The U.S. Federal Copyright Office is considering requests for clarification and revisions of certain cable compulsory copyright license reporting requirements, and from time to time, other revisions to the cable compulsory copyright rules are considered. We cannot predict the outcome of any such inquiries. However, it is possible that changes in the rules or copyright compulsory license fee computations or compliance procedures could have an adverse effect on our business by, for example, increasing copyright

compulsory license fee costs or by causing us to reduce or discontinue carriage of certain broadcast signals that we currently carry on a discretionary basis.

Table of Contents

*Telephone Company Competition.* U.S. Federal law permits telephone companies to offer video programming services. Over the past decade, telephone companies have pursued multiple strategies to enter the market for the delivery of multichannel video programming services, such as merging with DBS operators, in the case of AT&T and DirecTV, or obtaining local franchise agreements. Increased competition from telephone companies that provide competing services could have a material effect on our business.

*Over-the-Top (OTT) Video Programming.* The continued proliferation of broadband services in the United States has enabled cable programmers and broadcast television stations and networks to “stream” their video content to consumers over the Internet. Although we have benefited generally from the growth in broadband due to our role as a provider of broadband services, the continued and growing availability of cable programming and broadcast television content on the Internet may result in less demand for our video cable service offering. Some providers of cable service are marketing their own version of OTT video programming, thus enabling their subscribers to access cable programming outside of their home or business. For example, Verizon Wireless offers the ability to stream NFL games on its smartphones over the Internet. Some fixed and wireless broadband providers are excluding certain streamed content from metered data charges or data limits in an effort to make their broadband service more attractive to consumers. In addition, online video distributors and other OTT video distributors have begun to stream broadcast programming over the Internet. In some cases, distributors streamed broadcast programming without the consent of broadcasters and copyright owners. Broadcasters challenged this practice, and in June 2014, the U.S. Supreme Court determined that such streaming requires the consent of the applicable copyright owner. However, there is a potential for other streaming services to attempt to enter the market, and in December 2014, the FCC opened a proceeding concerning how OTT providers should be classified for purposes of the FCC’s rules. We cannot predict the outcome of these proceedings, nor related litigation, nor how widespread these practices may become or the extent to which the integrated functionality and ease of use of the cable platform will continue to appeal to the majority of our subscribers.

*Wireless Services.* The FCC is in the process of preparing to auction additional spectrum, including spectrum currently in the television broadcast band, for use by wireless broadband providers. The FCC rules will provide for both the auction of spectrum and a “repacking,” whereby the FCC will require certain broadcast stations to move to new channel allotments so as to free up a nationwide block of spectrum for wireless broadband use. The availability of more spectrum to enable wireless video services over time will create additional competitive alternatives to cable services. The auction began in March 2016 and is scheduled to end in the first quarter of 2017, but we cannot predict when the auction will conclude or the effect it may have on us. After the auction concludes, the FCC is expected to allocate a portion of the \$1.75 billion reimbursement fund authorized by Congress to MVPDs that incur costs by continuing to carry stations that were reassigned to new channels. MVPDs, such as us, will be required to submit an estimate of their costs 90 days after the closing of the auction. We cannot predict the amount of funding, if any, that we might receive from the disbursement of these funds.

*Set-Top Boxes.* Congress, the FCC and other government agencies have for some time been developing and implementing regulations that affect the types of set-top boxes that cable operators can lease or deploy to their subscribers. Prior to 2015, FCC rules banned the integration of security and non-security function in set-top boxes and required MVPDs to allow third-party vendors to provide set-top boxes with basic converter functions. In 2015, Congress repealed the integration ban and mandated that the FCC establish a working group to a successor technology-and platform-neutral security solution. In February 2016, the FCC opened a rulemaking to consider proposals that would require any retail video device to work on any cable operator’s system, but the new administration has removed this item from active FCC review. We cannot predict if or when new changes may be proposed, what effect such changes may have on our operations, or if they will increase our costs and impair our ability to deliver programming to our customers.

*Disability Access.* In September 2010, Congress passed the Twenty-First Century Communications and Video Accessibility Act (the “CVAA”). The CVAA directs the FCC to impose additional accessibility requirements on cable operators. For example, cable operators that serve 50,000 or more subscribers must provide 50 hours of video description per calendar quarter, during prime time or on children’s programming, on each channel on which they carry one of the top five national non-broadcast networks. In addition, cable operators of all sizes must pass through video description that is provided for each broadcast station or non-broadcast network that they carry. Compliance imposes certain costs on us. The CVAA also directs the FCC to adopt rules to help ensure that persons with disabilities have access to video programming and related information. In October 2013, the FCC adopted a requirement that equipment used by consumers to access video programming and other services offered by cable operators make on-screen text menus and guides for the display or selection of video programming audibly accessible to individuals who are blind or visually impaired. The compliance deadline for these new rules was December 2016 (subject to certain exceptions). In October 2013, the FCC also initiated a proceeding to consider additional rules. In February 2014, the FCC issued an order adopting closed captioning quality standards for video programming distributors (“VPDs”) and, in February 2016, the FCC amended its rules to allocate responsibility for the quality of closed captioning between video programmers and VPDs. The FCC also revised its procedures for the handling of complaints

regarding closed captioning quality. We cannot predict any further actions the FCC will take in this proceeding or the extent to which any such requirements may impose new costs on us.

Table of Contents

In 2016, the FCC proposed to increase the number of video-described programming for covered broadcast and cable channels from 50 hours to 87.5 hours. The FCC also sought to increase the number of cable networks that are required to provide video-described programming. While a draft order implementing these increased requirements was expected to be voted on in September 2016, the FCC delayed its decision. We cannot predict if or how the new administration or newly-constituted FCC will proceed with these increased requirements or the extent that these obligations, if adopted, could impose costs on our business.

*Other Requirements.* The FCC regulates various other aspects of cable operations, including certain terms for commercial leased access, signal leakage, distant broadcast station signals and technical standards. We cannot predict whether, when or to what extent changes to these and other regulations may affect our operations or costs.

***Broadband Internet Access Service***

Broadband Internet access service, which we currently offer on virtually all of our cable systems, is subject to some regulation at the Federal level, and is not subject to state or local government regulation at this time.

*Regulatory Reclassification and Network Neutrality Regulation.* In 2015, the FCC elected, by a 3-2 vote, to reclassify broadband Internet access service as a “telecommunications service” and to subject the service to network neutrality and certain common carrier regulations under Title II of the Communications Act. The new regulations: (1) prohibit broadband Internet access service providers from blocking access to lawful content, applications, services or non-harmful devices; (2) prohibit broadband Internet access service providers from impairing or degrading lawful Internet traffic on the basis of content, applications or services; (3) prohibit broadband Internet access service providers from favoring lawful traffic from one provider of Internet content over lawful traffic of another content provider in exchange for consideration; (4) establish a new “general conduct standard” that prohibits broadband Internet access service providers from unreasonably interfering with or unreasonably disadvantaging the ability of consumers to select, access and use the lawful Internet content, applications, services or devices of their choosing; and (5) require broadband Internet access service providers to disclose information regarding network management, performance and commercial terms of the service to their customers. These new net neutrality obligations could cause us to incur certain compliance costs, and the FCC’s enforcement or interpretation of these new obligations could adversely affect our business. The FCC’s regulations have been challenged in a U.S. Federal court, and we cannot predict the outcome of that review. We also cannot predict if or how the new administration and newly-constituted FCC will revise these rules. States also may attempt to use the FCC’s reclassification of broadband Internet access service in an attempt to justify imposing new regulations or taxes and/or fees on broadband Internet access service providers that could adversely affect our business.

*Privacy.* Broadband Internet access service is subject to many of the same U.S. Federal and state privacy laws that apply to other electronic communications. These include the U.S. Federal Electronic Communications Privacy Act, which addresses interceptions of electronic communications that are in transit; the Stored Communications Act, which addresses acquisitions of electronic data in storage; and other Federal and state privacy laws and regulations. As the collection and use of consumer data becomes more prevalent in the communications industry, our compliance obligations may grow. In November 2016, the FCC adopted new rules for broadband Internet access services to protect the privacy of certain information broadband Internet access service providers obtain about their customers. These rules are subject to reconsideration before the FCC, and may be subject to court appeals. The new rules take effect at various times in 2017, and could be subject to review and revision by the new administration and the newly-constituted FCC. We cannot predict whether, when or to what extent these obligations may impose costs on our business.

In addition to FCC privacy regulations governing broadband Internet access service, the Federal Trade Commission also may exercise authority over privacy by using its existing authority over unfair and deceptive acts or practices to apply greater restrictions on the collection and use of personally identifiable and other information relating to consumers. It also has undertaken numerous enforcement actions against parties that do not provide sufficient security protections against the loss or unauthorized disclosure of this type of information. We also are subject to stringent data security and data retention requirements that apply to website operators and online services directed to children under 13 years of age, or that knowingly collect or post personal information from children under 13 years of age. Other privacy-oriented laws have been extended by courts to online video providers and are increasingly being used in privacy lawsuits, including class actions, against providers of video materials online. We cannot predict whether, when, or to what extent these obligations may impose costs on our business.

Table of Contents

We are also subject to state and federal laws and regulations regarding data security that primarily apply to sensitive personal information that could be used to commit identity theft. Most states have security breach notification laws that generally require a business to give notice to consumers and government agencies when certain information has been disclosed due to a security breach, and the FCC has adopted security breach rules for voice services and broadband Internet access services. Several states have also enacted general data security requirements to safeguard consumer information, including the proper disposal of consumer information. We cannot predict whether, when or to what extent these obligations may impose costs on our business.

*Digital Millennium Copyright Act.* Owners of copyrights and trademarks actively seek to prevent use of the Internet to violate their rights. For example, copyright and trademark owners assert claims that a customer used an Internet service or resources accessed via the Internet to post, download or disseminate copyrighted music, movies, software or other content without the consent of the copyright owner or to seek to profit from the use of the goodwill associated with another person's trademark. In some cases, copyright and trademark owners have sought to recover damages from the broadband Internet access service provider, as well as or instead of the customer. The law relating to the potential liability of broadband Internet access service providers in these circumstances is unsettled. In 1998, Congress adopted the Digital Millennium Copyright Act, which grants broadband Internet access service providers protection against certain claims of copyright infringement resulting from the actions of customers if the Internet provider complies with certain requirements. So far, Congress has not adopted similar immunity for broadband Internet access service providers for trademark infringement claims.

*Business Data Services.* In April 2016, the FCC proposed new rules for "business data services" (formerly known as "special access" services). These services provide dedicated point-to-point transmission of data at certain guaranteed speeds and service levels using high-capacity connections. The FCC proposed new rate regulation and other regulatory mandates that could apply to business data services offered by cable companies. The proposed rules or any variation of the proposed rules, if implemented, could impose substantial costs on us and have other significant adverse effects on our business. It appears the newly-constituted FCC has removed this item from review by the FCC for the time being. It is uncertain whether the FCC will pursue other rules in this area.

#### *Voice*

*Voice Over Internet Protocol (VoIP).* Cable companies, including Cable One and others, offer VoIP service, which permits users to make voice calls over broadband communications networks, including the Internet, to recipients on the public switched telephone network and other broadband communications networks. U.S. Federal law preempts state and local regulatory barriers to the offering of voice service by cable companies and others, and the FCC and U.S. Federal courts generally have preempted state laws that seek to regulate or classify VoIP.

The FCC has held that VoIP services are IP-enabled services, which are interstate in nature and thus subject exclusively to the FCC's U.S. Federal jurisdiction and not to state regulation. This decision was upheld on appeal, although the FCC has an ongoing proceeding to consider whether VoIP services provided by cable companies and others are properly classified as an "information service," "telecommunications service" or some other new category of service. This determination, once made, could have numerous regulatory implications for cable companies that provide interconnected VoIP services, including us. Although the FCC has yet to ascribe a regulatory definition to VoIP services, the FCC nevertheless has imposed a number of obligations on interconnected VoIP service providers, some of which are discussed more fully below.

*Emergency 911 Services.* The FCC has ruled that an interconnected VoIP service provider that enables its customers to make calls to and receive calls from persons who use the public switched telephone network must provide its customers with the same enhanced 911 ("E911") features that traditional telephone and wireless companies are obligated to provide. This requirement was upheld on appeal. In January 2015, the FCC established indoor location requirements when E911 calls are made by interconnected VoIP subscribers. The FCC also requires certain providers of facilities-based fixed, residential voice services, which includes interconnected VoIP service providers, to offer backup power options to consumers, and to inform consumers of the availability of such options.

*CALEA.* FCC regulations require providers of interconnected VoIP service to comply with the requirements of the Communications Assistance for Law Enforcement Act, which requires covered entities and their equipment suppliers to deploy equipment that law enforcement officials can access readily for lawful wiretap purposes.

Table of Contents

*Universal Service.* The FCC has determined that interconnected VoIP service providers must contribute to the U.S. Federal Universal Service Fund (the "USF"). The amount of a company's USF contribution is based on a percentage of revenues earned from end-user interstate and international interconnected VoIP services. We are permitted to recover these contributions from our customers. In October 2011, the FCC adopted an order and new rules intended to transition the USF so that it supports the build out of broadband, rather than telecommunications facilities. The order principally addressed the manner in which universal service funds will be distributed to network operators for broadband build out. In April 2012, the FCC initiated a proceeding that focused on reforming the nature and manner in which entities should contribute to the USF and at what levels. We cannot predict whether and how such reform will occur and the extent to which it may affect providers of VoIP services, including us and our competitors. The FCC's 2011 universal service reform order was subject to both reconsideration requests and appeals, and in May 2014, the U.S. Court of Appeals for the Tenth Circuit upheld the order in its entirety. A number of parties filed petitions with the U.S. Supreme Court seeking review of that decision, but the Supreme Court declined to review the case. In November 2010, the FCC determined that states may impose state USF fees on interconnected VoIP service providers subject to certain limitations and requirements. State USF contributions are based on a percentage of revenues earned from end-user intrastate interconnected VoIP services, and we are typically permitted to recover these contributions from our customers. We cannot predict whether or how the imposition of such state-based universal service fees will affect our operations and business. In addition, the FCC has focused on subsidizing broadband deployment, and this shift could help some of our competitors. For example, the FCC substantially revised the program that provides universal service support for services to schools and libraries to shift support from voice services to broadband services and the deployment of Wi-Fi networks. Similarly, the FCC has expanded its Lifeline subsidy program for low-income consumers to include broadband services in addition to voice services. However, the newly-constituted FCC may revisit these subsidy programs and how they are funded. We cannot predict whether or how these programs will be changed.

*Intercarrier Compensation.* The order and new rules adopted by the FCC in October 2011 in connection with universal service reform also addressed intercarrier compensation and specified that "VoIP-PSTN traffic," that is, traffic exchanged over public switched telephone network facilities that originates and/or terminates in IP format, which includes interconnected VoIP traffic, is subject to intercarrier compensation obligations either on the basis of specified default charges or through negotiated rates. The FCC's order was subject to both reconsideration requests and appeals, and the U.S. Court of Appeals for the Tenth Circuit upheld the order in its entirety. A number of parties filed petitions with the U.S. Supreme Court seeking review of that decision, but the Supreme Court declined to review the case. Future FCC determinations regarding the rates, terms and conditions for transporting and terminating such traffic could have a profound and material effect on the profitability of providing voice and data services.

*Customer Proprietary Network Information.* In 2007, the FCC adopted rules expanding the protection of Customer Proprietary Network Information ("CPNI") and extending CPNI protection requirements to providers of interconnected VoIP service. CPNI is information about the quantity, technical configuration, type, location and amount of a voice customer's use. These requirements generally have increased the cost of providing interconnected VoIP service, as providers now must implement various safeguards to protect CPNI from unauthorized disclosure. In its November 2016 decision applying privacy requirements to broadband Internet access services, the FCC also revised the CPNI rules applied to interconnected VoIP services.

*Access for Persons with Disabilities.* FCC regulations require providers of interconnected VoIP services to comply with all disability access requirements that apply to telecommunications carriers, including the provision of telecommunications relay services for persons with speech or hearing impairments. The FCC also has adopted reporting requirements associated with disability access obligations. We and other interconnected VoIP service providers must also contribute to the interstate Telecommunications Relay Service Fund to support such access. These requirements generally have had the effect of increasing the cost of providing VoIP services.

*Service Discontinuance and Outage Obligations.* In 2009, the FCC adopted rules subjecting providers of interconnected VoIP services to the same service discontinuance requirements applicable to providers of wireline telecommunication services. In 2012, the FCC adopted mandatory outage reporting requirements for interconnected VoIP service providers, which apply when customers of interconnected VoIP service lose service or connectivity and, as a result, are unable to access 911 service. Along with other FCC actions described in this section, which impose legacy telecom obligations on interconnected VoIP providers, this development will subject our interconnected VoIP services to greater regulation and, therefore, greater burdens and costs.

*Regulatory Fees.* The FCC requires interconnected VoIP service providers to contribute to shared costs of FCC regulation through an annual regulatory fee assessment. These fees have increased our cost of providing VoIP services. The FCC from time to time revises its regulatory fees and sometimes creates new fees. We cannot predict when or the extent to which the FCC will adopt new rules or regulatory fees affecting VoIP service providers, which could affect our cost of doing business.

Table of Contents

*Local Number Portability.* Providers of interconnected VoIP services and their “numbering partners” must ensure that their subscribers have the ability to port their telephone numbers when changing service providers. We, along with other providers of interconnected VoIP service, must contribute funds to cover the shared costs of local number portability and the costs of North American Numbering Plan Administration. In June 2015, the FCC adopted rules requiring additional numbering requirements, such as allowing consumers access to abbreviated dialing codes like 211 and 311 in certain circumstances, to be applied to interconnected VoIP service providers. Although consumers’ ability to port their existing telephone numbers to interconnected VoIP service has created additional opportunities for us to gain voice customers, the local number portability and associated rules overall have had the effect of increasing the cost of providing VoIP service.

*Rural Calling Issues.* In October 2013, the FCC adopted new rules to combat problems with the completion of long-distance calls to rural areas. The new rules apply detailed record keeping, record retention and reporting requirements on all voice providers, including VoIP service providers, subject to certain exceptions. The rules also prohibit VoIP service providers (and other voice providers) from using false audible ringing when originating calls. Compliance with these new rules could have the effect of increasing the cost of providing VoIP services.

**State and Local Taxes**

The Internet Tax Freedom Act prohibits most states and localities from imposing taxes on Internet access service charges. Legislative and administrative proceedings in some states and localities have imposed or are considering adopting changes to general business taxes, central assessments for property tax and new taxes and fees applicable to our services. Often, DBS and other competitors that deliver their services over the Internet do not face similar state tax and fee burdens. In addition, the FCC’s reclassification of broadband Internet access services as Title II telecommunications services may cause or allow, directly or indirectly, some states and localities to seek to impose additional taxes and fees on our data service.

**ITEM 1A. RISK FACTORS**

You should carefully consider all of the information in this Annual Report on Form 10-K and each of the risks described below, which we believe are the principal risks that we face. Some of the risks relate to our business, others to the spin-off. Some risks relate principally to the securities markets and ownership of our common stock.

Any of the following risks could materially and adversely affect our business, financial condition and results of operations and the actual outcome of matters as to which forward-looking statements are made in this Annual Report on Form 10-K.

**Risks Relating to Our Business**

*We face significant competition from other cable companies and telephone companies, as well as other well-capitalized entrants in the video and data services industry, which could reduce our market share and lower our profits.*

We operate in highly competitive, subscriber-driven and rapidly changing environments and compete with a growing number of companies that provide a broad range of communications products, services and content to subscribers. Our competitors have historically included, and we expect will continue to include, over-the-air reception providers; DBS providers; telephone companies that offer data and video services through DSL or fiber-to-the-node networks; and other cable companies that have been granted a franchise to operate in a geographic market in which we are already operating.

Substantially all of our cable systems are in markets in which CenturyLink or AT&T is the established local telephone company and our primary competitor. The remainder of our cable systems are in markets where we compete with various other companies. Our cable systems generally operate pursuant to franchises, permits and similar authorizations issued by LFAs, and these franchises are typically non-exclusive. Accordingly, LFAs can grant additional franchises to our competitors and create competition in our markets where none existed previously, resulting in overbuilds. In some cases, the FCC has adopted rules that streamline entry for new competitors (particularly those affiliated with telephone companies) and reduce franchising burdens for these new entrants. Although as a general matter Internet service providers have upgraded their data networks to enable faster upload and download speeds for their customers in metropolitan markets before upgrading their data networks in our markets, CenturyLink, AT&T (through its U-verse brand) and other companies have overbuilt approximately 28% of our homes passed with fiber-to-the-node or other high-speed networks, such that they are able to offer data, video and voice services, including data services with high access speeds, albeit generally lower when compared to those that we offer. Further overbuilding could cause more of our customers to purchase data and video services from our competitors instead of from us. In our other markets, some of our telephone company competitors have entered into strategic partnerships or other arrangements with DBS operators that permit these telephone companies to package the

video services of DBS operators with their own DSL, landline voice and wireless voice services. An example of such arrangement is the merger of AT&T and DirecTV. We also face increasing competition for residential voice services from wireless telephone companies, as some of our customers are replacing our landline voice service completely with wireless voice service.

Table of Contents

In addition, new entrants with significant financial resources may compete on a larger scale with our video and data services. For example, several years ago, Alphabet launched Google Fiber, which offers data and video services in several areas of the country. Google Fiber's infrastructure consists of fiber optic wirelines, which is technologically superior to the DSL technology of a number of our competitors. Given its financial resources, Alphabet may further expand into regions in which we compete, as well as prompt our competitors to continue to upgrade their own networks in order to be able to offer increased download and upload speeds necessary to remain competitive. Alphabet's size and financial resources may enable it to continue to upgrade its infrastructure. Although Alphabet announced in the fourth quarter of 2016 that it was pausing its Google Fiber expansion in most of its potential Google Fiber cities, if Alphabet expands its Google Fiber offerings into our markets, it may be able to offer our current customers attractive pricing and technology, increasing competition in our markets.

A number of municipalities have also announced plans to construct their own data networks with access speeds that match or exceed those of our own through the use of fiber optic technology. In some cases, local government entities and municipal utilities may legally compete with us without obtaining a franchise from an LFA, reducing their barriers to entry into our markets. The entrance of municipalities as competitors in our markets would add to the competition we face and could lead to additional customer attrition.

Our video business also faces substantial and increasing competition from other forms of in-home entertainment and recreational activities, including video games, mobile apps and the Internet, as well as from other media companies. Internet and other media companies, including Alphabet, Amazon, Apple, Sling TV, Hulu and Netflix, increasingly offer video programming via OTT streaming on the Internet. Because of the significant size and financial resources of such companies, we anticipate that they will continue to invest resources in increasing the availability of video content on the Internet, which may result in less demand for the video services we provide. In addition, companies that offer OTT content in certain markets also provide data services, such as Alphabet, and they may seek to increase sales of their streaming content by lowering the cost of data services for their customers, which would further increase price competition for the data services we offer. In addition to creating competition for our video services business, OTT content also significantly increases the volume of traffic on our data networks, which can lead to decreases in access speeds for all users if data networks are not upgraded so that their broadband capacity can keep pace with increased traffic. Any of these events could have a material negative impact on our operations, business, financial results and financial condition.

*Our business is characterized by rapid technological change, and if we do not adapt to technological changes and respond appropriately to changes in consumer demand, our competitive position may be harmed.*

Our success is, to a large extent, dependent on our ability to acquire, develop, adopt, upgrade and exploit new and existing technologies to address consumers' changing demands and distinguish our services from those of our competitors. We may not be able to accurately predict technological trends or the success of new products and services. If we choose technologies or equipment that are less effective, cost-efficient or attractive to our customers than those chosen by our competitors, or if we offer services that fail to appeal to consumers, that are not available at competitive prices or that do not function as expected, our competitive position could deteriorate, and our business and financial results could suffer.

The ability of some of our competitors to introduce new technologies, products and services more quickly than we can may adversely affect our competitive position. Furthermore, advances in technology, decreases in the cost of existing technologies or changes in competitors' product and service offerings may require us in the future to make additional research and development expenditures or to offer at no additional charge or at a lower price certain products and services that we currently offer to customers separately or at a premium.

In addition, we seek to leverage overall industry experience before rolling out new technology in order to avoid investing in technology that has not been proven successful in other markets. We implement this approach to avoid costly mistakes made by early adopters of new technology that does not provide expected returns, and it exposes us to the risk that one of our competitors will adopt successful new technology before us, and leverage this new technology to attract our customers, increasing the level of customer attrition we experience and adversely affecting our business.

Table of Contents***Business services sales increasingly contribute to our results of operations, and we face risks as we attempt to further focus on sales to our business customers.***

Growth in revenue from sales to our business customers has exceeded 13% for each year since we started focusing on business services sales in 2011, and we may encounter challenges as we continue our initiative to expand sales of data, voice and video services to our business customers. To accommodate this expansion, we expect to commit a greater proportion of our expenditures on technology, equipment and personnel focused on our business customers. If we are unable to sufficiently maintain the necessary infrastructure and internal support functions necessary to service these customers, potential future growth of our business services revenues would be limited. In many cases, business customers have service level agreements that require us to provide higher standards of service and reliability. If we are unable to meet these service level requirements, or more broadly, the expectations of our business customers, we would no longer expect business sales to increase and our results of operations may be materially negatively affected.

***The increase in programming costs and retransmission fees may continue in the future, resulting in lower margins than we anticipate.***

Over the past few years, the sales margins on our residential video services, which accounted for 36.0%, 41.2% and 44.4% of our total revenues in 2016, 2015 and 2014, respectively, have decreased as a result of increased programming costs and retransmission fees and customer cord-cutting. Programming costs and retransmission fees paid to major programmers may continue to increase as programmers are expected to ask for higher fees. Moreover, programming cost increases have caused us, and may in the future cause us, to cease carrying channels offered by certain programmers, which may result in attrition of video subscribers as well as customers who subscribe to double-play or triple-play packages that include video service. These customer losses and increased costs could result in further decreases in our residential video margins and adversely impact our business.

***We may not be able to obtain necessary hardware, software and operational support.***

We depend on a limited number of third-party suppliers and licensors to supply some of the hardware and software necessary to provide some of our services, including our access to the network backbone and the set-top boxes and modems that we lease to our customers. Some of these vendors represent our sole source of supply or have, either through contract or as a result of intellectual property rights, a position of some exclusivity. If any of these parties breaches or terminates its agreement with us or otherwise fails to perform its obligations in a timely manner, demand exceeds these vendors' capacity, they experience operating or financial difficulties, they significantly increase the amount we pay for necessary products or services or they cease production of any necessary product due to lack of demand, profitability, a change in their ownership or otherwise, our ability to provide some services may be materially adversely affected. Any of these events could adversely affect our ability to retain and attract subscribers and have a material negative impact on our operations, business, financial results and financial condition.

***We may make acquisitions, which could involve inherent risks and uncertainties.***

We may make acquisitions, which could involve inherent risks and uncertainties, including:

- the difficulty in integrating newly acquired businesses and operations in an efficient and effective manner;
- the challenge in achieving strategic objectives, cost savings and other anticipated benefits;
- the potential loss of key employees of the acquired businesses;
- the potential diversion of senior management's attention from our ongoing operations;
- the risks associated with integrating financial reporting and internal control systems;
- the difficulty in expanding information technology systems and other business processes to incorporate the acquired businesses;
- potential future impairments of goodwill associated with the acquired businesses; and
- in some cases, the potential for increased regulation.

If an acquired business fails to operate as anticipated, cannot be successfully integrated with our existing business or one or more of the other risks and uncertainties identified above occur in connection with our acquisitions, our operations, business, results of operations and financial condition could be materially negatively affected.

Table of Contents***Adverse conditions in the U.S. economy could impact our results of operations.***

Unfavorable general economic conditions, such as a recession or economic slowdown in the United States, could negatively affect the affordability of and demand for some of our products and services. In difficult economic conditions, consumers may seek to reduce discretionary spending by forgoing purchases of our products, electing to use fewer higher margin services or obtaining lower cost products and services offered by other companies. Similarly, under these conditions the business customers that we serve in the United States may delay purchasing decisions, delay full implementation of service offerings or reduce their use of services. In addition, adverse economic conditions may lead to an increased number of our residential and business customers that are unable to pay for services. Such conditions could also inhibit or prevent our third-party suppliers and licensors from supplying some of the hardware and software necessary to provide some of our services. If any of these events were to occur, it could have a material negative effect on our operations, business, financial condition and results of operations.

***We rely on network and information systems and other technology, and a disruption or failure of such networks, systems or technology as a result of computer viruses, "cyber attacks," misappropriation of data or other malfeasance, as well as outages, natural disasters (including extreme weather), terrorist attacks, accidental releases of information or similar events, may disrupt our business.***

Network and information systems and other technologies are critical to our operating activities, both to internal uses and in supplying data, video and voice services to customers. Network or information system shutdowns or other service disruptions caused by events such as computer hacking, dissemination of computer viruses, worms and other destructive or disruptive software, "cyber attacks," process breakdowns, denial of service attacks and other malicious activity pose increasing risks. Both unsuccessful and successful "cyber attacks" on companies have continued to increase in frequency, scope and potential harm in recent years and, because the techniques used in such attacks have become more sophisticated and change frequently, we may be unable to anticipate these techniques or implement adequate preventative measures. From time to time third parties make malicious attempts to access our network. Any successful attempts could result in an unauthorized release of information, degradation to our network and information systems or disruption to our data, video and voice services, all of which could adversely affect our results of operations.

Our network and information systems are also vulnerable to damage or interruption from power outages, natural disasters (including extreme weather arising from short-term weather patterns or any long-term changes), terrorist attacks and similar events. For example, the damage to our network infrastructure caused by Hurricane Katrina and the Joplin, Missouri tornado each created a significant disruption in our ability to provide services in affected areas. Any of these events could have an adverse impact on us and our customers in the future, including degradation of service, service disruption, excessive call volume to call centers and damage to our plant, equipment, data and reputation. Such an event also could result in large expenditures necessary to repair or replace such networks or information systems or to protect them from similar events in the future. Further, the impacts associated with extreme weather or any long-term changes, such as intensified storm activity, may cause increased business interruptions.

Furthermore, our operating activities could be subject to risks caused by misappropriation, misuse, leakage, falsification or accidental release or loss of information maintained in our information technology systems and networks and those of third-party vendors, including customer, personnel and vendor data. We provide certain confidential, proprietary and personal information to third parties in connection with our business, and there is a risk that this information may be compromised. Any such compromise could require us to implement costly remediation measures.

Various U.S. Federal, state and international laws and regulations govern the collection, use, retention, sharing and security of consumer data. This area of the law is evolving, and interpretations of applicable laws and regulations differ. Legislative and regulatory activity in the privacy area may result in new laws that are relevant to our operations, for example, use of consumer data for marketing or advertising. Claims of failure to comply with our privacy policies or applicable laws or regulations could form the basis of governmental or private-party actions against us. Such claims and actions may cause damage to our reputation and could have an adverse effect on our business.

Table of Contents

***Intellectual property and proprietary rights of others could prevent us from using necessary technology to provide our services or subject us to expensive intellectual property litigation.***

We periodically receive claims from third parties alleging that our network and information technology infrastructure infringes the intellectual property rights of others. We are generally named as joint defendants in these suits together with other providers of data, video and voice services. Typically these claims allege that aspects of our cable system architecture, electronic program guides, cable modem technology and VoIP services infringe on process patents held by third parties. It is likely that we will continue to be subject to similar claims as they relate to our cable business. Addressing these claims is a time-consuming and expensive endeavor, regardless of the merits of the claims. In order to resolve such a claim, we could determine the need to change our method of doing business, enter into a licensing agreement or incur substantial monetary liability. It is also possible that our business could be enjoined from using the intellectual property at issue, causing us to significantly alter our operations. If any such claims are successful, then the outcome would likely affect our services utilizing the intellectual property at issue and could have a material adverse effect on our operating results.

***If we are unable to retain key employees, our ability to manage our business could be adversely affected.***

Our operational results have depended, and our future results will depend, upon the retention and continued performance of our management team. The competitive environment for management talent in the broadband communications industry could adversely impact our ability to retain and hire new key employees for management positions. The loss of the services of key members of management and the inability or delay in hiring new key employees could adversely affect our ability to manage our business and our future operational and financial results.

**Risks Relating to Regulation and Legislation**

***The profitability of our data services offerings may be impacted by legislative or regulatory efforts to impose "net-neutrality" and other new requirements on cable operators.***

The majority of our current Adjusted EBITDA less capital expenditures comes from residential data services, and we expect that a majority of our residential customers will be data-only in the future. We have aligned our resources to emphasize increased sales of data services, as well as sales to business customers. In order to continue to generate Adjusted EBITDA less capital expenditures at our desired level from data services, we need the continued flexibility to develop and refine business models that respond to changing consumer uses and demands and to manage data usage efficiently, including by charging our data subscribers higher rates based on the overall bandwidth capacity available to, or used by, them, referred to as "usage-based billing." Our ability to implement usage-based billing or other network management initiatives in the future may be restricted by the FCC's "net-neutrality" requirements on cable operators.

To the extent the FCC in the future limits our ability to price our data services, we may not be able to generate the margins on our data services that we anticipated in shifting our focus from video to data services, and our business could be materially negatively impacted. While the FCC forbore from requirements that would require cable companies to contribute a portion of their revenues from data services to the USF, the FCC also ruled that it may revisit this determination in the future. Current rules only require that a portion of revenues from VoIP services be contributed to the USF. The changes brought about by how USF monies are distributed may provide funding and subsidies to those who either compete with us or seek to compete with us and therefore put us at a competitive disadvantage. Moreover, if the FCC imposes USF fees on broadband services, bundled services or a larger portion of VoIP services, it would increase the cost of our services and harm our ability to compete.

Given that the scope of the FCC's network neutrality regulations is not fully defined and given that the rules create procedural mechanisms for parties to complain of violations, it is reasonable to expect litigation to resolve ambiguities, which could lead to yet further regulation. It also is possible that the FCC's network neutrality regulations will be reduced or eliminated entirely as a result of the new administration and the newly-constituted FCC. The regulation of broadband activities and any related court decisions could restrict our ability to profit from our existing broadband network and limit the return we can expect to achieve on past and future investments in our broadband networks. We cannot predict what, if any, proposals might be adopted or what effect they might have on our business.

***Our video and voice services are subject to additional regulation by U.S. Federal, state and local authorities, which may impose additional costs and restrictions on our businesses.***

Our video services business operates in a highly regulated environment. Our cable systems generally operate pursuant to franchises, permits and similar authorizations issued by LFAs controlling the public rights-of-way, which typically are non-exclusive

and limited in time, contain various conditions and limitations and provide for the payment of fees to the local authority, determined generally as a percentage of revenues. Failure to comply with all of the terms and conditions of a franchise may give rise to rights of termination by the franchising authority.

We have the ability, pursuant to the Copyright Act, under certain terms and conditions, to retransmit the signals of television stations pursuant to a compulsory copyright license. From time to time, revisions to the cable compulsory copyright rules are considered. It is possible that changes in the rules or copyright compulsory license fee computations or compliance procedures could have an adverse effect on our business by, for example, increasing copyright compulsory license fee costs or by causing us to reduce or discontinue carriage of certain broadcast signals that we currently carry on a discretionary basis.

Table of Contents

In addition, Congress, the FCC and other government agencies have implemented regulations that affect the types of set-top boxes that we can lease or deploy to our subscribers, and we expect these regulations to change in the future. Most recently, in January 2013, the U.S. Department of Energy tentatively designated set-top boxes and network equipment as covered consumer products and proposed to adopt a new test procedure for set-top boxes as part of its Energy Conservation Program for Consumer Products and Certain Commercial and Industry Equipment. In December 2013, the Department of Energy withdrew its proposed rules to designate set-top boxes and network equipment as a covered product and to establish a test procedure for set-top boxes, but stated that it would consider reinitiating the rulemaking. Imposing energy conservation regulations on the hardware products we provide to our customers could impede innovation and require mandatory upgrades in our set-top boxes and be costly to us. In February 2016, the FCC announced a notice of proposed rulemaking that would allow any manufacturer to create cable boxes that can access pay-TV services so that consumers are not required to lease set-top boxes from cable and satellite providers, but the newly-constituted FCC has removed this item from review by the FCC for now. We cannot predict when, whether or to what extent any of these proposals will be resolved or how they will affect our operations.

Our voice services business is also subject to a growing degree of regulation. Complying with these regulations may increase the costs we incur and decrease the revenues we derive from our voice business. While the compliance costs associated with the current regulatory structure applicable to our voice services business are manageable, changes in this regulatory structure are unpredictable and have the potential to further negatively impact our voice services business by increasing compliance costs and/or taxes.

***Our cable system franchises are subject to non-renewal or termination. The failure to renew a franchise in one or more markets could adversely affect our business.***

Many of the LFAs from whom we have obtained franchises, permits and similar authorizations required to operate our video services business have established comprehensive facilities and service requirements, as well as specific customer service standards and monetary penalties for non-compliance. In many cases, our franchises are terminable if we fail to comply with significant provisions set forth in the applicable franchise agreement governing our video operations. Franchises are generally granted for fixed terms and must be periodically renewed. LFAs may resist granting a renewal if either past performance or the prospective operating proposal is considered inadequate. LFAs often demand concessions or other commitments as a condition to renewal. The traditional cable franchising regime has recently undergone significant change as a result of various federal and state actions. Some state franchising laws do not allow us to immediately opt into favorable statewide franchising. In many cases, state franchising laws will result in fewer franchise imposed requirements for our competitors who are new entrants than for us, until we are able to opt into the applicable state franchise. We cannot assure that we will be able to comply with all significant provisions of our franchise agreements and certain of our franchisers have from time to time alleged that we have not complied with these agreements. Additionally, although historically we have renewed our franchises without incurring significant costs, we cannot assure that we will be able to renew, or to renew as favorably, our franchises in the future. A termination of or a sustained failure to renew a franchise in one or more markets could materially negatively affect our business in the affected geographic area.

In addition, certain of our franchise agreements require that the applicable LFA approve a transfer of control of our Company. Although FCC rules provide that a transfer application shall be deemed granted if it is not acted upon within a 120 days after submission, as a practical matter, cable operators often waive the deadline if the LFA has not completed its review to facilitate discussions and thereby avoid an LFA denying the transfer of control. Failure to obtain such consents on commercially reasonable and satisfactory terms may impair our entitlement to the benefit of these franchise agreements in the future and could materially negatively affect our business.

Table of Contents***We may encounter increased pole attachment costs.***

Under U.S. Federal law, we have the right to attach cables carrying video and other services to telephone and similar poles and underground conduits owned by utility companies. In addition, U.S. Federal law requires most telephone and power utilities to charge reasonable rates to cable operators for utilizing space on utility poles or in underground conduits in order to transmit video services to customers. However, because these cables may carry services other than video services, such as voice services, some utility pole owners have sought to impose on cable companies a telecommunications rate for utilizing pole space for voice services, which is higher than the statutory rate charged to cable operators for video services. In May 2010 and again in April 2011, the FCC adopted new requirements relating to pole access and construction practices that were expected to improve the ability of cable operators to attach to utility poles on a timely basis and to lower the pole attachment rate for voice services. In October 2013, the U.S. Supreme Court declined to review a lower court's decision to uphold the FCC's pole attachment regulations. The FCC further revised its pole attachment rules in November 2015 to adjust the formula for calculating pole rental rates, which resulted in similar rates for telecommunications attachments and cable attachments, and eliminated the ability of utility companies to justify higher rates for pole attachments used to provide broadband Internet access service. Those rules are being challenged in a U.S. Federal court by the utility companies, where the matter is pending. In the meantime, the appropriate method for calculating pole attachment rates for cable operators that provide VoIP services remains unclear, although the FCC's recent rule revisions to equalize pole attachment rates make this issue less significant. We cannot predict the extent to which regulatory changes may affect our ability over time to secure timely access to poles at reasonable rates for our data, voice and video services. As a general matter, changes to our pole attachment rate structure could significantly increase our annual pole attachment costs and materially negatively impact our operations, business, financial condition and results of operations.

***LFA's have the ability to impose additional regulatory constraints on our business, which could further increase our expenses.***

In addition to the franchise agreement, LFAs in some jurisdictions have adopted cable regulatory ordinances that further regulate the operation of cable systems, and the services we provide in the jurisdiction. This additional regulation increases the cost of operating our business. LFAs may impose new and more restrictive requirements. LFAs who are certified to regulate rates in their communities generally have the power to reduce rates and order refunds on the rates charged for basic video service and equipment.

***Changes in broadcast carriage regulations could impose significant additional costs.***

Although we would likely choose to carry all primary video feeds of local broadcast stations in the markets in which we operate voluntarily, so-called "must carry" rules could, in the future, require us to carry some local broadcast television signals on some of our cable systems that we might not otherwise carry. If the FCC seeks to revise or expand the "must carry" rules, such as to require carriage of multicast streams, we would be forced to carry video programming that we would not otherwise carry and potentially drop other, more popular programming in order to free capacity for the required programming, which could make us less competitive. Moreover, if the FCC adopts rules that are not competitively neutral, cable operators could be placed at a disadvantage versus other video providers. Any of these events could adversely affect our business.

**Risks Related to Our Spin-Off from GHC**

***The spin-off could result in significant tax liability to GHC and its stockholders, and we could have an indemnification obligation to GHC if the Distribution were determined not to qualify for non-recognition treatment, which could materially adversely affect our financial condition.***

Completion of the spin-off required GHC's receipt of a written opinion of Cravath, Swaine & Moore LLP to the effect that the Distribution should qualify for non-recognition of gain and loss under Section 355 of the Internal Revenue Code of 1986, as amended (the "Code").

The opinion of counsel did not address any U.S. state or local or foreign tax consequences of the spin-off. The opinion assumed that the spin-off was completed according to the terms of the Separation and Distribution Agreement and the Tax Matters Agreement with GHC and relied on the facts as stated in the Separation and Distribution Agreement, the Tax Matters Agreement, the other ancillary agreements, the Information Statement included in our registration statement on Form 10 and a number of other documents. In addition, the opinion was based on certain representations as to factual matters from GHC, us and Donald E. Graham. The opinion cannot be relied on if any of the assumptions, representations or covenants are incorrect, incomplete or inaccurate or are violated in any material respect.

The opinion of counsel is not binding on the Internal Revenue Service (the "IRS") or the courts, and there can be no assurance that the IRS or a court will not take a contrary position. GHC has not requested, and does not intend to request, a ruling from the IRS

regarding the U.S. Federal income tax consequences of the spin-off.

Table of Contents

If the Distribution were determined not to qualify for non-recognition of gain and loss, "U.S. Holders" (defined as a beneficial owner of GHC common stock that is a United States person for purposes of the Code) could be subject to tax. In this case, each U.S. Holder who received our common stock in the Distribution would generally be treated as receiving a distribution in an amount equal to the fair market value of our common stock received, which would generally result in (1) a taxable dividend to the U.S. Holder to the extent of that U.S. Holder's pro rata share of GHC's current and accumulated earnings and profits; (2) a reduction in the U.S. Holder's basis (but not below zero) in GHC common stock to the extent the amount received exceeds the stockholder's share of GHC's earnings and profits; and (3) a taxable gain from the exchange of GHC common stock to the extent the amount received exceeds the sum of the U.S. Holder's share of GHC's earnings and profits and the U.S. Holder's basis in its GHC common stock.

If, due to any of our representations being untrue or our covenants being breached, it were determined that the Distribution did not qualify for non-recognition of gain and loss under Section 355 of the Code, we could be required to indemnify GHC for the resulting taxes and related expenses. Any such indemnification obligation could materially adversely affect our financial condition.

In addition, Section 355(e) of the Code generally creates a presumption that the Distribution would be taxable to GHC, but not to stockholders, if we or our stockholders were to engage in transactions that result in a 50% or greater change by vote or value in the ownership of our stock during the four-year period beginning on the date that begins two years before the date of the Distribution, unless it were established that such transactions and the Distribution were not part of a plan or series of related transactions giving effect to such a change in ownership. If the Distribution were taxable to GHC due to such a 50% or greater change in ownership of our stock, GHC would recognize gain equal to the excess of the fair market value of our common stock distributed to GHC stockholders over GHC's tax basis in our common stock and we generally would be required to indemnify GHC for the tax on such gain and related expenses. Any such indemnification obligation could materially adversely affect our financial condition.

*We agreed to numerous restrictions to preserve the non-recognition treatment of the Distribution, which may reduce our strategic and operating flexibility.*

We agreed in the Tax Matters Agreement to covenants and indemnification obligations that address compliance with Section 355 of the Code. These covenants and indemnification obligations may limit our ability to pursue strategic transactions or engage in new businesses or other transactions that may maximize the value of our business and might discourage or delay a strategic transaction that our stockholders may consider favorable.

*We have limited operating history as an independent, publicly traded company, and our historical financial information is not necessarily representative of the results we would have achieved as an independent, publicly traded company and may not be a reliable indicator of our future results.*

Our historical financial information does not necessarily reflect the results of operations and financial position we would have achieved as an independent, publicly traded company during the periods prior to the spin-off, or those that we will achieve in the future. This is primarily because of the following factors:

- Prior to the spin-off, we operated as part of GHC's broader corporate organization and GHC performed various corporate functions for us, including finance, human resources, legal, information technology, general insurance, risk management and other corporate functions. Our historical financial information reflects allocations of corporate expenses from GHC for these and similar functions. These allocations may not reflect the costs we will incur for similar services in the future as an independent, publicly traded company.
- We entered into transactions with GHC that did not exist prior to the spin-off, such as GHC's provision of transition services, which caused and may continue to cause us to incur new costs.
- Our historical financial information does not reflect all changes that we expect to experience in the future as a result of our separation from GHC, including changes in our cost structure, personnel needs, tax structure, financing and business operations. As part of GHC, we enjoyed certain benefits from GHC's operating diversity, size, purchasing power, borrowing leverage and available capital for investments, and we have lost those benefits after the spin-off. As an independent entity, we may be unable to purchase goods, services and technologies, such as insurance and health care benefits and computer software licenses, or access capital markets on terms as favorable to us as those we obtained as part of GHC prior to the spin-off.

Following the spin-off, we are responsible for the additional costs associated with being an independent, publicly traded company, including costs related to corporate governance, investor and public relations and public reporting. For example, we are now required to comply with Section 404 of the Sarbanes-Oxley Act of 2002, which requires annual management assessments of the

effectiveness of our internal controls over financial reporting and a report by our independent registered public accounting firm as to whether we maintained, in all material respects, effective internal controls over financial reporting as of the last day of the year. Any failure to achieve and maintain effective internal controls could have a material adverse effect on our financial condition, results of operations or cash flows.

Table of Contents

***We may have been able to receive better terms from unaffiliated third parties than the terms we received in our agreements with GHC.***

We have entered into agreements with GHC related to our separation from GHC, including the Separation and Distribution Agreement, Transition Services Agreement, Tax Matters Agreement and Employee Matters Agreement, while we were still part of GHC. Accordingly, these agreements may not reflect terms that would have resulted from arm's-length negotiations among unaffiliated third parties. The terms of these agreements relate to, among other things, allocations of assets, liabilities, rights, indemnifications and other obligations between GHC and us. We may have received better terms from third parties.

**Risks Relating to Our Indebtedness**

***We incurred indebtedness in connection with the spin-off, and the degree to which we are now leveraged may have a material adverse effect on our business, financial condition or results of operations and cash flows.***

In connection with the spin-off, we incurred indebtedness in an aggregate principal amount of \$550 million, of which \$450 million was distributed to GHC prior to the consummation of the spin-off. We historically relied upon GHC for working capital and other cash requirements, including in connection with our previous acquisitions. We are no longer able to rely on the earnings, assets or cash flow of GHC, and GHC will not provide funds to finance our working capital or other cash requirements. We are responsible for servicing our own debt, and obtaining and maintaining sufficient working capital and other funds to satisfy our cash requirements. Our access to and cost of debt financing may be different from our historical access to and cost of debt financing under GHC. Differences in access to and cost of debt financing may result in differences in the interest rate charged to us on financings, as well as the amount of indebtedness, types of financing structures and debt markets that may be available to us now that we are an independent, publicly traded company.

Our ability to make payments on and to refinance our indebtedness, including the debt incurred in connection with the spin-off, as well as any future debt that we may incur, will depend on our ability to generate cash in the future from operations, financings or asset sales. Our ability to generate cash is subject to general economic, financial, competitive, legislative, regulatory and other factors that are beyond our control.

***The terms of our indebtedness restricts our current and future operations, particularly our ability to incur debt that we may need to fund initiatives in response to changes in our business, the industries in which we operate, the economy and governmental regulations.***

The terms of our indebtedness include a number of restrictive covenants that impose significant operating and financial restrictions on us and limit our ability to engage in actions that may be in our long-term best interests. These may restrict our ability to take some or all of the following actions:

- incur or guarantee additional indebtedness or sell disqualified or preferred stock;
- pay dividends on, make distributions in respect of, repurchase or redeem, capital stock;
- make investments or acquisitions;
- sell, transfer or otherwise dispose of certain assets;
- create liens;
- enter into sale/leaseback transactions;
- enter into agreements restricting the ability to pay dividends or make other intercompany transfers;
- consolidate, merge, sell or otherwise dispose of all or substantially all of our or our subsidiaries' assets;
- enter into transactions with affiliates;

Table of Contents

- prepay, repurchase or redeem certain kinds of indebtedness;
- issue or sell stock of our subsidiaries; and/or
- significantly change the nature of our business.

As a result of all of these restrictions, we may be:

- limited in how we conduct our business and pursue our strategy;
- unable to raise additional debt financing to operate during general economic or business downturns; or
- unable to compete effectively or to take advantage of new business opportunities.

A breach of any of these covenants, if applicable, could result in an event of default under the terms of our indebtedness. If an event of default occurs, the lenders would have the right to accelerate the repayment of such debt and the event of default or acceleration may result in the acceleration of the repayment of any other of our debt to which a cross-default or cross-acceleration provision applies. Furthermore, the lenders of this indebtedness may require that we pledge our assets as collateral as security for our repayment obligations. If we were unable to repay any amount of this indebtedness when due and payable, the lenders could proceed against the collateral that secures this indebtedness. In the event our creditors accelerate the repayment of our borrowings, we may not have sufficient assets to repay such indebtedness and our financial condition will be materially negatively affected.

*We have variable rate indebtedness that subjects us to interest rate risk, which could cause our debt service obligations to increase significantly.*

As of the end of 2016, we had \$95.0 million of outstanding term loans and an additional \$197.2 million of undrawn revolving credit facilities with variable rates of interest that expose us to interest rate risks. If interest rates increase, our debt service obligations on the variable rate indebtedness would increase even though the amount borrowed remains the same, and our net income and cash flows will correspondingly decrease. In addition, we will be exposed to the risk of rising interest rates to the extent that we fund our operations with short-term or variable-rate borrowings. Even if we enter into interest rate swaps in the future in order to reduce future interest rate volatility, we may not elect to maintain such interest rate swaps with respect to our variable rate indebtedness, if any, and any swaps we enter into may not fully mitigate our interest rate risk. As a result, our financial condition could be materially negatively affected.

*Our ability to incur future indebtedness, whether for general corporate purposes or for acquisitions and strategic investments, may not be available on favorable terms, or at all.*

We may need to seek additional financing for our general corporate purposes or for acquisitions and strategic investments in the future. For example, we expect to finance the acquisition of NewWave with \$650 million of senior secured loans and cash on hand. In connection with the entry into the Merger Agreement, we entered into a commitment letter on January 17, 2017, as amended and restated on February 13, 2017, with the Lenders. Pursuant to the amended and restated commitment letter, and subject to the terms and conditions set forth therein, the Lenders have committed to provide us with \$300 million of incremental five-year term "A" loans and \$350 million of incremental seven-year term "B" loans to finance the transaction.

We may be unable to obtain additional indebtedness on terms favorable to us, or at all, including because of the terms of our current indebtedness. If adequate funds are not available on acceptable terms, we may be unable to fund our future activities, which could negatively affect our business. If we raise additional funds through the issuance of equity securities, our stockholders could experience dilution of their ownership interest. If we raise additional funds by issuing debt, we may be subject to limitations on our operations due to restrictive covenants.

#### **Risks Relating to Our Common Stock and the Securities Market**

*Our stock price may fluctuate significantly, depending on many factors, some of which may be beyond our control.*

The market price of our common stock may fluctuate significantly, depending on many factors, some of which may be beyond our control, including:

-----

Table of Contents

- actual or anticipated fluctuations in our operating results due to factors related to our business;
- success or failure of our business strategies;
- our quarterly or annual earnings, or those of other companies in our industry;
- our ability to obtain financing as needed;
- announcements by us or our competitors of significant acquisitions or dispositions;
- changes in accounting standards, policies, guidance, interpretations or principles;
- the failure of securities analysts to cover, or maintain coverage of, our common stock;
- changes in earnings estimates by securities analysts or our ability to meet those estimates;
- the operating and stock price performance of other comparable companies;
- investor perception of our Company and the cable industry;
- overall market fluctuations;
- results from any material litigation or government investigation;
- changes in laws and regulations (including tax laws and regulations) affecting our business;
- changes in capital gains taxes and taxes on dividends affecting stockholders; and
- general economic conditions and other external factors.

Low trading volume for our stock, which may occur if an active trading market is not sustained, among other reasons, would amplify the effect of the above factors on our stock price volatility.

Stock markets in general have experienced volatility that has often been unrelated to the operating performance of a particular company. These broad market fluctuations could adversely affect the trading price of our common stock.

***We cannot assure you that we will continue to pay dividends on our common stock, and our indebtedness limits our ability to pay dividends on our common stock.***

The timing, declaration, amount and payment of future dividends to stockholders falls within the discretion of our Board. Our Board's decisions regarding the amount and payment of future dividends will depend on many factors, including our financial condition, earnings, capital requirements of our business and covenants associated with debt obligations, as well as legal requirements, regulatory constraints, industry practice and other factors that our Board deems relevant. There can be no assurance that we will continue to pay any dividend in the future.

***Your percentage ownership in our Company may be diluted in the future.***

Your percentage ownership in our Company may be diluted in the future because of equity awards granted, and that we expect to grant in the future, to our directors, officers and other employees. In addition, we may issue equity as all or part of the consideration paid for acquisitions and strategic investments that we may make in the future or as necessary to finance our ongoing operations.

***Certain provisions in our Amended and Restated Certificate of Incorporation and Amended and Restated By-laws and Delaware law may discourage takeovers and the concentration of ownership of our common stock will affect the voting results of matters submitted for stockholder approval.***

Several provisions of our Amended and Restated Certificate of Incorporation, Amended and Restated By-laws and Delaware law may discourage, delay or prevent a merger or acquisition that is opposed by our Board or certain stockholders holding a significant percentage of the voting power of our outstanding voting stock. These include provisions that:

Table of Contents

- divide our Board into three classes of directors, standing for election on a staggered basis, such that only approximately one-third of the directors constituting our Board may change each year;
- do not permit our stockholders to act by written consent and require that stockholder action must take place at an annual or special meeting of our stockholders;
- provide that only our Chief Executive Officer and a majority of our directors, and not our stockholders, may call a special meeting of our stockholders;
- require the approval of our Board or the affirmative vote of stockholders holding at least 66 <sup>2</sup>/<sub>3</sub>% of the voting power of our capital stock to amend our Amended and Restated By-laws; and
- limit our ability to enter into business combination transactions with certain stockholders.

These and other provisions of our Amended and Restated Certificate of Incorporation, Amended and Restated By-laws and Delaware law may discourage, delay or prevent certain types of transactions involving an actual or a threatened acquisition or change in control of our Company, including unsolicited takeover attempts, even though the transaction may offer our stockholders the opportunity to sell their shares of our common stock at a price above the prevailing market price.

**ITEM 1B. UNRESOLVED STAFF COMMENTS**

Not applicable.

**ITEM 2. PROPERTIES**

Our headquarters, which we purchased in 2012, and other corporate offices are located in Phoenix, Arizona. Our call-center operations are housed at our headquarters. The majority of the offices and headend facilities of our individual cable systems are located in buildings owned by us. Most of the tower sites used by us are leased.

**ITEM 3. LEGAL PROCEEDINGS**

In the ordinary course of business, we periodically receive claims from third parties alleging that our network and information technology infrastructure infringes the intellectual property rights of others. We are generally named as joint defendants in these suits together with other providers of data, video and voice services. Typically these claims allege that aspects of our cable system architecture, electronic program guides, cable modem technology and VoIP services infringe on process patents held by third parties. In addition, we have been subject to various civil lawsuits in the ordinary course of business, including contract disputes, actions alleging negligence, invasion of privacy, violations of applicable wage and hour laws and statutory and common law claims involving various other matters. We do not view any of these proceedings as material to our business, and are currently not subject to any other material legal proceedings.

**ITEM 4. MINE SAFETY DISCLOSURES**

Not applicable.

Table of Contents**PART II****ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES****Market Information**

Our common stock began trading on the New York Stock Exchange under the ticker symbol "CABO" on July 1, 2015 after completion of the spin-off. Prior to that date, there was no public market for our common stock. The following table sets forth the high and low sales prices for our common stock for the quarterly periods indicated as reported by the New York Stock Exchange.

	2016		2015	
	High	Low	High	Low
First Quarter	\$ 459.40	\$ 390.00	\$ -	\$ -
Second Quarter	\$ 518.31	\$ 430.21	\$ -	\$ -
Third Quarter	\$ 589.76	\$ 506.43	\$ 450.48	\$ 365.00
Fourth Quarter	\$ 635.85	\$ 559.83	\$ 492.81	\$ 413.64

**Holdings**

As of February 21, 2017, there were approximately 458 holders of record of our common stock and 5,719,502 shares of our common stock outstanding.

**Dividends**

The following table sets forth the dividends declared on our common stock for the quarterly periods indicated.

	2016	2015
First Quarter	\$ 1.50	\$ -
Second Quarter	\$ 1.50	\$ -
Third Quarter	\$ 1.50	\$ -
Fourth Quarter	\$ 1.50	\$ 1.50
Total	\$ 6.00	\$ 1.50

We expect to continue to pay quarterly dividends, although the timing, declaration, amount and payment of future dividends to stockholders falls within the discretion of our Board.

**Securities Authorized for Issuance Under Equity Compensation Plans**

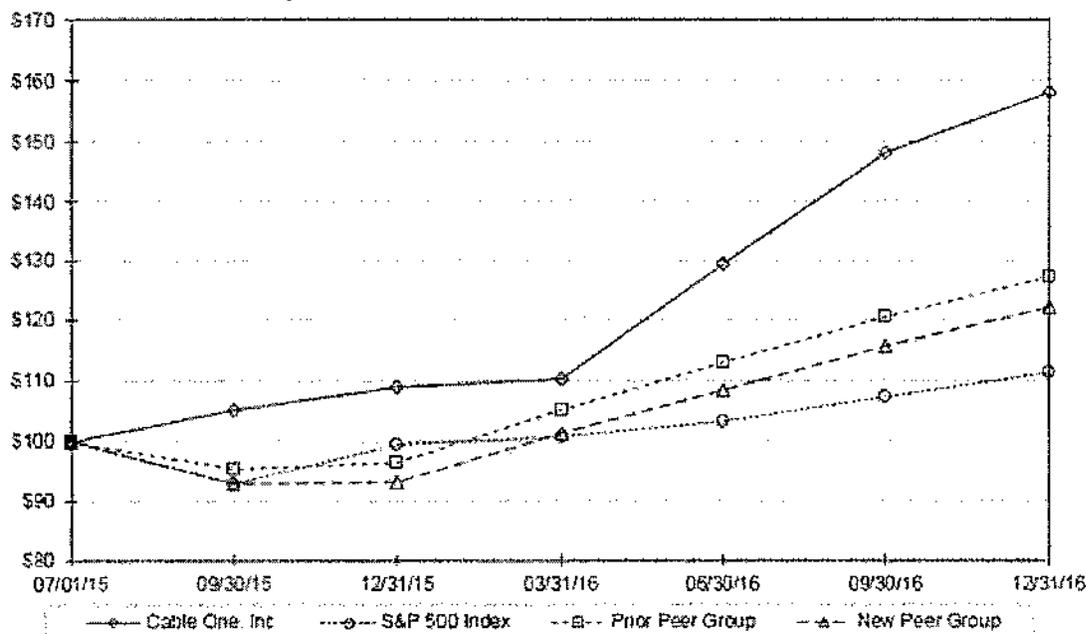

For equity compensation plan information, refer to Item 12 in Part III of this Annual Report on Form 10-K.

Table of Contents

**Performance Graph**

The following graph compares the cumulative total stockholder return of our common stock between July 1, 2015 (the date our stock began trading on the New York Stock Exchange) and December 31, 2016 with the cumulative total returns of the Standard & Poor's 500 Stock Index, a new custom peer group index (the "New Peer Group"), which was created because of merger and acquisition activity that impacted our prior peer group index, and our prior peer group index (the "Prior Peer Group"). For purposes of this graph, it assumes a hypothetical \$100 investment on July 1, 2015 and that dividends, if any, were reinvested. The New Peer Group of data, video and voice services companies includes Charter Communications, Inc.; Comcast Corporation; General Communication, Inc.; and our Company. The Prior Peer Group of data, video and voice services companies includes Cablevision Systems Corp.; Charter Communications, Inc.; Comcast Corporation; Time Warner Cable Inc.; and our Company.

The stock price performance shown on this graph is based on historical results and is not necessarily indicative of future stock price performance. The graph is furnished solely to accompany this Annual Report on Form 10-K and is not being filed for purposes of Section 18 of the Exchange Act or otherwise subject to the liabilities under that section, and shall not be deemed to be incorporated by reference into any filing of the Company under the Securities Act of 1933, as amended, or the Exchange Act.

Table of Contents**Purchases of Equity Securities by the Issuer**

The following table sets forth certain information relating to the purchases of our common stock by us and any affiliated purchasers within the meaning of Rule 10b-18(a)(3) under the Exchange Act during the three months ended December 31, 2016 (dollars in thousands, except per share data):

Period	Total # of Shares Purchased	Average Price Paid Per Share	Total # of Shares Purchased as Part of Publicly Announced Plans or Programs <sup>(1)</sup>	Maximum Dollar Value of Shares that May Yet Be Purchased Under the Plans or Programs
October 1 to 31, 2016	-	\$ -	-	\$ 177,493
November 1 to 30, 2016	401	\$ 570.00	401	\$ 177,264
December 1 to 31, 2016 <sup>(2)</sup>	3,616	\$ 605.86	-	\$ 177,264
<b>Total</b>	<u>4,017</u>	<u>\$ 602.28</u>	<u>401</u>	

(1) On July 1, 2015, the Board authorized up to \$250 million of share repurchases (subject to a total cap of 600,000 shares of Company common stock), which was announced on August 7, 2015. Purchases under the stock repurchase program may be made from time to time on the open market and in privately negotiated transactions. The size and timing of these purchases will be based on a number of factors, including price and business market conditions.

(2) Represents shares withheld from employees to satisfy estimated tax withholding obligations in connection with the vesting of restricted shares under the Cable One, Inc. 2015 Omnibus Incentive Compensation Plan. The average price paid per share for the common stock withheld was based on the closing price of our common stock on the applicable vesting date.

**ITEM 6. SELECTED FINANCIAL DATA**

The following table presents selected historical financial information. The selected historical financial information as of December 31, 2016, 2015, 2014, 2013 and 2012, and for each of the fiscal years in the five-year period ended December 31, 2016, are derived from our historical audited Consolidated Financial Statements included elsewhere in this Annual Report on Form 10-K or in our registration statement on Form 10.

The selected historical financial data presented below should be read in conjunction with our audited Consolidated Financial Statements and the accompanying notes thereto, and "Management's Discussion and Analysis of Financial Condition and Results of Operations," included elsewhere in this Annual Report on Form 10-K. For each of the periods presented, except for the period from July 1, 2015 through December 31, 2016, we were a separate wholly owned subsidiary of GHC. The financial information included herein may not necessarily reflect our financial position, results of operations and cash flows in the future or what our financial position, results of operations and cash flows would have been had we been an independent, publicly traded company during the periods presented. The historical financial information includes allocations of certain GHC corporate expenses. We believe the assumptions and methodologies underlying the allocation of these expenses were reasonable. However, such expenses may not be indicative of the actual level of expense that we would have incurred if we had operated as an independent, publicly traded company or of the costs expected to be incurred in the future.

## ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

### Forward-Looking Statements

You should read the following discussion of our financial condition and results of operations in conjunction with our accompanying audited Consolidated Financial Statements and related notes included in this Annual Report on Form 10-K, as well as the discussion in the section of this Annual Report on Form 10-K entitled "Business." This discussion contains forward-looking statements that involve risks and uncertainties. These statements can be identified by the fact that they do not relate strictly to historical or current facts, but rather are based on current expectations, estimates, assumptions and projections about the cable industry and our business and financial results. Forward-looking statements often include words such as "anticipates," "estimates," "expects," "projects," "intends," "plans," "believes" and words and terms of similar substance in connection with discussions of future operating or financial performance. Accordingly, undue reliance should not be placed on any forward-looking statement made by us or on our behalf. Our actual results may vary materially from those expressed or implied by these forward-looking statements due to a number of factors, including those discussed in the sections of this Annual Report on Form 10-K entitled "Risk Factors" and "Cautionary Statement Concerning Forward-Looking Statements."

### Overview

#### *Spin-Off*

On July 1, 2015, Cable One became an independent company traded under the ticker symbol "CABO" on the New York Stock Exchange. The spin-off was effected through the distribution by GHC of 100% of the outstanding shares of common stock of Cable One to GHC stockholders as of the record date for the distribution in a pro rata dividend. In connection with the spin-off, approximately 5.84 million shares of Cable One's common stock were issued and outstanding on July 1, 2015, based on approximately 0.96 million shares of GHC Class A Common Stock and 4.88 million shares of GHC Class B Common Stock outstanding as of June 30, 2015. No preferred stock was issued or outstanding.

#### *Our Business*

We are a fully integrated provider of data, video and voice services in 19 Western, Midwestern and Southern states. We provide these broadband services to residential and business customers in more than 35 cable systems covering over 400 cities and towns. The markets we serve are primarily non-metropolitan, secondary markets, with 76% of our customers located in five states: Arizona, Idaho, Mississippi, Oklahoma and Texas. Our biggest customer concentrations are in the Mississippi Gulf Coast region and in the

greater Boise, Idaho region. We are the seventh-largest cable system operator in the United States based on customers and revenues in 2016, making services available to approximately 1.7 million homes in the United States as of December 31, 2016.

Table of Contents

As of December 31, 2016, we provided service to 657,222 residential and business customers out of approximately 1.7 million homes passed. Of these customers, 513,908 subscribed to data services, 320,246 subscribed to video services and 115,811 to voice services.

We generate revenues through five primary products. Ranked by share of our total revenues in 2016, they are residential data (42.0%), residential video (36.0%), business services (data, voice and video – 12.2%), residential voice (5.2%) and advertising sales (3.4%). The profit margins, growth rates and capital intensity of our five primary products vary significantly due to competition, product maturity and relative costs. In 2016, our Adjusted EBITDA margins for residential data and business services were approximately four and five times greater, respectively, than for residential video. We define Adjusted EBITDA margin for a product line as Adjusted EBITDA attributable to that product line divided by revenue attributable to that product line (see “Use of Adjusted EBITDA” below for the definition of Adjusted EBITDA and a reconciliation of Adjusted EBITDA to net income, which is the most directly comparable GAAP measure). This margin disparity is largely the result of significant programming costs and retransmission fees incurred to deliver residential video services, which in each of the last three years represented between 50% and 60% of total residential video revenues (in addition to the other material direct and indirect costs associated with residential video). None of our other product lines has direct costs representing as substantial a portion of revenues as programming costs and retransmission fees represent for residential video, and indirect costs are allocated equally on a per PSU basis. Programming costs and retransmission fees have a meaningfully lower impact on business services margins than residential video because business services include data, voice and video, diminishing the relative impact of programming costs and retransmission fees on that product line as a whole.

Prior to 2012, we were focused on growing revenues through subscriber retention and growth in overall PSUs. To that end, our strategies consisted of, among others, offering promotional discounts to new and existing subscribers adding new services and to subscribers purchasing more than one service offering.

Since 2012, we have adapted our strategy to face the trend, which has affected the entire cable industry, of declining profitability of residential video and declining revenues from residential voice services. We believe the declining profitability of residential video services is primarily due to competition from other content providers and increasing programming costs and retransmission fees, and the declining revenues from residential voice services is primarily due to the increasing use of wireless voice services in addition to, or instead of, landline voice service. Beginning in 2013, we shifted our focus away from maximizing customer PSUs and towards growing and maintaining our higher margin businesses, namely residential data and business services. Separately, we have also focused on retaining customers with a high expected LTV, who are less attracted by discounting, require less support and churn less. This strategy focuses on increasing Adjusted EBITDA, Adjusted EBITDA less capital expenditures and margins.

The trends described above have impacted our four largest product lines in the following ways:

- *Residential data.* We experienced growth in the number of and revenues from our residential data customers every year since 2013. We expect this growth to continue due to projected increases in the number of potential customers for us to serve, as there are still a number of households in our markets that do not subscribe to data services from any provider. We expect to capture a portion of these customers and anticipate capturing additional market share from existing data subscribers due to our recent upgrades in broadband capacity and our ability to offer higher access speeds than many of our competitors.
- *Residential video.* Residential video service is a competitive and highly-penetrated business. As we focus on the higher-margin businesses of residential data and business services, we are de-emphasizing our residential video business and, as a result, expect residential video revenues to continue to decline in the future.
- *Residential voice.* We have experienced declines in residential voice customers as a result of homes in the United States deciding to terminate their landline voice service and exclusively use wireless voice service. We believe this trend will continue because of competition from wireless voice service. Revenues from residential voice customers have declined over recent years, and we expect this decline will continue.
- *Business services.* We have experienced significant growth in business data and voice customers and revenues and expect this to continue. We attribute this growth to our strategic focus shift on increasing sales to business customers. More recently, we have expanded our efforts to attract enterprise business customers. Margins in products sold to business customers have remained attractive, and we expect this trend to continue.

Table of Contents

We continue to experience increased competition, particularly from telephone companies, cable overbuilders, OTT video providers and DBS television providers. Because of the levels of competition we face, we believe it is important to make investments in our infrastructure. We made elevated levels of capital investments between 2012 and 2015 to increase our cable plant capacities and reliability, launch all-digital video services, which has freed up approximately three-fourths of average plant bandwidth for data services, and increase data capacity by moving from four-channel bonding to 32-channel bonding. We expect to continue devoting financial resources to infrastructure improvements because we believe these investments are necessary to remain competitive.

The spin-off provided us the opportunity to further tailor our strategies to achieve greater operational focus and drive our return on investment. Our goals are to continue to grow residential data and business services and to maintain profit margins to deliver strong Adjusted EBITDA. To achieve these goals, we intend to continue our industrial engineering-driven cost management, remain focused on customers with high LTV and follow through with further planned investments in broadband plant upgrades and new data services offerings for residential and business services customers.

Our business is subject to extensive governmental regulation. Such regulation has led to increases in our operational and administrative expenses. In addition, we could be significantly impacted by changes to the existing regulatory framework, whether triggered by legislative, administrative or judicial rulings. In 2015, the FCC used its Title II authority to regulate broadband Internet access services in the Order. According to the Order, under this regime, the FCC will forbear from systematic rate regulation of Internet access service at the subscriber level, which we believe will permit us to continue to manage data usage efficiently by establishing appropriate rates. However, the Order also imposes on all providers of broadband Internet access service, including us, obligations that limit the ways we can manage certain types of traffic. In June 2016, the U.S. Court of Appeals for the D.C. Circuit upheld the Order in its entirety. A petition for an *en banc* rehearing of the June 2016 decision upholding the Order is currently pending in the U.S. Court of Appeals for the D.C. Circuit. In addition, the change in administration and the newly-constituted FCC may take steps to revise the Order and the resulting rules. We cannot predict whether or not future changes to the regulatory framework that are inconsistent with the Order will occur, whether the petition for an *en banc* rehearing will be granted, or whether the decision of the U.S. Court of Appeals for the D.C. Circuit will be appealed, and if any such rehearing or appeal would be successful. See "*Risk Factors—Risks Relating to Regulation and Legislation—The profitability of our data services offerings may be impacted by legislative or regulatory efforts to impose "net-neutrality" and other new requirements on cable operators.*"

**Results of Operations*****Basis of Presentation***

The accompanying Consolidated Financial Statements have been prepared in accordance with GAAP in the United States and the rules and regulations of the SEC. They reflect the historical Consolidated Statements of Operations and Comprehensive Income, Consolidated Balance Sheets, Consolidated Statements of Stockholders' Equity and Consolidated Statements of Cash Flows of the Company for the years presented.

Prior to the spin-off, the accompanying Consolidated Financial Statements were derived from the consolidated financial statements and accounting records of GHC. These Consolidated Financial Statements were prepared solely to present the Company's historical results of operations, financial position and cash flows for the periods prior to the spin-off as it was historically managed. The impact of transactions between the Company and GHC was included in these Consolidated Financial Statements and was considered to be effectively settled for cash in the Consolidated Financial Statements at the time the transaction was recorded. The total net effect of the settlement of these intercompany transactions was reflected in the Consolidated Statements of Cash Flows as a financing activity and in the Consolidated Balance Sheets as Additional GHC investment (deficit).

Prior to the spin-off, we functioned as part of the larger group of companies controlled by GHC, and, accordingly, GHC provided certain support and overhead functions to us. These functions included finance, human resources, legal, information technology, general insurance, risk management and other corporate functions. The costs of such services were allocated to us based on the most relevant allocation methods to the service provided. Management believed such allocations were reasonable and were consistently applied; however, they may not be indicative of the actual expense that would have been incurred had we been operating on a stand-alone basis. See Notes 12 and 16 of the Notes to our Consolidated Financial Statements for details on these allocations.

Table of Contents

Prior to the spin-off, we participated in a centralized approach to cash management and in financing its operations managed by GHC. Cash was transferred to GHC and GHC funded our operating and investing activities as needed. Accordingly, cash and cash equivalents at the GHC level were not allocated to us in the Consolidated Financial Statements included elsewhere in this Annual Report on Form 10-K. Cash transfers to and from GHC's cash management accounts are included within net transfers to GHC in the Consolidated Statements of Stockholders' Equity. GHC third-party debt and the related interest expense were not allocated to us for any of the periods presented as we were not the legal obligor on the debt, and GHC borrowings were not directly attributable to our business.

Prior to the spin-off, certain of our eligible employees participated in the pension, post-retirement and deferred compensation plans of GHC. Although we are a stand-alone, independent entity after the spin-off, these employees remain entitled to the benefits under these plans accrued prior to the spin-off, but no longer accrue additional benefits under these plans. In addition, the liabilities in respect of the accrued benefits of certain of our employees under these plans remain at GHC (to the extent such liabilities were not already held by us at the time of the spin-off). Therefore, the allocation of related expenses to us in respect of these employees has not been reflected in our financial statements in the periods following the spin-off. Allocations were equal to \$2.0 million and \$3.6 million for the years ended December 31, 2015 and 2014, respectively. However, deferred compensation and unfunded Supplemental Executive Retirement Plan benefits for a number of our executives were assumed by us following the spin-off, and have been reflected in our financial statements for post spin-off periods.

The obligation for U.S. Federal and certain state income taxes attributable to the tax period prior to the spin-off were retained by us, along with related deferred tax assets and liabilities. With respect to general insurance and workers' compensation liabilities, we assumed financial responsibility.

Also, in connection with the spin-off, on June 29, 2015, we distributed \$450 million to GHC, which was funded by our senior unsecured notes. See "*Financial Condition: Liquidity and Capital Resources—Financing Activity*" for more information on our capitalization activities.

Our results of operations for the years ended December 31, 2016 and 2015 may not be indicative of our future results. In addition, as we did not operate as a stand-alone entity prior to July 1, 2015, the financial information included in this Annual Report on Form 10-K may not necessarily be indicative of our future performance and may not necessarily reflect what our financial position, results of operations or cash flows would have been had we operated as a stand-alone entity during all of the periods presented.

***PSUs and Customer Counts and PSUs by Primary Products***

During 2016, we had a reduction of 48,544 residential PSUs, representing a 5.3% decline. Including business customers, we had a reduction of 42,520 PSUs, representing a 4.3% decline, and a reduction of 7,382 total customer relationships, representing a 1.1% decline, for the year ended December 31, 2016. The declines in residential PSUs and total customer relationships were primarily the result of residential video and residential voice customer losses due to our shift in focus, as described above.

During 2015, we had a reduction of 95,260 residential PSUs, representing a 9.4% decline. Including business customers, we had a reduction of 96,699 PSUs, representing an 8.9% decline, and a reduction of 22,067 total customer relationships, representing a 3.2% decline, for the year ended December 31, 2015. The decline in business voice customers in 2015 was primarily attributable to converting data into our new billing system, which counts each business customer relationship at a unique business address as a single customer, whereas our prior billing system calculated multiple relationships based on revenue generated at an address.

Table of Contents

The following tables provides an overview of selected customer data for our cable systems for the time periods specified:

Customer Counts and PSUs	As of December 31,		
	2016	2015	2014
Residential data customers <sup>(1)</sup>	469,053	460,977	449,839
Residential video customers <sup>(2)</sup>	306,563	349,879	436,370
Residential voice customers <sup>(3)</sup>	97,724	111,028	130,935
Total residential <sup>(4)</sup>	873,340	921,884	1,017,144
Business data customers <sup>(5)</sup>	44,855	40,264	38,615
Business video customers <sup>(6)</sup>	13,683	14,271	14,847
Business voice customers <sup>(7)(8)</sup>	18,087	16,066	18,578
Total business <sup>(8)(9)</sup>	76,625	70,601	72,040
Total PSUs	949,965	992,485	1,089,184
Total residential customer relationships	605,699	617,220	643,938
Total business customer relationships	51,523	47,384	42,733
Total customer relationships	657,222	664,604	686,671

Annual Net Gain/(Loss)	Year Ended December 31,		% Change	
	2016	2015	2016	2015
Residential data customers <sup>(1)</sup>	8,076	11,138	1.8	2.5
Residential video customers <sup>(2)</sup>	(43,316)	(86,491)	(12.4)	(19.8)
Residential voice customers <sup>(3)</sup>	(13,304)	(19,907)	(12.0)	(15.2)
Total residential <sup>(4)</sup>	(48,544)	(95,260)	(5.3)	(9.4)
Business data customers <sup>(5)</sup>	4,591	1,649	11.4	4.3
Business video customers <sup>(6)</sup>	(588)	(576)	(4.1)	(3.9)
Business voice customers <sup>(7)(8)</sup>	2,021	(2,512)	12.6	(13.5)
Total business <sup>(8)(9)</sup>	6,024	(1,439)	8.5	(2.0)
Total PSUs	(42,520)	(96,699)	(4.3)	(8.9)
Total residential customer relationships	(11,521)	(26,718)	(1.9)	(4.1)
Total business customer relationships	4,139	4,651	8.7	10.9
Total customer relationships	(7,382)	(22,067)	(1.1)	(3.2)

- (1) Residential data customers include all residential customers who subscribe to our data service.
- (2) Residential video customers include all basic residential customers who receive video services and may have one or more digital set-top boxes or cable cards deployed. Residential bulk multi-dwelling accounts are included in our video customers.
- (3) Residential voice customers include all residential customers who subscribe to our voice service. Residential customers who take multiple voice lines are only counted once in the total.
- (4) Total residential PSUs represents the sum of residential data, residential video and residential voice customers, not counting additional outlets within one household.
- (5) Business data customers include commercial accounts that receive data service via a cable modem and commercial accounts that receive broadband service optically, via fiber connections.
- (6) Business video customers include commercial accounts.
- (7) Business voice customers include commercial accounts that subscribe to our voice service.
- (8) The decrease in business voice customers and total business PSUs for the year ended December 31, 2015 was primarily attributable to converting data into our new billing system, which counts each business customer relationship at a unique business address as a single customer; whereas our prior billing system calculated multiple relationships based on revenue generated at an address.
- (9) Total business PSUs represent the sum of business data, business video and business voice customer.

In recent years, our customer mix has shifted, causing subscribers to move from triple-play packages to single and double-play. This is because some residential video customers have defected to DBS services and OTT offerings in lieu of video and more households have discontinued landline voice service. In addition, we have focused on selling data-only packages to new customers rather than on cross-selling video to these customers.

.....

Table of Contents**2016 Compared to 2015***Revenues*

Revenues increased \$12.4 million, or 1.5%, due primarily to increases in residential data and business services revenues of \$49.7 million and \$11.6 million, respectively, partially offset by decreases in residential video and residential voice revenues of \$37.9 million and \$7.2 million, respectively. The declines in residential video and residential voice revenues were primarily attributable to residential video customer losses of 12.4% and residential voice customer losses of 12.0% during 2016.

Revenues by service offering were as follows for 2016 and 2015, together with the percentages of revenues that each item represented for the years presented (dollars in thousands):

	Year Ended December 31,					
	2016		2015		2016 vs. 2015	
	Revenues	% of Revenues	Revenues	% of Revenues	\$ Change	% Change
Residential data	\$ 344,184	42.0	\$ 294,486	36.5	\$ 49,698	16.9
Residential video	294,781	36.0	332,716	41.2	(37,935)	(11.4)
Residential voice	42,949	5.2	50,148	6.2	(7,199)	(14.4)
Business services	100,311	12.2	88,741	11.0	11,570	13.0
Advertising sales	27,496	3.4	31,034	3.8	(3,538)	(11.4)
Other	9,904	1.2	10,141	1.3	(237)	(2.3)
Total revenues	\$ 819,625	100.0	\$ 807,266	100.0	\$ 12,359	1.5

Average monthly revenue per unit for the indicated service offerings were as follows for 2016 and 2015:

	Year Ended December 31,					
	2016		2015		2016 vs. 2015	
	\$	%	\$	%	\$ Change	% Change
Residential data <sup>(1)</sup>	\$ 61.68	53.89	\$ 53.89	53.89	\$ 7.79	14.5
Residential video <sup>(1)</sup>	74.84	70.53	70.53	70.53	4.31	6.1
Residential voice <sup>(1)</sup>	34.29	34.54	34.54	34.54	(0.25)	(0.7)
Business services <sup>(2)</sup>	169.03	164.12	164.12	164.12	4.91	3.0
Total customers <sup>(2)</sup>	103.35	99.57	99.57	99.57	3.78	3.8

<sup>(1)</sup> Average monthly per unit values represent the applicable residential service revenues divided by the corresponding average number of customers at the beginning and end of each period.

<sup>(2)</sup> Average monthly per unit values represent the applicable business services or total revenues divided by the corresponding average number of customer relationships at the beginning and end of each period.

Residential data service revenues increased \$49.7 million, or 16.9%, due primarily to a rate adjustment taken in the fourth quarter of 2015, an increase in residential data customers of 1.8%, a reduction in package discounting and increased subscriptions to premium tiers by residential customers.

Residential video service revenues declined \$37.9 million, or 11.4%, due primarily to residential video customer losses of 12.4%, partially offset by a broadcast television surcharge imposed in the second quarter of 2016.

Residential voice service revenues decreased \$7.2 million, or 14.4%, due primarily to a decline in residential voice customers of 12.0% as more residential customers have discontinued landline voice service.

Business services revenues increased \$11.6 million, or 13.0%, due primarily to growth in our business data and voice services to both small and medium-sized businesses and enterprise customers. Total business customer relationships increased 8.7% in 2016. Overall, business services represented 12.2% for 2016, compared to 11.0% of our total revenues for 2015.

Advertising sales revenues declined \$3.5 million, or 11.4%, due primarily to the negative impact of decreased video customers on the number of viewers available to be reached by advertising spots.

Table of Contents

Other revenues decreased \$0.2 million, or 2.3%, due primarily to a decrease in late charges and installation fees, partially offset by an increase in reconnect fees.

*Operating Costs and Expenses*

Operating expenses (excluding depreciation and amortization) declined \$6.5 million, or 2.1%, due primarily to a 12.4% reduction in residential video customers, which significantly reduced programming costs. In total, programming costs declined \$9.9 million and non-programming operating expenses increased \$3.4 million. The increase in non-programming operating expenses was primarily attributable to increases in backbone and Internet connectivity fees of \$1.9 million; group insurance of \$1.2 million; loss on disposal of property, plant and equipment of \$1.1 million; and increased software maintenance costs of \$0.7 million, partially offset by a decrease in franchise fees of \$1.5 million due to the decrease in video revenues subject to franchise fees. Operating expenses (excluding depreciation and amortization) as a percentage of revenues were 37.1% and 38.5% for 2016 and 2015, respectively.

Selling, general and administrative expenses declined \$9.2 million, or 4.7%, due primarily to decreases in processing costs for customer billing following the completion of our billing system conversion of \$11.4 million; salaries, wages and benefits costs of \$7.3 million due to decreased headcount and lower group insurance costs; general and workers' compensation insurance expense of \$2.9 million; property taxes of \$1.5 million and software maintenance of \$1.1 million. The decrease was partially offset by increases in incentive compensation expense of \$4.8 million; acquisition-related costs of \$4.7 million; advertising and marketing expense of \$3.2 million and professional services expense of \$2.2 million. Selling, general and administrative expenses as a percentage of revenues were 22.5% and 24.0% for 2016 and 2015, respectively.

Depreciation and amortization increased \$1.5 million, or 1.1%, due primarily to new assets placed in service in 2016 and 2015, partially offset by assets that became fully depreciated during those years.

*Interest Expense*

Interest expense was \$30.2 million and \$16.1 million for 2016 and 2015, respectively. The increase was due to the issuance of our long-term debt in June 2015 in conjunction with the spin-off.

*Other Income (Expense)*

Other income (expense) increased \$5.4 million due primarily to a \$4.1 million net gain on the sale of a cable system and higher interest income.

*Provision for Income Taxes*

Provision for income taxes increased \$7.8 million, or 13.8%, due primarily to an increase in taxable income of \$17.7 million, or 12.2%. Our effective tax rate was 39.3% and 38.8% for 2016 and 2015, respectively.

*Net Income*

As a result of the factors described above, our net income was \$98.9 million for 2016, compared to \$89.0 million for 2015.

**2015 Compared to 2014***Revenues*

Revenues declined \$7.5 million, or 0.9%, due primarily to declines in residential video and residential voice revenues of \$29.0 million and \$12.2 million, respectively, partially offset by increases in residential data and business services revenues of \$28.8 million and \$11.9 million, respectively. The declines in residential video and residential voice revenues were primarily attributable to residential video customer losses of 19.8% and residential voice customer losses of 15.2%.

Table of Contents

Revenues by service offering were as follows for the years ended December 31, 2015 and 2014, together with the percentages of revenues that each item represented for the years presented (dollars in thousands):

	Year Ended December 31,					
	2015		2014		2015 vs. 2014	
	Revenues	% of Revenues	Revenues	% of Revenues	\$ Change	% Change
Residential data	\$ 294,486	36.5	\$ 265,718	32.6	\$ 28,768	10.8
Residential video	332,716	41.2	361,668	44.4	(28,952)	(8.0)
Residential voice	50,148	6.2	62,396	7.7	(12,248)	(19.6)
Business services	88,741	11.0	76,829	9.4	11,912	15.5
Advertising sales	31,034	3.8	35,362	4.3	(4,328)	(12.2)
Other	10,141	1.3	12,839	1.6	(2,698)	(21.0)
Total revenues	<u>\$ 807,266</u>	<u>100.0</u>	<u>\$ 814,812</u>	<u>100.0</u>	<u>\$ (7,546)</u>	<u>(0.9)</u>

Average monthly revenue per unit for the indicated service offerings were as follows for 2015 and 2014:

	Year Ended December 31,		2015 vs. 2014	
	2015	2014	\$ Change	% Change
Residential data <sup>(1)</sup>	\$ 53.89	\$ 49.82	\$ 4.07	8.2
Residential video <sup>(1)</sup>	70.53	62.70	7.83	12.5
Residential voice <sup>(1)</sup>	34.54	36.46	(1.92)	(5.3)
Business services <sup>(2)</sup>	164.12	154.32	9.80	6.4
Total customers <sup>(2)</sup>	99.57	97.03	2.54	2.6

<sup>(1)</sup> Average monthly per unit values represent the applicable residential service revenues divided by the corresponding average number of customers at the beginning and end of each period. Certain residential data, video and voice service revenues used in the calculation of average monthly revenue per unit for 2015 and 2014 have been reclassified to conform to the 2016 presentation.

<sup>(2)</sup> Average monthly per unit values represent the applicable business services or total revenues divided by the corresponding average number of customer relationships at the beginning and end of each period.

Residential data service revenues rose \$28.8 million, or 10.8%, due primarily to an increase in residential data customers of 2.5%, a reduction in price discounting, a rate adjustment in the fourth quarter of 2015 and increased subscriptions to premium tiers by residential customers.

Residential video service revenues declined \$29.0 million, or 8.0%, due primarily to residential video customer losses of 19.8% and digital customers purchasing fewer digital tiers of service, partially offset by video rate adjustments and a reduction in promotional discounts.

Residential voice service revenues declined \$12.2 million, or 19.6%, due primarily to a decline in residential voice customers of 15.2% as more residential customers have discontinued landline voice service.

Business services revenues rose \$11.9 million, or 15.5%, due to growth in our business data and voice services to small and medium-sized businesses. Total business customer relationships increased 10.9%. The decline in business voice customers and total business PSUs was primarily attributable to converting data into our new billing system in 2015, which counts each business customer relationship at a unique business address as a single customer, whereas our prior billing system calculated multiple relationships based on revenue generated at an address. Overall, business services comprised 11.0% of our total revenues for 2015, compared to 9.4% of our total revenues for 2014.

Advertising sales revenues declined \$4.3 million, or 12.2%, due primarily to the negative impact of decreased video customers on the number of viewers available to be reached by advertising spots.

Other revenues declined \$2.7 million, or 21.0%, due primarily to the impact of decreased number of residential video and residential voice customers on installation, reconnects and late charges.

Table of Contents*Operating Costs and Expenses*

Operating expenses (excluding depreciation and amortization) declined \$17.0 million, or 5.2%, due primarily to a 19.8% reduction in residential video customers, which significantly reduced programming costs. Also, effective April 1, 2014, we elected not to renew our contract for certain networks. In total, programming costs declined 8.5%. Operating expenses were also down from lower voice service expense, partially offset by modest increases in technical, Internet and information technology expenses. Operating expenses (excluding depreciation and amortization) as a percentage of revenues were 38.5% and 40.3% for 2015 and 2014, respectively.

Selling, general and administrative costs increased \$5.1 million, or 2.7%, due primarily to an aggregate increase of \$6.5 million in group insurance, development of internal use software (primarily our new billing system), repairs and maintenance and salaries and wages, partially offset by an aggregate decrease of \$1.6 million in GHC overhead and pension costs due to the spin-off. Selling, general and administrative expenses as a percentage of revenues were 24.0% and 23.2% for 2015 and 2014, respectively.

Depreciation and amortization increased \$6.5 million, or 4.8%, due primarily to new assets placed in service in 2015 and 2014, partially offset by assets that became fully depreciated during those years.

*Interest Expense*

Interest expense was \$16.1 million, attributable to our long-term debt incurred in connection with the spin-off. No interest expense was incurred in 2014.

*Other Income (Expense)*

Other income (expense) in 2014 consisted primarily of a \$75.2 million gain associated our sale of certain wireless spectrum licenses during the year.

*Provision for Income Taxes*

Provision for income taxes decreased \$34.3 million, or 37.8%, due primarily to a \$75.2 million gain from the sale of wireless spectrum licenses. Our effective tax rate was 38.8% and 38.1% for 2015 and 2014, respectively.

*Net Income*

As a result of the factors described above, our net income was \$89.0 million for 2015, compared to \$147.3 million for 2014.

*Use of Adjusted EBITDA*

We use certain measures that are not defined by GAAP to evaluate various aspects of our business. Adjusted EBITDA is a non-GAAP financial measure and should be considered in addition to, not as a substitute for, net income reported in accordance with GAAP. This term, as defined by us, may not be comparable to similarly titled measures used by other companies. Adjusted EBITDA is reconciled to net income below.

Adjusted EBITDA is defined as net income plus net interest expense, provision for income taxes, depreciation and amortization, equity- and pre-spin cash-based incentive compensation expense, loss (gain) on deferred compensation, other (income) expense, net, acquisition-related costs, loss on disposal of fixed assets and other unusual operating expenses, as defined in the table below. As such, it eliminates the significant non-cash depreciation and amortization expense that results from the capital-intensive nature of our business as well as other non-cash or special items and is unaffected by our capital structure or investment activities. This measure is limited in that it does not reflect the periodic costs of certain capitalized tangible and intangible assets used in generating revenues and our cash cost of financing. These costs are evaluated through other financial measures.

Table of Contents

We use Adjusted EBITDA to assess our performance. In addition, Adjusted EBITDA generally correlates to the leverage ratio calculation under our Senior Credit Facilities and outstanding Notes (each as defined under “*Financial Condition: Liquidity and Capital Resources—Financing Activity*” below) to determine compliance with the covenants contained in the Senior Credit Facilities and Notes. For the purpose of calculating compliance with leverage covenants, we use a measure similar to Adjusted EBITDA, as presented. Adjusted EBITDA is also a significant performance measure used by us in our annual incentive compensation program. Adjusted EBITDA does not take into account cash used for mandatory debt service requirements or other non-discretionary expenditures, and thus does not represent residual funds available for discretionary uses.

(in thousands)	Year Ended December 31,		
	2016	2015	2014
Net income	\$ 98,939	\$ 89,033	\$ 147,309
Plus: Interest expense, net	30,221	16,090	-
Provision for income taxes	64,168	56,387	90,700
Depreciation and amortization	142,183	140,635	134,167
Equity- and pre-spin cash-based incentive compensation expense	12,298	9,739	3,542
Loss (gain) on deferred compensation	312	(1,141)	1,119
Other (income) expense, net	(5,121)	232	(74,196)
Acquisition-related costs	4,719	-	-
Loss on disposal of fixed assets	2,821	1,735	933
Billing system implementation costs	-	5,007	1,887
Adjusted EBITDA	<u>\$ 350,540</u>	<u>\$ 317,717</u>	<u>\$ 305,461</u>

We believe Adjusted EBITDA is useful to investors in evaluating the operating performance of our Company. Adjusted EBITDA and similar measures with similar titles are common measures used by investors, analysts and peers to compare performance in our industry, although our measure of Adjusted EBITDA may not be directly comparable to similar measures reported by other companies.

**Financial Condition: Liquidity and Capital Resources***Liquidity*

Prior to the spin-off, our cash flows from operations were historically distributed to GHC on a periodic basis, and we historically relied on GHC to fund our working capital requirements and other cash requirements. In contemplation of the spin-off and the related dividend, we recapitalized our Company through a series of financing transactions described below. We believe that existing cash balances, our Senior Credit Facilities and operating cash flows will provide adequate funds to support our current operating plan, make planned capital expenditures and quarterly dividend payments for the next 12 months, and fund the acquisition of NewWave. However, our ability to fund operations and acquisitions and make planned capital expenditures and quarterly dividend payments depends on future operating performance and cash flows, which, in turn, are subject to prevailing economic conditions and to financial, business and other factors, some of which are beyond our control.

The following table shows a summary of our cash flows for the years indicated (in thousands):

	Year Ended December 31,		
	2016	2015	2014
Net cash provided by operating activities	\$ 251,831	\$ 246,413	\$ 205,833
Net cash used in investing activities	(136,317)	(155,225)	(78,400)
Net cash (used in) provided by financing activities	(96,673)	21,601	(127,261)
Change in cash and cash equivalents	18,841	112,789	172
Cash and cash equivalents, beginning of period	119,199	6,410	6,238
Cash and cash equivalents, end of period	<u>\$ 138,040</u>	<u>\$ 119,199</u>	<u>\$ 6,410</u>

At December 31, 2016 and 2015, we had a working capital surplus of \$74.8 million and \$37.9 million, respectively. In connection with the spin-off in 2015, we incurred indebtedness in an aggregate principal amount of \$550 million, of which \$450 million was distributed to GHC prior to the consummation of the spin-off.

Table of Contents

Our net cash provided by operating activities was \$251.8 million, \$246.4 million and \$205.8 million in 2016, 2015, and 2014, respectively. The change in operating cash flows in 2016 compared to 2015 was primarily attributable to higher net income and a favorable change in deferred taxes compared to 2015, partially offset by unfavorable changes in operating assets and liabilities. Operating cash flows increased in 2015 compared to 2014 due to improvements in favorable changes in operating assets and liabilities, partially offset by lower net income.

Our net cash used in investing activities was \$136.3 million, \$155.2 million and \$78.4 million in 2016, 2015 and 2014, respectively. The lower use of cash for investing activities in 2016 compared to 2015 was driven by lower capital expenditures coupled with increases in proceeds received from the sale of a cable system and the sale of fixed assets, partially offset by cash outflows to acquire a cable system. The lower investing cash outflows in 2014 compared to 2015 was driven primarily by proceeds from the cable wireless spectrum license sale in 2014.

Our net cash used in financing activities was \$96.7 million and \$127.3 million in 2016 and 2014, respectively, and our net cash provided by financing activities was \$21.6 million in 2015. Cash outflows in 2016 primarily consisted of \$56.4 million to repurchase our common stock, \$34.4 million in dividends payment to stockholders, \$3.8 million of long-term debt repayment as well as a \$2.2 million of withholding tax payments for vested restricted stock awards. Cash inflows in 2015 were primarily due to \$541.1 million of proceeds from senior notes issuance and borrowings under our Term Loan, net of issuance costs. The net proceeds were utilized primarily to fund the \$450 million distribution to GHC in conjunction with the spin-off. Cash outflows in 2014 reflect amounts transferred to GHC as our financing activities were limited to capital distributions to our prior corporate parent prior to the spin-off.

On July 1, 2015, the Board authorized up to \$250 million of share repurchases (subject to a total cap of 600,000 shares of Company common stock). We plan to make purchases under the stock repurchase program from time to time on the open market and in privately negotiated transactions. The size and timing of these purchases will be based on a number of factors, including price and business and market conditions. Since the beginning of the stock repurchase program through the end of 2016, we repurchased 164,933 shares at an aggregate cost of \$72.7 million. In 2016, we repurchased 126,797 shares at an aggregate cost of \$56.4 million. Additionally, we currently expect to pay quarterly cash dividends on shares of our common stock, subject to approval of the Board. During the fourth quarter of 2016, the Board approved a quarterly dividend of \$1.50 per share of common stock, which was paid on December 2, 2016. During the first quarter of 2017, the Board approved a quarterly dividend of \$1.50 per share of common stock, which will be payable to holders of record as of February 21, 2017 with payment scheduled for early March 2017.

*Financing Activity*

On June 17, 2015, we issued \$450 million aggregate principal amount of 5.750% senior unsecured notes due 2022 (the "Notes"). The Notes were issued pursuant to an indenture (the "Indenture"), dated as of June 17, 2015, among the Company, the Guarantors (as defined below) and the Bank of New York Mellon Trust Company, N.A. The Notes mature on June 15, 2022 and bear interest at a rate of 5.75% per year. Interest on the Notes is payable on June 15 and December 15 of each year. The Notes are jointly and severally guaranteed (the "Guarantees") on a senior unsecured basis by each of our existing and future domestic subsidiaries that initially guaranteed (the "Guarantors") the Senior Credit Facilities (as defined below). The Notes are unsecured and senior obligations of the Company. The Guarantees are unsecured and senior obligations of the Guarantors. At our option, the Notes may be redeemed in whole or in part, at any time prior to June 15, 2018, at a price equal to 100% of the aggregate principal amount of the Notes plus accrued and unpaid interest, if any, to, but excluding, the redemption date plus a "make-whole" premium. We may also redeem the Notes, in whole or in part, at any time on or after June 15, 2018, at the redemption prices specified in the Indenture, plus accrued and unpaid interest, if any, to (but excluding) the redemption date. Additionally, at any time prior to June 15, 2018, we may redeem up to 35% of the aggregate principal amount of the Notes with the net cash proceeds from certain equity offerings at a price equal to 105.75% of the principal amount of the Notes, plus accrued and unpaid interest, if any, to, but excluding, the redemption date. The Indenture includes certain covenants relating to debt incurrence, liens, restricted payments, assets sales and transactions with affiliates, changes in control and mergers or sales of all or substantially all of our assets.

On June 30, 2015, we entered into a Credit Agreement (the "Credit Agreement") among the Company, as borrower, the lenders party thereto, JPMorgan, as administrative agent, and the other agents party thereto. The Credit Agreement provides for a five-year revolving credit facility in an aggregate principal amount of \$200 million (the "Revolving Credit Facility") and a five-year term loan facility in an aggregate principal amount of \$100 million (the "Term Loan Facility" and, together with the Revolving Credit Facility, and as further amended as described below, the "Senior Credit Facilities"). Concurrently with our entry into the Credit Agreement, we borrowed the full amount of the Term Loan Facility (the "Term Loan"). The obligations under the Senior Credit Facilities are obligations of the Company and are guaranteed by the Subsidiary. The obligations under the Senior Credit Facilities are secured, subject to certain exceptions, by substantially all of the assets of the Company and the Subsidiary. Borrowings under the Senior Credit Facilities bear interest, at our option, at a rate per annum determined by reference to either the LIBOR or an adjusted base rate, in each case plus an applicable interest rate margin. The applicable interest rate margin with respect to LIBOR borrowings is a rate

per annum between 1.50% and 2.25% and the applicable interest rate margin with respect to adjusted base rate borrowings is a rate per annum between 0.50% and 1.25%, in each case determined on a quarterly basis by reference to a pricing grid based upon our total net leverage ratio. The Senior Credit Facilities may be prepaid at any time without premium. The Term Loan Facility amortizes in equal quarterly installments at a rate of 2.5% per annum in the first year after funding, 5.0% per annum in the second year after funding, 7.5% per annum in the third year after funding, 10.0% per annum in the fourth year after funding and 15.0% per annum in the fifth year after funding, with the outstanding balance of the Term Loan Facility to be paid on the fifth anniversary of funding. Outstanding borrowings under the Term Loan Facility were \$95.0 million at December 31, 2016. We had \$197.2 million available for borrowing under the Revolving Credit Facility at December 31, 2016.

Table of Contents

The Revolving Credit Facility also gives us the ability to issue letters of credit, which reduce the amount available for borrowing under the Revolving Credit Facility. Letter of credit issuances under the Revolving Credit Facility of \$2.8 million at December 31, 2016 were held for the benefit of certain general and liability insurance matters and bore interest at a rate of 1.625% per annum.

On February 13, 2017, we entered into an amendment to the Credit Agreement to permit, among other things, the incurrence of the \$650 million of senior secured loans expected to be used to finance the acquisition of NewWave and the other transactions contemplated by the Merger Agreement.

*Capital Expenditures*

We have significant ongoing capital expenditure requirements. Capital expenditures are funded primarily by cash on hand and cash flows from operating activities.

We have adopted capital expenditure disclosure guidance as supported by the National Cable & Telecommunications Association ("NCTA"). These disclosures are not required under GAAP, nor do they impact our accounting for capital expenditures under GAAP. The amounts of "capital expenditures" reported in this Annual Report on Form 10-K are calculated in accordance with NCTA disclosure guidelines, which include assets acquired during the relevant periods.

For 2016, 2015 and 2014, capital expenditures were \$125.5 million, \$166.4 million, and \$165.8 million, respectively.

The following table presents our major capital expenditure categories in accordance with NCTA disclosure guidelines for the years ended December 31, 2016, 2015 and 2014 (in thousands):

	Year Ended December 31,		
	2016	2015	2014
Customer Premise Equipment	\$ 22,248	\$ 31,459	\$ 38,122
Commercial	8,257	7,147	4,165
Scalable Infrastructure	41,017	57,452	61,567
Line Extensions	10,470	8,505	7,064
Upgrade/Rebuild	17,575	25,572	23,318
Support Capital	25,967	36,226	31,551
Total	<u>\$ 125,534</u>	<u>\$ 166,361</u>	<u>\$ 165,787</u>

*Contractual Obligations and Contingent Commitments*

The following is a summary of our contractual obligations as of December 31, 2016 (in thousands):

Years ending December 31,	Programming purchase commitments (1)	Operating leases	Total debt, including capital lease	Other purchase obligations (2)	Total
2017	\$ 171,995	\$ 1,038	\$ 6,250	\$ 24,162	\$ 203,445
2018	150,830	728	8,767	15,731	176,056
2019	124,507	564	12,517	8,988	146,576
2020	83,621	452	67,517	3,990	155,580
2021	19,244	360	17	2,507	22,128
Thereafter	-	741	450,216	4,060	455,017
Total	<u>\$ 550,197</u>	<u>\$ 3,883</u>	<u>\$ 545,284</u>	<u>\$ 59,438</u>	<u>\$ 1,158,802</u>

(1) Includes commitments to purchase programming to be produced in future years.

(2) Includes purchase obligations related to capital projects and other legally binding commitments. Other purchase orders made in the ordinary course of business are excluded from the table above. Any amounts for which we are liable under purchase orders are reflected in our Consolidated Balance Sheets as Accounts payable and accrued liabilities.

Table of Contents

Programming and content purchases represent contracts that we have with cable television networks and broadcast stations to provide programming services to our subscribers. The amounts included above represent estimates of the future programming costs for these contract requirements and commitments based on subscriber numbers and tier placement as of December 31, 2016 applied to the per-subscriber rates contained in these contracts. Actual amounts due under such contracts may differ from the amounts above based on the actual subscriber numbers and tier placements. In addition, programming purchases sometimes occur pursuant to non-binding commitments, which are not reflected in the summary above.

Long-term debt relates to principal repayment obligations as defined by the agreements described in the "Financing Activity" section above.

The following items are not included as contractual obligations due to various factors discussed below. However, we incur these costs as part of our operations:

- We rent utility poles used in our operations. Generally, pole rentals are cancellable on short notice, but we anticipate that such rentals will recur. Rent expense for pole attachments was approximately \$5.7 million, \$5.7 million and \$5.5 million in 2016, 2015 and 2014, respectively.
- We pay franchise fees under multi-year franchise agreements based on a percentage of revenues generated from video service per year. Franchise fees and other franchise-related costs included in the Consolidated Statements of Operations and Comprehensive Income were \$14.2 million, \$15.7 million and \$16.7 million in 2016, 2015 and 2014, respectively.
- We have cable franchise agreements requiring the construction of cable plant and the provision of services to customers within the franchise areas. In connection with these obligations under existing franchise agreements, we obtain surety bonds or letters of credit guaranteeing performance to municipalities and public utilities and payment of insurance premiums. Such surety bonds and letters of credit as of December 31, 2016 and 2015 totaled \$5.1 million and \$4.6 million, respectively. Payments under these arrangements are required only in the event of nonperformance. We do not expect that these contingent commitments will result in any amounts being paid in the foreseeable future.

*Off-Balance Sheet Arrangements*

With the exception of surety bonds and letters of credit noted above, we do not have any off-balance-sheet arrangements or financing activities with special-purpose entities. Transactions with related parties, as discussed in Note 16 to our Consolidated Financial Statements included elsewhere in this Annual Report on Form 10-K, pertain to the spin-off, and these arrangements may not reflect terms that would have resulted from arm's-length negotiations among unaffiliated third parties.

**Critical Accounting Policies and Estimates**

The preparation of financial statements in conformity with GAAP requires management to make estimates and judgments that affect the amounts reported in the financial statements. On an ongoing basis, we evaluate our estimates and assumptions. We base our estimates on historical experience and other assumptions believed to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying value of assets and liabilities that are not readily apparent from other sources. Actual results could differ from these estimates.

An accounting policy is considered to be critical if it is important to our financial condition and results and if it requires management's most difficult, subjective and complex judgments in its application. For a summary of all of our significant accounting policies, see Note 2 of the Notes to our Consolidated Financial Statements included elsewhere in this Annual Report on Form 10-K.

Table of Contents*Long-lived Assets*

A long-lived asset or asset group is tested for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. Indicators of impairment may include:

- a significant decrease in the market value of the asset;
- a significant change in the extent or manner in which an asset is used or a significant change in the physical condition of the asset;
- a significant adverse change in legal factors or in the business climate that could affect the value of an asset, including an adverse action or assessment by a regulator;
- an accumulation of costs significantly in excess of the amount originally expected to acquire or construct an asset;
- a current period operating or cash flow loss combined with a history of operating or cash flow losses or a projection or forecast that demonstrates continuing losses associated with an asset; and
- a current expectation that, more likely than not, an asset will be sold or otherwise disposed of significantly before the end of its estimated useful life.

When an indicator of impairment is determined, the first step is to identify the future intent of the asset or asset group: hold for continued use, hold for sale, or dispose by a means other than sale. If the asset is held for continued use and the carrying amount exceeds the undiscounted sum of cash flows expected from the use and eventual disposition of the property, the impairment loss is recognized as the difference between the carrying amount and the estimated fair value of the asset or asset group, and the new cost basis is depreciated over the remaining useful life of the asset. If the intent is to hold the asset for sale and certain other criteria are met (e.g., the asset can be disposed of currently, appropriate levels of authority have approved the sale, and there is an active program to locate a buyer), the impairment test involves comparing the asset's carrying value to its estimated fair value. To the extent the carrying value is greater than the asset's estimated fair value, an impairment charge is recognized for the difference. If the asset is to be disposed by a means other than sale, the depreciation estimates are revised to reflect the use of the asset over its shortened useful life.

Significant judgments in this area involve determining whether an event has occurred, determining the future cash flows for the assets involved and selecting the appropriate discount rate to be applied in determining estimated fair value.

*Goodwill and Other Intangible Assets*

We have a significant amount of goodwill and indefinite-lived intangible assets that are reviewed at least annually for possible impairment. For 2016, we did not enter into any material transactions that would change the carrying amount of goodwill and indefinite-lived intangible; therefore, these balances were as follows:

(dollars in millions)	As of December 31,	
	2016	2015
Goodwill and indefinite-lived intangible assets	\$ 582.1	\$ 581.8
Total assets	\$ 1,397.3	\$ 1,398.8
Percentage of goodwill and indefinite-lived intangible assets to total assets	42%	42%

*Goodwill*

We test goodwill for impairment as of November 30 of each year or more frequently as warranted by events or changes in circumstances. Accounting guidance also permits an optional qualitative assessment for goodwill to determine whether it is more likely than not that the carrying value of a reporting unit exceeds its fair value. If, after this qualitative assessment, we determine that it is not more likely than not that the fair value of a reporting unit is less than its carrying amount then no further quantitative testing would be necessary. If management elects or is required to perform the two-step test under the accounting guidance, the first step involves a comparison of the estimated fair value of the reporting unit to its carrying amount. If the estimated fair value of the reporting unit exceeds its carrying amount, goodwill of the reporting unit is not considered impaired and the second step of the goodwill impairment is not necessary. If the carrying amount of a reporting unit exceeds its estimated fair value, then the second step of the goodwill impairment test must be performed, and a comparison of the implied fair value of the reporting unit's goodwill is compared to its carrying amount to determine the amount of impairment, if any. The fair value of the reporting unit, when performing

the second step of the goodwill impairment test, is determined using both an income approach and market approach. The income approach model used for goodwill valuation is consistent with that used for the franchise valuation noted below except that cash flows from the entire business enterprise are used for the goodwill valuation. The market approach model estimates the fair value of the reporting unit based on market prices in actual precedent transactions of similar businesses and market valuations of guideline public companies. In 2016, we elected to perform a qualitative goodwill impairment assessment and concluded that goodwill is not impaired.

Table of Contents*Indefinite-Lived Intangible Assets*

Our \$497.1 million and \$496.3 million of intangible assets with an indefinite life as of December 31, 2016 and 2015, respectively, are principally from franchise agreements. These franchise agreements result from agreements we have with state and local governments that allow us to contract and operate a cable business within a specified geographic area. We expect our cable franchise agreements to provide us with substantial benefit for a period that extends beyond the foreseeable horizon, and we have historically obtained renewals and extensions of such agreements for nominal costs and without material modifications to the agreements. We grouped the recorded values of our various cable franchise agreements into regional cable systems or units of account.

For our goodwill impairment testing in 2016, we elected to perform a qualitative impairment assessment that indicated the fair value of the franchise assets in each unit of accounting exceeds the carrying value of such assets and thus resulted in no impairment. For each franchise unit of accounting, the estimated fair value of the franchise assets exceeds the carrying value. Based on our qualitative impairment assessment and sensitivity analyses, none of our franchise assets are considered at risk of impairment.

Periodically, we will elect to perform a quantitative analysis of impairment. If we elect or are required to perform a quantitative analysis to test our franchise assets for impairment, we determine the estimated fair value of franchises utilizing a discounted cash flow model, and in certain cases, a market value approach is also utilized to supplement the discounted cash flow model to determine the estimated fair value of the indefinite-lived intangible assets. We make estimates and assumptions regarding future cash flows, discount rates, long-term growth rates and other market values to determine the estimated fair value of the indefinite-lived intangible assets.

This approach makes use of unobservable factors, such as projected revenues, expenses, capital expenditures, customer trends and a discount rate applied to the estimated cash flows. The determination of the discount rate is derived from our weighted average cost of capital, which uses a market participant's cost of equity and after-tax cost of debt and reflects the risks inherent in the cash flows. We estimate discounted future cash flows using reasonable and appropriate assumptions, including, among others, penetration rates for data, video and voice; revenue growth rates; operating margins; and capital expenditures. The assumptions are based on our Company's and our peers' historical operating performance adjusted for current and expected competitive and economic factors surrounding the cable industry. The estimates and assumptions made in our valuations are inherently subject to significant uncertainties, many of which are beyond our control, and there is no assurance that these results can be achieved. The primary assumptions for which there is a reasonable possibility of the occurrence of a variation that would significantly affect the measurement value include the assumptions regarding revenue growth, programming expense growth rates, the amount and timing of capital expenditures, actual customer trends and the discount rate utilized.

*Property, Plant and Equipment*

The cable industry is capital intensive, and a significant portion of our resources is spent on capital activities associated with extending, rebuilding, and upgrading our cable network. The following table presents certain information regarding our net property, plant and equipment, including as a percentage of total assets, and our cash paid for property, plant and equipment for the periods indicated.

(dollars in millions)	As of December 31,	
	2016	2015
Property, plant and equipment	\$ 619.6	\$ 640.6
Total assets	\$ 1,397.3	\$ 1,398.8
Percentage of property, plant and equipment to total assets	44%	46%

Table of Contents

(dollars in millions)	For the Year ended December 31,	
Cash paid for property, plant and equipment		
2016	\$	141.7
2015	\$	156.1
2014	\$	177.4

Costs incurred with network construction, initial customer installations, installations of refurbishments and the addition of network equipment necessary to provide new or advanced video services, are capitalized. These costs consist of materials, subcontractor labor, direct consulting fees, and internal labor and related costs associated with the construction activities. These costs are depreciated over the estimated life of the plant (10 to 12 years) and headend facilities (10 years). Costs of operating the plant and the technical facilities, including repairs and maintenance, are expensed as incurred.

Costs incurred to connect businesses or residences that have not been previously connected to the infrastructure or digital platform are also capitalized. These costs include materials, subcontractor labor, internal labor, and other related costs associated with the connection activities. New connections are amortized over the estimated useful lives of 10 years. The costs related to reconnection, programming service up- and down- grade, repair and maintenance, and disconnection activities are expensed as incurred.

The estimated useful lives assigned to our property, plant and equipment are reviewed on an annual basis or more frequently if circumstances warrant and such lives are revised to the extent necessary due to changing facts and circumstances. Any changes in estimated useful lives are reflected prospectively.

In the first quarter of 2017 we changed our accounting estimate related to the capitalization of certain internal labor and related costs associated with construction and customer installation activities. Historically, we did not have adequate information to identify and calculate all of the capitalizable labor and related costs, and therefore these costs were expensed as incurred. In the first quarter of 2017, we have implemented systems and processes that allow us to more accurately estimate the amount of directly identifiable labor costs incurred on construction and installation activities. We anticipate that this change in estimate will result in an increase of capitalized labor costs in the range of \$28 million to \$33 million on an annual basis, resulting in an equivalent decrease in expenses and increase in capital expenditures beginning in 2017.

#### Recently Adopted and Issued Accounting Pronouncements

Recent accounting pronouncements which may be applicable to us are described in Note 2 to our Consolidated Financial Statements.

#### ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Market risk is the potential gain/loss arising from changes in market rates and prices, such as interest rates. As described under "Management's Discussion and Analysis of Financial Condition and Results of Operations—Financial Condition: Liquidity and Capital Resources—Financing Activity," our long-term debt at December 31, 2016 consisted of \$450 million of the Notes and \$95.0 million of borrowings under the Senior Credit Facilities, which bear interest, at our option, at a rate per annum determined by reference to either the LIBOR or an adjusted base rate, in each case plus an applicable interest rate margin. Based on the principal outstanding under our Senior Credit Facilities as of December 31, 2016, assuming, hypothetically, that the LIBOR rate applicable to the Senior Credit Facilities was 100 basis points higher would result in a change in interest expense of approximately \$1.0 million annually. At December 31, 2016, the aggregate fair value of the Notes, based upon quoted market prices, was \$463.5 million. An increase in the market rate of interest applicable to the Notes would not increase our interest expense with respect to the Notes since the rate of interest we are required to pay on the Notes is fixed.

#### ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

Our consolidated financial statements, the related notes thereto, and the reports of independent accountants are included in this Annual Report on Form 10-K beginning on page F-1.

-----

Table of Contents**ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE**

None.

**ITEM 9A. CONTROLS AND PROCEDURES****Disclosure Controls and Procedures**

The Company's management, with the participation of the Company's Chief Executive Officer and Chief Financial Officer, has evaluated the effectiveness of the Company's disclosure controls and procedures (as such term is defined in Rules 13a-15(e) and 15d-15(e) under the Exchange Act) as of December 31, 2016, the end of the period covered by this Annual Report on Form 10-K. Based on such evaluation, the Company's Chief Executive Officer and Chief Financial Officer have concluded that, as of the end of such period, the Company's disclosure controls and procedures were effective in recording, processing, summarizing and reporting, on a timely basis, information required to be disclosed by the Company in the reports that it files or submits under the Exchange Act and were effective in ensuring that information required to be disclosed by the Company in the reports it files or submits under the Exchange Act is accumulated and communicated to the Company's management, including the Company's Chief Executive Officer and Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure.

**Management's Report on Internal Control Over Financial Reporting**

The Company's management is responsible for establishing and maintaining adequate internal control over financial reporting (as such term is defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act). The Company's internal control over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles.

The Company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the Company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles and that receipts and expenditures of the Company are being made only in accordance with authorizations of management and directors of the Company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the Company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

The Company's management conducted an assessment of the effectiveness of internal control over financial reporting as of December 31, 2016. In making this assessment, management used the criteria set forth in *Internal Control – Integrated Framework* (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based on the results of this assessment, management has concluded that, as of December 31, 2016, the Company's internal control over financial reporting was effective based on these criteria.

The effectiveness of the Company's internal control over financial reporting as of December 31, 2016, has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in their report on page F-2 of this Annual Report on Form 10-K.

**Changes in Internal Control Over Financial Reporting**

There has been no change in the Company's internal control over financial reporting (as such term is defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) during the quarter ended December 31, 2016 that has materially affected, or is reasonably likely to materially affect, the Company's internal control over financial reporting.

Table of Contents**Report of Independent Registered Public Accounting Firm**

To the Board of Directors and Stockholders of Cable One, Inc.

In our opinion, the accompanying consolidated balance sheets and the related consolidated statements of operations and comprehensive income, of stockholders' equity and of cash flows present fairly, in all material respects, the financial position of Cable One, Inc. and its subsidiary at December 31, 2016 and 2015, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2016 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2016, based on criteria established in *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for these financial statements, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Report on Internal Control Over Financial Reporting appearing under Item 9A. Our responsibility is to express opinions on these financial statements and on the Company's internal control over financial reporting based on our audits (which was an integrated audit in 2016). We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

## CABLE ONE, INC.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

**1. SEPARATION FROM GRAHAM HOLDINGS COMPANY AND DESCRIPTION OF BUSINESS**

On July 1, 2015, Cable One, Inc. ("Cable One") became an independent company traded under the ticker symbol "CABO" on the New York Stock Exchange after completion of its spin-off from Graham Holdings Company ("GHC"). The spin-off was effected through the distribution by GHC of 100% of the outstanding shares of common stock of Cable One to GHC stockholders as of the record date for the distribution (the "spin-off") in a pro rata dividend. In connection with the spin-off, approximately 5.84 million shares of Cable One's common stock were issued and outstanding on July 1, 2015, based on approximately 0.96 million shares of GHC Class A Common Stock and 4.88 million shares of GHC Class B Common Stock outstanding as of June 30, 2015. No preferred stock was issued or outstanding.

The financial statements included herein have been retroactively restated, including share and per share amounts, to reflect the effects of the spin-off.

Cable One owns and operates cable systems that provide data, video and voice services to residential and commercial subscribers in 19 Western, Midwestern and Southern states of the United States of America. At the end of 2016, Cable One provided service to 513,908 data customers, 320,246 video customers and 115,811 voice customers.

Unless otherwise stated or the context otherwise indicates, all references in the Consolidated Financial Statements and the accompanying Notes to Consolidated Financial Statements in this Annual Report on Form 10-K to "Cable One," "us," "our," "we" or the "Company" means Cable One, Inc. and its wholly owned subsidiary, Cable One VoIP LLC (the "Subsidiary"). References in the Consolidated Financial Statements and the accompanying Notes to Consolidated Financial Statements in this Annual Report on Form 10-K to "GHC" refer to Graham Holdings Company.

**2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES**

**Basis of Presentation.** The accompanying Consolidated Financial Statements have been prepared in accordance with accounting principles generally accepted in the United States ("GAAP") and the rules and regulations of the Securities and Exchange Commission (the "SEC").

Prior to the spin-off, the Company's financial statements were derived from the consolidated financial statements and accounting records of GHC. The impact of transactions between the Company and GHC was included in the Consolidated Financial Statements and was considered to be effectively settled for cash in the Consolidated Financial Statements at the time the transaction was recorded. The total net effect of the settlement of these intercompany transactions was reflected in the Consolidated Statements of Cash Flows as a financing activity at the time of settlement.

The Company functioned as part of the larger group of subsidiary companies controlled by GHC prior to the spin-off, and accordingly, GHC provided certain support and overhead functions to the Company. These functions included finance, human resources, legal, information technology, general insurance, risk management and other corporate functions. The costs of such services were allocated to the Company based on the most relevant allocation methods to the service provided. Management believed such allocations were reasonable and were consistently applied; however, they may not have been indicative of the actual expense that would have been incurred had the Company been operating on a stand-alone basis. See Notes 12 and 16 for details on these allocations prior to the spin off.

Additionally, prior to the spin-off, the Company participated in a centralized approach to cash management and in financing its operations managed by GHC. Cash was transferred to GHC and GHC funded the Company's operating and investing activities as needed. Accordingly, cash and cash equivalents at GHC were not allocated to the Company in the Consolidated Financial Statements. GHC's third-party debt, and the related interest expense, were not allocated to the Company for any of the periods presented as the Company was not the legal obligor on the debt and GHC borrowings were not directly attributable to the Company's business.

Prior to the spin-off, the Company's operations were historically included in GHC's consolidated U.S. Federal and certain state tax returns. The Company did not maintain taxes payable to/from GHC and was deemed to settle the annual current tax balances immediately with the legal tax-paying entities in the respective jurisdictions.

Table of Contents

The Company's results of operations for the years ended December 31, 2016 and 2015 may not be indicative of the Company's future results. In addition, as the Company did not operate as a stand-alone entity prior to July 1, 2015, the Consolidated Financial Statements included herein may not necessarily be indicative of the Company's future performance and may not necessarily reflect what its financial position, results of operations or cash flows would have been had it operated as a stand-alone entity during all of the periods presented.

Certain reclassifications have been made to prior period amounts to conform to the current year presentation.

**Principles of Consolidation.** The accompanying Consolidated Financial Statements include the accounts of the Company and the Subsidiary. All significant intercompany accounts and transactions have been eliminated in consolidation.

**Segment Reporting.** ASC 280 - *Segment Reporting* ("ASC 280") requires the disclosure of factors used to identify an enterprise's reportable segments. Our operations are organized and managed on the basis of cable systems within our geographic regions. Each cable system derives revenues from the delivery of similar products and services to a customer base that is also similar. Each cable system deploys similar technology to deliver our products and services, operates within a similar regulatory environment and has similar economic characteristics. Management evaluated the criteria for aggregation under ASC 280 and believes that we meet each of the respective criteria set forth. Accordingly, management has identified one reportable segment.

**Use of Estimates in the Preparation of the Consolidated Financial Statements.** The preparation of the Consolidated Financial Statements in conformity with GAAP requires management to make estimates and judgments that affect the amounts reported herein. Management bases its estimates and assumptions on historical experience and on various other factors that are believed to be reasonable under the circumstances. Due to the inherent uncertainty involved in making estimates, actual results reported in future periods may be affected by changes in those estimates.

**Revenue Recognition.** Revenue is recognized when persuasive evidence of an arrangement exists, the fees are fixed or determinable, the product or service has been delivered and collectability is reasonably assured. Revenues are primarily derived from subscriber fees for data, video, and voice services, and from the sale of advertising.

The Company recognizes subscriber revenue as each service is provided. Revenue received from subscribers who purchase bundled services (e.g., the Company sells data, video and voice services to a customer) at a discounted rate is allocated to each product in a pro-rata manner based on the individual product's selling price on a standalone basis. The Company typically bills customers in advance on a monthly basis. The Company manages credit risk by screening applicants through the use of internal customer information, identification verification tools and credit bureau data. Various measures are used to collect outstanding amounts when a customer's account is delinquent, including termination of the customer's cable services. Installation revenue is recognized when the connection of the customer to the Company's cable system is completed, as installation revenue is less than the related direct selling costs.

The Company generally receives an allocation of scheduled advertising time as part of its distribution agreements with cable networks, which the Company sells to local, regional and national advertisers. The Company recognizes advertising revenue when the commercials are aired. In most cases, the available advertising time is sold by the Company's internal sales force. Since the Company is acting as a principal in these arrangements, the advertising that is sold is reported as revenue on a gross basis. In cases where advertising time is sold by agencies, the Company is not acting as a principal and the advertising sold is reported net of agency fees.

Under the terms of the Company's cable franchise agreements, the Company is generally required to pay to the franchising authority an amount based on the gross amount billed to the customer. The Company normally passes these fees to its customers and reports the fees on a gross basis as a component of revenue with the corresponding costs included in operating expense. The franchise authority assesses the Company directly for these fees and it is the Company's obligation to pay the fees. The amount of such fees recorded on a gross basis was \$14.2 million, \$15.7 million and \$16.7 million in 2016, 2015 and 2014, respectively.

**Concentrations of Credit Risk.** Financial instruments that potentially subject the Company to concentrations of credit risk are primarily cash and accounts receivable. Concentration of credit risk with respect to the Company's cash balance is limited. The Company maintains or invests its cash with highly qualified financial institutions. With respect to the Company's receivables, credit risk is limited due to the large number of customers, individually small balances and short payment terms.

Table of Contents

**Programming Costs.** The Company's programming costs are fees paid to license the programming that is distributed to video customers and are recorded in the period the services are provided. Programming costs are recorded based on the Company's contractual agreements with its programming vendors, which are generally multi-year agreements that provide for the Company to make payments to the programming vendors at agreed upon rates based on the number of subscribers to which the Company provides the programming service. From time to time, these agreements expire and programming continues to be distributed to customers while the parties negotiate new contractual terms. While payments are typically made under the prior agreement's terms, the amount of programming costs recorded during these interim periods is based on the Company's estimates of the ultimate contractual terms expected to be negotiated. Differences between actual amounts determined upon resolution of negotiations and amounts recorded during these interim periods are recorded in the period of resolution.

**Advertising Costs.** The Company expenses advertising costs as incurred. The total amount of such advertising expense recorded was \$25.9 million, \$22.5 million and \$22.9 million in 2016, 2015 and 2014, respectively.

**Cash and Cash Equivalents.** For financial reporting purposes, the Company considers all highly liquid investments with original maturities at purchase of three months or less to be cash equivalents. These investments are carried at cost, which approximates market value.

**Allowance for Doubtful Accounts.** Accounts receivable have been reduced by an allowance for amounts that may be uncollectible in the future. This estimated allowance is based primarily on the aging category, historical collection experience and management's evaluation of the financial condition of the customer. The Company generally considers an account past due or delinquent when a customer misses a scheduled payment. The Company writes off accounts receivable balances deemed uncollectible against the allowance for doubtful accounts generally when the account is turned over for collection to an outside collection agency.

**Fair Value Measurements.** Fair value measurements are determined based on the assumptions that a market participant would use in pricing an asset or liability based on a three-tiered hierarchy that draws a distinction between market participant assumptions based on (i) observable inputs, such as quoted prices in active markets (Level 1); (ii) inputs other than quoted prices in active markets that are observable either directly or indirectly (Level 2); and (iii) unobservable inputs that require the Company to use present value and other valuation techniques in the determination of fair value (Level 3). Financial assets and liabilities are classified in their entirety based on the lowest level of input that is significant to the fair value measure. The Company's assessment of the significance of a particular input to the fair value measurements requires judgment and may affect the valuation of the assets and liabilities being measured and their placement within the fair value hierarchy.

For assets that are measured using quoted prices in active markets, the total fair value is the published market price per unit multiplied by the number of units held, without consideration of transaction costs. Assets and liabilities that are measured using significant other observable inputs are primarily valued by reference to quoted prices of similar assets or liabilities in active markets, adjusted for any terms specific to that asset or liability.

The Company measures certain assets including goodwill, intangible assets and property, plant and equipment at fair value on a nonrecurring basis when they are deemed to be impaired. The fair value of these assets is determined with valuation techniques using the best information available and may include quoted market prices, market comparables and discounted cash flow models.

**Fair Value of Financial Instruments.** The carrying amounts reported in the Company's financial statements for cash and cash equivalents, accounts receivable, accounts payable and accrued liabilities approximate fair value because of the short-term nature of these financial instruments.

**Property, Plant and Equipment.** Property, plant and equipment is recorded at cost. Replacements and major improvements are capitalized; maintenance and repairs are expensed as incurred. Depreciation is calculated using the straight-line method over the following estimated useful lives of the property, plant and equipment (in years):

Cable distribution systems	5 - 12
Customer premise equipment	5
Other equipment, vehicles and fixtures	3 - 10
Capitalized software	3 - 7
Buildings and improvements	20

The costs of leasehold improvements are amortized over the lesser of their useful lives or the terms of the respective leases.

The Company capitalizes certain internal and external costs incurred to acquire or develop internal-use software, including costs associated with coding, software configuration, upgrades and enhancements.

Table of Contents

The Company capitalizes costs associated with the construction of cable transmission and distribution facilities and new cable service installations. Costs include all direct labor and materials, as well as certain indirect costs. The cost of subsequent disconnects and reconnects are expensed as they are incurred.

**Evaluation of Long-Lived Assets.** The recoverability of property, plant and equipment and amortized intangible assets is assessed whenever adverse events or changes in circumstances indicate that recorded values may not be recoverable. A long-lived asset is considered to not be recoverable when the undiscounted estimated future cash flows are less than the asset's recorded value. An impairment charge is measured based on estimated fair market value, determined primarily using estimated future cash flows on a discounted basis. Losses on long-lived assets to be disposed of are determined in a similar manner, but the fair market value would be reduced for estimated costs to dispose.

**Goodwill and Indefinite-Lived Intangible Assets.** Goodwill is the excess of purchase price over the fair value of identified net assets of businesses acquired. The Company's intangible assets with an indefinite life are principally from franchise agreements, as the Company expects its cable franchise agreements to provide the Company with substantial benefit for a period that extends beyond the foreseeable horizon, and the Company historically has obtained renewals and extensions of such agreements for nominal costs and without any material modifications to the agreements.

The Company reviews goodwill and indefinite-lived intangible assets at least annually, as of November 30, for possible impairment. Goodwill and indefinite-lived intangible assets are reviewed for possible impairment between annual tests if an event occurs or circumstances change that would more likely than not reduce the fair value of the reporting unit or indefinite-lived intangible asset below its carrying value. The Company tests its goodwill at the reporting unit level, which is an operating segment or one level below an operating segment. The reporting unit level is at a regional basis. In reviewing the carrying value of indefinite-lived intangible assets, the Company aggregates its cable systems on a regional basis. The Company initially assesses qualitative factors to determine if it is necessary to perform the two-step goodwill impairment review or indefinite-lived intangible asset quantitative impairment review. The Company reviews the goodwill for impairment using the two-step process and the indefinite-lived intangible assets using the quantitative process if, based on its assessment of the qualitative factors, it determines that it is more likely than not that the fair value of a reporting unit or indefinite-lived intangible asset is less than its carrying value, or if it decides to bypass the qualitative assessment. The Company reviews the carrying value of goodwill and indefinite-lived intangible assets utilizing a discounted cash flow model, and, where appropriate, a market value approach is also utilized to supplement the discounted cash flow model. The Company makes assumptions regarding estimated future cash flows, discount rates, long-term growth rates and market values to determine each reporting unit's and indefinite-lived intangible asset's estimated fair value. If these estimates or related assumptions change in the future, the Company may be required to record impairment charges.

**Pension and Other Postretirement Benefits.** The Company maintains various pension and incentive savings plans. The Company recognizes the overfunded or underfunded status of the defined benefit SERP (as defined in Note 14) as an asset or liability in its statement of financial position and recognizes change in that funded status in the year in which the changes occur through comprehensive income. The Company measures changes in the funded status of its plans using the projected unit credit method and several actuarial assumptions, the most significant of which are the discount rate, the long-term rate of asset return and the rate of compensation increase. The Company uses a measurement date of December 31 for its pension and other postretirement benefit plans.

**Self-Insurance.** The Company uses a combination of insurance and self-insurance for a number of risks, including claims related to employee medical and dental care, disability benefits, workers' compensation, general liability, property damage and business interruption. Liabilities associated with these plans are estimated based on, among other things, the Company's historical claims experience, severity factors and other actuarial assumptions. Accruals for expected loss are based on estimates, and, while the Company believes that the amounts accrued are adequate, the ultimate loss may differ from the amounts provided.

**Equity-Based Compensation.** The Company measures compensation expense for awards settled in shares based on the grant date fair value of the award. The Company measures compensation expense for awards settled in cash, or that may be settled in cash, based on the fair value at each reporting date. The Company recognizes the expense over the requisite service period, which is generally the vesting period of the award.

**Income Taxes.** During the periods presented, the Company's income taxes have been prepared on a separate return basis as if the Company was a stand-alone entity. Prior to the spin-off, the Company's operations were historically included in GHC's consolidated U.S. Federal and certain state tax returns. The results from being included in the consolidated tax returns were included in Additional GHC investment (deficit) for the applicable periods. The Company did not maintain taxes payable to/from GHC and was deemed to settle the annual current tax balances immediately with the legal tax-paying entities in the respective jurisdictions. These settlements were reflected as net transfer to/from GHC within Additional GHC investment (deficit).

F-10

Table of Contents

The Company accounts for income taxes under the asset and liability method, which requires the recognition of deferred tax assets and liabilities for the expected future tax consequences of events that have been included in the financial statements. Under this method, deferred tax assets and liabilities are determined based on the differences between the financial statements and tax basis of assets and liabilities using enacted tax rates in effect for the year in which the differences are expected to reverse. The effect of a change in tax rates on deferred tax assets and liabilities is recognized in income in the period that includes the enactment date.

The Company records net deferred tax assets to the extent that it believes these assets will more likely than not be realized. In making such determination, the Company considers all available positive and negative evidence, including future reversals of existing taxable temporary differences, projected future taxable income, tax planning strategies and recent financial operations. This evaluation is made on an ongoing basis. In the event the Company were to determine that it was not able to realize net deferred income tax assets in the future, the Company would record a valuation allowance, which would increase the provision for income taxes.

The Company recognizes a tax benefit from an uncertain tax position when it is more likely than not that the position will be sustained upon examination, including resolutions of any related appeals or litigation processes, based on the technical merits. The Company records a liability for the difference between the benefit recognized and measured for financial statement purposes and the tax position taken or expected to be taken on the tax return. Changes in the estimate are recorded in the period in which such determination is made.

**Asset Retirement Obligations.** Certain of the Company's cable franchise agreements and lease agreements contain provisions requiring the Company to restore facilities or remove property in the event that the franchise or lease agreement is not renewed. The Company expects to continually renew its cable franchise agreements and therefore cannot reasonably estimate any liabilities associated with such agreements. A remote possibility exists that franchise agreements could be terminated unexpectedly, which could result in the Company incurring significant expense in complying with restoration or removal provisions. The Company does not have any significant liabilities related to asset retirements recorded in the financial statements.

**Recently Adopted and Issued Accounting Pronouncements.** In May 2014, the Financial Accounting Standards Board (the "FASB") issued comprehensive new guidance that supersedes all existing revenue recognition guidance. The new guidance requires revenue to be recognized when the Company transfers promised goods or services to customers in an amount that reflects the consideration to which the Company expects to be entitled in exchange for those goods or services. The new guidance also significantly expands the disclosure requirements for revenue recognition. This guidance, as amended, is effective for interim and fiscal years beginning after December 15, 2017. Early adoption is permitted only as of annual reporting periods beginning after December 15, 2016, including interim reporting periods within that reporting period. The standard permits two implementation approaches, one requiring retrospective application of the new guidance with a restatement of prior years and one requiring prospective application of the new guidance with disclosure of results under the old guidance. The Company is in the process of evaluating the impact of this new guidance on its financial statements.

In August 2014, the FASB issued new guidance that requires management to assess the Company's ability to continue as a going concern and to provide related disclosures in certain circumstances. This guidance is effective for interim and fiscal years ending after December 15, 2016. The adoption of this guidance did not have a significant impact on the Company's financial statements.

In April 2015, the FASB issued new guidance to simplify the presentation of debt issuance costs. This guidance requires that debt issuance costs related to a recognized debt liability be presented in the balance sheet as a direct deduction from the carrying amount of that debt liability, consistent with debt discounts. The recognition and measurement guidance for debt issuance costs are not affected by this guidance. The new guidance should be applied on a full retrospective basis to all periods presented. This guidance is effective for interim and fiscal years beginning after December 15, 2015. In accordance with the provisions of the new guidance, the Company has recorded unamortized debt issuance costs net of the long-term debt liability in the accompanying Consolidated Balance Sheets as of December 31, 2016 and 2015. This resulted in a reclassification of deferred financing costs, which caused a reduction of \$9.8 million to Long-term debt, \$1.6 million to Current Assets and \$8.2 million to Other assets in the accompanying Consolidated Balance Sheet as of December 31, 2015.

Table of Contents

In September 2015, the FASB issued new guidance requiring an acquirer to retrospectively adjust provisional amounts reflected in its financial statements arising from a business combination during the measurement period. To simplify the accounting for adjustments made to provisional amounts, the guidance requires that the acquirer reflect adjustments to provisional amounts that are identified during the measurement period in the financial statements for the reporting period in which the adjustment amount is determined. The acquirer is required to also record, in the same period's financial statements, the effect on earnings of changes in depreciation, amortization, or other income effects, if any, as a result of the change to the provisional amounts, calculated as if the adjustment had been completed at the acquisition date. In addition, an entity is required to present separately on the face of the income statement or disclose in the notes to the financial statements the portion of the amount recorded in current-period earnings by line item that would have been recorded in previous reporting periods if the adjustment to the provisional amounts had been recognized as of the acquisition date. This guidance is effective for fiscal years beginning after December 15, 2016 and interim periods within fiscal years beginning after December 15, 2017. The amendments in this guidance should be applied prospectively to adjustments to provisional amounts that occur after the effective date of this guidance. The Company does not expect this guidance to have an impact on its financial statements unless an acquisition is made.

In November 2015, the FASB issued new guidance that eliminates the requirement to bifurcate deferred taxes between current and noncurrent on the balance sheet and requires that deferred tax liabilities and assets be classified as noncurrent on the balance sheet. This guidance can be either applied prospectively to all deferred tax liabilities and assets or retrospectively to all periods presented and early adoption is permitted. We early-adopted this guidance on a prospective basis as of December 31, 2015, and the Consolidated Balance Sheet as of December 31, 2015 reflects the revised classification of current deferred tax assets and liabilities as noncurrent. Adoption of this guidance resulted in an immaterial reclassification between current deferred tax assets and noncurrent deferred tax assets as of December 31, 2015. There is no other impact on the financial statements due to early-adopting this guidance.

In February 2016, the FASB issued new guidance that requires a lessee to record a right-of-use asset and a lease liability on the balance sheet for all leases with terms longer than 12 months. Leases will be classified as either finance or operating, with classification affecting the pattern of expense recognition in the income statement. This guidance is effective for interim and fiscal years beginning after December 15, 2018. A modified retrospective transition approach is required for lessees for capital and operating leases existing at, or entered into after, the beginning of the earliest comparative period presented in the financial statements, with certain practical expedients available. The Company is in the process of evaluating the impact of its pending adoption of this new guidance on its financial statements.

In March 2016, the FASB issued new guidance affecting several aspects of the accounting for share-based payment transactions, including the income tax consequences, classification of awards as either equity or liabilities, and classification on the statement of cash flows. This guidance is effective for fiscal years beginning after December 15, 2016 and interim periods within those fiscal years. The Company does not expect this guidance to have a significant impact on its financial statements.

In August 2016, the FASB issued new guidance affecting the classification of certain cash receipts and cash payments, including debt prepayments or debt extinguishments costs, settlement of zero-coupon debt instruments, contingent consideration payments made after a business combination, proceeds from the settlement of insurance claims and corporate-owned life insurance policies, distributions received from equity method investees, beneficial interests in securitization transactions, and separately identifiable cash flows and application of the predominance principle. This guidance is effective for fiscal years beginning after December 15, 2017 and interim periods within those fiscal years, with early adoption permitted. If an entity early adopts this guidance in an interim period, any adjustments should be reflected as of the beginning of the fiscal year that includes that interim period. The Company does not expect this guidance to have a significant impact on its financial statements.

### 3. REVENUES

The Company's revenues by product line were as follows (in thousands):

	Year Ended December 31,		
	2016	2015	2014
Residential			
Data	\$ 344,184	\$ 294,486	\$ 265,718

Less accumulated depreciation	<u>(1,217,819)</u>	<u>(1,212,811)</u>
Total property, plant and equipment, net	<u>\$ 619,621</u>	<u>\$ 640,567</u>

Table of Contents

The cable industry is capital intensive, and a significant portion of our resources is spent on capital activities associated with extending, rebuilding, and upgrading our cable network. For the years ended December 31, 2016, 2015 and 2014, cash paid for property, plant and equipment was \$141.7 million, \$156.1 million and \$177.4 million, respectively.

