6 THE 2017 HURRICANE SEASON: A REVIEW OF
7 EMERGENCY RESPONSE AND ENERGY INFRASTRUCTURE
8 RECOVERY EFFORTS
9 THURSDAY, NOVEMBER 2, 2017
10 House of Representatives
11 Subcommittee on Energy
12 Committee on Energy and Commerce
13 Washington, D.C.

14
15
16
17 The subcommittee met, pursuant to call, at 10:00 a.m., in
18 Room 2123 Rayburn House Office Building, Hon. Fred Upton [chairman
19 of the subcommittee] presiding.

20 Members present: Representatives Upton, Olson, Shimkus,
21 Murphy, Latta, Harper, McKinley, Kinzinger, Griffith, Johnson,
22 Long, Bucshon, Flores, Mullin, Hudson, Walberg, Walden (ex
23 officio), Rush, McNerney, Peters, Green, Doyle, Castor, Sarbanes,

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Welch, Tonko, Loeb sack, Schrader, Kennedy, Butterfield, and
2 Pallone (ex officio).

3 Also present: Representative Bilirakis.

4 Staff present: Ray Baum, Staff Director; Mike Bloomquist,
5 Deputy Staff Director; Adam Buckalew, Professional Staff Member,
6 Health; Allie Bury, Legislative Clerk, Energy/Environment; Karen
7 Christian, General Counsel; Kelly Collins, Staff Assistant;
8 Zachary Dareshori, Staff Assistant; Wyatt Ellertson, Research
9 Associate, Energy/Environment; Adam Fromm, Director of Outreach
10 and Coalitions; Jordan Haverly, Policy Coordinator, Environment;
11 A.T. Johnston, Senior Policy Advisor, Energy; Mary Martin, Deputy
12 Chief Counsel, Energy and Environment; Alex Miller, Video
13 Production Aide and Press Assistant; Brandon Mooney, Deputy Chief
14 Energy Advisor; Mark Ratner, Policy Coordinator; Annelise
15 Rickert, Counsel, Energy; Dan Schneider, Press Secretary; Peter
16 Spencer, Professional Staff Member, Energy; Jason Stanek, Senior
17 Counsel, Energy; Madeline Vey, Policy Coordinator, Digital
18 Commerce and Consumer Protection; Hamlin Wade, Special Advisor,
19 External Affairs; Everett Winnick, Director of Information
20 Technology; Andy Zach, Senior Professional Staff Member,
21 Environment; Priscilla Barbour, Minority Energy Fellow; Jeff
22 Carroll, Minority Staff Director; Rick Kessler, Minority Senior
23 Advisor and Staff Director, Energy and Environment; John

1 Marshall, Minority Policy Coordinator; Jon Monger, Minority
2 Counsel; Alexander Ratner, Minority Policy Analyst; Tim Robinson,
3 Minority Chief Counsel; Tuley Wright, Minority Energy and
4 Environment Policy Advisor; C.J. Young, Minority Press Secretary;
5 and Catherine Zander, Minority Environment Fellow.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Upton. [presiding] The Subcommittee on Energy will
2 now come to order.

3 And the Chair will recognize himself for an opening
4 statement.

5 So, this year's Atlantic hurricane season was unprecedented.
6 Four named storms in close succession slammed into the Gulf,
7 Puerto Rico, and the U.S. Virgin Islands. These hurricanes
8 caused catastrophic damage and energy supply disruptions across
9 the country. While Texas and Florida are further down the road
10 to recovery, a humanitarian crisis is unfolding in Puerto Rico
11 -- a number of colleagues from this committee have been down there
12 -- and the U.S. Virgin Islands, where the majority of folks still
13 remain without power for more than a month after Hurricane Maria
14 made landfall.

15 Today's hearing will review the emergency response and
16 energy recovery efforts in the wake of those storms. It will help
17 us begin to understand what went right and what went wrong, what
18 lessons can be learned, and how we, as policymakers, can identify
19 gaps, so that when the next hurricane hits, we will be better
20 prepared.

21 As a result of Hurricane Harvey, more than 275,000 customers
22 lost power in Texas, and severe flooding also affected the supply
23 and delivery of transportation fuels, compounding response

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 challenges and energy impacts across the Gulf. Hurricane Irma
2 left more than a million customers without power across Puerto
3 Rico and the Virgin Islands. More than 6 million customers in
4 Florida and another million in Georgia and South Carolina also
5 lost power. Then, two weeks after Irma, Hurricane Maria
6 delivered the knockout punch, wiping out the entire grid on Puerto
7 Rico and the Virgin Islands. At peak, more than 3.5 million folks
8 were without power.

9 As with most disasters, energy restoration is performed by
10 federal, state, and local authorities, who provide vital
11 resources, infrastructure support, and logistical coordination,
12 and by industry, which provides the expertise and manpower to
13 restore energy supply and services.

14 As we have witnessed nightly in the news, recovery on the
15 islands has been painfully difficult and slow. Questions are
16 mounting regarding the role of the Puerto Rico Electric Power
17 Authority, PREPA, and its initial reluctance to request mutual
18 aid from mainland electricity companies that were standing by
19 ready to assist immediately after the storm. Rather than request
20 mutual assistance, as Texas and Florida did in the preceding
21 storms, PREPA took the unusual step to award a contract to a
22 virtually unknown company which it, then, cancelled. The deals
23 that PREPA signed immediately following the storm are now the

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 subject of an investigation by this committee, as they should be.

2 Today we are going to hear from two witness panels which will
3 provide perspective from the federal level, the state level, and
4 the industry responder level. As we have seen in recent weeks
5 across the areas affected by the storms, each disaster creates
6 its own set of problems. Today's witnesses can help us understand
7 the factors that contribute to these problems and what we may do
8 to ensure a more effective response going forward.

9 It will also help us understand the challenges that they face
10 as they move energy and product in the aftermath of devastating
11 storms. While we have seen alarming devastation, we have also
12 seen some aspects of the response go right. At this point, by
13 most accounts, the Department of Energy's support functions have
14 gone well. DOE's coordination of regulatory assistance, or
15 waivers, during the disasters has gone well. Their informational
16 assistance has been consistent and helpful to government and
17 industry alike.

18 We will hear this morning about the Strategic Petroleum
19 Reserve, which during Harvey served to provide emergency
20 petroleum swaps to make up for the temporary loss of supply and
21 keep prices at the pump somewhat stable.

22 We will also receive an important update on the various
23 restoration efforts to bring power back to the folks of Puerto

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Rico and the Virgin Islands. It will be particularly helpful to
2 understand what have been the barriers to a more rapid recovery,
3 what we are learning about coordination of emergency response and
4 restoration on these territories, and what is needed more from
5 us, the Congress. How can we apply these lessons going forward?
6 This hearing should help us answer some of those critical
7 questions.

8 And I yield now to the ranking member of the subcommittee,
9 my friend, the gentleman from Illinois, Mr. Rush.

10 [The prepared statement of Mr. Upton follows:]
11

12 ***** INSERT 1*****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Rush. I want to thank you, Mr. Chairman, for holding
2 this important hearing, examining the 2017 hurricane season and
3 the emergency response and energy infrastructure recovery efforts
4 surrounding these emergencies.

5 Mr. Chairman, I hope this will not be a "one and none"
6 hearing. Folks know in this year's historic and devastating
7 hurricane season that there are many, many critical interrelated
8 issues that must be addressed.

9 While I appreciate having witnesses here to discuss the GAO
10 report that we requested last year, the fact of the matter, Mr.
11 Chairman, is that, as we speak, there are still many millions of
12 American citizens living without electricity, and many are facing
13 dire life-and-death conditions. It is over a month now that
14 Hurricanes Harvey and Irma and Maria shattered their lives and
15 devastated their livelihoods.

16 Mr. Chairman, it is my hope that this hearing will shed light
17 on what additional steps need to be taken quickly to restore power
18 while also assuring those residents in Puerto Rico and the U.S.
19 Virgin Island specifically that their government has not
20 forgotten about them, and that we will provide the exact same
21 effort and the exact same attention to helping them as we would
22 for any other American citizen.

23 Mr. Chairman, as you know, more than six weeks after

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Hurricane Maria initially made landfall, nearly 70 percent of
2 Puerto Rico and 80 percent of the U.S. Virgin Islands still, Mr.
3 Chairman, still lack the power needed for basic everyday services,
4 such as lighting their homes, treating drinking water, preserving
5 food and medicine, or even making emergency calls, among other
6 critical functions that are so necessary to normal and daily
7 activities.

8 While immediate attention must be focused, Mr. Chairman, on
9 providing essential resources to protect the safety of
10 individuals and helping them cope in maintaining their lives, over
11 the long term we must also help to rebuild the energy
12 infrastructure in a way that makes it stronger and more resilient
13 against extreme weather conditions.

14 Mr. Chairman, Hurricanes Irma and Maria exposed the
15 vulnerability of the Puerto Rico and U.S. Virgin Islands electric
16 grids to extreme weather, while some communities expected to
17 remain without power for even months on end. In fact, a study
18 released last week by the Rhodium Group concluded that the outages
19 caused by Hurricane Maria resulted in 1.25 million hours of
20 electricity supplied disruption to a household in Puerto Rico and
21 the U.S. Virgin Islands, Mr. Chairman, making this sole event the
22 nation's largest blackout that was ever recorded. We can find
23 no event in recorded U.S. history where there were as many people

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 without power for as long as it has occurred over the past month
2 in Puerto Rico and the U.S. Virgin Islands, the report stated.

3 Mr. Chairman, I look forward to engaging today's
4 distinguished panel on the progress that has been made, the
5 additional steps that must be taken to immediately get the power
6 grid on, as well as the ways that we build more resilient and
7 sustainable infrastructure that is less vulnerable to an extreme
8 weather condition that we have witnessed and that we certainly
9 will witness in the future.

10 Thank you, Mr. Chairman. I yield back the balance of my
11 time.

12 Mr. Upton. The gentleman yields back.

13 The Chair now calls upon the chairman of the full committee,
14 Mr. Walden, for 5 minutes.

15 Mr. Walden. I thank the gentleman and acknowledge his
16 uniform today.

17 The 2017 hurricane season has been among the worst in recent
18 memory. Four major storms have wreaked havoc all over our Gulf
19 Coast and, more recently, in Puerto Rico and the Virgin Islands.
20 While fuel supplies and electricity have been restored on the
21 mainland, a humanitarian crisis continues to unfold in Puerto Rico
22 and the U.S. Virgin Islands, and I think you hear that from both
23 sides of the aisle here. This is a real, real serious situation

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 we all care deeply about.

2 As we often do following natural disasters, it is not
3 uncommon to see stories in the news about heroics and acts of
4 personal sacrifice and great kindness. We trust that our
5 policymakers can put aside their differences to do what is in the
6 best interest of the country. We have already passed initial
7 supplemental disaster relief funding this Congress, but we
8 understand that much more is needed, and we will continue to work
9 with the administration and our colleagues, so that our fellow
10 citizens can get the additional resources they need to recover
11 and to rebuild.

12 In this committee we roll up our sleeves and we search for
13 solutions to the various challenges that present themselves after
14 a major disaster. We want to make sure that the agencies under
15 our jurisdiction are well-prepared and that you all are responding
16 appropriately, both now and that we learn from lessons of bad
17 incidents and are ready and even better prepared for the next storm
18 or the next disaster.

19 If you are lacking certain authorities, let us know. We
20 would like to expedite recovery. We want to know about these
21 things, so that we can help fix them. We are all in this together.

22 We want to be practical and we want to be forward-thinking.
23 How can we help ensure the relevant federal response is

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 well-coordinated with state, local, and industry responders?
2 How do we ensure decisions are made to guarantee taxpayer funding
3 provides the maximum benefit for those in need and that taxpayers
4 aren't ripped off? If we need to rebuild, what can we do to make
5 our infrastructure more resilient?

6 Because of this committee's broad jurisdiction over public
7 health, emergency telecommunications, and the supply and delivery
8 of energy, we will be gathering facts, perspectives, and lessons
9 learned. We have already heard from witnesses on our Oversight
10 and Investigation Subcommittee hearing about HHS's public health
11 preparedness for and responses to the hurricanes. We will soon
12 examine the disaster response related to environmental hazards
13 and telecommunications as well.

14 But today we are focusing on emergency response and energy
15 infrastructure recovery, both for fuel supply and the electric
16 grid. This year we have already been confronted with several
17 different challenging situations, historic flooding in Houston,
18 possibly the greatest evacuation in Florida's history, an energy
19 crisis in Puerto Rico and the U.S. Virgin Islands that could leave
20 millions without power for estimated months to come.

21 We may take for granted how lucky we are that we can flip
22 a switch and the lights come on. For our citizens in Puerto Rico
23 and the U.S. Virgin Islands, however, almost every aspect of their

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 lives has been deeply disrupted. Hospitals without external
2 generators cannot serve their patients. Getting that power
3 restored is critical. Water treatment plants without power
4 threaten the health of individuals that rely on them for safe
5 water. And those who live in remote areas that do not have access
6 to fuel are cut off even from the most basic of necessities.

7 The witness panel today will provide important perspectives
8 about the state of current fuel and electric supply recovery
9 efforts, what worked, what could be done better under urgent
10 circumstances of the hurricanes, and what may be considered in
11 the future. I expect this will be an excellent hearing for us
12 to identify vulnerabilities and assess what is needed to better
13 prepare and respond to future storms and disasters.

14 And with that, I want to thank you for being here today. I
15 appreciate the testimony which you have already submitted that
16 I have, and thanks for the good work you and your teams are doing
17 out there. We really want to learn from you and be even better
18 prepared when the next disaster hits.

19 So, with that, Mr. Chairman, unless anybody else on our side
20 seeks the remaining minute, I would yield back.

21 Mr. Upton. I just might ask a question of the Vice Chair
22 of the committee. Are you intending to wear that jersey on the
23 House Floor when we take the picture of the full House this

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 afternoon?

2 Mr. Olson. Chairman, that is not an issue. I tried to wear
3 this about three weeks, and it was banned. So, this will not be
4 in the picture --

5 Mr. Upton. All right.

6 Mr. Olson. -- much to your disappointment, I can tell.

7 Mr. Upton. I just was curious because, then, we would always
8 be able to find you forever, right, in that picture?

9 [Laughter.]

10 Mr. Walden. Now, Mr. Chairman, I yield back the balance of
11 my time.

12 Mr. Upton. Yes, the gentleman yields back.

13 I recognize the ranking member of the full committee, Mr.
14 Pallone from New Jersey, for an opening statement.

15 Mr. Pallone. Thank you, Mr. Chairman, for convening today's
16 hearing reviewing the disastrous 2017 hurricane season which has
17 wreaked havoc on many parts of our country.

18 And I am grateful to former Senator Nieves of Puerto Rico
19 and Mr. Rhymer of the Virgin Islands for coming here today. I
20 guess they are on the second panel.

21 But I am disappointed that the committee did not even receive
22 a response to its outreach to the Puerto Rico Electric Power
23 Authority, or PREPA. I have serious concerns not only about how

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 PREPA has overseen the effort to restore power in Puerto Rico,
2 but also, more broadly, on how PREPA has managed or, more
3 accurately, mismanaged the grid in Puerto Rico over the years.

4 Now today we are focusing on the energy infrastructure
5 recovery efforts. I must say that accounts from the areas
6 affected by these storms paint a dire situation that completely
7 contradicts the often rosy stories that come from the White House.
8 The truth is that, taken together, Puerto Rico and the Virgin
9 Islands are currently experiencing the largest blackout in
10 American history, and this nightmare for our fellow citizens is
11 far from over.

12 The central question for us today should be, why is it taking
13 so long to restore power in Puerto Rico and the Virgin Islands,
14 and who is actually in charge of the effort to restore power to
15 Puerto Rico? No one person or entity seems to be in charge, and
16 it is fostering a chaotic and ineffective effort to restore power
17 on the island. And I want answers, and so do many of my colleagues
18 on both sides of the aisle.

19 I am also troubled by the maze of contracts with numerous
20 companies for overlapping missions, a patchwork that is failing
21 to turn the lights back on in Puerto Rico. And that needs to
22 change now. I am deeply concerned by the terms of the contract
23 PREPA signed with Whitefish and Cobra Acquisitions, which went

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 so far as to bar PREPA from holding the companies liable for
2 delayed completion of grid repair work or letting the government
3 audit their work. Now Governor Rossello has since taken steps
4 to have the Whitefish contract cancelled, but we need to learn
5 more about how these contracts are being awarded and whether the
6 bidding process is truly competitive. That is why Chairmen
7 Walden and Upton and Ranking Members Rush and I have requested
8 documents and a briefing from Whitefish, so we can learn more about
9 how that troubling agreement materialized.

10 Additionally, FEMA issued a statement that said it had no
11 involvement in the development of this contract. Well, my
12 question is, why not? The federal government should be engaged
13 in the contracting process of large-scale rebuilding contracts
14 for which U.S. taxpayers will ultimately foot the bill. The
15 federal government needs to step up and take charge to expedite
16 power restoration efforts. Missions like this are why we have
17 a strong federal government. And simply put, the Trump
18 administration needs to be doing more. If we can't get the power
19 turned back on soon, more people are going to die. This is a
20 humanitarian crisis, and our government owes it to the citizens
21 in these territories to do everything it can to fix it.

22 And while restoring power quickly is the most urgent concern,
23 it is also crucial that the grid in Puerto Rico and the U.S. Virgin

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Islands be rebuilt with more modern energy technology focused on
2 increased resiliency, energy efficiency, and renewable energy.
3 Replacing the old grid as it stood before the storm will cost
4 taxpayers more money and do nothing to make electricity in Puerto
5 Rico more reliable or affordable.

6 So, as Congress prepares the next emergency spending bill,
7 we must make changes to the current law to enable the rebuilding
8 to occur in a way that lays the groundwork for constructing a
9 modern electricity grid in the territories. Failing to invest
10 wisely in Puerto Rico now will only cost all taxpayers more down
11 the road. And we must consider innovative ways for turning around
12 Puerto Rico's situation, including alternatives to PREPA for
13 overseeing the rebuilding and operation of the grid, and all ideas
14 from privatization, which I am not really a fan of, but from
15 privatization to creation of a new Federal Power Marketing
16 Administration. All these things have to be up for discussion.
17 And whatever road we go down must have buy-in from the Puerto Rican
18 people and the government.

19 I don't know if anybody wants my minute that I still have.
20 If not, Mr. Chairman, I will yield back.

21 Mr. Upton. The gentleman yields back.

22 At this point we are ready for the testimony. Thank you in
23 advance or thank you for sending your testimony in advance. It

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 will be made part of the record. We would like each of you to
2 take no more than 5 minutes to summarize your testimony. At that
3 point when that is completed, we will be asking questions.

4 We are joined first by Patricia Hoffman, the Acting
5 Undersecretary for Science and Energy, Principal Deputy Assistant
6 Secretary for the Office of Electricity Delivery and Energy
7 Reliability, at the Department of Energy. Welcome. Thank you.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 STATEMENTS OF PATRICIA HOFFMAN, ACTING UNDERSECRETARY FOR SCIENCE
2 AND ENERGY, PRINCIPAL DEPUTY ASSISTANT SECRETARY FOR THE OFFICE
3 OF ELECTRICITY DELIVERY AND ENERGY RELIABILITY, U.S. DEPARTMENT
4 OF ENERGY; RAY ALEXANDER, DIRECTOR OF CONTINGENCY OPERATIONS,
5 U.S. ARMY CORPS OF ENGINEERS; DEANN WALKER, CHAIRMAN, PUBLIC
6 UTILITY COMMISSION OF TEXAS; ROBERT CORBIN, DEPUTY ASSISTANT
7 SECRETARY FOR THE OFFICE OF PETROLEUM RESERVES, U.S. DEPARTMENT
8 OF ENERGY, AND FRANK RUSCO, DIRECTOR, NATURAL RESOURCES AND
9 ENVIRONMENT, GOVERNMENT ACCOUNTABILITY OFFICE

10
11 STATEMENT OF PATRICIA HOFFMAN

12 Ms. Hoffman. Chairman Upton, Ranking Member Rush, and
13 distinguished members of the subcommittee, I appreciate the
14 opportunity today to discuss energy security and emergency
15 response issues related to the 2017 hurricane season.

16 The mission of the Office of Electricity Delivery and Energy
17 Reliability is to develop innovative, cutting-edge solutions to
18 ensure our nation's energy infrastructure remains reliable,
19 affordable, and resilient. In order to fulfill this mission, the
20 Department of Energy leverages the technical capabilities of
21 National Laboratories and partnerships with the key private
22 sector stakeholders to focus on early-stage research and
23 transformative projects.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Our organization is also the lead for providing
2 energy-related expertise to the Federal Energy Management Agency,
3 also known as FEMA, our interagency partners, and the
4 administration, as part of the Department of Energy's emergency
5 response activities. DOE serves as the lead organization for
6 Emergency Support Function 12 under the National Response
7 Framework and as the sector-specific agency for energy. As the
8 lead for ESF-12, DOE is responsible for providing information and
9 analysis about energy disruptions and to assist in facilitating
10 the restoration of damaged energy infrastructure.

11 During Hurricanes Harvey, Irma, Maria, Nate, we have worked
12 with industry and the federal, state, territorial, and local
13 partners to facilitate response and recovery. Overall, DOE has
14 received 18 mission assignments and has deployed more than 110
15 personnel to the response efforts. Each of these storms has
16 presented unique challenges to the energy sector.

17 With respect to Hurricane Harvey, we saw peak electricity
18 outages of about 300,000 customers in Texas and Louisiana. While
19 offshore and onshore, crude oil and natural gas productions were
20 disrupted by the storm, the greatest impacts were to the midstream
21 and downstream oil and refining sectors. At its peak, more than
22 4 million barrels per day of refining capacity, representing more
23 than 20 percent of the U.S. refining capacity, was offline. It

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 took several weeks for floodwaters to recede, but the refining
2 systems in Texas and Louisiana have resumed normal operations.
3 In addition, flooding closed two key injection points along the
4 Colonial Pipeline, forcing the system to operate intermittently
5 at reduced rates for several weeks before normal service was
6 resumed.

7 Hurricane Irma, the second category 4 hurricane to make
8 landfall in the United States this year, caused approximately 8
9 million electric customer outages from the Caribbean to the
10 southeastern United States. At Irma's peak on September 11th,
11 there were approximately 7.8 million customer outages in Florida.
12 Three days later, on September 14th, power had restored to
13 approximately 5 million customers, 64 percent of those customers.
14 And five days later, restoration was at 98 percent.

15 DOE is also playing a significant role in supporting the
16 restoration and recovery efforts in the U.S. Virgin Islands and
17 Puerto Rico from Hurricane Maria. In Puerto Rico, the U.S. Army
18 Corps does have the primary role in emergency restoration and
19 rebuilding the infrastructure, but DOE has deployed personnel and
20 equipment from the Western Power Area Administration to provide
21 mutual assistance through a mission assignment from FEMA and is
22 working to facilitate additional mutual assistance with industry.

23 Days after Bruce Walker was confirmed as the Department of

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Energy's new Assistant Secretary for the Office of Electricity
2 Delivery and Energy Reliability, he was on the ground in Puerto
3 Rico assisting other DOE personnel in coordination with the
4 governor, PREPA, FEMA, and the Army Corps of Engineers.
5 Recently, the governor and PREPA have requested additional line
6 workers and equipment necessary for the restoration of power.

7 Secretary Perry and our DOE team look forward to a thoughtful
8 conversation focused on our response and recovery efforts for this
9 hurricane season, and a focus on reliability, affordability, and
10 resilience of the electricity system from hurricanes as well as
11 other extreme weather events.

12 I would like to take a moment and thank the hard utility
13 workers for their time and their efforts in responding to the
14 hurricane season. But, like any event, there is always some hard
15 lessons learned, and we look forward to improving our efforts.

16 So, thank you, and I look forward to your questions.

17 [The prepared statement of Ms. Hoffman follows:]
18

19 ***** INSERT 2*****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Upton. Thank you very much.

2 Next, we're joined by Ray Alexander, the Director of
3 Contingency Operations for the Corps of Engineers.

4 Welcome.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 STATEMENT OF RAY ALEXANDER

2
3 Mr. Alexander. Chairman Upton, Ranking Member Rush, and
4 members of the subcommittee, my name is Ray Alexander, Director
5 of Contingency Operations, the U.S. Army Corps of Engineers.
6 Thank you for the opportunity to testify today.

