREET 2020. GREET 2020 projects a national default electricity generation mix for transportation use from the latest Annual Energy Outlook (AEO) data available from the previous year. As discussed above, the CAFE Model uses a single upstream electricity factor for each analysis year.

### 3. Simulating Tailpipe Emissions Impacts

Tailpipe emission factors are generated using the latest regulatory model for on-road emission inventories from the U.S. Environmental Protection Agency, the Motor Vehicle Emission Simulator (MOVES3), November 2020 release. MOVES3 is a state-of-the-science, mobile-source emissions inventory model for regulatory applications.<sup>319</sup> New MOVES3 tailpipe emission factors have been incorporated

<sup>319</sup> U.S. Environmental Protection Agency, Office of Transportation and Air Quality, Motor Vehicle Emission Simulator (MOVES), Last Updated: March 2021, <https://www.epa.gov/moves/latest-version-motor-vehicle-emission-simulator-moves>.

into the CAFE parameters, and these updates supersede tailpipe data previously provided by EPA under MOVES2014 for past CAFE analyses. MOVES3 accounts for a variety of processes related to emissions impacts from vehicle use, including running exhaust, start exhaust, refueling displacement vapor loss, brakewear, and tirewear, among others.

The CAFE Model uses tailpipe emissions factors for all model years from 2020 to 2060 for criteria pollutants and air toxics. To maintain continuity in the historical inventories, only emission factors for model years 2020 and after were updated; all emission factors prior to MY 2020 were unchanged from previous CAFE rulemakings. In addition, the updated tailpipe data in the current CAFE reference case no longer account for any fuel economy improvements or changes in vehicle miles traveled from the 2020 final rule. In order to avoid double-counting effects from the previous rulemaking in the current rulemaking, the new tailpipe baseline backs out 1.5% year-over-year stringency increases in fuel economy, and 0.3% VMT increases assumed each year (20% rebound on the 1.5% improvements in stringency). Note that the MOVES3 data do not cover all the model years and ages required by the CAFE Model. MOVES only generates emissions data for vehicles made in the last 30 model years for each calendar year being run. This means emissions data for some calendar year and vehicle age combinations are missing. To remedy this, we take the last vehicle age that has emissions data and forward fill those data for the following vehicle ages. Due to incomplete available data for years prior to MY 2020, tailpipe emission factors for MY 2019 and earlier have not been modified and continue to utilize MOVES2014 data.

For tailpipe CO<sub>2</sub> emissions, these factors are defined based on the fraction of each fuel type's mass that represents carbon (the carbon content) along with the mass density per unit of the specific type of fuel. To obtain the emission factors associated with each fuel, the carbon content is then multiplied by the mass density of a particular fuel as well as by the ratio of the molecular weight of carbon dioxide to that of elemental carbon. This ratio, a constant value of 44/12, measures the mass of carbon dioxide that is produced by complete combustion of mass of carbon contained in each unit of fuel. The resulting value defines the emission factor attributed to CO<sub>2</sub> as the amount of grams of CO<sub>2</sub> emitted during vehicle operation from each type of fuel. This calculation is repeated for gasoline, E85, diesel, and

compressed natural gas (CNG) fuel types. In the case of CNG, the mass density and the calculated CO<sub>2</sub> emission factor are denoted as grams per standard cubic feet (scf), while for the remainder of fuels, these are defined as grams per gallon of the given fuel source. Since electricity and hydrogen fuel types do not cause CO<sub>2</sub> emissions to be emitted during vehicle operation, the carbon content, and the CO<sub>2</sub> emission factors for these two fuel types are assumed to be zero. The mass density, carbon content, and CO<sub>2</sub> emission factors for each fuel type are defined in the Parameters file.