Depreciation and amortization expense was \$142.2 million, \$140.6 million and \$134.2 million in 2016, 2015 and 2014, respectively.

The Company's previous headquarters building and adjoining property were held for sale at December 31, 2016. The property's carrying value of \$8.1 million was included in Other assets at December 31, 2016. In January 2017, we sold certain of these assets for \$10.5 million. We expect to complete the sale of the remaining assets within the next two years.

## 6. GOODWILL AND INTANGIBLE ASSETS

The carrying amount of goodwill at December 31, 2016 and 2015 was \$84.9 million and \$85.5 million, respectively. Historically, the Company has not recorded any impairment of goodwill. During 2016, we sold the assets of a cable system, which resulted in disposed goodwill of \$0.6 million.

Intangible assets consisted of the following (in thousands):

	<u>December 31, 2016</u>			
	<u>Useful Life Range (years)</u>	<u>Gross Carrying Amount</u>	<u>Accumulated Amortization</u>	<u>Net Carrying Amount</u>
<b>Amortized Intangible Assets</b>				
Cable franchise renewals and access rights	1 - 25	4,138	3,794	344
<b>Indefinite-Lived Intangible Assets</b>				
Franchise agreements		<u>\$ 497,136</u>		

	<u>December 31, 2015</u>			
	<u>Useful Life Range (years)</u>	<u>Gross Carrying Amount</u>	<u>Accumulated Amortization</u>	<u>Net Carrying Amount</u>
<b>Amortized Intangible Assets</b>				
Cable franchise renewals and access rights	1 - 25	4,127	3,678	449
<b>Indefinite-Lived Intangible Assets</b>				
Franchise agreements		<u>\$ 496,321</u>		

Amortization of intangible assets was less than \$0.1 million, \$0.1 million and \$0.2 million in 2016, 2015 and 2014, respectively. Amortization of intangible assets is estimated to be approximately \$0.1 million in each of the next three years through 2019 and less than \$0.1 million thereafter.

In July 2014, the Company sold wireless spectrum licenses that were purchased in 2006 and recorded a pre-tax non-operating gain of \$75.2 million included in Other income (expense), net in the Consolidated Statements of Operations and Comprehensive Income.

## 7. LONG-TERM DEBT

**5.750% Senior Unsecured Notes Due 2022.** On June 17, 2015, the Company issued \$450 million aggregate principal amount of 5.750% senior unsecured notes due 2022 (the "Notes"). The Company used the proceeds from the Notes offering to pay a special one-time cash dividend to GHC of \$450 million on June 29, 2015 in connection with the spin-off.

The Notes have not been, and will not be, registered under the Securities Act of 1933, as amended (the "Securities Act"), or the securities laws of any state or other jurisdiction and may not be offered or sold in the United States absent registration or an applicable exemption from the registration requirements of the Securities Act and any other applicable securities laws. The Notes were offered in the United States only to persons reasonably believed to be qualified institutional buyers in reliance on the exemption

from registration set forth in Rule 144A under the Securities Act and outside the United States to non-U.S. persons in reliance on the exemption from registration set forth in Regulation S under the Securities Act.

F-14

Table of Contents

The Notes were issued pursuant to an indenture (the "Indenture"), dated as of June 17, 2015, among the Company, the Guarantors (as defined below) and the Bank of New York Mellon Trust Company, N.A., as trustee (the "Trustee").

The Notes mature on June 15, 2022 and bear interest at a rate of 5.750% per year. Interest on the Notes is payable on June 15 and December 15 of each year, beginning on December 15, 2015. The Notes are jointly and severally guaranteed (the "Guarantees") on a senior unsecured basis by each of the Company's existing and future domestic subsidiaries that initially guaranteed (the "Guarantors") the Senior Credit Facilities (as defined below). The Notes are unsecured and senior obligations of the Company. The Guarantees are unsecured and senior obligations of the Guarantors.

At the option of the Company, the Notes are redeemable, in whole or in part, at any time prior to June 15, 2018 at a price equal to 100% of the aggregate principal amount of the Notes plus accrued and unpaid interest, if any, to, but excluding, the redemption date plus a "make-whole" premium. The Company may also redeem the Notes, in whole or in part, at any time on or after June 15, 2018 at the redemption prices specified in the Indenture, plus accrued and unpaid interest, if any, to, but excluding, the redemption date.

Additionally, at any time prior to June 15, 2018, the Company may redeem up to 35% of the aggregate principal amount of the Notes with the net cash proceeds from certain equity offerings at a price equal to 105.75% of the principal amount of the Notes, plus accrued and unpaid interest, if any, to, but excluding, the redemption date.

The Indenture includes certain covenants relating to debt incurrence, liens, restricted payments, assets sales and transactions with affiliates, changes in control and mergers or sales of all or substantially all of the Company's assets. The Indenture also provides for customary events of default (subject, in certain cases, to customary grace periods), which include nonpayment on the Notes, breach of covenants in the Indenture, payment defaults or acceleration of other indebtedness over a specified threshold, failure to pay certain judgments over a specified threshold and certain events of bankruptcy and insolvency. Generally, if an event of default occurs, the Trustee under the Indenture or holders of at least 25% of the aggregate principal amount of the then outstanding Notes may declare the principal of, and accrued but unpaid interest, if any, on the then outstanding Notes to be due and payable immediately.

**Senior Credit Facilities Due 2020.** On June 30, 2015, the Company entered into a Credit Agreement (the "Credit Agreement") among the Company, as borrower, the lenders party thereto, JPMorgan Chase Bank, N.A., as administrative agent, and the other agents party thereto. The Credit Agreement provides for a five-year revolving credit facility in an aggregate amount of \$200 million (the "Revolving Credit Facility") and a five-year term loan facility in an aggregate amount of \$100 million (the "Term Loan Facility" and, together with the Revolving Credit Facility, the "Senior Credit Facilities"). Concurrently with its entry into the Credit Agreement, the Company borrowed the full amount of the Term Loan Facility (the "Term Loan").

The obligations under the Senior Credit Facilities are obligations of the Company and are guaranteed by the Subsidiary. The obligations under the Senior Credit Facilities are secured, subject to certain exceptions, by substantially all of the assets of the Company and the Subsidiary.

Borrowings under the Senior Credit Facilities bear interest, at the Company's option, at a rate per annum determined by reference to either the London Interbank Offered Rate ("LIBOR") or an adjusted base rate, in each case plus an applicable interest rate margin. The applicable interest rate margin with respect to LIBOR borrowings is a rate per annum between 1.50% and 2.25% and the applicable interest rate margin with respect to adjusted base rate borrowings is a rate per annum between 0.50% and 1.25%, in each case determined on a quarterly basis by reference to a pricing grid based upon the Company's total net leverage ratio. As of December 31, 2016, borrowings under the Senior Credit Facilities bore interest at a rate of 2.34% per annum. In addition, the Company is required to pay commitment fees on any unused portion of the Revolving Credit Facility at a rate between 0.25% per annum and 0.40% per annum, determined by reference to the pricing grid. As of December 31, 2016, the commitment fee accrues at a rate of 0.25% per annum. Outstanding borrowings under the Term Loan Facility were \$95.0 million at December 31, 2016. The Company had \$197.2 million available for borrowing under the Revolving Credit Facility at December 31, 2016.

The Senior Credit Facilities may be prepaid at any time without premium. The Term Loan Facility amortizes in equal quarterly installments at a rate of 2.5% per annum in the first year after funding, 5.0% per annum in the second year after funding, 7.5% per annum in the third year after funding, 10.0% per annum in the fourth year after funding and 15.0% per annum in the fifth year after funding, with the outstanding balance of the Term Loan Facility to be paid on the fifth anniversary of funding.

Table of Contents

The Revolving Credit Facility also gives the Company the ability to issue letters of credit, which reduce the amount available for borrowing under the Revolving Credit Facility. Letter of credit issuances under the Revolving Credit Facility of \$2.8 million at December 31, 2016 were held for the benefit of certain general and liability insurance matters and bore interest at a rate of 1.625% per annum.

The Company may, subject to the terms and conditions of the Credit Agreement, obtain additional credit facilities of up to \$300 million under the Credit Agreement pursuant to an uncommitted incremental facility.

The Credit Agreement contains customary representations, warranties and affirmative and negative covenants, including limitations on indebtedness, liens, restricted payments, prepayments of certain indebtedness, investments, dispositions of assets, restrictions on subsidiary distributions and negative pledge clauses, fundamental changes, transactions with affiliates and amendments to organizational documents. The Credit Agreement also requires the Company to maintain specified ratios of total net leverage and first lien net leverage to consolidated operating cash flow. The Credit Agreement also contains customary events of default, including non-payment of principal, interest, fees or other amounts, material inaccuracy of any representation or warranty, failure to observe or perform any covenant, default in respect of other material debt of the Company and its restricted subsidiaries, bankruptcy or insolvency, the entry against the Company or any of its restricted subsidiaries of a material judgment, the occurrence of certain ERISA events, impairment of the loan documentation and the occurrence of a change of control.

The Company was in compliance with all debt covenants as of December 31, 2016.

Long-term debt consisted of the following (in thousands):

	<b>As of December 31,</b>	
	<b>2016</b>	<b>2015</b>
Senior Unsecured Notes	\$ 450,000	\$ 450,000
Senior Credit Facilities	95,000	98,750
Capital lease obligation	284	301
Total debt	<u>545,284</u>	<u>549,051</u>
Less unamortized debt issuance costs	(8,148)	(9,790)
Less current portion long-term debt	(6,250)	(3,750)
Total long-term debt	<u>\$ 530,886</u>	<u>\$ 535,511</u>

The Company recorded \$1.6 million and \$0.9 million of debt issuance costs for the years ended December 31, 2016 and 2015, respectively. These amounts are reflected in Interest expense in the Consolidated Statements of Operations and Comprehensive Income.

As of December 31, 2016, the future maturities of long-term debt were as follows (in thousands):

	<b>Amount</b>
2017	\$ 6,250
2018	8,767
2019	12,517
2020	67,517
2021	17
Thereafter	450,216
Total	<u>\$ 545,284</u>

On February 13, 2017, the Company entered into an amendment to the Credit Agreement to permit, among other things, the incurrence of the \$650 million of senior secured loans expected to be used to finance the acquisition of NewWave and the other transactions contemplated by the Merger Agreement (as defined in Note 19).

	<u>291,402</u>	<u>289,057</u>
\$	<u>276,297</u>	<u>\$ 276,627</u>

The Company has not established valuation allowances against any U.S. Federal or state deferred tax assets.

Before the spin-off, the Company was included in consolidated U.S. Federal and Arizona corporate income tax returns filed by GHC, and also filed in various other state and local governmental jurisdictions. The U.S. Federal tax return filing is considered the only major tax jurisdiction. The statute of limitations has expired on all GHC consolidated U.S. Federal corporate income tax returns filed through 2012, with the exception of an issue that does not involve the Company. The Internal Revenue Service ("IRS") is currently examining the 2013 GHC consolidated U.S. Corporation Income Tax Return.

The Company endeavors to comply with tax laws and regulations where it does business, but cannot guarantee that, if challenged, the Company's interpretation of all relevant tax laws and regulations will prevail and that all tax benefits recorded in the financial statements will ultimately be recognized in full. The Company has taken reasonable efforts to address uncertain tax positions and has determined that there are no material transactions and no material tax positions taken by the Company that would fail to meet the more-likely-than-not threshold for recognizing transactions or tax positions in the financial statements. Accordingly, the Company has

not recorded a reserve for uncertain tax positions in the financial statements, and the Company does not expect any significant tax increase or decrease to occur within the next 12 months with respect to any transactions or tax positions taken and reflected in the financial statements. In making these determinations, the Company presumes that taxing authorities pursuing examinations of the Company's compliance with tax law filing requirements will have full knowledge of all relevant information, and, if necessary, the Company will pursue resolution of disputed tax positions by appeals or litigation. The Company classifies interest and penalties, if applicable, associated with any uncertain tax positions as a component of Interest expense in its Consolidated Statements of Operations and Comprehensive Income.

Table of Contents**9. FAIR VALUE MEASUREMENTS**

The Company's deferred compensation liabilities were \$18.2 million and \$18.3 million at December 31, 2016 and 2015, respectively. These liabilities are included in Accounts payable and accrued liabilities and Accrued compensation and related benefits in the Consolidated Balance Sheets. These liabilities represent the market value of a participant's balance in a notional investment account that is comprised primarily of mutual funds, which is based on observable market prices. However, since the deferred compensation obligations are not exchanged in an active market, they are classified as Level 2 in the fair value hierarchy. Realized and unrealized gains (losses) on deferred compensation are included in operating income.

The carrying amounts and fair values of the Company's long-term debt, including current portion, money market and commercial paper investments as of December 31, 2016 were as follows (in thousands):

	December 31, 2016	
	Carrying Amount	Fair Value
<b>Assets:</b>		
Money market investments	\$ 47,527	\$ 47,527
Commercial paper	\$ 79,918	\$ 79,898
<b>Long-term debt, including current portion</b>		
Notes	\$ 450,000	\$ 463,500
Term Loan	\$ 95,000	\$ 95,000

Money market investments are included in cash and cash equivalents in the Consolidated Balance Sheets. Commercial paper investments with original maturities of 90 days or less are also included in cash and cash equivalents. These investments are primarily held in U.S. Treasury securities and registered money market funds. These investments were valued using a market approach based on the quoted market prices of the commercial paper (Level 2), or inputs that include quoted market prices for investments similar to the money market investments (Level 1). The fair value of the Notes was estimated based on market prices in active markets (Level 2). The fair value of the Term Loan was estimated based on discounting the remaining principal and interest payments using current market rates for similar debt (Level 2).

**10. TREASURY STOCK**

**Share Repurchase Program.** On July 1, 2015, the Company's board of directors (the "Board") authorized up to \$250 million of share repurchases (subject to a total cap of 600,000 shares of Company common stock). Purchases under the stock repurchase program may be made from time to time on the open market and in privately negotiated transactions. The size and timing of these purchases will be based on a number of factors, including price and business and market conditions. As of December 31, 2016, the Company repurchased 164,933 shares at an aggregate cost of \$72.7 million. During 2016, the Company repurchased 126,797 shares at an aggregate cost of \$56.4 million.

**Restricted Stock Tax Withholding.** Treasury stock is recorded at cost and is presented as a reduction of stockholders' equity in the Consolidated Financial Statements. Shares of Company common stock, with a fair market value equal to the applicable statutory minimum amount of the employee withholding taxes due, are withheld by the Company upon the vesting of restricted stock to pay the applicable statutory minimum amount of employee withholding taxes and are considered common stock repurchases. The Company then pays the applicable statutory minimum amount of withholding taxes in cash. The amount remitted in the year ended December 31, 2016 was \$2.2 million for which the Company withheld 3,616 shares of common stock. Treasury shares of 179,676 at December 31, 2016 includes the aforementioned shares withheld for withholding tax.

**11. EQUITY-BASED COMPENSATION**

Through June 30, 2015, certain of the Company's employees participated in an equity-based incentive compensation plan maintained by GHC for the benefit of certain officers, directors and employees. Equity-based awards issued to employees included non-qualified stock options and restricted stock awards. These compensation costs are recognized within selling, general and administrative expenses.

Table of Contents

On June 5, 2015, the Board adopted the Cable One, Inc. 2015 Omnibus Incentive Compensation Plan (the "2015 Plan"), which became effective July 1, 2015. The 2015 Plan is designed to promote the interests of the Company and its stockholders by providing the employees and directors of the Company with incentives and rewards to encourage them to continue in the service of the Company and with a proprietary interest in pursuing the long-term growth, profitability and financial success of the Company. Any of the directors, officers and employees of the Company and its affiliates are eligible to be granted one or more of the following types of awards under the 2015 Plan: (1) incentive stock options, (2) non-qualified stock options, (3) restricted stock awards, (4) stock appreciation rights ("SARs"), (5) restricted stock units ("RSUs"), (6) cash-based awards, (7) performance-based awards, (8) dividend equivalent rights and (9) other stock-based awards, including, without limitation, performance stock units and deferred stock units. The 2015 Plan includes the authority to grant awards that are intended to qualify as "qualified performance-based compensation" under Section 162(m) of the Internal Revenue Code of 1986, as amended. Unless the 2015 Plan is sooner terminated by the Board, no awards may be granted under the 2015 Plan after the tenth anniversary of its effective date.

The 2015 Plan provides that, subject to certain adjustments for certain corporate events, the maximum number of shares of Company common stock that may be issued under the 2015 Plan is equal to 600,000, and no more than 400,000 shares may be issued pursuant to incentive stock options.

**Restricted Stock Awards.** The Company has granted restricted shares of Company common stock subject to service-based and performance-based vesting conditions under the 2015 Plan to employees of the Company (the "Restricted Shares"). The Restricted Shares generally cliff-vest on the three-year anniversary of the grant date, except in the case of awards made to individuals (i) whose equity awards issued by GHC were forfeited in connection with the spin-off (the "Replacement Shares"), which Replacement Shares vested on December 12, 2016 (with certain exceptions as provided in the applicable award agreement), or (ii) who did not receive an equity award from GHC in 2015 in anticipation of the spin-off (the "Staking Shares"), which Staking Shares are scheduled to cliff-vest on January 2, 2018. For Restricted Shares granted in 2015, the performance goals, which have been met, related primarily to year over year growth in Adjusted EBITDA less capital expenditures. For performance-based Restricted Shares granted in 2016, the performance goals relate primarily to year over year growth in Adjusted EBITDA and to capital expenditures as a percentage of total revenues. The Restricted Shares are subject to the terms and conditions of the 2015 Plan and will otherwise be subject to the terms and conditions of the applicable award agreement.

The compensation arrangements for the Company's non-employee directors under the 2015 Plan provide that each non-employee director is entitled to an annual retainer of \$150,000, plus an additional annual retainer of \$15,000 for each non-employee director who serves as a committee chair or as lead independent director. Each such retainer will be provided in the form of RSUs. Such RSUs will generally be granted on the date of the Company's annual stockholders' meeting and will vest on the first anniversary of the grant date, subject to the director's continued service through such vesting date. Settlement of such RSUs will be in the form of one share of the Company's common stock and will follow vesting, unless the director has previously elected to defer such settlement until his or her separation from service from the Board. As of December 31, 2016, 2,206 RSUs were vested and deferred.

The Restricted Shares and RSUs are collectively referred to as "restricted stock" and a summary of the restricted stock is as follows:

	<u>Restricted Stock</u>	<u>Weighted Average Grant Date Fair Value Per Share</u>
Unvested as of December 31, 2014	-	\$ -
Granted	39,744	\$ 383.18
Unvested as of December 31, 2015	39,744	\$ 383.18
Granted	10,369	\$ 454.75
Forfeited	(1,343)	\$ 389.33
Vested	(10,345)	\$ 383.61
Unvested as of December 31, 2016	<u>38,425</u>	\$ 402.13
Vested and unissued as of December 31, 2016	<u>2,206</u>	\$ 414.62

Table of Contents

Compensation expense associated with unvested restricted stock is recognized on a straight-line basis over the vesting period. The expense recognized each period is dependent upon our estimate of the number of shares that will ultimately vest. Equity-based compensation expense for restricted stock was \$9.4 million and \$3.9 million for 2016 and 2015, respectively. At December 31, 2016, there was \$8.3 million of unrecognized compensation expense related to restricted stock, which is expected to be recognized over a weighted average period of 1.1 years.

**Stock Appreciation Rights.** The Company has granted SARs under the 2015 Plan to certain executives and other employees of the Company. The SARs are scheduled to vest in four equal ratable installments beginning on the first anniversary of the grant date (generally subject to the holder's continued employment with the Company through the applicable vesting date). The SARs are subject to the terms and conditions of the 2015 Plan and will otherwise be subject to the terms and conditions of the applicable award agreement.

A summary of SAR activity is as follows:

	Stock Appreciation Rights	Weighted Average Exercise Price	Weighted Average Fair Value	Aggregate Intrinsic Value (in millions)	Weighted Average Remaining Contractual Term (in years)
Outstanding as of December 31, 2014	-	\$ -	\$ -	\$ -	-
Granted	135,600	\$ 422.31	\$ 87.22	\$ -	-
Outstanding as of December 31, 2015	135,600	\$ 422.31	\$ 87.22	\$ 1.5	9.7
Granted	6,100	\$ 522.50	\$ 106.15	\$ -	9.5
Forfeited	(5,700)	\$ 422.31	\$ 87.22	\$ -	-
Outstanding as of December 31, 2016	136,000	\$ 426.80	\$ 88.07	\$ 26.5	8.7
Vested and exercisable as of December 31, 2016	32,475	\$ 422.31	\$ 87.22	\$ 6.5	8.7

The fair value of the SARs was measured based on the Black-Scholes model. The inputs used in the fair value measurement for 2016 were as follows:

	2016	2015
Expected volatility	21.63%	24.00%
Risk-free interest rate	1.39%	1.75%
Expected term (in years)	6.25	6.25
Expected dividend yield	1.16%	1.45%

Compensation expense associated with unvested SARs is recognized on a straight-line basis over the vesting period. The expense recognized each period is dependent upon our estimate of the number of SARs that will ultimately vest. Equity-based compensation expense for these SARs was \$2.9 million and \$1.0 million for 2016 and 2015, respectively. At December 31, 2016, there was \$8.1 million of unrecognized compensation expense related to the SARs, which is expected to be recognized over a weighted average period of 1.7 years.

The Black-Scholes model used to estimate the fair value of our SARs requires the input of highly subjective assumptions, including the fair value of the underlying common stock, the expected volatility of the price of our common stock, risk-free interest rates, the expected term of the SAR and the expected dividend yield of our common stock. These estimates involve inherent uncertainties and the application of management's judgment. If factors change and different assumptions are used, our equity-based compensation expense could be materially different in the future. These assumptions are estimated as follows:

- **Fair Value** — Our common stock is valued by reference to the publicly-traded price of our common stock.
- **Expected Volatility** — Prior to the spin-off, we did not have a history of market prices for our common stock and since the spin-off, we do not have what we consider a sufficiently active and readily traded market for our common stock to use historical market prices for our common stock to estimate volatility. Accordingly, we estimate the expected stock price volatility for our common stock by using leverage-adjusted average volatilities of industry peers based on daily price observations over a period equivalent to the expected term of the SAR grants. Industry peers consist of other public companies in the cable, satellite, and integrated telecommunication services industry similar in size, stage of life cycle and

financial leverage. We intend to continue to consistently apply this process using the same or similar public companies until a sufficient amount of historical information regarding the volatility of our own common stock share price becomes available.

- **Risk-Free Interest Rate** — The risk-free interest rate assumption is based on observed interest rates appropriate for the expected terms of our awards. The risk-free interest rate assumption is based on the yields of U.S. Treasury securities with maturities similar to the expected term of the SARs for each SAR group.

Table of Contents

- **Expected Term** — The expected term represents the period that our stock-based awards are expected to be outstanding. Prior to the spin-off, we did not have stock-based awards specific to Cable One and therefore did not have a history of the period that our stock-based awards are expected to be outstanding. Accordingly, the expected terms of the awards are based on a simplified method which defines the term as the average of the contractual term of the SARs and the weighted-average vesting period for all open tranches.
- **Expected Dividend Yield** — We expect to pay a dividend in the future and, as such, the weighted average expected dividend yield rate used in the valuation was 1.16%.

In addition to the assumptions used in the Black-Scholes model, the amount of SAR expense we recognize in our Consolidated Statements of Operations and Comprehensive Income includes an estimate of SAR forfeitures. We estimate our forfeiture rate based on an analysis of our actual forfeitures and will continue to evaluate the appropriateness of the forfeiture rate based on actual forfeiture experience, analysis of employee turnover and other factors. Changes in the estimated forfeiture rate can have a significant impact on our equity-based compensation expense as the cumulative effect of adjusting the rate is recognized in the period the forfeiture estimate is changed. If a revised forfeiture rate is higher than the previously estimated forfeiture rate, an adjustment is made that will result in a decrease to the equity-based compensation expense recognized in the Consolidated Financial Statements. If a revised forfeiture rate is lower than the previously estimated forfeiture rate, an adjustment is made that will result in an increase to the equity-based compensation expense recognized in our Consolidated Financial Statements.

**Compensation Expense.** Total equity-based compensation expense recognized was \$12.3 million, \$9.2 million and \$2.0 million for 2016, 2015 and 2014, respectively, and was included in Selling, general and administrative expenses in the Consolidated Statements of Operations and Comprehensive Income. The Company recorded a tax benefit of \$3.2 million related to the equity-based awards granted through December 31, 2016. As of December 31, 2016, the total deferred tax asset related to all outstanding equity-based awards was \$5.0 million. Prior to the spin-off, a portion of these charges related to costs allocated to the Company for GHC corporate employees not solely dedicated to the Company.

Also, in connection with the spin-off, GHC modified the terms of 10,830 restricted stock awards in the second quarter of 2015 affecting 21 Cable One employees. The modification resulted in the acceleration of the vesting period of 6,324 restricted stock awards and the forfeiture of 4,506 restricted stock awards. The Company recorded \$3.7 million of incremental stock compensation expense, net of forfeitures, related to such awards during the first half of 2015, which is included in Selling, general and administrative expenses in the Consolidated Statements of Operations and Comprehensive Income.

## 12. POSTEMPLOYMENT BENEFIT PLANS, PRE-SPIN

**Multiemployer Benefit Plans.** Through June 30, 2015, certain of the Company's employees participated in The Retirement Plan for Graham Holdings Company (the "GHC Retirement Plan") and GHC's Supplemental Executive Retirement Plan (collectively with the GHC Retirement Plan, the "GHC Plans"). The total cost of the GHC Plans was actuarially determined and the Company received an allocation of the service cost associated with the GHC Plans based upon actual benefits earned by the Company's employees. The amount of pension expense allocated to the Company related to these multiemployer plans was \$2.1 million and \$3.9 million in 2015 and 2014, respectively, and is reflected within Operating and Selling, general and administrative expenses in the Consolidated Statements of Operations and Comprehensive Income.

As of June 30, 2015, the GHC Retirement Plan was fully funded and is not in critical or endangered status as defined by the Pension Protection Act of 2006. The GHC Supplemental Executive Retirement Plan is unfunded.

**Multiemployer Savings Plans.** Also, through June 30, 2015, the Company's employees participated in defined contribution plans (primarily 401(k) plans) sponsored by GHC. The defined contribution plans allowed eligible employees to contribute a portion of their salary to the plans, and in some cases, a matching contribution to the funds was provided. The Company recorded expense associated with these GHC-sponsored defined contribution plans of approximately \$0.3 million and \$0.7 million in 2015 and 2014, respectively.

## 13. POSTEMPLOYMENT BENEFIT PLANS, POST-SPIN

As a condition of the spin-off, the Company assumed full financial and reporting responsibility for the postemployment benefit plans offered to eligible employees, other than the GHC Retirement Plan. The accumulated benefits of Company employees participating in GHC sponsored multiemployer benefit and/or savings plans other than the GHC Retirement Plan were transferred into corresponding Cable One sponsored plans. After the spin-off, GHC will continue to administer the GHC Retirement Plan, including making payments under the plan, with respect to current and former Company employees with vested rights thereunder.

Table of Contents

On June 5, 2015, the Board adopted the Cable One, Inc. Supplemental Executive Retirement Plan (the "SERP"), which became effective as of July 1, 2015. The SERP includes a defined benefit portion, or the "DB SERP," and a defined contribution portion, or the "DC SERP."

Upon the spin-off, under the SERP, a \$5.4 million long-term liability was transferred from GHC to the Company representing the accumulated DB SERP and DC SERP liabilities of \$4.1 million and \$1.3 million, respectively. As the DB SERP is unfunded, the Company makes contributions to the DB SERP based on actual benefits payments, which were not material for each of 2016 and 2015. Participant contributions into the DC SERP continued through December 31, 2015. No Company contributions were earned by DC SERP participants on or after July 1, 2015.

On June 5, 2015, the Board also adopted the Cable One 401(k) Savings Plan (the "401(k) Plan"). The 401(k) Plan allows for eligible employees to contribute a portion of their salary to the 401(k) Plan, and in some cases, a matching contribution to the 401(k) Plan is made by the Company. The Company recorded matching contributions to the 401(k) Plan of \$2.8 million and \$1.2 million for 2016 and 2015, respectively.

In addition to the advent of the post-spin postemployment plans described above, the Company has (prior to the spin-off) and may continue to enter into arrangements with certain current and former executives and officers of the Company who desire to defer all or a portion of their annual cash-based incentives under the Cable One, Inc. Deferred Compensation Plan. Upon execution of the agreements, the Company transfers the deferred incentive to a long-term liability. Market-based gains and losses are applied to the respective outstanding balances at each reporting period such that market-based period gains represent additional compensation expense to the Company and market-based losses represent a reduction of compensation expense. The Company recorded compensation expense of \$0.3 million for 2016 and income of \$1.1 million for 2015. The total deferred compensation balance as of December 31, 2016 and 2015 was \$18.2 million and \$18.3 million, respectively, which is included within Accounts payable and accrued liabilities and Accrued compensation and related benefits on the Consolidated Balance Sheets.

In 1999, the Company's then CEO was granted a special deferred compensation award in recognition of his efforts in growing the Company. Annual payouts under this arrangement will commence when he separates service with the Company. The base amounts began accruing interest on May 1, 2016 at an annual rate corresponding to the applicable rate for 12-month U.S. treasury bills (set at each anniversary and carried forward), credited and compounded on an annual basis. The award may be payable in installments upon mutual agreement of the Company and the former CEO, not to extend beyond a ten-year period, however, in the event of his death, all amounts due will be payable in a lump sum within 60 days. No amounts were paid to the former CEO in 2016 in respect of this arrangement. As of December 31, 2016, the Company had an accrued liability of \$2.0 million for this special deferred compensation, which is included in the \$18.2 million deferred compensation balance discussed above.

#### 14. DEFINED BENEFIT POSTRETIREMENT PLAN

The following table sets forth obligation, asset and funding information for the DB SERP:

(in thousands)	As of December 31,	
	2016	2015
<b>Change in Benefit Obligation</b>		
Benefit obligation at Beginning of Period <sup>(1)</sup>	\$ 5,124	\$ 4,115
Interest cost	209	105
Actuarial loss (gain)	(197)	910
Benefits paid	(11)	(6)
<b>Benefit Obligation at End of Year</b>	<b>\$ 5,125</b>	<b>\$ 5,124</b>

<sup>(1)</sup> The beginning of period for 2015 was July 1, 2015 when the Company assumed the DB SERP obligation from GHC.

Table of Contents

The accumulated benefit obligation for the DB SERP at December 31, 2016 and 2015 was \$5.1 million and \$5.1 million, respectively. The amounts recognized in the Consolidated Balance Sheets for defined benefit pension plan were as follows:

(in thousands)	As of December 31,	
	2016	2015
Current liability	\$ (336)	\$ (334)
Noncurrent liability	(4,789)	(4,790)
<b>Recognized Asset (Liability)</b>	<b>\$ (5,125)</b>	<b>\$ (5,124)</b>

Key assumptions utilized for determining the benefit obligation included the use of a discount rate of 3.95% and 4.22% for 2016 and 2015, respectively.

The Company recognized \$0.2 million and \$0.1 million in DB SERP expense for 2016 and 2015, respectively. As the plan is unfunded, the Company makes contributions to the DB SERP based on actual benefit payments. Company contributions were not material for the years ended December 31, 2016 and 2015.

At December 31, 2016, future estimated benefit payments, excluding charges for early retirement programs, were as follows:

(in thousands)	DB SERP
2017	\$ 342
2018	340
2019	337
2020	334
2021	331
2022 – 2026	1,602

During 2017, the Company expects to recognize the following amortization components of net periodic cost for the DB SERP:

(in thousands)	DB SERP
Actuarial loss recognition	\$ 8

## 15. NET INCOME PER SHARE

Basic net income per common share is computed by dividing the net income allocable to the common stockholders by the weighted average number of common shares outstanding during the period. Diluted income per share further includes any common shares available to be issued upon exercise of outstanding SARs if such inclusion would be dilutive.

The following table sets forth the computation of basic and diluted net income per common share (dollars in thousands, except share and per share amounts):

	Year Ended December 31,		
	2016	2015	2014
Numerator:			
Net income	\$ 98,939	\$ 89,033	\$ 147,309
Denominator:			
Weighted average common shares outstanding - Basic	5,743,568	5,853,283	5,843,313
Effect of dilutive equity awards <sup>(1)</sup>	27,392	6,806	-
Weighted average common shares outstanding - Diluted	5,770,960	5,860,089	5,843,313
Net income per share:			
Basic	\$ 17.23	\$ 15.21	\$ 25.21
Diluted	\$ 17.14	\$ 15.19	\$ 25.21

<sup>(1)</sup> SARs outstanding that were not included in the diluted net income per share calculation because the effect would have been anti-dilutive were 438; 89,909 and 0 SARs as of December 31, 2016, 2015 and 2014, respectively.

Table of Contents**16. RELATED PARTY TRANSACTIONS**

**Allocation of expenses.** Prior to the spin-off, the Consolidated Financial Statements included allocations of expenses from GHC for certain overhead functions, including, but not limited to, finance, human resources, legal, information technology, general insurance, risk management and other corporate functions. These expenses were allocated to the Company on the basis of direct usage when identifiable, with the remainder generally allocated on a proportional basis using revenue or headcount. The Company was allocated \$5.8 million and \$12.7 million in 2015 and 2014, respectively, of corporate overhead costs incurred by GHC. These cost allocations are included in selling, general and administrative expenses in the Consolidated Statements of Operations and Comprehensive Income.

These expense allocations were determined on the basis that both the Company and GHC considered to be a reasonable reflection of the utilization of services provided or the benefit received by the Company. The allocations may not, however, have reflected the expense the Company would have incurred as an independent company for the periods prior to the spin-off. Actual costs that may have been incurred if the Company had been a stand-alone company would depend on a number of factors, including the chosen organizational structure and certain strategic decisions.

**Additional GHC Investment (Deficit).** Prior to the spin-off, the net assets of the Company were represented by the cumulative investment in the Company by GHC that is shown as Additional GHC investment (deficit), which comprised share capital, settlements of intercompany balances and transactions between the Company and GHC, and net transfers of cash and cash equivalents. The settlement of intercompany balances and transactions between the Company and GHC that were not historically settled in cash were included in Additional GHC investment (deficit) and thus effectively deemed settled in cash for presentation purposes.

The components of net transfers to GHC were as follows (in thousands):

	<b>Year Ended December 31,</b>	
	<b>2015</b>	<b>2014</b>
Net change in current income tax accounts	\$ (39,083)	\$ 85,071
Allocation of overhead and other expenses from GHC	5,800	12,671
Net advances to GHC	(2,916)	(227,022)
<b>Total net transfers to GHC</b>	<b>\$ (36,199)</b>	<b>\$ (129,280)</b>

**17. COMMITMENTS AND CONTINGENCIES**

**Contractual Obligations.** The Company has obligations to make future payments for goods and services under certain contractual arrangements. These contractual obligations secure the future rights to various assets and services to be used in the normal course of the Company's operations. For example, the Company is contractually committed to make certain minimum lease payments for the use of property under operating lease agreements. In accordance with applicable accounting rules, the future rights and obligations pertaining to firm commitments, such as operating lease obligations and certain purchase obligations under contracts, are not reflected as assets or liabilities in the Consolidated Balance Sheets.

The Company's rent expense, which primarily includes facility rental expense, was \$8.1 million, \$8.4 million and \$1.8 million in 2016, 2015 and 2014, respectively. The Company has lease obligations under various operating leases including minimum lease obligations for real estate.

Table of Contents

The following table summarizes the Company's contractual obligations outstanding as of December 31, 2016 under various contractual obligations (including amounts associated with data processing services, high-speed data connectivity and fiber-related obligations) and the estimated timing and effect that such obligations are expected to have on the Company's liquidity and cash flows in future periods (in thousands):

Years ending December 31,	Programming purchase commitments (1)	Operating leases	Total debt, including capital lease	Other purchase obligations (2)	Total
2017	\$ 171,995	\$ 1,038	\$ 6,250	\$ 24,162	\$ 203,445
2018	150,830	728	8,767	15,731	176,056
2019	124,507	564	12,517	8,988	146,576
2020	83,621	452	67,517	3,990	155,580
2021	19,244	360	17	2,507	22,128
Thereafter	-	741	450,216	4,060	455,017
Total	\$ 550,197	\$ 3,883	\$ 545,284	\$ 59,438	\$ 1,158,802

(1) Includes commitments to purchase programming to be produced in future years.

(2) Includes purchase obligations related to capital projects and other legally binding commitments. Other purchase orders made in the ordinary course of business are excluded from the table above. Any amounts for which we are liable under purchase orders are reflected in our Consolidated Balance Sheets as accounts payable and accrued liabilities.

Programming and content purchases represent contracts that the Company has with cable television networks and broadcast stations to provide programming services to its subscribers. The amounts included above represent estimates of the future programming costs for these contract requirements and commitments based on subscriber numbers and tier placement as of December 31, 2016 applied to the per-subscriber rates contained in these contracts. Actual amounts due under such contracts may differ from the amounts above based on the actual subscriber numbers and tier placements.

The following items are not included as contractual obligations due to various factors discussed below. However, the Company incurs these costs as part of its operations:

- The Company rents utility poles used in its operations. Generally, pole rentals are cancellable on short notice, but the Company anticipates that such rentals will recur. Rent expense for pole attachments was approximately \$5.7 million, \$5.7 million and \$5.5 million in 2016, 2015 and 2014, respectively.
- The Company pays franchise fees under multi-year franchise agreements based on a percentage of revenues generated from video service per year. Franchise fees and other franchise-related costs included in the Consolidated Statements of Operations and Comprehensive Income were \$14.2 million, \$15.7 million and \$16.7 million in 2016, 2015 and 2014, respectively.
- The Company has cable franchise agreements containing provisions requiring the construction of cable plant and the provision of services to customers within the franchise areas. In connection with these obligations under existing franchise agreements, the Company obtains surety bonds or letters of credit guaranteeing performance to municipalities and public utilities and payment of insurance premiums. Such surety bonds and letters of credit as of December 31, 2016 and 2015 totaled \$5.1 million and \$4.6 million, respectively. Payments under these arrangements are required only in the event of nonperformance. The Company does not expect that these contingent commitments will result in any amounts being paid in the foreseeable future.

**Litigation and Legal Matters.** The Company is subject to complaints and administrative proceedings and is a defendant in various civil lawsuits that have arisen in the ordinary course of its businesses. Such matters include: contract disputes; actions alleging negligence; invasion of privacy; trademark, copyright and patent infringement; violations of applicable wage and hour laws; statutory or common law claims involving current and former employees; and other matters. Although the outcomes of the legal claims and proceedings against the Company cannot be predicted with certainty, based on currently available information, management believes that there are no existing claims or proceedings that are likely to have a material effect on the Company's business, financial condition, results of operations or cash flows. Also, based on currently available information, management is of the opinion that the exposure to future material losses from existing legal proceedings is not reasonably possible or that future material losses in excess of the amounts accrued are not reasonably possible.

Table of Contents

**Regulation in the Cable Industry.** The operation of a cable system is extensively regulated by the Federal Communications Commission (the "FCC"), some state governments and most local governments. The FCC has the authority to enforce its regulations through the imposition of substantial fines, the issuance of cease and desist orders and/or the imposition of other administrative sanctions, such as the revocation of FCC licenses needed to operate certain transmission facilities used in connection with cable operations. The Telecommunications Act of 1996 altered the regulatory structure governing the nation's communications providers. It removed barriers to competition in both the cable television market and the voice market. Among other things, it reduced the scope of cable rate regulation and encouraged additional competition in the video programming industry by allowing telephone companies to provide video programming in their own telephone service areas. Future legislative and regulatory changes could adversely affect the Company's operations.

**GHC Agreements.** On June 16, 2015, Cable One entered into several agreements with GHC that set forth the principal actions taken in connection with the spin-off and that govern the relationship of the parties following the spin-off, including a Separation and Distribution Agreement, a Tax Matters Agreement and an Employee Matters Agreement.

**18. SUMMARY OF QUARTERLY OPERATING RESULTS**

**For Each of the Four Quarters in the Year Ended  
December 31, 2016  
(Unaudited)**

**Statement of Operations Information**

(in thousands, except per share and share data)

	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
Revenues	\$ 202,805	\$ 204,557	\$ 205,536	\$ 206,727
Operating costs and expenses	155,422	154,000	161,716	160,280
Income from operations	47,383	50,557	43,820	46,447
Net income	27,044	26,633	20,874	24,388
Net income per common share:				
Basic	\$ 4.67	\$ 4.64	\$ 3.65	\$ 4.27

Table of Contents**19. SUBSEQUENT EVENTS****Acquisition of NewWave**

On January 18, 2017, the Company announced that the Company and Frequency Merger Sub, LLC, its wholly owned subsidiary, entered into an Agreement and Plan of Merger, dated as of January 17, 2017 (the "Merger Agreement"), with RBI Holding LLC ("NewWave"), RBI Blocker Corp., RBI Blocker Holdings LLC and GTCR-RBI, LLC, as equityholder representative, pursuant to which the Company has agreed to acquire all of the outstanding equity interests in NewWave. NewWave is owned by funds affiliated with GTCR LLC, a leading private equity firm based in Chicago. Under the terms of the Merger Agreement, the Company will pay a purchase price of \$735 million in cash, subject to customary post-closing adjustments. The closing of the transaction is subject to the receipt of certain regulatory approvals and other customary closing conditions. The Company currently anticipates that the transaction will be completed in the second quarter of 2017.

The Company expects to finance the transaction with \$650 million of senior secured loans and cash on hand. In connection with the entry into the Merger Agreement, the Company entered into a commitment letter on January 17, 2017, as amended and restated on February 13, 2017, with JPMorgan Chase Bank, N.A., Wells Fargo Bank, National Association, Wells Fargo Securities, LLC, RBC Capital Markets, Royal Bank of Canada, Toronto Dominion Bank, New York Branch, TD Securities (USA) LLC, SunTrust Bank, SunTrust Robinson Humphrey, Inc. and U.S. Bank National Association (the "Lenders"). Pursuant to the amended and restated commitment letter, and subject to the terms and conditions set forth therein, the Lenders have committed to provide the Company with \$300 million of incremental five-year term "A" loans and \$350 million of incremental seven-year term "B" loans to finance the transaction.

On February 13, 2017, the Company entered into an amendment to the Credit Agreement to permit, among other things, the incurrence of the \$650 million of senior secured loans expected to be used to finance the acquisition of NewWave and the other transactions contemplated by the Merger Agreement.

**Change in Accounting Estimate**

In the first quarter of 2017, the Company changed its accounting estimate related to the capitalization of certain internal labor and related costs associated with construction and customer installation activities. As a result of this change in estimate, the Company expects the amount of capitalized labor costs to increase as compared to prior periods, resulting in lower expenses and higher capital expenditures beginning in 2017.

## PART I

### ITEM 1. BUSINESS

#### Overview

We are an integrated communications company engaged primarily in providing an array of services to our residential and business customers. Our communications services include local and long-distance voice, broadband, Multi-Protocol Label Switching ("MPLS"), private line (including special access), Ethernet, colocation, hosting (including cloud hosting and managed hosting), data integration, video, network, public access, Voice over Internet Protocol ("VoIP"), information technology and other ancillary services. We strive to maintain our customer relationships by, among other things, bundling our service offerings to provide our customers with a complete offering of integrated communications services.

Based on our approximately 11.1 million total access lines at December 31, 2016, we believe we are the third largest wireline telecommunications company in the United States. We operate 74% of our total access lines in portions of Colorado, Arizona, Washington, Minnesota, Florida, North Carolina, Oregon, Iowa, Utah, New Mexico, Missouri, and Idaho. We also provide local service in portions of Nevada, Wisconsin, Ohio, Virginia, Texas, Nebraska, Pennsylvania, Alabama, Montana, Indiana, Arkansas, Wyoming, Tennessee, New Jersey, South Dakota, North Dakota, Kansas, South Carolina, Louisiana, Michigan, Illinois, Georgia, Mississippi, Oklahoma, and California. In the portion of these 37 states where we have access lines, which we refer to as our local service area, we are the incumbent local telephone company.

At December 31, 2016, we served approximately 5.9 million broadband subscribers and 325 thousand Prism TV subscribers. We also operate 58 data centers throughout North America, Europe and Asia.

We were incorporated under the laws of the State of Louisiana in 1968. Our principal executive offices are located at 100 CenturyLink Drive, Monroe, Louisiana 71203 and our telephone number is (318) 388-9000.

For a discussion of certain risks applicable to our business, see "Risk Factors" in Item 1A of Part I of this annual report. The summary financial information in this section should be read in conjunction with, and is qualified by reference to, our consolidated financial statements and notes thereto in Item 8 and "Management's Discussion and Analysis of Financial Condition and Results of Operations" in Item 7 of Part II of this annual report.

#### *Pending Transactions*

##### **Pending Acquisition of Level 3**

On October 31, 2016, we entered into a definitive merger agreement under which we propose to acquire Level 3 Communications, Inc. ("Level 3") in a cash and stock transaction. Under the terms of the agreement, Level 3 shareholders will receive \$26.50 per share in cash and 1.4286 of CenturyLink shares for each share of Level 3 common stock they own at closing. CenturyLink shareholders are expected to own approximately 51% and Level 3 shareholders are expected to own approximately 49% of the combined company at closing. On December 31, 2016, Level 3 had outstanding \$10.9 billion of long-term debt.

Completion of the transaction is subject to the receipt of regulatory approvals, including the expiration or termination of the applicable waiting period under the Hart-Scott-Rodino Antitrust Improvements Act, as well as approvals from the Federal Communications Commission ("FCC") and certain state regulatory authorities. The transaction is also subject to the approval of CenturyLink and Level 3 shareholders at meetings scheduled to be held on March 16, 2017, as well as other customary closing conditions. Subject to these conditions, we anticipate closing this transaction by the end of the third quarter 2017. If the merger agreement is terminated under certain circumstances, we may be obligated to pay Level 3 a termination fee of \$472 million, or Level 3 may be obligated to pay CenturyLink a termination fee of \$738 million.

See "Risk Factors—Risks Relating to Our Pending Acquisition of Level 3" in Item 1A of Part I of this annual report, for additional information concerning our pending acquisition of Level 3. Additional information about Level 3 is included in documents filed by it with the Securities and Exchange Commission ("SEC").

The foregoing description of the pending Level 3 acquisition is not complete, and is qualified in its entirety by reference to the definitive joint proxy statement/prospectus filed with the SEC by us on February 13, 2017.

## Pending Sale of Colocation Business and Data Centers

On November 3, 2016, we entered into a definitive stock purchase agreement to sell our data centers and colocation business to a consortium led by BC Partners, Inc. and Medina Capital ("the Purchaser") in exchange for cash and a minority stake in the consortium's newly-formed global secure infrastructure company. During 2016, as a result of the pending sale, the assets to be sold to the Purchaser have been reclassified as assets held for sale in other current assets on our consolidated balance sheet. Additionally, the liabilities to be assumed by the Purchaser have been reclassified and presented as current liabilities associated with assets held for sale on our consolidated balance sheet. The sale is subject to regulatory approvals, including a review by the Committee of Foreign Investments in the United States, as well as other customary closing conditions. This transaction will result in the Purchaser acquiring 57 data centers. This business generated revenues of \$622 million, \$626 million and \$643 million (excluding revenue with affiliates) for the years ended December 31, 2016, 2015 and 2014, respectively (a small portion of which will be retained by us). Based on certain estimates and assumptions regarding the closing date and various tax matters, we currently project that the net cash proceeds from the divestiture will be approximately \$1.5 billion to \$1.7 billion. We plan to use a portion of these net cash proceeds to partly fund our acquisition of Level 3.

See Note 3—Pending Sale of Colocation Business and Data Centers to our consolidated financial statements in Item 8 of Part II of this annual report for additional information on this pending sale.

The foregoing description of the pending sale of our data centers and colocation business is not complete, and is qualified in its entirety by reference to our current report on Form 8-K filed with the SEC on November 7, 2016.

## Financial and Operational Highlights

The following table summarizes the results of our consolidated operations:

	Years Ended December 31,		
	2016 <sup>(1)(2)</sup>	2015 <sup>(1)</sup>	2014 <sup>(3)</sup>
	(Dollars in millions)		
Consolidated statements of operations summary results:			
Operating revenues	\$ 17,470	17,900	18,031
Operating expenses	15,139	15,295	15,621
Operating income	\$ 2,331	2,605	2,410
Net income	\$ 626	878	772

- (1) During 2016 and 2015, we recognized an incremental \$201 million and \$215 million, respectively, of revenue associated with the FCC's Connect America Fund Phase 2 support program as compared to the interstate USF program. For additional information, see Note 1—Basis of Presentation and Summary of Significant Accounting Policies to our consolidated financial statements in Item 8 of Part II of this annual report.
- (2) During 2016, we recognized \$189 million of severance expenses and other one-time termination benefits associated with our workforce reductions and \$52 million of expenses related to our pending acquisition of Level 3.
- (3) During 2014, we recognized a \$60 million tax benefit associated with a deduction for the tax basis for worthless stock in a wholly-owned foreign subsidiary and a \$63 million pension settlement charge.

The following table summarizes certain selected financial information from our consolidated balance sheets:

	As of December 31,	
	2016	2015
	(Dollars in millions)	
Consolidated balance sheets summary information:		
Total assets	\$ 47,017	47,604
Total long-term debt <sup>(1)</sup>	19,993	20,225
Total stockholders' equity	13,399	14,060

- (1) Total long-term debt is the sum of current maturities of long-term debt, capital lease obligations of \$305 million (associated with the pending sale of colocation business and data centers) included in current liabilities associated with assets held for sale and long-term debt on our consolidated balance sheets. For additional information on our total long-term debt, see Note 5—Long-Term Debt and Credit Facilities to our consolidated financial statements in Item 8 of Part II of this annual report. For information on our total obligations, see "Management's Discussion and Analysis of Financial Condition and Results of Operations—Liquidity and Capital Resources—Future Contractual Obligations" in Item 7 of Part II of this annual report.

The following table summarizes certain of our operational metrics:

	As of December 31,		
	2016	2015	2014
	(in thousands except for data centers, which are actuals)		
Operational metrics:			
Total access lines <sup>(1)</sup>	11,090	11,748	12,394
Total broadband subscribers <sup>(1)</sup>	5,945	6,048	6,082
Total Prism TV subscribers	325	285	242
Total data centers <sup>(2)</sup>	58	59	58

(1) Access lines are lines reaching from the customers' premises to a connection with the public network and broadband subscribers are customers that purchase broadband connection service through their existing telephone lines, stand-alone telephone lines, or fiber-optic cables. Our methodology for counting our access lines and broadband subscribers includes only those lines that we use to provide services to external customers and excludes lines used solely by us and our affiliates. It also excludes unbundled loops and includes stand-alone broadband subscribers. We count lines when we install the service.

(2) We define a data center as any facility where we market, sell and deliver either colocation services, multi-tenant managed services, or both. Our data centers are located in North America, Europe and Asia.

Our methodology for counting access lines, broadband subscribers, Prism TV subscribers and data centers may not be comparable to those of other companies.

Substantially all of our long-lived assets are located in the United States and substantially all of our total consolidated operating revenues are from customers located in the United States. We estimate that approximately 1% of our consolidated revenues is derived from providing telecommunications, colocation and hosting services outside the United States.

## Operations

### Segments

We are organized into operating segments based on customer type, business and consumer. These operating segments are our two reportable segments in our consolidated financial statements:

- Business Segment.** Consists generally of providing strategic, legacy and data integration products and services to small, medium and enterprise business, wholesale and governmental customers, including other communication providers. Our strategic products and services offered to these customers include our MPLS, Ethernet, colocation, hosting (including cloud hosting and managed hosting), broadband, VoIP, information technology and other ancillary services. Our legacy services offered to these customers primarily include local and long-distance voice, including the sale of unbundled network elements ("UNEs"), private line (including special access), switched access and other ancillary services. Our data integration offerings include the sale of telecommunications equipment located on customers' premises and related products and professional services, all of which are described further below under the heading "Products and Services"; and
- Consumer Segment.** Consists generally of providing strategic and legacy products and services to residential customers. Our strategic products and services offered to these customers include our broadband, video (including our Prism TV services) and other ancillary services. Our legacy services offered to these customers include local and long-distance voice and other ancillary services.

The following table shows the composition of our operating revenues by segment under our current segment categorization for the years ended December 31, 2016, 2015 and 2014:

	Years Ended December 31,			Percent Change	
	2016	2015	2014	2016 vs 2015	2015 vs 2014
Percentage of revenues:					
Business segment	59%	59%	61%	—%	(2)%
Consumer segment	34%	34%	33%	—%	1 %
Other operating revenues	7%	7%	6%	—%	1 %
Total operating revenues	100%	100%	100%		

For additional information on our segment data, including information on certain centrally-managed assets and expenses not reflected in our segment results, see Note 14—Segment Information to our consolidated financial statements in Item 8 of Part II of this annual report and "Management's Discussion and Analysis of Financial Condition and Results of Operations" in Item 7 of Part II of this annual report.

In January 2017, we announced to our employees an organizational change designed to better align our customer-facing organizations into three business units: consumer; enterprise and IT and managed services. These organizations will be fully integrated with sales, marketing and service delivery support teams to enable faster decision-making, market responsiveness and deeper accountability. We implemented this organization change to create greater focus on the customer experience in each business unit and accelerate strategic revenue growth.

#### *Products and Services*

From time to time, we change the categorization of our products and services, and we may make similar changes in the future. During the second quarter of 2016, we determined that because of declines due to customer migration to other strategic products and services, certain of our business low-bandwidth data services, specifically our private line (including special access) services in our business segment, are more closely aligned with our legacy services than with our strategic services. As described in greater detail in Note 14—Segment Information, these operating revenues are now reflected as legacy services.

Our products and services include local and long-distance voice, broadband, MPLS, private line (including special access), Ethernet, colocation, hosting (including cloud hosting and managed hosting), data integration, video, network, public access, VoIP, information technology and other ancillary services.

We offer our customers the ability to bundle together several products and services. For example, we offer integrated and unlimited local and long-distance voice services. Our customers can also bundle two or more services such as broadband, video (including DIRECTV through our strategic partnership), voice and Verizon Wireless (through our strategic partnership) services. We believe our customers value the convenience and price discounts associated with receiving multiple services through a single company.

Most of our products and services are provided using our telecommunications network, which consists of voice and data switches, copper cables, fiber-optic cables and other equipment. Our network serves approximately 11.1 million access lines and forms a portion of the public switched telephone network, or PSTN. For more information on our network, see "Business—Network Architecture" below.

Described in greater detail below are our key products and services.

### Strategic Services

We primarily focus our marketing and sales efforts on our "strategic" services, which are those services for which demand generally remains strong and that we believe are most important to our future performance. Generally speaking, our strategic services enable our customers to access the Internet, connect to private networks and transmit data, and enhance the security, reliability and efficiency of our customers' communications. Our strategic services are comprised of the following:

- *Broadband.* Our broadband services allow customers to connect at high speeds to the Internet through their existing telephone lines or fiber-optic cables. Substantially all of our broadband subscribers are located within the local service area of our wireline telephone operations;
- *MPLS.* Multi-Protocol Label Switching is a standards-approved data networking technology that we provide to support real-time voice and video transmission services. This technology allows network operators flexibility to divert and route traffic around link failures, congestion and bottlenecks;
- *Ethernet.* Ethernet services include point-to-point and multi-point equipment configurations that facilitate data transmissions across metropolitan areas and wide area networks. Ethernet services are also used to provide transmission services to wireless service providers that use our fiber-optic cables connected to their towers;
- *Colocation.* Colocation services enable our customers to install their own IT equipment in our data centers;
- *Managed Hosting.* Managed hosting includes provision of centralized IT infrastructure and a variety of managed services including cloud and traditional computing, application management, back-up, storage, and other advanced services including planning, design, implementation and support services;
- *Video.* Our video services include our facilities-based video, marketed as CenturyLink Prism TV, which is a premium entertainment service that allows our customers to watch hundreds of television or cable channels and record up to four shows on one home digital video recorder. We also offer satellite digital television under an arrangement with DIRECTV that allows us to market, sell and bill for its services under its brand name;
- *VoIP.* Voice over Internet Protocol, or VoIP, is a real-time, two-way voice communication service (similar to our traditional voice services) that originates over a broadband connection and often terminates on the PSTN; and
- *Managed Services.* Managed services represents a blend of network, hosting, cloud, and IT services that typically require ongoing support from our staff. These services frequently involve equipment or networks owned, acquired or controlled by the customer and often include consulting or software development.

### Legacy Services

Our "legacy" services represent our traditional voice, data and network services, which include the following:

- *Local Voice Services.* We offer local calling services for our residential and business customers within the local service area of our wireline markets, generally for a fixed monthly charge. These services include a number of enhanced calling features and other services, such as call forwarding, caller identification, conference calling, voice mail, selective call ringing and call waiting, for which we generally charge an additional monthly fee. We also generate revenues from non-recurring services, such as inside wire installation, maintenance services, service activation and reactivation. For our wholesale customers, our local calling service offerings include primarily the resale of our voice services and the sale of UNEs, which allow our wholesale customers to use all or part of our network to provide voice and data services to their customers. Local calling services provided to our wholesale customers allow other telecommunications companies the ability to originate or terminate telecommunications services on our network;
- *Long-distance Voice Services.* We offer our residential and business customers domestic and international long-distance services and toll-free services. Our international long-distance services include voice calls that either terminate or originate with our customers in the United States;

- *Private Line.* A private line (including special access) is a direct circuit or channel specifically dedicated for the purpose of directly connecting two or more sites. Private line service offers a high-speed, secure solution for frequent transmission of large amounts of data between sites, including wireless backhaul transmissions;
- *Switched Access Services.* As part of our wholesale services, we provide various forms of switched access services to wireline and wireless service providers for the use of our facilities to originate and terminate their interstate and intrastate voice transmissions;

- *ISDN*. We offer integrated services digital network ("ISDN") services, which use regular telephone lines to support voice, video and data applications; and
- *WAN*. We offer wide area network ("WAN") services, which allow a local communications network to link to networks in remote locations.

### **Data Integration**

Data integration includes the sale of telecommunications equipment located on customers' premises and related products and professional services. These services include network management, installation and maintenance of data equipment and the building of proprietary fiber-optic broadband networks for our governmental and business customers.

### **Other Operating Revenues**

Other operating revenues consist primarily of Connect America Fund ("CAF") support payments, Universal Service Fund ("USF") support payments and USF surcharges. We receive federal support payments from both Phase 1 and Phase 2 of the CAF program, and support payments from both federal and state USF programs. These support payments are government subsidies designed to reimburse us for various costs related to certain telecommunications services, including the costs of deploying, maintaining and operating voice and broadband infrastructure in high-cost rural areas where we are not able to fully recover our costs from our customers. We also collect USF surcharges based on specific items we list on our customers' invoices to fund the Federal Communications Commission's ("FCC") universal service programs. We also generate other operating revenues from the leasing and subleasing of space in our office buildings, warehouses and other properties. Because we centrally manage the activities that generate these other operating revenues, these revenues are not included in our segment revenues.

### **Additional Information**

From time to time, we also make investments in other communications or technology companies.

For further information on regulatory, technological and competitive changes that could impact our revenues, see "Regulation" and "Competition" under this Item 1 below and "Risk Factors" under Item 1A below. For more information on the financial contributions of our various services, see "Management's Discussion and Analysis of Financial Condition and Results of Operations" in Item 7 of Part II of this annual report.

### **Patents, Trade Names, Trademarks and Copyrights**

Either directly or through our subsidiaries, we have rights in various patents, trade names, trademarks, copyrights and other intellectual property necessary to conduct our business, such as our CenturyLink® and Prism® brand names. Our services often use the intellectual property of others, including licensed software. We also occasionally license our intellectual property to others as we deem appropriate.

We periodically receive offers from third parties to purchase or obtain licenses for patents and other intellectual property rights in exchange for royalties or other payments. We also periodically receive notices, or are named in lawsuits, alleging that our products or services infringe on patents or other intellectual property rights of third parties. In certain instances, these matters can potentially adversely impact our operations, operating results or financial position. For additional information, see "Risk Factors—Risks Affecting Our Business" in Item 1A of Part I of this annual report, and Note 16—Commitments and Contingencies to our consolidated financial statements in Item 8 of Part II of this annual report.

### **Sales and Marketing**

We maintain local offices in most of the larger population centers within our local service area. These offices provide sales and customer support services in the community. We also rely on our call center personnel and a variety of channel partners to promote sales of services that meet the needs of our customers. Our sales and marketing strategy is to enhance our sales by offering solutions tailored to the needs of our various customers and promoting our brands. Our offerings include both stand-alone services and bundled services designed to meet the needs of different customer segments.

We conduct most of our operations under the brand name "CenturyLink." Our satellite television service is offered on a co-branded basis under the "DIRECTV" name. Our switched digital television service offering is branded under the name "Prism TV." The wireless service that we offer under our agency agreement with Verizon Wireless is marketed under the "Verizon Wireless" brand name.

Our sales and marketing approach to our residential customers emphasizes customer-oriented sales, marketing and service with a local presence. Our marketing plans include marketing our products and services primarily through direct sales representatives, inbound call centers, local retail stores, telemarketing and third parties, including retailers, satellite television providers, door to door sales agents and digital marketing firms. We support our distribution with digital marketing, direct mail, bill inserts, newspaper and television advertising, website promotions, public relations activities and sponsorship of community events and sports venues.

Similarly, our sales and marketing approach to our business customers includes a commitment to provide comprehensive communications and IT solutions for business, wholesale and governmental customers of all sizes, ranging from small offices to select enterprise customers. We strive to offer our business customers stable, reliable, secure and trusted solutions. Our marketing plans include marketing our products and services primarily through digital advertising, direct sales representatives, inbound call centers, telemarketing and third parties, including telecommunications agents, system integrators, value-added resellers and other telecommunications firms. We support our distribution through digital advertising, events, television advertising, website promotions and public relations.

### Network Architecture

Most of our products and services are provided using our telecommunications network, which consists of voice switches, data switches and routers, high-speed transport equipment, fiber-optic and copper cables and other equipment. Our local exchange carrier networks also include central offices and remote site assets. A substantial portion of our equipment operates with licensed software. As of December 31, 2016, we maintained approximately 1 million miles of copper plant and approximately 265 thousand miles of domestic fiber-optic plant.

We continue to enhance and expand our network by deploying broadband-enabled technologies to provide additional capacity to our customers. Rapid and significant changes in technology are expected to continue in the telecommunications industry. Our future success will depend, in part, on our ability to anticipate and adapt to changes in customer demands and technology. In particular, we anticipate that continued increases in broadband usage by our customers will require us to make significant capital expenditures to increase network capacity or to implement network management practices to alleviate network capacity shortages. The FCC's definition of "broadband service" could create additional requirements for higher capital spending to address marketing and competitive issues. Any such additional expenditures could adversely impact our results of operations and financial condition.

Similarly, we continue to take steps to simplify and modernize our network. To attain our objectives, we plan to continue to undertake several complex projects that we expect will be costly and take several years to complete. The costs of these projects could increase materially if we conclude that we need to replace any or all of our legacy systems.

Like other large telecommunications companies, we are a constant target of cyber-attacks of varying degrees, which has caused us to spend increasingly more time and money to deal with increasingly sophisticated attacks. Some of the attacks result in security breaches, and we periodically notify our customers, our employees or the public of these breaches when necessary or appropriate. None of these resulting security breaches to date have materially adversely affected our business, results of operations or financial condition.

We rely on several other communications companies to provide our offerings. We lease a significant portion of our core fiber network from our competitors and other third parties. Many of these leases will lapse in future years. All of our satellite television and wireless voice services are provided by other carriers under agency agreements, and some of our other services are reliant upon reselling arrangements with other carriers. Our future ability to provide services on the terms of our current offerings will depend in part upon our ability to renew or replace these leases, agreements and arrangements on terms substantially similar to those currently in effect.

For additional information regarding our systems, network, cyber risks, capital expenditure requirements and reliance upon third parties, see "Risk Factors," generally, in Item 1A of Part I of this annual report, and, in particular, "Risk Factors—Risks Affecting Our Business" and "Risk Factors—Risks Affecting Our Liquidity and Capital Resources." For more information on our properties, see "Properties" in Item 2 of Part I of this annual report.

## Regulation

### Overview

As discussed further below, our operations are subject to significant local, state, federal and foreign laws and regulations.

We are subject to significant regulation by the FCC, which regulates interstate communications, and state utility commissions, which regulate intrastate communications. These agencies (i) issue rules to protect consumers and promote competition, (ii) set the rates that telecommunication companies charge each other for exchanging traffic, and (iii) have traditionally developed and administered support programs designed to subsidize the provision of services to high-cost rural areas. In most states, local voice service, switched and special access services and interconnection services are subject to price regulation, although the extent of regulation varies by type of service and geographic region. In addition, we are required to maintain licenses with the FCC and with state utility commissions. Laws and regulations in many states restrict the manner in which a licensed entity can interact with affiliates, transfer assets, issue debt and engage in other business activities. Many acquisitions and divestitures require approval by the FCC and some state commissions. These agencies typically have the authority to withhold their approval, or to request or impose substantial conditions upon the transacting parties in connection with granting their approvals.

The following description discusses some of the major industry regulations that affect our traditional telephone operations, but numerous other regulations not discussed below could also impact us. Some legislation and regulations are currently the subject of judicial, legislative and administrative proceedings which could substantially change the manner in which the telecommunications industry operates and the amount of revenues we receive for our services. Neither the outcome of these proceedings, nor their potential impact on us, can be predicted at this time. For additional information, see "Risk Factors" in Item 1A of Part I of this annual report.

The laws and regulations governing our affairs are quite complex and occasionally in conflict with each other. From time to time, we are fined for failing to meet applicable regulations or service requirements.

### Federal Regulation

#### General

We are required to comply with the Communications Act of 1934. Among other things, this law requires our incumbent local exchange carriers ("ILECs") to offer various of our legacy services at just and reasonable rates and on non-discriminatory terms. The Telecommunications Act of 1996 materially amended the Communications Act of 1934, primarily to promote competition.

The FCC regulates interstate services we provide, including the special access charges we bill for wholesale network transmission and the interstate access charges that we bill to long-distance companies and other communications companies in connection with the origination and termination of interstate phone calls. Additionally, the FCC regulates a number of aspects of our business related to privacy, homeland security and network infrastructure, including our access to and use of local telephone numbers and our provision of emergency 911 services. The FCC has responsibility for maintaining and administering support programs designed to expand nationwide access to communications services (which are described further below), as well as other programs supporting service to low-income households, schools and libraries, and rural health care providers. Changes in the composition of the five members of the FCC or its Chairman can have significant impacts on the regulation of our business.

In recent years, our operations and those of other telecommunications carriers have been further impacted by legislation and regulation imposing additional obligations on us, particularly with regards to providing voice and broadband service, bolstering homeland security, increasing disaster recovery requirements, minimizing environmental impacts and enhancing privacy. These laws include the Communications Assistance for Law Enforcement Act, and laws governing local telephone number portability and customer proprietary network information requirements. In addition, the FCC has heightened its focus on the reliability of emergency 911 services. The FCC has imposed fines on us and other companies for 911 outages and has adopted new compliance requirements for providing 911 service. We are incurring capital and operating expenses designed to comply with the FCC's new requirements and minimize future outages. All of these laws and regulations may cause us to incur additional costs and could impact our ability to compete effectively against companies not subject to the same regulations.

Over the past several years, the FCC has taken various actions and initiated certain proceedings designed to comprehensively evaluate the proper regulation of the provisions of data services to businesses. As part of its evaluation, the FCC has reviewed the rates,

terms and conditions under which these services are provided. The FCC's proceedings remain pending, and their ultimate impact on us is currently unknown.

In 2015, the FCC issued an order regulating the manner in which ILECs can discontinue or reduce certain copper-based services. This order requires ILECs to provide prior notice to certain customers of their proposed change in services, and in certain cases to provide replacement offerings on reasonably comparable terms and conditions. We expect that this order will limit our flexibility to react to changing conditions in the communications industry.

### **Intercarrier Compensation and Universal Service**

For decades, the FCC has regularly considered various intercarrier compensation reforms, generally with a goal to create a uniform mechanism to be used by the entire telecommunications industry for payments between carriers originating, terminating, or carrying telecommunications traffic. The FCC has also traditionally administered support programs designed to promote the deployment of voice and broadband services in high-cost rural areas of the country.

In October 2011, the FCC adopted the Connect America and Intercarrier Compensation Reform order ("the 2011 order"), intended to reform the existing regulatory regime to recognize ongoing shifts to new technologies, including VoIP, and to re-direct universal service funding to foster nationwide broadband coverage. The 2011 order provides for a multi-year transition as terminating intercarrier compensation charges are reduced, universal service funding is explicitly targeted to broadband deployment, and line charges paid by end user customers are increased. These changes have increased the pace of reductions in the amount of switched access revenues related to our wholesale services, while creating opportunities for increased federal USF support and retail revenue funding.

In late 2011, numerous parties filed a petition for reconsideration with the FCC seeking numerous revisions to the 2011 order. Future judicial challenges to the 2011 order are also possible, which could alter or delay the FCC's proposed changes. In addition, based on the outcome of the FCC proceedings, various state commissions may consider changes to their universal service funds or intrastate access rates. Rulemaking designed to implement the order is not complete, and several FCC proceedings relating to the 2011 order remain pending. For these and other reasons, we cannot predict the ultimate impact of these proceedings at this time.

As a result of the 2011 order, a new Universal Service program was created to deploy broadband to unserved and underserved rural areas utilizing the Connect America Fund or "CAF". The CAF substantially replaces interstate USF funding, that we previously utilized to support voice services in high-cost rural markets. There are two phases to the CAF program, CAF Phase 1, a one-time broadband grant program, and CAF Phase 2, which is a multi-year recurring subsidy program for more extensive broadband deployment in price-cap ILEC territories.

In 2015, we accepted CAF funding from the FCC of approximately \$500 million per year for six years to fund the deployment of voice and broadband capable infrastructure for approximately 1.2 million rural households and businesses in 33 states of the 37 states in which we are an ILEC under the CAF Phase 2 high-cost support program. The funding from the CAF Phase 2 support program in these 33 states has substantially replaced the funding from the interstate USF high-cost program that we previously utilized to support voice services in high-cost rural markets in these 33 states. In late 2015, we began receiving these support payments from the FCC under the new CAF Phase 2 support program, which included (i) monthly support payments at a higher rate than under the interstate USF support program and (ii) a substantial one-time transitional payment, designed to align the prior USF payments with the new CAF Phase 2 payments for the full year 2015. For additional information on the payments we have thus far received under this program, see "Management's Discussion and Analysis of Financial Conditions and Results of Operations" in Item 7 of Part II of this annual report.

As a result of accepting CAF Phase 2 support payments for 33 states, we will be obligated to make substantial capital expenditures to build infrastructure by certain specified milestone deadlines. Future funding is contingent upon our compliance with these infrastructure buildout commitments and certain other service requirements, including certain minimum upload and download transmission speed requirements. In addition, if we are not in compliance with FCC measures at the end of the six-year CAF Phase 2 period, we will have 12 months to attain full compliance. If we are not in full compliance after the additional 12 months, we would incur a penalty equal to 1.89 times the average amount of support per location received in the state over the six-year term, plus a potential penalty of 10% of the total CAF Phase 2 support over the six-year term for the state. For information on the risks associated with participating in this program, see "Risk Factors—Risks Relating to Legal and Regulatory Matters" in Item 1A of Part I of this annual report.

For additional information about the potential financial impact of the CAF Phase 2 program, see "Management's Discussion and Analysis of Financial Condition and Results of Operations" in Item 7 of Part II of this annual report.

## **Broadband Regulation**

In February 2015, the FCC adopted new regulations that regulate Internet services as a public utility under Title II of the Communications Act of 1934. In 2016, that order was upheld by a court of appeals. We anticipate that these regulations and any related rules may be reviewed by Congress. In addition, the newly-constituted FCC may reconsider these regulations. At this time, we cannot estimate the impact this may have on our business.

In 2015, the FCC adopted a broadband standard of 25 megabits per second download speed and 3 megabits per second of upload speed. At this time, we are not aware of any regulatory mandates requiring us to deploy this target speed. The new target is simply a benchmark by which the FCC will evaluate broadband deployment progress in the future. However, the FCC could attempt to utilize this broadband speed target in future regulatory proceedings, and our failure to attain these speeds in certain markets could place us at a marketing disadvantage.

## **State Regulation**

In recent years, most states have reduced their regulation of ILECs. Nonetheless, state regulatory commissions generally continue to regulate local service rates, intrastate access charges, state universal service funds and in some cases service quality. We are generally regulated under various forms of alternative regulation that typically limit our ability to increase rates for stand-alone, basic local voice service, but relieve us from the requirement to meet certain earnings tests. In a number of states, we have gained pricing freedom for the majority of retail services other than stand-alone basic consumer voice service. In most of the states in which we operate, we have gained pricing flexibility for certain enhanced calling services, such as caller identification and for bundled services that also include local voice service.

Under state law, our telephone operating subsidiaries are typically governed by laws and regulations that (i) regulate the purchase and sale of ILECs, (ii) prescribe certain reporting requirements, (iii) require ILECs to provide service under publicly-filed tariffs setting forth the terms, conditions and prices of regulated services, (iv) limit ILECs' ability to borrow and pledge their assets, (v) regulate transactions between ILECs and their affiliates and (vi) impose various other service standards.

Unlike many of our competitors, as an ILEC we generally face "carrier of last resort" obligations which include an ongoing requirement to provide service to all prospective and current customers in our service area who request service and are willing to pay rates prescribed in our tariffs. In certain situations, this may constitute a competitive disadvantage to us if competitors can choose to focus on low-cost profitable customers and withhold service from high-cost unprofitable customers. In addition, strict adherence to carrier-of-last-resort requirements may force us to construct facilities with a low likelihood of attractive economic return.

We operate in states where traditional cost recovery mechanisms, including rate structures, are under evaluation or have been modified. As laws and regulations change, there can be no assurance that these mechanisms will continue to provide us with any cost recovery.

For several years, we have faced various carrier complaints, legislation or other investigations regarding our intrastate switched access rates in several of our states. The outcomes of these disputes cannot be determined at this time. If we are required to reduce our intrastate switched access rates as a result of any of these disputes or state initiatives, we will seek to recover displaced switched access revenues from state universal service funds or other services. However, the amount of such recovery, particularly from residential customers, is not assured.

## **Other Regulations**

We are subject to federal and state regulations of customer service standards related to Prism TV. The FCC adopted customer service standards that we must meet in all of our Prism TV markets. The FCC has largely delegated its enforcement powers to local franchise authorities, who have the ability to adopt more stringent standards. We are subject to penalties in many of our local franchise agreements if we fail to meet applicable customer service standards.

Certain of our telecommunications, colocation and hosting services conducted in foreign countries are or may become subject to various foreign laws. Some of the legal requirements governing our foreign operations are more restrictive than or conflict with those governing our domestic operations, which raises our compliance costs and regulatory risks.

Various foreign, federal and state laws govern our storage, maintenance and use of customer data, including a wide range of consumer protection, data protection, privacy, intellectual property and similar laws. The application, interpretation and enforcement of these laws are often uncertain, and may be interpreted and applied inconsistently from jurisdiction to jurisdiction. Various foreign, federal and state legislative or regulatory bodies have recently adopted increasingly restrictive laws or regulations governing the protection or retention of data, and others are contemplating similar actions.

For additional information about these matters, see "Risk Factors—Risks Affecting Our Business" and "Risk Factors—Risks Relating to Legal and Regulatory Matters" in item 1A of Part I of this annual report.

## Competition

### General

We compete in a rapidly evolving and highly competitive market, and we expect intense competition to continue. In addition to competition from larger national telecommunications providers, we are facing increasing competition from several other sources, including cable and satellite companies, wireless providers, technology companies, cloud companies, broadband providers, device providers, resellers, sales agents and facilities-based providers using their own networks as well as those leasing parts of our network. Technological advances and regulatory and legislative changes have increased opportunities for a wide range of alternative communications service providers, which in turn have increased competitive pressures on our business. These alternate providers often face fewer regulations and have lower cost structures than we do. In addition, the communications industry has, in recent years, experienced substantial consolidation, and some of our competitors in one or more lines of our business are generally larger, have stronger brand names, have more financial and business resources and have broader service offerings than we currently do.

Wireless telephone services are a significant source of competition with our legacy ILEC services. It is increasingly common for customers to completely forego use of traditional wireline phone service and instead rely solely on wireless service for voice services. We anticipate this trend will continue, particularly as our older customers are replaced over time with younger customers who are less accustomed to using traditional wireline voice services. Technological and regulatory developments in wireless services, Wi-Fi, and other wired and wireless technologies have contributed to the development of alternatives to traditional landline voice services. Moreover, the growing prevalence of electronic mail, text messaging, social networking and similar digital non-voice communications services continues to reduce the demand for traditional landline voice services. These factors have led to a long-term systemic decline in the number of our wireline voice service customers.

The Telecommunications Act of 1996, which obligates ILECs to permit competitors to interconnect their facilities to the ILEC's network and to take various other steps that are designed to promote competition, imposes several duties on an ILEC if it receives a specific request from another entity which seeks to connect with or provide services using the ILEC's network. In addition, each ILEC is obligated to (i) negotiate interconnection agreements in good faith, (ii) provide nondiscriminatory "unbundled" access to all aspects of the ILEC's network, (iii) offer resale of its telecommunications services at wholesale rates and (iv) permit competitors, on terms and conditions (including rates) that are just, reasonable and nondiscriminatory, to colocate their physical plant on the ILEC's property, or provide virtual colocation if physical colocation is not practicable. Current FCC rules require ILECs to lease a network element only in those situations where competing carriers genuinely would be impaired without access to such network elements, and where the unbundling would not interfere with the development of facilities-based competition.

As a result of these regulatory, consumer and technological developments, ILECs also face competition from competitive local exchange carriers, or CLECs, particularly in densely populated areas. CLECs provide competing services through reselling an ILEC's local services, through use of an ILEC's unbundled network elements or through their own facilities.

Technological developments have led to the development of new products and services that have reduced the demand for our traditional services, as noted above, or that compete with traditional ILEC services. Technological improvements have enabled cable television companies to provide traditional circuit-switched telephone service over their cable networks, and several national cable companies have aggressively marketed these services. Similarly, companies providing VoIP services provide voice communication services over the Internet which compete with our traditional telephone service and our own VoIP services. In addition, demand for our broadband services could be adversely affected by advanced wireless data transmission technologies being deployed by wireless providers and by certain technologies permitting cable companies and other competitors to deliver faster average broadband transmission speeds than ours.

Similar to us, many cable, technology or other communications companies that previously offered a limited range of services are now offering diversified bundles of services, either through their own networks, reselling arrangements or joint ventures. As such, a growing number of companies are competing to serve the communications needs of the same customer base. Such activities will continue to place downward pressure on the demand for and pricing of our services.

As both residential and business customers increasingly demand high-speed connections for entertainment, communications and productivity, we expect the demands on our network will continue to increase over the next several years. To succeed, we must

continue to invest in our networks to ensure that they can deliver competitive services that meet these increasing bandwidth and speed requirements. In addition, network reliability and security are increasingly important competitive factors in our business.

In addition to facing direct competition from those providers described above, ILECs increasingly face competition from alternate communication systems constructed by long distance carriers, large customers, municipalities or alternative access vendors. These systems are capable of originating or terminating calls without use of an ILEC's networks or switching services. Other potential sources of competition include non-carrier systems that are capable of bypassing ILECs' local networks, either partially or completely, through various means, including the provision of special access or independent switching services and the concentration of telecommunications traffic on a few of an ILEC's access lines. We anticipate that all these trends will continue and lead to decreased billable use of our networks.

Additional information about competitive pressures is located (i) under the heading "Risk Factors—Risks Affecting Our Business" in Item 1A of Part I of this annual report and (ii) in the discussion immediately below, which contains more specific information on how these trends in competition have impacted our segments.

## ***Business Segment***

### **Strategic Services**

In connection with providing strategic services to our business customers, which includes our small, medium and enterprise business, wholesale and governmental customers, we compete against other telecommunication providers, as well as other regional and national carriers, other data transport providers, cable companies, CLECs and other enterprises, some of whom are substantially larger than us. Competition is based on price, bandwidth, quality and speed of service, promotions and bundled offerings. In providing broadband services, we compete primarily with cable companies, wireless providers, technology companies and other broadband service providers. We face competition in Ethernet based services in the wholesale market from cable companies and fiber based providers.

Our competitors for providing integrated data, broadband, voice services and other IT services to our business customers range from mid-sized businesses to large enterprises. Due to the size and capacity of some of these companies, our competitors may be able to offer more inexpensive solutions to our customers. To compete, we focus on providing sophisticated, secure and performance-driven services to our business customers through our global infrastructure.

The number of companies providing business services has grown and increased competition for these services, particularly with respect to smaller business customers. Many of our competitors for strategic services are not subject to the same regulatory requirements as we are and therefore they are able to avoid significant regulatory costs and obligations.

Our competitors for cloud, hosting, colocation and other IT services include telecommunications companies, technology companies, cloud companies, colocation companies, hardware manufacturers and system integrators that support the in-house IT operations for a business or offer outsourcing solutions. Due to the size, capacity and strategically low pricing tactics of some of these companies, our competitors may be able to offer more inexpensive solutions to our customers. The increase in recent years in the number of companies providing these services has placed substantial downward pressure on pricing for a wide range of cloud, hosting, colocation and other IT services. We believe, however, that our hybrid IT services capabilities, which offer multiple products and services (including network services), could help differentiate our products and services from those offered by competitors with a narrower range of products and services. We have remained focused on expanding our hybrid cloud capabilities through internal product development and strategic acquisitions of select startup businesses.

### **Legacy Services**

We face intense competition with respect to our legacy services and continue to see customers migrating away from these services and into strategic services. In addition, our legacy services revenues have been, and we expect they will continue to be, adversely affected by product substitution, technological migration and price competition. For our wholesale customers, we will continue to be adversely affected by product substitution, technological migration, industry consolidation and mandated rate reductions. Competition for private line services is based on price, network reach and reliability, service, promotions and bundled offerings. We face significant competition for access services from CLECs, cable companies, resellers and wireless service providers as well as some of our own wholesale markets customers, many of which are deploying their own networks to provide customers with local services. By doing so, these competitors reduce revenue producing traffic on our network.

### **Data Integration**

In providing data integration to our business customers, we compete primarily with large integrators, equipment providers and national telecommunication providers. Competition is based on package offerings, and as such we focus on providing these customers individualized and customizable packages. Our strategy is to provide our data integration through packages that include other strategic and legacy services. As such, in providing data integration we often face many of the same competitive pressures as we face in providing strategic and legacy services, as discussed above.

We expect data integration revenues to continue to fluctuate from quarter to quarter as this offering tends to be more sensitive than others to changes in the economy and in spending trends of our governmental customers. We further expect the profit margins on our data integration offerings to continue to be lower than those of our strategic and legacy services.

### *Consumer Segment*

#### **Strategic Services**

With respect to providing our strategic services to residential customers, competition is based on price, bandwidth, quality and speed of service, promotions and bundled offerings. Wireless carriers' latest generation technologies are allowing them to more directly compete with our strategic services. The manner in which we compete for broadband customers in this segment is substantially similar to the manner in which we compete for business customers, as described in the above section. In reselling DIRECTV video services, we compete primarily with cable and other satellite companies as well as other sales agents and resellers. Our Prism TV residential video service faces substantial competition from a variety of competitors, including well-established cable companies, satellite companies and several national companies that deliver content over the Internet and on mobile devices. Many of our competitors for these strategic services are not subject to the same regulatory requirements as we are, and therefore are able to avoid significant regulatory costs and obligations.

Our strategy for maintaining and increasing our base of broadband customers is based on pricing, packaging of services and features and quality of service. In order to remain competitive, we believe continually increasing connection speeds is important. As a result, we continue to invest in our network, which allows for the delivery of higher speed broadband services. We also continue to expand our marketing and product bundling efforts by offering a variety of bundled products and services with various pricing discounts, as we compete in a maturing market in which a significant portion of consumers already have broadband services. We offer these bundled products and services through various sales and marketing opportunities as further described above under the heading "Sales and Marketing."

#### **Legacy Services**

Although our status as an ILEC continues to provide us advantages in providing local services in our local service area, as noted above, we increasingly face significant competition as an increasing number of consumers are willing to substitute cable, wireless and electronic communications for traditional voice telecommunications services. This has led to an increase in the number and type of competitors within our industry, price compression and a decrease in our market share. As a result of this product substitution, we face greater competition in providing local and long-distance voice services from wireless providers, resellers and sales agents (including ourselves), social media hosts and broadband service providers, including cable companies. We also continue to compete with traditional telecommunications providers, such as national carriers, smaller regional providers, CLECs and independent telephone companies.

Our strategy to manage access line loss is based primarily on our pricing, packaging of services and features and quality of service. While bundle price discounts have resulted in lower average revenues for our individual services, we believe service bundles continue to positively impact our customer retention.

#### **Acquisitions and Dispositions**

We regularly evaluate the possibility of acquiring additional assets or disposing of assets in exchange for cash, securities or other properties, and at any given time may be engaged in discussions or negotiations regarding additional acquisitions or dispositions. We generally do not announce our acquisitions or dispositions until we have entered into a preliminary or definitive agreement.

During 2016, we acquired all of the outstanding stock of three companies for total consideration of \$53 million, including future deferred or contingent cash payments of \$14 million, of which \$49 million has initially been attributed to goodwill. These acquisitions were consummated to expand the product offerings of our then business segment, and therefore, the goodwill was assigned to that segment. The majority of the goodwill is attributed primarily to expected future increases in revenue from the sale of new products. The majority of the goodwill from these acquisitions is expected to be deductible for tax purposes. See Note 4—Goodwill, Customer Relationships and Other Intangible Assets for additional information on these acquisitions.

## Environmental Compliance

From time to time we may incur environmental compliance and remediation expenses, mainly resulting from owning or operating prior industrial sites or operating vehicle fleets or power supplies for our communications equipment. Although we cannot assess with certainty the impact of any future compliance and remediation obligations or provide you with any assurances regarding the ultimate impact thereof, we do not currently believe that future environmental compliance and remediation expenditures will have a material adverse effect on our financial condition or results of operations. For additional information, see "Risk Factors—Risks Relating to Legal and Regulatory Matters—Risks posed by other regulation" in Item 1A of Part I of this annual report and Note 16—Commitments and Contingencies included in Item 8 of Part II of this annual report.

## Seasonality

Overall, our business is not materially impacted by seasonality. Our network-related operating expenses are, however, generally higher in the second and third quarters of the year. From time to time, weather related problems have resulted in increased costs to repair our network and respond to service calls in some of our markets. The amount and timing of these costs are subject to the weather patterns of any given year, but have generally been highest during the third quarter and have been related to damage from severe storms, including hurricanes, tropical storms and tornadoes in our markets along the Atlantic and Gulf of Mexico coastlines.

## Employees

At December 31, 2016, we had approximately 40,000 employees, of which approximately 15,000 are members of either the Communications Workers of America ("CWA") or the International Brotherhood of Electrical Workers ("IBEW"). See the discussion of risks relating to our labor relations in "Risk Factors—Risks Affecting Our Business" in Item 1A of Part I of this annual report and see Note 18—Labor Union Contracts to our consolidated financial statements in Item 8 of Part II of this annual report for additional information on the timing of certain contract expirations.

Over the last several years, we have reduced our workforce primarily due to (i) increased competitive pressures, (ii) the loss of access lines and related legacy revenues, (iii) cost reduction initiatives, (iv) process improvements through automation and (v) integration efforts from our acquisitions.

## Website Access and Important Investor Information

Our website is [www.centurylink.com](http://www.centurylink.com). We routinely post important investor information in the "Investor Relations" section of our website at [ir.centurylink.com](http://ir.centurylink.com). The information contained on, or that may be accessed through, our website is not part of this annual report. You may obtain free electronic copies of our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and amendments to those reports in the "Investor Relations" section of our website ([ir.centurylink.com](http://ir.centurylink.com)) under the heading "SEC Filings." These reports are available on our website as soon as reasonably practicable after we electronically file them with the SEC. From time to time we also use our website to webcast our earnings calls and certain of our meetings with investors or other members of the investment community.

We have adopted a written code of conduct that serves as the code of ethics applicable to our directors, officers and employees, in accordance with applicable laws and rules promulgated by the SEC and the New York Stock Exchange. In the event that we make any changes (other than by a technical, administrative or non-substantive amendment) to, or provide any waivers from, the provisions of our code of conduct applicable to our directors or executive officers, we intend to disclose these events on our website or in a report on Form 8-K filed with the SEC. The code of conduct, as well as copies of our guidelines on significant governance issues and the charters of our key board committees, are also available in the "Corporate Governance" section of our website at [www.centurylink.com/Pages/AboutUs/Governance/](http://www.centurylink.com/Pages/AboutUs/Governance/) or in print to any shareholder who requests them by sending a written request to our Corporate Secretary at CenturyLink, Inc., 100 CenturyLink Drive, Monroe, Louisiana, 71203.

Investors may also read and copy any materials filed with the SEC at the SEC's Public Reference Room at 100 F Street, N.E., Washington, D.C. 20549. For information on the operation of the Public Reference Room, you are encouraged to call the SEC at 1-800-SEC-0330. For all of our electronic filings, the SEC maintains a website at [www.sec.gov](http://www.sec.gov) that contains reports, proxy statements and other information regarding issuers that file electronically with the SEC.

In connection with filing this annual report, our chief executive officer and chief financial officer made the certifications regarding our financial disclosures required under the Sarbanes-Oxley Act of 2002, and its related regulations. In addition, during

2016, our chief executive officer certified to the New York Stock Exchange that he was unaware of any violations by us of the New York Stock Exchange's corporate governance listing standards.

We typically disclose material non-public information by disseminating press releases, making public filings with the SEC, or disclosing information during publicly accessible meetings or conference calls. Nonetheless, from time to time we have used, and intend to continue to use, our website and social media accounts to augment our disclosures.

### Special Note Regarding Forward-Looking Statements and Related Matters

This annual report and other documents filed by us under the federal securities law include, and future oral or written statements or press releases by us and our management may include, forward-looking statements about our business, financial condition, operating results and prospects. These statements constitute "forward-looking" statements as defined by, and are subject to the "safe harbor" protections under, the federal securities laws. These statements include, among others:

- forecasts of our anticipated future results of operations or financial position;
- statements concerning the impact of our transactions, investments, product development and other initiatives, including our pending acquisitions and dispositions and our participation in government programs;
- statements about our liquidity, tax position, tax rates, asset values, contingent liabilities, growth opportunities and growth rates, acquisition and divestiture opportunities, business prospects, regulatory and competitive outlook, investment and expenditure plans, business strategies, dividend and stock repurchase plans, capital allocation plans, financing alternatives and sources, and pricing plans; and
- other similar statements of our expectations, beliefs, future plans and strategies, anticipated developments and other matters that are not historical facts, many of which are highlighted by words such as "may," "would," "could," "should," "plan," "believes," "expects," "anticipates," "estimates," "projects," "intends," "likely," "seeks," "hopes," or variations or similar expressions.

These forward-looking statements are based upon our judgment and assumptions as of the date such statements are made concerning future developments and events, many of which are beyond our control. These forward-looking statements, and the assumptions upon which they are based, (i) are not guarantees of future results, (ii) are inherently speculative and (iii) are subject to a number of risks and uncertainties. Actual events and results may differ materially from those anticipated, estimated, projected or implied by us in those statements if one or more of these risks or uncertainties materialize, or if our underlying assumptions prove incorrect. Factors that could affect actual results include but are not limited to:

- the effects of competition from a wide variety of competitive providers, including decreased demand for our legacy offerings and increased pricing pressures;
- the effects of new, emerging or competing technologies, including those that could make our products less desirable or obsolete;
- the effects of ongoing changes in the regulation of the communications industry, including the outcome of regulatory or judicial proceedings relating to intercarrier compensation, interconnection obligations, access charges, universal service, broadband deployment, data protection and net neutrality;
- our ability to (i) successfully complete our pending acquisition of Level 3, including the timely receipt of all requisite financing and all shareholder and regulatory approvals free of any detrimental conditions, and (ii) timely realize the anticipated benefits of the transaction, including our ability after the closing to attain anticipated cost savings, to use Level 3's net operating loss carryforwards in the amounts projected, to retain key personnel and to avoid unanticipated integration disruptions.
- our ability to effectively adjust to changes in the communications industry, and changes in the composition of our markets and product mix;
- possible changes in the demand for our products and services, including our ability to effectively respond to increased demand for high-speed broadband service;
- our ability to successfully maintain the quality and profitability of our existing product and service offerings, to provision

them successfully to our customers and to introduce new offerings on a timely and cost-effective basis;

- the adverse impact on our business and network from possible equipment failures, service outages, security breaches or similar events impacting our network;
- our ability to generate cash flows sufficient to fund our financial commitments and objectives, including our capital expenditures, operating costs, periodic share repurchases, dividends, pension contributions and other benefits payments, and debt repayments;

- changes in our operating plans, corporate strategies, dividend payment plans or other capital allocation plans, whether based upon changes in our cash flows, cash requirements, financial performance, financial position, market conditions or otherwise;
- our ability to effectively retain and hire key personnel and to successfully negotiate collective bargaining agreements on reasonable terms without work stoppages;
- increases in the costs of our pension, health, post-employment or other benefits, including those caused by changes in markets, interest rates, mortality rates, demographics or regulations;
- adverse changes in our access to credit markets on favorable terms, whether caused by changes in our financial position, lower debt credit ratings, unstable markets or otherwise;
- our ability to maintain favorable relations with our key business partners, suppliers, vendors, landlords and financial institutions;
- our ability to effectively manage our network buildout project and our other expansion opportunities;
- our ability to collect our receivables from financially troubled customers;
- any adverse developments in legal or regulatory proceedings involving us;
- changes in tax, communications, pension, healthcare or other laws or regulations, in governmental support programs, or in general government funding levels;
- the effects of changes in accounting policies or practices, including potential future impairment charges;
- the effects of adverse weather or other natural or man-made disasters;
- the effects of more general factors such as changes in interest rates, in operating costs, in general market, labor, economic or geo-political conditions, or in public policy; and
- other risks referenced in "Risk Factors" in Item 1A or elsewhere in this annual report or other of our filings with the SEC.

Additional factors or risks that we currently deem immaterial, that are not presently known to us or that arise in the future could also cause our actual results to differ materially from our expected results. Given these uncertainties, investors are cautioned not to unduly rely upon our forward-looking statements. We undertake no obligation to publicly update or revise any forward-looking statements for any reason, whether as a result of new information, future events or developments, changed circumstances, or otherwise. Furthermore, any information about our intentions contained in any of our forward-looking statements reflects our intentions as of the date of such forward-looking statement, and is based upon, among other things, existing regulatory, technological, industry, competitive, economic and market conditions, and our assumptions as of such date. We may change our intentions, strategies or plans (including our dividend or other capital allocation plans) at any time and without notice, based upon any changes in such factors, in our assumptions or otherwise.

Investors should also be aware that while we do, at various times, answer questions raised by securities analysts, it is against our policy to disclose to them selectively any material non-public information or other confidential information. Accordingly, investors should not assume that we agree with any statement or report issued by an analyst with respect to our past or projected performance. To the extent that reports issued by securities analysts contain any projections, forecasts or opinions, such reports are not our responsibility.

Unless otherwise indicated, information contained in this annual report and other documents filed by us under the federal securities laws concerning our views and expectations regarding the communications industry are based on estimates made by us using data from industry sources, and on assumptions made by us based on our management's knowledge and experience in the markets in which we operate and the communications industry generally. You should be aware that we have not independently verified data from industry or other third-party sources and cannot guarantee its accuracy or completeness.

## ITEM IA. RISK FACTORS

The following discussion identifies the most significant risks or uncertainties that could (i) materially and adversely affect our business, financial condition, results of operations, liquidity or prospects or (ii) cause our actual results to differ materially from our anticipated results or other expectations. The following information should be read in conjunction with the other portions of this annual report, including "Management's Discussion and Analysis of Financial Condition and Results of Operations" in Item 7 of Part II and our consolidated financial statements and related notes in Item 8 of Part II. Please note that the following discussion is not intended to comprehensively list all risks or uncertainties faced by us. Our operations or actual results could also be similarly impacted by additional risks and uncertainties that are not currently known to us, that we currently deem to be immaterial, that arise in the future or that are not specific to us, such as general economic conditions.

### Risks Affecting Our Business

*We may not be able to compete successfully against current or future competitors.*

Each of our offerings to our residential and business customers face increasingly intense competition from a variety of sources under evolving market conditions. We expect these trends will continue. In addition to competition from larger national telecommunications providers, we are facing increasing competition from several other sources, including cable and satellite companies, wireless providers, technology companies, cloud companies, broadband providers, device providers, resellers, sales agents and facilities-based providers using their own networks as well as those leasing parts of our network. In particular, (i) intense competition from wireless and other communications providers has led to a long-term systemic decline in the number of our wireline voice customers, (ii) strong competition from cable companies and others has impacted the growth of our broadband operations and (iii) aggressive competition from a wide range of technology companies and other market entrants has limited the prospects for our cloud computing operations. For more detailed information, see "Business—Competition" in Item I of Part I of this annual report.

Some of our current and potential competitors (i) offer products or services that are substitutes for our legacy wireline voice services, including wireless voice and non-voice communication services, (ii) offer a more comprehensive range of communications products and services, (iii) offer products or services with features that we cannot readily match in some or all of our markets, (iv) offer shorter installation intervals, allowing customers to begin receiving services sooner after ordering, (v) have greater marketing, engineering, research, development, technical, financial and other resources, (vi) have larger or more diverse networks with greater transmission capacity, (vii) conduct operations or raise capital at a lower cost than us, (viii) are subject to less regulation, which we believe enables such competitors to operate more flexibly than us with respect to certain offerings, (ix) offer services nationally or internationally to a larger geographic area or larger base of customers, (x) have substantially stronger brand names, which may provide them with greater pricing power than ours, or (xi) have larger operations than ours, which may enable them to compete more successfully in recruiting top talent, entering into operational or strategic partnerships or acquiring companies. Consequently, these competitors may be better equipped to provide more attractive offerings, to charge lower prices for their products and services, to develop and expand their communications and network infrastructure more quickly, to adapt more swiftly to changes in technologies or customer requirements, to devote greater resources to the marketing and sale of their products and services, to provide more comprehensive customer service, to provide greater resources to research and development initiatives and to take advantage of business or other opportunities more readily. In the past, several of our competitors and their operations have grown through acquisitions and aggressive product development. The continued growth of our competitors could further enhance their competitive positions.

Competition could adversely impact us in several ways, including (i) the loss of customers and market share, (ii) the possibility of customers terminating or reducing their usage of our services or shifting to less profitable services, (iii) reduced traffic on our networks, (iv) our need to expend substantial time or money on new capital improvement projects, (v) our need to lower prices or increase marketing expenses to remain competitive and (vi) our inability to diversify by successfully offering new products or services.

We are continually taking steps to respond to these competitive pressures, but these efforts may not be successful. Our operating results and financial condition would be adversely affected if these initiatives are unsuccessful or insufficient. If this occurred, our ability to pay our debt and other obligations and to re-invest in the business would also be adversely affected.

***Rapid technological changes could significantly impact our competitive and financial position.***

The communications industry has been and continues to be impacted by significant technological changes, which in general are enhancing wireless services and enabling a broader array of companies to compete with us. Many of these technological changes are (i) enabling customers to reduce or bypass use of our networks, (ii) displacing or reducing demand for our services, or (iii) enabling the development of competitive products or services. For years, improvements in wireless and Internet-based voice communications technologies have reduced demand for our legacy voice services, and these trends continue. More recently, continuous improvements in wireless data technologies have enabled wireless carriers to offer competing products, and we expect this trend to continue as technological advances enable these carriers to carry greater amounts of data faster and with less latency. Technological advancements have also permitted cable companies and other of our competitors to deliver faster average broadband transmission speeds than ours. Rapid changes in technology have also placed competitive pressures on our video, cloud and hosting businesses, and enabled new competitors to enter our markets. To enhance the competitiveness of certain of our services, we will likely be required to spend additional capital to install more fiber optic cable or to augment the capabilities of our copper-based services.

We may not be able to accurately predict or respond to changes in technology or industry standards, or to the introduction of newly-offered services. Any of these developments could make some or all of our offerings less desirable or even obsolete, which would place downward pressure on our market share and revenues. These developments could also require us to (i) expend capital or other resources in excess of currently contemplated levels, (ii) forego the development or provision of products or services that others can provide more efficiently, or (iii) make other changes to our operating plans, corporate strategies or capital allocation plans, any of which could be contrary to the expectations of our security holders or could adversely impact our operations. Our inability to effectively respond to technological changes could adversely affect our operating results and financial condition, as well as our ability to service debt and fund other commitments or initiatives.

Even if we succeed in adapting to changes in technology or industry standards by developing new products or services, there is no assurance that the new products or services would have a positive impact on our profit margins or financial performance.

In addition to introducing new technologies and offerings, we may need, from time to time, to phase out outdated and unprofitable technologies and services. If we are unable to do so on a cost-effective basis, we could experience reduced profits.

For additional information on the risks of increased expenditures, see "Risk Factors—Risks Affecting our Liquidity and Capital Resources—Our business requires us to incur substantial capital and operating expenses, which reduces our available free cash flow."

***Our legacy services continue to experience declining revenues, and our efforts to offset these declines may not be successful.***

Primarily as a result of the competitive and technological changes discussed above, we have experienced a prolonged systemic decline in our local voice, long-distance voice, network access, private line and other legacy revenues. Consequently, we have experienced lower consolidated revenues in each of our last several years.

We have taken a variety of steps to counter these declines in our legacy services revenues, including:

- an increased focus on selling a broader range of higher-growth strategic services, which are described in detail elsewhere in this annual report;
- an increased focus on serving a broader range of business, governmental and wholesale customers;
- greater use of service bundles; and
- acquisitions to increase our scale, enhance our business segment and strengthen our product offerings.

However, for the reasons described elsewhere in this annual report, most of our strategic services generate lower profit margins than our legacy services, and some can be expected to experience slowing growth as increasing numbers of our existing or potential customers subscribe to our newer strategic product and service offerings. Moreover, we cannot assure you that the revenues generated from our new offerings will offset revenue losses associated with our legacy services. In addition, our reliance on third parties to provide certain of these strategic services could constrain our flexibility, as described further below.

***Our failure to develop new products and services could adversely impact our competitive position.***

In order to compete effectively and respond to the changing communication needs of our customers, we continuously develop, test and introduce new products and services. Our ability to successfully introduce new product or service offerings on a timely and cost-effective basis could be constrained by a range of factors, including network limitations, support system limitations, limited capital, an inability to attract key personnel with the necessary skills, intellectual property constraints, testing delays, technological limits or an inability to act as quickly or efficiently as other competitors. In addition, new product or service offerings may not be widely accepted by our customers. Our business could be materially adversely affected if we are unable to timely and successfully develop and introduce new products or services.

***Our failure to continuously develop effective service support systems could adversely impact our competitive position.***

For many of our services, we can effectively compete only if we can quickly and efficiently (i) quote and accept customer orders, (ii) provision and initiate ordered services, (iii) provide customers with adequate means to manage their services and (iv) accurately bill for our services. Development of systems designed to support these tasks is a significant undertaking that continuously requires our personnel and third-party vendors to adjust to changes in our offerings and customers' preferences, to eliminate inconsistencies between the practices of our legacy operations and newly-acquired operations, to eliminate older support systems that are costly or obsolete, to develop uniform practices and procedures, and to automate them as much as possible. Our failure to continuously develop service support systems that are satisfactory to our current and potential customers could adversely impact our competitive position.

***We may not be able to successfully adjust to changes in our industry, our markets and our product mix.***

Ongoing changes in the communications industry have fundamentally changed consumers' communications expectations and requirements. In response to these changes, we have substantially altered our product and service offerings through acquisitions and internal product development. Many of these changes have placed a higher premium on sales, marketing and product development functions, and necessitated ongoing changes in our processes and operating protocols, as well as periodic reorganizations of our sales and leadership teams. In addition, we now offer a more complex range of products and services, operate larger and more complex networks and serve a much larger and more diverse set of customers. Consequently, we now face greater challenges in effectively managing and administering our operations and allocating capital and other resources to our various offerings. For all these reasons, we cannot assure you that our efforts to adjust to these changes will be timely or successful.

***Our revenues and cash flows may not be adequate to fund all of our current objectives.***

As noted in the risk factor disclosures appearing above and below, changes in competition, technology, regulation and demand for our legacy services continue to place downward pressure on our consolidated revenues and cash flows. During each of 2016, 2015, 2014 and 2013, we experienced declines in revenues and net cash provided by operating activities as compared to prior periods. Our cash flows will be further impacted by other changes discussed herein, including anticipated increases in our cash tax payments prior to the pending Level 3 acquisition and additional post-retirement health care payments as a result of the depletion in 2016 of substantially all of the post-retirement benefit plan trust assets.

We rely upon our consolidated revenues and cash flows to fund our commitments and business objectives, including without limitation, funding our capital expenditures, operating costs, debt repayments, dividends, periodic share repurchases, periodic pension contributions and other benefits payments. We cannot assure you that our future cash flows will be sufficient to fund all of our cash requirements in the manner currently contemplated. Our inability to fund certain of these payments could have an adverse impact on our business, operations or competitive position or on the value of our securities.

*We could be harmed by security breaches, damages or other significant disruptions or failures of our networks, information technology infrastructure or related systems, or of those we operate for certain of our customers.*

We are materially reliant upon our networks, information technology infrastructure and related technology systems (including our billing and provisioning systems) to provide products and services to our customers and to manage our operations and affairs. We face the risk, as does any company, of a security breach or significant disruption of our information technology infrastructure and related systems. As a communications company that transmits large amounts of information over communications networks, we face an added risk that a security breach or other significant disruption of our public networks or information technology infrastructure and related systems that we develop, install, operate and maintain for certain of our business customers (which includes our wholesale and governmental customers) could lead to material interruptions or curtailments of service. Moreover, in connection with processing and storing sensitive and confidential customer data, we face a heightened risk that a security breach or disruption could result in unauthorized access to our customers' proprietary information on our public networks or internal systems or the systems that we operate and maintain for certain of our customers.

We strive to maintain the security and integrity of information and systems under our control, and maintain contingency plans in the event of security breaches or other system disruptions. Nonetheless, we cannot assure you that our security efforts and measures will prevent unauthorized access to our systems, loss or destruction of data (including confidential customer information), account takeovers, unavailability of service, computer viruses, malware, distributed denial-of-service attacks, or other forms of cyber-attacks or similar events. These threats may derive from human error, hardware or software vulnerabilities, fraud, malice or sabotage on the part of employees, third parties or foreign nations, or could result from aging equipment or accidental technological failure. These threats may also arise from failure or breaches of systems owned, operated or controlled by other unaffiliated operators to the extent we rely on such other systems to deliver services to our customers.

Similar to other large telecommunications companies, we are a constant target of cyber-attacks of varying degrees. Although some of these attacks have resulted in security breaches, to date, none of these breaches have resulted in a material adverse effect on our operating results or financial condition. You should be aware, however, that defenses against cyber-attacks currently available to U.S. companies are unlikely to prevent intrusions by a highly-determined, highly-sophisticated hacker. Consequently, you should assume that we will be unable to implement security barriers or other preventative measures that repel all future cyber-attacks. Any such future security breaches or disruptions could materially adversely affect our business, results of operations or financial condition, especially in light of the growing frequency, scope and well-documented sophistication of cyber-attacks and intrusions.

Although we maintain insurance coverage that may, subject to policy terms and conditions (including self-insured deductibles, coverage restrictions and monetary coverage caps), cover certain aspects of our cyber risks, such insurance coverage may be unavailable or insufficient to cover our losses.

Additional risks to our network, infrastructure and related systems include:

- power losses or physical damage, whether caused by fire, flood, adverse weather conditions, terrorism, sabotage, vandalism or otherwise;
- capacity or system configuration limitations, including those resulting from changes in our customer's usage patterns, the introduction of new technologies or products, or incompatibilities between our newer and older systems;
- theft or failure of our equipment;
- software or hardware obsolescence, defects or malfunctions;
- deficiencies in our processes or controls;
- our inability to hire and retain personnel with the requisite skills to adequately maintain our systems;
- programming, processing and other human error; and
- service failures of our third-party vendors and other disruptions that are beyond our control.

Due to these factors, from time to time in the ordinary course of our business we experience disruptions in our service, and could experience more significant disruptions in the future.

Disruptions, security breaches and other significant failures of the above-described networks and systems could:

- disrupt the proper functioning of these networks and systems, which could in turn disrupt (i) our operational or administrative functions or (ii) the operations of certain of our customers who rely upon us to provide services critical to their operations;
- result in the unauthorized access to, and destruction, loss, theft, misappropriation or release of proprietary, confidential, sensitive, classified or otherwise valuable information of ours, our customers or our customers' end users, including trade secrets, which others could use for competitive, disruptive, destructive or otherwise harmful purposes and outcomes;
- require significant management attention or financial resources to remedy the resulting damages or to change our systems, including expenses to repair systems, add new personnel or develop additional protective systems;
- require us to notify customers, regulatory agencies or the public of data breaches;
- require us to provide credits for future service under certain service level commitments we have provided contractually to our customers or to offer expensive incentives to retain customers;
- subject us to claims for damages, fines, penalties, termination or other remedies under our customer contracts or service standards set by state regulatory commissions, which in certain cases could exceed our insurance coverage; or
- result in a loss of business, damage our reputation among our customers and the public generally, subject us to additional regulatory scrutiny or expose us to prolonged litigation.

*We could experience difficulties in expanding and updating our technical infrastructure.*

Our ability to expand and update our systems and information technology infrastructure in response to our growth and changing business needs is important to our ability to maintain and develop attractive product and service offerings. As discussed further under "Business—Network Architecture" in Item 1 of Part I of this annual report, we are currently undertaking several complex, costly and time-consuming projects to simplify and modernize our network, which combines our legacy network and the networks of companies we have acquired in the past. Unanticipated delays in the completion of these projects may lead to increased project costs or operational inefficiencies. In addition, there may be issues related to our expanded or updated infrastructure that are not identified by our testing processes, and which may only become evident after we have started to fully utilize the redesigned systems. Our failure to modernize and upgrade our technology infrastructure could have adverse consequences, including the delayed implementation of new service offerings, decreased competitiveness of existing service offerings, network instabilities, increased operating or acquisition integration costs, service or billing interruptions, and the diversion of development resources.

Any or all of the foregoing developments could have a negative impact on our business, results of operations, financial condition and cash flows.

*Negative publicity may adversely impact us.*

Outages or other service failures of networks operated by us or other operators could cause substantial adverse publicity affecting us specifically or our industry generally. In either case, media coverage and public statements that insinuate improper actions by us or other operators, regardless of their factual accuracy or truthfulness, may result in negative publicity, litigation, governmental investigations or additional regulations. Addressing negative publicity and any resulting litigation or investigations may distract management, increase costs and divert resources. Negative publicity may have an adverse impact on our reputation and the morale of our employees, which could adversely affect our business, results of operations, financial condition and cash flows.

*Market prices for many of our services have decreased in the past, and any similar price decreases in the future will adversely affect our revenues and margins.*

Over the past several years, a range of competitive and technological factors, including robust network construction and intense competition, have lowered market prices for many of our products and services. If these market conditions persist, we may need to continue to reduce prices to retain customers and revenue. If future price reductions are necessary, we will suffer unless we are able to offset these reductions by reducing our operating expenses or increasing our sales volumes.

***Our future growth potential will depend in part on the continued development and expansion of the Internet.***

Our future growth potential will depend in part upon the continued development and expansion of the Internet as a communication medium and marketplace for the distribution of data, video and other products by businesses, consumers, and governments. The use of the Internet for these purposes may not grow and expand at the rate anticipated by us or others, or may be restricted by factors outside of our control, including (i) actions by other carriers or governmental authorities that restrict us from delivering traffic over other parties' networks, (ii) changes in regulations, (iii) technological stagnation or (iv) changes in consumers' preferences or data usage.

***If we fail to hire and retain qualified executives, managers and employees, our operating results could be harmed.***

Our future success depends on our ability to identify, hire, train and retain executives, managers and employees with technological, engineering, product development, operational, provisioning, marketing, sales, administrative, managerial and other key skills. There is a shortage of qualified personnel in several of these fields. We compete with several other companies for this limited pool of potential employees. As our industry increasingly becomes more competitive, it could become especially difficult to attract and retain top personnel with skills in high demand. Our workforce reduction initiatives over the past couple of years have further increased the challenges of attracting and retaining talented individuals. In addition, subject to limited exceptions, none of our executives or domestic employees have long-term employment agreements. For all these reasons, there is no assurance that our efforts to recruit and retain qualified personnel will be successful.

***Increases in broadband usage may cause network capacity limitations, resulting in service disruptions, reduced capacity or slower transmission speeds for our customers.***

Video streaming services, gaming and peer-to-peer file sharing applications use significantly more bandwidth than other Internet activity such as web browsing and email. As use of these newer services continues to grow, our broadband customers will likely use much more bandwidth than in the past. If this occurs, we could be required to make significant capital expenditures to increase network capacity in order to avoid service disruptions, service degradation or slower transmission speeds for our customers. Alternatively, we could choose to implement network management practices to reduce the network capacity available to bandwidth-intensive activities during certain times in market areas experiencing congestion, which could negatively affect our ability to retain and attract customers in affected markets. While we believe demand for these services may drive broadband customers to pay for faster broadband speeds, competitive or regulatory constraints may preclude us from recovering the costs of the necessary network investments. This could result in an adverse impact to our operating margins, results of operations, financial condition and cash flows.

***We have been accused of infringing the intellectual property rights of others and will likely face similar accusations in the future, which could subject us to costly and time-consuming litigation or require us to seek third-party licenses.***

Like other communications companies, we have increasingly in recent years received a number of notices from third parties or have been named in lawsuits filed by third parties claiming we have infringed or are infringing upon their intellectual property rights. We are currently responding to several of these notices and claims and expect this industry-wide trend will continue. Responding to these claims may require us to expend significant time and money defending our use of the applicable technology, and divert management's time and resources away from other business. In certain instances, we may be required to enter into licensing agreements requiring royalty payments. In the case of litigation, we could be required to pay damages or cease using the applicable technology. If we are required to take one or more of these actions, our profit margins may decline or our operations could be impaired. In addition, in responding to these claims, we may be required to stop selling or redesign one or more of our products or services, which could significantly and adversely affect our business, results of operations, financial condition and cash flows.

Similarly, from time to time, we may need to obtain the right to use certain patents or other intellectual property from third parties to be able to offer new products and services. If we cannot license or otherwise obtain rights to use any required technology from a third party on reasonable terms, our ability to offer new products and services may be prohibited, restricted, made more costly or delayed.

***We may not be successful in protecting and enforcing our intellectual property rights.***

We rely on various patents, copyrights, trade names, trademarks, service marks, trade secrets and other similar intellectual property rights, as well as confidentiality procedures and contractual restrictions, to establish and protect our proprietary rights. The steps we have taken, however, may not prevent unauthorized use or the reverse engineering of our technology. Others may independently develop technologies that are substantially equivalent, superior to, or otherwise competitive to the technologies we employ in our services or that infringe on our intellectual property. We may be unable to prevent competitors from acquiring proprietary rights that are similar to or infringe upon our proprietary rights, or to prevent our current or former employees from using or disclosing to others our proprietary information. Enforcement of our intellectual property rights may depend on initiating legal actions against parties who infringe or misappropriate our proprietary information, but these actions may not be successful, even when our rights have been infringed. If we are unsuccessful in protecting or enforcing our intellectual property rights, our business, competitive position, results of operations and financial condition could be adversely affected.

***Our operations, financial performance and liquidity are materially reliant on various third parties.***

**Reliance on other communications providers.** To offer voice or data services in certain of our markets, we must either lease network capacity from, or interconnect our network with the infrastructure of, other communications carriers who typically compete against us in those markets. Our reliance on these lease or interconnection arrangements limits our control over the quality of our services and exposes us to the risk that our ability to market our services could be adversely impacted by changes in the plans or properties of the carriers upon which we are reliant. In addition, we are exposed to the risk that the other carriers may be unwilling to continue or renew these arrangements in the future on terms favorable to us, or at all. This risk is heightened when the other carrier is a competitor of ours and may benefit from terminating the agreement. If we lose these arrangements and cannot timely replace them, our ability to provide services to our customers and conduct our business could be materially adversely affected.

Conversely, certain of our operations carry a significant amount of voice or data traffic for other communications providers. Their reliance on our services exposes us to the risk that they may transfer all or a portion of this traffic from our network to networks built, owned or leased by them, thereby reducing our revenues. For additional information, see "Management's Discussion and Analysis of Financial Condition and Results of Operations—Segment Results" included in Item 7 of Part II of this annual report.

We also rely on reseller and sales agency arrangements with other communications companies to provide some of the services that we offer to our customers, including video services and wireless products and services. As a reseller or sales agent, we do not control the availability, retail price, design, function, quality, reliability, customer service or branding of these products and services, nor do we directly control all of the marketing and promotion of these products and services. Similar to the risks described above regarding our reliance upon other carriers, we could be adversely affected if these communication companies fail to maintain competitive products or services, or fail to continue to make them available to us on attractive terms, or at all.

Our operations and financial performance could be adversely affected if our relationships with any of these other communications companies are disrupted or terminated for any other reason, including if such other companies:

- become bankrupt or experience substantial financial difficulties;
- suffer work stoppages or other labor strife;
- challenge our right to receive payments or services under applicable regulations or the terms of our existing contractual arrangements; or
- are otherwise unable or unwilling to make payments or provide services to us.

**Reliance on other key suppliers and vendors.** We depend on a limited number of suppliers and vendors for equipment and services relating to our network infrastructure. Our local exchange carrier networks consist of central office and remote sites, all with advanced digital switches. If any of these suppliers experience interruptions or other problems delivering or servicing these network components on a timely basis, our operations could suffer significantly. To the extent that proprietary technology of a supplier is an integral component of our network, we may have limited flexibility to purchase key network components from alternative suppliers and may be adversely affected if third parties assert patent infringement claims against our suppliers or us. We also rely on a limited number of (i) software vendors to support our business management systems, (ii) content suppliers to provide programming to our video operations, and (iii) contractors to assist us in connection with our network construction and maintenance activities. In the event it becomes necessary to seek alternative suppliers and vendors, we may be unable to obtain satisfactory replacement supplies, services, utilities or programming on economically attractive terms, on a timely basis, or at all, which could increase costs or cause disruptions in our services.

**Reliance on utility providers and landlords.** Pending the sale of our colocation business, we operate a substantial number of data center facilities, which are susceptible to electrical power shortages or outages. Our energy costs can fluctuate significantly or increase for a variety of reasons, including changes in legislation and regulation. Several pending proposals designed to reduce greenhouse emissions could substantially increase our energy costs, which we may not be able to pass on to our customers. Due to the increasing sophistication of equipment and our products, our demand or our customers' demand for power may exceed the power capacity in older data centers, which may limit our ability to fully utilize these data centers.

Pending the sale of our colocation business, we lease most of our data centers. Although the majority of these leases provide us with the opportunity to renew the lease, many of these renewal options provide that rent for the renewal period will be equal to the fair market rental rate at the time of renewal. Any resulting increases in our rent costs could have a negative impact on our financial results. We cannot assure you that our data centers in the future will have access to sufficient space or power on attractive terms, or at all.

**Reliance on governmental payments.** We receive a material amount of revenue or government subsidies under various government programs, which are further described under the heading "Risk Factors—Risks Relating to Legal and Regulatory Matters." We also provide products or services to various federal, state and local agencies. Our failure to comply with complex governmental regulations and laws applicable to these programs, or the terms of our governmental contracts, could result in us being suspended or barred from future governmental programs or contracts for a significant period of time. Moreover, certain governmental agencies frequently reserve the right to terminate their contracts for convenience. If our governmental contracts are terminated for any reason, or if we are suspended or barred from governmental programs or contracts, our results of operations and financial condition could be materially adversely affected.

**Reliance on financial institutions.** We rely on a number of financial institutions to provide us with short-term liquidity under our credit facility. If one or more of these lenders default on their funding commitments, our access to revolving credit could be adversely affected.

*Rising costs, changes in consumer behaviors and other industry changes may adversely impact our video business.*

The costs of purchasing video programming have risen significantly in recent years and continue to rise. Moreover, an increasing number of consumers are receiving access to video content through video streaming or other services pursuant to new technologies for a nominal or no fee, which will likely reduce demand for more traditional video products, such as the satellite TV services that we resell and our Prism TV services.

New technologies are also affecting consumer behavior in ways that are changing how content is delivered and viewed. Increased access to various media through wireless devices has the potential to reduce the viewing of our content through traditional distribution outlets. These new technologies have increased the number of entertainment choices available to consumers and intensified the challenges posed by audience fragmentation. Some of these newer technologies also give consumers greater flexibility to watch programming on a time-delayed or on-demand basis. All of these changes, coupled with changing consumer preferences and other related developments, could reduce demand for our video products and services.

*If we fail to extend or renegotiate our collective bargaining agreements with our labor unions as they expire from time to time, or if our unionized employees were to engage in a strike or other work stoppage, our business and operating results could be materially harmed.*

As of December 31, 2016, approximately 38% of our employees were members of various bargaining units represented by the Communications Workers of America or the International Brotherhood of Electrical Workers. From time to time, our labor agreements with unions expire. Approximately 11,000, or 28%, of our employees are subject to collective bargaining agreements that are scheduled to expire October 7, 2017. Although we typically are able to negotiate new bargaining agreements, we cannot predict the outcome of our future negotiations of these agreements. We may be unable to reach new agreements, and union employees may engage in strikes, work slowdowns or other labor actions, which could materially disrupt our ability to provide services and result in increased cost to us. In addition, new labor agreements may impose significant new costs on us, which could impair our financial condition or results of operations in the future. To the extent they contain benefit provisions, these agreements may also limit our flexibility to change benefits in response to industry or competitive changes. In particular, post-employment benefits provided under these agreements could cause us to incur costs not faced by many of our competitors, which could ultimately hinder our competitive position.

*Portions of our property, plant and equipment are located on property owned by third parties.*

We rely on rights-of-way, colocation agreements and other authorizations granted by governmental bodies, railway companies, carriers and other third parties to locate our cable, conduit and other network equipment on or under their respective properties. A significant number of these authorizations are scheduled to lapse over the next five to ten years, unless we are able to extend or renew them. Our operations could be adversely affected if any of these authorizations terminate or lapse, or if the landowner requests price increases.

Over the past few years, certain utilities, cooperatives and municipalities in certain of the states in which we operate have requested significant rate increases for attaching our plant to their facilities. To the extent that these entities are successful in increasing the amount we pay for these attachments, our future operating costs will increase.

*Our business customers may seek to shift risk to us.*

We furnish to and receive from our business customers indemnities relating to damages caused or sustained by us in connection with certain of our operations. Our customers' changing views on risk allocation could cause us to accept greater risk to win new business or could result in us losing business if we are not prepared to take such risks. To the extent that we accept such additional risk, and seek to insure against it, our insurance premiums could rise.

*Our international operations expose us to various regulatory, currency, tax, legal and other risks.*

Our international operations are subject to U.S. and other laws and regulations regarding operations in foreign jurisdictions in which we provide services. These numerous and sometimes conflicting laws and regulations include anti-corruption laws, anti-competition laws, trade restrictions, tax laws, immigration laws, privacy laws and accounting requirements. Many of these laws are complex and change frequently. Regulations that require the awarding of contracts to local contractors or the employment of local citizens may adversely affect our flexibility or competitiveness in these jurisdictions. Local laws and regulations, and their interpretation and enforcement, differ significantly among those jurisdictions. There is a risk that these laws or regulations may materially restrict our ability to deliver services in various foreign jurisdictions or could be breached through inadvertence or mistake, fraudulent or negligent behavior of our employees or agents, failure to comply with certain formal documentation or technical requirements, or otherwise. Violations of these laws and regulations could result in fines and penalties, criminal sanctions against us or our personnel, or prohibitions on the conduct of our business or our ability to operate in one or more countries, any of which could have a material adverse effect on our business, reputation, results of operations, financial condition or prospects.

Many foreign laws and regulations relating to communications services are more restrictive than U.S. laws and regulations, particularly those relating to privacy rights and data retention. For example, all 28 member states of the European Union have adopted new European data protection laws that we believe could impact our operations in Europe and could potentially expose us to an increased risk of litigation or significant regulatory fines. Moreover, national regulatory frameworks that are consistent with the policies and requirements of the World Trade Organization have only recently been, or are still being, enacted in many countries. Accordingly, many countries are still in the early stages of providing for and adapting to a liberalized telecommunications market. As a result, in these markets we may encounter more protracted and difficult procedures to obtain licenses necessary to provide the full set of products and services we seek to offer.

In addition to these international regulatory risks, some of the other risks inherent in conducting business internationally include:

- tax, licensing, political or other business restrictions or requirements;
- uncertainty concerning import and export restrictions, including the risk of fines or penalties assessed for violations;
- longer payment cycles and problems collecting accounts receivable;
- domestic and foreign regulation of overseas operations, including regulation under the Foreign Corrupt Practices Act, or FCPA, as well as other anti-corruption laws;
- economic, social and political instability, with the attendant risks of terrorism, kidnapping, extortion, civic unrest and potential seizure or nationalization of assets;
- currency and exchange controls, repatriation restrictions and fluctuations in currency exchange rates;
- challenges in securing and maintaining the necessary physical and telecommunications infrastructure;

- the inability in certain jurisdictions to enforce contract rights either due to underdeveloped legal systems or government actions that result in a deprivation of contract rights;

- the inability in certain jurisdictions to adequately protect intellectual property rights;
- laws, policies or practices that restrict with whom we can contract or otherwise limit the scope of operations that can legally or practicably be conducted within any particular country;
- potential submission of disputes to the jurisdiction of a foreign court or arbitration panel;
- reliance on third parties, including those with which we have limited experience;
- limitations in the availability, amount or terms of insurance coverage;
- the imposition of unanticipated or increased taxes, increased communications or privacy regulations or other forms of public or governmental regulation that increase our operating expenses; and
- challenges in staffing and managing foreign operations.

Many of these risks are beyond our control, and we cannot predict the nature or the likelihood of the occurrence or corresponding effect of any such events, each of which could have an adverse effect on our financial condition and results of operations.

We do business and may in the future do additional business in certain countries or regions in which corruption is a serious problem. Moreover, in order to effectively compete in certain foreign jurisdictions, it is frequently necessary or required to establish joint ventures, strategic alliances or marketing arrangements with local operators, partners or agents. In certain instances, these local operators, partners or agents may have interests that are not always aligned with ours. Reliance on local operators, partners or agents could expose us to the risk of being unable to control the scope or quality of our overseas services or products, or being held liable under the FCPA or other anti-corruption laws for actions taken by our strategic or local partners or agents even though these partners or agents may not themselves be subject to the FCPA or other applicable anti-corruption laws. Any determination that we have violated the FCPA or other anti-corruption laws could have a material adverse effect on our business, results of operations, reputation or prospects.

*We may not be able in the future to acquire new businesses on attractive terms.*

Historically, much of our growth has been attributable to acquisitions. Our future ability to grow through additional acquisitions could be limited by several factors, including our leverage, debt covenants and inability to identify attractively-priced target companies. Moreover, we generally must devote significant management attention and resources to evaluate acquisition opportunities, which could preclude us from evaluating acquisition opportunities during periods when management is committed to other opportunities, tasks or activities. Accordingly, we cannot assure you that we will be able to attain future growth through acquisitions. See "Risks Relating to Our Pending Acquisition of Level 3" for a discussion of certain specific risks raised by our pending acquisition of Level 3 and see the next risk factor immediately below for a discussion of certain general risks raised by acquisitions.

*Any additional future acquisitions by us would subject us to additional business, operating and financial risks, the impact of which cannot presently be evaluated, and could adversely impact our capital structure or financial position.*

In an effort to implement our business strategies, we may from time to time in the future pursue other acquisition or expansion opportunities, including strategic investments. These transactions could involve acquisitions of entire businesses or investments in start-up or established companies, and could take several forms, including mergers, joint ventures, investments in new lines of business, or the purchase of equity interests or assets. These types of transactions may present significant risks and uncertainties, including the difficulty of identifying appropriate companies to acquire or invest in on acceptable terms, distraction of management from current operations, insufficient revenue acquired to offset liabilities assumed, unexpected expenses, inadequate return of capital, regulatory or compliance issues, potential infringements, potential violations of covenants in our debt instruments and other unidentified issues not discovered in due diligence. To the extent we acquire part or all of a business that is financially unstable or is otherwise subject to a high level of risk, we may be affected by currently unascertainable risks of that business. Accordingly, there is no current basis for you to evaluate the possible merits or risks of the particular business or assets that we may acquire. Moreover, we cannot guarantee that any such transaction will ultimately result in the realization of the benefits of the transaction originally anticipated by us or that any such transaction will not have a material adverse impact on our financial condition or results of operations. In particular, we can provide no assurances that we will be able to successfully integrate the technology systems, billing systems, accounting processes, sales force, cost structure, product development and service delivery processes, standards, controls, policies, strategies and culture of the acquired company with ours. In addition, the financing of any future acquisition completed by us could adversely impact our capital structure as any such financing would likely include the issuance of additional securities or the borrowing of additional funds.

Except as required by law or applicable securities exchange listing standards, we do not expect to ask our shareholders to vote on any proposed acquisition. Moreover, we generally do not announce our acquisitions until we have entered into a preliminary or definitive agreement.

*Unfavorable general economic conditions could negatively impact our operating results and financial condition.*

Unfavorable general economic conditions, including unstable economic and credit markets, could negatively affect our business. Worldwide economic growth has been sluggish since 2008, and many experts believe that a confluence of global factors may result in a prolonged period of economic stagnation, slow growth or economic uncertainty. While it is difficult to predict the ultimate impact of these general economic conditions, they could adversely affect demand for some of our products and services and could cause customers to shift to lower priced products and services or to delay or forego purchases of our products and services. These conditions impact, in particular, our ability to sell discretionary products or services to business customers that are under pressure to reduce costs or to governmental customers that have suffered substantial budget cuts in recent years. Any one or more of these circumstances could continue to depress our revenues. Also, our customers may encounter financial hardships or may not be able to obtain adequate access to credit, which could negatively impact their ability to make timely payments to us. In addition, as discussed further below, unstable economic and credit markets may preclude us from refinancing maturing debt at terms that are as favorable as those from which we previously benefited, at terms that are acceptable to us, or at all. For these reasons, among others, if current economic conditions persist or decline, our operating results, financial condition, and liquidity could be adversely affected.

For additional information about our business and operations, see "Business" in Item 1 of Part I of this annual report.

**Risks Relating to Our Pending Acquisition of Level 3**

*The completion of the Level 3 acquisition is subject to several conditions, including the receipt of consents and approvals from government entities, which may impose conditions that could have an adverse effect on the combined company or could cause the proposed transaction to be abandoned.*

The completion of the Level 3 acquisition is subject to a number of conditions, including, among others, the expiration or termination of the applicable waiting period under the Hart-Scott-Rodino Antitrust Improvements Act and the receipt of approvals from the FCC and certain other governmental entities. In deciding whether to grant some of these approvals, the relevant governmental entity will make a determination of whether, among other things, the transaction is in the public interest. We cannot provide any assurance that the necessary approvals will be obtained.

In addition, regulatory entities may impose certain requirements or obligations as conditions for their approval or in connection with their review. The merger agreement may require CenturyLink or Level 3 to accept conditions from these regulators that could adversely affect the combined company without either of CenturyLink or Level 3 having the right to refuse to close the acquisition on the basis of those regulatory conditions. While we are not required to accept conditions that would or would reasonably be likely to have a material adverse effect on the combined company (assuming for these purposes that the combined company is the size of CenturyLink), this assessment will be made at or prior to the closing and we cannot provide any assurance that any required conditions will not have a material adverse effect on the combined company following the proposed acquisition. In addition, we cannot provide any assurance that these conditions will not result in the abandonment of the acquisition.

It could take longer to receive the requisite governmental consents and approvals than currently anticipated. Any delay in completing the acquisition, whether caused by regulatory delays or otherwise, could cause us, Level 3, as well as the combined company, to incur extra transaction expenses or to delay or fail to realize fully the benefits that we currently expect to receive if the acquisition is successfully completed within the expected time frame.

***Failure to complete the acquisition could negatively affect our stock price and our future business and financial results.***

If the Level 3 acquisition is not completed, our ongoing businesses may be adversely affected and we will be subject to several risks, including the following:

- the possibility that we could be required to pay Level 3 a substantial termination fee and, in some cases, certain expenses of Level 3 if the acquisition is terminated under certain qualifying circumstances;
- the incurrence of costs and expenses relating to the proposed acquisition, such as financing, legal, accounting, financial advisor, filing, printing and mailing fees and expenses, including the potential expense reimbursement obligations described above;
- the possibility of a change in the trading price of our common stock to the extent current trading prices reflect a market assumption that the acquisition will be completed;
- the possibility that we could suffer potential negative reactions from our employees, customers or vendors; and
- the possibility that we could suffer adverse consequences associated with our management's focus on the acquisition instead of on pursuing other opportunities that could have been beneficial to us, without realizing any of the benefits contemplated by the acquisition.

In addition, if the acquisition is not completed, we could be subject to litigation related to any failure to complete the acquisition or to perform our obligations under the merger agreement.

If the acquisition is not completed, we cannot assure you that these risks will not materialize and will not materially affect our business financial results and stock price.

***Our merger agreement with Level 3 contains provisions that could discourage a potential competing acquirer of us or could result in any competing proposal being at a lower price than it might otherwise be.***

Our merger agreement with Level 3 contains "no-shop" provisions that, subject to limited exceptions, restrict our ability to solicit, encourage, facilitate or discuss competing third-party proposals to acquire all or a significant part of CenturyLink. In some circumstances on termination of the merger agreement, we may be required to pay a termination fee or expenses to Level 3. These provisions could discourage a potential competing acquirer that might have an interest in acquiring all or a significant part of us from considering or proposing that acquisition, even if it were prepared to pay an attractive purchase price, or might result in a potential competing acquirer proposing to pay a lower price than it might otherwise have proposed to pay because of the added expense of the termination fee or expenses that may become payable in certain circumstances. If the merger agreement is terminated and we attempt to seek another business acquisition, we may not be able to negotiate a transaction with another party on terms comparable or better than the terms of the Level 3 acquisition.

***The pendency of the Level 3 acquisition could adversely affect the business and operations of CenturyLink or Level 3.***

In connection with the pending Level 3 acquisition, some of the customers or vendors of CenturyLink or Level 3 may delay or defer decisions or reduce their level of business with either or both of the companies, any of which could negatively affect the revenues, earnings, cash flows and expenses of CenturyLink or Level 3, regardless of whether the acquisition is completed. Similarly, current and prospective employees of CenturyLink and Level 3 may experience uncertainty about their future roles with the combined company following the acquisition, which may materially adversely affect the ability of each of CenturyLink or Level 3 to attract and retain key management, sales, marketing, operational and technical personnel during the pendency of the acquisition. In addition, due to operating covenants in the merger agreement, each of CenturyLink and Level 3 may be unable, during the pendency of the acquisition, to pursue strategic transactions, undertake significant capital projects, undertake certain significant financing transactions and otherwise pursue other actions that are not in the ordinary course of business, even if such actions would prove beneficial. Any of these effects could have an adverse effect on the ability to generate revenue at anticipated levels prior to the completion of the acquisition. Moreover, the pursuit of the acquisition and the preparation for the integration of the companies may place a significant burden on the management and personnel of both companies. The diversion of management's attention away from operating the companies in the ordinary course could adversely affect CenturyLink's and Level 3's financial results.

***Current CenturyLink shareholders may have a reduced ownership and voting interest in the combined company after the Level 3 acquisition.***

CenturyLink expects to issue or reserve for issuance approximately 538 million shares of CenturyLink common stock to Level 3 stockholders in connection with the acquisition (including shares of CenturyLink common stock to be issued in connection with outstanding Level 3 equity awards). Upon completion of the Level 3 acquisition, each CenturyLink shareholder will remain a shareholder of CenturyLink with a percentage ownership of the combined company that may be smaller than the shareholder's percentage of CenturyLink prior to the transaction, depending upon such shareholder's current ownership of Level 3 shares. As a result of these potentially reduced ownership percentages, CenturyLink shareholders may have less voting power in the combined company than they now have with respect to CenturyLink.

***We expect to incur substantial expenses related to the Level 3 acquisition.***

We expect to incur substantial expenses in connection with completing the acquisition and integrating our business, operations, networks, systems, technologies, policies and procedures with those of Level 3. There are a large number of systems that will likely be integrated, including management information, purchasing, accounting and finance, sales, payroll and benefits, fixed asset, lease administration and regulatory compliance systems. While we have assumed that a certain level of transaction and integration expenses would be incurred, there are a number of factors beyond our control that could affect the total amount or the timing of our integration expenses. Many of the expenses that will be incurred, by their nature, are difficult to estimate accurately at the present time. Due to these factors, the transaction and integration expenses associated with the acquisition are likely in the near term to exceed the savings that we expect to achieve from the elimination of duplicative expenses and the realization of economies of scale and cost savings related to the integration of the businesses following the completion of the acquisition. As a result of these expenses, we expect to take charges against our earnings before and after the completion of the acquisition. The charges taken after the acquisition are expected to be significant, although the aggregate amount and timing of such charges are uncertain at present.

***Following the Level 3 acquisition, the combined company may be unable to integrate successfully our business and Level 3's business and realize the anticipated benefits of the acquisition.***

The proposed transaction involves the combination of two companies which currently operate as independent public companies. The combined company will be required to devote significant management attention and resources to integrating the business practices and operations of CenturyLink and Level 3. Potential difficulties the combined company may encounter in the integration process include the following:

- the inability to successfully combine our business and Level 3's business in a manner that permits the combined company to achieve the cost savings and operating synergies anticipated to result from the acquisition, which would result in the anticipated benefits of the acquisition not being realized in the time frame currently anticipated or at all;
- lost sales and customers as a result of certain customers of either of the two companies deciding to terminate or reduce their business with the combined company;
- the complexities associated with managing the combined businesses out of several different locations and integrating personnel from the two companies, while at the same time attempting to (i) provide consistent, high quality products and services under a unified culture and (ii) focus on other on-going transactions, including the pending divestiture of our data centers and colocation business and related transactions;
- the additional complexities of combining two companies with different histories, regulatory restrictions, operating structures and markets;
- the failure to retain key employees of either of the two companies;
- potential unknown liabilities and unforeseen increased expenses, delays or regulatory conditions associated with the acquisition; and
- performance shortfalls at one or both of the two companies as a result of the diversion of management's attention caused by completing the acquisition and integrating the companies' operations.

For all these reasons, you should be aware that it is possible that the integration process could result in the distraction of the combined company's management, the disruption of the combined company's ongoing business or inconsistencies in the combined company's products, services, standards, controls, procedures and policies, any of which could adversely affect the ability of the combined company to maintain relationships with customers, vendors and employees or to achieve the anticipated benefits of the acquisition, or could otherwise adversely affect the business and financial results of the combined company.

***Following the Level 3 acquisition, we may be unable to retain key employees.***

The success of the combined company after the acquisition will depend in part upon its ability to retain key Level 3 and CenturyLink employees. Key employees may depart either before or after the acquisition because of issues relating to the uncertainty and difficulty of integration or a desire not to remain with the combined company following the acquisition. Accordingly, no assurance can be given that we, Level 3 and, following the acquisition, the combined company will be able to retain key employees to the same extent as in the past.

***In connection with the Level 3 acquisition, we will incur and assume a substantial amount of indebtedness and the agreements that will govern the indebtedness to be incurred or assumed by us are expected to contain various covenants and other provisions that impose restrictions on our ability to operate.***

As a result of incurring the debt financing for the Level 3 acquisition and assuming Level 3's existing consolidated indebtedness in connection with the acquisition, we will become more leveraged. This could have material adverse consequences for us, including those listed below under the heading "Risks Affecting Our Liquidity and Capital Resources—Our high debt levels expose us to a broad range of risks."

The agreements that will govern the indebtedness to be incurred or assumed by us in connection with the acquisition are expected to contain certain affiliate guarantees and pledges of stock of certain affiliates and various affirmative and negative covenants that may, subject to certain significant exceptions, restrict the ability of us and certain of our subsidiaries to, among other things, pledge property, incur additional indebtedness, enter into sale and lease-back transactions, make loans, advances or other investments, make non-ordinary course asset sales, declare or pay dividends or make other distributions with respect to equity interest, merge or consolidate with any other person or sell or convey certain assets to any one person, among various other things. In particular, certain covenants contained in Level 3's indebtedness to be assumed by us may restrict our ability to distribute cash from Level 3 to other of our affiliated entities, or enter into other transactions among our wholly owned subsidiaries. In addition, some of the agreements that govern the debt financing are expected to contain financial covenants that will require us to maintain certain financial ratios. The ability of us and our subsidiaries to comply with these provisions may be affected by events beyond our and their control. Failure to comply with these covenants could result in an event of default, which, if not cured or waived, could accelerate our debt repayment obligations. Certain of our debt instruments have cross-default or cross-acceleration provisions. When present, these provisions could have a wider impact on liquidity than might otherwise arise from a default or acceleration of a single debt instrument. For additional information, see "Risks Affecting Our Liquidity and Capital Resources."

***Following the Level 3 acquisition, we plan to conduct rebranding initiatives that are likely to involve substantial costs and may not be favorably received by customers.***

Prior to the Level 3 acquisition, CenturyLink and Level 3 will each continue to market their respective products and services using the "CenturyLink" and "Level 3" brand names and logos. Following the acquisition, "CenturyLink" will be the brand name of the combined company. As a result, we expect to incur substantial costs in rebranding the combined company's products and services in those markets that previously used the "Level 3" name, and may incur write-offs associated with the discontinued use of Level 3's brand names. We cannot assure you that customers will be receptive to our proposed rebranding efforts. The failure of any of these initiatives could adversely affect our ability to attract and retain customers after the acquisition, resulting in reduced revenues.

***Consummation of the Level 3 acquisition will increase our exposure to the risk of operating internationally.***

CenturyLink and, to a greater extent, Level 3 conduct international operations, which expose each of them to the risks described under the heading "Risks Affecting Our Business—Our international operations expose us to various regulatory, currency, tax, legal and other risks." Consummation of the Level 3 acquisition will generally increase our exposure to these risks. In particular, our acquisition of Level 3 will increase our exposure to currency exchange rate risks and currency transfer restrictions. Moreover, the acquisition of Level 3's Latin American operations will expose CenturyLink to the economic and political risks of operating in those markets.