7 The Corps conducts emergency response activities under two
8 basic authorities, the Stafford Act and Public Law 84-99. Under
9 the Stafford Act, we support FEMA under the National Response
10 Framework as the lead federal agency for Emergency Support
11 Function 3, public works and engineering. ESF-3 provides
12 temporary emergency power, roofing, and housing, debris
13 management, infrastructure assessment, and critical public
14 facility restoration.

15 Under Public Law 84-99, we prepare for disasters through
16 planning, coordination, and training with local, state, and
17 federal partners. We assist state and local entities to
18 implement advanced measures that prevent or reduce storm event
19 damages. We repair damage to authorized federal projects and
20 work with states and municipalities to rehabilitate and restore
21 eligible non-federal flood infrastructure to pre-storm
22 conditions.

23 When disasters occur, core teams and resources are mobilized

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 from across the command to assist local offices with their
2 response to the event. As part of this mission, the Corps has
3 more than 50 specially-trained teams supported by emergency
4 contracts that perform the wide range of support missions I just
5 described. These contracts are pre-awarded and can be quickly
6 activated to execute many of these missions.

7 This year the Corps has supported FEMA-led federal response
8 and recovery operations in multiple events, including Hurricanes
9 Harvey, Irma, and Maria. FEMA directed 37 mission assignments
10 to the Corps for Hurricane Harvey. Currently, the Corps has 195
11 employees deployed. The Corps assisted in temporary emergency
12 power and continues to support the state of Texas in the
13 development and implementation of a temporary housing project
14 management plan. Debris teams led by subject matter experts
15 continue provide state and municipalities the technical
16 assistance to define requirements and monitor debris removal and
17 disposal operations in 15 counties.

18 FEMA directed 81 mission assignments to the Corps for
19 Hurricanes Irma and Maria. Currently, the Corps has over 1500
20 personnel deployed. As of this morning, the Corps has completed
21 over 1,000 assessments and over 500 temporary generator
22 installations in the Caribbean. This includes 250 assessments
23 and 150 installations in the U.S. Virgin Islands and over 750

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 assessments and 400 installations in Puerto Rico. Under FEMA
2 authority, we are assisting Puerto Rico with the operation and
3 maintenance of critical non-federal generators across the island
4 as well.

5 The Corps has completed over 14,000 temporary roofing
6 installations in Florida and is on track to complete that mission
7 by 4 November. We have also completed over 7,000 temporary
8 roofing installations in the Caribbean, including over 2500 in
9 the U.S. Virgin Islands and 4700 in Puerto Rico. Roofing
10 requirements have been extensive, requiring additional material
11 and construction support, which initially slowed progress. We
12 have adjusted. We have added additional capacity, and we are
13 seeing daily improvements.

14 Corps debris subject matter experts provided technical
15 assistance to counties across Florida and Georgia in response to
16 Hurricane Irma, and continue to provide oversight to five regions
17 within the Florida Department of Emergency Management. The Corps
18 is working to remove an estimated 1 million cubic yards of debris
19 in the U.S. Virgin Islands and over 6 million cubic yards in Puerto
20 Rico.

21 The Corps works closely with the U.S. Coast Guard and the
22 National Oceanic and Atmospheric Administration and local
23 authorities to open harbors and navigation channels across all

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 affected areas, critical to restoring commerce and the flow of
2 commodities, and essential equipment to reach affected
3 communities.

4 The Corps worked closely with officials of Texas and Florida
5 to manage local flood control reservoirs during a period of
6 unprecedented rainfall. In Puerto Rico, Corps dam and levy teams
7 inspected 17 priority dams and worked closely with the Puerto Rico
8 Electrical Power Authority, PREPA, to stabilize a spillway
9 feature, the Guajataca Dam. Additionally, the Corps cleared
10 existing outflow conduits and placed emergency pumps to further
11 reduce water levels in the dam that restore flow to a critical
12 treatment plant that supports the needs of over 30,000 people.

13 On September 30th, the Corps received a FEMA mission
14 assignment under Stafford Act authority to assist PREPA in
15 conducting emergency repairs to the power grid itself. We are
16 partnering with PREPA. We have established a general officer,
17 senior-executive-led task force to oversee work and provide
18 technical assistance.

19 The Department of Energy has embedded experts in our team
20 and continues to assist in our efforts. Within two weeks of
21 receiving this mission assignment, we awarded contracts for
22 large-scale temporary power generation to stabilize the grid in
23 San Juan and for additional line repair assets that will assist

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 ongoing efforts by PREPA.

2 The Corps remains fully committed and capable of executing
3 other civil works activities across the nation, despite our heavy
4 involvement in these ongoing response and recovery operations.
5 We also remain ready and poised to assist in future events, should
6 they occur.

7 This concludes my testimony, and I look forward to answering
8 any questions you may have. Thank you.

9 [The prepared statement of Mr. Alexander follows:]

10
11 ***** INSERT 3*****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Upton. Thank you very much.

2 Next is DeAnn Walker, the Chair of the Public Utility
3 Commission for Texas. You have got to be a happy woman today as
4 well with the Astros.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 STATEMENT OF DEANN WALKER

2
3 Ms. Walker. Yes. Thank you very much for your invitation
4 to appear here today.

5 My name is DeAnn Walker. I am the Chairman of the Public
6 Utility Commission of Texas. I have happily held that seat since
7 September 20th. So, I am new to this.

8 I believe I have a unique perspective on restoration from
9 hurricanes. The State Operations Center in Texas creates what
10 they call a Tiger Team of utility personnel that is located within
11 the State Operations Center to help with restoration, to
12 coordinate with federal/state officials throughout an event. I
13 have now served three hurricanes in the State Operations Center.
14 Hurricane Rita and Hurricane Ike, I was actually representing a
15 utility in the State Operations Center. During Hurricane Harvey,
16 I was working for Governor Abbott and was down in the State
17 Operations Center working with the utilities to restore service.

18 We believe that the electric industry and the infrastructure
19 in Texas fared very well during Hurricane Harvey compared to past
20 hurricanes. As has been stated, we had under 350,000 at any one
21 time. We had more than that, but the utilities were continually
22 restoring service during that time. The longest we had any
23 customers out was for two weeks, and that was in the Rockport area,

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 which was the direct hit of the eye of Hurricane Harvey. So, it
2 took the brunt of it. During a storm, the PUC, as I said, works
3 with state, federal, and local agencies to restore power.

4 I wanted to focus the rest of my time on what we are taking
5 as action items to better prepare for a new hurricane. Due to
6 the amount of flooding that we had, some cities and towns, areas
7 received 60 inches of rain throughout Hurricane Harvey. Many
8 substations in our area flooded for the first time ever. So, we
9 are looking at, and we moved in for the first time ever, mobile
10 substations to help serve those customers. We are looking at
11 whether or not it is prudent for the state as a whole, all of the
12 utilities to get together and purchase these mobile substations
13 to have on hand in such an event. We are also working with the
14 utilities to elevate those substations when they rebuild them,
15 so that we are taking care of hardening the system in the process
16 of rebuilding.

17 I have also asked the state to look at whether or not we can
18 better utilize utilities within Texas to send equipment and
19 personnel. We were drawing people from all over the United States
20 under mutual assistance crews, which we greatly appreciate, but
21 I would like us to look and see if we can rely on the Texans that
22 we have. SPS in the Panhandle and El Paso in far west Texas never
23 were called on to help, and obviously, they were closer than a

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 lot of places.

2 We have been working through the process with FEMA for how
3 to interconnect their temporary housing, so that we could have
4 one seamless process for all utilities to implement. We are
5 trying to do that on the fly. I would like us to further address
6 that process in the meantime before the next storm hits us.

7 We also learned that not every utility is reporting outages
8 consistently. In Texas we require that all utilities report
9 outages to us and to DOE on a county- and ZIP-code-wide basis,
10 but there is not consistency between the utilities on how that
11 was being done. For instance, some of the flooded substations,
12 once they had a plan to bring in the mobile substation, they took
13 those outages and moved them to planned outages. So, they were
14 no longer showing up as being impacted by the hurricane. I don't
15 think that is an accurate representation. So, I have asked to
16 look at that.

17 There are many other things that we have started looking at
18 to correct and to, hopefully, do better. I am running out of time.
19 I wanted to, again, thank you for your time today.

20 [The prepared statement of Ms. Walker follows:]

21
22 ***** INSERT 4*****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Upton. Thank you.

2 Next, we are joined by Robert Corbin, Deputy Assistant
3 Secretary for the Office of Petroleum Reserves, the U.S.
4 Department of Energy.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 STATEMENT OF ROBERT CORBIN

2
3 Mr. Corbin. Chairman Upton, Ranking Member Rush, and
4 distinguished members of the subcommittee, it is an honor to
5 appear before you today to discuss the Strategic Petroleum
6 Reserve.

7 The Strategic Petroleum Reserve, or SPR, was established
8 under the authority of the Energy Policy and Conservation Act in
9 December 1975. At that time U.S. oil production was in decline,
10 oil price and allocation controls separated the U.S. oil market
11 from the rest of the world, and the global commodity market for
12 oil as we know it now did not exist.

13 Today the global oil market has changed the environment in
14 which the SPR operates. Although domestic oil production has
15 increased dramatically in recent years, the global oil market is
16 the largest commodity market in the world, making U.S. consumers
17 subject to global commodity price fluctuations. Regardless of
18 U.S. oil import levels, a severe global oil supply disruption
19 today would impact domestic petroleum product prices.

20 In the event of a serious international oil supply
21 disruption, offsetting disrupted supplies with SPR crude oil in
22 concert with other countries that hold strategic oil stocks can
23 help reduce an increase in international oil prices and the

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 resulting adverse economic impacts that could otherwise occur.

2 The SPR maintains and operates four major oil storage sites,
3 two in Texas and two in Louisiana. The SPR's current crude oil
4 inventory is approximately 670 million barrels stored in 60
5 underground salt caverns with a design capacity of 713.5 million
6 barrels. The SPR is designed to provide the capability to draw
7 down and deliver crude oil from the storage sites to designated
8 distribution points, a design drawdown rate of 4.415 million
9 barrels per day. The SPR can physically begin to draw down crude
10 oil in as little as two days of notification, and taking into
11 account the time required to meet sales requirements and draw down
12 and deliver crude oil within 13 days of a presidential finding.
13 SPR operating costs are less than 25 cents per barrel of design
14 capacity per year, the lowest reported cost among oil
15 stock-holding nations.

16 As a member of the International Energy Agency, or IEA, the
17 U.S. has two primary oil stock-holding obligations. As a net oil
18 importer, the U.S. must maintain oil stock-holding inventories
19 equal to at least 90 days of net petroleum imports. As of June
20 30th, 2017, the U.S. held 149 days of net petroleum imports.

21 The U.S. must also be able to contribute a proportionate
22 share to an IEA collective action in response to an oil supply
23 disruption, based on its percentage share of IEA oil consumption.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 As of June 30th, 2017, the U.S. must contribute 43.2 percent of
2 all barrels released during any IEA collective action.

3 As global oil trade increases, the potential role of the SPR
4 to help mitigate global supply disruptions expands, regardless
5 of the level of U.S. net oil imports. Without the ability to
6 replace disrupted oil supplies in the global market, global oil
7 prices could increase significantly and the U.S. and global
8 economy could be harmed.

9 SPR infrastructure has performed capability to ensure the
10 SPR has been able to respond to every emergency release situation
11 presented throughout its history. However, SPR facilities are
12 aging. A significant amount of infrastructure components are at
13 or beyond their design life, and equipment will be further
14 stressed due to nine consecutive years of
15 congressionally-mandated crude oil sales.

16 Congress, recognizing the need to modernize SPR
17 infrastructure, included provisions in the Bipartisan Budget Act
18 of 2015 to address this concern by authorizing the drawdown and
19 sale of up to \$2 billion worth of SPR crude oil over a four-year
20 period to carry out an SPR modernization program. In response,
21 the SPR has initiated a major capital asset acquisition project
22 to modernize aging SPR infrastructure for systems upgrades and
23 equipment replacement to ensure the SPR can meet mission

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 requirements for the next several decades.

2 Hurricane Harvey severely impacted U.S. Gulf Coast crude oil
3 infrastructure, closing refineries, ports, and supply pipelines.
4 Many impacted refiners were operable following the passage of
5 Harvey, but in some cases were unable to secure crude oil feedstock
6 to recommence or continue operations, resulting in multiple
7 requests for emergency exchanges of SPR crude oil. After
8 assessing prevailing supply conditions and consulting with other
9 federal agencies regarding the status of crude oil
10 infrastructure, the SPR received approval from the Secretary of
11 Energy to execute six emergency exchange agreements. First
12 deliveries of crude oil were provided on August 30th, just two
13 days after the initial request was received. Deliveries to the
14 remaining companies also commenced within days after those
15 requests were received and continued until deliveries totaling
16 5 million barrels were completed on September 28th. These
17 emergency exchanges helped alleviate the loss of crude oil supply,
18 allowing the affected refiners to begin and/or continue
19 operations that otherwise would have been halted due to the
20 impacts of Hurricane Harvey.

21 This concludes my statement. Thank you for the opportunity
22 to speak with you today about the SPR, and I look forward to
23 answering any of your questions.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee’s website as soon as it is available.

1 [The prepared statement of Mr. Corbin follows:]

2 ***** INSERT 5*****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Upton. Thank you very much.

2 Lastly, on the first panel we are joined by Frank Rusco,
3 Director of the Natural Resources and Environment from the GAO.
4 Welcome.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 STATEMENT OF FRANCO RUSCO

2
3 Mr. Rusco. Chairman Upton, Ranking Member Rush, and members
4 of the subcommittee, thank you for the opportunity to discuss our
5 past and ongoing work on energy resilience and particularly the
6 effectiveness of the Strategic Petroleum Reserve in responding
7 to domestic petroleum supply disruptions caused by extreme
8 weather and other events.

9 The SPR was created at a time when global oil supply was
10 dominated by OPEC and oil markets were characterized by long-term
11 contracts with fixed prices. At that time a global oil supply
12 disruption, as occurred during the Arab oil embargo, had the
13 effect of physical oil shortages and in the United States and
14 elsewhere long lines at the gas pump. It made sense at the time
15 for the SPR to be comprised of crude oil centrally held in cheap
16 salt dome storage in Louisiana and Texas, near the nation's
17 largest refining centers.

18 Today global oil markets are robust, and prices change to
19 accommodate supply and demand, so that physical shortages and long
20 lines are less of an issue. In addition, the use of the SPR has
21 been primarily in response to domestic supply disruptions,
22 particularly those caused by extreme weather events, rather than
23 global supply shortages. My remarks will focus on how well the

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 SPR is able to respond to these domestic supply disruptions.

2 The SPR has been partially successful in responding to
3 domestic supply disruptions in instances when Gulf Coast
4 refineries and pipelines are operational but crude oil supplies
5 to these refineries have been disrupted. For example, this year
6 following Hurricane Harvey the SPR was able to supply several
7 refineries with crude oil by pipeline while shipping ports were
8 closed.

9 However, the SPR has been less effective in responding to
10 reductions in petroleum products in the rest of the country, as
11 has occurred multiple times when hurricanes have shut down
12 refineries or shut down power to other petroleum infrastructure.
13 In this latter cases, including following Hurricane Harvey when
14 as much as 34 percent of the Gulf Coast refining capacity was shut
15 in, the real supply problem was gasoline, diesel, and jet fuel,
16 and the SPR has only a small reserve of gasoline in the Northeast
17 and no other petroleum product reserves. As a result, the SPR
18 cannot provide needed petroleum products to Florida, the Eastern
19 Seaboard, and other regions typically supplied by Gulf Coast
20 refiners.

21 DOE has recognize the desirability of having regional
22 reserves of petroleum products. For example, in 2014, DOE
23 identified five regions that are vulnerable to petroleum product

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 supply disruptions. These include the West Coast, which is
2 vulnerable to earthquakes and tsunamis, parts of six Midwestern
3 states vulnerable to earthquakes, a number of states vulnerable
4 to extreme cold weather, and the entire coast from Texas up to
5 Massachusetts that is vulnerable to hurricanes.

6 With the exception of the small gasoline reserves held in
7 the Northeast, there are no other petroleum product reserves held
8 by the SPR in any of these vulnerable regions. Further, while
9 DOE has recognized these vulnerabilities and conducted some
10 studies of alternatives to the current composition and
11 configuration of strategic reserves, it has not completed these
12 studies. As a result, DOE cannot determine the efficacy of
13 creating regional petroleum product reserves.

14 In contrast to how the SPR is configured, most other
15 countries with strategic reserves have chosen to hold significant
16 quantities of petroleum products in addition to crude oil, and
17 some have chosen to spread these reserves out across their
18 countries to be closer to centers of demand. For example, Germany
19 chooses to hold about 55 percent of its strategic stocks as
20 petroleum products. France spreads its reserves across seven
21 geographic zones that enable it to distribute petroleum products
22 to distribution networks all over the country.

23 The United States has benefitted from European strategic

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 stocks of petroleum products during past hurricane damage to Gulf
2 Coast refining and production infrastructure. For example, in
3 response to Hurricane Katrina in 2005, as prices of gasoline rose
4 across the United States, shipments of gasoline from Europe began
5 arriving on the East Coast within days. This mitigated the
6 economic effects of the hurricane-caused refinery and oil
7 production shutdowns.

8 As DOE undertakes a modernization program of its existing
9 systems, this committee and others have requested that we
10 undertake an evaluation of the SPR, its size, composition,
11 location of reserves, and options for improving its
12 effectiveness. We will report our findings in the next few
13 months.

14 Thank you. This concludes my oral remarks. I will be happy
15 to answer any questions you may have.

16 [The prepared statement of Mr. Rusco follows:]

17
18 ***** INSERT 6*****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Upton. Well, thank you all. At this point we will move
2 to questions from the dais.

3 Mr. Alexander, you said in your testimony that the Corps is
4 overseeing the work that is done by PREPA in Puerto Rico. I would
5 like to ask the question, how has that gone? Because this
6 subcommittee has tried to contact PREPA both by email and phone.
7 They are not answering. There is not heartbeat that we are
8 getting back. So, how has that oversight gone?

9 Mr. Alexander. Sir, perhaps I misstated. We have a task
10 force -- again, general officer, senior-executive-led -- that is
11 overseeing our mission to restore the grid, as assigned by FEMA.
12 What we are doing with PREPA, though, is we are working in
13 coordination and collaboration with them, so that we can have
14 well-defined, focused areas of operation. So, we are not working
15 in each other's area and we ensure that there are no gaps. We
16 are only working with PREPA; we are not working for PREPA, but
17 we are working in coordination with PREPA.

18 The oversight of the Corps' mission assignment we believe
19 is going well. Again, we were assigned this mission on 30
20 September. Within 18 days, we were able to award three major
21 contracts, one for temporary power generation, 230-megawatt power
22 plants to put in the vicinity, the Palo Seco Power Plant near San
23 Juan, and restore the power grid around San Juan. Those

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 generators have arrived. They have been installed, and we have
2 additional load on the grid in the greater San Juan area as of
3 several days ago.

4 The other two contracts focused on line repair, transmission
5 distribution/line repair. A larger contract to Fluor, a \$240
6 million contract. They have boots on the ground today. They are
7 conducting assessments. They are starting to have crews
8 arriving. I believe, as I said in my testimony, we are ramping
9 up quickly, 620 by the end of this weekend, and that number will
10 double by mid-November.

11 And then, we also have a company named PowerSecure. They
12 are fully engaged and will be. They, too, have assessment teams
13 on the ground. Their equipment is actually en route by sea now
14 on a MARAD, Ready Reserve Fleet vessel that should arrive at Ponce
15 port on 3 November.

16 Mr. Upton. Did the Corps have any advance knowledge of
17 working with PREPA prior to the contract that they established
18 with Whitefish and Cobra? Were you aware of that contract before
19 it was signed?

20 Mr. Alexander. No, sir, we were not. We were engaged in
21 our temporary power mission under the Stafford Act, and we have
22 been working that since the 6th of September. The news that PREPA
23 had independently committed in a contract to another company, we

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 were not consulted; we were not aware.

2 Mr. Upton. You indicated in your written testimony that the
3 temporary housing plan includes establishing -- this is as it
4 relates to Texas -- 20,000 travel trailers and 4,000 mobile
5 housing units. I presume that most of those are for folks that
6 were actually displaced, homeowners or families that were
7 displaced. Do you know what that number is for Puerto Rico? It's
8 20,000 for Texas. Do you know what the number would be for Puerto
9 Rico?

10 Mr. Alexander. No, I do not, sir.

11 Mr. Upton. Ms. Hoffman, I have met with a number of
12 pharmaceutical/medical device companies, many with very large
13 operations in Puerto Rico. We are all aware of the critical need
14 to get those facilities back online. It is a public health
15 priority because it is so critical for patients to ensure that
16 their products that are being manufactured there don't go into
17 a shortage. How are you incorporating medical manufacturing in
18 an approach to restore the grid in Puerto Rico?

19 Ms. Hoffman. So, thank you.

20 Critical infrastructure, critical loads on an electric
21 system is very important, utilities. In our conversation with
22 the utilities, with FEMA and the interagency partners, we
23 discussed what are some of those priority restoration efforts and

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 helping with the communications, so that we understand where some
2 of those needs are and where some of the activities should be with
3 respect to restoration processes. So, those coordinations occur
4 with FEMA and with the local utilities in the territory itself.

5 Mr. Upton. Okay. Thank you. My time has expired.

6 I recognize the ranking member of the subcommittee, Mr. Rush,
7 for 5 minutes.

8 Mr. Rush. I want to thank you, Mr. Chairman.

9 Mr. Alexander, I am kind of curious, not "kind", I am very
10 curious about your Army Corps of Engineers' lack of information
11 about this Whitefish contract. You, the Army Corps of Engineers,
12 were unaware of this contract, is that correct?

13 Mr. Alexander. Yes, sir.

14 Mr. Rush. The governor says he was unaware of this contract.

15 Mr. Alexander. I'm sorry, sir, did you say --

16 Mr. Rush. The governor of Puerto Rico has stated publicly
17 that he was unaware of this contract.

18 Mr. Alexander. The governor of Puerto Rico said he was
19 unaware?

20 Mr. Rush. Right.

21 Mr. Alexander. Sir, I am not privy to that. I do not know.

22 Mr. Rush. Are you aware that this contract is being
23 cancelled or has been cancelled?

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Alexander. Sir, I understand that the governor has
2 given the direction to terminate that contract. Whitefish and
3 other contractors, they are completing the task, the last task
4 they have been assigned. So, they are still working on the
5 island.

6 Mr. Rush. Do you have any information about who executed
7 that contract?

8 Mr. Alexander. No, I do not.

9 Mr. Rush. Do you trust PREPA? Do you trust them?

10 Mr. Alexander. Sir, I have no reason not to. Again, we are
11 working in collaboration with them on restoring the power.

12 Mr. Rush. Do you have any estimate in terms of how much
13 additional dollars the cancellation of this contract will cost
14 the American people?

15 Mr. Alexander. No, I do not.

16 Mr. Rush. All right. Secretary Hoffman, the economic
17 consulting firm Rhodium Group concluded that Maria cost 1.25
18 billion hours of electricity supply disruption to households,
19 which they say is the longest disruption in recorded history. Do
20 you concur with their finding?

21 Ms. Hoffman. I will have to look at the information, but
22 it is a significant duration for outage for Puerto Rico.

23 Mr. Rush. And what is the best estimate on when power will

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 be fully restored to both the U.S. Virgin Islands and Puerto Rico?

2 Ms. Hoffman. So, that is information that the governor as
3 well as PREPA is looking at, as well as partnerships with the Army
4 Corps of Engineers, on the supplies that are needed, the resources
5 that are required for restoring power. Some initial indications
6 are that for, I would say 50 percent -- I believe the Army Corps
7 has estimated that 50 percent of the island will be restored by
8 the end of December, and that the significant portion of the
9 restoration will occur later on.

10 Mr. Rush. Mr. Alexander, can you give us some insight on
11 your opinions about the timeline, the estimated timeline? There
12 might be some others on the panel that might also have some idea
13 about the estimated timeline for Puerto Rico and, also, the U.S.
14 Virgin Islands.

