Melissa C. Mann

Melissa Mann is President of URENCO USA Inc., the holding company for Louisiana Energy Services and its URENCO USA uranium enrichment facility, and the URENCO Group's Executive Director of Strategic & Government Affairs. The URENCO USA enrichment facility is located in Lea County, New Mexico and was the first facility to be licensed, constructed and operated under a Nuclear Regulatory Commission-approved Combined Construction and Operating License. URENCO USA represents an investment of roughly \$5 billion to-date. A New Mexican by birth, Melissa is privileged to represent URENCO USA along with its more than two hundred New Mexican and Texan employees.

Melissa has spent her nearly 30-year career in the service of the commercial nuclear energy industry and as a licensee of the U.S. Nuclear Regulatory Commission. From 2006 to 2013, Melissa served as Manager of Marketing & Sales for URENCO, Inc., managing relationships with North American utilities and nuclear fuel cycle companies. This work entailed negotiating and administering a sales contract portfolio that significantly contributed to U.S. demand for uranium enrichment and hundreds of millions of dollars in revenue annually.

Prior to joining URENCO, as Vice President for Regulatory & Risk Assessment at The Ux Consulting Company from 2004 to 2006, Melissa supported commercial nuclear utilities and fuel cycle companies in managing risks associated with economic, regulatory, export control and nuclear energy policy matters.

This role built on nearly two decades managing the international movement of radioactive materials and specializing in non-proliferation policy and export controls. She started her career in 1989 as an International Affairs Specialist with Edlow International Company eventually serving as the company's International Vice President, and then undertook similar roles as Director of Research & Consulting at Transportation Logistics International and as Executive Vice President of TLI Shipping, LLC, a specialized ocean service for international transport of sensitive commodities including fissile nuclear materials.

Melissa holds a degree in International Relations from Rhodes College.