***Level 3 has only recently generated net income, and has generated substantial net losses in the past.***

As indicated in Level 3's consolidated financial statements included in its reports filed with the SEC, Level 3 has only generated net income for its three most recently completed full fiscal years, and generated substantial losses prior to then.

***Counterparties to certain significant agreements with Level 3 may exercise contractual rights to terminate such agreements following the Level 3 acquisition.***

Level 3 is a party to certain agreements that give the counterparty a right under certain conditions to terminate the agreement following a "change in control" of Level 3. Under most such agreements, the Level 3 acquisition will constitute a change in control and therefore the counterparty may terminate the agreement upon the closing of the acquisition, subject to the terms and conditions specified in such agreements. Level 3 has agreements subject to such termination provisions with significant customers, major suppliers and providers of services where Level 3 has acted as reseller or sales agent. In addition, certain Level 3 customer contracts, including those with state or federal government agencies, allow the customer to terminate the contract at any time for convenience, which would allow the customer to terminate its contract before, at or after the closing of the acquisition. Any such counterparty may request modifications of their respective agreements as a condition to foregoing exercise of their termination rights. There is no assurance that such agreements will not be terminated, that any such terminations will not result in a material adverse effect, or that any modifications of such agreements to avoid termination will not result in a material adverse effect.

***We may be unable to obtain security clearances necessary to perform certain Level 3 government contracts.***

Certain Level 3 legal entities and officers have security clearances required for Level 3's performance of customer contracts with various government entities. Following the acquisition, it may be necessary for us to obtain comparable security clearances. If we or our officers are unable to qualify for such security clearances, we may not be able to continue to perform such contracts.

***We cannot assure you whether, when or in what amounts we will be able to use Level 3's net operating loss carryforwards following the Level 3 acquisition.***

As of December 31, 2016, Level 3 had approximately \$9.0 billion of net operating loss carryforwards, ("NOLs"), which for U.S. federal income tax purposes can be used to offset future taxable income, subject to certain limitations under Section 382 of the Code and related Treasury regulations. Our ability to use these NOLs following the Level 3 acquisition would likely be further limited by Section 382 if Level 3 is deemed to undergo an ownership change as a result of the acquisition or CenturyLink is deemed to undergo an ownership change following the acquisition, either of which could restrict use of a material portion of the NOLs. Determining the limitations under Section 382 is technical and highly complex. Although the parties, based on their review to date, currently believe that Level 3 will undergo an ownership change as a result of the acquisition, neither company has definitively completed the analysis necessary to confirm this. Moreover, issuances or sales of our stock following the acquisition (including certain transactions outside of our control) could result in an ownership change of CenturyLink under Section 382, which may further limit its use of the NOLs. For these and other reasons, we cannot assure you that we will be able to use the NOLs after the acquisition in the amounts we project.

***Our pending acquisition of Level 3 raises other risks.***

Our pending acquisition of Level 3 and, upon completion thereof, our ownership of Level 3 raise additional risks not described above. For additional information, see (i) the definitive joint proxy statement/prospectus filed with the SEC by us on February 13, 2017 and (ii) Level 3's most recently filed annual report on Form 10-K, as updated by its subsequent quarterly reports on Form 10-Q.

## **Risks Relating to Legal and Regulatory Matters**

***We operate in a highly regulated industry and are therefore exposed to restrictions on our operations and a variety of claims relating to such regulation.***

**General.** We are subject to significant regulation by, among others, (i) the Federal Communications Commission ("FCC"), which regulates interstate communications, (ii) state utility commissions, which regulate intrastate communications, and (iii) various foreign governments and international bodies, which regulate our international operations. Generally, we must obtain and maintain certificates of authority or licenses from these bodies in most territories where we offer regulated services. We cannot assure you that we will be successful in obtaining or retaining all licenses necessary to carry out our business plan, and, even if we are, the prescribed service standards and conditions imposed on us in connection with obtaining or acquiring control of these licenses may impose on us substantial costs and limitations. We are also subject to numerous requirements and interpretations under various international, federal, state and local laws, rules and regulations, which are quite detailed and occasionally in conflict with each other. Accordingly, we cannot ensure that we are always considered to be in compliance with all these requirements at any single point in time. The agencies responsible for the enforcement of these laws, rules and regulations may initiate inquiries or actions based on customer complaints or on their own initiative. Even if we are ultimately found to have complied with applicable regulations, such actions or inquiries could create adverse publicity that negatively impacts our business.

Regulation of the telecommunications industry continues to change, and the regulatory environment varies substantially from jurisdiction to jurisdiction. A substantial portion of our local voice services revenue remains subject to FCC and state utility commission pricing regulation, which periodically exposes us to pricing or earnings disputes and could expose us to unanticipated price declines. In addition, from time to time carriers or other third parties refuse to pay for certain of our services, challenge our rights to receive certain service payments, file complaints requesting rate reductions or take other similar actions that have the potential to reduce our revenues. Our future revenues, costs, and capital investment could be adversely affected by material changes to or decisions regarding the applicability of government requirements, including, but not limited to, changes in rules governing intercarrier compensation, state and federal USF support, competition policies, pricing limitations or operational restrictions. There can be no assurance that future regulatory, judicial or legislative activities will not have a material adverse effect on our operations, or that regulators or third parties will not raise material issues with regard to our compliance or noncompliance with applicable regulations.

Changes in the composition and leadership of the FCC, state commissions and other agencies that regulate our business could have significant impacts on our revenues, expenses, competitive position and prospects. Changes in the composition and leadership of these agencies are often difficult to predict, and make future planning more difficult.

**Risks associated with recent changes in regulation.** Changes in regulation can have a material impact on our business, revenues or financial performance. Recent changes in federal regulations have substantially impacted our operations. In October 2011, the FCC adopted an order providing for a multi-year transition to a regulatory structure that reduces intercarrier compensation charges, redeploys universal service funding to newer technologies, and increases certain end-user charges. These changes, coupled with our participation in the new FCC support programs, has significantly impacted various aspects of our operations, financial results and capital expenditures, including the amount of revenues we collect from our wholesale customers and our receipt of federal support payments. We expect these impacts will continue in the future. For more information, see "Business—Regulation" in Item 1 of Part I of this annual report, and "Management's Discussion and Analysis of Financial Condition and Results of Operations" in Item 7 of Part II of this annual report.

In addition, during the last few years Congress or the FCC has initiated various other changes, including various broadband and Internet regulation initiatives including "network neutrality" regulations (as discussed further below) and actions that will restrict our ability to discontinue or reduce certain services, even if unprofitable. In 2016, the FCC initiated rulemaking regarding the regulation of business data services. This rulemaking, which remains pending, could adversely affect our operations or financial results. Many of the FCC's regulations adopted in recent years remain subject to judicial review and additional rulemakings, thus increasing the difficulty of determining the ultimate impact of these changes on us and our competitors.

Certain states have recently taken steps that could reduce the amount of their universal service support payments to incumbent local exchange companies. If these trends continue, we would suffer a reduction in our revenues from state support programs.

**Risks of higher costs.** Regulations continue to create significant operating and capital costs for us. Challenges to our tariffs by regulators or third parties or delays in obtaining certifications and regulatory approvals could cause us to incur substantial legal and administrative expenses, and, if successful, such challenges could adversely affect the rates that we are able to charge our customers.

Our business also may be impacted by legislation and regulation imposing new or greater obligations related to regulations or laws related to regulating broadband services, storing records, bolstering homeland security or cyber security, increasing disaster recovery requirements, minimizing environmental impacts, enhancing privacy, restricting data collection, protecting intellectual property rights of third parties, or addressing other issues that impact our business, including (i) the Communications Assistance for Law Enforcement Act, which requires communications carriers to ensure that their equipment, facilities, and services are able to facilitate authorized electronic surveillance, (ii) the USA Freedom Act, which requires communication companies to store records of communications of their customers, and (iii) laws that have significantly enhanced our responsibilities relating to data security in certain jurisdictions. We expect our compliance costs to increase if future laws or regulations continue to increase our obligations.

**Increased risks of fines.** We have recently paid certain regulatory fines associated with network or service outages, particularly with respect to outages impacting the availability of emergency - 911 services. Over the past couple of years, we believe that regulators have assessed substantially higher fines than in the past for these types of incidents, and it is possible this trend will continue.

**Risks of reduced flexibility.** As a diversified full service incumbent local exchange carrier in many of our key operating markets, we have traditionally been subject to significant regulation that does not apply to many of our competitors. This regulation in many instances restricts our ability to change rates, to compete and to respond rapidly to changing industry conditions. In particular, cable television companies in recent years have been able to exploit differences in regulatory oversight, which we believe has helped them to develop service offerings competitive with ours. As our business becomes increasingly competitive, regulatory disparities between us and our competitors could increasingly impede our ability to compete.

**Risks posed by other regulations.** All of our operations are also subject to a variety of environmental, safety, health and other governmental regulations. We monitor our compliance with federal, state and local regulations governing the management, discharge and disposal of hazardous and environmentally sensitive materials. Although we believe that we are in compliance with these regulations in all material respects, our management, discharge or disposal of hazardous and environmentally sensitive materials might expose us to claims or actions that could potentially have a material adverse effect on our business, financial condition and operating results. For a discussion of regulatory risks associated with our international operations, see "Risk Factors—Risks Affecting Our Business—Our international operations expose us to various regulatory, currency, tax, legal and other risks."

***Our participation in the FCC's Connect America Fund ("CAF") Phase 2 support program poses certain risks.***

Our participation in the FCC's CAF Phase 2 support program subjects us to certain financial risks. If we fail to attain certain specified infrastructure buildout requirements, the FCC could withhold future CAF support payments until these shortcomings are rectified. In addition, if we are not in compliance with FCC measures by the end of the CAF Phase 2 program, we would incur substantial penalties. To comply with the FCC's buildout requirements, we believe we will need to dedicate a substantial portion of our future capital expenditure budget to the construction of new infrastructure. The CAF-related expenditures could reduce the amount of funds we are willing or able to allocate to other initiatives or projects.

***Regulation of the Internet could limit our ability to operate our broadband business profitably and to manage our broadband facilities efficiently.***

In order to continue to provide quality broadband service at attractive prices, we believe we need the continued flexibility to respond to changing consumer demands, to manage bandwidth usage efficiently for the benefit of all customers and to invest in our networks. In 2015, the FCC adopted new regulations that regulate broadband services as a public utility under Title II of the Communications Act. The ultimate impact of the new regulations will depend on several factors, including the manner in which the new regulations are implemented and enforced and whether those regulations are altered by the newly-constituted FCC or Congress. Although it is premature for us to determine the ultimate impact of the new regulations upon our operations, we currently anticipate that implementation of the proposed rules could hamper our ability to operate our data networks efficiently, restrict our ability to implement network management practices necessary to ensure quality service, increase the cost of network extensions and upgrades, and otherwise negatively impact our current operations. Our service offerings could become subject to additional laws and regulations as they are adopted or applied to the Internet. As the significance of the Internet expands, federal, state, local or foreign governments may adopt new laws or regulations, or apply existing laws and regulations to the Internet. We cannot predict the outcome of any such changes.

***We may be liable for the material that content providers distribute over our network.***

Although we believe our liability for third party information stored on or transmitted through our networks is limited, the liability of private network operators is impacted both by changing technology and evolving legal principles that remain unsettled in many jurisdictions. As a private network provider, we could be exposed to legal claims relating to third party content stored or transmitted on our networks. Such claims could involve, among others, allegations of defamation, invasion of privacy, copyright infringement, or aiding and abetting restricted activities such as online gambling or pornography. If we decide to implement additional measures to reduce our exposure to these risks, or if we are required to defend ourselves against these kinds of claims, our operations and financial results could be negatively affected.

***Any adverse outcome in any of our pending key legal proceedings could have a material adverse impact on our financial condition and operating results, on the trading price of our securities and on our ability to access the capital markets.***

There are several material proceedings pending against us, as described in Note 16—Commitments and Contingencies to our consolidated financial statements included in Item 8 of Part II of this annual report. Results of these legal proceedings cannot be predicted with certainty. Irrespective of its merits, litigation may be both lengthy and disruptive to our operations and could cause significant expenditure and diversion of management attention. Any of the proceedings described in Note 16, as well as current

litigation not described therein or future litigation, could have a material adverse effect on our financial position or operating results. We can give you no assurances as to the impact of these matters on our operating results or financial condition.

*We are subject to franchising requirements that could impede our expansion opportunities or result in potential fines or penalties.*

We may be required to obtain from municipal authorities operating franchises to install or expand certain facilities related to our fiber transport operations, our competitive local exchange carrier operations, and our facilities-based video services. Some of these franchises may require us to pay franchise fees. Many of our franchise agreements have compliance obligations and failure to comply may result in fines or penalties. In some cases, certain franchise requirements could delay us in expanding our operations or increase the costs of providing these services.

*We are exposed to risks arising out of recent legislation affecting U.S. public companies.*

Changing laws, regulations and standards relating to corporate governance and public disclosure, including the Sarbanes-Oxley Act and the Dodd-Frank Wall Street Reform and Consumer Protection Act, and related regulations implemented thereunder, have increased our legal and financial compliance costs and made some activities more time consuming. Any failure to successfully or timely complete annual assessments of our internal controls required by Section 404 of the Sarbanes-Oxley Act could subject us to sanctions or investigation by regulatory authorities. Any such action could adversely affect our financial results or our reputation with investors, lenders or others.

*Changes in any of the above-described laws or regulations may limit our ability to plan, and could subject us to further costs or constraints.*

From time to time, the laws or regulations governing us or our customers, or the government's policy of enforcing those laws or regulations, have changed frequently and materially. The variability of these laws could hamper the ability of us and our customers to plan for the future or establish long-term strategies. Moreover, future changes in these laws or regulations could further increase our operating or compliance costs, or further restrict our operational flexibility, any of which could have a material adverse effect on our results of operations, competitive position, financial condition or prospects.

For a more thorough discussion of the regulatory issues that may affect our business, see "Business—Regulation" in Item 1 of Part I of this annual report.

### **Risks Affecting Our Liquidity and Capital Resources**

*Our high debt levels expose us to a broad range of risks.*

We continue to carry significant debt. As of December 31, 2016, the aggregate principal amount of our consolidated long-term debt, excluding unamortized discounts, net, unamortized debt issuance costs and capital lease and other obligations, was \$19.879 billion. As of the date of this annual report, \$2.715 billion aggregate principal amount of this long-term debt is scheduled to mature prior to December 31, 2019. While we currently believe we will have the financial resources to meet or refinance our obligations when they come due, we cannot fully anticipate our future performance or financial condition, the future condition of the credit markets or the economy generally.

Our significant levels of debt can adversely affect us in several other respects, including:

- limiting our ability to obtain additional financing for working capital, capital expenditures, acquisitions, refinancings or other general corporate purposes, particularly if, as discussed further in the risk factor disclosure below, (i) the ratings assigned to our debt securities by nationally recognized credit rating organizations are revised downward or (ii) we seek capital during periods of turbulent or unsettled market conditions;
- requiring us to dedicate a substantial portion of our cash flow from operations to the payment of interest and principal on our debt, thereby reducing the funds available to us for other purposes, including acquisitions, capital expenditures, strategic initiatives, dividends, stock repurchases, marketing and other potential growth initiatives;
- hindering our ability to capitalize on business opportunities and to plan for or react to changing market, industry, competitive or economic conditions;
- increasing our future borrowing costs;
- increasing the risk that third parties will be unwilling or unable to engage in hedging or other financial or commercial arrangements with us;

- making us more vulnerable to economic or industry downturns, including interest rate increases;
- placing us at a competitive disadvantage compared to less leveraged competitors;

- increasing the risk that we will need to sell securities or assets, possibly on unfavorable terms, or take other unfavorable actions to meet payment obligations; or
- increasing the risk that we may not meet the financial covenants contained in our debt agreements or timely make all required debt payments, either of which could result in the acceleration of some or all of our outstanding indebtedness.

The effects of each of these factors could be intensified if we increase our borrowings.

Any failure to make required debt payments could, among other things, adversely affect our ability to conduct operations or raise capital.

*Our debt agreements and the debt agreements of our subsidiaries allow us to incur significantly more debt, which could exacerbate the other risks described in this annual report.*

The terms of our debt instruments and the debt instruments of our subsidiaries permit us to incur additional indebtedness. Additional debt may be necessary for many reasons, including those discussed above. Incremental borrowings that impose additional financial risks could exacerbate the other risks described in this annual report.

*We expect to periodically require financing, and we cannot assure you that we will be able to obtain such financing on terms that are acceptable to us, or at all.*

We have a significant amount of indebtedness that we intend to refinance over the next several years, principally through the issuance of debt securities of CenturyLink, Inc., Qwest Corporation or both. Our ability to arrange additional financing will depend on, among other factors, our financial position, performance, and credit ratings, as well as prevailing market conditions and other factors beyond our control. Global financial markets continue to be volatile. Prevailing market conditions could be adversely affected by (i) general market conditions, such as disruptions in domestic or overseas sovereign or corporate debt markets, geo-political instabilities, contractions or limited growth in the economy or other similar adverse economic developments in the U.S. or abroad and (ii) specific conditions in the communications industry. Volatility in the global markets could limit our access to the credit markets, leading to higher borrowing costs or, in some cases, the inability to obtain financing on terms that are as favorable as those from which we previously benefited, on terms that are acceptable to us, or at all. Any such failure to obtain additional financing could jeopardize our ability to repay, refinance or reduce our debt obligations.

We may also need to obtain additional financing under a variety of other circumstances, including if:

- revenues and cash provided by operations decline;
- economic conditions weaken, competitive pressures increase or regulatory requirements change;
- we engage in additional acquisitions or undertake substantial capital projects or other initiatives that increase our cash requirements;
- we are required to contribute a material amount of cash to our pension plans;
- we are required to begin to pay other post-retirement benefits earlier than anticipated;
- our payments of federal income taxes increase faster or in greater amounts than currently anticipated; or
- we become subject to significant judgments or settlements, including in connection with one or more of the matters discussed in Note 16—Commitments and Contingencies to our consolidated financial statements included in Item 8 of Part II of this annual report.

For all the reasons mentioned above, we can give no assurance that additional financing for any of these purposes will be available on terms that are acceptable to us, or at all.

In addition, our ability to borrow funds in the future will depend in part on the satisfaction of the covenants in our credit facilities and other debt instruments. If we are unable to satisfy the covenants contained in those instruments, or are unable to generate cash sufficient to make required debt payments, the parties to whom we are indebted could accelerate the maturity of some or all of our outstanding indebtedness. Certain of our debt instruments have cross-default or cross-acceleration provisions. When present, these provisions could have a wider impact on liquidity than might otherwise arise from a default or acceleration of a single debt instrument.

As noted above, if we are unable to make required debt payments or refinance our debt, we would likely have to consider other options, such as selling assets, issuing additional securities, reducing or terminating our dividend payments, cutting costs or otherwise reducing our cash requirements, or negotiating with our lenders to restructure our applicable debt. Our current and future debt instruments may restrict, or market or business conditions may limit, our ability to do some of these things on favorable terms, or at all.

*Any downgrade in the credit ratings of us or our affiliates could limit our ability to obtain future financing, increase our borrowing costs and adversely affect the market price of our existing debt securities or otherwise impair our business, financial condition and results of operations.*

Nationally recognized credit rating organizations have issued credit ratings relating to CenturyLink, Inc.'s long-term debt and the long-term debt of several of its subsidiaries. Most of these ratings are below "investment grade", which results in higher borrowing costs than "investment grade" debt as well as reduced marketability of our debt securities. There can be no assurance that any rating assigned to any of these debt securities will remain in effect for any given period of time or that any such ratings will not be lowered, suspended or withdrawn entirely by a rating agency if, in that rating agency's judgment, circumstances so warrant.

A downgrade of any of these credit ratings could:

- adversely affect the market price of some or all of our outstanding debt or equity securities;
- limit our access to the capital markets or otherwise adversely affect the availability of other new financing on favorable terms, if at all;
- trigger the application of restrictive covenants in certain of our debt agreements or result in new or more restrictive covenants in agreements governing the terms of any future indebtedness that we may incur;
- increase our cost of borrowing; and
- impair our business, financial condition and results of operations.

*Under certain circumstances upon a change of control, we will be obligated to offer to repurchase certain of our outstanding debt securities, which could have certain adverse ramifications.*

If the credit ratings relating to certain of our currently outstanding long-term debt securities are downgraded in the manner specified thereunder in connection with a "change of control" of CenturyLink, Inc., then we will be required to offer to repurchase such debt securities. If, due to lack of cash, legal or contractual impediments, or otherwise, we fail to offer to repurchase such debt securities, such failure could constitute an event of default under such debt securities, which could in turn constitute a default under other of our agreements relating to our indebtedness outstanding at that time. Moreover, the existence of these repurchase covenants may in certain circumstances render it more difficult or discourage a sale or takeover of us, or the removal of our incumbent directors.

*Our business requires us to incur substantial capital and operating expenses, which reduce our available free cash flow.*

Our business is capital intensive, and we anticipate that our capital requirements will continue to be significant in the coming years.

We expect to invest additional capital to expand and enhance our network infrastructure as a result of several factors, including:

- our regulatory commitments, including infrastructure construction requirements arising out of our participation in the FCC's CAF Phase 2 program, which are discussed further herein;
- increased demands by customers to transmit larger amounts of data at faster speeds;
- changes in customers' service requirements;
- technological advances of our competitors; or
- the development and launch of new services.

We may be unable to expand or adapt our network infrastructure to respond to these developments in a timely manner, at a commercially reasonable cost or on terms producing satisfactory returns on our investment.

In addition to investing in expanded networks, new products or new technologies, we must from time to time invest capital to (i) replace some of our aging equipment that supports many of our legacy services that are experiencing revenue declines or (ii) convert older systems to simplify and modernize our network. While we believe that our currently planned level of capital expenditures will meet both our maintenance and core growth requirements, this may not be the case if demands on our network continue to accelerate or other circumstances underlying our expectations change. Increased spending could, among other things, adversely affect our operating margins, cash flows, results of operations and financial position.

Similarly, we continue to anticipate incurring substantial operating expenses to support our incumbent services and growth initiatives. We may be unable to sufficiently manage or reduce these costs, even if revenues in some of our lines of business are decreasing. If so, our operating margins will be adversely impacted.

*Our senior notes are unsecured and will be effectively subordinated to any secured indebtedness.*

Our currently outstanding senior notes are unsecured and are effectively subordinated to any of our existing or future secured indebtedness, to the extent of the value of the assets securing such indebtedness, including, upon consummation of the Level 3 acquisition, any newly-incurred acquisition financing secured by subsidiary guarantees or pledges of stock of selected subsidiaries. In the event of a bankruptcy or similar proceeding, the stock that serve as collateral for any secured indebtedness would generally be available to satisfy our obligations under such secured indebtedness, and would not be expected to be available to satisfy other claims.

*As a holding company, we rely on payments from our operating companies to meet our obligations.*

As a holding company, substantially all of our income and operating cash flow is dependent upon the earnings of our subsidiaries and their distribution of those earnings to us in the form of dividends, loans or other payments. As a result, we rely upon our subsidiaries to generate the funds necessary to meet our obligations, including the payment of amounts owed under our long-term debt. Our subsidiaries are separate and distinct legal entities and have no obligation to pay any amounts owed by us or, subject to limited exceptions for tax-sharing or cash management purposes, to make any funds available to us to repay our obligations, whether by dividends, loans or other payments. State law applicable to each of our subsidiaries restricts the amount of dividends that they may pay. Restrictions that have been or may be imposed by state regulators (either in connection with obtaining necessary approvals for our acquisitions or in connection with our regulated operations), and restrictions imposed by credit instruments or other agreements applicable to certain of our subsidiaries may limit the amount of funds that our subsidiaries are permitted to transfer to us, including the amount of dividends that may be paid to us. Moreover, our rights to receive assets of any subsidiary upon its liquidation or reorganization will be effectively subordinated to the claims of creditors of that subsidiary, including trade creditors. See "Management's Discussion and Analysis of Financial Condition and Results of Operations—Liquidity and Capital Resources" included elsewhere in this annual report for further discussion of these matters.

*We cannot assure you that we will continue paying dividends at the current rates, or at all.*

For the reasons noted below, we cannot assure you that we will continue periodic dividends on our capital stock at the current rates, or at all.

As noted in the immediately preceding risk factor, because we are a holding company with no material assets other than the stock of our subsidiaries, our ability to pay dividends will depend on the earnings and cash flow of our subsidiaries and their ability to furnish funds to us in the form of dividends, loans or other payments.

Any quarterly dividends on our common stock and our outstanding shares of preferred stock will be paid from funds legally available for such purpose when, as and if declared by our Board of Directors. Decisions on whether, when and in which amounts to continue making any future dividend distributions will remain at all times entirely at the discretion of our Board of Directors, which reserves the right to change or terminate our dividend practices at any time and for any reason without prior notice, including without limitation any of the following:

- our supply of cash or other liquid assets is anticipated to remain under pressure due to declining cash flows from operating activities, increased payments of post-retirement benefits and our projected payment of higher cash taxes prior to the pending Level 3 acquisition and might be further negatively impacted by any of the potential adverse events or developments described in this annual report, including (i) changes in competition, regulation, federal and state support, technology, taxes, capital markets, operating costs or litigation costs, or (ii) the impact of any liquidity shortfalls caused by the below-described restrictions on the ability of our subsidiaries to lawfully transfer cash to us;

- our cash requirements or plans might change for a wide variety of reasons, including changes in our capital allocation plans (including a desire to retain or accumulate cash), capital spending plans, stock purchase plans, acquisition strategies, strategic initiatives, debt payment plans (including a desire to maintain or improve credit ratings on our debt securities), pension funding payments, or financial position;
- our ability to service and refinance our current and future indebtedness and our ability to borrow or raise additional capital to satisfy our capital needs;
- the amount of dividends that we may distribute to our shareholders is subject to restrictions under Louisiana law and restrictions imposed by our existing or future credit facilities, debt securities, outstanding preferred stock securities, leases and other agreements, including restricted payment and leverage covenants; and
- the amount of cash that our subsidiaries may make available to us, whether by dividends, loans or other payments, may be subject to the legal, regulatory and contractual restrictions described in the immediately preceding risk factor.

Based on its evaluation of these and other relevant factors, our Board of Directors may, in its sole discretion, decide not to declare a dividend on our common stock or our outstanding shares of preferred stock for any period for any reason without prior notice, regardless of whether we have funds legally available for such purposes. Holders of our equity securities should be aware that they have no contractual or other legal right to receive dividends.

Similarly, holders of our common stock should be aware that repurchases of our common stock under any repurchase plan then in effect are completely discretionary, and may be suspended or discontinued at any time for any reason regardless of our financial position.

*Our current dividend practices could limit our ability to deploy cash for other beneficial purposes.*

The current practice of our Board of Directors to pay common share dividends reflects a current intention to distribute to our shareholders a substantial portion of our cash flow. As a result, we may not retain a sufficient amount of cash to apply to other transactions that could be beneficial to our shareholders or debtholders, including stock buybacks, debt prepayments or capital expenditures that strengthen our business. In addition, our ability to pursue any material expansion of our business through acquisitions or increased capital spending may depend more than it otherwise would on our ability to obtain third party financing.

*We cannot assure you whether, when or in what amounts we will be able to use our net operating loss carryforwards, or when they will be depleted.*

At December 31, 2016, we had state NOL carryforwards of approximately \$11.9 billion. A significant portion of the state NOL carryforwards are generated in states where separate company income tax returns are filed and our subsidiaries that generated the losses may not have the ability to generate income in sufficient amounts to realize these losses. In addition, certain of these state NOL carryforwards will be limited by state laws related to ownership changes. As a result, we expect to utilize only a small portion of the state NOL carryforwards, and consequently have determined that as of December 31, 2016, these state NOL carryforwards, net of federal benefit, had a net tax benefit (after valuation allowance) of \$131 million.

*Increases in costs for pension and healthcare benefits for our active and retired employees may reduce our profitability and increase our funding commitments.*

With approximately 36,000 active employees, approximately 72,000 active and retired employees and surviving spouses eligible for post-retirement benefits, approximately 68,000 pension retirees and approximately 14,000 former employees with vested pension benefits participating in our benefit plans as of December 31, 2016, the costs of pension and healthcare benefits for our active and retired employees have a significant impact on our profitability. Our costs of maintaining our pension and healthcare plans, and the future funding requirements for these plans, are affected by several factors, most of which are outside our control, including:

- decreases in investment returns on funds held by our pension and other benefit plan trusts;
- changes in prevailing interest rates and discount rates or other factors used to calculate the funding status of our pension and other post-retirement plans;
- increases in healthcare costs generally or claims submitted under our healthcare plans specifically;
- increasing longevity of our employees and retirees;
- the impact of the continuing implementation, modification or potential repeal of current federal healthcare legislation and

regulations promulgated thereunder;

- increases in the number of retirees who elect to receive lump sum benefit payments;
- increases in insurance premiums we are required to pay to the Pension Benefit Guaranty Corporation, an independent agency of the United States government that must cover its own underfunded status by collecting premiums from an ever shrinking population of pension plans that are qualified under the U.S. tax code;
- changes in plan benefits; and
- changes in funding laws or regulations.

Increased costs under these plans could reduce our profitability and increase our funding commitments to our pension plans. Any future material cash contributions could have a negative impact on our liquidity by reducing our cash flows available for other purposes. Similarly, depletion of assets placed in trust by us to fund these benefits, such as those discussed elsewhere herein, will similarly reduce our liquidity by reducing our cash flows available for other purposes.

As of December 31, 2016, our pension plans and our other post-retirement benefit plans were substantially underfunded from an accounting standpoint. See Note 9—Employee Benefits to our consolidated financial statements included in Item 8 of this annual report. For more information on our obligations under our defined benefit pension plans and other post-retirement benefit plans, please see “Management’s Discussion and Analysis of Financial Condition and Results of Operations—Liquidity and Capital Resources—Pension and Post-retirement Benefit Obligations” included in Item 7 of this annual report.

For additional information concerning our liquidity and capital resources, see Item 7 of this annual report. For a discussion of certain currency and liquidity risks associated with our international operations, see “Risk Factors—Risks Affecting Our Business—Our international operations expose us to various regulatory, currency, tax, legal and other risks.”

#### **Other Risks**

*We face risks from natural disasters, which can disrupt our operations and cause us to incur substantial additional capital and operating costs.*

A substantial number of our facilities are located in Florida, Alabama, Louisiana, Texas, North Carolina, South Carolina and other coastal states, which subjects them to the risks associated with severe tropical storms, hurricanes and tornadoes, including downed telephone lines, flooded facilities, power outages, fuel shortages, damaged or destroyed property and equipment, and work interruptions. Although we maintain property and casualty insurance on our property (excluding our above ground outside plant) and may, under certain circumstances, be able to seek recovery of some additional costs through increased rates, only a portion of our additional costs directly related to such natural disasters have historically been recoverable. We cannot predict whether we will continue to be able to obtain insurance for catastrophic hazard-related damages or, if obtainable and carried, whether this insurance will be adequate to cover our losses. In addition, we expect any insurance of this nature to be subject to substantial deductibles, retentions and coverage exclusions, and the premiums to be based on our loss experience. For all these reasons, any future hazard-related costs and work interruptions could adversely affect our operations and our financial condition.

*If conditions or assumptions differ from the judgments, assumptions or estimates used in our critical accounting policies, our consolidated financial statements and related disclosures could be materially affected.*

The preparation of financial statements and related disclosures in conformity with U.S. generally accepted accounting principles requires management to make judgments, assumptions and estimates that affect the amounts reported in our consolidated financial statements and accompanying notes. Our critical accounting policies, which are described in “Management’s Discussion and Analysis of Financial Condition and Results of Operations—Critical Accounting Policies and Estimates” in Item 7 of Part II of this annual report, describe those significant accounting policies and methods used in the preparation of our consolidated financial statements that are considered “critical” because they require judgments, assumptions and estimates that materially impact our consolidated financial statements and related disclosures. As a result, if future events or assumptions differ significantly from the judgments, assumptions and estimates in our critical accounting policies, these events or assumptions could have a material impact on our consolidated financial statements and related disclosures.

While frequently presented with numeric specificity, the guidance and other forward-looking statements that we disseminate from time to time is based on numerous variables and assumptions (including, but not limited to, those related to industry performance and competition and general business, economic, market and financial conditions and additional matters specific to our business, as applicable) that are inherently subjective and uncertain and are largely beyond our control. As a result, actual results may differ

materially from our guidance or other forward-looking statements. For additional information, see "Special Note Regarding Forward-Looking Statements and Related Matters" in Item 1 of Part I of this annual report.

***Lapses in disclosure controls and procedures or internal control over financial reporting could materially and adversely affect our operations, profitability or reputation.***

There can be no assurance that our disclosure controls and procedures will be effective in the future or that we will not experience a material weakness or significant deficiency in internal control over financial reporting. Any such lapses or deficiencies may materially and adversely affect our business, operating results or financial condition, restrict our ability to access the capital markets, require us to expend significant resources to correct the lapses or deficiencies, expose us to regulatory or legal proceedings, including litigation brought by private individuals, subject us to fines, penalties or judgments, harm our reputation, or otherwise cause a decline in investor confidence and our stock price.

***If our goodwill or other intangible assets become impaired, we may be required to record a significant charge to earnings and reduce our stockholders' equity.***

As of December 31, 2016, approximately 51% of our total consolidated assets reflected on the consolidated balance sheet included in this annual report consisted of goodwill (excluding goodwill assigned to the colocation business and included in assets held for sale), customer relationships and other intangible assets. Under U.S. generally accepted accounting principles, most of these intangible assets must be tested for impairment on an annual basis or more frequently whenever events or circumstances indicate that their carrying value may not be recoverable. From time to time (most recently for the third quarter of 2013), we have recorded large non-cash charges to earnings in connection with required reductions of the value of our intangible assets. If our intangible assets are determined to be impaired in the future, we may be required to record additional significant, non-cash charges to earnings during the period in which the impairment is determined to have occurred. Any such charges could, in turn, have a material adverse effect on our results of operation, financial condition or ability to comply with financial covenants in our debt instruments.

***Tax audits or changes in tax laws could adversely affect us.***

Like all large businesses, we are subject to frequent and regular audits by the Internal Revenue Service as well as state and local tax authorities. These audits could subject us to tax liabilities if adverse positions are taken by these tax authorities.

We believe that we have adequately provided for tax contingencies. However, our tax audits and examinations may result in tax liabilities that differ materially from those that we have recognized in our consolidated financial statements. Because the ultimate outcomes of all of these matters are uncertain, we can give no assurance as to whether an adverse result from one or more of them will have a material effect on our financial results.

Legislators and regulators at all levels of government may from time to time change existing tax laws or regulations or enact new laws or regulations that could negatively impact our operating results or financial condition.

***Our agreements and organizational documents and applicable law could limit another party's ability to acquire us.***

A number of provisions in our agreements and organizational documents and various provisions of applicable law may delay, defer or prevent a future takeover of CenturyLink unless the takeover is approved by our Board of Directors. These provisions could deprive our shareholders of any related takeover premium. For additional information, please see our Registration Statement on Form 8-A/A filed with the SEC on March 2, 2015.

#### **ITEM 1B. UNRESOLVED STAFF COMMENTS**

None.

**ITEM 2. PROPERTIES**

Our property, plant and equipment consists principally of telephone lines, cable, central office equipment, land and buildings related to our operations. Our gross property, plant and equipment consisted of the following components:

	As of December 31,	
	2016	2015
Land	2%	2%
Fiber, conduit and other outside plant <sup>(1)</sup>	43%	42%
Central office and other network electronics <sup>(2)</sup>	35%	36%
Support assets <sup>(3)</sup>	17%	18%
Construction in progress <sup>(4)</sup>	3%	2%
Gross property, plant and equipment	100%	100%

- (1) Fiber, conduit and other outside plant consists of fiber and metallic cable, conduit, poles and other supporting structures.
- (2) Central office and other network electronics consists of circuit and packet switches, routers, transmission electronics and electronics providing service to customers.
- (3) Support assets consist of buildings, data centers, computers and other administrative and support equipment.
- (4) Construction in progress includes inventory held for construction and property of the aforementioned categories that has not been placed in service as it is still under construction.

We own substantially all of our telecommunications equipment required for our business. However, we lease from third parties certain facilities, plant, equipment and software under various capital and operating lease arrangements when the leasing arrangements are more favorable to us than purchasing the assets. We also own and lease administrative offices in major metropolitan locations both in the United States and internationally. Substantially all of our network electronics equipment is located in buildings or on land that we own or lease within our local service area. Outside of our local service area, our assets are generally located on real property pursuant to an agreement with the property owner or another person with rights to the property. It is possible that we may lose our rights under one or more of these agreements, due to their termination or expiration or in connection with legal challenges to our rights under such agreements.

Our net property, plant and equipment was approximately \$17.0 billion and \$18.1 billion at December 31, 2016 and 2015, respectively. Some of our property, plant and equipment is pledged to secure the long-term debt of subsidiaries. For additional information, see Note 7—Property, Plant and Equipment to our consolidated financial statements in Item 8 of Part II of this annual report.

**ITEM 3. LEGAL PROCEEDINGS**

The information contained under the subheadings "Pending Matters" and "Other Proceedings and Disputes" in Note 16—Commitments and Contingencies to our consolidated financial statements included in Item 8 of Part II of this annual report is incorporated herein by reference.

**ITEM 4. MINE SAFETY DISCLOSURES**

Not applicable.

## PART II

## ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

Our common stock is listed on the New York Stock Exchange ("NYSE") and the Berlin Stock Exchange and is traded under the symbol CTL and CYT, respectively. The following table sets forth the high and low reported sales prices on the NYSE along with the quarterly dividends, for each of the quarters indicated.

	Sales Price		Cash Dividend per Common Share
	High	Low	
<b>2016</b>			
First quarter	\$ 32.49	21.94	0.540
Second quarter	32.94	26.35	0.540
Third quarter	31.56	26.51	0.540
Fourth quarter	33.45	22.86	0.540
<b>2015</b>			
First quarter	\$ 40.59	34.04	0.540
Second quarter	37.00	29.28	0.540
Third quarter	31.13	24.29	0.540
Fourth quarter	29.37	24.11	0.540

Dividends on common stock during 2016 and 2015 were paid each quarter. On February 21, 2017, our Board of Directors declared a common stock dividend of \$0.54 per share.

As described in greater detail in "Risk Factors" in Item 1A of Part I of this annual report, the declaration and payment of dividends is at the discretion of our Board of Directors, and will depend upon our financial results, cash requirements, future prospects and other factors deemed relevant by our Board of Directors.

At February 16, 2017, there were approximately 122,000 stockholders of record, although there were significantly more beneficial holders of our common stock. At February 16, 2017, the closing stock price of our common stock was \$24.28.

#### Issuer Purchases of Equity Securities

The following table contains information about shares of our previously-issued common stock that we withheld from employees upon vesting of their stock-based awards during the fourth quarter of 2016 to satisfy the related minimum tax withholding obligations:

Period	Total Number of Shares Withheld for Taxes	Average Price Paid Per Share
October 2016	5,123	\$ 27.48
November 2016	24,858	26.94
December 2016	834	23.93
Total	30,815	

**ITEM 6. SELECTED FINANCIAL DATA**

The following tables of selected consolidated financial data should be read in conjunction with, and are qualified by reference to, our consolidated financial statements and notes thereto in Item 8 of Part II and "Management's Discussion and Analysis of Financial Condition and Results of Operations" in Item 7 of Part II of this annual report.

The tables of selected financial data shown below are derived from our audited consolidated financial statements. These historical results are not necessarily indicative of results that you can expect for any future period.

Selected financial information from our consolidated statements of operations is as follows:

	Years Ended December 31, <sup>(1)</sup>				
	2016 <sup>(2)(3)</sup>	2015 <sup>(2)</sup>	2014 <sup>(4)</sup>	2013 <sup>(5)</sup>	2012
	(Dollars in millions, except per share amounts and shares in thousands)				
Operating revenues	\$ 17,470	17,900	18,031	18,095	18,376
Operating expenses	15,139	15,295	15,621	16,642	15,663
Operating income	\$ 2,331	2,605	2,410	1,453	2,713
Income before income tax expense	1,020	1,316	1,110	224	1,250
Net income (loss)	626	878	772	(239)	777
Basic earnings (loss) per common share	1.16	1.58	1.36	(0.40)	1.25
Diluted earnings (loss) per common share	1.16	1.58	1.36	(0.40)	1.25
Dividends declared per common share	2.16	2.16	2.16	2.16	2.90
Weighted average basic common shares outstanding	539,549	554,278	568,435	600,892	620,205
Weighted average diluted common shares outstanding	540,679	555,093	569,739	600,892	622,285

- (1) See "Management's Discussion and Analysis of Financial Condition and Results of Operations—Results of Operations" in Item 7 of Part II of this annual report for a discussion of unusual items affecting the results for the years ended December 31, 2016, 2015 and 2014.
- (2) During 2016 and 2015, we recognized an incremental \$201 million and \$215 million, respectively, of revenue associated with the Federal Communications Commission ("FCC") Connect America Fund Phase 2 support program as compared to the interstate USF program. For additional information, see Note 1—Basis of Presentation and Summary of Significant Accounting Policies to our consolidated financial statements in Item 8 of Part II of this annual report.
- (3) During 2016, we recognized \$189 million of severance expenses and other one-time termination benefits associated with our workforce reductions and \$52 million of expenses related to our pending acquisition of Level 3.
- (4) During 2014, we recognized a \$60 million tax benefit associated with a deduction for the tax basis for worthless stock in a wholly-owned foreign subsidiary and a \$63 million pension settlement charge.
- (5) During 2013, we recorded a non-cash, non-tax-deductible goodwill impairment charge of \$1.092 billion for goodwill attributed to one of our previous operating segments and a litigation settlement charge of \$235 million.

Selected financial information from our consolidated balance sheets is as follows:

	As of December 31,				
	2016	2015	2014	2013	2012
	(Dollars in millions)				
Net property, plant and equipment <sup>(1)</sup>	\$ 17,039	18,069	18,433	18,646	18,909
Goodwill <sup>(1)(2)</sup>	19,650	20,742	20,755	20,674	21,627
Total assets <sup>(3)</sup>	47,017	47,604	49,103	50,471	52,901
Total long-term debt <sup>(3)(4)</sup>	19,993	20,225	20,503	20,809	20,481
Total stockholders' equity <sup>(2)</sup>	13,399	14,060	15,023	17,191	19,289

- (1) During 2016, as a result of the pending sale of our colocation business and data centers, we reclassified \$1.071 billion in net property, plant and equipment and \$1.141 billion of goodwill to assets held for sale which is included in other current assets on our consolidated balance sheet. See Note 3—Pending Sale of Colocation Business and Data Centers to our consolidated financial statements in Item 8 of Part II of this annual report, for additional information.
- (2) During 2013, we recorded a non-cash, non-tax-deductible goodwill impairment charge of \$1.092 billion for goodwill attributed to one of our previous operating segments.
- (3) In 2015, we adopted both ASU 2015-03 "Simplifying the Presentation of Debt Issuance Costs" and ASU 2015-17 "Balance Sheet Classification of Deferred Taxes" by retrospectively applying the requirements of the ASUs to our previously issued consolidated financial statements. The adoption of both ASU 2015-03 and ASU 2015-17 reduced total assets by \$1.044 billion, \$1.316 billion and \$1.039 billion in each year for the three years ended December 31, 2014, respectively, and ASU 2015-03 reduced total long-term debt by \$168 million, \$157 million and \$124 million in each year for the three years ended December 31, 2014, respectively.
- (4) Total long-term debt is the sum of current maturities of long-term debt, capital lease obligations of \$305 million (associated with the pending sale of colocation business and data centers) included in current liabilities associated with assets held for sale and long-term debt on our consolidated balance sheets. For additional information on our total long-term debt, see Note 5—Long-Term Debt and Credit Facilities to our consolidated financial statements in Item 8 of Part II of this annual report. For total contractual obligations, see "Management's Discussion and Analysis of Financial Condition and Results of Operations—Future Contractual Obligations" in Item 7 of Part II of this annual report.

Selected financial information from our consolidated statements of cash flows is as follows:

	Years Ended December 31,				
	2016	2015	2014	2013	2012
	(Dollars in millions)				
Net cash provided by operating activities \$	4,608	5,152	5,188	5,559	6,065
Net cash used in investing activities	(2,994)	(2,853)	(3,077)	(3,148)	(2,690)
Net cash used in financing activities	(1,518)	(2,301)	(2,151)	(2,454)	(3,295)
Payments for property, plant and equipment and capitalized software	(2,981)	(2,872)	(3,047)	(3,048)	(2,919)

The following table presents certain of our selected operational metrics:

	As of December 31,				
	2016	2015	2014	2013	2012
	(in thousands except for data centers, which are actuals)				
<b>Operational metrics:</b>					
Total access lines <sup>(1)</sup>	11,090	11,748	12,394	13,002	13,751
Total broadband subscribers <sup>(1)</sup>	5,945	6,048	6,082	5,991	5,851
Prism TV subscribers	325	285	242	175	106
Total data centers <sup>(2)</sup>	58	59	58	55	54

(1) Access lines are lines reaching from the customers' premises to a connection with the public network and broadband subscribers are customers that purchase broadband connection service through their existing telephone lines, stand-alone telephone lines, or fiber-optic cables. Our methodology for counting our access lines and broadband subscribers includes only those lines that we use to provide services to external customers and excludes lines used solely by us and our affiliates. It also excludes unbundled loops and includes stand-alone broadband subscribers. We count lines when we install the service.

(2) We define a data center as any facility where we market, sell and deliver either colocation services, multi-tenant managed services, or both. Our data centers are located in North America, Europe and Asia.

## ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

*All references to "Notes" in this Item 7 of Part II refer to the Notes to Consolidated Financial Statements included in Item 8 of Part II of this annual report. Certain statements in this annual report constitute forward-looking statements. See "Special Note Regarding Forward-Looking Statements and Related Matters" in Item 1 of Part I of this annual report for factors relating to these statements and "Risk Factors" in Item 1A of Part I of this annual report for a discussion of certain risk factors applicable to our business, financial condition, results of operations, liquidity or prospects.*

### Overview

We are an integrated communications company engaged primarily in providing an array of services to our residential and business customers. Our communications services include local and long-distance voice, broadband, Multi-Protocol Label Switching ("MPLS"), private line (including special access), Ethernet, colocation, hosting (including cloud hosting and managed hosting), data integration, video, network, public access, Voice over Internet Protocol ("VoIP"), information technology and other ancillary services. We strive to maintain our customer relationships by, among other things, bundling our service offerings to provide our customers with a complete offering of integrated communications services.

At December 31, 2016, we operated approximately 11.1 million access lines in 37 states and served approximately 5.9 million broadband subscribers and 325 thousand Prism TV subscribers. We also operated 58 data centers throughout North America, Europe and Asia. Our methodology for counting access lines, broadband subscribers and data centers, which is described further in the operational metrics table below under "Results of Operations", and our methodology for counting Prism TV subscribers may not be comparable to those of other companies.

### Pending Acquisition of Level 3

On October 31, 2016, we entered into a definitive merger agreement under which we propose to acquire Level 3 Communications, Inc. ("Level 3") in a cash and stock transaction. Under the terms of the agreement, Level 3 shareholders will receive \$26.50 per share in cash and 1.4286 of CenturyLink shares for each share of Level 3 common stock they own at closing. CenturyLink shareholders are expected to own approximately 51% and Level 3 shareholders are expected to own approximately 49% of the combined company at closing. On December 31, 2016, Level 3 had outstanding \$10.9 billion of long-term debt.

Completion of the transaction is subject to the receipt of regulatory approvals, including the expiration or termination of the applicable waiting period under the Hart-Scott-Rodino Antitrust Improvements Act, as well as approvals from the Federal Communications Commission (the "FCC") and certain state regulatory authorities. The transaction is also subject to the approval of CenturyLink and Level 3 shareholders at meetings scheduled to be held on March 16, 2017, as well as other customary closing conditions. Subject to these conditions, we anticipate closing this transaction by the end of the third quarter 2017. If the merger agreement is terminated under certain circumstances, we may be obligated to pay Level 3 a termination fee of \$472 million, or Level 3 may be obligated to pay CenturyLink a termination fee of \$738 million.

As of December 31, 2016, we had recognized \$52 million of expenses associated with our activities related to the pending Level 3 acquisition. We have not recognized certain other expenses that are contingent on completion of the acquisition. These expenses include financial advisory fees and compensation expense comprised of retention bonuses, severance and stock-based compensation for stock-based awards that will vest in connection with the acquisition. Most of these contingent expenses will be recognized in our consolidated financial statements in the period in which the acquisition occurs, with the remainder recognized thereafter. The final amount of compensation expense to be recognized is partially dependent upon personnel decisions that will be made as part of integration planning. These amounts may be material.

Upon completion of the acquisition, Level 3's assets and liabilities will be revalued and recorded at fair value. The assignment of fair value will require a significant amount of judgment. The use of fair value measures will affect the comparability of our post-acquisition financial information and may make it more difficult to predict earnings in future periods. For example, Level 3 has certain deferred costs and deferred revenues on its balance sheet associated with capacity leases. Based on the accounting guidance for business combinations, these existing deferred costs and deferred revenues are expected to be assigned little or no value in the purchase price allocation process and will thus be eliminated.

For unaudited pro forma condensed combined financial information relating to the acquisition, see the definitive joint proxy statement/prospectus filed with the SEC by us on February 13, 2017. This pro forma financial information is based upon preliminary

purchase price allocations and various assumptions and estimates, all of which we urge you to carefully consider in connection with your review of such information.

### Pending Sale of Colocation Business and Data Centers

On November 3, 2016, we entered into a definitive stock purchase agreement to sell our data centers and colocation business to a consortium led by BC Partners, Inc. and Medina Capital ("the Purchaser") in exchange for cash and a minority stake in the consortium's newly-formed global secure infrastructure company. During 2016, as a result of the pending sale, the assets to be sold to the Purchaser have been reclassified as assets held for sale in other current assets on our consolidated balance sheet. Additionally, the liabilities to be assumed by the Purchaser have been reclassified and presented as current liabilities associated with assets held for sale on our consolidated balance sheet. As part of the transaction, the Purchaser will assume our capital lease obligations, which amounted to \$305 million as of December 31, 2016, related to the properties that we will sell. The sale is subject to regulatory approvals, including a review by the Committee of Foreign Investments in the United States, as well as other customary closing conditions.

Upon being completed, this transaction will result in the Purchaser acquiring 57 data centers. This business generated revenues of \$622 million, \$626 million and \$643 million (excluding revenue with affiliates) for the years ended December 31, 2016, 2015 and 2014, respectively (a small portion of which will be retained by us). Based on certain estimates and assumptions regarding the closing date and various tax matters, we currently project that the net cash proceeds from the divestiture will be approximately \$1.5 billion to \$1.7 billion. We plan to use a portion of these net cash proceeds to partly fund our acquisition of Level 3.

The following tables present additional metrics related to our data centers:

	As of December 31,		Increase / (Decrease)	% Change
	2016	2015		
Hosting data center metrics:				
Number of data centers <sup>(1)</sup>	58	59	(1)	(2)%
Sellable square feet, million sq ft	1.54	1.58	(0.04)	(3)%
Billed square feet, million sq ft	1.04	0.99	0.05	5 %
Utilization	67%	63%	4%	6 %
<hr/>				
	As of December 31,		Increase / (Decrease)	% Change
	2015	2014		
Hosting data center metrics:				
Number of data centers <sup>(1)</sup>	59	58	1	2%
Sellable square feet, million sq ft	1.58	1.46	0.12	8%
Billed square feet, million sq ft	0.99	0.92	0.07	8%
Utilization	63%	63%	—%	—%

(1) We define a data center as any facility where we market, sell and deliver either colocation services, multi-tenant managed services, or both. Our data centers are located in North America, Europe and Asia.

See Note 3—Pending Sale of Colocation Business and Data Centers to our consolidated financial statements in Item 8 of Part II of this annual report for additional information on the pending sale.

We are organized into operating segments based on customer type, business and consumer. These operating segments are our two reportable segments in our consolidated financial statements:

- **Business Segment.** Consists generally of providing strategic, legacy and data integration products and services to small, medium and enterprise business, wholesale and governmental customers, including other communication providers. Our strategic products and services offered to these customers include our MPLS, Ethernet, colocation, hosting (including cloud hosting and managed hosting), broadband, VoIP, information technology and other ancillary services. Our legacy services offered to these customers primarily include local and long-distance voice, including the sale of unbundled network elements ("UNEs"), private line (including special access), switched access and other ancillary services. Our data integration offerings include the sale of telecommunications equipment located on customers' premises and related products and professional services, all of which are described further below under the heading "Operating Revenues"; and

- *Consumer Segment.* Consists generally of providing strategic and legacy products and services to residential customers. Our strategic products and services offered to these customers include our broadband, video (including our Prism TV services) and other ancillary services. Our legacy services offered to these customers include local and long-distance voice and other ancillary services.

## Results of Operations

The following table summarizes the results of our consolidated operations for the years ended December 31, 2016, 2015 and 2014:

	Years Ended December 31,		
	2016 <sup>(1)(2)</sup>	2015 <sup>(1)</sup>	2014 <sup>(3)</sup>
	(Dollars in millions except per share amounts)		
Operating revenues	\$ 17,470	17,900	18,031
Operating expenses	15,139	15,295	15,621
Operating income	2,331	2,605	2,410
Other expense, net	1,311	1,289	1,300
Income tax expense	394	438	338
Net income	\$ 626	878	772
Basic earnings per common share	\$ 1.16	1.58	1.36
Diluted earnings per common share	\$ 1.16	1.58	1.36

(1) During 2016 and 2015, we recognized an incremental \$201 million and \$215 million, respectively, of revenue associated with the FCC's Connect America Fund Phase 2 support program as compared to the interstate USF program. For additional information, see Note 1—Basis of Presentation and Summary of Significant Accounting Policies to our consolidated financial statements in Item 8 of Part II of this annual report.

(2) During 2016, we recognized \$189 million of severance expenses and other one-time termination benefits associated with our workforce reductions and \$52 million of expenses related to our pending acquisition of Level 3

(3) During 2014, we recognized a \$60 million tax benefit associated with a deduction for the tax basis for worthless stock in a wholly-owned foreign subsidiary and a \$63 million pension settlement charge.

The following table summarizes our access lines, broadband subscribers, Prism TV subscribers, data centers and number of employees:

	As of December 31,		
	2016	2015	2014
	(in thousands except for data centers, which are actuals)		
Operational metrics:			
Total access lines <sup>(1)</sup>	11,090	11,748	12,394
Total broadband subscribers <sup>(1)</sup>	5,945	6,048	6,082
Total Prism TV subscribers	325	285	242
Total data centers <sup>(2)</sup>	58	59	58
Total employees	40	43	45

(1) Access lines are lines reaching from the customers' premises to a connection with the public network and broadband subscribers are customers that purchase broadband connection service through their existing telephone lines, stand-alone telephone lines, or fiber-optic cables. Our methodology for counting our access lines and broadband subscribers includes only those lines that we use to provide services to external customers and excludes lines used solely by us and our affiliates. It also excludes unbundled loops and includes stand-alone broadband subscribers. We count lines when we install the service.

(2) We define a data center as any facility where we market, sell and deliver either colocation services, multi-tenant managed services, or both. Our data centers

are located in North America, Europe and Asia.

During the last decade, we have experienced revenue declines primarily due to declines in access lines, private line customers, switched access rates and minutes of use. To mitigate these revenue declines, we remain focused on efforts to, among other things:

- promote long-term relationships with our customers through bundling of integrated services;
- provide a wide array of diverse services, including enhanced or additional services that may become available in the future due to, among other things, advances in technology or improvements in our infrastructure;
- provide our broadband and premium services to a higher percentage of our customers;
- pursue acquisitions of additional assets if available at attractive prices;
- increase prices on our products and services if and when practicable;
- increase the capacity, speed and usage of our networks; and
- market our products and services to new customers.

### Operating Revenues

From time to time, we change the categorization of our products and services, and we may make similar changes in the future. During the second quarter of 2016, we determined that because of declines due to customer migration to other strategic products and services, certain of our business low-bandwidth data services, specifically our private line (including special access) services in our business segment, are more closely aligned with our legacy services than with our strategic services. As described in greater detail in Note 14—Segment Information in our Notes, these operating revenues are now reflected as legacy services.

We currently categorize our products, services and revenues among the following four categories:

- *Strategic services*, which include primarily broadband, MPLS, Ethernet, colocation, hosting (including cloud hosting and managed hosting), video (including our facilities-based video services, which we offer in 16 markets), VoIP, information technology and other ancillary services;
- *Legacy services*, which include primarily local and long-distance voice services, including the sale of UNEs, private line (including special access), Integrated Services Digital Network ("ISDN") (which use regular telephone lines to support voice, video and data applications), switched access and other ancillary services;
- *Data integration*, which includes the sale of telecommunications equipment located on customers' premises and related products and professional services, such as network management, installation and maintenance of data equipment and the building of proprietary fiber-optic broadband networks for our governmental and business customers; and
- *Other operating revenues*, which consists primarily of Connect America Fund ("CAF") support payments, Universal Service Fund ("USF") support payments and USF surcharges. We receive federal support payments from both Phase 1 and Phase 2 of the CAF program, and support payments from both federal and state USF programs. These support payments are government subsidies designed to reimburse us for various costs related to certain telecommunications services, including the costs of deploying, maintaining and operating voice and broadband infrastructure in high-cost rural areas where we are not able to fully recover our costs from our customers. We also collect USF surcharges based on specific items we list on our customers' invoices to fund the FCC's universal service programs. We also generate other operating revenues from the leasing and subleasing of space in our office buildings, warehouses and other properties. Because we centrally manage the activities that generate these other operating revenues, these revenues are not included in our segment revenues.

The following tables summarize our consolidated operating revenues recorded under our four revenue categories:

	Years Ended December 31,		Increase / (Decrease)	% Change
	2016	2015		
	(Dollars in millions)			
Strategic services	\$ 8,050	7,753	297	4 %
Legacy services	7,672	8,338	(666)	(8)%
Data integration	533	577	(44)	(8)%
Other	1,215	1,232	(17)	(1)%
Total operating revenues	\$ 17,470	17,900	(430)	(2)%

	Years Ended December 31,		Increase / (Decrease)	% Change
	2015	2014		
	(Dollars in millions)			
Strategic services	\$ 7,753	7,303	450	6 %
Legacy services	8,338	9,033	(695)	(8)%
Data integration	577	692	(115)	(17)%
Other	1,232	1,003	229	23 %
Total operating revenues	\$ 17,900	18,031	(131)	(1)%

Our total operating revenues decreased by \$430 million, or 2%, for the year ended December 31, 2016 as compared to the year ended December 31, 2015 and decreased by \$131 million, or 1%, for the year ended December 31, 2015 as compared to the year ended December 31, 2014. The decline in operating revenues for both periods was primarily due to lower legacy services revenues, which decreased by \$666 million, or 8%, and \$695 million, or 8%, for the respective periods.

The decline in legacy services revenues for both periods reflects the continuing loss of access lines, loss of long-distance revenues primarily due to the displacement of traditional wireline telephone services by other competitive products and services, including data and wireless communication services, and reductions in the volume of our private line (including special access) services. At December 31, 2016, we had approximately 11.1 million access lines, or approximately 5.6% less than the number of access lines we operated at December 31, 2015. At December 31, 2015, we had approximately 11.7 million access lines, or approximately 5.2% less than the number of access lines we operated at December 31, 2014. We estimate that the rate of our access lines losses will be between 4% and 6% over the full year of 2017.

For 2016, the growth in our strategic services revenues was primarily due to increased demand for our Ethernet, MPLS, facilities-based video and VoIP services and from rate increases on various services, which were partially offset by declines in our hosting services and losses of broadband customers. For 2015, the growth in our strategic services revenues was primarily due to increased demand for our Ethernet, MPLS, facilities-based video and IT Services and from rate increases on various services, which were partially offset by declines in our colocation and hosting services.

Data integration revenues, which are typically more volatile than our other sources of revenues, decreased by \$44 million, or 8%, for the year ended December 31, 2016 as compared to the year ended December 31, 2015. The decline in data integration revenues was primarily due to declines in governmental and business sales and professional and maintenance services. Data integration revenues decreased by \$115 million, or 17%, for the year ended December 31, 2015 as compared to the year ended December 31, 2014. The decline in data integration revenues was primarily due to declines in governmental sales and professional services, which were partially offset by an increase in maintenance services.

Other operating revenues decreased by \$17 million, or 1%, for the year ended December 31, 2016 as compared to the year ended December 31, 2015. The decrease in other operating revenues was primarily due to lower high-cost support revenues. These declines were partially offset by higher USF surcharge revenues related to increased universal service fund contribution factors. Other operating revenues increased by \$229 million, or 23%, for the year ended December 31, 2015 as compared to the year ended December 31, 2014. The increase in other operating revenues was primarily due to additional revenue recorded under the CAF Phase 2 support program. For additional information about the CAF Phase 2 support program, see the discussion below in "Liquidity and Capital Resources—Connect America Fund."

We are aggressively marketing our strategic services in an effort to partially offset the continuing declines in our legacy services.

Further analysis of our segment operating revenues and trends impacting our performance are provided below in "Segment Results."

### Operating Expenses

Our current definitions of operating expenses are as follows:

- *Cost of services and products (exclusive of depreciation and amortization)* are expenses incurred in providing products and services to our customers. These expenses include: employee-related expenses directly attributable to operating and maintaining our network (such as salaries, wages, benefits and professional fees); facilities expenses (which include third-party telecommunications expenses we incur for using other carriers' networks to provide services to our customers); rents and utilities expenses; equipment sales expenses (such as data integration and modem expenses); payments to universal service funds (which are federal and state funds that are established to promote the availability of telecommunications services to all consumers at reasonable and affordable rates, among other things, and to which we are often required to contribute); certain litigation expenses associated with our operations; and other expenses directly related to our operations; and
- *Selling, general and administrative expenses* are corporate overhead and other operating expenses. These expenses include: employee-related expenses (such as salaries, wages, internal commissions, benefits and professional fees) directly attributable to selling products or services and employee-related expenses for administrative functions; marketing and advertising; property and other operating taxes and fees; external commissions; litigation expenses associated with general matters; bad debt expense; and other selling, general and administrative expenses.

These expense classifications may not be comparable to those of other companies.

The following tables summarize our operating expenses:

	Years Ended December 31,		Increase / (Decrease)	% Change
	2016	2015		
	(Dollars in millions)			
Cost of services and products (exclusive of depreciation and amortization)	\$ 7,774	7,778	(4)	— %
Selling, general and administrative	3,449	3,328	121	4 %
Depreciation and amortization	3,916	4,189	(273)	(7)%
Total operating expenses	<u>\$ 15,139</u>	<u>15,295</u>	<u>(156)</u>	<u>(1)%</u>

	Years Ended December 31,		Increase / (Decrease)	% Change
	2015	2014		
	(Dollars in millions)			
Cost of services and products (exclusive of depreciation and amortization)	\$ 7,778	7,846	(68)	(1)%
Selling, general and administrative	3,328	3,347	(19)	(1)%
Depreciation and amortization	4,189	4,428	(239)	(5)%
Total operating expenses	<u>\$ 15,295</u>	<u>15,621</u>	<u>(326)</u>	<u>(2)%</u>

#### Cost of Services and Products (exclusive of depreciation and amortization)

Cost of services and products (exclusive of depreciation and amortization) decreased by \$4 million, or less than 1%, for the year ended December 31, 2016 as compared to the year ended December 31, 2015. The decrease in costs of services and products (exclusive of depreciation and amortization) was primarily due to reductions in salaries and wages from lower headcount, professional fees, payment processing fees and customer premises equipment costs, which were substantially offset by increases in content costs for Prism TV (resulting from higher content volume and rates), network expense and USF rates. Cost of services and products (exclusive of depreciation and amortization) decreased by \$68 million, or 1%, for the year ended December 31, 2015 as compared to the year

ended December 31, 2014. Excluding the lower customer premises equipment costs, cost of services and products increased by \$56 million for the year ended December 31, 2015 as compared to the year ended December 31, 2014. The increase in costs of services and products was primarily due to increases in pension and postretirement costs, USF rate increases, higher network expenses and increases in content costs for Prism TV. These increases were partially offset by decreases in salaries and wages from lower headcount, professional fees and contract labor costs.

### Selling, General and Administrative

Selling, general and administrative expenses increased by \$121 million, or 4%, for the year ended December 31, 2016 as compared to the year ended December 31, 2015. The increase in selling, general and administrative expenses was primarily due to increases in severance expenses associated with our recent workforce reduction, higher payments of employee health care claims, bad debt and other expenses (including fees related to the Level 3 acquisition), which were partially offset by reductions in professional fees and property and other taxes. Selling, general and administrative expenses decreased by \$19 million, or 1%, for the year ended December 31, 2015 as compared to the year ended December 31, 2014. The decrease in selling, general and administrative expenses was primarily due to lower benefit expenses, insurance costs and asset impairment charges. These decreases were partially offset by increases in bad debt expense, external commissions and regulatory fines of \$15 million associated with a 911 system outage.

### Pension Lump Sum Offer

Our pension plan contains provisions that allow us, from time to time, to offer lump sum payment options to certain former employees in settlement of their future retirement benefits. These lump sum payments are paid from the trust that holds the plan's assets. Under pension settlement accounting, we record an accounting settlement charge associated with these lump sum payments only if, in the aggregate, they exceed the sum of the annual service and interest costs for the plan's net periodic pension benefit cost. There were no pension lump sum offerings in 2016, other than those to eligible employees who terminated during 2016. For the year ended December 31, 2015, we made cash settlement payments to former employees for lump sum offers of approximately \$356 million, but pension settlement accounting was not triggered in 2015. For the year ended December 31, 2014, we made cash settlement payments to former employees for lump sum offers of approximately \$460 million, which triggered pension settlement accounting and resulted in us recording additional pension expense of \$63 million. Pension expense is allocated to cost of services and products (exclusive of depreciation and amortization), selling, general and administrative and to capital projects. See Note 9—Employee Benefits to our consolidated financial statements in Item 8 of Part II of this annual report, for additional information on the pension lump sum offers.

### Depreciation and Amortization

The following tables provide detail of our depreciation and amortization expense:

	Years Ended December 31,		Increase / (Decrease)	% Change
	2016	2015		
	(Dollars in millions)			
Depreciation	\$ 2,691	2,836	(145)	(5)%
Amortization	1,225	1,353	(128)	(9)%
Total depreciation and amortization	\$ 3,916	4,189	(273)	(7)%

	Years Ended December 31,		Increase / (Decrease)	% Change
	2015	2014		
	(Dollars in millions)			
Depreciation	\$ 2,836	2,958	(122)	(4)%
Amortization	1,353	1,470	(117)	(8)%
Total depreciation and amortization	\$ 4,189	4,428	(239)	(5)%

Annual depreciation expense is impacted by several factors, including changes in our depreciable cost basis, changes in our estimates of the remaining economic life of certain network assets, the addition of new plant and our entry into an agreement to sell our data centers and colocation business. Depreciation expense decreased by \$145 million, or 5%, for the year ended December 31, 2016 as compared to the year ended December 31, 2015 and decreased by \$122 million, or 4%, for the year ended December 31, 2015 as compared to the year ended December 31, 2014. The depreciation expense related to our plant was lower for both periods due to full depreciation and retirement of certain plant placed in service prior to 2016 and 2015. Additionally, we ceased depreciating property, plant and equipment assets of our colocation business when we entered into the agreement to sell that business. We estimate that we would have recorded additional depreciation expense during 2016 of \$30 million if we had not agreed to sell the colocation business. The decrease in both periods was partially offset by an increase in depreciation expense attributable to new plant placed in service during the respective years.

Additionally, in 2015, the lower depreciation expense was further offset by the impact of changes in the estimated lives of certain property, plant and equipment which resulted in additional depreciation. The changes in the estimated lives of certain property, plant and equipment resulted in an increase in depreciation expense of approximately \$48 million for 2015, which was more than fully offset by the decrease in depreciation expense noted above. In addition, we developed a plan to migrate customers from one of our networks to another, which began in late 2014 and ended in late 2015. As a result, we implemented changes in estimates that reduced the remaining economic lives of certain network assets. The impact from the above-noted changes in estimates and network migration resulted in an increase in depreciation expense of approximately \$90 million for the year ended December 31, 2014.

Amortization expense decreased by \$128 million, or 9%, for the year ended December 31, 2016 as compared to the year ended December 31, 2015 and decreased by \$117 million, or 8%, for the year ended December 31, 2015 as compared to the year ended December 31, 2014. The decrease in amortization expense for both periods was primarily due to the use of accelerated amortization for a portion of our customer relationship assets and our entry into an agreement to sell our data centers and colocation business. The effect of using an accelerated amortization method results in an incremental decline in expense each period as the intangible assets amortize. We ceased amortizing the intangible assets of our colocation business when we entered into the agreement to sell that business. We estimate that we would have recorded additional amortization expense during 2016 of \$6 million if we had not agreed to sell the colocation business. In addition, amortization of capitalized software was lower in both periods due to software becoming fully amortized faster than new software was acquired or developed.

### Other Consolidated Results

The following tables summarize our total other expense, net and income tax expense:

	Years Ended December 31,		Increase / (Decrease)	% Change
	2016	2015		
	(Dollars in millions)			
Interest expense	\$ (1,318)	(1,312)	6	— %
Other income, net	7	23	(16)	(70)%
Total other expense, net	\$ (1,311)	(1,289)	22	2 %
Income tax expense	\$ 394	438	(44)	(10)%

	Years Ended December 31,		Increase / (Decrease)	% Change
	2015	2014		
	(Dollars in millions)			
Interest expense	\$ (1,312)	(1,311)	1	— %
Other income, net	23	11	12	109 %
Total other expense, net	\$ (1,289)	(1,300)	(11)	(1)%
Income tax expense	\$ 438	338	100	30 %

### Interest Expense

Interest expense increased by \$6 million, or less than 1%, for the year ended December 31, 2016 as compared to the year ended December 31, 2015. The increase in interest expense was substantially due to a reduction in the amount of net premium amortization recorded at acquisition due to the early retirement of several issuances of debt during the period, which has the effect of increasing interest expense and an increase in interest expense on unsecured notes related to the issuance of \$1.0 billion of new debt in April, 2016 in advance of a debt maturity in June, 2016. Interest expense increased by \$1 million, or less than 1%, for the year ended December 31, 2015 as compared to the year ended December 31, 2014. The increase in interest expense was primarily due to a reduction in the amortization of debt premiums, which was substantially offset by higher capitalized interest, lower bond coupon rates and lower interest under our Credit Facility. See Note 5—Long-Term Debt and Credit Facilities to our consolidated financial statements in Item 8 of Part II of this annual report and Liquidity and Capital Resources below for additional information about our debt.

### Other Income, Net

Other income, net reflects certain items not directly related to our core operations, including our share of income from partnerships we do not control, interest income, gains and losses from non-operating asset dispositions and foreign currency gains and losses. Other income, net decreased by \$16 million, or 70%, for the year ended December 31, 2016 as compared to the year ended December 31, 2015. This decrease in other income, net was primarily due to losses on early retirement of debt, which was partially offset by the impact of nonrecurring funding from a state economic development program. Other income, net increased by \$12 million, or 109%, for the year ended December 31, 2015 as compared to the year ended December 31, 2014. This increase in other income, net was primarily due to the impact of a 2014 impairment charge of \$14 million recorded in connection with the sale of our 700 MHz A-Block Wireless Spectrum licenses, which was partially offset by a net loss on early retirement of debt in 2015.

### Income Tax Expense

Income tax expense decreased by \$44 million for the year ended December 31, 2016 as compared to the year ended December 31, 2015. Our income tax expense for the year ended December 31, 2015 increased by \$100 million from the amounts for the comparable prior year. For the years ended December 31, 2016, 2015 and 2014, our effective income tax rate was 38.6%, 33.3% and 30.5%, respectively. The effective tax rate for the year ended December 31, 2016 reflects a tax impact of \$18 million from an intercompany dividend payment from one of our foreign subsidiaries to its domestic parent company that was made as part of our corporate restructuring in preparation for the sale of our colocation business. The effective tax rate for the year ended December 31, 2015 reflects a tax benefit of approximately \$34 million related to affiliate debt rationalization, research and development tax credits of \$28 million for 2011 through 2015, and a \$16 million tax decrease due to changes in state taxes caused by apportionment changes, state tax rate changes and the changes in the expected utilization of net operating loss carryforwards ("NOLs"). The effective tax rate for the year ended December 31, 2014 reflects a \$60 million tax benefit associated with a worthless stock deduction for the tax basis in a wholly-owned foreign subsidiary as a result of developments in bankruptcy proceedings involving its sole asset, an indirect investment in KPNQwest, N.V. The subsidiary was acquired as part of the acquisition of Qwest and we assigned it no fair value in the acquisition due to the bankruptcy proceedings, which were then ongoing. The effective tax rate for the year ended December 31, 2014 also reflects a \$13 million tax decrease due to changes in state taxes caused by apportionment changes, state tax rate changes and the changes in the expected utilization of NOLs. The rate also reflects the absence of tax benefits from the impairment and disposition of our 700 MHz A-Block wireless spectrum licenses in 2014, because we are not likely to generate income of a character required to realize a tax benefit from the loss on disposition during the period permitted by law for utilization of that loss. See Note 13—Income Taxes to our consolidated financial statements in Item 8 of Part II of this annual report and "Critical Accounting Policies and Estimates—Income Taxes" below for additional information.

### Segment Results

The results for our business and consumer segments are summarized below for the years ended December 31, 2016, 2015 and 2014:

	Years Ended December 31,		
	2016	2015	2014
	(Dollars in millions)		
Total segment revenues	\$ 16,255	16,668	17,028
Total segment expenses	8,492	8,461	8,502
Total segment income	\$ 7,763	8,207	8,526
Total margin percentage	48%	49%	50%
Business segment:			
Revenues	\$ 10,352	10,646	11,030
Expenses	5,930	5,967	6,019
Income	\$ 4,422	4,679	5,011
Margin percentage	43%	44%	45%
Consumer segment:			
Revenues	\$ 5,903	6,022	5,998
Expenses	2,562	2,494	2,483
Income	\$ 3,341	3,528	3,515
Margin percentage	57%	59%	59%

The following table reconciles our total segment revenues and total segment income presented above to consolidated operating revenues and consolidated operating income reported in our consolidated statements of operations.

	Years Ended December 31,		
	2016	2015	2014
	(Dollars in millions)		
Total segment revenues	\$ 16,255	16,668	17,028
Other operating revenues	1,215	1,232	1,003
Operating revenues reported in our consolidated statements of operations	\$ 17,470	17,900	18,031
Total segment income	\$ 7,763	8,207	8,526
Other operating revenues	1,215	1,232	1,003
Depreciation and amortization	(3,916)	(4,189)	(4,428)
Other unassigned operating expenses	(2,731)	(2,645)	(2,691)
Operating income reported in our consolidated statements of operations	\$ 2,331	2,605	2,410

### Changes in Segment Reporting

During the first half of 2016, we implemented several changes with respect to the assignment of certain expenses to our reportable segments, including changes that increased our consumer segment expenses and decreased our business segment expenses in prior periods. We have recast our previously reported segment results for the years ended December 31, 2015 and 2014 to conform to the current presentation. See Note 14—Segment Information to our consolidated financial statements in Item 8 of Part II of this annual report for additional information on our changes in segment reporting.

### Allocation of Revenues and Expenses

Our segment revenues include all revenues from our strategic services, legacy services and data integration as described in more detail above. Segment revenues are based upon each customer's classification to an individual segment. We report our segment

revenues based upon all services provided to that segment's customers. For information on how we allocate expenses to our segments, as well as other additional information about our segments, see Note 14—Segment Information.

## Business Segment

The operations of our business segment have been impacted by several significant trends, including those described below:

- *Strategic services.* Our mix of total business segment revenues continues to migrate from legacy services to strategic services as our small, medium and enterprise business, wholesale and governmental customers increasingly demand integrated data, broadband, hosting and voice services. Our Ethernet-based services in the wholesale market face competition from cable companies and competitive fiber-based telecommunications providers. We anticipate continued pricing pressure for our colocation services as vendors continue to expand their enterprise colocation operations. In recent years, our competitors, as well as several large, diversified technology companies, have made substantial investments in cloud computing. This expansion in competitive cloud computing offerings has led to increased pricing pressure, a migration towards lower-priced cloud-based services and enhanced competition for contracts, and we expect these trends to continue. Customers' demand for new technology has also increased the number of competitors offering strategic services similar to ours. Price compression from each of these above-mentioned competitive pressures has negatively impacted the operating margins of our strategic services, and we expect this trend to continue. Operating costs also impact the operating margins of our strategic services, but to a lesser extent than price compression and customer disconnects. These operating costs include employee costs, sales commissions, software costs on selected services, installation costs and third-party facility costs. We believe increases in operating costs have generally had a greater impact on the operating margins of our strategic services as compared to our legacy services, principally because our strategic services rely more heavily upon the above-listed support functions;
- *Legacy services.* We continue to experience customers migrating away from our higher margin legacy services into lower margin strategic services. Our legacy services revenues have been, and we expect they will continue to be, adversely affected by access line losses and price compression. In particular, our access, local services and long-distance revenues have been, and we expect will continue to be, adversely affected by customer migration to more technologically advanced services, an increase in the use of non-voice communications and a related decrease in the demand for traditional voice services, industry consolidation and price compression caused by regulation and rate reductions. For example, many of our business segment customers are substituting cable, wireless and VoIP services for traditional voice telecommunications services, resulting in continued access revenue loss. Demand for our private line services (including special access) continues to decline due to our customers' optimization of their networks, industry consolidation and technological migration to higher-speed services. Although our legacy services generally face fewer direct competitors than certain of our strategic services, customer migration and, to a lesser degree, price compression from competitive pressures have negatively impacted our legacy revenues and the operating margins of our legacy services. We expect this trend to continue. Operating costs, such as installation costs and third-party facility costs, have also negatively impacted the operating margins of our legacy services, but to a lesser extent than customer loss, customer migration and price compression. Operating costs also tend to impact our legacy services to a lesser extent than our strategic services as noted above;
- *Data integration.* We expect both data integration revenue and the related costs will fluctuate from year to year as this offering tends to be more sensitive than others to changes in the economy and in spending trends of our federal, state and local governmental customers, many of whom have experienced substantial budget cuts over the past several years, with the possibility of additional future budget cuts. Our data integration operating margins are typically smaller than most of our other offerings; and
- *Operating efficiencies.* We continue to evaluate our segment operating structure and focus. This involves balancing our workforce in response to our workload requirements, productivity improvements and changes in industry, competitive, technological and regulatory conditions, while achieving operational efficiencies and improving our processes through automation. However, our ongoing efforts to increase revenue will continue to require that we incur higher costs in some areas. We also expect our business segment to benefit indirectly from enhanced efficiencies in our company-wide network operations.

The following tables summarize the results of operations from our business segment:

	<b>Business Segment</b>			
	<b>Years Ended December 31,</b>		<b>Increase / (Decrease)</b>	<b>% Change</b>
	<b>2016</b>	<b>2015</b>		
	<b>(Dollars in millions)</b>

- (1) Includes MPLS and Ethernet revenue  
(2) Includes colocation, hosting (including cloud hosting and managed hosting) and hosting area network revenue  
(3) Includes primarily broadband, VoIP, video and IT services revenue  
(4) Includes local and long-distance voice revenue  
(5) Includes private line (including special access) revenue  
(6) Includes UNEs, public access, switched access and other ancillary revenue

*Segment Revenues*

Business segment revenues decreased by \$294 million, or 3%, for the year ended December 31, 2016 as compared to the year ended December 31, 2015. The decrease in business segment revenues was primarily due to declines in our legacy services revenues. The decline in legacy services revenues was attributable to a reduction in local service access lines and lower volumes of long-distance and access services for the reasons noted above and to reductions in the volume of private line (including special access) services. The increase in our strategic services revenues was primarily due to increases in MPLS unit growth and higher Ethernet and VOIP volumes, which were partially offset by declines in our hosting services. The decrease in our data integration revenues was primarily due to lower sales of customer premises equipment to governmental and business customers and to declines in maintenance services. Business segment revenues decreased by \$384 million, or 3%, for the year ended December 31, 2015 as compared to the year ended December 31, 2014. The decrease in business segment revenues was primarily due to declines in legacy services revenues and data integration revenues, which were partially offset by the growth in our strategic services revenues. The decline in legacy services revenues was attributable to a reduction in local service access lines and lower volumes of long-distance, access and traditional WAN services for the reasons noted above and a reduction in private line (including special access) volumes, as well as a pricing reduction on private line services for a large wholesale customer in exchange for a longer term commitment. The growth in our strategic services revenues was primarily due to MPLS unit growth and higher Ethernet volumes, which were partially offset by a reduction in hosting services. The decrease in data integration revenues was primarily due to lower sales of customer premises equipment to governmental and business customers during the period.

### *Segment Expenses*

Business segment expenses decreased by \$37 million, or 1%, for the year ended December 31, 2016 as compared to the year ended December 31, 2015. The decrease in our business segment expenses was primarily due to decreases in salaries and wages, professional fees and payment processing fees, which were partially offset by increases in facility costs, network expense and real estate and power costs. Business segment expenses decreased by \$52 million, or 1%, for the year ended December 31, 2015 as compared to the year ended December 31, 2014. The decrease was primarily due to lower customer premises equipment costs resulting from the lower sales noted above in segment revenues. Excluding the lower customer premises equipment costs, business expenses increased by \$62 million for the year ended December 31, 2015 as compared to the year ended December 31, 2014. The increase is primarily due to increases in salaries and wages, benefits expense, external commissions, network expense and facility costs, which were partially offset by decreases in professional fees, materials and supplies and fleet expenses.

### *Segment Income*

Business segment income decreased by \$257 million, or 5%, for the year ended December 31, 2016 as compared to the year ended December 31, 2015 and decreased by \$332 million, or 7%, for the year ended December 31, 2015 as compared to the year ended December 31, 2014. The decrease in business segment income for both periods was due predominantly to the loss of customers and lower service volumes in our legacy services.

### **Consumer Segment**

The operations of our consumer segment have been impacted by several significant trends, including those described below:

- *Strategic services.* In order to remain competitive and attract additional residential broadband subscribers, we believe it is important to continually increase our broadband network's scope and connection speeds. As a result, we continue to invest in our broadband network, which allows for the delivery of higher-speed broadband services to a greater number of customers. We compete in a maturing broadband market in which most consumers already have broadband services and growth rates in new subscribers have slowed. Moreover, as described further in Item 1A of Part I of this annual report, certain of our competitors continue to provide broadband services at higher average transmission speeds than ours or through advanced wireless data service offerings, both of which we believe have impacted the competitiveness of certain of our broadband offerings. The offering of our facilities-based video services in our markets requires us to incur substantial start-up expenses in advance of marketing and selling the service. Also, our associated content costs continue to increase and the video business has become more competitive as more options become available to customers to access video services through new technologies. The demand for new technology has increased the number of competitors offering strategic services similar to ours. Price compression and new technology from our competitors have negatively impacted the operating margins of our strategic services and we expect this trend to continue. Operating costs also impact the operating margins of our strategic services. These operating costs include employee costs, marketing and advertising expenses, sales commissions, Prism TV content costs and installation costs. We believe increases in operating costs have generally had a greater impact on our operating margins of our strategic services as compared to our legacy services, principally because our strategic services rely more heavily upon the above-listed costs;
- *Legacy services.* Our voice revenues have been, and we expect they will continue to be, adversely affected by access line losses and lower long-distance voice service volumes. Intense competition and product substitution continue to drive our access line losses. For example, many consumers are substituting cable and wireless voice services and electronic mail, texting and social networking non-voice services for traditional voice telecommunications services. We expect that these factors will continue to negatively impact our business. As a result of the expected loss of higher margin services associated with access lines, we continue to offer our customers service bundling and other product promotions to help mitigate this trend, as described below. Customer migration and price compression from competitive pressures have not only negatively impacted our legacy revenues, but they have also negatively impacted the operating margins of our legacy services and we expect this trend to continue. Operating costs, such as installation costs and facility costs, have also negatively impacted the operating margins of our legacy services, but to a lesser extent than customer migration and price compression. Operating costs also tend to impact our legacy services margins to a lesser extent than our strategic services as noted above;
- *Service bundling and product promotions.* We offer our customers the ability to bundle multiple products and services. These customers can bundle broadband services with other services such as local voice, video, long-distance and wireless. While we believe our bundled service offerings can help retain customers, they also tend to lower our profit margins in the consumer segment due to the related discounts; and

- *Operating efficiencies.* We continue to evaluate our segment operating structure and focus. This involves balancing our workforce in response to our workload requirements, productivity improvements and changes in industry, competitive, technological and regulatory conditions. We also expect our consumer segment to benefit indirectly from enhanced efficiencies in our company-wide network operations.

The following tables summarize the results of operations from our consumer segment:

	Consumer Segment			
	Years Ended December 31,		Increase / (Decrease)	% Change
	2016	2015		
	(Dollars in millions)			
Segment revenues:				
Strategic services				
Broadband services (1)	\$ 2,689	2,611	78	3 %
Other strategic services (2)	458	421	37	9 %
Total strategic services revenues	3,147	3,032	115	4 %
Legacy services				
Voice services (3)	2,442	2,676	(234)	(9)%
Other legacy services (4)	312	312	—	— %
Total legacy services revenues	2,754	2,988	(234)	(8)%
Data integration	2	2	—	— %
Total revenues	5,903	6,022	(119)	(2)%
Segment expenses:				
Total expenses	2,562	2,494	68	3 %
Segment income	\$ 3,341	3,528	(187)	(5)%
Segment income margin percentage	57%	59%		

- (1) Includes broadband and related services revenue  
(2) Includes video and other revenue  
(3) Includes local and long-distance voice revenue  
(4) Includes other ancillary revenue

## Consumer Segment

	Years Ended December 31,		Increase / (Decrease)	% Change
	2015	2014		
	(Dollars in millions)			
Segment revenues:				
Strategic services				
Broadband services (1)	\$ 2,611	2,469	142	6 %
Other strategic services (2)	421	381	40	10 %
Total strategic services revenues	3,032	2,850	182	6 %
Legacy services				
Voice services (3)	2,676	2,865	(189)	(7)%
Other legacy services (4)	312	279	33	12 %
Total legacy services revenues	2,988	3,144	(156)	(5)%
Data integration	2	4	(2)	(50)%
Total revenues	6,022	5,998	24	— %
Segment expenses:				
Total expenses	2,494	2,483	11	— %
Segment income	\$ 3,528	3,515	13	— %
Segment income margin percentage	59%	59%		

- (1) Includes broadband and related services revenue  
(2) Includes video and other revenue  
(3) Includes local and long-distance voice revenue  
(4) Includes other ancillary revenue

*Segment Revenues*

Consumer segment revenues decreased by \$119 million, or 2%, for year ended December 31, 2016 as compared to the year ended December 31, 2015. The decrease in our consumer segment revenues was primarily due to the declines in our legacy services revenues, which were partially offset by increases in our strategic revenues. The decline in our legacy services revenues for both periods was primarily due to lower local and long-distance voice service volumes associated with access line losses resulting from the competitive and technological factors noted above. The increase in our strategic services revenues was primarily due to 2016 rate increases resulting from various pricing initiatives on broadband, Prism TV and other strategic products and services, and increases in the number of our Prism TV customers, which were partially offset by a decline in broadband customers. Consumer segment revenues increased by \$24 million, or less than 1%, for the year ended December 31, 2015 as compared to the year ended December 31, 2014. The increase in strategic services revenues was primarily due to increases in the number of Prism TV customers, as well as from 2015 price increases on various services. The decline in legacy services revenues was primarily due to declines in local and long-distance services volumes associated with access line losses resulting from the competitive and technological factors as further described above.

*Segment Expenses*

Consumer segment expenses increased by \$68 million, or 3%, for the year ended December 31, 2016 as compared to the year ended December 31, 2015. The increase in our consumer segment expenses was primarily due to increases in costs related to Prism TV (resulting from higher content volume and rates), professional fees, sales commissions, bad debt expense and network costs, which were partially offset by reductions in salaries and wages from lower headcount and payment processing fees. Consumer segment expenses increased by \$11 million, or less than 1%, for the year ended December 31, 2015 as compared to the year ended December 31, 2014. This increase was primarily due to increases in Prism TV content costs (resulting from higher volume and rates) and bad debt expense, which were partially offset by reductions in employee-related costs, facility costs, fleet expenses and network expenses.

### *Segment Income*

Consumer segment income decreased by \$187 million, or 5%, for the year ended December 31, 2016 as compared to the year ended December 31, 2015. This decrease was primarily due to loss of customers from legacy services and increases in the costs related to the growth in Prism TV. Consumer segment income increased by \$13 million, or less than 1%, for the year ended December 31, 2015 as compared to the year ended December 31, 2014. This increase was primarily due to price increases on various services.

### **Critical Accounting Policies and Estimates**

Our consolidated financial statements are prepared in accordance with accounting principles that are generally accepted in the United States. The preparation of these consolidated financial statements requires management to make estimates and assumptions that affect the reported amounts of our assets, liabilities, revenues and expenses. We have identified certain policies and estimates as critical to our business operations and the understanding of our past or present results of operations related to (i) goodwill, customer relationships and other intangible assets; (ii) property, plant and equipment; (iii) pension and post-retirement benefits; (iv) loss contingencies and litigation reserves; (v) Connect America Fund; and (vi) income taxes. These policies and estimates are considered critical because they had a material impact, or they have the potential to have a material impact, on our consolidated financial statements and because they require us to make significant judgments, assumptions or estimates. We believe that the estimates, judgments and assumptions made when accounting for the items described below were reasonable, based on information available at the time they were made. However, there can be no assurance that actual results will not differ from those estimates.

### *Goodwill, Customer Relationships and Other Intangible Assets*

We amortize customer relationships primarily over an estimated life of 10 to 15 years, using either the sum-of-the-years-digits or the straight-line methods, depending on the type of customer. We amortize capitalized software using the straight-line method over estimated lives ranging up to 7 years, except for approximately \$237 million of our capitalized software costs, which represents costs to develop an integrated billing and customer care system which is amortized using the straight-line method over a 20 year period. We annually review the estimated lives and methods used to amortize our other intangible assets, primarily capitalized software. The amount of future amortization expense may differ materially from current amounts, depending on the results of our annual reviews.

Our goodwill was derived from numerous acquisitions where the purchase price exceeded the fair value of the net assets acquired.

We are required to reassign goodwill to reporting units each time we reorganize our internal reporting structure which causes a change in the composition of our reporting units. We assign goodwill to the reporting units using a relative fair value approach. We utilize the trailing twelve months earnings before interest, taxes, depreciation and amortization as our allocation methodology as we believe that it represents a reasonable proxy for the fair value of the operations being reorganized. The use of other fair value assignment methods could result in materially different results. For additional information on our segments, see Note 14—Segment Information to our consolidated financial statements in Item 8 of Part II of this annual report.

We are required to assess goodwill for impairment at least annually, or more frequently, if an event occurs or circumstances change that would indicate an impairment may have occurred. We are required to write-down the value of goodwill in periods in which the recorded amount of goodwill exceeds the implied fair value of goodwill. Our reporting units are not discrete legal entities with discrete financial statements. Our assets and liabilities are employed in and relate to the operations of our reporting units. Therefore, the equity carrying value and future cash flows must be estimated each time a goodwill impairment analysis is performed on a reporting unit. As a result, our assets, liabilities and cash flows are assigned to reporting units using reasonable and consistent allocation methodologies. Certain estimates, judgments and assumptions are required to perform these assignments. We believe these estimates, judgments and assumptions to be reasonable, but changes in many of these can significantly affect each reporting unit's equity carrying value and future cash flows utilized for our goodwill impairment test. Our annual assessment date for testing goodwill impairment is October 31.

As of October 31, 2016, we assessed goodwill for impairment for our three reporting units, which we determined to be business (excluding wholesale), consumer and wholesale and determined that the estimated fair value of our wholesale reporting unit was substantially in excess of our carrying value of equity and the estimated fair value of our business and consumer reporting units exceeded our carrying value of equity by 28% and 18%, respectively.

For additional information on our goodwill balances by segment, see Note 4—Goodwill, Customer Relationships and Other Intangible Assets in Item 8 of Part II of this annual report.

We may be required to assess our goodwill for impairment before our next required assessment date of October 31, 2017 under certain circumstances, including any failure to meet our forecasted future operating results or any significant increases in our weighted average cost of capital. In addition, we cannot assure that adverse conditions will not trigger future goodwill impairment assessments or impairment charges. A number of factors, many of which we cannot control, could affect our financial condition, operating results and business prospects and could cause our actual results to differ from the estimates and assumptions we employed in our goodwill impairment assessment. These factors include, but are not limited to, (i) further weakening in the overall economy; (ii) a significant decline in our stock price and resulting market capitalization as a result of an adverse change to our overall business operations; (iii) changes in the discount rate we use in our testing; (iv) successful efforts by our competitors to gain market share in our markets; (v) adverse changes as a result of regulatory or legislative actions; (vi) a significant adverse change in our legal affairs or in the overall business climate; and (vii) recognition of a goodwill impairment loss in the financial statements of one or more of our subsidiaries that are a component of our segments. For additional information, see "Risk Factors" in Item 1A of Part I of this annual report. We will continue to monitor certain events that impact our operations to determine if an interim assessment of goodwill impairment should be performed prior to the next required assessment date of October 31, 2017.

### *Property, Plant and Equipment*

Property, plant and equipment acquired in connection with our acquisitions was recorded based on its estimated fair value as of its acquisition date, plus the estimated value of any associated legally or contractually required asset retirement obligation. Purchased and constructed property, plant and equipment is recorded at cost, plus the estimated value of any associated legally or contractually required asset retirement obligation. Renewals and betterments of plant and equipment are capitalized while repairs, as well as renewals of minor items, are charged to operating expense. Depreciation of property, plant and equipment is provided on the straight-line method using class or overall group rates. The group method provides for the recognition of the remaining net investment, less anticipated net salvage value, over the remaining useful life of the assets. This method requires the periodic revision of depreciation rates.

Normal retirements of property, plant and equipment are charged against accumulated depreciation, with no gain or loss recognized. We depreciate such property on the straight-line method over estimated service lives ranging from 3 to 45 years.

We perform annual internal reviews to evaluate the reasonableness of the depreciable lives for our property, plant and equipment. Our reviews utilize models that take into account actual usage, physical wear and tear, replacement history, assumptions about technology evolution and, in certain instances, actuarially determined probabilities to estimate the remaining life of our asset base.

Due to rapid changes in technology and the competitive environment, determining the estimated economic life of telecommunications plant and equipment requires a significant amount of judgment. We regularly review data on utilization of equipment, asset retirements and salvage values to determine adjustments to our depreciation rates. The effect of a hypothetical one year increase or decrease in the estimated remaining useful lives of our property, plant and equipment would have decreased depreciation expense by approximately \$390 million annually or increased depreciation expense by approximately \$550 million annually, respectively.

### *Pension and Post-retirement Benefits*

We sponsor a noncontributory qualified defined benefit pension plan (referred to as our qualified pension plan) for a substantial portion of our employees. In addition to this tax-qualified pension plan, we also maintain several non-qualified pension plans for certain eligible highly compensated employees. We also maintain post-retirement benefit plans that provide health care and life insurance benefits for certain eligible retirees.

In 2016, approximately 53% of the qualified pension plan's January 1, 2016 net actuarial loss balance of \$2.843 billion was subject to amortization as a component of net periodic expense over the average remaining service period of participating employees expected to receive benefits, which ranges from 9 to 10 years for the plan. The other 47% of the qualified pension plan's beginning net actuarial loss balance was treated as indefinitely deferred during 2016. The entire beginning net actuarial loss of \$147 million for the post-retirement benefit plans was treated as indefinitely deferred during 2016.

In 2015, approximately 45% of the qualified pension plan's January 1, 2015 net actuarial loss balance of \$2.740 billion was subject to amortization as a component of net periodic expense over the average remaining service period of participating employees expected to receive benefits, which ranges from 8 to 9 years for the plan. The other 55% of the qualified pension plan's beginning net actuarial loss balance was treated as indefinitely deferred during 2015. The entire beginning net actuarial loss of \$277 million for the post-retirement benefit plans was treated as indefinitely deferred during 2015.

In 2014, approximately 16% of the qualified pension plans' January 1, 2014 net actuarial loss balance of \$1.048 billion was subject to amortization as a component of net periodic expense over the average remaining service period of participating employees expected to receive benefits, which ranges from 8 to 9 years for the plans. The other 84% of the pension plans' beginning net actuarial loss balance was treated as indefinitely deferred during 2014. The entire beginning net actuarial loss of \$37 million for the post-retirement benefit plans was treated as indefinitely deferred during 2014.

In computing our pension and post-retirement health care and life insurance benefit obligations, our most significant assumptions are the discount rate and mortality rates. In computing our periodic pension and post-retirement benefit expense, our most significant assumptions are the discount rate and the expected rate of return on plan assets.

The discount rate for each plan is the rate at which we believe we could effectively settle the plan's benefit obligations as of the end of the year. We selected each plan's discount rate based on a cash flow matching analysis using hypothetical yield curves from U.S. corporate bonds rated high quality and projections of the future benefit payments that constitute the projected benefit obligation for the plans. This process establishes the uniform discount rate that produces the same present value of the estimated future benefit payments as is generated by discounting each year's benefit payments by a spot rate applicable to that year. The spot rates used in this process are derived from a yield curve created from yields on the 60th to 90th percentile of U.S. high quality bonds.

In 2016, we changed the method we use to estimate the service and interest components of net periodic benefit expense for pension and other postretirement benefit obligations. This change resulted in a decrease in the service and interest components in 2016. Beginning in 2016, we utilized a full yield curve approach in connection with estimating these components by applying the specific spot rates along the yield curve used in the determination of the benefit obligation to the relevant projected cash flows, as opposed to the single weighted-average discount rate derived from the yield curve that we have used in the past. We believe this change more precisely measures service and interest costs by improving the correlation between projected benefit cash flows to the corresponding spot yield curve rates. This change did not affect the measurement of our total benefit obligations but lowered our annual net periodic benefit cost by approximately \$149 million in 2016. This change was treated as a change in accounting estimate and, accordingly, we did not adjust the amounts recorded in 2015 or 2014.

Mortality rates help predict the expected life of plan participants and are based on historical demographic studies by the Society of Actuaries. In 2016, we adopted the revised mortality table and projection scale released by the Society of Actuaries ("SOA"), which decreased the projected benefit obligation of our benefit plans by \$268 million. The 2015 revised mortality table and projection scale decreased the 2015 projected benefit obligation of our benefit plans by \$379 million. In 2014, the SOA published new mortality rate tables reflecting increases in the projected life expectancies of North Americans since its publications of earlier tables. We adopted the new tables immediately. This resulted in an increase to the projected benefit obligation of approximately \$1.3 billion for our pension and post-retirement benefit plans. The change in the projected benefit obligation of our benefit plans was recognized as part of the net actuarial loss and is included in accumulated other comprehensive loss, a portion of which is subject to amortization over the remaining estimated life of plan participants, which was approximately 9 to 10 years as of December 31, 2016.

The expected rate of return on plan assets is the long-term rate of return we expect to earn on the plans' assets in the future, net of administrative expenses paid from plan assets. The rate of return is determined by the strategic allocation of plan assets and the long-term risk and return forecast for each asset class. The forecasts for each asset class are generated primarily from an analysis of the long-term expectations of various third party investment management organizations to which we then add a factor of 50 basis points to reflect the benefit we expect to result from our active management of the assets. The expected rate of return on plan assets is reviewed annually and revised, as necessary, to reflect changes in the financial markets and our investment strategy.

To compute the expected return on pension and post-retirement benefit plan assets, we apply an expected rate of return to the fair value of the pension plan assets and to the fair value of the post-retirement benefit plan assets adjusted for contribution timing and for projected benefit payments to be made from the plan assets. Annual market volatility for these assets (higher or lower than expected return) is reflected in the net actuarial losses.

Changes in any of the above factors could significantly impact operating expenses in the consolidated statements of operations and other comprehensive (loss) income in the consolidated statements of comprehensive income (loss) as well as the value of the liability and accumulated other comprehensive loss of stockholders' equity on our consolidated balance sheets. The expected return on plan assets is reflected as a reduction to our pension and post-retirement benefit expense. If our assumed expected rates of return for 2016 were 100 basis points lower, our qualified pension and post-retirement benefit expenses for 2016 would have increased by \$92 million. If our assumed discount rates for 2016 were 100 basis points lower, our qualified pension and post-retirement benefit expenses for 2016 would have increased by \$46 million and our projected benefit obligation for 2016 would have increased by approximately \$1.753 billion.

### *Loss Contingencies and Litigation Reserves*

We are involved in several material legal proceedings, as described in more detail in Note 16—Commitments and Contingencies to our consolidated financial statements in Item 8 of Part II of this annual report. We assess potential losses in relation to these and other pending or threatened tax and legal matters. For matters not related to income taxes, if a loss is considered probable and the amount can be reasonably estimated, we recognize an expense for the estimated loss. To the extent these estimates are more or less than the actual liability resulting from the resolution of these matters, our earnings will be increased or decreased accordingly. If the differences are material, our consolidated financial statements could be materially impacted.

For matters related to income taxes, if we determine in our judgment that the impact of an uncertain tax position is more likely than not to be sustained upon audit by the relevant taxing authority, then we recognize in our financial statements a benefit for the largest amount that is more likely than not to be sustained. No portion of an uncertain tax position will be recognized if we determine in our judgment that the position has less than a 50% likelihood of being sustained. Though the validity of any tax position is a matter of tax law, the body of statutory, regulatory and interpretive guidance on the application of the law is complex and often ambiguous. Because of this, whether a tax position will ultimately be sustained may be uncertain.

### *Connect America Fund*

In 2015, we accepted CAF funding from the FCC of approximately \$500 million per year for six years to fund the deployment of voice and broadband capable infrastructure for approximately 1.2 million rural households and businesses (living units) in 33 states under the CAF Phase 2 high-cost support program. This program provides a monthly high-cost subsidy similar to the support provided by the FCC's previous cost reimbursement programs. Although we believe that there is no specific authoritative U.S. GAAP guidance for the treatment of government assistance, we identified three acceptable methods to account for these funds: (1) recognize revenue when entitled to receive cash, (2) defer cash received until the living units are enabled to receive the service at the FCC specified level, or (3) record the cash received as contra capital. After assessing these alternatives, we have determined that we will recognize CAF Phase 2 funds each month as revenue when we are entitled to receive the cash less a deferred amount. The amount of revenue deferred in 2016 was approximately \$12 million. We believe our recognition methodology is consistent with other companies in our industry in the United States, but may not necessarily be consistent with companies outside the United States that receive similar government funding, and we cannot provide assurances to this effect.

In computing the amount of revenue to recognize, we assume that we will not be able to economically enable 100% of the required living units in every state with voice and broadband capabilities under the CAF Phase 2 program. We defer recognition of the funds related to potential living units that we estimate we will not enable until we can with reasonable assurance determine that we can fully meet the enablement targets. As disclosed elsewhere herein, in some limited instances, a portion of the funds must be returned if enablement targets are not attained. Based on estimated enablement, the effect of a hypothetical 1% decrease in our estimate of living units we will not enable with voice and broadband capabilities under the CAF Phase 2 program would have increased our revenue by \$3 million in 2016 and a 1% increase would have decreased our revenue by \$9 million in 2016.

For additional information about the CAF Phase 2 support program, see the discussion below in "Liquidity and Capital Resources—Connect America Fund."

### *Income Taxes*

Our provision for income taxes includes amounts for tax consequences deferred to future periods. We record deferred income tax assets and liabilities reflecting future tax consequences attributable to tax credit carryforwards, differences between the financial statement carrying value of assets and liabilities and the tax bases of those assets and liabilities and tax net operating loss carryforwards, or NOLs. Deferred taxes are computed using enacted tax rates expected to apply in the year in which the differences are expected to affect taxable income. The effect on deferred income tax assets and liabilities of a change in tax rate is recognized in earnings in the period that includes the enactment date.

The measurement of deferred taxes often involves the exercise of considerable judgment related to the realization of tax basis. Our deferred tax assets and liabilities reflect our assessment that tax positions taken in filed tax returns and the resulting tax basis are more likely than not to be sustained if they are audited by taxing authorities. Assessing tax rates that we expect to apply and determining the years when the temporary differences are expected to affect taxable income requires judgment about the future apportionment of our income among the states in which we operate. Any changes in our practices or judgments involved in the measurement of deferred tax assets and liabilities could materially impact our financial condition or results of operations.

In connection with recording deferred income tax assets and liabilities, we establish valuation allowances when necessary to reduce deferred income tax assets to amounts that we believe are more likely than not to be realized. We evaluate our deferred tax assets quarterly to determine whether adjustments to our valuation allowance are appropriate in light of changes in facts or circumstances, such as changes in tax law, interactions with taxing authorities and developments in case law. In making this evaluation, we rely on our recent history of pre-tax earnings. We also rely on our forecasts of future earnings and the nature and timing of future deductions and benefits represented by the deferred tax assets, all which involve the exercise of significant judgment. At December 31, 2016, we established a valuation allowance of \$375 million primarily related to state NOLs, as it is more likely than not that these NOLs will expire unused. If forecasts of future earnings and the nature and estimated timing of future deductions and benefits change in the future, we may determine that a valuation allowance for certain deferred tax assets is appropriate, which could materially impact our financial condition or results of operations. See Note 13—Income Taxes to our consolidated financial statements in Item 8 of Part II of this annual report for additional information.

## **Liquidity and Capital Resources**

### *Overview*

At December 31, 2016, we held cash and cash equivalents of \$222 million and we had \$1.630 billion of borrowing capacity available under our \$2 billion amended and restated revolving credit facility (referred to as our "Credit Facility", which is described further below). At December 31, 2016, cash and cash equivalents of \$44 million were held in foreign bank accounts for the purpose of funding our foreign operations. Due to various factors, our access to foreign cash is generally much more restricted than our access to domestic cash.

Our executive officers and our Board of Directors periodically review our sources and potential uses of cash in connection with our annual budgeting process. Generally speaking, our principal funding source is cash from operating activities, and our principal cash requirements include operating expenses, capital expenditures, income taxes, debt repayments, dividends, periodic stock repurchases, periodic pension contributions and other benefits payments. As discussed below, the amount we pay for income taxes is expected to increase for most of 2017, and the amount we pay for retiree healthcare benefits is expected to increase substantially in 2017. The potential impact of the pending sale of our colocation business and data centers and the potential impact of the pending acquisition of Level 3 are further described below.

Based on our current capital allocation objectives, during 2017 we anticipate expending approximately \$2.6 billion of cash for capital investment in property, plant and equipment and up to \$1.176 billion for dividends on our common stock, based on the current annual common stock dividend rate of \$2.16 and the current number of outstanding common shares, assuming solely for these purposes no impact from the Level 3 acquisition. During 2017, we have debt maturities of \$1.421 billion, scheduled debt principal payments of \$22 million and capital lease and other fixed payments of approximately \$100 million (including \$41 million of capital lease obligations related to the colocation operations), excluding liabilities that we expect to assume later in 2017 in connection with consummating the Level 3 acquisition. Each of the expenditures are described further below.

We will continue to monitor our future sources and uses of cash, and anticipate that we will make adjustments to our capital allocation strategies when, as and if determined by our Board of Directors. We typically use our revolving credit facility as a source of liquidity for operating activities and our other cash requirements.

### *Potential Impact of the Sale of Our Colocation Business and Data Centers*

If, as anticipated, we sell our colocation business and data centers in the manner discussed in Note 3—Pending Sale of Colocation Business and Data Centers to our consolidated financial statements in Item 8 of Part II of this annual report, we expect to receive net cash proceeds of approximately \$1.5 billion to \$1.7 billion from the sale, which is net of tax payments relating to the sale of approximately \$100 million to \$200 million, which we anticipate will be triggered by certain corporate restructuring actions we are taking in the first quarter of 2017 regarding certain subsidiaries involved in the colocation business. We also expect ongoing cash flows from operating activities will be negatively impacted by approximately \$30 million to \$45 million per quarter.

### ***Potential Impact of the Pending Acquisition of Level 3***

If, as anticipated, we complete the acquisition of Level 3 by the end of third quarter of 2017 in the manner discussed in Note 2—Pending Acquisition of Level 3 to our consolidated financial statements in Item 8 of Part II of this annual report, we expect our operations, financial position and cash flows to be significantly impacted following the closing of the transaction. We expect to issue a significant amount of new debt to finance the Level 3 acquisition, and we would assume approximately \$10.9 billion of Level 3's outstanding debt upon consummating the acquisition. With this additional debt, we would expect our cash paid for interest payments to be significantly higher following the closing of the transaction. We project that our capital expenditures would increase significantly; we anticipate, based on information included in Level 3's annual guidance regarding its estimated 2017 capital expenditures, that Level 3 will spend approximately \$100 million to \$125 million per month on average, in the period prior to closing, but that amount could be significantly different than amounts that we expect to spend in the months following the closing of the transaction. In connection with consummating the acquisition, we would expect to issue approximately 538 million shares of our common stock to Level 3 stockholders (including shares of CenturyLink common stock expected to be issued in exchange for outstanding Level 3 equity awards), based on the number of Level 3 shares held of record on January 27, 2017. Based on our current quarterly common stock dividend rate of \$0.54 per share, this issuance of additional shares would result in an additional incremental dividend payment of approximately \$290 million per quarter. Also, we expect our upcoming cash payments for transaction costs, integration costs and debt financing costs to be material primarily following the closing of the transaction. These above factors are expected to result in a net cash outflow for the period of 2017 following the closing. However, we expect we will have sufficient liquidity to more than offset the impact of the net cash outflows.

### ***Capital Expenditures***

We incur capital expenditures on an ongoing basis in order to enhance and modernize our networks, compete effectively in our markets and expand our service offerings. We evaluate capital expenditure projects based on a variety of factors, including expected strategic impacts (such as forecasted impact on revenue growth, productivity, expenses, service levels and customer retention) and our expected return on investment. The amount of capital investment is influenced by, among other things, demand for our services and products, cash flow generated by operating activities, cash required for other purposes and regulatory considerations (such as our CAF Phase 2 infrastructure buildout requirements). Based on current circumstances, we estimate that our total capital expenditures for 2017 will be approximately \$2.6 billion, inclusive of CAF Phase 2 related capital expenditures, but exclusive of additional capital expenditures with respect to the Level 3 operations that we expect to acquire later this year.

Our capital expenditures continue to be focused on our strategic services. For more information on our capital spending, see "Business" and "Risk Factors" in Items 1 and 1A, respectively, of Part I of this annual report.

### ***Debt and Other Financing Arrangements***

Subject to market conditions, we expect to continue to issue debt securities from time to time in the future to refinance a substantial portion of our maturing debt, including issuing Qwest Corporation debt securities to refinance its maturing debt to the extent feasible. The availability, interest rate and other terms of any new borrowings will depend on the ratings assigned to us and Qwest Corporation by credit rating agencies, among other factors. For further information on our debt maturities, see "Future Contractual Obligations" below.

As of the date of this annual report, the credit ratings for the senior unsecured debt of CenturyLink, Inc. and Qwest Corporation were as follows:

Agency	CenturyLink, Inc.	Qwest Corporation
Standard & Poor's	BB	BBB-
Moody's Investors Service, Inc. <sup>(1)</sup>	Ba3	Ba1
Fitch Ratings	BB+	BBB-

<sup>(1)</sup> On March 15, 2016, Moody's Investors Service, Inc. downgraded CenturyLink, Inc.'s rating from Ba2 to Ba3 and downgraded Qwest Corporation's rating from Baa3 to Ba1.

Our credit ratings are reviewed and adjusted from time to time by the rating agencies, and downgrades of CenturyLink, Inc.'s senior unsecured debt ratings could, under certain circumstances, incrementally increase the cost of our borrowing under the Credit

Facility. Moreover, any additional downgrades of CenturyLink, Inc.'s or Qwest Corporation's senior unsecured debt ratings could impact our access to debt capital or further raise our borrowing costs. See "Risk Factors—Risks Affecting our Liquidity and Capital Resources" in Item 1A of Part I of this annual report.

Following the announcement of our pending acquisition of Level 3, Standard & Poor's indicated that CenturyLink, Inc.'s current unsecured senior debt rating of BB has been placed on watch with negative implications, Moody's Investor Service, Inc. indicated that CenturyLink, Inc.'s current senior unsecured debt rating of Ba3 has been placed on review for downgrade and Fitch Ratings indicated that CenturyLink, Inc.'s current unsecured senior debt rating of BB+ has been placed on negative watch. Additionally, Qwest Corporation's current unsecured senior debt rating of Ba1 has been placed on review for downgrade by Moody's Investor Service, Inc. and its current unsecured senior debt rating of BBB- has been placed on negative watch by Fitch Ratings. It is expected that any downgrades would be made only following the completion of the Level 3 acquisition.

### *Net Operating Loss Carryforwards*

In recent years, we have been using Net Operating Loss ("NOL") carryforwards to offset a large portion of our federal taxable income. As of December 31, 2016, we have substantially utilized our federal NOL carryforwards. A portion of these remaining NOL carryforwards are subject to the limitations imposed by section 382 of the Internal Revenue Code ("Code"). As a result of the substantial utilization of the NOL carryforwards in prior years and the limitations imposed on portions of the remaining NOL carryforward balance, the amounts of our cash flows dedicated to or required for the payment of federal taxes has increased and is expected to continue to increase substantially during 2017 prior to our anticipated acquisition of additional NOLs later this year, as described further below. The amounts of our near-term tax payments will depend upon many factors, including our future earnings and tax circumstances. Based on current laws (including the extension of bonus depreciation) and our current estimates of 2017 earnings, we estimate our cash income tax liability related to 2017 will be between \$500 million to \$600 million, exclusive of (i) tax payments relating to the sale of our data centers and colocation business of approximately \$100 million to \$200 million, which we anticipate will be triggered by certain corporate restructuring actions we are taking in the first quarter of 2017 regarding certain subsidiaries involved in the colocation business and (ii) the impact of acquiring Level 3.

Based on information provided to us by Level 3, as of December 31, 2016, Level 3 had approximately \$9.0 billion of NOL carryforwards that we expect to acquire in connection with the Level 3 transaction. We cannot assure you that we will be able to use these NOL carryforwards fully, or at all. See "Risk Factors—Risk Relating to Our Pending Acquisition of Level 3—We cannot assure you, whether, when or in what amounts we will be able to use Level 3's net operating loss carryforwards following the Level 3 acquisition" in Item 1A of Part I of this annual report.

### *Dividends*

We currently expect to continue our current practice of paying quarterly cash dividends in respect of our common stock subject to our Board of Directors' discretion to modify or terminate this practice at any time and for any reason without prior notice. Our current quarterly common stock dividend rate is \$0.54 per share, as approved by our Board of Directors, which we believe is a dividend rate per share that gives us the flexibility to balance our multiple objectives of managing our business, paying our fixed commitments and returning cash to our shareholders. Assuming continued payment during 2017 at this rate of \$0.54 per share, our average total dividends paid each quarter prior to the Level 3 acquisition would be approximately \$294 million based on our current number of outstanding shares (which does not reflect shares that we expect to issue in connection with the Level 3 acquisition or any other shares that we might issue or repurchase in future periods). See "Risk Factors—Risks Affecting Our Business" in Item 1A of Part I of this annual report.

### *Credit Facility*

Our \$2 billion Credit Facility matures on December 3, 2019 and has 16 lenders, each with commitments ranging from \$3.5 million to \$198.5 million. The Credit Facility allows us to obtain revolving loans and to issue up to \$400 million of letters of credit, which upon issuance reduces the amount available for other extensions of credit. Interest is assessed on borrowings using either the LIBOR or the base rate (each as defined in the Credit Facility) plus an applicable margin between 1.00% and 2.25% per annum for LIBOR loans and 0.00% and 1.25% per annum for base rate loans depending on our then current senior unsecured long-term debt rating. Our obligations under the Credit Facility are guaranteed by nine of our subsidiaries. At December 31, 2016, we had \$370 million in borrowings and no amounts of letters of credit outstanding under the Credit Facility.

Under the Credit Facility, we, and our indirect subsidiary, Qwest Corporation, must maintain a debt to EBITDA (earnings before interest, taxes, depreciation and amortization, as defined in our Credit Facility) ratio of not more than 4.0:1.0 and 2.85:1.0, respectively, as of the last day of each fiscal quarter for the four quarters then ended. The Credit Facility also contains a negative pledge covenant, which generally requires us to secure equally and ratably any advances under the Credit Facility if we pledge assets or permit liens on our property for the benefit of other debtholders. The Credit Facility also has a cross payment default provision, and the Credit Facility and certain of our debt securities also have cross acceleration provisions. When present, these provisions could have a wider impact on liquidity than might otherwise arise from a default or acceleration of a single debt instrument. Our debt to EBITDA ratios could be adversely affected by a wide variety of events, including unforeseen expenses or contingencies. This could reduce our financing flexibility due to potential restrictions on incurring additional debt under certain provisions of our debt agreements or, in certain circumstances, could result in a default under certain provisions of such agreements.

#### *Term Loans and Revolving Letter of Credit*

At December 31, 2016, CenturyLink, Inc. owed \$336 million under a term loan maturing in 2019 and Qwest Corporation owed \$100 million under a term loan maturing in 2025. Both of these term loans include covenants substantially similar to those set forth in the Credit Facility.

We have a \$160 million uncommitted revolving letter of credit facility which enables us to provide letters of credit under terms that may be more favorable than those under the Credit Facility. At December 31, 2016, our outstanding letters of credit totaled \$105 million under this facility.

For information on our outstanding debt securities, see immediately below "Future Contractual Obligations" and Note 5—Long-Term Debt and Credit Facilities to our consolidated financial statements in Item 8 of Part II of this annual report.

#### *Level 3 Financing Commitment Letter*

In connection with entering into our merger agreement with Level 3, we obtained a debt commitment letter from a group of lenders. See Note 5—Long-Term Debt and Credit Facilities to our consolidated financial statements in Item 8 of Part II of this annual report, for additional information on the financing commitment letter.

### Future Contractual Obligations

The following table summarizes our estimated future contractual obligations as of December 31, 2016:

	2017	2018	2019	2020	2021	2022 and thereafter	Total
	(Dollars in millions)						
Long-term debt <sup>(1)(2)</sup>	\$ 1,544	280	1,131	1,032	2,329	14,003	20,319
Interest on long-term debt and capital leases <sup>(2)</sup>	1,202	1,164	1,137	1,069	893	15,434	20,899
Operating leases <sup>(3)</sup>	295	276	249	226	162	1,049	2,257
Purchase commitments <sup>(4)</sup>	166	109	44	26	15	67	427
Post-retirement benefit obligation <sup>(5)</sup>	97	94	90	87	83	775	1,226
Non-qualified pension obligations <sup>(5)</sup>	6	5	5	5	4	20	45
Unrecognized tax benefits <sup>(6)</sup>	—	—	—	—	—	51	51
Other	6	7	7	6	8	60	94
<b>Total future contractual obligations<sup>(7)</sup></b>	<b>\$ 3,316</b>	<b>1,935</b>	<b>2,663</b>	<b>2,451</b>	<b>3,494</b>	<b>31,459</b>	<b>45,318</b>

- (1) Includes current maturities and capital lease obligations, but excludes unamortized discounts, net and unamortized debt issuance costs. Also, includes \$305 million of capital lease obligations related to our colocation operations. See Note 16—Commitments and Contingencies to our consolidated financial statements in Item 8 of Part II of this annual report for additional information regarding the future commitments for capital leases related to our colocation operations.
- (2) Actual principal and interest paid in all years may differ due to future refinancing of outstanding debt or issuance of new debt. Interest on our floating rate debt was calculated for all years using the rates effective at December 31, 2016. Also, includes interest and executory costs of \$93 million associated with our capital lease obligations related to our colocation operations. See Note 16—Commitments and Contingencies to our consolidated financial statements in Item 8 of Part II of this annual report for additional information regarding the future commitments for capital leases related to our colocation operations.
- (3) Includes \$750 million of operating lease future rental commitments related to our colocation operations. See Note 16—Commitments and Contingencies to our consolidated financial statements in Item 8 of Part II of this annual report for additional information regarding the future commitments for operating leases related to our colocation operations.
- (4) We have various long-term, non-cancelable purchase commitments for advertising and promotion services, including advertising and marketing at sports arenas and other venues and events. We also have purchase commitments with third-party vendors for operating, installation and maintenance services for facilities. In addition, we have service-related commitments with various vendors for data processing, technical and software support services. Future payments under certain service contracts will vary depending on our actual usage. In the table above, we estimated payments for these service contracts based on estimates of the level of services we expect to receive. Includes \$80 million of purchase commitments related to our colocation operations. See Note 16—Commitments and Contingencies to our consolidated financial statements in Item 8 of Part II of this annual report for additional information regarding the purchase commitments related to our colocation operations.
- (5) Reflects only the portion of total obligation that is contractual in nature. See Note 7 below.
- (6) Represents the amount of tax and interest we would pay for our unrecognized tax benefits. The \$51 million is composed of unrecognized tax benefits of \$16 million and related estimated interest of \$35 million, which would result in future cash payments if our tax positions were not upheld. See Note 13—Income Taxes to our consolidated financial statements in Item 8 of Part II of this annual report for additional information. The timing of any payments for our unrecognized tax benefits cannot be predicted with certainty; therefore, such amount is reflected in the "2022 and thereafter" column in the above table.
- (7) The table is limited solely to contractual payment obligations and does not include
- contingent liabilities,
  - our open purchase orders as of December 31, 2016. These purchase orders are generally issued at fair value, and are generally cancelable without penalty,
  - other long-term liabilities, such as accruals for legal matters and other taxes that are not contractual obligations by nature. We cannot determine

with any degree of reliability the years in which these liabilities might ultimately settle,

- cash funding requirements for qualified pension benefits payable to certain eligible current and future retirees. Benefits paid by our qualified pension plan are paid through a trust. Cash funding requirements for this trust are not included in this table as we are not able to reliably estimate required contributions to this trust. Our funding projections are discussed further below.
- certain post-retirement benefits payable to certain eligible current and future retirees. Not all of our post-retirement benefit obligation amount is a contractual obligation and only the portion that we believe is a contractual obligation is reported in the table. See additional information on our benefits plans in Note 9—Employee Benefits to our consolidated financial statements in Item 8 of Part II of this annual report.

- contract termination fees. These fees are non-recurring payments, the timing and payment of which, if any, is uncertain. In the ordinary course of business and to optimize our cost structure, we enter into contracts with terms greater than one year to use the network facilities of other carriers and to purchase other goods and services. Our contracts to use other carriers' network facilities generally have no minimum volume requirements and pricing is based upon volumes and usage. Assuming we terminate these contracts in 2017, the contract termination fees would be \$359 million. Under the same assumption, we estimate that our termination fees for these contracts to purchase goods and services would be \$165 million. In the normal course of business, we do not believe payment of these fees is likely;
- service level commitments to our customers, the violation of which typically results in service credits rather than cash payments, and
- potential indemnification obligations to counterparties in certain agreements entered into in the normal course of business. The nature and terms of these arrangements vary.

For information on debt that we expect to assume or incur in connection with consummating the Level 3 acquisition, see "Risk Factors" in Item 1A of Part I of this annual report and Note 5—Long-Term Debt and Credit Facilities to our consolidated financial statements in Item 8 of Part II of this annual report.

### *Pension and Post-retirement Benefit Obligations*

We are subject to material obligations under our existing defined benefit pension plans and post-retirement benefit plans. At December 31, 2016, the accounting unfunded status of our qualified and non-qualified defined benefit pension plans and qualified post-retirement benefit plans was \$2.409 billion and \$3.360 billion, respectively. See Note 9—Employee Benefits to our consolidated financial statements in Item 8 of Part II of this annual report for additional information about our pension and post-retirement benefit arrangements.

Benefits paid by our qualified pension plan are paid through a trust that holds all of the plan's assets. Based on current laws and circumstances, we do not expect any contributions to be required for our qualified pension plan during 2017. The amount of required contributions to our qualified pension plan in 2018 and beyond will depend on a variety of factors, most of which are beyond our control, including earnings on plan investments, prevailing interest rates, demographic experience, changes in plan benefits and changes in funding laws and regulations. We occasionally make voluntary contributions to the trust in addition to required contributions, including voluntary contributions in the amount of \$100 million made in the third quarter of both 2016 and 2015. We currently expect to make a voluntary contribution of \$100 million to the trust in 2017.

Substantially all of our post-retirement health care and life insurance benefits plans are unfunded. Several trusts hold assets that have been used to help cover the health care costs of certain retirees. Assets in the post-retirement trusts have been substantially depleted as of December 31, 2016; however, we will continue to pay certain benefits through the trusts. The fair value of these trust assets was approximately \$53 million at December 31, 2016, with a portion comprised of investments with restricted liquidity. Benefits not paid through the trusts will be paid directly by us. As described further in Note 9—Employee Benefits to our consolidated financial statements in Item 8 of Part II of this annual report, aggregate benefits paid by us under these plans (net of participant contributions and direct subsidy receipts) were \$129 million, \$116 million and \$88 million for the years ended December 31, 2016, 2015 and 2014, respectively, while the amounts paid from the trust were \$145 million, \$163 million and \$219 million, respectively. For additional information on our expected future benefits payments for our post-retirement benefit plans, please see Note 9—Employee Benefits to our consolidated financial statements in Item 8 of Part II in this annual report.

For 2017, our estimated annual long-term rates of return are 6.5% and 5.0% for the pension plan trust assets and post-retirement plans' trust assets, respectively, based on the assets currently held. However, actual returns could be substantially different.

### Workforce Reductions

In response to the continued decline of our legacy services revenues and to better align our workforce with our workload requirements, we periodically implement workforce reduction programs. In the third quarter of 2016, we announced plans to reduce our workforce, initially through voluntary severance packages and the balance through involuntary reductions. We recognized in the fourth quarter of 2016 a charge for severance expenses and other one-time termination benefits of \$164 million, \$98 million of which remained to be paid as of December 31, 2016.

### Connect America Fund

In 2015, we accepted CAF funding from the FCC of approximately \$500 million per year for six years to fund the deployment of voice and broadband capable infrastructure for approximately 1.2 million rural households and businesses in 33 states under the CAF Phase 2 high-cost support program. The funding from the CAF Phase 2 support program has substantially replaced the funding from the interstate USF program that we previously utilized to support voice services in high-cost rural markets in these 33 states. In late 2015, we began receiving these monthly support payments from the FCC under the new CAF Phase 2 support program, which included (i) monthly support payments at a higher rate than under the interstate USF support program and (ii) a substantial one-time transitional payment, designed to align the prior USF payments with the new CAF Phase 2 payments for the full year 2015. For 2016, we continued to receive monthly support payments at the higher rate than under the interstate USF support program. We received \$214 million and \$209 million more cash from the CAF Phase 2 program for the years ended December 31, 2016 and 2015, respectively, than the projected amounts we would have otherwise received during the same periods under the interstate USF support program.

As a result of accepting CAF Phase 2 support payments for 33 states, we will be obligated to make substantial capital expenditures to build broadband infrastructure over the next several years. See "Capital Expenditures" above.

For additional information on the FCC's CAF order and the USF program, see "Business—Regulation" in Item 1 of Part I of this annual report and see "Risk Factors—Risks Affecting Our Liquidity and Capital Resources" in Item 1A of Part I of this annual report.

In 2013, under the CAF Phase 1 Round 2 program, we received \$40 million in funding for deployment of broadband services in rural areas. In compliance with program terms, during the second half of 2016 we returned \$23 million for failing to meet interim buildout milestones within the FCC specified time frames. As of December 31, 2016, we have included the remaining \$17 million of funding in deferred credits and other liabilities - other on our consolidated balance sheet. At the conclusion of the CAF 1 Round 2 program in the first quarter 2017, we will have an opportunity to reclaim a majority of the interim refund if we ultimately meet the CAF 1 Round 2 buildout targets.

### Historical Information

The following tables summarize our consolidated cash flow activities:

	Years Ended December 31,		Increase / (Decrease)
	2016	2015	
	(Dollars in millions)		
Net cash provided by operating activities	\$ 4,608	5,152	(544)
Net cash used in investing activities	(2,994)	(2,853)	141
Net cash used in financing activities	(1,518)	(2,301)	(783)

	Years Ended December 31,		Increase / (Decrease)
	2015	2014	
	(Dollars in millions)		
Net cash provided by operating activities	\$ 5,152	5,188	(36)
Net cash used in investing activities	(2,853)	(3,077)	(224)
Net cash used in financing activities	(2,301)	(2,151)	150

### Operating Activities

Net cash provided by operating activities decreased by \$544 million for the year ended December 31, 2016 as compared to the year ended December 31, 2015 primarily due to a significant negative variance in net income adjusted for non-cash items (attributable to higher cash taxes paid and lower profitability), which was partially offset by a positive variance in the change in accounts payable. Net cash provided by operating activities decreased by \$36 million for the year ended December 31, 2015 as compared to the year ended December 31, 2014 primarily due to a slight negative variance in net income adjusted for non-cash items along with negative variances in accounts payable and other noncurrent assets and liabilities, net. The decreases were substantially offset with positive variances in accrued income and other taxes and other current assets and liabilities, net, which was primarily due to a payment of approximately \$235 million in 2014 to settle certain litigation. Our net cash provided by operating activities in 2016 and 2015 were positively impacted by the cash received from the CAF Phase 2 support program, which was \$214 million and \$209 million greater in 2016 and 2015, respectively, than the projected amounts of cash we would have otherwise received during the same periods under the interstate USF support program. For additional information about our operating results, see "Results of Operations" above.

### Investing Activities

Net cash used in investing activities increased by \$141 million for the year ended December 31, 2016 as compared to the year ended December 31, 2015 substantially due to an increase in payments for property, plant and equipment. Net cash used in investing activities decreased by \$224 million for the year ended December 31, 2015 as compared to the year ended December 31, 2014 primarily due to a decrease in payments of property, plant and equipment and amounts paid for acquisitions in 2015.

### Financing Activities

Net cash used in financing activities decreased by \$783 million for the year ended December 31, 2016 as compared to the year ended December 31, 2015 primarily due to a reduction of common stock repurchases. Net cash used in financing activities increased by \$150 million for the year ended December 31, 2015 as compared to the year ended December 31, 2014 primarily due to additional common stock repurchases. Net debt repayments have been about the same for all three years.

On December 23, 2016, a subsidiary of Embarq Corporation redeemed \$5 million of its 8.375% Notes due 2025, which resulted in an immaterial loss.

On September 19, 2016, a subsidiary of Embarq Corporation redeemed all of its 8.77% Notes due 2017, which was less than \$4 million and resulted in an immaterial loss.

On September 15, 2016, Qwest Corporation redeemed \$287 million of its 7.5% Notes due 2051, which resulted in a loss of \$9 million.

On August 29, 2016, Qwest Corporation redeemed all \$661 million of its 7.375% Notes due 2051, which resulted in a loss of \$18 million.

On August 22, 2016, Qwest Corporation issued \$978 million aggregate principal amount of 6.5% Notes due 2056, including \$128 million principal amount that was sold pursuant to an over-allotment option, in exchange for net proceeds, after deducting underwriting discounts and other expenses, of \$946 million.

On June 1, 2016, Embarq Corporation paid at maturity the \$1.184 billion principal amount and accrued and unpaid interest due under its 7.082% Notes.

On May 2, 2016, Qwest Corporation paid at maturity the \$235 million principal amount and accrued and unpaid interest due under its 8.375% Notes.

On April 6, 2016, CenturyLink, Inc. issued \$1 billion aggregate principal amount of 7.5% Notes due 2024, in exchange for net proceeds, after deducting underwriting discounts and other expenses, of \$988 million.

On January 29, 2016, Qwest Corporation issued \$235 million aggregate principal amount of 7% Notes due 2056, in exchange for net proceeds, after deducting underwriting discounts and other expenses, of \$227 million.

See Note 5—Long-Term Debt and Credit Facilities to our consolidated financial statements in Item 8 of Part II of this annual report, for additional information on our outstanding debt securities.

### **Other Matters**

In February 2015, the FCC adopted new regulations that regulate broadband services as a public utility service under Title II of the Communications Act. In light of pending litigation and changes in the composition of the FCC, we believe it is premature for us to determine the ultimate impact of the new regulations on our operations. For additional information, see "Risk Factors—Risks Relating to Legal and Regulatory Matters" in Item 1A of Part I of this annual report.

We have cash management arrangements with certain of our principal subsidiaries, in which substantial portions of the subsidiaries' cash is regularly advanced to us. Although we periodically repay these advances to fund the subsidiaries' cash requirements throughout the year, at any given point in time we may owe a substantial sum to our subsidiaries under these advances, which, in accordance with generally accepted accounting principles, are eliminated in consolidation and therefore not recognized on our consolidated balance sheets.

We also are involved in various legal proceedings that could substantially impact our financial position. See Note 16—Commitments and Contingencies to our consolidated financial statements in Item 8 of Part II of this annual report for the current status of such legal proceedings.

### **Market Risk**

We are exposed to market risk from changes in interest rates on our variable rate long-term debt obligations and fluctuations in certain foreign currencies. We seek to maintain a favorable mix of fixed and variable rate debt in an effort to limit interest costs and cash flow volatility resulting from changes in rates.

Management periodically reviews our exposure to interest rate fluctuations and periodically implements strategies to manage the exposure. From time to time, we have used derivative instruments to (i) lock-in or swap our exposure to changing or variable interest rates for fixed interest rates or (ii) to swap obligations to pay fixed interest rates for variable interest rates. As of December 31, 2016, we had no such instruments outstanding. We have established policies and procedures for risk assessment and the approval, reporting and monitoring of derivative instrument activities. We do not hold or issue derivative financial instruments for trading or speculative purposes.

At December 31, 2016, we had approximately \$19.6 billion (excluding capital lease and other obligations with a carrying amount of \$440 million) of long-term debt outstanding, approximately 96% of which bears interest at fixed rates and is therefore not exposed to interest rate risk. At December 31, 2016, we had \$806 million floating rate debt exposed to changes in either the London InterBank Offered Rate (LIBOR) or the Prime Rate. A hypothetical increase of 100 basis points in LIBOR relative to this debt would decrease our annual pre-tax earnings by \$8 million.

By operating internationally, we are exposed to the risk of fluctuations in the foreign currencies used by our international subsidiaries, primarily the British Pound, and secondarily the Canadian Dollar, the Japanese Yen, the Hong Kong Dollar and the Singapore Dollar. Although the percentages of our consolidated revenues and costs that are denominated in these currencies are immaterial, future volatility in exchange rates and an increase in the number of transactions could adversely impact our consolidated results of operations. We use a sensitivity analysis to estimate our exposure to this foreign currency risk, measuring the change in financial position arising from a hypothetical 10% change in the exchange rates of these currencies, relative to the U.S. Dollar, with all other variables held constant. The aggregate potential change in the fair value of financial assets resulting from a hypothetical 10% change in these exchange rates was \$18 million at December 31, 2016.

Certain shortcomings are inherent in the method of analysis presented in the computation of exposures to market risks. Actual values may differ materially from those disclosed by us from time to time if market conditions vary from the assumptions used in the analyses performed. These analyses only incorporate the risk exposures that existed at December 31, 2016.

### **Off-Balance Sheet Arrangements**

We have no special purpose or limited purpose entities that provide off-balance sheet financing, liquidity, or market or credit risk support and we do not engage in leasing, hedging or other similar activities that expose us to any significant liabilities that are not (i) reflected on the face of the consolidated financial statements, (ii) disclosed in Note 16—Commitments and Contingencies to our consolidated financial statements in Item 8 of Part II of this annual report, or in the Future Contractual Obligations table included in this Item 7 of Part II above, or (iii) discussed under the heading "Market Risk" above.

**ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK**

The information in "Management's Discussion and Analysis of Financial Condition and Results of Operations—Market Risk" in Item 7 of Part II of this annual report is incorporated herein by reference.

**ITEM 8. CONSOLIDATED FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA****Report of Independent Registered Public Accounting Firm**

The Board of Directors and Stockholders  
CenturyLink, Inc.:

We have audited the accompanying consolidated balance sheets of CenturyLink, Inc. and subsidiaries (the Company) as of December 31, 2016 and 2015, and the related consolidated statements of operations, comprehensive income (loss), cash flows, and stockholders' equity for each of the years in the three-year period ended December 31, 2016. These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Company as of December 31, 2016 and 2015, and the results of their operations and their cash flows for each of the years in the three-year period ended December 31, 2016, in conformity with U.S. generally accepted accounting principles.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), CenturyLink, Inc.'s internal control over financial reporting as of December 31, 2016, based on criteria established in *Internal Control—Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), and our report dated February 22, 2017 expressed an unqualified opinion on the effectiveness of CenturyLink, Inc.'s internal control over financial reporting.

/s/ KPMG LLP

Shreveport, Louisiana  
February 22, 2017

**Report of Independent Registered Public Accounting Firm**

The Board of Directors and Stockholders  
CenturyLink, Inc.:

We have audited CenturyLink, Inc.'s (the Company) internal control over financial reporting as of December 31, 2016, based on criteria established in *Internal Control—Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Report on Internal Control Over Financial Reporting (Item 9A). Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2016, based on criteria established in *Internal Control—Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of CenturyLink, Inc. and subsidiaries as of December 31, 2016 and 2015, and the related consolidated statements of operations, comprehensive income (loss), cash flows, and stockholders' equity for each of the years in the three-year period ended December 31, 2016, and our report dated February 22, 2017 expressed an unqualified opinion on those consolidated financial statements.

## CENTURYLINK, INC.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

*References in the Notes to "CenturyLink," "we," "us" and "our" refer to CenturyLink, Inc. and its consolidated subsidiaries, unless the content otherwise requires and except in Note 5, where such references refer solely to CenturyLink, Inc.*

**(1) Background and Summary of Significant Accounting Policies****General**

We are an integrated communications company engaged primarily in providing an array of services to our residential and business customers. Our communications services include local and long-distance voice, broadband, Multi-Protocol Label Switching ("MPLS"), private line (including special access), Ethernet, colocation, hosting (including cloud hosting and managed hosting), data integration, video, network, public access, Voice over Internet Protocol ("VoIP"), information technology and other ancillary services.

On October 31, 2016, we entered into a definitive merger agreement under which we agreed to acquire Level 3 Communications, Inc. ("Level 3") in a cash and stock transaction. See Note 2—Pending Acquisition of Level 3 for additional information. On November 3, 2016, we entered into a definitive stock purchase agreement with a consortium led by BC Partners, Inc. and Medina Capital under which we propose to sell our data centers and colocation business for a combination of cash and equity. See Note 3—Pending Sale of Colocation Business and Data Centers for additional information.

**Basis of Presentation**

The accompanying consolidated financial statements include our accounts and the accounts of our subsidiaries. Intercompany amounts and transactions with our consolidated subsidiaries have been eliminated.

To simplify the overall presentation of our consolidated financial statements, we report immaterial amounts attributable to noncontrolling interests in certain of our subsidiaries as follows: (i) income attributable to noncontrolling interests in other income, net, (ii) equity attributable to noncontrolling interests in additional paid-in capital and (iii) cash flows attributable to noncontrolling interests in other, net financing activities.

We reclassified certain prior period amounts to conform to the current period presentation, including the categorization of our revenues and our segment reporting. See Note 14—Segment Information for additional information. These changes had no impact on total operating revenues, total operating expenses or net income for any period presented.

**Connect America Fund**

In 2015, we accepted Connect America Fund ("CAF") funding from the Federal Communications Commission ("FCC") of approximately \$500 million per year for six years to fund the deployment of voice and broadband capable infrastructure for approximately 1.2 million rural households and businesses in 33 states under the CAF Phase 2 high-cost support program. The funding from the CAF Phase 2 support program has substantially replaced the funding from the interstate Universal Service Fund ("USF") program that we previously utilized to support voice services in high-cost rural markets in these 33 states. In late 2015, we began receiving these monthly support payments from the FCC under the new CAF Phase 2 support program, which included (i) monthly support payments at a higher rate than under the interstate USF support program and (ii) a substantial one-time transitional payment, designed to align the prior USF payments with the new CAF Phase 2 payments for the full year 2015. For 2016, we continued to receive the monthly support payments at the higher rate than under the interstate USF support program. We recorded \$201 million and \$215 million more revenue from the CAF Phase 2 program for the years ended December 31, 2016 and 2015, respectively, than the projected amounts we would have otherwise recorded during the same periods under the interstate USF support program.

## Changes in Estimates

In 2016, we changed the method we use to estimate the service and interest components of net periodic benefit expense for pension and other postretirement benefit obligations. This change resulted in a decrease in the service and interest components in 2016. Beginning in 2016, we utilized a full yield curve approach in connection with estimating these components by applying the specific spot rates along the yield curve used in the determination of the benefit obligation to the relevant projected cash flows, as opposed to the single weighted-average discount rate derived from the yield curve that we have used in the past. We believe this change more precisely measures service and interest costs by improving the correlation between projected benefit cash flows to the corresponding spot yield curve rates. This change did not affect the measurement of our total benefit obligations but lowered our annual net periodic benefit cost by approximately \$149 million in 2016. This change was treated as a change in accounting estimate and accordingly, we did not adjust the amounts recorded in 2015 or 2014. The reduction in expense described above, net of tax, increased net income by \$91 million, or \$0.17 per basic and diluted common share, for the year ended December 31, 2016.

## Summary of Significant Accounting Policies

### Use of Estimates

Our consolidated financial statements are prepared in accordance with U.S. generally accepted accounting principles. These accounting principles require us to make certain estimates, judgments and assumptions. We believe that the estimates, judgments and assumptions we make when accounting for specific items and matters, including, but not limited to, investments, long-term contracts, customer retention patterns, allowance for doubtful accounts, depreciation, amortization, asset valuations, internal labor capitalization rates, recoverability of assets (including deferred tax assets), impairment assessments, pension, post-retirement and other post-employment benefits, taxes, certain liabilities and other provisions and contingencies, are reasonable, based on information available at the time they are made. These estimates, judgments and assumptions can materially affect the reported amounts of assets, liabilities and components of stockholders' equity as of the dates of the consolidated balance sheets, as well as the reported amounts of revenues, expenses and components of cash flows during the periods presented in our other consolidated financial statements. We also make estimates in our assessments of potential losses in relation to threatened or pending tax and legal matters. See Note 13—Income Taxes and Note 16—Commitments and Contingencies for additional information.