15 Mr. Alexander. Sir, as for Puerto Rico, we estimated 30
16 percent of the pre-storm load on the grid would be restored by
17 30 October. We did achieve that metric on time before the 30th.
18 I believe we are up over 31-32 percent today. Our estimate is
19 50 percent pre-storm load restored by 30 November. And then, as
20 we go on into the new year, we are estimating 75 percent by 31
21 January.

22 Mr. Rush. Anyone else want to add?

23 [No response.]

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 All right. Mr. Alexander, is the Corps currently involved
2 in discussions with PREPA, or any other government entity in
3 Puerto Rico, to ensure that when the grid is repaired, it will
4 meet construction -- it will be a way to account some of the lessons
5 learned from this ongoing catastrophe for the American taxpayers'
6 dollars are not being wasted?

7 Mr. Alexander. Sir, we are focused on executing the mission
8 we have been assigned, which is the restoration of the grid to
9 pre-storm conditions, the load, and we are coordinating with PREPA
10 as we do that. We actually, though, are working with the
11 Department of Energy on what a more resilient grid might look like,
12 as they lead the effort to develop recommendations and cost
13 estimates. But, for now, we are executing our mission under the
14 Stafford Act, which does not allow for any permanent construction
15 or enhancement of the existing grid.

16 Mr. Rush. I yield back, Mr. Chairman.

17 Mr. Upton. The Chair will recognize the Vice Chair of the
18 subcommittee, the gentleman from Houston, Texas, Mr. Olson.

19 Mr. Olson. I thank the Chair.

20 And welcome to all five witnesses. A special pony up to the
21 new Chairwoman of the PUC of Texas, Ms. DeAnn Walker. My daughter
22 Kate is a junior at SMU, your alma mater, and she loves it.

23 My first two questions are for you, Mr. Alexander, one about

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Harvey and one about Irma. First of all, Harvey. As you know,
2 sir, I live in Fort Bend County, Texas. When Fort Bend floods,
3 it floods. We have had four major floods in the past three years.
4 Our drainage district works hard 24/7, 365, to make sure our
5 drainage ditches are maintained. After the first major flood in
6 2015, the Army Corps told our drainage district they need a Section
7 404 permit under the Clean Water Act to maintain the ditches. The
8 maintenance of a drainage ditch is supposed to be exempt from the
9 permitting process under Section 404. But the Corps disputed the
10 exemption and referred the district to the EPA. The EPA agreed
11 it is maintenance work and the county should be good to go. But
12 here we are, two years and four floods later, with Fort Bend County
13 still unable to fix this critical problem. And now, Harvey has
14 made a bad problem much, much worse.

15 These repairs can't wait. Texas and Fort Bend need to
16 rebuild after Hurricane Harvey. Things are being made worse with
17 erosion and piles of silt. We don't need red tape at the Corps
18 hindering the maintenance project that should be exempt under
19 Section 404(f)(1)(C) of the Clean Water Act.

20 My question is, will you guarantee me that your office will
21 work with my staff and local Fort Bend County officials, under
22 Judge Bob Hebert, to get this fixed ASAP, so Texans can protect
23 their livelihoods?

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Alexander. Sir, thank you. I acknowledge your
2 concerns. I am generally aware of this issue in Fort Bend. While
3 I do not have all the specific details here with me today, I can
4 assure you and can guarantee you that the Corps remains committed
5 to working with our partners and your office to resolve this issue.

6 Mr. Olson. Great. ASAP, please.

7 The next question about Hurricane Irma that follows up on
8 comments and questions from my colleague from Illinois, Mr. Rush.
9 Sir, have you ever talked to someone on the ground in PREPA? Have
10 you, yourself, talked to someone on the ground PREPA about the
11 situation in Puerto Rico?

12 Mr. Alexander. No, sir, I have not.

13 Mr. Olson. Wow, have not. Okay.

14 The second round of questions is for you, Ms. Walker. First
15 of all, I want to thank you for your service to our state. I
16 appreciate your work in guiding us through Harvey. And I know
17 Drew Vincentchild at the PUC. You have been our PUC Chair for
18 41 rather intense days, I do believe. And as you know, for a city
19 like Houston, I want you to talk about how Harvey as being a storm
20 event with heavy rain as opposed to wind and storm surge, and how
21 does that change the impacts you have to address? And what was
22 the biggest surprise you had to recovery? Can we help with that
23 surprise to mitigate that, either D.C. or NGOs? How can we

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 address your concerns/surprises after Hurricane Harvey with our
2 grid there in Fort Bend County, Texas?

3 Ms. Walker. Well, as you noted, wind damage is very
4 different than flooding damage, and Houston did have the flooding
5 damage during this hurricane. The biggest surprise was the
6 amount of rain. There was substations such as Memorial
7 substation that took on water that had never taken on water in
8 the 50 years that it had been there. And so, we were having to
9 come up during the storm with ways to address all of the flooding,
10 moving crews. Frankly, they were using aquatic equipment that
11 they had never used before to get to things because of the
12 flooding.

13 Houston, also, downtown experienced heavy flooding. I
14 believe I heard that 83 of the downtown buildings lost power, and
15 I think some still are without power. Luckily the medical center
16 did not. We have reinforced the medical center time and time
17 again since Hurricane Allison. It wasn't a hurricane, but since
18 Allison.

19 And so, I am not sure of anything that you all can pass here
20 that would help us. We continue to learn from each storm. Each
21 storm is different. Hurricane Ike was a wind event. It took,
22 out of 2.2 million, it took out 2 million. It was a much different
23 storm.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Olson. Again, being a Member who lives in the area, I
2 have to thank you so much because, when Harvey hit my house twice
3 in two days, we never ever, ever lost power. So, thank you for
4 that.

5 I yield back.

6 Ms. Walker. Thank you.

7 Mr. Upton. The Chair recognizes the ranking member of the
8 full committee, Mr. Pallone.

9 Mr. Pallone. Thank you, Mr. Chairman.

10 Obviously, in addressing the panel, I have to say it, express
11 my concern that the federal response so far is nowhere near where
12 it needs to be. Reports indicate nearly 70 percent of Americans
13 on the island are without electricity. The New York Times
14 recently described the situation of Puerto Rico, quote, "like
15 going back in time". Most of my questions are of Mr. Alexander
16 and the Corps.

17 Mr. Alexander, who is in charge of the effort to restore power
18 in Puerto Rico and the Virgin Islands? Is it the Army Corps or
19 another agency?

20 Mr. Alexander. Sir, again, our mission, assignment from
21 FEMA, is to restore the grid to pre-storm condition in
22 coordination/collaboration with PREPA.

23 Mr. Pallone. That is fine. I just wanted to get --

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Alexander. Okay.

2 Mr. Pallone. You answered my question.

3 Is there a strategic plan for these federal restoration
4 efforts?

5 Mr. Alexander. Sir, if you look at strategic beyond the
6 pre-storm restoration, that is being looked at by Energy and other
7 departments and the interagency --

8 Mr. Pallone. So, the DOE is more responsible for a long-term
9 plan, is that what you are saying?

10 Mr. Alexander. For full, permanent grid restoration
11 enhancement, yes, sir.

12 Mr. Pallone. And you are more involved in trying to get
13 things up and going?

14 Mr. Alexander. Sir, we are involved in trying to restore
15 the grid in different sectors as expeditiously as possible with
16 concentration initially on San Juan and, then, out to seven larger
17 municipalities on the island, and then, finally, preparing and
18 transitioning to PREPA for permanent service.

19 Mr. Pallone. All right. Now how many companies -- yes, I
20 understand the Corps has several contracts with private companies
21 for restoration work -- how many companies has the Corps
22 contracted with to perform the grid-rebuilding work in Puerto
23 Rico?

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Alexander. Sir, we have contracted with three
2 companies.

3 Mr. Pallone. And will the Army Corps provide the committee
4 with copies of those contracts, so that we can get an understanding
5 of their scope? Would you be willing to do that through the
6 chairman?

7 Mr. Alexander. Sir, I will have to speak to our contracting
8 authority and see what is permissible because it is
9 acquisition-sensitive material.

10 Mr. Pallone. All right. If you can, we would appreciate
11 it. I know I am acting through the chairman in asking you for
12 it.

13 We have heard varying reports as to how long it will take
14 to restore power to the citizens of Puerto Rico. By some
15 accounts, it will be many more months until power is fully
16 restored. So, Mr. Alexander, when did the Army Corps receive its
17 mission to repair Puerto Rico's grid from FEMA?

18 Mr. Alexander. On 30 September.

19 Mr. Pallone. And Hurricane Maria made landfall in Puerto
20 Rico on September 20th. Do you know why it took FEMA 10 days to
21 give the Army Corps its mission?

22 Mr. Alexander. Sir, we were not involved in deliberation.
23 We were executing our temporary emergency power at that time.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Pallone. All right. Just on that issue, does the Army
2 Corps mission assignment provide -- well, I guess you did answer
3 that. You basically said, if I understood, that the short-term
4 repairs in San Juan and these other areas is under your
5 jurisdiction, but the long-term and fully reconstruction of a more
6 efficient and resilient grid, that would be more DOE, correct?

7 Mr. Alexander. Yes, sir.

8 Mr. Pallone. All right. So, then, let me turn to Ms.
9 Hoffman, to the DOE witness. If the Army Corps is not responsible
10 for making long-term improvements, is the DOE taking the lead on
11 this effort?

12 Ms. Hoffman. So, the Department of Energy is looking at
13 strategies for long-term improvements with respect to
14 strengthening the grid. So, ideas such as energy storage,
15 microgrids or minigrids, options for rerouting power, better
16 situational awareness, all those activities are activities that
17 we are looking at. But, once again, the actual financing and
18 implementation is the responsibility of the utilities or the
19 governance structure that will be decided for Puerto Rico.

20 Mr. Pallone. But you stated in your testimony that DOE is
21 leveraging the National Labs to develop long-term solutions to
22 improve resiliency. What is the status of that effort?

23 Ms. Hoffman. So, the National laboratories, we have been

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 in active discussion with the Grid Modernization Lab Consortium
2 in looking at areas such as planning activities, situational
3 awareness, looking at analysis-type activities, as well as
4 hardening activities. What this is going to have to be done as
5 is mirrored up with the existing rebuilding process and looking
6 at how some of the innovative solutions can be married in and built
7 upon the existing rebuilding. So, that is going to take time and
8 it is going to have to run in close coordination. So, we have
9 seven technical experts in Puerto Rico working with the Army Corps
10 to understand the timing and the extent of where their activities
11 are going and opportunities for the future.

12 Mr. Pallone. All right. Thank you so much.

13 Thank you, Mr. Chairman.

14 Mr. Upton. The Chair will recognize the gentleman from
15 Illinois, Mr. Shimkus.

16 Mr. Shimkus. Thank you, Mr. Chairman.

17 I want to try to go to three different directions real quick.
18 But, Mr. Alexander, I am a former military officer. Someone has
19 to be in charge. So, I think it is very troubling that we have
20 you all there trying to restore the grid and you are not in
21 consultation with PREPA. The basic question is, if you are going
22 to call and yell at someone to get the job done, does anyone know
23 who we are going to call? Mr. Alexander?

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Alexander. Sir, my job is really --

2 Mr. Shimkus. Yes, you have been very good at trying to
3 answer this tactfully. But who do we call?

4 Mr. Alexander. FEMA.

5 Mr. Shimkus. We call FEMA?

6 Mr. Alexander. FEMA.

7 Mr. Shimkus. Okay. Do we get our answer?

8 Mr. Alexander. It is the authority we are operating under.

9 And I will say this: from our Chief of Engineers to our South
10 Atlantic Division commanding general, and to a number of colonels
11 that are on the ground in Puerto Rico, they collaborate and meet
12 with PREPA on a daily basis.

13 Mr. Shimkus. Okay. Thanks. So, I think we probably
14 should have FEMA here. That is who we should have had, FEMA, as
15 far of this committee hearing. So, maybe we will do that as a
16 followup.

17 Because, obviously, we all know the history behind PREPA and
18 the bankruptcy and their questionable practices and their ability
19 even to provide power before the storm.

20 Does anyone know why it took -- and Puerto Rico is separate
21 because it is an island; it is far away; it is hard. Other states
22 usually have, with the utilities have mutual assistance
23 agreements. And you will see folks flow. Does anyone know if

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 PREPA had a mutual assistance agreement with any stateside
2 utility? Does anyone know that?

3 Ms. Hoffman. It is my understanding that PREPA had not asked
4 for mutual assistance agreements. Early on in the storm they just
5 did ask for it.

6 Mr. Shimkus. Yes, I have been told it took five weeks, PREPA
7 took five weeks to ask anybody for help.

8 Ms. Hoffman. Yes, a letter was submitted two days ago, I
9 believe, for mutual assistance. But, generally, the industry is
10 very forward-leaning in discussing with the utilities and
11 activating mutual assistance --

12 Mr. Shimkus. Well, we see it all the time.

13 Ms. Hoffman. Yes.

14 Mr. Shimkus. I mean, the trucks are on the road, whether
15 there is an ice storm, whether there is in my neck of the woods
16 a tornado, whether it is hurricanes. I have members of my
17 congregation who are utility workers, and they are gone. That
18 is a disappointing statement.

19 I also wanted to put on the record, I think we wanted the
20 Nuclear Regulatory Commission to submit a letter for this hearing
21 because the hurricanes did come through some of our locations
22 where we have nuclear power plants, and we think that would help
23 build the record of the resiliency, baseload power, the importance

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 of that. And I would ask that, if we finally get a letter from
2 the NRC, Mr. Chairman, that we are allowed to submit that for the
3 record.

4 [The information follows:]

5

6 ***** COMMITTEE INSERT 7*****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Shimkus. And the last point, I really want to go to Mr.
2 Rusco and maybe Mr. Corbin. The crude oil world has changed
3 significantly since the establishment of the SPRO. I have been
4 here a long time, 20 years, and I think one thing is for sure:
5 we have always bought high and sold low. Is that a safe statement
6 in the history of the SPRO, in the purchase of crude oil? Mr.
7 Rusco, do you want to answer that?

8 Mr. Rusco. I think that, just by the nature of when it was
9 established, you know, it was established after a crisis.
10 Usually, when DOE has had authority to expand, it is --

11 Mr. Shimkus. Quickly.

12 Mr. Rusco. -- after a crisis. And so, it has been at
13 higher prices.

14 Mr. Shimkus. So, we have a history of buying high and
15 selling low?

16 Mr. Rusco. At least buying high.

17 Mr. Shimkus. And your testimony talked about refined
18 products. In the world really now the need is for immediate
19 refined product, not base crude oil. In the old days when we were
20 worried about deploying forces to Europe and sea lanes being
21 closed, and importation of crude oil, a SPRO made sense. Am I
22 right, based upon your testimony today, that you are saying maybe
23 regional systems -- well, actually, regional systems which DOE

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 was supposed to analyze, and that there would be more focus on
2 refined product?

3 Mr. Rusco. I think that it is fair to say that most other
4 countries that have strategic reserves have chosen to do that,
5 for the reasons that you state, yes.

6 Mr. Shimkus. Thank you. I hope my colleagues will follow
7 up on some of those questions. I have run out of time. I yield
8 back.

9 Mr. Upton. The Chair recognizes the gentleman from
10 California, Mr. McNerney.

11 Mr. McNerney. Well, I thank the chairman, and I thank the
12 witnesses this morning.

13 Mr. Alexander, you mentioned prevention as a part of the
14 mission. Within the Stafford Act framework, can the electric
15 structure of Puerto Rico be rebuilt to improve grid resilience
16 and using sustainable technology?

17 Mr. Alexander. Sir, the Stafford Act allows us to restore
18 the grid to pre-storm conditions, meeting U.S. Code, electrical
19 code, in order to satisfy life, health, safety requirements.
20 Some have interpreted that to mean we are making a more resilient
21 or betterment on the system, but that is not the case.

22 Mr. McNerney. Okay. Ms. Hoffman, has there been a credible
23 estimate of the cost difference between rebuilding a system that

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 is resilient and just rebuilding the old system to look like it
2 did before?

3 Ms. Hoffman. There has not been a complete cost estimate,
4 taking into consideration the amount of work that has been done
5 and that is being planned to be accomplished from the Army Corps
6 of Engineers. So, there has been discussion around different
7 advanced solutions, but that needs to be baselined with the work
8 and the building planout. So, that needs to be evaluated still.

9 Mr. McNerney. So, it could be that building a system that
10 is resilient and sustainable wouldn't cost much more than just
11 rebuilding the old system up to code?

12 Ms. Hoffman. I think the analysis has to be completed.

13 Mr. McNerney. Okay. Thank you.

14 The Office of Electricity has worked on a State Energy Risk
15 Assessment Initiative that helps states understand the risks to
16 their infrastructure. Did the Virgin Islands and Puerto Rico
17 have a risk profile before the hurricanes?

18 Ms. Hoffman. I would have to go back and look into that.
19 I am not sure whether they did do a risk profile with the state
20 assessments.

21 Mr. McNerney. Thank you.

22 Mr. Stafford, is it true that the National Science Foundation
23 facility at the radiotelescope has an infrastructure that

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 supported FEMA operations subsequent to the hurricane?

2 Mr. Shimkus. You said "Stafford".

3 Mr. McNerney. Oh, Mr. Alexander? Excuse me. Thank you,
4 my colleague from Illinois.

5 Go ahead.

6 Mr. Alexander. Sir, now that I know it was me you were
7 talking to, could I ask you, please, to repeat the question?

8 Mr. McNerney. Sure. Is it true that the National Science
9 Foundation facility radiotelescope infrastructure survived well
10 enough to serve as a FEMA operations center?

11 Mr. Alexander. Sir, I am not aware of that.

12 Mr. McNerney. Okay. I was going to ask you what
13 differentiated that facility that survived from facilities that
14 did not survive. Does anyone have a clue to that question?

15 Mr. Alexander. I do not.

16 Mr. McNerney. No?

17 Ms. Walker, you highlighted the inconsistencies in tracking
18 outages in the system. Would better tracking of outages be
19 beneficial? Or how would it be beneficial?

20 Ms. Walker. It helps us determine where to deploy services,
21 such as, we call them pods, but water, food, whether or not outages
22 are going to be restored quicker, and we know how many in the area
23 have outages. We are able to, then, deploy the needs for that

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 community better with that knowledge; also, working with the Corps
2 of Engineers on deploying temporary generators. It just helps
3 us to understand where to deploy for those needs.

4 Mr. McNerney. Do you have the authority to require
5 utilities to report outages?

6 Ms. Walker. Yes, we do.

7 Mr. McNerney. Is that authority a state authority or is it
8 a federal authority?

9 Ms. Walker. It is a state.

10 Mr. McNerney. Thank you.

11 Ms. Hoffman, how does the DOE go about helping utilities
12 prioritize which lines, substations, and so on, should be put
13 online first?

14 Ms. Hoffman. So, thank you very much for the question.

15 The utilities have a restoration plan as they look at their
16 outage management system. They look at prioritization for
17 transmission lines to get the most customers on as soon as possible
18 and, then, work down into the distribution system. But they first
19 must do damage assessments and assess really the extent of the
20 damage on the system, and accelerating that damage assessment
21 really helps a utility outline the restoration process.

22 What the federal government does is look at where the
23 critical infrastructure is and are there any special needs with

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 respect to storing large loads or storing critical
2 infrastructure, whether it be telecommunication facilities,
3 hospitals. And so, that is an ongoing discussion. But it gets
4 melded with a utility's restoration plan and the utility's
5 commitment with respect to how they are doing the restoration.

6 Mr. McNerney. I yield.

7 Mr. Upton. The Chair recognizes the gentleman from Ohio,
8 Mr. Latta, for 5 minutes.

9 Mr. Latta. Well, thanks very much, Mr. Chairman, and for
10 calling this hearing today. And thanks to our witnesses for being
11 here.

12 Ms. Hoffman, if I could ask you my first question, you noted
13 that one of the reasons for the rapid electrical recovery in
14 Florida was the nearly \$3 billion in grid resiliency improvements
15 since 2006. Could you elaborate as to what those improvements
16 were, and will DOE be working with Florida going forward to
17 identify additional hardening practices?

18 Ms. Hoffman. So, thank you, sir, for the question.

19 The investments by Florida really have stimulated from
20 activities that looked at, first, situational awareness, so
21 looking at advance meter and infrastructure to provide the
22 situational awareness that we have been talking about. Because,
23 once you have that awareness, you can do an outage management

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 system. You can actually look at how you can advance and
2 preposition crews for a restoration process. It also has allowed
3 for advanced switching to be able to minimize the amount of
4 customers without power; versus taking down a whole feeder system,
5 you can really isolate damage on a system and look at restoration
6 opportunities.

7 Other things that the utilities have done is hardening their
8 infrastructure by looking at stronger poles, looking at concrete
9 poles, steel poles, versus your traditional wooden poles. But
10 all these capabilities are pulled together with an advanced kind
11 of communications and control system, but a situational awareness
12 system that can help with the restoration process.

13 Mr. Latta. Okay. You are talking about the different types
14 of poles. Are there other things that they were doing on
15 hardening, did you say?

16 Ms. Hoffman. So, with respect to substations -- and this
17 would probably go more for Sandy, but also looking at hardening
18 substations and being able to --

19 Mr. Latta. And how do they go about hardening the
20 substations?

21 Ms. Hoffman. Pardon?

22 Mr. Latta. How do they go about hardening the substations?

23 Ms. Hoffman. So, when hardening the substations, you really

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 look at increased capabilities with respect to duration, being
2 able to support prevention of damage from wind, but also from
3 flooding. So, it goes back to supporting infrastructure, so that
4 you don't see the flooding damage that can occur.

5 Mr. Latta. Okay. Thank you.

6 Ms. Walker, if I could turn to you, can you elaborate on
7 working with the federal agencies after Hurricane Harvey? And
8 could you see any improvements that need to be made between
9 federal, state, local, industry, all working together out there?
10 Or what is your view as to what happened, and is there anything
11 that can be improved on?

12 Ms. Walker. I think there are improvements that we can make.
13 My view is that the time to make those is before the next storm.
14 I found myself in the State Operations Center addressing issues
15 that I think are better to try to handle after the storm and get
16 ready for the next one. Some have to do with the interconnection
17 for the FEMA temporary housing. Some had to do --

18 Mr. Latta. Could you elaborate on that, on the temporary
19 housing, because I know I've seen different press reports on that,
20 but would you elaborate on the temporary housing of FEMA?

21 Ms. Walker. Once they bring in temporary housing, it is not
22 set, usually, right at the meter that the house is on. So, the
23 utilities have to set a new pole. There are processes in Texas

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 for each utility, and my guess is throughout the country for each
2 utility, on how those processes are to interconnect the new
3 customer, a new facility.

4 And we would like to streamline that for all utilities in
5 Texas. We had five major utilities impacted by Harvey and, then,
6 multiple coops and municipalities. And so, we are hoping to have
7 one process for FEMA to have to go through, instead of multiple
8 different processes. So, that is an example.

9 Mr. Latta. Okay. Any other examples you can think of that
10 would be how to improve things out there?

11 Ms. Walker. We understood, or I understood, during
12 Hurricane Harvey that there were issues, chokepoints, as they were
13 called during Hurricane Ike, related to the processes, inspection
14 processes, for cities to get homes reconnected once they are
15 rebuilt, once they are remodeled. And so, I think that is
16 something we can address going forward, how those inspections are
17 done, who does them, to make sure we have enough people on the
18 ground.

19 It was during recovery. It is not, to me, the time to try
20 to be addressing things like that. And I just think that that
21 is something we can look at going forward.

22 Mr. Latta. Okay. Well, thank you very much, Mr. Chairman.
23 My time is just about expired, and I yield back.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Olson. [presiding.] The gentleman yields back.

2 The Chair now calls upon the gentleman from Pennsylvania,
3 Mr. Doyle, for 5 minutes.

4 Mr. Doyle. Thank you, Mr. Chairman.

5 Ms. Hoffman, welcome back to our committee. It is always
6 nice to have another Penn-Stater here at the committee.

7 Let me ask you, in your testimony you explained DOE's role
8 in restoration and recovery efforts in those areas affected by
9 recent hurricanes. A DOE piece from 2015 published in Power &
10 Energy Magazine that is still on your energy.gov site explained
11 that, and I quote, "Both the frequency and intensity of these
12 disaster events have been trending higher in recent years, with
13 7 of the 10 costliest storms in U.S. history occurring in the last
14 10 years. These weather disaster events represent one of the most
15 significant threats posed by climate change." Now that was
16 published in 2015. And since that time, we have witnessed the
17 most extreme month of hurricanes that has ever been recorded
18 earlier this year.