The CAFE Model calculates CO<sub>2</sub> tailpipe emissions associated with vehicle operation of the surviving on-road fleet by multiplying the number of gallons (or scf for CNG) of a specific fuel consumed by the CO<sub>2</sub> emissions factor for the associated fuel type. More specifically, the amount of gallons or scf of a particular fuel are multiplied by the carbon content and the mass density per unit of that fuel type, and then applying the ratio of carbon dioxide emissions generated per unit of carbon consumed during the combustion process.<sup>320</sup>

### 4. Estimating Health Impacts From Changes in Criteria Pollutant Emissions

The CAFE Model computes select health impacts resulting from three criteria pollutants: NO<sub>x</sub>, SO<sub>x</sub>,<sup>321</sup> and PM<sub>2.5</sub>. Out of the six criteria pollutants currently regulated, NO<sub>x</sub>, SO<sub>x</sub>, and PM<sub>2.5</sub> are known to be emitted regularly from mobile sources and have the most adverse effects to human health. These health impacts include several different morbidity measures, as well as low and high mortality estimates, and are measured by the number of instances predicted to occur per ton of emitted pollutant.<sup>322</sup> The model reports total health impacts by multiplying the estimated tons of each criteria pollutant by the corresponding health incidence per ton value. The inputs that inform the calculation of the total tons of emissions resulting from criteria pollutants are discussed above. This section discusses how the health

<sup>320</sup> Chapter 3, Section 4 of the CAFE Model Documentation provides additional description for calculation of CO<sub>2</sub> tailpipe emissions with the model.

<sup>321</sup> Any reference to SO<sub>x</sub> in this section refers to the sum of sulfur dioxide (SO<sub>2</sub>) and sulfate particulate matter (pSO<sub>4</sub>) emissions, following the methodology of the EPA papers cited.

<sup>322</sup> The complete list of morbidity impacts estimated in the CAFE Model is as follows: Acute bronchitis, asthma exacerbation, cardiovascular hospital admissions, lower respiratory symptoms, minor restricted activity days, non-fatal heart attacks, respiratory emergency hospital admissions, respiratory emergency room visits, upper respiratory symptoms, and work loss days.

incidence per ton values were obtained. See Section III.G.2.b)(2) and Chapter 6.2.2 of the TSD accompanying this proposal for information regarding the monetized damages arising from these health impacts.

The SEIS that accompanies this proposal also includes a detailed discussion of the criteria pollutants and air toxics analyzed and their potential health effects. In addition, consistent with past analyses, NHTSA will perform full-scale photochemical air quality modeling and present those results in the Final SEIS associated with the final rule. That analysis will provide additional assessment of the human health impacts from changes in PM<sub>2.5</sub> and ozone associated with this rule. NHTSA will also consider whether such modeling could practicably and meaningfully be included in the FRIA, noting that compliance with CAFE standards is based on the *average* performance of manufacturers' production for sale *throughout* the U.S., and that the FRIA will involve sensitivity analysis spanning a range of model inputs, many of which impact estimates of future emissions from passenger cars and light trucks. Chapter 6 of the FRIA includes a discussion of overall changes in health impacts associated with criteria pollutant changes across the different rulemaking scenarios.

In previous rulemakings, health impacts were split into two categories based on whether they arose from upstream emissions or tailpipe emissions. In the current analysis, these health incidence per ton values have been updated to reflect the differences in health impacts arising from each emission source sector, according to the latest publicly available EPA reports. Five different upstream emission source sectors (Petroleum Extraction, Petroleum Transportation, Refineries, Fuel Transportation, Storage and Distribution, and Electricity Generation) are now represented. As the health incidences for the different source sectors are all based on the emission of one ton of the same pollutants, NO<sub>x</sub>, SO<sub>x</sub>, and PM<sub>2.5</sub>, the differences in the incidence per ton values arise from differences in the geographic distribution of the pollutants, a factor which affects the number of people impacted by the pollutants.<sup>323</sup>

The CAFE Model health impacts inputs are based partially on the structure of EPA's 2018 technical

support document, Estimating the Benefit per Ton of Reducing PM<sub>2.5</sub> Precursors from 17 Sectors (referred to here as the 2018 EPA source apportionment TSD),<sup>324</sup> which reported benefit per ton values for the years 2016, 2020, 2025, and 2030.<sup>325</sup> For the years in between the source years used in the input structure, the CAFE Model applies values from the closest source year. For instance, 2020 values are applied for 2020–2022, and 2025 values are applied for 2023–2027. For further details, see the CAFE Model documentation, which contains a description of the model's computation of health impacts from criteria pollutant emissions.