For matters not related to income taxes, if a loss is considered probable and the amount can be reasonably estimated, we recognize an expense for the estimated loss. If we have the potential to recover a portion of the estimated loss from a third party, we make a separate assessment of recoverability and reduce the estimated loss if recovery is also deemed probable.

For matters related to income taxes, if we determine that the impact of an uncertain tax position is more likely than not to be sustained upon audit by the relevant taxing authority, then we recognize a benefit for the largest amount that is more likely than not to be sustained. No portion of an uncertain tax position will be recognized if the position has less than a 50% likelihood of being sustained. Interest is recognized on the amount of unrecognized benefit from uncertain tax positions.

For all of these and other matters, actual results could differ materially from our estimates.

### Revenue Recognition

We recognize revenue for services when the related services are provided. Recognition of certain payments received in advance of services being provided is deferred until the service is provided. These advance payments include activation and installation charges, which we recognize as revenue over the expected customer relationship period, which ranges from three years to over seven years depending on the service. We also defer costs for customer activations and installations. The deferral of customer activation and installation costs is limited to the amount of revenue deferred on advance payments. Costs in excess of advance payments are recorded as expense in the period such costs are incurred. Expected customer relationship periods are estimated using historical experience. In most cases, termination fees or other fees on existing contracts that are negotiated in conjunction with new contracts are deferred and recognized over the new contract term.

We offer bundle discounts to our customers who receive certain groupings of services. These bundle discounts are recognized concurrently with the associated revenue and are allocated to the various services in the bundled offering based on the estimated selling price of services included in each bundled combination.

Customer arrangements that include both equipment and services are evaluated to determine whether the elements are separable. If the elements are deemed separable and separate earnings processes exist, the revenue associated with the customer arrangement is allocated to each element based on the relative estimated selling price of the separate elements. We have estimated the selling prices of each element by reference to vendor-specific objective evidence of selling prices when the elements are sold separately. The revenue associated with each element is then recognized as earned. For example, if we receive an advance payment when we sell equipment and continuing service together, we immediately recognize as revenue the amount allocated to the equipment as long as all the conditions for revenue recognition have been satisfied. The portion of the advance payment allocated to the service based upon its relative selling price is recognized ratably over the longer of the contractual period or the expected customer relationship period.

We periodically transfer optical capacity assets on our network to other telecommunications service carriers. These transactions are structured as indefeasible rights of use, commonly referred to as IRUs, which are the exclusive right to use a specified amount of capacity or fiber for a specified term, typically 20 years. We account for the cash consideration received on transfers of optical capacity assets and on all of the other elements deliverable under an IRU, as revenue ratably over the term of the agreement. We do not recognize revenue on any contemporaneous exchanges of our optical capacity assets for other optical capacity assets.

In connection with offering products and services provided by third-party vendors, we review the relationship between us, the vendor and the end customer to assess whether revenue should be reported on a gross or net basis. In assessing whether revenue should be reported on a gross or net basis, we consider whether we act as a principal in the transaction, take title to the products, have risk and rewards of ownership or act as an agent or broker. Based on our agreements with DIRECTV and Verizon Wireless, we offer these services through sales agency relationships which are reported on a net basis.

We have service level commitments pursuant to contracts with certain of our customers. To the extent that such service levels are not achieved or are otherwise disputed due to performance or service issues or other service interruptions or conditions, we will estimate the amount of credits to be issued and record a reduction to revenues, with a corresponding increase in the credit reserve.

#### **USF Surcharges, Gross Receipts Taxes and Other Surcharges**

In determining whether to include in our revenues and expenses the taxes and surcharges collected from customers and remitted to government authorities, including USF surcharges, sales, use, value added and some excise taxes, we assess, among other things, whether we are the primary obligor or principal taxpayer for the taxes assessed in each jurisdiction where we do business. In jurisdictions where we determine that we are the principal taxpayer, we record the surcharges on a gross basis and include them in our revenues and costs of services and products. In jurisdictions where we determine that we are merely a collection agent for the government authority, we record the taxes on a net basis and do not include them in our revenues and costs of services and products.

#### **Advertising Costs**

Costs related to advertising are expensed as incurred and included in selling, general and administrative expenses in our consolidated statements of operations. Our advertising expense was \$216 million, \$210 million and \$214 million for the years ended December 31, 2016, 2015 and 2014, respectively.

#### **Legal Costs**

In the normal course of our business, we incur costs to hire and retain external legal counsel to advise us on regulatory, litigation and other matters. We expense these costs as the related services are received.

#### **Income Taxes**

We file a consolidated federal income tax return with our eligible subsidiaries. The provision for income taxes consists of an amount for taxes currently payable, an amount for tax consequences deferred to future periods and adjustments to our liabilities for uncertain tax positions. We record deferred income tax assets and liabilities reflecting future tax consequences attributable to tax net operating loss carryforwards ("NOLs"), tax credit carryforwards and differences between the financial statement carrying value of assets and liabilities and the tax bases of those assets and liabilities. Deferred taxes are computed using enacted tax rates expected to apply in the year in which the differences are expected to affect taxable income. The effect on deferred income tax assets and liabilities of a change in tax rate is recognized in earnings in the period that includes the enactment date.

We establish valuation allowances when necessary to reduce deferred income tax assets to the amounts that we believe are more likely than not to be recovered. Each quarter we evaluate the need to retain all or a portion of the valuation allowance on our deferred tax assets. See Note 13—Income Taxes for additional information.

### **Cash and Cash Equivalents**

Cash and cash equivalents include highly liquid investments that are readily convertible into cash and are not subject to significant risk from fluctuations in interest rates. As a result, the value at which cash and cash equivalents are reported in our consolidated financial statements approximates their fair value. In evaluating investments for classification as cash equivalents, we require that individual securities have original maturities of ninety days or less and that individual investment funds have dollar-weighted average maturities of ninety days or less. To preserve capital and maintain liquidity, we invest with financial institutions we deem to be of sound financial condition and in high quality and relatively risk-free investment products. Our cash investment policy limits the concentration of investments with specific financial institutions or among certain products and includes criteria related to credit worthiness of any particular financial institution.

Book overdrafts occur when checks have been issued but have not been presented to our controlled disbursement bank accounts for payment. Disbursement bank accounts allow us to delay funding of issued checks until the checks are presented for payment. Until the issued checks are presented for payment, the book overdrafts are included in accounts payable on our consolidated balance sheet. This activity is included in the operating activities section in our consolidated statements of cash flows.

### **Accounts Receivable and Allowance for Doubtful Accounts**

Accounts receivable are recognized based upon the amount due from customers for the services provided or at cost for purchased and other receivables less an allowance for doubtful accounts. The allowance for doubtful accounts receivable reflects our best estimate of probable losses inherent in our receivable portfolio determined on the basis of historical experience, specific allowances for known troubled accounts and other currently available evidence. We generally consider our accounts past due if they are outstanding over 30 days. Our collection process varies by the customer segment, amount of the receivable, and our evaluation of the customer's credit risk. Our past due accounts are written off against our allowance for doubtful accounts when collection is considered to be not probable. Any recoveries of accounts previously written off are generally recognized as a reduction in bad debt expense in the period received. The carrying value of accounts receivable net of the allowance for doubtful accounts approximates fair value.

### **Property, Plant and Equipment**

We record property, plant and equipment acquired in connection with our acquisitions based on its estimated fair value as of its acquisition date plus the estimated value of any associated legally or contractually required retirement obligations. We record purchased and constructed property, plant and equipment at cost, plus the estimated value of any associated legally or contractually required retirement obligations. Property, plant and equipment is depreciated primarily using the straight-line group method. Under the straight-line group method, assets dedicated to providing telecommunications services (which comprise the majority of our property, plant and equipment) that have similar physical characteristics, use and expected useful lives are pooled for purposes of depreciation and tracking. The equal life group procedure is used to establish each pool's average remaining useful life. Generally, under the straight-line group method, when an asset is sold or retired in the course of normal business activities, the cost is deducted from property, plant and equipment and charged to accumulated depreciation without recognition of a gain or loss. A gain or loss is recognized in our consolidated statements of operations only if a disposal is unusual. Leasehold improvements are amortized over the shorter of the useful lives of the assets or the expected lease term. Expenditures for maintenance and repairs are expensed as incurred. Interest is capitalized during the construction phase of network and other internal-use capital projects. Employee-related costs for construction of network and other internal use assets are also capitalized during the construction phase. Property, plant and equipment supplies used internally are carried at average cost, except for significant individual items for which cost is based on specific identification.

We perform annual internal reviews to evaluate the reasonableness of the depreciable lives for our property, plant and equipment. Our reviews utilize models that take into account actual usage, physical wear and tear, replacement history, assumptions about technology evolution and, in certain instances, actuarially determined probabilities to estimate the remaining useful life of our asset base. Our remaining useful life assessments anticipate the loss in service value of assets that may precede the physical retirement. Assets shared among many customers may lose service value as those customers leave the network. However, the asset is not retired until all customers no longer utilize the asset and we determine there is no alternative use for the asset.

We have asset retirement obligations associated with the legally or contractually required removal of a limited group of property, plant and equipment assets from leased properties and the disposal of certain hazardous materials present in our owned properties. When an asset retirement obligation is identified, usually in association with the acquisition of the asset, we record the fair value of the obligation as a liability. The fair value of the obligation is also capitalized as property, plant and equipment and then amortized over the

estimated remaining useful life of the associated asset. Where the removal obligation is not legally binding, the net cost to remove assets is expensed in the period in which the costs are actually incurred.

We review long-lived tangible assets for impairment whenever facts and circumstances indicate that the carrying amounts of the assets may not be recoverable. For assessment purposes, long-lived assets are grouped with other assets and liabilities at the lowest level for which identifiable cash flows are largely independent of the cash flows of other assets and liabilities, absent a material change in operations. An impairment loss is recognized only if the carrying amount of the asset group is not recoverable and exceeds its fair value. Recoverability of the asset group to be held and used is assessed by comparing the carrying amount of the asset group to the estimated undiscounted future net cash flows expected to be generated by the asset group. If the asset group's carrying value is not recoverable, an impairment charge is recognized for the amount by which the carrying amount of the asset group exceeds its fair value. We determine fair values by using a combination of comparable market values and discounted cash flows, as appropriate.

### **Goodwill, Customer Relationships and Other Intangible Assets**

Intangible assets arising from business combinations, such as goodwill, customer relationships, capitalized software, trademarks and trade names, are initially recorded at estimated fair value. We amortize customer relationships primarily over an estimated life of 10 to 15 years, using either the sum-of-the-years-digits or the straight-line methods, depending on the type of customer. We amortize capitalized software using the straight-line method over estimated lives ranging up to 7 years, except for approximately \$237 million of our capitalized software costs, which represents costs to develop an integrated billing and customer care system which is amortized using the straight-line method over a 20 year period. We amortize our other intangible assets predominantly using the sum-of-the-years-digits method over an estimated life of 4 to 20 years. Other intangible assets not arising from business combinations are initially recorded at cost. Where there are no legal, regulatory, contractual or other factors that would reasonably limit the useful life of an intangible asset, we classify the intangible asset as indefinite-lived and such intangible assets are not amortized.

Internally used software, whether purchased or developed by us, is capitalized and amortized using the straight-line method over its estimated useful life. We have capitalized certain costs associated with software such as costs of employees devoting time to the projects and external direct costs for materials and services. Costs associated with software to be used for internal purposes are expensed until the point at which the project has reached the development stage. Subsequent additions, modifications or upgrades to internal-use software are capitalized only to the extent that they allow the software to perform a task it previously did not perform. Software maintenance, data conversion and training costs are expensed in the period in which they are incurred. We review the remaining economic lives of our capitalized software annually. Capitalized software is included in other intangible assets, net, in our consolidated balance sheets.

Our long-lived intangible assets, other than goodwill, with indefinite lives are assessed for impairment annually, or, under certain circumstances, more frequently, such as when events or changes in circumstances indicate there may be an impairment. These assets are carried at the estimated fair value at the time of acquisition and assets not acquired in acquisitions are recorded at historical cost. However, if their estimated fair value is less than the carrying amount, other indefinite-lived intangible assets are reduced to their estimated fair value through an impairment charge to our consolidated statements of operations.

We are required to assess goodwill for impairment at least annually, or more frequently, if an event occurs or circumstances change that would indicate an impairment may have occurred. We are required to write-down the value of goodwill in periods in which the recorded amount of goodwill exceeds the implied fair value of goodwill. Our reporting units are not discrete legal entities with discrete financial statements. Therefore, the equity carrying value and future cash flows must be estimated each time a goodwill impairment assessment is performed on a reporting unit. As a result, our assets, liabilities and cash flows are assigned to reporting units using reasonable and consistent allocation methodologies. Certain estimates, judgments and assumptions are required to perform these assignments. We believe these estimates, judgments and assumptions to be reasonable, but changes in many of these can significantly affect each reporting unit's equity carrying value and future cash flows utilized for our goodwill impairment assessment.

We are required to reassign goodwill to reporting units each time we reorganize our internal reporting structure which causes a change in the composition of our reporting units. Goodwill is reassigned to the reporting units using a relative fair value approach. We utilize the earnings before interest, taxes, depreciation and amortization of each reporting unit as our allocation methodology as it represents a reasonable proxy for the fair value of the operations being reorganized.

See Note 4—Goodwill, Customer Relationships and Other Intangible Assets for additional information.

## **Pension and Post-Retirement Benefits**

We recognize the funded status of our defined benefit and post-retirement plans as an asset or a liability on our consolidated balance sheet. Each year's actuarial gains or losses are a component of our other comprehensive (loss) income, which is then included in our accumulated other comprehensive loss. Pension and post-retirement benefit expenses are recognized over the period in which the employee renders service and becomes eligible to receive benefits. We make significant assumptions (including the discount rate, expected rate of return on plan assets, mortality and health care trend rates) in computing the pension and post-retirement benefits expense and obligations. See Note 9—Employee Benefits for additional information.

## **Foreign Currency**

Our results of operations include foreign subsidiaries, which are translated from the applicable functional currency to the United States Dollar using the average exchange rates during the reporting period, while assets and liabilities are translated at the reporting date. We include gains or losses from foreign currency remeasurement in other income, net in our consolidated statements of operations. Certain non-U.S. subsidiaries designate the local currency as their functional currency, and we record the translation of their assets and liabilities into U.S. Dollars at the balance sheet date as translation adjustments and include them as a component of accumulated other comprehensive loss in our consolidated balance sheets.

## **Common Stock**

At December 31, 2016, we had 4 million unissued shares of CenturyLink, Inc. common stock reserved for acquisitions, substantially all of which are reserved for issuance in connection with our pending acquisition of Level 3. In addition, we had 21 million shares authorized for future issuance under our equity incentive plans.

## **Preferred stock**

Holders of outstanding CenturyLink, Inc. preferred stock are entitled to receive cumulative dividends, receive preferential distributions equal to \$25 per share plus unpaid dividends upon CenturyLink, Inc.'s liquidation and vote as a single class with the holders of common stock.

## **Dividends**

We pay dividends out of retained earnings to the extent we have retained earnings on the date the dividend is declared. If the dividend is in excess of our retained earnings on the declaration date, then the excess is drawn from our additional paid-in capital.

## **Recent Accounting Pronouncements**

### *Income Taxes*

On October 24, 2016, the Financial Accounting Standards Board ("FASB") issued Accounting Standards Update ("ASU") 2016-16, "Intra-Entity Transfers of Assets Other Than Inventory" ("ASU 2016-16"). ASU 2016-16 eliminates the current prohibition on the recognition of the income tax effects on the transfer of assets among our subsidiaries. After adoption of this ASU, the income tax effects associated with these asset transfers, except for the transfer of inventory, will be recognized in the period the asset is transferred versus the current deferral and recognition upon either the sale of the asset to a third party or over the remaining useful life of the asset. We are currently reviewing the requirements of this ASU and evaluating the impact on our consolidated financial statements.

We are required to adopt the provisions of ASU 2016-16 on January 1, 2018, but have the option to early adopt as of January 1, 2017. We plan to adopt the provision of ASU 2016-16 on January 1, 2018. The impact of adopting ASU 2016-16, if any, will be recognized through a cumulative adjustment to retained earnings as of the date of adoption.

### *Financial Instruments*

On June 16, 2016, the FASB issued ASU 2016-13, "Measurement of Credit Losses on Financial Instruments" ("ASU 2016-13"). The primary impact of ASU 2016-13 for us is a change in the model for the recognition of credit losses related to our financial instruments from an incurred loss model, which recognized credit losses only if it was probable that a loss had been incurred, to an expected loss model, which requires our management team to estimate the total credit losses expected on the portfolio of financial

instruments. We are currently reviewing the requirements of the standard and evaluating the impact on our consolidated financial statements.

We are required to adopt the provisions of ASU 2016-13 effective January 1, 2020, but could elect to early adopt the provisions as of January 1, 2019. We expect to recognize any impacts of adopting ASU 2016-13 through a cumulative adjustment to retained earnings as of the date of adoption. As of the date of this annual report, we have not yet determined the date we will adopt ASU 2016-13.

#### *Share-based Compensation*

On March 30, 2016, the FASB issued ASU 2016-09, "Improvement to Employee Share-Based Payment Accounting" ("ASU 2016-09"). ASU 2016-09 modifies the accounting and associated income tax accounting for share-based compensation in order to reduce the cost and complexity associated with current generally accepted accounting principles. ASU 2016-09 became effective as of January 1, 2017. ASU 2016-09 includes different transition requirements for the different changes implemented, including some provisions which allow retrospective application. We will implement this new standard on its effective date.

The primary provisions of ASU 2016-09 that we expect will affect our financial statements are: (1) a reclassification of the tax effect associated with the difference between the expense recognized for share-based payments and the associated tax deduction from additional paid-in capital to income tax expense; (2) a reclassification of the tax effect associated with the difference between compensation expense and associated deduction from financing cash flow to operating cash flow; and (3) a change in our accounting policy to account for forfeitures of share-based payment grants as they occur as opposed to our current policy of estimating the forfeitures on the grant date. The adoption of this accounting policy change will result in an immaterial increase in our retained earnings as of January 1, 2017. Although the provisions would not have had a material impact on our previously-issued financial statements, we cannot provide any assurance regarding their future impacts. Adoption of ASU 2016-09 may increase the volatility of income tax expense and cash flow from operating activities.

#### *Leases*

On February 25, 2016, the FASB issued ASU 2016-02, "Leases" ("ASU 2016-02"). The core principle of ASU 2016-02 will require lessees to present right-of-use assets and lease liabilities on their balance sheets for operating leases, which are currently not reflected on their balance sheets.

ASU 2016-02 is effective for annual and interim periods beginning January 1, 2019. Early adoption of ASU 2016-02 is permitted. Upon adoption of ASU 2016-02, we are required to recognize and measure leases at the beginning of the earliest period presented in our consolidated financial statements using a modified retrospective approach. The modified retrospective approach includes a number of optional practical expedients that we may elect to apply. We will implement this new standard on its effective date, but we have not yet decided which practical expedient options we will elect.

We are currently evaluating our existing lease accounting systems to determine whether our current systems will support the new accounting requirements or if upgrades or new systems will be required, and we are in the process of developing an implementation plan. We are also currently evaluating and assessing the impact ASU 2016-02 will have on us and our consolidated financial statements. As of the date of this annual report, we cannot provide any estimate of the impact of adopting ASU 2016-02.

#### *Revenue Recognition*

On May 28, 2014, the FASB issued ASU 2014-09, "Revenue from Contracts with Customers" ("ASU 2014-09"). ASU 2014-09 replaces virtually all existing generally accepted accounting principles ("GAAP") on revenue recognition and replaces them with a principles-based approach for determining revenue recognition using a new five step model. The core principle of ASU 2014-09 is that an entity should recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services. ASU 2014-09 also includes new accounting principles related to the deferral and amortization of contract acquisition and fulfillment costs. We currently do not defer any contract acquisition costs, but we expect we will defer certain contract acquisition costs in the future which could have the impact of lowering our operating expenses. We currently defer contract fulfillment costs only up to the extent of any revenue deferred. Under ASU 2014-09, in certain transactions our deferred contract fulfillment costs could exceed our deferred revenues, which could result in an increase in deferred costs and could also have the impact of lowering our operating expenses.

On July 9, 2015, the FASB approved the deferral of the effective date of ASU 2014-09 by one year until January 1, 2018, which is the date we plan to adopt this standard. ASU 2014-09 may be adopted by applying the provisions of this standard on a retrospective basis to the periods included in the financial statements or on a modified retrospective basis which would result in the recognition of a cumulative effect of adopting ASU 2014-09 in the first quarter of 2018. We have completed our initial assessment of our business and systems requirements and we are currently developing and implementing a new revenue recognition system to comply with the requirements of ASU 2014-09. Based on this initial assessment, we currently plan to adopt the new revenue recognition standard under the modified retrospective transition method. Until we are further along in implementing our new revenue recognition system, we do not anticipate being able to provide reasonably accurate estimates of the impact of ASU 2014-09 on the timing of our revenue recognition.

## (2) Pending Acquisition of Level 3

On October 31, 2016, we entered into a definitive merger agreement under which we propose to acquire Level 3 Communications, Inc. ("Level 3") in a cash and stock transaction. Under the terms of the agreement, Level 3 shareholders will receive \$26.50 per share in cash and 1.4286 of CenturyLink shares for each share of Level 3 common stock they own at closing. CenturyLink shareholders are expected to own approximately 51% and Level 3 shareholders are expected to own approximately 49% of the combined company at closing. On December 31, 2016, Level 3 had outstanding \$10.9 billion of long-term debt.

Completion of the transaction is subject to the receipt of regulatory approvals, including the expiration or termination of the applicable waiting period under the Hart-Scott-Rodino Antitrust Improvements Act, as well as approvals from the FCC and certain state regulatory authorities. The transaction is also subject to the approval of CenturyLink and Level 3 shareholders at meetings scheduled for March 16, 2017, as well as other customary closing conditions. Subject to these conditions, we anticipate closing this transaction by the end of the third quarter 2017. If the merger is terminated under certain circumstances, we may be obligated to pay Level 3 a termination fee of \$472 million, or Level 3 may be obligated to pay CenturyLink a termination fee of \$738 million.

## (3) Pending Sale of Colocation Business and Data Centers

On November 3, 2016, we entered into a definitive stock purchase agreement to sell our data centers and colocation business to a consortium led by BC Partners, Inc. and Medina Capital in exchange for cash and a minority stake in the consortium's newly-formed global secure infrastructure company. The sale is subject to regulatory approvals, including a review by the Committee of Foreign Investments in the United States, as well as other customary closing conditions.

Based on certain estimates and assumptions regarding the closing date and various tax matters, we currently project that the net cash proceeds from the divestiture will be approximately \$1.5 billion to \$1.7 billion. We plan to use a portion of these net cash proceeds to partly fund our acquisition of Level 3.

As a result of the pending sale of our colocation business and data centers, we reclassified the following assets and liabilities, which are now reflected as assets held for sale and current liabilities associated with the assets held for sale on our consolidated balance sheet, respectively, as of December 31, 2016:

	Dollars in millions
Goodwill	\$ 1,141
Property, plant and equipment	1,071
Other intangible assets	258
Other assets	45
Total amount reclassified to assets held for sale <sup>(1)</sup>	<u>\$ 2,515</u>
Capital lease obligations	305
Other liabilities	114
Total liabilities associated with assets held for sale	<u>\$ 419</u>

<sup>(1)</sup> A portion of the assets equivalent to our anticipated minority stake, which was based on an estimated fair value, in the consortium's newly-formed global secure infrastructure company is reflected in non-current other assets on our consolidated balance sheet

The colocation business has resided in our business reporting unit. The amount of goodwill allocated to the colocation business being sold was determined using a relative-fair-value approach. The amount of goodwill included in the carrying amount of assets held for sale was based on the relative fair value of the colocation business we agreed to sell and the portion of the business reporting unit to be retained by us. We used the sale price as the fair value of the colocation business and the relative business fair value for the portion of the business reporting unit we will retain. As of November 3, 2016, we performed a quantitative assessment of the goodwill remaining in the business reporting unit after the allocation to the colocation business and concluded the remaining goodwill was not impaired as of that date.

Effective with the date we entered into the agreement to sell the colocation business we ceased recording depreciation of the property, plant and equipment to be sold and amortization of the intangible assets. We estimate that we would have recorded \$36 million of depreciation and amortization expense in the two months subsequent to entering into the agreement to sell the colocation business if we had not met the held-for-sale criteria.

We have estimated that after factoring in the costs to sell the colocation business the net carrying value of the assets and liabilities being sold closely approximates the estimated value of the proceeds we will receive upon closing. We further estimate, due to corporate actions we plan to take in the first quarter of 2017 regarding certain subsidiaries involved in the colocation business, that we will trigger tax expense relating to the sale of approximately \$100 million to \$200 million.

For additional information on our goodwill, see Note 4—Goodwill, Customer Relationships and Other Intangible Assets.

#### (4) Goodwill, Customer Relationships and Other Intangible Assets

Goodwill, customer relationships and other intangible assets consisted of the following:

	As of December 31,	
	2016	2015
	(Dollars in millions)	
Goodwill	\$ 19,650	20,742
Customer relationships, less accumulated amortization of \$6,318 and \$5,648	2,797	3,928
Indefinite-life intangible assets	269	269
Other intangible assets subject to amortization:		
Capitalized software, less accumulated amortization of \$2,019 and \$1,778	1,227	1,248
Trade names and patents, less accumulated amortization of \$23 and \$20	35	38
Total other intangible assets, net	\$ 1,531	1,555

Total amortization expense for intangible assets for the years ended December 31, 2016, 2015 and 2014 was \$1.225 billion, \$1.353 billion and \$1.470 billion, respectively. As of December 31, 2016, the gross carrying amount of goodwill, customer relationships, indefinite-life and other intangible assets was \$32.338 billion.

We estimate that total amortization expense for intangible assets for the years ending December 31, 2017 through 2021 will be as follows:

	(Dollars in millions)	
2017	\$	1,044
2018		925
2019		808
2020		703
2021		268

Our goodwill was derived from numerous acquisitions where the purchase price exceeded the fair value of the net assets acquired.

We assess our goodwill and other indefinite-lived intangible assets for impairment annually, or, under certain circumstances, more frequently, such as when events or changes in circumstances indicate there may be impairment. We are required to write down the value of goodwill only when our assessment determines the recorded amount of goodwill exceeds the fair value. Our annual impairment assessment date for goodwill is October 31, at which date we assessed our reporting units, which are business (excluding wholesale), consumer and wholesale. Our annual impairment assessment date for indefinite-lived intangible assets other than goodwill is December 31.

Our reporting units are not discrete legal entities with discrete financial statements. Our assets and liabilities are employed in and relate to the operations of multiple reporting units. For each reporting unit, we compare its estimated fair value of equity to its carrying value of equity that we assign to the reporting unit. If the estimated fair value of the reporting unit is greater than the carrying value, we conclude that no impairment exists. If the estimated fair value of the reporting unit is less than the carrying value, a second calculation is required in which the implied fair value of goodwill is compared to the carrying value of goodwill that we assigned to the reporting unit. If the implied fair value of goodwill is less than its carrying value, goodwill must be written down to its implied fair value.

At October 31, 2016, we utilized a level 3 valuation technique to estimate the fair value of our business (excluding wholesale), consumer and wholesale reporting units by considering both a market approach and a discounted cash flow method. The market approach method includes the use of comparable multiples of publicly traded companies whose services are comparable to ours. The discounted cash flow method is based on the present value of projected cash flows and a terminal value, which represents the expected normalized cash flows of the reporting units beyond the cash flows from the discrete projection period. We discounted the estimated cash flows for our consumer and wholesale reporting units using a rate that represents their estimated weighted average cost of capital, which we determined to be approximately 6.0% as of the assessment date (which was comprised of an after-tax cost of debt of 2.8% and a cost of equity of 6.2%). We discounted the estimated cash flows of our business (excluding wholesale) reporting unit using a rate that represents its estimated weighted average cost of capital, which we determined to be approximately 7.0% as of the assessment date (which was comprised of an after-tax cost of debt of 2.8% and a cost of equity of 6.8%). We also reconciled the estimated fair values of the reporting units to our market capitalization as of October 31, 2016 and concluded that the indicated implied control premium of approximately 33.8% was reasonable based on recent transactions in the market place. As of October 31, 2016, based on our assessment performed with respect to these reporting units as described above, we concluded that our goodwill for our three reporting units was not impaired as of that date.

The following table shows the rollforward of goodwill assigned to our reportable segments from December 31, 2014 through December 31, 2016.

	Business	Consumer	Total
	(Dollars in millions)		
As of December 31, 2014 <sup>(1)</sup>	\$ 10,477	10,278	20,755
Purchase accounting and other adjustments	(13)	—	(13)
As of December 31, 2015 <sup>(1)</sup>	10,464	10,278	20,742
Purchase accounting and other adjustments	49	—	49
Goodwill attributable to the colocation business and data centers reclassified to assets held for sale	(1,141)	—	(1,141)
As of December 31, 2016 <sup>(1)</sup>	\$ 9,372	\$ 10,278	\$ 19,650

<sup>(1)</sup> Goodwill is net of accumulated impairment losses of \$1.1 billion that related to our former hosting segment now included in our business segment.

During 2016, we acquired all of the outstanding stock of three companies for total consideration of \$53 million, including future deferred or contingent cash payments of \$14 million, of which \$49 million has initially been attributed to goodwill. The valuation for these three acquisitions is preliminary and subject to change during the measurement period, which will end one year from the date of each acquisition. These acquisitions were consummated to expand the product offerings of our business segment and therefore the goodwill has been assigned to that segment. The majority of the goodwill is attributed primarily to expected future increases in business segment revenue from the sale of new products. The majority of the goodwill from these acquisitions is expected to be deductible for tax purposes.

None of the above-described acquisitions materially impacted the consolidated results of operations from the dates of the acquisitions and would not materially impact pro forma results of operations.

For additional information on our segments, see Note 14—Segment Information.

We completed our qualitative assessment of our indefinite-lived intangible assets other than goodwill as of December 31, 2016 and concluded it is more likely than not that our indefinite-lived intangible assets are not impaired; thus, no impairment charge was recorded in 2016.

As of October 31, 2015, based on our assessment performed, we concluded that our goodwill for our then three reporting units was not impaired as of that date. As of October 31, 2014, based on our assessment performed, we concluded that our goodwill for our then four reporting units was not impaired as of that date.

### (5) Long-Term Debt and Credit Facilities

Long-term debt, including unamortized discounts and premiums and unamortized debt issuance costs, consisting of borrowings by CenturyLink, Inc. and certain of its subsidiaries, including Qwest Corporation, Qwest Capital Funding, Inc. and Embarq Corporation and its subsidiaries ("Embarq"), were as follows:

	Interest Rates	Maturities	As of December 31,	
			2016	2015
(Dollars in millions)				
<b>CenturyLink, Inc.</b>				
Senior notes	5.150% - 7.650%	2017 - 2042	\$ 8,975	7,975
Credit facility and revolving line of credit <sup>(1)</sup>	4.500%	2019	370	410
Term loan	2.520%	2019	336	358
<b>Subsidiaries</b>				
Qwest Corporation				
Senior notes	6.125% - 7.750%	2017 - 2056	7,259	7,229
Term loan	2.520%	2025	100	100
Qwest Capital Funding, Inc.				
Senior notes	6.500% - 7.750%	2018 - 2031	981	981
Embarq Corporation and subsidiaries				
Senior note	7.995%	2036	1,485	2,669
First mortgage bonds	7.125% - 8.770%	2017 - 2025	223	232
Other	9.000%	2019	150	150
Capital lease and other obligations	Various	Various	440	425
Unamortized discounts, net			(133)	(125)
Unamortized debt issuance costs			(193)	(179)
Total long-term debt			19,993	20,225
Less current maturities not associated with assets held for sale			(1,503)	(1,503)
Less capital lease obligations associated with assets held for sale <sup>(2)</sup>			(305)	—
Long-term debt, excluding current maturities and capital lease obligations associated with assets held for sale			\$ 18,185	18,722

(1) The aggregate amount outstanding on our Credit Facility and revolving line of credit borrowings at December 31, 2016 and 2015 was \$370 million and \$410 million, respectively, with weighted-average interest rates of 4.500% and 2.756%, respectively. These amounts change on a regular basis.

(2) If, as anticipated, we sell our colocation business and data centers in the manner discussed in Note 3—Pending Sale of Colocation Business and Data Centers, \$305 million of the capital lease obligations as of December 31, 2016 will be assumed by the Purchaser. See Note 3—Pending Sale of Colocation Business and Data Centers for additional information.

*New Issuances***2016**

On August 22, 2016, Qwest Corporation issued \$978 million aggregate principal amount of 6.5% Notes due 2056, including \$128 million principal amount that was sold pursuant to an over-allotment option, in exchange for net proceeds, after deducting underwriting discounts and other expenses, of \$946 million. All of the 6.5% Notes are unsecured obligations and may be redeemed by Qwest Corporation, in whole or in part, on or after September 1, 2021, at a redemption price equal to 100% of the principal amount redeemed plus accrued and unpaid interest to the redemption date.

On April 6, 2016, CenturyLink, Inc. issued \$1 billion aggregate principal amount of 7.5% Notes due 2024, in exchange for net proceeds, after deducting underwriting discounts and other expenses, of \$988 million. All of the 7.5% Notes are unsecured obligations and may be redeemed by CenturyLink, Inc., in whole or in part, on or after January 1, 2024, at a redemption price equal to 100% of the principal amount redeemed plus accrued and unpaid interest to the redemption date. At any time before January 1, 2024, the Notes are redeemable, in whole or in part, at CenturyLink, Inc.'s option, at a redemption price equal to the greater of 100% of the principal amount of the Notes to be redeemed or the sum of the present values of the remaining scheduled payments of principal and interest on the Notes to be redeemed, discounted to the redemption date in the manner described in the Notes, plus accrued and unpaid interest to the redemption date. In addition, at any time on or prior to April 1, 2019, CenturyLink, Inc. may redeem up to 35% of the aggregate principal amount of the Notes at a redemption price of 107.5% of the principal amount thereof, plus accrued and unpaid interest to the redemption date, with the net proceeds of certain equity offerings. Under certain circumstances, CenturyLink, Inc. will be required to make an offer to repurchase the Notes at a price of 101% of the aggregate principal amount plus accrued and unpaid interest to the repurchase date.

On January 29, 2016, Qwest Corporation issued \$235 million aggregate principal amount of 7% Notes due 2056, in exchange for net proceeds, after deducting underwriting discounts and other expenses, of \$227 million. All of the 7% Notes are unsecured obligations and may be redeemed by Qwest Corporation, in whole or in part, on or after February 1, 2021, at a redemption price equal to 100% of the principal amount redeemed plus accrued and unpaid interest to the redemption date.

**2015**

On September 21, 2015, Qwest Corporation issued \$400 million aggregate principal amount of 6.625% Notes due 2055, in exchange for net proceeds, after deducting underwriting discounts and other expenses, of approximately \$386 million. On September 30, 2015, Qwest Corporation issued an additional \$10 million aggregate principal amount of the 6.625% Notes under an over-allotment option granted to the underwriter for this offering. All of the 6.625% Notes are unsecured obligations and may be redeemed by Qwest Corporation, in whole or in part, on or after September 15, 2020, at a redemption price equal to 100% of the principal amount redeemed plus accrued and unpaid interest to the redemption date.

On March 19, 2015, CenturyLink, Inc. issued in a private offering \$500 million aggregate principal amount of 5.625% Notes due 2025, in exchange for net proceeds, after deducting underwriting discounts and other expenses, of approximately \$494 million. The Notes are senior unsecured obligations and may be redeemed, in whole or in part, at any time before January 1, 2025 at a redemption price equal to the greater of 100% of the principal amount of the Notes or the sum of the present value of the remaining scheduled payments of principal and interest on the Notes, discounted to the redemption date in the manner described in the Notes, plus accrued and unpaid interest to the redemption date. At any time on or after January 1, 2025, CenturyLink, Inc. may redeem the Notes at par plus accrued and unpaid interest to the redemption date. In addition, at any time on or prior to April 1, 2018, CenturyLink, Inc. may redeem up to 35% of the principal amount of the Notes at a redemption price equal to 105.625% of the principal amount thereof, plus accrued and unpaid interest to the redemption date, with net cash proceeds of certain equity offerings. Under certain circumstances, CenturyLink, Inc. will be required to make an offer to repurchase the Notes at a price of 101% of the aggregate principal amount plus accrued and unpaid interest to the repurchase date. In October 2015, CenturyLink, Inc. exchanged all of the unregistered Notes issued on March 19, 2015 for fully-registered Notes.

## *Repayments*

### **2016**

On December 23, 2016, a subsidiary of Embarq Corporation redeemed \$5 million of its 8.375% Notes due 2025, which resulted in an immaterial loss.

On September 19, 2016, a subsidiary of Embarq Corporation redeemed all of its 8.77% Notes due 2017, which was less than \$4 million and resulted in an immaterial loss.

On September 15, 2016, Qwest Corporation redeemed \$287 million of its 7.5% Notes due 2051, which resulted in a loss of \$9 million.

On August 29, 2016, Qwest Corporation redeemed all \$661 million of its 7.375% Notes due 2051, which resulted in a loss of \$18 million.

On June 1, 2016, Embarq Corporation paid at maturity the \$1.184 billion principal amount and accrued and unpaid interest due under its 7.082% Notes.

On May 2, 2016, Qwest Corporation paid at maturity the \$235 million principal amount and accrued and unpaid interest due under its 8.375% Notes.

### **2015**

On October 13, 2015, Qwest Corporation redeemed all \$250 million of its 7.2% Notes due 2026, which resulted in an immaterial gain, and redeemed \$150 million of its 6.875% Notes due 2033, which resulted in an immaterial loss.

On June 15, 2015, Qwest Corporation paid at maturity the \$92 million principal amount of its 7.625% Notes.

On February 17, 2015, CenturyLink, Inc. paid at maturity the \$350 million principal and accrued and unpaid interest due under its Series M 5.00% Notes.

## *Credit Facility*

Our \$2 billion revolving credit facility (as amended, the "Credit Facility") matures on December 3, 2019 and has 16 lenders, each with commitments ranging from \$3.5 million to \$198.5 million. The Credit Facility allows us to obtain revolving loans and to issue up to \$400 million of letters of credit, which upon issuance reduce the amount available for other extensions of credit. Interest is assessed on borrowings using either the LIBOR or the base rate (each as defined in the Credit Facility) plus an applicable margin between 1.00% and 2.25% per annum for LIBOR loans and 0.00% and 1.25% per annum for base rate loans depending on our then current senior unsecured long-term debt rating. Our obligations under the Credit Facility are guaranteed by nine of our subsidiaries.

### *Term Loans, Revolving Line of Credit and Revolving Letter of Credit*

The CenturyLink, Inc. term loan matures on April 18, 2019. In 2015, CenturyLink amended its term loan agreement to reduce the interest rate payable by it thereunder and to modify some covenants to provide additional flexibility.

In 2015, Qwest Corporation entered into a term loan in the amount of \$100 million with CoBank, ACB. The outstanding unpaid principal amount of this term loan plus any accrued and unpaid interest is due on February 20, 2025. Interest is paid monthly based upon either the London Interbank Offered Rate ("LIBOR") or the base rate (as defined in the credit agreement) plus an applicable margin between 1.50% to 2.50% per annum for LIBOR loans and 0.50% to 1.50% per annum for base rate loans depending on Qwest Corporation's then current senior unsecured long-term debt rating. At both December 31, 2016 and 2015, the outstanding principal balance on this term loan was \$100 million.

In 2016, our \$85 million uncommitted revolving line of credit with one of the lenders under the Credit Facility was suspended as a result of this lender's additional borrowing commitment towards the pending acquisition of Level 3. Interest is paid monthly based upon the LIBOR plus an applicable margin between 1.00% and 2.25% per annum. At December 31, 2016, CenturyLink, Inc. had no

borrowings outstanding under this uncommitted revolving line of credit and at December 31, 2015, CenturyLink, Inc. had \$80 million borrowings outstanding under this uncommitted revolving line of credit.

In April 2011, we entered into a \$160 million uncommitted revolving letter of credit facility which enables us to provide letters of credit under terms that may be more favorable than those under the Credit Facility. At December 31, 2016 and 2015, our outstanding letters of credit totaled \$105 million and \$109 million, respectively, under this facility.

### Aggregate Maturities of Long-Term Debt

Set forth below is the aggregate principal amount of our long-term debt (excluding unamortized discounts, net and unamortized debt issuance costs) maturing during the following years:

	(Dollars in millions) <sup>(1)</sup>
2017	\$ 1,544
2018	280
2019	1,131
2020	1,032
2021	2,329
2022 and thereafter	14,003
Total long-term debt	<u>\$ 20,319</u>

(1) Actual principal paid in any year may differ due to the possible future refinancing of outstanding debt or the issuance of new debt. The projected amounts in the table also exclude any impacts from the sale of our colocation business or any further acquisitions.

### Interest Expense

Interest expense includes interest on total long-term debt. The following table presents the amount of gross interest expense, net of capitalized interest:

	Years Ended December 31,		
	2016	2015	2014
	(Dollars in millions)		
Interest expense:			
Gross interest expense	\$ 1,372	1,364	1,358
Capitalized interest	(54)	(52)	(47)
Total interest expense	<u>\$ 1,318</u>	<u>1,312</u>	<u>1,311</u>

### Covenants

Certain of our loan agreements contain various restrictions, as described more fully below. Under current circumstances, we believe the covenants currently in effect place no significant restriction on the transfer of funds from our consolidated subsidiaries to CenturyLink.

The senior notes of CenturyLink, Inc. were issued under an indenture dated March 31, 1994. This indenture restricts our ability to (i) incur, issue or create liens upon the property of CenturyLink, Inc. and (ii) consolidate with or merge into, or transfer or lease all or substantially all of our assets to any other party. The indenture does not contain any provisions that are impacted by our credit ratings or that restrict the issuance of new securities in the event of a material adverse change to us. However, if the credit ratings relating to certain of our long-term debt securities issued under this indenture are downgraded in the manner specified thereunder in connection with a "change of control" of CenturyLink, Inc., then we will be required to offer to repurchase such debt securities.

The senior notes of Qwest Corporation were issued under indentures dated April 15, 1990 and October 15, 1999. These indentures contain restrictions on the incurrence of liens and the consummation of certain transactions substantially similar to the above-described covenants in CenturyLink, Inc.'s March 31, 1994 indenture. The senior notes of Qwest Capital Funding, Inc. were issued under an indenture dated June 29, 1998 containing terms substantially similar to those set forth in Qwest Corporation's indentures.

Embarq's senior note was issued pursuant to an indenture dated as of May 17, 2006. While Embarq is generally prohibited from creating liens on its property unless its senior notes are secured equally and ratably, Embarq can create liens on its property without equally and ratably securing its senior notes so long as the sum of all indebtedness so secured does not exceed 15% of Embarq's

consolidated net tangible assets. The indenture contains customary events of default, none of which are impacted by Embarq's credit rating.

None of the above-listed indentures of CenturyLink, Inc., Qwest Corporation, Qwest Capital Funding, Inc. and Embarq contain any financial covenants or restrictions on the ability to issue new securities in accordance with the terms of the indenture.

Several of our Embarq subsidiaries have outstanding first mortgage bonds. Each issue of these first mortgage bonds is secured by substantially all of the property, plant and equipment of the issuing subsidiary. Approximately 10% of our net property, plant and equipment is pledged to secure the long-term debt of subsidiaries.

Under the Credit Facility, we, and our indirect subsidiary, Qwest Corporation, must maintain a debt to EBITDA (earnings before interest, taxes, depreciation and amortization, as defined in our Credit Facility) ratio of not more than 4.0:1.0 and 2.85:1.0, respectively, as of the last day of each fiscal quarter for the four quarters then ended. The Credit Facility also contains a negative pledge covenant, which generally requires us to secure equally and ratably any advances under the Credit Facility if we pledge assets or permit liens on our property for the benefit of other debtholders. The Credit Facility also has a cross payment default provision, and the Credit Facility and certain of our debt securities also have cross acceleration provisions. When present, these provisions could have a wider impact on liquidity than might otherwise arise from a default or acceleration of a single debt instrument. Our debt to EBITDA ratios could be adversely affected by a wide variety of events, including unforeseen expenses or contingencies. This could reduce our financing flexibility due to potential restrictions on incurring additional debt under certain provisions of our debt agreements or, in certain circumstances, could result in a default under certain provisions of such agreements.

CenturyLink, Inc. and Qwest Corporation are both indebted under term loans, each of which includes covenants substantially similar to those set forth in the Credit Facility.

At December 31, 2016, we believe we were in compliance with all of the provisions and covenants contained in our Credit Facility and other material debt agreements.

### ***Guarantees***

We do not guarantee the debt of any unaffiliated parties, but certain of our subsidiaries guarantee the outstanding senior notes issued by other subsidiaries. In addition, nine of our largest wholly owned subsidiaries guarantee the obligations of CenturyLink, Inc. under the Credit Facility and its term loan.

### ***Level 3 Financing Commitment Letter***

In connection with entering into our merger agreement with Level 3 (discussed further in Note 2), on October 31, 2016, we obtained a debt commitment letter, which was amended and restated on November 13, 2016, and further amended on November 15, 2016 (the "Debt Commitment Letter"), from Bank of America, N.A., Morgan Stanley Senior Funding, Inc., The Bank of Tokyo-Mitsubishi UFJ, Ltd., Barclays Bank PLC, JPMorgan Chase Bank, N.A., Wells Fargo Bank, National Association, Royal Bank of Canada, Goldman Sachs Bank USA, SunTrust Bank, Mizuho Bank, Ltd., Regions Bank, Fifth Third Bank, Credit Suisse AG, Cayman Islands Branch, and U.S. Bank, National Association (collectively the "Commitment Parties"), pursuant to which the Commitment Parties or certain of their affiliates agreed to provide a \$2.0 billion senior secured revolving credit facility, a \$1.5 billion senior secured term loan "A" credit facility, a \$4.5 billion senior secured term loan "B" credit facility and a \$2.225 billion senior secured bridge loan facility (collectively, the "Commitment Facilities"), together with certain backstop commitments designed to provide additional acquisition-related financing in certain limited instances. The secured bridge loan facility will only be drawn to the extent we are unable to raise such amounts by issuing senior secured notes or other debt securities at or prior to the closing of the Level 3 acquisition. The senior secured revolving credit facility is designed to replace the Credit Facility. Bank of America, N.A. and Morgan Stanley Senior Funding, Inc., affiliates of BofA Merrill Lynch and Morgan Stanley, will be entitled to receive financing fees in connection with the debt commitment letter, the amount of which will vary based on, among other things, when the debt financing is incurred, whether the previously-announced divestiture of our data centers and colocation business closes prior to the Level 3 acquisition and whether the bridge loan facility is drawn. The financing fees to be payable to Bank of America, N.A. and Morgan Stanley Senior Funding, Inc. are expected to be quite substantial.

Each Commitment Party's commitments to provide the Commitment Facilities and each Commitment Party's agreements to perform the services described in the Commitment Letter will automatically terminate on the earliest of (i) the date of termination of our merger agreement with Level 3 in accordance with its terms, (ii) the closing of the Level 3 acquisition with or without the use of such Commitment Facilities and (iii) 11:59 p.m. on October 31, 2017 (or, if the "Termination Date" as defined in the merger agreement is extended in certain circumstances, the date to which it is extended that is not later than 11:59 p.m. on January 31, 2018).

The definitive documentation governing the Level 3 debt financing has not been finalized and, accordingly, the actual terms of the debt financing may differ from those described above. Although the debt financing described above is not subject to due diligence or a "market out," such financing may not be considered assured. The obligation of the Commitment Parties to provide debt financing under the debt commitment letter is subject to a number of conditions, and it is anticipated that the definitive debt financing documentation will also include certain funding conditions. There is a risk that these conditions will not be satisfied and the debt financing may not be available when required. In addition, we have the right to substitute the proceeds of other debt financing, or commitments for other debt financing, for all or any portion of the Commitment Facilities. As of the date of this annual report, no such other debt financing has been arranged.

#### (6) Accounts Receivable

The following table presents details of our accounts receivable balances:

	As of December 31,	
	2016	2015
	(Dollars in millions)	
Trade and purchased receivables	\$ 1,882	1,789
Earned and unbilled receivables	299	288
Other	14	18
Total accounts receivable	2,195	2,095
Less: allowance for doubtful accounts	(178)	(152)
Accounts receivable, less allowance	\$ 2,017	1,943

We are exposed to concentrations of credit risk from residential and business customers within our local service area, business customers outside of our local service area and from other telecommunications service providers. We generally do not require collateral to secure our receivable balances. We have agreements with other telecommunications service providers whereby we agree to bill and collect on their behalf for services rendered by those providers to our customers within our local service area. We purchase accounts receivable from other telecommunications service providers primarily on a recourse basis and include these amounts in our accounts receivable balance. We have not experienced any significant loss associated with these purchased receivables.

The following table presents details of our allowance for doubtful accounts:

	Beginning Balance	Additions	Deductions	Ending Balance
	(Dollars in millions)			
2016	\$ 152	192	(166)	178
2015	\$ 162	177	(187)	152
2014	\$ 155	159	(152)	162

**(7) Property, Plant and Equipment**

Net property, plant and equipment is composed of the following:

	Depreciable Lives	As of December 31,	
		2016	2015
		(Dollars in millions)	
Land	N/A	\$ 563	571
Fiber, conduit and other outside plant <sup>(1)</sup>	15-45 years	16,996	16,166
Central office and other network electronics <sup>(2)</sup>	3-10 years	13,768	14,144
Support assets <sup>(3)</sup>	3-30 years	6,623	7,000
Construction in progress <sup>(4)</sup>	N/A	1,244	904
Gross property, plant and equipment		39,194	38,785
Accumulated depreciation		(22,155)	(20,716)
Net property, plant and equipment		\$ 17,039	18,069

- (1) Fiber, conduit and other outside plant consists of fiber and metallic cable, conduit, poles and other supporting structures.
- (2) Central office and other network electronics consists of circuit and packet switches, routers, transmission electronics and electronics providing service to customers.
- (3) Support assets consist of buildings, data centers, computers and other administrative and support equipment.
- (4) Construction in progress includes inventory held for construction and property of the aforementioned categories that has not been placed in service as it is still under construction.

See Note 3—Pending Sale of Colocation Business and Data Centers for additional information on our colocation assets and data centers reclassified to assets held for sale.

We recorded depreciation expense of \$2.691 billion, \$2.836 billion and \$2.958 billion for the years ended December 31, 2016, 2015 and 2014, respectively.

In 2014, we recorded an impairment charge of \$17 million in connection with a sale-leaseback transaction involving an office building that we closed in the fourth quarter of 2014. This impairment charge is included in selling, general and administrative expense in our consolidated statement of operations for the year ended December 31, 2014.

Additionally, in 2014 we sold an office building for \$12 million.

**Asset Retirement Obligations**

At December 31, 2016, our asset retirement obligations balance was primarily related to estimated future costs of removing equipment from leased properties and estimated future costs of properly disposing of asbestos and other hazardous materials upon remodeling or demolishing buildings. Asset retirement obligations are included in other long-term liabilities on our consolidated balance sheets.

The following table provides asset retirement obligation activity:

	Years Ended December 31,		
	2016	2015	2014
	(Dollars in millions)		
Balance at beginning of year	\$ 91	107	106
Accretion expense	6	7	7
Liabilities incurred	—	—	6

Liabilities settled	(2)	(2)	(2)
Change in estimate	—	(21)	(10)
Balance at end of year	<u>\$ 95</u>	<u>91</u>	<u>107</u>

If, as anticipated, we sell our colocation business and data centers in the manner discussed in Note 3, \$19 million of the asset retirement obligation as of December 31, 2016 will be assumed by the Purchaser.

Our estimates for the cost of removal of network equipment, asbestos remediation and other obligations remained unchanged for the year ended December 31, 2016. During 2015 and 2014, we revised our estimates for the cost of removal of network equipment, asbestos remediation, and other obligations by \$21 million and \$10 million, respectively. These revisions resulted in a reduction of the asset retirement obligation and offsetting reduction to gross property, plant and equipment, and revisions to assets specifically identified are recorded as a reduction to accretion expense.

#### (8) Severance and Leased Real Estate

Periodically, we reduce our workforce and accrue liabilities for the related severance costs. These workforce reductions resulted primarily from the progression or completion of our post-acquisition integration plans, increased competitive pressures, cost reduction initiatives, process improvements through automation and reduced workload demands due to the loss of customers purchasing certain services.

We report severance liabilities within accrued expenses and other liabilities - salaries and benefits in our consolidated balance sheets and report severance expenses in selling, general and administrative expenses in our consolidated statements of operations. As noted in Note 14—Segment Information, we do not allocate these severance expenses to our segments.

We have recognized liabilities to reflect our estimates of the fair values of the existing lease obligations for real estate which we have ceased using, net of estimated sublease rentals. Our fair value estimates were determined using discounted cash flow methods. We recognize expense to reflect accretion of the discounted liabilities and periodically we adjust the expense when our actual subleasing experience differs from our initial estimates. We report the current portion of liabilities for ceased-use real estate leases in accrued expenses and other liabilities-other and report the noncurrent portion in deferred credits and other liabilities in our consolidated balance sheets. We report the related expenses in selling, general and administrative expenses in our consolidated statements of operations. At December 31, 2016, the current and noncurrent portions of our leased real estate accrual were \$8 million and \$59 million, respectively. The remaining lease terms range from 1.2 years to 9.0 years, with a weighted average of 7.8 years.

Changes in our accrued liabilities for severance expenses and leased real estate were as follows:

	Severance	Real Estate
	(Dollars in millions)	
Balance at December 31, 2014	\$ 26	96
Accrued to expense	96	—
Payments, net	(108)	(13)
Reversals and adjustments	—	(3)
Balance at December 31, 2015	14	80
Accrued to expense	173	4
Payments, net	(89)	(20)
Reversals and adjustments	—	3
Balance at December 31, 2016	\$ 98	67

#### (9) Employee Benefits

##### *Pension, Post-Retirement and Other Post-Employment Benefits*

We sponsor various defined benefit pension plans (qualified and non-qualified), which in the aggregate cover a substantial portion of our employees including legacy CenturyLink, legacy Qwest Communications International, Inc. ("Qwest") and legacy Embarq employees. On December 31, 2014, we merged our existing qualified pension plans, which included merging the Qwest Pension Plan and Embarq Retirement Pension Plan into the CenturyLink Retirement Plan. The CenturyLink Retirement Plan was renamed the CenturyLink Combined Pension Plan ("Combined Plan"). Pension benefits for participants of the new Combined Plan who are represented by a collective bargaining agreement are based on negotiated schedules. All other participants' pension benefits are based on each individual participant's years of service and compensation. We also maintain non-qualified pension plans for certain current and former highly compensated employees. We maintain post-retirement benefit plans that provide health care and life insurance benefits for certain eligible retirees. We also provide other post-employment benefits for certain eligible former employees. We use a December 31 measurement date for all our plans.

## Pension Benefits

Current funding laws require a company with a pension shortfall to fund the annual cost of benefits earned in addition to a seven-year amortization of the shortfall. Our funding policy for our Combined Plan is to make contributions with the objective of accumulating sufficient assets to pay all qualified pension benefits when due under the terms of the plan. The accounting unfunded status of our qualified pension plan was \$2.352 billion and \$2.215 billion as of December 31, 2016 and 2015, respectively.

We made a voluntary cash contribution of \$100 million in both 2016 and 2015 to our qualified pension plan and paid \$7 million and \$6 million of benefits directly to participants of our non-qualified pension plans in 2016 and 2015, respectively. Based on current laws and circumstances, we are not required to make any contributions to our qualified pension plan in 2017, but we estimate that we will pay \$6 million of benefits directly to participants of our non-qualified pension plans. We currently expect to make a voluntary contribution of \$100 million to the trust for our qualified pension plan in 2017.

Our pension plans contain provisions that allow us, from time to time, to offer lump sum payment options to certain former employees in settlement of their future retirement benefits. Additionally, eligible employees who terminate employment may elect to receive a lump sum payout. We record these payments as a settlement only if, in the aggregate, they exceed the sum of the annual service and interest costs for the plan's net periodic pension benefit costs, which represents the settlement threshold. There were no pension lump sum offerings in 2016, other than those to eligible employees who terminated during 2016. In 2015, we made cash settlement payments of \$356 million through a lump sum offering to a group of former employees. The total amount of the lump sum settlement payments for the year ended December 31, 2015, which included the lump sum offer and lump sum elections from employees who terminated employment during the year, was less than the settlement threshold, therefore settlement accounting was not triggered in 2015. In 2014, lump sum pension settlement payments to terminated, but not-yet-retired legacy Qwest participants was \$460 million, which exceeded the settlement threshold of \$418 million. As a result, we were required to recognize a settlement charge of \$63 million in 2014 to accelerate the recognition of a portion of the previously unrecognized actuarial losses in the qualified pension plan, which has been allocated and reflected in cost of services and products (exclusive of depreciation and amortization) and selling, general and administrative in our consolidated statement of operations for the year ended December 31, 2014. This charge reduced our recorded net income and retained earnings, with an offset to accumulated other comprehensive loss in shareholders' equity. The amount of any future non-cash settlement charges will depend on the level of lump sum benefit payments made in 2017 and beyond.

## Post-Retirement Benefits

Our post-retirement benefit plans provide post-retirement benefits to qualified retirees and allow (i) eligible employees retiring before certain dates to receive benefits at no or reduced cost and (ii) eligible employees retiring after certain dates to receive benefits on a shared cost basis. The post-retirement benefits not paid by the trust are funded by us and we expect to continue funding these post-retirement obligations as benefits are paid. The accounting unfunded status of our qualified post-retirement benefit plan was \$3.360 billion and \$3.374 billion as of December 31, 2016 and 2015, respectively.

Assets in the post-retirement trusts have been substantially depleted as of December 31, 2016; however we will continue to pay certain post-retirement benefits through the trusts. No contributions were made to the post-retirement trusts in 2016, and we do not expect to make a contribution in 2017. In 2016, we paid \$129 million of post-retirement benefits, net of participant contributions and direct subsidies. In 2017, we expect to pay \$275 million of post-retirement benefits, net of participant contributions and direct subsidies. The increase in anticipated post-retirement benefit payments is the result of substantially depleting the plan assets held in the trust.

We expect our health care cost trend rate to range from 5.0% to 5.5% in 2017 to 5.0% to 6.0% in 2018 and 2019 and grading to 4.50% by 2025. Our post-retirement benefit expense, for certain eligible legacy Qwest retirees and certain eligible legacy CenturyLink retirees, is capped at a set dollar amount. Therefore, those health care benefit obligations are not subject to increasing health care trends after the effective date of the caps.

A change of 100 basis points in the assumed initial health care cost trend rate would have had the following effects in 2016:

	100 Basis Points Change	
	Increase	(Decrease)
	(Dollars in millions)	
Effect on the aggregate of the service and interest cost components of net periodic post-retirement benefit expense (consolidated statement of operations)	\$ 2	(2)
Effect on benefit obligation (consolidated balance sheet)	66	(61)

### Expected Cash Flows

The qualified pension, non-qualified pension and post-retirement health care benefit payments and premiums and life insurance premium payments are paid by us or distributed from plan assets. The estimated benefit payments provided below are based on actuarial assumptions using the demographics of the employee and retiree populations and have been reduced by estimated participant contributions.

	Pension Plans	Post-Retirement Benefit Plans	Medicare Part D Subsidy Receipts
	(Dollars in millions)		
Estimated future benefit payments:			
2017	\$ 1,277	295	(6)
2018	987	284	(6)
2019	968	275	(6)
2020	948	267	(6)
2021	928	259	(6)
2022 - 2026	4,280	1,160	(26)

### Net Periodic Benefit Expense

In 2016, we changed the method we use to estimate the service and interest components of net periodic benefit expense for pension and other postretirement benefit obligations. This change resulted in a decrease in the service and interest components in 2016. Beginning in 2016, we utilized a full yield curve approach in connection with estimating these components by applying the specific spot rates along the yield curve used in the determination of the benefit obligation to the relevant projected cash flows, as opposed to the single weighted-average discount rate derived from the yield curve that we have used in the past. We believe this change more precisely measures service and interest costs by improving the correlation between projected benefit cash flows to the corresponding spot yield curve rates. This change did not affect the measurement of our total benefit obligations but lowered our annual net periodic benefit cost by approximately \$149 million in 2016. This change was treated as a change in accounting estimate and accordingly, we did not adjust the amounts recorded in 2015 or 2014.

The actuarial assumptions used to compute the net periodic benefit expense for our qualified pension, non-qualified pension and post-retirement benefit plans are based upon information available as of the beginning of the year, as presented in the following table.

	Pension Plans			Post-Retirement Benefit Plans		
	2016	2015	2014	2016	2015	2014
Actuarial assumptions at beginning of year:						
Discount rate	3.50% - 4.50%	3.50% - 4.10%	4.20% - 5.10%	4.15%	3.80%	4.50%
Rate of compensation increase	3.25%	3.25%	3.25%	N/A	N/A	N/A
Expected long-term rate of return on plan assets	7.00%	7.50%	7.50%	7.00%	7.50%	6.00% - 7.50%
Initial health care cost trend rate	N/A	N/A	N/A	5.00% / 5.25%	6.00% / 6.50%	6.00% / 6.50%
Ultimate health care cost trend rate	N/A	N/A	N/A	4.50%	4.50%	4.50%
Year ultimate trend rate is reached	N/A	N/A	N/A	2025	2025	2024

N/A-Not applicable

Net periodic benefit (income) expense for our qualified and non-qualified pension plans includes the following components:

	<b>Pension Plans</b>		
	<b>Years Ended December 31,</b>		
	<b>2016</b>	<b>2015</b>	<b>2014</b>
	<b>(Dollars in millions)</b>		
Service cost	\$ 64	83	77
Interest cost	427	568	602
Expected return on plan assets	(732)	(898)	(891)
Settlements	—	—	63
Special termination benefits charge	13	—	—
Recognition of prior service (credit) cost	(8)	5	5
Recognition of actuarial loss	175	161	22
Net periodic pension benefit income	<u>\$ (61)</u>	<u>(81)</u>	<u>(122)</u>

Net periodic benefit expense (income) for our post-retirement benefit plans includes the following components:

	<b>Post-Retirement Plans</b>		
	<b>Years Ended December 31,</b>		
	<b>2016</b>	<b>2015</b>	<b>2014</b>
	<b>(Dollars in millions)</b>		
Service cost	\$ 19	24	22
Interest cost	111	140	159
Expected return on plan assets	(7)	(21)	(33)
Special termination benefits charge	3	—	—
Recognition of prior service cost	20	19	20
Net periodic post-retirement benefit expense	<u>\$ 146</u>	<u>162</u>	<u>168</u>

We report net periodic benefit (income) expense for our qualified pension, non-qualified pension and post-retirement benefit plans in cost of services and products and selling, general and administrative expenses in our consolidated statements of operations for the years ended December 31, 2016, 2015 and 2014. In the third quarter of 2016, we announced plans to reduce our workforce, initially through voluntary severance packages and the balance through involuntary reductions. We recognized in the fourth quarter of 2016, a one-time charge of \$16 million for special termination benefit enhancements paid to certain eligible employees upon voluntary retirement.

### ***Benefit Obligations***

The actuarial assumptions used to compute the funded status for the plans are based upon information available as of December 31, 2016 and 2015 and are as follows:

	<b>Pension Plans</b>		<b>Post-Retirement Benefit Plans</b>	
	<b>December 31,</b>		<b>December 31,</b>	
	<b>2016</b>	<b>2015</b>	<b>2016</b>	<b>2015</b>

N/A-Not applicable

In 2016, we adopted the revised mortality table and projection scale released by the Society of Actuaries ("SOA"), which decreased the projected benefit obligation of our benefit plans by \$268 million. The 2015 revised mortality table and projection scale decreased the 2015 projected benefit obligation of our benefit plans by \$379 million. In 2014, to better reflect the expected lifetimes of our plan participants, we adopted a new mortality table for our defined benefit plan. The table used was based on SOA tables and increased the projected benefit obligation of our benefit plans by approximately \$1.3 billion. The change in the projected benefit obligation of our benefit plans was recognized as part of the net actuarial loss and is included in accumulated other comprehensive loss, a portion of which is subject to amortization over the remaining estimated life of plan participants, which was approximately 9 to 10 years as of December 31, 2016.

The following tables summarize the change in the benefit obligations for the pension and post-retirement benefit plans:

	<b>Pension Plans</b>		
	<b>Years Ended December 31,</b>		
	<b>2016</b>	<b>2015</b>	<b>2014</b>
	(Dollars in millions)		
Change in benefit obligation			
Benefit obligation at beginning of year	\$ 13,349	15,042	13,401
Service cost	64	83	77
Interest cost	427	568	602
Plan amendments	2	(100)	4
Special termination benefits charge	13	—	—
Actuarial loss (gain)	487	(800)	2,269
Settlements	—	—	(460)
Benefits paid by company	(7)	(6)	(6)
Benefits paid from plan assets	(1,034)	(1,438)	(845)
Benefit obligation at end of year	<u>\$ 13,301</u>	<u>13,349</u>	<u>15,042</u>

	<b>Post-Retirement Benefit Plans</b>		
	<b>Years Ended December 31,</b>		
	<b>2016</b>	<b>2015</b>	<b>2014</b>
	(Dollars in millions)		
Change in benefit obligation			
Benefit obligation at beginning of year	\$ 3,567	3,830	3,688
Service cost	19	24	22
Interest cost	111	140	159
Participant contributions	57	57	69
Plan amendments	—	—	23
Direct subsidy receipts	5	8	9
Special termination benefits charge	3	—	—
Actuarial (gain) loss	(13)	(148)	245
Benefits paid by company	(191)	(181)	(166)
Benefits paid from plan assets	(145)	(163)	(219)
Benefit obligation at end of year	<u>\$ 3,413</u>	<u>3,567</u>	<u>3,830</u>

Our aggregate benefit obligation as of December 31, 2016, 2015 and 2014 was \$16.714 billion, \$16.916 billion and \$18.872 billion, respectively.

### Plan Assets

We maintain plan assets for our qualified pension plan and certain post-retirement benefit plans. The qualified pension plan's assets are used for the payment of pension benefits and certain eligible plan expenses. The post-retirement benefit plan's assets are used to pay health care benefits and premiums on behalf of eligible retirees and to pay certain eligible plan expenses. As discussed further above, the liquid plan assets in our post-retirement trust have been substantially depleted as of December 31, 2016. The expected rate of return on plan assets is the long-term rate of return we expect to earn on the plans' assets, net of administrative expenses paid from plan assets. The rate of return is determined by the strategic allocation of plan assets and the long-term risk and return forecast for each asset class. The forecasts for each asset class are generated primarily from an analysis of the long-term expectations of various third party investment management organizations. The expected rate of return on plan assets is reviewed annually and revised, as necessary, to reflect changes in the financial markets and our investment strategy.

The following tables summarize the change in the fair value of plan assets for the pension and post-retirement benefit plans:

	Pension Plans		
	Years Ended December 31,		
	2016	2015	2014
	(Dollars in millions)		
Change in plan assets			
Fair value of plan assets at beginning of year	\$ 11,072	12,571	12,346
Return on plan assets	754	(161)	1,373
Employer contributions	100	100	157
Settlements	—	—	(460)
Benefits paid from plan assets	(1,034)	(1,438)	(845)
Fair value of plan assets at end of year	\$ 10,892	11,072	12,571

	Post-Retirement Benefit Plans		
	Years Ended December 31,		
	2016	2015	2014
	(Dollars in millions)		
Change in plan assets			
Fair value of plan assets at beginning of year	\$ 193	353	535
Return on plan assets	5	3	37
Benefits paid from plan assets	(145)	(163)	(219)
Fair value of plan assets at end of year	\$ 53	193	353

*Pension Plans:* Our investment objective for the qualified pension plan assets is to achieve an attractive risk-adjusted return over time that will provide for the payment of benefits and minimize the risk of large losses. Our pension plan investment strategy is designed to meet this objective by broadly diversifying plan assets across numerous strategies with differing expected returns, volatilities and correlations. The pension plan assets have target allocations of 45% to interest rate sensitive investments and 55% to investments designed to provide higher expected returns than the interest rate sensitive investments. Interest rate sensitive investments include 30% of plan assets targeted primarily to long-duration investment grade bonds, 10% targeted to high yield and emerging market bonds and 5% targeted to diversified strategies, which primarily have exposures to global bonds, as well as some exposures to global stocks and commodities. Assets expected to provide higher returns than the interest rate sensitive assets include broadly diversified equity investments with targets of approximately 15% to U.S. equity markets and 15% to non-U.S. developed and emerging markets. Approximately 7% is targeted to broadly diversified multi-asset class strategies that have the flexibility to adjust exposures to different asset classes. Approximately 10% is allocated to private markets investments including funds primarily invested in private equity, private debt and hedge funds. Real estate investments are targeted at 8% of plan assets. At the beginning of 2017, our expected annual long-term rate of return on pension assets before consideration of administrative expenses is assumed to be 7.0%. However, projected increases in PBGC (Pension Benefit Guaranty Corporation) premium rates have now become large enough to reduce the annual long-term expected return net of administrative expenses to 6.5%.

Our non-qualified pension plans are not funded. We pay benefits directly to the participants of these plans.

*Post-Retirement Benefit Plans:* Our investment objective for the post-retirement benefit plans' assets is to achieve an attractive risk-adjusted return and minimize the risk of large losses over the expected life of the assets. At the beginning of 2017, our expected annual long-term rate of return on post-retirement benefit plan assets is assumed to be 5.0%.

*Permitted investments:* Plan assets are managed consistent with the restrictions set forth by the Employee Retirement Income Security Act of 1974, as amended, which requires diversification of assets and also generally prohibits defined benefit and welfare plans from investing more than 10% of their assets in securities issued by the sponsor company. At December 31, 2016 and 2015, the pension and post-retirement benefit plans did not directly own any shares of our common stock and less than 1% of the assets were held in CenturyLink debt.

*Derivative instruments:* Derivative instruments are used to reduce risk as well as provide return. The pension and post-retirement benefit plans use exchange traded futures and swaps to gain exposure to equity and interest rate markets consistent with target asset allocations and to reduce risk relative to measurement of the benefit obligation, which is sensitive to interest rate changes. Foreign exchange forward contracts are used to manage currency exposures. Credit default swaps are used to manage credit risk exposures in a cost effective and targeted manner relative to transacting with physical corporate fixed income securities. Options are currently used to manage interest rate exposure taking into account the implied volatility and current pricing of the specific underlying market instrument. Some derivative instruments subject the plans to counterparty risk. The external investment managers, along with Plan Management, monitor counterparty exposure and mitigate this risk by diversifying the exposure among multiple high credit quality counterparties, requiring collateral and limiting exposure by periodically settling contracts.

The gross notional exposure of the derivative instruments directly held by the pension benefit plan is shown below. The notional amount of the derivatives corresponds to market exposure but does not represent an actual cash investment. Our post-retirement plans were not invested in derivative instruments for the years ended December 31, 2016 or 2015.

	Gross Notional Exposure	
	Pension Plans	
	Years Ended December 31,	
	2016	2015
	(Dollars in millions)	
<u>Derivative instruments:</u>		
Exchange-traded U.S. equity futures	\$ 104	79
Exchange-traded Treasury and other interest rate futures	1,813	1,767
Interest rate swaps	260	550
Credit default swaps	240	189
Foreign exchange forwards	778	992
Options	206	285

*Fair Value Measurements:* Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between independent and knowledgeable parties who are willing and able to transact for an asset or liability at the measurement date. We use valuation techniques that maximize the use of observable inputs and minimize the use of unobservable inputs when determining fair value and then we rank the estimated values based on the reliability of the inputs used following the fair value hierarchy set forth by the FASB. For additional information on the fair value hierarchy, see Note 12—Fair Value Disclosure.

At December 31, 2016, we used the following valuation techniques to measure fair value for assets. There were no changes to these methodologies during 2016:

- Level 1—Assets were valued using the closing price reported in the active market in which the individual security was traded.
- Level 2—Assets were valued using quoted prices in markets that are not active, broker dealer quotations, net asset value of shares held by the plans and other methods by which all significant inputs were observable at the measurement date.
- Level 3—Assets were valued using unobservable inputs in which little or no market data exists as reported by the respective institutions at the measurement date.

The tables below present the fair value of plan assets by category and the input levels used to determine those fair values at December 31, 2016. It is important to note that the asset allocations do not include market exposures that are gained with derivatives. Investments include dividend and interest receivables, pending trades and accrued expenses.

<b>Fair Value of Pension Plan Assets at December 31, 2016</b>				
	<b>Level 1</b>	<b>Level 2</b>	<b>Level 3</b>	<b>Total</b>
	(Dollars in millions)

In 2015, we adopted Accounting Standards Update 2015-07 (“ASU 2015-07”), which retrospectively changed the disclosure requirements for certain investments that are valued based upon net asset value (“NAV”) as a practical expedient. ASU 2015-07 was issued to eliminate diversity among entities on what level in the fair value hierarchy such investments were assigned. Under ASU 2015-07, investments valued using NAV as a practical expedient are no longer assigned to a level in the fair value hierarchy. The value associated with these investments is disclosed in the reconciliation of the total investments measured at fair value shown below.

The table below presents the fair value of plan assets valued at NAV by category for our pension and post-retirement plans at December 31, 2016 and 2015.

	Fair Value of Plan Assets Valued at NAV			
	Pension Plans at December 31,		Post-Retirement Benefit Plans at December 31,	
	2016	2015	2016	2015
	(Dollars in millions)

Total investments valued at NAV	\$ 5,564	5,293	41	153

The plans' assets are invested in various asset categories utilizing multiple strategies and investment managers. Interests in commingled funds are valued using the net asset value ("NAV") per unit of each fund. The NAV reported by the fund manager is based on the market value of the underlying investments owned by each fund, minus its liabilities, divided by the number of shares outstanding. Commingled funds can be redeemed at NAV, generally within a year of the financial statement date. Investments in private funds, primarily limited partnerships, represent long-term commitments with a fixed maturity date and are also valued at NAV. Valuation inputs for these private fund interests are generally based on assumptions and other information not observable in the market. The assumptions and valuation methodologies of the pricing vendors, account managers, fund managers and partnerships are monitored and evaluated for reasonableness. Below is an overview of the asset categories, the underlying strategies and valuation inputs used to value the assets in the preceding tables:

(a) *Investment grade bonds* represent investments in fixed income securities as well as commingled bond funds comprised of U.S. Treasury securities, agencies, corporate bonds, mortgage-backed securities, asset-backed securities and commercial mortgage-backed securities. Treasury securities are valued at the bid price reported in the active market in which the security is traded and are classified as Level 1. The valuation inputs of other investment grade bonds primarily utilize observable market information and are based on a spread to U.S. Treasury securities and consider yields available on comparable securities of issuers with similar credit ratings. The primary observable inputs include references to the new issue market for similar securities, the secondary trading markets and dealer quotes. Option adjusted spread models are utilized to evaluate securities such as asset backed securities that have early redemption features. These securities are classified as Level 2. The commingled funds are valued at NAV based on the market value of the underlying fixed income securities using the same valuation inputs previously described.

(b) *High yield bonds* represent investments in below investment grade fixed income securities as well as commingled high yield bond funds. The valuation inputs for the securities primarily utilize observable market information and are based on a spread to U.S. Treasury securities and consider yields available on comparable securities of issuers with similar credit ratings. These securities are primarily classified as Level 2. The commingled funds are valued at NAV based on the market value of the underlying high yield instruments using the same valuation inputs previously described.

(c) *Emerging market bonds* represent investments in securities issued by governments and other entities located in developing countries as well as registered mutual funds and commingled emerging market bond funds. The valuation inputs for the securities utilize observable market information and are primarily based on dealer quotes or a spread relative to the local government bonds. The registered mutual fund is classified as Level 1 while individual securities are classified as Level 2. The commingled funds are valued at NAV based on the market value of the underlying emerging market bonds using the same valuation inputs previously described.

(d) *Convertible bonds* primarily represent investments in corporate debt securities that have features that allow the debt to be converted into equity securities under certain circumstances. The valuation inputs for the individual convertible bonds primarily utilize observable market information including a spread to U.S. Treasuries and the value and volatility of the underlying equity security. Convertible bonds are classified as Level 1.

(e) *Diversified strategies* represent an investment in a commingled fund that primarily has exposures to global government, corporate and inflation linked bonds, global stocks and commodities. The commingled fund is valued at NAV based on the market value of the underlying investments. The valuation inputs utilize observable market information including published prices for exchange traded securities, bid prices for government bonds, and spreads and yields available for comparable fixed income securities with similar credit ratings.

(f) *U.S. stocks* represent investments in stocks of U.S. based companies as well as commingled U.S. stock funds. The valuation inputs for U.S. stocks are based on the last published price reported on the major stock market on which the securities are traded and are primarily classified as Level 1. The commingled funds are valued at NAV based on the market value of the underlying investments using the same valuation inputs described above.

(g) *Non-U.S. stocks* represent investments in stocks of companies based in developed countries outside the U.S. as well as commingled funds. The valuation inputs for non-U.S. stocks are based on the last published price reported on the major stock market on which the securities are traded and are primarily classified as Level 1. The commingled funds are valued at NAV based on the market value of the underlying investments using the same valuation inputs described above.

(h) *Emerging market stocks* represent investments in an exchange traded fund and commingled funds comprised of stocks of companies located in developing markets. Exchange traded funds are based on the last published price reported on the major stock market on which the securities are traded and are classified as Level 1. The commingled funds are valued at NAV based on the market value of the underlying investments using the same valuation inputs described previously for individual stocks.

(i) *Private equity* represents non-public investments in domestic and foreign buy out and venture capital funds. Private equity funds are primarily structured as limited partnerships and are valued according to the valuation policy of each partnership, subject to prevailing accounting and other regulatory guidelines. The partnerships are valued at NAV using valuation methodologies that give consideration to a range of factors, including but not limited to the price at which investments were acquired, the nature of the investments, market conditions, trading values on comparable public securities, current and projected operating performance, and financing transactions subsequent to the acquisition of the investments. These valuation methodologies involve a significant degree of judgment.

(j) *Private debt* represents non-public investments in distressed or mezzanine debt funds. Mezzanine debt instruments are debt instruments that are subordinated to other debt issues and may include embedded equity instruments such as warrants. Private debt funds are primarily structured as limited partnerships and are valued at NAV according to the valuation policy of each partnership, subject to prevailing accounting and other regulatory guidelines. The valuation of underlying fund investments are based on factors including the issuer's current and projected credit worthiness, the security's terms, reference to the securities of comparable companies, and other market factors. These valuation methodologies involve a significant degree of judgment.

(k) *Market neutral hedge funds* hold investments in a diversified mix of instruments that are intended in combination to exhibit low correlations to market fluctuations. These investments are typically combined with futures to achieve uncorrelated excess returns over various markets. *Directional hedge funds*—This asset category represents investments that may exhibit somewhat higher correlations to market fluctuations than the market neutral hedge funds. Investments in hedge funds include both direct investments and investments in diversified funds of funds. Hedge funds are valued at NAV based on the market value of the underlying investments which include publicly traded equity and fixed income securities and privately negotiated debt securities. The hedge funds are valued by third party administrators using the same valuation inputs previously described.

(l) *Real estate* represents investments in commingled funds and limited partnerships that invest in a diversified portfolio of real estate properties. These investments are valued at NAV according to the valuation policy of each fund or partnership, subject to prevailing accounting and other regulatory guidelines. The valuation inputs of the underlying properties are generally based on third-party appraisals that use comparable sales or a projection of future cash flows to determine fair value.

(m) *Multi-asset strategies* represent broadly diversified strategies that have the flexibility to tactically adjust exposures to different asset classes through time. This asset category includes investments in a registered mutual fund which is classified as Level 1 and a commingled fund which is valued at NAV based on the market value of the underlying investments.

(n) *Derivatives* include exchange traded futures contracts which are classified as Level 1, as well as privately negotiated over-the-counter swaps and options that are valued based on the change in interest rates or a specific market index and are classified as Level 2. The market values represent gains or losses that occur due to fluctuations in interest rates, foreign currency exchange rates, security prices, or other factors.

(o) *Cash equivalents and short-term investments* represent investments that are used in conjunction with derivatives positions or are used to provide liquidity for the payment of benefits or other purposes. The valuation inputs of securities are based on a spread to U.S. Treasury Bills, the Federal Funds Rate, or London Interbank Offered Rate and consider yields available on comparable securities of issuers with similar credit ratings and are classified as Level 2. The commingled funds are valued at NAV based on the market value of the underlying investments using the same valuation inputs described above.

*Concentrations of Risk:* Investments, in general, are exposed to various risks, such as significant world events, interest rate, credit, foreign currency and overall market volatility risk. These risks are managed by broadly diversifying assets across numerous asset classes and strategies with differing expected returns, volatilities and correlations. Risk is also broadly diversified across numerous market sectors and individual companies. Financial instruments that potentially subject the plans to concentrations of counterparty risk consist principally of investment contracts with high quality financial institutions. These investment contracts are typically collateralized obligations and/or are actively managed, limiting the amount of counterparty exposure to any one financial institution. Although the investments are well diversified, the value of plan assets could change materially depending upon the overall market volatility, which could affect the funded status of the plans.

The table below presents a rollforward of the pension plan assets valued using Level 3 inputs:

	Pension Plan Assets Valued Using Level 3 Inputs		
	High Yield Bonds	Emerging Market Bonds	Total
	(Dollars in millions)		
Balance at December 31, 2014	\$ 7	—	7
Net transfers	4	1	5
Acquisitions	4	—	4
Dispositions	(2)	—	(2)
Balance at December 31, 2015	13	1	14
Net transfers	(2)	—	(2)
Acquisitions	1	—	1
Dispositions	(1)	(1)	(2)
Balance at December 31, 2016	\$ 11	—	11

Certain gains and losses are allocated between assets sold during the year and assets still held at year-end based on transactions and changes in valuations that occurred during the year. These allocations also impact our calculation of net acquisitions and dispositions.

For the year ended December 31, 2016, the investment program produced actual gains on qualified pension and post-retirement plan assets of \$759 million as compared to expected returns of \$739 million for a difference of \$20 million. For the year ended December 31, 2015, the investment program produced actual losses on pension and post-retirement plan assets of \$158 million as compared to the expected returns of \$919 million for a difference of \$1.077 billion. The short-term annual returns on plan assets will

almost always be different from the expected long-term returns and the plans could experience net gains or losses, due primarily to the volatility occurring in the financial markets during any given year.

*Unfunded Status*

The following table presents the unfunded status of the pensions and post-retirement benefit plans:

	Pension Plans		Post-Retirement Benefit Plans	
	Years Ended December 31,		Years Ended December 31,	
	2016	2015	2016	2015
	(Dollars in millions)			
Benefit obligation	\$ (13,301)	(13,349)	(3,413)	(3,567)
Fair value of plan assets	10,892	11,072	53	193
Unfunded status	(2,409)	(2,277)	(3,360)	(3,374)
Current portion of unfunded status	\$ (6)	(5)	(236)	(135)
Non-current portion of unfunded status	\$ (2,403)	(2,272)	(3,124)	(3,239)

The current portion of our post-retirement benefit obligations is recorded on our consolidated balance sheets in accrued expenses and other current liabilities-salaries and benefits.

*Accumulated Other Comprehensive Loss-Recognition and Deferrals*

The following table presents cumulative items not recognized as a component of net periodic benefits expense as of December 31, 2015, items recognized as a component of net periodic benefits expense in 2016, additional items deferred during 2016 and cumulative items not recognized as a component of net periodic benefits expense as of December 31, 2016. The items not recognized as a component of net periodic benefits expense have been recorded on our consolidated balance sheets in accumulated other comprehensive loss:

	As of and for the Years Ended December 31,				
	2015	Recognition	Deferrals	Net	2016
		of Net Periodic Benefits Expense		Change in AOCL	
	(Dollars in millions)

Total post-retirement benefit plans	(180)	12	6	18	(162)
Total accumulated other comprehensive loss	\$ (1,895)	112	(274)	(162)	(2,057)

The following table presents cumulative items not recognized as a component of net periodic benefits expense as of December 31, 2014, items recognized as a component of net periodic benefits expense in 2015, additional items deferred during 2015 and cumulative items not recognized as a component of net periodic benefits expense as of December 31, 2015. The items not recognized as a component of net periodic benefits expense have been recorded on our consolidated balance sheets in accumulated other comprehensive loss:

As of and for the Years Ended December 31,					
2014	Recognition of Net Periodic Benefits Expense	Deferrals	Net Change in AOCL	2015	
(Dollars in millions)					
Accumulated other comprehensive loss:					
Pension plans:					
Net actuarial (loss) gain	\$ (2,760)	161	(258)	(97)	(2,857)
Prior service (cost) benefit	(32)	5	99	104	72
Deferred income tax benefit (expense)	1,072	(63)	61	(2)	1,070
Total pension plans	(1,720)	103	(98)	5	(1,715)
Post-retirement benefit plans:					
Net actuarial (loss) gain	(277)	—	130	130	(147)
Prior service (cost) benefit	(166)	19	—	19	(147)
Deferred income tax benefit (expense)	171	(7)	(50)	(57)	114
Total post-retirement benefit plans	(272)	12	80	92	(180)
Total accumulated other comprehensive loss	\$ (1,992)	115	(18)	97	(1,895)

The following table presents estimated items to be recognized in 2017 as a component of net periodic benefit expense of the pension, non-qualified pension and post-retirement benefit plans:

	Pension Plans	Post- Retirement Plans
(Dollars in millions)		
Estimated recognition of net periodic (cost) benefit income in 2017:		
Net actuarial loss	\$ (202)	—
Prior service income (cost)	8	(20)
Deferred income tax benefit	74	8
Estimated net periodic benefit expense to be recorded in 2017 as a component of other comprehensive (loss) income	\$ (120)	(12)

#### *Medicare Prescription Drug, Improvement and Modernization Act of 2003*

We sponsor post-retirement health care plans with several benefit options that provide prescription drug benefits that we deem actuarially equivalent to or exceeding Medicare Part D. We recognize the impact of the federal subsidy received under the Medicare Prescription Drug, Improvement and Modernization Act of 2003 in the calculation of our post-retirement benefit obligation and net periodic post-retirement benefit expense.

## Other Benefit Plans

### Health Care and Life Insurance

We provide health care and life insurance benefits to essentially all of our active employees. We are largely self-funded for the cost of the health care plan. Our health care benefit expense for current employees was \$399 million, \$381 million and \$381 million for the years ended December 31, 2016, 2015 and 2014, respectively. Union-represented employee benefits are based on negotiated collective bargaining agreements. Employees contributed \$127 million, \$125 million and \$136 million for the years ended December 31, 2016, 2015 and 2014, respectively. Our group basic life insurance plans are fully insured and the premiums are paid by us.

### 401(k) Plans

We sponsor qualified defined contribution plans covering substantially all of our employees. Under these plans, employees may contribute a percentage of their annual compensation up to certain maximums, as defined by the plans and by the Internal Revenue Service ("IRS"). Currently, we match a percentage of employee contributions in cash. At December 31, 2016 and 2015, the assets of the plans included approximately 7 million shares and 8 million shares, respectively, of our common stock all of which were the result of the combination of previous employer match and participant directed contributions. We recognized expenses related to these plans of \$79 million, \$83 million and \$81 million and for the years ended December 31, 2016, 2015 and 2014, respectively.

### Deferred Compensation Plans

We sponsored non-qualified deferred compensation plans for various groups that included certain of our current and former highly compensated employees. The value of liabilities related to these plans was not significant.

### (10) Share-based Compensation

We maintain equity programs that allow our Board of Directors (through its Compensation Committee or our Chief Executive Officer as its delegate) to grant incentives to certain employees and our outside directors in any one or a combination of several forms, including incentive and non-qualified stock options, stock appreciation rights, restricted stock awards, restricted stock units and market and performance shares. Stock options generally expire ten years from the date of grant. Until June 30, 2014, we offered an employee stock purchase plan, which allowed eligible employees to purchase our common stock at a 15% discount based on the lower of the beginning or ending stock price during recurring six month offering periods.

#### Stock Options

The following table summarizes activity involving stock option awards for the year ended December 31, 2016:

	Number of Options (in thousands)	Weighted- Average Exercise Price
Outstanding and Exercisable at December 31, 2015	3,525	\$ 39.67
Exercised	(31)	26.34
Forfeited/Expired	(486)	37.96
Outstanding and Exercisable at December 31, 2016	<u>3,008</u>	<u>40.08</u>

The aggregate intrinsic value of our options outstanding and exercisable at December 31, 2016 was approximately \$1 million. The weighted-average remaining contractual term for such options was 1.0 years.

During 2016, we received net cash proceeds of approximately \$1 million in connection with our option exercises. The tax benefit realized from these exercises was less than \$1 million. The total intrinsic value of options exercised for the years ended December 31, 2015 and 2014, was \$4 million and \$9 million, respectively. The total intrinsic value of options exercised for the year ended December 31, 2016 was less than \$1 million.

### *Restricted Stock Awards*

For equity based awards that contain only service conditions for vesting, we calculate the award fair value based on the closing stock price on the accounting grant date. We also grant equity based restricted stock awards which contain market conditions or performance conditions, in addition to service conditions. For equity based restricted stock awards that contain market conditions, the award fair value is calculated through Monte-Carlo simulations. These awards, with service and market or performance conditions, represent the number of target shares for the award, as each recipient has the opportunity to ultimately receive a number of shares between 0% and 200% of the target restricted stock award. For the awards with market conditions, the percentage received depends on our total shareholder return versus that of selected peer companies during the three-year term of the award and for the awards with performance conditions, the percentage received depends upon the attainment of two financial performance targets during the three-year term of the award.

During the first quarter of 2016, we granted approximately 766 thousand shares of restricted stock to certain executive level employees as part of our long-term incentive program, of which approximately 306 thousand contained only service conditions and will vest on a straight-line basis on February 23, 2017, 2018 and 2019. The remaining awards contain service conditions and either market or performance conditions and are scheduled to vest on February 23, 2019.

During the first quarter of 2016, we also granted approximately 1.9 million shares to certain key employees as part of our annual equity compensation program, of which approximately 1.7 million contained only service conditions and will vest on a straight-line basis on February 25, 2017, 2018 and 2019. The remaining awards contain service conditions and either market or performance conditions and are scheduled to vest on February 25, 2019. During the first and third quarter of 2016, we granted shares to certain key employees as part of our long-term equity retention program. These awards will vest over a three to seven year period with approximately 113 thousand, 322 thousand and 209 thousand shares vesting on August 16, 2019, 2021 and 2023, respectively, and 22 thousand shares vesting on January 13, 2021 and 22 thousand shares vesting on January 13, 2023. The remaining awards granted throughout 2016 to certain other key employees and our outside directors were made as part of our equity compensation and retention programs. These awards require only service conditions for vesting and typically vest equally over a three year period.

During the first quarter of 2015, we granted approximately 496 thousand shares of restricted stock to certain executive-level employees as part of our long-term incentive program, of which approximately 198 thousand contained only service conditions and will vest on a straight-line basis on February 23, 2016, 2017 and 2018. The remaining awards contain service conditions and market or performance conditions and are scheduled to vest on February 23, 2018.

At the end of the first quarter of 2015, we granted approximately 1.2 million shares to certain key employees as part of our annual equity compensation program. These awards contained only service conditions and will vest on a straight-line basis on March 12, 2016, 2017 and 2018. During the third quarter of 2015 we granted shares to certain key employees as part of our long-term equity retention program. These awards will vest over a three to seven year period with approximately 193 thousand, 423 thousand and 230 thousand shares vesting on August 14, 2018, 2020 and 2022, respectively, and 55 thousand shares vesting equally on August 14, 2017, 2019, and 2021. The remaining awards granted throughout 2015 to certain other key employees and our outside directors were made as part of our equity compensation and retention programs. These awards require only service conditions for vesting and typically vest equally over a three year period.

During the first quarter of 2014, we granted approximately 440 thousand shares of restricted stock to certain executive-level employees as part of our long-term incentive program, of which approximately 250 thousand contained only service conditions and will vest on a straight-line basis on February 20, 2015, 2016 and 2017. The remaining awards contain service conditions and market or performance conditions and are scheduled to vest on February 20, 2017.

During the second quarter of 2014, we granted approximately 1.5 million shares to certain key employees as part of our annual equity compensation program. These awards contained only service conditions and will vest on a straight-line basis on March 26, 2015, 2016 and 2017. During the third quarter of 2014 we granted shares to certain key employees as part of our long-term equity retention program. These awards will vest over a three to seven year period with approximately 105 thousand, 325 thousand and 220 thousand vesting on August 4, 2017, 2019 and 2021, respectively. The remaining awards granted throughout 2014 to certain other key employees and our outside directors were made as part of our equity compensation and retention programs. These awards require only service conditions for vesting and typically vest equally over a three year period.

The following table summarizes activity involving restricted stock and restricted stock unit awards for the year ended December 31, 2016:

	Number of Shares	Weighted- Average Grant Date Fair Value
	(in thousands)	
Non-vested at December 31, 2015	4,902	33.86
Granted	3,564	30.83
Vested	(1,547)	34.82
Forfeited	(971)	33.23
Non-vested at December 31, 2016	<u>5,948</u>	31.89

During 2015, we granted 2.9 million shares of restricted stock and restricted stock unit awards at a weighted-average price of \$31.83. The total fair value of restricted stock that vested during 2016, 2015 and 2014, was \$47 million, \$59 million and \$53 million, respectively.

#### *Compensation Expense and Tax Benefit*

We recognize compensation expense related to our market and performance share-based awards with graded vesting that only have a service condition on a straight-line basis over the requisite service period for the entire award. Total compensation expense for all share-based payment arrangements for the years ended December 31, 2016, 2015 and 2014, was \$80 million, \$73 million and \$75 million, respectively. Our tax benefit recognized in the consolidated statements of operations for our share-based payment arrangements for the years ended December 31, 2016, 2015 and 2014, was \$31 million, \$28 million and \$29 million, respectively. At December 31, 2016, there was \$137 million of total unrecognized compensation expense related to our share-based payment arrangements, which we expect to recognize over a weighted-average period of 2.6 years.

**(11) Earnings Per Common Share**

Basic and diluted earnings per common share for the years ended December 31, 2016, 2015 and 2014 were calculated as follows:

	Years Ended December 31,		
	2016	2015	2014
	(Dollars in millions, except per share amounts, shares in thousands)		
Income (Numerator):			
Net income	\$ 626	878	772
Earnings applicable to non-vested restricted stock	—	—	—
Net income applicable to common stock for computing basic earnings per common share	626	878	772
Net income as adjusted for purposes of computing diluted earnings per common share	\$ 626	878	772
Shares (Denominator):			
Weighted average number of shares:			
Outstanding during period	545,946	559,260	572,748
Non-vested restricted stock	(6,397)	(4,982)	(4,313)
Weighted average shares outstanding for computing basic earnings per common share	539,549	554,278	568,435
Incremental common shares attributable to dilutive securities:			
Shares issuable under convertible securities	10	10	10
Shares issuable under incentive compensation plans	1,120	805	1,294
Number of shares as adjusted for purposes of computing diluted earnings per common share	540,679	555,093	569,739
Basic earnings per common share	\$ 1.16	1.58	1.36
Diluted earnings per common share	\$ 1.16	1.58	1.36

Our calculation of diluted earnings per common share excludes shares of common stock that are issuable upon exercise of stock options when the exercise price is greater than the average market price of our common stock. We also exclude unvested restricted stock awards that are antidilutive as a result of unrecognized compensation cost. Such shares averaged 3.3 million, 3.1 million and 2.5 million for 2016, 2015 and 2014, respectively.

**(12) Fair Value Disclosure**

Our financial instruments consist of cash and cash equivalents, accounts receivable, accounts payable and long-term debt, excluding capital lease and other obligations. Due to their short-term nature, the carrying amounts of our cash and cash equivalents, accounts receivable and accounts payable approximate their fair values.

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between independent and knowledgeable parties who are willing and able to transact for an asset or liability at the measurement date. We use valuation techniques that maximize the use of observable inputs and minimize the use of unobservable inputs when determining fair value and then we rank the estimated values based on the reliability of the inputs used following the fair value hierarchy set forth by the FASB.

We determined the fair values of our long-term debt, including the current portion, based on quoted market prices where available or, if not available, based on discounted future cash flows using current market interest rates.

The three input levels in the hierarchy of fair value measurements are defined by the FASB generally as follows:

Input Level	Description of Input
-------------	----------------------

- Level 1      Observable inputs such as quoted market prices in active markets.
- Level 2      Inputs other than quoted prices in active markets that are either directly or indirectly observable.
- Level 3      Unobservable inputs in which little or no market data exists.

The following table presents the carrying amounts and estimated fair values of our long-term debt, excluding capital lease and other obligations, as well as the input level used to determine the fair values indicated below:

Input Level	As of December 31, 2016		As of December 31, 2015		
	Carrying Amount	Fair Value	Carrying Amount	Fair Value	
(Dollars in millions)					
Liabilities-Long-term debt, excluding capital lease and other obligations	2	\$ 19,553	19,639	19,800	19,473

### (13) Income Taxes

	Years Ended December 31,		
	2016	2015	2014
(Dollars in millions)			
Income tax expense was as follows:			
Federal			
Current	\$ 335	28	18
Deferred	5	329	305
State			
Current	27	40	26
Deferred	8	21	(14)
Foreign			
Current	26	16	3
Deferred	(7)	4	—
Total income tax expense	\$ 394	438	338

	Years Ended December 31,		
	2016	2015	2014
(Dollars in millions)			
Income tax expense was allocated as follows:			
Income tax expense in the consolidated statements of operations:			
Attributable to income	\$ 394	438	338
Stockholders' equity:			
Compensation expense for tax purposes in excess of amounts recognized for financial reporting purposes	(2)	(5)	(5)
Tax effect of the change in accumulated other comprehensive loss	(109)	59	(744)

The following is a reconciliation from the statutory federal income tax rate to our effective income tax rate:

	Years Ended December 31,		
	2016	2015	2014
	(Percentage of pre-tax income)		
Statutory federal income tax rate	35.0 %	35.0 %	35.0 %
State income taxes, net of federal income tax benefit	2.3 %	2.6 %	2.7 %
Change in liability for unrecognized tax position	0.2 %	0.4 %	0.4 %
Net foreign income taxes	0.1 %	0.7 %	0.4 %
Foreign dividend paid to a domestic parent company	1.8 %	— %	— %
Affiliate debt rationalization	— %	(2.6)%	— %
Research and development credits	(0.6)%	(2.1)%	— %
Loss on worthless investment in foreign subsidiary	— %	— %	(5.4)%
Other, net	(0.2)%	(0.7)%	(2.6)%
Effective income tax rate	38.6 %	33.3 %	30.5 %

The 2016 effective tax rate is 38.6% compared to 33.3% for 2015. The effective tax rate for the year ended December 31, 2016 reflects a tax impact of \$18 million from an intercompany dividend payment from one of our foreign subsidiaries to its domestic parent company that was made as part of our corporate restructuring in preparation for the sale of our colocation business. The 2015 rate reflects a tax benefit of approximately \$34 million related to affiliate debt rationalization, research and development tax credits of \$28 million for 2011 through 2015 and a \$16 million tax decrease due to changes in state taxes caused by apportionment changes, state tax rate changes and the changes in the expected utilization of net operating loss carryforwards ("NOLs"). The 2014 rate reflects a \$60 million tax benefit associated with a deduction for tax basis for worthless stock in a wholly-owned foreign subsidiary as a result of developments in bankruptcy proceedings involving its sole asset and a \$13 million tax decrease due to changes in the state taxes caused by apportionment changes, state tax rate changes and the changes in the expected utilization of NOLs.

The tax effects of temporary differences that gave rise to significant portions of the deferred tax assets and deferred tax liabilities were as follows:

	As of December 31,	
	2016	2015
	(Dollars in millions)	
Deferred tax assets		
Post-retirement and pension benefit costs	\$ 2,175	2,154
Net operating loss carryforwards	473	487
Other employee benefits	125	182
Other	342	458
Gross deferred tax assets	3,115	3,281
Less valuation allowance	(375)	(380)
Net deferred tax assets	2,740	2,901
Deferred tax liabilities		
Property, plant and equipment, primarily due to depreciation differences	(3,626)	(3,841)
Goodwill and other intangible assets	(2,577)	(2,588)
Other	—	(38)
Gross deferred tax liabilities	(6,203)	(6,467)
Net deferred tax liability	\$ (3,463)	(3,566)

Of the \$3.463 billion and \$3.566 billion net deferred tax liability at December 31, 2016 and 2015, respectively, \$3.471 billion and \$3.569 billion is reflected as a long-term liability and \$8 million and \$3 million is reflected as a net noncurrent deferred tax asset at December 31, 2016 and 2015, respectively.

At December 31, 2016, we had federal NOLs of \$61 million and state NOLs of \$11.9 billion. If unused, the NOLs will expire between 2017 and 2032; however, no significant amounts expire until 2021. At December 31, 2016, we had an immaterial amount of federal tax credits. Additionally, we had \$39 million (\$25 million net of federal income tax) of state investment tax credit carryforwards that will expire between 2017 and 2026 if not utilized. In addition, at December 31, 2016, we have fully utilized all remaining federal alternative minimum tax, or AMT, credits. Our acquisitions of Qwest and SAVVIS, Inc. ("Savvis") caused "ownership changes" within the meaning of Section 382 of the Internal Revenue Code ("Section 382"). As a result, our ability to use these NOLs and AMT credits are subject to annual limits imposed by Section 382. Despite this, we expect to use substantially all of these tax attributes to reduce our future federal tax liabilities, although the timing of that use will depend upon our future earnings and future tax circumstances.

We establish valuation allowances when necessary to reduce the deferred tax assets to amounts we expect to realize. As of December 31, 2016, a valuation allowance of \$375 million was established as it is more likely than not that this amount of net operating loss and tax credit carryforwards will not be utilized prior to expiration. Our valuation allowance at December 31, 2016 and 2015 is primarily related to state NOL carryforwards. This valuation allowance decreased by \$5 million during 2016.

A reconciliation of the change in our gross unrecognized tax benefits (excluding both interest and any related federal benefit) from January 1 to December 31 for 2016 and 2015 is as follows:

	2016	2015
	(Dollars in millions)	
Unrecognized tax benefits at beginning of year	\$ 15	17
Increase in tax positions taken in the current year	1	1
Increase in tax positions taken in the prior year	—	7
Decrease due to the reversal of tax positions taken in a prior year	—	(9)
Decrease from the lapse of statute of limitations	—	(1)
Unrecognized tax benefits at end of year	<u>\$ 16</u>	<u>15</u>

The total amount of unrecognized tax benefits that, if recognized, would impact the effective income tax rate was \$34 million and \$32 million at December 31, 2016 and 2015, respectively.

Our policy is to reflect interest expense associated with unrecognized tax benefits in income tax expense. We had accrued interest (presented before related tax benefits) of approximately \$35 million and \$33 million at December 31, 2016 and 2015, respectively.

We file income tax returns, including returns for our subsidiaries, with federal, state and local jurisdictions. Our uncertain income tax positions are related to tax years that are currently under or remain subject to examination by the relevant taxing authorities.

Beginning with the 2013 tax year, our federal consolidated returns are subject to annual examination by the IRS.

Our open income tax years by major jurisdiction are as follows at December 31, 2016:

Jurisdiction	Open Tax Years
Federal	2013—current
State	
Arizona	2010—current
Other states	2012—current

Since the period for assessing additional liability typically begins upon the filing of a return, it is possible that certain jurisdictions could assess tax for years prior to the open tax years disclosed above. Additionally, it is possible that certain jurisdictions in which we do not believe we have an income tax filing responsibility, and accordingly did not file a return, may attempt to assess a liability, or that other jurisdictions to which we pay taxes may attempt to assert that we owe additional taxes.

Based on our current assessment of various factors, including (i) the potential outcomes of these ongoing examinations, (ii) the expiration of statute of limitations for specific jurisdictions, (iii) the negotiated settlement of certain disputed issues, and (iv) the

administrative practices of applicable taxing jurisdictions, it is reasonably possible that the related unrecognized tax benefits for uncertain tax positions previously taken may decrease by up to \$11 million within the next 12 months. The actual amount of such decrease, if any, will depend on several future developments and events, many of which are outside our control.

**(14) Segment Information**

We are organized into operating segments based on customer type, business and consumer. These operating segments are our two reportable segments in our consolidated financial statements:

- *Business Segment.* Consists generally of providing strategic, legacy and data integration products and services to small, medium and enterprise business, wholesale and governmental customers, including other communication providers. Our strategic products and services offered to these customers include our MPLS, Ethernet, colocation, hosting (including cloud hosting and managed hosting), broadband, VoIP, information technology ("IT") and other ancillary services. Our legacy services offered to these customers primarily include local and long-distance voice, including the sale of unbundled network elements ("UNEs"), private line (including special access), switched access and other ancillary services. Our data integration offerings include the sale of telecommunications equipment located on customers' premises and related products and professional services, all of which are described further below under the heading "Products and Services Categories"; and
- *Consumer Segment.* Consists generally of providing strategic and legacy products and services to residential customers. Our strategic products and services offered to these customers include our broadband, video (including our Prism TV services) and other ancillary services. Our legacy services offered to these customers include local and long-distance voice and other ancillary services.

The following table summarizes our segment results for 2016, 2015 and 2014 based on the segment categorization we were operating under at December 31, 2016.

	Years Ended December 31,		
	2016	2015	2014
	(Dollars in millions)		
Total segment revenues	\$ 16,255	16,668	17,028
Total segment expenses	8,492	8,461	8,502
Total segment income	\$ 7,763	8,207	8,526
Total margin percentage	48%	49%	50%
Business segment:			
Revenues	\$ 10,352	10,646	11,030
Expenses	5,930	5,967	6,019
Income	\$ 4,422	4,679	5,011
Margin percentage	43%	44%	45%
Consumer segment:			
Revenues	\$ 5,903	6,022	5,998
Expenses	2,562	2,494	2,483
Income	\$ 3,341	3,528	3,515
Margin percentage	57%	59%	59%

**Changes in Segment Reporting**

We continually review, evaluate and refine our expense allocations to better reflect how we view and manage our operations, and as a result, during the first half of 2016, we implemented several changes with respect to the assignment of certain expenses to our reportable segments. We have recast our previously-reported segment results for the years ended December 31, 2015 and 2014, to conform to the current presentation. The nature of the most significant changes to segment expenses are as follows:

- Certain marketing and advertising expenses were reassigned from the business segment to the consumer segment;
- Certain service delivery costs were reassigned from the consumer segment to the business segment;

- Centralized human resources training costs were reassigned from the business and consumer segments to corporate overhead; and

- Marketing direct mail costs and certain printing expenses were reassigned from corporate overhead to the business and consumer segments.

For the year ended December 31, 2015, the segment expense recast resulted in an increase in consumer expenses of \$69 million and a decrease in business expenses of \$67 million. For the year ended December 31, 2014, the segment expense recast resulted in an increase in consumer expenses of \$63 million and a decrease in business expenses of \$70 million.

### Product and Service Categories

From time to time, we change the categorization of our products and services, and we may make similar changes in the future. During the second quarter of 2016, we determined that because of declines due to customer migration to other strategic products and services, certain of our business low-bandwidth data services, specifically our private line (including special access) services in our business segment, are more closely aligned with our legacy services than with our strategic services. As a result, we reflect these operating revenues as legacy services, and we have reclassified certain prior period amounts to conform to this change. The revision resulted in a reduction of revenue from strategic services and a corresponding increase in revenue from legacy services of \$1.586 billion and \$1.861 billion (net of \$9 million and \$33 million of deferred revenue included in other business legacy services) for the years ended December 31, 2015 and 2014, respectively. In addition, our business broadband services remain a strategic service and are now included in our other business strategic services.

We categorize our products, services and revenues among the following four categories:

- *Strategic services*, which include primarily broadband, MPLS, Ethernet, colocation, hosting (including cloud hosting and managed hosting), video (including our facilities-based video services, which we offer in 16 markets), VoIP, information technology and other ancillary services;
- *Legacy services*, which include primarily local and long-distance voice, including the sale of UNEs, private line (including special access), Integrated Services Digital Network ("ISDN") (which use regular telephone lines to support voice, video and data applications), switched access and other ancillary services;
- *Data integration*, which includes the sale of telecommunications equipment located on customers' premises and related products and professional services, such as network management, installation and maintenance of data equipment and building of proprietary fiber-optic broadband networks for our governmental and business customers; and
- *Other operating revenues*, which consist primarily of CAF support payments, USF support payments and USF surcharges. We receive federal support payments from both Phase 1 and Phase 2 of the CAF program, and support payments from both federal and state USF programs. These support payments are government subsidies designed to reimburse us for various costs related to certain telecommunications services, including the costs of deploying, maintaining and operating voice and broadband infrastructure in high-cost rural areas where we are not able to fully recover our costs from our customers. We also collect USF surcharges based on specific items we list on our customers' invoices to fund the FCC's universal service programs. We also generate other operating revenues from the leasing and subleasing of space in our office buildings, warehouses and other properties. Because we centrally manage the activities that generate these other operating revenues, these revenues are not included in our segment revenues.

Our operating revenues for our products and services consisted of the following categories for the years ended December 31, 2016, 2015 and 2014:

	Years Ended December 31,		
	2016	2015	2014
	(Dollars in millions)		
<b>Strategic services</b>			
Business high-bandwidth data services (1)	\$ 2,990	2,816	2,579
Business hosting services (2)	1,210	1,281	1,316
Other business strategic services (3)	703	624	558
Consumer broadband services (4)	2,689	2,611	2,469
Other consumer strategic services (5)	458	421	381
Total strategic services revenues	8,050	7,753	7,303
<b>Legacy services</b>			
Business voice services (6)	2,413	2,588	2,777
Business low-bandwidth data services (7)	1,382	1,594	1,893
Other business legacy services (8)	1,123	1,168	1,219
Consumer voice services (6)	2,442	2,676	2,865
Other consumer legacy services (9)	312	312	279
Total legacy services revenues	7,672	8,338	9,033
<b>Data integration</b>			
Business data integration	531	575	688
Consumer data integration	2	2	4
Total data integration revenues	533	577	692
<b>Other revenues</b>			
High-cost support revenue (10)	688	732	528
Other revenue (11)	527	500	475
Total other revenues	1,215	1,232	1,003
<b>Total revenues</b>	<b>\$ 17,470</b>	<b>17,900</b>	<b>18,031</b>

- (1) Includes MPLS and Ethernet revenue
- (2) Includes colocation, hosting (including cloud hosting and managed hosting) and hosting area network revenue
- (3) Includes primarily broadband, VoIP, video and IT services revenue
- (4) Includes broadband and related services revenue
- (5) Includes video and other revenue
- (6) Includes local and long-distance voice revenue
- (7) Includes private line (including special access) revenue
- (8) Includes UNEs, public access, switched access and other ancillary revenue
- (9) Includes other ancillary revenue
- (10) Includes CAF Phase 1, CAF Phase 2 and federal and state USF support revenue
- (11) Includes USF surcharges

We recognize revenues in our consolidated statements of operations for certain USF surcharges and transaction taxes that we bill to our customers. Our consolidated statements of operations also reflect the offsetting expense for the amounts we remit to the government agencies. The total amount of such surcharges and transaction taxes that we included in revenues aggregated to \$572 million, \$544 million and \$526 million for the years ended December 31, 2016, 2015 and 2014, respectively. These USF surcharges, where we record revenue, are included in "other" operating revenues and transaction taxes are included in "legacy services" revenues. We also act as a collection agent for certain other USF and transaction taxes that we are required by government agencies to bill our customers, for which we do not record any revenue or expense because we only act as a pass-through agent.

#### Allocations of Revenues and Expenses

Our segment revenues include all revenues from our strategic, legacy and data integration operations as described in more detail above. Segment revenues are based upon each customer's classification as either business or consumer. We report our segment revenues based upon all services provided to that segment's customers. Our segment expenses for our two segments include specific expenses incurred as a direct result of providing services and products to segment customers, along with selling, general and administrative expenses that are (i) directly associated with specific segment customers or activities, and (ii) allocated expenses which include network expenses, facilities expenses and other expenses such as fleet and real estate expenses. We do not assign depreciation and amortization expense or impairments to our segments, as the related assets and capital expenditures are centrally managed and are not monitored by or reported to the chief operating decision maker ("CODM") by segment. Generally speaking, severance expenses, restructuring expenses and certain centrally managed administrative functions (such as finance, information technology, legal and human resources) are not assigned to our segments. Interest expense is also excluded from segment results because we manage our financing on a consolidated basis and have not allocated assets or debt to specific segments. Other income and expense items are not monitored as a part of our segment operations and are therefore excluded from our segment results.

The following table reconciles segment income to net income for the years ended December 31, 2016, 2015 and 2014:

	Years Ended December 31,		
	2016	2015	2014
	(Dollars in millions)		
Total segment income	\$ 7,763	8,207	8,526
Other operating revenues	1,215	1,232	1,003
Depreciation and amortization	(3,916)	(4,189)	(4,428)
Other unassigned operating expenses	(2,731)	(2,645)	(2,691)
Other expenses, net	(1,311)	(1,289)	(1,300)
Income before income tax expense	1,020	1,316	1,110
Income tax expense	(394)	(438)	(338)
Net income	\$ 626	878	772

We do not have any single customer that provides more than 10% of our total consolidated operating revenues. Substantially all of our consolidated revenues come from customers located in the United States.

**(15) Quarterly Financial Data (Unaudited)**

	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	Total
(Dollars in millions, except per share amounts)					
<b>2016</b>					
Operating revenues	\$ 4,401	4,398	4,382	4,289	17,470
Operating income	694	650	595	392	2,331
Net income	236	196	152	42	626
Basic earnings per common share	0.44	0.36	0.28	0.08	1.16
Diluted earnings per common share	0.44	0.36	0.28	0.08	1.16
<b>2015</b>					
Operating revenues	\$ 4,451	4,419	4,554	4,476	17,900
Operating income	649	549	656	751	2,605
Net income	192	143	205	338	878
Basic earnings per common share	0.34	0.26	0.37	0.62	1.58
Diluted earnings per common share	0.34	0.26	0.37	0.62	1.58

During the fourth quarter of 2016, we recognized \$164 million of severance expenses and other one-time termination benefits associated with our workforce reductions and \$52 million of expenses related to our pending acquisition of Level 3.

During the third quarter of 2015, we recognized an incremental \$158 million of revenue associated with the FCC's CAF Phase 2 high-cost support program (primarily impacted by the one-time transitional payment), and an additional incremental \$57 million in the fourth quarter of 2015. During the fourth quarter of 2015, we also recognized a tax benefit of approximately \$34 million related to affiliate debt rationalization, research and development tax credits of \$28 million for 2011 through 2015, and a \$16 million tax decrease due to changes in state taxes caused by apportionment changes, state tax rate changes and the changes in the expected utilization of net operating loss carryforwards ("NOLs").

**(16) Commitments and Contingencies**

We are vigorously defending against all of the matters described below under the headings "Pending Matters" and "Other Proceedings and Disputes." As a matter of course, we are prepared both to litigate these matters to judgment, as well as to evaluate and consider all reasonable settlement opportunities. In this Note, when we refer to a class action as "putative" it is because a class has been alleged, but not certified in that matter. We have established accrued liabilities for these matters described below where losses are deemed probable and reasonably estimable.

***Pending Matters***

CenturyLink and the members of the CenturyLink Board have been named as defendants in a putative shareholder class action lawsuit filed on January 11, 2017 in the 4th Judicial District Court of the State of Louisiana, Ouachita Parish, captioned Jeffery Tomasulo v. CenturyLink, Inc., et al., Docket No. C-20170110. The complaint asserts, among other things, that the members of CenturyLink's Board allegedly breached their fiduciary duties to the CenturyLink shareholders in approving the Level 3 merger agreement and, more particularly, that: the consideration that CenturyLink agreed to pay to Level 3 stockholders in the transaction is allegedly unfairly high; the CenturyLink directors allegedly had conflicts of interest in negotiating and approving the transaction; and the disclosures set forth in our preliminary joint proxy statement/prospectus filed in December 2016 are insufficient in that they allegedly fail to contain material information concerning the transaction. The complaint seeks, among other things, a declaration that the members of the CenturyLink Board have breached their fiduciary duties, corrective disclosure, rescissory or other damages and equitable relief, including rescission of the transaction. On February 13, 2017, the parties entered into a memorandum of understanding providing for the settlement of the lawsuit. The proposed settlement is subject to court approval, among other conditions.

In *William Douglas Fulghum, et al. v. Embarq Corporation, et al.*, filed on December 28, 2007 in the United States District Court for the District of Kansas, a group of retirees filed a class action lawsuit challenging the decision to make certain modifications in retiree benefits programs relating to life insurance, medical insurance and prescription drug benefits, generally effective January 1, 2006 and January 1, 2008 (which, at the time of the modifications, was expected to reduce estimated future expenses for the subject benefits by more than \$300 million). Defendants include Embarq, certain of its benefit plans, its Employee Benefits Committee and the individual plan administrator of certain of its benefits plans. Additional defendants include Sprint Nextel and certain of its benefit plans. The court certified classes on the claims for vested benefits and age discrimination, but rejected class certification on the claims for breach of fiduciary duty. On October 14, 2011, the Fulghum lawyers filed a new, related lawsuit, *Abbott et al. v. Sprint Nextel et al.* In *Abbott*, approximately 1,500 plaintiffs alleged breach of fiduciary duty in connection with the changes in retiree benefits that were at issue in *Fulghum*. After extensive district court proceedings in *Fulghum*, and an interlocutory appeal to the United States Court of Appeals for the Tenth Circuit, defendants prevailed in 2015 on all age discrimination claims and on the majority of claims for vested benefits. The district court in *Fulghum* subsequently granted judgment in favor of defendants on all remaining vested benefits claims, and in July 2016 ordered that any affected class members could appeal this ruling. No appeal was taken, and all claims for vested benefits thus have lapsed. On August 31, 2016, the parties reached a settlement in principle on all remaining claims in *Fulghum* and *Abbott*. Assuming its terms are successfully implemented, we believe the settlement is likely to be final in mid 2017. We have accrued a liability that we believe is probable for these matters; the amount is not material to our consolidated financial statements.

Subsidiaries of CenturyLink, Inc. are among hundreds of companies in an industry-wide dispute, raised in nearly 100 federal lawsuits (filed between 2014 and 2016) that have been consolidated in the United States District Court for the District of Northern Texas for pretrial procedures. The disputes relate to switched access charges that local exchange carriers ("LECs") collect from interexchange carriers ("IXCs") for IXCs' use of LEC's access services. In the lawsuits, three IXCs, Sprint Communications Company L.P. ("Sprint"), affiliates of Verizon Communications Inc. ("Verizon") and affiliates of Level 3 Communications LLC ("Level 3"), assert that federal and state laws bar LECs from collecting access charges when IXCs exchange certain types of calls between mobile and wireline devices that are routed through an IXC. Some of these IXCs have asserted claims seeking refunds of payments for access charges previously paid and relief from future access charges. In addition, Level 3 has ceased paying switched access charges on these calls.

In November 2015, the federal court agreed with the LECs and rejected the IXCs' contention that federal law prohibits these particular access charges, and also allowed the IXCs to refile state-law claims. Since then, many of the LECs and IXCs have filed revised pleadings and additional motions, which remain pending. Separately, some of the defendants, including CenturyLink, Inc.'s LECs, have petitioned the FCC to address these issues on an industry-wide basis.

As both an IXC and a LEC, we both pay and assess significant amounts of the charges in question. The outcome of these disputes and lawsuits, as well as any related regulatory proceedings that could ensue, are currently not predictable. If we are required to stop assessing these charges or to pay refunds of any such charges, our financial results could be negatively affected.

CenturyLink, Inc. and several of its subsidiaries are defendants in lawsuits filed over the past few years in the Circuit Court of St. Louis County, Missouri by numerous Missouri municipalities alleging underpayment of taxes. These municipalities are seeking, among other things, (i) a declaratory judgment regarding the extent of our obligations to pay certain business license and gross receipts taxes and (ii) a monetary award of back taxes covering 2007 to the present, plus penalties and interest. In an April 2016 ruling in connection with one of these pending cases, the court made findings which, if not overturned, will result in a tax liability to us well in excess of the contingent liability we have established. Following further proceedings at the district court, we plan to file an appeal and continue to vigorously defend against these claims. For a variety of reasons, we expect the outcome of our appeal to significantly reduce our ultimate exposure, although we can provide no assurances to this effect.

### *Other Proceedings and Disputes*

From time to time, we are involved in other proceedings incidental to our business, including patent infringement allegations, administrative hearings of state public utility commissions relating primarily to our rates or services, actions relating to employee claims, various tax issues, environmental law issues, grievance hearings before labor regulatory agencies and miscellaneous third party tort actions.

We are currently defending several patent infringement lawsuits asserted against us by non-practicing entities, many of which are seeking substantial recoveries. These cases have progressed to various stages and one or more may go to trial in the coming 24 months if they are not otherwise resolved. Where applicable, we are seeking full or partial indemnification from our vendors and suppliers. As with all litigation, we are vigorously defending these actions and, as a matter of course, are prepared to litigate these matters to judgment, as well as to evaluate and consider all reasonable settlement opportunities.

We are subject to various foreign, federal, state and local environmental protection and health and safety laws. From time to time, we are subject to judicial and administrative proceedings brought by various governmental authorities under these laws. Several such proceedings are currently pending, but none is reasonably expected to exceed \$100,000 in fines and penalties.

The outcome of these other proceedings is not predictable. However, based on current circumstances, we do not believe that the ultimate resolution of these other proceedings, after considering available defenses and any insurance coverage or indemnification rights, will have a material adverse effect on our financial position, results of operations or cash flows.

### *Capital Leases*

We lease certain facilities and equipment under various capital lease arrangements. Depreciation of assets under capital leases is included in depreciation and amortization expense in our consolidated statements of operations. Payments on capital leases are included in repayments of long-term debt, including current maturities in our consolidated statements of cash flows.

The tables below summarize our capital lease activity:

	Years Ended December 31,		
	2016	2015	2014
	(Dollars in millions)		
Assets acquired through capital leases	45	17	37
Depreciation expense	70	96	126
Cash payments towards capital leases	58	89	118

	As of December 31,	
	2016	2015
	(Dollars in millions)	
Assets included in property, plant and equipment	705	722
Accumulated depreciation	351	352

The future annual minimum payments under capital lease arrangements as of December 31, 2016 were as follows:

	<b>Future Minimum Payments</b>	
	<u>(Dollars in millions)</u>	
Capital lease obligations:		
2017	\$	94
2018		91
2019		70
2020		46
2021		43
2022 and thereafter		170
Total minimum payments		<u>514</u>
Less: amount representing interest and executory costs		(123)
Present value of minimum payments		<u>391</u>
Less: current portion		(69)
Long-term portion	\$	<u><u>322</u></u>

If, as anticipated, we sell our colocation business and data centers in the manner discussed in Note 3—Pending Sale of Colocation Business and Data Centers, \$305 million of the capital lease obligations as of December 31, 2016 will be assumed by the Purchaser. The future annual minimum payments under capital lease arrangements for the colocation operations as of December 31, 2016 were as follows:

	<b>Future Minimum Payments</b>	
	<u>(Dollars in millions)</u>	
Capital lease obligations:		
2017	\$	60
2018		62
2019		52
2020		39
2021		40
2022 and thereafter		145
Total minimum payments		<u>398</u>
Less: amount representing interest and executory costs		(93)
Present value of minimum payments	\$	<u><u>305</u></u>

The present value of the minimum payments under capital lease arrangements for the colocation operations is included in "Current liabilities associated with assets held for sale" on our consolidated balance sheets. See Note 3—Pending Sale of Colocation Business and Data Centers for additional information.

### *Operating Leases*

CenturyLink leases various equipment, office facilities, retail outlets, switching facilities and other network sites. These leases, with few exceptions, provide for renewal options and escalations that are either fixed or based on the consumer price index. Any rent abatements, along with rent escalations, are included in the computation of rent expense calculated on a straight-line basis over the lease term. The lease term for most leases includes the initial non-cancelable term plus any term under renewal options that are reasonably assured. For the years ended December 31, 2016, 2015 and 2014, our gross rental expense was \$482 million, \$467 million and \$446 million, respectively. We also received sublease rental income for the years ended December 31, 2016, 2015 and 2014 of \$12 million, \$12 million and \$14 million, respectively.

At December 31, 2016, our future rental commitments for operating leases were as follows:

	<b>Future Minimum Payments</b>	
	<b>(Dollars in millions)</b>	
2017	\$	295
2018		276
2019		249
2020		226
2021		162
2022 and thereafter		1,049
Total future minimum payments <sup>(1)</sup>	<b>\$</b>	<b>2,257</b>

(1) Minimum payments have not been reduced by minimum sublease rentals of \$77 million due in the future under non-cancelable subleases.

If, as anticipated, we sell our colocation business and data centers in the manner discussed in Note 3—Pending Sale of Colocation Business and Data Centers, \$750 million of the operating leases future rental commitments as of December 31, 2016 will be assumed by the Purchaser. The future rental commitments under operating leases for the colocation operations as of December 31, 2016 were as follows:

	<b>Future Minimum Payments</b>	
	<b>(Dollars in millions)</b>	
2017	\$	89
2018		84
2019		71
2020		68
2021		68
2022 and thereafter		370
Total future minimum payments	<b>\$</b>	<b>750</b>

#### *Purchase Commitments*

We have several commitments primarily for marketing activities and support services from a variety of vendors to be used in the ordinary course of business totaling \$427 million at December 31, 2016. Of this amount, we expect to purchase \$166 million in 2017, \$153 million in 2018 through 2019, \$41 million in 2020 through 2021 and \$67 million in 2022 and thereafter. These amounts do not represent our entire anticipated purchases in the future, but represent only those items for which we were contractually committed as of December 31, 2016.

If, as anticipated, we sell our colocation business and data centers in the manner discussed in Note 3—Pending Sale of Colocation Business and Data Centers, \$80 million of the purchase commitments as of December 31, 2016 will be assumed by the Purchaser.

**(17) Other Financial Information****Other Current Assets**

The following table presents details of other current assets in our consolidated balance sheets:

	As of December 31,	
	2016	2015
	(Dollars in millions)	
Prepaid expenses	\$ 206	238
Materials, supplies and inventory	134	144
Deferred activation and installation charges	101	105
Other	106	86
Total other current assets	<u>\$ 547</u>	<u>573</u>

**Selected Current Liabilities**

Current liabilities reflected in our consolidated balance sheets include accounts payable and other current liabilities as follows:

	As of December 31,	
	2016	2015
	(Dollars in millions)	
Accounts payable	\$ 1,179	968
Other current liabilities:		
Accrued rent	\$ 31	32
Legal reserves	30	20
Other	152	168
Total other current liabilities	<u>\$ 213</u>	<u>220</u>

Included in accounts payable at December 31, 2016 and 2015, were (i) \$56 million and \$68 million, respectively, representing book overdrafts and (ii) \$196 million and \$94 million, respectively, associated with capital expenditures.

**(18) Labor Union Contracts**

Approximately 38% of our employees are members of various bargaining units represented by the Communication Workers of America and the International Brotherhood of Electrical Workers. We believe that relations with our employees continue to be generally good. Approximately 12,000, or 30%, of our employees are subject to collective bargaining agreements that are scheduled to expire in 2017, including approximately 11,000, or 28%, of our employees that are subject to collective bargaining agreements that are scheduled to expire October 7, 2017.

**(19) Accumulated Other Comprehensive Loss**

The table below summarizes changes in accumulated other comprehensive loss recorded on our consolidated balance sheet by component for the year ended December 31, 2016:

	Pension Plans	Post-Retirement Benefit Plans	Foreign Currency Translation Adjustment and Other	Total
Balance at December 31, 2015	\$ (1,715)	(180)	(39)	(1,934)

**(20) Dividends**

Our Board of Directors declared the following dividends payable in 2016 and 2015:

<b>Date Declared</b>	<b>Record Date</b>	<b>Dividend Per Share</b>	<b>Total Amount</b>	<b>Payment Date</b>
			(in millions)	
November 15, 2016	11/28/2016	\$ 0.540	\$ 294	12/12/2016
August 23, 2016	9/2/2016	0.540	295	9/16/2016
May 18, 2016	5/31/2016	0.540	294	6/14/2016
February 23, 2016	3/4/2016	0.540	295	3/18/2016
November 10, 2015	11/24/2015	0.540	293	12/8/2015
August 25, 2015	9/8/2015	0.540	300	9/22/2015
May 20, 2015	6/2/2015	0.540	303	6/16/2015
February 23, 2015	3/6/2015	0.540	303	3/20/2015

The declaration of dividends is solely at the discretion of our Board of Directors, which may change or terminate our dividend practice at any time for any reason without prior notice.

**ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE**

None.

**ITEM 9A. CONTROLS AND PROCEDURES****Disclosure Controls and Procedures**

The Company maintains disclosure controls and procedures (as defined in Rule 13a-15(e) of the Securities Exchange Act (the "Exchange Act")) designed to provide reasonable assurance that the information required to be disclosed by the Company in the reports that it files or submits under the Exchange Act is recorded, processed, summarized, and reported within the time periods specified in the SEC's rules and forms. These include controls and procedures designed to ensure that this information is accumulated and communicated to the Company's management, including its Chief Executive Officer and Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure. Management, with the participation of our Chief Executive Officer, Glen F. Post, III, and our Chief Financial Officer, R. Stewart Ewing, Jr., evaluated the effectiveness of the Company's disclosure controls and procedures as of December 31, 2016. Based on this evaluation, the Company's Chief Executive Officer and Chief Financial Officer have concluded that the Company's disclosure controls and procedures were effective as of December 31, 2016, at the reasonable assurance level.

The effectiveness of our or any system of disclosure controls and procedures is subject to certain limitations, including the exercise of judgment in designing, implementing and evaluating the controls and procedures, the assumptions used in identifying the likelihood of future events and the inability to eliminate misconduct completely. As a result, there can be no assurance that our disclosure controls and procedures will detect all errors or fraud. By their nature, our or any system of disclosure controls and procedures can provide only reasonable assurance regarding management's control objectives.

**Changes in Internal Control Over Financial Reporting**

There were no changes in our internal control over financial reporting during the quarter ended December 31, 2016 that materially affected, or that we believe are reasonably likely to materially affect, our internal control over financial reporting.

## Internal Control Over Financial Reporting

### *Management's Report on Internal Control Over Financial Reporting*

Management of the Company is responsible for establishing and maintaining adequate internal control over financial reporting (as defined in Rule 13a-15(f) of the Exchange Act), a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles in the United States. Under the supervision and with the participation of management, including our principal executive officer and principal financial officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting based on the framework in Internal Control-Integrated Framework (2013) issued by the COSO. Based on our evaluation under the framework of COSO, management concluded that our internal control over financial reporting was effective at December 31, 2016. The effectiveness of our internal control over financial reporting at December 31, 2016 has been audited by KPMG LLP, as stated in their report. See the Report of Independent Registered Public Accounting Firm on our internal control over financial reporting in Item 8, which is incorporated herein by reference.

### *Management's Report on the Consolidated Financial Statements*

Management has prepared and is responsible for the integrity and objectivity of our consolidated financial statements for the year ended December 31, 2016. The consolidated financial statements included in this annual report have been prepared in accordance with accounting principles generally accepted in the United States and necessarily include amounts determined using our best judgments and estimates.

Our consolidated financial statements have been audited by KPMG LLP, an independent registered public accounting firm, who have expressed their opinion with respect to the fairness of the consolidated financial statements. Their audit was conducted in accordance with standards of the Public Company Accounting Oversight Board (United States).

## ITEM 9B. OTHER INFORMATION

None.

## PART III

### ITEM 10. DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE

The information required by Item 10 is incorporated by reference to the Proxy Statement.

### ITEM 11. EXECUTIVE COMPENSATION

The information required by Item 11 is incorporated by reference to the Proxy Statement.

## ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS

### Equity Compensation Plan Information

The following table provides information as of December 31, 2016 about our equity compensation plans under which Common Shares are authorized for issuance:

	Number of securities to be issued upon exercise of outstanding options and rights (a)	Weighted-average exercise price of outstanding options and rights (b)	Number of securities remaining available for future issuance under plans (excluding securities reflected in column (a)) (c)
Equity compensation plans approved by shareholders	2,000,623 <sup>(1)</sup>	\$ 45.75 <sup>(2)</sup>	17,904,466
Equity compensation plans not approved by shareholders <sup>(3)</sup>	2,282,277	38.28	—
<b>Totals</b>	<b>4,282,900 <sup>(1)</sup></b>	<b>\$ 40.08 <sup>(2)</sup></b>	<b>17,904,466</b>

(1) These amounts include restricted stock units, which represent the difference between the number of shares of restricted stock subject to market conditions granted at target and the maximum possible payout for these awards. Depending on performance, the actual share payout of these awards may range between 0-200% of target.

(2) The amounts in column (a) include restricted stock units, which do not have an exercise price. Consequently, those awards were excluded from the calculation of this exercise price.

(3) These amounts represent common shares to be issued upon exercise of options that were assumed in connection with certain acquisitions.

The balance of the information required by Item 12 is incorporated by reference to the Proxy Statement.

## ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS AND DIRECTOR INDEPENDENCE

The information required by Item 13 is incorporated by reference to the Proxy Statement.

## ITEM 14. PRINCIPAL ACCOUNTANT FEES AND SERVICES

The information required by Item 14 is incorporated by reference to the Proxy Statement.

## PART IV

## ITEM 15. EXHIBITS AND FINANCIAL STATEMENT SCHEDULES

Exhibits identified in parentheses below are on file with the SEC and are incorporated herein by reference. All other exhibits are provided as part of this electronic submission.

Exhibit Number	Description

**Securities registered pursuant to section 12(b) of the Act:**

Title of each class	Name of Exchange which registered
Class A Common Stock, \$.001 Par Value	NASDAQ Global Select Market

**Securities registered pursuant to section 12(g) of the Act: None**

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act Yes  No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act Yes  No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days Yes  No

Indicate by check mark whether the registrants have submitted electronically and posted on their corporate website, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrants were required to submit and post such files). Yes  No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K (§ 229.405 of this chapter) is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See definition of "large accelerated filer," "accelerated filer," and "smaller reporting company" in Rule 12b-2 of the Exchange Act.:

Large accelerated filer  Accelerated filer  Non-accelerated filer  Smaller reporting company

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes  No

The aggregate market value of the registrant of outstanding Class A common stock held by non-affiliates of the registrant at June 30, 2016 was approximately \$49.1 billion, computed based on the closing sale price as quoted on the NASDAQ Global Select Market on that date. For purposes of this calculation only, directors, executive officers and the principal controlling shareholders or entities controlled by such controlling shareholders of the registrant are deemed to be affiliates of the registrant.

There were 268,897,792 shares of Class A common stock outstanding as of December 31, 2016. There was 1 share of Class B common stock outstanding as of the same date.

#### Documents Incorporated By Reference

Information required by Part III is incorporated by reference from Registrant's proxy statement or an amendment to this Annual Report on Form 10-K to be filed by April 30, 2017.

This annual report on Form 10-K is for the year ended December 31, 2016. The United States Securities and Exchange Commission ("SEC") allows us to "incorporate by reference" information that we file with the SEC, which means that we can disclose important information to you by referring you directly to those documents. Information incorporated by reference is considered to be part of this annual report. In addition, information that we file with the SEC in the future will automatically update and supersede information

contained in this annual report. In this annual report, "Charter," "we," "us" and "our" refer to Charter Communications, Inc. and its subsidiaries.

### Explanatory Note

On May 18, 2016, Charter Communications, Inc. (formerly known as CCH I, LLC, the "Company" or "Charter") completed its previously reported merger transactions among Charter, Time Warner Cable Inc. ("Legacy TWC"), Charter Communications, Inc. ("Legacy Charter"), and certain other subsidiaries of Charter (the "TWC Transaction"). Also on May 18, 2016, Charter completed its previously reported acquisition of Bright House Networks, LLC ("Legacy Bright House") from Advance/Newhouse Partnership (the "Bright House Transaction," and, together with the TWC Transaction, the "Transactions"). As a result of the Transactions, Charter became the new public parent company that holds the combined operations of Legacy Charter, Legacy TWC and Legacy Bright House and was renamed Charter Communications, Inc. The financial statements presented in this annual report reflect the operations of Legacy Charter through May 17, 2016 and the Company on and after May 18, 2016. See Part II, Item 8. Financial Statements and Supplementary Data, Notes to Consolidated Financial Statements, Note 2, "Mergers and Acquisitions - Selected Pro Forma Financial Information" for certain financial information presented as if the Transactions had closed on January 1, 2015. Also see Exhibit 99.1 in Charter's Quarterly Report on Form 10-Q for the three and nine months ended September 30, 2016 filed with the SEC on November 3, 2016 for pro forma financial information for each quarter of 2015 and the first and second quarter of 2016. Throughout this report references to the "Company" or to "Charter" refer to the combined company following the completion of the Transactions.

As a result of the Transactions and by operation of Rule 12g-3(c) promulgated under the Securities Exchange Act of 1934, as amended (the "Exchange Act"), Charter is the successor issuer to Legacy Charter and succeeds to the attributes of Legacy Charter as the registrant. Charter's Class A common stock is deemed to be registered under Section 12(b) of the Exchange Act, and Charter is subject to the Exchange Act to the same extent as Legacy Charter.

## CAUTIONARY STATEMENT REGARDING FORWARD-LOOKING STATEMENTS:

This annual report includes forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended (the "Securities Act"), and Section 21E of the Securities Exchange Act of 1934, as amended (the "Exchange Act"), regarding, among other things, our plans, strategies and prospects, both business and financial including, without limitation, the forward-looking statements set forth in Part I. Item 1. under the heading "Business" and in Part II. Item 7. under the heading "Management's Discussion and Analysis of Financial Condition and Results of Operations" in this annual report. Although we believe that our plans, intentions and expectations reflected in or suggested by these forward-looking statements are reasonable, we cannot assure you that we will achieve or realize these plans, intentions or expectations. Forward-looking statements are inherently subject to risks, uncertainties and assumptions, including, without limitation, the factors described in Part I. Item 1A. under "Risk Factors" and in Part II. Item 7. under the heading, "Management's Discussion and Analysis of Financial Condition and Results of Operations" in this annual report. Many of the forward-looking statements contained in this annual report may be identified by the use of forward-looking words such as "believe," "expect," "anticipate," "should," "planned," "will," "may," "intend," "estimated," "aim," "on track," "target," "opportunity," "tentative," "positioning," "designed," "create," "predict," "project," "initiatives," "seek," "would," "could," "continue," "ongoing," "upside," "increases" and "potential," among others. Important factors that could cause actual results to differ materially from the forward-looking statements we make in this annual report are set forth in this annual report and in other reports or documents that we file from time to time with the SEC, and include, but are not limited to:

### *Risks Related to the Recently Completed Transactions:*

- our ability to promptly, efficiently and effectively integrate acquired operations;
- managing a significantly larger company than before the completion of the Transactions;
- our ability to achieve the synergies and value creation contemplated by the Transactions;
- changes in Legacy Charter, Legacy TWC or Legacy Bright House operations' businesses, future cash requirements, capital requirements, results of operations, revenues, financial condition and/or cash flows;
- disruption in our business relationships as a result of the Transactions;
- the increase in indebtedness as a result of the Transactions, which will increase interest expense and may decrease our operating flexibility;
- operating costs and business disruption that may be greater than expected;
- the ability to retain and hire key personnel; and
- costs, disruptions and possible limitations on operating flexibility related to, and our ability to comply with, regulatory conditions applicable to us as a result of the Transactions.

### *Risks Related to Our Business*

- our ability to sustain and grow revenues and cash flow from operations by offering video, Internet, voice, advertising and other services to residential and commercial customers, to adequately meet the customer experience demands in our markets and to maintain and grow our customer base, particularly in the face of increasingly aggressive competition, the need for innovation and the related capital expenditures;
- the impact of competition from other market participants, including but not limited to incumbent telephone companies, direct broadcast satellite operators, wireless broadband and telephone providers, digital subscriber line ("DSL") providers, fiber to the home providers, video provided over the Internet by (i) market participants that have not historically competed in the multichannel video business, (ii) traditional multichannel video distributors, and (iii) content providers that have historically licensed cable networks to multichannel video distributors, and providers of advertising over the Internet;
- general business conditions, economic uncertainty or downturn, unemployment levels and the level of activity in the housing sector;
- our ability to obtain programming at reasonable prices or to raise prices to offset, in whole or in part, the effects of higher programming costs (including retransmission consents);
- our ability to develop and deploy new products and technologies including our cloud-based user interface, Spectrum Guide®, and downloadable security for set-top boxes, and any other cloud-based consumer services and service platforms;
- the effects of governmental regulation on our business or potential business combination transactions;
- any events that disrupt our networks, information systems or properties and impair our operating activities or our reputation;
- the availability and access, in general, of funds to meet our debt obligations prior to or when they become due and to fund our operations and necessary capital expenditures, either through (i) cash on hand, (ii) free cash flow, or (iii) access to the capital or credit markets; and

- our ability to comply with all covenants in our indentures and credit facilities, any violation of which, if not cured in a timely manner, could trigger a default of our other obligations under cross-default provisions.

All forward-looking statements attributable to us or any person acting on our behalf are expressly qualified in their entirety by this cautionary statement. We are under no duty or obligation to update any of the forward-looking statements after the date of this annual report.

## PART I

### Item 1. *Business.*

#### Introduction

We are the second largest cable operator in the United States and a leading broadband communications services company providing video, Internet and voice services to approximately 26.2 million residential and business customers at December 31, 2016. In addition, we sell video and online advertising inventory to local, regional and national advertising customers and fiber-delivered communications and managed information technology ("IT") solutions to larger enterprise customers. We also own and operate regional sports networks and local sports, news and lifestyle channels and sell security and home management services to the residential marketplace.

Our core strategy is to deliver high quality products at competitive prices, combined with outstanding service. This strategy, combined with simple, easy to understand pricing and packaging, is central to our goal of growing our customer base while also selling more individual services to each customer. We expect to execute this strategy by managing our operations in a consumer-friendly, efficient and cost effective manner. Our operating strategy includes insourcing much of our customer care and field operations workforce which results in higher quality service transactions. While an insourced operating model can increase field operations and customer care costs associated with each service transaction, the higher quality nature of each service transaction significantly reduces the volume of service transactions per customer, more than offsetting the higher investment made in each service transaction. As we reduce the number of service transactions and recurring costs per customer relationship, we effectively pass those savings on to customers in the form of products and prices, that we believe are more cost effective than what our competitors offer. The combination of offering competitively priced products and high quality service, allows us to increase the number of customer relationships over a fixed network and products sold per relationship, while at the same time reducing the number of service transactions per relationship, improving customer satisfaction and reducing churn, which results in lower costs to acquire and serve customers. Ultimately, this operating strategy enables us to offer high quality, competitively priced services profitably, while continuing to invest in new products and services.