19 So, I want to ask you, how is the Department of Energy
20 responding to this increasing threat of climate change and extreme
21 weather events?

22 Ms. Hoffman. So, the Department of Energy is looking at all
23 hazards, including extreme weather, as we look at investment

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 opportunities or research opportunities for advancing our
2 electric grid. And so, a lot of our research focuses on advanced
3 technologies, energy storage capabilities, advanced minigrids or
4 microgrids, as they are called. We are looking at advanced
5 capabilities that the utility industry can build and invest in
6 for hardening and improving the infrastructure.

7 Mr. Doyle. Yes, I mean, exactly. In fact, that article
8 goes on to detail the SmartGrid R&D Program which is designed to
9 improve grid resilience and, also, modernizing the grid through
10 the adaptation and integration of advanced technologies.

11 So, in your testimony you explain your recommendation for
12 the rebuild as being formed in consultation with the National
13 Labs. And a presentation from my NREL earlier this year explained
14 the importance of distributed generation, calling it "a large
15 factor in developing resiliency with clean energy technologies
16 and solutions".

17 So, my question is, is the Department, in making
18 recommendations to those that are helping rebuild the grid in
19 Puerto Rico, which will essentially be a brand-new system, are
20 you urging deployment of distributed systems and renewables?

21 Ms. Hoffman. So, distributed generation, combined heat and
22 power, which is probably the most efficient form of distributed
23 generation, is an option that should be considered in any sort

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 of restoration improvement process. But one of the things that
2 we are going to have to think about moving forward is how are we
3 going to repair systems if another emergency happens. As you look
4 at Puerto Rico, which had, I believe, over 8,000 solar panels
5 there, what is the process in which the Department of Energy and
6 the restoration activities in the next event, how are we going
7 to orchestrate the repair of those systems?

8 As you look at an efficient restoration process, there is
9 an advantage to restoring the core electric grid. So, microgrids
10 might a good balance between the two of looking at siting
11 generation closer to load, but I think it has to be an individual
12 evaluation with respect to the state of the system and the
13 opportunities from that point of view.

14 Mr. Doyle. Thank you.

15 Let me just ask anybody on the panel, does anyone have a
16 comment regarding FEMA's resistance to authorizing
17 reconstruction aid? My understanding is this makes local
18 governments and local utilities ineligible for long-term grants.
19 And I am also concerned, because Puerto Rico is only eligible for
20 emergency services, that these contracts don't end up following
21 federal procurement rules and we end up with situations like
22 Whitefish Energy. Has any of your agencies weighed in on this
23 topic? Is there an expected timeline for action on this?

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Anyone?

2 [No response.]

3 I mean, FEMA authorized in 10 days in Houston, in Texas, and
4 I believe in a couple of weeks in the Virgin Islands. But, yet,
5 still, for some reason, this hasn't been fully authorized. They
6 claim they are working on it; they are close to it. Could anyone
7 explain what this holdup is and why it has taken so long?

8 [No response.]

9 I think you are right when someone said we should have had
10 FEMA up here. FEMA should be sitting on this panel, too, because
11 it seems like a lot of the questions we have need to be answered
12 by them.

13 Well, let me ask it. Do any panelists have suggestions for
14 any highly beneficial action we could take to help expedite the
15 rebuilding efforts in a prudent, sustainable manner? Can you
16 give any suggestions to this committee on what we should be doing
17 that we are not doing right now?

18 Ms. Hoffman. Sir, if I may add some comments?

19 Mr. Doyle. I am glad to see Penn State stepping up to the
20 plate here and at least answering a question.

21 [Laughter.]

22 Ms. Hoffman. As we look forward to investing in resilience,
23 I know it is something that the Administrator of FEMA is looking

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 at, as well as the Department. It is, how do we build in
2 resilience and how do we think about that upfront investment ahead
3 of a disaster, and looking at what funds are available, to really
4 think about investing for resilience?

5 Mr. Doyle. The idea that our citizens are going to go
6 another three months without electricity is just unconscionable,
7 I think.

8 I yield back.

9 Mr. Olson. The gentleman yields back.

10 The Chair now calls upon the gentleman from Ohio, Mr.
11 Johnson, for 5 minutes.

12 Mr. Johnson. Thank you, Mr. Chairman.

13 I appreciate the opportunity to ask of this panel. A very,
14 very important hearing that we are having today because we saw
15 the effects of the hurricanes and how the destruction that
16 occurred during and afterwards, how that affected not only the
17 areas that were hit, but other regions of the country as well,
18 since so much of our energy resources reside there on the Gulf
19 Coast.

20 So, Mr. Corbin, how much does the Northeast Gasoline Supply
21 Reserve cost on an annual basis? Let's get that question out of
22 the way first.

23 Mr. Corbin. Thank you for the question, Mr. Johnson.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 For the Northeast Gasoline Supply Reserve, the average
2 storage contracts, which are for leased commercial storage for
3 the product, are approximately \$19.60 per barrel per year. And
4 when you include overhead costs, to include quality assurance and
5 administration of your IT/sales platform, in the event you have
6 to release the gasoline, it comes to a little over \$20 per barrel
7 per year, sir.

8 Mr. Johnson. Okay. So, is the higher per-barrel cost of
9 storing gasoline versus crude oil a good use of taxpayer dollars,
10 do you think?

11 Mr. Corbin. That is really not for me to decide, whether
12 that is a good use of the taxpayer dollars.

13 Mr. Johnson. But you have got an opinion?

14 Mr. Corbin. I will say, Mr. Johnson, that in terms of the
15 cost of storage for refined products, the United States has, out
16 of 14 countries that participated in benchmarking studies that
17 are stock-holding countries, the U.S. has by far the highest cost
18 for gasoline storage out of the 14 countries.

19 Mr. Johnson. Okay. All right.

20 Also, Mr. Corbin, continuing on, the SPR is almost entirely
21 located in the Gulf Coast region of the United States, limiting
22 its ability to respond to disruptions in other parts of the
23 country, particularly if we were to have a repeat of what we saw

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 recently. For example, the West Coast has relatively few
2 pipelines that are connected to the SPR, meaning that some
3 petroleum products must be shipped by truck, barge, or other
4 domestic methods or by tankers even from foreign countries.
5 These modes of transport, obviously, are slower and more costly
6 and limit the usefulness of the Strategic Petroleum Reserve. So,
7 how would expanding, in your opinion, how would expanding the
8 number of SPR locations across the country enhance the
9 effectiveness of the SPR?

10 Mr. Corbin. First, I would just like to make a correction
11 to your statement, sir. There are no pipelines that directly
12 connect the SPR to the West Coast of the United States.

13 The SPR, as I mentioned in my testimony, our crude oil is
14 stored in underground salt caverns in two sites in Texas, two in
15 Louisiana. Salt cavern storage is very inexpensive. We have the
16 lowest operating cost of any stock-holding country in the world
17 for our crude oil. There are no salt domes along the West Coast
18 of the United States. There are some outside of the immediate
19 Gulf Coast area, but they are not significant. So, crude oil
20 storage would be problematic on the West Coast.

21 Mr. Johnson. So, you are basically saying -- I don't mean
22 just the West Coast; I mean other regions of the country as well.
23 I mean, the question centered on the West Coast. So, you are

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 saying, in your opinion, developing other storage areas for the
2 SPR around the country in different regions would be problematic?

3 Mr. Corbin. For crude oil storage. Now, in discussions
4 that were mentioned by Mr. Shimkus earlier, and talked about
5 refined product storage, the U.S. Government currently has two
6 refined products reserves, the Northeast Gasoline Supply Reserve
7 and the Northeast Home Heating Oil Reserve. They are both very
8 small, 1 million barrels apiece. They are intended to meet
9 regional supply disruptions.

10 There are challenges associated with product reserves,
11 regardless of the model that is used. Both of the product
12 reserves that are currently in existence, they are, essentially,
13 government-owned refined product in leased commercial storage
14 facilities. In any product reserve with that model, there is an
15 initial refined product acquisition cost associated with it. In
16 studies that we did in PADD 5, which is the West Coast, and in
17 the Southeast U.S., my staff found that there is little to no spare
18 commercial storage capacity. And as I mentioned previously, the
19 leased commercial storage costs are high.

20 Mr. Johnson. Okay. All right.

21 Mr. Chairman, I yield back.

22 Mr. Olson. The gentleman yields back.

23 The Chair now calls upon the gentlelady from Florida, Ms.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Castor, for 5 minutes.

2 Ms. Castor. Thank you, Mr. Chairman. And I want to thank
3 Chairman Upton and Ranking Member Rush, and the professional
4 staff, for bringing this hearing to be. And thanks to all of our
5 witnesses.

6 There is a very serious tension that the Congress has to
7 address as soon as possible. On the one hand, we need to restore
8 power in Puerto Rico and the U.S. Virgin Islands as quickly as
9 possible, but, on the other hand, Congress has an overarching
10 responsibility to protect the taxpayer from future losses by
11 building a more resilient, modern, distributed grid with better
12 technology, technology, by the way, that has largely been funded
13 by the taxpayers that we see in our National Laboratories that
14 is used by utilities and businesses all across the country.

15 Senator Ramon Luis Nieves, who is in the audience and is going
16 to testify on the next panel, is a former Chairman of the Puerto
17 Rican Senate Committee on Energy. He says the current grid is
18 obsolete, the grid before the storm, before the hurricanes. He
19 said in his testimony, "Appropriating taxpayer money just to
20 repair an old 20th century grid would be a waste of resources."
21 In fact, Ken Buell, the Director of Emergency Response and
22 Recovery with the U.S. Department of Energy, stated that, "We
23 really should think in terms of rebuilding at this point, not just

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 repairing the old grid."

2 The problem that we have all got to grapple with is PREPA
3 is largely in debt. They do not have the wherewithal now to take
4 the lead on this. They have governance problems. Gosh, what
5 else do we have to know after this Whitefish contract controversy?
6 I think we have a very significant responsibility to protect the
7 taxpayers here.

8 A few weeks ago, there was a congressional briefing provided
9 by the Department of Homeland Security, FEMA, and the U.S. Army
10 Corps of Engineers was there. They also relayed that they only
11 have the authority now to go in and make repairs, and not do the
12 kind of rebuilding of a modern grid that needs to happen.

13 In fact, Mr. Alexander, in your testimony you say that your
14 mission right now is to repair the power system to its pre-storm
15 condition, is that correct?

16 Mr. Alexander. Yes, ma'am.

17 Ms. Castor. Ms. Hoffman, what kind of direction do you need
18 from the Congress to begin to go beyond a planning stage and do
19 something that your very own Director of Emergency Response and
20 Recovery has said needs to be done? And do you agree that you
21 need that authority to go beyond repairing?

22 Ms. Hoffman. So, I think there has to be an ability for the
23 Department of Energy to work closely with PREPA in planning and

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 actively engaging and discussing what some of those advanced
2 technologies solutions are. So, the forum has to be codified,
3 so that there can be active engagement and discussion of what are
4 the opportunities. I know that PREPA has their own plans and
5 their own activities, but how do we really take the advancements
6 and provide that?

7 Ms. Castor. So, you think, yes, it would be helpful for
8 Congress to provide additional clarity, so that you can move
9 forward to do what, on a bipartisan basis, what experts have
10 advised that needs to be done in Puerto Rico?

11 Ms. Hoffman. Yes.

12 Ms. Castor. And the Virgin Islands? Okay.

13 Ms. Hoffman. Yes.

14 Ms. Castor. We have got to do this with a sense of urgency,
15 though. Mr. Alexander, how do we do this? As you keep going on
16 to repair, what kind of advice, what kind of clarity do you need
17 from the Congress in maybe the next emergency aid package, maybe
18 in something that would allow you to go beyond just repairing the
19 old, obsolete grid and moving forward on something that would
20 protect the taxpayers?

21 Mr. Alexander. So, while we recognize that the pre-storm
22 grid was not in good condition, the current authorities under the
23 Stafford Act, and the mission assigned for FEMA, limits us to

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 restoring to pre-storm condition, meaning U.S. Code. I think
2 this is, ultimately, a policy decision. Do we need to relook at
3 the Stafford Act? As written, it was --

4 Ms. Castor. And Colleagues, let me -- thank you very much
5 -- in previous emergency aid packages for Superstorm Sandy and
6 for Katrina, it has been the Congress that has been able to go
7 beyond the Stafford Act that limits the government to just going
8 and repairing what was, and building in, instead, a new
9 resiliency, whether it is in housing or defense installations and
10 things like that, those previous emergency aid package. We have
11 never had a blackout and destruction of an electric grid the scale
12 of this ever before in the country, and that is why this is
13 something new this committee needs to work on together with our
14 colleagues in the Senate and, hopefully, with DOE, as they have
15 expressed they are already doing some of this planning. But, to
16 put this into action, it is going to be our responsibility to
17 actually pass that authorization in the next emergency aid package
18 or before.

19 And I yield back my time.

20 Mr. Olson. My friend's time has expired.

21 The Chair now calls upon the gentleman from the Commonwealth
22 of Virginia, Mr. Griffith, for 5 minutes.

23 Mr. Griffith. Thank you very much, Mr. Chairman. I

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 appreciate it,

2 Ms. Hoffman, during a hearing before this committee,
3 Secretary Perry mentioned that microgrids could be a solution to
4 quickly restore electricity after future natural disasters. I
5 am also interested in how microgrid technology could be used to
6 provide power to rural and rural mountainous areas of the country.
7 Do you believe Puerto Rico could benefit from microgrids and, if
8 so, how?

9 Ms. Hoffman. So, thank you very much for the question.

10 Microgrids provide an opportunity to bring generation closer
11 to the load and be able to manage supply and demand on a more local
12 basis. In Puerto Rico you have the generation on one side of the
13 island and, of course, the load on the other side of the island.
14 So, ultimately, you really would like to be able to create a
15 minigrid or a microgrid. It would be able to balance that in a
16 different form. But that does require generation, and it does
17 require load management and advanced communications and controls
18 to be able to manage that on a more localized basis. So, you look
19 at things such as energy storage and other generation that can
20 be meshed very well with a local distribution system.

21 Mr. Griffith. Now would you see that as exclusive of the
22 current type of system or would you see it as an ancillary except
23 in times of disaster?

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Ms. Hoffman. So, ideally, I would love to think about how
2 you build off of the existing system and capitalize on the existing
3 investment, where it is electrically feasible. And then, once
4 again, that requires close coordination with the existing
5 infrastructure. Whenever utilities look at isolation or
6 separation of the grid and look at microgrids, they are looking
7 at utilizing the existing assets and being able to build upon those
8 assets with new technology and new capabilities.

9 Mr. Griffith. And if you are suddenly cut off, as we have
10 seen in Puerto Rico, from your supply of either electricity or
11 the fuel to produce that electricity, doesn't that require that
12 the microgrid also have some kind of a fuel source that it can
13 tap into in cases of emergency?

14 Ms. Hoffman. Absolutely. You need a fuel source. You
15 need redundancy. You need to be able to ensure reliability of
16 the microgrid. Whether it is a utility-owned or a
17 private-sector-owned, you have to have that redundancy and
18 capability for your customers.

19 Mr. Griffith. I appreciate that.

20 What are the current limitations associated with the
21 microgrid technology, if any?

22 Ms. Hoffman. So, some of the current limitations are really
23 looking at microgrid controllers to be able to have an ability

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 from a standards form to be able to look at control of the
2 microgrid, looking at cybersecurity. Regardless of who owns the
3 electric grid and how the electric grid is developed, you have
4 to be secure. You also have to have the capability to dynamically
5 manage supply and demand. So, looking at some of the advanced
6 control solutions and things along those lines, as well as the
7 generation technology.

8 Mr. Griffith. Now let me ask you this: can you envision
9 that a microgrid might be as small as, say, just a power source
10 that would handle a hospital and its needs or a factor and its
11 needs for short periods of time, as a part of the system as a whole,
12 but, then, also, in times of emergency be able to take care of
13 those needs where we have seen problems in Puerto Rico and other
14 places?

15 Ms. Hoffman. So, absolutely. We have seen microgrids at
16 university campuses, at hospitals. So, it can be as small as one
17 wants to define a microgrid, but also can be larger from a minigrid
18 point of view, if you want to support multiple services in a
19 locality.

20 Mr. Griffith. And I would assume that, based on what we have
21 already discussed, that if you had, if for some reason in the
22 natural disaster your fuel source was damaged, but the rest of
23 the equipment was still good, that it would be easier to drop in

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 the fuel, for the federal government to come in after the disaster
2 and drop in the fuel than it would if you drop in a whole new system,
3 isn't that correct?

4 Ms. Hoffman. I think that has to be evaluated on a system
5 basis, to be fair.

6 Mr. Griffith. Okay.

7 Ms. Hoffman. I mean, you are bringing in a lot of fuel, and
8 it kind of comes down to what really is it required for a
9 cost-effective restoration. What we are talking about is getting
10 the power back on for as many customers as possible as efficiently
11 and as effectively as possible. And so, in some cases that may
12 be putting in, re-establishing a grid system and a grid network.
13 In other cases in a localized community that is very far and
14 isolated, it may be putting onsite generation there and creating
15 a minigrid in the near term until lines and power can be restored
16 from a main grid point of view.

17 Mr. Griffith. And I appreciate that. Of course, in my neck
18 of the woods where we have a lot of coal and some natural gas,
19 but a lot of coal, we think that might be an answer for us, and
20 maybe for others, to have that fuel source available and have the
21 big microgrid ready to go.

22 With that, Mr. Chairman, I appreciate it very much and yield
23 back.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Olson. The gentleman yields back.

2 The Chair now calls upon the gentleman from Iowa, Mr.
3 Loebsack, for 5 minutes.

4 Mr. Loebsack. Thank you, Mr. Chair.

5 Thanks to the panel today for your excellent testimony, and
6 we have had a lot of great questions.

7 I guess I want to join in with everyone else in expressing
8 the fact that I was heartbroken by the devastation of these most
9 recent storms. I think it is unfortunate that we are probably
10 going to see a lot more of this down the road. So, we are going
11 to be faced with these issues, I think, across the country.

12 And many of us represent districts that have already been
13 affected over the years by this kind of devastation. I
14 represented Cedar Rapids, Iowa, for six years. Back in 2008, we
15 had the Flood of the Century or the flood of whatever number of
16 centuries, and the river crested at 31 feet, 9 feet over the
17 previous record. There was \$2.5 billion damage done immediately
18 in Cedar Rapids, the economic loss of probably the same. And they
19 have been through a lot, like a lot of communities around this
20 country, and just most recently what we have seen in Puerto Rico
21 and Texas and Florida.

22 I do want to, I guess, address my concerns more to Mr.
23 Alexander than anybody with respect to the Corps. You know, the

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Corps I know ranks the projects, and we are going to have a lot
2 of projects coming up, what we have seen recently, projects for
3 reconstruction, for flood mitigation. I run the benefit/cost
4 ratio, and it has to be at least 1-to-1, as you know.

5 Cedar Rapids was 1.2-to-1. We authorized the project to go
6 forward in 2014, but we haven't seen any movement on it in terms
7 of funding. And this is going to happen in these other instances,
8 too. We are going to have a lot of challenges, sort of where to
9 prioritize, where to put the money.

10 But I have a lot of concerns with this benefit/cost ratio.
11 It seems awfully bureaucratic to the folks who are living in these
12 communities when they want to prevent floods in the future. Can
13 you address that issue and give us any hope at all that, not just
14 Cedar Rapids, Iowa, but these communities that are going to be
15 faced with flood mitigation down the road might get some relief
16 and actually see some projects built?

17 Mr. Alexander. Sir, I am familiar with benefit/cost ratios
18 and prioritizing and racking and stacking of projects, and the
19 needs are many, but the budget is limited. But my focus is on
20 contingency operations. And so, to adequately address your
21 question, I would have to refer to our Civil Works personnel. So,
22 I could have my staff coordinate with them.

23 Mr. Loeb sack. Yes, I suspected that might be the case, but

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 I am going to go ahead and submit a question on the last. Then,
2 if you can get us an answer from the relevant person at the Corps,
3 that would be great. Again, I just want to bring up this issue
4 more than anything else, because going forward this is going to
5 cost, as we know, billions of dollars for reconstruction in these
6 communities. And a lot of them are going to face the same
7 questions that Cedar Rapids faced since 2008, and a lot of other
8 communities around the country, and it is something that we are
9 going to have to pay close attention to and we are going to have
10 to resolve that issue, because folks are going to be depending
11 upon those reconstruction funds to make sure that they can go
12 forward with their communities.

13 So, thanks to all of you.

14 And thank you, Mr. Chairman. With that, I will yield back.

15 Mr. Olson. The gentleman yields back.

16 The Chair now calls upon the patient gentleman from West
17 Virginia, Mr. McKinley, for 5 minutes.

18 Mr. McKinley. Very patient, very patient. Thank you, Mr.
19 Chairman.

20 Mr. Olson. Very patient.

21 Mr. McKinley. Mr. Chairman, given the aftermath and all the
22 discussion here we have had about the natural disasters we have
23 had in Florida, Texas, Louisiana, Puerto Rico, I really want to

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 applaud the Department of Energy's efforts to refocus the
2 narrative and the discussion about reliability and resiliency,
3 because really it underscored how serious that problem is if we
4 don't address it. So, thank you for what you are doing, and for
5 Secretary Perry, for focusing on that, because I think that could
6 have some impact.

7 But my question, a little along the same line, has to do with
8 the petrochemical industry in the Houston and Louisiana, all of
9 the Gulf Coast, where we were so hard hit when that Category 4
10 hit there that it wiped out or shut down 17 -- I think there are
11 23 crackers down in that area -- 17 of them were shut down. One
12 of them is still out. Sixty percent of our production of
13 polyethylene and propylene were lost for a period of time. It
14 showed how vulnerable we are in that area.

15 And I know that, in contact with folks that have reached our
16 office, because of that slowdown, because of the lack of cracker
17 facilities to be able to provide the ethylene and propylene around
18 the country, companies all across America that use their plastic
19 resins are slowing down as a result. One company, particularly,
20 in my district was working seven days a week. It is now down to
21 five because it can't get the plastics.

22 So, this thing is serious about it. What we have done, or
23 what I think DOE maybe has an interest -- and I would like to hear

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 more from you -- is that, rather than taking a page from the
2 Strategic Petroleum Reserve of having it all in one location, what
3 if we were to locate an ethane storage up in the northern
4 Appalachian area, right where the Marcellus and the Utica shale
5 formations are located, so that we could have a secondary supply,
6 a secondary source, to be able to provide that, the petrochemical
7 supplies of material for around the country?

8 Do you have a thought about that from DOE's position, here
9 they may be on having a secondary? It is not replacing Houston
10 by any stretch. It is just having something that is in another
11 location, so it is not vulnerable to the weather.

12 Ms. Hoffman. So, Congressman, you bring up an important
13 issue. It is location, location, location. Diversity is very
14 important. And as we look at any sort of, whether it is fuel
15 product, chemical product, having and thinking about having
16 flexibility in where that product is developed also looks at our
17 security and resilience for the nation. So, I understand that
18 in the Appalachian area there is a lot of natural gas resources
19 and a byproduct of natural gas and the ability is ethane. And
20 so, I know that the Secretary had a roundtable discussion and is
21 looking at the opportunity. But it brings up the important point
22 that we need to think about diversity and I wanted to say
23 "generation diversity," but product diversity in the United

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 States.

2 Mr. McKinley. Following up on that is that, during last
3 year's appropriation process, our office had introduced an
4 amendment to the appropriation bill to see that a study was
5 undertaken to confirm whether or not there was an interest or
6 possibility and potential for having it in the Marcellus and the
7 Utica shale formations. That has been since, I think it was May.
8 Do you have a sense? Can you give me a status on how far along,
9 if it has been undertaken yet, to make a determination of the
10 feasibility of locating a secondary ethane storage?

11 Ms. Hoffman. So, I understand the Department is undertaking
12 a study in this area, and it is my understanding that this study
13 will be completed in 2018.

14 Mr. McKinley. Do you have an idea when in 2018? In December
15 or is that going to be in September or October?

16 Ms. Hoffman. I don't have that.

17 Mr. McKinley. Okay.

18 Ms. Hoffman. I will get back to you on that answer.

19 Mr. McKinley. If you could back to me, I would appreciate
20 it. And I yield back. Thank you.

21 Mr. Olson. The gentleman yields back.

22 The Chair now calls upon the gentleman from the Bay state,
23 the Bayline state -- I'm sorry -- the goldmine state, Mr. Sarbanes,

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 for 5 minutes. I apologize.