Despite efforts to be as consistent as possible between the upstream emissions sectors utilized in the CAFE Model with the 2018 EPA source apportionment TSD, the need to use up-to-date sources based on newer air quality modeling updates led to the use of multiple papers. In addition to the 2018 EPA source apportionment TSD used in the 2020 final rule, DOT used additional EPA sources and conversations with EPA staff to appropriately map health incidence per ton values to the appropriate CAFE Model emissions source category.

We understand that uncertainty exists around the contribution of VOCs to PM<sub>2.5</sub> formation in the modeled health impacts from the petroleum extraction sector; however, based on feedback to the 2020 final rule we believe that the updated health incidence values specific to petroleum extraction sector emissions may provide a more appropriate estimate of potential health impacts from that sector's emissions than the previous approach of applying refinery sector emissions impacts to the petroleum extraction sector. That said, we are aware of work that EPA has been doing to address concerns about the BPT estimates, and NHTSA will work further with EPA to update and synchronize approaches to the BPT estimates.

The basis for the health impacts from the petroleum extraction sector was a 2018 oil and natural gas sector paper written by EPA staff (Fann et al.), which estimated health impacts for this sector in the year 2025.<sup>326</sup> This paper defined

the oil and gas sector's emissions not only as arising from petroleum extraction but also from transportation to refineries, while the CAFE/GREET component is composed of only petroleum extraction. After consultation with the authors of the EPA paper, it was determined that these were the best available estimates for the petroleum extraction sector, notwithstanding this difference. Specific health incidence per pollutant were not reported in the paper, so EPA staff sent BenMAP health incidence files for the oil and natural gas sector upon request. DOT staff then calculated per ton values based on these files and the tons reported in the Fann et al. paper.<sup>327</sup> The only available health impacts corresponded to the year 2025. Rather than trying to extrapolate, these 2025 values were used for all the years in the CAFE Model structure: 2020, 2025, and 2030.<sup>328</sup> This simplification implies an overestimate of damages in 2020 and an underestimate in 2030.<sup>329</sup>

The petroleum transportation sector and fuel TS&D sector did not correspond to any one EPA source sector in the 2018 EPA source apportionment TSD, so a weighted average of multiple different EPA sectors was used to determine the health impact per ton values for those sectors. We used a combination of different EPA mobile source sectors from two different papers, the 2018 EPA source apportionment TSD,<sup>330</sup> and a 2019 mobile source sectors paper (Wolfe et al.)<sup>331</sup> to generate these values. The health incidence per ton values associated with the refineries sector and

2025. *Environmental science & technology*, 52(15), 8095–8103 (*hereinafter* Fann et al.).

<sup>327</sup> Nitrate-related health incidents were divided by the total tons of NO<sub>x</sub> projected to be emitted in 2025, sulfate-related health incidents were divided by the total tons of projected SO<sub>x</sub>, and EC/OC (elemental carbon and organic carbon) related health incidents were divided by the total tons of projected EC/OC. Both Fann et al. and the 2018 EPA source apportionment TSD define primary PM<sub>2.5</sub> as being composed of elemental carbon, organic carbon, and small amounts of crustal material. Thus, the EC/OC BenMAP file was used for the calculation of the incidents per ton attributable to PM<sub>2.5</sub>.

<sup>328</sup> These three years are used in the CAFE Model structure because it was originally based on the estimate provided in the 2018 EPA source apportionment TSD.

electricity generation sector were drawn solely from the 2018 EPA source apportionment TSD.