Our principal executive offices are located at 400 Atlantic Street, Stamford, Connecticut 06901. Our telephone number is (203) 905-7800, and we have a website accessible at [www.charter.com](http://www.charter.com). Our Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q and Current Reports on Form 8-K, and all amendments thereto, are available on our website free of charge as soon as reasonably practicable after they have been filed. The information posted on our website is not incorporated into this annual report.

#### TWC Transaction

On May 18, 2016, the transactions contemplated by the Agreement and Plan of Mergers dated as of May 23, 2015 (the "Merger Agreement"), by and among Legacy TWC, Legacy Charter, CCH I, LLC, previously a wholly owned subsidiary of Legacy Charter ("New Charter") and certain other subsidiaries of New Charter were completed. As a result of the TWC Transaction, New Charter became the new public parent company that holds the operations of the combined companies and was renamed Charter Communications, Inc.

Pursuant to the terms of the Merger Agreement, upon consummation of the TWC Transaction, 285 million outstanding shares of Legacy TWC common stock were converted into 143 million shares of Charter Class A common stock valued at approximately \$32 billion as of the date of acquisition. In addition, Legacy TWC shareholders (excluding Liberty Broadband Corporation ("Liberty Broadband") and Liberty Interactive Corporation ("Liberty Interactive")) received approximately \$28 billion in cash.

As of the date of completion of the Transactions, the total value of the TWC Transaction was approximately \$85 billion, including cash, equity and Legacy TWC assumed debt. The purchase price also includes an estimated pre-combination vesting period fair value of \$514 million for Legacy TWC equity awards converted into Charter awards upon closing of the TWC Transaction ("Converted TWC Awards") and \$69 million of cash paid to former Legacy TWC employees and non-employee directors who held equity awards, whether vested or not vested.

#### Bright House Transaction

Also, on May 18, 2016, Legacy Charter and Advance/Newhouse Partnership ("A/N"), the former parent of Legacy Bright House, completed their previously announced transaction, pursuant to a definitive Contribution Agreement (the "Contribution Agreement"), under which Charter acquired Bright House. Pursuant to the Bright House Transaction, Charter became the owner

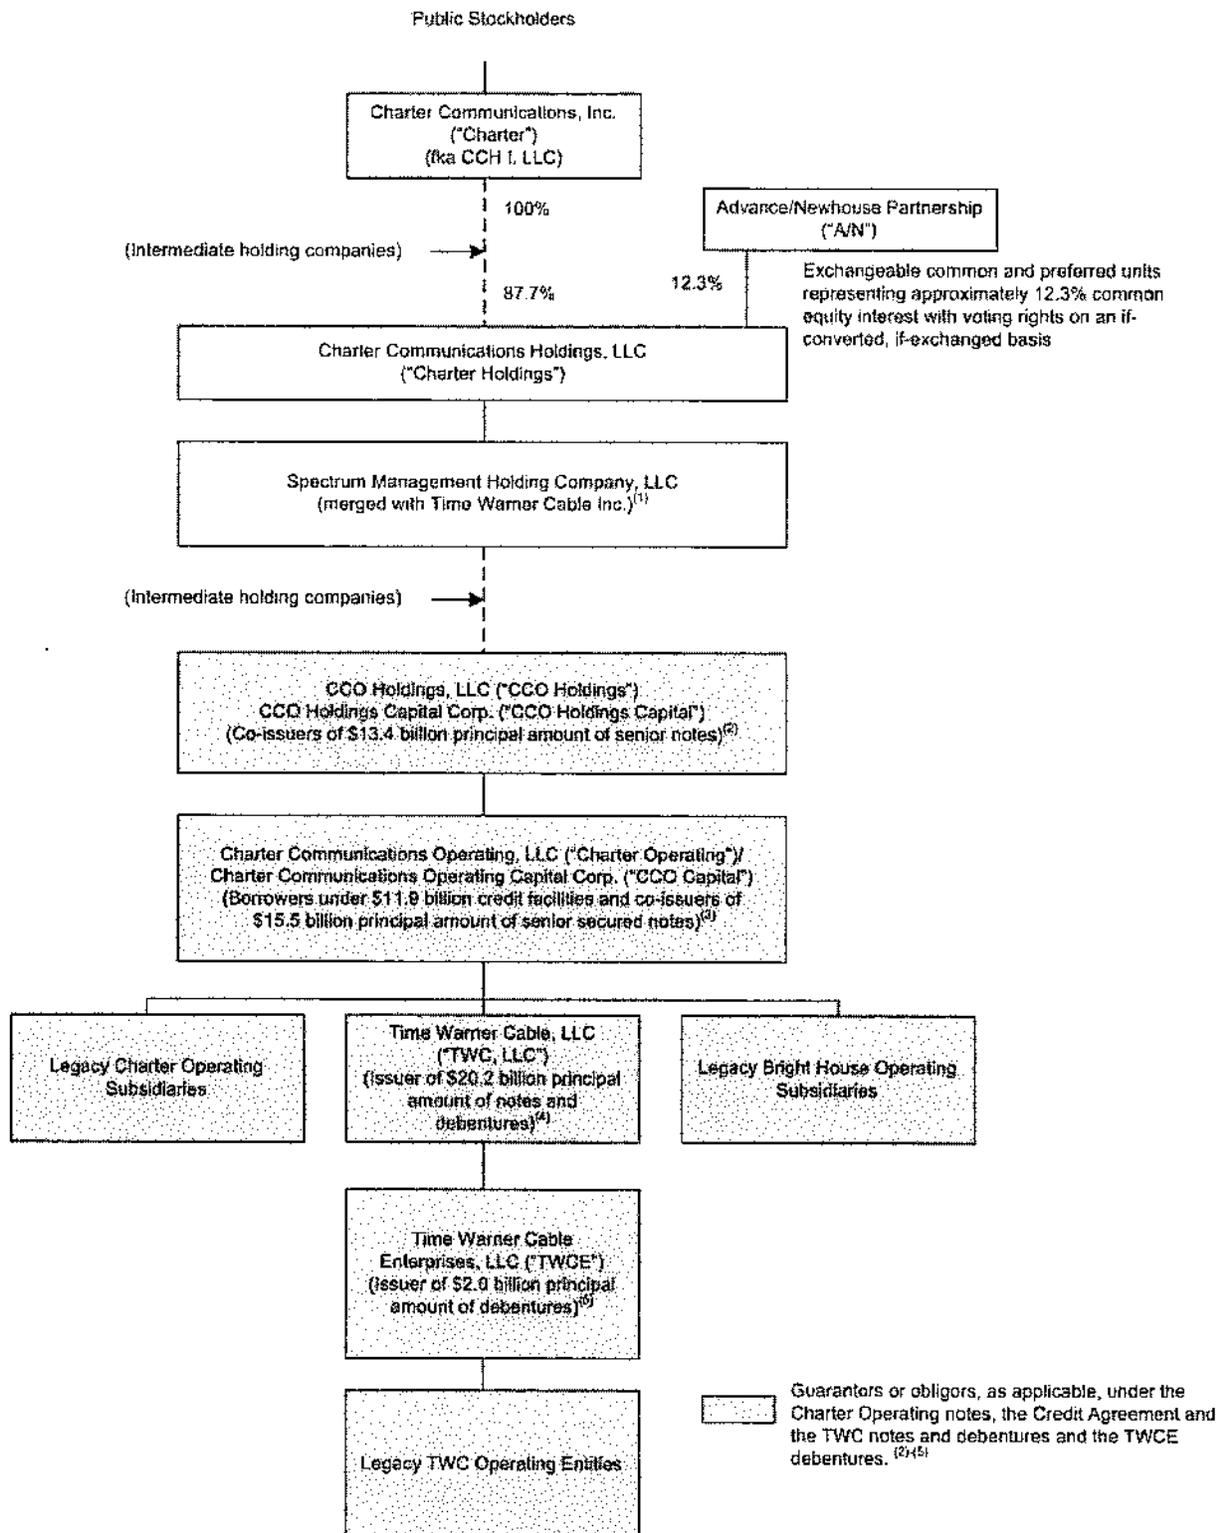

of the membership interests in Bright House and the other assets primarily related to Bright House (other than certain excluded assets and liabilities and non-operating cash). As of the date of acquisition, the purchase price totaled approximately \$12.2 billion consisting of (a) \$2 billion in cash, (b) 25 million convertible preferred units of Charter Communications Holdings, LLC ("Charter Holdings") with a face amount of \$2.5 billion that pay a 6% annual preferential dividend, (c) approximately 31.0 million common units of Charter Holdings that are exchangeable into Charter Class A common stock on a one-for-one basis and (d) one share of Charter Class B common stock.

### **Liberty Transaction**

In connection with the TWC Transaction, Legacy Charter and Liberty Broadband completed their previously announced transactions pursuant to their investment agreement, in which Liberty Broadband purchased for cash approximately 22.0 million shares of Charter Class A common stock valued at \$4.3 billion at the closing of the TWC Transaction to partially finance the cash portion of the TWC Transaction consideration. In connection with the Bright House Transaction, Liberty Broadband purchased approximately 3.7 million shares of Charter Class A common stock valued at \$700 million at the closing of the Bright House Transaction. See Note 2 to the accompanying consolidated financial statements contained in "Item 8. Financial Statements and Supplementary Data," for more information on the Transactions.

**Corporate Entity Structure**

The chart below sets forth our entity structure and that of our direct and indirect subsidiaries. The chart does not include all of our affiliates and subsidiaries and, in some cases, we have combined separate entities for presentation purposes. The equity ownership percentages shown below are approximations. Indebtedness amounts shown below are principal amounts as of December 31, 2016. See Note 9 to the accompanying consolidated financial statements contained in "Item 8. Financial Statements and Supplementary Data," which also includes the accreted values of the indebtedness described below.

- (1) In connection with the Transactions, Legacy TWC transferred substantially all of its assets to TWC, LLC and merged with and into Spectrum Management Holding Company, LLC (formerly named Nina Company II, LLC) ("Spectrum Management") with Spectrum Management as the surviving entity. Spectrum Management was the successor to the SEC reporting obligations of Legacy TWC (which have since been terminated).
- (2) In connection with the Transactions, on May 18, 2016, the proceeds of \$2.5 billion principal amount of senior notes previously issued by CCOH Safari, LLC ("CCOH Safari") and held in escrow were released from escrow, and CCOH Safari merged with and into CCO Holdings, LLC ("CCO Holdings"), which, among other things, assumed the obligations under these debt securities and agreed to guarantee, along with Time Warner Cable, LLC ("TWC, LLC"), Time Warner Cable Enterprises LLC ("TWCE") and substantially all of the operating subsidiaries of Charter Communications Operating, LLC ("Charter Operating") (collectively, the "Subsidiary Guarantors"), the Charter Operating notes, the TWC, LLC and TWCE debt securities and the Charter Operating credit facilities.
- (3) In connection with the Transactions, on May 18, 2016, (a) the proceeds of \$15.5 billion principal amount of senior notes previously issued by CCO Safari II, LLC ("CCO Safari") and held in escrow were released from escrow, and CCO Safari II merged with and into Charter Operating, which, among other things, assumed these debt obligations, (b) the \$3.8 billion credit facility of CCO Safari III, LLC ("CCO Safari III") was issued, and CCO Safari III merged with and into Charter Operating, which, among other things, assumed the obligations under this credit facility and (c) Charter Operating agreed to guarantee, along with the Subsidiary Guarantors, the TWC, LLC senior notes and debentures and the TWCE senior debentures. As of December 31, 2016, the Charter Operating credit facilities were comprised of \$2.5 billion aggregate principal amount term loan A facility, \$1.4 billion aggregate principal amount term loan E facility, \$1.2 billion aggregate principal amount term loan F facility, \$993 million aggregate principal amount term loan H facility and \$2.8 billion aggregate principal amount term loan I facility. Charter Operating also has availability under its revolving credit facility of approximately \$2.8 billion as of December 31, 2016.
- (4) In connection with the Transactions, Legacy TWC transferred substantially all of its assets to TWC, LLC (f/k/a TWC NewCo LLC), and, among other things, TWC, LLC assumed all the obligations under \$20.2 billion principal amount of notes and debentures previously issued by Legacy TWC, and agreed to guarantee the Charter Operating and TWCE notes and debentures and the Charter Operating credit facilities.
- (5) In connection with the Transactions, TWCE assumed all the obligations under \$2.0 billion principal amount of debentures previously issued by Legacy TWC, and agreed to guarantee the Charter Operating and TWC, LLC notes and debentures and the Charter Operating credit facilities.

### Products and Services

We offer our customers subscription-based video services, including video on demand ("VOD"), high definition ("HD") television, and digital video recorder ("DVR") service), Internet services and voice services. As of December 31, 2016, 70% of our footprint was all-digital enabling us to offer more HD channels, faster Internet speeds and better video picture quality and we intend to transition the remaining portions of our Legacy TWC and Legacy Bright House footprints. Our video, Internet, and voice services are offered to residential and commercial customers on a subscription basis, with prices and related charges based on the types of service selected, whether the services are sold as a "bundle" or on an individual basis, and the equipment necessary to receive our services. Bundled services are available to approximately 99% of our passings, and approximately 61% of our customers subscribe to a bundle of services.

All customer statistics as of December 31, 2016 include the operations of Legacy TWC, Legacy Bright House and Legacy Charter, each of which is based on individual legacy company reporting methodology. These methodologies differ and their differences may be material and statistical reporting will be conformed over time to a single reporting methodology. The following table summarizes our customer statistics for video, Internet and voice as of December 31, 2016 and 2015 (in thousands except per customer data and footnotes).

	Approximate as of	
	December 31,	
	2016 (a)	2015 (a)
<b><u>Customer Relationships (b)</u></b>		
Residential	24,801	6,284
Small and Medium Business	1,404	390
Total Customer Relationships	26,205	6,674
<b><u>Residential Primary Service Units ("PSUs")</u></b>		
Video	16,836	4,322
Internet	21,374	5,227
Voice	10,327	2,598
	48,537	12,147
Monthly Residential Revenue per Residential Customer (c)	\$ 109.77	\$ 111.19
<b><u>Small and Medium Business PSUs</u></b>		
Video	400	108
Internet	1,219	345
Voice	778	218
	2,397	671
Monthly Small and Medium Business Revenue per Customer (d)	\$ 214.25	\$ 172.88
<b><u>Enterprise PSUs (e)</u></b>	97	30

After giving effect to the Transactions, December 31, 2015 residential and small and medium business customer relationships would have been 23,795,000 and 1,256,000, respectively, residential video, Internet and voice PSUs would have been 17,062,000, 19,911,000 and 9,959,000, respectively and small and medium business PSUs would have been 361,000, 1,078,000 and 667,000, respectively; Enterprise PSUs would have been 81,000.

- We calculate the aging of customer accounts based on the monthly billing cycle for each account. On that basis, as of December 31, 2016 and 2015, customers include approximately 208,400 and 38,100 customers, respectively, whose accounts were over 60 days past due, approximately 15,500 and 1,700 customers, respectively, whose accounts were over 90 days past due, and approximately 8,000 and 900 customers, respectively, whose accounts were over 120 days past due.
- Customer relationships include the number of customers that receive one or more levels of service, encompassing video, Internet and voice services, without regard to which service(s) such customers receive. Customers who reside in residential multiple dwelling units ("MDUs") and that are billed under bulk contracts are counted based on the number of billed units within each bulk MDU. Total customer relationships excludes enterprise customer relationships.
- Monthly residential revenue per residential customer is calculated as total residential video, Internet and voice quarterly revenue divided by three divided by average residential customer relationships during the respective quarter.
- Monthly small and medium business revenue per customer is calculated as total small and medium business quarterly revenue divided by three divided by average small and medium business customer relationships during the respective quarter.
- Enterprise PSUs represent the aggregate number of fiber service offerings counting each separate service offering as an individual PSU.

## Residential Services

### *Video Services*

Our video customers receive a package of basic programming which, in our all-digital markets, includes a digital set-top box that provides an interactive electronic programming guide with parental controls, access to pay-per-view services, including VOD (available to nearly all of our passings), digital music channels and the option to view certain video services on third party devices. Customers have the option to purchase additional tiers of services including premium channels which provide original programming, commercial-free movies, sports, and other special event entertainment programming. Substantially all of our video programming is available in HD.

In most areas, we offer VOD service which allows customers to select from approximately 30,000 titles at any time. VOD includes standard definition, HD and three dimensional ("3D") content. VOD programming options may be accessed for free if the content is associated with a customer's linear subscription, or for a fee on a transactional basis. VOD services are also offered on a subscription basis included in a digital tier premium channel subscription or for a monthly fee. Pay-per-view channels allow customers to pay on a per-event basis to view a single showing of a one-time special sporting event, music concert, or similar event on a commercial-free basis.

Our goal is to provide our video customers with the programming they want, when they want it, on any device. DVR service enables customers to digitally record programming and to pause and rewind live programming. Customers can also use the Charter TV applications available on portable devices, streaming devices and on our websites to watch up to 300 channels of cable TV, view VOD programming, remotely control digital set-top boxes while in the home and to program DVRs remotely. We intend to consolidate the various legacy entity TV applications into a single Spectrum TV Application in 2017. Customers also have access to programmer authenticated applications and websites such as HBO Go<sup>®</sup>, Fox Now<sup>®</sup>, Discovery Go<sup>®</sup> and WatchESPN<sup>®</sup>.

In certain markets, we have launched Spectrum Guide<sup>®</sup>, a network or "cloud-based" user interface that runs on traditional set-top boxes, with a look and feel that is similar to that of the Spectrum TV App. Spectrum Guide<sup>®</sup> is designed to enable our customers to enjoy a state-of-the-art video experience on set-top boxes, regardless of the age of the set-top box. The guide enables customers to find video content more easily across cable TV channels and VOD options. We plan to continue to deploy across our footprint and enhance this technology in 2017 and beyond.

### *Internet Services*

Approximately 99% of our estimated passings are enabled for DOCSIS 3.0 wideband technology, allowing us to offer our residential customers multiple tiers of Internet services with currently marketed download speeds of up to 300 megabits per second ("Mbps"). In nearly every market where we have launched Spectrum pricing and packaging ("SPP"), our entry level Internet download speed offering is 60 or 100 Mbps which, among other things, allows several people within a single household to stream HD video content online while simultaneously using our Internet service for non-video purposes. As we roll out SPP in Legacy TWC and Legacy Bright House markets, we will bring base speed offerings to a standard minimum of 60 or 100 Mbps at uniform pricing without any usage-based pricing data caps, modem fees or early termination fees. Finally, we offer a security suite with our Internet services which, upon installation by customers, provides protection against computer viruses and spyware and includes parental control features.

We offer an in-home WiFi product that permits customers to lease high performance wireless routers to maximize their in-home wireless Internet experience. Additionally, we offer an out-of-home WiFi service ("Spectrum WiFi") in most of our footprint to our Internet customers at designated "hot spots." In 2017, we expect to expand WiFi accessibility to our customers both inside and outside of their legacy entity footprints.

### *Voice Services*

We provide voice communications services using VoIP technology to transmit digital voice signals over our network. Our voice services include unlimited local and long distance calling to the United States, Canada, Mexico and Puerto Rico, voicemail, call waiting, caller ID, call forwarding and other features and offers international calling either by the minute, or through packages of minutes per month. For customers that subscribe to both our voice and video offerings, caller ID on TV is also available in most areas.

### *Other Residential Services*

We are continually engaging in product research and development and other opportunities to expand our services including the activation of our Mobile Virtual Network Operator ("MVNO") agreement with Verizon which would enable us to offer mobile services. The activation of the MVNO with Verizon does not, however, represent an obligation for us to offer mobile services.

### **Commercial Services**

We offer scalable broadband communications solutions for businesses and carrier organizations of all sizes, selling Internet access, data networking, fiber connectivity to cellular towers and office buildings, video entertainment services and business telephone services.

### *Small and Medium Business*

As Spectrum Business, we offer video, Internet and voice services to small and medium businesses over our coaxial network that are similar to those that we provide to our residential customers. Spectrum Business includes a full range of video programming and music services and Internet speeds of up to 100 Mbps downstream, 300 Mbps in certain markets, and up to 20 Mbps upstream in its DOCSIS 3.0 markets. Spectrum Business also includes a set of business services including web hosting, e-mail and security, and multi-line telephone services with more than 30 business features including web-based service management.

### *Enterprise Solutions*

As Spectrum Enterprise, we offer fiber-delivered communications and managed IT solutions to larger businesses, as well as high-capacity last-mile data connectivity services to wireless and wireline carriers, Internet Service Providers ("ISPs") and other competitive carriers on a wholesale basis. More specifically, Spectrum Enterprise's portfolio includes fiber Internet access with symmetrical speeds up to 10 gigabits per second ("Gbps"), voice trunking services such as Primary Rate Interface ("PRI") and Session Initiation Protocol ("SIP") Trunks, Ethernet services that privately and securely connect geographically dispersed client locations with speeds up to 10 Gbps, and video solutions designed to meet the needs of the hospitality, education, and health care clients. Our managed IT portfolio includes Cloud Infrastructure as a Service ("IaaS") and Cloud Desktop as a Service ("DaaS"), and managed hosting, application, and messaging solutions, along with other related IT and professional services. The Transactions have provided us with a larger footprint which allows us to more effectively serve business customers with multiple sites across given geographic regions. These customers can benefit from obtaining these advanced services from a single provider simplifying procurement and potentially reducing their costs.

### **Advertising Services**

Our advertising sales division, Spectrum Reach<sup>®</sup>, offers local, regional and national businesses with the opportunity to advertise in individual and multiple markets on cable television networks. We receive revenues from the sale of local advertising on digital advertising networks and satellite-delivered networks such as MTV<sup>®</sup>, CNN<sup>®</sup> and ESPN<sup>®</sup>. In any particular market, we typically insert local advertising on over 50 channels. Since completion of the Transactions, our larger footprint has increased opportunities for advertising customers to address broader regional audiences from a single provider and thus reach more customers with a single transaction. Our increased size provides scale to invest in new technology to create more targeted and interactive advertising capabilities.

Available advertising time is generally sold by our advertising sales force. In some markets, we have formed advertising interconnects or entered into representation agreements with other video distributors, including, among others, Verizon Communications Inc.'s ("Verizon") fiber optic service ("FiOS") and AT&T Inc.'s ("AT&T") U-verse, under which we sell advertising on behalf of those operators. In some markets, we enter into representation agreements under which another operator in the area will sell advertising on our behalf. These arrangements enable us and our partners to deliver linear commercials across wider geographic areas, replicating the reach of local broadcast television stations to the extent possible. In addition, we, together with Comcast Corporation ("Comcast") and Cox Communications, Inc., own National Cable Communications LLC, which, on behalf of a number of video operators, sells advertising time to national and regional advertisers.

We also sell the advertising inventory of our owned and operated local sports, news and lifestyle channels, and advertising inventory on our regional sports networks that carry Los Angeles Lakers' basketball games and other sports programming and on SportsNet LA, a regional sports network that carries Los Angeles Dodgers' baseball games and other sports programming.

We have deployed advanced advertising products such as interactivity, household addressability, dynamic ad insertion into VOD and data infused advertising campaigns within various parts of our footprint. These new products will be distributed across more of our footprint in 2017.

## **Other Services**

### ***Regional Sports and News Networks***

We have an agreement with the Los Angeles Lakers for rights to distribute all locally available pre-season, regular season and post-season Los Angeles Lakers' games through 2033. We broadcast those games on our regional sports network, Spectrum SportsNet. As of December 31, 2016, Spectrum SportsNet was distributed to approximately 4.7 million multichannel video customers via the majority of major multichannel video distributors in our Southern California, Las Vegas, NV and Hawaii regions. We also manage 36 local news channels, including Spectrum News NY1, a 24-hour news channel focused on New York City, 20 local sports channels and three local lifestyle community channels, and we own 26.8% of Sterling Entertainment Enterprises, LLC (doing business as SportsNet New York), a New York City-based regional sports network that carries New York Mets' baseball games as well as other regional sports programming.

American Media Productions, LLC ("American Media Productions"), an unaffiliated third party, owns SportsNet LA, a regional sports network carrying the Los Angeles Dodgers' baseball games and other sports programming. In accordance with agreements with American Media Productions, we act as the network's exclusive affiliate and advertising sales representative and have certain branding and programming rights with respect to the network. In addition, we provide certain production and technical services to American Media Productions. The affiliate, advertising, production and programming agreements continue through 2038. We continue to seek distribution agreements for the carriage of SportsNet LA by other major distributors.

### ***Security and Home Management***

We also provide security and home management services to our residential customers in certain markets. Our broadband cable system connects the customer's in-home system to our emergency response center. In addition to providing traditional security, fire and medical emergency monitoring and dispatch, the service allows customers to remotely arm or disarm their security system, monitor their home via indoor and outdoor cameras, and remotely operate key home functions, including setting and controlling lights, thermostats and door locks.

## **Pricing of Our Products and Services**

Our revenues are principally derived from the monthly fees customers pay for the services we provide. We typically charge a one-time installation fee which is sometimes waived or discounted in certain sales channels during certain promotional periods.

Our SPP offers a standardized price for each tier of service, bundle of services, and add-on service, regardless of market and emphasizes triple play bundles of video, Internet and voice services. Our most popular and competitive services are combined in core packages at what we believe are attractive prices. We began launching SPP in the Legacy TWC and Legacy Bright House footprints in the third quarter of 2016, and we expect to offer SPP in all markets by the middle of 2017. We believe our approach:

- offers simplicity for customers to understand our offers, and for our employees in service delivery;
- offers the ability to package more services at the time of sale, thus increasing revenue per customer;
- offers a higher quality and more value-based set of services, including faster Internet speeds, more HD channels, lower equipment fees and a more transparent pricing structure;
- drives higher customer satisfaction, lower service calls and churn; and
- allows for gradual price increases at the end of promotional periods.

## **Our Network Technology and Customer Premise Equipment**

Our network includes three key components: a national backbone, regional/metro networks and the "last-mile" network. Both our national backbone and regional/metro network components utilize a redundant Internet Protocol ("IP") ring/mesh architecture. The national backbone component provides connectivity from the regional demarcation points to nationally centralized content, connectivity and services. The regional/metro network components provide connectivity between the regional demarcation points and headends within a specific geographic area and enable the delivery of content and services between these network components.

Our last-mile network utilizes a hybrid fiber coaxial cable ("HFC") architecture, which combines the use of fiber optic cable with coaxial cable. In most systems, we deliver our signals via fiber optic cable from the headend to a group of nodes, and use coaxial

cable to deliver the signal from individual nodes to the homes served by that node. For our fiber Internet, Ethernet, carrier wholesale, SIP and PRI Spectrum Enterprise customers, fiber optic cable is extended from the individual nodes to the customer's site. For certain new build and MDU sites, we increasingly bring fiber to the customer site. Our design standard is six strands of fiber to each node, with two strands activated and four strands reserved for spares and future services. This design standard allows these strands to be utilized for additional residential traffic capacity, and enterprise customer needs as they arise. We believe that this hybrid network design provides high capacity and signal quality. The design also provides two-way signal capabilities for the support of interactive services.

HFC architecture benefits include:

- bandwidth capacity to enable traditional and two-way video and broadband services;
- dedicated bandwidth for two-way services; and
- signal quality and high service reliability.

Approximately 98% of our estimated passings are served by systems that have bandwidth of 750 megahertz or greater as of December 31, 2016. This bandwidth capacity enables us to offer HD television, DOCSIS-based Internet services and voice services.

An all-digital platform enables us to offer a larger selection of HD channels, faster Internet speeds and better picture quality while providing greater plant security and enabling lower installation and disconnect service truck rolls. We are currently all-digital in 70% of our footprint and intend to transition the remaining portions of our Legacy TWC and Legacy Bright House footprints.

We have been introducing our new set-top box, WorldBox, to consumers in certain markets. The WorldBox design has opened the set-top box market to new vendors and reduced our set-top box costs. The WorldBox also includes more advanced features and functionality than older set-top boxes, including faster processing times, IP capabilities with increased speed, additional simultaneous recordings, increased DVR storage capacity, and a greater degree of flexibility for consumers to take Charter-provisioned set-top boxes with them, if and when, they move residences. We have also been introducing our new cloud-based user interface, Spectrum Guide<sup>®</sup>, to our video customers in certain markets. Spectrum Guide<sup>®</sup> improves video content search and discovery, and fully enables our on-demand offering. In addition, Spectrum Guide<sup>®</sup> can function on nearly all of Legacy Charter's deployed set-tops, reducing costs and customer disruption to swap equipment for new functionality.

### **Management, Customer Care and Marketing**

Our operations are centralized, with senior executives located at several key corporate offices, responsible for coordinating and overseeing operations including establishing company-wide strategies, policies and procedures. Sales and marketing, network operations, field operations, customer operations, engineering, advertising sales, human resources, legal, government relations, information technology and finance are all directed at the corporate level. Regional and local field operations are responsible for on-site service transactions with customers and maintaining and constructing that portion of our network which is located outdoors. In 2017, our field operations group will focus on standardizing practices, processes, procedures and metrics, including those used to assure the quality of work performed when servicing customers.

We continue to focus on improving the customer experience through enhanced product offerings, reliability of services, and delivery of quality customer service. As part of our operating strategy, we are committed to investments and hiring plans that will insource most of our customer service workload over the next few years. We intend to bring the Legacy TWC and Legacy Bright House customer operations workload, much of which is outsourced offshore, back to the United States. Most of these repatriated jobs will be fully insourced and will increase our full time labor force. We are currently constructing a new call center in McAllen, TX which will solely serve customers who prefer to engage with us in Spanish, resulting in the creation of new jobs. This new facility will be operational and taking calls in 2017.

Legacy Charter's in-house domestic call centers currently handle approximately 90% of calls, managed centrally to ensure a consistent, high quality customer experience. On a consolidated basis, in-house domestic call centers handle just over 60% of customer service calls. Over a multi-year period, however, we plan to migrate Legacy TWC and Legacy Bright House customer service centers to Legacy Charter's model of using segmented, virtualized, U.S.-based in-house call centers. Segmented, virtualized call centers allow calls to be routed to agents across our footprint based on call type, enabling agents to be experts in addressing specific customer needs, thus creating a better customer experience. Legacy Charter's inbound sales, billing, service and retention call centers are also virtualized and segmented by call-type. A new call center agent desktop interface tool, already used at Legacy Charter, is being developed for the acquired systems. This new desktop interface tool will enable virtualization of all call centers, regardless of the legacy billing platform, to better serve our customers.

We also provide customers with the opportunity to interact with us through a variety of forums in addition to telephonic communications, including through our customer website, mobile device applications, online chat, and via social media. Our customer websites and mobile applications enable customers to pay their bills, manage their accounts, order new services and utilize self-service help and support.

We sell our residential and commercial services using a national brand platform known as Spectrum®, Spectrum Business® and Spectrum Enterprise®. These brands reflect our comprehensive approach to industry-leading products, driven by speed, performance and innovation. Our marketing strategy emphasizes the sale of our bundled services through targeted direct response marketing programs to existing and potential customers and increases awareness and the value of the Spectrum brand. Our marketing organization creates and executes marketing programs intended to grow customer relationships, increase services per relationship, retain existing customers and cross-sell additional products to current customers. We monitor the effectiveness of our marketing efforts, customer perception, competition, pricing, and service preferences, among other factors, in order to increase our responsiveness to our customers and to improve our sales and customer retention. Our marketing organization also manages and directs several sales channels including direct sales, on-line, outbound telemarketing and stores.

### **Programming**

We believe that offering a wide variety of video programming choices influences a customer's decision to subscribe and retain our cable video services. We obtain basic and premium programming, usually pursuant to written contracts, from a number of suppliers although media consolidation has resulted in fewer suppliers and additional selling power on the part of programmer suppliers. Our programming contracts generally continue for a fixed period of time, usually for multiple years, and are subject to negotiated renewal.

Programming is usually made available to us for a license fee, which is generally paid based on the number of customers to whom we make that programming available. Programming license fees may include "volume" discounts and financial incentives to support the launch of a channel and/or ongoing marketing support, as well as discounts for channel placement or service penetration. For home shopping channels, we typically receive a percentage of the revenue attributable to our customers' purchases. We also offer VOD and pay per view channels of movies and events that are subject to a revenue split with the content provider.

Our programming costs have increased in excess of customary inflationary and cost-of-living type increases. We expect programming costs to continue to increase due to a variety of factors including, annual increases pursuant to our programming contracts, contract renewals with programmers and the carriage of incremental programming, including new services and VOD programming. Increases in the cost of sports programming and the amounts paid for broadcast station retransmission consent have been the largest contributors to the growth in our programming costs over the last few years. Additionally, the demands of large media companies who link carriage of their most popular networks to carriage and cost increases of their less popular networks, has limited our flexibility in creating more tailored and cost-sensitive programming packages for consumers. Finally, programmers have experienced declines in demand for advertising as advertisers shift more of their marketing spend online. We believe that this is resulting in programmers demanding higher programming fees from us, as they seek to recover revenue they are losing to online advertising.

Federal law allows commercial television broadcast stations to make an election between "must-carry" rights and an alternative "retransmission-consent" regime. When a station opts for the retransmission-consent regime, we are not allowed to carry the station's signal without that station's permission. Continuing demands by owners of broadcast stations for cash payments at substantial increases over amounts paid in prior years in exchange for retransmission consent will increase our programming costs or require us to cease carriage of popular programming, potentially leading to a loss of customers in affected markets.

Over the past several years, increases in our video service rates have not fully offset increasing programming costs, and with the impact of increasing competition and other marketplace factors, we do not expect them to do so in the foreseeable future. Although we pass along a portion of amounts paid for retransmission consent to the majority of our customers, our inability to fully pass programming cost increases on to our video customers has had, and is expected in the future to have, an adverse impact on our cash flow and operating margins associated with our video product. In order to mitigate reductions of our operating margins due to rapidly increasing programming costs, we continue to review our pricing and programming packaging strategies.

We have programming contracts that have expired and others that will expire at or before the end of 2017. We will seek to renegotiate the terms of these agreements. There can be no assurance that these agreements will be renewed on favorable or comparable terms. To the extent that we are unable to reach agreements with certain programmers on terms that we believe are reasonable, we have been, and may in the future be, forced to remove such programming channels from our line-up, which may result in a loss of customers.

## Regions

We operate in geographically diverse areas which are organized in regional clusters. These regions are managed centrally on a consolidated level. Our eleven regions and the customer relationships within each region as of December 31, 2016 are as follows (in thousands):

Regions	Total Customer Relationships
Carolinas	2,609
Central	2,800
Florida	2,251
Great Lakes	2,143
Northeast	2,909
Northwest	1,410
NYC	1,317
South	2,030
Southern Ohio	2,039
Texas	2,561
West	4,136

## Competition

### Residential Services

We face intense competition for residential customers, both from existing competitors and, as a result of the rapid development of new technologies, services and products, from new entrants.

#### *Video competition*

Our residential video service faces competition from direct broadcast satellite (“DBS”) services, which have a national footprint and compete in all of our operating areas. DBS providers offer satellite-delivered pre-packaged programming services that can be received by relatively small and inexpensive receiving dishes. They offer aggressive promotional pricing, exclusive programming (e.g., NFL Sunday Ticket) and video services that are comparable in many respects to our residential video service. Our residential video service also faces competition from phone companies with fiber-based networks, primarily AT&T U-verse, Frontier Communications Corporation (“Frontier”) FiOs and Verizon FiOs, which offer wireline video services in approximately 23%, 8% and 4%, respectively, of our operating areas. In July 2015, AT&T acquired DIRECTV Group Inc. (“DIRECTV”), the nation’s largest DBS provider, with the combined company able to offer bundles of video, Internet, wireline phone service and wireless service. As a condition to the Federal Communications Commission (“FCC”) approval of the transaction, AT&T is required to deploy fiber to the home (“FTTH”) to 12.5 million locations within four years from the close of its transaction. AT&T also announced the acquisition of Time Warner Inc. in October 2016 which is subject to regulatory approval. If approved, it is not yet clear how AT&T will use the various programming and studio assets to benefit its own video on its various platforms or potential program access conditions as part of such regulatory approval.

Our residential video service also faces growing competition from a number of other sources, including companies that deliver linear network programming, movies and television shows on demand and other video content over broadband Internet connections to televisions, computers, tablets and mobile devices. These newer categories of competitors include virtual multichannel video programming distributors (“V-MVPD”) such as AT&T’s “DirecTV NOW,” DISH Network Corporation’s “Sling TV,” and Sony Corporation’s “Playstation Vue,” and direct to consumer products offered by programmers that have not traditionally sold programming directly to consumers, such as HBO’s “HBO Now,” CBS’ “CBS All Access” and Showtime’s “Showtime Anytime.” Other online video business models have also developed, including, (i) subscription video on demand (“SVOD”) services such as Netflix, Amazon.com Inc.’s (“Amazon”) “Prime,” and “Hulu Plus,” (ii) ad-supported free online video products, including Google Inc.’s (“Google”), “YouTube” and “Hulu,” some of which offer programming for free to consumers that we currently purchase for a fee, (iii) pay-per-view products, such as Apple’s “iTunes” and Amazon’s, “Amazon Instant,” and (iv) additional ad-supported free

offerings from wireless providers such as Verizon's "go90" and T-Mobile's "Binge On" that exempt certain video content traffic from counting towards monthly data caps. We have viewed online video services as complementary to our

own video offering, and we have developed a cloud-based guide that is capable of incorporating video from many on-line video services currently offered in the marketplace. As the proliferation of online video services grows, however, services such as DirecTV Now and potential forthcoming services such as Hulu Live, and new direct to consumer offerings, could negatively impact the growth of our video business.

#### ***Internet competition***

Our residential Internet service faces competition from the phone companies' DSL, FTTH and wireless broadband offerings as well as from a variety of companies that offer other forms of online services, including wireless and satellite-based broadband services. Verizon's FiOs and Frontier in certain markets acquired from Verizon, are our primary fiber-to-the-home competitor, although AT&T has also begun fiber-to-the-home builds as well, including the required buildout per the FCC condition as a result of AT&T's acquisition of DIRECTV noted above. Given the FTTH deployments of our competitors, launches of broadband services offering 1 Gbps speed are becoming more common. Several competitors, including AT&T and Google, deliver 1 Gbps broadband speed in at least a portion of their footprints which overlap our footprint. DSL service is often offered at prices lower than our Internet services, although typically at speeds lower than the speeds we offer. Various wireless phone companies are now offering third and fourth generation (3G and 4G) wireless Internet services with fifth generation (5G) and faster services on the horizon, some of which offer unlimited data packages to customers. In addition, a growing number of commercial areas, such as retail malls, restaurants and airports, offer WiFi Internet service. Numerous local governments are also considering or actively pursuing publicly subsidized WiFi Internet access networks. These options offer alternatives to cable-based Internet access.

#### ***Voice competition***

Our residential voice service competes with wireless and wireline phone providers, as well as other forms of communication, such as text messaging on cellular phones, instant messaging, social networking services, video conferencing and email. We also compete with "over-the-top" phone providers, such as Vonage, Skype, magicJack, Google Voice and Ooma, Inc., as well as companies that sell phone cards at a cost per minute for both national and international service. The increase in the number of different technologies capable of carrying voice services and the number of alternative communication options available to customers as well as the replacement of wireline services by wireless have intensified the competitive environment in which we operate our residential voice service.

#### ***Regional Competitors***

In some of our operating areas, other competitors have built networks that offer video, Internet and voice services that compete with our services. For example, in Kansas City and Austin, Texas, our residential video, Internet and voice services compete with Google Fiber services. In addition to Google Fiber, Cincinnati Bell Inc., Hawaiian Telcom, RCN Telecom Services, LLC and WideOpenWest Finance, LLC ("WOW"), each compete with us in parts of our operating area.

#### ***Additional competition***

In addition to multi-channel video providers, cable systems compete with other sources of news, information and entertainment, including over-the-air television broadcast reception, live events, movie theaters and the Internet. Competition is also posed by satellite master antenna television systems, or SMATV systems, serving MDUs, such as condominiums, apartment complexes, and private residential communities.

#### ***Business Services***

We face intense competition as to each of our business services offerings. Our small and medium business video, Internet, networking and voice services face competition from a variety of providers as described above. Our enterprise solutions also face competition from the competitors described above as well as other telecommunications carriers, such as metro and regional fiber-based carriers. We also compete with cloud, hosting and related service providers and application-service providers.

#### ***Advertising***

We face intense competition for advertising revenue across many different platforms and from a wide range of local and national competitors. Advertising competition has increased and will likely continue to increase as new formats seek to attract the same advertisers. We compete for advertising revenue against, among others, local broadcast stations, national cable and broadcast networks, radio stations, print media and online advertising companies and content providers.

## Security and Home Management

Our IntelligentHome service faces competition from traditional security companies, such as The ADT Corporation, service providers such as Verizon and AT&T, as well as new entrants, such as Vivint, Inc., Alarm.com, Inc. and NEST Labs, Inc. (which Google acquired in 2014).

## Seasonality and Cyclicity

Our business is subject to seasonal and cyclical variations. Our results are impacted by the seasonal nature of customers receiving our cable services in college and vacation markets. Our revenue is subject to cyclical advertising patterns and changes in viewership levels. Our advertising revenue is generally higher in the second and fourth calendar quarters of each year, due in part to increases in consumer advertising in the spring and in the period leading up to and including the holiday season. U.S. advertising revenue is also cyclical, benefiting in even-numbered years from advertising related to candidates running for political office and issue-oriented advertising. Our capital expenditures and trade working capital are also subject to significant seasonality based on the timing of subscriber growth, network programs, specific projects and construction.

## Regulation and Legislation

The following summary addresses the key regulatory and legislative developments affecting the cable industry and our three primary services for both residential and commercial customers: video, Internet, and voice services. Cable system operations are extensively regulated by the federal government (primarily the FCC), certain state governments, and many local governments. A failure to comply with these regulations could subject us to substantial penalties. Our business can be dramatically impacted by changes to the existing regulatory framework, whether triggered by legislative, administrative, or judicial rulings. Congress and the FCC have frequently revisited the subject of communications regulation and they are likely to do so again in the future. We could be materially disadvantaged in the future if we are subject to new regulations or regulatory actions that do not equally impact our key competitors. We cannot provide assurance that the already extensive regulation of our business will not be expanded in the future. In addition, we are already subject to Charter-specific conditions regarding certain business practices as a result of the FCC's approval of the Transactions.

## Video Service

### *Must Carry/Retransmission Consent*

There are two alternative legal methods for carriage of local broadcast television stations on cable systems. Federal "must carry" regulations require cable systems to carry local broadcast television stations upon the request of the local broadcaster. Alternatively, federal law includes "retransmission consent" regulations, by which popular commercial television stations can prohibit cable carriage unless the cable operator first negotiates for "retransmission consent," which may be conditioned on significant payments or other concessions. Popular stations invoking "retransmission consent" have been demanding substantial compensation increases in their recent negotiations with cable operators, thereby significantly increasing our operating costs.

Additional government-mandated broadcast carriage obligations could disrupt existing programming commitments, interfere with our preferred use of limited channel capacity, and limit our ability to offer services that appeal to our customers and generate revenues.

### *Cable Equipment*

In 1996, Congress enacted a statute requiring the FCC to adopt regulations designed to assure the development of an independent retail market for "navigation devices," such as cable set-top boxes. As a result, the FCC required cable operators to make a separate offering of security modules (*i.e.*, a "CableCARD") that can be used with retail navigation devices. Some of the FCC's rules requiring support for CableCARDS were vacated by the United States Court of Appeals for the District of Columbia in 2013, and another of these rules was repealed by Congress in 2014, but the basic obligation to provide separable security for retail devices remains in place. In 2016, the FCC proposed to replace its CableCARD regime with burdensome new rules that would have required us to make disaggregated "information flows" available to set-top boxes and apps supplied by third parties. That proposal was not adopted, but various parties may continue to advocate alternative regulatory approaches to reduce consumer dependency on traditional operator provided set-top boxes. It remains uncertain whether the FCC or Congress will change the legal requirements related to our set-top boxes and what the impact of any such changes might be.

### ***Privacy and Information Security Regulation***

The Communications Act limits our ability to collect, use, and disclose subscribers' personally identifiable information for our video, voice, and Internet services, as well as provides requirements to safeguard such information. We are subject to additional federal, state, and local laws and regulations that impose additional restrictions on the collection, use and disclosure of consumer, subscriber and employee information. Further, the FCC, Federal Trade Commission ("FTC"), and many states regulate and restrict the marketing practices of communications service providers, including telemarketing and online marketing efforts. The FCC recently adopted privacy rules that contain new restrictions affecting the use of broadband and voice customer data, and various other federal agencies, including the FTC, continue to provide updated guidance on the use and protection of consumer data.

Our operations are also subject to federal and state laws governing information security, including new "reasonable" data security requirements set forth in the FCC's recently adopted privacy rules, which will become effective on March 3, 2017. In the event of an information security breach, such rules may require consumer and government agency notification and may result in regulatory enforcement actions with the potential of monetary forfeitures. The FCC has recently used the existing authority under its privacy and security requirements for telecommunications services to bring enforcement actions against several companies for failing to protect customer data from unauthorized access by and disclosure to third parties, resulting in substantial monetary settlements. Similarly, the FTC and state attorneys general regularly bring enforcement actions against companies related to information security breaches and privacy violations. Several state legislatures are considering the adoption of new data security and cybersecurity legislation that could result in additional network and information security requirements for our business.

Various security standards provide guidance to telecommunications companies in order to help identify and mitigate cybersecurity risk. One such standard is the voluntary framework released by the National Institute for Standards and Technologies ("NIST") in February 2014, in cooperation with other federal agencies and owners and operators of U.S. critical infrastructure. The NIST cybersecurity framework provides a prioritized and flexible model for organizations to identify and manage cyber risks inherent to their business. It was designed to supplement, not supersede, existing cybersecurity regulations and requirements. Several government agencies have encouraged compliance with the NIST cybersecurity framework, including the FCC, which is also considering expansion of its cybersecurity guidelines or the adoption of cybersecurity requirements. We cannot predict what proposals may be adopted or how new legislation and regulations, if any, would affect our business.

### ***MDUs / Inside Wiring***

The FCC has adopted a series of regulations designed to spur competition to established cable operators in MDU complexes. These regulations allow our competitors to access certain existing cable wiring inside MDUs. The FCC also adopted regulations limiting the ability of established cable operators, like us, to enter into exclusive service contracts for MDU complexes. In their current form, the FCC's regulations in this area favor our competitors.

### ***Pole Attachments***

The Communications Act requires most utilities owning utility poles to provide cable systems with access to poles and conduits and simultaneously subjects the rates charged for this access to either federal or state regulation. In 2011 and again in 2015, the FCC amended its existing pole attachment rules to promote broadband deployment. The 2011 order allows for new penalties in certain cases involving unauthorized attachments, but generally strengthens the cable industry's ability to access investor-owned utility poles on reasonable rates, terms, and conditions. Additionally, the 2011 order reduces the federal rate formula previously applicable to "telecommunications" attachments to closely approximate the rate formula applicable to "cable" attachments. The 2015 order continues the reconciliation of rates, effectively closing the remaining "loophole" that potentially allowed for significantly higher rates for telecommunications than for "cable" attachments in certain scenarios. Utility pole owners have appealed the 2015 order. Neither the 2011 order nor the 2015 order directly affect the rate in states that self-regulate (rather than allow the FCC to regulate pole rates), but many of those states have substantially the same rate for cable and telecommunications attachments.

Although the 2011 and 2015 orders do not impact the status quo treatment of cable-provided VoIP service as an unclassified service eligible for the favorable cable rate, the issue has not been fully resolved by the FCC, and a potential change in classification in a pending proceeding could adversely impact our pole attachment rates in states or for periods of time in which the cable rate is or was lower than the telecommunications rate. Additionally, although the FCC's 2015 reclassification of broadband Internet access as a telecommunications service also set forth the FCC's intention that pole rates not increase as result. That reclassification ruling could adversely impact our pole attachment rates in states or for periods of time in which the cable rate is or was lower than the telecommunications rate.

### ***Cable Rate Regulation***

Federal law strictly limits the potential scope of cable rate regulation. Pursuant to federal law, all video offerings are universally exempt from rate regulation, except for a cable system's minimum level of video programming service, referred to as "basic service," and associated equipment. Rate regulation of basic service and associated equipment operates pursuant to a federal formula, with local governments, commonly referred to as local franchising authorities, primarily responsible for administering this regulation. The majority of our local franchising authorities have never certified to regulate basic service cable rates. In 2015, the FCC adopted an order (which is now under appeal) reversing its historic approach to rate regulation certifications and requiring a local franchise authority interested in regulating cable rates to first make an affirmative showing that there is no "effective competition" (as defined under federal law) in the community. Very few local franchise authorities have filed the necessary rate regulation certification, and the FCC's 2015 order should make it more difficult for such entities to assert rate regulation in the future.

There have been calls to impose expanded rate regulation on the cable industry. Confronted with rapidly increasing cable programming costs, it is possible that Congress may adopt new constraints on the retail pricing or packaging of cable programming. Any such constraints could adversely affect our operations.

### ***Ownership Restrictions***

Federal regulation of the communications field traditionally included a host of ownership restrictions, which limited the size of certain media entities and restricted their ability to enter into competing enterprises. Through a series of legislative, regulatory, and judicial actions, most of these restrictions have been either eliminated or substantially relaxed. Changes in this regulatory area could alter the business environment in which we operate.

### ***Access Channels***

Local franchise agreements often require cable operators to set aside certain channels for public, educational, and governmental access programming. Federal law also requires cable systems to designate up to 15% of their channel capacity for commercial leased access by unaffiliated third parties, who may offer programming that our customers do not particularly desire. The FCC adopted revised rules in 2007 mandating a significant reduction in the rates that operators can charge commercial leased access users and imposing additional administrative requirements that would be burdensome on the cable industry. The effect of the FCC's revised rules was stayed by a federal court, pending a cable industry appeal and an adverse finding by the Office of Management and Budget. Although commercial leased access activity historically has been relatively limited, increased activity in this area could further burden the channel capacity of our cable systems.

### ***Other FCC Regulatory Matters***

FCC regulations cover a variety of additional areas, including, among other things: (1) equal employment opportunity obligations; (2) customer service standards; (3) technical service standards; (4) mandatory blackouts of certain network and syndicated programming; (5) restrictions on political advertising; (6) restrictions on advertising in children's programming; (7) licensing of systems and facilities; (8) maintenance of public files; (9) emergency alert systems; and (10) disability access, including new requirements governing video-description and closed-captioning. Each of these regulations restricts our business practices to varying degrees and may impose additional costs on our operations.

It is possible that Congress or the FCC will expand or modify its regulation of cable systems in the future, and we cannot predict at this time how that might impact our business.

### ***Copyright***

Cable systems are subject to a federal copyright compulsory license covering carriage of television and radio broadcast signals. The possible modification or elimination of this compulsory copyright license is the subject of continuing legislative proposals and administrative review and could adversely affect our ability to obtain desired broadcast programming.

Copyright clearances for non-broadcast programming services are arranged through private negotiations. Cable operators also must obtain music rights for locally originated programming and advertising from the major music performing rights organizations. These licensing fees have been the source of litigation in the past, and we cannot predict with certainty whether license fee disputes may arise in the future.

### ***Franchise Matters***

Our cable systems generally are operated pursuant to nonexclusive franchises, permits, and similar authorizations granted by a municipality or other state or local government entity in order to utilize and cross public rights-of-way. Cable franchises generally are granted for fixed terms and in many cases include monetary penalties for noncompliance and may be terminable if the franchisee fails to comply with material provisions. The specific terms and conditions of cable franchises vary significantly between jurisdictions. Cable franchises generally contain provisions governing cable operations, franchise fees, system construction, maintenance, technical performance, customer service standards, supporting and carrying public access channels, and changes in the ownership of the franchisee. A number of states subject cable systems to the jurisdiction of centralized state government agencies, such as public utility commissions. Although local franchising authorities have considerable discretion in establishing franchise terms, certain federal protections benefit cable operators. For example, federal law caps local franchise fees.

Prior to the scheduled expiration of our franchises, we generally initiate renewal proceedings with the granting authorities. The Communications Act of 1934, as amended (the "Communications Act"), which is the primary federal statute regulating interstate communications, provides for an orderly franchise renewal process in which granting authorities may not unreasonably withhold renewals. In connection with the franchise renewal process, however, many governmental authorities require the cable operator to make additional costly commitments. Historically, we have been able to renew our franchises without incurring significant costs, although any particular franchise may not be renewed on commercially favorable terms or otherwise. If we fail to obtain renewals of franchises representing a significant number of our customers, it could have a material adverse effect on our consolidated financial condition, results of operations, or our liquidity, including our ability to comply with our debt covenants. Similarly, if a local franchising authority's consent is required for the purchase or sale of a cable system, the local franchising authority may attempt to impose more burdensome requirements as a condition for providing its consent.

The traditional cable franchising regime has undergone significant change as a result of various federal and state actions. The FCC has adopted rules that streamline entry for new competitors (particularly those affiliated with telephone companies) and reduce certain franchising burdens for these new entrants. The FCC adopted more modest relief for existing cable operators.

At the same time, a substantial number of states have adopted new franchising laws. Again, these laws were principally designed to streamline entry for new competitors, and they often provide advantages for these new entrants that are not immediately available to existing cable operators. In many instances, these franchising regimes do not apply to established cable operators until the existing franchise expires or a competitor directly enters the franchise territory. The exact nature of these state franchising laws, and their varying application to new and existing video providers, will impact our franchising obligations and our competitive position.

### **Internet Service**

FCC regulations subject broadband Internet access services to certain regulations intended to ensure that end users can send and receive lawful Internet content without discrimination by Internet service providers such as us. Under these rules, providers of broadband Internet access service are not permitted to block access to, or restrict data rates for downloading, lawful content or ban the attachment of non-harmful devices to our service except to the extent required by reasonable network management practices. Internet service providers are also not permitted to give special priority to the transmission of content from our affiliates or accept payment from third parties to give special priority their content. Furthermore, Internet service providers are subject to a general obligation not to take actions that unreasonably interfere with the ability of end users (such as our subscribers) and edge providers (such as web sites) to exchange data with each other. The FCC has also stated that it will investigate problems that may arise regarding interconnection of the networks of retail broadband Internet access providers with "upstream" providers of Internet connectivity. In addition, the FCC rules require that we meet certain "transparency" obligations, i.e., that we disclose material technical and other terms and conditions applicable to our Internet service. These FCC regulations were upheld by the D.C. Circuit in June 2016, but remain subject to additional appeals. We cannot predict how those ongoing appeals will be resolved. Moreover, it is possible that Congress or the FCC will modify or repeal the existing regulations.

We cannot predict how the FCC will enforce its regulations in particular cases or whether in the future the FCC may seek to expand the scope of its regulatory obligations on Internet access service providers. In addition to the regulatory obligations noted above, providers of broadband Internet access service are obliged by the Communications Assistance for Law Enforcement Act (CALEA) to configure their networks in a manner that facilitates the ability of law enforcement, with proper legal authorization, to obtain information about our customers, including the content of their Internet communications. The FCC and Congress also are considering subjecting Internet access services to the Universal Service funding requirements. These funding requirements could impose significant new costs on our Internet service. Also, the FCC and some state regulatory commissions direct certain subsidies to telephone companies deploying broadband to areas deemed to be "unserved" or "underserved." We have opposed such subsidies when directed to areas that we serve. Despite our efforts, future subsidies may be directed to areas served by us, which could

result in subsidized competitors operating in our service territories. State and local governmental organizations have also adopted Internet-related regulations. These various governmental jurisdictions are also considering additional regulations in these and other areas, such as privacy, pricing, service and product quality, and taxation. The adoption of new Internet regulations or the adaptation of existing laws to the Internet could adversely affect our business.

Aside from the FCC's generally applicable regulations, we have made certain commitments to comply with the FCC's order in connection with the FCC's approval of the TWC Transaction and the Bright House Transaction (discussed above).

The FCC is considering whether online video distributors ("OVDs") that offer programming to customers with a broadband Internet connection should be classified as multichannel video programming distributors ("MVPDs"), and thereby subject to the program access protections available to MVPDs, as well as some of the regulatory requirements applicable to MVPDs. The outcome of this proceeding, which could impact how OVDs compete in the future with traditional cable service, cannot be determined at the current time.

### **Voice Service**

The Telecommunications Act of 1996 created a more favorable regulatory environment for us to provide telecommunications and/or competitive voice services than had previously existed. In particular, it established requirements ensuring that competitive telephone companies could interconnect their networks with those providers of traditional telecommunications services to open the market to competition. The FCC has subsequently ruled that competitive telephone companies that support VoIP services, such as those we offer our customers, are entitled to interconnection with incumbent providers of traditional telecommunications services, which ensures that our VoIP services can compete in the market. Since that time, the FCC has initiated a proceeding to determine whether such interconnection rights should extend to traditional and competitive networks utilizing IP technology, and how to encourage the transition to IP networks throughout the industry. New rules or obligations arising from these proceedings may affect our ability to compete in the provision of voice services.

The FCC has collected extensive data from providers of point to point transport ("special access") services, such as us, and the FCC may use that data to evaluate whether the market for such services is competitive, or whether the market should be subject to further regulation, which may increase our costs or constrain our ability to compete in this market. The FCC also recently selected a new national local number portability administrator, and the change to that new administrator may adversely impact our ability to manage number porting and related tasks.

Further regulatory changes are being considered that could impact our voice business and that of our primary telecommunications competitors. The FCC and state regulatory authorities are considering, for example, whether certain common carrier regulations traditionally applied to incumbent local exchange carriers should be modified or reduced, and the extent to which common carrier requirements should be extended to VoIP providers. The FCC has already determined that certain providers of voice services using Internet Protocol technology must comply with requirements relating to 911 emergency services ("E911"), the CALEA (the statute governing law enforcement access to and surveillance of communications), Universal Service Fund contributions, customer privacy and Customer Proprietary Network Information issues, number portability, network outage reporting, rural call completion, disability access, regulatory fees, and discontinuance of service. In November 2014, the FCC adopted an order imposing limited back-up power obligations on providers of facilities-based fixed, residential voice services that are not otherwise line-powered, including our VoIP services. This order became effective in February 2016 and requires us to disclose certain information to customers and to make back-up power available at the point of sale. In March 2007, a federal appeals court affirmed the FCC's decision concerning federal regulation of certain VoIP services, but declined to specifically find that VoIP service provided by cable companies, such as we provide, should be regulated only at the federal level. As a result, some states have begun proceedings to subject cable VoIP services to state level regulation, and at least one state has asserted jurisdiction over our VoIP services. We have filed a legal challenge to that state's assertion of jurisdiction, which is now pending before a federal district court in Minnesota. Although we have registered with, or obtained certificates or authorizations from the FCC and the state regulatory authorities in those states in which we offer competitive voice services in order to ensure the continuity of our services and to maintain needed network interconnection arrangements, it is unclear whether and how these and other ongoing regulatory matters ultimately will be resolved.

## Transaction-Related Commitments

In connection with approval of the Transactions, federal and state regulators imposed a number of post-merger conditions on us including but not limited to the following.

### *FCC Conditions*

- Offer settlement-free Internet interconnection to any party that meets the requirements of our Interconnection Policy (available on Charter's website) on terms generally consistent with the policy for seven years (with a possible reduction to five);
- Deploy and offer high-speed broadband Internet access service to an additional two million locations over five years, at least one million of which must be in areas outside our footprint that face competition from another high-speed Internet provider;
- Refrain from charging usage-based prices or imposing data caps on any fixed mass market broadband Internet access service plans for seven years (with a possible reduction to five);
- Offer 30/4 Mbps discounted broadband where technically feasible to eligible customers throughout our service area for four years from the offer's commencement; and
- Continue to provide CableCARDS to any new or existing customer upon request for use in third-party retail devices for four years-and continue to support such CableCARDS for seven years (in each case, unless the FCC changes the relevant rules).

The FCC conditions also contain a number of compliance reporting requirements.

### *DOJ Conditions*

The Department of Justice ("DOJ") Order prohibits us from entering into or enforcing any agreement with a video programmer that forbids, limits or creates incentives to limit the video programmer's provision of content to OVDs. We will not be able to avail ourselves of other distributors' most favored nation ("MFN") provisions if they are inconsistent with this prohibition. The DOJ's conditions are effective for seven years, although we may petition the DOJ to eliminate the conditions after five years.

### *State Conditions*

Certain state regulators, including California, New York, Hawaii and New Jersey also imposed conditions in connection with the approval of the Transactions. These conditions include requirements related to:

- Upgrading networks within the designated state, including upgrades to broadband speeds and conversion of all households served within California and New York to an all-digital platform;
- Building out our network to households and business locations that are not currently served by cable within the designated states;
- Offering LifeLine service discounts and low-income broadband to eligible households served within the applicable states;
- Investing in service improvement programs and customer service enhancements and maintaining customer-facing jobs within the designated state;
- Continuing to make legacy service offerings available, including allowing Legacy TWC and Legacy Bright House customers to maintain their existing service offerings for a period of three years; and
- Complying with reporting requirements.

## Employees

As of December 31, 2016, we had approximately 91,500 active full-time equivalent employees. At December 31, 2016, approximately 2,500 of our employees were represented by collective bargaining agreements. We believe we have good relations with our employees including those represented by collective bargaining agreements.

## Item 1A. Risk Factors.

### Risks Related to the Integration of the Transactions

*If we are not able to successfully integrate our business with that of Legacy TWC and Legacy Bright House within the anticipated time frame, or at all, the anticipated cost savings and other benefits of the Transactions may not be realized fully, or at all, or*

*may take longer to realize than expected. In such circumstance, we may not perform as expected and the value of Charter's Class A common stock may be adversely affected.*

Until the closing of the Transactions, Legacy Charter, Legacy TWC and Legacy Bright House operated independently, and there can be no assurances that their businesses can be integrated successfully. We now have significantly more systems, assets, investments, businesses, customers and employees than each company did prior to the Transactions. It is possible that the integration process could result in the loss of key Charter employees, the loss of customers, the disruption of our ongoing businesses or in unexpected integration issues, higher than expected integration costs and an overall post-completion integration process that takes longer than originally anticipated. The process of integrating Legacy TWC and Legacy Bright House with the Legacy Charter operations will require significant capital expenditures and the expansion of certain operations and operating and financial systems. Management will be required to devote a significant amount of time and attention to the integration process and there is a significant degree of difficulty and management involvement inherent in that process. These difficulties include:

- integrating the companies' operations and corporate functions;
- integrating the companies' technologies, networks and customer service platforms;
- integrating and unifying the product offerings and services available to customers, including customer premise equipment and video user interfaces;
- harmonizing the companies' operating practices, employee development and compensation programs, internal controls and other policies, procedures and processes;
- maintaining existing relationships and agreements with customers, providers, programmers and other vendors and avoiding delays in entering into new agreements with prospective customers, providers and vendors;
- addressing possible differences in business backgrounds, corporate cultures and management philosophies;
- consolidating the companies' administrative and information technology infrastructure;
- coordinating programming and marketing efforts;
- coordinating geographically dispersed organizations;
- integrating information, purchasing, provisioning, accounting, finance, sales, billing, payroll, reporting and regulatory compliance systems;
- completing the conversion of analog systems to all-digital for the Legacy TWC and Legacy Bright House systems; and
- attracting and retaining the necessary personnel associated with the acquired assets.

Even if the new businesses are successfully integrated, it may not be possible to realize the benefits that are expected to result from the Transactions, or realize these benefits within the time frame that is expected. For example, the elimination of duplicative costs may not be possible or may take longer than anticipated, or the benefits from the Transactions may be offset by costs incurred or delays in integrating the businesses and increased operating costs. If the combined company fails to realize the anticipated benefits from the transactions, our liquidity, results of operations, financial condition and/or share price may be adversely affected. In addition, at times, the attention of certain members of our management and resources may be focused on the integration of the businesses and diverted from day-to-day business operations, which may disrupt the business of the combined company.

*If the operating results of Legacy TWC and/or Legacy Bright House are less than our expectations, or an increase in the capital expenditures to upgrade and maintain those assets as well as to keep pace with technological developments are greater than expected, we may not achieve the expected level of financial results from the Transactions.*

We will derive a portion of our continuing revenues and earnings per share from the operations of Legacy TWC and Legacy Bright House. Therefore, any negative impact on these companies or the operating results derived from such companies could harm the combined company's operating results.

Our business and the businesses of Legacy TWC and Legacy Bright House are characterized by rapid technological change and the introduction of new products and services. We intend to make investments in the combined business and transition toward only using two-way all-digital set-top boxes. The increase in capital expenditures necessary for the transition toward two-way set-top boxes in the business may negatively impact the expected financial results from the Transactions. The combined company may not be able to fund the capital expenditures necessary to keep pace with technological developments, execute the plans to do so, or anticipate the demand of its customers for products and services requiring new technology or bandwidth. Our inability to maintain, expand and upgrade our existing or combined businesses could materially adversely affect our financial condition and results of operations.

The Transactions were accounted for as an acquisition in accordance with accounting principles generally accepted in the United States. Under the acquisition method of accounting, the assets and liabilities of Legacy TWC and Legacy Bright House have been recorded, as of the date of completion of the Transactions, at their respective fair values and added to our assets and liabilities.

The excess of the purchase price over those fair values has been recorded as goodwill. To the extent the value of goodwill or intangibles becomes impaired, we may be required to incur material charges relating to such impairment. Such a potential impairment charge could have a material impact on our operating results.

*As a result of the closing of the Transactions, our businesses are subject to the conditions set forth in the FCC Order and the DOJ Consent Decree and those imposed by state utility commissions and local franchise authorities, and there can be no assurance that these conditions will not have an adverse effect on our businesses and results of operations.*

In connection with the Transactions, the FCC Order, the DOJ Consent Decree, and the approvals from state utility commissions and local franchise authorities incorporated numerous commitments and voluntary conditions made by the parties and imposed numerous conditions on our businesses relating to the operation of our business and other matters. Among other things, (i) we will not be permitted to charge usage-based prices or impose data caps and will be prohibited from charging interconnection fees for qualifying parties; (ii) we will be prohibited from entering into or enforcing any agreement with a programmer that forbids, limits or creates incentives to limit the programmer's provision of content to OVD and cannot retaliate against programmers for licensing to OVDs; (iii) we will not be able to avail ourselves of other distributors' most favored nation ("MFN") provisions if they are inconsistent with this prohibition; (iv) we must undertake a number of actions designed to promote diversity; (v) we must appoint an independent compliance monitor and comply with a broad array of reporting requirements; and (v) we must satisfy various other conditions relating to our Internet services, including building out an additional two million locations with access to a high-speed connection of at least 60 megabits per second with at least one million of those connections in competition with another high-speed broadband provider in the market served, and implementing a reduced price high-speed Internet program for low income families. These and other conditions and commitments relating to the Transactions are of varying duration, ranging from three to seven years. In light of the breadth and duration of the conditions and potential changes in market conditions during the time the conditions and commitments are in effect, there can be no assurance that our compliance, and ability to comply, with the conditions will not have a material adverse effect on our business or results of operations.

#### **Risks Related to Our Indebtedness**

*We have a significant amount of debt and may incur significant additional debt, including secured debt, in the future, which could adversely affect our financial health and our ability to react to changes in our business.*

We have a significant amount of debt and may (subject to applicable restrictions in our debt instruments) incur additional debt in the future. As of December 31, 2016, our total principal amount of debt was approximately \$60.0 billion.

Our significant amount of debt could have consequences, such as:

- impact our ability to raise additional capital at reasonable rates, or at all;
- make us vulnerable to interest rate increases, in part because approximately 13% of our borrowings as of December 31, 2016 were, and may continue to be, subject to variable rates of interest;
- expose us to increased interest expense to the extent we refinance existing debt with higher cost debt;
- require us to dedicate a significant portion of our cash flow from operating activities to make payments on our debt, reducing our funds available for working capital, capital expenditures, and other general corporate expenses;
- limit our flexibility in planning for, or reacting to, changes in our business, the cable and telecommunications industries, and the economy at large;
- place us at a disadvantage compared to our competitors that have proportionately less debt; and
- adversely affect our relationship with customers and suppliers.

If current debt amounts increase, our business results are lower than expected, or credit rating agencies downgrade our debt limiting our access to investment grade markets, the related risks that we now face will intensify.

*The agreements and instruments governing our debt contain restrictions and limitations that could significantly affect our ability to operate our business, as well as significantly affect our liquidity.*

Our credit facilities and the indentures governing our debt contain a number of significant covenants that could adversely affect our ability to operate our business, our liquidity, and our results of operations. These covenants restrict, among other things, our and our subsidiaries' ability to:

- incur additional debt;
- repurchase or redeem equity interests and debt;
- issue equity;

- make certain investments or acquisitions;
- pay dividends or make other distributions;
- dispose of assets or merge;
- enter into related party transactions; and
- grant liens and pledge assets.

Additionally, the Charter Operating credit facilities require Charter Operating to comply with a maximum total leverage covenant and a maximum first lien leverage covenant. The breach of any covenants or obligations in our indentures or credit facilities, not otherwise waived or amended, could result in a default under the applicable debt obligations and could trigger acceleration of those obligations, which in turn could trigger cross defaults under other agreements governing our long-term indebtedness. In addition, the secured lenders under our notes and the Charter Operating credit facilities could foreclose on their collateral, which includes equity interests in our subsidiaries, and exercise other rights of secured creditors.

***We depend on generating sufficient cash flow to fund our debt obligations, capital expenditures, and ongoing operations.***

We are dependent on our cash on hand and cash flow from operations to fund our debt obligations, capital expenditures and ongoing operations. Our ability to service our debt and to fund our planned capital expenditures and ongoing operations will depend on our ability to continue to generate cash flow and our access (by dividend or otherwise) to additional liquidity sources at the applicable obligor. Our ability to continue to generate cash flow is dependent on many factors, including:

- our ability to sustain and grow revenues and cash flow from operations by offering video, Internet, voice, advertising and other services to residential and commercial customers, to adequately meet the customer experience demands in our markets and to maintain and grow our customer base, particularly in the face of increasingly aggressive competition, the need for innovation and the related capital expenditures;
- the impact of competition from other market participants, including but not limited to incumbent telephone companies, direct broadcast satellite operators, wireless broadband and telephone providers, DSL providers, video provided over the Internet and providers of advertising over the Internet;
- general business conditions, economic uncertainty or downturn, high unemployment levels and the level of activity in the housing sector;
- our ability to obtain programming at reasonable prices or to raise prices to offset, in whole or in part, the effects of higher programming costs (including retransmission consents);
- the development and deployment of new products and technologies including our cloud-based user interface, Spectrum Guide®;
- the effects of governmental regulation on our business or potential business combination transactions; and
- any events that disrupt our networks, information systems or properties and impair our operating activities and negatively impact our reputation.

Some of these factors are beyond our control. If we are unable to generate sufficient cash flow or we are unable to access additional liquidity sources, we may not be able to service and repay our debt, operate our business, respond to competitive challenges, or fund our other liquidity and capital needs.

***Restrictions in our subsidiaries' debt instruments and under applicable law limit their ability to provide funds to us and our subsidiaries that are debt issuers.***

Our primary assets are our equity interests in our subsidiaries. Our operating subsidiaries are separate and distinct legal entities and are not obligated to make funds available to their debt issuer holding companies for payments on our notes or other obligations in the form of loans, distributions, or otherwise. Charter Operating's ability to make distributions to Charter or CCO Holdings, our other primary debt issuers other than TWC, LLC and TWCE, to service debt obligations is subject to its compliance with the terms of its credit facilities, and restrictions under applicable law. TWC, LLC's and TWCE's ability to make distributions to Charter, CCO Holdings or Charter Operating to service debt obligations is subject to restrictions under applicable law. See Note 9 to the accompanying consolidated financial statements contained in "Part II. Item 8. Financial Statements and Supplementary Data." Under the Delaware Limited Liability Company Act (the "Act"), our subsidiaries may only make distributions if the relevant entity has "surplus" as defined in the Act. Under fraudulent transfer laws, our subsidiaries may not pay dividends if the relevant entity is insolvent or is rendered insolvent thereby. The measures of insolvency for purposes of these fraudulent transfer laws vary depending upon the law applied in any proceeding to determine whether a fraudulent transfer has occurred. Generally, however, an entity would be considered insolvent if:

- the sum of its debts, including contingent liabilities, was greater than the fair saleable value of all its assets;

- the present fair saleable value of its assets was less than the amount that would be required to pay its probable liability on its existing debts, including contingent liabilities, as they become absolute and mature: or
- it could not pay its debts as they became due.

We believe that our relevant subsidiaries currently have surplus and are not insolvent, however, these subsidiaries may become insolvent in the future. Our direct or indirect subsidiaries include the borrowers and guarantors under the Charter Operating credit facilities and notes, under the CCO Holdings notes and under the TWC, LLC and TWCE notes. As of December 31, 2016, our total principal amount of debt was approximately \$60.0 billion.

In the event of bankruptcy, liquidation, or dissolution of one or more of our subsidiaries, that subsidiary's assets would first be applied to satisfy its own obligations, and following such payments, such subsidiary may not have sufficient assets remaining to make payments to its parent company as an equity holder or otherwise. In that event, the lenders under Charter Operating's credit facilities and notes and any other indebtedness of our subsidiaries whose interests are secured by substantially all of our operating assets, and all holders of other debt of Charter Operating, CCO Holdings, TWC, LLC and TWCE will have the right to be paid in full before us from any of our subsidiaries' assets.

*Some of our outstanding debt is subject to change of control provisions. We may not have the ability to raise the funds necessary to fulfill our obligations under our indebtedness following a change of control, which would place us in default under the applicable debt instruments.*

We may not have the ability to raise the funds necessary to fulfill our obligations under our notes and our credit facilities following a change of control. Under the indentures governing the CCO Holdings' notes, upon the occurrence of specified change of control events, the debt issuer is required to offer to repurchase all of its outstanding notes. However, we may not have sufficient access to funds at the time of the change of control event to make the required repurchase of the applicable notes, and Charter Operating is limited in its ability to make distributions or other payments to any debt issuer to fund any required repurchase. In addition, a change of control under the Charter Operating credit facilities would result in a default under those credit facilities, which would trigger a default under the indentures governing the CCO Holdings' notes, the Charter Operating notes and the TWC, LLC and TWCE notes. Because such credit facilities and notes are obligations of Charter Operating and its subsidiaries, the credit facilities would have to be repaid before Charter Operating's assets could be available to CCO Holdings to repurchase their notes. Any failure to make or complete a change of control offer would place CCO Holdings in default under their notes. The failure of our subsidiaries to make a change of control offer or repay the amounts accelerated under their notes and credit facilities would place them in default under such agreements.

## **Risks Related to Our Business**

*We operate in a very competitive business environment, which affects our ability to attract and retain customers and can adversely affect our business, operations and financial results.*

The industry in which we operate is highly competitive and has become more so in recent years. In some instances, we compete against companies with fewer regulatory burdens, better access to financing, greater personnel resources, greater resources for marketing, greater and more favorable brand name recognition, and long-established relationships with regulatory authorities and customers. Increasing consolidation in the cable industry and the repeal of certain ownership rules have provided additional benefits to certain of our competitors, either through access to financing, resources, or efficiencies of scale.

Our residential video service faces competition from a number of sources, including direct broadcast satellite services, as well as other companies that deliver movies, television shows and other video programming over broadband Internet connections to TVs, computers, tablets and mobile devices. Our residential Internet service faces competition from the phone companies' DSL, FTTH and wireless broadband offerings as well as from a variety of companies that offer other forms of online services, including wireless and satellite-based broadband services. Our residential voice service competes with wireless and wireline phone providers, as well as other forms of communication, such as text messaging on cellular phones, instant messaging, social networking services, video conferencing and email. Competition from these companies, including intensive marketing efforts with aggressive pricing, exclusive programming and increased HD broadcasting may have an adverse impact on our ability to attract and retain customers.

Overbuilds could also adversely affect our growth, financial condition, and results of operations, by creating or increasing competition. We are aware of traditional overbuild situations impacting certain of our markets, however, we are unable to predict the extent to which additional overbuild situations may occur.

Our services may not allow us to compete effectively. Competition may reduce our expected growth of future cash flows which may contribute to future impairments of our franchises and goodwill and our ability to meet cash flow requirements, including

debt service requirements. For additional information regarding the competition we face, see “Business —Competition” and “—Regulation and Legislation.”

*We face risks relating to competition for the leisure time and discretionary spending of audiences, which has intensified in part due to advances in technology and changes in consumer expectations and behavior.*

In addition to the various competitive factors discussed above, we are subject to risks relating to increasing competition for the leisure time, shifting consumer needs and discretionary spending of consumers. We compete with all other sources of entertainment, news and information delivery, as well as a broad range of communications products and services. Technological advancements, such as new video formats and Internet streaming and downloading of programming that can be viewed on televisions, computers, smartphones and tablets, many of which have been beneficial to us, have nonetheless increased the number of entertainment and information delivery choices available to consumers and intensified the challenges posed by audience fragmentation.

Newer products and services, particularly alternative methods for the distribution, sale and viewing of content will likely continue to be developed, further increasing the number of competitors that we face. The increasing number of choices available to audiences, including low-cost or free choices, could negatively impact not only consumer demand for our products and services, but also advertisers’ willingness to purchase advertising from us. We compete for the sale of advertising revenue with television networks and stations, as well as other advertising platforms, such as radio, print and, increasingly, online media. Our failure to effectively anticipate or adapt to new technologies and changes in consumer expectations and behavior could significantly adversely affect our competitive position and our business and results of operations.

*Our exposure to the economic conditions of our current and potential customers, vendors and third parties could adversely affect our cash flow, results of operations and financial condition.*

We are exposed to risks associated with the economic conditions of our current and potential customers, the potential financial instability of our customers and their financial ability to purchase our products. If there were a general economic downturn, we may experience increased cancellations by our customers or unfavorable changes in the mix of products purchased, including an increase in the number of homes that replace their video service with Internet-delivered and/or over-air content, which would negatively impact our ability to attract customers, increase rates and maintain or increase revenue. In addition, providing video services is an established and highly penetrated business. Our ability to gain new video subscribers is dependent to a large extent on growth in occupied housing in our service areas, which is influenced by both national and local economic conditions. Weak economic conditions may also have a negative impact on our advertising revenue. These events have adversely affected us in the past, and may adversely affect our cash flow, results of operations and financial condition if a downturn were to occur.

In addition, we are susceptible to risks associated with the potential financial instability of the vendors and third parties on which we rely to provide products and services or to which we outsource certain functions. The same economic conditions that may affect our customers, as well as volatility and disruption in the capital and credit markets, also could adversely affect vendors and third parties and lead to significant increases in prices, reduction in output or the bankruptcy of our vendors or third parties upon which we rely. Any interruption in the services provided by our vendors or by third parties could adversely affect our cash flow, results of operation and financial condition.

*We face risks inherent in our commercial business.*

We may encounter unforeseen difficulties as we increase the scale of our service offerings to businesses. We sell Internet access, data networking and fiber connectivity to cellular towers and office buildings, video and business voice services to businesses and have increased our focus on growing this business. In order to grow our commercial business, we expect to continue investment in technology, equipment and personnel focused on the commercial business. Commercial business customers often require service level agreements and generally have heightened customer expectations for reliability of services. If our efforts to build the infrastructure to scale the commercial business are not successful, the growth of our commercial services business would be limited. We depend on interconnection and related services provided by certain third parties for the growth of our commercial business. As a result, our ability to implement changes as the services grow may be limited. If we are unable to meet these service level requirements or expectations, our commercial business could be adversely affected. Finally, we expect advances in communications technology, as well as changes in the marketplace and the regulatory and legislative environment. Consequently, we are unable to predict the effect that ongoing or future developments in these areas might have on our voice and commercial businesses and operations.

*Programming costs are rising at a much faster rate than wages or inflation, and we may not have the ability to reduce or moderate the growth rates of, or pass on to our customers, our increasing programming costs, which would adversely affect our cash flow and operating margins.*

Video programming has been, and is expected to continue to be, our largest operating expense item. In recent years, the cable industry has experienced a rapid escalation in the cost of programming. We expect programming costs to continue to increase because of a variety of factors including amounts paid for broadcast station retransmission consent, annual increases imposed by programmers and carriage of incremental programming, including new services and VOD programming. The inability to fully pass programming cost increases on to our customers has had, and is expected in the future to have, an adverse impact on our cash flow and operating margins associated with the video product. We have programming contracts that have expired and others that will expire at or before the end of 2017. There can be no assurance that these agreements will be renewed on favorable or comparable terms. Three programmers have filed lawsuits against us regarding which legacy programming arrangements apply after the closing of the Transactions, and there can be no assurance that other programmers will not bring similar suits in the future. In addition, a number of programmers have begun to sell their services through alternative distribution channels which may cause those programmers to seek even higher programming fees from us as this may degrade security of their product, increase their operating costs or reduce their advertising revenue. To the extent that we are unable to reach agreement with certain programmers on terms that we believe are reasonable, we have been, and may be in the future, forced to remove such programming channels from our line-up, which may result in a loss of customers. Our failure to carry programming that is attractive to our subscribers could adversely impact our customer levels, operations and financial results. In addition, if our Internet customers are unable to access desirable content online because content providers block or limit access by our subscribers as a class, our ability to gain and retain customers, especially Internet customers, may be negatively impacted.

Increased demands by owners of some broadcast stations for carriage of other services or payments to those broadcasters for retransmission consent are likely to further increase our programming costs. Federal law allows commercial television broadcast stations to make an election between "must-carry" rights and an alternative "retransmission-consent" regime. When a station opts for the retransmission consent regime, we are not allowed to carry the station's signal without the station's permission. In some cases, we carry stations under short-term arrangements while we attempt to negotiate new long-term retransmission agreements. If negotiations with these programmers prove unsuccessful, they could require us to cease carrying their signals, possibly for an indefinite period. Any loss of stations could make our video service less attractive to customers, which could result in less subscription and advertising revenue. In retransmission-consent negotiations, broadcasters often condition consent with respect to one station on carriage of one or more other stations or programming services in which they or their affiliates have an interest. Carriage of these other services, as well as increased fees for retransmission rights, may increase our programming expenses and diminish the amount of capacity we have available to introduce new services, which could have an adverse effect on our business and financial results.

*Our inability to respond to technological developments and meet customer demand for new products and services could adversely affect our ability to compete effectively.*

We operate in a highly competitive, consumer-driven and rapidly changing environment. Our success is, to a large extent, dependent on our ability to acquire, develop, adopt, upgrade and exploit new and existing technologies to address consumers' changing demands and distinguish our services from those of our competitors. We may not be able to accurately predict technological trends or the success of new products and services. If we choose technologies or equipment that are less effective, cost-efficient or attractive to customers than those chosen by our competitors, if we offer services that fail to appeal to consumers, are not available at competitive prices or that do not function as expected, or we are not able to fund the expenditures necessary to keep pace with technological developments, our competitive position could deteriorate, and our business and financial results could suffer.

The ability of some of our competitors to introduce new technologies, products and services more quickly than we do may adversely affect our competitive position. Furthermore, advances in technology, decreases in the cost of existing technologies or changes in competitors' product and service offerings may require us in the future to make additional research and development expenditures or to offer at no additional charge or at a lower price certain products and services that we currently offer to customers separately or at a premium. In addition, the uncertainty of our ability, and the costs, to obtain intellectual property rights from third parties could impact our ability to respond to technological advances in a timely and effective manner.

The implementation of our network-based user interface, Spectrum Guide may ultimately be unsuccessful or more expensive than anticipated. Our inability to maintain and expand our upgraded systems and provide advanced services such as a state of the art user interface in a timely manner, or to anticipate the demands of the marketplace, could materially adversely affect our ability to attract and retain customers. Consequently, our growth, financial condition and results of operations could suffer materially.

*We depend on third party service providers, suppliers and licensors; thus, if we are unable to procure the necessary services, equipment, software or licenses on reasonable terms and on a timely basis, our ability to offer services could be impaired, and our growth, operations, business, financial results and financial condition could be materially adversely affected.*

We depend on a limited number of third party service providers, suppliers and licensors to supply some of the services, hardware, software and operational support necessary to provide some of our services. Some of our hardware, software and operational support vendors, and service providers represent our sole source of supply or have, either through contract or as a result of intellectual property rights, a position of some exclusivity. If any of these parties breaches or terminates its agreement with us or otherwise fails to perform its obligations in a timely manner, demand exceeds these vendors' capacity, they experience operating or financial difficulties, they significantly increase the amount we pay for necessary products or services, or they cease production of any necessary product due to lack of demand, profitability or a change in ownership or are otherwise unable to provide the equipment or services we need in a timely manner, at our specifications and at reasonable prices, our ability to provide some services might be materially adversely affected, or the need to procure or develop alternative sources of the affected materials or services might delay our ability to serve our customers. In addition, the existence of only a limited number of vendors of key technologies can lead to less product innovation and higher costs. These events could materially and adversely affect our ability to retain and attract customers and our operations, business, financial results and financial condition.

Our cable systems have historically been restricted to using one of two proprietary conditional access security systems, which we believe has limited the number of manufacturers producing set-top boxes for such systems. As an alternative, we developed a new conditional access security system which can be downloaded into set-top boxes with features we specify that could be provided by a variety of manufacturers. We refer to our specified set-top box as our Worldbox. Additionally, we are developing technology to allow our two current proprietary conditional access security systems to be software downloadable into our Worldbox. In order to realize the broadest benefits of our Worldbox technology, we must now complete the support for the downloadable proprietary conditional access security systems within the Worldbox. We cannot provide assurances that this implementation will ultimately be successful or completed in the expected timeframe or at the expected budget.

*Our business may be adversely affected if we cannot continue to license or enforce the intellectual property rights on which our business depends.*

We rely on patent, copyright, trademark and trade secret laws and licenses and other agreements with our employees, customers, suppliers and other parties to establish and maintain our intellectual property rights in technology and the products and services used in our operations. Also, because of the rapid pace of technological change, we both develop our own technologies, products and services and rely on technologies developed or licensed by third parties. However, any of our intellectual property rights could be challenged or invalidated, or such intellectual property rights may not be sufficient to permit us to take advantage of current industry trends or otherwise to provide competitive advantages, which could result in costly redesign efforts, discontinuance of certain product or service offerings or other competitive harm. We may not be able to obtain or continue to obtain licenses from these third parties on reasonable terms, if at all. In addition, claims of intellectual property infringement could require us to enter into royalty or licensing agreements on unfavorable terms, incur substantial monetary liability or be enjoined preliminarily or permanently from further use of the intellectual property in question, which could require us to change our business practices or offerings and limit our ability to compete effectively. Even unsuccessful claims can be time-consuming and costly to defend and may divert management's attention and resources away from our business. In recent years, the number of intellectual property infringement claims has been increasing in the communications and entertainment industries, and, with increasing frequency, we are party to litigation alleging that certain of our services or technologies infringe the intellectual property rights of others.

*Various events could disrupt our networks, information systems or properties and could impair our operating activities and negatively impact our reputation and financial results.*

Network and information systems technologies are critical to our operating activities, both for our internal uses, such as network management and supplying services to our customers, including customer service operations and programming delivery. Network or information system shutdowns or other service disruptions caused by events such as computer hacking, dissemination of computer viruses, worms and other destructive or disruptive software, "cyber attacks," process breakdowns, denial of service attacks and other malicious activity pose increasing risks. Both unsuccessful and successful "cyber attacks" on companies have continued to increase in frequency, scope and potential harm in recent years. While we develop and maintain systems seeking to prevent systems-related events and security breaches from occurring, the development and maintenance of these systems is costly and requires ongoing monitoring and updating as techniques used in such attacks become more sophisticated and change frequently. We, and the third parties on which we rely, may be unable to anticipate these techniques or implement adequate preventive measures. While from time to time attempts have been made to access our network, these attempts have not as yet resulted in any material release of information, degradation or disruption to our network and information systems.

Our network and information systems are also vulnerable to damage or interruption from power outages, telecommunications failures, accidents, natural disasters (including extreme weather arising from short-term or any long-term changes in weather patterns), terrorist attacks and similar events. Further, the impacts associated with extreme weather or long-term changes in weather patterns, such as rising sea levels or increased and intensified storm activity, may cause increased business interruptions or may require the relocation of some of our facilities. Our system redundancy may be ineffective or inadequate, and our disaster recovery planning may not be sufficient for all eventualities.

Any of these events, if directed at, or experienced by, us or technologies upon which we depend, could have adverse consequences on our network, our customers and our business, including degradation of service, service disruption, excessive call volume to call centers, and damage to our or our customers' equipment and data. Large expenditures may be necessary to repair or replace damaged property, networks or information systems or to protect them from similar events in the future. Moreover, the amount and scope of insurance that we maintain against losses resulting from any such events or security breaches may not be sufficient to cover our losses or otherwise adequately compensate us for any disruptions to our business that may result. Any such significant service disruption could result in damage to our reputation and credibility, customer dissatisfaction and ultimately a loss of customers or revenue. Any significant loss of customers or revenue, or significant increase in costs of serving those customers, could adversely affect our growth, financial condition and results of operations.

Furthermore, our operating activities could be subject to risks caused by misappropriation, misuse, leakage, falsification or accidental release or loss of information maintained in our information technology systems and networks and those of our third-party vendors, including customer, personnel and vendor data. We provide certain confidential, proprietary and personal information to third parties in connection with our business, and there is a risk that this information may be compromised.

As a result of the increasing awareness concerning the importance of safeguarding personal information, the potential misuse of such information and legislation that has been adopted or is being considered regarding the protection, privacy and security of personal information, information-related risks are increasing, particularly for businesses like ours that process, store and transmit large amount of data, including personal information for our customers. We could be exposed to significant costs if such risks were to materialize, and such events could damage our reputation, credibility and business and have a negative impact on our revenue. We could be subject to regulatory actions and claims made by consumers in private litigations involving privacy issues related to consumer data collection and use practices. We also could be required to expend significant capital and other resources to remedy any such security breach.

The risk described above may be increased during the period in which we are integrating our people, processes and systems as a result of the Transactions.

*For tax purposes, Charter could experience a deemed ownership change in the future that could limit its ability to use its tax loss carryforwards.*

Charter had approximately \$11.2 billion of federal tax net operating loss carryforwards resulting in a gross deferred tax asset of approximately \$3.9 billion as of December 31, 2016. These losses resulted from the operations of Charter Communications Holdings Company, LLC ("Charter Holdco") and its subsidiaries and from loss carryforwards received as a result of the TWC Transaction. Federal tax net operating loss carryforwards expire in the years 2018 through 2035. In addition, Charter had state tax net operating loss carryforwards resulting in a gross deferred tax asset (net of federal tax benefit) of approximately \$304 million as of December 31, 2016. State tax net operating loss carryforwards generally expire in the years 2017 through 2035.

In the past, Charter has experienced "ownership changes" as defined in Section 382 of the Internal Revenue Code of 1986, as amended (the "Code"). In general, an "ownership change" occurs whenever the percentage of the stock of a corporation owned, directly or indirectly, by "5-percent stockholders" (within the meaning of Section 382 of the Code) increases by more than 50 percentage points over the lowest percentage of the stock of such corporation owned, directly or indirectly, by such "5-percent stockholders" at any time over the preceding three years. As a result, Charter is subject to an annual limitation on the use of its loss carryforwards which existed at November 30, 2009 for the first "ownership change," those that existed at May 1, 2013 for the second "ownership change," and those created at May 18, 2016 for the third "ownership change." The limitation on Charter's ability to use its loss carryforwards, in conjunction with the loss carryforward expiration provisions, could reduce Charter's ability to use a portion of its loss carryforwards to offset future taxable income, which could result in Charter being required to make material cash tax payments. Charter's ability to make such income tax payments, if any, will depend at such time on its liquidity or its ability to raise additional capital, and/or on receipt of payments or distributions from Charter Holdco and its subsidiaries.

If Charter were to experience additional ownership changes in the future (as a result of purchases and sales of stock by its "5-percent stockholders," new issuances or redemptions of our stock, certain acquisitions of its stock and issuances, redemptions,

sales or other dispositions or acquisitions of interests in its "5-percent stockholders"), Charter's ability to use its loss carryforwards could become subject to further limitations.

*If Legacy TWC's Separation Transactions (as defined below), including the Distribution (as defined below), do not qualify as tax-free, either as a result of actions taken or not taken by Legacy TWC or as a result of the failure of certain representations by Legacy TWC to be true, Legacy TWC has agreed to indemnify Time Warner Inc. for its taxes resulting from such disqualification, which would be significant.*

As part of Legacy TWC's separation from Time Warner Inc. ("Time Warner") in March 2009 (the "Separation"), Time Warner received a private letter ruling from the IRS and Time Warner and TWC received opinions of tax counsel confirming that the transactions undertaken in connection with the Separation, including the transfer by a subsidiary of Time Warner of its 12.43% non-voting common stock interest in TW NY to TWC in exchange for 80 million newly issued shares of Legacy TWC's Class A common stock, Legacy TWC's payment of a special cash dividend to holders of Legacy TWC's outstanding Class A and Class B common stock, the conversion of each share of Legacy TWC's outstanding Class A and Class B common stock into one share of Legacy TWC common stock, and the pro-rata dividend of all shares of Legacy TWC common stock held by Time Warner to holders of record of Time Warner's common stock (the "Distribution" and, together with all of the transactions, the "Separation Transactions"), should generally qualify as tax-free to Time Warner and its stockholders for U.S. federal income tax purposes. The ruling and opinions rely on certain facts, assumptions, representations and undertakings from Time Warner and Legacy TWC regarding the past and future conduct of the companies' businesses and other matters. If any of these facts, assumptions, representations or undertakings are incorrect or not otherwise satisfied, Time Warner and its stockholders may not be able to rely on the ruling or the opinions and could be subject to significant tax liabilities. Notwithstanding the private letter ruling and opinions, the IRS could determine on audit that the Separation Transactions should be treated as taxable transactions if it determines that any of these facts, assumptions, representations or undertakings are not correct or have been violated, or for other reasons, including as a result of significant changes in the stock ownership of Time Warner or Legacy TWC after the Distribution.

Under the tax sharing agreement among Time Warner and Legacy TWC, Legacy TWC generally would be required to indemnify Time Warner against its taxes resulting from the failure of any of the Separation Transactions to qualify as tax-free as a result of (i) certain actions or failures to act by Legacy TWC or (ii) the failure of certain representations made by Legacy TWC to be true. In addition, even if Legacy TWC bears no contractual responsibility for taxes related to a failure of the Separation Transactions to qualify for their intended tax treatment, Treasury regulation section 1.1502-6 imposes on Legacy TWC several liability for all Time Warner federal income tax obligations relating to the period during which Legacy TWC was a member of the Time Warner federal consolidated tax group, including the date of the Separation Transactions. Similar provisions may apply under foreign, state or local law. Absent Legacy TWC causing the Separation Transactions to not qualify as tax-free, Time Warner has indemnified Legacy TWC against such several liability arising from a failure of the Separation Transactions to qualify for their intended tax treatment.

*If we are unable to retain key employees, our ability to manage our business could be adversely affected.*

Our operational results have depended, and our future results will depend, upon the retention and continued performance of our management team. Our ability to retain and hire new key employees for management positions could be impacted adversely by the competitive environment for management talent in the broadband communications industry. The loss of the services of key members of management and the inability or delay in hiring new key employees could adversely affect our ability to manage our business and our future operational and financial results.

*Our inability to successfully acquire and integrate other businesses, assets, products or technologies could harm our operating results.*

We continuously evaluate and pursue small and large acquisitions and strategic investments in businesses, products or technologies that we believe could complement or expand our business or otherwise offer growth or cost-saving opportunities. From time to time, we may enter into letters of intent with companies with which we are negotiating for potential acquisitions or investments, or as to which we are conducting due diligence. An investment in, or acquisition of, complementary businesses, products or technologies in the future could materially decrease the amount of our available cash or require us to seek additional equity or debt financing. We may not be successful in negotiating the terms of any potential acquisition, conducting thorough due diligence, financing the acquisition or effectively integrating the acquired business, product or technology into our existing business and operations. Our due diligence may fail to identify all of the problems, liabilities or other shortcomings or challenges of an acquired business, product or technology, including issues related to intellectual property, product quality or product architecture, regulatory compliance practices, revenue recognition or other accounting practices, or employee or customer issues.

Additionally, in connection with any acquisitions we complete, including the recently completed Transactions, we may not achieve the growth, synergies or other financial and operating benefits we expected to achieve, and we may incur write-downs, impairment charges or unforeseen liabilities that could negatively affect our operating results or financial position or could otherwise harm our business. Even if we are able to integrate the business operations obtained in such transactions successfully, it is not possible to predict with certainty if or when these cost synergies, growth opportunities and benefits will occur, or the extent to which they actually will be achieved. For example, the benefits from such transactions may be offset by costs incurred in integrating new business operations or in obtaining or attempting to obtain regulatory approvals, or increased operating costs that may be experienced as a result of the transactions. Realization of any benefits and cost synergies could be affected by the factors described in other risk factors and a number of factors beyond our control, as applicable, including, without limitation, general economic conditions, increased operating costs, the response of competitors and vendors and regulatory developments. Further, contemplating or completing an acquisition and integrating an acquired business, product or technology, individually or across multiple opportunities, could divert management and employee time and resources from other matters.

### **Risks Related to Ownership Position of Liberty Broadband Corporation and Advance/Newhouse Partnership**

#### ***Liberty Broadband and A/N have governance rights that give them influence over corporate transactions and other matters.***

Liberty Broadband currently owns a significant amount of Charter Class A common stock and is entitled to certain governance rights with respect to Charter. A/N currently owns Charter Class A common stock and a significant amount of membership interests in our subsidiary Charter Holdings that are convertible into our Charter Class A common stock and is entitled to certain governance rights with respect to Charter. Members of the Charter board of directors include directors who are also officers and directors of Liberty Broadband and directors who are current or former officers and directors of A/N. Dr. John Malone is the Chairman of Liberty Broadband, and Mr. Greg Maffei is the president and chief executive officer of Liberty Broadband. Steven Miron is the Chief Executive Officer of A/N and Michael Newhouse is an officer or director of several of A/N's affiliates. As of December 31, 2016, Liberty Broadband beneficially held approximately 19% of Charter's Class A common stock (including shares owned by Liberty Interactive over which Liberty Broadband holds an irrevocable voting proxy) and A/N beneficially held approximately 13% of Charter's Class A common stock, in each case assuming the conversion of the membership interests held by A/N. Pursuant to the stockholders agreement between Liberty Broadband, A/N and Charter, Liberty Broadband currently has the right to designate up to three directors as nominees for Charter's board of directors and A/N currently has the right to designate up to two directors as nominees for Charter's board of directors with one designated director to be appointed to each of the audit committee, the nominating and corporate governance committee, the compensation and benefits committee and the Finance Committee, in each case provided that each maintains certain specified voting or equity ownership thresholds and each nominee meets certain applicable requirements or qualifications.

In connection with the TWC Transaction, Liberty Broadband and Liberty Interactive entered into a proxy and right of first refusal agreement, pursuant to which Liberty Interactive granted Liberty Broadband an irrevocable proxy to vote all Charter Class A common stock owned beneficially or of record by Liberty Interactive, with certain exceptions. In addition, at the closing of the Bright House Transaction, A/N and Liberty Broadband entered into a proxy agreement pursuant to which A/N granted to Liberty Broadband a 5-year irrevocable proxy (which we refer to as the "A/N proxy") to vote, subject to certain exceptions, that number of shares of New Charter Class A common stock and New Charter Class B common stock, in each case held by A/N (such shares are referred to as the "proxy shares"), that will result in Liberty Broadband having voting power in Charter equal to 25.01% of the outstanding voting power of Charter, provided, that the voting power of the proxy shares is capped at 7.0% of the outstanding voting power of Charter. Therefore, giving effect to the Liberty Interactive proxy and the A/N proxy and the voting cap contained in the stockholders agreement, Liberty Broadband has 25.01% of the outstanding voting power in Charter. The stockholders agreement and Charter's amended and restated certificate of incorporation fixes the size of the board at 13 directors. Liberty Broadband and A/N are required to vote (subject to the applicable voting cap) their respective shares of Charter Class A common stock and Charter Class B common stock for the director nominees nominated by the nominating and corporate governance committee of the board of directors, including the respective designees of Liberty Broadband and A/N, and against any other nominees, except that, with respect to the unaffiliated directors, Liberty Broadband and A/N must instead vote in the same proportion as the voting securities are voted by stockholders other than A/N and Liberty Broadband or any group which includes any of them are voted, if doing so would cause a different outcome with respect to the unaffiliated directors. As a result of their rights under the stockholders agreement and their significant equity and voting stakes in Charter, Liberty Broadband and/or A/N, who may have interests different from those of other stockholders, will be able to exercise substantial influence over certain matters relating to the governance of Charter, including the approval of significant corporate actions, such as mergers and other business combination transactions.

*The stockholders agreement provides A/N and Liberty Broadband with preemptive rights with respect to issuances of Charter equity in connection with certain transactions, and in the event that A/N or Liberty Broadband exercises these rights, holders of Charter Class A common stock may experience further dilution.*

The stockholders agreement provides that A/N and Liberty Broadband will have certain contractual preemptive rights over issuances of Charter equity securities in connection with capital raising transactions, merger and acquisition transactions, and in certain other circumstances. Holders of Charter Class A common stock will not be entitled to similar preemptive rights with respect to such transactions. As a result, if Liberty Broadband and/or A/N elect to exercise their preemptive rights, (i) these parties would not experience the dilution experienced by the other holders of Charter Class A common stock, and (ii) such other holders of Charter Class A common stock may experience further dilution of their interest in Charter upon such exercise.

#### **Risks Related to Regulatory and Legislative Matters**

*Our business is subject to extensive governmental legislation and regulation, which could adversely affect our business.*

Regulation of the cable industry has increased cable operators' operational and administrative expenses and limited their revenues. Cable operators are subject to various laws and regulations including those covering the following:

- the provisioning and marketing of cable equipment and compatibility with new digital technologies;
- customer and employee privacy and data security;
- limited rate regulation of video service;
- copyright royalties for retransmitting broadcast signals;
- when a cable system must carry a particular broadcast station and when it must first obtain retransmission consent to carry a broadcast station;
- the provision of channel capacity to unaffiliated commercial leased access programmers;
- limitations on our ability to enter into exclusive agreements with multiple dwelling unit complexes and control our inside wiring;
- the provision of high-speed Internet service, including net neutrality or open Internet rules;
- the provision of voice communications;
- cable franchise renewals and transfers;
- equal employment opportunity, emergency alert systems, disability access, technical standards, marketing practices, customer service, and consumer protection; and
- approval for mergers and acquisitions often accompanied by the imposition of restrictions and requirements on an applicant's business in order to secure approval of the proposed transaction.

Legislators and regulators at all levels of government frequently consider changing, and sometimes do change, existing statutes, rules, regulations, or interpretations thereof, or prescribe new ones. Any future legislative, judicial, regulatory or administrative actions may increase our costs or impose additional restrictions on our businesses. For example, with respect to our retail broadband Internet access service, the FCC has (1) reclassified the service as a Title II service, (2) applied certain existing Title II provisions and associated regulations to it, (3) forbore from applying a range of other existing Title II provisions and associated regulations, but to varying degrees indicated that this forbearance may be only temporary, and (4) issued new rules expanding disclosure requirements and prohibiting blocking, throttling, paid prioritization, and unreasonable interference with the ability of end users and edge providers to reach each other. The order also subjected broadband providers' Internet traffic exchange rates and practices to potential FCC oversight for the first time and created a mechanism for third parties to file complaints regarding these matters. These FCC actions were upheld on appeal in June 2016, although additional appeals remain pending.

As a result of the reclassification of broadband Internet access service as a Title II communications service, the FCC adopted new privacy and data security rules for common carriers, interconnected VoIP providers, and broadband service providers on October 27, 2016. The new rules replace the prior rules and extend broader privacy protections to broadband customers, as well as voice service customers. The new rules place heightened restrictions on the use of customer information that Internet service providers obtain from the provision of broadband Internet access service (including increased notice, consumer choice, and security), and are more restrictive than other existing privacy and security frameworks. The new rules are subject to additional regulatory approval and legal challenges.

*Changes to existing statutes, rules, regulations, or interpretations thereof, or adoption of new ones, could have an adverse effect on our business.*

There are ongoing efforts to amend or expand the federal, state, and local regulation of some of the services offered over our cable systems, which may compound the regulatory risks we already face. For example, the FCC recently issued a proposal to impose

new regulations on our point to point transport service as well as other commercial data services ("business data services"). As a result, the FCC may price regulate business data services as common carriage services and impose additional restrictions on contracting terms. The FCC also has considered adopting new navigation device rules, pursuant to Section 629 of the Communications Act, which directs the FCC to assure the availability of navigation devices (such as set-top boxes) from third party providers. In 2016, the FCC proposed burdensome new rules that would have required us to make disaggregated "information flows" available to set-top boxes and apps supplied by third parties. That proposal has not been adopted, but various parties may continue to advocate alternative regulatory approaches to reduce consumer dependency on traditional operator provided set-top boxes. The FCC also is considering the appropriate regulatory framework for VoIP service, including whether that service should be regulated under Title II.

Congress is considering legislation that could increase costs on the company, including (1) the adoption of new data security and cybersecurity legislation that could result in additional network and information security requirements for our business, (2) a change in corporate tax laws that could eliminate some of our current deductions, and (3) broadband subsidies to rural areas that could result in subsidized overbuilding of our more rural facilities.

If any of these pending laws and regulations are enacted, they could affect our operations and require significant expenditures. We cannot predict future developments in these areas, and we are already subject to Charter-specific conditions regarding certain Internet practices as a result of the FCC's approval of the Transactions, but any changes to the regulatory framework for our Internet or VoIP services could have a negative impact on our business and results of operations.

It remains uncertain what rule changes, if any, will ultimately be adopted by Congress and the FCC and what operating or financial impact any such rules might have on us, including on our programming agreements, customer privacy and the user experience. In addition, the FCC's Enforcement Bureau has been actively investigating certain industry practices of various companies and imposing forfeitures for alleged regulatory violations.

***Our cable system franchises are subject to non-renewal or termination. The failure to renew a franchise in one or more key markets could adversely affect our business.***

Our cable systems generally operate pursuant to franchises, permits, and similar authorizations issued by a state or local governmental authority controlling the public rights-of-way. Many franchises establish comprehensive facilities and service requirements, as well as specific customer service standards and monetary penalties for non-compliance. In many cases, franchises are terminable if the franchisee fails to comply with significant provisions set forth in the franchise agreement governing system operations. Franchises are generally granted for fixed terms and must be periodically renewed. Franchising authorities may resist granting a renewal if either past performance or the prospective operating proposal is considered inadequate. Franchise authorities often demand concessions or other commitments as a condition to renewal. In some instances, local franchises have not been renewed at expiration, and we have operated and are operating under either temporary operating agreements or without a franchise while negotiating renewal terms with the local franchising authorities.

We cannot assure you that we will be able to comply with all significant provisions of our franchise agreements and certain of our franchisers have from time to time alleged that we have not complied with these agreements. Additionally, although historically we have renewed our franchises without incurring significant costs, we cannot assure you that we will be able to renew, or to renew as favorably, our franchises in the future. A termination of or a sustained failure to renew a franchise in one or more key markets could adversely affect our business in the affected geographic area.

***Our cable system franchises are non-exclusive. Accordingly, local and state franchising authorities can grant additional franchises and create additional competition for our products, resulting in overbuilds, which could adversely affect results of operations.***

Our cable system franchises are non-exclusive. Consequently, local and state franchising authorities can grant additional franchises to competitors in the same geographic area or operate their own cable systems. In some cases, local government entities and municipal utilities may legally compete with us on more favorable terms. Potential competitors (like Google) have recently pursued and obtained local franchises that are more favorable than the incumbent operator's franchise.

The FCC has adopted rules that streamline entry for new competitors (particularly those affiliated with telephone companies) and reduce franchising burdens for these new entrants. At the same time, a substantial number of states have adopted new franchising laws, principally designed to streamline entry for new competitors, and often provide advantages for these new entrants that are not immediately available to existing operators.

Broadband delivery of video content is not necessarily subject to the same franchising obligations applicable to our traditional cable systems. The FCC administers a program that collects Universal Service Fund contributions from telecommunications service providers and uses them to subsidize the provision of telecommunications services in high-cost areas and to low-income consumers and the provision of Internet and telecommunications services to schools, libraries and certain health care providers. A variety of regulatory changes may lead the FCC to expand the collection of Universal Service Fund contributions to encompass Internet service providers. The FCC already has begun to redirect the expenditure of some Universal Service Fund subsidies to broadband deployment in ways that could assist competitors.

*Local franchise authorities have the ability to impose additional regulatory constraints on our business, which could further increase our expenses.*

In addition to the franchise agreement, cable authorities in some jurisdictions have adopted cable regulatory ordinances that further regulate the operation of cable systems. This additional regulation increases the cost of operating our business. Local franchising authorities may impose new and more restrictive requirements. Local franchising authorities who are certified to regulate rates in the communities where they operate generally have the power to reduce rates and order refunds on the rates charged for basic service and equipment.

*Tax legislation and administrative initiatives or challenges to our tax positions could adversely affect our results of operations and financial condition.*

We operate cable systems in locations throughout the United States and, as a result, we are subject to the tax laws and regulations of federal, state and local governments. From time to time, various legislative and/or administrative initiatives may be proposed that could adversely affect our tax positions. There can be no assurance that our effective tax rate or tax payments will not be adversely affected by these initiatives. Certain states and localities have imposed or are considering imposing new or additional taxes or fees on our services or changing the methodologies or base on which certain fees and taxes are computed. Potential changes include additional taxes or fees on our services which could impact our customers, combined reporting and other changes to general business taxes, central/unit-level assessment of property taxes and other matters that could increase our income, franchise, sales, use and/or property tax liabilities. In addition, federal, state and local tax laws and regulations are extremely complex and subject to varying interpretations. There can be no assurance that our tax positions will not be challenged by relevant tax authorities or that we would be successful in any such challenge.

*Further regulation of the cable industry could impair our ability to raise rates to cover our increasing costs, resulting in increased losses.*

Currently, rate regulation of cable systems is strictly limited to the basic service tier and associated equipment and installation activities, and the FCC recently revised its rules, in response to changed market conditions, to make it more difficult for local franchising authorities to assert rate regulation authority. However, the FCC and Congress continue to be concerned that cable rate increases are exceeding inflation. It is possible that either the FCC or Congress will further restrict the ability of cable system operators to implement rate increases for our video services or even for our Internet and voice services. Should this occur, it would impede our ability to raise our rates. If we are unable to raise our rates in response to increasing costs, our financial results would be adversely impacted.

There has been legislative and regulatory interest in requiring companies that own multiple cable networks to make each of them available on a standalone, rather than a bundled basis to cable operators, and in requiring cable operators to offer historically bundled programming services on an à la carte basis to consumers. While any new regulation or legislation designed to enable cable operators to purchase programming on a standalone basis could be beneficial to us, any regulation or legislation that limits how we sell programming could adversely affect our business.

*Changes in channel carriage regulations could impose significant additional costs on us.*

Cable operators also face significant regulation of their video channel carriage. We can be required to devote substantial capacity to the carriage of programming that we might not carry voluntarily, including certain local broadcast signals; local public, educational and governmental access ("PEG") programming; and unaffiliated, commercial leased access programming (required channel capacity for use by persons unaffiliated with the cable operator who desire to distribute programming over a cable system). The FCC adopted revised commercial leased access rules which would dramatically reduce the rate we can charge for leasing this capacity and dramatically increase our administrative burdens, but these remain stayed while under appeal. Legislation has been introduced in Congress in the past that, if adopted, could impact our carriage of broadcast signals by eliminating the cable industry's compulsory copyright license. The FCC also continues to consider changes to the rules affecting the relationship between programmers (including broadcasters) and multichannel video distributors, including potential loosening of media ownership rules.

Future regulatory changes could disrupt existing programming commitments, interfere with our preferred use of limited channel capacity, increase our programming costs, and limit our ability to offer services that would maximize our revenue potential. It is possible that other legal restraints will be adopted limiting our discretion over programming decisions.

*Our voice service is subject to regulatory burdens which may increase, causing us to incur additional costs.*

We offer voice communications services over our broadband network using VoIP services. The FCC has ruled that competitive telephone companies that support VoIP services, such as those we offer our customers, are entitled to interconnect with incumbent providers of traditional telecommunications services, which ensures that our VoIP services can compete in the market. The scope of these interconnection rights are being reviewed in a current FCC proceeding, which may affect our ability to compete in the provision of voice services or result in additional costs. The FCC has also declared that certain VoIP services are not subject to traditional state public utility regulation. The full extent of the FCC preemption of state and local regulation of VoIP services is not yet clear, and at least one state (Minnesota) has asserted jurisdiction over the company's VoIP services. We have filed a legal challenge to that jurisdictional assertion, which is now pending before a federal district court in Minnesota. Telecommunications companies generally are subject to other significant regulation which could also be extended to VoIP providers. The FCC has already extended certain traditional telecommunications carrier requirements to many VoIP providers such as us. If additional telecommunications regulations are applied to our VoIP service, it could cause us to incur additional costs.

**Item 1B. Unresolved Staff Comments.**

None.

**Item 2. Properties.**

Our principal physical assets consist of cable distribution plant and equipment, including signal receiving, encoding and decoding devices, headend reception facilities, distribution systems, and customer premise equipment for each of our cable systems.

Our cable plant and related equipment are generally attached to utility poles under pole rental agreements with local public utilities and telephone companies, and in certain locations are buried in underground ducts or trenches. We own or lease real property for signal reception sites, and own our service vehicles.

Our subsidiaries generally lease space for business offices. Our headend and tower locations are located on owned or leased parcels of land, and we generally own the towers on which our equipment is located. We lease space for our corporate headquarters in Stamford, Connecticut.

The physical components of our cable systems require maintenance as well as periodic upgrades to support the new services and products we introduce. See "Item 1. Business – Our Network Technology." We believe that our properties are generally in good operating condition and are suitable for our business operations.

**Item 3. Legal Proceedings.**

The legal proceedings information set forth in Note 20 to the accompanying consolidated financial statements contained in "Part II. Item 8. Financial Statements and Supplementary Data" in this Annual Report on Form 10-K is incorporated herein by reference.

**Item 4. Mine Safety Disclosures.**

Not applicable.

## PART II

**Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities.****(A) Market Information**

Charter's Class A common stock is listed on the NASDAQ Global Select Market under the symbol "CHTR."

The following table sets forth, for the periods indicated, the range of high and low last reported sale price per share of Charter's Class A common stock on the NASDAQ Global Select Market.

**Class A Common Stock**

	<b>High</b>	<b>Low</b>
<b>2015</b>		
First quarter	\$ 193.46	\$ 150.60
Second quarter	\$ 193.19	\$ 167.84
Third quarter	\$ 194.50	\$ 167.36
Fourth quarter	\$ 193.33	\$ 174.81
<b>2016</b>		
First quarter	\$ 204.10	\$ 159.53
Second quarter	\$ 233.11	\$ 197.91
Third quarter	\$ 277.56	\$ 231.77
Fourth quarter	\$ 292.19	\$ 244.10

**(B) Holders**

As of December 31, 2016, there were approximately 15,035 holders of record of Charter's Class A common stock and one holder of Charter's Class B common stock.

**(C) Dividends**

Charter has not paid stock or cash dividends on any of its common stock.

Charter would be dependent on distributions from its subsidiaries if Charter were to make any dividends. Covenants in the indentures and Charter Operating credit facilities governing the debt obligations of our subsidiaries restrict their ability to make distributions to us, and accordingly, limit our ability to declare or pay cash dividends. Future cash dividends, if any, will be at the discretion of Charter's board of directors and will depend upon, among other things, our future operations and earnings, capital requirements, general financial condition, contractual restrictions and such other factors as Charter's board of directors may deem relevant.

**(D) Securities Authorized for Issuance Under Equity Compensation Plans**

The following information is provided as of December 31, 2016 with respect to equity compensation plans:

Plan Category	Number of Securities to be Issued Upon Exercise of Outstanding Options, Warrants and Rights	Weighted Average Exercise Price of Outstanding Warrants and Rights	Number of Securities Remaining Available for Future Issuance Under Equity Compensation Plans
Equity compensation plans approved by security holders	12,905,216 (1)	\$ 184.22	3,155,002 (1)
Equity compensation plans not approved by security holders	—	\$ —	—
<b>TOTAL</b>	<b>12,905,216 (1)</b>		<b>3,155,002 (1)</b>

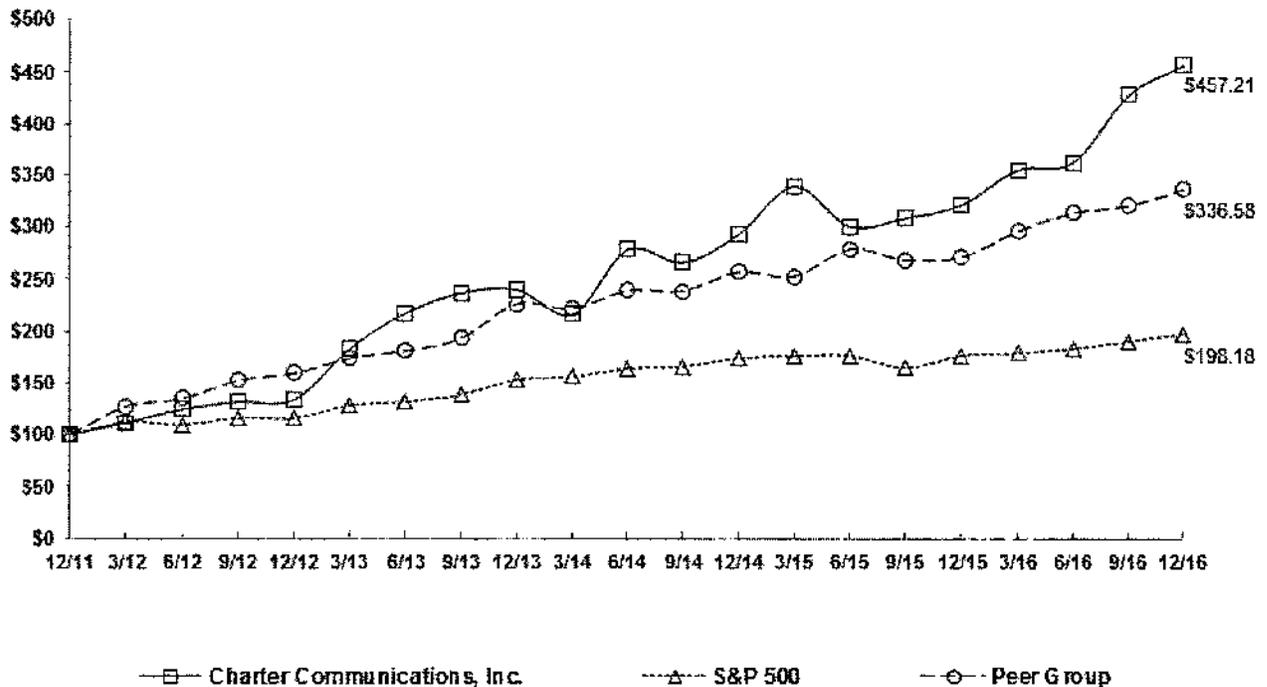

(1) This total does not include 9,811 shares issued pursuant to restricted stock grants made under our 2009 Stock Incentive Plan, which are subject to vesting based on continued employment and market conditions.

For information regarding securities issued under our equity compensation plans, see Note 16 to our accompanying consolidated financial statements contained in "Item 8. Financial Statements and Supplementary Data."

**(E) Performance Graph**

The graph below shows the cumulative total return on Charter’s Class A common stock for the period from December 31, 2011 through December 31, 2016, in comparison to the cumulative total return on Standard & Poor’s 500 Index and a peer group consisting of the national cable operators that are most comparable to us in terms of size and nature of operations. The Company’s peer group consists of Cablevision Systems Corporation (“Cablevision”), Comcast, and Legacy TWC (through May 18, 2016). The results shown assume that \$100 was invested on December 31, 2011 and that all dividends were reinvested. These indices are included for comparative purposes only and do not reflect whether it is management’s opinion that such indices are an appropriate measure of the relative performance of the stock involved, nor are they intended to forecast or be indicative of future performance of Charter’s Class A common stock.

**COMPARISON OF 5 YEAR CUMULATIVE TOTAL RETURN\***  
Among Charter Communications, Inc., the S&P 500 Index,  
and a Peer Group

\*\$100 invested on 12/31/11 in stock or index, including reinvestment of dividends. Fiscal year ending December 31.

**(F) Recent Sales of Unregistered Securities**

During 2016, there were no unregistered sales of securities of the registrant other than those previously reported on a Quarterly Report on Form 10-Q or Current Report on Form 8-K.

**(G) Purchases of Equity Securities by the Issuer**

The following table presents Charter's purchases of equity securities completed during the fourth quarter of 2016 (dollars in millions, except per share data).

Period	Total Number of Shares Purchased <sup>(1)</sup>	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs <sup>(2)</sup>	Approximate Dollar Value of Shares that May Yet Be Purchased Under the Plans or Programs <sup>(2)</sup>
October 1 - 31, 2016	1,845,823	\$ 262.58	1,784,834	\$750
November 1 - 30, 2016	1,493,418	\$ 262.14	1,442,144	\$370
December 1 - 31, 2016	865,145	\$ 280.59	793,645	\$1,654

<sup>(1)</sup> Includes 60,989, 51,274 and 71,500 shares withheld from employees for the payment of taxes and exercise costs upon the exercise of stock options or vesting of other equity awards for the months of October, November and December 2016, respectively.

<sup>(2)</sup> In 2016, Charter purchased approximately 5.1 million shares of its Class A common stock for approximately \$1.3 billion pursuant to authorizations by Charter's board of directors of \$3 billion (\$750 million authorized on July 26, 2016, \$750 million on October 25, 2016 and \$1.5 billion on December 2, 2016). Accordingly, as of December 31, 2016 and provided Charter's leverage ratio remains at 4 to 4.5 times and Charter Operating's leverage remains below 3.5 times, management has authority to cause Charter to purchase an additional \$1.7 billion of Charter's Class A common stock without taking into account shares or units that may be purchased from A/N. Effective November 1, 2016, Charter's board of directors granted authority for a new \$750 million of Class A common stock buybacks under the rolling six-month authority without taking into account any Class A common stock purchased prior to November 1. As a result, a portion of the \$1.7 billion of authority is under the authority of management to approve up to \$750 million for Class A common stock buybacks in any six-month period. In December 2016, Charter and A/N entered into a letter agreement ("Letter Agreement") that requires A/N to sell to Charter or to Charter Holdings, on a monthly basis, a number of shares of Charter Class A common stock or Charter Holdings common units that represents a pro rata participation by A/N and its affiliates in any repurchases of shares of Charter Class A common stock from persons other than A/N effected by Charter during the immediately preceding calendar month, at a purchase price equal to the average price paid by Charter for the shares repurchased from persons other than A/N during such immediately preceding calendar month. A/N and Charter both have the right to terminate or suspend the pro rata repurchase arrangement on a prospective basis once Charter or Charter Holdings have repurchased shares of Class A common stock or Charter Holdings common units from A/N and its affiliates for an aggregate purchase price of \$537 million. In December 2016, pursuant to this Letter Agreement, Charter purchased Charter Holdings common units from A/N at a price of \$289.83 per unit, or \$218 million. Charter has established a Rule 10b5-1 plan in connection with its share repurchase activity and cannot predict when or if it will repurchase more shares of Charter Class A common stock pursuant to the current plan as such plan includes a price grid including a limit where Charter would not buy shares under the Rule 10b5-1 plan currently in place. Charter may also buy shares of Charter Class A common stock, from time to time, pursuant to private transactions outside of its Rule 10b5-1 plan and any such repurchases would also trigger the repurchases from A/N pursuant to and to the extent provided in the Letter Agreement.

**Item 6. Selected Financial Data.**

The following table presents selected consolidated financial data for the periods indicated (dollars in millions, except per share data):

	Years Ended December 31,				
	2016	2015	2014	2013	2012
<b>Statement of Operations Data:</b>					
Revenues	\$ 29,003	\$ 9,754	\$ 9,108	\$ 8,155	\$ 7,504
Income from operations	\$ 3,355	\$ 1,114	\$ 971	\$ 909	\$ 915
Interest expense, net	\$ 2,499	\$ 1,306	\$ 911	\$ 846	\$ 907
Income (loss) before income taxes	\$ 820	\$ (331)	\$ 53	\$ (49)	\$ (47)
Net income (loss) attributable to Charter shareholders	\$ 3,522	\$ (271)	\$ (183)	\$ (169)	\$ (304)
Income (loss) per common share, basic	\$ 17.05	\$ (2.68)	\$ (1.88)	\$ (1.83)	\$ (3.38)
Income (loss) per common share, diluted	\$ 15.94	\$ (2.68)	\$ (1.88)	\$ (1.83)	\$ (3.38)
Weighted average shares outstanding, basic (a)	206,539,100	101,152,647	97,991,915	92,169,292	90,110,754
Weighted average shares outstanding, diluted (a)	234,791,439	101,152,647	97,991,915	92,169,292	90,110,754
<b>Balance Sheet Data (end of period):</b>					
Investment in cable properties	\$ 144,396	\$ 16,375	\$ 16,652	\$ 16,556	\$ 14,870
Total assets (b)	\$ 149,067	\$ 39,316	\$ 24,388	\$ 17,129	\$ 15,440
Total debt (b)	\$ 61,747	\$ 35,723	\$ 20,887	\$ 14,031	\$ 12,670
Total shareholders' equity (deficit)	\$ 50,366	\$ (46)	\$ 146	\$ 151	\$ 149
<b>Other Financial Data:</b>					
Ratio of earnings to fixed charges (c)	1.33	N/A	1.06	N/A	N/A
Deficiency of earnings to cover fixed charges (c)	N/A	\$ 331	N/A	\$ 49	\$ 47

- (a) Weighted average number of shares outstanding for all periods presented has been recast to reflect the application of the Parent Merger Exchange Ratio. See Note 2 to our accompanying consolidated financial statements contained in "Item 8. Financial Statements and Supplementary Data."
- (b) Years ended December 31, 2014, 2013 and 2012 have been restated to reflect the adoption of certain new accounting standards in 2015, including Accounting Standards Update ("ASU") 2015-03, *Simplifying the Presentation of Debt Issuance Costs*, and ASU 2015-17, *Balance Sheet Classification of Deferred Taxes*.
- (c) Earnings include income (loss) before non-controlling interest and income taxes plus fixed charges. Fixed charges consist of interest expense and an estimated interest component of rent expense.

Comparability of the above information from year to year is affected by acquisitions and dispositions completed by us, including the Transactions. See "Part I. Item 1. Business" for a discussion regarding the Transactions.

**Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.**

Reference is made to "Part I. Item 1A. Risk Factors" and "Cautionary Statement Regarding Forward-Looking Statements," which describe important factors that could cause actual results to differ from expectations and non-historical information contained herein. In addition, the following discussion should be read in conjunction with the audited consolidated financial statements and accompanying notes thereto of Charter Communications, Inc. and subsidiaries included in "Part II. Item 8. Financial Statements and Supplementary Data."

**Overview**

We are the second largest cable operator in the United States and a leading broadband communications services company providing video, Internet and voice services to approximately 26.2 million residential and business customers at December 31, 2016. In addition, we sell video and online advertising inventory to local, regional and national advertising customers and fiber-delivered

communications and managed IT solutions to larger enterprise customers. We also own and operate regional sports networks and local sports, news and community channels and sell security and home management services to the residential marketplace. See

“Part I. Item 1. Business — Products and Services” for further description of these services, including customer statistics for different services.

Since 2012, Legacy Charter has actively invested in its network and operations and improved the quality and value of the products and packages that Legacy Charter offered. Through the roll-out of Spectrum pricing and packaging we have simplified our offers and improved our packaging of products, delivering more value to new and existing customers. Further, through the transition of our Legacy Charter markets to our all-digital platform, we increased our offerings to more than 200 HD channels in most of the Legacy Charter markets and offered Internet speeds of at least 60 or 100 Mbps, among other benefits. We believe that this product set combined with improved customer service, as we insource our workforce in our call centers and in our field operations, has led to lower customer churn and longer customer lifetimes.

As a result of the Transactions, 2016 revenues increased by over \$18.6 billion year over year. We also saw an increase in expenses related to our increased scale. In September 2016, we began launching SPP to Legacy TWC markets and we expect that by mid 2017, we will offer SPP in all Legacy TWC and Legacy Bright House markets. In 2017, we intend to begin converting the remaining Legacy TWC and Legacy Bright House analog markets to an all-digital platform. Our corporate organization, as well as our marketing, sales and product development departments, are now centralized. Field operations are managed through eleven regional areas, each designed to represent a combination of designated marketing areas and managed with largely the same set of field employees that were with the three legacy companies prior to completion of the Transactions. Over a multi-year period, Legacy TWC and Legacy Bright House customer care centers will migrate to Legacy Charter's model of using segmented, virtualized, U.S.-based in-house call centers. We will focus on deploying superior products and service with minimal service disruptions as we integrate our information technology and network operations. We expect customer and financial results to trend similar to Legacy Charter following the implementation of the Legacy Charter operating strategies across the Legacy TWC and Legacy Bright House markets. As a result of implementing our operating strategy at Legacy TWC and Legacy Bright House, we cannot be certain that we will be able to grow revenues or maintain our margins at recent historical rates.

The Company realized revenue, Adjusted EBITDA and income from operations during the periods presented as follows (in millions; all percentages are calculated using whole numbers. Minor differences may exist due to rounding).

	Years ended December 31,			Growth	
	2016	2015	2014	2016 over 2015	2015 over 2014
<b>Actual</b>					
Revenues	\$ 29,003	\$ 9,754	\$ 9,108	197.3%	7.1%
Adjusted EBITDA	\$ 10,592	\$ 3,406	\$ 3,190	211.0%	6.8%
Income from operations	\$ 3,355	\$ 1,114	\$ 971	201.3%	14.8%
<b>Pro Forma</b>					
Revenues	\$ 40,023	\$ 37,394		7.0%	
Adjusted EBITDA	\$ 14,464	\$ 13,004		11.2%	
Income from operations	\$ 4,801	\$ 3,396		41.4%	

Adjusted EBITDA is defined as consolidated net income (loss) plus net interest expense, income taxes, depreciation and amortization, stock compensation expense, loss on extinguishment of debt, (gain) loss on financial instruments, net, other (income) expense, net and other operating (income) expenses, such as merger and restructuring costs, other pension benefits, special charges and gain (loss) on sale or retirement of assets. See “—Use of Adjusted EBITDA and Free Cash Flow” for further information on Adjusted EBITDA and free cash flow. Growth in total revenue, Adjusted EBITDA and income from operations was primarily due to the Transactions.

On a pro forma basis, assuming the Transactions occurred as of January 1, 2015, total revenue growth was primarily due to growth in our Internet and commercial businesses. On a pro forma basis, Adjusted EBITDA growth was primarily due to an increase in residential and commercial revenues offset by increases in programming costs and other operating costs. In addition to the factors discussed above, income from operations on a pro forma basis was affected by increases in depreciation and amortization, merger and restructuring costs and stock compensation expense.

Approximately 90%, 91% and 90% of our revenues for years ended December 31, 2016, 2015 and 2014, respectively, are attributable to monthly subscription fees charged to customers for our video, Internet, voice and commercial services provided by our cable systems. Generally, these customer subscriptions may be discontinued by the customer at any time subject to a fee for

certain commercial customers. The remaining 10%, 9% and 10% of revenue for fiscal years 2016, 2015 and 2014, respectively, is derived primarily from advertising revenues, franchise and other regulatory fee revenues (which are collected by us but then paid to local authorities), pay-per-view and VOD programming, installation, processing fees or reconnection fees charged to customers to commence or reinstate service, and commissions related to the sale of merchandise by home shopping services.

We incurred the following transition costs in connection with the Transactions (in millions).

	Years ended December 31,		
	2016	2015	2014
Operating expenses	\$ 156	\$ 72	\$ 14
Other operating expenses	\$ 970	\$ 70	\$ 38
Interest expense	\$ 390	\$ 521	\$ 75
Capital expenditures	\$ 460	\$ 115	\$ 27

Amounts included in transition operating expenses and transition capital expenditures represent incremental costs incurred to integrate the Legacy TWC and Legacy Bright House operations and to bring the three companies' systems and processes into a uniform operating structure. Costs are incremental and would not be incurred absent the integration. Other operating expenses associated with the Transactions represent merger and restructuring costs and include advisory, legal and accounting fees, employee retention costs, employee termination costs and other exit costs. Interest expense associated with the Transactions represents interest incurred on the CCO Safari II, CCO Safari III and CCOH Safari notes issued in advance of the closing of the Transactions, the proceeds of which were held in escrow to finance the Transactions.

We have a history of net losses. Our net losses were principally attributable to insufficient revenue to cover the combination of operating expenses, interest expenses that we incur on our debt, depreciation expenses resulting from the capital investments we have made, and continue to make, in our cable properties, amortization expenses related to our customer relationship intangibles and higher non-cash income tax expense. We will incur significant increases in interest expense and depreciation and amortization as a result of the Transactions and will incur restructuring and transition costs for at least one to two years, and as a result, absent non-recurring impacts such as the reversal of the income tax valuation allowance in the second quarter of 2016, we may incur net losses in the future.

### Critical Accounting Policies and Estimates

Certain of our accounting policies require our management to make difficult, subjective and/or complex judgments. Management has discussed these policies with the Audit Committee of Charter's board of directors, and the Audit Committee has reviewed the following disclosure. We consider the following policies to be the most critical in understanding the estimates, assumptions and judgments that are involved in preparing our financial statements, and the uncertainties that could affect our results of operations, financial condition and cash flows:

- Property, plant and equipment
  - Capitalization of labor and overhead costs
  - Valuation and impairment of property, plant and equipment
  - Useful lives of property, plant and equipment
- Intangible assets
  - Valuation and impairment of franchises
  - Valuation and impairment of goodwill
  - Valuation and impairment and amortization of customer relationships
- Income taxes
- Litigation
- Programming agreements
- Pension plans

In addition, there are other items within our financial statements that require estimates or judgment that are not deemed critical, such as the allowance for doubtful accounts and valuations of our financial instruments, but changes in estimates or judgment in these other items could also have a material impact on our financial statements.

### ***Property, plant and equipment***

The cable industry is capital intensive, and a large portion of our resources are spent on capital activities associated with extending, rebuilding, and upgrading our cable network. As of December 31, 2016 and 2015, the net carrying amount of our property, plant and equipment (consisting primarily of cable distribution systems) was approximately \$33.0 billion (representing 22% of total assets) and \$8.3 billion (representing 49% of total assets excluding restricted cash and cash equivalents), respectively. Total capital expenditures for the years ended December 31, 2016, 2015 and 2014 were approximately \$5.3 billion, \$1.8 billion and \$2.2 billion, respectively.

***Capitalization of labor and overhead costs.*** Costs associated with network construction, initial placement of the customer drop to the dwelling and the initial placement of outlets within a dwelling along with the costs associated with the initial deployment of customer premise equipment necessary to provide video, Internet or voices services, are capitalized. Costs capitalized include materials, direct labor, and certain indirect costs. These indirect costs are associated with the activities of personnel who assist in installation activities, and consist of compensation and overhead costs associated with these support functions. While our capitalization is based on specific activities, once capitalized, we track these costs on a composite basis by fixed asset category at the cable system level, and not on a specific asset basis. For assets that are sold or retired, we remove the estimated applicable cost and accumulated depreciation. The costs of disconnecting service and removing customer premise equipment from a dwelling and the costs to reconnect a customer drop or to redeploy previously installed customer premise equipment are charged to operating expense as incurred. Costs for repairs and maintenance are charged to operating expense as incurred, while plant and equipment replacement, including replacement of certain components, betterments, and replacement of cable drops and outlets, are capitalized.

We make judgments regarding the installation and construction activities to be capitalized. We capitalize direct labor and overhead using standards developed from actual costs and applicable operational data. We calculate standards annually (or more frequently if circumstances dictate) for items such as the labor rates, overhead rates, and the actual amount of time required to perform a capitalizable activity. For example, the standard amounts of time required to perform capitalizable activities are based on studies of the time required to perform such activities. Overhead rates are established based on an analysis of the nature of costs incurred in support of capitalizable activities, and a determination of the portion of costs that is directly attributable to capitalizable activities. The impact of changes that resulted from these studies were not material in the periods presented.

Labor costs directly associated with capital projects are capitalized. Capitalizable activities performed in connection with installations include such activities as:

- dispatching a "truck roll" to the customer's dwelling or business for service connection or placement of new equipment;
- verification of serviceability to the customer's dwelling or business (i.e., determining whether the customer's dwelling is capable of receiving service by our cable network and/or receiving advanced or Internet services);
- customer premise activities performed by in-house field technicians and third-party contractors in connection with customer installations, installation of equipment in connection with the installation of video, Internet or voice services, and equipment replacement and betterment; and
- verifying the integrity of the customer's network connection by initiating test signals downstream from the headend to the customer's digital set-top box, as well as testing signal levels at the pole or pedestal.

Judgment is required to determine the extent to which overhead costs incurred result from specific capital activities, and therefore should be capitalized. The primary costs that are included in the determination of the overhead rate are (i) employee benefits and payroll taxes associated with capitalized direct labor, (ii) direct variable costs associated with capitalizable activities, (iii) the cost of support personnel, such as care personnel and dispatchers, who assist with capitalizable installation activities, and (iv) indirect costs directly attributable to capitalizable activities.

While we believe our existing capitalization policies are appropriate, a significant change in the nature or extent of our system activities could affect management's judgment about the extent to which we should capitalize direct labor or overhead in the future. We monitor the appropriateness of our capitalization policies, and perform updates to our internal studies on an ongoing basis to determine whether facts or circumstances warrant a change to our capitalization policies. We capitalized direct labor and overhead of \$991 million, \$420 million and \$427 million, respectively, for the years ended December 31, 2016, 2015 and 2014.

***Valuation and impairment of property, plant and equipment.*** We evaluate the recoverability of our property, plant and equipment upon the occurrence of events or changes in circumstances indicating that the carrying amount of an asset may not be recoverable. Such events or changes in circumstances could include such factors as the impairment of our indefinite life franchises, changes in technological advances, fluctuations in the fair value of such assets, adverse changes in relationships with local franchise authorities, adverse changes in market conditions, or a deterioration of current or expected future operating results. A long-lived

asset is deemed impaired when the carrying amount of the asset exceeds the projected undiscounted future cash flows associated with the asset. No impairments of long-lived assets to be held and used were recorded in the years ended December 31, 2016, 2015 and 2014.

We utilize the cost approach as the primary method used to establish fair value for our property, plant and equipment in connection with business combinations. The cost approach considers the amount required to replace an asset by constructing or purchasing a new asset with similar utility, then adjusts the value in consideration of physical depreciation and functional and economic obsolescence as of the appraisal date. The cost approach relies on management's assumptions regarding current material and labor costs required to rebuild and repurchase significant components of our property, plant and equipment along with assumptions regarding the age and estimated useful lives of our property, plant and equipment.

**Useful lives of property, plant and equipment.** We evaluate the appropriateness of estimated useful lives assigned to our property, plant and equipment, based on annual analysis of such useful lives, and revise such lives to the extent warranted by changing facts and circumstances. Any changes in estimated useful lives as a result of this analysis are reflected prospectively beginning in the period in which the study is completed. Our analysis of useful lives in 2016 did not indicate a change in useful lives. The effect of a one-year decrease in the weighted average remaining useful life of our property, plant and equipment as of December 31, 2016 would be an increase in annual depreciation expense of approximately \$1.7 billion. The effect of a one-year increase in the weighted average remaining useful life of our property, plant and equipment as of December 31, 2016 would be a decrease in annual depreciation expense of approximately \$863 million.

Depreciation expense related to property, plant and equipment totaled \$5.0 billion, \$1.9 billion and \$1.8 billion for the years ended December 31, 2016, 2015 and 2014, respectively, representing approximately 19%, 21% and 22% of costs and expenses, respectively. Depreciation is recorded using the straight-line composite method over management's estimate of the useful lives of the related assets as listed below:

Cable distribution systems	7-20 years
Customer premise equipment and installations	3-8 years
Vehicles and equipment	3-6 years
Buildings and improvements	15-40 years
Furniture, fixtures and equipment	6-10 years

#### **Intangible assets**

**Valuation and impairment of franchises.** The net carrying value of franchises as of December 31, 2016 and 2015 was approximately \$67.3 billion (representing 45% of total assets) and \$6.0 billion (representing 35% of total assets excluding restricted cash and cash equivalents), respectively. For more information and a complete discussion of how we value and test franchise assets for impairment, see Note 6 to the accompanying consolidated financial statements contained in "Part II. Item 8. Financial Statements and Supplementary Data."

We perform an impairment assessment of franchise assets annually or more frequently as warranted by events or changes in circumstances. We performed a qualitative assessment in 2016. Our assessment included consideration of the fair value appraisals of Legacy Charter and the newly-acquired operations performed as of the date of acquisition for tax and acquisition accounting purposes, respectively, along with a multitude of factors that affect the fair value of our franchise assets. Examples of such factors include environmental and competitive changes within our operating footprint, actual and projected operating performance, the consistency of our operating margins, equity and debt market trends, including changes in our market capitalization, and changes in our regulatory and political landscape, among other factors. Based on our assessment, we concluded that it was more likely than not that the estimated fair values of our franchise assets equals or exceeds their carrying values and that a quantitative impairment test is not required.

The appraisals indicated that the fair value of our franchise assets exceeded carrying value by approximately 25% in the aggregate, with the excess entirely attributable to the franchise assets of Legacy Charter to which acquisition accounting was not applied. At our unit of accounting level for franchise asset impairment testing, the amount by which fair value exceeds carrying value varies based on the extent to which the unit of accounting was comprised of newly-acquired operations. For units of accounting comprised entirely or substantially of newly-acquired operations, we believe the carrying value approximates the fair value given that there has been no significant adverse changes in factors impacting our fair value estimates since the Transaction date. For units of accounting comprised of at least 25% Legacy Charter operations, the fair value exceeded carrying value by a range of 36% to 260%.