2 Mr. Sarbanes. All those names work.

3 Thanks to the panel.

4 I wanted to ask you, Mr. Alexander, to step back in terms
5 of the Corps' relationship to these disasters that have been
6 occurring with more frequency, and give me a sense of how much
7 the Corps' mission and effort and sort of the deployment of its
8 various projects has changed over the last few years in either
9 response to the disasters that we are seeing, these natural
10 disasters, or in anticipation that the frequency of them is going
11 to increase. Is that an analysis that is happening? Can you cite
12 some trends in terms of the Corps' projects around this, the kind
13 of requests that come in that are related to resiliency and
14 adaptation, and so forth, in addition to just efforts to respond
15 to things that happen? So, if you could give that kind of
16 30,000-foot perspective, that would be helpful.

17 Mr. Alexander. Thank you, sir.

18 First, every year following a storm season, we do an
19 after-action review and we identify lessons learned, and we work
20 to develop and establish best practices, so that we can improve
21 ourselves, train accordingly. How can we work with state and
22 local governments to help them prevent and work toward mitigation
23 of a disaster?

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 We are always looking at how we can improve our critical
2 infrastructure. We have an aging infrastructure, as you know.
3 So, that is a separate issue. We acknowledge that infrastructure
4 needs to be resilient in order to withstand storms such as this,
5 flooding on the Mississippi, tornadoes out in the Midwest. We
6 are looking, as we move forward and develop and study projects
7 and future projects, we are looking at ways to ensure that a
8 greater degree of resilience is incorporated in those designs.

9 Mr. Sarbanes. Are you seeing an increase? Is there a
10 marked increase or at least something measurable in the kinds of
11 proposals that are coming into the Corps that relate to these
12 extreme weather events, either responding to something that has
13 happened or projects that are anticipating increased exposure
14 from these events? And has the Corps' kind of scoring system for
15 projects been adjusted in any way relative to what has been
16 happening with these kinds of disasters and weather events?

17 Mr. Alexander. I am not in a position to adequately address
18 your question. I can say, I mean, we do every year; we have
19 requests for additional flood damage mitigation projects. How
20 can we increase the resilience in levy systems and support and
21 mitigate flooding in low-lying areas, flood plains, things of that
22 nature?

23 Mr. Sarbanes. I would appreciate it, if it were possible,

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 to go back to the Corps, and maybe after the analysis following
2 this hurricane season has been completed, to see if you could give
3 us some information about trends over the last few years in terms
4 of the number of projects that fall into that kind of a basket
5 and, as I said, whether the Corps is putting that analysis and
6 thinking into a strategic plan for the Corps going forward that
7 may lead to creating different sets of priorities for project
8 based on some of these issues. So, if that is something,
9 certainly getting that analysis -- I assume we can get some report
10 on the analysis that is done on an annual basis -- that would be
11 helpful, but, then, any additional perspective you can bring on
12 those kinds of trends would be helpful.

13 Mr. Alexander. Yes, sir, we will.

14 Mr. Sarbanes. Thanks. I yield back.

15 Mr. Olson. The gentleman yields back.

16 The Chair now calls upon the gentleman from Missouri, Mr.
17 Long, for 5 minutes. Welcome back, Billy.

18 Mr. Long. Thank you, Mr. Chairman.

19 And, Ms. Hoffman, 10 or so years ago, my hometown of
20 Springfield, Missouri, we received a devastating ice storm where
21 there were folks out of power for 10, 12 days, two weeks, whatever,
22 and the utility companies came in from all over to help us in that
23 situation. I know the recent situation in Florida, from the

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Washington, D.C., area here in Maryland, Virginia, and
2 Springfield, Missouri, again sent crews down to Florida to help
3 in that situation. So, I know what it is like whenever people
4 -- neighbors helping neighbors, so to speak.

5 You note in your testimony that mutual assistance provided
6 by electric companies, public utilities, and electric
7 cooperatives across the country played an important role in
8 restoring power so quickly in Florida. Could you discuss the
9 logistics of bringing in as many as 60,000 workers from across
10 the country to quickly assess and restore, or assess restoration
11 locations, and how this effort is being coordinated by industry?

12 Ms. Hoffman. So, thank you very much for the question. And
13 I think it is an impressive network, and the aggressive posture
14 that the utility industry has had, as well as the lessons learned
15 from Katrina and past events, that the utilities have really taken
16 it upon themselves to have a leadership position in developing
17 a mutual assistance network. This is a network where utilities
18 talk among each other, request mutual assistance, and it is
19 organized to provide mutual assistance to utilities that request
20 it. And this is across the United States. There is different
21 coordination and different entities that are responsible for a
22 mutual assistance request in different areas of the country.

23 The utilities that provide mutual assistance, they talk

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 about the management structure; they talk about laydown
2 procedures with respect to equipment and equipment necessary.
3 And there is a huge coordination with respect to supplies and the
4 availability of resources.

5 Mr. Long. Okay. What role do state or federal emergency
6 operations officials have in monitoring the use of mutual
7 assistance and to ensure that it is applied to the most critical
8 areas?

9 Ms. Hoffman. So, this is real interesting, and I thank you
10 for bringing up the point. What we deal with is, first and
11 foremost, the utilities are in a leadership position, as they
12 should be, for providing response and recovery. The federal
13 agency and the federal government and the Department of Energy,
14 what we do is help understand when is it outside the ability of
15 a utility to be able to manage their response and recovery efforts,
16 and what are the resources that are required, the gaps that are
17 needed in providing support. So, whether it is transportation
18 issues, access issues. And so, that is the activities that the
19 Department of Energy and the federal government help with. And
20 that is whether it is hours of service waivers, whether it is
21 weight restriction waivers, whether it is understanding if there
22 is a priority, whether it is a heavy load like a chemical facility
23 or a pharmaceutical or a hospital, what some of those restoration

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 needs are.

2 Mr. Long. Speaking of the federal government, what does the
3 federal government do to remove regulatory roadblocks to recovery
4 and repair efforts, and are there areas that we can improve in
5 those?

6 Ms. Hoffman. So, the efforts that the federal government
7 does and looks at are from a waiver point of view. So, looking
8 at access to any sort of damaged area, to making sure that the
9 utilities -- I guess where I would go with this answer is I will
10 be very pointed here. It is that utilities nowadays are very much
11 seen as emergency responders. Typically, that has been the
12 health and the safety side of things. But now, as you look at
13 critical infrastructure and as you look at the needs moving
14 forward, telecommunications and electricity are primary for
15 providing an effective restoration process and life and safety.
16 And so, access for utilities in a damaged infrastructure
17 environment, being able to be forward-leaning in getting utility
18 resources there, are absolutely critical as we move forward. And
19 it is going to be more critical as we look at onsite generation
20 and being able to restore power.

21 Mr. Long. Okay. Thank you.

22 And will the Department of Energy be working with the states
23 and territories impacted by these recent hurricanes to assess grid

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 resiliency efforts and identify ways to improve grid resiliency?

2 Ms. Hoffman. Yes.

3 Mr. Long. Okay. I wish we had time today for an EMP
4 discussion with all of you, but perhaps another day. It seems
5 like our time is taken up today with talking about the Astros all
6 the time.

7 Mr. Chairman, I yield back.

8 Ms. Hoffman. I look forward to future conversations on
9 that.

10 Mr. Olson. The conversation is a problem, my friend, about
11 the Astros? Is that a big problem?

12 The gentleman yields back.

13 The Chair now calls upon the gentleman from New York 20,
14 including the state capital of Albany, Mr. Tonko, for 5 minutes.

15 Mr. Tonko. Thank you, Mr. Chair.

16 While we hear about restoration working along in some of our
17 states, many of our fellow Americans in Puerto Rico and the United
18 States Virgin Islands remain in the middle of the most serious
19 blackout in United States history. Restoring services is
20 absolutely critical, but we also need to acknowledge the risks
21 of this happening again and the need to support the development
22 of a more resilient grid moving forward.

23 Over the last decade, extreme weather and fire events have

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 cost the federal government well over \$350 billion, according to
2 the Office of Management and Budget. A GAO report last week
3 estimated that these costs will likely rise in the future, due
4 to the effects of climate change. This is not a choice between
5 pay now or pay later. It is a pay now by supporting research,
6 hardening infrastructure, and making meaningful investments to
7 adapt to and mitigate climate change, or pay now in multibillion
8 dollar emergency spending packages. The fiscally-sensible
9 approach is to acknowledge the risk posed by extreme weather and
10 to make the necessary investments that will mitigate it.

11 We just passed the five-year anniversary of Superstorm Sandy
12 hitting the Northeast. We have seen a lot of effort in New York
13 to build a more resilient grid, but the experience of Sandy shows
14 that rebuilding takes time. And it is clear that lessons learned
15 from one disaster can make future response and recovery more
16 effective. We have been learning from Sandy. We are learning
17 from Harvey, from Irma, and from Maria, and the learning will
18 continue until we address some of the preventative measures.

19 So, Ms. Hoffman, your testimony mentioned that Florida Power
20 & Light has made major investments since 2006 to build a more
21 storm-resilient grid. Similar work has been done in New York
22 State in regard to Sandy. How can a smarter, modernized grid be
23 more resilient?

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Ms. Hoffman. So, thank you, Congressman, for the question.

2 A smarter grid allows for advanced communications and
3 controls. It allows for rerouting power. It allows for an
4 accelerated situational awareness.

5 So, let's first talk situational awareness and the ability
6 to have smart meters and you are able to have better visibility
7 into your system, be able to isolate damage, be able to reroute
8 power. And so, having that ability allows you to be
9 forward-leaning on placement of resources, to have a very
10 effective restoration process, well-planned, well-distributed
11 with respect to priorities and how a restoration process can be
12 done.

13 With respect to being able to reroute power, you can really
14 look at isolating customers and being able to make sure that you
15 can restore most of, a large number of customers quickly, as well
16 as prevent damage to additional customers unnecessarily.

17 Mr. Tonko. Thank you.

18 And, Ms. Walker, can you explain how grid modernization
19 efforts in Texas, advanced meters, and others, aided in a more
20 rapid recovery there?

21 Ms. Walker. Yes, sir. Thank you for the question.

22 The advanced meter systems that we have -- we have them
23 through most of the ERCOT region -- were very helpful. It

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 notified the utilities of when those customers were out. So, they
2 knew where those customers were located. It also helped, as Ms.
3 Hoffman said, in rerouting and knowing where they needed to send
4 their crews, and being able to reroute electricity to serve people
5 in a more timely fashion. So, we found that it was very helpful
6 to have the advanced meter systems and the new technologies.

7 Mr. Tonko. Thank you.

8 And DOE's quadrennial energy review heavily focused on
9 critical infrastructure interdependencies. I am particularly
10 concerned by the harrowing statistics of Puerto Ricans without
11 access to safe drinking water. Water, telecommunications,
12 hospital, and public safety infrastructure are dependent on
13 electricity.

14 So, Ms. Hoffman, is a more resilient grid system, perhaps
15 one that includes microgrids, distributed generation, and
16 storage, important for supporting rapid response and recovery in
17 regard to and in interaction with these other critical
18 infrastructure needs?

19 Ms. Hoffman. So, thank you, Congressman.

20 Using a microgrid in a smart fashion around critical
21 infrastructure is absolutely important. As you look at
22 telecommunications, as you look at water and wastewater treatment
23 plants, it is really how do we harden those areas to allow for

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 them to either sustain or be able to recover quickly. And having
2 generation closer to these critical loads, through the form of
3 a microgrid, is absolutely important. I know that ConEd and areas
4 in New York are also looking at how do they harden their
5 infrastructure.

6 And I do want to say I appreciate NIPA and their efforts in
7 going down to Puerto Rico as well and supporting the recovery
8 efforts.

9 Mr. Tonko. Thank you.

10 Has there been any interaction with EPA and DOE in regard
11 to this interdependency on infrastructure?

12 Ms. Hoffman. Sorry, you said EPA?

13 Mr. Tonko. Yes. Any efforts with drinking water, DOE, and
14 the infrastructure, the electric utility?

15 Ms. Hoffman. Thank you very much. I understand.

16 Through the Electric Sector Coordinating Council and through
17 our responsibility as a sector-specific agency, we have had
18 coordination discussions with the telecommunication sectors and
19 some of the other critical infrastructure sectors to think about
20 how do we really move forward from a restoration process, from
21 a hardening process, from an advanced technology process, from
22 a coordination process, and moving forward and strengthening our
23 economy.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Tonko. Thank you so much.

2 Mr. Chair, I yield back. And congratulations.

3 Mr. Olson. Thank you. The gentleman's time has expired.

4 The Chair now calls upon the gentleman from Florida, Mr.

5 Bilirakis, for 5 minutes.

6 Mr. Bilirakis. Thank you, Mr. Chairman. Thanks for

7 allowing me to sit on the committee.

8 And then, also, I want to congratulate you on the Astros'

9 victory. They are a model. They really accomplished quite a bit
10 this year, and I like the way they rebuilt their team.

11 So, anyway, can I have an extra 2 minutes because of that?

12 Mr. Olson. As long as you want to talk like that, you can
13 have 10 minutes.

14 [Laughter.]

15 Mr. Bilirakis. All right, but I am going to root for another
16 team next year. You know that.

17 But, in any case, I wanted to talk about -- Ms. Walker, if
18 I can ask you a couple of questions? I understand that there is
19 a site prioritization when utilities are being restored and in
20 the midst of a response resources are often spread thin. If there
21 are two hospitals -- this is a question -- if there are two
22 hospitals in a given area, how do utilities determine which
23 facility is responded to first?

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Ms. Walker. Well, in Texas the hospitals by statute are
2 required to have backup generation. So, they do have that
3 requirement. I am not sure how they are decided which one they
4 respond to first. I know that for CenterPoint Energy during
5 Hurricane Ike that that was the first areas that the company went
6 to, was to the hospitals. So that all of the personnel were trying
7 to restore service to those. So, I am not for sure and I would
8 have to look into how they would decide between two.

9 Mr. Bilirakis. Thank you.

10 What role do utility companies play in crafting a state's
11 disaster response plan and determining which sites are
12 prioritized?

13 Ms. Walker. They have complete power to come up with their
14 plan on how to restore power. The Commission does have levels
15 that we ask them to look at, which are the critical structures
16 such as hospitals. By statute, they also have to respond to
17 nursing homes. We clearly have them respond to refineries and
18 things in the ship channel. So, there is a tier, but the utilities
19 are responsible for setting their own priorities.

20 Mr. Bilirakis. Thank you.

21 How much flexibility does a utility company have in
22 determining which sites are restored first?

23 Ms. Walker. They have a lot in Texas. They do work, and

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Texas recovery is at the local level, so they do work also with
2 their counties and their cities to make those determinations.
3 But the utilities in Texas have a significant amount of
4 determination on how they restore power.

5 Mr. Bilirakis. Thank you.

6 The next question to the panel, what challenges still exist
7 for Florida and what are your post-storm recommendations? What
8 DOE resources are available to the communities like mine impacted
9 by Irma? Who would like to be first?

10 Ms. Hoffman. I will start. Florida had a very effective
11 restoration process. They had the arrangements from a mutual
12 assistance point of view. They looked at, and their investments
13 in the infrastructure have helped with, hardening their systems.
14 Their advanced control and metering has advanced their
15 capabilities. At this stage in the game, Florida really looked
16 at their codes and standards from a perspective of a Category 3
17 hurricane. As we are looking at Category 4 hurricanes and
18 additional hurricanes, I think now it comes down to, what are some
19 of the additional new capabilities to mitigate a Category 4 and
20 higher-level hurricanes that they are going to have to consider?

21 I think from a fuel distribution point of view, that was the
22 one area of looking at distributing fuel. Gasoline was a
23 challenge in Florida, but I think it was also partly that the

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 necessary evacuation that occurred had a run-on on gasoline
2 stations. And so, it looks at, they did advance by having
3 generation hookup. So, from an electrical point of view, they
4 advanced capabilities there. But if I had one area, it is
5 probably look at the distribution network with respect to
6 gasoline.

7 Mr. Bilirakis. The fuel issue, yes, definitely. We were
8 very fortunate in the Tampa Bay area, I think as you know, to dodge
9 the Category 3 or 4, but God forbid we have one.

10 So, anyone else want to comment? I don't have much time.
11 I know I asked for an additional couple, but I was just kidding.
12 But does anyone else want to comment on that? Any suggestions?

13 [No response.]

14 That is great input. I really appreciate that.

15 Thank you very much, Mr. Chairman. I yield back.

16 Mr. Olson. The gentleman is always welcome here. He yields
17 back.

18 The Chair now calls upon the man who is working very hard
19 for a bipartisan agreement to allow me to wear this jersey on the
20 House Floor later today, Gene Green from Houston, Texas, 5
21 minutes.

22 [Laughter.]

23 Mr. Green. I thank my colleague and neighbor for yielding

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 to me.

2 For our colleague from Florida, I know there were some
3 problems with gasoline supplies there, and maybe you can tell me,
4 does Florida import all your gasoline and diesel? I didn't know
5 if you had any refineries in Florida. Okay. Well, that is okay
6 because we want to keep selling you the stuff we produce in Texas
7 and Louisiana.

8 But, anyway, being a native Houstonian and going through lots
9 of storms and hurricanes over the years, Harvey was probably the
10 toughest, even compared to Hurricane Carla who hit us in 1960,
11 1961. But every eight years we have a tropical storm or a
12 hurricane. In 2008, we had Hurricane Ike, which damaged our
13 infrastructure because it was a wind storm, the storm surge, but
14 the wind. By the time Harvey got to Harris County, it was mostly
15 rain. And our biggest problem was typically so much rain that
16 it overflowed a lot of our sanitary sewer systems in the west side
17 of Houston, and even Houston facilities and our smaller cities
18 and how that did.

19 But, somewhere along the way when we have these thousand-year
20 storms that are happening so often, and the average rainfall in
21 Houston is 49 inches a year and you get 52 inches in five days,
22 I don't know how we can deal with it. We just have to dig more
23 reservoirs, spend more money to contain that water, because water

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 is a precious commodity and we need to do it, instead of letting
2 it go into the Gulf of Mexico.

3 This is the first storm that I have had where I have had
4 fatalities in our district. We lost eight people in our district.
5 Two of them were breadwinners in their family, because they
6 thought they could go through this high water in an underpass.

7 But the sad one was that we lost a family of six in our
8 district on Greens Bayou, northeast Houston. The bayou, we have
9 been working on it for decades to build detention ponds upstream,
10 but the family turned off into the bayou, literally, because they
11 thought it was the road. And it was widely publicized the family
12 was missing, but we didn't find them until after the water went
13 down down in Greens Bayou, northeast Harris County.

14 But, as far as for the utilities, we didn't have that big
15 a problem. But, as we are sitting here, we will get another
16 hurricane or a tropical storm. And so, that is what I am concerned
17 about.

18 It is important we try to learn from these lessons of these
19 storms. We are in the middle now of building back houses, shops,
20 and communities, but we know we have to do better on the flood
21 infrastructure, both working with the Corps of Engineers and in
22 Harris County. We have a Harris County Flood Control District.
23 We tax ourselves to keep from flooding in Harris County, so we

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 can partner with the Corps. But it is essential that we fund the
2 Corps of Engineers, FEMA, and other related agencies in our next
3 supplemental.

4 I am concerned about Puerto Rico because their electric grid
5 was in pretty bad shape even before. And some of us were talking
6 on the Energy Subcommittee a week ago about this may give us the
7 opportunity for the United States to actually provide an electric
8 system in Puerto Rico, because I understand they are still burning
9 fuel oil.

10 Again, coming from Texas, we can put all the windmills up
11 and all the solar, which you can't get wind and solar. We would
12 be glad to have an LNG export/import facility there, because, one,
13 it would be much cleaner than fuel oil. It would probably be
14 cheaper, too, because the price of natural gas is relatively
15 cheap.

16 I would just like to ask -- like I said, I have driven around
17 Puerto Rico, but I don't live there and I don't represent it, but
18 I know they need help in getting literally the whole grid back
19 up. Is that something that we could look at through the
20 Department of Energy to see if we could redo the grid in Puerto
21 Rico to where it would be brought up to what we would consider
22 standards?

23 Ms. Hoffman. I think it is an opportunity to look at all

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 technologies and different solutions for investment in Puerto
2 Rico, and looking at how we can harden the system. But everything
3 should be on the table of what advancements can be done with
4 respect to their energy infrastructure. Forty-seven percent of
5 Puerto Rico electricity comes from petroleum, 34 percent from
6 natural gas, 17 percent from coal, and 2 percent of renewable
7 energy. And so, there is a lot of opportunities to think about
8 the generation mix as well as the location of generation, and the
9 use of the transmission and distribution system, as well as
10 demand/response and customer engagement.

11 Mr. Green. Yes. Well, I know in Texas we have had success
12 with the wind power, not only in west Texas, but south Texas, and
13 it gives us that type of opportunity to have a different fuel
14 supply, although it is hard today to heat with low-price natural
15 gas. That is why some of our coal plants are problems.

16 Ms. Walker, in your testimony you said that the PUCT's
17 initial assessment of the Texas utilities is that they did an
18 outstanding job of responding to the storm. And I know over the
19 years we have had partnerships with other states and other
20 communities, that we will send our utility workers up there when
21 they have a problem. When there are ice storms in Dallas, we will
22 take care of that. But I don't remember seeing that much in the
23 Houston or southeast Texas area.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Ms. Walker. Mutual assistance?

2 Mr. Green. Yes.

3 Ms. Walker. There probably wasn't that much because the
4 damage was very different and the cause of the outages was very
5 different. Usually, the mutual assistance comes in to repair
6 wind damage, the poles going own, the wires going down. Houston
7 and Beaumont was flooding. And so, most of that was due to the
8 substations being out. And so, once we were able to get these
9 mobile substations in or the waters recede and get those
10 substations back up and running, we were able to restore the
11 customers.

12 The outages in those areas really weren't very long-lasting.
13 They were more like a thunderstorm. And Houston and CenterPoint
14 Energy and Entergy were continually restoring customers. And so,
15 their numbers were very low on an ongoing basis, although they
16 ultimately restored a lot of people.

17 Mr. Green. And that is why it worries me, because here in
18 Puerto Rico I think they are still only about 30 percent of the
19 power that has been restored. So, it is really a case that we
20 need to work on.

21 So, thank you, Mr. Chairman. I yield back.

22 Mr. Olson. The gentleman's time has expired.

23 Seeing no members seeking to ask questions, the Chair wants

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 to thank our five witnesses. Thank you, thank you, thank you for
2 coming here today.

3 I remind our witnesses that every member can submit questions
4 for the record for 10 days. Once you get that, you have 10 days
5 to respond.

6 Mr. Rush. Mr. Chairman, I request, I would like to make a
7 statement.

8 Mr. Olson. Yes, sir, you have a minute, Bobby.

9 Mr. Rush. A minute? Thank you, Mr. Chairman.

10 Mr. Chairman, I must say, with all due respect, as we conclude
11 this panel and are getting ready and prepare to introduce the next
12 panel, with all due respect, Mr. Chairman, I simply smell a rat
13 here. I really smell a rat.

14 PREPA's lack of response to this subcommittee's efforts to
15 invite them to attend and provide witness testimony to this
16 subcommittee is most disgusting and extremely disrespectful.
17 Mr. Chairman, that said, I strongly request that we use our
18 subpoena authority to demand that PREPA come to this subcommittee
19 and disclose to Members of Congress who are members of the
20 subcommittee what were the facts involved in its awarding this
21 \$300 million contract, which I call the sweetest of sweetheart
22 deals, to repair and reconstruct Puerto Rico's electrical
23 infrastructure.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 And I also believe, Mr. Chairman, that as has been stated
2 by members of both sides during this panel, that FEMA should also
3 be invited to be at the same witness table. Mr. Chairman, we ought
4 to get to the bottom of this, and we have got to know what happened,
5 when did it happen, and who is responsible for this absurd
6 sweetheart deal that is going to result in numerous people paying
7 an extraordinary additional amount of millions of dollars because
8 of the delay in the withdrawal of this contract.

9 So, I really request that we use our subpoena authority to
10 make sure that PREPA stop disrespecting the United States
11 Congress.