The CAFE Model follows a similar process for computing health impacts resulting from tailpipe emissions as it does for calculating health impacts from upstream emissions. Previous rulemakings used the 2018 EPA source apportionment TSD as the source for the health incidence per ton, matching the CAFE Model tailpipe emissions inventory to the “on-road mobile sources sector” in the TSD. However, a more recent EPA paper from 2019 (Wolfe et al.)<sup>332</sup> computes monetized damage costs per ton values at a more disaggregated level, separating on-road mobile sources into multiple categories based on vehicle type and fuel type. Wolfe et al. did not report incidences per ton, but that information was obtained through communications with EPA staff.

The methodology for generating values for each emissions category in the CAFE Model is discussed in detail in Chapter 5 of the TSD accompanying this proposal. The Parameters file contains all of the health impact per ton of emissions values used in this proposal.

#### *G. Simulating Economic Impacts of Regulatory Alternatives*

This section describes the agency’s approach for measuring the economic costs and benefits that will result from

establishing alternative CAFE standards for future model years. The benefit and cost measures the agency uses are important considerations, because as Office of Management and Budget (OMB) Circular A–4 states, benefits and costs reported in regulatory analyses must be defined and measured consistently with economic theory, and should also reflect how alternative regulations are anticipated to change the behavior of producers and consumers from a baseline scenario.<sup>333</sup> For CAFE standards, those include vehicle manufacturers, buyers of new cars and light trucks, owners of used vehicles, and suppliers of fuel, all of whose behavior is likely to respond in complex ways to the level of CAFE standards that DOT establishes for future model years.

It is important to report the benefits and costs of this proposed action in a format that conveys useful information about how those impacts are generated and also distinguishes the impacts of those economic consequences for private businesses and households from the effects on the remainder of the U.S. economy. A reporting format will accomplish this objective to the extent that it clarifies who incurs the benefits and costs of the proposed, and shows how the economy-wide or “social” benefits and costs of the proposed action are composed of its direct effects on vehicle producers, buyers, and users, plus the indirect or “external” benefits

and costs it creates for the general public.

Table III–37 and Table III–38 present the incremental economic benefits and costs of the proposed action and the alternatives (described in detail in Section IV) to increase CAFE standards for model years 2024–26 at three percent and seven percent discount rates in a format that is intended to meet these objectives. The tables include costs which are transfers between different economic actors—these will appear as both a cost and a benefit in equal amounts (to separate affected parties). Societal cost and benefit values shown elsewhere in this document do not show costs which are transfers for the sake of simplicity but report the same net societal costs and benefits. The proposed action and the alternatives would increase costs to manufacturers for adding technology necessary to enable new cars and light trucks to comply with fuel economy and emission regulations. It may also increase fine payments by manufacturers who would have achieved compliance with the less demanding baseline standards. Manufacturers are assumed to transfer these costs on to buyers by charging higher prices; although this reduces their revenues, on balance, the increase in compliance costs and higher sales revenue leaves them financially unaffected. Since the analysis assumes that manufacturers are left in the same economic position regardless of the standards, they are excluded from the tables.

**BILLING CODE 4910-59-C**

Compared to the baseline standards, if the preferred alternative is finalized, the analysis shows that buyers of new cars and light trucks will incur higher purchasing prices and financing costs, which will lead to some buyers dropping out of the new vehicle market. Drivers of new vehicles will also experience a slight uptick in the risk of being injured in a crash because of mass reduction technologies employed to meet the increased standards. While this effect is not statistically significant, NHTSA provides these results for transparency, and to demonstrate that their inclusion does not affect NHTSA's proposed policy decision. Because of the increasing price of new vehicles, some owners may delay retiring and replacing their older vehicles with newer models. In effect, this will