**Valuation and impairment of goodwill.** The net carrying value of goodwill as of December 31, 2016 and 2015 was approximately \$29.5 billion (representing 20% of total assets) and \$1.2 billion (representing 7% of total assets excluding restricted cash and cash equivalents), respectively. For more information and a complete discussion on how we test goodwill for impairment, see Note 6 to the accompanying consolidated financial statements contained in "Part II. Item 8. Financial Statements and Supplementary Data." We perform our impairment assessment of goodwill annually as of November 30<sup>th</sup>. As with our franchise impairment testing, we elected to perform a qualitative assessment of goodwill in 2016 which included the fair value appraisals and other factors described above. Based on the appraisals, we determined that the fair value of our goodwill exceeded carrying value by approximately 28% as of the closing of the Transactions. Given the limited amount of time between the closing of the Transactions and the completion of the assessment and absence of significant adverse changes in factors impacting our fair value estimates, we concluded that it is more likely than not that our goodwill is not impaired.

**Valuation, impairment and amortization of customer relationships.** The net carrying value of customer relationships as of December 31, 2016 and 2015 was approximately \$14.6 billion (representing 10% of total assets) and \$856 million (representing 5% of total assets excluding restricted cash and cash equivalents), respectively. Amortization expense related to customer relationships for the years ended December 31, 2016, 2015 and 2014 was approximately \$1.9 billion, \$249 million and \$282 million, respectively. No impairment of customer relationships was recorded in the years ended December 31, 2016, 2015 and 2014. For more information and a complete discussion on our valuation methodology and amortization method, see Note 6 to the accompanying consolidated financial statements contained in "Part II. Item 8. Financial Statements and Supplementary Data."

#### **Income taxes**

As of December 31, 2016, Charter had approximately \$11.2 billion of federal tax net operating loss carryforwards resulting in a gross deferred tax asset of approximately \$3.9 billion. These losses resulted from the operations of Charter Holdco and its subsidiaries and from loss carryforwards received as a result of the TWC Transaction. Federal tax net operating loss carryforwards expire in the years 2018 through 2035. In addition, as of December 31, 2016, Charter had state tax net operating loss carryforwards, resulting in a gross deferred tax asset (net of federal tax benefit) of approximately \$304 million. State tax net operating loss carryforwards generally expire in the years 2017 through 2035. Such tax loss carryforwards can accumulate and be used to offset Charter's future taxable income. As of December 31, 2016, all of Charter's federal tax loss carryforwards are subject to Section 382 and other restrictions. Pursuant to these restrictions, Charter estimates that approximately \$5.4 billion in 2017, \$3.8 billion in 2018, \$432 million in 2019 and an additional \$226 million annually over each of the next five years of federal tax loss carryforwards, should become unrestricted and available for Charter's use. An additional \$415 million is currently subject to a valuation allowance. Charter's state tax loss carryforwards are subject to similar but varying restrictions.

In assessing the realizability of deferred tax assets, management considers whether it is more likely than not that some portion or all of the deferred tax assets will be realized. In evaluating the need for a valuation allowance, management takes into account various factors, including the expected level of future taxable income, available tax planning strategies and reversals of existing taxable temporary differences. Due to Legacy Charter's history of losses, Legacy Charter was historically unable to assume future taxable income in its analysis and accordingly valuation allowances were established against the deferred tax assets, net of deferred tax liabilities, from definite-lived assets for book accounting purposes. However, as a result of the TWC Transaction, deferred tax liabilities resulting from the book fair value adjustment increased significantly and future taxable income that will result from the reversal of existing temporary differences for which deferred tax liabilities are recognized, is sufficient to conclude it is more likely than not that we will realize substantially all of our deferred tax assets. As a result, Charter has reversed approximately \$3.3 billion of its valuation allowance and recognized a corresponding income tax benefit in the consolidated statements of operations for the year ended December 31, 2016. Approximately \$145 million of valuation allowance associated with federal tax net operating loss carryforwards and approximately \$55 million of valuation allowance associated with state tax loss carryforwards and other miscellaneous deferred tax assets remains on the December 31, 2016 consolidated balance sheet.

In determining our tax provision for financial reporting purposes, Charter establishes a reserve for uncertain tax positions unless such positions are determined to be "more likely than not" of being sustained upon examination, based on their technical merits. In evaluating whether a tax position has met the more-likely-than-not recognition threshold, we presume the position will be examined by the appropriate taxing authority that has full knowledge of all relevant information. A tax position that meets the more-likely-than-not recognition threshold is measured to determine the amount of benefit to be recognized in our financial statements. The tax position is measured as the largest amount of benefit that has a greater than 50% likelihood of being realized when the position is ultimately resolved. There is considerable judgment involved in determining whether positions taken on the tax return are "more likely than not" of being sustained. Charter adjusts its uncertain tax reserve estimates periodically because of ongoing examinations by, and settlements with, the various taxing authorities, as well as changes in tax laws, regulations and interpretations.

No tax years for Charter, Charter Holdings or Charter Holdco, for income tax purposes, are currently under examination by the IRS. Charter and Charter Holdings' 2016 tax year remains open for assessment. Legacy Charter's tax years ending 2013 through the short period return dated May 17, 2016 remain subject to examination and assessment. Years prior to 2013 remain open solely for purposes of examination of Legacy Charter's loss and credit carryforwards. The IRS is currently examining Legacy TWC's income tax returns for 2011 and 2012. Legacy TWC's tax years ending 2013 through 2015 remain subject to examination and assessment. Prior to Legacy TWC's separation from Time Warner Inc. ("Time Warner") in March 2009 (the "Separation"), Legacy TWC was included in the consolidated U.S. federal and certain state income tax returns of Time Warner. The IRS is currently examining Time Warner's 2008 through 2010 income tax returns. Time Warner's income tax returns for 2005 to 2007, which are periods prior to the separation, were settled with the exception of an immaterial item that has been referred to the IRS Appeals Division. We have unrecognized tax benefits, exclusive of interest and penalties, totaling approximately \$172 million and \$5 million as of December 31, 2016 and 2015, respectively.

### *Litigation*

Legal contingencies have a high degree of uncertainty. When a loss from a contingency becomes estimable and probable, a reserve is established. The reserve reflects management's best estimate of the probable cost of ultimate resolution of the matter and is revised as facts and circumstances change. A reserve is released when a matter is ultimately brought to closure or the statute of limitations lapses. We have established reserves for certain matters. Although these matters are not expected individually to have a material adverse effect on our consolidated financial condition, results of operations or liquidity, such matters could have, in the aggregate, a material adverse effect on our consolidated financial condition, results of operations or liquidity.

### *Programming agreements*

We exercise significant judgment in estimating programming expense associated with certain video programming contracts. Our policy is to record video programming costs based on our contractual agreements with our programming vendors, which are generally multi-year agreements that provide for us to make payments to the programming vendors at agreed upon market rates based on the number of customers to which we provide the programming service. If a programming contract expires prior to the parties' entry into a new agreement and we continue to distribute the service, we estimate the programming costs during the period there is no contract in place. In doing so, we consider the previous contractual rates, inflation and the status of the negotiations in determining our estimates. When the programming contract terms are finalized, an adjustment to programming expense is recorded, if necessary, to reflect the terms of the new contract. We also make estimates in the recognition of programming expense related to other items, such as the accounting for free periods, timing of rate increases and credits from service interruptions, as well as the allocation of consideration exchanged between the parties in multiple-element transactions.

Significant judgment is also involved when we enter into agreements that result in us receiving cash consideration from the programming vendor, usually in the form of advertising sales, channel positioning fees, launch support or marketing support. In these situations, we must determine based upon facts and circumstances if such cash consideration should be recorded as revenue, a reduction in programming expense or a reduction in another expense category (e.g., marketing).

### *Pension plans*

Upon completion of the TWC Transaction, we assumed Legacy TWC's pension plans. We sponsor two qualified defined benefit pension plans, the TWC Pension Plan and the TWC Union Pension Plan (collectively, the "TWC Pension Plans"), that provide pension benefits to a majority of Legacy TWC employees. We also provide a nonqualified defined benefit pension plan for certain employees under the TWC Excess Pension Plan. As of December 31, 2016, the accumulated benefit obligation and fair value of plan assets for the TWC Pension Plans was \$3.3 billion and \$2.9 billion, respectively, and the net underfunded liability of the TWC Pension Plans was recorded as a \$1 million noncurrent asset, \$6 million current liability and \$309 million long-term liability.

Pension benefits are based on formulas that reflect the employees' years of service and compensation during their employment period. Actuarial gains or losses are changes in the amount of either the benefit obligation or the fair value of plan assets resulting from experience different from that assumed or from changes in assumptions. We have elected to follow a mark-to-market pension accounting policy for recording the actuarial gains or losses annually during the fourth quarter, or earlier if a remeasurement event occurs during an interim period. We use a December 31 measurement date for our pension plans.

We recognized a net periodic pension benefit of \$813 million in 2016. Net periodic pension benefit or expense is determined using certain assumptions, including the expected long-term rate of return on plan assets, discount rate and expected rate of compensation increases. We determined the discount rate used to compute pension expense based on the yield of a large population of high-quality corporate bonds with cash flows sufficient in timing and amount to settle projected future defined benefit payments. In developing the expected long-term rate of return on assets, we considered the current pension portfolio's composition, past

average rate of earnings, and our asset allocation targets. We used a discount rate of 3.99% from the date of the Transaction to June 30, 2016, and 3.72% from July 1, 2016 to December 31, 2016 to compute 2016 pension expense. A decrease in the discount rate of 25 basis points would result in a \$154 million increase in our pension plan benefit obligation as of December 31, 2016 and net periodic pension expense recognized in 2016 under our mark-to-market accounting policy. Our expected long-term rate of return on plan assets used to compute 2016 pension expense was 6.50%. A decrease in the expected long-term rate of return of 25 basis points, from 6.50% to 6.25%, while holding all other assumptions constant, would result in an increase in our 2017 net periodic pension expense of approximately \$7 million. See Note 21 to the accompanying consolidated financial statements contained in "Part II. Item 8. Financial Statements and Supplementary Data" for additional discussion on these assumptions.

## Results of Operations

The following table sets forth the consolidated statements of operations for the periods presented (dollars in millions, except per share data):

	Year Ended December 31,		
	2016	2015	2014
Revenues	\$ 29,003	\$ 9,754	\$ 9,108
Costs and Expenses:			
Operating costs and expenses (exclusive of items shown separately below)	18,655	6,426	5,973
Depreciation and amortization	6,907	2,125	2,102
Other operating expenses, net	86	89	62
	<u>25,648</u>	<u>8,640</u>	<u>8,137</u>
Income from operations	<u>3,355</u>	<u>1,114</u>	<u>971</u>
Other Expenses:			
Interest expense, net	(2,499)	(1,306)	(911)
Loss on extinguishment of debt	(111)	(128)	—
Gain (loss) on financial instruments, net	89	(4)	(7)
Other expense, net	(14)	(7)	—
	<u>(2,535)</u>	<u>(1,445)</u>	<u>(918)</u>
Income (loss) before income taxes	820	(331)	53
Income tax benefit (expense)	2,925	60	(236)
Consolidated net income (loss)	<u>3,745</u>	<u>(271)</u>	<u>(183)</u>
Less: Net income attributable to noncontrolling interests	(223)	—	—
Net income (loss) attributable to Charter shareholders	<u>\$ 3,522</u>	<u>\$ (271)</u>	<u>\$ (183)</u>
<b>EARNINGS (LOSS) PER COMMON SHARE ATTRIBUTABLE TO CHARTER SHAREHOLDERS:</b>			
Basic	<u>\$ 17.05</u>	<u>\$ (2.68)</u>	<u>\$ (1.88)</u>
Diluted	<u>\$ 15.94</u>	<u>\$ (2.68)</u>	<u>\$ (1.88)</u>
Weighted average common shares outstanding, basic	<u>206,539,100</u>	<u>101,152,647</u>	<u>97,991,915</u>
Weighted average common shares outstanding, diluted	<u>234,791,439</u>	<u>101,152,647</u>	<u>97,991,915</u>

**Revenues.** Total revenues grew \$19.2 billion or 197% in the year ended December 31, 2016 as compared to 2015 and grew \$646 million or 7.1% in the year ended December 31, 2015 as compared to 2014. Revenue growth primarily reflects the Transactions and increases in the number of residential Internet and triple play customers and in commercial business customers, growth in rates driven by higher equipment revenue and rate increases offset by a decrease in basic video customers. The Transactions increased revenues for year ended December 31, 2016 as compared to 2015 by approximately \$18.6 billion. On a pro forma basis, assuming the Transactions occurred as of January 1, 2015, total revenue growth was 7% for the year ended December 31, 2016 compared to 2015.

Revenues by service offering were as follows (dollars in millions; all percentages are calculated using whole numbers. Minor differences may exist due to rounding):

	Years ended December 31,					Years ended December 31,		
	Actual					Pro Forma		
	2016	2015	2014	2016 vs. 2015 Growth	2015 vs. 2014 Growth	2016	2015	2016 vs. 2015 Growth
Video	\$ 11,967	\$ 4,587	\$ 4,443	160.9%	3.2%	\$ 16,390	\$ 16,029	2.3%
Internet	9,272	3,003	2,576	208.7%	16.6%	12,688	11,295	12.3%
Voice	2,005	539	575	272.2%	(6.4)%	2,905	2,842	2.2%
Residential revenue	23,244	8,129	7,594	185.9%	7.0%	31,983	30,166	6.0%
Small and medium business	2,480	764	676	224.7%	13.0%	3,409	3,009	13.3%
Enterprise	1,429	363	317	293.0%	14.8%	2,025	1,818	11.4%
Commercial revenue	3,909	1,127	993	246.7%	13.5%	5,434	4,827	12.6%
Advertising sales	1,235	309	341	300.3%	(9.5)%	1,696	1,524	11.3%
Other	615	189	180	225.0%	5.0%	910	877	4.0%
	<u>\$ 29,003</u>	<u>\$ 9,754</u>	<u>\$ 9,108</u>	197.3%	7.1%	<u>\$ 40,023</u>	<u>\$ 37,394</u>	7.0%

Video revenues consist primarily of revenues from basic and digital video services provided to our residential customers, as well as franchise fees, equipment rental and video installation revenue. Excluding the impacts of the Transactions, residential video customers increased by 42,000 in 2016 and decreased by 2,000 in 2015. The increases in video revenues are attributable to the following (dollars in millions):

	2016 compared to 2015	2015 compared to 2014
Incremental video services, price adjustments and bundle revenue allocation	\$ 103	\$ 161
Increase (decrease) in VOD and pay-per-view	(22)	15
Increase (decrease) in average basic video customers	35	(32)
TWC Transaction	6,263	—
Bright House Transaction	1,001	—
	<u>\$ 7,380</u>	<u>\$ 144</u>

On a pro forma basis, assuming the Transactions occurred as of January 1, 2015, residential video customers decreased by 226,000 in 2016 and the increase in video revenues is attributable to the following (dollars in millions):

	2016 compared to 2015
Incremental video services, price adjustments and bundle revenue allocation	\$ 498
Decrease in VOD and pay-per-view	(69)
Decrease in average basic video customers	(68)
	<u>\$ 361</u>

Excluding the impacts of the Transactions, residential Internet customers grew by 461,000 and 442,000 customers in 2016 and 2015, respectively. The increases in Internet revenues from our residential customers are attributable to the following (dollars in millions):

	<u>2016 compared to 2015</u>	<u>2015 compared to 2014</u>
Increase in average residential Internet customers	\$ 284	\$ 242
Service level changes, price adjustments and bundle revenue allocation	62	185
TWC Transaction	5,063	—
Bright House Transaction	860	—
	<u>\$ 6,269</u>	<u>\$ 427</u>

On a pro forma basis, assuming the Transactions occurred as of January 1, 2015, residential Internet customers increased by 1,463,000 in 2016 and the increase in Internet revenues is attributable to the following (dollars in millions):

	<u>2016 compared to 2015</u>
Increase in average residential Internet customers	\$ 957
Service level changes, price adjustments and bundle revenue allocation	436
	<u>\$ 1,393</u>

Excluding the impacts of the Transactions, residential voice customers grew by 95,000 and 159,000 customers in 2016 and 2015, respectively. The change in voice revenues from our residential customers is attributable to the following (dollars in millions):

	<u>2016 compared to 2015</u>	<u>2015 compared to 2014</u>
Increase in average residential voice customers	\$ 28	\$ 34
Price adjustments and bundle revenue allocation	(18)	(70)
TWC Transaction	1,247	—
Bright House Transaction	209	—
	<u>\$ 1,466</u>	<u>\$ (36)</u>

On a pro forma basis, assuming the Transactions occurred as of January 1, 2015, residential voice customers increased by 368,000 in 2016 and the increase in voice revenues is attributable to the following (dollars in millions):

	<u>2016 compared to 2015</u>
Increase in average residential voice customers	\$ 229
Price adjustments and bundle revenue allocation	(166)
	<u>\$ 63</u>

Excluding the impacts of the Transactions, small and medium business PSUs increased 128,000 and 109,000 in 2016 and 2015, respectively. The increases in small and medium business commercial revenues are attributable to the following (dollars in millions):

	<u>2016 compared to 2015</u>	<u>2015 compared to 2014</u>
Increase in small and medium business customers	\$ 127	\$ 112
Price adjustments	(38)	(24)
TWC Transaction	1,408	—
Bright House Transaction	219	—
	<u>\$ 1,716</u>	<u>\$ 88</u>

On a pro forma basis, assuming the Transactions occurred as of January 1, 2015, small and medium business PSUs increased by 291,000 in 2016 and the increase in small and medium business commercial revenues is attributable to the following (dollars in millions):

	<u>2016 compared to 2015</u>
Increase in small and medium business customers	\$ 359
Price adjustments	41
	<u>\$ 400</u>

Excluding the impacts of the Transactions, enterprise PSUs increased 6,000 and 5,000 in 2016 and 2015, respectively. On a pro forma basis, assuming the Transactions occurred as of January 1, 2015, enterprise PSUs increased by 16,000 in 2016. The Transactions increased enterprise commercial revenues for year ended December 31, 2016 as compared to 2015 by approximately \$1.0 billion. On a pro forma basis, assuming the Transactions occurred as of January 1, 2015, enterprise commercial revenues increased \$207 million during the year ended December 31, 2016 compared to 2015 primarily due to growth in customers.

Advertising sales revenues consist primarily of revenues from commercial advertising customers, programmers and other vendors, as well as local cable and advertising on regional sports and news channels. Advertising sales revenues increased in 2016 primarily due to the Transactions and decreased in 2015 primarily as a result of a decrease in political advertising. The Transactions increased advertising sales revenues for the year ended December 31, 2016 as compared to 2015 by \$898 million. On a pro forma basis, assuming the Transactions occurred as of January 1, 2015, advertising sales revenues increased \$172 million during the year ended December 31, 2016 compared to 2015 primarily due to an increase in political advertising.

Other revenues consist of revenue from regional sports and news channels (excluding intercompany charges or advertising sales on those channels), home shopping, late payment fees, wire maintenance fees and other miscellaneous revenues. The increase in 2016 was primarily due to the Transactions. The Transactions increased other revenues for the year ended December 31, 2016 as compared to 2015 by \$429 million. On a pro forma basis, assuming the Transactions occurred as of January 1, 2015, other revenues increased \$33 million during the year ended December 31, 2016 compared to 2015 primarily due to a settlement related to an early contract termination.

**Operating costs and expenses.** The increases in our operating costs and expenses are attributable to the following (dollars in millions):

	<u>2016 compared to 2015</u>	<u>2015 compared to 2014</u>
Programming	\$ 4,356	\$ 219
Regulatory, connectivity and produced content	1,032	7
Costs to service customers	3,468	26
Marketing	1,071	11
Transition costs	84	58
Other	2,218	132
	<u>\$ 12,229</u>	<u>\$ 453</u>

Programming costs were approximately \$7.0 billion, \$2.7 billion and \$2.5 billion, representing 38%, 42% and 41% of operating costs and expenses for each of the years ended December 31, 2016, 2015 and 2014, respectively. The increase in operating costs and expenses for the year ended December 31, 2016 compared to 2015 was primarily due to the Transactions.

The increase in other expense is attributable to the following (dollars in millions):

	<u>2016 compared to 2015</u>	<u>2015 compared to 2014</u>
Corporate costs	\$ 540	\$ 44
Advertising sales expense	405	10
Enterprise	390	7
Property tax and insurance	198	17
Bad debt expense	188	15
Stock compensation expense	166	23
Bank fees	114	6
Other	217	10
	<u>\$ 2,218</u>	<u>\$ 132</u>

The increases in other expense for the year ended December 31, 2016 compared to the corresponding prior periods were primarily due to the Transactions.

On a pro forma basis, assuming the Transactions occurred as of January 1, 2015, increases in our operating costs and expenses, exclusive of items shown separately in the consolidated statements of operations, are attributable to the following (dollars in millions):

	<u>2016 compared to 2015</u>
Programming	\$ 661
Regulatory, connectivity and produced content	28
Costs to service customers	76
Marketing	53
Transition costs	84
Other	316
	<u>\$ 1,218</u>

On a pro forma basis, assuming the Transactions occurred as of January 1, 2015, programming costs were approximately \$9.6 billion and \$9.0 billion, representing 37% and 36% of total operating costs and expenses for the years ended December 31, 2016 and 2015, respectively.

Programming costs consist primarily of costs paid to programmers for basic, digital, premium, VOD, and pay-per-view programming. The increase in pro forma programming costs is primarily a result of annual contractual rate adjustments, including increases in amounts paid for retransmission consents and the introduction of new networks offset by synergies as a result of the Transactions and lower pay-per-view programming expenses. We expect pro forma programming expenses will continue to increase due to a variety of factors, including annual increases imposed by programmers with additional selling power as a result of media consolidation, increased demands by owners of broadcast stations for payment for retransmission consent or linking carriage of other services to retransmission consent, and additional programming, particularly new services. We have been unable to fully pass these increases on to our customers nor do we expect to be able to do so in the future without a potential loss of customers.

On a pro forma basis, assuming the Transactions occurred as of January 1, 2015, the increase in other expense is attributable to the following (dollars in millions):

	<b>2016 compared to 2015</b>
Advertising sales expense	\$ 100
Corporate costs	86
Stock compensation expense	49
Enterprise	48
Bank fees	33
	<u>\$ 316</u>

The increase in advertising sales expense relates primarily to higher advertising sales revenue. The increase in corporate costs relates primarily to increases in the number of employees including increases in engineering and IT. Stock compensation expense increased primarily due to increases in headcount and the value of equity issued.

**Depreciation and amortization.** Depreciation and amortization expense increased by \$4.8 billion in 2016 compared to 2015 primarily as a result of additional depreciation and amortization related to the Transactions, inclusive of the incremental amounts as a result of the higher fair values recorded in acquisition accounting. Depreciation and amortization expense increased by \$23 million in 2015 compared to 2014 which primarily represents depreciation on more recent capital expenditures offset by certain assets becoming fully depreciated.

**Other operating expenses, net.** The changes in other operating expenses, net are attributable to the following (dollars in millions):

	<b>2016 compared to 2015</b>	<b>2015 compared to 2014</b>
Merger and restructuring costs	\$ 900	\$ 32
Other pension benefits	(899)	—
Special charges, net	2	1
(Gain) loss on sale of assets, net	(6)	(6)
	<u>\$ (3)</u>	<u>\$ 27</u>

The increase in merger and restructuring costs is primarily due to approximately \$262 million of Legacy Charter and Legacy TWC contingent financing and advisory transaction fees paid at the closing of the Transactions as well as approximately \$642 million of employee retention and employee termination costs incurred during 2016. Other pension benefits includes the pension curtailment gain of \$675 million, rereasurement gain of \$195 million, expected return on plan assets of \$116 million offset by interest costs of \$87 million. For more information, see Note 15 to the accompanying consolidated financial statements contained in "Part II. Item 8. Financial Statements and Supplementary Data."

**Interest expense, net.** Net interest expense increased by \$1.2 billion in 2016 from 2015 and by \$395 million in 2015 from 2014 primarily as a result of an increase of \$463 million and \$446 million, respectively, of interest expense associated with the debt incurred to fund the Transactions, and, in 2016, \$604 million associated with debt assumed from Legacy TWC.

**Loss on extinguishment of debt.** Loss on extinguishment of debt of \$111 million and \$128 million for the years ended December 31, 2016 and 2015 primarily represents losses recognized as a result of the repurchase of CCO Holdings notes. For more information, see Note 9 to the accompanying consolidated financial statements contained in "Part II. Item 8. Financial Statements and Supplementary Data."

**Gain (loss) on financial instruments, net.** Interest rate derivative instruments are used to manage our interest costs and to reduce our exposure to increases in floating interest rates, and cross-currency derivative instruments are used to manage foreign exchange risk related to the foreign currency denominated debt assumed in the TWC Transaction. We recorded gains of \$89 million and losses of \$4 million and \$7 million during the years ended December 31, 2016, 2015 and 2014, respectively. Gains and losses on financial instruments are recognized due to changes in the fair value of our interest rate and, in 2016 our cross currency derivative instruments and the remeasurement of the fixed-rate British pound sterling denominated notes (the "Sterling Notes") into U.S. dollars. The year ended December 31, 2016 also includes an \$11 million loss realized upon termination of Legacy TWC interest rate swap derivative instruments. For more information, see Note 12 to the accompanying consolidated financial statements contained in "Part II. Item 8. Financial Statements and Supplementary Data."

**Other expense, net.** Other expense, net primarily represents equity losses on our equity-method investments. For more information, see Note 7 to the accompanying consolidated financial statements contained in "Part II. Item 8. Financial Statements and Supplementary Data."

**Income tax benefit (expense).** We recognized income tax benefits of \$2.9 billion and \$60 million for the years ended December 31, 2016 and 2015, respectively, and income tax expense of \$236 million for the year ended December 31, 2014. Certain of the deferred tax liabilities that were assumed in connection with the closing of the TWC Transaction will reverse and provide a source of future taxable income, resulting in a reduction of approximately \$3.3 billion of Legacy Charter's preexisting valuation allowance associated with its deferred tax assets. Such release of Legacy Charter's valuation allowance was recognized directly to income tax benefit in the consolidated statements of operations for the year ended December 31, 2016. Income tax benefit for the year ended December 31, 2016 was also impacted by a change in a state tax law that resulted in approximately \$65 million of tax benefit. The tax provision in future periods will vary based on current and future temporary differences, as well as future operating results. For more information, see Note 17 to the accompanying consolidated financial statements contained in "Part II. Item 8. Financial Statements and Supplementary Data."

The income tax benefit in 2015 was primarily due to the deemed liquidation of Charter Holdco solely for federal and state income tax purposes, resulting in a \$187 million deferred income tax benefit offset by income tax expense primarily through increases in deferred tax liabilities. Income tax expense was recognized in 2015 and 2014 primarily through increases in deferred tax liabilities related to Legacy Charter's franchises, which are characterized as indefinite lived for book financial reporting purposes, as well as, to a lesser extent, through current federal and state income tax expense.

**Net income attributable to noncontrolling interest.** Net income attributable to noncontrolling interest for financial reporting purposes represents A/N's portion of Charter Holdings' net income based on its effective common unit ownership interest of approximately 10% and on the preferred dividend of \$93 million for the year ended December 31, 2016. For more information, see Note 11 to the accompanying consolidated financial statements contained in "Item 1. Financial Statements."

**Net income (loss) attributable to Charter shareholders.** Net income attributable to Charter shareholders was \$3.5 billion for the year ended December 31, 2016 and net loss attributable to Charter shareholders was \$271 million and \$183 million for the years ended December 31, 2016, 2015 and 2014, respectively, primarily as a result of the factors described above. On a pro forma basis, assuming the Transactions occurred as of January 1, 2015, net income attributable to Charter shareholders was \$1.1 billion and \$159 million for the years ended December 31, 2016 and 2015, respectively.

#### **Use of Adjusted EBITDA and Free Cash Flow**

We use certain measures that are not defined by U.S. generally accepted accounting principles ("GAAP") to evaluate various aspects of our business. Adjusted EBITDA and free cash flow are non-GAAP financial measures and should be considered in addition to, not as a substitute for, consolidated net income (loss) and net cash flows from operating activities reported in accordance with GAAP. These terms, as defined by us, may not be comparable to similarly titled measures used by other companies. Adjusted EBITDA and free cash flow are reconciled to consolidated net income (loss) and net cash flows from operating activities, respectively, below.

Adjusted EBITDA is defined as consolidated net income (loss) plus net interest expense, income taxes, depreciation and amortization, stock compensation expense, loss on extinguishment of debt, (gain) loss on financial instruments, other (income) expense, net and other operating (income) expenses, such as merger and restructuring costs, other pension benefits, special charge

s and (gain) loss on sale or retirement of assets. As such, it eliminates the significant non-cash depreciation and amortization expense that results from the capital-intensive nature of our businesses as well as other non-cash or special items, and is unaffected by our capital structure or investment activities. However, this measure is limited in that it does not reflect the periodic costs of certain capitalized tangible and intangible assets used in generating revenues and our cash cost of financing. These costs are evaluated through other financial measures.

Free cash flow is defined as net cash flows from operating activities, less capital expenditures and changes in accrued expenses related to capital expenditures.

We believe that Adjusted EBITDA and free cash flow provide information useful to investors in assessing our performance and our ability to service our debt, fund operations and make additional investments with internally generated funds. In addition, Adjusted EBITDA generally correlates to the leverage ratio calculation under our credit facilities or outstanding notes to determine compliance with the covenants contained in the facilities and notes (all such documents have been previously filed with the SEC). For the purpose of calculating compliance with leverage covenants, we use Adjusted EBITDA, as presented, excluding certain expenses paid by our operating subsidiaries to other Charter entities. Our debt covenants refer to these expenses as management fees, which fees were in the amount of \$930 million, \$322 million and \$253 million for the years ended December 31, 2016, 2015 and 2014, respectively.

	Years ended December 31,		
	2016	2015	2014

## Liquidity and Capital Resources

### Overview

We have significant amounts of debt. The principal amount of our debt as of December 31, 2016 was \$60.0 billion, consisting of \$8.9 billion of credit facility debt, \$37.7 billion of investment grade senior secured notes and \$13.4 billion of high-yield senior unsecured notes. Our business requires significant cash to fund principal and interest payments on our debt.

Our projected cash needs and projected sources of liquidity depend upon, among other things, our actual results, and the timing and amount of our expenditures. Free cash flow was \$3.3 billion, \$547 million and \$171 million for the years ended December 31, 2016, 2015 and 2014, respectively. As of December 31, 2016, the amount available under our credit facilities was approximately \$2.8 billion and cash on hand was approximately \$1.5 billion. We expect to utilize free cash flow, cash on hand and availability under our credit facilities as well as future refinancing transactions to further extend the maturities of or reduce the principal on our obligations. The timing and terms of any refinancing transactions will be subject to market conditions. Additionally, we may, from time to time, and depending on market conditions and other factors, use cash on hand and the proceeds from securities offerings or other borrowings to retire our debt through open market purchases, privately negotiated purchases, tender offers or redemption provisions. We believe we have sufficient liquidity from cash on hand, free cash flow and Charter Operating's revolving credit facility as well as access to the capital markets to fund our projected cash needs.

We continue to evaluate the deployment of our cash on hand and anticipated future free cash flow including to invest in our business growth and other strategic opportunities, including mergers and acquisitions as well as stock repurchases and dividends. Our target leverage remains at 4 to 4.5 times, and up to 3.5 times at the Charter Operating level. In 2016, Charter purchased approximately 5.1 million shares of its Class A common stock for approximately \$1.3 billion pursuant to authorizations by Charter's board of directors of \$3 billion. Accordingly, as of December 31, 2016 and provided Charter's and Charter Operating's leverage ratios remain at target, management has authority to cause Charter to purchase an additional \$1.7 billion of Charter's Class A common stock without taking into account shares or units that may be purchased from A/N. Effective November 1, 2016, Charter's board of directors granted authority for a new \$750 million of Class A common stock buybacks under the rolling six-month authority without taking into account any Class A common stock purchased prior to November 1. As a result, a portion of the \$1.7 billion of authority is under the authority of management to approve up to \$750 million for Class A common stock buybacks in any six-month period. Charter is not obligated to acquire any particular amount of common stock, and the timing of any purchases that may occur cannot be predicted and will largely depend on market conditions and other potential uses of capital. Purchases may include open market purchases or negotiated transactions. As possible acquisitions, swaps or dispositions arise, we actively review them against our objectives including, among other considerations, improving the operational efficiency, clustering, product development or technology capabilities of our business and achieving appropriate return targets, and we may participate to the extent we believe these possibilities present attractive opportunities. However, there can be no assurance that we will actually complete any acquisitions, dispositions or system swaps, or that any such transactions will be material to our operations or results.

In December 2016, Charter and A/N exchanged 1.9 million Charter Holdings common units held by A/N for shares of Charter Class A common stock pursuant to the Letter Agreement for an aggregate purchase price of \$537 million. The Letter Agreement also requires A/N to sell to Charter or to Charter Holdings, on a monthly basis, a number of shares of Charter Class A common stock or Charter Holdings common units that represents a pro rata participation by A/N and its affiliates in any repurchases of shares of Charter Class A common stock from persons other than A/N effected by Charter during the immediately preceding calendar month, at a purchase price equal to the average price paid by Charter for the shares repurchased from persons other than A/N during such immediately preceding calendar month. Pursuant to the Letter Agreement, Charter Holdings purchased from A/N 752,767 Charter Holdings common units at a price per unit of \$289.83, or \$218 million.

### Recent Events

In January 2017, Charter Operating entered into an amendment to its Credit Agreement decreasing the applicable LIBOR margin on both the term loan E and term loan F to 2.00% and eliminating the LIBOR floor.

In February 2017, CCO Holdings and CCO Holdings Capital Corp. closed on transactions in which they issued \$1.0 billion aggregate principal amount of 5.125% senior notes due 2027. The net proceeds will be used to redeem CCO Holdings' 6.625% senior notes due 2022, pay related fees and expenses and for general corporate purposes.

### Free Cash Flow

Free cash flow increased \$2.8 billion and \$376 million during the years ended December 31, 2016 and 2015 compared to the corresponding prior periods, respectively, due to the following.

	Year ended December 31, 2016 compared to year ended December 31, 2015	Year ended December 31, 2015 compared to year ended December 31, 2014
Increase in Adjusted EBITDA	\$ 7,186	\$ 216
(Increase) decrease in capital expenditures	(3,485)	381
Changes in working capital, excluding change in accrued interest, net of effects from acquisitions	1,387	9
Increase in cash paid for interest, net	(1,602)	(196)
Increase in merger and restructuring costs	(652)	(32)
Other, net	(62)	(2)
	<u>\$ 2,772</u>	<u>\$ 376</u>

### Contractual Obligations

The following table summarizes our payment obligations as of December 31, 2016 under our long-term debt and certain other contractual obligations and commitments (dollars in millions.)

	Payments by Period				
	Total	Less than 1 year	1-3 years	3-5 years	More than 5 years
Long-Term Debt Principal Payments <sup>(a)</sup>	\$ 60,036	\$ 2,197	\$ 5,743	\$ 10,344	\$ 41,752
Long-Term Debt Interest Payments <sup>(b)</sup>	38,508	3,275	6,247	5,314	23,672
Capital and Operating Lease Obligations <sup>(c)</sup>	1,324	259	405	250	410
Programming Minimum Commitments <sup>(d)</sup>	310	225	63	22	—
Other <sup>(e)</sup>	13,187	1,334	1,514	1,203	9,136
	<u>\$ 113,365</u>	<u>\$ 7,290</u>	<u>\$ 13,972</u>	<u>\$ 17,133</u>	<u>\$ 74,970</u>

<sup>(a)</sup> The table presents maturities of long-term debt outstanding as of December 31, 2016. Refer to Notes 9 and 20 to our accompanying consolidated financial statements contained in "Part II. Item 8. Financial Statements and Supplementary Data" for a description of our long-term debt and other contractual obligations and commitments.

<sup>(b)</sup> Interest payments on variable debt are estimated using amounts outstanding at December 31, 2016 and the average implied forward London Interbank Offering Rate ("LIBOR") rates applicable for the quarter during the interest rate reset based on the yield curve in effect at December 31, 2016. Actual interest payments will differ based on actual LIBOR rates and actual amounts outstanding for applicable periods.

<sup>(c)</sup> We lease certain facilities and equipment under noncancelable capital and operating leases. Leases and rental costs charged to expense for the years ended December 31, 2016, 2015 and 2014, were \$215 million, \$49 million and \$43 million, respectively.

<sup>(d)</sup> We pay programming fees under multi-year contracts typically based on a flat fee per customer, which may be fixed for the term, or may in some cases escalate over the term. Programming costs included in the accompanying statement of operations were approximately \$7.0 billion, \$2.7 billion and \$2.5 billion, for the years ended December 31, 2016, 2015 and 2014, respectively. Certain of our programming agreements are based on a flat fee per month or have guaranteed minimum payments. The table sets forth the aggregate guaranteed minimum commitments under our programming contracts.

<sup>(e)</sup> "Other" represents other guaranteed minimum commitments, including rights negotiated directly with content owners for distribution on company-owned channels or networks and commitments related to our role as an advertising and distribution sales agent for third party-owned channels or networks as well as commitments to our customer premise equipment vendors.

The following items are not included in the contractual obligations table because the obligations are not fixed and/or determinable due to various factors discussed below. However, we incur these costs as part of our operations:

- We rent utility poles used in our operations. Generally, pole rentals are cancelable on short notice, but we anticipate that such rentals will recur. Rent expense incurred for pole rental attachments for the years ended December 31, 2016, 2015 and 2014 was \$115 million, \$53 million and \$49 million, respectively.
- We pay franchise fees under multi-year franchise agreements based on a percentage of revenues generated from video service per year. We also pay other franchise related costs, such as public education grants, under multi-year agreements. Franchise fees and other franchise-related costs included in the accompanying statement of operations were \$534 million, \$212 million and \$208 million for the years ended December 31, 2016, 2015 and 2014, respectively.
- We also have \$278 million in letters of credit, of which \$220 million is secured under the Charter Operating credit facility, primarily to our various casualty carriers as collateral for reimbursement of workers' compensation, auto liability and general liability claims.
- Minimum pension funding requirements have not been presented in the table above as such amounts have not been determined beyond 2016. We made no cash contributions to the qualified pension plans in 2016; however, we are permitted to make discretionary cash contributions to the qualified pension plans in 2017. For the nonqualified pension plan, we contributed \$5 million during 2016 and will continue to make contributions in 2017 to the extent benefits are paid.

See "Part I. Item 1. Business — Transaction-Related Commitments" for a listing of commitments as a result of the Transactions.

#### *Historical Operating, Investing, and Financing Activities*

**Cash and Cash Equivalents.** We held \$1.5 billion and \$5 million in cash and cash equivalents as of December 31, 2016 and 2015, respectively. We also held \$22.3 billion in restricted cash and cash equivalents as of December 31, 2015 representing proceeds of debt raised to fund the cash portion of the TWC Transaction consideration that were held in escrow until consummation of the TWC Transaction.

**Operating Activities.** Net cash provided by operating activities increased \$5.7 billion during the year ended December 31, 2016 compared to the year ended December 31, 2015, primarily due to an increase in Adjusted EBITDA of \$7.2 billion offset by an increase in cash paid for interest, net of \$1.6 billion.

Net cash provided by operating activities remained flat at \$2.4 billion for the years ended December 31, 2015 and 2014.

**Investing Activities.** Net cash used in investing activities for the years ended December 31, 2016, 2015 and 2014, was \$11.3 billion, \$17.0 billion and \$9.3 billion, respectively. Cash used in investing activities during the year ended December 31, 2016 primarily represented the acquisitions of Legacy TWC and Legacy Bright House with long-term restricted cash and cash equivalents and an increase in capital expenditures of \$3.5 billion as compared to 2015.

The increase in 2015 compared to 2014 is primarily due to an increase in the investment of net proceeds from the issuance of the CCO Safari II notes, CCO Safari III credit facilities and CCOH Safari notes related to the TWC Transaction in long-term restricted cash and cash equivalents offset by a decrease in long-term restricted cash and cash equivalents upon repayment of the Term G Loans and CCOH Safari notes out of escrow related to the Comcast Transactions and a decrease in capital expenditures.

**Financing Activities.** Net cash provided in financing activities was \$4.8 billion, \$14.7 billion and \$6.9 billion for the years ended December 31, 2016, 2015 and 2014, respectively. Cash provided during the year ended December 31, 2016 primarily represented the issuance of \$5 billion of equity to Liberty Broadband to fund a portion of the Transactions in 2016 offset by an increase in the purchase of treasury stock of \$1.5 billion as compared to 2015.

The increase in cash provided during the year ended December 31, 2015 as compared to the corresponding period in 2014 was primarily the result of the issuance of the CCO Safari II notes, CCO Safari III credit facilities and CCOH Safari notes related to the TWC Transaction offset by the repayment of \$7.1 billion of net proceeds held in escrow related to the CCOH Safari notes and Term G Loans upon the termination of the Comcast Transactions.

#### *Capital Expenditures*

We have significant ongoing capital expenditure requirements. Capital expenditures were \$5.3 billion, \$1.8 billion and \$2.2 billion for the years ended December 31, 2016, 2015 and 2014, respectively. The increase was driven by the Transactions. On a pro forma basis, assuming the Transactions occurred as of January 1, 2015, the increase for the year ended December 31, 2016 compared

to the corresponding prior period was driven by higher product development investments, transition capital expenditures incurred in connection with the Transactions and support capital investments. See the table below for more details.

The actual amount of our capital expenditures in 2017 will depend on a number of factors, including the pace of transition planning to service a larger customer base as a result of the Transactions, our all-digital transition in the Legacy TWC and Legacy Bright House markets and growth rates of both our residential and commercial businesses.

Our capital expenditures are funded primarily from cash flows from operating activities and borrowings on our credit facility. In addition, our liabilities related to capital expenditures increased by \$603 million, \$28 million and \$33 million for the years ended December 31, 2016, 2015 and 2014, respectively.

The following tables present our major capital expenditures categories on an actual and pro forma basis, assuming the Transactions occurred as of January 1, 2015, in accordance with National Cable and Telecommunications Association ("NCTA") disclosure guidelines for the years ended December 31, 2016, 2015 and 2014. The disclosure is intended to provide more consistency in the reporting of capital expenditures among peer companies in the cable industry. These disclosure guidelines are not required disclosures under GAAP, nor do they impact our accounting for capital expenditures under GAAP (dollars in millions):

Actual	Year ended December 31,		
	2016	2015	2014
Customer premise equipment (a)	\$ 1,864	\$ 582	\$ 1,082
Scalable infrastructure (b)	1,390	523	455
Line extensions (c)	721	194	176
Upgrade/rebuild (d)	456	128	167
Support capital (e)	894	413	341
Total capital expenditures	\$ 5,325	\$ 1,840	\$ 2,221

Capital expenditures included in total related to:

Commercial services	\$ 824	\$ 260	\$ 242
Transition (f)	\$ 460	\$ 115	\$ 27
All-digital transition	\$ —	\$ —	\$ 410

Pro Forma	Year ended December 31,	
	2016	2015
Customer premise equipment (a)	\$ 2,761	\$ 2,650
Scalable infrastructure (b)	2,009	1,702
Line extensions (c)	1,005	977
Upgrade/rebuild (d)	610	594
Support capital (e)	1,160	1,046
Total capital expenditures	\$ 7,545	\$ 6,969

- (a) Customer premise equipment includes costs incurred at the customer residence to secure new customers and revenue generating units. It also includes customer installation costs and customer premise equipment (e.g., set-top boxes and cable modems).
- (b) Scalable infrastructure includes costs not related to customer premise equipment, to secure growth of new customers and revenue generating units, or provide service enhancements (e.g., headend equipment).
- (c) Line extensions include network costs associated with entering new service areas (e.g., fiber/coaxial cable, amplifiers, electronic equipment, make-ready and design engineering).
- (d) Upgrade/rebuild includes costs to modify or replace existing fiber/coaxial cable networks, including betterments.
- (e) Support capital includes costs associated with the replacement or enhancement of non-network assets due to technological and physical obsolescence (e.g., non-network equipment, land, buildings and vehicles).
- (f) Transition represents incremental costs incurred to integrate the Legacy TWC and Legacy Bright House operations and to bring the three companies' systems and processes into a uniform operating structure.

**Debt**

As of December 31, 2016, the accreted value of our total debt was approximately \$61.7 billion, as summarized below (dollars in millions):

	December 31, 2016		Interest Payment Dates	Maturity Date (b)
	Principal Amount	Accreted Value (a)		
<b>CCO Holdings, LLC:</b>				
5.250% senior notes due 2021	\$ 500	\$ 496	3/15 & 9/15	3/15/2021

<u>          </u>		<u>          </u>	

- (a) The accreted values presented in the table above represent the principal amount of the debt less the original issue discount at the time of sale, deferred financing costs, and, (i) in regards to the Legacy TWC debt assumed, a fair value premium adjustment as a result of applying acquisition accounting plus/minus the accretion of those amounts to the balance sheet date and (ii) in regards to the fixed-rate British pound sterling denominated notes (the "Sterling Notes"), a remeasurement of the principal amount of the debt and any premium or discount into US dollars as of the balance sheet date. However, the amount that is currently payable if the debt becomes immediately due is equal to the principal amount of the debt. We have availability under our credit facilities of approximately \$2.8 billion as of December 31, 2016.
- (b) In general, the obligors have the right to redeem all of the notes set forth in the above table in whole or in part at their option, beginning at various times prior to their stated maturity dates, subject to certain conditions, upon the payment of the outstanding principal amount (plus a specified redemption premium) and all accrued and unpaid interest. For additional information see "Description of our Outstanding Debt" below.
- (c) Principal amount includes £625 million valued at \$770 million as of December 31, 2016 using the exchange rate as of December 31, 2016.
- (d) Principal amount includes £650 million valued at \$800 million as of December 31, 2016 using the exchange rate as of December 31, 2016.

See Note 9 to the accompanying consolidated financial statements contained in "Part II. Item 8. Financial Statements and Supplementary Data" for further details regarding our outstanding debt and other financing arrangements, including certain information about maturities, covenants and restrictions related to such debt and financing arrangements. The agreements and instruments governing our debt and financing arrangements are complicated and you should consult such agreements and instruments which are filed with the SEC for more detailed information.

At December 31, 2016, Charter Operating had a consolidated leverage ratio of approximately 2.8 to 1.0 and a consolidated first lien leverage ratio of 2.7 to 1.0. Both ratios are in compliance with the ratios required by the Charter Operating credit facilities of 5.0 to 1.0 consolidated leverage ratio and 4.0 to 1.0 consolidated first lien leverage ratio. A failure by Charter Operating to maintain the financial covenants would result in an event of default under the Charter Operating credit facilities and the debt of CCO Holdings. See "Part I. Item 1A. Risk Factors — The agreements and instruments governing our debt contain restrictions and limitations that could significantly affect our ability to operate our business, as well as significantly affect our liquidity."

#### **Recently Issued Accounting Standards**

See Note 22 to the accompanying consolidated financial statements contained in "Part II. Item 8. Financial Statements and Supplementary Data" for a discussion of recently issued accounting standards.

#### **Item 7A. *Quantitative and Qualitative Disclosures About Market Risk.***

We use derivative instruments to manage interest rate risk on variable debt and foreign exchange risk on the Sterling Notes, and do not hold or issue derivative instruments for speculative trading purposes.

Interest rate derivative instruments are used to manage interest costs and to reduce our exposure to increases in floating interest rates. We manage our exposure to fluctuations in interest rates by maintaining a mix of fixed and variable-rate debt. Using interest rate derivative instruments, we agree to exchange, at specified intervals through 2017, the difference between fixed and variable interest amounts calculated by reference to agreed-upon notional principal amounts.

Upon closing of the TWC Transaction, we assumed cross-currency derivative instruments. Cross-currency derivative instruments are used to effectively convert £1.275 billion aggregate principal amount of fixed-rate British pound sterling denominated debt, including annual interest payments and the payment of principal at maturity, to fixed-rate U.S. dollar denominated debt. The cross-currency derivative instruments have maturities of June 2031 and July 2042. We are required to post collateral on the cross-currency derivative instruments when such instruments are in a liability position. In May 2016, we entered into a collateral holiday agreement for 80% of both the 2031 and 2042 cross-currency swaps, which eliminates the requirement to post collateral for three years. For more information, see Note 12 to the accompanying consolidated financial statements contained in "Part II. Item 8. Financial Statements and Supplementary Data."

As of December 31, 2016 and 2015, the weighted average interest rate on the credit facility debt, including the effects of our interest rate swap agreements, was approximately 2.9% and 3.3%, respectively, and the weighted average interest rate on the senior notes was approximately 5.9% and 5.5%, respectively, resulting in a blended weighted average interest rate of 5.4% and 5.1%, respectively. The interest rate on approximately 87% and 83% of the total principal amount of our debt was effectively fixed, including the effects of our interest rate swap agreements, as of December 31, 2016 and 2015, respectively.

The table set forth below summarizes the fair values and contract terms of financial instruments subject to interest rate risk maintained by us as of December 31, 2016 (dollars in millions):

	2017	2018	2019	2020	2021	Thereafter	Total	Fair Value
<b>Debt:</b>								
Fixed Rate	\$ 2,000	\$ 2,000	\$ 3,250	\$ 3,500	\$ 2,200	\$ 38,170	\$ 51,120	\$ 55,203
Average Interest Rate	5.85%	6.75%	8.44%	4.19%	4.32%	5.84%	5.86%	
Variable Rate	\$ 197	\$ 197	\$ 296	\$ 1,716	\$ 2,928	\$ 3,582	\$ 8,916	\$ 8,943
Average Interest Rate	3.15%	3.66%	3.96%	4.49%	4.37%	4.81%	4.51%	
<b>Interest Rate Instruments:</b>								
Variable to Fixed Rate	\$ 850	\$ —	\$ —	\$ —	\$ —	\$ —	\$ 850	\$ 5
Average Pay Rate	3.84%	—%	—%	—%	—%	—%	3.84%	
Average Receive Rate	3.70%	—%	—%	—%	—%	—%	3.70%	

As of December 31, 2016, we had \$850 million in notional amounts of interest rate derivative instruments outstanding. The notional amounts of interest rate derivative instruments do not represent amounts exchanged by the parties and, thus, are not a measure of our exposure to credit loss. The amounts exchanged are determined by reference to the notional amount and the other terms of the contracts.

The estimated fair value of the interest rate derivative instruments is determined using a present value calculation based on an implied forward LIBOR curve (adjusted for Charter Operating's or counterparties' credit risk). Interest rates on variable-rate debt are estimated using the average implied forward LIBOR for the year of maturity based on the yield curve in effect at December 31, 2016 including applicable bank spread.

#### **Item 8. Financial Statements and Supplementary Data.**

Our consolidated financial statements, the related notes thereto, and the reports of independent accountants are included in this annual report beginning on page F-I.

#### **Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure.**

None.

#### **Item 9A. Controls and Procedures.**

##### **Conclusion Regarding the Effectiveness of Disclosure Controls and Procedures**

As of the end of the period covered by this report, under the supervision and with the participation of our management, including our Chief Executive Officer and Chief Financial Officer, we have evaluated the effectiveness of the design and operation of disclosure controls and procedures with respect to the information generated for use in this annual report. The evaluation was based upon reports and certifications provided by a number of executives. Based on, and as of the date of that evaluation, our Chief Executive Officer and Chief Financial Officer concluded that the disclosure controls and procedures were effective to provide reasonable assurances that information required to be disclosed in the reports we file or submit under the Securities Exchange Act of 1934 is recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms.

In designing and evaluating the disclosure controls and procedures, our management recognized that any controls and procedures, no matter how well designed and operated, can provide only reasonable, not absolute, assurance of achieving the desired control objectives, and management necessarily was required to apply its judgment in evaluating the cost-benefit relationship of possible controls and procedures. Based upon the above evaluation, we believe that our controls provide such reasonable assurances.

On May 18, 2016, we completed the Transactions and as a result, we have incorporated internal controls over significant processes specific to the Transactions and to activities post-Transactions that we believe to be appropriate and necessary in consideration of the related integration, including controls associated with the Transactions for the valuations of certain Legacy TWC and Legacy Bright House assets and liabilities assumed, as well as adoption of common financial reporting and internal control practices for

the combined company. In October 2016, Legacy TWC was converted to the Legacy Charter's enterprise resource planning system which resulted in significant changes to the nature and type of internal controls for the most recent fiscal quarter. As we further integrate Legacy TWC and Legacy Bright House, we will continue to validate the effectiveness and integration of internal controls.

Except as described above in the preceding paragraph, during the quarter ended December 31, 2016, there was no change in our internal control over financial reporting that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

#### **Management's Report on Internal Control Over Financial Reporting**

Our management is responsible for establishing and maintaining adequate internal control over financial reporting (as defined in Rule 13a-15(f) under the Exchange Act) for the Company. Our internal control system was designed to provide reasonable assurance to our management and board of directors regarding the preparation and fair presentation of published financial statements.

Management has assessed the effectiveness of our internal control over financial reporting as of December 31, 2016. In making this assessment, we used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission ("COSO") in *Internal Control — Integrated Framework* (2013). As permitted by guidance issued by the SEC, we have excluded from the scope of our assessment of internal control over financial reporting the operations and related assets of Legacy Bright House. As of December 31, 2016 and for the period from acquisition through December 31, 2016, both total assets and revenues subject to Bright House's internal control over financial reporting represented 9% of our consolidated total assets (including goodwill, intangibles and property, plant and equipment acquired in the Bright House Transaction and included within the scope of the assessment) and total revenues as of and for the year ended December 31, 2016. Based on management's assessment utilizing these criteria we believe that, as of December 31, 2016, our internal control over financial reporting was effective.

Our independent auditors, KPMG LLP, have audited our internal control over financial reporting as stated in their report on page F-2.

#### **Item 9B. Other Information.**

None.

**PART III****Item 10. *Directors, Executive Officers and Corporate Governance.***

The information required by Item 10 will be included in Charter's 2016 Proxy Statement (the "Proxy Statement") under the headings "Election of Class A Directors," "Section 16(a) Beneficial Ownership Reporting Requirements," and "Code of Ethics," or in amendment to this Annual Report on Form 10-K and is incorporated herein by reference.

**Item 11. *Executive Compensation.***

The information required by Item 11 will be included in the Proxy Statement under the headings "Executive Compensation," "Election of Class A Directors – Director Compensation" and "Compensation Discussion and Analysis," or in an amendment to this Annual Report on Form 10-K and is incorporated herein by reference. Information contained in the Proxy Statement or an amendment to this Annual Report on Form 10-K under the caption "Report of Compensation and Benefits Committee" is furnished and not deemed filed with the SEC.

**Item 12. *Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters.***

The information required by Item 12 will be included in the Proxy Statement under the heading "Security Ownership of Certain Beneficial Owners and Management" or in amendment to this Annual Report on Form 10-K and is incorporated herein by reference.

**Item 13. *Certain Relationships and Related Transactions, and Director Independence.***

The information required by Item 13 will be included in the Proxy Statement under the heading "Certain Relationships and Related Transactions" and "Election of Class A Directors" or in amendment to this Annual Report on Form 10-K and is incorporated herein by reference.

**Item 14. *Principal Accounting Fees and Services.***

The information required by Item 14 will be included in the Proxy Statement under the heading "Accounting Matters" or in amendment to this Annual Report on Form 10-K and is incorporated herein by reference.

**PART IV****Item 15. Exhibits and Financial Statement Schedules.**

(a) The following documents are filed as part of this annual report:

(1) Financial Statements.

A listing of the financial statements, notes and reports of independent public accountants required by Item 8 begins on page F-1 of this annual report.

(2) Financial Statement Schedules.

No financial statement schedules are required to be filed by Items 8 and 15(c) because they are not required or are not applicable, or the required information is set forth in the applicable financial statements or notes thereto.

(3) The index to the exhibits begins on page E-1 of this annual report.

**SIGNATURES**

Pursuant to the requirements of Section 13 or 15(d) of the Securities Exchange Act of 1934, Charter Communications, Inc. has duly caused this annual report to be signed on its behalf by the undersigned, thereunto duly authorized.

### Exhibit Index

Exhibits are listed by numbers corresponding to the Exhibit Table of Item 601 in Regulation S-K.

Exhibit	Description
2.1	Agreement and Plan of Mergers, dated as of May 23, 2015, among Time Warner Cable Inc., Charter Communications, Inc., CCH I, LLC, Nina Corporation I, Inc., Nina Company II, LLC and Nina Company III, LLC (incorporated by reference to Exhibit 2.1 to the current report on Form 8-K filed by Charter Communications, Inc. on May 29, 2015 (File No. 001-33664)).
2.2	Contribution Agreement, dated March 31, 2015, by and among Advance/Newhouse Partnership, A/NPC Holdings LLC, Charter Communications, Inc., CCH I, LLC, and Charter Communications Holding Company, LLC (incorporated by reference to Exhibit 2.1 to the current report on Form 8-K filed by Charter Communications, Inc. on April 1, 2015 (File No. 001-33664)).
3.1	Amended and Restated Certificate of Incorporation of Charter Communications, Inc. (incorporated by reference to Exhibit 3.1 to the current report on Form 8-K of Charter Communications, Inc. filed on May 19, 2016 (File No. 001-33664)).
3.2	By-laws of Charter Communications, Inc. as of May 18, 2016 (incorporated by reference to Exhibit 3.2 to the current report on Form 8-K of Charter Communications, Inc. filed on May 19, 2016 (File No. 001-33664)).
4.1(a)	Amended and Restated Stockholders Agreement, dated March 31, 2015, by and among Charter Communications, Inc., Liberty Broadband Corporation and Advance/Newhouse Partnership (incorporated by reference to Exhibit 4.1 to the current report on Form 8-K filed by Charter Communications, Inc. on April 1, 2015 (File No. 001-33664)).
4.1(b)	Second Amended and Restated Stockholders Agreement, dated May 23, 2015, by and among Charter Communications, Inc., CCH I, LLC, Liberty Broadband Corporation and Advance/Newhouse Partnership (incorporated by reference to Exhibit 10.1 to the registration statement on Form S-4 filed by CCH I, LLC on June 26, 2015 (File No. 333-205240)).
10.1	Indenture dated as of May 10, 2011, by and among CCO Holdings, LLC, and CCO Holdings Capital Corp., as Issuers, Charter Communications, Inc., as Parent Guarantor, and The Bank of New York Mellon Trust Company, N.A., as Trustee (incorporated by reference to Exhibit 4.1 to the current report on Form 8-K of Charter Communications, Inc. filed on May 13, 2011 (File No. 001-33664)).
10.2	Third Supplemental Indenture dated as of January 26, 2012 by and among CCO Holdings, LLC, and CCO Holdings Capital Corp., as Issuers, Charter Communications, Inc., as Parent Guarantor, and The Bank of New York Mellon Trust Company, N.A., as Trustee (incorporated by reference to Exhibit 4.2 to the current report on Form 8-K of Charter Communications, Inc. filed on February 1, 2012 (File No. 001-33664)).
10.3	Fourth Supplemental Indenture dated August 22, 2012 relating to the 5.25% Senior Notes due 2022 by and among CCO Holdings, LLC, CCO Holdings Capital Corp. and The Bank of New York Mellon Trust Company, N.A., as trustee (incorporated by reference to Exhibit 10.1 to the quarterly report on Form 10-Q of Charter Communications, Inc. filed on November 6, 2012 (File No. 001-33664)).
10.4	Fifth Supplemental Indenture dated December 17, 2012 relating to the 5.125% Senior Notes due 2023 by and among CCO Holdings, LLC, CCO Holdings Capital Corp. and The Bank of New York Mellon Trust Company, N.A., as trustee (incorporated by reference to Exhibit 10.9 to the annual report on Form 10-K of Charter Communications, Inc. filed February 22, 2013 (File No. 001-33664)).
10.5	Sixth Supplemental Indenture relating to the 5.25% senior notes due 2021, dated as of March 14, 2013, by and among CCO Holdings, LLC, and CCO Holdings Capital Corp., as Issuers, Charter Communications, Inc., as Parent Guarantor, and The Bank of New York Mellon Trust Company, N.A., as Trustee (incorporated by reference to Exhibit 10.1 to the current report on Form 8-K of Charter Communications, Inc. filed March 15, 2013 (File No. 001-33664)).
10.6	Seventh Supplemental Indenture relating to the 5.75% senior notes due 2023, dated as of March 14, 2013, by and among CCO Holdings, LLC, and CCO Holdings Capital Corp., as Issuers, Charter Communications, Inc., as Parent Guarantor, and The Bank of New York Mellon Trust Company, N.A., as Trustee (incorporated by reference to Exhibit 10.2 to the current report on Form 8-K of Charter Communications, Inc. filed March 15, 2013 (File No. 001-33664)).
10.7	Eighth Supplemental Indenture relating to the 5.75% senior notes due 2024, dated as of May 3, 2013, by and among CCO Holdings, LLC and CCO Holdings Capital Corp., as Issuers, Charter Communications, Inc., as Parent Guarantor, and The Bank of New York Mellon Trust Company, N.A., as Trustee (incorporated by reference to Exhibit 10.7 to the quarterly report on Form 10-Q of Charter Communications, Inc. filed on May 7, 2013 (File No. 001-33664)).
10.8	Indenture dated as of November 5, 2014, by and among CCO Holdings, LLC, CCO Holdings Capital Corp. and CCOH Safari, LLC, as Issuers, Charter Communications, Inc., as Parent Guarantor, and The Bank of New York Mellon Trust

Company, N.A., as Trustee (incorporated by reference to Exhibit 4.1 to the current report on Form 8-K of Charter Communications, Inc. filed on November 10, 2014 (File No. 001-33664)).

---

- 10.9 Third Supplemental Indenture, dated as of April 21, 2015, among CCO Holdings, LLC, CCO Holdings Capital Corp., Charter Communications, Inc., as guarantor, and The Bank of New York Mellon Trust Company, N.A., as trustee (incorporated by reference to Exhibit 4.1 to the current report on Form 8-K filed by Charter Communications, Inc. on April 22, 2015 (File No. 001-33664)).
- 10.10 Fourth Supplemental Indenture, dated as of April 21, 2015, among CCO Holdings, LLC, CCO Holdings Capital Corp., Charter Communications, Inc., as guarantor, and The Bank of New York Mellon Trust Company, N.A., as trustee (incorporated by reference to Exhibit 4.2 to the current report on Form 8-K filed by Charter Communications, Inc. on April 22, 2015 (File No. 001-33664)).
- 10.11 Fifth Supplemental Indenture, dated as of April 21, 2015, among CCO Holdings, LLC, CCO Holdings Capital Corp., Charter Communications, Inc., as guarantor, and The Bank of New York Mellon Trust Company, N.A., as trustee (incorporated by reference to Exhibit 4.3 to the current report on Form 8-K filed by Charter Communications, Inc. on April 22, 2015 (File No. 001-33664)).
- 10.12 Exchange and Registration Rights Agreement, dated as of April 21, 2015 relating to the 5.125% Senior Notes due 2023, among CCO Holdings, LLC, CCO Holdings Capital Corp., Charter Communications, Inc., as guarantor, and Credit Suisse Securities (USA) LLC, Deutsche Bank Securities Inc., Goldman, Sachs & Co. and Merrill Lynch, Pierce, Fenner & Smith Incorporated, as representatives of the several Purchasers (as defined therein) (incorporated by reference to Exhibit 10.1 to the current report on Form 8-K filed by Charter Communications, Inc. on April 22, 2015 (File No. 001-33664)).
- 10.13 Exchange and Registration Rights Agreement relating to the 5.375% Senior Notes due 2025, dated as of April 21, 2015, among CCO Holdings, LLC, CCO Holdings Capital Corp., Charter Communications, Inc., as guarantor, and Credit Suisse Securities (USA) LLC, Deutsche Bank Securities Inc., Goldman, Sachs & Co. and Merrill Lynch, Pierce, Fenner & Smith Incorporated, as representatives of the several Purchasers (as defined therein) (incorporated by reference to Exhibit 10.2 to the current report on Form 8-K filed by Charter Communications, Inc. on April 22, 2015 (File No. 001-33664)).
- 10.14 Exchange and Registration Rights Agreement relating to the 5.875% Senior Notes due 2027, dated as of April 21, 2015, among CCO Holdings, LLC, CCO Holdings Capital Corp., Charter Communications, Inc., as guarantor, and Credit Suisse Securities (USA) LLC, Deutsche Bank Securities Inc., Goldman, Sachs & Co. and Merrill Lynch, Pierce, Fenner & Smith Incorporated, as representatives of the several Purchasers (as defined therein) (incorporated by reference to Exhibit 10.3 to the current report on Form 8-K filed by Charter Communications, Inc. on April 22, 2015 (File No. 001-33664)).
- 10.15 Indenture, dated as of July 23, 2015, among Charter Communications Operating, LLC, Charter Communications Operating Capital Corp. and CCO Safari II, LLC, as issuers, and The Bank of New York Mellon Trust Company, N.A., as trustee and collateral agent (incorporated by reference to Exhibit 4.1 to the current report on Form 8-K filed by Charter Communications, Inc. on July 27, 2015 (File No. 001-33664)).
- 10.16 First Supplemental Indenture, dated as of July 23, 2015, among CCO Safari II, LLC, as escrow issuer, CCH II, LLC, as limited guarantor, and The Bank of New York Mellon Trust Company, N.A., as trustee and collateral agent (incorporated by reference to Exhibit 4.2 to the current report on Form 8-K filed by Charter Communications, Inc. on July 27, 2015 (File No. 001-33664)).
- 10.17 Exchange and Registration Rights Agreement, dated July 23, 2015 relating to the 3.579% Senior Secured Notes due 2020, 4.464% Senior Secured Notes due 2022, 4.908% Senior Secured Notes due 2025, 6.384% Senior Secured Notes due 2035, 6.484% Senior Secured Notes due 2045 and 6.834% Senior Secured Notes due 2055, between CCO Safari II, LLC and Goldman, Sachs & Co., Credit Suisse Securities (USA) LLC, Merrill Lynch, Pierce, Fenner & Smith Incorporated, Deutsche Bank Securities Inc. and UBS Securities LLC, as representatives of the several Purchasers (as defined therein) (incorporated by reference to Exhibit 10.1 to the current report on Form 8-K filed by Charter Communications, Inc. on July 27, 2015 (File No. 001-33664)).
- 10.18 Indenture, dated as of November 20, 2015, among CCO Holdings, LLC, CCO Holdings Capital Corp. and CCOH Safari, LLC, as issuers, and The Bank of New York Mellon Trust Company, N.A., as trustee (incorporated by reference to Exhibit 4.1 to the current report on Form 8-K filed by Charter Communications, Inc. on November 25, 2015 (File No. 001-33664)).
- 10.19 First Supplemental Indenture, dated as of November 20, 2015, between CCOH Safari, LLC, as escrow issuer, and The Bank of New York Mellon Trust Company, N.A., as trustee (incorporated by reference to Exhibit 4.2 to the current report on Form 8-K filed by Charter Communications, Inc. on November 25, 2015 (File No. 001-33664)).
- 10.20 Exchange and Registration Rights Agreement, dated November 20, 2015 relating to the 5.750% Senior Notes due 2026, between CCOH Safari, LLC and Credit Suisse Securities (USA) LLC, Goldman, Sachs & Co., Merrill Lynch, Pierce, Fenner & Smith Incorporated, UBS Securities LLC and Deutsche Bank Securities Inc., as representatives of the

several Purchasers (as defined therein) (incorporated by reference to Exhibit 10.1 to the current report on Form 8-K filed by Charter Communications, Inc. on November 25, 2015 (File No. 001-33664)).

10.21

Sixth Supplemental Indenture, dated as of February 19, 2016, among CCO Holdings, LLC, CCO Holdings Capital Corp., Charter Communications, Inc., as guarantor, and The Bank of New York Mellon Trust Company, N.A., as trustee (incorporated by reference to Exhibit 4.1 to the current report on Form 8-K filed by Charter Communications, Inc. on February 22, 2016 (File No. 001-33664)).

E- 2

- 10.22 Exchange and Registration Rights Agreement, dated February 19, 2016, relating to the 5.875% Senior Notes due 2024, among CCO Holdings, LLC, CCO Holdings Capital Corp., Charter Communications, Inc., as guarantor, and Deutsche Bank Securities Inc., Credit Suisse Securities (USA) LLC, Goldman, Sachs & Co., Merrill Lynch, Pierce, Fenner & Smith Incorporated, UBS Securities LLC, Citigroup Global Markets Inc. and Wells Fargo Securities, LLC, as representatives of the several Purchasers (as defined therein) (incorporated by reference to Exhibit 10.1 to the current report on Form 8-K filed by Charter Communications, Inc. on February 22, 2016 (File No. 001-33664)).
- 10.23 Seventh Supplemental Indenture, dated as of April 21, 2016, among CCO Holdings, LLC, CCO Holdings Capital Corp., Charter Communications, Inc., as guarantor, and The Bank of New York Mellon Trust Company, N.A., as trustee (incorporated by reference to Exhibit 4.1 to the current report on Form 8-K filed by Charter Communications, Inc. on April 27, 2016 (File No. 001-33664)).
- 10.24 Exchange and Registration Rights Agreement, dated April 21, 2016, relating to the 5.500% Senior Notes due 2026, among CCO Holdings, LLC, CCO Holdings Capital Corp., Charter Communications, Inc., as guarantor, and Merrill Lynch, Pierce, Fenner & Smith Incorporated, Citigroup Global Markets Inc., Credit Suisse Securities (USA) LLC, Deutsche Bank Securities Inc., Goldman, Sachs & Co., UBS Securities LLC and Wells Fargo Securities, LLC, as representatives of the several Purchasers (as defined therein) (incorporated by reference to Exhibit 10.1 to the current report on Form 8-K filed by Charter Communications, Inc. on April 27, 2016 (File No. 001-33664)).
- 10.25 Second Supplemental Indenture, dated as of May 18, 2016, by and among Charter Communications Operating, LLC, Charter Communications Operating Capital Corp., CCO Safari II, LLC and The Bank of New York Mellon Trust Company, N.A., as trustee and collateral agent (incorporated by reference to Exhibit 4.1 to the current report on Form 8-K filed by Charter Communications, Inc. on May 24, 2016 (File No. 001-33664)).
- 10.26 Third Supplemental Indenture, dated as of May 18, 2016, by and among CCO Holdings, LLC, the subsidiary guarantors party thereto and The Bank of New York Mellon Trust Company, N.A., as trustee and collateral agent (incorporated by reference to Exhibit 4.2 to the current report on Form 8-K filed by Charter Communications, Inc. on May 24, 2016 (File No. 001-33664)).

### Report of Independent Registered Public Accounting Firm

The Board of Directors and Shareholders  
Charter Communications, Inc.:

We have audited the accompanying consolidated balance sheets of Charter Communications, Inc. and subsidiaries (the Company) as of December 31, 2016 and 2015, and the related consolidated statements of operations, comprehensive income (loss), changes in shareholders' equity (deficit), and cash flows for each of the years in the three-year period ended December 31, 2016. We also have audited the Company's internal control over financial reporting as of December 31, 2016, based on criteria established in *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for these consolidated financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Report on Internal Control over Financial Reporting (Item 9A). Our responsibility is to express an opinion on these consolidated financial statements and an opinion on the Company's internal control over financial reporting based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the consolidated financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Charter Communications, Inc. and subsidiaries as of December 31, 2016 and 2015, and the results of their operations and their cash flows for each of the years in the three-year period ended December 31, 2016, in conformity with U.S. generally accepted accounting principles. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2016, based on criteria established in *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

Charter Communications, Inc. acquired Bright House Networks, LLC (Legacy Bright House) during 2016. Management excluded from its assessment of the effectiveness of the Company's internal control over financial reporting as of December 31, 2016, the operations and related assets of Legacy Bright House. As of December 31, 2016 and for the period from acquisition through December 31, 2016, both total assets and revenues subject to Legacy Bright House's internal control over financial reporting represented approximately 9% of the Company's consolidated total assets (including goodwill, intangible assets, and property, plant and equipment acquired from Legacy Bright House that are included within the scope of the assessment) and consolidated total revenues as of and for the year ended December 31, 2016. Our audit of internal control over financial reporting of Charter Communications, Inc. also excluded an evaluation of the internal control over financial reporting of Bright House Networks, LLC as of December 31, 2016.

F- 8

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

## 1. Organization and Basis of Presentation

### *Organization*

Charter Communications, Inc. (together with its controlled subsidiaries, "Charter," or the "Company") is the second largest cable operator in the United States and a leading broadband communications company providing video, Internet and voice services to residential and business customers. In addition, the Company sells video and online advertising inventory to local, regional and national advertising customers and fiber-delivered communications and managed information technology solutions to larger enterprise customers. The Company also owns and operates regional sports networks and local sports, news and lifestyle channels and sells security and home management services to the residential marketplace.

Charter is a holding company whose principal asset is a controlling equity interest in Charter Communications Holdings, LLC ("Charter Holdings"), an indirect owner of Charter Communications Operating, LLC ("Charter Operating") under which substantially all of the operations reside. All significant intercompany accounts and transactions among consolidated entities have been eliminated.

### *Basis of Presentation*

The accompanying consolidated financial statements have been prepared in accordance with U.S. generally accepted accounting principles ("GAAP") and the rules and regulations of the Securities and Exchange Commission (the "SEC").

The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Areas involving significant judgments and estimates include capitalization of labor and overhead costs; depreciation and amortization costs; purchase accounting valuations of assets and liabilities including, but not limited to, property, plant and equipment, intangibles and goodwill; pension benefits; income taxes; contingencies and programming expense. Actual results could differ from those estimates.

## 2. Mergers and Acquisitions

### **TWC Transaction**

On May 18, 2016, the transactions contemplated by the Agreement and Plan of Mergers dated as of May 23, 2015 (the "Merger Agreement"), by and among Time Warner Cable Inc. ("Legacy TWC"), Charter Communications, Inc. prior to the closing of the Merger Agreement ("Legacy Charter"), CCH I, LLC, previously a wholly owned subsidiary of Legacy Charter ("New Charter") and certain other subsidiaries of New Charter were completed (the "TWC Transaction," and together with the Bright House Transaction described below, the "Transactions"). As a result of the TWC Transaction, New Charter became the new public parent company that holds the operations of the combined companies and was renamed Charter Communications, Inc.

Pursuant to the terms of the Merger Agreement, upon consummation of the TWC Transaction, each outstanding share of Legacy TWC common stock (other than Legacy TWC common stock held by Liberty Broadband Corporation ("Liberty Broadband") and Liberty Interactive Corporation ("Liberty Interactive" and, collectively, the "Liberty Parties")), was converted into the right to receive, at the option of each such holder of Legacy TWC common stock, either (a) \$100 in cash and Charter Class A common stock equivalent to 0.5409 shares of Legacy Charter Class A common stock (the "Option A Consideration") or (b) \$115 in cash and Charter Class A common stock equivalent to 0.4562 shares of Legacy Charter Class A common stock (the "Option B Consideration"). The actual number of shares of Charter Class A common stock that Legacy TWC stockholders received, excluding the Liberty Parties, was calculated by multiplying the exchange ratios of 0.5409 or 0.4562 specified above by 0.9042 (the "Parent Merger Exchange Ratio"), which was also the exchange ratio that was used to determine the number of shares of Charter Class A common stock that Legacy Charter stockholders received per share of Legacy Charter Class A common stock. Such exchange ratio did not impact the aggregate value represented by the shares of Charter Class A common stock issued in the TWC Transaction; however, it did impact the actual number of shares issued in the TWC Transaction.

Out of approximately 277 million shares of TWC common stock outstanding at the closing of the TWC Transaction, excluding TWC common stock held by the Liberty Parties, approximately 274 million shares were converted into the right to receive the

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
**(dollars in millions, except share or per share data or where indicated)**

Option A Consideration and approximately 3 million shares were converted into the right to receive the Option B Consideration. The Liberty Parties received approximately one share of Charter Class A common stock for each share of Legacy TWC common stock they owned (equivalent to 1.106 shares of Legacy Charter Class A common stock multiplied by the Parent Merger Exchange Ratio).

As of the date of completion of the Transactions, the total value of the TWC Transaction was approximately \$85 billion, including cash, equity and Legacy TWC assumed debt. The purchase price also includes an estimated pre-combination vesting period fair value of \$514 million for Legacy TWC equity awards converted into Charter awards upon closing of the TWC Transaction ("Converted TWC Awards") and \$69 million of cash paid to former Legacy TWC employees and non-employee directors who held equity awards, whether vested or not vested.

#### **Bright House Transaction**

Also, on May 18, 2016, Legacy Charter and Advance/Newhouse Partnership ("A/N"), the former parent of Bright House Networks, LLC ("Bright House"), completed their previously announced transaction, pursuant to a definitive Contribution Agreement (the "Contribution Agreement"), under which Charter acquired Bright House (the "Bright House Transaction"). Pursuant to the Bright House Transaction, Charter became the owner of the membership interests in Bright House and the other assets primarily related to Bright House (other than certain excluded assets and liabilities and non-operating cash). As of the date of acquisition, the purchase price totaled approximately \$12.2 billion consisting of (a) \$2.0 billion in cash, (b) 25 million convertible preferred units of Charter Holdings with a face amount of \$2.5 billion that pay a 6% annual preferential dividend, (c) approximately 31.0 million common units of Charter Holdings that are exchangeable into Charter Class A common stock on a one-for-one basis and (d) one share of Charter Class B common stock. These Charter Holdings common and convertible preferred units held by A/N are recorded in noncontrolling interests as permanent equity in the consolidated balance sheet. See Note 11 for conversion features of the Charter Holdings common and preferred units and Note 10 for the terms of the Charter Class B common stock.

#### **Liberty Transaction**

In connection with the TWC Transaction, Legacy Charter and Liberty Broadband completed their previously announced transactions pursuant to their investment agreement, in which Liberty Broadband purchased for cash approximately 22.0 million shares of Charter Class A common stock valued at \$4.3 billion at the closing of the TWC Transaction to partially finance the cash portion of the TWC Transaction consideration, and in connection with the Bright House Transaction, Liberty Broadband purchased approximately 3.7 million shares of Charter Class A common stock valued at \$700 million at the closing of the Bright House Transaction (the "Liberty Transaction").

#### **Financing for the Transactions**

Charter partially financed the cash portion of the purchase price of the Transactions with additional indebtedness and cash on hand. In 2015, Legacy Charter issued \$15.5 billion aggregate principal amount of CCO Safari II, LLC ("CCO Safari II") senior secured notes, \$3.8 billion aggregate principal amount of CCO Safari III, LLC ("CCO Safari III") senior secured bank loans and \$2.5 billion aggregate principal amount of CCOH Safari, LLC ("CCOH Safari") senior unsecured notes. The net proceeds were initially deposited into escrow accounts. Upon closing of the TWC Transaction, the proceeds were released from escrow and the CCOH Safari notes became obligations of CCO Holdings, LLC ("CCO Holdings"), an indirect wholly-owned subsidiary of Charter Holdings, and CCO Holdings Capital Corp. ("CCO Holdings Capital"), and the CCO Safari II notes and CCO Safari III credit facilities became obligations of Charter Operating and Charter Communications Operating Capital Corp. CCOH Safari merged into CCO Holdings and CCO Safari II and CCO Safari III merged into Charter Operating.

In connection with the closing of the Bright House Transaction, Charter Operating closed on a \$2.6 billion aggregate principal amount term loan A facility ("Term Loan A") pursuant to the terms of Charter Operating's Amended and Restated Credit Agreement dated May 18, 2016 (the "Credit Agreement") of which \$2.0 billion was used to fund the cash portion of the Bright House Transaction and \$638 million was used to prepay and terminate Charter Operating's existing Term A-1 Loans. See Note 9.

#### **Acquisition Accounting**

The Transactions enable Charter to apply its operating strategy to a larger set of assets, accelerate product development and innovation through greater scale as well as more effectively compete in medium and large commercial markets. The operating

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

results of Legacy TWC and Legacy Bright House have been included in the Company's consolidated statements of operations for the period from the date of the Transactions through December 31, 2016. Revenues included in the Company's consolidated statements of operations were \$16.0 billion and \$2.6 billion for Legacy TWC and Legacy Bright House, respectively, for the year ended December 31, 2016.

Charter applied acquisition accounting to the Transactions. The total purchase price was allocated to the identifiable tangible and intangible assets acquired and the liabilities assumed based on their estimated fair values. The fair values were primarily based on third-party valuations using assumptions developed by management and other information compiled by management including, but not limited to, future expected cash flows. The excess of the purchase price over those fair values was recorded as goodwill. Goodwill recognized in the Transactions is representative of resources that do not meet the definition of an identifiable intangible asset and include buy-side synergies, economies of scale of the combined operations, increased market share, assembled workforces and improved credit rating.

The fair values of the assets acquired and liabilities assumed were preliminarily determined using the income, cost and market approaches. The fair values were primarily based on significant inputs that are not observable in the market and thus represent a Level 3 measurement, other than long-term debt assumed in the TWC Transaction, which represents a Level 1 measurement. See Note 13.

Property, plant and equipment was valued utilizing the cost approach. The cost approach considers the amount required to replace an asset by constructing or purchasing a new asset with similar utility, then adjusts the value in consideration of all forms of depreciation as of the appraisal date as described below:

- Physical depreciation - the loss in value or usefulness attributable solely to use of the asset and physical causes such as wear and tear and exposure to the elements.
- Functional obsolescence - the loss in value due to factors inherent in the asset itself and due to changes in technology, design or process resulting in inadequacy, overcapacity, lack of functional utility or excess operating costs.
- Economic obsolescence - the loss in value due to unfavorable external conditions such as economics of the industry or geographic area, or change in ordinances.

The cost approach relies on assumptions regarding current material and labor costs required to rebuild and repurchase significant components of property, plant and equipment along with assumptions regarding the age and estimated useful lives of property, plant and equipment.

Franchise rights and customer relationships were valued using an income approach model based on the present value of the estimated discrete future cash flows attributable to each of the intangible assets identified. See Note 6 for more information on the income approach model. The weighted average life of customer relationships acquired in the TWC Transaction and Bright House Transaction was 11 years and 10 years, respectively.

The fair value of equity investments was based on either applying implied multiples to estimated cash flows or utilizing a discounted cash flow model. The implied multiples were estimated based on precedent transactions and comparable companies. The discounted cash flow model required estimating the present value of future cash flows of the investee.

Legacy TWC long-term debt assumed was adjusted to fair value based on quoted market prices. At the acquisition date, the quoted market values of all but two of Legacy TWC's bonds were higher than the principal amount of the related debt instrument, which resulted in the recognition of a net debt premium of approximately \$2.4 billion. The quoted market value of a debt instrument is higher than the principal amount of the debt when the market interest rates are lower than the stated interest rate of the debt. This debt premium is amortized as a reduction to interest expense over the remaining life of the applicable debt.

Generally, no fair value adjustments were reflected in current assets and current liabilities as carrying value is estimated to approximate fair value because of the short-term nature of the items, except for risk management obligations. Risk management obligations assumed including various claims for workers compensation, employment practices, and auto and general liabilities were measured at fair value as of the acquisition date based on an actuarially determined study. Fair value adjustments were reflected in other noncurrent assets and other long-term liabilities relating to contract-based assets and liabilities, capital lease obligations, deferred liabilities and net pension liabilities. Out-of-market contract-based assets and liabilities relating to non-cancelable executory contracts and operating leases were recognized based on discounted cash flow models to the extent the terms

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

of the non-cancelable contracts are favorable or unfavorable compared with the relative market terms of the same or similar contract at the acquisition date. The out-of-market element will be amortized as if the contract were consummated at market terms on the acquisition date. Capital lease obligations were measured at fair value based on the present value of amounts to be paid under the lease agreement using a market participant discount rate. Deferred liabilities were not recorded in acquisition accounting to the extent there was no associated payment obligation or substantive performance obligation. The net pension liabilities assumed in the TWC Transaction were measured at fair value based on an actuarially determined projected benefit obligation, less the fair value of pension investments, as of the acquisition date. See Note 21 for fair value assumptions considered in acquisition accounting for the net pension liabilities.

Deferred tax assets and liabilities were recorded for the deferred tax impact of acquisition accounting adjustments primarily related to property, plant and equipment, franchises, customer relationships and assumed Legacy TWC long-term debt. The incremental deferred tax liabilities were calculated primarily based on the tax effect of the step-up in book basis of net assets of Legacy TWC excluding the amount attributable to nondeductible goodwill.

The Charter Class A common stock issued to Legacy TWC stockholders and Charter Holdings common units issued to A/N were valued based on the opening share price of Charter Class A common stock on the acquisition date. The convertible preferred units of Charter Holdings issued to A/N were valued at approximately \$3.2 billion based on a binomial lattice model for convertible bonds that models the future changes in the common equity value of Charter. The valuation relies on management's assumptions including risk-free interest rate, volatility and discount yield. The pre-combination vesting period fair value of the Converted TWC Awards was based on the portion of the requisite service period completed at the acquisition date by Legacy TWC employee award holders applied to the total fair value of the Converted TWC Awards.

The allocation of the purchase price to certain assets and liabilities is preliminary and is subject to change based on additional information that may be obtained during the measurement period primarily related to working capital measurement. The Company will continue to obtain information to assist in finalizing the fair value of net assets acquired and liabilities assumed, which is not expected to differ materially from the preliminary estimates herein. The Company will apply any measurement period adjustments, including any related impacts to net income (loss), in the reporting period in which the adjustments are determined. The tables below present the calculation of the purchase price and the preliminary allocation of the purchase price to the assets acquired and liabilities assumed in the Transactions.

***TWC Purchase Price***

Shares of Charter Class A common stock issued (including the Liberty Parties) (in millions)	143.0
Charter Class A common stock closing price per share	\$ 224.91
Fair value of Charter Class A common stock issued	<u>\$ 32,164</u>
Cash paid to Legacy TWC stockholders (excluding the Liberty Parties)	\$ 27,770
Pre-combination vesting period fair value of Converted TWC Awards	514
Cash paid for Legacy TWC non-employee equity awards	69
Total purchase price	<u>\$ 60,517</u>

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

*TWC Preliminary Allocation of Purchase Price*

Cash and cash equivalents	\$ 1,058
Current assets	1,308
Property, plant and equipment	21,413
Customer relationships	13,460
Franchises	54,085
Goodwill	28,292
Other noncurrent assets	1,040
Accounts payable and accrued liabilities	(3,925)
Debt	(24,900)
Deferred income taxes	(28,148)
Other long-term liabilities	(3,162)
Noncontrolling interests	(4)
	<u>\$ 60,517</u>

Since completion of the initial estimates in the second quarter of 2016, the Company made measurement period adjustments to the fair value of certain assets acquired and liabilities assumed in the TWC Transaction, including a decrease of \$163 million to property, plant and equipment; a decrease of \$240 million to customer relationships; an increase of \$690 million to franchises; an increase to other operating net liabilities of \$215 million; and a decrease of \$4 million to deferred income taxes; resulting in a net decrease to goodwill of \$76 million. These adjustments were made primarily to reflect updated appraisal results.

The measurement period adjustment to intangibles resulted in a decrease of \$20 million in amortization expense relating to the prior quarters that was recorded in the fourth quarter of 2016. The measurement period adjustment to property, plant and equipment resulted in an increase of \$12 million in depreciation expense relating to the second quarter that was recorded in the third quarter of 2016. The Company may record additional measurement period adjustments in future periods.

*Bright House Purchase Price*

Charter Holdings common units issued to A/N (in millions)	31.0
Charter Class A common stock closing price per share	\$ 224.91
Fair value of Charter Holdings common units issued to A/N	<u>\$ 6,971</u>
Fair value of Charter Holdings convertible preferred units issued to A/N	3,163
Cash paid to A/N	2,022
Total purchase price	<u>\$ 12,156</u>

**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

*Bright House Preliminary Allocation of Purchase Price*

Current assets	\$ 131
Property, plant and equipment	2,884
Customer relationships	2,150
Franchises	7,225
Goodwill	44
Other noncurrent assets	86
Accounts payable and accrued liabilities	(330)
Other long-term liabilities	(12)
Noncontrolling interests	(22)
	\$ 12,156

Since completion of the initial estimates in the second quarter of 2016, the Company made measurement period adjustments to the fair value of certain assets acquired and liabilities assumed in the Bright House Transaction, including a decrease of \$382 million to property, plant and equipment; an increase of \$110 million to customer relationships; an increase of \$381 million to franchises; and a decrease of \$1 million to current assets resulting in a decrease to goodwill of \$108 million. These adjustments were made primarily to reflect updated appraisal results.

The measurement period adjustment to intangibles resulted in an increase of \$7 million in amortization expense relating to the prior quarters that was recorded in the fourth quarter of 2016. The measurement period adjustment to property, plant and equipment in the third quarter had an inconsequential impact on depreciation expense recorded in the prior quarter. The Company may record additional measurement period adjustments in future periods.

**Selected Pro Forma Financial Information**

The following unaudited pro forma financial information of the Company is based on the historical consolidated financial statements of Legacy Charter, Legacy TWC and Legacy Bright House and is intended to provide information about how the Transactions and related financing may have affected the Company's historical consolidated financial statements if they had closed as of January 1, 2015. The pro forma financial information below is based on available information and assumptions that the Company believes are reasonable. The pro forma financial information is for illustrative and informational purposes only and is not intended to represent or be indicative of what the Company's financial condition or results of operations would have been had the transactions described above occurred on the date indicated. The pro forma financial information also should not be considered representative of the Company's future financial condition or results of operations.

	Year Ended December 31,	
	2016	2015
Revenues	\$ 40,023	\$ 37,394
Net income attributable to Charter shareholders	\$ 1,070	\$ 159

Basic	\$ 3.97	\$ 0.59
Diluted	\$ 3.91	\$ 0.58

**3. Summary of Significant Accounting Policies**

*Consolidation*

The accompanying consolidated financial statements include the accounts of Charter and all entities in which Charter has a controlling interest. The Company consolidates based upon evaluation of the Company's power, through voting rights or similar rights, to direct

the activities of another entity that most significantly impact the entity's economic performance; its obligation to

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

absorb the expected losses of the entity; and its right to receive the expected residual returns of the entity. Charter controls and consolidates Charter Holdings. The noncontrolling interest on the Company's balance sheet primarily represents A/N's minority equity interests in Charter Holdings. See Note 11. All significant inter-company accounts and transactions among consolidated entities have been eliminated in consolidation.

***Cash and Cash Equivalents***

The Company considers all highly liquid investments with original maturities of three months or less to be cash equivalents. These investments are carried at cost, which approximates market value. Cash and cash equivalents consist primarily of money market funds and commercial paper.

***Restricted Cash and Cash Equivalents***

Proceeds from the issuance of certain long-term debt were deposited into escrow accounts and were used for acquisition financing and were contractually restricted as to their withdrawal or use. See Note 2. The amounts held in escrow were classified as noncurrent restricted cash and cash equivalents in the Company's consolidated balance sheets as of December 31, 2015. The Company's restricted cash and cash equivalents were primarily invested in money market funds and 90-day or less commercial paper. The changes in restricted cash and cash equivalents are presented as an investing activity in the Company's consolidated statements of cash flows.

***Property, Plant and Equipment***

Additions to property, plant and equipment are recorded at cost, including all material, labor and certain indirect costs associated with the construction of cable transmission and distribution facilities. While the Company's capitalization is based on specific activities, once capitalized, costs are tracked on a composite basis by fixed asset category at the cable system level and not on a specific asset basis. For assets that are sold or retired, the estimated historical cost and related accumulated depreciation is removed. Costs associated with the initial placement of the customer drop to the dwelling and the initial placement of outlets within a dwelling along with the costs associated with the initial deployment of customer premise equipment necessary to provide video, Internet or voice services are capitalized. Costs capitalized include materials, direct labor, and certain indirect costs. Indirect costs are associated with the activities of the Company's personnel who assist in installation activities and consist of compensation and other costs associated with these support functions. Indirect costs primarily include employee benefits and payroll taxes, vehicle and occupancy costs, and the costs of sales and dispatch personnel associated with capitalizable activities. The costs of disconnecting service and removing customer premise equipment from a dwelling and the costs to reconnect a customer drop or to redeploy previously installed customer premise equipment are charged to operating expense as incurred. Costs for repairs and maintenance are charged to operating expense as incurred, while plant and equipment replacement, including replacement of certain components, betterments, including replacement of cable drops and outlets, are capitalized.

Depreciation is recorded using the straight-line composite method over management's estimate of the useful lives of the related assets as follows:

Cable distribution systems	7-20 years
Customer premise equipment and installations	3-8 years
Vehicles and equipment	3-6 years
Buildings and improvements	15-40 years
Furniture, fixtures and equipment	6-10 years

***Asset Retirement Obligations***

Certain of the Company's franchise agreements and leases contain provisions requiring the Company to restore facilities or remove equipment in the event that the franchise or lease agreement is not renewed. The Company expects to continually renew its franchise agreements and therefore cannot reasonably estimate any liabilities associated with such agreements. A remote possibility exists that franchise agreements could be terminated unexpectedly, which could result in the Company incurring significant expense in complying with restoration or removal provisions. The Company does not have any significant liabilities related to asset retirements recorded in its consolidated financial statements.

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

*Valuation of Long-Lived Assets*

The Company evaluates the recoverability of long-lived assets (e.g., property, plant and equipment and finite-lived intangible assets) to be held and used when events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. Such events or changes in circumstances could include such factors as impairment of the Company's indefinite life assets, changes in technological advances, fluctuations in the fair value of such assets, adverse changes in relationships with local franchise authorities, adverse changes in market conditions or a deterioration of operating results. If a review indicates that the carrying value of such asset is not recoverable from estimated undiscounted cash flows, the carrying value of such asset is reduced to its estimated fair value. While the Company believes that its estimates of future cash flows are reasonable, different assumptions regarding such cash flows could materially affect its evaluations of asset recoverability. No impairments of long-lived assets to be held and used were recorded in 2016, 2015 and 2014.

*Other Noncurrent Assets*

Other noncurrent assets primarily include investments, trademarks, right-of-entry costs and other intangible assets. The Company accounts for its investments in less than majority owned investees under either the equity or cost method. The Company applies the equity method to investments when it has the ability to exercise significant influence over the operating and financial policies of the investee. The Company's share of the investee's earnings (losses) is included in other expense, net in the consolidated statements of operations. The Company monitors its investments for indicators that a decrease in investment value has occurred that is other than temporary. If it has been determined that an investment has sustained an other than temporary decline in value, the investment is written down to fair value with a charge to earnings. Investments acquired are measured at fair value utilizing the acquisition method of accounting. The difference between the fair value and the amount of underlying equity in net assets for most equity method investments is due to previously unrecognized intangible assets at the investee. These amounts are amortized as a component of equity earnings (losses), recorded within other expense, net over the estimated useful life of the asset. Trademarks have been determined to have an indefinite life and are tested annually for impairment. Right-of-entry costs represent costs incurred related to agreements entered into with landlords, real estate companies or owners to gain access to a building in order to provide cable service. Right-of-entry costs are generally deferred and amortized to amortization expense over the term of the agreement.

*Revenue Recognition*

Revenues from residential and commercial video, Internet and voice services are recognized when the related services are provided. Advertising sales are recognized at estimated realizable values in the period that the advertisements are broadcast. In some cases, the Company coordinates the advertising sales efforts of other cable operators in a certain market and remits amounts received from customers less an agreed-upon percentage to such cable operator. For those arrangements in which the Company acts as a principal, the Company records the revenues earned from the advertising customer on a gross basis and the amount remitted to the cable operator as an operating expense.

Fees imposed on the Company by various governmental authorities are passed through on a monthly basis to the Company's customers and are periodically remitted to authorities. Fees of \$711 million, \$255 million and \$248 million for the years ended December 31, 2016, 2015 and 2014, respectively, are reported in video, voice and commercial revenues, on a gross basis with a corresponding operating expense because the Company is acting as a principal. Other taxes, such as sales taxes imposed on the Company's customers, collected and remitted to state and local authorities, are recorded on a net basis because the Company is acting as an agent in such situation.

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

The Company's revenues by product line are as follows:

	Year Ended December 31,		
	2016	2015	2014
Video	\$ 11,967	\$ 4,587	\$ 4,443
Internet	9,272	3,003	2,576
Voice	2,005	539	575
Residential revenue	23,244	8,129	7,594
Small and medium business	2,480	764	676
Enterprise	1,429	363	317
Commercial revenue	3,909	1,127	993
Advertising sales	1,235	309	341
Other	615	189	180
	<u>\$ 29,003</u>	<u>\$ 9,754</u>	<u>\$ 9,108</u>

#### *Programming Costs*

The Company has various contracts to obtain video programming from vendors whose compensation is typically based on a flat fee per customer. The cost of the right to exhibit network programming under such arrangements is recorded in operating expenses in the month the programming is available for exhibition. Programming costs are paid each month based on calculations performed by the Company and are subject to periodic audits performed by the programmers. Certain programming contracts contain incentives to be paid by the programmers. The Company receives these payments and recognizes the incentives on a straight-line basis over the life of the programming agreement as a reduction of programming expense. Programming costs included in the statements of operations were \$7.0 billion, \$2.7 billion and \$2.5 billion for the years ended December 31, 2016, 2015 and 2014, respectively.

#### *Advertising Costs*

Advertising costs associated with marketing the Company's products and services are generally expensed as costs are incurred.

#### *Multiple-Element Transactions*

In the normal course of business, the Company enters into multiple-element transactions where it is simultaneously both a customer and a vendor with the same counterparty or in which it purchases multiple products and/or services, or settles outstanding items contemporaneous with the purchase of a product or service from a single counterparty. Transactions, although negotiated contemporaneously, may be documented in one or more contracts. The Company's policy for accounting for each transaction negotiated contemporaneously is to record each element of the transaction based on the respective estimated fair values of the products or services purchased and the products or services sold. In determining the fair value of the respective elements, the Company refers to quoted market prices (where available), historical transactions or comparable cash transactions. Cash consideration received from a vendor is recorded as a reduction in the price of the vendor's product unless (i) the consideration is for the reimbursement of a specific, incremental, identifiable cost incurred, in which case the cash consideration received would be recorded as a reduction in such cost (e.g., marketing costs), or (ii) an identifiable benefit in exchange for the consideration is provided, in which case revenue would be recognized for this element.

#### *Stock-Based Compensation*

Restricted stock, restricted stock units, stock options as well as equity awards with market conditions are measured at the grant date fair value and amortized to stock compensation expense over the requisite service period. The fair value of options is estimated on the

date of grant using the Black-Scholes option-pricing model and the fair value of equity awards with market conditions is estimated on the date of grant using Monte Carlo simulations. The grant date weighted average assumptions used during the years

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

ended December 31, 2016, 2015 and 2014, respectively, were: risk-free interest rate of 1.7%, 1.5% and 2.0%; expected volatility of 25.4%, 34.7% and 36.9%; and expected lives of 1.3 years, 6.5 years and 6.5 years. Weighted average assumptions for 2016 include the assumptions used for the Converted TWC Awards. Volatility assumptions were based on historical volatility of Legacy Charter and Legacy TWC. The Company's volatility assumptions represent management's best estimate and were partially based on historical volatility of Legacy TWC due to the completion of the Transactions. Expected lives were estimated using historical exercise data. The valuations assume no dividends are paid.

#### *Pension Plans*

The Company sponsors the TWC Pension Plan, TWC Union Pension Plan and TWC Excess Pension Plan (as defined in Note 21). Pension benefits are based on formulas that reflect the employees' years of service and compensation during their employment period. Actuarial gains or losses are changes in the amount of either the benefit obligation or the fair value of plan assets resulting from experience different from that assumed or from changes in assumptions. The Company has elected to follow a mark-to-market pension accounting policy for recording the actuarial gains or losses annually during the fourth quarter, or earlier if a remeasurement event occurs during an interim period.

#### *Income Taxes*

The Company recognizes deferred tax assets and liabilities for temporary differences between the financial reporting basis and the tax basis of the Company's assets and liabilities and expected benefits of utilizing loss carryforwards. Since substantially all the Company's operations are held through its partnership interest in Charter Holdings, the primary deferred tax component recorded in the consolidated balance sheet relates to the excess financial reporting outside basis, excluding amounts attributable to nondeductible goodwill, over Charter's tax basis in its investment in the partnership. Valuation allowances are established when management determines that it is more likely than not that some portion or the entire deferred tax asset will not be realized. The impact on deferred taxes of changes in tax rates and tax law, if any, applied to the years during which temporary differences are expected to be settled, are reflected in the consolidated financial statements in the period of enactment. In determining the Company's tax provision for financial reporting purposes, the Company establishes a reserve for uncertain tax positions unless such positions are determined to be "more likely than not" of being sustained upon examination, based on their technical merits. There is considerable judgment involved in making such a determination. Interest and penalties are recognized on uncertain income tax positions as part of the income tax provision. See Note 17.

#### *Segments*

The Company's operations are managed and reported to its Chief Executive Officer ("CEO"), the Company's chief operating decision maker, on a consolidated basis. The CEO assesses performance and allocates resources based on the consolidated results of operations. Under this organizational and reporting structure, the Company has one reportable segment, cable services.

#### **4. Allowance for Doubtful Accounts**

Activity in the allowance for doubtful accounts is summarized as follows for the years presented:

	Year Ended December 31,		
	2016	2015	2014
Balance, beginning of period	\$ 21	\$ 22	\$ 19
Charged to expense	328	135	122
Uncollected balances written off, net of recoveries	(225)	(136)	(119)
Balance, end of period	<u>\$ 124</u>	<u>\$ 21</u>	<u>\$ 22</u>

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

## 5. Property, Plant and Equipment

Property, plant and equipment consists of the following as of December 31, 2016 and 2015:

	December 31,	
	2016	2015
Cable distribution systems	\$ 23,317	\$ 8,158
Customer premise equipment and installations	12,867	4,632
Vehicles and equipment	1,212	384
Buildings and improvements	3,426	570
Furniture, fixtures and equipment	3,244	1,119
	<u>44,066</u>	<u>14,863</u>
Less: accumulated depreciation	(11,103)	(6,518)
	<u>\$ 32,963</u>	<u>\$ 8,345</u>

The Company periodically evaluates the estimated useful lives used to depreciate its assets and the estimated amount of assets that will be abandoned or have minimal use in the future. A significant change in assumptions about the extent or timing of future asset retirements, or in the Company's use of new technology and upgrade programs, could materially affect future depreciation expense.

Depreciation expense for the years ended December 31, 2016, 2015 and 2014 was \$5.0 billion, \$1.9 billion, and \$1.8 billion, respectively. Property, plant and equipment increased by \$24.3 billion as a result of the Transactions. See Note 2.

## 6. Franchises, Goodwill and Other Intangible Assets

Franchise rights represent the value attributed to agreements or authorizations with local and state authorities that allow access to homes in cable service areas. For valuation purposes, they are defined as the future economic benefits of the right to solicit and service potential customers (customer marketing rights), and the right to deploy and market new services to potential customers (service marketing rights).

Management estimates the fair value of franchise rights at the date of acquisition and determines if the franchise has a finite life or an indefinite life. The Company has concluded that all of its franchises, including those acquired as part of the Transactions, qualify for indefinite life treatment given that there are no legal, regulatory, contractual, competitive, economic or other factors which limit the period over which these rights will contribute to our cash flows. We reassess this determination periodically or whenever events or substantive changes in circumstances occur.

The estimated fair value of franchises is determined utilizing an income approach model based on the present value of the estimated discrete future cash flows attributable to each of the intangible assets identified assuming a discount rate. The fair value of franchises is determined based on estimated discrete discounted future cash flows using assumptions consistent with internal forecasts. The franchise after-tax cash flow is calculated as the after-tax cash flow generated by the potential customers obtained. The sum of the present value of the franchises' after-tax cash flow in years 1 through 10 and the continuing value of the after-tax cash flow beyond year 10 yields the fair value of the franchises.

This approach makes use of unobservable factors such as projected revenues, expenses, capital expenditures, customer trends, and a discount rate applied to the estimated cash flows. The determination of the franchise discount rate is derived from the Company's weighted average cost of capital, which uses a market participant's cost of equity and after-tax cost of debt and reflects the risks inherent in the cash flows. The Company estimates discounted future cash flows using reasonable and appropriate assumptions including among others, penetration rates for video, Internet, and voice; revenue growth rates; operating margins; and capital expenditures. The assumptions are based on the Company's and its peers' historical operating performance adjusted for current and expected competitive and economic factors surrounding the cable industry. The estimates and assumptions made in the Company's valuations are inherently subject to significant uncertainties, many of which are beyond its control, and there is no assurance that these results can be achieved. The primary assumptions for which there is a reasonable possibility of the occurrence of a variation that would significantly affect the measurement value include the assumptions regarding revenue growth.

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**

**DECEMBER 31, 2016, 2015 AND 2014**  
**(dollars in millions, except share or per share data or where indicated)**

programming expense growth rates, the amount and timing of capital expenditures, actual customer trends and the discount rate utilized.

All franchises are tested for impairment annually or more frequently as warranted by events or changes in circumstances. Franchise assets are aggregated into essentially inseparable units of accounting to conduct valuations. The units of accounting generally represent geographical clustering of our cable systems into groups. The Company assesses qualitative factors to determine whether the existence of events or circumstances leads to a determination that it is more likely than not that an indefinite lived intangible asset has been impaired. If, after this optional qualitative assessment, the Company determines that it is not more likely than not that an indefinite lived intangible asset has been impaired, then no further quantitative testing is necessary. In completing the qualitative impairment testing, the Company evaluates a multitude of factors that affect the fair value of our franchise assets. Examples of such factors include environmental and competitive changes within our operating footprint, actual and projected operating performance, the consistency of our operating margins, equity and debt market trends, including changes in our market capitalization, and changes in our regulatory and political landscape, among other factors. After consideration of the qualitative factors, in 2016 the Company concluded that it is more likely than not that the fair value of the franchise assets in each unit of accounting exceeds the carrying value of such assets and therefore did not perform a quantitative analysis. Periodically, the Company will elect to perform a quantitative analysis for impairment testing. If the Company elects or is required to perform a quantitative analysis to test its franchise assets for impairment, the methodology described above is utilized.

The fair value of goodwill is determined using both an income approach and market approach. The Company's income approach model used for its goodwill valuation is consistent with that used for its franchise valuation noted above except that cash flows from the entire business enterprise are used for the goodwill valuation. The Company's market approach model estimates the fair value of the reporting unit based on market prices in actual precedent transactions of similar businesses and market valuations of guideline public companies. Goodwill is tested for impairment as of November 30 of each year, or more frequently as warranted by events or changes in circumstances. Accounting guidance also permits an optional qualitative assessment for goodwill to determine whether it is more likely than not that the carrying value of a reporting unit exceeds its fair value. If, after this qualitative assessment, the Company determines that it is not more likely than not that the fair value of a reporting unit is less than its carrying amount then no further quantitative testing would be necessary. If the Company elects or is required to perform the two-step test under the accounting guidance, the first step involves a comparison of the estimated fair value of the reporting unit to its carrying amount. If the estimated fair value of the reporting unit exceeds its carrying amount, goodwill of the reporting unit is not considered impaired and the second step of the goodwill impairment is not necessary. If the carrying amount of a reporting unit exceeds its estimated fair value, then the second step of the goodwill impairment test must be performed, and a comparison of the implied fair value of the reporting unit's goodwill is compared to its carrying amount to determine the amount of impairment, if any. As with the Company's franchise impairment testing, in 2016 the Company elected to perform a qualitative goodwill impairment assessment and concluded that goodwill is not impaired.

Customer relationships are recorded at fair value as of the date acquired less accumulated amortization. Customer relationships, for valuation purposes, represent the value of the business relationship with existing customers, and are calculated by projecting the discrete future after-tax cash flows from these customers, including the right to deploy and market additional services to these customers. The present value of these after-tax cash flows yields the fair value of the customer relationships. The use of different valuation assumptions or definitions of franchises or customer relationships, such as our inclusion of the value of selling additional services to our current customers within customer relationships versus franchises, could significantly impact our valuations and any resulting impairment. Customer relationships are amortized on an accelerated sum of years' digits method over useful lives of 8-15 years based on the period over which current customers are expected to generate cash flows. The Company periodically evaluates the remaining useful lives of its customer relationships to determine whether events or circumstances warrant revision to the remaining periods of amortization. Customer relationships are evaluated for impairment upon the occurrence of events or changes in circumstances indicating that the carrying amount of an asset may not be recoverable. Customer relationships are deemed impaired when the carrying value exceeds the projected undiscounted future cash flows associated with the customer relationships. No impairment of customer relationships was recorded in the years ended December 31, 2016, 2015 or 2014.

The fair value of trademarks is determined using the relief-from-royalty method, a variation of the income approach, which applies a fair royalty rate to estimated revenue derived under the Company's trademarks. The fair value of the intangible is estimated to be the present value of the royalty saved because the Company owns the trademarks. Royalty rates are estimated based on a review of market royalty rates in the communications and entertainment industries. As the Company expects to continue to use each trademark indefinitely, trademarks have been assigned an indefinite life and are tested annually for impairment using either a qualitative analysis or quantitative analysis as elected by management. As with the Company's franchise impairment testing, in

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

2016 the Company elected to perform a qualitative trademark impairment assessment and concluded that trademarks are not impaired.

As of December 31, 2016 and 2015, indefinite-lived and finite-lived intangible assets are presented in the following table:

	December 31,					
	2016			2015		
	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount
Indefinite-lived intangible assets:						
Franchises	\$ 67,316	\$ —	\$ 67,316	\$ 6,006	\$ —	\$ 6,006
Goodwill	29,509	—	29,509	1,168	—	1,168
Trademarks	159	—	159	159	—	159
Other intangible assets	4	—	4	4	—	4
	<u>\$ 96,988</u>	<u>\$ —</u>	<u>\$ 96,988</u>	<u>\$ 7,337</u>	<u>\$ —</u>	<u>\$ 7,337</u>
Finite-lived intangible assets:						
Customer relationships	\$ 18,226	\$ (3,618)	\$ 14,608	\$ 2,616	\$ (1,760)	\$ 856
Other intangible assets	615	(128)	487	173	(82)	91
	<u>\$ 18,841</u>	<u>\$ (3,746)</u>	<u>\$ 15,095</u>	<u>\$ 2,789</u>	<u>\$ (1,842)</u>	<u>\$ 947</u>

Other intangible assets consist primarily of right-of-entry costs. Amortization expense related to customer relationships and other intangible assets for the years ended December 31, 2016, 2015 and 2014 was \$1.9 billion, \$271 million and \$299 million, respectively. Franchises, goodwill and customer relationships increased by \$61.3 billion, \$28.3 billion and \$15.6 billion, respectively, as a result of the Transactions. See Note 2.

The Company expects amortization expense on its finite-lived intangible assets will be as follows.

2017	\$ 2,743
2018	2,461
2019	2,178
2020	1,886
2021	1,602
Thereafter	4,225
	<u>\$ 15,095</u>

Actual amortization expense in future periods could differ from these estimates as a result of new intangible asset acquisitions or divestitures, changes in useful lives, impairments and other relevant factors.

## 7. Investments

In connection with the Transactions, the Company acquired approximately \$508 million of Legacy TWC and Legacy Bright House equity-method and cost-method investments, which were adjusted to fair value as a result of applying acquisition accounting. The equity-method investments acquired include Sterling Entertainment Enterprises, LLC ("Sterling" - d/b/a SportsNet New York - 26.8% owned), MLB Network, LLC ("MLB Network" - 6.4% owned), iN Demand L.L.C. ("iN Demand" - 39.8% owned) and National Cable Communications LLC ("NCC" - 20.0% owned), among other less significant equity-method and cost-method investments. Sterling and MLB Network are primarily engaged in the development of sports programming services. iN Demand provides programming on a video on demand, pay-per-view and subscription basis. NCC represents multi-video program distributors to advertisers.

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

Investments consisted of the following as of December 31, 2016 and 2015:

	December 31,	
	2016	2015
Equity-method investments	519	53
Other investments	11	2
<b>Total investments</b>	<b>\$ 530</b>	<b>\$ 55</b>

The Company's equity-method investments balance as of December 31, 2016 reflected in the table above includes differences between the acquisition date fair value of certain investments acquired in the Transactions and the underlying equity in the net assets of the investee, referred to as a basis difference. As discussed in Note 2, this basis difference is amortized as a component of equity earnings. The remaining unamortized basis difference is \$436 million as of December 31, 2016.

The Company applies the equity method of accounting to these and other less significant equity-method investments, all of which are recorded in other noncurrent assets in the consolidated balance sheets as of December 31, 2016 and 2015. For the years ended December 31, 2016 and 2015, net losses from equity-method investments were \$14 million and \$7 million, respectively, which were recorded in other expense, net in the consolidated statements of operations.

#### 8. Accounts Payable and Accrued Liabilities

Accounts payable and accrued liabilities consist of the following as of December 31, 2016 and 2015:

	December 31,	
	2016	2015
Accounts payable – trade	\$ 454	\$ 134
Deferred revenue	352	96
Accrued liabilities:		
Programming costs	1,783	451
Compensation	1,111	191
Capital expenditures	1,107	296
Interest	958	445
Taxes and regulatory fees	538	128
Property and casualty	394	74
Other	847	157
	<b>\$ 7,544</b>	<b>\$ 1,972</b>

#### 9. Long-Term Debt

Long-term debt consists of the following as of December 31, 2016 and 2015:

<b>Long-term debt</b>	\$ 58,036	\$ 59,719	\$ 35,902	\$ 35,723

(a) Principal amount includes £625 million valued at \$770 million as of December 31, 2016 using the exchange rate at that date.

(b) Principal amount includes £650 million valued at \$800 million as of December 31, 2016 using the exchange rate at that date.

The accreted values presented in the table above represent the principal amount of the debt less the original issue discount at the time of sale, deferred financing costs, and, (i) in regards to the Legacy TWC debt assumed, a fair value premium adjustment as a result of applying acquisition accounting plus/minus the accretion of those amounts to the balance sheet date and (ii) in regards to the fixed-rate British pound sterling denominated notes (the "Sterling Notes"), a remeasurement of the principal amount of the debt and any premium or discount into US dollars as of the balance sheet date. See Note 12. However, the amount that is currently payable if the debt becomes immediately due is equal to the principal amount of the debt. The Company has availability under the Charter Operating credit facilities of approximately \$2.8 billion as of December 31, 2016.

In December 2016, Charter Operating entered into an amendment to its Credit Agreement decreasing the applicable LIBOR margin on the term loan A, term loan H, term loan I and revolver to 1.75%, 2.00%, 2.25% and 1.75%, respectively, eliminating the LIBOR floor on the term loan H and term loan I and extending the maturity of term loan H to 2022 and term loan I to 2024. The Company recorded a loss on extinguishment of debt of \$1 million for the year ended December 31, 2016 related to these transactions.

In February 2016, CCO Holdings and CCO Holdings Capital jointly issued \$1.7 billion aggregate principal amount of 5.875% senior notes due 2024 (the "2024 Notes") and, in April 2016, they issued \$1.5 billion aggregate principal amount of 5.500% senior notes due 2026 (the "2026 Notes") at a price of 100.075% of the aggregate principal amount. The net proceeds from both issuances were used to repurchase all of CCO Holdings' 7.000% senior notes due 2019, 7.375% senior notes due 2020 and 6.500% senior notes due 2021 and to pay related fees and expenses and for general corporate purposes. These debt repurchases resulted in a loss on extinguishment of debt of \$110 million for the year ended December 31, 2016.

In April 2015, CCO Holdings and CCO Holdings Capital closed on transactions in which they issued \$1.15 billion aggregate principal amount of 5.125% senior unsecured notes due 2023 (the "2023 Notes"), \$750 million aggregate principal amount of 5.375% senior unsecured notes due 2025 (the "2025 Notes") and \$800 million aggregate principal amount of 5.875% senior unsecured notes due 2027 (the "2027 Notes"). The net proceeds from the issuance of the 2023 Notes and 2025 Notes were used to finance tender offers and a subsequent call in which \$1.0 billion aggregate principal amount of CCO Holdings' outstanding 7.250% senior notes due 2017 and \$700 million aggregate principal amount of CCO Holdings' outstanding 8.125% senior notes due 2020 were repurchased, as well as for general corporate purposes. The net proceeds from the issuance of the 2027 Notes were used to call \$800 million of the \$1.4 billion aggregate principal amount of CCO Holdings' outstanding 7.000% senior notes due 2019. These debt repurchases resulted in a loss on extinguishment of debt of \$123 million for the year ended December 31, 2015.

The Company also recorded a loss on extinguishment of debt of approximately \$5 million for the year ended December 31, 2015 as a result of the repayment of debt upon termination of the proposed transactions with Comcast Corporation ("Comcast").

#### CCO Holdings Notes

The CCO Holdings notes are senior debt obligations of CCO Holdings and CCO Holdings Capital and rank equally with all other current and future unsecured, unsubordinated obligations of CCO Holdings and CCO Holdings Capital. They are structurally subordinated to all obligations of subsidiaries of CCO Holdings.

CCO Holdings may redeem some or all of the CCO Holdings notes at any time at a premium. The optional redemption price declines to 100% of the respective series' principal amount, plus accrued and unpaid interest, if any, on or after varying dates in 2017 through 2024.

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

In addition, at any time prior to varying dates in 2017 through 2021, CCO Holdings may redeem up to 35% (40% in regards to certain notes issued in 2015 and 2016) of the aggregate principal amount of the notes at a premium plus accrued and unpaid interest to the redemption date, with the net cash proceeds of one or more equity offerings (as defined in the indenture); provided that certain conditions are met. In the event of specified change of control events, CCO Holdings must offer to purchase the outstanding CCO Holdings notes from the holders at a purchase price equal to 101% of the total principal amount of the notes, plus any accrued and unpaid interest.

***High-Yield Restrictive Covenants; Limitation on Indebtedness.***

The indentures governing the CCO Holdings notes contain certain covenants that restrict the ability of CCO Holdings, CCO Holdings Capital and all of their restricted subsidiaries to:

- incur additional debt;
- pay dividends on equity or repurchase equity;
- make investments;
- sell all or substantially all of their assets or merge with or into other companies;
- sell assets;
- in the case of restricted subsidiaries, create or permit to exist dividend or payment restrictions with respect to CCO Holdings, guarantee their parent companies debt, or issue specified equity interests;
- engage in certain transactions with affiliates; and
- grant liens.

The above limitations in certain circumstances regarding incurrence of debt, payment of dividends and making investments contained in the indentures of CCO Holdings permit CCO Holdings and its restricted subsidiaries to perform the above, so long as, after giving pro forma effect to the above, the leverage ratio would be below a specified level for the issuer. The leverage ratio under the indentures is 6.0 to 1.0.

**Charter Operating Notes**

The Charter Operating notes are guaranteed by CCO Holdings, TWC, LLC (as defined below), TWCE (as defined below) and substantially all of the operating subsidiaries of Charter Operating (collectively, the "Subsidiary Guarantors"). In addition, the Charter Operating notes are secured by a perfected first priority security interest in substantially all of the assets of Charter Operating to the extent such liens can be perfected under the Uniform Commercial Code by the filing of a financing statement and the liens rank equally with the liens on the collateral securing obligations under the Charter Operating credit facilities. Charter Operating may redeem some or all of the Charter Operating notes at any time at a premium.

The Charter Operating notes are subject to the terms and conditions of the indenture governing the Charter Operating notes. The Charter Operating notes contain customary representations and warranties and affirmative covenants with limited negative covenants. The Charter Operating indenture also contains customary events of default.

**Charter Operating Credit Facilities**

The Charter Operating credit facilities have an outstanding principal amount of \$8.9 billion at December 31, 2016 as follows:

- term loan A with a remaining principal amount of \$2.5 billion, which is repayable in quarterly installments and aggregating \$132 million in 2017 and 2018, \$231 million in 2019 and \$264 million in 2020, with the remaining balance due at final maturity on May 18, 2021. Pricing on term loan A is LIBOR plus 1.75%;
- term loan E with a remaining principal amount of approximately \$1.4 billion, which is repayable in equal quarterly installments and aggregating \$15 million in each loan year, with the remaining balance due at final maturity on July 1, 2020. Pricing on term loan E is LIBOR plus 2.25% with a LIBOR floor of 0.75% (see Note 25 for amendments to the Charter Operating credit facilities completed in 2017);
- term loan F with a remaining principal amount of approximately \$1.2 billion, which is repayable in equal quarterly installments and aggregating \$12 million in each loan year, with the remaining balance due at final maturity on January

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
**(dollars in millions, except share or per share data or where indicated)**

- 3, 2021. Pricing on term loan F is LIBOR plus 2.25% with a LIBOR floor of 0.75% (see Note 25 for amendments to the Charter Operating credit facilities completed in 2017);
- term loan H with a remaining principal amount of approximately \$993 million, which is repayable in equal quarterly installments and aggregating \$10 million in each loan year, with the remaining balance due at final maturity on January 15, 2022. Pricing on term loan H is LIBOR plus 2.00%;
  - term loan I with a remaining principal amount of approximately \$2.8 billion, which is repayable in equal quarterly installments and aggregating \$28 million in each loan year, with the remaining balance due at final maturity on January 15, 2024. Pricing on term loan I is LIBOR plus 2.25%; and
  - revolving loan allowing for borrowings of up to \$3.0 billion, maturing on May 18, 2021. Pricing on the revolving loan is LIBOR plus 1.75% with a commitment fee of 0.30%. As of December 31, 2016, \$220 million of the revolving loan was utilized to collateralize a like principal amount of letters of credit out of \$278 million of letters of credit issued on the Company's behalf.

Amounts outstanding under the Charter Operating credit facilities bear interest, at Charter Operating's election, at a base rate or LIBOR (0.77% and 0.42% as of December 31, 2016 and December 31, 2015, respectively), as defined, plus an applicable margin.

The Charter Operating credit facilities also allow us to enter into incremental term loans in the future, with amortization as set forth in the notices establishing such term loans. Although the Charter Operating credit facilities allow for the incurrence of a certain amount of incremental term loans subject to pro forma compliance with its financial maintenance covenants, no assurance can be given that the Company could obtain additional incremental term loans in the future if Charter Operating sought to do so or what amount of incremental term loans would be allowable at any given time under the terms of the Charter Operating credit facilities.

The obligations of Charter Operating under the Charter Operating credit facilities are guaranteed by the Subsidiary Guarantors. The obligations are also secured by (i) a lien on substantially all of the assets of Charter Operating and the Subsidiary Guarantors, to the extent such lien can be perfected under the Uniform Commercial Code by the filing of a financing statement, and (ii) a pledge by CCO Holdings of the equity interests owned by it in any of Charter Operating's subsidiaries, as well as intercompany obligations owing to it by any of such entities.

#### ***Restrictive Covenants***

The Charter Operating credit facilities contain representations and warranties, and affirmative and negative covenants customary for financings of this type. The financial covenants measure performance against standards set for leverage to be tested as of the end of each quarter. The Charter Operating credit facilities contain provisions requiring mandatory loan prepayments under specific circumstances, including in connection with certain sales of assets, so long as the proceeds have not been reinvested in the business. Additionally, the Charter Operating credit facilities provisions contain an allowance for restricted payments so long as the consolidated leverage ratio is no greater than 3.5 after giving pro forma effect to such restricted payment. The Charter Operating credit facilities permit Charter Operating and its subsidiaries to make distributions to pay interest on the currently outstanding subordinated and parent company indebtedness, provided that, among other things, no default has occurred and is continuing under the Charter Operating credit facilities. The Charter Operating credit facilities also contain customary events of default.

#### **Assumed Legacy TWC Indebtedness**

The Company assumed approximately \$22.4 billion in aggregate principal amount of Time Warner Cable, LLC (successor to Legacy TWC outstanding debt obligations, "TWC, LLC") senior notes and debentures and Time Warner Cable Enterprises LLC ("TWCE") senior debentures with varying maturities. The Company applied acquisition accounting to Legacy TWC, and as a result, the debt assumed was adjusted to fair value using quoted market values as of the closing date. This fair value adjustment resulted in recognition of a net debt premium of approximately \$2.4 billion.

#### ***TWC, LLC Senior Notes and Debentures***

The TWC, LLC senior notes and debentures are guaranteed by CCO Holdings, Charter Operating, TWCE and the Subsidiary Guarantors and rank equally with the liens on the collateral securing obligations under the Charter Operating notes and credit facilities. Interest on each series of TWC, LLC senior notes and debentures is payable semi-annually (with the exception of the Sterling Notes, which is payable annually) in arrears.

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

The TWC, LLC indenture contains customary covenants relating to restrictions on the ability of TWC, LLC or any material subsidiary to create liens and on the ability of TWC, LLC and TWCE to consolidate, merge or convey or transfer substantially all of their assets. The TWC, LLC indenture also contains customary events of default.

The TWC, LLC senior notes and debentures may be redeemed in whole or in part at any time at TWC, LLC's option at a redemption price equal to the greater of (i) all of the applicable principal amount being redeemed and (ii) the sum of the present values of the remaining scheduled payments on the applicable TWC, LLC senior notes and debentures discounted to the redemption date on a semi-annual basis (with the exception of the Sterling Notes, which are on an annual basis), at a comparable government bond rate plus a designated number of basis points as further described in the indenture and the applicable note or debenture, plus, in each case, accrued but unpaid interest to, but not including, the redemption date.

The Company may offer to redeem all, but not less than all, of the Sterling Notes in the event of certain changes in the tax laws of the U.S. (or any taxing authority in the U.S.). This redemption would be at a redemption price equal to 100% of the principal amount, together with accrued and unpaid interest on the Sterling Notes to, but not including, the redemption date.

#### *TWCE Senior Debentures*

The TWCE senior debentures are guaranteed by CCO Holdings, Charter Operating, TWC, LLC and the Subsidiary Guarantors and rank equally with the liens on the collateral securing obligations under the Charter Operating notes and credit facilities. Interest on each series of TWCE senior debentures is payable semi-annually in arrears. The TWCE senior debentures are not redeemable before maturity.

The TWCE indenture contains customary covenants relating to restrictions on the ability of TWCE or any material subsidiary to create liens and on the ability of TWC, LLC and TWCE to consolidate, merge or convey or transfer substantially all of their assets. The TWCE indenture also contains customary events of default.

#### **Limitations on Distributions**

Distributions by the Company's subsidiaries to a parent company for payment of principal on parent company notes are restricted under the indentures and credit facilities discussed above, unless there is no default under the applicable indenture and credit facilities, and unless each applicable subsidiary's leverage ratio test is met at the time of such distribution. As of December 31, 2016, there was no default under any of these indentures or credit facilities and each subsidiary met its applicable leverage ratio tests based on December 31, 2016 financial results. Such distributions would be restricted, however, if any such subsidiary fails to meet these tests at the time of the contemplated distribution. In the past, certain subsidiaries have from time to time failed to meet their leverage ratio test. There can be no assurance that they will satisfy these tests at the time of the contemplated distribution. Distributions by Charter Operating for payment of principal on parent company notes are further restricted by the covenants in its credit facilities.

However, without regard to leverage, during any calendar year or any portion thereof during which the borrower is a flow-through entity for tax purposes, and so long as no event of default exists, the borrower may make distributions to the equity interests of the borrower in an amount sufficient to make permitted tax payments.

In addition to the limitation on distributions under the various indentures, distributions by the Company's subsidiaries may be limited by applicable law, including the Delaware Limited Liability Company Act, under which the Company's subsidiaries may make distributions if they have "surplus" as defined in the act.

#### **Liquidity and Future Principal Payments**

The Company continues to have significant amounts of debt, and its business requires significant cash to fund principal and interest payments on its debt, capital expenditures and ongoing operations. As set forth below, the Company has significant future principal payments. The Company continues to monitor the capital markets, and it expects to undertake refinancing transactions and utilize free cash flow and cash on hand to further extend or reduce the maturities of its principal obligations. The timing and terms of any refinancing transactions will be subject to market conditions.

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

Based upon outstanding indebtedness as of December 31, 2016, the amortization of term loans, and the maturity dates for all senior and subordinated notes, total future principal payments on the total borrowings under all debt agreements as of December 31, 2016, are as follows:

<b>Year</b>	<b>Amount</b>
2017	\$ 2,197
2018	2,197
2019	3,546
2020	5,216
2021	5,128
Thereafter	41,752
	<u>\$ 60,036</u>

#### 10. Common Stock

Charter's Class A common stock and Class B common stock are identical except with respect to certain voting, transfer and conversion rights. Holders of Class A common stock are entitled to one vote per share. Charter's Class B common stock represents the share issued to A/N in connection with the Bright House Transaction. One share of Charter's Class B common stock has a number of votes reflecting the voting power of the Charter Holdings common units and Charter Holdings convertible preferred units held by A/N as of the applicable record date on an if-converted, if-exchanged basis, and is generally intended to reflect A/N's economic interests in Charter Holdings.

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

The following table summarizes our shares outstanding for the three years ended December 31, 2016:

	Class A Common Stock	Class B Common Stock
BALANCE, December 31, 2013	106,144,075	—
Exercise of stock options	640,342	—
Restricted stock issuances, net of cancellations	9,090	—
Stock issuances from exercise of warrants	5,243,167	—
Restricted stock unit vesting	104,270	—
Purchase of treasury stock	(141,257)	—
BALANCE, December 31, 2014	111,999,687	—
Exercise of stock options	579,173	—
Restricted stock issuances, net of cancellations	6,920	—
Restricted stock unit vesting	98,831	—
Purchase of treasury stock	(245,783)	—
BALANCE, December 31, 2015	112,438,828	—
Reorganization of common stock	(10,771,404)	—
Issuance of shares in TWC Transaction	143,012,155	—
Issuance of shares to Liberty Broadband for cash	25,631,339	—
Issuance of share to A/N in Bright House Transaction	—	1
Exchange of Charter Holdings units held by A/N	1,852,832	—
Exercise of stock options	1,014,664	—
Restricted stock issuances, net of cancellations	9,811	—
Restricted stock unit vesting	1,738,792	—
Purchase of treasury stock	(6,029,225)	—
BALANCE, December 31, 2016	268,897,792	1

The shares outstanding balances shown above as of and prior to December 31, 2015 represent historical shares outstanding of Legacy Charter before applying the Parent Merger Exchange Ratio. The 10.8 million shares associated with the reorganization of Charter Class A common stock represents the reduction to Legacy Charter Class A common shares outstanding as of the acquisition date as a result of applying the Parent Merger Exchange Ratio. See Note 2.

In December 2016, A/N exchanged 1.9 million Charter Holdings common units for Charter Class A common stock. See Note 11.

### *Share Repurchases*

In 2016, the Company purchased approximately 5.1 million shares of Charter Class A common stock for approximately \$1.3 billion pursuant to authorizations by Charter's board of directors of \$3 billion. Accordingly, as of December 31, 2016 and provided Charter's leverage ratio remains at 4 to 4.5 times and Charter Operating's leverage remains below 3.5 times, management has authority to cause the Company to purchase an additional \$1.7 billion of Charter's Class A common stock without taking into account shares or units that may be purchased from A/N. Effective November 1, 2016, Charter's board of directors granted authority for a new \$750 million of Class A common stock buybacks under the rolling six-month authority without taking into account any Class A common stock purchased prior to November 1. As a result, a portion of the \$1.7 billion of authority is under the authority of management to approve up to \$750 million for Class A common stock buybacks in any six-month period.

During the years ended December 31, 2016, 2015 and 2014, the Company withheld 908,066, 177,696 and 127,725 shares, respectively, of its common stock in payment of \$216 million, \$38 million and \$19 million, respectively, of tax withholdings owed by employees

upon vesting of restricted shares and stock options. During the years ended December 31, 2016 and 2015, Company

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

also withheld 50,503 shares and 44,541 shares, respectively, of its Class A common stock representing the exercise costs owed by employees upon exercise of stock options.

In December 31, 2016 and 2015, Charter's board of directors approved the retirement of the then currently outstanding treasury stock and those shares were retired as of December 31, 2016 and 2015.

The Company accounted for treasury stock using the cost method and the treasury shares upon repurchase were reflected on the Company's consolidated balance sheets as a component of total shareholders' equity. Upon retirement, these treasury shares are allocated between additional paid-in capital and accumulated deficit based on the cost of original issue included in additional paid-in capital.

In 2014, the Company issued approximately 5.2 million shares of Charter Class A common stock as a result of exercises by holders who received warrants pursuant to the Joint Plan of Reorganization upon the Company's emergence from bankruptcy in 2009. The exercises resulted in proceeds to the Company of approximately \$90 million. As of December 31, 2016 and 2015, there were no warrants outstanding.

#### **11. Noncontrolling Interests**

Noncontrolling interests represents consolidated subsidiaries of which the Company owns less than 100%. The Company is a holding company whose principal asset is a controlling equity interest in Charter Holdings, the indirect owner of the Company's cable systems. Noncontrolling interests on the Company's balance sheet primarily includes A/N's equity interests in Charter Holdings, which is comprised of a common ownership interest and a convertible preferred ownership interest.

In connection with the closing of the Bright House Transaction, Charter Holdings issued approximately 31.0 million common units to A/N, which are exchangeable at any time into either Charter Class A common stock on a one-for-one basis, or, at Charter's option, cash, based on the then current market price of Charter Class A common stock. Net income (loss) of Charter Holdings attributable to A/N's common noncontrolling interest for financial reporting purposes is based on the weighted average effective common ownership interest of approximately 10% which was \$129 million for the year ended December 31, 2016. Charter Holdings distributed \$3 million to A/N as a pro rata tax distribution on its common units during the year ended December 31, 2016. Charter Holdings also issued approximately 25 million convertible preferred units to A/N with a face amount of \$2.5 billion that pay a 6% annual preferred dividend. The 6% annual preferred dividend is paid quarterly in cash, if and when declared, provided that, if dividends are suspended at any time, the dividends will accrue until they are paid. Net income (loss) of Charter Holdings attributable to the preferred noncontrolling interest for financial reporting purposes is based on the preferred dividend which was \$93 million for the year ended December 31, 2016. Each convertible preferred unit is convertible into either 0.37334 of a Charter Holdings common unit (if then held by A/N) or 0.37334 of a share of Charter Class A common stock (if then held by a third party), representing a conversion price of \$267.85 per unit, based on a conversion feature as defined in the Limited Liability Company Agreement of Charter Holdings. After May 18, 2021, Charter may redeem the convertible preferred units if the price of Charter Class A common stock exceeds 130% of the conversion price. These Charter Holdings common and convertible preferred units held by A/N are recorded in noncontrolling interests as permanent equity in the consolidated balance sheet.

The common units and convertible preferred units issued to A/N as consideration for the Bright House Transaction were initially measured at their fair value of \$7.0 billion and \$3.2 billion, respectively, in accordance with acquisition accounting. However, upon formation of Charter Holdings and subsequent to the acquisition, the carrying amounts of the controlling and noncontrolling interests were adjusted to reflect the relative effective common ownership interest in Charter Holdings. This resulted in an increase to noncontrolling interest of approximately \$589 million and a corresponding decrease to additional paid-in capital of \$589 million, net of \$225 million of deferred income taxes, for the year ended December 31, 2016.

In December 2016, Charter and A/N entered into a letter agreement (the "Letter Agreement") pursuant to which A/N exchanged 1.9 million Charter Holdings common units held by A/N for shares of Charter Class A common stock for an aggregate purchase price of \$537 million. The common units exchanged had a net carrying value in noncontrolling interest of approximately \$460 million. The exchange of A/N common units resulted in a tax step-up of the assets of Charter Holdings which is further discussed in Note 17. The Letter Agreement also requires A/N to sell to Charter or to Charter Holdings, on a monthly basis, a number of shares of Charter Class A common stock or Charter Holdings common units that represents a pro rata participation by A/N and its affiliates in any repurchases of shares of Charter Class A common stock from persons other than A/N effected by Charter during the immediately preceding calendar month, at a purchase price equal to the average price paid by Charter for the shares repurchased.

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

from persons other than A/N during such immediately preceding calendar month. Pursuant to the Letter Agreement, Charter Holdings purchased from A/N 752,767 Charter Holdings common units at a price per unit of \$289.83, or \$218 million. The common units purchased had a net carrying value in noncontrolling interest of approximately \$187 million. As of December 31, 2016, A/N held 28.4 million Charter Holdings common units.

## 12. Accounting for Derivative Instruments and Hedging Activities

The Company uses derivative instruments to manage interest rate risk on variable debt and foreign exchange risk on the Sterling Notes, and does not hold or issue derivative instruments for speculative trading purposes.

Interest rate derivative instruments are used to manage interest costs and to reduce the Company's exposure to increases in floating interest rates. The Company manages its exposure to fluctuations in interest rates by maintaining a mix of fixed and variable rate debt. Using interest rate derivative instruments, the Company agrees to exchange, at specified intervals through 2017, the difference between fixed and variable interest amounts calculated by reference to agreed-upon notional principal amounts. As of December 31, 2016 and 2015, the Company had \$850 million and \$1.1 billion, respectively, in notional amounts of interest rate derivative instruments outstanding. The notional amounts of interest rate derivative instruments do not represent amounts exchanged by the parties and, thus, are not a measure of exposure to credit loss. The amounts exchanged were determined by reference to the notional amount and the other terms of the contracts.

Upon closing of the TWC Transaction, the Company acquired interest rate derivative instrument assets with a fair value of \$85 million (excluding accrued interest), which were terminated and settled with their respective counterparties in the second quarter of 2016 with an \$88 million cash payment to the Company of which \$14 million was for interest accrued through the date of termination. The termination resulted in an \$11 million loss for the year ended December 31, 2016 which was recorded in gain (loss) on financial instruments, net in the consolidated statements of operations.

Upon closing of the TWC Transaction, the Company assumed cross-currency derivative instrument liabilities with a fair value of \$72 million (excluding accrued interest). Cross-currency derivative instruments are used to effectively convert £1.275 billion aggregate principal amount of fixed-rate British pound sterling denominated debt, including annual interest payments and the payment of principal at maturity, to fixed-rate U.S. dollar denominated debt. The cross-currency swaps have maturities of June 2031 and July 2042. The Company is required to post collateral on the cross-currency derivative instruments when the derivative contracts are in a liability position. In May 2016, the Company entered into a collateral holiday agreement for 80% of both the 2031 and 2042 cross-currency swaps, which eliminates the requirement to post collateral for three years.

The effect of derivative instruments on the consolidated balance sheets is presented in the table below:

	December 31,	
	2016	2015
<b>Interest Rate Derivatives</b>		
Accrued interest	\$ 5	\$ 3
Other long-term liabilities	\$ —	\$ 10
Accumulated other comprehensive loss	\$ (5)	\$ (13)
<b>Cross-Currency Derivatives</b>		
Other long-term liabilities	\$ 251	\$ —

The Company's interest rate and cross-currency derivative instruments are not designated as hedges and are marked to fair value each period, with the impact recorded as a gain or loss on financial instruments, net in the consolidated statements of operations. While these derivative instruments are not designated as cash flow hedges for accounting purposes, management continues to believe such instruments are correlated with the respective debt, thus managing associated risk.

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

The effect of financial instruments on the consolidated statements of operations is presented in the table below.

	Year Ended December 31,		
	2016	2015	2014
<b>Gain (Loss) on Financial Instruments, Net:</b>			
Change in fair value of interest rate derivative instruments	\$ 8	\$ 5	\$ 12
Change in fair value of cross-currency derivative instruments	(179)	—	—
Remeasurement of Sterling Notes to U.S. dollars	279	—	—
Loss on termination of interest rate derivative instruments	(11)	—	—
Loss reclassified from accumulated other comprehensive loss due to discontinuance of hedge accounting	(8)	(9)	(19)
	<u>\$ 89</u>	<u>\$ (4)</u>	<u>\$ (7)</u>

### 13. Fair Value Measurements

The accounting guidance establishes a three-level hierarchy for disclosure of fair value measurements, based upon the transparency of inputs to the valuation of an asset or liability as of the measurement date, as follows:

- Level 1 – inputs to the valuation methodology are quoted prices (unadjusted) for identical assets or liabilities in active markets.
- Level 2 – inputs to the valuation methodology include quoted prices for similar assets and liabilities in active markets, and inputs that are observable for the asset or liability, either directly or indirectly, for substantially the full term of the financial instrument.
- Level 3 – inputs to the valuation methodology are unobservable and significant to the fair value measurement.

#### *Financial Assets and Liabilities*

The Company has estimated the fair value of its financial instruments as of December 31, 2016 and 2015 using available market information or other appropriate valuation methodologies. Considerable judgment, however, is required in interpreting market data to develop the estimates of fair value. Accordingly, the estimates presented in the accompanying consolidated financial statements are not necessarily indicative of the amounts the Company would realize in a current market exchange.

The carrying amounts of cash and cash equivalents, receivables, payables and other current assets and liabilities approximate fair value because of the short maturity of those instruments.

The Company's cash and cash equivalents as of December 31, 2016 and restricted cash and cash equivalents as of December 31, 2015 were primarily invested in money market funds and 90 day or less commercial paper. The money market funds are valued at the closing price reported by the fund sponsor from an actively traded exchange and commercial paper is valued at cost plus the accretion of the discount on a yield to maturity basis, which approximated fair value. The money market funds and commercial paper potentially subject the Company to concentration of credit risk. The amount invested within any one financial instrument did not exceed \$250 million and \$1.5 billion as of December 31, 2016 and December 31, 2015, respectively. As of December 31, 2016 and 2015, there were no significant concentrations of financial instruments in a single investee, industry or geographic location.

Interest rate derivative instruments are valued using a present value calculation based on an implied forward LIBOR curve (adjusted for Charter Operating's and counterparties' credit risk). The weighted average pay rate for the Company's currently effective interest rate derivative instruments was 1.59% and 1.61% at December 31, 2016 and 2015, respectively (exclusive of applicable spreads).

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

The Company's financial instruments that are accounted for at fair value on a recurring basis are presented in the table below.

	December 31, 2016		December 31, 2015	
	Level 1	Level 2	Level 1	Level 2
<b>Assets</b>				
Money market funds	\$ 1,205	\$ —	\$ 14,330	\$ —
Commercial paper	\$ —	\$ —	\$ —	\$ 7,934
<b>Liabilities</b>				
Interest rate derivative instruments	\$ —	\$ 5	\$ —	\$ 13
Cross-currency derivative instruments	\$ —	\$ 251	\$ —	\$ —

A summary of the carrying value and fair value of the Company's debt at December 31, 2016 and 2015 is as follows:

	December 31, 2016		December 31, 2015	
	Carrying Value	Fair Value	Carrying Value	Fair Value
<b>Debt</b>				
Senior notes and debentures	\$ 52,933	\$ 55,203	\$ 28,433	\$ 28,744
Credit facilities	\$ 8,814	\$ 8,943	\$ 7,290	\$ 7,274

The estimated fair value of the Company's senior notes and debentures as of December 31, 2016 and 2015 is based on quoted market prices in active markets and is classified within Level 1 of the valuation hierarchy, while the estimated fair value of the Company's credit facilities is based on quoted market prices in inactive markets and is classified within Level 2.