12 Thank you. I yield back.

13 Mr. Olson. And, my friend, I share your concerns. It
14 sounds kind of odd, what happened there, but I will talk to the
15 Chair for the subcommittee, Mr. Upton, and the full committee,
16 Mr. Walden, about the subpoena issue.

17 But, right now, a point of personal privilege before the
18 first panel leaves, and this is maybe at the risk of offending
19 Ms. Castor. But, Commissioner Walker, I hope you are going to
20 SMU Saturday, joining my daughter and my wife to watch SMU beat
21 the tar out of Central Florida.

22 [Laughter.]

23 The panel is dismissed.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Okay. Second panel, are you all ready? And just like
2 before, we will start out with opening statements from all of the
3 panelists, followed by questions from members.

4 And I recognize Thomas Fanning. Tom is the President and
5 CEO of Southern Company. He is here on behalf of the Electricity
6 Subsector Coordinating Council.

7 Tom, you have 5 minutes for an opening statement.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 STATEMENTS OF THOMAS FANNING, PRESIDENT AND CEO, SOUTHERN
2 COMPANY, ON BEHALF OF THE ELECTRICITY SUBSECTOR COORDINATING
3 COUNCIL; JULIO A. RHYMER, SR., EXECUTIVE DIRECTOR, VIRGIN ISLANDS
4 WATER & POWER AUTHORITY; CHET THOMPSON, PRESIDENT AND CEO,
5 AMERICAN FUEL & PETROCHEMICAL MANUFACTURERS; MAX MCBRAYER, CHIEF
6 SUPPLY OFFICER, RACETRAC PETROLEUM, INC., ON BEHALF OF THE
7 NATIONAL ASSOCIATION OF CONVENIENCE STORES AND THE SOCIETY OF
8 INDEPENDENT GASOLINE MARKETERS OF AMERICA; RAMON LUIS NIEVES,
9 ATTORNEY AT LAW, FORMER MEMBER, SENATE OF PUERTO RICO, AND
10 CATHERINE B. KENNEDY, VICE PRESIDENT, NATIONAL NURSES UNITED

11
12 STATEMENT OF THOMAS FANNING

13 Mr. Fanning. Thank you. Thank you for inviting me to
14 testify today.

15 My name is Tom Fanning. I am the Chairman, President, and
16 CEO of Southern Company. I am also the Immediate Past Chairman
17 of the Edison Electric Institute, the association that represents
18 all U.S. investor-owned electric companies. However, I am
19 addressing you today in my role as one of three Co-Chairs of the
20 Electricity Subsector Coordinating Council. We collaborate
21 closely with our colleagues from public power utilities and rural
22 electric cooperatives on the ESCC.

23 I am pleased to address the subcommittee and to share the

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 steps the electric power industry is taking to make energy
2 infrastructure smarter and more resilient, allowing us to
3 continue delivering affordable and reliable power.

4 The 2017 hurricane season highlights the critical importance
5 of cooperation and coordination among electric utility companies,
6 the government, and other key infrastructure industries to ensure
7 fast, efficient recovery for customers.

8 The electric sector faces constantly-evolving threats to the
9 energy grid. The industry's risk mitigation strategy emphasizes
10 a defense-in-depth approach. We focus on preparation,
11 prevention, response, and recovery, with an emphasis on the
12 isolation of and enhanced protections for critical assets.

13 While this hearing is focused on storm response and recovery,
14 it is important to note that our companies do not build the energy
15 grid or our security responses to meet only one type of threat.
16 We must prepare and plan for them all, whether manmade or natural,
17 malicious or unintentional, relating to the cyber or physical
18 security, or a combination of threats.

19 Weather is an unavoidable part of our business. In the
20 aftermath of such events, the industry works to identify gaps,
21 compile lessons learned, and disseminate best practices. As an
22 industry, we strive to be better today than we were yesterday and
23 to be better tomorrow than we are today.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Since Superstorm Sandy five years ago this week, the electric
2 power industry has combined efforts across all segments of the
3 industry and has worked with the government partners to streamline
4 restoration efforts and to improve preparation for and response
5 to major threats that cause significant outages.

6 The benefits of this coordination were visible over the past
7 several months as the industry and federal government worked to
8 prepare for and respond to the hurricanes. There is an
9 understandable urge to compare storms, but the reality is that
10 each storm is different. The common threads, however, are the
11 need for resilient infrastructure, a plan for response and
12 recovery, and the awesome nature of our industry's ability to
13 respond to emergencies.

14 Before I close, I would like to underscore the importance
15 of the ESCC. During the most recent storms, the ESCC held daily
16 coordination calls among impacted companies and government
17 officials to address critical operational issues such as
18 identifying specialized equipment needs, removing temporary
19 flight restrictions for both manned and unmanned aircraft to
20 assist with aerial damage assessments, coordinating how industry
21 could re-enter and access disaster areas, and coordinating
22 response efforts with the oil and natural gas,
23 telecommunications, transportation, and water and wastewater

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 sectors.

2 Energy Secretary Rick Perry was on every call and was
3 frequently joined by other officials such as Homeland Security
4 Acting Secretary Elaine Duke. These calls were essential to
5 identify and address critical issues in the response and recovery
6 efforts.

7 The reliability and resiliency of the energy grip are of
8 paramount importance. Our customers expect the lights to go on
9 when they flip a switch. When the power goes out, our customers
10 expect that it will be on soon.

11 The electric power sector will continue to strive to meet
12 those expectations through a multilayered strategy, to invest in
13 smart energy infrastructure, continuous enhancement of our
14 industry/government partnership, and the grit of the amazing men
15 and women who make the energy grid work day-in and day-out.

16 The subcommittee is showing great leadership with its focus
17 on preparedness, and we look forward to working with you on this
18 critical topic.

19 Thank you again for the opportunity to testify on behalf of
20 the ESCC, and I look forward to your questions.

21 [The prepared statement of Mr. Fanning follows:]

22
23 ***** INSERT 8*****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Olson. Thank you, Mr. Fanning.

2 And now, the Chair is glad to call upon Mr. Julio Rhymer,
3 the Executive Director of the Virgin Islands Water & Power
4 Authority, that suffered devastation from two hurricanes, Irma
5 and Maria. A 5-minute opening statement, Mr. Rhymer. Thank you.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 STATEMENT OF JULIO A. RHYMER, SR.

2
3 Mr. Rhymer. Good evening, Mr. Chair, other honorable
4 members of the Subcommittee on Energy.

5 My name is Julio A. Rhymer, Sr. I am an Executive Director
6 and Chief Executive Officer of the Virgin Islands Water & Power
7 Authority.

8 On behalf of the governor of the Virgin Islands, the
9 honorable Kenneth E. Mapp; the Virgin Island Delegate to Congress,
10 Honorable Stacy Plaskett; the members of the 32nd Legislature of
11 the Virgin Islands, and the Governing Board of WAPA, I thank you
12 for the invitation to provide testimony on the energy challenges
13 facing the U.S. Virgin Islands as a result of the passage of
14 Hurricanes Irma and Maria.

15 As you all are aware, in September of 2017, the Virgin Islands
16 faced the phenomenon of two back-to-back Category 5 hurricanes
17 within two weeks. According to the Saffir-Simpson Wind Scale,
18 a Category 5 hurricane has sustained winds of greater than 157
19 miles per hour. There were cases in Hurricane Irma that winds
20 were sustained at above 190 miles an hour.

21 WAPA's transmission and distribution facilities were, plain
22 and simple, destroyed by the catastrophic winds of two hurricanes.
23 Due to Hurricane Irma's impact on September 6th, 2017, the St.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Thomas, St. John, Water Island, and Hassel Island electrical
2 transmission distribution system suffered significant damage.
3 The St. Thomas system sustained damages of approximately 80
4 percent; St. John, approximately 90 percent; Water Island, 90
5 percent, and Hassel Island, 90 percent.

6 Approximately two weeks later, on Tuesday, September 19th,
7 2017, Hurricane Maria caused damage to almost 60 percent of the
8 transmission and distribution system on St. Croix. The islands
9 of St. Thomas, St. John, Water Island, and Hassel Island did not
10 receive any significant damage from a result of Hurricane Maria.

11 To date, the Authority has approximately 536 linemen and
12 other related off-island personnel in the territory, restoring
13 WAPA's electrical infrastructure. With the assistance of FEMA,
14 naval vessels and cruise ships have been brought in to provide
15 sleeping quarters for the off-island crews, since many hotels and
16 guesthouses throughout the territory remain closed after
17 sustaining major damages during these two hurricanes.

18 By far, the biggest challenge that I would like to focus on
19 today is funding the day-to-day operations and hardening of the
20 system in the event of future storms. Without question, these
21 hurricanes have decimated WAPA's finances. While we appreciate
22 the assistance that has been, and will be, forthcoming to rebuild
23 the systems that were damaged, one of our primary concerns as the

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Authority is the ability to meet pre-storm expenses. Prior to
2 hurricanes, the Authority's revenues were approximately \$25.6
3 million per month. Since the hurricanes events, and since we are
4 unable to provide electrical service and bill customers, revenues
5 have dropped below \$2 million per month.

6 WAPA has reoccurring expenses such as payroll, insurance,
7 plant operation and maintenance, debt service, and
8 previously-executed contracts, and financing agreements it must
9 pay. To address this dramatic shortfall, the Authority has
10 sought, through the government of the Virgin Islands, a community
11 disaster loan. Any support or assistance that you can offer in
12 this regard is appreciated.

13 One of the evident takeaways from the two Category 5
14 hurricanes, and significant damages to this regional system
15 territory-wide, is that there is an urgent need for WAPA to rebuild
16 its transmission and distribution systems, but to harden it to
17 a point where it is resilient to wind storms. WAPA believes it
18 would significantly reduce its post-storm hurricane period by
19 undergoing more of its critical infrastructure and by moving away
20 from wooden poles and introducing composite poles on the major
21 distribution circuits.

22 WAPA must also address its grid, since it is too susceptible
23 to damage from wind storms. WAPA had a proposed plan to construct

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 a series of microgrids on each island. Each microgrid would be
2 a localized group of electrical facilities that would either work
3 in tandem with the generating facilities or an option for
4 disconnection where they can stand alone. In the event the power
5 and the main grid is interrupted for any reason, the microgrid
6 would function as a small facility generating its own power at
7 this point.

8 Currently, you have in the works a microgrid on the island
9 of St. Croix that is actually going to go out for bid, and that
10 will provide, basically, power through solar and battery storage
11 to our airport facilities, a waste treatment facility, a
12 correctional facility, and, basically, a police station at this
13 point. What we are actually attempting to do here, as a utility
14 moving forward, is to harden our system, No. 1, and, basically,
15 make it more resilient by having microgrids.

16 I would like to thank you for the opportunity to appear before
17 the Subcommittee on Energy. I am available to answer any question
18 that you may have on this matter.

19 [The prepared statement of Mr. Rhymer follows:]
20

21 ***** INSERT 9*****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Olson. Thank you, Mr. Rhymer. And I heard what Irma
2 didn't destroy, Maria drowned.

3 Mr. Rhymer. Yes, it did.

4 Mr. Olson. The Chair now calls upon Mr. Chet Thompson.
5 Chet is the President and CEO of the American Fuels & Petrochemical
6 Manufacturers.

7 Mr. Thompson, you have 5 minutes for an opening statement.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 STATEMENT OF CHET THOMPSON

2
3 Mr. Thompson. Thank you, Mr. Vice Chairman, Ranking Member
4 Rush, and members of the subcommittee. Thank you for having me
5 here today.

6 My name is Chet Thompson. I am the President and CEO of the
7 American Fuel & Petrochemical Manufacturers. AFPM represents
8 the refining and petrochemical industries. Our members
9 represent 120 refineries, 140 petrochemical facilities. That
10 represents 98 percent of U.S. production capacity. More than
11 half of that capacity is located along the Gulf Coast.

12 Hurricane Harvey impacted our facilities in the fuel supply
13 chain very hard. Hurricane Irma impacted the fuel supply chain,
14 but largely in Florida, while Nate's impact on our assets was
15 rather minimal.

16 But, more importantly, the combination of Hurricanes Harvey,
17 Irma, and Maria were devastating to the people of the Gulf Coast,
18 particularly those in Houston and the Beaumont area, Florida, and
19 Puerto Rico. Many of those impacted are part of our extended oil
20 and gas family. Our hearts and prayers continue to go out to those
21 still struggling to recovery, and we stand by them and will help
22 them any way we can.

23 As a result of this personal impact on us, the subject of

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 today's hearing is particularly important to our industry. So,
2 I would like to limit my time this afternoon only to three key
3 points of my written testimony.

4 First, by and large, the U.S. refining and petrochemical
5 industries weathered the storm fairly well and proved to be very
6 resilient. This did not happen by accident. Rather, it was the
7 result of lots of hard work and preparation, and with the help
8 of an incredibly dedicated workforce and federal, state, and local
9 first responders. They are the true heroes coming out of these
10 events.

11 If you wanted to draw the storm up that could wreak the most
12 havoc on our industry, Harvey was it. Harvey hit Corpus Christi
13 as a Category 4 storm, moved right up the east coast, stalled
14 largely over Houston, which is the epicenter of the refining and
15 petrochemical industries. It dumped over 60 inches of rain in
16 some locations and more than a trillion gallons of water across
17 Texas and Louisiana.

18 At its peak, Harvey knocked 24 of our refineries offline.
19 That represents 25 percent of all U.S. refining capacity. It had
20 a similar impact on our petrochemical members. It knocked 60
21 percent of U.S. petrochemical capacity down. That is 80 percent
22 of the capacity found in the Gulf Region.

23 Harvey also had a significant impact on the entire fuel

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 supply chain. It shut down ports, pipelines, terminals, rail,
2 and certainly gasoline stations. Our facilities couldn't get
3 feed into their plants, and we certainly couldn't get products
4 out.

5 This had the potential to be catastrophic for the fuels and
6 petrochemical supply chains, but in the end it wasn't. Just two
7 weeks after Harvey made landfall, 20 of the 24 facilities that
8 went down had restarted. And the petrochemical facilities made
9 substantial progress during this period as well.

10 Again, this was not by accident. Facilities were prepared
11 for the storms. They had applied many of the lessons learned in
12 the aftermaths of previous storms like Katrina and Rita. For
13 example, our facilities developed more sophisticated
14 preparedness plans, improved storm monitoring, hardened critical
15 infrastructure, elevated pumps and generators, procured spare
16 parts so we could be ready to move with recovery efforts after
17 the storm. We upgraded our IT systems to help us locate employees
18 and ensure that they had the assistance they needed. All of this
19 made a difference. We came back online much faster than we did
20 after prior storms.

21 The second point I would like to make, the federal and state
22 response was significantly improved compared to previous storms.
23 One of the lessons we have learned is that we have to better

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 coordinate federal, state, and local governments. So, over the
2 last few years, we have been working hard in that regard, working
3 closely with DOE and DHS to improve our relationships.

4 The results during Harvey, in particular, were excellent.
5 We were in constant contact before, during, and after the storms.
6 The improved coordination was most evident in the quick review
7 and approval of fuel waivers, unlike in prior storms, helping us
8 get fuel to where it was needed quickly and efficiently. Our
9 federal and state partners, particularly Secretary Perry,
10 Administrator Pruitt, Governors Abbott and Scott, deserve kudos
11 for these improvements.

12 If I had to identify the one area that could be improved,
13 it would be better communication by our government to consumers
14 about the fuel supply chain and the challenges that often
15 accompany events like hurricanes. For example, the government
16 could help us explain the timelines for bringing facilities back
17 online and getting products back to the distributors and the
18 marketers. And it could also help us discourage panic buying that
19 always seems to accompany these types of events.

20 Third and finally, as always, our companies will work with
21 federal and state authorities to identify and apply lessons
22 learned. Although we did fare fairly well, no doubt there are
23 going to be things we can learn and improve upon to make future

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 responses even better. We would caution anyone to resort to any
2 knee-jerk reactions or conclusions, particularly those based on
3 a few isolated events, before full assessments are in.

4 So, I know I am running out of time. I thank everyone for
5 my time and the opportunity to speak today.

6 And again, I would like to express our thanks and
7 appreciation for our incredible workforce and our first
8 responders. They certainly deserve our appreciation.

9 So, thank you, and I am happy to answer any questions.

10 [The prepared statement of Mr. Thompson follows:]
11

12 ***** INSERT 10*****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Olson. Thank you, Mr. Thompson.

2 The Chair now calls upon Mr. Max McBrayer. Max is the Chief
3 Supply Officer for RaceTrac Petroleum, Incorporated.

4 You have 5 minutes, sir.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 STATEMENT OF MAX MCBRAYER

2
3 Mr. McBrayer. Thank you. Mr. Vice Chairman, Mr. Ranking
4 Member, and members of the subcommittee, thank you for the
5 opportunity to testify today on the retail community's response
6 efforts to 2017 hurricane season.

7 My name is Max McBrayer. I am the Chief Supply Officer and
8 the Chief Financial Officer of RaceTrac Petroleum, Inc. I am
9 testifying today on behalf of the National Association of
10 Convenience Stores and the Society of Independent Gasoline
11 Marketers of America. RaceTrac is a family-owned business,
12 headquartered in Atlanta, Georgia, operating more than 450
13 convenience stores across 12 states and employing nearly 9,000
14 team members.

15 The 2017 hurricane season had a devastating effect on
16 America's fuels infrastructure and markets. During Hurricane
17 Harvey, flooding damaged more than a quarter of the U.S. refining
18 capacity and shut down fuel pipelines. This put severe strain
19 on the domestic fuel supply. Hurricane Irma led to an increased
20 demand for fuel in Florida, further straining the fuels market
21 and causing prices to rise sharply.

22 Natural disasters directly and severely affect the retail
23 fuels market. Margin on fuel sales range between 2 and 20 cents,

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 and retailers must constantly react to changes in supply and
2 demand to ensure their prices remain competitive.

3 During any severe weather event, wholesale fuel prices
4 become more volatile as the market tries to assess and anticipate
5 supply availability. When these unwelcome changes occur,
6 retailers respond to meet their cost.

7 Due to the infrastructure damage, compliant fuel inventories
8 became strained, leading to escalating wholesale prices. Retail
9 market prices generally reflect rapid increase in the wholesale
10 prices. In this instance, fuel retailers made individual
11 decisions on whether to increase prices and risk losing customers
12 or potentially take losses by keeping prices low and not covering
13 the increased wholesale cost.

14 Despite the tough situations, the fuel market was supported
15 by the actions of both the federal government and the state
16 governments. The governments worked with us to deal with the
17 issues before, during, and after the hurricanes.

18 Communication and coordination initiatives were
19 particularly important. For example, the governors of Texas and
20 Florida held conference calls with industry and government
21 stakeholders where they listened to concerns and rendered prompt
22 assistance.

23 In Florida specifically, the governor's office waived

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 certain restrictions for highways, helped ensure that ports
2 prioritized fuel shipments, coordinated escorts for fuel trucks
3 and ships, easing the movement of product to the retail fuel
4 locations.

5 At the federal level, disaster response efforts spanned a
6 number of agencies, which ultimately issued more than 30 waivers
7 to help deal with fuel supply issues. Of particular importance
8 to RaceTrac was the waiving of hours-of-service limitations for
9 drivers providing assistance to affected areas. These waivers
10 were the difference between getting fuel to our customers in a
11 reasonably affordable and timely manner and not being able to
12 supply customers with the fuel they needed.

13 In response to state petitions, federal agencies also eased
14 restrictions on the type of product that retailers could sell.
15 For example, EPA temporarily waived certain reformulated gasoline
16 requirements under the Clean Air Act.

17 Despite the major disruptions to the fuel distribution
18 system after the hurricanes, the impact on consumers and the
19 economy was still less than what occurred with Hurricanes Katrina
20 and Rita in 2005. This is because the government worked with the
21 private sector to respond appropriately.

22 There are still important lessons to be learned, however.
23 For instance, there is no good coordinated effort to make sure

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 that consumers were informed of the status of fuel supplies via
2 social media. As the hurricanes approached, we believe that much
3 of the panic about fuel availability caused a significant and
4 totally unnecessary pull on the available fuel supply. The panic
5 lessened when information on the fuel supply was shared with the
6 public. In addition, bottlenecking at ports and fuel terminals
7 was a problem that the government could have done more to
8 alleviate.

9 Finally, in the hurricanes' aftermath, truck drivers and
10 other employees found it difficult to get to affected areas
11 quickly. Anything that can be done to remove hurdles for fuel
12 transportation would speed up recovery efforts in the wake of
13 future hurricanes.

14 RaceTrac believes the collaboration between the public and
15 the private sectors was critical to the successful response
16 efforts. We are proud to have been able to serve the communities
17 that we operate in.

18 And I thank you for the opportunity to provide this
19 testimony.

20 [The prepared statement of Mr. McBrayer follows:]

21
22 ***** INSERT 11*****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Olson. Thank you, Mr. McBrayer.

2 The Chair now calls upon the honorable Ramon Luis Nieves,
3 who is now an attorney at law, was a former distinguished member
4 of the Senate of Puerto Rico.

5 You have 5 minutes for an opening statement, sir.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 STATEMENT OF RAMON LUIS NIEVES

2
3 Mr. Nieves. Thank you, Chairman Olson, Ranking Member Bobby
4 Rush, members of the subcommittee.

5 My name is Ramon Luis Nieves. I had the privilege to serve
6 the people of Puerto Rico as Senator of San Juan and Chairman of
7 the Committee on Energy. I currently practice law in the state
8 and federal courts of Puerto Rico.

9 I want to thank the subcommittee for this opportunity to
10 discuss Puerto Rico's energy challenges. As a resident of San
11 Juan, I have personally suffered the problems associated with the
12 lack of electricity for more than 40 days. The currently energy
13 crisis is destroying our economy and our way of life.

14 Nobody denies the challenges of repairing the collapsed
15 energy grid of Puerto Rico, but I submit to you that most of the
16 challenges to turn the lights back on in Puerto Rico are neither
17 natural nor geographic. They are manmade.

18 The Puerto Rico Electric Power Authority, PREPA, was already
19 a bankrupt, fragile, and useless entity before Hurricane Maria
20 made landfall. The Power Authority's grid was obsolete, lacking
21 adequate maintenance.

22 The recent Whitefish debacle is exhibit A of the governance
23 issues plaguing PREPA. As we evaluate energy options for Puerto

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Rico, we must be particularly alert about disaster contractors
2 who may try to take advantage and profit off of our people's
3 misery.

4 But I didn't take two flights from San Juan to complain about
5 PREPA. I come before you with proposals to help us transform
6 Puerto Rico's energy model.

7 Energy equals life. As most Puerto Ricans sadly understood
8 after Hurricane Maria, the lack of a strong, resilient, and smart
9 energy system has the potential of killing people and destroying
10 the economy. The actual death toll not of Hurricane Maria, but
11 of Hurricane PREPA has not been properly disclosed by the
12 government of Puerto Rico.

13 While working hard to turn the lights back on as soon as
14 possible, policymakers must also think long term. A plan to
15 transform Puerto Rico's energy model, supported by significant
16 federal support funding, is the right course of action.

17 Technology and innovation are transforming the energy
18 industry. Puerto Rico must break free from PREPA's centralized
19 energy model. The people of Puerto Rico deserve an energy model
20 whereby more and more customers are able to opt for distributed
21 generation or go off the grid in their homes and business.

22 Policymakers are agreeing with the idea of a new energy model
23 based on several regional microgrids. Microgrids for key

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 government security and health installations, such as hospitals,
2 will also help recovery efforts after future storms and
3 hurricanes.

4 The mandate to regulate microgrids is already in our law
5 books. Act No. 133 from last year the last bill that I sponsored
6 in the Senate, to include microgrids as a mandate. However, a
7 federal mandate to include microgrids in a new energy model for
8 Puerto Rico will certainly help.

9 PREPA has also pointed out that the Stafford Act restricts
10 to rebuild the grid as it was. Perhaps you may be able to change
11 that by amending federal law.

12 PREPA's old, and now collapsed, grid is not able to deal with
13 the technical challenges of an energy model that embraces
14 renewable power. However, as I have said, countless policymakers
15 agree that just repairing the old, obsolete energy grid of Puerto
16 Rico will be a colossal waste of taxpayer dollars. PREPA is
17 broke. So, the federal government is the only entity able to
18 finance this key project.