transfer some driving that would have been done in newer vehicles under the baseline scenario to older models within the legacy fleet, thus increasing costs for injuries (both fatal and less severe) and property damages sustained in motor vehicle crashes. This stems from the fact that cars and light trucks have become progressively more protective in crashes over time (and also slightly less prone to certain types of crashes, such as rollovers). Thus, shifting some travel from newer to older models would increase injuries and damages sustained by drivers and passengers because they are traveling in less safe vehicles and not because it changes the risk profiles of drivers themselves. These costs are largely driven by assumptions regarding consumer valuation of fuel efficiency and an assumption that more fuel-efficient vehicles are less preferable to

consumers than their total cost to improve fuel economy. These are issues on which we seek comments.

In exchange for these costs, consumers will benefit from new cars and light trucks with better fuel economy. Drivers will experience lower costs as a consequence of new vehicles' decreased fuel consumption, and from fewer refueling stops required because of their increased driving range. They will experience mobility benefits as they use newly purchased cars and light trucks more in response to their lower operating costs. On balance, consumers of new cars and light trucks produced during the model years subject to this proposed action will experience significant economic benefits.

Table III-37 and Table III-38 also show that the changes in fuel consumption and vehicle use resulting

from this proposed action will in turn generate both benefits and costs to society writ large. These impacts are “external,” in the sense that they are by-products of decisions by private firms and individuals that alter vehicle use and fuel consumption but are experienced broadly throughout society rather than by the firms and individuals who indirectly cause them. In terms of costs, additional driving by consumers of new vehicles in response to their lower operating costs will increase the external costs associated with their contributions to traffic delays and noise levels in urban areas, and these additional costs will be experienced throughout much of the society. While most of the risk of additional driving or delaying purchasing a newer vehicle are internalized by those who make those decisions, a portion of the costs are borne by other road users. Finally, since owners of new vehicles will be consuming less fuel, they will pay less in fuel taxes.

Society will also benefit from more stringent standards. Increased fuel efficiency will reduce the amount of petroleum-based fuel consumed and refined domestically, which will decrease the emissions of carbon dioxide and other greenhouse gases that contribute to climate change, and, as a result, the U.S. (and the rest of world) will avoid some of the economic damages from future changes in the global climate. Similarly, reduced fuel production and use will decrease emissions of more localized air pollutants (or their chemical precursors), and the resulting decrease in the U.S. population’s exposure to harmful levels of these pollutants will lead to lower costs from its adverse effects on health. Decreasing consumption and imports of crude petroleum for refining lower volumes of gasoline and diesel will also accrue some benefits throughout to the U.S., in the form of potential gains of energy security as businesses and households that are dependent on fuel are subject to less sudden and sharp changes in energy prices.

On balance, Table III–37 and Table III–38 show that both consumers and society as a whole will experience net economic benefits from the proposed action. The following subsections will briefly describe the economic costs and benefits considered by the agency. For a complete discussion of the methodology employed and the results, see TSD Chapter 6 and PRIA Chapter 6, respectively. The safety implications of the proposal—including the monetary impacts—are reserved for Section III.H.

NHTSA seeks comment on the following discussion.

## 1. Private Costs and Benefits

### (a) Costs to Consumers

#### (1) Technology Costs

The proposed action and the alternatives would increase costs to manufacturers for adding technology necessary to enable new cars and light trucks to comply with fuel economy and emission regulations. Manufacturers are assumed to transfer these costs on to buyers by charging higher prices. See Section III.C.6 and TSD Chapter 2.5.

#### (2) Consumer Sales Surplus

Buyers who would have purchased a new vehicle with the baseline standards in effect but decide not to do so in response to the changes in new vehicles’ prices due to more stringent standards in place will experience a decrease in welfare. The collective welfare loss to those “potential” new vehicle buyers is measured by the foregone consumer surplus they would have received from their purchase of a new vehicle in the baseline.