#### *Non-financial Assets and Liabilities*

The Company's nonfinancial assets such as equity-method investments, franchises, property, plant, and equipment, and other intangible assets are not measured at fair value on a recurring basis; however, they are subject to fair value adjustments in certain circumstances, such as upon a business combination and when there is evidence that an impairment may exist. No impairments were recorded in 2016, 2015 and 2014. Upon closing of the Transactions, all of Legacy TWC and Legacy Bright House nonfinancial assets and liabilities were recorded at fair values. See Note 2.

#### **14. Operating Costs and Expenses**

Operating costs and expenses, exclusive of items shown separately in the consolidated statements of operations, consist of the following for the periods presented:

	Year Ended December 31,		
	2016	2015	2014
Programming	\$ 7,034	\$ 2,678	\$ 2,459
Regulatory, connectivity and produced content	1,467	435	428
Costs to service customers	5,173	1,705	1,679
Marketing	1,699	628	617
Transition costs	156	72	14
Other	3,126	908	776
	\$ 18,655	\$ 6,426	\$ 5,973

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

Programming costs consist primarily of costs paid to programmers for basic, premium, digital, video on demand, and pay-per-view programming. Regulatory, connectivity and produced content costs represent payments to franchise and regulatory authorities, costs directly related to providing video, Internet and voice services as well as payments for sports, local and news content produced by the Company. Included in regulatory, connectivity and produced content costs is content acquisition costs for the Los Angeles Lakers' basketball games and Los Angeles Dodgers' baseball games which are recorded as games are exhibited over the applicable season. Costs to service customers include costs related to field operations, network operations and customer care for the Company's residential and small and medium business customers, including internal and third-party labor for installations, service and repairs, maintenance, billing and collection, occupancy and vehicle costs. Marketing costs represent the costs of marketing to current and potential commercial and residential customers including labor costs. Transition costs represent incremental costs incurred to integrate the TWC and Bright House operations and to increase the scale of the Company's business as a result of the Transactions. See Note 2. Other includes bad debt expense, corporate overhead, advertising sales expenses, indirect costs associated with the Company's enterprise business customers and regional sports and news networks, property tax expense and insurance expense and stock compensation expense, among others.

**15. Other Operating Expenses, Net**

Other operating expenses, net consist of the following for the years presented:

	Year Ended December 31,		
	2016	2015	2014
Merger and restructuring costs	\$ 970	\$ 70	\$ 38
Other pension benefits	(899)	—	—
Special charges, net	17	15	14
(Gain) loss on sale of assets, net	(2)	4	10
	<u>\$ 86</u>	<u>\$ 89</u>	<u>\$ 62</u>

*Merger and restructuring costs*

Merger and restructuring costs represent costs incurred in connection with merger and acquisition transactions and related restructuring, such as advisory, legal and accounting fees, employee retention costs, employee termination costs related to the Transactions and other exit costs. The Company expects to incur additional merger and restructuring costs in connection with the Transactions. Changes in accruals for merger and restructuring costs from January 1, 2016 through December 31, 2016 are presented below:

	Employee Retention Costs	Employee Termination Costs	Transaction and Advisory Costs	Other Costs	Total
Liability, December 31, 2015	\$ —	\$ —	\$ 33	\$ —	\$ 33
Liability assumed in the Transactions	80	9	3	—	92
Costs incurred	26	337	318	41	722
Cash paid	(99)	(102)	(329)	(41)	(571)
Remaining liability, December 31, 2016	<u>\$ 7</u>	<u>\$ 244</u>	<u>\$ 25</u>	<u>\$ —</u>	<u>\$ 276</u>

In addition to the costs indicated above, the Company recorded \$248 million of expense related to accelerated vesting of equity awards of terminated employees for the year ended December 31, 2016.

*Other pension benefits*

Other pension benefits include the pension curtailment gain, remeasurement gain, expected return on plan assets and interest cost components of net periodic pension benefit. See Note 21.

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

*Special charges, net*

Special charges, net primarily includes employee termination costs not related to the Transactions and net amounts of litigation settlements.

*(Gain) loss on sale of assets, net*

(Gain) loss on sale of assets, net represents the net (gain) loss recognized on the sales and disposals of fixed assets and cable systems.

**16. Stock Compensation Plans**

Legacy Charter's 2009 Stock Incentive Plan (assumed by Charter upon closing of the Transactions) provides for grants of nonqualified stock options, incentive stock options, stock appreciation rights, dividend equivalent rights, performance units and performance shares, share awards, phantom stock, restricted stock units and restricted stock. Directors, officers and other employees of the Company and its subsidiaries, as well as others performing consulting services for the Company, are eligible for grants under the 2009 Stock Incentive Plan. In April 2016, Charter's board of directors and stockholders approved an additional 9 million shares of Charter Class A common stock (or units convertible into Charter Class A common stock) under the 2009 Stock Incentive Plan which now allows for the issuance of up to 21 million shares of Charter Class A common stock (or units convertible into Charter Class A common stock).

At the closing of the TWC Transaction, Legacy TWC employee equity awards were converted into Charter Class A common stock equity awards on the same terms and conditions as were applicable under the Legacy TWC equity awards, except that the number of shares covered by each award and the option exercise prices were adjusted for the Stock Award Exchange Ratio (as defined in the Merger Agreement) such that the intrinsic value of the Converted TWC Awards was approximately equal to that of the original awards at the closing of the Transactions. The Converted TWC Awards represented approximately 4.2 million Charter restricted stock units and 0.8 million Charter stock options (0.5 million of which were exercisable at the time of conversion) and continue to be subject to the terms of the Legacy TWC equity plans. The Converted TWC Awards were measured at their fair value as of the closing of the TWC Transaction. Of that fair value, \$514 million related to Legacy TWC employee pre-combination service and was treated as consideration transferred in the TWC Transaction (see Note 2), while \$539 million relates to post-combination service and is being amortized to stock compensation expense over the remaining vesting period of the awards. The fair values of the Converted TWC Awards were based on a valuation using assumptions developed by management and other information compiled by management including, but not limited to, historical volatility and exercise trends of Legacy Charter and Legacy TWC. The Parent Merger Exchange Ratio was also applied to outstanding Legacy Charter equity awards and option exercise prices; however, the terms of the equity awards did not change as a result of the Transactions.

Legacy Charter Stock options and restricted stock units cliff vest upon the three year anniversary of each grant. Stock options generally expire ten years from the grant date and restricted stock units have no voting rights. Certain stock options and restricted stock units vest based on achievement of stock price hurdles. Restricted stock generally vests annually over one year beginning from the date of grant. Legacy TWC restricted stock units that were converted into Charter restricted stock units generally vest 50% on each of the third and fourth anniversary of the grant date. Legacy TWC stock options that were converted into Charter stock options vest ratably over a four-year period and expire ten years from the grant date.

As of December 31, 2016, total unrecognized compensation remaining to be recognized in future periods totaled \$262 million for stock options, \$1 million for restricted stock and \$279 million for restricted stock units and the weighted average period over which they are expected to be recognized is 4 years for stock options, 4 months for restricted stock and 3 years for restricted stock units. The Company recorded \$244 million, \$78 million and \$55 million of stock compensation expense for the years ended December 31, 2016, 2015 and 2014, respectively, which is included in operating costs and expenses. The Company also recorded \$248 million of expense for the year ended December 31, 2016 related to accelerated vesting of equity awards of terminated employees which is recorded in merger and restructuring costs.

#### 17. Income Taxes

Substantially all of the Company's operations are held through Charter Holdings and its direct and indirect subsidiaries. Charter Holdings and the majority of its subsidiaries are generally limited liability companies that are not subject to income tax. However, certain of these limited liability companies are subject to state income tax. In addition, the subsidiaries that are corporations are subject to income tax. Generally, the taxable income, gains, losses, deductions and credits of Charter Holdings are passed through to its members, Charter and A/N. Charter is responsible for its share of taxable income or loss of Charter Holdings allocated to it in accordance with the LLC Agreement and partnership tax rules and regulations. As a result, Charter's primary deferred tax component recorded in the consolidated balance sheets relates to its excess financial reporting outside basis, excluding amounts attributable to nondeductible goodwill, over Charter's tax basis in the investment in Charter Holdings.

Charter Holdings, the indirect owner of the Company's cable systems, generally allocates its taxable income, gains, losses, deductions and credits proportionately according to the members' respective ownership interests, except for special allocations required under Section 704(c) of the Internal Revenue Code and the Treasury Regulations ("Section 704(c)"). Pursuant to Section 704(c) and the LLC Agreement, each item of income, gain, loss and deduction with respect to any property contributed to the capital of the partnership shall, solely for tax purposes, be allocated among the members so as to take into account any variation between the adjusted basis of such property to the partnership for U.S. federal income tax purposes and its initial gross asset value using the "traditional method" as described in the Treasury Regulations.

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

*Income Tax Benefit (Expense)*

For the years ended December 31, 2016, 2015, and 2014, the Company recorded deferred income tax benefit (expense) as shown below. The tax provision in future periods will vary based on current and future temporary differences, as well as future operating results.

	Year Ended December 31,		
	2016	2015	2014
Current expense:			
Federal income taxes	\$ (4)	\$ (1)	\$ (1)
State income taxes	(29)	(4)	(2)
Current income tax expense	<u>(33)</u>	<u>(5)</u>	<u>(3)</u>
Deferred benefit (expense):			
Federal income taxes	2,549	53	(192)
State income taxes	409	12	(41)
Deferred income tax benefit (expense)	<u>2,958</u>	<u>65</u>	<u>(233)</u>
Income tax benefit (expense)	<u>\$ 2,925</u>	<u>\$ 60</u>	<u>\$ (236)</u>

Income tax benefit for the year ended December 31, 2016 was recognized primarily through the reversal of approximately \$3.3 billion of valuation allowance (see further discussion below), net of tax effect of permanent differences, a decrease to the anticipated blended state rate applied to Legacy Charter deferred tax balances as a result of the Transactions, a change in a state tax law, and prior to the closing of the Transactions, increases (decreases) in deferred tax liabilities related to Charter's franchises which are characterized as indefinite-lived for book financial reporting purposes.

Prior to July 2, 2015, Charter Communications Holding Company, LLC ("Charter Holdco") was treated as a partnership for tax purposes. Effective on July 2, 2015, Charter elected to treat two of its wholly owned subsidiaries as disregarded entities for federal and state income tax purposes (the "Election"). The subsidiaries that made the Election were two of the three partners in Charter Holdco. This Election resulted in a deemed liquidation of Charter Holdco into Charter solely for federal and state income tax purposes, and resulted in a net increase of \$638 million to the tax basis of Charter Holdco's amortizable and depreciable assets. After the Election, all taxable income, gains, losses, deductions and credits of Charter Holdco and its indirect limited liability company subsidiaries were treated as income of Charter. In addition, the indirect subsidiaries of Charter Holdco that are corporations joined the Charter consolidated group. The impact of the Election to the Charter income tax provision, net of valuation allowance, was \$187 million of income tax benefit recorded as a discrete tax event during the year ended December 31, 2015.

The Company's effective tax rate differs from that derived by applying the applicable federal income tax rate of 35% for the years ended December 31, 2016, 2015, and 2014, respectively, as follows:

	Year Ended December 31,		
	2016	2015	2014
Statutory federal income taxes	\$ (288)	\$ 116	\$ (18)
Statutory state income taxes, net	(36)	(4)	(2)
Nondeductible expenses	(62)	(12)	(10)
Net income attributable to noncontrolling interest	78	—	—
Change in valuation allowance	3,171	(250)	(203)
Organizational restructuring	—	187	—
Federal tax credits	16	18	—
State rate changes	65	4	(3)

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

The change in the valuation allowance above differs from the change between the beginning and ending deferred tax position due to a change in deferred tax assets and the establishment of a valuation allowance on the net operating losses which results in no impact to the consolidated statements of operations.

*Deferred Tax Assets (Liabilities)*

The tax effects of these temporary differences that give rise to significant portions of the deferred tax assets and deferred tax liabilities at December 31, 2016 and 2015 are presented below.

	December 31,	
	2016	2015
Deferred tax assets:		
Loss carryforwards	\$ 4,127	\$ 4,247
Goodwill	—	315
Other intangibles	—	211
Accrued and other	243	227
Total gross deferred tax assets	4,370	5,000
Less: valuation allowance	(200)	(3,186)
Deferred tax assets	\$ 4,170	\$ 1,814
Deferred tax liabilities:		
Investment in partnership	\$ (30,832)	\$ —
Indefinite-lived intangibles	—	(1,582)
Property, plant and equipment	—	(1,822)
Accrued and other	(3)	—
Deferred tax liabilities	(30,835)	(3,404)
Net deferred tax liabilities	\$ (26,665)	\$ (1,590)

Net deferred tax liabilities included approximately \$25 million and \$28 million at December 31, 2016 and 2015, respectively, relating to certain indirect subsidiaries that file separate income tax returns.

*Valuation Allowance*

In assessing the realizability of deferred tax assets, management considers whether it is more likely than not that some portion or all of the deferred tax assets will be realized. In evaluating the need for a valuation allowance, management takes into account various factors, including the expected level of future taxable income, available tax planning strategies and reversals of existing taxable temporary differences. Due to Legacy Charter's history of losses, Legacy Charter was historically unable to assume future taxable income in its analysis and accordingly valuation allowances were established against the deferred tax assets, net of deferred tax liabilities, from definite-lived assets for book accounting purposes. However, as a result of the TWC Transaction, deferred tax liabilities resulting from the book fair value adjustment increased significantly and future taxable income that will result from the reversal of existing temporary differences for which deferred tax liabilities are recognized, is sufficient to conclude it is more likely than not that the Company will realize substantially all of its deferred tax assets. As a result, Charter reversed approximately \$3.3 billion of its valuation allowance and recognized a corresponding income tax benefit in the consolidated statements of operations for the year ended December 31, 2016. Approximately \$145 million of valuation allowance associated with federal tax net operating loss carryforwards acquired in the TWC Transaction and approximately \$55 million of valuation allowance associated with state tax loss carryforwards and other miscellaneous deferred tax assets remains on the December 31, 2016 consolidated balance sheet.

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

*Net Operating Loss Carryforwards*

As of December 31, 2016, Charter had approximately \$11.2 billion of federal tax net operating loss carryforwards resulting in a gross deferred tax asset of approximately \$3.9 billion. Federal tax net operating loss carryforwards expire in the years 2018 through 2035. These losses resulted from the operations of Charter Holdco and its subsidiaries. In addition, as of December 31, 2016, Charter had state tax net operating loss carryforwards, resulting in a gross deferred tax asset (net of federal tax benefit) of approximately \$304 million. State tax net operating loss carryforwards generally expire in the years 2017 through 2035.

Upon closing of the TWC Transaction, Charter experienced a third "ownership change" as defined in Section 382 of the Internal Revenue Code; resulting in a third set of limitations on Charter's use of its existing federal and state net operating losses, capital losses, and tax credit carryforwards. Both the first ownership change limitations that applied as a result of Legacy Charter's emergence from bankruptcy in 2009 and second ownership change limitations that applied as a result of Liberty Media Corporation's purchase in 2013 of a 27% beneficial interest in Legacy Charter will also continue to apply. As of December 31, 2016, all of Charter's federal tax loss carryforwards are subject to Section 382 and other restrictions. Pursuant to these restrictions, Charter estimates that approximately \$5.4 billion in 2017, \$3.8 billion in 2018, \$432 million in 2019 and an additional \$226 million annually over each of the next five years of federal tax loss carryforwards should become unrestricted and available for Charter's use. An additional \$415 million is currently subject to a valuation allowance. Since the limitation amounts accumulate for future use to the extent they are not utilized in any given year, Charter believes its loss carryforwards should become fully available to offset future taxable income. Charter's state loss carryforwards are subject to similar, but varying, limitations on their future use. If Charter was to experience another "ownership change" in the future, its ability to use its loss carryforwards could be subject to further limitations.

*Tax Receivable Agreement*

Under the LLC Agreement, A/N has rights to: (1) convert at any time some or all of its preferred units in Charter Holdings for common units in Charter Holdings, and (2) exchange at any time some or all of its common units in Charter Holdings for Charter's Class A common stock or cash, at Charter's option. Pursuant to a Tax Receivable Agreement ("TRA") between Charter and A/N, Charter must pay to A/N 50% of the tax benefit when realized by Charter from the step-up in tax basis resulting from any future exchange or sale of the preferred and common units. Charter did not record a liability for this obligation as of the acquisition date since the tax benefit is dependent on uncertain future events that are outside of Charter's control, such as the timing of a conversion or exchange. A future exchange or sale is not based on a fixed and determinable date and the exchange or sale is not certain to occur. If all of A/N's partnership units were to be exchanged or sold in the future, the undiscounted value of the obligation is currently estimated to be in the range of zero to \$3 billion depending on measurement of the tax step-up in the future and Charter's ability to realize the tax benefit in the periods following the exchange or sale. Factors impacting these calculations include, but are not limited to, the fair value of the equity at the time of the exchange and the effective tax rates when the benefits are realized.

In connection with the Letter Agreement between Charter and A/N whereby 1.9 million Charter Holdings common units held by A/N were exchanged for shares of Charter Class A common stock for an aggregate purchase price of \$537 million, an immediate step-up of \$580 million in the tax basis of the assets of Charter Holdings occurred. As it relates to the exchange and tax step-up, a net deferred tax asset of approximately \$82 million was recorded and a resulting TRA liability owed to A/N of \$137 million which, as a transaction with a shareholder, was recorded directly to additional paid in capital. The TRA liability is recorded on an iterative, undiscounted basis and included in other long-term liabilities on the consolidated balance sheets as of December 31, 2016.

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

*Uncertain Tax Positions*

In connection with the TWC Transaction, the Company assumed \$181 million of gross unrecognized tax benefits, exclusive of interest and penalties, which are recorded within other long-term liabilities. The net amount of the unrecognized tax benefits that could impact the effective tax rate is \$154 million. The Company has determined that it is reasonably possible that its existing reserve for uncertain tax positions as of December 31, 2016 could decrease by \$35 million during the year ended December 31, 2017 related to various ongoing audits, settlement discussions and expiration of statute of limitations with various state and local agencies; however, various events could cause the Company's current expectations to change in the future. These uncertain tax positions, if ever recognized in the financial statements, would be recorded in the consolidated statements of operations as part of the income tax provision. A reconciliation of the beginning and ending amount of unrecognized tax benefits, exclusive of interest and penalties, included in other long-term liabilities on the accompanying consolidated balance sheets of the Company is as follows:

BALANCE, December 31, 2014	\$	—
Additions on current year tax positions		5
		<hr/>
BALANCE, December 31, 2015		5
Additions on prior year tax positions		1
Additions on current year tax positions		7
Additions on tax positions assumed in the TWC Transaction		181
Reductions on settlements and expirations with taxing authorities		(22)
		<hr/>
BALANCE, December 31, 2016	\$	<u>172</u>

No tax years for Charter, Charter Holdings, or Charter Communications Holding Company, LLC for income tax purposes, are currently under examination by the IRS. Legacy Charter's tax years ending 2013 through the short period return dated May 17, 2016 remain subject to examination and assessment. Years prior to 2013 remain open solely for purposes of examination of Legacy Charter's loss and credit carryforwards. The IRS is currently examining Legacy TWC's income tax returns for 2011 and 2012. Legacy TWC's tax years ending 2013 through 2015 remain subject to examination and assessment. Prior to Legacy TWC's separation from Time Warner Inc. ("Time Warner") in March 2009 (the "Separation"), Legacy TWC was included in the consolidated U.S. federal and certain state income tax returns of Time Warner. The IRS is currently examining Time Warner's 2008 through 2010 income tax returns. Time Warner's income tax returns for 2005 to 2007, which are periods prior to the Separation, were settled with the exception of an immaterial item that has been referred to the IRS Appeals Division. The Company does not anticipate that these examinations will have a material impact on the Company's consolidated financial position or results of operations. In addition, the Company is also subject to ongoing examinations of the Company's tax returns by state and local tax authorities for various periods. Activity related to these state and local examinations did not have a material impact on the Company's consolidated financial position or results of operations in 2016, nor does the Company anticipate a material impact in the future.

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

**18. Earnings (Loss) Per Share**

Basic earnings (loss) per common share is computed by dividing net income (loss) attributable to Charter shareholders by the weighted average number of shares of common stock outstanding during the period. Diluted earnings per common share considers the impact of potentially dilutive securities using the treasury stock and if-converted methods and is based on the weighted average number of shares used for the basic earnings per share calculation, adjusted for the dilutive effect of stock options, restricted stock, restricted stock units, equity awards with market conditions and Charter Holdings convertible preferred units and common units. Weighted average number of shares outstanding for all periods presented has been recast to reflect the application of the Parent Merger Exchange Ratio. Basic loss per common share equaled diluted loss per common share for the years ended December 31, 2015 and 2014 because the Company incurred a net loss during those periods. The following is the computation of diluted earnings per common share for the year ended December 31, 2016.

	<b>2016</b>
Numerator:	
Net income attributable to Charter shareholders	\$ 3,522
Effect of dilutive securities:	
Charter Holdings common units	129
Charter Holdings convertible preferred units	93
Net income attributable to Charter shareholders after assumed conversions	\$ 3,744
Denominator:	
Weighted average common shares outstanding, basic	206,539,100
Effect of dilutive securities:	
Assumed exercise or issuance of shares relating to stock plans	3,088,871
Weighted average Charter Holdings common units	19,333,227
Weighted average Charter Holdings convertible preferred units	5,830,241
Weighted average common shares outstanding, diluted	234,791,439
Basic earnings per common share attributable to Charter shareholders	\$ 17.05
Diluted earnings per common share attributable to Charter shareholders	\$ 15.94

**19. Related Party Transactions**

The following sets forth certain transactions in which the Company and the directors, executive officers, and affiliates of the Company are involved or, in the case of the management arrangements, subsidiaries that are debt issuers that pay certain of their parent companies for services.

Charter is a party to management arrangements with Spectrum Management Holding Company, LLC ("Spectrum Management") and certain of their subsidiaries. Under these agreements, Charter, Spectrum Management and Charter Holdco provide management services for the cable systems owned or operated by their subsidiaries. Costs associated with providing these services are charged directly to the Company's operating subsidiaries. All other costs incurred on behalf of Charter's operating subsidiaries are considered a part of the management fee. These costs are recorded as a component of operating costs and expenses, in the accompanying consolidated financial statements. The management fee charged to the Company's operating subsidiaries approximated the expenses incurred by Spectrum Management, Charter Holdco and Charter on behalf of the Company's operating subsidiaries in 2016, 2015 and 2014.

***Liberty Broadband and A/N***

On May 23, 2015, in connection with the execution of the Merger Agreement and the amendment of the Contribution Agreement, Charter entered into the Amended and Restated Stockholders Agreement with Liberty Broadband, A/N and Legacy Charter (the "Stockholders Agreement") and the Charter Holdings Limited Liability Operating Agreement ("LLC Agreement") with Liberty

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

Broadband and A/N. As of the closing of the Merger Agreement and the Contribution Agreement on May 18, 2016, the Stockholders Agreement replaced Legacy Charter's existing stockholders agreement with Liberty Broadband, dated September 29, 2014, and superseded the amended and restated stockholders agreement among Legacy Charter, Charter, Liberty Broadband and A/N, dated March 31, 2015.

Under the terms of the Stockholders Agreement, the number of Charter's directors is fixed at 13, and includes its chief executive officer. Upon the closing of the Bright House Transaction, two designees selected by A/N became members of the board of directors of Charter and three designees selected by Liberty Broadband continued as members of the board of directors of Charter. The remaining eight directors are not affiliated with either A/N or Liberty Broadband. Each of A/N and Liberty Broadband is entitled to nominate at least one director to each of the committees of Charter's board of directors, subject to applicable stock exchange listing rules and certain specified voting or equity ownership thresholds for each of A/N and Liberty Broadband, and provided that the Nominating and Corporate Governance Committee and the Compensation and Benefit Committee each have at least a majority of directors independent from A/N, Liberty Broadband and the Company (referred to as the "unaffiliated directors"). Each of the Nominating and Corporate Governance Committee and the Compensation and Benefits Committee is currently comprised of three unaffiliated directors and one designee of each of A/N and Liberty Broadband. A/N and Liberty Broadband also have certain other committee designation and other governance rights. Upon the closing of the Bright House Transaction, Mr. Thomas Rutledge, the Company's Chief Executive Officer ("CEO"), became the chairman of the board of Charter.

In December 2016, the Company and A/N entered into the Letter Agreement in which A/N exchanged Charter Holdings common units for shares of Charter Class A common stock and the Company purchased from A/N Charter Holdings common units. The Letter Agreement also requires pro rata participation by A/N and its affiliates in any repurchases of shares of Charter Class A common stock until A/N has sold shares or units totaling \$537 million (\$218 million has already been completed), subject to Liberty Broadband's right of first refusal to purchase shares or units from A/N upon A/N's sale to any third party, excluding the Company. See Note 11 for more information. Pursuant to the TRA between Charter and A/N, Charter must pay to A/N 50% of the tax benefit when realized by Charter from the step-up in tax basis resulting from any future exchange or sale of the preferred and common units. See Note 17 for more information.

The Company is aware that Dr. John Malone may be deemed to have a 36.4% voting interest in Liberty Interactive and is Chairman of the board of directors, an executive officer position, of Liberty Interactive. Liberty Interactive owns 38.3% of the common stock of HSN, Inc. ("HSN") and has the right to elect 20% of the board members of HSN. Liberty Interactive wholly owns QVC, Inc. ("QVC"). The Company has programming relationships with HSN and QVC which pre-date the transaction with Liberty Media. For the years ended December 31, 2016, 2015 and 2014, the Company recorded payments in aggregate of approximately \$53 million, \$17 million and \$14 million, respectively, from HSN and QVC as part of channel carriage fees and revenue sharing arrangements for home shopping sales made to customers in the Company's footprint.

Dr. Malone and Mr. Steven Miron, each a member of Charter's board of directors, also serve on the board of directors of Discovery Communications, Inc., ("Discovery") and the Company is aware that Dr. Malone owns 5.2% in the aggregate of the common stock of Discovery and has a 28.7% voting interest in Discovery for the election of directors. The Company is aware that Advance/Newhouse Programming Partnership ("A/N PP"), an affiliate of A/N and in which Mr. Miron is the CEO, owns 100% of the Series A preferred stock of Discovery and 100% of the Series C preferred stock of Discovery, representing approximately 34.0% of the outstanding equity of Discovery's stock, on an as-converted basis. A/N PP has the right to appoint three directors out of a total of ten directors to Discovery's board to be elected by the holders of Discovery's Series A preferred stock. In addition, Dr. Malone is a member of the board of directors of Lions Gate Entertainment Corp. ("Lions Gate", parent company of Starz, Inc.) and owns approximately 5.9% in the aggregate of the common stock of Lions Gate and has 8.1% of the voting power, pursuant to his ownership of Lions Gate Class A voting shares. The Company purchases programming from both Discovery and Lions Gate pursuant to agreements entered into prior to Dr. Malone and Mr. Miron joining Charter's board of directors. Based on publicly available information, the Company does not believe that either Discovery or Lions Gate would currently be considered related parties. The amounts paid in the aggregate to Discovery and Lions Gate represent less than 3% of total operating costs and expenses for the years ended December 31, 2016, 2015 and 2014.

#### *Equity Investments*

The Company has agreements with certain equity-method investees (see Note 7) pursuant to which the Company has made or received related party transaction payments. The Company recorded payments to equity-method investees totaling \$171 million and \$28 million during the years ended December 31, 2016 and 2015, respectively. The Company recorded advertising revenues

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

from transactions with equity-method investees totaling \$7 million during the year ended December 31, 2016. The Company has loans outstanding to investees of \$5 million as of December 31, 2016.

## 20. Commitments and Contingencies

### Commitments

The following table summarizes the Company's payment obligations as of December 31, 2016 for its contractual obligations.

	Total	2017	2018	2019	2020	2021	Thereafter
Capital and Operating Lease Obligations <sup>(a)</sup>	\$ 1,324	\$ 259	\$ 225	\$ 180	\$ 142	108	\$ 410
Programming Minimum Commitments <sup>(b)</sup>	310	225	37	26	22	—	—
Other <sup>(c)</sup>	13,187	1,334	810	704	664	539	9,136
	<u>\$ 14,821</u>	<u>\$ 1,818</u>	<u>\$ 1,072</u>	<u>\$ 910</u>	<u>\$ 828</u>	<u>\$ 647</u>	<u>\$ 9,546</u>

<sup>(a)</sup> The Company leases certain facilities and equipment under non-cancelable capital and operating leases. Leases and rental costs charged to expense for the years ended December 31, 2016, 2015 and 2014 were \$215 million, \$49 million, \$43 million, respectively.

<sup>(b)</sup> The Company pays programming fees under multi-year contracts ranging from three to ten years, typically based on a flat fee per customer, which may be fixed for the term, or may in some cases escalate over the term. Programming costs included in the statement of operations were \$7.0 billion, \$2.7 billion and \$2.5 billion for the years ended December 31, 2016, 2015 and 2014 respectively. Certain of the Company's programming agreements are based on a flat fee per month or have guaranteed minimum payments. The table sets forth the aggregate guaranteed minimum commitments under the Company's programming contracts.

<sup>(c)</sup> "Other" represents other guaranteed minimum commitments, including rights negotiated directly with content owners for distribution on Company-owned channels or networks and commitments related to the Company's role as an advertising and distribution sales agent for third party-owned channels or networks as well as commitments to the Company's customer premise equipment vendors.

The following items are not included in the contractual obligation table due to various factors discussed below. However, the Company incurs these costs as part of its operations:

- The Company rents utility poles used in its operations. Generally, pole rentals are cancelable on short notice, but the Company anticipates that such rentals will recur. Rent expense incurred for pole rental attachments for the years ended December 31, 2016, 2015 and 2014 was \$115 million, \$53 million and \$49 million, respectively.
- The Company pays franchise fees under multi-year franchise agreements based on a percentage of revenues generated from video service per year. The Company also pays other franchise related costs, such as public education grants, under multi-year agreements. Franchise fees and other franchise-related costs included in the accompanying statement of operations were \$534 million, \$212 million and \$208 million for the years ended December 31, 2016, 2015 and 2014 respectively.
- The Company also has \$278 million in letters of credit, of which \$220 million is secured under the Charter Operating credit facility, primarily to its various casualty carriers as collateral for reimbursement of workers' compensation, auto liability and general liability claims.
- Minimum pension funding requirements have not been presented in the table above as such amounts have not been determined beyond 2016. The Company made no cash contributions to the qualified pension plans in 2016; however, the Company is permitted to make discretionary cash contributions to the qualified pension plans in 2017. For the nonqualified pension plan, the Company contributed \$5 million during 2016 and will continue to make contributions in 2017 to the extent benefits are paid.

### Legal Proceedings

In 2014, following an announcement by Comcast and Legacy TWC of their intent to merge, Breffni Barrett and others filed suit in the Supreme Court of the State of New York for the County of New York against Comcast, Legacy TWC and their respective officers and directors. Later five similar class actions were consolidated with this matter (the "NY Actions"). The NY Actions

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
**(dollars in millions, except share or per share data or where indicated)**

were settled in July 2014, however, such settlement was terminated following the termination of the Comcast and TWC merger in April 2015. In May 2015, Charter and TWC announced their intent to merge. Subsequently, the parties in the NY Actions filed a Second Consolidated Class Action Complaint (the "Second Amended Complaint"), removing Comcast as a defendant and naming TWC, the members of the TWC board of directors, Charter and the merger subsidiaries as defendants. The Second Amended Complaint generally alleges, among other things, that the members of the TWC board of directors breached their fiduciary duties to TWC stockholders during the Charter merger negotiations and by entering into the merger agreement and approving the mergers, and that Charter aided and abetted such breaches of fiduciary duties. The complaint sought, among other relief, injunctive relief enjoining the stockholder vote on the mergers, unspecified declaratory and equitable relief, compensatory damages in an unspecified amount, and costs and attorneys' fees.

In September 2015, the parties entered into a memorandum of understanding ("MOU") to settle the action. Pursuant to the MOU, the defendants issued certain supplemental disclosures relating to the mergers on a Form 8-K, and plaintiffs agreed to release with prejudice all claims that could have been asserted against defendants in connection with the mergers. The settlement is conditioned on, among other things, approval by the New York Supreme Court. That court gave preliminary approval to the settlement in October 2016. A hearing to consider final approval of this settlement is set for March 2017. In the event that the New York Supreme Court does not approve the settlement, Charter intends to vigorously defend this case.

In August 2015, a purported stockholder of Charter, Matthew Sciabacucchi, filed a lawsuit in the Delaware Court of Chancery, on behalf of a putative class of Charter stockholders, challenging the transactions between Charter, TWC, A/N, and Liberty Broadband announced by Charter on May 26, 2015 (collectively, the "Transactions"). The lawsuit names as defendants Liberty Broadband, Charter, the board of directors of Charter, and New Charter. Plaintiff alleged that the Transactions improperly benefit Liberty Broadband at the expense of other Charter shareholders, and that Charter issued a false and misleading proxy statement in connection with the Transactions. Plaintiff requested, among other things, that the Delaware Court of Chancery enjoin the September 21, 2015 special meeting of Charter stockholders at which Charter stockholders were asked to vote on the Transactions until the defendants disclosed certain information relating to Charter and the Transactions. The disclosures demanded by the plaintiff included (i) certain unlevered free cash flow projections for Charter and (ii) a Form of Proxy and Right of First Refusal Agreement ("Proxy") by and among Liberty Broadband, A/N, Charter and New Charter, which was referenced in the description of the Second Amended and Restated Stockholders Agreement, dated May 23, 2015, among Charter, New Charter, Liberty Broadband and A/N. On September 9, 2015, Charter issued supplemental disclosures containing unlevered free cash flow projections for Charter. In return, the plaintiff agreed its disclosure claims were moot and withdrew its application to enjoin the Charter stockholder vote on the Transactions. Charter has filed a motion to dismiss this litigation but the court has not yet ruled upon it. Charter denies any liability, believes that it has substantial defenses, and intends to vigorously defend this suit.

The California Attorney General and the Alameda County, California District Attorney are investigating whether certain of Legacy Charter's waste disposal policies, procedures and practices are in violation of the California Business and Professions Code and the California Health and Safety Code. That investigation was commenced in January 2014. A similar investigation involving Legacy TWC was initiated in February 2012. Charter is cooperating with these investigations. While the Company is unable to predict the outcome of these investigations, it does not expect that the outcome will have a material effect on its operations, financial condition, or cash flows.

On December 19, 2011, Sprint Communications Company L.P. ("Sprint") filed a complaint in the U.S. District Court for the District of Kansas alleging that Legacy TWC infringes 12 U.S. patents purportedly relating to Voice over Internet Protocol ("VoIP") services. Over the course of the litigation Sprint dismissed its claims relating to five of the asserted patents, and shortly before trial Sprint dropped its claims with respect to two additional patents. A trial on the remaining five patents is scheduled to begin on February 13, 2017. The plaintiff is seeking monetary damages of approximately \$150 million. The plaintiff is also claiming that TWC willfully infringed the patents, and may seek up to treble damages as well as attorneys' fees and costs. Charter intends to vigorously defend against this lawsuit. However, no assurances can be made that such defenses would ultimately be successful. At this time, the Company does not expect that the outcome of this litigation will have a material adverse effect on its operations, financial condition or cash flows although the ultimate outcome of the litigation cannot be predicted.

On October 23, 2015, the New York Office of the Attorney General (the "NY AG") began an investigation of Legacy TWC's advertised Internet speeds and other Internet product advertising. On February 1, 2017, the NY AG filed suit in the Supreme Court for the State of New York alleging that Legacy TWC's advertising of Internet speeds was false and misleading. The suit seeks restitution and injunctive relief. The Company denies that Legacy TWC engaged in any wrongdoing and the Company intends to defend itself vigorously. However, no assurances can be made that such defenses would ultimately be successful. At this time,

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

the Company does not expect that the outcome of this litigation will have a material adverse effect on its operations, financial condition or cash flows.

The Company is a defendant or co-defendant in several lawsuits involving alleged infringement of various patents relating to various aspects of its businesses. Other industry participants are also defendants in certain of these cases. In the event that a court ultimately determines that the Company infringes on any intellectual property rights, the Company may be subject to substantial damages and/or an injunction that could require the Company or its vendors to modify certain products and services the Company offers to its subscribers, as well as negotiate royalty or license agreements with respect to the patents at issue. While the Company believes the lawsuits are without merit and intends to defend the actions vigorously, no assurance can be given that any adverse outcome would not be material to the Company's consolidated financial condition, results of operations, or liquidity. The Company cannot predict the outcome of any such claims nor can it reasonably estimate a range of possible loss.

The Company is party to lawsuits, claims and regulatory inquiries that arise in the ordinary course of conducting its business, including lawsuits claiming violation of wage and hour laws and breach of contract by vendors, including by three programmers. The ultimate outcome of these other legal matters pending against the Company cannot be predicted, and although such lawsuits and claims are not expected individually to have a material adverse effect on the Company's consolidated financial condition, results of operations or liquidity, such lawsuits could have, in the aggregate, a material adverse effect on the Company's consolidated financial condition, results of operations or liquidity. Whether or not the Company ultimately prevails in any particular lawsuit or claim, litigation can be time consuming and costly and injure the Company's reputation.

## **21. Employee Benefit Plans**

### *Pension Plans*

Upon completion of the TWC Transaction, Charter assumed sponsorship of Legacy TWC's pension plans. The Company sponsors two qualified defined benefit pension plans, the TWC Pension Plan and the TWC Union Pension Plan, that provide pension benefits to a majority of Legacy TWC employees. The Company also provides a nonqualified defined benefit pension plan for certain employees under the TWC Excess Pension Plan.

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

Changes in the projected benefit obligation, fair value of plan assets and funded status of the pension plans from January 1, 2016 through December 31, 2016 are presented below:

	<u>2016</u>
Projected benefit obligation at beginning of year	\$ —
Benefit obligation assumed in the TWC Transaction	4,009
Service cost	86
Interest cost	87
Curtailement amendment	(675)
Actuarial gain	(149)
Benefits paid	(98)
Projected benefit obligation at end of year	<u>\$ 3,260</u>
Accumulated benefit obligation at end of year	<u>\$ 3,260</u>
Fair value of plan assets at beginning of year	\$ —
Fair value of plan assets acquired in the TWC Transaction	2,877
Actual return on plan assets	162
Employer contributions	5
Benefits paid	(98)
Fair value of plan assets at end of year	<u>\$ 2,946</u>
Funded status	<u>\$ (314)</u>

The projected benefit obligation, accumulated benefit obligation and fair value of plan assets for the qualified pension plans and the nonqualified pension plan as of December 31, 2016 consisted of the following:

	<u>Qualified Pension Plans</u>	<u>Nonqualified Pension Plan</u>
	<u>December 31, 2016</u>	
Projected benefit obligation	\$ 3,204	\$ 56
Accumulated benefit obligation	\$ 3,204	\$ 56
Fair value of plan assets	\$ 2,946	\$ —

Pretax amounts recognized in the consolidated balance sheet as of December 31, 2016 consisted of the following:

	<u>December 31, 2016</u>
Noncurrent asset	\$ 1
Current liability	(6)
Long-term liability	(309)
Net amounts recognized in consolidated balance sheet	<u>\$ (314)</u>

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

The components of net periodic benefit costs for the year ended December 31, 2016 consisted of the following:

	<u>Year Ended December 31, 2016</u>
Service cost	\$ 86
Interest cost	87
Expected return on plan assets	(116)
Pension curtailment gain	(675)
Remeasurement gain	(195)
Net periodic pension benefit	<u>\$ (813)</u>

The \$195 million remeasurement gain recorded during the year ended December 31, 2016 was primarily driven by the effects of an increase of the discount rate from 3.99% at the closing date of the TWC Transaction to 4.20% at December 31, 2016 and a gain to record pension assets at December 31, 2016 fair values.

Weighted average assumptions used to determine benefit obligations as of December 31, 2016 consisted of the following:

	<u>December 31, 2016</u>
Discount rate	4.20%
Rate of compensation increase	—%

The weighted average of discount rates used to measure the projected benefit obligation at the closing date of the TWC Transaction was 3.99%. The rate of compensation increase used to measure the projected benefit obligation as of the closing of the TWC Transaction was an age-graded average increase of 4.25%. The Company utilized the RP 2015/MP2015 mortality tables published by the Society of Actuaries to measure the benefit obligations as of December 31, 2016 and the closing date of the TWC Transaction.

Weighted average assumptions used to determine net periodic benefit costs for the year ended December 31, 2016 consisted of the following:

	<u>Year Ended December 31, 2016</u>
Expected long-term rate of return on plan assets	6.50%
Discount rate <sup>(a)</sup>	3.72%
Rate of compensation increase <sup>(b)</sup>	—%

(a) The discount rate used to determine net periodic pension benefit was 3.99% from the closing date of the TWC Transaction through remeasurement date (June 30, 2016), and was 3.72% from remeasurement date through December 31, 2016.

(b) The rate of compensation increase used to determine net periodic pension benefit was 4.25% from the closing date of the TWC Transaction through remeasurement date (June 30, 2016), and 0% thereafter. See "Pension Plan Curtailment Amendment" below for further discussion.

In developing the expected long-term rate of return on plan assets, the Company considered the pension portfolio's composition, past average rate of earnings and the Company's future asset allocation targets. The weighted average expected long-term rate of return on plan assets used to determine net periodic pension benefit for the year ended December 31, 2017 is expected to be 6.50%. The Company determined the discount rates used to determine benefit obligations and net periodic pension benefit based on the yield of a large population of high quality corporate bonds with cash flows sufficient in timing and amount to settle projected future defined benefit payments.

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

*Pension Plan Curtailment Amendment*

Following the closing of the TWC Transaction, Charter amended the pension plans to freeze future benefit accruals to current active plan participants as of August 31, 2016. Effective September 1, 2016, no future compensation increases or future service will be credited to participants of the pension plans and new hires are not eligible to participate in the plans. Upon announcement and approval of the plan amendment, the assumptions underlying the pension liability and pension asset values were reassessed utilizing remeasurement date assumptions in accordance with Charter's mark-to-market pension accounting policy to record gains and losses in the period in which a remeasurement event occurs. The \$675 million curtailment gain recorded during the year ended December 31, 2016 was primarily driven by the reduction of the compensation rate assumption to 0% in accordance with the terms of the plan amendment, reflecting the pension liability at its accumulated benefit obligation instead of its projected benefit obligation at the remeasurement date.

*Pension Plan Assets*

The assets of the qualified pension plans are held in a master trust in which the qualified pension plans are the only participating plans (the "Master Trust"). The investment policy for the qualified pension plans is to achieve a reasonable long-term rate of return on plan assets with an acceptable level of risk in order to maintain adequate funding levels. The investment portfolio is a mix of fixed-income and equity securities with the objective of matching plan liability performance, diversifying risk and achieving a target investment return. The pension plan's Investment Committee establishes risk mitigation policies and regularly monitors investment performance, investment allocation policies, and the execution of these strategies. The Investment Committee engages a third-party investment firm with responsibility of executing the directives of the Investment Committee, monitoring the performance of individual investment managers of the Master Trust, and making adjustments and changes within defined parameters when necessary. On a periodic basis, the Investment Committee conducts a broad strategic review of its portfolio construction and investment allocation policies. Neither the Company, the Investment Committee, nor the third-party investment firm manages any assets internally or directly utilizes derivative instruments or hedging; however, the investment mandate of some investment managers allows the use of derivatives as components of their standard portfolio management strategies. Pension assets are managed in a balanced portfolio comprised of two major components: a return-seeking portion and a liability-matching portion. The expected role of return-seeking investments is to achieve a reasonable long-term growth of pension assets with a prudent level of risk, while the role of liability-matching investments is to provide a partial hedge against liability performance associated with changes in interest rates. The objective within return-seeking investments is to achieve asset diversity in order to balance return and volatility.

The Company adopted an investment strategy referred to as a de-risking glide path to increase the fixed income allocation as the funded status of the qualified pension plans improves. As the qualified pension plans reach set funded status milestones, the assets will be rebalanced to shift more assets from equity to fixed income. Based on the progress with this strategy, the target investment allocation for pension fund assets is permitted to vary within specified ranges subject to Investment Committee approval for return-seeking securities and liability-matching securities. The target and actual investment allocation of the qualified pension plans by asset category as of December 31, 2016 consisted of the following:

	<u>Target Allocation</u>	<u>Actual Allocation December 31, 2016</u>
Return-seeking securities	75.0%	64.4%
Liability-matching securities	25.0%	35.4%
Other investments	—%	0.2%

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
**(dollars in millions, except share or per share data or where indicated)**

The following table sets forth the investment assets of the qualified pension plans, which exclude accrued investment income and other receivables, accrued liabilities, and investments with a fair value measured at net asset value per share as a practical expedient, by level within the fair value hierarchy as of December 31, 2016:

	December 31, 2016			
	Fair Value	Level 1	Level 2	Level 3
Cash	\$ 2	\$ 2	\$ —	\$ —
Common stocks:				
Domestic <sup>(a)</sup>	1,065	1,065	—	—
International <sup>(a)</sup>	391	391	—	—
Commingled equity funds <sup>(b)</sup>	348	—	348	—
Other equity securities <sup>(c)</sup>	3	3	—	—
Corporate debt securities <sup>(d)</sup>	394	—	394	—
Commingled bond funds <sup>(b)</sup>	273	—	273	—
U.S. Treasury debt securities <sup>(a)</sup>	260	260	—	—
Collective trust funds <sup>(c)</sup>	75	—	75	—
U.S. government agency asset-backed debt securities <sup>(f)</sup>	53	—	53	—
Corporate asset-backed debt securities <sup>(g)</sup>	2	—	2	—
Other fixed-income securities <sup>(h)</sup>	89	—	89	—
Total investment assets	2,955	<u>\$ 1,721</u>	<u>\$ 1,234</u>	<u>\$ —</u>
Accrued investment income and other receivables <sup>(i)</sup>	107			
Accrued liabilities <sup>(i)</sup>	(120)			
Investments measured at net asset value <sup>(j)</sup>	4			
Fair value of plan assets	<u>\$ 2,946</u>			

(a) Common stocks, mutual funds and U.S. Treasury debt securities are valued at the closing price reported on the active market on which the individual securities are traded. No single industry comprised a significant portion of common stock held by the qualified pension plan as of December 31, 2016.

(b) Commingled equity funds and commingled bond funds are valued using the net asset value provided by the administrator of the fund. The net asset value is based on the readily determinable value of the underlying assets owned by the fund, less liabilities, and then divided by the number of units outstanding.

(c) Other equity securities consist of preferred stocks, which are valued at the closing price reported on the active market on which the individual securities are traded.

(d) Corporate debt securities are valued based on observable prices from the new issue market, benchmark quotes, secondary trading and dealer quotes. An option adjusted spread model is incorporated to adjust spreads of issues that have early redemption features and final spreads are added to the U.S. Treasury curve.

(e) Collective trust funds primarily consist of short-term investment strategies comprised of instruments issued or fully guaranteed by the U.S. government and/or its agencies and are valued using the net asset value provided by the administrator of the fund. The net asset value is based on the readily determinable value of the underlying assets owned by the fund, less liabilities, and then divided by the number of units outstanding.

(f) U.S. government agency asset-backed debt securities consist of pass-through mortgage-backed securities issued by the Federal Home Loan Mortgage Corporation and the Federal National Mortgage Association valued using available trade information, dealer quotes, market indices and research reports, spreads, bids and offers.

(g) Corporate asset-backed debt securities primarily consist of pass-through mortgage-backed securities issued by U.S. and foreign corporations valued using available trade information, dealer quotes, market indices and research reports, spreads, bids and offers.

**CHARTER COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
**DECEMBER 31, 2016, 2015 AND 2014**  
(dollars in millions, except share or per share data or where indicated)

- (b) Other fixed-income securities consist of foreign government debt securities, municipal bonds and U.S. government agency debt securities, which are valued based on observable prices from the new issue market, benchmark quotes, secondary trading and dealer quotes. An option adjusted spread model is incorporated to adjust spreads of issues that have early redemption features and final spreads are added to the U.S. Treasury curve.
- (c) Accrued investment income and other receivables includes amounts receivable under foreign exchange contracts of \$70 million as of December 31, 2016. Accrued liabilities includes amounts accrued under foreign exchange contracts of \$71 million as of December 31, 2016. The fair value of the assets and liabilities associated with these foreign exchange contracts are presented on a gross basis and are valued using the exchange rates in effect for the applicable currencies as of the valuation date (a Level 1 fair value measurement).
- (d) Certain investments that are measured at fair value using the net asset value per share (or its equivalent) practical expedient have not been classified in the fair value hierarchy. These investments primarily consist of hedge funds valued utilizing net asset value provided by the administrator of the fund, which is based on the value of the underlying assets owned by the fund, less liabilities, and then divided by the number of units outstanding. Shares of the fund are not redeemable and the underlying assets are anticipated to be liquidated and distributed to investors in the near term. There are no material unfunded commitments with respect to these investments. The fair value amounts presented in this table are intended to permit the reconciliation of the fair value hierarchy to the total fair value of plan assets discussed throughout this footnote.

#### ***Pension Plan Contributions***

The Company made no cash contributions to the qualified pension plans during the year ended December 31, 2016; however, the Company may make discretionary cash contributions to the qualified pension plans in the future. Such contributions will be dependent on a variety of factors, including current and expected interest rates, asset performance, the funded status of the qualified pension plans and management's judgment. For the nonqualified unfunded pension plan, the Company will continue to make contributions during 2017 to the extent benefits are paid.

Benefit payments for the pension plans are expected to be \$170 million in 2017, \$174 million in 2018, \$177 million in 2019, \$180 million in 2020, \$182 million in 2021 and \$911 million in 2022 to 2026.

#### ***Multiemployer Plans***

Upon completion of the TWC Transaction, Charter assumed Legacy TWC's multiemployer plans. The Company contributes to a number of multiemployer plans under the terms of collective-bargaining agreements that cover its union-represented employees. Such multiemployer plans provide medical, pension and retirement savings benefits to active employees and retirees. The Company made contributions to multiemployer plans of \$31 million for the year ended December 31, 2016.

The risks of participating in multiemployer pension plans are different from single-employer pension plans in the following aspects: (a) assets contributed to a multiemployer pension plan by one employer may be used to provide benefits to employees of other participating employers, (b) if a participating employer stops contributing to the multiemployer pension plan, the unfunded obligations of the plan may be borne by the remaining participating employers and (c) if the Company chooses to stop participating in any of the multiemployer pension plans, it may be required to pay those plans an amount based on the underfunded status of the plan, referred to as a withdrawal liability.

The multiemployer pension plans to which the Company contributes each received a Pension Protection Act "green" zone status in 2015. The zone status is based on the most recent information the Company received from the plan and is certified by the plan's actuary. Among other factors, plans in the green zone are at least 80% funded.

#### ***Defined Contribution Benefit Plans***

The Company's employees may participate in the Charter Communications, Inc. 401(k) Plan (the "401(k) Plan"). Upon completion of the TWC Transaction, Charter assumed Legacy TWC's defined contribution plan, the TWC Savings Plan. In June 2016, the Company announced changes to both the 401(k) Plan and the TWC Savings Plan that were effective September 1, 2016 and effective January 1, 2017, the 401(k) Plan and TWC Savings Plan merged into one plan. Employees that qualify for participation can contribute up to 50% of their salary, on a pre-tax basis, subject to a maximum contribution limit as determined by the Internal Revenue Service. The Company's matching contribution is discretionary and is equal to 100% of the amount of the salary reduction the participant elects to defer (up to 6% of the participant's eligible compensation), excluding any catch-up contributions and is

**(dollars in millions, except share or per share data or where indicated)**

paid by the Company on a per pay period basis. The Company made contributions to the 401(k) plans totaling \$147 million, \$23 million and \$19 million for the years ended December 31, 2016, 2015 and 2014, respectively.

For employees who are not eligible to participate in the Company's long-term incentive plan and who are not covered by a collective bargaining agreement, the Company offers a contribution to the new Retirement Accumulation Plan ("RAP"), equal to 3% of eligible pay. The Company made contributions to the RAP totaling \$48 million for the year ended December 31, 2016.

## **22. Recently Issued Accounting Standards**

In May 2014, the Financial Accounting Standards Board ("FASB") issued Accounting Standards Update ("ASU") No. 2014-09, *Revenue from Contracts with Customers* ("ASU 2014-09"), which is a comprehensive revenue recognition standard that will supersede nearly all existing revenue recognition guidance under U.S. GAAP. The new standard provides a single principles-based, five-step model to be applied to all contracts with customers, which steps are to (1) identify the contract(s) with the customer, (2) identify the performance obligations in the contract, (3) determine the transaction price, (4) allocate the transaction price to the performance obligations in the contract and (5) recognize revenue when each performance obligation is satisfied. More specifically, revenue will be recognized when promised goods or services are transferred to the customer in an amount that reflects the consideration expected in exchange for those goods or services. ASU 2014-09 will be effective, reflecting the one-year deferral, for interim and annual periods beginning after December 15, 2017 (January 1, 2018 for the Company). Early adoption of the standard is permitted but not before the original effective date. Companies can transition to the standard either retrospectively or as a cumulative-effect adjustment as of the date of adoption. The Company is currently in the process of evaluating which method of transition will be utilized. The Company is continuing to assess all potential impacts that the adoption of ASU 2014-09 will have on its consolidated financial statements, including developing new accounting policies, internal controls and processes to facilitate the adoption of the standard. The most significant impacts upon adoption are anticipated to result from the deferral over a period of time instead of recognized immediately of (1) the residential installation revenues which represent nonrefundable up-front fees that convey a material right to the customer and (2) the internal and external commission expenses which represent costs of obtaining a contract.

In April 2015, the FASB issued ASU No. 2015-05, *Customer's Accounting for Fees Paid in a Cloud Computing Arrangement* ("ASU 2015-05"), which provides guidance in determining whether fees for purchasing cloud computing services (or hosted software solutions) are considered internal-use software or should be considered a service contract. The cloud computing agreement that includes a software license should be accounted for in the same manner as internal-use software if customer has contractual right to take possession of the software during the hosting period without significant penalty and it is feasible to either run the software on customer's hardware or contract with another vendor to host the software. Arrangements that don't meet the requirements for internal-use software should be accounted for as a service contract. ASU 2015-05 was effective for interim and annual periods beginning after December 15, 2015 (January 1, 2016 for the Company). The adoption of ASU 2015-05 did not have a material impact on the Company's financial statements.

In February 2016, the FASB issued ASU No. 2016-02, *Leases* ("ASU 2016-02"), which requires lessees to recognize almost all leases on their balance sheet as a right-of-use asset and a lease liability. Lessees are allowed to account for short-term leases (i.e., leases with a term of 12 months or less) off-balance sheet, consistent with current operating lease accounting. For income statement purposes, the FASB retained a dual model, requiring leases to be classified as either operating or finance. Classification will be based on criteria that are largely similar to those applied in current lease accounting, but without explicit bright lines. ASU 2016-02 will be effective for interim and annual periods beginning after December 15, 2018 (January 1, 2019 for the Company). Early adoption is permitted. The new standard requires a modified retrospective transition through a cumulative-effect adjustment as of the beginning of the earliest period presented in the financial statements. The Company is currently in the process of evaluating the impact that the adoption of ASU 2016-02 will have on its consolidated financial statements including identifying the population of leases, evaluating technology solutions and collecting lease data.

In March 2016, the FASB issued ASU No. 2016-09, *Improvements to Employee Share-Based Payment Accounting* ("ASU 2016-09"), which includes multiple provisions intended to simplify various aspects of the accounting for share-based payments. The new standard (1) requires all excess tax benefits and deficiencies to be recognized as income tax expense or benefit in the income statement in the period in which they occur regardless of whether the benefit reduces taxes payable in the current period, (2) requires classification of excess tax benefits as an operating activity on the statements of cash flows, (3) allows an entity to make an entity-wide accounting policy election to either estimate the number of awards that are expected to vest or account for forfeitures when they occur and (4) causes the threshold under which employee share-based awards partially settled in cash can

(dollars in millions, except share or per share data or where indicated)

qualify for equity classification to increase to the maximum statutory tax rates in the applicable jurisdiction. ASU 2016-09 will be effective for interim and annual periods after December 15, 2016 (January 1, 2017 for the Company). The new standard generally requires a modified retrospective transition through a cumulative-effect adjustment as of the beginning of the period of adoption, with certain provisions requiring either a prospective or retrospective transition. The Company adopted ASU 2016-09 on January 1, 2017. Upon adoption of ASU 2016-09, the Company will recognize excess tax benefits of approximately \$136 million in deferred tax assets that were previously not recognized in a cumulative-effect adjustment to retained earnings. The Company will prospectively record a deferred tax benefit or expense associated with the difference between book and tax for stock compensation expense. On January 1, 2017, the Company will also establish an accounting policy election to assume zero forfeitures for stock award grants and account for forfeitures when they occur which will prospectively impact stock compensation expense. Other aspects of adoption ASU 2016-09 are not anticipated to have a material impact to the Company's consolidated financial statements.

In August 2016, the FASB issued ASU No. 2016-15, *Classification of Certain Cash Receipts and Cash Payments* ("ASU 2016-15"), which clarifies how entities should classify cash receipts and cash payments related to eight specific cash flow matters on the statement of cash flows, with the objective of reducing existing diversity in practice. ASU 2016-15 will be effective for interim and annual periods beginning after December 15, 2017 (January 1, 2018 for the Company). Early adoption is permitted. The Company is currently in the process of evaluating the impact that the adoption of ASU 2016-15 will have on its consolidated financial statements.

### 23. Unaudited Quarterly Financial Data

The following table presents quarterly data for the periods presented in the consolidated statement of operations:

	Year Ended December 31, 2016			
	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
Revenues	\$ 2,530	\$ 6,161	\$ 10,037	\$ 10,275
Income from operations	\$ 302	\$ 690	\$ 924	\$ 1,439
Net income (loss) attributable to Charter shareholders	\$ (188)	\$ 3,067	\$ 189	\$ 454
Earnings (loss) per common share attributable to Charter shareholders:				
Basic	\$ (1.86)	\$ 16.73	\$ 0.70	\$ 1.69
Diluted	\$ (1.86)	\$ 15.17	\$ 0.69	\$ 1.67
Weighted average common share outstanding:

#### 24. Consolidating Schedules

Each of Charter Operating, TWC, LLC, TWCE, CCO Holdings and certain subsidiaries jointly, severally, fully and unconditionally guarantee the outstanding debt securities of the others (other than the CCO Holdings notes) on an unsecured senior basis and the condensed consolidating financial information has been prepared and presented pursuant to SEC Regulation S-X Rule 3-10, *Financial Statements of Guarantors and Issuers of Guaranteed Securities Registered or Being Registered*. Certain Charter Operating subsidiaries that are regulated telephone entities only become guarantor subsidiaries upon approval by regulators. This information is not intended to present the financial position, results of operations and cash flows of the individual companies or groups of companies in accordance with generally accepted accounting principles.

The "Charter Operating and Restricted Subsidiaries" column is presented to comply with the terms of the Credit Agreement.

The "Safari Escrow Entities" column included in the condensed consolidating financial statements as of December 31, 2015 and for the years ended December 31, 2015 and 2014 consists of CCOH Safari, CCO Safari II and CCO Safari III. CCOH Safari, CCO Safari II and CCO Safari III issued the CCOH Safari notes, CCO Safari II notes and the CCO Safari III credit facilities, respectively. Upon closing of the TWC Transaction, the CCOH Safari notes became obligations of CCO Holdings and CCO Holdings Capital and the CCO Safari II notes and CCO Safari III credit facilities became obligations of Charter Operating and Charter Communications Operating Capital Corp. CCOH Safari merged into CCO Holdings and CCO Safari II and CCO Safari III merged into Charter Operating.

The "Unrestricted Subsidiary" column included in the condensed consolidating financial statements for the years ended December 31, 2016 and 2015 consists of CCO Safari which was a non-recourse subsidiary under the Credit Agreement and held the CCO Safari Term G Loans that were repaid in April 2015.

Condensed consolidating financial statements as of December 31, 2016 and 2015 and for the years ended December 31, 2016, 2015 and 2014 follow.

## 25. Subsequent Events

In January 2017, Charter Operating entered into an amendment to its Credit Agreement decreasing the applicable LIBOR margin on both the term loan E and term loan F to 2.00% and eliminating the LIBOR floor.

In February 2017, CCO Holdings and CCO Holdings Capital Corp. closed on transactions in which they issued \$1.0 billion aggregate principal amount of 5.125% senior notes due May 1, 2027. The net proceeds will be used to redeem CCO Holdings' 6.625% senior notes due 2022, pay related fees and expenses and for general corporate purposes.

**Explanatory Note**

This Annual Report on Form 10-K is a combined report being filed separately by Comcast Corporation ("Comcast") and NBCUniversal Media, LLC ("NBCUniversal"). Comcast owns all of the common equity interests in NBCUniversal, and NBCUniversal meets the conditions set forth in General Instruction I(1)(a), (b) and (d) of Form 10-K and is therefore filing its information within this Form 10-K with the reduced disclosure format. Each of Comcast and NBCUniversal is filing on its own behalf the information contained in this report that relates to itself, and neither company makes any representation as to information relating to the other company. Where information or an explanation is provided that is substantially the same for each company, such information or explanation has been combined in this report. Where information or an explanation is not substantially the same for each company, separate information and explanation has been provided. In addition, separate consolidated financial statements for each company, along with notes to the consolidated financial statements, are included in this report. Unless indicated otherwise, throughout this Annual Report on Form 10-K, we refer to Comcast and its consolidated subsidiaries, including NBCUniversal and its consolidated subsidiaries, as "we," "us" and "our;" Comcast Cable Communications, LLC and its subsidiaries as

**Table of Contents**

"Comcast Cable;" Comcast Holdings Corporation as "Comcast Holdings;" and NBCUniversal, LLC as "NBCUniversal Holdings."

This Annual Report on Form 10-K is for the year ended December 31, 2016. This Annual Report on Form 10-K modifies and supersedes documents filed before it.

The Securities and Exchange Commission ("SEC") allows us to "incorporate by reference" information that we file with it, which means that we can disclose important information to you by referring you directly to those documents. Information incorporated by reference is considered to be part of this Annual Report on Form 10-K. In addition, information that we file with the SEC in the future will automatically update and supersede information contained in this Annual Report on Form 10-K.

Our registered trademarks include Comcast, NBCUniversal and the Comcast and NBCUniversal logos. This Annual Report on Form 10-K also contains other trademarks, service marks and trade names owned by us, as well as those owned by others.

## Table of Contents

### Part I

#### Item 1: Business

We are a global media and technology company with two primary businesses, Comcast Cable and NBCUniversal. We were incorporated under the laws of Pennsylvania in December 2001. Through our predecessors, we have developed, managed and operated cable systems since 1963. In 2011, we acquired control of NBCUniversal from General Electric Company (the "NBCUniversal transaction"), and in 2013, we acquired General Electric Company's remaining interest in NBCUniversal.

We present our operations for Comcast Cable in one reportable business segment, referred to as Cable Communications, and our operations for NBCUniversal in four reportable business segments: Cable Networks, Broadcast Television, Filmed Entertainment and Theme Parks (collectively, the "NBCUniversal segments").

- **Cable Communications:** Consists of the operations of Comcast Cable, which is one of the nation's largest providers of video, high-speed Internet and voice services ("cable services") to residential customers under the XFINITY brand; we also provide these and other services to business customers and sell advertising.
- **Cable Networks:** Consists primarily of our national cable networks, our regional sports and news networks, our international cable networks, and our cable television studio production operations.
- **Broadcast Television:** Consists primarily of the NBC and Telemundo broadcast networks, our NBC and Telemundo owned local broadcast television stations, and our broadcast television studio production operations.
- **Filmed Entertainment:** Consists primarily of the operations of Universal Pictures, which produces, acquires, markets and distributes filmed entertainment worldwide, as well as DreamWorks Animation, which we acquired in August 2016; our films are also produced under the Illumination and Focus Features names.
- **Theme Parks:** Consists primarily of our Universal theme parks in Orlando, Florida and Hollywood, California and our 51% interest in the Universal Studios theme park in Osaka, Japan ("Universal Studios Japan"), which we acquired in November 2015.

Our other business interests consist primarily of Comcast Spectacor, which owns the Philadelphia Flyers and the Wells Fargo Center arena in Philadelphia, Pennsylvania and operates arena management-related businesses. We are also pursuing other business initiatives, such as a wireless phone service that we expect to launch in 2017 using our virtual network operator rights to provide the service over a third party's wireless network.

For financial and other information about our reportable business segments, refer to Item 7: Management's Discussion and Analysis of Financial Condition and Results of Operations, Note 17 to Comcast's consolidated financial statements, and Note 16 to NBCUniversal's consolidated financial statements included in this Annual Report on Form 10-K.

#### Available Information and Websites

Comcast's phone number is (215) 286-1700, and its principal executive offices are located at One Comcast Center, Philadelphia, PA 19103-2838. NBCUniversal's phone number is (212) 664-4444, and its principal executive offices are located at 30 Rockefeller Plaza, New York, NY 10112-0015. Comcast and NBCUniversal's

## Description of Our Businesses

### Cable Communications Segment

The table below summarizes certain customer and penetration data for our cable system operations.

December 31 (in millions)	2016	2015	2014
Homes and businesses passed <sup>(a)</sup>	56.4	55.7	54.7
Total customer relationships <sup>(b)</sup>	28.6	27.7	27.0
Single product customers <sup>(b)</sup>	8.5	8.4	8.4
Double product customers <sup>(b)</sup>	9.7	9.2	8.8
Triple product customers <sup>(b)</sup>	10.3	10.1	9.9
Video			
Video customers <sup>(c)</sup>	22.5	22.3	22.4
Video penetration <sup>(d)</sup>	39.9%	40.1%	40.9%
High-speed Internet			
High-speed Internet customers	24.7	23.3	22.0
High-speed Internet penetration <sup>(d)</sup>	43.8%	41.9%	40.2%
Voice			
Voice customers	11.7	11.5	11.2
Voice penetration <sup>(d)</sup>	20.7%	20.6%	20.5%

Basis of Presentation: Customer metrics include our residential and business customers. All percentages are calculated based on actual amounts. Minor differences may exist due to rounding.

- (a) Homes and businesses are considered passed if we can connect them to our distribution system without further extending the transmission lines. Homes and businesses passed is estimated based on the best available information.
- (b) Customer relationships represent the number of residential and business customers that subscribe to at least one of our cable services. Single product, double product and triple product customers represent customers that subscribe to one, two or three of our cable services, respectively. As of December 31, 2016, we had 26.5 million residential customer relationships.
- (c) Generally, a home or business receiving video programming from our distribution system counts as one video customer. For multiple dwelling units ("MDUs") whose residents have the ability to receive additional cable services, such as additional programming choices or our high-definition video ("HD") or digital video recorder ("DVR") advanced services, we count and report customers based on the number of potential billable relationships within each MDU. For MDUs whose residents are not able to receive additional cable services, the MDU is counted as a single customer.
- (d) Penetration is calculated by dividing the number of customers by the number of homes and businesses passed.

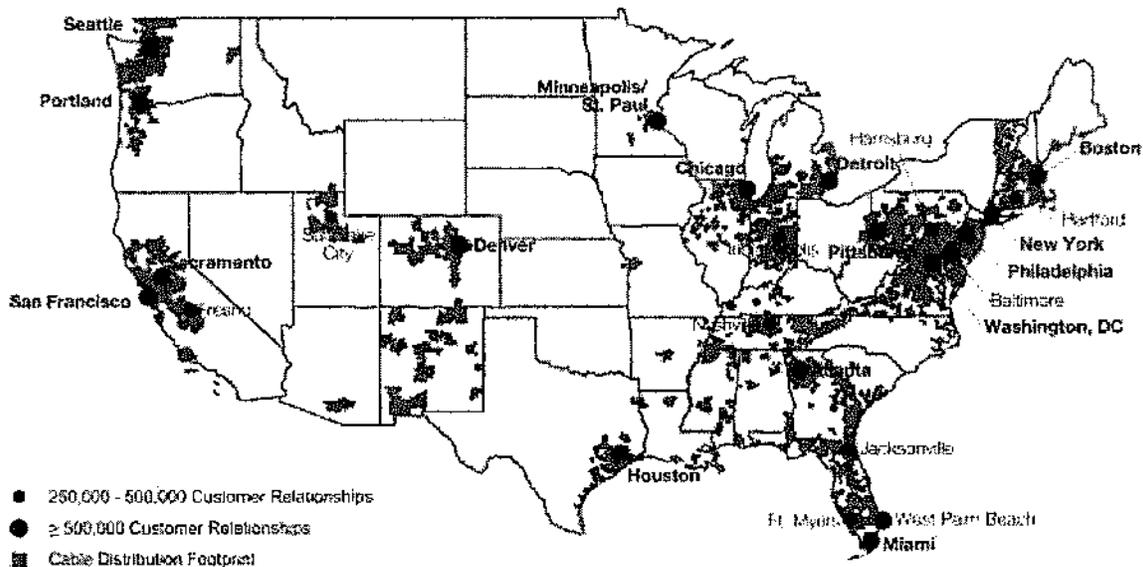

## Table of Contents

### **Cable Services**

We offer our video, high-speed Internet and voice services individually and as bundled services over our cable distribution system to residential and business customers. Our bundled service offerings aim to meet the needs of the various segments of our customer base, ranging from high-speed Internet services packaged with video or streaming services that include a limited number of channels, to a triple product bundle, consisting of our video, high-speed Internet and voice services. We also offer our home security and automation services as a component of our bundled service offerings. Subscription rates and related charges vary according to the services and features customers receive and the type of equipment they use, and customers are typically billed in advance on a monthly basis. The majority of our residential cable services customers are not subject to minimum-term contracts for their services, while substantially all of our business customers are. Minimum-term contracts are typically 2 years in length for residential customers and typically range from 2 to 5 years for business services customers. Customers with minimum-term contracts may only discontinue service in accordance with the terms of their contracts, which typically include an early termination fee.

### **The Areas We Serve**

The map below highlights our footprint as of December 31, 2016 and the designated market areas ("DMAs") in which we offer cable services that have 250,000 or more customer relationships. The locations that are bolded represent the DMAs in which we operate that were also included in the top 25 U.S. television DMAs as of December 31, 2016.

### **Video Services**

We offer a broad variety of video services under the XFINITY brand that provide access to hundreds of channels depending on the customer's level of service. Our levels of service typically range from a limited basic service with access to between 20 and 40 channels to a full service with access to more than 300 channels. Our video services generally include programming provided by national broadcast networks, local broadcast stations, and national and regional cable networks, as well as government and public access programming. We also offer packages that include extensive amounts of foreign-language programming and other specialty tiers of programming with sports, family and international themes. We tailor our video services for a particular geographic area according to applicable local and federal regulatory requirements, programming preferences and demographics.

## Table of Contents

Our video customers may also subscribe to premium networks. Premium networks include networks such as HBO, Showtime, Starz and Cinemax that generally provide, without commercial interruption, movies, original programming, live and taped sporting events and concerts, and other features.

Our video services generally include access to our video on demand service ("On Demand") and an interactive, on-screen program guide. Our On Demand service provides video customers with over 100,000 programming choices over the course of a month, including approximately 40,000 in high definition. A substantial portion of our On Demand content is available at no additional charge; other content, primarily movies and special-events programming, such as sporting events and concerts, can be rented or in some cases purchased to own digitally. We continue to increase the number of On Demand choices we offer.

Our HD service provides customers with high-resolution picture quality, improved audio quality and a wide-screen format through an HD set-top box. Our HD service includes a broad selection of HD programming choices, including major broadcast networks, national cable networks, premium networks and regional sports networks. Our DVR service allows video customers to record and store programs and play them at whatever time is convenient. Our DVR service also provides the ability to pause and rewind live television. We refer to our HD and DVR services as "advanced services."

We are actively deploying set-top boxes for our Internet Protocol ("IP") and cloud-enabled video platform, referred to as our X1 platform. Our X1 platform provides customers with integrated search functionality, personalized recommendations and access to certain third-party Internet applications, such as Netflix. We also offer our cloud DVR technology in substantially all of our markets. Cloud DVR technology allows our video customers to record programming using cloud-based servers and also view those recordings on mobile devices via our mobile apps.

Through our mobile apps and online portal, we offer streaming services that allow our video customers to view certain live programming and On Demand content, browse program listings, and schedule and manage DVR recordings. Depending on the customer's level of service, these services may require an additional monthly fee.

### High-Speed Internet Services

We offer high-speed Internet services with downstream speeds from a range of up to 10 Mbps to fiber-based speeds up to 2 Gbps. These services include access to our online portal and mobile apps, which provide email, an address book, calendars and online security features. We are actively deploying wireless gateways throughout our footprint, which combine a customer's wireless router, cable modem and voice adapter, to improve the performance of multiple IP-enabled devices used at the same time within the home, provide faster Internet speeds and create an in-home Wi-Fi network. We are continuing to expand our network of residential, outdoor and business Wi-Fi hotspots to allow most of our high-speed Internet customers to access our high-speed Internet services inside and outside the home. As of December 31, 2016, there were approximately 15.8 million of these hotspots.

### Voice Services

We offer voice services using an interconnected Voice over Internet Protocol ("VoIP") technology. Our voice services provide either unlimited or usage-based local and domestic long-distance calling and include options for international calling plans, voicemail, voicemail transcriptions, text messaging, caller ID and call waiting. For customers with our high-speed Internet services, our voice services also include the ability to access and manage voicemail, text messaging and other account features through our online portal or mobile apps.

## Table of Contents

### **Business Services**

We offer our cable services to small and medium-sized businesses and to large enterprises with multiple locations. Our large enterprise business services are designed for Fortune 1000 companies and other large enterprises with multiple locations both within and outside of our cable distribution footprint. We service these multiple locations through agreements with other cable companies to use their networks to provide coverage outside of our service areas. In addition to the features available to our residential cable services customers, our services for business customers include an interactive tool that allows customers to store, share, and collaborate on files online, hosted voice services that use cloud network servers, a business directory listing, and additional capacity for multiple phone lines.

We offer Ethernet network services that connect multiple locations and provide higher downstream and upstream speed options to medium-sized businesses and large enterprises. We also provide cellular backhaul services to mobile network operators to help those customers manage network bandwidth.

### **Advertising**

As part of our distribution agreements with cable networks, we generally receive an allocation of scheduled advertising time on cable networks that we sell through our advertising business, Spotlight, to local, regional and national advertisers. In most cases, the available advertising units are sold by our sales force. In some cases, we work with representation firms as an extension of our sales force to sell a portion of the advertising units allocated to us. We also represent the advertising sales efforts of other multichannel video providers in some markets. In addition, we generate revenue from the sale of advertising online and on our On Demand service.

### **Other**

We also offer home security and automation services that provide home monitoring services and the ability to manage other functions within the home, such as lighting and room temperature, through our online portal or our mobile apps.

### **Technology**

Our cable distribution system uses a hybrid fiber-optic and coaxial cable network that we believe is sufficiently flexible and scalable to support our future technology requirements. This network provides the two-way transmissions that are essential to providing high-speed Internet services, interactive video services, such as On Demand, and voice services.

We continue to focus on technology initiatives, including:

- developing and deploying next-generation media and content delivery platforms, such as our X1 platform and related cloud DVR technology, that use IP technology and our own cloud network servers to deliver video and advanced search capabilities, including through a voice-activated remote control, and allow access to certain third-party Internet applications
- deploying wireless gateways to improve the performance of multiple IP-enabled devices used at the same time within the home, provide faster Internet speeds and create an in-home Wi-Fi network
- expanding our network of residential, outdoor and business Wi-Fi hotspots
- developing multiple tools to recapture bandwidth and optimize our network to allow for faster Internet speeds and capacity, including using advanced video encoding and digital compression technologies and DOCSIS innovations, such as DOCSIS 3.1

## Table of Contents

- developing and deploying various technology and software tools to improve the customer experience

### **Sources of Supply**

To offer our video services, we license a substantial portion of our programming from cable networks and broadcast networks, as well as from local broadcast television stations. We attempt to secure long-term programming distribution agreements with these programming providers. We seek to include in our distribution agreements the rights to offer such programming through multiple delivery platforms that may be used in a variety of locations, such as through On Demand, our online portal, our mobile apps, and our streaming services.

For our high-speed Internet services, we license software products, such as email and security software, and content, such as news feeds for our online portal, from a variety of suppliers. Under our contracts with these suppliers, we generally pay on a fixed-fee basis, on a per subscriber basis in the case of software product licenses or on a video advertising revenue share basis in the case of content licenses.

For our voice services, we license software products such as voicemail and text messaging from a variety of suppliers under multiyear contracts. The fees we pay are generally based on the consumption of the related services.

We purchase from a limited number of suppliers a significant number of set-top boxes and certain other customer premise equipment, network equipment and services to provide our cable services and our home security and automation services to residential and business customers.

We use two primary vendors to provide customer billing for our cable services to our residential and business customers.

### **Customer and Technical Services**

Our customer service call centers provide 24/7 call-answering capability, telemarketing and other services. Our technical services group performs various tasks, including installations, plant maintenance and upgrades to our cable distribution system.

### **Sales and Marketing**

We offer our services directly to residential and business customers through customer service call centers, customer service centers, our website, door-to-door selling, telemarketing and retail outlets, as well as through advertising via direct mail, television and the Internet.

## **NBCUniversal Segments**

---

### **Cable Networks**

Our Cable Networks segment consists of a diversified portfolio of national cable networks that provide a variety of entertainment, news and information, and sports content, our regional sports and news networks, our international cable networks, and our cable television studio production operations. We also own related digital media properties, which primarily include brand-aligned websites.

## Table of Contents

The table below presents a summary of our national cable networks and their advertising reach to U.S. households.

Cable Network	Approximate U.S. Households as of December 31 (in millions) <sup>(a)</sup>			Description of Programming
	2016	2015	2014	
USA Network	92	94	96	General entertainment
MSNBC	91	92	95	News and information
E!	90	92	94	Entertainment and pop culture
Syfy	90	92	95	Imagination-based entertainment
CNBC	89	91	94	Business and financial news
Bravo	88	90	92	Entertainment, culture and arts
NBC Sports Network	83	83	81	Sports
Golf Channel	78	77	79	Golf competition and golf entertainment
Oxygen	76	77	78	Women's interests
Sprout	59	56	58	Children's entertainment
Esquire Network <sup>(b)</sup>	58	68	70	Men's lifestyle and entertainment
Chiller	37	38	39	Horror and suspense
CNBC World	36	36	38	Global financial news
Universal HD	30	29	31	General entertainment HD programming
Cloo <sup>(b)</sup>	24	25	26	Crime, mystery and suspense

(a) Household data is based on The Nielsen Company's January reports, except for Universal HD, which is derived from information provided by multichannel video providers. Household data for 2016 is derived from information available during the period from November 28, 2016 through December 25, 2016.

(b) In January 2017, we announced plans to convert the Esquire Network to an online-only format in 2017 and we ceased operations of the Cloo network.

Our regional sports and news networks together serve more than 27 million households across the United States, including key markets such as Baltimore/Washington, Boston, Chicago, Philadelphia, Portland, Sacramento and San Francisco.

We market and distribute our cable network programming in the United States and internationally to traditional and virtual multichannel video providers, as well as to subscription video on demand services, such as those offered by Amazon, Hulu and Netflix. These distributors may provide our content on television, including via video on demand services, online and through mobile apps.

Our cable networks produce their own programs or acquire the rights to programming from third parties, including sports programming rights that are discussed below under the heading "Broadcast Television." Our cable television studio production operations identify, develop and produce original content for our cable networks and third parties. We license this content to cable networks, broadcast networks and subscription video on demand services and it is sold on standard-definition DVDs and Blu-ray discs (together, "DVDs") and through digital distribution services such as iTunes.

### **Broadcast Television**

Our Broadcast Television segment operates the NBC and Telemundo broadcast networks, which together serve viewers and advertisers in all 50 states. Our Broadcast Television segment also includes our owned NBC and Telemundo local broadcast television stations, the NBC Universo national cable network, our broadcast television studio production operations, and related digital media properties.

## Table of Contents

### NBC Network

The NBC network distributes entertainment, news and sports programming that reaches viewers in virtually all U.S. television households through more than 200 affiliated stations across the United States, including our 10 owned NBC-affiliated local broadcast television stations. The NBC network's programming library consists of rights of varying nature to more than 100,000 episodes of popular television content, including current and classic titles, unscripted programming, sports, news, long-form and short-form programming, and locally produced programming from around the world. In addition, the NBC network owns related digital media properties, which primarily include brand-aligned websites.

The NBC network produces its own programs or acquires the rights to programming from third parties. NBCUniversal has various contractual commitments for the licensing of rights to multiyear programming, primarily sports programming. Our most significant sports programming commitments include the U.S. broadcast rights for the summer and winter Olympic Games through 2032 and agreements with the NFL to produce and broadcast a specified number of regular season and playoff games, including *Thursday Night Football* through the 2017-18 season, *Sunday Night Football* through the 2022-23 season and the 2018 and 2021 Super Bowl games. We also have U.S. broadcast rights to a specified number of NHL games through the 2020-21 season, English Premier League soccer through the 2021-22 season, certain NASCAR events through 2024 and certain PGA TOUR and other golf events through 2030. NBCUniversal's sports programming agreements also include the rights to distribute content on our national cable networks, including the NBC Sports Network and Golf Channel, on our regional sports networks, and online, including through our mobile apps.

Our broadcast television studio production operations develop and produce original content, including scripted and unscripted programming series and talk shows. This original content is licensed to broadcast networks, cable networks and local broadcast television stations owned by us and third parties, as well as to subscription video on demand services, and it is sold on DVDs and through digital distribution services both in the United States and internationally. We also produce first-run syndicated shows for local markets that are broadcast on local broadcast television stations in the United States on a market-by-market basis. We currently distribute some of our television programs after their initial broadcast, as well as older television programs from our library, to local broadcast television stations and cable networks in the off-network syndication market.

## Table of Contents

### *NBC Local Broadcast Television Stations*

As of December 31, 2016, we owned and operated 10 NBC-affiliated local broadcast television stations that collectively reached approximately 31 million U.S. television households, which represent approximately 27% of U.S. television households. In addition to broadcasting the NBC network's national programming, our local broadcast television stations produce news, sports, public affairs and other programming that addresses local needs and acquire syndicated programming from other sources. The table below presents a summary of the NBC-affiliated local broadcast television stations that we owned and operated as of December 31, 2016.

DMA Served <sup>(a)(b)</sup>	Station	General Market Rank <sup>(c)</sup>	Percentage of U.S. Television Households <sup>(d)</sup>
New York, NY	WNBC	1	6%
Los Angeles, CA	KNBC	2	5%
Chicago, IL	WMAQ	3	3%
Philadelphia, PA	WCAU	4	3%
Dallas-Fort Worth, TX	KXAS	5	2%
San Francisco-Oakland-San Jose, CA	KNTV	6	2%
Washington, D.C.	WRC	7	2%
Miami-Ft. Lauderdale, FL	WTVJ	16	1%
San Diego, CA	KNSD	28	1%
Hartford, CT	WVIT	30	1%

(a) DMA served is defined by Nielsen Media Research as a geographic market for the sale of national spot and local advertising time.

(b) On January 1, 2017, we launched a new owned and operated NBC-affiliated local broadcast television station in the Boston market that reaches approximately 2 million U.S. television households. Boston's general market rank is No. 9, which represents approximately 2% of U.S. television households.

(c) General market rank is based on the relative size of the DMA among the 210 generally recognized DMAs in the United States based on Nielsen estimates for the 2016-17 season.

(d) Based on Nielsen estimates for the 2016-17 season. The percentage of U.S. television households does not reflect the calculation of national audience reach under the Federal Communications Commission's ("FCC") national television ownership cap limits. See "Legislation and Regulation — Broadcast Television — Ownership Limits — National Television Ownership."

### *Telemundo*

Telemundo is a leading Hispanic media company that produces, acquires and distributes Spanish-language content in the United States and internationally. Telemundo's operations include the Telemundo network, its 17 owned local broadcast television stations and the NBC Universo national cable network.

The Telemundo network is a leading Spanish-language broadcast network featuring original telenovelas, movies, news, specials and sporting events. Telemundo develops original programming primarily through its production studio and also acquires the rights to programming from third parties. It holds the Spanish-language U.S. broadcast rights to FIFA World Cup soccer through 2026 and the Spanish-language U.S. broadcast rights for certain NFL games that the NBC network will broadcast through the 2022-23 season.

## Table of Contents

### Telemundo Local Broadcast Television Stations

As of December 31, 2016, Telemundo owned 17 local broadcast television stations, including 16 local broadcast television stations affiliated with the Telemundo network, which collectively reached approximately 59% of U.S. Hispanic television households as of December 31, 2016, and an independent television station in Puerto Rico. The table below presents a summary of these local broadcast television stations.

DMA Served <sup>(a)</sup>	Station	Hispanic Market Rank <sup>(b)</sup>	Percentage of U.S. Hispanic Television Households <sup>(c)</sup>
Los Angeles, CA	KVEA	1	13%
New York, NY	WNJU	2	10%
Miami, FL	WSCV	3	5%
Houston, TX	KTMD	4	5%
Dallas-Fort Worth, TX	KXTX	5	4%
Chicago, IL	WSNS	6	4%
San Antonio, TX	KVDA	7	3%
San Francisco-Oakland-San Jose, CA	KSTS	8	3%
Phoenix, AZ	KTAZ	9	3%
Harlingen-Brownsville-McAllen, TX	KTLM	10	2%
Fresno, CA	KNSO <sup>(d)</sup>	14	2%
Philadelphia, PA	WWSI	16	2%
Denver, CO	KDEN	17	2%
Boston, MA	WNEU	21	1%
Las Vegas, NV	KBLR	24	1%
Tucson, AZ	KHRR	26	1%
Puerto Rico	WKAQ	N/A	N/A

(a) DMA served is defined by Nielsen Media Research as a geographic market for the sale of national spot and local advertising time.

(b) Hispanic market rank is based on the relative size of the DMA among approximately 15.1 million U.S. Hispanic households based on Nielsen estimates for the 2016-17 season.

(c) Based on Nielsen estimates for the 2016-17 season. The percentage of U.S. Hispanic television households does not reflect the calculation of national audience reach under the FCC's national television ownership cap limits. See "Legislation and Regulation — Broadcast Television — Ownership Limits — National Television Ownership."

(d) Operated by a third party that provides certain non-network programming and operations services under a time brokerage agreement.

### Filmed Entertainment

Our Filmed Entertainment segment primarily produces, acquires, markets and distributes filmed entertainment worldwide, and it also develops, produces and licenses live stage plays.

We produce films both on our own and jointly with other studios or production companies, as well as with other entities. Our films are produced primarily under the Universal Pictures, Illumination and Focus Features names, and in August 2016, we acquired DreamWorks Animation. Our films are marketed and distributed worldwide primarily through our own marketing and distribution operations. We also acquire distribution rights to films produced by others, which may be limited to particular geographic regions, specific forms of media or certain periods of time. Our content includes theatrical films, direct-to-video movies and our film library, which is comprised of more than 5,000 movies in a variety of genres.

We have entered into, and may continue to enter into, film cofinancing arrangements with third parties, including both studio and nonstudio entities, to jointly finance or distribute certain of our film productions. These arrangements can take various forms, but in most cases involve the grant of an economic interest in a film to an investor. Investors generally assume the full risks and rewards of ownership proportionate to their ownership in the film.

## Table of Contents

The majority of our produced and acquired films are initially distributed for exhibition in movie theaters. After their release in movie theaters, we sell and license our films through various methods. We distribute our films globally by selling them on DVDs to retail stores, rental kiosks and subscription by mail services and by selling them through digital distribution services and video on demand services provided by multichannel video providers, including our Cable Communications segment. We also license our films, including selections from our film library, to cable, broadcast and premium networks, to subscription video on demand services, and to video on demand and pay-per-view services. The number of films that we license through subscription video on demand services is increasing as consumers continue to seek additional ways to view our content.

### **Theme Parks**

Our Theme Parks segment consists primarily of our Universal theme parks in Orlando, Florida and Hollywood, California and our 51% interest in Universal Studios Japan, which we acquired in November 2015. Universal Orlando includes two theme parks, Universal Studios Florida and Universal's Islands of Adventure, as well as Universal CityWalk Orlando, a dining, retail and entertainment complex. Universal Orlando also features on-site themed hotels in which we own a noncontrolling interest. Our Universal theme park in Hollywood, California consists primarily of Universal Studios Hollywood, as well as Universal CityWalk Hollywood. We continue to expand our theme park business internationally, such as through our plans to develop a Universal Studios theme park in Beijing, China along with a consortium of Chinese state-owned companies. In addition, we license the right to use the Universal Studios brand name and other intellectual property, and also provide other services, to third parties that own and operate the Universal Studios Singapore theme park on Sentosa Island, Singapore. We also owned a water park, Wet 'n Wild in Orlando, Florida, which closed on December 31, 2016, and are developing a new water park, Volcano Bay, in Orlando, Florida, that we plan to open in mid-2017.

Our Theme Parks segment licenses the right to use a substantial amount of intellectual property from third parties for its themed elements in rides, attractions and merchandising.

### **Competition**

All of our businesses operate in intensely competitive, consumer-driven and rapidly changing environments and compete with a growing number of companies that provide a broad range of communications products and services, and entertainment, news and information products and services, to consumers. Technological changes are further intensifying and complicating the competitive landscape for all of our businesses by challenging existing business models and affecting consumer behavior.

### **Cable Communications**

Competition for our cable services consists primarily of direct broadcast satellite ("DBS") providers, which have a national footprint and compete in all of our service areas, and phone companies with fiber-based networks, which overlap approximately 60% of our service areas and are continuing to expand the areas they serve. Many of these competitors offer features, pricing and packaging for these services, individually and in bundles, comparable to what we offer, and some of these traditional competitors also offer smaller online-only video packages. In 2015, AT&T, one of our largest phone company competitors, acquired DIRECTV, the nation's largest DBS provider, which created an even larger competitor to our cable services and has enabled it to enhance its bundled offerings with video, high-speed Internet, and wireline and wireless phone services. AT&T also announced in 2016 a proposed merger with Time Warner Inc., a media and entertainment company, which competes with our NBCUniversal businesses.

Current and future wireless Internet services, such as 3G, 4G and 5G wireless broadband services and Wi-Fi networks, may compete with our high-speed Internet services, and our voice services are facing increased competition as customers replace wireline phones with wireless phones and Internet-based phone services such as Skype.

## Table of Contents

There also continue to be new companies, some with significant financial resources, that offer or are seeking to offer services that potentially may compete with some or all of our cable services. For example, Google has launched high-speed Internet and video services in a limited number of areas in which we operate and other companies continue to emerge that provide Internet streaming and downloading of video programming, some of which charge a nominal or no fee.

### Video Services

We compete with a number of different sources that provide news, sports, information and entertainment programming to consumers, including:

- DBS providers, including AT&T's DIRECTV and DISH Network, that transmit satellite signals to substantially all U.S. households to provide video programming and other information similar to our video services
- phone companies, including AT&T and Verizon, that have built and continue to build fiber-based networks that provide cable services similar to ours, which overlap a substantial portion of our service areas, and that in some cases offer bundled offerings that include wireless phone services
- online video distributors that offer online services and devices that enable Internet streaming and downloading of movies, television shows and other video programming, including linear and video on demand programming, and generally involve the offering of smaller packages of programming networks at prices lower than our traditional video service package offerings
- other providers that build and operate wireline communications systems in the same communities that we serve, including those operating as franchised cable operators
- satellite master antenna television systems that offer to their subscribers both improved reception of local broadcast television stations and much of the programming offered by our cable systems and generally serve MDUs, office complexes and residential developments
- other companies, such as local broadcast television stations, that provide multiple channels of free over-the-air programming, as well as video rental services and home entertainment and gaming products

### High-Speed Internet Services

We compete with a number of companies offering Internet services, including:

- wireline phone companies
- Internet service providers
- wireless phone companies and other providers of wireless Internet service
- satellite broadband providers
- power companies
- municipal broadband networks

Some phone companies, such as AT&T, CenturyLink, Frontier and Verizon, have built and are continuing to build fiber-based network infrastructure farther into their networks, which allows them to provide data trans-

## Table of Contents

mission speeds that exceed those that can be provided with traditional digital subscriber line ("DSL") technology, and are now offering these higher-speed services in many of our service areas. Certain companies that offer DSL service have increased data transmission speeds, lowered prices or created bundled services to compete with our high-speed Internet services.

Google has launched a fiber-to-the-home network that provides high-speed Internet services in a limited number of areas in which we operate, and certain municipalities in our service areas are also building fiber-based networks.

Various wireless companies are offering Internet services using a variety of network types, including 3G and 4G, and in the future 5G, wireless broadband services and Wi-Fi networks. These networks work with devices such as smartphones, laptops, tablets and mobile wireless routers, as well as wireless data cards. A growing number of commercial venues, such as retail malls, restaurants and airports, also offer Wi-Fi service. Numerous local governments are also considering or actively pursuing publicly subsidized Wi-Fi and other Internet access networks. The availability of these wireless offerings could negatively impact the demand for our high-speed Internet services.

### Voice Services

Our voice services compete with wireline and wireless phone companies, including incumbent local exchange carriers ("ILECs") and competitive local exchange carriers ("CLECs"), and other Internet-based and VoIP service providers. Certain phone companies, such as the ILECs AT&T and Verizon, have substantial capital and other resources, longstanding customer relationships, and extensive existing facilities and network rights-of-way. A few CLECs also have existing local networks and significant financial resources. In addition, we are increasingly competing with other phone service providers as customers replace traditional wireline phone services with wireless and Internet-based phone services.

### Business Services

Our business services primarily compete with a variety of phone companies, including ILECs and CLECs. These companies either operate their own network infrastructure or rely on reselling all or part of another carrier's network. We also compete with satellite operators who offer video services to businesses.

## **NBCUniversal Segments**

### Cable Networks and Broadcast Television

Our cable networks, broadcast networks and owned local broadcast television stations compete for viewers' attention and audience share with all forms of programming provided to viewers, including cable, broadcast and premium networks; subscription video on demand services; local broadcast television stations; home entertainment products; pay-per-view and video on demand services; online activities, such as social networking and viewing user-generated content; gaming products; and other forms of entertainment, news and information.

Our cable networks, broadcast networks and owned local broadcast television stations compete for the acquisition of programming and for on-air and creative talent with other cable and broadcast networks, local television stations and subscription video on demand services. The market for programming is very competitive, particularly for sports programming, where the cost for such programming is significant.

Our cable networks compete with other cable networks and programming providers for carriage of their programming by multichannel video providers and subscription video on demand services. Our broadcast networks compete with the other broadcast networks in markets across the United States to secure affiliations with independently owned television stations, which are necessary to ensure the effective distribution of broadcast network programming to a nationwide audience.

## Table of Contents

In addition, our cable television and broadcast television studio production operations compete with other production companies and creators of content for the acquisition of story properties, for creative, performing and technical personnel, and for distribution of, and consumer interest in, their content.

### Filmed Entertainment

Our filmed entertainment business competes for audiences for its films and other entertainment content with other major studios and, to a lesser extent, with independent film producers, as well as with alternative forms of entertainment. Our competitive position primarily depends on the number of films we produce, their distribution and marketing success, and consumer response. Our filmed entertainment business also competes to obtain creative, performing and technical talent, including writers, actors, directors and producers, as well as scripts for films. Our filmed entertainment business also competes with the other major studios and other producers of entertainment content for the exhibition of its films in theaters and for premium network and digital distribution of its films.

### Theme Parks

Our theme parks business competes with other multi-park entertainment companies. We also compete with other providers of entertainment, lodging, tourism and recreational activities. To help maintain the competitiveness of our theme parks, we have invested and continue to invest in existing and new theme park attractions, hotels and infrastructure.

### Advertising

Our cable communications business, cable networks, broadcast networks, and owned local broadcast television stations compete for the sale of advertising with other television networks and stations, as well as with all other advertising platforms, such as digital, radio and print media. The willingness of advertisers to purchase advertising from us may be adversely affected by lower audience ratings at our cable networks, broadcast networks and owned local broadcast television stations. Declines in advertising revenue also can be caused by increased competition for the leisure time of viewers and audience fragmentation and from the growing use of technologies such as DVRs and video on demand services, which give consumers greater flexibility to watch programming on a time-delayed or on-demand basis or to fast-forward or skip advertisements within programming; from subscription video on demand services; and from other online programming.

### Seasonality and Cyclicity

---

Each of our businesses is subject to seasonal and cyclical variations. See Item 7: Management's Discussion and Analysis of Financial Condition and Results of Operations and refer to the "Seasonality and Cyclicity" discussion within that section for additional information.

## Legislation and Regulation

The Communications Act of 1934, as amended (the "Communications Act"), and FCC regulations and policies affect significant aspects of our businesses. Our businesses are also subject to other regulation by federal, state, local and foreign authorities and to agreements we enter into with local cable franchising authorities. In addition, we must comply with the terms, conditions and commitments of the FCC Order that approved the NBCUniversal transaction in January 2011 (the "NBCUniversal Order") and a consent decree entered into between us, the Department of Justice ("DOJ") and five states (the "NBCUniversal Consent Decree") in September 2011, which contain conditions and commitments of varying duration, ranging from three to seven years thereafter.

Legislators and regulators at all levels of government frequently consider changing, and sometimes do change, existing statutes, rules or regulations, or interpretations of existing statutes, rules or regulations, or

## Table of Contents

prescribe new ones, any of which may significantly affect our businesses. In addition, in recent years, the FCC and certain states have been more active in considering rulemakings and legislation, as well as in conducting inquiries and reviews, regarding our services. Any future legislative, judicial, regulatory or administrative actions may increase our costs or impose additional restrictions on our businesses, some of which may be significant. Congress may consider proposals to address communications issues, including whether it should rewrite the entire Communications Act to account for changes in the communications marketplace, whether it should address the FCC's authority to implement or enforce open Internet regulations, and whether it should fund new broadband infrastructure. We are unable to predict the effects of any of these or any other further legislative requirements on our businesses. In addition, with the new Administration in place, the FCC and other agencies may pursue new regulations or seek changes to, or the elimination of, existing regulations, such as the classification of broadband Internet service and requirements relating to the Internet and privacy. We cannot predict what changes will be sought and, if adopted, how they will affect our businesses.

The following paragraphs summarize material existing and potential future legal and regulatory requirements affecting our businesses, although reference should be made to the Communications Act, FCC regulations, the NBCUniversal Order, the NBCUniversal Consent Decree, and other legislation and regulations for further information.

### **Cable Communications Segment**

---

#### **Video Services**

##### **Program Carriage**

Cable operators and other multichannel video providers are prohibited from requiring as a condition of carriage a financial interest in, or exclusive distribution rights for, a video programming network. In addition, FCC regulations, as well as the NBCUniversal Order, prohibit us from unreasonably restraining the ability of an unaffiliated video programming network to compete fairly by discriminating against the network on the basis of its non-affiliation in the selection, terms or conditions for its carriage. We have been involved in program carriage disputes at the FCC and may be subject to new complaints in the future.

##### **Must-Carry/Retransmission Consent**

Cable operators are required to carry, without compensation, programming transmitted by most local commercial and noncommercial broadcast television stations. As an alternative to this "must-carry" requirement, local broadcast television stations may choose to negotiate with the cable operator for "retransmission consent," under which the station gives up its must-carry rights and instead seeks to negotiate a carriage agreement with the cable operator, which frequently will involve payments to the station. We currently pay certain local broadcast television stations in exchange for their required consent for the retransmission of the stations' broadcast programming to our video services customers and expect to continue to be subject to demands for increased payment and other concessions from local broadcast television stations. For information on must-carry and retransmission consent issues relating to our broadcast television business, see "NBCUniversal Segments — Broadcast Television" below and refer to the "Must-Carry/Retransmission Consent" discussion within that section.

##### **Pricing and Packaging**

In 2015, the FCC revised its rate regulations to create a presumption that all local communities are subject to effective competition and should no longer be subject to rate regulation that limits prices cable operators may charge for basic video service, equipment and installation. That decision has been appealed in federal court. While the FCC has accepted a certification from a Massachusetts franchising authority that demonstrated an absence of effective competition in a number of the communities we serve in Massachusetts that will allow for

## Table of Contents

continued rate regulation in those communities, all of the other areas we serve are unregulated. In addition to the FCC's rate regulation rules, certain state entities monitor and may challenge the marketing and advertising of our services. For example, in 2016, the Washington State Attorney General filed suit in state court alleging our service protection plan, an optional plan that protects customers from incurring charges for service visits to diagnose and repair installed in-home wiring for residential cable services, violates state consumer protection laws.

### Cable Equipment

The Communications Act includes provisions aimed at promoting the retail availability of set-top boxes and other equipment that can be used to receive digital video services. In 2016, the FCC launched a rulemaking to consider proposed technology mandates on multichannel video providers aimed at enabling third-party retail video devices to access a provider's video service without the need for a provider-supplied set-top box. If implemented, these mandates would impose substantial costs on us, impair our ability to innovate and have other adverse effects on our business. It is unclear whether the FCC under the new Administration will pursue this proceeding or adopt these rules.

### Pole Attachments

The FCC regulates the rates, terms and conditions that most pole-owning utility companies charge cable operators and telecommunications carriers, including broadband Internet access service providers such as us, for allowing attachments to their poles. States are permitted to preempt FCC jurisdiction and regulate the rates, terms and conditions of attachments themselves, and many states in which we operate have done so. Most of these states have generally followed the FCC's pole attachment rate standards, which set rates for telecommunications service pole attachments to levels at or near the rates for cable service attachments. In 2015, the FCC eliminated the ability of utility companies to justify higher rates for telecommunication service pole attachments. Cable operators had requested this FCC action because the FCC's new open Internet regulations, as described below under the heading "Open Internet Regulations", reclassified Internet access service as a telecommunications service, which could have allowed for higher rental rates to be applied to a majority of our pole attachments. The FCC's order ensuring that pole rates for telecommunications service attachments approximate the cable service pole rate has been appealed in federal court by the utility companies. Some municipalities have enacted "one-touch" make ready pole attachment ordinances, which permit third parties to alter components of our network attached to utility poles in ways that could adversely affect our businesses. We and other providers have filed complaints in federal court challenging these ordinances.

### Franchising

Cable operators generally operate their cable systems under nonexclusive franchises granted by local or state franchising authorities. While the terms and conditions of franchises vary materially from jurisdiction to jurisdiction, franchises typically last for a fixed term, obligate the franchisee to pay franchise fees and meet service quality, customer service and other requirements, and are terminable if the franchisee fails to comply with material provisions. Franchising authorities also may establish reasonable requirements for public, educational and governmental access programming, and some of our franchises require substantial channel capacity and financial support for this programming. The Communications Act also contains provisions governing the franchising process, including renewal procedures designed to protect incumbent franchisees against arbitrary denials of renewal. We believe that our franchise renewal prospects are generally favorable but cannot guarantee the future renewal of any individual franchise.

Approximately half of the states in which we operate provide for statewide franchising or have simplified local franchising requirements for new entrants. Some allow new entrants to operate on more favorable terms than our current operations, for instance by not requiring that the new entrant provide service to all parts of the franchise area or permitting the new entrant to designate only those portions it wishes to serve. Certain states allow incumbent cable operators such as us to opt in to the new state franchise immediately or later.

## Table of Contents

when a competing state franchise has been issued, although even in those states, incumbent cable operators may be required to retain certain franchise obligations that are more burdensome than the new entrant's state franchise.

### **High-Speed Internet Services**

We provide high-speed Internet services to our customers. Many of these services are subject to a number of regulatory obligations described below, including open Internet regulations prescribed by the FCC and certain common carrier regulations under Title II of the Communications Act. As an Internet service provider ("ISP"), we are also subject to a requirement to implement certain network capabilities to assist law enforcement in conducting surveillance of persons suspected of criminal activity. From time to time, the FCC considers imposing new regulatory obligations on ISPs, including, for example, proposals to require broadband network outage reporting. New broadband regulations, if adopted, may have adverse effects on our businesses.

#### Open Internet Regulations

In 2015, the FCC reclassified broadband Internet access service as a "telecommunications service" subject to new open Internet regulations and certain common carrier regulations under Title II of the Communications Act, including requirements that charges and practices of ISPs for and in connection with broadband Internet access service be just, reasonable and not unjustly or unreasonably discriminatory. However, the FCC refrained from implementing a number of utility-style regulations that might otherwise apply under Title II, such as rate regulation, tariffs and unbundling requirements.

The new open Internet regulations bar ISPs from blocking access to lawful content, applications, services or non-harmful devices; prohibit ISPs from impairing or degrading lawful Internet traffic on the basis of content, applications or services, or impairing or degrading the use of non-harmful devices; prohibit ISPs from favoring lawful traffic from one provider of Internet content, applications or services (called an "edge provider") over lawful traffic of another edge provider in exchange for consideration ("paid prioritization"); establish a new "general conduct standard" that prohibits ISPs from unreasonably interfering with or unreasonably disadvantaging the ability of consumers to select, access and use the lawful Internet content, applications, services or devices of their choosing or of edge providers to make lawful content, applications, services or devices available to consumers; and require ISPs to disclose information regarding network management, performance and commercial terms of the service. In addition, interconnection arrangements, which govern how Internet traffic is exchanged between high-speed Internet networks and provide direct, dedicated interconnection capacity to edge providers, are now subject to FCC oversight under Title II of the Communications Act. All of these regulations are subject to FCC enforcement and could give rise to third-party claims for damages or equitable relief. These requirements could adversely affect our business, although the extent to which they do so will depend upon the manner in which the FCC interprets and enforces them.

In June 2016, a panel of the United States Court of Appeals for the District of Columbia affirmed the FCC's new open Internet regulations on appeal. Petitions have been filed requesting a rehearing of the decision. In addition, Congress may consider legislation addressing these regulations, and the FCC under the new Administration may also revisit the rules. We cannot predict whether or how the rules might be changed. States have attempted, and may continue to attempt, to use the FCC's open Internet decision to justify imposing new regulations and taxes and fees on ISPs that could adversely affect our business.

Separate and apart from the FCC's new open Internet regulations, we committed to be bound by the FCC's original "open Internet" regulations adopted in 2010 as a condition of the NBCUniversal Order and the NBCUniversal Consent Decree until 2018, although we did not agree to be bound by any future open Internet regulations. As a result, among other things, we cannot block access to lawful Internet content, applications, services or non-harmful devices or unreasonably discriminate in transmitting lawful Internet network traffic, although we may engage in reasonable network management.

## **Table of Contents**

### **Business Data Services**

In April 2016, the FCC proposed new regulations for "business data services" (formerly "special access" services), which provide dedicated point-to-point transmission of data at certain guaranteed speeds and service levels using high-capacity connections. The FCC proposed new rate regulation and other regulatory mandates that could apply to business data services offered by cable companies. The proposed rules or any variation of the proposed rules, if implemented, could impose substantial costs on us and have other significant adverse effects on our business. It is uncertain whether the FCC under the new Administration will pursue this proceeding or adopt these rules.

### **NBCUniversal Order/Consent Decree Conditions**

The NBCUniversal Order and NBCUniversal Consent Decree include various conditions and commitments requiring us to offer all of our broadband Internet access service speed tiers on a stand-alone basis at reasonable market-based prices, to maintain a broadband Internet access service of at least 12 Mbps downstream across most of our footprint, and to avoid discrimination in how we treat "specialized services" (defined as services we provide over the same last-mile facilities as our broadband Internet access service, but not including our broadband Internet access service, video services or voice services).

### **Municipally Owned Broadband Networks**

A number of local municipalities operate municipally-owned broadband networks. Certain states have enacted laws that restrict or prohibit local municipalities from operating municipally owned broadband networks. The FCC's efforts to preempt such laws in Tennessee and North Carolina were overturned in 2016 by the United States Court of Appeals for the Sixth Circuit. However, there may be further efforts by local governments to expand or create government-owned networks and there may also be efforts in state legislatures to restrict the development of government-owned networks or to ease or facilitate such networks. In addition, as part of any federal infrastructure program, governmental subsidies or funding of additional Internet broadband networks may be encouraged. We cannot predict how successful those efforts will be and how they might affect our business.

### **Voice Services**

We provide voice services using VoIP technology. The FCC has adopted a number of regulations for providers of nontraditional voice services such as ours, including regulations relating to privacy of customer proprietary network information, local number portability duties and benefits, disability access, E911, law enforcement assistance, outage reporting, Universal Service Fund contribution obligations and certain regulatory filing requirements. The FCC has not yet ruled on whether VoIP services such as ours should be classified as an "information service" or a "telecommunications service" under the Communications Act. The classification determination is important because telecommunications services are regulated more extensively than information services. State regulatory commissions and legislatures may continue to investigate imposing regulatory requirements on our voice services, and the FCC's open Internet regulations reclassifying Internet access as a telecommunications service may further encourage state-level regulatory actions.

### **Voice Interconnection**

Because the FCC has not determined the appropriate classification of our voice services, providers of VoIP services typically either secure CLEC authorization or obtain interconnection to traditional wireline phone company networks by contracting with an existing CLEC, which has the right, as a telecommunications carrier, to request and obtain interconnection with the traditional wireline phone companies. We have arranged for such interconnection rights through affiliated CLECs. If a regulatory or judicial authority were to deny our ability to interconnect through one of our affiliated CLECs, our ability to provide voice services and compete in the area in question would be negatively impacted. The FCC regulates the arrangements by which telecommunications carriers compensate one another for exchanged traffic and has affirmed the right of CLECs to collect intercarrier compensation when providing interconnection for VoIP providers.

## Table of Contents

### Universal Service

The federal Universal Service program generally requires us and other phone service providers to pay a fee based on revenue from their services into a fund used to subsidize the provision of telecommunications services in high-cost areas and to low-income consumers and the provision of Internet and telecommunications services to schools, libraries and certain health care providers. Some states also have analogous programs that support service in high-cost areas or to low-income consumers. The FCC has long considered implementing changes to the Universal Service program, such as changing the fee calculation from a revenue-based formula to a per-user fee or per-connection fee, adopting a fee based on bandwidth, and expanding the services subject to the fee to include broadband Internet access services. We are unable to predict if or how the FCC may change the Universal Service program, or the effects any such changes would have on our businesses.

The FCC recently has shifted its focus away from supporting traditional telephone service, and toward subsidizing broadband deployment. This shift could assist some of our competitors. For example, in 2014, the FCC substantially revised the program that provides Universal Service support for services to schools and libraries to shift support from voice services to broadband services and the deployment of Wi-Fi networks. Similarly, the FCC has expanded its Lifeline subsidy program for low-income consumers to include broadband services in addition to voice services. The FCC under the new Administration or Congress may revisit these subsidy programs and how they are funded. We cannot predict whether or how these programs will be changed.

### NBCUniversal Segments

---

#### Cable Networks

##### Program Access

The Communications Act and FCC regulations (the "program access rules") generally prevent cable networks affiliated with cable operators from favoring cable operators over competing multichannel video programming distributors ("MVPDs").

The FCC and Congress have considered proposals that would require companies that own multiple cable networks to make each of their networks available individually when negotiating distribution agreements with MVPDs and potentially with online video distributors ("OVDs"). We currently offer our cable networks both on a bundled basis and, when requested, individually.

Under the terms of the NBCUniversal Order, MVPDs in certain circumstances can invoke commercial arbitration for access to our cable networks and broadcast television networks, including our regional sports networks. In addition, under the NBCUniversal Order and NBCUniversal Consent Decree, we are required to make certain of our cable network, broadcast television and filmed entertainment programming available to bona fide OVDs in certain circumstances. For further discussion of these conditions, see "Broadcast Television" below and refer to the "Must-Carry/Retransmission Consent" and "Internet Distribution" discussions within that section.

##### Children's Programming

Under federal regulations, the amount of commercial content that may be shown on cable networks, broadcast networks and broadcast television stations during programming originally produced and broadcast primarily for an audience of children under 13 years of age is limited, and certain television station programming must serve the educational and informational needs of children under 17 years of age. In addition, the NBCUniversal Order includes certain commitments and conditions related to children's television and advertising directed at children.

## Table of Contents

### **Broadcast Television**

#### **Licensing**

Local broadcast television stations may be operated only in accordance with a license issued by the FCC upon a finding that the grant of the license will serve the public interest, convenience and necessity. The FCC grants broadcast television station licenses for specific periods of time, which may be renewed with or without conditions. Substantially all of our broadcast television station licenses have pending applications for renewal, although our stations' authority to operate is automatically extended while a renewal application is under review. Several of these applications have been opposed by third parties. Although our licenses have been renewed in the past, there can be no assurance that we will always obtain renewal grants.

#### **Ownership Limits**

FCC regulations limit the ability of individuals and entities to have "attributable interests" above specific ownership levels in local television stations and place limitations on ownership of other specified mass media entities, such as limits on the cross-ownership of broadcast television stations and newspapers in the same market. The FCC is in the process of reviewing these ownership regulations.

#### *Local Television Ownership*

Under FCC regulations, a licensee generally may own up to two broadcast television stations in the same DMA, as long as at least one of the stations is not among the top four-ranked stations in the market based on audience share and there are at least eight independently owned and operating full-power broadcast television stations in the market. Without regard to the number of remaining independently owned television stations, ownership of more than one television station within the same DMA is permitted so long as certain signal contours of the stations involved do not overlap.

#### *National Television Ownership*

The Communications Act and FCC regulations limit the number of broadcast television stations one entity may own or control nationally. No entity may have an attributable interest in broadcast television stations that reach, in the aggregate, more than 39% of all U.S. television households. The FCC also has adopted a rule that eliminates a 50% discount formerly afforded to UHF stations (channels 14 and above) in calculating the extent of an individual station owner's holdings under the national cap. Our owned broadcast television station reach does not exceed this limit, but the elimination of this discount places us closer to the national cap and limits our flexibility to acquire stations in the future.

#### *Foreign Ownership*

The Communications Act generally limits foreign ownership in a broadcast television station to 20% direct ownership and 25% indirect ownership, although the limit on indirect ownership can be waived if the FCC finds it to be in the public interest.

#### *Dual Network Rule*

Each of the four major broadcast television networks — ABC, CBS, Fox and NBC — is prohibited from being under common ownership or control with another of the four.

#### **Must-Carry/Retransmission Consent**

Every three years, each commercial television station must elect for each cable system in its DMA either must-carry or retransmission consent. A similar regulatory scheme applies to satellite providers. For the current period, which ends on December 31, 2017, all of our owned NBC broadcast television stations and our owned Telemundo broadcast television stations elected retransmission consent.

In enacting the STELA Reauthorization Act of 2014, Congress modified certain aspects of the compulsory copyright licenses under which satellite providers and cable operators retransmit broadcast television sta-

## **Table of Contents**

tions. Congress also is considering legislation that would modify the must-carry and retransmission consent regime. Under conditions imposed in the NBCUniversal Order, MVPDs may invoke commercial arbitration to resolve disputes regarding carriage of our owned local broadcast television stations.

### **Internet Distribution**

The NBCUniversal Order and NBCUniversal Consent Decree establish certain obligations and restraints concerning distribution of our content online. We must make available certain of our cable network, broadcast television and filmed entertainment programming to bona fide OVDs in certain circumstances, and they may invoke commercial arbitration to resolve disputes over access to such programming. We also must distribute programming via nbc.com that is generally equivalent to the programming that we distributed via nbc.com as of January 1, 2011, on generally equivalent prices, terms and conditions, so long as at least one of the other major broadcast networks continues to distribute its programming in a similar fashion. We are one of three broadcast network owners of Hulu, but we have no voting rights or board representation. We have entered into renewal license agreements with Hulu on substantially the same terms as its other broadcast network owners.

### **Indecency**

A federal statute and FCC regulations prohibit the broadcast of obscene material on television stations at any time and indecent or profane material between the hours of 6 a.m. and 10 p.m. From time to time, we have received and may receive in the future letters of inquiry from the FCC prompted by complaints alleging that certain programming on our owned local broadcast television stations included indecent or profane material.

### **Filmed Entertainment**

Our filmed entertainment business is subject to "trade practice laws" in effect in 25 states and Puerto Rico relating to theatrical distribution of motion pictures. In countries outside the United States, a variety of existing or contemplated laws and regulations may affect our ability to distribute and license motion picture and television products, as well as consumer merchandise products. The ability of countries to deny market access or refuse national treatment to products originating outside their territories is regulated under various international agreements.

### **Theme Parks**

Our theme parks are subject to various regulations, including laws and regulations regarding environmental protection, privacy and data protection, consumer product safety and theme park operations, such as health, sanitation, safety and fire standards, as well as liquor licenses.

## **Other Areas of Regulation**

---

### **Intellectual Property**

Copyright, trademark, unfair competition, patent, trade secret and other proprietary-rights laws of the United States and other countries help protect our intellectual property rights. In particular, piracy of programming and films through unauthorized distribution of counterfeit DVDs, peer-to-peer file sharing and other platforms presents challenges for our cable networks, broadcast television and filmed entertainment businesses. The unauthorized reproduction, distribution or display of copyrighted material over the Internet or through other methods of distribution, such as through devices, software or websites that allow the reproduction, viewing, sharing and/or downloading of content by either ignoring or interfering with the content's security features and copyrighted status, interferes with the market for copyrighted works and disrupts our ability to exploit our content. The extent of copyright protection and the use of technological protections, such as encryption, are controversial. Modifications to existing laws that weaken these protections could have an adverse effect on our ability to license and sell our programming.

## **Table of Contents**

While many legal protections exist to combat piracy, laws in the United States and internationally continue to evolve, as do technologies used to evade these laws. We have actively engaged in the enforcement of our intellectual property rights and likely will continue to expend substantial resources to protect our content. The repeal of laws intended to combat piracy and protect intellectual property or weakening of such laws or enforcement in the United States or internationally, or a failure of existing laws to adapt to new technologies, could make it more difficult for us to adequately protect our intellectual property rights, which could negatively affect their value and further increase the costs of enforcing our rights.

Copyright laws also require that we contribute a percentage of revenue to a federal copyright royalty pool in exchange for retransmitting copyrighted material in broadcast signals under a compulsory license and that we pay standard industry licensing fees for the public performance of music in the programs we distribute, such as local advertising and local origination programming on our cable systems, as well as in the content we create. The fees we pay to music performance rights organizations are typically renegotiated when we renew licenses with those organizations, while the royalties we contribute to the copyright royalty pool for broadcast signals can be challenged by copyright owners in annual audits, and we cannot predict what those fees will be in the future or if disputes will arise over them. In addition, in response to a 2014 FCC decision eliminating the FCC's "sports blackout" rule, which previously enabled sports teams to insist that cable operators black out sports events not available on local broadcast signals, the leading sports leagues petitioned the Copyright Royalty Board to impose a copyright surcharge on cable operators to compensate sports teams for the loss of programming exclusivity, and that proceeding is now pending.

There has been litigation related to a number of online entities that stream our broadcast television content online without the consent of, or compensation to, NBC or its affiliates. In 2014, the U.S. Supreme Court ruled that one such entity, Aereo, violated the broadcasters' exclusive right to perform their copyrighted works publicly. Subsequently, Aereo sought to operate as a cable system under the Copyright Act. Although the U.S. Copyright Office rejected its application for a compulsory copyright license, other companies continue to seek legislation or court rulings to obtain a compulsory license to stream broadcast programming online.

### **Privacy and Data Security Regulation**

The Communications Act generally restricts the nonconsensual collection and disclosure to third parties of cable customers' personally identifiable information by cable operators, except for rendering service, conducting legitimate business activities related to the service, and responding to legal requests. We are also subject to various state and federal regulations that provide privacy protections for customer proprietary network information related to our voice services.

As a result of the FCC's 2015 decision to reclassify broadband Internet access service as a "telecommunications service" subject to Title II of the Communications Act, the FCC has concluded that ISPs are subject to FCC regulations regarding the use and disclosure of certain customer information. Specifically, in October 2016, the FCC adopted new privacy and data security regulations governing the use of certain customer information by telecommunications carriers, including ISPs and providers of VoIP services such as ours. Under these new regulations, we may use, disclose or permit access to any customer non-sensitive proprietary information subject to the customer's ability to opt out, but must obtain opt-in approval from the customer to use, disclose or permit access to customer sensitive proprietary information, with certain exceptions. The new regulations also impose breach notification obligations and data security requirements. These new rules are more stringent than the FTC's privacy rules that previously applied to ISPs and could have adverse effects on our ability to compete in the highly concentrated online advertising market. The FCC under the new Administration or Congress may revisit and revise these new rules, although we cannot predict whether or how the rules might be changed.

## Table of Contents

In addition to FCC privacy regulations governing ISPs, the FTC generally exercises authority over privacy protections applicable to some of our other businesses by using its existing authority over unfair and deceptive acts or practices to apply greater restrictions on the collection and use of personally identifiable and other information relating to consumers. It also has undertaken numerous enforcement actions against parties that do not provide sufficient security protections against the loss or unauthorized disclosure of this type of information. However, a recent court decision has raised questions regarding the extent of FTC jurisdiction over companies like us, whose service offerings include some common carrier services. The FTC has appealed this decision. We cannot predict the outcome of the litigation or the impact of the decision on our business. We also are subject to stringent data security and data retention requirements that apply to website operators and online services directed to children under 13 years of age, or that knowingly collect or post personal information from children under 13 years of age. Other privacy-oriented laws have been extended by courts to online video providers and are increasingly being used in privacy lawsuits, including class actions, against providers of video materials online.

We are also subject to state and federal "do not call" laws regarding telemarketing and state and federal laws regarding unsolicited commercial emails, as well as FCC regulations relating to automated telemarketing calls, texts and SMS messages. The FTC and state attorneys general also have initiated efforts to increase and enforce transparency requirements about the collection and use of consumer information, even in an aggregated, non-customer-identifiable form, which may require ongoing review of new and rapidly evolving technologies and methods for delivering content and advertising to ensure that appropriate notice is given to consumers and consent is obtained where required.

We are also subject to state and federal laws and regulations regarding data security that primarily apply to sensitive personal information that could be used to commit identity theft. Most states have security breach notification laws that generally require a business to give notice to consumers and government agencies when certain information has been disclosed due to a security breach, and the FCC has adopted security breach rules for voice services and broadband Internet access services. Several states have also enacted general data security requirements to safeguard consumer information, including the proper disposal of consumer information.

The National Institute of Standards and Technology ("NIST"), in cooperation with other federal agencies and owners and operators of U.S. critical infrastructure, including us, have developed a voluntary framework that provides a prioritized, flexible, repeatable, performance-based and cost-effective approach to cybersecurity risk. It is a compendium of existing cross-sector cyber-defense processes, practices and protocols that can help companies identify, assess and manage their cyber risks and vulnerabilities, and several government agencies have encouraged compliance with this framework. NIST recently proposed draft updates to this voluntary framework and is collecting feedback on the draft. In June 2016, the Department of Homeland Security and the Department of Justice, in collaboration with other federal agencies, released final guidance regarding the sharing of cyber threat indicators and defensive measures between and among Federal and Non-Federal entities under the Cybersecurity Act of 2015. Finally, there are pending legislative proposals that could impose new requirements on owners and operators of critical infrastructure, including us, and the FCC is considering expanding its cybersecurity guidelines or adopting new cybersecurity requirements.

### **FCC Spectrum Auction**

Congress has authorized the FCC to conduct an auction to repurpose some broadcast spectrum to mobile broadband use. In this auction, licensees of full-power and Class A television stations have the opportunity to sell some or all of their spectrum rights in exchange for cash. TV stations that do not voluntarily sell their spectrum rights may be assigned new channels on which to operate, but the FCC must make "all reasonable efforts" to preserve those stations' over-the-air coverage areas and populations served, and to reimburse them for reasonable relocation costs (subject to an aggregate limit of \$1.75 billion).

## Table of Contents

NBCUniversal has submitted applications with the FCC indicating its potential interest in selling broadcast spectrum rights, and we have filed an application to bid on new mobile broadband licenses. Filing an application in the auction does not create any obligation to sell, bid on or buy spectrum.

Bidding in the auction began in May 2016 and is still ongoing. We cannot predict the outcome of the auction or the impact the outcome may have on our business.

### **State and Local Taxes**

Some states and localities have imposed or are considering imposing, through both legislative and administrative channels, new or additional taxes or fees on, or limiting or eliminating incentives or credits earned or monetized by, the businesses operated by our Cable Communications and NBCUniversal segments, or imposing adverse methodologies by which taxes, fees, incentives or credits are computed, earned or monetized. These include combined reporting or other changes to general business taxes, central assessments for property tax, and taxes and fees on the businesses operated or services provided by our Cable Communications and NBCUniversal segments. In some situations, DBS providers and other competitors that deliver their services over a high-speed Internet connection do not face the same state tax and fee burdens. Congress has also considered, and may consider again, proposals to bar or limit states from imposing taxes on these DBS providers or other competitors that are equivalent to the taxes or fees that we pay. The Internet Tax Freedom Act, which prohibits most states and localities from imposing sales and other taxes on our Internet access charges, has now been made permanent by 2016 legislation; however, some jurisdictions have or may assert that certain taxes akin to right-of-way fees are not preempted by Internet Tax Freedom Act. The FCC's reclassification of broadband Internet access services as Title II telecommunications services may cause or allow, directly or indirectly, some states and localities to impose various other taxes and fees on our high-speed Internet business.

### **Environmental Matters**

Certain of our business operations are subject to environmental laws and regulations since they involve air emissions, wastewater discharges, and the use, disposal and cleanup of toxic and hazardous substances. Any failure to comply with environmental requirements could result in monetary fines, civil or criminal sanctions, third-party claims, or other costs or liabilities.

Environmental requirements have become more stringent over time, and pending or proposed new regulations could impact our operations or costs. For example, climate change regulation, such as proposed greenhouse gas emissions limits or cap and trade programs, could result in an increase in the cost of electricity, which is a significant component of our operational costs for some aspects of our businesses.

### **Other Regulations**

Federal regulators actively regulate other aspects of our businesses, including accessibility to our video and voice services and broadcast television programming for people with disabilities, customer service standards, inside wiring, leased access, loudness of commercial advertisements, advertising, Emergency Alert System, equal employment opportunity, lottery programming, recordkeeping and public file access requirements, regulatory fees and technical standards relating to the operation of cable systems and television stations. We are occasionally subject to enforcement actions at the FCC, which can result in us having to pay fines to the agency or being subject to other sanctions. We also are subject to various international regulations, including those that cover television broadcasting, programming and advertising.

## Table of Contents

### Employees

As of December 31, 2016, we had approximately 159,000 full-time and part-time employees calculated on a full-time equivalent basis. Of these employees, approximately 91,000 and 58,000 were associated with our cable communications business and our NBCUniversal businesses, respectively. We also use freelance and temporary employees in the normal course of our business.

### Caution Concerning Forward-Looking Statements

The SEC encourages companies to disclose forward-looking information so that investors can better understand a company's future prospects and make informed investment decisions. In this Annual Report on Form 10-K, we state our beliefs of future events and of our future financial performance. In some cases, you can identify these so-called "forward-looking statements" by words such as "may," "will," "should," "expects," "believes," "estimates," "potential," or "continue," or the negative of these words, and other comparable words. You should be aware that these statements are only our predictions. In evaluating these statements, you should consider various factors, including the risks and uncertainties listed in "Risk Factors" and in other reports we file with the SEC.

Additionally, we operate in a highly competitive, consumer-driven and rapidly changing environment. This environment is affected by government regulation; economic, strategic, political and social conditions; consumer response to new and existing products and services; technological developments; and, particularly in view of new technologies, the ability to develop and protect intellectual property rights. Our actual results could differ materially from our forward-looking statements as a result of any of such factors, which could adversely affect our businesses, results of operations or financial condition. We undertake no obligation to update any forward-looking statements.

### Item 1A: Risk Factors

**Our businesses currently face a wide range of competition, and our businesses and results of operations could be adversely affected if we do not compete effectively.**

All of our businesses operate in intensely competitive, consumer-driven and rapidly changing environments and compete with a growing number of companies that provide a broad range of communications products and services and entertainment, news and information content to consumers. Technological changes are further intensifying and complicating the competitive landscape and influencing consumer behavior, which is discussed in the risk factor immediately below under the heading "Changes in consumer behavior driven by new technologies and distribution platforms for viewing content may adversely affect our businesses and challenge existing business models."

Competition for our cable services consists primarily of DBS providers and phone companies with fiber-based networks that typically offer features, pricing and packaging for services comparable to ours. In 2015, AT&T, our largest phone company competitor, acquired DirecTV, the nation's largest DBS provider to create an even larger competitor that also has its own wireless phone facilities, which we do not, and in 2016, announced a proposed merger with Time Warner, a media and entertainment company. Some of these competitors have begun offering smaller packages of channels at price points lower than our standard packages, both through traditional and online distribution platforms, which could cause us to offer more customized programming packages that may be less profitable. In addition, if consolidation between wireless distributors and content providers occurs, some of our competitors may offer free or lower cost streaming services for viewing their content through unlimited data-usage plans for their Internet or wireless phone serv-

## Table of Contents

ices. Additional companies, some with significant financial resources, continue to enter or are seeking to enter the video distribution market, primarily by offering online video programming services that can be viewed live, through streaming services or by downloading.

Current and future wireless Internet services, such as 3G, 4G and 5G wireless broadband services and Wi-Fi networks, and devices such as wireless data cards, tablets and smartphones, and mobile wireless routers that connect to such devices, may compete with our high-speed Internet services. Our voice services are facing increased competition as customers replace wireline phones with wireless and Internet-based phone services.

Our cable communications business continues to seek ways to enhance the value of our cable services network, such as by growing our high-speed Internet and business services businesses and by launching additional services, such as our home security and automation services. There can be no assurance that we can execute on these and other initiatives in a manner sufficient to grow or maintain our Cable Communications segment revenue, maintain our Cable Communications segment operating margin, or to compete successfully in the future.

Each of NBCUniversal's businesses also faces substantial and increasing competition from providers of similar types of content, as well as from other forms of entertainment and recreational activities. NBCUniversal must compete to obtain talent, programming and other resources required in operating these businesses.

The ability of all of our businesses to compete effectively depends on our perceived image and reputation among our various constituencies, including our customers, consumers, advertisers, investors and government authorities. Our ability to compete may be negatively affected if we do not provide our customers with a satisfactory customer experience.

There can be no assurance that we will be able to compete effectively against existing or new competitors or that competition will not have an adverse effect on our businesses. For a more detailed description of the competition facing our businesses, see Item 1: Business and refer to the "Competition" discussion within that section.

### **Changes in consumer behavior driven by new technologies and distribution platforms for viewing content may adversely affect our businesses and challenge existing business models.**

New technologies and platforms for the distribution, sale and viewing of content have been, and will likely continue to be, developed that further increase the number of competitors that all our businesses face and challenge existing business models. These technologies and distribution platforms are driving changes in consumer behavior as consumers seek more control over when, where and how they consume content and access communications services.

While our cable communications business is attempting to adapt to changing consumer behaviors, for example, by deploying our X1 platform, cloud DVR technology and apps such as Netflix on our X1 set top boxes, new and traditional competitors, as well as some programming networks, continue to launch subscription video on demand services, live online broadcast and cable television streaming services and downloading services that can be viewed on television sets, computers, smartphones and tablets. Many of these service offerings charge no fee or a lower fee than our traditional video packages for access to their content, which could have an adverse effect on demand for our video services, including for expanded digital video packages, premium networks, and our DVR and On Demand services.

New technologies and distribution platforms, together with an increasing number of companies offering their content directly to consumers over the Internet, including some that also offer exclusive high-quality original

## Table of Contents

video programming, have increased the number of entertainment choices available to consumers, which has intensified audience fragmentation. The increase in entertainment choices has and may continue to reduce the number of subscribers to our cable networks. Time-shifting technologies, such as DVRs and cloud-based recording services and video on demand services, reduce the viewing of content through traditional linear television distribution outlets. Reduced viewing of our content through traditional linear television distribution outlets has caused and will likely continue to cause audience ratings declines for NBCUniversal's linear television content and may adversely affect the price and amount of advertising that advertisers are willing to purchase from us and the amount NBCUniversal receives for distribution of its content.

The success of any of these ongoing or future developments or our failure to effectively anticipate or adapt to emerging competitors or changes in consumer behavior, including among younger consumers, could have an adverse effect on our competitive position, businesses and results of operations.

### **A decline in advertisers' expenditures or changes in advertising markets could negatively impact our businesses.**

Our cable communications, cable networks and broadcast television businesses compete for the sale of advertising time with other television networks and stations, as well as with all other advertising platforms, such as digital media, as well as radio and print. We derive substantial revenue from the sale of advertising, and a decline in expenditures by advertisers, including through traditional linear television distribution models, could negatively impact our results of operations. Declines can be caused by the economic prospects of specific advertisers or industries, increased competition for the leisure time of viewers and audience fragmentation, the growing use of new technologies, or the economy in general. In addition, advertisers' willingness to purchase advertising from us may be adversely affected by lower audience ratings, which many of our networks have experienced and likely will continue to experience. Advertising sales and rates also are dependent on the methodology used for audience measurement and could be negatively affected if methodologies do not accurately reflect actual viewership levels. For example, certain methods of viewing content, such as delayed viewing on DVRs or viewing content online, might not be counted in audience measurements or may generate less, if any, revenue than traditional distribution methods, which could have an adverse effect on our advertising revenue. Reductions in advertisers' expenditures could adversely affect our revenue and businesses.

### **Our businesses depend on keeping pace with technological developments.**

Our success is, to a large extent, dependent on our ability to acquire, develop, adopt and leverage new and existing technologies, and our competitors' use of certain types of technology and equipment may provide them with a competitive advantage. For example, current and new wireless Internet technologies such as 4G and 5G wireless broadband services continue to evolve rapidly to allow for greater speed and reliability, and some companies and municipalities are building advanced fiber-based networks that provide very fast Internet access speeds. We expect other advances in communications technology to occur in the future. If we choose technology or equipment that is not as effective or attractive to consumers as that employed by our competitors, if we fail to employ technologies desired by consumers before our competitors do so, or if we fail to execute effectively on our technology initiatives, our businesses and results of operations could be adversely affected. We also will continue to incur additional costs as we execute our technology initiatives, such as the deployment of DOCSIS 3.1, X1 set-top boxes, wireless gateways and cloud DVR technology, and there can be no assurance that we can execute on these and other initiatives in a manner sufficient to grow or maintain our revenue or to compete successfully in the future. We also may incur increased costs if changes in our competitors' product offerings require that we offer certain of our existing services or enhancements at a lower or no cost to our customers or that we make additional research and development expenditures.

## Table of Contents

### **We are subject to regulation by federal, state, local and foreign authorities, which may impose additional costs and restrictions on our businesses.**

Federal, state and local governments extensively regulate the video, high-speed Internet and voice services industries. Our broadcast television business is also highly regulated by federal laws and regulations. Our cable networks, filmed entertainment and theme parks businesses are also subject to various other laws and regulations at the international, federal, state and local levels, including laws and regulations relating to environmental protection, which have become more stringent over time, and the safety of consumer products and theme park operations. In addition, we are subject to the NBCUniversal Order and the NBCUniversal Consent Decree, which have imposed numerous conditions on our businesses relating to the treatment of competitors and other matters. In recent years, the FCC and certain states also have been more active in conducting inquiries and reviews regarding our services, and this trend may continue. Failure to comply with the laws and regulations applicable to our businesses could result in administrative enforcement actions, fines, and civil and criminal liability. For a more extensive discussion of the significant risks associated with the regulation of our businesses, see Item 1: Business and refer to the "Legislation and Regulation" discussion within that section.

### **Changes to existing statutes, rules, regulations, or interpretations thereof, or adoption of new ones, could have an adverse effect on our businesses.**

Legislators and regulators at all levels of government frequently consider changing, and sometimes do change, existing statutes, rules, regulations, or interpretations thereof, or prescribe new ones, which may significantly affect our businesses. In addition, in recent years, the FCC and certain states have been more active in considering rulemakings and legislation regarding our services. Any future legislative, judicial, regulatory or administrative actions may increase our costs or impose additional restrictions on our businesses, some of which may be significant. In addition, Congress is expected to consider proposals to address communications issues, including whether it should rewrite the entire Communications Act to account for changes in the communications marketplace, whether it should address the FCC's authority to implement or enforce open Internet regulations, and whether it should fund new broadband infrastructure. We are unable to predict the effects of any of these or any other further legislative requirements on our businesses, nor can we predict how the FCC or other agencies under the new Administration will address regulatory matters affecting our businesses. Any changes to the legal and regulatory framework applicable to any of our services or businesses could have a negative impact on our businesses and results of operations.

### **Programming expenses for our video services are increasing, which could adversely affect our Cable Communications segment's video business.**

We expect programming expenses for our video services to continue to be our Cable Communications segment's largest single expense item and to increase in the foreseeable future. The multichannel video provider industry has experienced continued increases in the cost of programming, especially sports programming, which we expect will continue for the foreseeable future. Our programming expenses may also increase as we add programming to our video services or distribute existing programming to more of our customers or through additional delivery platforms, such as On Demand or streaming services. Additionally, in the past few years, we have begun paying certain local broadcast television stations in exchange for their required consent for the retransmission of broadcast network programming to our video services customers; we expect to continue to be subject to increasing demands for payment and other concessions from local broadcast television stations. These market factors may be exacerbated by increased consolidation in the media industry, which may further increase our programming expenses. If we are unable to raise our customers' rates or offset programming cost increases through the sale of additional services, the increasing cost of programming could have an adverse effect on our Cable Communications segment's results of operations. Moreover, as our contracts with content providers expire, there can be no assurance that they will be renewed on acceptable terms or that they will be renewed at all, in which case we may be unable to provide such content as part of our video services, and our businesses and results of operations could be adversely affected.

## Table of Contents

**NBCUniversal's success depends on consumer acceptance of its content, and its businesses may be adversely affected if its content fails to achieve sufficient consumer acceptance or the costs to create or acquire content increase.**

Most of NBCUniversal's businesses create and acquire media and entertainment content, the success of which depends substantially on consumer tastes and preferences that change in often unpredictable ways. The success of these businesses depends on our ability to consistently create, acquire, market and distribute cable network and broadcast television programming, filmed entertainment, theme park attractions and other content that meet the changing preferences of the broad domestic and international consumer markets. We have invested, and will continue to invest, substantial funds in our content, including in the production of original content on our cable networks and broadcast television networks, in our films and for theme park attractions, before learning the extent to which it would earn consumer acceptance.

We also obtain a significant portion of our content from third parties, such as movie studios, television production companies, sports organizations and other suppliers. Competition for popular content, particularly for sports programming, is intense, and we may have to increase the price we are willing to pay or be outbid by our competitors for popular content. Entering into or renewing contracts for such programming rights or acquiring additional rights may result in significantly increased costs. Particularly with respect to long-term contracts for sports programming rights, our results of operations and cash flows over the term of a contract depend on a number of factors, including the strength of the advertising market, our audience size, the ability to secure distribution from and impose surcharges or obtain carriage on multichannel video providers for the content, and the timing and amount of our rights payments. There can be no assurance that revenue from these contracts will exceed our costs for the rights, as well as the other costs of producing and distributing the programming. If our content does not achieve sufficient consumer acceptance, or if we cannot obtain or retain rights to popular content on acceptable terms, or at all, our businesses may be adversely affected.

**The loss of NBCUniversal's programming distribution agreements, or the renewal of these agreements on less favorable terms, could adversely affect its businesses.**

Our cable networks depend on their ability to secure and maintain distribution agreements with multichannel video providers, and if a network does not attract sufficient viewers, multichannel video providers may decide not to distribute the network. Our broadcast television networks depend on their ability to secure and maintain network affiliation agreements with third-party local broadcast television stations in the markets where we do not own the affiliated local broadcast television station. In addition, every three years, each of our owned local broadcast television stations must elect, with respect to its retransmission by multichannel video providers within its DMA, either "must-carry" status, in which the distributor's carriage of the station is mandatory and does not generate any compensation for the local station, or "retransmission consent," in which the station gives up its right to mandatory carriage and instead seeks to negotiate the terms and conditions of carriage with the distributor, including the amount of compensation, if any, paid to the station by such distributor. All of our NBC and Telemundo owned local broadcast television stations have elected retransmission consent through December 31, 2017. Increasingly, our cable networks, broadcast television and filmed entertainment businesses have entered into agreements to license their prior season and library content on other distribution platforms, including subscription video on demand services, and some multichannel video providers are offering smaller packages of channels as part of their streaming and linear television programming packages. In addition, certain online entities may stream our broadcast television content online without our consent and without paying any compensation to us. As a result, there can be no assurance that any of our distribution agreements will be renewed in the future on acceptable terms, or at all. The loss of any of these agreements, or the renewal of these agreements on less favorable terms, could reduce our distribution revenue and the reach of our television programming and its attractiveness to advertisers, which in turn could adversely affect our cable networks, broadcast television and filmed entertainment businesses.

## Table of Contents

### **We rely on network and information systems and other technologies, as well as key properties, and a disruption, cyber attack, failure or destruction of such networks, systems, technologies or properties may disrupt our businesses.**

Network and information systems and other technologies, including those related to our network management, customer service operations and programming delivery, are critical to our business activities. Network and information systems-related events, including those caused by us or by third parties, such as computer hackings, cyber attacks, computer viruses, worms or other destructive or disruptive software, process breakdowns, denial of service attacks, malicious social engineering or other malicious activities, or any combination of the foregoing, or power outages, natural disasters, infectious disease outbreaks, terrorist attacks or other similar events, could result in a degradation or disruption of our services, excessive call volume to call centers, a reduction in demand for our theme parks or damage to our equipment, data, properties and reputation. These events also could result in large expenditures to repair or replace the damaged properties, networks or information systems or to protect them from similar events in the future, and any such events could have an adverse effect on our results of operations.

In addition, we may obtain certain confidential, proprietary and personal information about our customers, personnel and vendors, and may provide this information to third parties, in connection with our business. While we obtain assurances that these third parties will protect this information, there is a risk that this information may be compromised. Any security breaches, such as misappropriation, misuse, leakage, falsification or accidental release or loss of information maintained in our information technology systems, including customer, personnel and vendor data, could damage our reputation and require us to expend significant capital and other resources to remedy any such security breach, and could cause regulators to impose fines or other remedies for failure to comply with relevant customer privacy rules.

The risk of these systems-related events and security breaches occurring continues to intensify in many lines of business, and our lines of business may be at a disproportionately heightened risk of these events occurring, due to the nature of our businesses and the fact that we maintain certain information necessary to conduct our business in digital form stored on cloud servers. In the ordinary course of our business, there are frequent attempts to cause such systems-related events and security breaches, and we have experienced minor systems-related events that, to date, have not resulted in any significant degradation or disruption to our network or information systems or our services or operations. While we develop and maintain systems, and operate a comprehensive security program, seeking to prevent systems-related events and security breaches from occurring, the development, maintenance and operation of these systems and programs is costly and requires ongoing monitoring and updating as technologies change and efforts to overcome security measures become more sophisticated. Despite any efforts to prevent these events and security breaches, there can be no assurance that they will not occur in the future or will not have an adverse effect on our businesses. Moreover, the amount and scope of insurance we maintain against losses resulting from any such events or security breaches likely would not be sufficient to cover our losses or otherwise adequately compensate us for any disruptions to our business that may result, and the occurrence of any such events or security breaches could have an adverse effect on our business.