19 Let's talk about PREPA's governance. The Whitefish scandal
20 is a sad example of the shameful and incompetent governance that
21 characterizes PREPA. PREPA awarded a no-bid \$300 million
22 contract to an unknown company with just two employees. The
23 government recently requested PREPA to cancel the contractual

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 agreement, but 40 days after Hurricane Maria, and hundreds of
2 deaths later, PREPA did what it should have done from the start,
3 request the mutual aid offered by private and public electric
4 companies. But where was PREPA's governing board? Nobody
5 really knows, but I submit to you that this Whitefish business
6 is very harmful to Puerto Rico's credibility.

7 Very quickly, since my time is almost up, PREPA collapsed
8 under its \$9 million debt. Congress, the administration, and the
9 oversight board must create a financial solution for PREPA's debt.
10 Aggressive restructuring of the debt, combined with new
11 Brady-type bonds and continued oversight over PREPA, could be a
12 way to solve this monumental problem.

13 And just to finish up, the most efficient way to transform
14 the energy model of Puerto Rico is by giving the proper resources
15 to Puerto Rico's independent energy commission. An independent
16 and strong regulator is key for our recovery. In order to
17 guarantee the federal funds to build a new energy grid are properly
18 used and allocated, I propose that the Revitalization Coordinator
19 of Puerto Rico under PROMESA and the Puerto Rico Energy Commission
20 be given sole authority over PREPA. PREPA shall cease to exist
21 in its present form.

22 Just to wrap up, thank you for the opportunity. The people
23 of Puerto Rico urgently need to turn their lights back on, but

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 we also demand the resources to create a new energy model for our
2 island. Our lives depend on it.

3 Thank you.

4 [The prepared statement of Mr. Nieves follows:]

5

6 ***** INSERT 12*****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Olson. Thank you, Senator Luis Nieves.

2 We saved the best for last, ma'am. Our final opening
3 statement is going to be from Ms. Cathy Kennedy, and she is the
4 Vice President of the National Nurses United.

5 Ma'am, you have 5 minutes for an opening statement.

6 Welcome.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 STATEMENT OF CATHERINE B. KENNEDY

2
3 Ms. Catherine Kennedy. Vice Chairman Olson, Ranking Member
4 Rush, and members of the subcommittee, good afternoon, and thank
5 you for inviting National Nurses to take part in this hearing.

6 My name is Catherine Kennedy of Carmichael, California, and
7 I have been a registered nurse for 37 years. I currently serve
8 as the Vice President of National Nurses United, which is the
9 largest union of RNs in the country. I submit the testimony today
10 on NNU's behalf.

11 From October the 4th through the 18th, I served on a voluntary
12 deployment to Puerto Rico with NNU's Registered Nurse Response
13 Network to assist with Hurricane Maria's disaster relief. Fifty
14 nurses deployed with R&R into Puerto Rico among 300 skilled union
15 members organized by AFL-CIO.

16 NNU nurses very much appreciate your holding this hearing
17 and providing us the opportunity to share our account of the public
18 health crisis that we witnessed. NNU's full report on the
19 conditions of Puerto Rico is attached to my written testimony.

20 The lack of electricity is endangering people's lives and
21 leading to preventable death and illness. I was the lead RN for
22 the healthcare teams on the deployment. I helped to organize
23 nurses into teams and, with a map of the island, we tracked the

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 public health assessment of each community that we visited,
2 evaluating whether people had access to food, water, and
3 healthcare, their basic living conditions, and medical needs.
4 Time and time again, we saw that lack of power exacerbated the
5 disaster or created new ones.

6 Basic medical services were down in many areas and not fully
7 functioning in others. An acute public health crisis has
8 developed. Without electricity, people with chronic illnesses,
9 such as diabetes and hypertension, cannot refrigerate their
10 medications. For example, in Loiza, nurses worked with elderly
11 residents who had to put their insulin in bowls of tepid water,
12 trying to keep this lifesaving medication cool enough to use.

13 Pharmacies could not refrigerate their medications, either.
14 They also cannot access computer systems which store prescription
15 orders. Therefore, patients were scrambling to find doctors to
16 write new prescriptions, so they can give them to the pharmacies.
17 But many doctors' offices were closed, partly because the grid
18 is still down and accessing reliable generators and fuel for them
19 was nearly impossible.

20 Pharmacies also cannot access insurance information. So,
21 patients are being asked to pay full price for medications. Most
22 people don't have cash, and if they had money in the bank, they
23 can't access it because the ATMs and the banking process systems

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 are also down.

2 As long as the power grid is down, hospitals cannot function
3 at full capacity. Generators are prone to failure, and fuel is
4 hard to access. With generators, hospitals can't perform certain
5 procedures or tests which use a large amount of energy. And at
6 one hospital we know that they could not perform MRIs as long as
7 they relied only on generators.

8 Without reliable power, the problems of accessing food and
9 water are amplified. The simple act of purchasing food and water,
10 when it is available, is nearly impossible. Stores can't take
11 credit cards, and ATMs don't work. Bank services that normally
12 take minutes now take hours.

13 The people of Puerto Rico are unable to refrigerate and cook
14 their food. They must rely on canned and processed foods, which
15 are high in sodium. Access to food in rural communities is
16 especially difficult. As long as there is no power, people will
17 be reliant on relief organizations to provide food and water for
18 them.

19 Electricity is also needed to run wastewater treatment
20 plants and to restore the functioning of water utilities.
21 Without clean running water, nurses have witnessed the beginnings
22 of multiple outbreaks of waterborne diseases, including
23 leptospirosis, an animal-borne bacterial disease that can be

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 fatal if not treated in time.

2 Then, there are problems accessing FEMA aid. People can't
3 access FEMA's online notices and aid application. For those that
4 are able to apply for aid, they are told that necessary followup
5 communication will be sent either by text or email. People don't
6 have power right now. They are not going to receive any followup
7 for their FEMA applications.

8 NNU urges Congress to use its oversight and appropriation
9 authority to ensure that FEMA and other U.S. agencies respond to
10 this crisis effectively. It is unacceptable that citizens of the
11 richest country on earth have been denied necessary humanitarian
12 aid and left to die. With a growing climate crisis, relief to
13 Puerto Rico must come in the form of responsible measures that
14 can build a sustainable energy future.

15 Thank you again for giving NNU the time to share the stories
16 of the people and places in Puerto Rico that we cannot and must
17 not forget. Thank you.

18 [The prepared statement of Ms. Catherine Kennedy follows:]

19
20 ***** INSERT 13*****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Olson. Thank you, Mrs. Kennedy.

2 And now is the fun time, questions from the members. And
3 the Chair will yield to himself for 5 minutes of questions.

4 My first questions are for you, Mr. Thompson. First of all,
5 I have to say congratulations. I mean, I was there for Hurricane
6 Ike, Tropical Storm Allison. I was there for Hurricane Harvey.
7 Most of our capacity was in that storm. You guys came roaring
8 back. So, congratulations for getting that turned around so
9 quickly.

10 I have talked to a lot of people. You guys have gotten much
11 better preparing for hurricanes or sort of natural disaster.
12 Yes, we are going to take a hit; we know it. I have heard like
13 with Katrina, Rita, and Ike, you all learned how to not fully shut
14 down our refinery, but keep it warm, so to speak, not the complete
15 shutdown, but keep it going where it is that risk of some sort
16 of breach. But, once the storm clears, get that thing up like
17 that.

18 So, I just want you to talk about how you prepare a refinery
19 that is directly in the path of a storm like Harvey to make sure
20 to get that thing back online as quickly as possible.

21 Mr. Thompson. Well, thank you for the question, and I
22 address some of this in my opening remarks. Most of this, of our
23 ability to weather the storms, one was our credible workforce.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 We literally had thousands of people that were riding out these
2 facilities. When their own families and houses were in peril,
3 they were helping keeping our facilities literally above water
4 and ready to go.

5 Also, lots of preparation. We have been working on storm
6 for years, working with the National Petroleum Council, working
7 with DOE and DHS. This was not something that we prepared for
8 just a few weeks ago.

9 We took all the lessons learned from prior storms and we put
10 them in the action. We hardened our infrastructure. We elevated
11 what we could elevate. We have much better storm-tracking
12 capabilities now. So, we could identify exactly where the storm
13 was going and identify when we had to bring the systems down.

14 Safety is the No. 1 responsibility. So, our facilities will
15 come down when safety demands it. And so, for those facilities
16 where they realized that they weren't going to be hit as hard,
17 they could remain warm and ready to go. Some of the facilities,
18 indeed, had to come all the way down.

19 So, I would just end by saying a lot of hard work, a lot of
20 dedication. And again, we can't applaud our employees enough.

21 Mr. Olson. And lessons learned, which I know it just goes
22 with the territory. You will have some leaks, some chemical
23 leaks, you know, whatever. For example, we have these big tanks

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 that have floating tops. And the water got so high, almost 5 feet
2 of rain overcame the capability, and you had some small leaks.

3 So, my question is, what are you all doing to prevent and
4 respond to these spills before they happen? Because I know it
5 is amazing what happened. I mean, it was such a stellar
6 performance. But how do you make it even better going forward?

7 Mr. Thompson. Well, I can assure that every company, those
8 impacted and those that even weren't directly impacted are
9 assessing how we responded to the storm, what went well, what
10 didn't go well. We, as a trade association, bring our members
11 together. We share information. And we will work to improve.
12 Very storm, we learn from the prior one to get better.

13 Mr. Olson. Thank you.

14 A question for you, Mr. McBrayer. I mean, I was driving
15 around pretty much for a week after Harvey hit and you could find
16 gasoline. Some shops were shut down. My question is, was that
17 because of power, because of lack of supply, lack of the gasoline,
18 or lack of the employees being able to get to work because of all
19 the floods? So, what was going on there? Because, again, you
20 could find it, but some stations weren't up and running and, as
21 you mentioned, there was some price gouging because of all sorts
22 of rushes because people are panicking that there will be no
23 gasoline.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. McBrayer. All of the things that you mentioned, Mr. Vice
2 Chairman, are correct. Some of it is due to the fact that we rely
3 upon the employees who are living in the affected area. And like
4 any good employer, we are more concerned about their life at home
5 and being sure that they are prepared to meet the needs of their
6 family before they return to work.

7 We do have some problems with the electrical supply.
8 Getting generators into our stores, specifically, was quite
9 challenging in the Houston area because of the amount of flooding
10 in the roadways. There are some stores that just choose not to
11 buy at the costs that tend to go up during these disasters.

12 But most everyone is working hard because in our business
13 we build 50-year assets. We are there for a long time. And so,
14 our long-term mentality is to provide what our guests, our
15 consumers, need, and to work hard to do that.

16 It is a site-by-site lissue as to what the problems are and
17 what we may need to do. We have stores in the south Houston area
18 with some water in tanks. We have had stores that were completely
19 flooded out that are still yet to reopen. But you have to assess
20 your assets one at a time and do things you can quickly in order
21 to bring them back online.

22 Mr. Olson. One further question, Mr. Fanning. You brought
23 up UAVs, and that is a big deal, hard back home. A town called

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Missouri City had some levies, not so much oil production, but
2 levies that may be breaching. They were fine, the UAVs, they
3 could see it and, then, they were grounded. So, how about the
4 role of UAVs in these disasters for oil and all the operations
5 with the petrochemical industry? Because those things are
6 working and, for some reason, they were shut down because there
7 was some kind of danger. And that was just not right to do because
8 of that breach; they may have prevented a breach because they saw
9 it with the UAVs. So, any idea about oil and gas operations,
10 refining, storage, whatever, that UAVs could help out?

11 Mr. Fanning. Yes. Well, we don't impact oil and gas
12 particularly. But, in response to any storm, there should be a
13 comprehensive plan that is undertaken, really driven by the local
14 authorities.

15 I was listening to your prior panel. Very interesting, in
16 that every utility works with -- for example, in Georgia, they
17 would work not only with the federal agency FEMA, but with GEMA.
18 Within that context, all critical infrastructure is evaluated
19 with respect to the approaching threat. And therefore, we
20 develop a set of priorities and, essentially, a response regime
21 as to how to provide the best benefit going forward.

22 I can't speak to Missouri or whatever the impact is there,
23 but I would assume that they have taken those things into account.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Olson. Thank you. I am aware of my time.

2 The Chair now recognizes the gentleman from Illinois, the
3 ranking member, Mr. Rush, for 5 minutes.

4 Mr. Rush. I want to thank you, Mr. Chairman.

5 Ms. Kennedy, your testimony has been very, very amazing
6 testimony. I am amazed at the breadth of the tragedies that are
7 occurring, even as we speak, in Puerto Rico. And I am amazed at the
8 lack of proper attention by those in our government in determining
9 their response to this American tragedy in Puerto Rico.

10 There are some who are disputing the official death toll.
11 Some say that, oh, 51 casualties due to the hurricane. But, yet,
12 the Puerto Rican Department of Public Safety confirmed that over
13 900 bodies have been authorized for cremation since Hurricane
14 Maria tore through their island on September the 20th. And that
15 900 figure includes deaths related to lack of oxygen and other
16 fatalities that appear to be due to the power outage. Yet, some
17 say that those fatalities should just be considered natural
18 deaths.

19 Do you concur with this definition from your experiences?
20 You have spent time there. Do you believe that the death toll
21 from Hurricane Maria is actually 51 or is it closer to 900, or
22 is it somewhere in between?

23 Ms. Catherine Kennedy. Well, thank you for the question.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 We were there from October the 4th through the 18th. And
2 as I said in my testimony, what the nurses saw was that, when you
3 get outside of San Juan, that they were pretty much cut off from
4 electricity, from communication, from anything. So, when you ask
5 me what was the death toll, do I believe whether it is 51 versus
6 911, or somewhere in between, personally, I think it is more of
7 the higher.

8 What we saw was people were desperate. We were considered
9 almost the first ones that they even saw as it relates to food
10 or water, or any kind of communication. And through word of
11 mouth, they did say that the neighbor passed, whether it was
12 through leptospirosis or natural causes -- you mentioned the lack
13 of electricity and without oxygen. So, yes, I think it is rather
14 on the high side.

15 Mr. Rush. Mr. Nieves, do you have any further insight into
16 the actual number of fatalities and the reason for those
17 fatalities?

18 Mr. Nieves. Yes. Basically, I really agree with Ms.
19 Kennedy. The official death toll of 59 up until now is very
20 superficial and misleading. By personal experience, I have
21 talked with dozens of family, friends, that have told me, "Oh,
22 my grandmother died. She passed because she didn't have
23 electricity in her nursing home." A lot of elderly people that

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 do not have electricity are simply dying.

2 And so, how can you relate that to Hurricane Maria? It is
3 very difficult because it didn't happen that day. But the death
4 toll is, in my view, in the hundreds.

5 Mr. Rush. So, even today, as we sit here in this committee
6 room, there are people who are still dying in Puerto Rico simply
7 because they have no electricity, even today?

8 Mr. Nieves. Yes. As I said in my testimony, people are
9 dying today not because of Hurricane Maria, but because of
10 Hurricane PREPA, because they don't have electricity in their
11 homes and care centers.

12 Ms. Catherine Kennedy. I would agree. Without
13 electricity, without power, you know, there are stories where
14 patients actually go to San Juan when the electricity is up, and
15 they take their nebulizers and plug them in, so that they can do
16 the breathing treatments. Or they may sit in clinics where they
17 have access to oxygen and use the oxygen there throughout the day,
18 and then, they go home where there is no electricity and they are
19 without oxygen, without anything.

20 Mr. Rush. Thank you, Mr. Chairman. I yield back.

21 Mr. Olson. The gentleman yields back.

22 The Chair now calls upon the gentleman from Illinois, Mr.
23 Shimkus, for 5 minutes.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Shimkus. Thank you, Mr. Chairman.

2 It is great to have you here. I want to direct some of my
3 questions to Mr. Fanning.

4 Mr. Fanning, if the electricity went out in Atlanta, Georgia,
5 who would get called?

6 Mr. Fanning. Initially, Paul Bowers, President of Georgia
7 Power Company, but that is a pretty clear deal.

8 You know what is interesting in these storms, we have,
9 essentially, people that run the storm activity. They are fully
10 empowered to work with whatever state, local, federal government,
11 to get the lights on as fast as we can. They have a clear sense
12 of priority and they get the job done.

13 Mr. Shimkus. Again, Puerto Rico is an island. It is very
14 difficult, and I kind of wish the administration would have
15 deployed the 82nd Airborne and just had a parachute jump into a
16 lot of communities that don't have access. At least there would
17 be a meal ration. And the military has even solar packs that they
18 take in Afghanistan. If there was one thing I wish they would
19 have done more than anything, it is really deployed.

20 But you also heard in the first panel that the fact that there
21 was no request for help until five weeks later. That is not
22 normal. I mean, you represent the Electricity Subsector
23 Coordinating Council.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Fanning. That is right.

2 Mr. Shimkus. Isn't that something that you all do as part
3 of that?

4 Mr. Fanning. Absolutely. In fact, I would argue,
5 especially this year -- the Electricity Subsector Coordinating
6 Council was originally formed to focus on cyber and physical
7 security. We have added to that, given the success we have
8 demonstrated on those issues, this notion of storm response.

9 Following Sandy, the electric utility industry reorganized
10 what we call regional mutual assistance groups. And so now, under
11 the kind of structure of the ESCC, we bring together, really for
12 the first time, an enhanced collaboration, not only of
13 investor-owned utility responses, but also
14 collaboration/coordination with municipal utilities,
15 cooperative utilities.

16 We offer that up and we participate in a series of restoration
17 activities, federal government, local, and with each other. And
18 we do that, also, interdependent with the other kind of industries
19 that you all were talking about in the last segment. And that
20 is telecom, so important; water and sewer; health care.

21 Believe it or not, we go beyond the notion of offering
22 assistance just for the restoration of electrons. In Houston,
23 particularly, my company got called on for two things that had

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 nothing to do with electricity.

2 One was for the humanitarian rescue effort. Within 20
3 minutes of a phone call, we sent forward pilots and drones to help
4 identify where survivors and other people may be.

5 Secondly, through Alabama Power, we delivered machinery that
6 was able to operate in very high water conditions that were used
7 to help rescue people.

8 Mr. Shimkus. Thank you.

9 And PREPA, or the Puerto Rican Electric Power Authority, they
10 are not involved in this group, are they?

11 Mr. Fanning. So, PREPA works under the aegis of the American
12 Public Power Association, which is, essentially, a municipal
13 organization. We offered help, but PREPA, the State of Puerto
14 Rico, for whatever reason, elected to pursue a different path,
15 not pursue the mutual assistance rubric and really go through
16 bilateral --

17 Mr. Shimkus. Yes, and let me go to the elected
18 representative, Mr. Nieves. When we look back now on lessons
19 learned and how we want to move forward, would you agree that we
20 probably should look at ways in which the whole community can be
21 helpful and develop these memorandums of understanding where we
22 can get joint use and quick response? That would be probably a
23 pretty good lesson learned in this?

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Nieves. Well, the thing is, the fact is that the
2 American Public Power Association, and I understand that at least
3 the Electric Institute offered since day one mutual assistance
4 to PREPA, but PREPA pursued another way. So, it is not a lack
5 of an agreement, but it was a lack of will from PREPA's part. And
6 then, we have the Whitefish situation.

7 Mr. Shimkus. Yes, yes. And I am sure we are going to have
8 time to continue to look at that. But, believing your testimony,
9 which I do, that is, I would call that criminal negligence. And
10 I am sorry for that.

11 My time has expired, Mr. Chairman. I yield back.

12 Mr. Olson. The gentleman yields back.

13 The Chair now calls upon the gentlewoman from Florida 14,
14 Ms. Castor, for 5 minutes.

15 Ms. Castor. Thank you, Mr. Chairman.

16 Thank you all very much for being here.

17 The more we hear directly from folks like you that are in
18 the U.S. Virgin Islands and Puerto Rica, the more disturbing it
19 gets. I think you can sense the outrage building from this
20 committee over the Puerto Rico Electric Power Authority.

21 Mr. Nieves, are you surprised that PREPA did not respond to
22 this committee and, in essence, refused to appear here?

23 Mr. Nieves. I am sad to say that I am not surprised. When

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 I used to Chair the Senate's Energy Committee, one of the things
2 that we found is their total lack of transparency. So, to me,
3 I assume this is a lack of respect for this committee that PREPA
4 is not here on this group.

5 Ms. Castor. And were you surprised to hear Mr. Alexander,
6 who is the lead for the U.S. Army Corps of Engineers in repairing
7 the grid in Puerto Rico, were you surprised to learn that he hasn't
8 even been able to have a conversation with PREPA

9 Mr. Nieves. Sadly, I am not surprised.

10 Ms. Castor. So, how do we justify taxpayer dollars now going
11 to repair a grid in Puerto Rico, trying to work with PREPA after
12 they refused to interact with the committee? They are not working
13 with the Army Corps of Engineers. They are wasting taxpayer money
14 through this Whitefish contract that has outraged so many people.
15 And yet, the need is so great on the island. How do you recommend
16 that we move forward? We are going to have to address the PREPA
17 situation in law as soon as possible, I would assume.

18 Mr. Nieves. Yes. First of all, we have to really
19 understand and consider at the end of the day, given PREPA's
20 governance problems, we need to think that people are dying. Our
21 economy is dying. So, how do we work around that, or PREPA's lack
22 of governance and transparency?

23 My suggestion, and that I did in my testimony, is that since

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Congress already passed the PROMESA act, and the oversight board
2 named a Revitalization Coordinator that has been appointed to take
3 over PREPA, that Congress finds a way, a mandate, a specific
4 mandate, that federal taxpayer money to create a new energy grid
5 be under the supervision of the Revitalization Coordinator of the
6 board and the Puerto Rico Energy Commission, which is an
7 independent, non-political, nonpartisan, and highly technical
8 body. So, you can bypass PREPA and the government of Puerto Rico.
9 So, that could be a way to get around it.

10 Ms. Castor. And this has to be, we have to have a sense of
11 urgency to do this, because they are talking about the next
12 emergency bill maybe will be in December, hopefully. I mean,
13 there is a lot of things on the agenda for Congress in December.
14 But time is of the essence here.

15 Mr. Nieves. Yes.

16 Ms. Castor. And, Colleagues, we simply have to find a way
17 to at least begin to plan to build in some resiliency, get the
18 power on, but begin to lay the groundwork for a modern electric
19 grid, and address the ineptitude of the Puerto Rico Electric Power
20 Authority. Lives hang in the balance.

21 We have the experts at our fingertips. We have the
22 technology to do this. Does Congress have the capacity to act
23 with a sense of urgency, knowing how our fellow citizens are

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 suffering there? So, that is a challenge for us.

2 So, I thank you all very much for being here.

3 And I yield back my time.

4 Mr. Olson. The gentlelady yields back.

5 The Chair now calls upon the gentleman from Mississippi,
6 Gregg Harper, for 5 minutes.

7 Mr. Harper. Thank you, Mr. Chairman. Congratulations to
8 the Astros.

9 Mr. Olson. Thank you.

10 Mr. Harper. And I know it was a great series.

11 I want to thank each of you for being here. This is still
12 something that just is stunning, the hurricanes we have had to
13 deal with this season. And certainly what has happened in Puerto
14 Rico has concerned us all.

15 So, Mr. Fanning, I know you mentioned that it is more than
16 just power or restoration of power. It is also telecom, water
17 and sewer issues. Can you talk for a moment and tell us how
18 utilities use their communications network to recovery and
19 respond from hurricanes and other weather-related events, and how
20 reliable do those communications networks need to be?

21 Mr. Fanning. Yes. Thank you, Congressman, and thank you
22 for your service to the great state of Mississippi.

23 Mr. Harper. Thank you.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Fanning. The best example of that is Katrina, as you
2 well know. I think Katrina and the national story gets told
3 around New Orleans in the breaching of the dam. The truth is,
4 in Mississippi, when Katrina came through, every light was out
5 around Mississippi Power.

6 And when you went in to try to restore that activity, the
7 streets were unrecognizable. You couldn't even use,
8 essentially, GPS to find your way around. All of the telecom was
9 out as well.

10 We have to have an interconnected effort between telecom and
11 electricity in order to most efficiently respond to these sorts
12 of disasters. Southern Company, as a matter of its own resilient
13 strategy, has our own dedicated telecom company called Souther
14 Linc, in which we can bring in mobile cells on wheels, towers
15 essentially, to set those things up.