Consumer surplus is a fundamental economic concept and represents the net value (or net benefit) a good or service provides to consumers. It is measured as the difference between what a consumer is willing to pay for a good or service and the market price. OMB Circular A–4 explicitly identifies consumer surplus as a benefit that should be accounted for in cost-benefit analysis. For instance, OMB Circular A–4 states the “net reduction in total surplus (consumer plus producer) is a real cost to society,” and elsewhere elaborates that consumer surplus values be monetized “when they are significant.”<sup>335</sup>

Accounting for the portion of fuel savings that the average new vehicle buyer demands, and holding all else equal, higher average prices should depress new vehicle sales and by extension reduce consumer surplus. The inclusion of consumer surplus is not only consistent with OMB guidance, but with other parts of the regulatory analysis. For instance, we calculate the increase in consumer surplus associated with increased driving that results from the decrease in the cost per mile of operation under more stringent regulatory alternatives, as discussed in Section III.G.1.b)(3). The surpluses associated with sales and additional mobility are inextricably linked as they capture the direct costs and benefits accrued by purchasers of new vehicles.

<sup>335</sup> OMB Circular A–4, at 37–38.

The sales surplus captures the welfare loss to consumers when they forego a new vehicle purchase in the presence of higher prices and the additional mobility measures the benefit increased mobility under lower operating expenses.

The agency estimates the loss of sales surplus based on the change in quantity of vehicles projected to be sold after adjusting for quality improvements attributable to fuel economy. For additional information about consumer sales surplus, see TSD Chapter 6.1.5.

### (3) Ancillary Costs of Higher Vehicle Prices

Some costs of purchasing and owning a new or used vehicle scale with the value of the vehicle. Where fuel economy standards increase the transaction price of vehicles, they will affect both the absolute amount paid in sales tax and the average amount of financing required to purchase the vehicle. Further, where they increase the MSRP, they increase the appraised value upon which both value-related registration fees and a portion of insurance premiums are based. The analysis assumes that the transaction price is a set share of the MSRP, which allows calculation of these factors as shares of MSRP. For a detailed explanation of how the agency estimates these costs, see TSD Chapter 6.1.1.

These costs are included in the consumer per-vehicle cost-benefit analysis but are not included in the societal cost-benefit analysis because they are assumed to be transfers from consumers to governments, financial institutions, and insurance companies.

### (b) Benefits to Consumers

#### (1) Fuel Savings

The primary benefit to consumers of increasing CAFE standards are the additional fuel savings that accrue to new vehicle owners. Fuel savings are calculated by multiplying avoided fuel consumption by fuel prices. Each vehicle of a given body style is assumed to be driven the same as all the others of a comparable age and body style in each calendar year. The ratio of that cohort’s VMT to its fuel efficiency produces an estimate of fuel consumption. The difference between fuel consumption in the baseline, and in each alternative, represents the gallons (or energy) saved. Under this assumption, our estimates of fuel consumption from increasing the fuel economy of each individual model depend only on how much its fuel economy is increased, and do not reflect whether its actual use differs from other

models of the same body type. Neither do our estimates of fuel consumption account for variation in how much vehicles of the same body type and age are driven each year, which appears to be significant (see TSD Chapter 4.3.1.2). Consumers save money on fuel expenditures at the average retail fuel price (fuel price assumptions are discussed in detail in TSD Chapter 4.1.2), which includes all taxes and represents an average across octane blends. For gasoline and diesel, the included taxes reflect both the Federal tax and a calculated average state fuel tax. Expenditures on alternative fuels (E85 and electricity, primarily) are also included in the calculation of fuel expenditures, on which fuel savings are based. And while the included taxes net out of the social benefit cost analysis (as they are a transfer), consumers value each gallon saved at retail fuel prices including any additional fees such as taxes.

See TSD Chapter 6.1.3 for additional details. In the TSD, the agency considers the possibility that several of the

assumptions made about vehicle use could lead to misstating the benefits of fuel savings. The agency notes that these assumptions are necessary to model fuel savings and likely have minimal impact to the accuracy of this analysis.