16 As I am working within the context of the ESCC as it relates
17 to Puerto Rico, early on -- and this is where the ESCC was not
18 asked to help in a mutual assistance effort -- but, still, we were
19 working with different parts of the economy to try to bring help
20 to that island.

21 I called personally John Donovan. He is roughly the No. 2
22 guy at AT&T, as I understand it. And also, at -- hold on -- at
23 Verizon, Lowell McAdam, who is the CEO there, to link together

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 our efforts in bringing help down there. And we assured each
2 other that, between telecom and electricity, we would provide
3 every level of support, whether it was even asked for or not, to
4 try to get that situation rectified.

5 Congressman, it is critical. If we are going to communicate
6 with people in the field, if we are going to have people in the
7 field without telecom, we need some way to kind of communicate
8 to get the stuff back on. It is absolutely critical.

9 Mr. Harper. So, you provided assistance in that area, even
10 though it was not requested by PREPA?

11 Mr. Fanning. That is right. And in fact, I will give great
12 kudos to the folks at FEMA, whether it is Brock Long who has done
13 a heck of a job. I was on the floor of FEMA during a weekend during
14 this situation. Another guy that works in DHS, Chris Krebs; in
15 the White House, Tom Bossert, all of these people have been
16 champions in trying to aid the situation without a whole lot of
17 encouragement.

18 Mr. Harper. Got you.

19 You know, Southern Company is right in the middle of what
20 I guess we would call the hurricane belt. But Southern Company
21 has a long and good track record of restoration after a hurricane,
22 not only in your home service area, but helping your neighbors,
23 certainly through the ESCC and others.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Have you seen changes based on lessons after Katrina that
2 you are using today to improve that?

3 Mr. Fanning. Oh, sure. We have this mantra I had in my
4 opening statement. We want to be today better than yesterday;
5 tomorrow better than today. And no matter how good we think we
6 are, we can always be better, me included.

7 And we are accountable for always improving. When you think
8 about some of the testimony, life-and-death matters that are at
9 stake here, you know, it isn't just about electrons; it is about
10 restoring hope to communities and people's ways of life.

11 And so, we always work hard to think about what we can do
12 better. I think the latest iteration, whether it is Harvey,
13 whether it is Irma, the ESCC has demonstrated a much better
14 capability of working across not only investor-owned utilities,
15 munis, and coops, but also across cross-sector industries,
16 telecom, finance --

17 Mr. Harper. Right.

18 Mr. Fanning. -- water, et cetera. And so, those are
19 particularly good things.

20 The other thing is this whole notion -- and we have heard
21 a lot about new technology being brought to bear. Good heavens,
22 we deployed that in terms of resiliency as a strategic objective
23 of America, whether it is cybersecurity, protection against

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 terrorists from a physical standpoint, but also against natural
2 disasters.

3 Mr. Harper. Fine. Thank you, Mr. Fanning.

4 My time has expired. I yield back, Mr. Chairman.

5 Mr. Olson. The gentleman yields back.

6 The Chair now calls upon the gentleman who made sure that
7 Texans signed Justin Verlander to get us through the playoffs
8 here, Gene Green, Texas 29.

9 [Laughter.]

10 Mr. Green. I wish I could claim, except going to a couple
11 of the games. But thank you, Mr. Chairman.

12 Mr. Thompson, you talk about how quickly refined production
13 was back online after Harvey. And I would like to commend the
14 job industry did in our district, because in east Harris County
15 we have five refineries. I sat down and met with Lyondell
16 refinery and, also, with Shell. And a lot of folks don't
17 understand you just can't turn switches off and on and get them
18 back up. But now the price of gas is going down because all those
19 refineries are back up. I know in our area -- and I assume over
20 in Beaumont-Port Arthur also -- I know a lot of my constituents
21 worked around the clock to get that back up.

22 One of the concerns I had, though, was the issue with the
23 tanks. In east Harris County, we have the tanks that are -- we

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 keep building them because it is either holding crude or product
2 or whatever. The engineering of them now is a floating roof.
3 Because of the amount of water that hit the top of that, it actually
4 turned that top over, and water went into whatever product was
5 there. It could have been crude oil; it could have been refined
6 products, and emissions from that, but also overflowing. Because
7 when you get 52 inches of rain anywhere, you are going to have
8 a problem.

9 Has the industry looked at what we are going to do? I know,
10 talking with the two companies, they said, we are going to have
11 to look at it because how do we plan for 52 inches of rain. But
12 see if engineering-wise there is a way we don't repeat that problem
13 if we have another -- well, not if; it is when we are going to
14 have another storm because on the Texas Gulf Coast -- I am a native
15 Houstonian; we have lived through them, and we will get through
16 this, too, but it is not pretty. But we need to learn from our
17 mistakes if we have another 52-inch rain in those plants.

18 Has there been talk about how, across from API -- because,
19 like I said, just talking with two companies, they said they had
20 to look at it and see what is going on.

21 Mr. Thompson. Thank you for the remarks.

22 Yes, our industry, as I have said open remarks, we fared
23 fairly well. We proved to be resilient. We weren't perfect by

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 any stretch of the imagination. We were better prepared than we
2 were in prior storms. We have installed a lot of floating roofs,
3 which you know are better for the environment. In the normal
4 states, emissions are much lower.

5 But we weren't prepared for 60 inches of rain at times. And
6 so, some tanks did have some failures. But the key is that was
7 the exception and not the rule --

8 Mr. Green. Yes. Mr. Thompson. -- for sure. And I can
9 assure you that this is already a No. 1 topic of conversation,
10 about to prevent this going forward, and there will be lots of
11 discussion. And I am sure there will be engineering to make sure
12 these problems don't happen going forward, to the best we can.

13 Mr. Green. Okay. Can you talk a little bit about the
14 difference in how quickly the refining sector came back up online,
15 and the difficulty, how long it took for the petrochemical sector
16 in Houston?

17 Mr. Thompson. Yes. Well, certainly the refining industry
18 came back online a little bit more quickly. A lot of that was
19 from preparation. The petrochemical side, we knocked out, as you
20 know, 60 percent of the national capacity, 80 percent in the Gulf.
21 About 75 percent of that capacity has returned to the industry.
22 Some of our facilities, they were under lots of water and it has
23 taken a lot of time to get those facilities back up. Repairs have

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 had to be made, and that just takes time. But we are well on our
2 way. We think we have turned the corner and, hopefully, we will
3 be back up to full capacity soon.

4 Mr. Green. And I also know that you can tell that at the
5 price at the pump because the prices went up 25-30 cents a gallon,
6 but now it is back down, maybe not in Washington, but at least
7 in southeast Texas it has gone back down to maybe a little higher
8 than it was, but still it is not \$2.49; it is \$2.19 that you can
9 get on the side of the road now.

10 Mr. Thompson. And certainly we are getting back closer to
11 pre-hurricane levels, but one thing I will point out is, since
12 that time, the price of crude oil is certainly higher.

13 Mr. Green. Yes.

14 Mr. Thompson. And so, some of that is being reflected at
15 the pump as well.

16 Mr. Green. Yes.

17 I yield back, Mr. Chairman. Thank you.

18 Mr. Olson. The gentleman yields back.

19 The chairman now calls upon the House's best birdwatcher,
20 the man from the Commonwealth of West Virginia --

21 Mr. Griffith. Virginia.

22 Mr. Olson. I am sorry. Virginia. I am confused.

23 [Laughter.]

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Griffith. You have been in the chair a long time.

2 [Laughter.]

3 I appreciate it.

4 Mr. Olson. Five minutes, my friend.

5 Mr. Griffith. Thank you very much.

6 Mr. Fanning, Mr. Harper touched on this a minute or two ago,
7 but making sure we have lines of communication up. The National
8 Infrastructure Advisory Council, noting this absolute
9 criticality that communications play in grid resilience,
10 suggested that electric utilities may need some dedicated
11 spectrum space. What do you think?

12 Mr. Fanning. Well, listen, there is a number of solutions
13 that go to that very important problem. Even to be provocative,
14 in the circumstance of a national emergency, should you have
15 dedicated internet access? There is a lot of things that you need
16 to clear the way for.

17 Let me just give great kudos. So many people today I think
18 lose faith in government and the institution and the people that
19 run it, and all that. I can say without equivocation that, in
20 response to these events, whether it is in the White House with
21 Tom Bossert, whether it is Energy Secretary Perry, one of the
22 things that we can do is to work with these folks. And these folks
23 can clear the way to get the work done.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 So often, I think the question goes to who is in charge. You
2 know who really knows how to get stuff done are the line crews
3 and the supervisors and the people that have the boots on the
4 ground to get this done. And when there are barriers, what we
5 have got to do is work in this effective public/private
6 partnership to get whatever barriers exist cleared away. The
7 government in this case has been fabulous during Harvey and Irma
8 particularly.

9 Mr. Griffith. I appreciate that, and thank you for your
10 answer.

11 Mr. Rhymer, I was very pleased, as I was listening to your
12 testimony, to hear you talk about microgrids and what you all are
13 planning on doing. I particularly like the way you described how
14 you are going to have them interact with the full system, and then,
15 if they need to be standalone -- I thought that was very good and
16 I appreciate it. I hope you all success in that, and I look
17 forward to seeing it at some point when it is working, because
18 I think that is helpful. Not just in the islands, but in mountains
19 and other regions of the United States those kinds of concepts
20 can be very, very helpful. So, thank you for that.

21 Mr. Rhymer. Thank you.

22 Mr. Griffith. Mr. Nieves -- did I say that close to right?
23 Thanks.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 I appreciated your stark comments. It seems that there have
2 been a lot of problems with the electric utility in Puerto Rico
3 for some time, based on your comments. I am just wondering, you
4 know, the federal government is going to be asked to come in there
5 and spend a lot of money. I understand that and think that is
6 right. But, if we do so, are you willing -- do you think that
7 the government there, particularly the electric utility, is going
8 to be willing to introduce some of these novel concepts like
9 microgrids, and working on ways to use Puerto Rico as a land of
10 experiments where we can try different things? They won't all
11 necessarily work, but things that we can do to try to make the
12 grid better long time, and try out some of these new ideas that
13 are out there that have been talked about for years, but we have
14 never had an opportunity.

15 And for all the tragedy that is taking place in Puerto Rico,
16 for which I am very sorry and worry about figuring out what we
17 can do, we may have the opportunity to do something better. Do
18 you think that the utility company would be willing to embrace
19 some of that?

20 Mr. Nieves. Well, my proposal during testimony is that, if
21 the federal government is going to step up and allocate
22 considerable resources to not just repair the old grid, but to
23 create a new grid, you cannot do that alone. You have to also

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 establish a specific mandate in the law saying we are
2 appropriating this "X" amount of dollars to build a new grid for
3 Puerto Rico, but with these specifications.

4 And I respectfully submit that macrogrids could work;
5 regional microgrids for Puerto Rico could really work to create
6 a strong, resilient system. That might as well be ordered by
7 federal law.

8 Under Puerto Rico local law that I worked on last year when
9 I was a Senator, we authorized microgrids. And the Puerto Rico
10 Energy Commission is right now working on an expedited regulation
11 to put them in place. But I really submit that "X" amount of
12 dollars appropriated by our federal government have to be with
13 a specific federal mandate.

14 Mr. Griffith. And I appreciate that and would agree that
15 we are going to have to do some different things there. One of
16 the things that I think might help is if we have the utility
17 accountable to shareholders. I don't know how you would spin that
18 off with the assets they have. But I noticed from your comments
19 that one of the problems was that you had, while it was a
20 semi-regulated monopoly, it was a nonprofit. And it is amazing,
21 when you are trying to figure out ways to make yourself more
22 efficient, you come across ways to make at least a little bit of
23 profit, even if it is not required to be much profit. Anyway,

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 it is a thought to think about, and I hoped that you would consider
2 that as well.

3 And my time is way over. So, I have to yield back. Thank
4 you.

5 Mr. Nieves. Thank you.

6 Mr. Olson. The gentleman from the Commonwealth of Virginia
7 yields back.

8 The Chair now calls upon the gentleman from Amsterdam, New
9 York, Mr. Tonko, for 5 minutes.

10 [Laughter.]

11 Mr. Tonko. Thank you, Mr. Chair.

12 Mr. Rhymer, your testimony mentioned that the Water & Power
13 Authority had used FEMA hazardous litigation grants to bury
14 infrastructure underground, making it more resilient. When did
15 you receive those grants?

16 Mr. Rhymer. We received those grants approximately in
17 2010-2011.

18 Mr. Tonko. Okay.

19 Mr. Rhymer. And we have underground a portion of St. Thomas
20 and a portion of St. Croix. We are currently seeking additional
21 hazardous litigation grants currently to underground St. John in
22 the Cruz Bay area and additional parts of St. Thomas and St. Croix.

23 Mr. Tonko. Okay. And is there any other FEMA money you are

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 asking to secure beyond that burying of cable? Anything with your
2 microgrids? Are you requesting --

3 Mr. Rhymer. Well, we are seeking to get litigation grants
4 for the microgrid stuff, renewable energy stuff that actually adds
5 to the microgrid. We are also looking to do some hardening of
6 the system in terms of administration, in terms of the buildings.
7 Like the line department building is completely destroyed. So,
8 basically, we need to have that building be resilient.

9 Mr. Tonko. Thank you.

10 New York State and the utilities there benefitted greatly
11 from mutual assistance in the aftermath of Superstorm Sandy. And
12 now, it is our turn to be called upon. It is your turn to be called
13 upon in making things better.

14 Mr. Fanning, do you believe the utility industry's mutual
15 assistance efforts work well?

16 Mr. Fanning. Oh, they are outstanding.

17 Mr. Tonko. I know islands present unique challenges to
18 mobilizing workers and equipment, but can you think of specific
19 reasons why mutual assistance would be resisted?

20 Mr. Fanning. No.

21 Mr. Tonko. Okay. Mr. Nieves, you testified that Puerto
22 Rico's grid had limitations certainly in the amount of renewable
23 resources that could be integrated into its energy mix. What were

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 the reasons for that?

2 Mr. Nieves. Yes. According to a 2014 report that PREPA
3 received, the grid, as it stood before Maria, could only integrate
4 up to 580 megawatts of renewable power. Renewable power has
5 certain technical issues that the grid that we had could not really
6 tolerate without jeopardizing the system.

7 Mr. Tonko. Is it a matter of better interconnect devices?
8 There is technology already shelf-ready, I would believe, that
9 might be able to help --

10 Mr. Nieves. That is correct.

11 Mr. Tonko. -- your situation?

12 Mr. Nieves. Well, PREPA's grid was not a smart grid. It
13 was not a grid that could really accommodate a system whereby
14 customers are also generating power, renewable power, so they are
15 not just passive customers of our energy model. So, according
16 to that report from Siemens, PREPA's grid only can tolerate up
17 to that amount of renewable power, which is really unacceptable,
18 and a really small amount.

19 Mr. Tonko. And, Ms. Kennedy, thank you for making it so
20 clear that Puerto Ricans are still dealing with a life-and-death
21 situation. Can you further explain the health impacts you have
22 seen due to a lack of safe water in Puerto Rico?

23 Ms. Catherine Kennedy. Sure. Like I said, we were there

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 for about two weeks. One of the things that the nurses had to
2 go out and do was really within the community to take a look at
3 what kind of resources were available. Time and time again, it
4 was the lack of clean running water.

5 One of the things that the nurses saw was that people were
6 very desperate. So, they were actually drinking from river
7 water. Water that came down they would save from their roofs.
8 As you know, with hurricane, you have rodents and, of course,
9 bacteria. So, the prospect of leptospirosis was imminent. And
10 clearly, there were people that were infected, but, again, if
11 treated properly, then, I mean, it wouldn't be life threatening.
12 But these were things that we saw for the last two weeks.

13 Mr. Tonko. Right. I have also seen some photos shared with
14 me by family members in my district. They cause grave concern.

15 I believe -- and I think Ms. Kennedy would agree -- that we
16 need to have a serious discussion about waiving cost-sharing
17 requirements, especially for critical public health
18 infrastructure such as our water systems. It is a public health
19 and public safety situation.

20 I would also express that Puerto Rico can learn a great deal
21 from New York's REV Initiative. It was in response to the
22 Superstorm Sandy situation. And that state, our state, my home
23 state has worked to understand changes in the traditional utility

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 business model and how to plan for a more decentralized grid.

2 My concern is that, if we build back to this failed system
3 that you cite, it is a very troublesome investment made by any
4 level of government and the private sector, and we need to do
5 better than that and encourage smart, flexible, and reliable grid
6 for a cleaner and stronger energy future.

7 And with that, I yield back. And congratulations on last
8 night.

9 Mr. Olson. Thank you, thank you, thank you.

10 The gentleman yields back.

11 The Chair now calls upon the gentleman from our neighbor to
12 the north, Oklahoma, Mr. Mullin, for 5 minutes.

13 Mr. Mullin. Chairman, you are in almost a giddy form today.
14 I wonder why.

15 [Laughter.]

16 Mr. Olson. Guilty as charged.

17 Mr. Mullin. The best thing is the third baseman for the
18 Dodgers, I guess, can shave and cut his hair now, right?

19 Hey, I appreciate you guys coming up here and informing
20 Members of Congress. It is very important for us to have a working
21 relationship in a situation like this.

22 It has been a long day, and I appreciate your all's patience.
23 But I feel like we are going to continue to learn from these

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 lessons. What we don't want to do is get in the habit of repeating
2 them.

3 Mr. Fanning, if you don't mind, I would like to start with
4 you. The physical work of the restoration I know falls mainly
5 on industries, but what role does the federal government play in
6 this?

7 Mr. Fanning. Oh, they play an exceedingly important role.
8 As I described earlier, when I think about the role of the ESCC,
9 I describe it kind of in three levels. The first is to harmonize
10 the efforts of the federal government. This is truly a
11 public/private partnership, particularly in a super-regional
12 kind of disaster where we absolutely --

13 Mr. Mullin. When you talk about a private/private
14 partnership --

15 Mr. Fanning. Right.

16 Mr. Mullin. -- does the partnership end when the federal
17 dollars are put in and, then, the utility companies reap the
18 benefits of it? Or do the federal dollars, since it is a
19 partnership, get paid back?

20 Mr. Fanning. Listen, the partnership exists whether there
21 is a disaster or not.

22 Mr. Mullin. Sure.

23 Mr. Fanning. This is our, what we call, playbook.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Mullin. Right.

2 Mr. Fanning. This is our regime in which we respond to
3 cyber, physical security, or natural disasters. And what it
4 describes here is, frankly, not only the unity of effort, the
5 "what's" of a restoration effort, but also the unity of message
6 and the "how's" around a restoration effort. That has to be
7 coordinated and harmonized between the federal government and not
8 only electricity in this case, but, as we said before, the lifeline
9 sectors. In cyberwarfare, it is going to be in the context of
10 finance, telecom, electricity. Broadly, it would include
11 transportation and water, and then, there are other priorities
12 going from that.

13 Don't ever forget the need to harmonize, also, state and
14 local government efforts, the boots on the ground that ultimately
15 will impact our ability to deliver.

16 Mr. Mullin. So, when we are talking about a partnership,
17 are we talking about just in financial support or, as you are
18 describing, all the above from the logistics behind it, from the
19 federal government stepping out and getting some of the red tape
20 out, letting you guys go to work, getting some waivers in place?

21 Mr. Fanning. Yes, Congressman, absolutely right. In fact,
22 somebody else mentioned this National Infrastructure Advisory
23 Council made a recommendation to the President to form something

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 called a SICC, Strategic Infrastructure Coordinating Council, of
2 electricity --

3 Mr. Mullin. We have acronyms for everything around here.

4 [Laughter.]

5 Mr. Fanning. Yes. Yes, I know it.

6 Electricity, finance, telecom. And what we will do is bring
7 CEOs together, so me and others representing the electricity
8 sector, finance, telecom, to put together a common set of
9 regulatory permissions, legislative initiatives, harmonizing
10 technology systems, information-sharing, and physical
11 coordination. If we can get that done, that is an enormous
12 activity.

13 The other thing that I think we need to do is inform
14 policymakers like you all. And that is why I applaud this effort.
15 Because there is so much noise around these kinds of disasters
16 or potential disasters, we have to take action before they get
17 here. If all we are doing is reacting to the latest disaster --

18 Mr. Mullin. Thank you.

19 Mr. Fanning. -- we are way behind the ball.

20 Mr. Mullin. Yes.

21 Mr. Fanning. We have got to pitch, not catch.

22 Mr. Mullin. No, I agree with that. But look at that; wasn't
23 that neat. You get a little zing in there for our chairman. Wow.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 That was thinking on your feet.

2 [Laughter.]

3 I agree with that. We would love to move to a point of being
4 more proactive than reactive, and take the lessons learned. So,
5 I actually applaud the idea of putting together that committee,
6 so to say, where we can say, "Hey, look, this is our lessons.
7 These are what we need. These are the roadblocks that need to
8 be dropped. This is why it happens." And let's move forward,
9 so we can react faster.

10 Mr. Fanning. And, Congressman, I think it needs to be
11 CEO-led. Eighty-seven percent of the critical infrastructure is
12 owned by private industry.

13 Mr. Mullin. Right.

14 Mr. Fanning. We have to work together.

15 Mr. Mullin. Mr. McBrayer, I have got just a short time here.
16 The EPA issued several fuel waivers --

17 Mr. McBrayer. Yes.

18 Mr. Mullin. -- along the way for diesel and gasoline that
19 maybe didn't meet the standards, but was able to get delivered.
20 Was it effective? Was that helpful?

21 Mr. McBrayer. I think it was effective and helpful at the
22 time. I think one of the things we have to adjust to as it relates
23 to getting fuel to folks who are your constituents, our consumers,

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 is that, at least in the Southeast, we are transitioning from
2 summer-grade gasoline to winter-grade gasoline on September 15th
3 every year. Because of the nature of the two specifications,
4 winter-grade gasoline is less costly than summer-grade gasoline.
5 So, whether your inventory is in your store or whether you are
6 a placeholder for inventory in a terminal, the financial incentive
7 is to diminish the amount of supply that you have going into
8 September 15 and 16 because you are going to take in many cases
9 a 10-to-15-cent devaluation of that inventory, basically, at
10 12:01 a.m. on the 16th.

11 One of the things I would ask from a federal perspective is
12 to take a look at that date. Is that really the only date that
13 we can in the Southeast convert from the lower-RVP to the
14 higher-RVP gasoline? Or is there a way to allow that date to move
15 from time or time, or be fixed, so that folks like RaceTrac and
16 other members of our association are not forced by the changing
17 cost to diminish inventories in a time where hurricanes are more
18 likely to occur?

19 Mr. Mullin. Thank you. That is a great point.

20 And, Mr. Chairman, thank you for entertaining a little bit
21 more time there. I yield back.

22 Mr. Olson. And seeing only Astros fans, but no further
23 members seeking to ask questions, I would like to thank all of

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 our witnesses again for being here today.

2 I have a unanimous consent and our nine documents for the
3 record.

4 No. 1 is the PREPA letter to EEI and APPA.

5 No. 2 is an APPA letter to the Energy and Commerce
6 subcommittee on mutual aid.

7 No. 3 is an APPA and EEI letter to Mr. Ricardo L. Ramos
8 Rodriguez.

9 No. 4 is a letter from a farmer to the Energy and Commerce,
10 the Energy Subcommittee.

11 No. 5 is the EIA supplemental testimony with attachments.

12 No. 6, AVA Med letter.

13 No. 7, letter from the FDA.

14 No. 8, GridWise Alliance document.

15 No. 9, letter to Senators Murkowski and Cantwell from the
16 former EPA official and Puerto Rico Energy Commissioner.

17 Without objection, so ordered.

18 [The information follows:]

19
20 ***** INSERT 14*****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1 Mr. Rush. Mr. Chairman, I want to restate or reiterate my
2 request that PREPA be subpoenaed and that we have FEMA before this
3 subcommittee in the near future.

4 Mr. Olson. As I told my friend, I will carry that message
5 to Chairman Upton and Chairman Walden.

6 Pursuant to committee rules, I will remind members that they
7 have 10 business days to submit additional questions for the
8 record. As to the witnesses, submit their response in 10 business
9 days upon receipt of those questions.

10 And one final comment, a point of personal privilege. You
11 guys have, it looks like, 23-and-a-half hours to get to Houston
12 for our big parade for our Astros.

13 [Laughter.]

14 Without objection, the subcommittee is adjourned.

15 [Whereupon, at 2:31 p.m., the subcommittee was adjourned.]