### **We may be unable to obtain necessary hardware, software and operational support.**

We depend on third-party vendors to supply us with a significant amount of the hardware, software and operational support necessary to provide certain of our services. Some of these vendors represent our primary source of supply or grant us the right to incorporate their intellectual property into some of our hardware and software products. While we actively monitor the operations and financial condition of key vendors in an attempt to detect any potential difficulties, there can be no assurance that we would timely identify any operating or financial difficulties associated with these vendors or that we could effectively mitigate our risks with respect to any such difficulties. If any of these vendors experience operating or financial difficulties, if our demand exceeds their capacity or if they are otherwise unable to meet our specifications or provide the

## Table of Contents

equipment or services we need in a timely manner or at reasonable prices, our ability to provide some services may be adversely affected.

### **Weak economic conditions may have a negative impact on our businesses.**

A substantial portion of our revenue comes from customers whose spending patterns may be affected by prevailing economic conditions. Weak economic conditions could adversely affect demand for any of our products and services and have a negative impact on our results of operations. For example, customers may reduce the level of cable services to which they subscribe, or may discontinue subscribing to one or more of our cable services. This risk may be increased by the expanded availability of free or lower cost competitive services, such as subscription video on demand services, or substitute services for our high-speed Internet and voice services, such as mobile phones, smartphones and Wi-Fi networks. Weak economic conditions also may have a negative impact on our advertising revenue, the performance of our films and home entertainment releases, and attendance and spending in our theme parks. Weak economic conditions and turmoil in the global financial markets may also impair the ability of third parties to satisfy their obligations to us, and any disruption in the global financial markets may affect our ability to obtain financing or refinance any existing debt on acceptable terms.

### **Our businesses depend on using and protecting certain intellectual property rights and on not infringing the intellectual property rights of others.**

We rely on our intellectual property, such as patents, copyrights, trademarks and trade secrets, as well as licenses and other agreements with our vendors and other third parties, to use various technologies, conduct our operations and sell our products and services. Legal challenges to our intellectual property rights and claims of intellectual property infringement by third parties could require that we enter into royalty or licensing agreements on unfavorable terms, incur substantial monetary liability, or be enjoined preliminarily or permanently from further use of the intellectual property in question or from the continuation of our businesses as currently conducted. We may need to change our business practices if any of these events occur, which may limit our ability to compete effectively and could have an adverse effect on our results of operations. Even if we believe any such challenges or claims are without merit, they can be time-consuming and costly to defend and divert management's attention and resources away from our businesses. Moreover, if we are unable to obtain or continue to obtain licenses from our vendors and other third parties on reasonable terms, our businesses could be adversely affected.

In addition, intellectual property constitutes a significant part of the value of NBCUniversal's businesses, and its success is highly dependent on protecting the intellectual property rights of the content it creates or acquires against third-party misappropriation, reproduction or infringement. The unauthorized reproduction, distribution or display of copyrighted material negatively affects our ability to generate revenue from the legitimate sale of our content, as well as from the sale of advertising in connection with our content, and increases our costs due to our active enforcement of our intellectual property rights.

Piracy and other unauthorized uses of content are made easier, and the enforcement of intellectual property rights more challenging, by technological advances that allow the conversion of programming, films and other content into digital formats, which facilitates the creation, transmission and sharing of high-quality unauthorized copies. In particular, piracy of programming and films through unauthorized distribution on DVDs, peer-to-peer computer networks and other platforms continues to present challenges for our cable networks, broadcast television and filmed entertainment businesses. While piracy is a challenge in the United States, it is particularly prevalent in many parts of the world that lack developed copyright laws, effective enforcement of copyright laws and technical protective measures like those in effect in the United States. If any U.S. or international laws intended to combat piracy and protect intellectual property rights are repealed or weakened or are not adequately enforced, or if the legal system fails to adapt to new technologies that facilitate piracy, we may be unable to effectively protect our rights, the value of our intellectual property may

## **Table of Contents**

be negatively impacted and our costs of enforcing our rights may increase. See Item 1: Business and refer to the "Legislation and Regulation — Other Areas of Regulation — Intellectual Property" discussion for additional information.

### **Acquisitions and other strategic initiatives present many risks, and we may not realize the financial and strategic goals that we had contemplated.**

From time to time, we make acquisitions and investments and may pursue other strategic initiatives, including, for example, with respect to our wireless strategy. In connection with such acquisitions and strategic initiatives, we may incur unanticipated expenses, fail to realize anticipated benefits, have difficulty incorporating an acquired or new line of business, disrupt relationships with current and new employees, customers and vendors, incur significant debt, or have to delay or not proceed with announced transactions or initiatives. For example, our launch of a wireless phone service in 2017 using virtual network operator rights from a third party will have success-based working capital requirements, primarily associated with the procurement of handsets and other equipment, as we launch the service, which could have negative effects on our cash flows. Additionally, regulatory agencies, such as the FCC or DOJ, may impose restrictions on the operation of our businesses as a result of our seeking regulatory approvals for any significant acquisitions and strategic initiatives, or may dissuade us from pursuing certain transactions. The occurrence of any of these events could have an adverse effect on our businesses.

### **Labor disputes, whether involving employees or sports organizations, may disrupt our operations and adversely affect our businesses.**

Many of NBCUniversal's employees, including writers, directors, actors, technical and production personnel and others, as well as some of our on-air and creative talent employees, are covered by collective bargaining agreements or works councils. Most of NBCUniversal's collective bargaining agreements are industry-wide agreements, and we may lack practical control over the negotiations and terms of the agreements. If we are unable to reach agreement with a labor union before the expiration of a collective bargaining agreement, our employees who were covered by that agreement may have a right to strike or take other actions that could adversely affect us, which could disrupt our operations and reduce our revenue, and the resolution of any disputes may increase our costs. There can be no assurance that we will renew our collective bargaining agreements as they expire or that we can renew them on favorable terms or without any work stoppages.

In addition, our cable networks and broadcast television networks have programming rights agreements of varying scope and duration with various sports organizations to broadcast and produce sporting events, including certain NFL, NHL, NBA and MLB games. Labor disputes in these and other sports organizations could have an adverse effect on our businesses.

### **The loss of key management personnel or popular on-air and creative talent could have an adverse effect on our businesses.**

We rely on certain key management personnel in the operation of our businesses. While we maintain long-term and emergency transition plans for key management personnel and believe we could either identify internal candidates or attract outside candidates to fill any vacancy created by the loss of any key management personnel, the loss of one or more of our key management personnel could have a negative impact on our businesses. In addition, our cable networks, broadcast television and filmed entertainment businesses depend on the abilities and expertise of our on-air and creative talent. If we fail to retain our on-air or creative talent, if the costs to retain such talent increase materially, if we need to make significant termination payments, or if these individuals lose their current appeal, our businesses could be adversely affected.

### **We face risks relating to doing business internationally that could adversely affect our businesses.**

We, primarily through NBCUniversal, operate our businesses worldwide. There are risks inherent in doing business internationally, including global financial market turmoil; economic volatility and the global economic

**Table of Contents**

slowdown; currency exchange rate fluctuations and inflationary pressures; the requirements of local laws and customs relating to the publication and distribution of content and the display and sale of advertising; import or export restrictions and changes in trade regulations; difficulties in developing, staffing and managing foreign operations; issues related to occupational safety and adherence to diverse local labor laws and regulations; and potentially adverse tax developments. In addition, doing business internationally subjects us to risks relating to political or social unrest, corruption and government regulation, including U.S. laws such as the Foreign Corrupt Practices Act, that impose stringent requirements on how we conduct our foreign operations. If any of these events occur, our businesses may be adversely affected.

**Our Class B common stock has substantial voting rights and separate approval rights over several potentially material transactions, and our Chairman and CEO has considerable influence over our company through his beneficial ownership of our Class B common stock.**

Our Class B common stock has a nondilutable 33 1/3% of the combined voting power of our Class A and Class B common stock. This nondilutable voting power is subject to proportional decrease to the extent the number of shares of Class B common stock is reduced below 9,444,375, which was the number of shares of Class B common stock outstanding on the date of our 2002 acquisition of AT&T Corp.'s cable business, subject to adjustment in specified situations. Stock dividends payable on the Class B common stock in the form of Class B or Class A common stock do not decrease the nondilutable voting power of the Class B common stock. The Class B common stock also has separate approval rights over several potentially material transactions, even if they are approved by our Board of Directors or by our other shareholders and even if they might be in the best interests of our other shareholders. These potentially material transactions include mergers or consolidations involving Comcast Corporation, transactions (such as a sale of all or substantially all of our assets) or issuances of securities that require shareholder approval, transactions that result in any person or group owning shares representing more than 10% of the combined voting power of the resulting or surviving corporation, issuances of Class B common stock or securities exercisable or convertible into Class B common stock, and amendments to our articles of incorporation or by-laws that would limit the rights of holders of our Class B common stock. Brian L. Roberts, our chairman and CEO, beneficially owns all of the outstanding shares of our Class B common stock and, accordingly, has considerable influence over our company and the potential ability to transfer effective control by selling the Class B common stock, which could be at a premium.

## Table of Contents

### Item 1B: Unresolved Staff Comments

None.

### Item 2: Properties

We believe that substantially all of our physical assets were in good operating condition as of December 31, 2016. Our corporate headquarters and Cable Communications segment headquarters are located in Philadelphia, Pennsylvania at One Comcast Center. We own an 80% interest in the entity whose primary asset is One Comcast Center. In addition, we own an 80% interest in an entity that is currently constructing the Comcast Technology Center, which is adjacent to One Comcast Center. We also lease locations for numerous business offices, warehouses and properties housing divisional information technology operations throughout the United States.

#### Cable Communications Segment

Our principal physical assets consist of operating plant and equipment, including signal receiving, encoding and decoding devices, headends and distribution networks, and equipment at or near our customers' homes. Our distribution network consists primarily of headends, content distribution servers, coaxial and fiber-optic cables, lasers, routers, switches and related electronic equipment. Our cable plant and related equipment generally are connected to utility poles under pole rental agreements with local public utilities, although in some areas the distribution cable is buried in underground ducts or trenches. Customer premise equipment consists primarily of set-top boxes, cable modems and wireless gateways. The physical components of cable systems require periodic maintenance and replacement.

Our signal reception sites, which consist primarily of antenna towers and headends, and our microwave facilities are located on owned and leased parcels of land, and we own or lease space on the towers on which certain of our equipment is located. We own most of our service vehicles.

Our high-speed Internet network consists of fiber-optic cables owned or leased by us and related equipment. We also operate national and regional data centers with equipment that is used to provide services, such as email and web services, to our high-speed Internet and voice customers, as well as cloud services to our video customers. In addition, we maintain network operations centers with equipment necessary to monitor and manage the status of our services and network.

We own or lease buildings throughout the country that contain customer service call centers, customer service retail centers, warehouses and administrative space. We also own a building that houses our digital media center. The digital media center contains equipment that we own or lease, including equipment related to network origination, video transmission via satellite and terrestrial fiber-optics, broadcast studios, post-production services and interactive television services.

#### NBCUniversal Segments

NBCUniversal's corporate headquarters are located in New York City at 30 Rockefeller Plaza. NBCUniversal owns the space it occupies at 30 Rockefeller Plaza. We also own or lease offices, studios, production facilities, screening rooms, retail operations, warehouse space, satellite transmission receiving facilities and data centers in numerous locations in the United States and around the world, including property for our owned local broadcast television stations. In addition, we own theme parks and related facilities in Orlando, Florida and Hollywood, California, as well as a 51% interest in the theme park and related facilities in Osaka, Japan.

Table of Contents

## NBCUniversal Properties as of December 31, 2016

Location	Principal Use	Principal Segment in Which Used	Owned or Leased
30 Rockefeller Plaza New York, NY	NBCUniversal corporate headquarters, offices and studios	Headquarters and Other, Cable Networks and Broadcast Television	Owned
10 Rockefeller Plaza New York, NY	<i>The Today Show</i> studio, production facilities and offices	Broadcast Television	Leased
Universal City Universal City, CA	Offices, studios, theme park and retail operations	All	Owned
1000 Universal Studios Plaza Orlando, FL	Theme parks, production facilities, parking structures and administrative buildings	Theme Parks	Owned

2290 W. 8th Ave. Hialeah, FL	Telemundo headquarters and production facilities	Headquarters and Other and Broadcast Television	Leased

Other

The Wells Fargo Center, a large, multipurpose arena in Philadelphia, Pennsylvania that we own, was the principal physical operating asset of our other businesses as of December 31, 2016.

Item 3: Legal Proceedings

Refer to Note 16 to Comcast's consolidated financial statements included in this Annual Report on Form 10-K for a discussion of recent developments related to our legal proceedings.

NBCUniversal is subject to legal proceedings and claims that arise in the ordinary course of its business and it does not expect the final disposition of these matters to have a material adverse effect on its results of operations, cash flows or financial condition, although any such matters could be time-consuming and costly and could injure its reputation.

Item 4: Mine Safety Disclosures

Not applicable.

Table of Contents**Part II****Item 5: Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities**

Comcast's Class A common stock is listed on the NASDAQ Global Select Market under the symbol CMCSA. There is no established public trading market for Comcast's Class B common stock. The Class B common stock can be converted, on a share for share basis, into Class A common stock.

On January 24, 2017, our Board of Directors approved a two-for-one stock split in the form of a 100% dividend payable on February 17, 2017 to shareholders of record as of the close of business on February 8, 2017. As the common stock is not yet trading on a post-split basis, all share and per-share amounts are presented on a pre-split basis.

## Dividends Declared

February	\$ 0.275	February	\$ 0.25
May	\$ 0.275	May	\$ 0.25
July	\$ 0.275	July	\$ 0.25
October (paid in January 2017)	\$ 0.275	October (paid in January 2016)	\$ 0.25
Total	\$ 1.10	Total	\$ 1.00

We expect to continue to pay quarterly dividends, although each dividend is subject to approval by our Board of Directors. In January 2017, our Board of Directors approved a 15% increase in our dividend to \$1.26 per share on an annualized, pre-split basis, or \$0.63 per share on an annualized, post-split basis. In addition, the Board of Directors approved our first quarter dividend of \$0.1575 a share on a post-split basis to be paid in April 2017.

Holders of Class A common stock in the aggregate hold 66  $\frac{2}{3}$ % of the voting power of our common stock. The number of votes that each share of Class A common stock has at any given time depends on the number of shares of Class A common stock and Class B common stock then outstanding. The Class B common stock has a 33  $\frac{1}{3}$ % nondilutable voting interest, and each share of Class B common stock has 15 votes per share. Mr. Brian L. Roberts beneficially owns all outstanding shares of Class B common stock. Generally, including as to the election of directors, holders of Class A common stock and Class B common stock vote as one class except where class voting is required by law.

Record holders as of December 31, 2016 are presented in the table below.

Stock Class	Record Holders
Class A Common Stock	463,104
Class B Common Stock	3

## Table of Contents

The table below summarizes our repurchases under our Board-authorized share repurchase program during 2016.

Period	Total Number of Shares Purchased	Average Price Per Share	Total Number of Shares Purchased as Part of Publicly Announced Authorization	Total Dollar Amount Purchased Under the Authorization	Maximum Dollar Value of Shares That May Yet Be Purchased Under the Authorization <sup>(a)</sup>
First Quarter 2016	22,025,226	\$ 56.82	21,989,334	\$ 1,249,417,635	\$ 8,750,582,365
Second Quarter 2016	18,418,256	\$ 61.66	18,418,136	\$ 1,135,699,704	\$ 7,614,882,661
Third Quarter 2016	20,836,401	\$ 66.07	20,836,288	\$ 1,376,575,738	\$ 6,238,306,923
October 1-31, 2016	13,294,399	\$ 64.00	13,294,399	\$ 850,819,050	\$ 5,387,487,873
November 1-30, 2016	4,036,116	\$ 61.80	4,036,116	\$ 249,446,256	\$ 5,138,041,617
December 1-31, 2016	1,995,929	\$ 69.18	1,995,464	\$ 138,041,588	\$ 5,000,000,029
<b>Total</b>	<b>80,606,327</b>	<b>\$ 62.06</b>	<b>80,569,737</b>	<b>\$ 4,999,999,971</b>	<b>\$ 5,000,000,029</b>

(a) In December 2015, our Board of Directors increased our share repurchase program authorization to \$10 billion, and in January 2017, it increased the authorization to \$12 billion, which does not have an expiration date.

The total number of shares purchased during 2016 includes 36,590 shares received in the administration of employee share-based compensation plans.

Under our share repurchase program authorization, we may repurchase shares in the open market or in private transactions. We expect to repurchase \$5.0 billion of our Class A common stock during 2017, subject to market conditions.

### Issuance of Equity Securities

In December 2016, we issued 356,635 shares of our Class A common stock to an institutional accredited investor in connection with an advance on future services in a transaction exempt from registration under the Securities Act of 1933, as amended, in accordance with Section 4(a)(2) thereof.

### Comcast Common Stock Sales Price Table

The following table sets forth, for the indicated periods, the high and low sales prices of Comcast's Class A and Class A Special common stock.

	Class A		Class A Special <sup>(a)</sup>	
	High	Low	High	Low
<b>2016</b>				
First Quarter	\$ 61.37	\$ 52.34	\$ —	\$ —
Second Quarter	\$ 65.42	\$ 59.62	\$ —	\$ —
Third Quarter	\$ 68.36	\$ 64.27	\$ —	\$ —
Fourth Quarter	\$ 71.32	\$ 60.04	\$ —	\$ —
<b>2015</b>				
First Quarter	\$ 60.70	\$ 52.45	\$ 60.19	\$ 52.23
Second Quarter	\$ 61.64	\$ 56.05	\$ 61.38	\$ 55.74
Third Quarter	\$ 64.99	\$ 50.00	\$ 64.70	\$ 51.26
Fourth Quarter <sup>(a)</sup>	\$ 63.38	\$ 55.39	\$ 63.48	\$ 56.88

(a) The high and low sales price of Comcast's Class A Special common stock reflects the prices until December 11, 2015, when each issued share of Class A Special common stock was reclassified into one share of Class A common stock (see Note 12 to Comcast's consolidated financial statements).

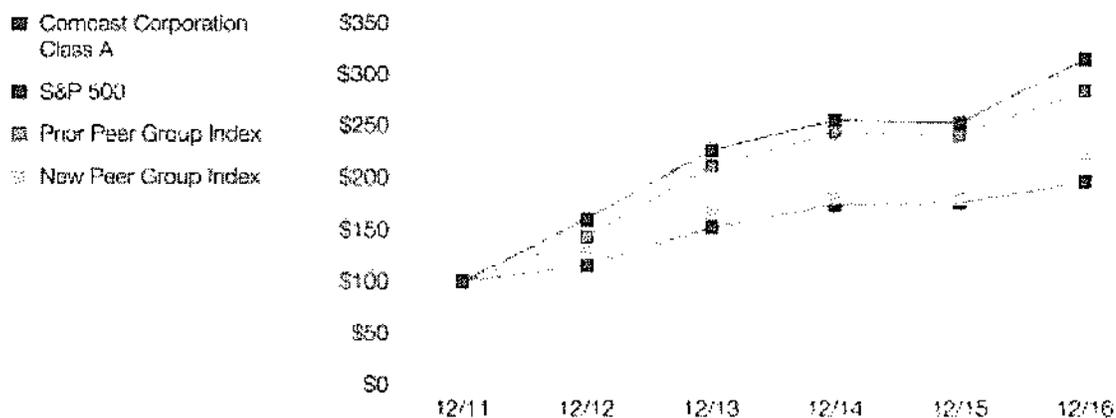

## Table of Contents

### Stock Performance Graph

#### Comcast

The following graph compares the annual percentage change in the cumulative total shareholder return on Comcast's Class A common stock during the five years ended December 31, 2016 with the cumulative total returns on the Standard & Poor's 500 Stock Index and with a select peer group consisting of us and other companies engaged in the cable, communications and media industries. This peer group (the "new peer group index") consists of our common stock, DISH Network Corporation (Class A), Charter Communications, Inc., AT&T Inc., Verizon Communications Inc., CenturyLink, Inc., and Sprint Corporation (the "transmission and distribution subgroup"); and Time Warner Inc., Walt Disney Company, Viacom Inc. (Class B), Twenty-First Century Fox, Inc. (Class A), and CBS Corporation (Class B) (the "media subgroup"). The new peer group index was created as a result of merger and acquisition activity that impacted our prior peer group index, which had consisted of our common stock as well as Cablevision Systems Corporation (Class A) (included through June 21, 2016, the date of acquisition by Altice NV), DISH Network Corporation (Class A), DirecTV Inc. (included through July 24, 2015, the date of acquisition by AT&T Inc.), Time Warner Cable Inc. (included through May 18, 2016, the date of acquisition by Charter Communications, Inc.) (the "cable subgroup"); and Time Warner Inc., Walt Disney Company, Viacom Inc. (Class B), Twenty-First Century Fox, Inc. (Class A), and CBS Corporation (Class B) (the "media subgroup"). The peer groups are constructed as composite peer groups in which the transmission and distribution subgroup and the cable subgroup are weighted 61% and the media subgroup is weighted 39% based on the respective revenue of our Cable Communications and NBCUniversal segments. The comparison assumes \$100 was invested on December 31, 2011 in our Class A common stock and in each of the following indices and assumes the reinvestment of dividends.

#### Comparison of 5 Year Cumulative Total Return

	2012	2013	2014	2015	2016
Comcast Class A	\$ 160	\$ 226	\$ 256	\$ 253	\$ 316
S&P 500 Stock Index	\$ 116	\$ 153	\$ 174	\$ 176	\$ 197
Prior Peer Group Index	\$ 144	\$ 211	\$ 244	\$ 242	\$ 284
New Peer Group Index	\$ 130	\$ 170	\$ 180	\$ 178	\$ 220

#### NBCUniversal

NBCUniversal is a wholly owned subsidiary of NBCUniversal Holdings and there is no market for its equity securities.

Financing activities	151	(8,429)	(6,020)	(13,879)	(4,037)

(a) For 2016, 2015 and 2014, refer to Item 7, Management's Discussion and Analysis of Financial Condition and Results of Operations included in this Annual Report on Form 10-K for a discussion of the effects of items impacting net income attributable to Comcast Corporation. In 2016, 2015, 2014, 2013 and 2012, net income attributable to Comcast Corporation is stated after deducting net income attributable to noncontrolling interests of \$350 million, \$250 million, \$212 million, \$319 million and \$1.7 billion, respectively. The reduction in net income attributable to noncontrolling interests in 2013 was primarily due to our acquisition of General Electric Company's remaining interest in NBCUniversal.

(b) Per share amounts are presented on a pre-split basis (see Note 1 to Comcast's consolidated financial statements).

## NBCUniversal

Omitted pursuant to General Instruction I(2)(a) to Form 10-K.

## Table of Contents

# Item 7: Management's Discussion and Analysis of Financial Condition and Results of Operations

## Introduction and Overview

We are a global media and technology company with two primary businesses, Comcast Cable and NBCUniversal. We present our operations for Comcast Cable in one reportable business segment, referred to as Cable Communications, and our operations for NBCUniversal in four reportable business segments: Cable Networks, Broadcast Television, Filmed Entertainment and Theme Parks (collectively, the "NBCUniversal segments").

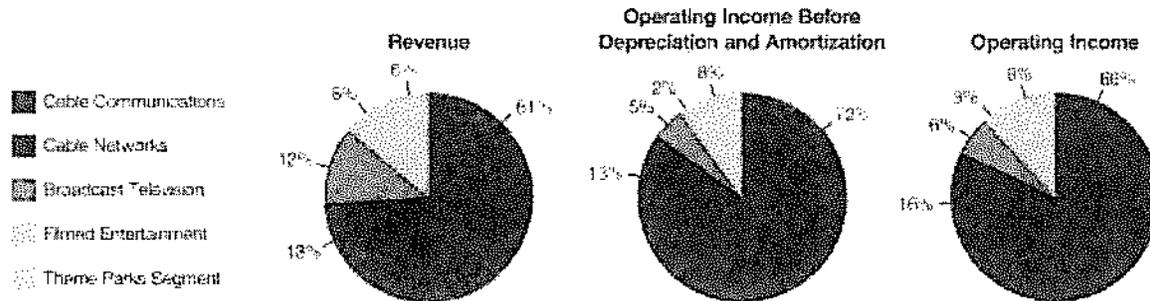

The following provides an overview of our businesses.

### Consolidated Revenue and Operating Income

(in billions)

### 2016 Consolidated Operating Results by Segment<sup>(a)</sup>

(a) Excludes the results of NBCUniversal Headquarters and Other, Corporate and Other, and eliminations.

### Cable Communications Segment

Comcast Cable is one of the nation's largest providers of video, high-speed Internet and voice services ("cable services") to residential customers under the XFINITY brand, and we also provide these and other services to business customers. As of December 31, 2016, our cable systems had 28.6 million total customer relationships, of which 26.5 million were residential customer relationships; served 22.5 million video customers, 24.7 million high-speed Internet customers and 11.7 million voice customers; and passed more than 56 million homes and businesses.

Our Cable Communications segment generates revenue primarily from residential and business customers subscribing to our cable services, which we market individually and as bundled services, and from the sale of advertising. Customers are typically billed in advance on a monthly basis based on the services and features

## Table of Contents

they receive and the type of equipment they use. The majority of our residential cable services customers are not subject to minimum-term contracts for their services, while substantially all of our business customers are. Minimum-term contracts are typically 2 years in length for residential customers and typically range from 2 to 5 years for business services customers. Customers with minimum-term contracts may only discontinue service in accordance with the terms of their contracts, which typically include an early termination fee.

### **NBCUniversal Segments**

NBCUniversal is one of the world's leading media and entertainment companies that develops, produces and distributes entertainment, news and information, sports, and other content for global audiences, and owns and operates theme parks worldwide.

#### Cable Networks

Our Cable Networks segment consists primarily of a diversified portfolio of cable television networks. Our cable networks are comprised of our national cable entertainment networks (USA Network, E!, Syfy, Bravo, Oxygen, Sprout, Esquire Network, Chiller, Universal HD and Cloo), our national cable news and information networks (MSNBC, CNBC and CNBC World), our national cable sports networks (NBC Sports Network and Golf Channel), our regional sports and news networks, our international cable networks, our cable television studio production operations, and related digital media properties.

Our Cable Networks segment generates revenue primarily from the distribution and licensing of its programming and from the sale of advertising on its networks.

#### Broadcast Television

Our Broadcast Television segment consists primarily of the NBC and Telemundo broadcast television networks, our NBC and Telemundo owned local broadcast television stations, the NBC Universo national cable network, our broadcast television studio production operations, and related digital media properties.

Our Broadcast Television segment generates revenue primarily from the sale of advertising on its networks, from the licensing of its programming, and from fees received under retransmission consent agreements and associated fees received from NBC-affiliated local broadcast television stations.

#### Filmed Entertainment

Our Filmed Entertainment segment primarily produces, acquires, markets and distributes filmed entertainment worldwide, and it also develops, produces and licenses live stage plays. Our films are produced primarily under the Universal Pictures, Illumination and Focus Features names, and in August 2016, we acquired DreamWorks Animation. DreamWorks Animation creates animated feature films, television series and specials, live entertainment and related consumer products.

Our Filmed Entertainment segment generates revenue primarily from the worldwide distribution of our owned and acquired films for exhibition in movie theaters and from the licensing and sale of our owned and acquired films.

#### Theme Parks

Our Theme Parks segment consists primarily of our Universal theme parks in Orlando, Florida and Hollywood, California and our 51% interest in the Universal Studios theme park in Osaka, Japan ("Universal Studios Japan"), which we acquired in November 2015. In addition, along with a consortium of Chinese state-owned companies, we are developing a theme park in China.

Our Theme Parks segment generates revenue primarily from ticket sales and guest spending at our theme parks.

## Table of Contents

### **Corporate and Other**

Our other business interests consist primarily of the operations of Comcast Spectacor, which owns the Philadelphia Flyers and the Wells Fargo Center arena in Philadelphia, Pennsylvania and operates arena management-related businesses.

We currently anticipate launching a Comcast-branded wireless phone service in 2017 using our virtual network operator rights to provide the service over a third party's wireless network, although we are still evaluating the parameters of the anticipated offering. A wireless phone service will have success-based working capital requirements, primarily associated with the procurement of handsets and other equipment, as we launch the new service.

### **2016 Developments**

The following are the more significant developments in our businesses during 2016:

#### Cable Communications Segment

- An increase in revenue of 6.6% to \$50.0 billion and an increase in operating income before depreciation and amortization of 5.6% to \$20.1 billion
- A decrease in operating margin to 40.2% primarily due to higher programming expenses, which were partially offset by increases in high-speed Internet, video and business services revenue
- Investments to improve the customer experience, including by hiring additional personnel and developing and deploying various technology and software tools
- An increase in capital expenditures of 7.9% to \$7.6 billion primarily due to:
  - an increased investment in line extensions, primarily for the expansion of our business services
  - an increased investment in scalable infrastructure to increase network capacity
  - the continued deployment of wireless gateways
  - the continued deployment of our X1 platform, which is now available in all of the markets in which we operate, and our cloud DVR technology, which is now available in substantially all of our markets

#### NBCUniversal Segments

- An increase in total NBCUniversal revenue of 11.0% to \$31.6 billion; excluding \$1.6 billion of revenue associated with our broadcast of the Rio Olympics in August 2016, as well as \$376 million of revenue associated with our broadcast of the Super Bowl in February 2015, total NBCUniversal revenue increased 6.7%
- An increase in total NBCUniversal operating income before depreciation and amortization of 13.8% to \$7.2 billion
- An increase in Cable Networks segment revenue of 8.7%, including \$432 million associated with our broadcast of the 2016 Rio Olympics
- An increase in Broadcast Television segment revenue of 19.0%, including \$1.2 billion associated with our broadcast of the 2016 Rio Olympics
- The acquisition of DreamWorks Animation for \$3.8 billion in our Filmed Entertainment segment

## Table of Contents

- An increase in Theme Parks segment revenue of 12.7% on a pro forma combined basis to include Universal Studios Japan

### Corporate and Other

- The announcement that we anticipate launching a Comcast-branded wireless phone service in 2017 using our virtual network operator rights to provide the service over a third party's wireless network

### **Competition**

The results of operations of our reportable business segments are affected by competition, as all of our businesses operate in intensely competitive, consumer-driven and rapidly changing environments and compete with a growing number of companies that provide a broad range of communications products and services and entertainment, news and information content to consumers.

For additional information on the competition our businesses face, see Item 1: Business and refer to the "Competition" discussion within that section and see Item 1A: Risk Factors and refer to the risk factors within that section entitled "Our businesses currently face a wide range of competition, and our businesses and results of operations could be adversely affected if we do not compete effectively" and "Changes in consumer behavior driven by new technologies and distribution platforms for viewing content may adversely affect our businesses and challenge existing business models."

### **Seasonality and Cyclicity**

Each of our businesses is subject to seasonal and cyclical variations. In our Cable Communications segment, our results are impacted by the seasonal nature of customers receiving our cable services in college and vacation markets. This generally results in a reduction in net customer additions in the second quarter and an increase in net customer additions in the third and fourth quarters of each year.

Revenue in our Cable Communications, Cable Networks and Broadcast Television segments is subject to cyclical advertising patterns and changes in viewership levels. Advertising revenue in the U.S. is generally higher in the second and fourth quarters of each year, due in part to increases in consumer advertising in the spring and in the period leading up to and including the holiday season. Advertising revenue in the U.S. is also cyclical, with a benefit in even-numbered years due to advertising related to candidates running for political office and issue-oriented advertising. Revenue in our Cable Networks and Broadcast Television segments fluctuates depending on the timing of when our programming is aired, which typically results in higher advertising revenue in the second and fourth quarters of each year. Our revenue and operating costs and expenses, excluding depreciation and amortization ("operating costs and expenses") are cyclical as a result of our periodic broadcasts of major sporting events, such as the Olympic Games, which affect our Cable Networks and Broadcast Television segments, and the Super Bowl, which affects our Broadcast Television segment. Our advertising revenue increases in the period of these broadcasts due to increased demand for advertising time, and our operating costs and expenses also increase as a result of our production costs and the amortization of the related rights fees.

Revenue in our Filmed Entertainment segment fluctuates due to the timing of the release of films in movie theaters, on standard-definition digital video discs and Blu-ray discs (together, "DVDs") and through various other distribution platforms. Release dates are determined by several factors, including competition and the timing of vacation and holiday periods. As a result, revenue tends to be seasonal, with increases experienced each year during the summer months and around the holiday season. Revenue in our Cable Networks, Broadcast Television and Filmed Entertainment segments also fluctuates due to the timing of when our content is made available to licensees.

## Table of Contents

Revenue in our Theme Parks segment fluctuates with changes in theme park attendance that result from the seasonal nature of vacation travel and weather variations, local entertainment offerings and the opening of new attractions as well as with changes in currency exchange rates. Our theme parks generally experience peak attendance during the spring holiday period, the summer months when schools are closed and the holiday season.

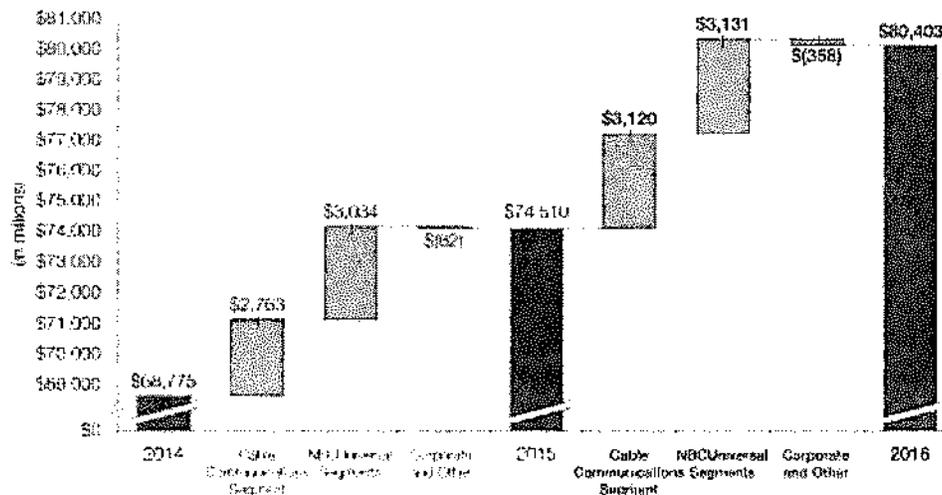

## Consolidated Operating Results

Year ended December 31 (in millions)	2016	2015	2014	% Change 2015 to 2016	% Change 2014 to 2015
<b>Revenue</b>	<b>\$ 80,403</b>	<b>\$ 74,510</b>	<b>\$ 68,775</b>	<b>7.9%</b>	<b>8.3%</b>

<b>Net income attributable to Comcast Corporation</b>	<b>\$ 8,695</b>	<b>\$ 8,163</b>	<b>\$ 8,380</b>	<b>6.5%</b>	<b>(2.6)%</b>

All percentages are calculated based on actual amounts. Minor differences may exist due to rounding.

## Consolidated Revenue

The following graph illustrates the contributions to the increases in consolidated revenue made by our Cable Communications and NBCUniversal segments, as well as by Corporate and Other activities including eliminations.

## Table of Contents

The primary drivers of the changes in revenue were as follows:

2016

- Growth in our Cable Communications segment driven by our high-speed Internet, video and business services businesses
- Our broadcast of the 2016 Rio Olympics that generated \$1.6 billion of revenue, which was reported in our NBCUniversal segments

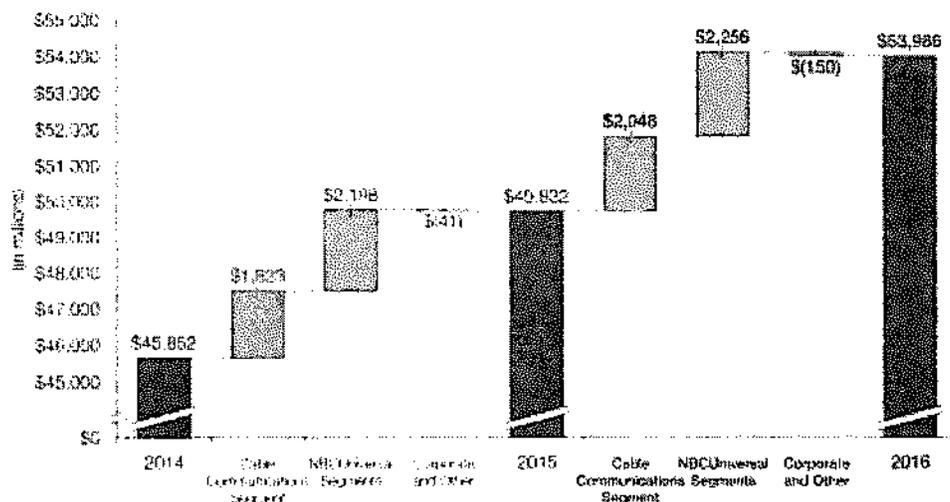

2015

- Growth in our Cable Communications segment driven by our high-speed Internet, business services and video businesses
- Our larger film slate in our Filmed Entertainment segment, which led to an increase in revenue of \$2.3 billion, and our broadcast of the 2015 Super Bowl, which generated \$376 million of revenue, both of which were reported in our NBCUniversal segments

Revenue for our segments is discussed separately below under the heading "Segment Operating Results." Revenue for our other businesses is discussed separately under the heading "Corporate and Other Results of Operations."

### Consolidated Costs and Expenses

The following graph illustrates the contributions to the increases in consolidated operating costs and expenses made by our Cable Communications and NBCUniversal segments, as well as by Corporate and Other activities including eliminations.

The primary drivers of the changes in operating costs and expenses were as follows:

2016

- An increase in programming expenses in our Cable Communications segment
- Our broadcast of the 2016 Rio Olympics, which was reported in our NBCUniversal segments

## Table of Contents

### 2015

- An increase in programming expenses in our Cable Communications segment
- Our larger film slate and our broadcast of the 2015 Super Bowl, both of which were reported in our NBCUniversal segments
- Transaction-related costs associated with the Time Warner Cable merger and the related divestiture transactions of \$178 million, which were reported in Corporate and Other activities. In April 2015, we and Time Warner Cable Inc. terminated our planned merger and, as a result, we terminated our related agreement with Charter Communications, Inc. to spin off, exchange and sell certain cable systems

Operating costs and expenses for our segments is discussed separately below under the heading "Segment Operating Results." Operating costs and expenses for our other businesses is discussed separately below under the heading "Corporate and Other Results of Operations."

### Consolidated Depreciation and Amortization

Year ended December 31 (in millions)	2016	2015	2014	% Change 2015 to 2016	% Change 2014 to 2015
Cable Communications	\$ 7,670	\$ 7,051	\$ 6,436	8.8%	9.6%
NBCUniversal	1,805	1,539	1,495	17.3	2.9
Corporate and Other	83	90	88	(7.3)	1.3
<b>Comcast Consolidated</b>	<b>\$ 9,558</b>	<b>\$ 8,680</b>	<b>\$ 8,019</b>	<b>10.1%</b>	<b>8.2%</b>

Consolidated depreciation and amortization expense increased in 2016 and 2015 primarily due to increases in capital expenditures, as well as expenditures for software, in our Cable Communications segment in recent years. We continue to invest to increase our network capacity and in customer premise equipment, primarily for our X1 platform and cloud DVR technology and for wireless gateways. In addition, because these assets generally have shorter estimated useful lives, our depreciation expenses have increased and we expect this will continue in 2017. NBCUniversal depreciation and amortization expense also increased due to the acquisition of the 51% interest in Universal Studios Japan in November 2015 and our investments in new attractions in the Theme Parks segment.

### Segment Operating Results

Our segment operating results are presented based on how we assess operating performance and internally report financial information. We use operating income (loss) before depreciation and amortization, excluding impairment charges related to fixed and intangible assets and gains or losses from the sale of assets, if any, as the measure of profit or loss for our operating segments. This measure eliminates the significant level of noncash depreciation and amortization expense that results from the capital-intensive nature of certain of our businesses and from intangible assets recognized in business combinations. Additionally, it is unaffected by our capital structure or investment activities. We use this measure to evaluate our consolidated operating performance and the operating performance of our operating segments and to allocate resources and capital to our operating segments. It is also a significant performance measure in our annual incentive compensation programs. We believe that this measure is useful to investors because it is one of the bases for comparing our operating performance with that of other companies in our industries, although our measure may not be directly comparable to similar measures used by other companies. Because we use operating income (loss) before depreciation and amortization to measure our segment profit or loss, we reconcile it to operating income, the most directly comparable financial measure calculated and presented in accordance with generally accepted accounting principles in the United States ("GAAP"), in the business segment footnote to our

**Table of Contents**

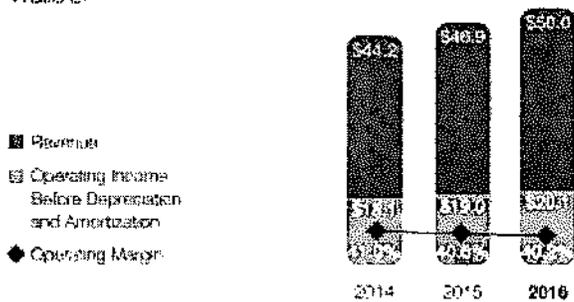

consolidated financial statements (see Note 17 to Comcast's consolidated financial statements and Note 16 to NBCUniversal's consolidated financial statements). This measure should not be considered a substitute for operating income (loss), net income (loss) attributable to Comcast Corporation or NBCUniversal, net cash provided by operating activities, or other measures of performance or liquidity we have reported in accordance with GAAP.

The revenue and operating costs and expenses associated with our broadcasts of the 2016 Rio Olympics and the Sochi Olympics in February 2014 were reported in our Cable Networks and Broadcast Television segments. The revenue and operating costs and expenses associated with our broadcast of the 2015 Super Bowl were reported in our Broadcast Television segment.

We have adjusted prior period segment operating results to reflect certain changes in our management reporting presentation. See Note 17 to Comcast's consolidated financial statements for additional information on these changes.

Video customers	22,608	22,347	22,383	161	(36)	(194)
High-speed Internet customers	24,701	23,329	21,962	1,373	1,367	1,277
Voice customers	11,687	11,475	11,193	211	282	470
<b>Average monthly total revenue per customer relationship</b>	<b>\$ 148.26</b>	<b>\$ 142.89</b>	<b>\$ 137.04</b>			

Customer metrics include residential and business customers and are presented based on actual amounts. Minor differences may exist due to rounding.

(a) Customer relationships represent the number of residential and business customers that subscribe to at least one of our cable services. Single product, double product and triple product customers represent customers that subscribe to one, two or three of our cable services, respectively.

**Cable Communications Segment – Revenue**

## Video

Our Cable Communications segment offers a broad variety of video service packages that may include premium networks, pay-per-view services and our On Demand service. Our video customers may subscribe for additional fees to our high-definition ("HD") video and digital video recorder ("DVR") advanced services. We are actively deploying set-top boxes for our Internet Protocol ("IP") and cloud-enabled video platform, referred to as our X1 platform, and cloud DVR technology throughout our footprint.

## Table of Contents

Video revenue increased 3.9% and 3.6% in 2016 and 2015, respectively. The increases in revenue in both years were primarily due to rate adjustments and an increase in the number of residential customers subscribing to additional services such as premium channels and advanced services, which accounted for increases in revenue of 3.9% and 4.5% in 2016 and 2015, respectively. As of December 31, 2016, 14.8 million customers subscribed to at least one of our HD or DVR advanced services compared to 13.9 million customers and 13.0 million customers as of December 31, 2015 and 2014, respectively. Net additional video customers increased in 2016 primarily due to reduced customer churn, which we believe is a result of our continued deployment of our X1 platform as well as improvements we have made in the customer experience. The increase in revenue in 2015 was partially offset by a decrease in the number of residential video customers, which was primarily due to competitive pressures and the impact of rate adjustments.

As of December 31, 2016, 39.9% of the homes and businesses in the areas we serve subscribed to our video services, compared to 40.1% and 40.9% as of December 31, 2015 and 2014, respectively. We have in the past, and may in the future, experience declines in the number of residential video customers due to competitive pressures and the impact of rate adjustments.

### High-Speed Internet

We offer high-speed Internet services with downstream speeds from a range of up to 10 Mbps to fiber-based speeds up to 2 Gbps. We are actively deploying wireless gateways throughout our footprint, which combine a customer's wireless router, cable modem and voice adapter, to improve the performance of multiple IP-enabled devices used at the same time within the home, provide faster Internet speeds and create an in-home Wi-Fi network. We are continuing to expand our network of residential, outdoor and business Wi-Fi hotspots to allow most of our high-speed Internet customers to access our high-speed Internet services inside and outside the home. As of December 31, 2016, there were approximately 15.8 million of these hotspots.

High-speed Internet revenue increased 8.5% and 10.2% in 2016 and 2015, respectively. Increases in the number of residential customers receiving our high-speed Internet services accounted for increases in revenue of 5.8% in both 2016 and 2015. The remaining increases in revenue in both 2016 and 2015 were primarily due to increases in the number of customers receiving higher levels of service and the impact of rate adjustments.

As of December 31, 2016, 43.8% of the homes and businesses in the areas we serve subscribed to our high-speed Internet services, compared to 41.9% and 40.2% as of December 31, 2015 and 2014, respectively. Our customer base continues to grow as consumers choose our high-speed Internet service and seek higher-speed offerings.

### Voice

We offer voice services that provide local and long-distance calling and other related features.

Voice revenue decreased 1.9% and 1.7% in 2016 and 2015, respectively. While the number of residential customers receiving voice services through our discounted bundled service offerings increased in both years, revenue was negatively impacted by the allocation of voice revenue for our customers who receive bundled services. The amount allocated to voice revenue in the rate charged for bundled services decreased in both years because video and high-speed Internet rates increased while voice rates remained relatively flat.

As of December 31, 2016, 20.7% of the homes and businesses in the areas we serve subscribed to our voice services, compared to 20.6% and 20.5% as of December 31, 2015 and 2014, respectively.

## Table of Contents

### Business Services

We offer our cable services to small and medium-sized businesses and to large enterprises with multiple locations. We offer Ethernet network services that connect multiple locations and provide higher downstream and upstream speed options to medium-sized businesses and large enterprises. We also provide cellular backhaul services to mobile network operators to help those customers manage network bandwidth.

Business services revenue increased 16.1% and 20.0% in 2016 and 2015, respectively. The increase in 2016 was primarily due to an increase in the number of small business customers, as well as continued growth in our medium-sized business services, including Ethernet network and advanced voice services. The increase in 2015 was primarily due to an increase in the number of small business customers receiving our high-speed Internet and voice services and rate adjustments. In 2016, 2015 and 2014, our small business customers represented more than 70% of total business services revenue. We believe the increases in the number of business customers were primarily the result of our efforts to gain market share from competitors by offering competitive services and pricing, although the rate of growth in the number of our small business customers may slow as the business matures.

### Advertising

Our Cable Communications segment also sells advertising. As part of our distribution agreements with cable networks, we generally receive an allocation of scheduled advertising time on cable networks that we sell through our advertising business, Spotlight, to local, regional and national advertisers. In most cases, the available advertising units are sold by our sales force. In some cases, we work with representation firms as an extension of our sales force to sell a portion of the advertising units allocated to us. We also represent the advertising sales efforts of other multichannel video providers in some markets. In addition, we generate revenue from the sale of advertising online and on our On Demand service. Advertising revenue is affected by the strength of the advertising market and general economic conditions.

Advertising revenue increased 9.6% in 2016 primarily due to an increase in political advertising revenue. Advertising revenue decreased 3.8% in 2015 primarily due to a decrease in political advertising revenue. Excluding the impact of political advertising revenue, advertising revenue increased slightly in 2016 and 3.0% in 2015.

In 2016, 5% of our Cable Communications segment advertising revenue was generated from our NBCUniversal segments, compared to 6% and 5% in 2015 and 2014, respectively. These amounts are eliminated in our consolidated financial statements but are included in the amounts presented above.

### Other

Other revenue primarily includes revenue related to cable franchise and other regulatory fees. We also receive revenue related to fees from other services, such as our home security and automation services. Cable franchise and other regulatory fees represent the fees we are required to pay to federal, state and local authorities that we pass through to our customers. Under the terms of our cable franchise agreements, we are generally required to pay to the cable franchising authority an amount based on our gross video revenue. The changes in franchise and other regulatory fees collected from our cable services customers are generally due to changes in the revenue to which the fees apply.

Other revenue increased 13.8% and 11.3% in 2016 and 2015, respectively, primarily due to increases in cable franchise and other regulatory fees, revenue from our home security and automation services and revenue from other services.

Table of Contents**Cable Communications Segment – Operating Costs and Expenses****Programming Expenses**

Programming expenses, which represent our most significant operating expense, are the fees we incur to provide content to our video customers. These expenses are affected by the programming license fees charged by cable networks, the fees charged for retransmission of the signals from local broadcast television stations, the number of video customers we serve and the amount of content we provide. Programming expenses increased in 2016 and 2015 primarily due to increases in programming license fees, including retransmission consent fees, sports programming costs and fees to secure rights for additional programming for distribution across an increasing number of platforms.

We anticipate that our programming expenses will increase at a higher growth rate in 2017, as the fees we pay will increase primarily due to the timing of contract renewals and increases in retransmission consent fees and sports programming costs; as we provide additional content to our video customers; and as we deliver this content through an increasing number of platforms, including On Demand, online and through our mobile apps. We believe that adding more content and delivering it on various platforms will help us to attract and retain video customers.

**Technical and Product Support Expenses**

Technical and product support expenses include costs to complete service call and installation activities, as well as costs for network operations, product development, fulfillment and provisioning. Technical and product support expenses increased in 2016 and 2015 primarily due to expenses related to the development, delivery and support of our enhanced devices and services, including our X1 platform, cloud DVR technology and wireless gateways, and continued growth in business services and home security and automation services. The increases in both years were also due to expenses related to investments to improve the customer experience.

**Customer Service Expenses**

Customer service expenses include the personnel and other costs associated with handling the sale of services to customers and customer service activity. Customer service expenses increased in 2016 and 2015 primarily due to increased support for improving the customer experience and increases in total labor costs, which reflect sales and support activities associated with the continued deployment of our enhanced devices and services, including our X1 platform and wireless gateways, and continued growth in business services and home security and automation services. The rate of growth of our customer service expenses decreased in 2016 primarily due to reduced call volumes.

**Franchise and Other Regulatory Fees**

Franchise and other regulatory fees increased in 2016 and 2015 primarily due to increases in the revenue to which the fees apply.

**Advertising, Marketing and Promotion Expenses**

Advertising, marketing and promotion expenses increased in 2016 and 2015 primarily due to increases in spending associated with attracting new residential and business services customers and encouraging existing customers to add additional or higher-tier services.

**Other Operating Costs and Expenses**

Other operating costs and expenses increased in 2016 and 2015 primarily due to increases in costs to support our advertising sales business, as well as increases in other administrative costs.

## Table of Contents

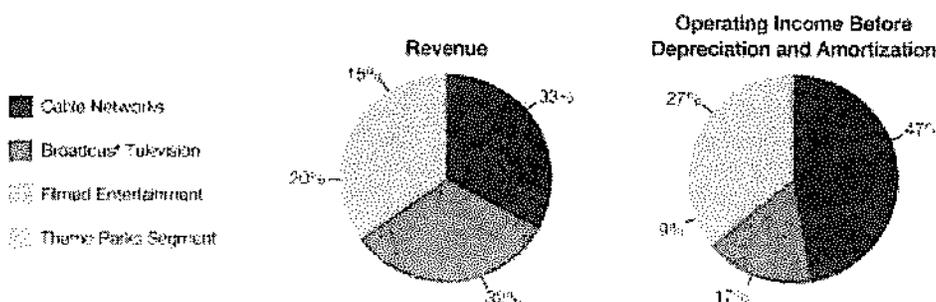

### Cable Communications Segment – Operating Margin

Our Cable Communications segment operating margin is operating income before depreciation and amortization as a percentage of revenue. The most significant operating margin costs and expenses for our Cable Communications segment are the programming expenses we incur to provide content to our video customers. We expect that our programming expenses will continue to increase, which may negatively impact our operating margin. We will attempt to mitigate increases in operating costs and expenses by growing revenue, particularly in our high-speed Internet, video and business services businesses and through cost management.

Our operating margin in 2016, 2015 and 2014 was 40.2%, 40.6% and 41.0%, respectively.

(a) Pro forma adjustments are presented as if the acquisition of the 51% interest of Universal Studios Japan occurred on January 1, 2014. Pro forma information does not include adjustments for transaction-related costs, costs related to integration activities, or cost savings or synergies that have been or may be achieved by the combined businesses. The pro forma amounts are primarily based on historical results of operations, adjusted for the allocation of purchase price, and are not necessarily indicative of what our results would have been had we operated Universal Studios Japan since January 1, 2014, nor of our future results.

## Table of Contents

### **Cable Networks Segment – Revenue**

#### Distribution

Distribution revenue is generated from the distribution of our cable network programming to multichannel video providers and is affected by the number of subscribers receiving our cable networks and the fees we charge per subscriber.

Distribution revenue increased in 2016 primarily due to increases in the contractual rates charged under distribution agreements and contract renewals, as well as \$298 million of revenue associated with our broadcast of the 2016 Rio Olympics, which were partially offset by a decline in the number of subscribers at some of our cable networks. Distribution revenue increased in 2015 primarily due to increases in the contractual rates charged under distribution agreements that were partially attributable to the premiere of NASCAR programming on the NBC Sports Network in 2015. The increases in 2015 were partially offset by a decrease in revenue from a decline in the number of subscribers at some of our cable networks and \$177 million of revenue in 2014 associated with our broadcast of the 2014 Sochi Olympics. Excluding revenue associated with our broadcasts of the 2016 Rio Olympics and the 2014 Sochi Olympics, distribution revenue increased 5.8% and 6.5% in 2016 and 2015, respectively.

#### Advertising

Advertising revenue is generated from the sale of advertising units sold on our cable networks and related digital media properties. Advertising revenue is primarily based on the price we charge for each advertising unit, which is generally based on audience ratings, the value of our viewer demographics to advertisers and the number of advertising units we can place in our cable networks' programming schedules. Advertising revenue is affected by the audience ratings of our programming, the strength of the national advertising market and general economic conditions. Audience ratings at our cable networks have declined, which has negatively affected advertising revenue in recent years, and may continue to decline as the number of programming choices, such as subscription video on demand services, continues to increase and as more viewers use DVRs and video on demand services to view our content outside of traditional audience ratings measurement periods.

Advertising revenue increased in 2016 primarily due to \$134 million of revenue associated with our broadcast of the 2016 Rio Olympics. Also, higher prices for advertising units were offset by the impact of declining audience ratings. Advertising revenue decreased in 2015 primarily due to \$80 million of revenue in 2014 associated with our broadcast of the 2014 Sochi Olympics. In addition, the impact of declining audience ratings in 2015 was partially offset by higher prices for, and an increase in the volume of, advertising units sold, as well as increased advertising revenue associated with the broadcast of NASCAR programming. Excluding revenue associated with our broadcasts of the 2016 Rio Olympics and the 2014 Sochi Olympics, advertising revenue decreased slightly in 2016 and increased slightly in 2015 due to the broadcast of NASCAR programming.

#### Content Licensing and Other

Content licensing and other revenue is generated primarily from the licensing of our owned programming in the United States and internationally to cable and broadcast networks and subscription video on demand services, as well as from the sale of our owned programming on DVDs and through digital distribution services such as iTunes. In addition, our cable television studio production operations generate revenue from programming it produces for third-party networks and subscription video on demand services.

Content licensing and other revenue increased in 2016 and decreased in 2015 primarily due to the timing of content provided under our licensing agreements.

## Table of Contents

In 2016, 2015 and 2014, 14%, 13% and 12%, respectively, of our Cable Networks segment revenue was generated from our Cable Communications segment. These amounts are eliminated in Comcast's consolidated financial statements but are included in the amounts presented above.

### **Cable Networks Segment – Operating Costs and Expenses**

#### Programming and Production Costs

Programming and production costs include the amortization of owned and acquired programming, sports rights, direct production costs, residual and participation payments, production overhead, costs associated with the distribution of our programming to third-party networks and other distribution platforms, and on-air talent costs.

Programming and production costs increased in 2016 primarily due to our broadcast of the 2016 Rio Olympics, as well as an increase in other sports programming rights costs. Programming and production costs increased in 2015 primarily due to our continued investment in programming, including the premiere of NASCAR programming and other sports programming rights costs. These increases in 2015 were partially offset by costs in 2014 associated with our broadcast of the 2014 Sochi Olympics.

#### Other Operating and Administrative Costs and Expenses

Other operating and administrative costs and expenses include salaries, employee benefits, rent and other overhead expenses, and these costs increased in 2016 and 2015 primarily due to increases in employee-related costs.

#### Advertising, Marketing and Promotion Expenses

Advertising, marketing and promotion expenses consist primarily of the costs associated with promoting programming on our cable networks and related digital media properties. These expenses decreased in 2016 and increased in 2015 primarily due to increased spending on marketing in 2015 related to the launch of new programming on our cable networks.

### **Broadcast Television Segment Results of Operations**

## Table of Contents

### **Broadcast Television Segment – Revenue**

#### Advertising

Advertising revenue is generated from the sale of advertising units sold on our broadcast networks, owned local television stations and related digital media properties. Advertising revenue is primarily based on the price we charge for each advertising unit, which is generally based on audience ratings and the value of our viewer demographics to advertisers, and the number of advertising units we can place in our broadcast networks' and owned local television stations' programming schedules. Advertising revenue is affected by the strength of the national and local advertising markets, general economic conditions, cyclicity related to political campaigns and issue-oriented advertising, and the success and ratings of our programming.

Advertising revenue increased in 2016 primarily due to \$1.0 billion of revenue associated with our broadcast of the 2016 Rio Olympics. Advertising revenue also increased due to higher prices for advertising units sold, the premiere of *Thursday Night Football* and higher political advertising, which was partially offset by revenue in 2015 associated with our broadcast of the 2015 Super Bowl and a decline in audience ratings. Advertising revenue decreased in 2015 primarily due to \$730 million of revenue in 2014 associated with our broadcast of the 2014 Sochi Olympics, which was partially offset by \$376 million of revenue in 2015 associated with our broadcast of the 2015 Super Bowl. Excluding revenue associated with our broadcasts of the 2016 Rio Olympics and the 2015 Super Bowl, revenue increased 7.7% in 2016. Excluding revenue associated with our broadcasts of the 2015 Super Bowl and the 2014 Sochi Olympics, revenue increased 4.1% in 2015 primarily due to higher prices for, and an increase in the volume of, advertising units sold.

#### Content Licensing

Content licensing revenue is generated from the licensing of our owned programming in the United States and internationally to various distribution platforms, including to cable and broadcast networks, as well as to subscription video on demand services. In addition, our broadcast television studio production operations develop and produce original content that they license to broadcast networks, cable networks and local broadcast television stations owned by us and third parties, as well as to subscription video on demand services. The production and distribution costs related to our owned programming generally exceed the revenue generated from the initial network license, which means the subsequent licensing of our owned programming series following the initial network license is critical to their financial success.

Content licensing revenue increased in 2016 and 2015 primarily due to the timing of content provided under our licensing agreements.

#### Distribution and Other

We generate distribution and other revenue primarily from fees for retransmission consent of our owned local broadcast television stations and associated fees received from NBC-affiliated local broadcast television stations, as well as from the sale of our owned programming on DVDs and through digital distribution services. The sale of our owned programming is driven primarily by the popularity of our broadcast networks and programming series and therefore fluctuates based on consumer spending and acceptance. Distribution and other revenue also includes distribution revenue associated with our periodic broadcasts of the Olympic Games.

Distribution and other revenue increased in 2016 primarily due to increases in fees recognized under our retransmission consent agreements, as well as \$140 million of distribution revenue associated with our broadcast of the 2016 Rio Olympics. Distribution and other revenue decreased in 2015 primarily due to \$116 million of distribution revenue in 2014 that was associated with our broadcast of the 2014 Sochi Olympics. The decrease was partially offset by an increase in fees recognized under our retransmission consent agreements, as well as new syndication agreements entered into in 2015.

## Table of Contents

### **Broadcast Television Segment – Operating Costs and Expenses**

#### Programming and Production Costs

Programming and production costs relate to content originating on our broadcast networks and owned local broadcast television stations, as well as owned content that is licensed to third parties. These costs include the amortization of owned and acquired programming costs, sports rights, direct production costs, residual and participation payments, production overhead, costs associated with the distribution of our programming to third-party networks and other distribution platforms, and on-air talent costs.

Programming and production costs increased in 2016 primarily due to our broadcast of the 2016 Rio Olympics, as well as our broadcast of *Thursday Night Football*, which were partially offset by costs in 2015 associated with our broadcast of the 2015 Super Bowl. Programming and production costs decreased in 2015 primarily due to costs in 2014 associated with our broadcast of the 2014 Sochi Olympics, which was partially offset by costs associated with our broadcast of the 2015 Super Bowl, the timing of content provided under our licensing agreements and higher studio production costs.

#### Other Operating and Administrative Costs and Expenses

Other operating and administrative costs and expenses include salaries, employee benefits, rent and other overhead expenses, and these costs increased in 2016 and 2015 primarily due to increases in employee-related costs.

#### Advertising, Marketing and Promotion Expenses

Advertising, marketing and promotion expenses consist primarily of the costs associated with promoting our owned and acquired television programming, as well as the marketing of DVDs and costs associated with our related digital media properties. These expenses decreased in 2016 and increased in 2015 primarily due to increased spending on marketing in 2015 associated with our NBC primetime lineup.

### **Filmed Entertainment Segment Results of Operations**

### **Filmed Entertainment Segment – Revenue**

#### Theatrical

Theatrical revenue is generated from the worldwide theatrical release of our owned and acquired films for exhibition in movie theaters and is significantly affected by the timing of each release and the number of films

## Table of Contents

we distribute, as well as their acceptance by audiences. Theatrical revenue is also affected by the number of exhibition screens, ticket prices, the percentage of ticket sale retention by the exhibitors and the popularity of competing films at the time our films are released. The success of a film in movie theaters is a significant factor in determining the revenue a film is likely to generate in succeeding distribution platforms.

Theatrical revenue decreased in 2016 and increased in 2015 primarily due to the strong performance of our larger 2015 film slate, including *Furious 7*, *Jurassic World* and *Minions*. The decrease in 2016 was partially offset by the strong performance of *The Secret Life of Pets* and *Sing* in 2016.

### Content Licensing

Content licensing revenue is generated primarily from the licensing of our owned and acquired films to cable, broadcast and premium networks, as well as to subscription video on demand services.

Content licensing revenue increased in 2016 and 2015 primarily due to the timing of when content was made available under licensing agreements. The increase in 2016 was partially due to the timing of when content related to our 2015 film slate was made available under licensing agreements.

### Home Entertainment

Home entertainment revenue is generated from the sale of our owned and acquired films on DVDs to retail stores, rental kiosks and subscription by mail services, and in digital formats. Home entertainment revenue is significantly affected by the timing and number of our releases and their acceptance by consumers. Release dates are determined by several factors, including the timing of the exhibition of a film in movie theaters, holiday periods and the timing of competitive releases. The overall DVD market continues to experience declines due to the maturation of the standard-definition DVD format, increasing shifts in consumer behavior toward digital distribution services, and subscription rental services, all of which generate less revenue per transaction than DVD sales, as well as due to piracy.

Home entertainment revenue decreased in 2016 and increased in 2015 primarily due to the strong performance of our 2015 releases, including *Minions* and *Jurassic World*. The decrease in 2016 was partially offset by the home entertainment sales of *Jason Bourne* and *The Secret Life of Pets*.

### Other

We also generate revenue from producing and licensing live stage plays, from distributing filmed entertainment produced by third parties, from Fandango, our movie ticketing and entertainment business, and from the sale of consumer products.

Other revenue increased in 2016 and 2015 primarily due to increases in revenue generated from Fandango.

## **Filmed Entertainment Segment – Operating Costs and Expenses**

### Programming and Production Costs

Programming and production costs include the amortization of capitalized film production and acquisition costs, residual and participation payments, and distribution expenses. Residual payments represent amounts payable to certain of our employees who are represented by labor unions or guilds, including freelance and temporary employees, and are based on post-theatrical revenue. Participation payments are primarily based on film performance and represent contingent consideration payable to creative talent, third parties that have entered into cofinancing agreements with us and other parties involved in the production of a film. The costs associated with producing films have generally increased in recent years and may continue to increase in the future.

## Table of Contents

Programming and production costs decreased in 2016 and increased in 2015 primarily due to higher amortization of film production costs in 2015 associated with our larger 2015 film slate, which included *Furious 7*, *Jurassic World* and *Minions*.

### Other Operating and Administrative Costs and Expenses

Other operating and administrative costs and expenses include salaries, employee benefits, rent and other overhead expenses.

Other operating and administrative expenses increased in 2016 primarily due to costs attributable to DreamWorks Animation, including \$61 million of severance costs. Other operating and administrative expenses increased slightly in 2015 due to increased expenses associated with our larger film slate.

### Advertising, Marketing and Promotion Expenses

Advertising, marketing and promotion expenses consist primarily of expenses associated with advertising for our theatrical releases and the marketing of our films on DVDs and in digital formats. We incur significant marketing expenses before and throughout the release of a film in movie theaters. As a result, we typically incur losses on a film prior to and during the film's exhibition in movie theaters and may not realize profits, if any, until the film generates home entertainment and content licensing revenue. The costs associated with marketing films have generally increased in recent years and may continue to increase in the future.

Advertising, marketing and promotion expenses decreased in 2016 and increased in 2015 primarily due to higher promotional costs associated with our larger 2015 film slate. The decrease in 2016 was partially offset due to advertising in 2016 for our domestic and international film slate. Advertising, marketing and promotion expenses also increased in 2015 due to increased advertising expenses associated with Fandango.

## Theme Parks Segment Actual and Pro Forma Results of Operations

Year ended December 31 (in millions)	2016	2015			% Change 2015 to 2016

### Theme Parks Segment – Revenue

Our Theme Parks segment revenue is generated primarily from ticket sales and guest spending at our Universal theme parks. Guest spending includes in-park spending on food, beverages and merchandise. Guest attendance at our theme parks and guest spending depend heavily on the general environment for travel and tourism, including consumer spending on travel and other recreational activities.

## Table of Contents

Theme Parks segment revenue increased in 2016 compared to the pro forma combined revenue in 2015 primarily due to increases in guest spending and higher guest attendance driven by the successful opening of *The Wizarding World of Harry Potter™* attraction in Hollywood in April 2016, as well as the positive impact of foreign currency translation due to the strengthening of the Japanese yen. The strengthening of the Japanese yen accounted for approximately one-third of the increase in revenue for 2016.

Theme Parks segment pro forma combined revenue increased in 2015 compared to the pro forma combined revenue in 2014 primarily due to higher guest attendance and increases in guest spending at our Universal theme parks. The increase in 2015 was primarily due to the success of our attractions, including *The Wizarding World of Harry Potter™ — Diagon Alley™* in Orlando, which opened in 2014, and the *Fast & Furious™ — Supercharged™* studio tour and *The Simpson's Springfield* attraction in Hollywood, both of which opened in 2015.

### **Theme Parks Segment – Operating Costs and Expenses**

Our Theme Parks segment operating costs and expenses consist primarily of theme park operations, including repairs and maintenance and related administrative expenses; food, beverage and merchandise costs; labor costs; and sales and marketing costs.

Theme Parks segment operating costs and expenses increased in 2016 compared to the pro forma combined operating costs and expenses in 2015 primarily due to additional costs associated with newer attractions, such as *The Wizarding World of Harry Potter™* attraction in Hollywood and *Skull Island: Reign of Kong™* attraction in Orlando, as well as the impact of foreign currency translation due to the strengthening on the Japanese yen.

Theme Parks segment pro forma combined operating costs and expenses in 2015 increased compared to the pro forma combined operating costs and expenses in 2014 primarily due to additional costs associated with newer attractions, such as the *Fast & Furious™ — Supercharged™* studio tour in Hollywood, and increases in food, beverage and merchandise costs associated with higher guest attendance.

The strengthening of the Japanese yen accounted for approximately one-third of the increase in operating income before depreciation and amortization in 2016.

### **NBCUniversal Headquarters, Other and Eliminations**

Headquarters and Other operating costs and expenses incurred by our NBCUniversal businesses include overhead, personnel costs and costs associated with corporate initiatives. Operating costs and expenses increased in 2016 and 2015 primarily due to higher employee-related costs.

### **Corporate and Other Results of Operations**

Year ended December 31 (in millions)	2016	2015	2014	% Change 2015 to 2016	% Change 2014 to 2015
<b>Revenue</b>	\$ 750	\$ 713	\$ 683	5.1%	4.4%
Operating costs and expenses	1,624	1,528	1,446	6.2	5.7
<b>Operating loss before depreciation and amortization</b>	\$ (874)	\$ (815)	\$ (763)	(7.1)%	(6.9)%

### **Corporate and Other – Revenue**

Other revenue primarily relates to Comcast Spectacor, which owns the Philadelphia Flyers and the Wells Fargo Center arena in Philadelphia, Pennsylvania and operates arena management-related businesses.

## Table of Contents

Other revenue increased in 2016 primarily due to increases in revenue from several of our Comcast Spectacor businesses. Other revenue increased in 2015 primarily due to an increase in revenue from food and other services associated with new contracts entered into by one of our Comcast Spectacor businesses.

### **Corporate and Other – Operating Costs and Expenses**

Corporate and Other operating costs and expenses primarily include overhead, personnel costs, the costs of corporate initiatives and branding, and operating costs and expenses associated with Comcast Spectacor.

Corporate and Other operating costs and expenses increased in 2016 due to an increase in expenses related to corporate activities and initiatives, including expenses associated with our anticipated wireless phone service offering. Corporate and Other operating costs and expenses increased in 2015 due to an increase in expenses related to corporate initiatives and an increase in operating costs and expenses at Comcast Spectacor that was primarily associated with new contracts entered into by one of its businesses. In addition, Corporate and Other operating costs and expenses in 2015 and 2014 included \$178 million and \$237 million, respectively, of transaction-related costs associated with the Time Warner Cable merger and related divestiture transactions.

### **Consolidated Other Income (Expense) Items, Net**

Year ended December 31 (in millions)	2016	2015	2014
Interest expense	\$ (2,942)	\$ (2,702)	\$ (2,617)
Investment income (loss), net	213	81	296
Equity in net income (losses) of investees, net	(104)	(325)	97
Other income (expense), net	327	320	(215)
<b>Total</b>	<b>\$ (2,506)</b>	<b>\$ (2,626)</b>	<b>\$ (2,439)</b>

### **Interest Expense**

Interest expense increased in 2016 primarily due to higher levels of debt outstanding, including the Universal Studios Japan term loans. Interest expense increased in 2015 primarily due to higher levels of debt outstanding and \$47 million of additional interest expense associated with the early redemption in June 2015 of our \$750 million aggregate principal amount of 5.85% senior notes due November 2015 and our \$1.0 billion aggregate principal amount of 5.90% senior notes due March 2016.

### **Investment Income (Loss), Net**

The change in investment income (loss), net in 2016 was primarily due to an increase in income of certain investments and gains recorded on the sale of certain investments. The change in investment income (loss), net in 2015 was primarily due to a \$154 million gain related to the sale of our shares of ARRIS Group, Inc. common stock in 2014. The components of investment income (loss), net are presented in a table in Note 7 to Comcast's consolidated financial statements.

### **Equity in Net Income (Losses) of Investees, Net**

The changes in equity in net income (losses) of investees, net in 2016 and 2015 were primarily due to an impairment charge related to goodwill recorded by The Weather Channel in 2015. We recorded expenses of \$333 million that represented NBCUniversal's proportionate share of the impairment charge. In addition, the changes in 2016 and 2015 were also due to increases in our proportionate share of losses at Hulu, LLC, which were driven by Hulu's higher programming and marketing costs. In 2016, 2015 and 2014, we recognized our proportionate share of losses at Hulu of \$168 million, \$106 million and \$20 million respectively. The change in 2016 was also due to our proportionate share of losses at Atairos Group, Inc., which commenced operations in 2016.

## Table of Contents

### **Other Income (Expense), Net**

Other income (expense), net for 2016 included \$225 million recognized in connection with the settlement of amounts owed to us under an agency agreement that had provided for, among other things, Verizon Wireless' sale of our cable services and \$108 million related to the sale of our investment in The Weather Channel's product and technology business to IBM.

Other income (expense), net for 2015 included gains of \$335 million on the sales of a business and an investment, \$240 million recorded on the settlement of a contingent consideration liability with General Electric Company related to the acquisition of NBCUniversal, and \$43 million related to an equity method investment. These gains were partially offset by \$236 million of expenses related to fair value adjustments to a contractual obligation.

Other income (expense), net for 2014 included a \$27 million favorable settlement of a contingency related to the AT&T Broadband transaction in 2002, which was more than offset by \$208 million of expenses related to fair value adjustments to a contractual obligation and \$35 million of expenses related to an indemnification receivable associated with an adjustment to our accruals for uncertain tax positions.

### **Consolidated Income Tax Expense**

Income tax expense reflects federal and state income taxes and adjustments associated with uncertain tax positions. Our effective income tax rate in 2016, 2015 and 2014 was 37.0%, 37.1% and 31.1%, respectively.

In 2014, we reduced our accruals for uncertain tax positions and the related accrued interest on these tax positions and, as a result, our income tax expense decreased by \$759 million. See Note 14 to Comcast's consolidated financial statements for additional information on the changes in our accruals for uncertain tax positions and related interest on these tax positions.

We expect our 2017 annual effective tax rate to be in the range of 35% to 37%, absent changes in tax laws or significant changes in uncertain tax positions. The expected annual effective tax rate includes the impact of the adoption of the new accounting guidance related to share-based compensation (see Note 3 to Comcast's consolidated financial statements). If significant tax legislation is enacted in 2017 that includes a change to the federal statutory rate, this could significantly impact our deferred income taxes. For example, using information as of December 31, 2016, for each 1% change in the federal statutory rate, our deferred income tax liability would change by \$850 million, which would primarily result in a corresponding change to income tax expense.

### **Consolidated Net (Income) Loss Attributable to Noncontrolling Interests and Redeemable Subsidiary Preferred Stock**

The increases in net income attributable to noncontrolling interests and redeemable subsidiary preferred stock in 2016 and 2015 were primarily due to NBCUniversal's acquisition of the 51% interest in Universal Studios Japan.

### **Liquidity and Capital Resources**

Our businesses generate significant cash flows from operating activities. We believe that we will be able to continue to meet our current and long-term liquidity and capital requirements, including fixed charges, through our cash flows from operating activities; existing cash, cash equivalents and investments; available borrowings under our existing credit facilities; and our ability to obtain future external financing. We anticipate that we will continue to use a substantial portion of our cash flows in repaying our debt obligations, funding our capital expenditures, investing in business opportunities and returning capital to shareholders.

## Table of Contents

We also maintain significant availability under our lines of credit and our commercial paper programs to meet our short-term liquidity requirements. Our commercial paper programs provide a lower-cost source of borrowing to fund our short-term working capital requirements. See Note 10 and Note 19 to Comcast's consolidated financial statements for additional information on the Comcast and NBCUniversal Enterprise revolving credit facilities and the related guarantees.

As of December 31, 2016, amounts available under our consolidated credit facilities, net of amounts outstanding under our commercial paper programs and outstanding letters of credit, totaled \$5.5 billion, which included \$460 million available under the NBCUniversal Enterprise revolving credit facility.

We, NBCUniversal and Comcast Cable Communications, LLC are subject to the covenants and restrictions set forth in the indentures governing our public debt securities and in the credit agreements governing the Comcast revolving credit facility. The only financial covenant is in the credit facility and pertains to leverage, which is the ratio of debt to operating income before depreciation and amortization, as defined in the credit facility. We test for compliance with this financial covenant on an ongoing basis. As of December 31, 2016, we met this financial covenant by a significant margin. We do not expect to have to reduce debt or improve operating results in order to continue to comply with this financial covenant. In addition, the Universal Studios Japan term loans contain certain financial covenants. As of December 31, 2016, Universal Studios Japan was in compliance with all of these covenants.

## **Operating Activities**

### Components of Net Cash Provided by Operating Activities

Year ended December 31 (in millions)	2016	2015	2014
Operating income	\$ 16,859	\$ 15,998	\$ 14,904
Depreciation and amortization	9,558	8,680	8,019
Operating income before depreciation and amortization	26,417	24,678	22,923
Noncash share-based compensation	640	567	513
Changes in operating assets and liabilities	(1,782)	(267)	(357)
Cash basis operating income	25,275	24,978	23,079
Payments of interest	(2,565)	(2,443)	(2,389)
Payments of income taxes	(3,693)	(3,726)	(3,668)
Proceeds from investments and other	456	251	190
Excess tax benefits under share-based compensation	(233)	(282)	(267)
Net cash provided by operating activities	\$ 19,240	\$ 18,778	\$ 16,945

The variance in changes in operating assets and liabilities in 2016 compared to 2015 was primarily due to the timing of film and television production spending and related costs, net of amortization, including certain sports programming obligations; the recognition of deferred revenue associated with the broadcast of the 2016 Rio Olympics; an increase in certain benefit payments; and the payment of a tax receivable agreement that DreamWorks Animation entered into with one of its former stockholders prior to our acquisition. The variance in changes in operating assets and liabilities in 2015 compared to 2014 was primarily related to the timing of film and television production spending and related costs, net of amortization; the timing of payments related to our accounts payable and accrued expenses related to trade creditors; and increases in deferred revenue associated with our Olympics broadcasts, which were partially offset by the timing of collections on our receivables.

The increases in interest payments in 2016 and 2015 were primarily due to higher levels of debt outstanding.

## Table of Contents

The decrease in income tax payments in 2016 was primarily due to taxable losses in 2016 related to the sale of certain investments as well as taxable gains in 2015 related to the sale of a business and investments partially offset by higher taxable income from operations. The increase in income tax payments in 2015 was primarily due to higher taxable income from operations offset by the timing of certain tax deductions. We expect income tax payments to increase in 2017 primarily due to higher taxable income from operations.

### **Investing Activities**

Net cash used in investing activities in 2016 consisted primarily of cash paid for capital expenditures, acquisitions, deposits, purchases of investments and intangible assets. Net cash used in investing activities in 2015 consisted primarily of cash paid for capital expenditures, acquisitions, intangible assets and purchases of investments, which was partially offset by proceeds from the sales of businesses and investments. Net cash used in investing activities in 2014 consisted primarily of cash paid for capital expenditures and intangible assets.

#### Capital Expenditures

Our most significant recurring investing activity has been capital expenditures in our Cable Communications segment, and we expect that this will continue in the future. The table below summarizes the capital expenditures we incurred in our Cable Communications segment in 2016, 2015 and 2014.

Year ended December 31 (in millions)	2016	2015	2014
Customer premise equipment	\$ 3,665	\$ 3,698	\$ 3,397
Scalable infrastructure	1,827	1,539	1,375
Line extensions	1,208	886	673
Support capital	896	917	711
<b>Total</b>	<b>\$ 7,596</b>	<b>\$ 7,040</b>	<b>\$ 6,156</b>

Cable Communications capital expenditures increased in 2016 and 2015 primarily due to increased investment in line extensions and increased spending in scalable infrastructure to increase network capacity, as well as continued spending on customer premise equipment related to the deployment of our X1 platform and wireless gateways.

Capital expenditures in our NBCUniversal segments increased 4.8% to \$1.5 billion in 2016 and 13.5% to \$1.4 billion in 2015 primarily due to continued investment in our Universal theme parks, including Universal Studios Japan and a purchase of land in 2015.

Our capital expenditures for 2017 are focused on continued investment in scalable infrastructure to increase network capacity; increased investment in line extensions primarily for the expansion of business services; and the continued deployment of wireless gateways, our X1 platform, and cloud DVR technology. In addition, we expect to continue to invest in existing and new attractions at our Universal theme parks. Capital expenditures for subsequent years will depend on numerous factors, including acquisitions, competition, changes in technology, regulatory changes, the timing and rate of deployment of new services, the capacity required for existing services, and the timing of new attractions at our theme parks. We are developing a Universal theme park in Beijing, China, and we expect to continue to develop this park throughout 2017.

#### Cash Paid for Intangible Assets

In 2016, 2015 and 2014, cash paid for intangible assets consisted primarily of expenditures for software in our Cable Communications segment.

#### Acquisitions and Construction of Real Estate Properties

Acquisitions and construction of real estate properties in 2016 and 2015 primarily included our investment in the construction of the Comcast Technology Center in Philadelphia, Pennsylvania.

## Table of Contents

### Acquisitions, Net of Cash Acquired

In August 2016, we acquired all of the outstanding stock of DreamWorks Animation. In November 2015, NBCUniversal acquired a 51% interest in Universal Studios Japan.

### Proceeds from Sales of Businesses and Investments

Proceeds from sales of businesses and investments in 2016 were primarily related to the sale of our investment in The Weather Channel's product and technology business to IBM. Proceeds from sales of businesses and investments in 2015 were primarily related to the sale of our investment in TV One, LLC and the sale of a business, CTI Towers Assets I, LLC. Proceeds from sales of businesses and investments in 2014 were primarily related to the sale of our investment in Arris Group and the sale of equity securities following the settlement of certain of our prepaid forward sale agreements.

### Purchases of Investments

Purchases of investments in 2016 were primarily related to capital contributions to Atairos and NBCUniversal's additional investment in BuzzFeed, Inc. Purchases of investments in 2015 were primarily related to NBCUniversal's investments in Vox Media, Inc. and BuzzFeed. Purchases of investments in 2014 were not significant.

### Financing Activities

Net cash provided by financing activities in 2016 consisted primarily of proceeds from new borrowings, which were partially offset by repurchases of our common stock, repayments of debt, dividend payments and our purchase of the remaining noncontrolling interest in Comcast Spectacor. Net cash used in financing activities in 2015 and 2014 consisted primarily of repurchases of our common stock, repayments of debt and dividend payments, which were partially offset by proceeds from new borrowings. Proceeds from borrowings fluctuate from year to year based on the amounts paid to fund acquisitions and debt repayments.

We have made, and may from time to time in the future make, optional repayments on our debt obligations, which may include repurchases of our outstanding public notes and debentures, depending on various factors, such as market conditions. See Note 10 to Comcast's consolidated financial statements for additional information on our financing activities, including details of our debt repayments and borrowings.

### Share Repurchases and Dividends

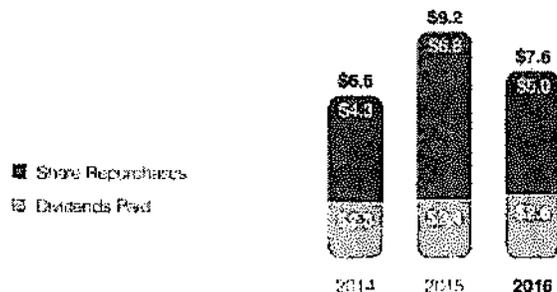

In 2016, we repurchased a total of 81 million shares of our Class A common stock for \$5.0 billion. Effective January 1, 2017, our Board of Directors increased our share repurchase program authorization to a total of \$12 billion, which does not have an expiration date. Under the authorization, we may repurchase shares in the open market or in private transactions. We expect to repurchase \$5.0 billion of our Class A common stock during 2017, subject to market conditions.

Our Board of Directors declared quarterly dividends totaling \$2.7 billion in 2016. We paid dividends of \$2.6 billion in 2016. In January 2017, our Board of Directors approved a 15% increase in our dividend to \$1.26 per share on an annualized, pre-split basis, or \$0.63 per share on an annualized, post-split basis. In addition, the Board of Directors approved our first quarter dividend of \$0.1575 a share on a post-split basis to be paid in April 2017. We expect to continue to pay quarterly dividends, although each dividend is subject to approval by our Board of Directors.

## Table of Contents

The table below sets forth information on our share repurchases and dividends paid in 2016, 2015 and 2014.

### Share Repurchases and Dividends Paid (in millions)

## Contractual Obligations

As of December 31, 2016 (in millions)	Payment Due by Period				
	Total	Year 1	Years 2-3	Years 4-5	More than 5
Debt obligations <sup>(a)</sup>	\$ 61,133	\$ 5,454	\$ 6,604	\$ 8,189	\$ 40,886
Capital lease obligations	238	29	65	71	73
Operating lease obligations	4,007	517	918	699	1,873
Purchase obligations <sup>(b)</sup>	51,649	9,978	11,404	8,538	21,729
Other long-term liabilities reflected on the balance sheet <sup>(c)</sup>	5,928	336	1,262	2,316	2,014
<b>Total<sup>(d)(e)</sup></b>	<b>\$ 122,955</b>	<b>\$ 16,314</b>	<b>\$ 20,253</b>	<b>\$ 19,813</b>	<b>\$ 66,575</b>

Refer to Note 10 and Note 16 to Comcast's consolidated financial statements.

(a) Excludes interest payments.

(b) Purchase obligations consist of agreements to purchase goods and services that are legally binding on us and specify all significant terms, including fixed or minimum quantities to be purchased and price provisions. Our purchase obligations related to our Cable Communications segment and other activities include programming contracts with cable networks and local broadcast television stations; contracts with customer premise equipment manufacturers; communications vendors and multichannel video providers for which we provide advertising sales representation; contracts to acquire handsets and other equipment; and other contracts entered into in the normal course of business. Cable Communications programming contracts in the table above include amounts payable under fixed or minimum guaranteed commitments and do not represent the total fees that are expected to be paid under programming contracts, which we expect to be significantly higher because these contracts are generally based on the number of subscribers receiving the programming. Our purchase obligations related to our NBCUniversal segments consist primarily of commitments to acquire film and television programming, including U.S. broadcast rights to future Olympic Games through 2032, *Sunday Night Football* through the 2022-23 season, including the Super Bowl in 2018 and 2021, *Thursday Night Football* through the 2017-18 season, NHL games through the 2020-21 season, Spanish-language U.S. broadcast rights to FIFA World Cup games through 2022, U.S. broadcast rights to English Premier League soccer games through the 2021-22 season, certain PGA TOUR and other golf events through 2030, and certain NASCAR events through 2024, as well as obligations under various creative talent agreements, including obligations to actors, producers and television personalities, and various other television commitments. Purchase obligations do not include contracts with immaterial future commitments.

(c) Other long-term liabilities reflected on the balance sheet consist primarily of subsidiary preferred shares; deferred compensation obligations; and postretirement, pension and postemployment benefit obligations. A contractual obligation with a carrying value of \$1.1 billion is not included in the table above because it is uncertain if the arrangement will be settled. The contractual obligation involves an interest held by a third party in the revenue of certain theme parks. The arrangement provides the counterparty with the right to periodic payments associated with current period revenue and, beginning in June 2017, the option to require NBCUniversal to purchase the interest for cash in an amount based on a contractual formula. The contractual formula is based on an average of specified historical theme park revenue at the time of exercise, which amount could be significantly higher than the carrying value. If the option had been exercisable as of December 31, 2016, the estimated value of the contractual obligation would have been approximately \$1.4 billion, based on inputs to the contractual formula as of that date. See Note 16 to Comcast's consolidated financial statements for additional information related to this arrangement. Reserves for uncertain tax positions of \$1.1 billion are not included in the table above because it is uncertain if or when these reserves will become payable. Payments of \$2.4 billion of participations and residuals are also not included in the table above because we cannot make a reliable estimate of the period in which these obligations will be settled.

(d) Our contractual obligations do not include our commitment to invest up to \$4 billion at any one time as an investor in Atairus due to our inability to estimate the timing of this funding. As of December 31, 2016, our remaining commitment is \$2.4 billion based on the capital

## Table of Contents

calls received as of that date (see Note 7 to Comcast's consolidated financial statements). In addition, our contractual obligations do not include any future expenditures related to the construction and development of the proposed Universal Studios theme park in Beijing, China or the Comcast Technology Center, as we do not currently have any obligation to fund either initiative.

(e) Total contractual obligations are made up of the following components.

(in millions)	
Liabilities recorded on the balance sheet	\$ 68,694
Commitments not recorded on the balance sheet	54,261
<b>Total</b>	<b>\$ 122,955</b>

## Off-Balance Sheet Arrangements

As of December 31, 2016, we did not have any material off-balance sheet arrangements that are reasonably likely to have a current or future effect on our financial condition, results of operations, liquidity, capital expenditures or capital resources.

## Recent Accounting Pronouncements

See Note 3 to each of Comcast's and NBCUniversal's consolidated financial statements for additional information related to recent accounting pronouncements.

## Critical Accounting Judgments and Estimates

The preparation of our consolidated financial statements requires us to make estimates that affect the reported amounts of assets, liabilities, revenue and expenses, and the related disclosure of contingent assets and contingent liabilities. We base our judgments on our historical experience and on various other assumptions that we believe are reasonable under the circumstances, the results of which form the basis for making estimates about the carrying value of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates under different assumptions or conditions.

We believe our judgments and related estimates associated with the valuation and impairment testing of our cable franchise rights and the accounting for film and television costs are critical in the preparation of our consolidated financial statements. Management has discussed the development and selection of these critical accounting judgments and estimates with the Audit Committee of our Board of Directors, and the Audit Committee has reviewed our disclosures relating to them, which are presented below. See Notes 9 and 6 to Comcast's consolidated financial statements for a discussion of our accounting policies with respect to these items.

### **Valuation and Impairment Testing of Cable Franchise Rights**

Our largest asset, our cable franchise rights, results from agreements we have with state and local governments that allow us to construct and operate a cable business within a specified geographic area. The value of a franchise is derived from the economic benefits we receive from the right to solicit new customers and to market additional services, such as advanced video services and high-speed Internet and voice services, in a particular service area. The amounts we record for cable franchise rights are primarily a result of cable system acquisitions. Typically when we acquire a cable system, the most significant asset we record is the value of the cable franchise rights. Often these cable system acquisitions include multiple franchise areas. We currently serve approximately 6,400 franchise areas in the United States.

We have concluded that our cable franchise rights have an indefinite useful life since there are no legal, regulatory, contractual, competitive, economic or other factors which limit the period over which these rights will contribute to our cash flows. Accordingly, we do not amortize our cable franchise rights but assess the carrying value of our cable franchise rights annually, or more frequently whenever events or changes in circumstances indicate that the carrying amount may exceed the fair value ("impairment testing").

## Table of Contents

For the purpose of our impairment testing, we have grouped the recorded values of our various cable franchise rights into our three Cable Communications divisions or units of account. We evaluate the unit of account periodically to ensure our impairment testing is performed at an appropriate level.

The annual impairment test for indefinite-lived intangibles allows for the option to first assess qualitative factors to determine whether it is more likely than not that the fair value of an indefinite-lived intangible is less than its carrying amount. An entity may choose to perform the qualitative assessment or an entity may bypass the qualitative assessment and proceed directly to the quantitative impairment test. If it is determined, on the basis of qualitative factors, that the fair value of the indefinite-lived intangible asset is, more likely than not, less than its carrying value, the quantitative impairment test is required. When performing a quantitative assessment, we estimate the fair value of our cable franchise rights primarily based on a discounted cash flow analysis that involves significant judgment. When analyzing the fair values indicated under the discounted cash flow models, we also consider multiples of operating income before depreciation and amortization generated by the underlying assets, current market transactions and profitability information.

In 2016, we performed a qualitative assessment of our cable franchise rights. At the time of our previous quantitative assessment in 2014, the estimated fair values of our franchise rights exceeded the carrying value in our three Cable Communications divisions by 26%, 42% and 50%, respectively. We also considered various factors that would affect the estimated fair values of our cable franchise rights in our qualitative assessment in 2016, including changes in our projected future cash flows associated with our Cable Communications segment; market transactions and macroeconomic conditions; weighted-average cost of capital; and an increase in our market capitalization. Based on this assessment, we concluded that it was more likely than not that the estimated fair values of our cable franchise rights were higher than the carrying values and that the performance of a quantitative impairment test was not required.

Since the adoption of the accounting guidance related to goodwill and intangible assets in 2002, we have not recorded any significant impairment charges to cable franchise rights as a result of our impairment testing.

We could record impairment charges in the future if there are changes in long-term market conditions, in expected future operating results, or in federal or state regulations that prevent us from recovering the carrying value of these cable franchise rights. Assumptions made about increased competition and economic conditions could also impact the results of any qualitative assessment and the valuations used in future annual quantitative impairment testing and result in a reduction in the fair values of our cable franchise rights. In addition, a future change in the unit of account could result in the recognition of an impairment charge.

### **Film and Television Costs**

We capitalize film and television production costs, including direct costs, production overhead, print costs, development costs and interest. We amortize capitalized film and television production costs, including acquired libraries, and accrue costs associated with participation and residual payments to programming and production expenses. We generally record the amortization and the accrued costs using the individual film forecast computation method, which amortizes the costs using the ratio of the current period's revenue to estimated total remaining revenue from all sources ("ultimate revenue"). Estimates of ultimate revenue have a significant impact on how quickly capitalized costs are amortized and, therefore, are updated regularly.

Our estimates of ultimate revenue for films generally include revenue from all sources that are expected to be earned within 10 years from the date of a film's initial release. These estimates are based on the historical performance of similar content, as well as factors unique to the content itself. The most sensitive factor affecting our estimate of ultimate revenue for a film intended for theatrical release is the film's theatrical performance, as subsequent revenue from the licensing and sale of a film has historically exhibited a high correlation to its theatrical performance. Upon a film's release, our estimates of revenue from succeeding

## Table of Contents

markets, including from content licensing across multiple platforms and home entertainment sales, are revised based on historical relationships and an analysis of current market trends.

With respect to television series or other owned television programming, the most sensitive factor affecting our estimate of ultimate revenue is whether the series can be successfully licensed beyond its initial license. Initial estimates of ultimate revenue are limited to the amount of revenue contracted for each episode under the initial license. Once it is determined that a television series or other owned television programming can be licensed for subsequent platforms, revenue estimates for these platforms, such as U.S. and international syndication, home entertainment, and other distribution platforms, are included in ultimate revenue. Revenue estimates for produced episodes include revenue expected to be earned within 10 years of delivery of the initial episode or, if still in production, 5 years from the delivery of the most recent episode, if later.

We capitalize the costs of programming content that we license but do not own, including rights to multiyear, live-event sports programming, at the earlier of when payments are made for the programming or when the license period begins and the content is made available for use. We amortize capitalized programming costs as the associated programs are broadcast. We generally amortize multiyear, live-event sports programming rights using the ratio of the current period revenue to the estimated ultimate revenue or under the terms of the contract.

Capitalized film and television costs, as well as stage play production costs, are subject to impairment testing when certain triggering events are identified. If the fair value of a production were to fall below its unamortized cost, we would record an adjustment for the amount by which the unamortized capitalized costs exceed the production's fair value. The fair value assessment is generally based on estimated future discounted cash flows, which are supported by our internal forecasts. Adjustments to capitalized film and stage play production costs of \$14 million, \$42 million and \$26 million were recorded in 2016, 2015 and 2014, respectively.

## Item 7A: Quantitative and Qualitative Disclosures About Market Risk

### Interest Rate Risk Management

---

We maintain a mix of fixed-rate and variable-rate debt and we are exposed to the market risk of adverse changes in interest rates. In order to manage the cost and volatility relating to the interest cost of our outstanding debt, we enter into various interest rate risk management derivative transactions in accordance with our policies.

We monitor our exposure to the risk of adverse changes in interest rates through the use of techniques that include market value and sensitivity analyses. We do not engage in any speculative or leveraged derivative transactions.

Our interest rate derivative financial instruments, which may include swaps, rate locks, caps and collars, represent an integral part of our interest rate risk management program. Comcast's interest rate derivative financial instruments reduced the portion of Comcast's total consolidated debt at fixed rates as of December 31, 2016 to 85.3% from 88.9%. As of December 31, 2016, NBCUniversal had no outstanding interest rate derivative financial instruments.

In 2016, 2015 and 2014, the effect of our interest rate derivative financial instruments was to decrease Comcast's consolidated interest expense by \$36 million, \$62 million and \$66 million, respectively. The effect

## Table of Contents

of NBCUniversal's interest rate derivative financial instruments was not material to NBCUniversal's consolidated financial statements for all periods presented. Interest rate derivative financial instruments may have a significant effect on Comcast's interest expense in the future.

The table below summarizes as of December 31, 2016 by contractual year of maturity the principal cash flows, notional amounts, fair values and contract terms of financial instruments subject to interest rate risk maintained by us.

(in millions)	2017	2018	2019	2020	2021	Thereafter	Total	Estimated Fair Value as of December 31, 2016
<b>Debt</b>								
Fixed rate	\$ 2,589	\$ 3,346	\$ 2,234	\$ 3,429	\$ 2,043	\$ 40,959	\$ 54,600	\$ 59,561
Average interest rate	6.9%	4.5%	3.2%	5.1%	4.4%	4.8%	4.8%	
Variable rate	\$ 2,894	\$ 857	\$ 232	\$ 2,788	\$ —	\$ —	\$ 6,771	\$ 6,777
Average interest rate	1.8%	2.5%	2.4%	3.0%	—%	—%	2.4%	
<b>Interest Rate Instruments</b>								
Fixed to variable swaps	\$ 400	\$ 1,600	\$ 200	\$ —	\$ —	\$ —	\$ 2,200	\$ 34
Average pay rate	6.0%	4.5%	5.1%	—%	—%	—%	4.5%	
Average receive rate	6.3%	5.8%	5.7%	—%	—%	—%	5.9%	

We use the notional amount of each interest rate derivative financial instrument to calculate the interest to be paid or received. The notional amounts do not represent our exposure to credit loss. The estimated fair value approximates the amount of payments to be made or proceeds to be received to settle the outstanding contracts, including accrued interest. We estimate interest rates on variable rate debt and swaps using the relevant average implied forward rates through the year of maturity based on the yield curve in effect on December 31, 2016, plus the applicable borrowing margin on December 31, 2016.

See Note 2 to each of Comcast's and NBCUniversal's consolidated financial statements for additional information on our accounting policies for derivative financial instruments.

## Foreign Exchange Risk Management

NBCUniversal has significant operations in a number of countries outside the United States, and certain of NBCUniversal's operations are conducted in foreign currencies. The value of these currencies fluctuates relative to the U.S. dollar. These changes could adversely affect the U.S. dollar equivalent value of our non-U.S. dollar revenue and operating costs and expenses and reduce international demand for our content, all of which could negatively affect our business, financial condition and results of operations in a given period or in specific territories.

As part of our overall strategy to manage the level of exposure to the risk of foreign exchange rate fluctuations, NBCUniversal enters into derivative financial instruments related to a significant portion of its foreign currency exposure, which is a result of transactions denominated in other than the functional currency. NBCUniversal enters into foreign currency forward contracts that change in value as currency exchange rates fluctuate to protect the U.S. dollar equivalent value of its non-U.S. dollar assets, liabilities, commitments, and forecasted foreign currency revenue and expenses. In accordance with our policy, NBCUniversal hedges forecasted foreign currency transactions for periods generally not to exceed 18 months. In certain circumstances, NBCUniversal enters into foreign exchange contracts with initial maturities in excess of 18 months. As of December 31, 2016 and 2015, NBCUniversal had foreign exchange contracts with a total notional value of \$1.5 billion and \$998 million, respectively. As of December 31, 2016 and 2015, the aggregate estimated fair value of these foreign exchange contracts was not material.

## Table of Contents

We have analyzed our foreign currency exposure related to NBCUniversal's operations as of December 31, 2016, including our hedging contracts, to identify assets and liabilities denominated in a currency other than their functional currency. For those assets and liabilities, we then evaluated the effect of a 10% shift in currency exchange rates between the functional currency and the U.S. dollar. Our analysis of such a shift in exchange rates indicated that there would be an immaterial effect on our 2016 income. In addition, the impact of fluctuations in currencies relative to the U.S. dollar for our non-U.S. dollar functional currency operations did not have a material impact on our financial condition or results of operations in 2016.

Comcast is also exposed to the market risks associated with fluctuations in currency exchange rates as they relate to its foreign currency denominated debt obligations. We use cross-currency swaps for foreign currency denominated debt obligations when those obligations are denominated in a currency other than the functional currency. Cross-currency swaps effectively convert fixed-rate foreign currency denominated debt to fixed-rate U.S. dollar denominated debt in order to hedge the risk that the cash flows related to annual interest payments and the payment of principal at maturity may be adversely affected by fluctuations in currency exchange rates. The gains and losses on the cross-currency swaps offset changes in the U.S. dollar equivalent value of the related exposures. As of December 31, 2016 and 2015, the fair value of our cross-currency swaps on our £625 million principal amount of 5.50% senior notes due 2029 was a liability of \$189 million and \$71 million, respectively.

### Counterparty Credit Risk Management

Comcast and NBCUniversal manage the credit risks associated with our derivative financial instruments through diversification and the evaluation and monitoring of the creditworthiness of counterparties. Although we may be exposed to losses in the event of nonperformance by counterparties, we do not expect such losses, if any, to be significant. Comcast has agreements with certain counterparties that include collateral provisions. These provisions require a party with an aggregate unrealized loss position in excess of certain thresholds to post cash collateral for the amount in excess of the threshold. The threshold levels in our collateral agreements are based on our and the counterparty's credit ratings. As of December 31, 2016 and 2015, Comcast was not required to post collateral under the terms of these agreements. As of December 31, 2016 and 2015, we did not hold any collateral under the terms of these agreements.

### Report of Management

#### **Management's Report on Comcast's Financial Statements**

Our management is responsible for the preparation, integrity and fair presentation of information in Comcast's consolidated financial statements, including estimates and judgments. The consolidated financial statements presented in this report have been prepared in accordance with accounting principles generally accepted in the United States. Our management believes the Comcast consolidated financial statements and other financial information included in this report fairly present, in all material respects, Comcast's financial condition, results of operations and cash flows as of and for the periods presented in this report. The Comcast consolidated financial statements have been audited by Deloitte & Touche LLP, an independent registered public accounting firm, as stated in their report, which is included herein.

#### **Management's Report on Comcast's Internal Control Over Financial Reporting**

Our management is responsible for establishing and maintaining an adequate system of internal control over financial reporting. Our system of internal control over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with accounting principles generally accepted in the United States.

Our internal control over financial reporting includes those policies and procedures that:

- Pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect our transactions and dispositions of our assets.
- Provide reasonable assurance that our transactions are recorded as necessary to permit preparation of our financial statements in accordance with accounting principles generally accepted in the United States, and that our receipts and expenditures are being made only in accordance with authorizations of our management and our directors.
- Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of our assets that could have a material effect on the financial statements.

Because of its inherent limitations, a system of internal control over financial reporting can provide only reasonable assurance and may not prevent or detect misstatements. Further, because of changes in conditions, effectiveness of internal control over financial reporting may vary over time. Our system contains self-monitoring mechanisms, and actions are taken to correct deficiencies as they are identified.

Our management conducted an evaluation of the effectiveness of the system of internal control over financial reporting based on the framework in *Internal Control — Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on this evaluation, our management concluded that Comcast's system of internal control over financial reporting was effective as of December 31, 2016. Our assessment of the effectiveness of internal control over financial reporting as of December 31, 2016 did not include the internal controls of DreamWorks Animation, which we acquired on August 22, 2016, as permitted by Securities and Exchange Commission guidelines that allow companies to exclude certain acquisitions from their assessment of internal control over financial reporting during the first year of an acquisition. The total assets and total revenues of DreamWorks Animation represented approximately 2% of our total assets as of December 31, 2016, and less than 1% of our total revenues for the year ended December 31, 2016. The effectiveness of Comcast's internal controls over financial reporting of Comcast has been audited by Deloitte & Touche LLP, an independent registered public accounting firm, as stated in their report, which is included herein.

#### **Audit Committee Oversight**

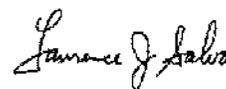

The Audit Committee of the Board of Directors, which is comprised solely of independent directors, has oversight responsibility for our financial reporting process and the audits of Comcast's consolidated financial statements and internal control over financial reporting. The Audit Committee meets regularly with management and with our internal auditors and independent registered public accounting firm (collectively, the "auditors") to review matters related to the quality and integrity of our financial reporting, internal control over financial reporting (including compliance matters related to our Code of Conduct), and the nature, extent, and results of internal and external audits. Our auditors have full and free access and report directly to the Audit Committee. The Audit Committee recommended, and the Board of Directors approved, that the Comcast audited consolidated financial statements be included in this Form 10-K.

**Brian L. Roberts**

**Lawrence J. Salva**  
Executive Vice President  
and Chief Accounting Officer

Table of Contents**Report of Independent Registered Public Accounting Firm****To the Board of Directors and Stockholders of  
Comcast Corporation  
Philadelphia, Pennsylvania**

We have audited the accompanying consolidated balance sheets of Comcast Corporation and subsidiaries (the "Company") as of December 31, 2016 and 2015, and the related consolidated statements of income, comprehensive income, cash flows and changes in equity for each of the three years in the period ended December 31, 2016. We also have audited the Company's internal control over financial reporting as of December 31, 2016, based on criteria established in *Internal Control — Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission. As described in the Report of Management on Internal Control over Financial Reporting, management excluded from its assessment the internal control over financial reporting at DreamWorks Animation, acquired on August 22, 2016 and whose financial statements constitute approximately 2% of total assets as of December 31, 2016 and less than 1% of total revenue for the year ended December 31, 2016. Accordingly, our audit did not include the internal control over financial reporting at DreamWorks Animation. The Company's management is responsible for these financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying *Management's Report on Comcast's Internal Control Over Financial Reporting*. Our responsibility is to express an opinion on these financial statements and an opinion on the Company's internal control over financial reporting based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Comcast Corporation and subsidiaries as of December 31, 2016 and 2015, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2016, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2016, based on the criteria established in *Internal Control — Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

### **Comcast Corporation**

#### Notes to Consolidated Financial Statements

##### **Note 1: Business and Basis of Presentation**

---

We are a global media and technology company with two primary businesses, Comcast Cable and NBCUniversal. We were incorporated under the laws of Pennsylvania in December 2001. Through our predecessors, we have developed, managed and operated cable systems since 1963.

We present our operations for Comcast Cable in one reportable business segment, referred to as Cable Communications, and our operations for NBCUniversal in four reportable business segments: Cable Networks, Broadcast Television, Filmed Entertainment and Theme Parks (collectively, the "NBCUniversal segments"). See Note 17 for additional information on our reportable business segments.

Our Cable Communications segment primarily manages and operates cable systems that serve residential and business customers in the United States. As of December 31, 2016, our cable systems had 28.6 million total customer relationships and served 22.5 million video customers, 24.7 million high-speed Internet customers and 11.7 million voice customers.

Our Cable Networks segment consists primarily of a diversified portfolio of cable television networks. Our cable networks are comprised of our national cable networks that provide a variety of entertainment, news and information, and sports content, our regional sports and news networks, our international cable networks, and our cable television studio production operations.

Our Broadcast Television segment consists primarily of the NBC and Telemundo broadcast networks, our owned NBC and Telemundo local broadcast television stations, the NBC Universo national cable network, and our broadcast television studio production operations.

Our Filmed Entertainment segment primarily produces, acquires, markets and distributes filmed entertainment worldwide. Our films are produced primarily under the Universal Pictures, Illumination and Focus Features names and in August 2016, we acquired DreamWorks Animation. See Note 5 for additional information on the acquisition.

Our Theme Parks segment consists primarily of our Universal theme parks in Orlando, Florida and Hollywood, California and our 51% interest in the Universal Studios theme park in Osaka, Japan ("Universal Studios Japan"), which we acquired in November 2015. See Note 5 for additional information on the acquisition.

Our other business interests, which are included in Corporate and Other, consist primarily of Comcast Spectacor, which owns the Philadelphia Flyers and the Wells Fargo Center arena in Philadelphia, Pennsylvania and operates arena management-related businesses.

##### **Basis of Presentation**

The accompanying consolidated financial statements include all entities in which we have a controlling voting interest and variable interest entities ("VIEs") required to be consolidated in accordance with generally accepted accounting principles in the United States ("GAAP").

We translate assets and liabilities of our foreign operations where the functional currency is the local currency, primarily the Japanese yen, euro and British pound, into U.S. dollars at the exchange rate as of the balance sheet date and translate revenue and expenses using average monthly exchange rates. The related translation adjustments are recorded as a component of accumulated other comprehensive income (loss) in our consolidated balance sheet. Any foreign currency transaction gains or losses are included in our consolidated statement of income.

## Table of Contents

### **Comcast Corporation**

#### **Reclassifications**

Reclassifications have been made to our consolidated financial statements for the prior years to conform to classifications used in 2016.

#### **Stock Split**

On January 24, 2017, our Board of Directors approved a two-for-one stock split in the form of a 100% stock dividend (the "Stock Split") payable on February 17, 2017 to shareholders of record as of February 8, 2017. The Stock Split will be in the form of one additional share for every share held and will be payable in shares of Class A common stock on the outstanding Class A common stock and Class B common stock. The pro forma diluted earnings per common share attributable to Comcast Corporation shareholders in our consolidated statement of income has been adjusted to reflect the Stock Split for all periods presented. All other share-based data, including the number of shares outstanding and related prices, per share amounts, and share authorizations and conversions have not been adjusted to reflect the Stock Split for any of the periods presented.

#### **Note 2: Accounting Policies**

---

Our consolidated financial statements are prepared in accordance with GAAP, which require us to select accounting policies, including in certain cases industry-specific policies, and make estimates that affect the reported amount of assets, liabilities, revenue and expenses, and the related disclosure of contingent assets and contingent liabilities. Actual results could differ from these estimates. We believe that the judgments and related estimates for the following items are critical in the preparation of our consolidated financial statements:

- valuation and impairment testing of cable franchise rights (see Note 9)
- film and television costs (see Note 6)

In addition, the following accounting policies are specific to the industries in which we operate:

- capitalization and amortization of film and television costs (see Note 6)
- installation revenue and costs for connecting customers to our cable systems (see revenue recognition below and Note 8)

Information on our other accounting policies and methods that are used in the preparation of our consolidated financial statements are included, where applicable, in their respective footnotes that follow. Below is a discussion of accounting policies and methods used in our consolidated financial statements that are not presented within other footnotes.

#### **Revenue Recognition**

##### **Cable Communications Segment**

Our Cable Communications segment generates revenue primarily from subscriptions to our video, high-speed Internet and voice services ("cable services") and from the sale of advertising. We recognize revenue from cable services as each service is provided. Customers are typically billed in advance on a monthly basis based on the services and features they receive and the type of equipment they use. Since installation revenue obtained from the connection of customers to our cable systems is less than the related direct selling costs, we recognize revenue as connections are completed. We manage credit risk by screening applicants through the use of internal customer information, identification verification tools and credit bureau data. If a customer's account is delinquent, various measures are used to collect outstanding amounts, including termination of the customer's cable services.

## Table of Contents

### **Comcast Corporation**

As part of our distribution agreements with cable networks, we generally receive an allocation of scheduled advertising time on cable networks that we sell through our advertising business, Spotlight, to local, regional and national advertisers. We recognize advertising revenue when the advertising is aired or viewed. In most cases, the available advertising units are sold by our sales force. In some cases, we work with representation firms as an extension of our sales force to sell a portion of the advertising units allocated to us. We also represent the advertising sales efforts of other multichannel video providers in some markets. Since we are acting as the principal in these arrangements, we record the advertising that is sold in revenue and the fees paid to representation firms and multichannel video providers in other operating and administrative expenses.

Revenue earned from other sources, such as our home security and automation services, is recognized when services are provided or events occur. Under the terms of our cable franchise agreements, we are generally required to pay to the cable franchising authority an amount based on our gross video revenue. We pass these fees through to our cable services customers and classify the fees as a component of revenue with the corresponding costs included in other operating and administrative expenses.

#### **Cable Networks and Broadcast Television Segments**

Our Cable Networks segment generates revenue primarily from the distribution of our cable network programming to multichannel video providers, from the sale of advertising on our cable networks and related digital media properties, from the licensing of our owned programming to cable and broadcast networks and subscription video on demand services, from the sale of our owned programming on standard-definition digital video discs and Blu-ray discs (together, "DVDs") and through digital distribution services such as iTunes, and from the sale of programming by our cable television studio production operations to third-party networks and subscription video on demand services. Our Broadcast Television segment generates revenue primarily from the sale of advertising on our broadcast networks, owned local broadcast television stations and related digital media properties, from the licensing of our owned programming by our broadcast television studio production operations to various distribution platforms, including to cable and broadcast networks as well as to subscription video on demand services, from the fees received under retransmission consent agreements and associated fees received from NBC-affiliated local broadcast television stations, and from the sale of our owned programming on DVDs and through digital distribution services. We recognize revenue from distributors as programming is provided, generally under multiyear distribution agreements. From time to time, the distribution agreements expire while programming continues to be provided to the distributor based on interim arrangements while the parties negotiate new contract terms. Revenue recognition is generally limited to current payments being made by the distributor, typically under the prior contract terms, until a new contract is negotiated, sometimes with effective dates that affect prior periods. Differences between actual amounts determined upon resolution of negotiations and amounts recorded during these interim arrangements are recorded in the period of resolution.

Advertising revenue for our Cable Networks and Broadcast Television segments is recognized in the period in which commercials are aired or viewed. In some instances, we guarantee audience ratings for the commercials. To the extent there is a shortfall in the ratings that were guaranteed, a portion of the revenue is deferred until the shortfall is settled, primarily by providing additional advertising units. We recognize revenue from the licensing of our owned programming and programming produced by our studios for third parties when the content is made available for use by the licensee, and when certain other conditions are met. When license fees include advertising time, we recognize the component of revenue associated with the advertisements when they are aired or viewed.

#### **Filmed Entertainment Segment**

Our Filmed Entertainment segment generates revenue primarily from the worldwide distribution of our produced and acquired films for exhibition in movie theaters, from the licensing of our owned and acquired films through various distribution platforms, and from the sale of our owned and acquired films on DVDs and

## Table of Contents

### **Comcast Corporation**

through digital distribution services. Our Filmed Entertainment segment also generates revenue from producing and licensing live stage plays, from the distribution of filmed entertainment produced by third parties, and from Fandango, our movie ticketing and entertainment business. We recognize revenue from the distribution of films to movie theaters when the films are exhibited. We recognize revenue from the licensing of a film when the film is available for use by the licensee, and when certain other conditions are met. We recognize revenue from the sale of DVDs, net of estimated returns and customer incentives, on the date that the DVDs are delivered to and made available for sale by retailers.

#### Theme Parks Segment

Our Theme Parks segment generates revenue primarily from ticket sales and guest spending at our Universal theme parks. We recognize revenue from advance theme park ticket sales when the tickets are used. For annual passes, we recognize revenue on a straight-line basis over the period following the activation date.

### **Cable Communications Programming Expenses**

Cable Communications programming expenses are the fees we pay to license the programming we distribute to our video customers. Programming is generally acquired under multiyear distribution agreements, with rates typically based on the number of customers that receive the programming, channel positioning and the extent of distribution. From time to time, these contracts expire and programming continues to be provided under interim arrangements while the parties negotiate new contract terms, sometimes with effective dates that affect prior periods. While payments are typically made under the prior contract's terms, the amount of programming expenses recorded during the interim arrangement is based on our estimate of the ultimate contract terms expected to be negotiated. Differences between actual amounts determined upon resolution of negotiations and amounts recorded during these interim arrangements are recorded in the period of resolution.

When our Cable Communications segment receives incentives from a cable network for the licensing of its programming, we defer a portion of these incentives, which are included in other current and noncurrent liabilities, and recognize them over the term of the contract as a reduction to programming expenses.

### **Advertising Expenses**

Advertising costs are expensed as incurred.

### **Cash Equivalents**

The carrying amounts of our cash equivalents approximate their fair values. Our cash equivalents consist primarily of money market funds and U.S. government obligations, as well as commercial paper and certificates of deposit with maturities of three months or less when purchased.

### **Derivative Financial Instruments**

We use derivative financial instruments to manage our exposure to the risks associated with fluctuations in interest rates, foreign exchange rates and equity prices. Our objective is to manage the financial and operational exposure arising from these risks by offsetting gains and losses on the underlying exposures with gains and losses on the derivatives used to economically hedge them.

Our derivative financial instruments are recorded in our consolidated balance sheet at fair value. The impact of our derivative financial instruments on our consolidated financial statements was not material in any of the periods presented.

### **Fair Value Measurements**

The accounting guidance related to financial assets and financial liabilities ("financial instruments") establishes a hierarchy that prioritizes fair value measurements based on the types of inputs used for the various

## Table of Contents

### **Comcast Corporation**

valuation techniques (market approach, income approach and cost approach). The levels of the hierarchy are described below.

- Level 1: Values are determined using quoted market prices for identical financial instruments in an active market
- Level 2: Values are determined using quoted prices for similar financial instruments and valuation models whose inputs are observable
- Level 3: Values are determined using pricing models that use significant inputs that are primarily unobservable, discounted cash flow methodologies or similar techniques, as well as instruments for which the determination of fair value requires significant management judgment or estimation

We use these levels of hierarchy for the measurement of fair value related to acquisitions, investments, long-term debt, redeemable subsidiary preferred stock and impairment testing, among others. Our assessment of the significance of a particular input to the fair value measurement requires judgment and may affect the valuation and classification within the fair value hierarchy. Our financial instruments that are accounted for at fair value on a recurring basis were not material as of December 31, 2016 and 2015.

### **Asset Retirement Obligations**

Certain of our cable franchise agreements and lease agreements contain provisions requiring us to restore facilities or remove property in the event that the franchise or lease agreement is not renewed. We expect to continually renew our cable franchise agreements and therefore cannot reasonably estimate any liabilities associated with such agreements. A remote possibility exists that franchise agreements could be terminated unexpectedly, which could result in us incurring significant expense in complying with restoration or removal provisions. We do not have any significant liabilities related to asset retirements recorded in our consolidated financial statements.

### **Note 3: Recent Accounting Pronouncements**

#### **Revenue Recognition**

In May 2014, the Financial Accounting Standards Board ("FASB") updated the accounting guidance related to revenue recognition. The updated accounting guidance provides a single, contract-based revenue recognition model to help improve financial reporting by providing clearer guidance on when an entity should recognize revenue and by reducing the number of standards to which an entity has to refer. The updated accounting guidance is effective for us as of January 1, 2018.

We have reviewed a majority of our revenue arrangements and expect our review to be completed in the second quarter of 2017. As a result of our review, we do not expect any material impact on our consolidated financial statements. However, we do expect that the new standard will impact the timing of recognition for (1) our Cable Communications segment's installation revenue and commission expenses, which upon adoption will be recognized as revenue and costs over a period of time instead of immediately, and (2) our Cable Networks, Broadcast Television and Filmed Entertainment segments' content licensing revenue associated with renewals or extensions of existing program licensing agreements, which upon adoption will be recognized as revenue when the licensed content becomes available under the renewal or extension instead of when the agreement is renewed or extended.

The guidance provides companies with alternative methods of adoption and we are in the process of determining our method of adoption, which depends in part upon our completion of the evaluation of our remaining revenue arrangements.

## Table of Contents

### **Comcast Corporation**

#### **Consolidations**

In February 2015, the FASB updated the accounting guidance related to consolidation under the variable interest entity and voting interest entity models. The updated accounting guidance modifies the consolidation guidance for VIEs, limited partnerships and similar legal entities. We have adopted this guidance as of January 1, 2016 and it did not have a material impact on our consolidated financial statements.

#### **Financial Assets and Financial Liabilities**

In January 2016, the FASB updated the accounting guidance related to the recognition and measurement of financial assets and financial liabilities. The updated accounting guidance, among other things, requires that all nonconsolidated equity investments, except those accounted for under the equity method, be measured at fair value and that the changes in fair value be recognized in net income. The updated guidance is effective for us as of January 1, 2018. The updated accounting guidance requires, with certain exceptions, a cumulative effect adjustment to beginning retained earnings when the guidance is adopted. We are currently in the process of determining the impact that the updated accounting guidance will have on our consolidated financial statements.

#### **Leases**

In February 2016, the FASB updated the accounting guidance related to leases. The updated accounting guidance requires lessees to recognize a right-of-use asset and a lease liability on the balance sheet for all leases with the exception of short-term leases. The asset and liability are initially measured based on the present value of committed lease payments. For a lessee, the recognition, measurement and presentation of expenses and cash flows arising from a lease do not significantly change from previous guidance. For a lessor, the accounting applied is also largely unchanged from previous guidance. The updated guidance is effective for us as of January 1, 2019 and early adoption is permitted. The updated accounting guidance must be adopted using a modified retrospective approach for leases that exist or are entered into after the beginning of the earliest comparative period in the financial statements. We are currently in the process of determining the impact that the updated accounting guidance will have on our consolidated financial statements. See Note 16 for a summary of our undiscounted minimum rental commitments under operating leases as of December 31, 2016.

#### **Share-Based Compensation**

In March 2016, the FASB updated the accounting guidance that affects several aspects of the accounting for share-based compensation. The most significant change for us relates to the presentation of the income and withholding tax consequences of share-based compensation in our consolidated financial statements. Among the changes, the updated guidance requires that the excess income tax benefits or deficiencies that arise when the tax consequences of share-based compensation differ from amounts previously recognized in the statement of income be recognized as income tax benefit or expense in the statement of income rather than as additional paid-in capital in the balance sheet. The guidance also states that excess income tax benefits should not be presented separately from other income taxes in the statement of cash flows and, thus, should be classified as an operating activity rather than a financing activity as they are under the current guidance. In addition, the updated guidance requires when an employer withholds shares upon exercise of options or the vesting of restricted stock for the purpose of meeting withholding tax requirements, that the cash paid for withholding taxes be classified as a financing activity. We currently record these amounts within operating activities.

We will adopt the updated guidance in the first quarter of 2017. As required under the updated guidance, we will prospectively adopt the provisions of this guidance that relate to the recognition of the excess income tax benefits or deficiencies in the statement of income. If we had adopted the updated guidance in 2016, our income tax expense and effective tax rate would have decreased by \$233 million and 1.6%, respectively, and

Table of Contents**Comcast Corporation**

our diluted earnings per common share attributable to Comcast Corporation shareholders in 2016 would have increased by \$0.08.

In addition, upon adoption we will retrospectively adopt the provisions of this guidance related to changes to the statement of cash flows in any of the periods presented. The table below presents the effect on our consolidated statement of cash flows for each of the years ended December 31, 2016, 2015 and 2014. These amounts are not necessarily indicative of amounts that we will recognize in future years related to the excess income tax benefits or deficiencies nor the cash paid for withholding taxes.

Year ended December 31 (in millions)	As Reported	Effect of Adoption	Upon Adoption

Assumed exercise or issuance of shares relating to stock plans		28			32			37	
<b>Diluted EPS attributable to Comcast Corporation shareholders</b>	<b>\$ 8,695</b>	<b>2,438</b>	<b>\$ 3.57</b>	<b>\$ 8,163</b>	<b>2,518</b>	<b>\$ 3.24</b>	<b>\$ 8,380</b>	<b>2,620</b>	<b>\$ 3.20</b>

Diluted earnings per common share attributable to Comcast Corporation shareholders ("diluted EPS") considers the impact of potentially dilutive securities using the treasury stock method. Our potentially dilutive securities include potential common shares related to our stock options and our restricted share units ("RSUs"). Diluted EPS excludes the impact of potential common shares related to our stock options in periods in which the combination of the option exercise price and the associated unrecognized compensation expense is greater than the average market price of our common stock.

The amount of potential common shares related to our share-based compensation plans that were excluded from diluted EPS because their effect would have been antidilutive was not material in any of the periods presented.

Table of Contents**Comcast Corporation****Note 5: Significant Transactions****2016***DreamWorks Animation*

On August 22, 2016, we acquired all of the outstanding stock of DreamWorks Animation for \$3.8 billion. DreamWorks Animation's stockholders received \$41 in cash for each share of DreamWorks Animation common stock. DreamWorks Animation creates animated feature films, television series and specials, live entertainment and related consumer products. The results of operations for DreamWorks Animation are reported in our Filmed Entertainment segment following the acquisition date.

*Preliminary Allocation of Purchase Price*

The transaction was accounted for under the acquisition method of accounting and, accordingly, the assets and liabilities are to be recorded at their fair market values as of the acquisition date. We recorded the acquired assets and liabilities of DreamWorks Animation at their estimated fair values based on preliminary valuation analyses. In valuing acquired assets and liabilities, fair value estimates are primarily based on Level 3 inputs including future expected cash flows, market rate assumptions and discount rates. The fair value of the assumed debt was primarily based on quoted market values. The fair value of the liability related to a tax receivable agreement that DreamWorks Animation had previously entered into with one of its former stockholders (the "tax receivable agreement") was based on the contractual settlement provisions in the agreement. Further, we recorded the deferred income taxes based on our estimates of the tax basis of the acquired net assets and the valuation allowances based on the expected use of net operating loss carryforwards. The goodwill is not deductible for tax purposes. We will adjust the assets and liabilities as valuations are completed and we obtain information necessary to complete the analyses, but no later than one year from the acquisition date.

The table below presents the preliminary allocation of the purchase price to the assets and liabilities of DreamWorks Animation.

*Preliminary Allocation of Purchase Price**(in millions)*

Film and television costs (see Note 6)	\$ 854
Intangible assets (see Note 9)	164
Working capital	248
Debt (see Note 10)	(381)
Tax receivable agreement	(146)
Deferred income taxes (see Note 14)	366
Other noncurrent assets and liabilities	137
Identifiable net assets (liabilities) acquired	1,242
Noncontrolling interest	(89)
Goodwill (see Note 9)	2,620
Cash consideration transferred	\$ 3,773

The tax receivable agreement was settled immediately following the acquisition and the payment was recorded as an operating activity in our consolidated statement of cash flows. In addition, we repaid all of the assumed debt of DreamWorks Animation.

Revenue and net income attributable to the acquisition of DreamWorks Animation were not material for 2016.

Table of Contents**Comcast Corporation****2015**

## Universal Studios Japan

On November 13, 2015, NBCUniversal acquired a 51% economic interest in Universal Studios Japan for \$1.5 billion.

Universal Studios Japan is a VIE based on the governance structure and we consolidate Universal Studios Japan since we have the power to direct activities that most significantly impact its economic performance. There are no liquidity arrangements, guarantees or other financial commitments between us and Universal Studios Japan, and therefore our maximum risk of financial loss is NBCUniversal's 51% interest. Universal Studios Japan's results of operations are reported in our Theme Parks segment following the acquisition date.

*Allocation of Purchase Price*

The transaction was accounted for under the acquisition method of accounting and, accordingly, the acquired assets and liabilities and the 49% noncontrolling interest were recorded at their estimated fair values. In 2016, we updated the allocation of the purchase price for Universal Studios Japan based on final valuation analyses, which primarily resulted in increases to property and equipment and intangible assets and a decrease in goodwill. The changes did not have a material impact on our consolidated financial statements. The goodwill is not deductible for tax purposes.

The table below presents the allocation of the purchase price to the assets and liabilities of Universal Studios Japan.

## Allocation of Purchase Price

<i>(in millions)</i>	
Property and equipment (see Note 8)	\$ 780
Intangible assets (see Note 9)	323
Working capital	(33)
Debt (see Note 10)	(3,271)
Other noncurrent assets and liabilities	17
Identifiable net assets (liabilities) acquired	(2,184)
Noncontrolling interest	(1,440)
Goodwill (see Note 9)	5,123
Cash consideration transferred	\$ 1,499

*Actual and Unaudited Pro Forma Results*

Our consolidated revenue in 2016 and 2015 included \$1.4 billion and \$169 million, respectively, from the acquisition of Universal Studios Japan. Our net income attributable to Comcast Corporation in 2016 and 2015 included \$124 million and \$18 million, respectively, from the acquisition of Universal Studios Japan.

Table of Contents**Comcast Corporation**

The following unaudited pro forma information has been presented as if the acquisition of Universal Studios Japan occurred on January 1, 2014. This information is primarily based on historical results of operations, adjusted for the allocation of purchase price, and is not necessarily indicative of what our results would have been had we operated Universal Studios Japan since January 1, 2014. No pro forma adjustments have been made for our transaction-related expenses.

Year ended December 31 (in millions, except per share amounts)	2015	2014
Revenue	\$ 75,563	\$ 69,860
Net income	\$ 8,591	\$ 8,704
Net income attributable to Comcast Corporation	\$ 8,253	\$ 8,435
Basic earnings per common share attributable to Comcast Corporation shareholders	\$ 3.32	\$ 3.27
Diluted earnings per common share attributable to Comcast Corporation shareholders	\$ 3.28	\$ 3.22

**Time Warner Cable Merger and Related Divestiture Transactions**

On April 24, 2015, we and Time Warner Cable Inc. terminated our planned merger, and we terminated our related agreement with Charter Communications, Inc. to spin off, exchange and sell certain cable systems. In connection with these proposed transactions, we incurred incremental transaction-related expenses of \$198 million and \$237 million in 2015 and 2014, respectively. The transaction-related expenses are included primarily in other operating and administrative expenses, with \$20 million recorded in depreciation and amortization expenses associated with the write-off of certain capitalized costs in 2015.

**Note 6: Film and Television Costs**

December 31 (in millions)	2016	2015
<b>Film Costs:</b>		
Released, less amortization	\$ 1,750	\$ 1,275
Completed, not released	50	226
In production and in development	1,310	907
	<b>3,110</b>	<b>2,408</b>
<b>Television Costs:</b>		
Released, less amortization	1,953	1,573
In production and in development	853	737
	<b>2,806</b>	<b>2,310</b>
<b>Programming rights, less amortization</b>	<b>2,586</b>	<b>2,350</b>
	<b>8,502</b>	<b>7,068</b>
Less: Current portion of programming rights	1,250	1,213
<b>Film and television costs</b>	<b>\$ 7,252</b>	<b>\$ 5,855</b>

Based on our current estimates of the total remaining revenue from all sources ("ultimate revenue"), in 2017 we expect to amortize approximately \$1.9 billion of film and television costs associated with our original film and television productions that have been released, or are completed and have not been released. Through 2019, we expect to amortize approximately 88% of unamortized film and television costs for our released productions, excluding amounts allocated to acquired libraries.

As of December 31, 2016, acquired film and television libraries, which are included within the "released, less amortization" captions in the table above, had remaining unamortized costs of \$596 million. These costs are generally amortized over a period not to exceed 20 years, and approximately 45% of these costs are expected to be amortized through 2019.

## Table of Contents

### Comcast Corporation

#### **Capitalization of Film and Television Costs**

We capitalize film and television production costs, including direct costs, production overhead, print costs, development costs and interest. We amortize capitalized film and television production costs, including acquired libraries, and accrue costs associated with participation and residual payments to programming and production expenses. We generally record the amortization and the accrued costs using the individual film forecast computation method, which amortizes the costs in the same ratio as the associated ultimate revenue. Estimates of ultimate revenue and total costs are based on anticipated release patterns, public acceptance and historical results for similar productions. Unamortized film and television costs, including acquired film and television libraries, are stated at the lower of unamortized cost or fair value. We do not capitalize costs related to the distribution of a film in movie theaters or the licensing or sale of a film or television production, which are primarily costs associated with the marketing and distribution of them.

In determining the method of amortization and estimated life of an acquired film or television library, we generally use the method and the life that most closely follow the undiscounted cash flows over the estimated life of the asset.

When an event or a change in circumstance occurs that was known or knowable as of the balance sheet date and that indicates the fair value of a film is less than its unamortized costs, we determine the fair value of the film and record an impairment charge for the amount by which the unamortized capitalized costs exceed the film's fair value. The estimated fair value of a production is based on Level 3 inputs that primarily use an analysis of future expected cash flows. Adjustments to capitalized film and stage play production costs of \$14 million, \$42 million and \$26 million were recorded in 2016, 2015 and 2014, respectively.

We enter into cofinancing arrangements with third parties to jointly finance or distribute certain of our film productions. Cofinancing arrangements can take various forms, but in most cases involve the grant of an economic interest in a film to an investor. The number of investors and the terms of these arrangements can vary, although investors generally assume the full risks and rewards for the portion of the film acquired in these arrangements. We account for the proceeds received from a third-party investor under these arrangements as a reduction to our capitalized film costs. Under these arrangements, the investor owns an undivided copyright interest in the film, and therefore in each period we record either a charge or a benefit to programming and production expenses to reflect the estimate of the third-party investor's interest in the profit or loss of the film. The estimate of the third-party investor's interest in the profit or loss of a film is determined using the ratio of actual revenue earned to date to the ultimate revenue expected to be recognized over the film's useful life.

We capitalize the costs of programming content that we license but do not own, including rights to multiyear, live-event sports programming, at the earlier of when payments are made for the programming or when the license period begins and the content is made available for use. We amortize capitalized programming costs as the associated programs are broadcast. We generally amortize multiyear, live-event sports programming rights using the ratio of the current period revenue to the estimated ultimate revenue or under the terms of the contract.

Acquired programming costs are recorded at the lower of unamortized cost or net realizable value on a program by program, package, channel or daypart basis. A daypart is an aggregation of programs broadcast during a particular time of day or programs of a similar type. Programming acquired by our Cable Networks segment is primarily tested on a channel basis for impairment, whereas programming acquired by our Broadcast Television segment is tested on a daypart basis. If we determine that the estimates of future cash flows are insufficient or if there is no plan to broadcast certain programming, we recognize an impairment charge to programming and production expenses.

Investment income (loss), net	\$ 213	\$ 81	\$ 296

**Fair Value Method**

We classify publicly traded investments that are not accounted for under the equity method as available-for-sale ("AFS") or trading securities and record them at fair value. For AFS securities, we record unrealized gains or losses resulting from changes in fair value between measurement dates as a component of other comprehensive income (loss), except when we consider declines in value to be other than temporary. For trading securities, we record unrealized gains or losses resulting from changes in fair value between measurement dates as a component of investment income (loss), net. We recognize realized gains and losses associated with our fair value method investments using the specific identification method. We classify the cash flows related to purchases of and proceeds from the sale of trading securities based on the nature of the securities and the purpose for which they were acquired.

**Equity Method**

We use the equity method to account for investments in which we have the ability to exercise significant influence over the investee's operating and financial policies or in which we hold a significant partnership or LLC interest. Equity method investments are recorded at cost and are adjusted to recognize (1) our proportionate share of the investee's net income or loss after the date of investment, (2) amortization of the recorded investment that exceeds our share of the book value of the investee's net assets, (3) additional contributions made and dividends received, and (4) impairments resulting from other-than-temporary declines in fair value.

## Table of Contents

### **Comcast Corporation**

For some investments, we record our share of the investee's net income or loss one quarter in arrears due to the timing of our receipt of such information. Gains or losses on the sale of equity method investments are recorded to other income (expense), net. If an equity method investee were to issue additional securities that would change our proportionate share of the entity, we would recognize the change, if any, as a gain or loss in our consolidated statement of income.

#### **Atairos**

In 2015, we entered into an agreement to establish Atairos Group, Inc., a strategic company focused on investing in and operating companies in a range of industries and business sectors, both domestically and internationally. The agreement became effective as of January 1, 2016. Atairos has a term of up to 12 years and is controlled by management companies led by our former CFO through interests that carry all of the voting rights. We are the only investor other than our former CFO and the other management company employees. We have committed to fund Atairos up to \$4 billion in the aggregate at any one time, subject to certain offsets, and \$40 million annually for a management fee, subject to certain adjustments, while the management company investors have committed to fund up to \$100 million, with at least \$40 million to be funded by our former CFO, subject to his continued role with Atairos. Our economic interests do not carry voting rights and obligate us to absorb approximately 99% of any losses and they provide us the right to receive approximately 86.5% of any residual returns in Atairos, in either case on a cumulative basis.

We have concluded that Atairos is a VIE, that we do not have the power to direct the activities that most significantly impact the economic performance of Atairos as we have no voting rights and only certain consent rights, and that we are not a related party with our former CFO or the management companies. We therefore do not consolidate Atairos and account for our investment as an equity method investment. There are no other liquidity arrangements, guarantees or other financial commitments between Comcast and Atairos, and therefore our maximum risk of financial loss is our investment balance and remaining unfunded capital commitment.

In 2016, we made cash capital contributions totaling \$1.2 billion to Atairos. In addition, we recorded capital contributions of \$447 million that were accrued in 2016 and paid in January 2017.

#### **Hulu**

In August 2016, Time Warner Inc. acquired a 10% interest in Hulu, LLC, which diluted our interest in Hulu from 33% to 30%. For a period not to exceed 3 years, Time Warner may put its shares to Hulu or Hulu may call Time Warner's shares under certain limited circumstances arising from regulatory review. Given the contingent nature of the put and call options, we recorded a deferred gain of \$159 million and a corresponding increase to our investment in Hulu as a result of the dilution. The deferred gain will be recognized in other income (expense), net if and when the options expire unexercised.

In 2016, 2015 and 2014, we recognized our proportionate share of losses of \$168 million, \$106 million and \$20 million, respectively, related to our investment in Hulu.

#### **The Weather Channel**

In January 2016, following a legal restructuring at The Weather Channel, we and the other investors sold the entity holding The Weather Channel's product and technology businesses to IBM. Following the close of the transaction, we continue to hold an investment in The Weather Channel cable network through a new holding company. As a result of the sale of our investment, we recognized a pretax gain of \$108 million in other income (expense), net.

In June and December 2015, The Weather Channel recorded impairment charges related to goodwill. In 2015, we recorded expenses of \$333 million that represented NBCUniversal's proportionate share of these impairment charges in equity in net income (losses) of investees, net in our consolidated statement of income.

## Table of Contents

### **Comcast Corporation**

#### **Cost Method**

We use the cost method to account for investments not accounted for under the fair value method or the equity method.

#### **AirTouch**

We hold two series of preferred stock of Verizon Americas, Inc., formerly known as AirTouch Communications, Inc., a subsidiary of Verizon Communications Inc., which are redeemable in April 2020. As of both December 31, 2016 and 2015, the estimated fair value of the AirTouch preferred stock was \$1.7 billion.

The dividend and redemption activity of the AirTouch preferred stock determines the dividend and redemption payments associated with substantially all of the preferred shares issued by one of our consolidated subsidiaries, which is a VIE. The subsidiary has three series of preferred stock outstanding with an aggregate redemption value of \$1.75 billion. Substantially all of the AirTouch preferred stock is redeemable in April 2020 at a redemption value of \$1.65 billion. As of both December 31, 2016 and 2015, the two series of redeemable subsidiary preferred shares were recorded at \$1.6 billion, and those amounts are included in other noncurrent liabilities. As of both December 31, 2016 and 2015, the liability related to the redeemable subsidiary preferred shares had an aggregate estimated fair value of \$1.7 billion. The estimated fair values of the AirTouch preferred stock and redeemable subsidiary preferred shares are based on Level 2 inputs that use pricing models whose inputs are derived primarily from or corroborated by observable market data through correlation or other means for substantially the full term of the financial instrument. The one series of nonredeemable subsidiary preferred shares was recorded at \$100 million as of both December 31, 2016 and 2015, and those amounts are included in noncontrolling interests in our consolidated balance sheet. The carrying amount of the nonredeemable subsidiary preferred stock approximates its fair value.

#### **BuzzFeed and Vox Media**

In September 2015, NBCUniversal acquired an interest in BuzzFeed, Inc. and made an additional investment in Vox Media, Inc. for \$200 million each in cash. In November 2016, NBCUniversal made an additional investment of \$200 million in BuzzFeed. BuzzFeed is a global media company that produces and distributes original news, entertainment and videos. Vox Media is a digital media company comprised of eight distinct brands.

#### **Impairment Testing of Investments**

We review our investment portfolio each reporting period to determine whether there are identified events or circumstances that would indicate there is a decline in the fair value that would be considered other than temporary. For our nonpublic investments, if there are no identified events or circumstances that would have a significant adverse effect on the fair value of the investment, then the fair value is not estimated. If an investment is deemed to have experienced an other-than-temporary decline below its cost basis, we reduce the carrying amount of the investment to its quoted or estimated fair value, as applicable, and establish a new cost basis for the investment. For our AFS securities and our cost method investments, we record the impairment to investment income (loss), net. For our equity method investments, we record the impairment to other income (expense), net.

Table of Contents**Comcast Corporation****Note 8: Property and Equipment**

December 31 (in millions)	Weighted-Average Original Useful Life As of December 31, 2016	2016	2015
Cable distribution system	11 years	\$ 34,028	\$ 32,586
Customer premise equipment	6 years	28,621	28,559
Other equipment	8 years	9,475	8,539
Buildings and leasehold improvements	29 years	12,550	10,829
Land	N/A	1,273	1,252
Property and equipment, at cost		85,947	81,765
Less: Accumulated depreciation		49,694	48,100
Property and equipment, net		\$ 36,253	\$ 33,665

Property and equipment are stated at cost. We capitalize improvements that extend asset lives and expense repairs and maintenance costs as incurred. We record depreciation using the straight-line method over the asset's estimated useful life. For assets that are sold or retired, we remove the applicable cost and accumulated depreciation and, unless the gain or loss on disposition is presented separately, we recognize it as a component of depreciation expense.

In accordance with the accounting guidance related to cable television companies, we capitalize the costs associated with the construction of and improvements to our cable transmission and distribution facilities, including scalable infrastructure and line extensions; costs associated with acquiring and deploying new customer premise equipment; and costs associated with installation of our services. Costs capitalized include all direct costs for labor and materials, as well as various indirect costs. Costs incurred in connection with subsequent disconnects and reconnects are expensed as they are incurred.

We evaluate the recoverability of our property and equipment whenever events or substantive changes in circumstances indicate that the carrying amount may not be recoverable. The evaluation is based on the cash flows generated by the underlying asset groups, including estimated future operating results, trends or other determinants of fair value. If the total of the expected future undiscounted cash flows were less than the carrying amount of the asset group, we would recognize an impairment charge to the extent the carrying amount of the asset group exceeded its estimated fair value. Unless presented separately, the impairment charge is included as a component of depreciation expense.

<b>Balance, December 31, 2016</b>	<b>\$ 12,645</b>	<b>\$ 13,183</b>	<b>\$ 806</b>	<b>\$ 2,993</b>	<b>\$ 6,341</b>	<b>\$ 12</b>	<b>\$ 35,980</b>	

(a) Acquisitions in 2015 in our Theme Parks segment included the Universal Studios Japan transaction (see Note 5 for additional information).

(b) Acquisitions in 2016 in our Filmed Entertainment segment primarily included the DreamWorks Animation acquisition (see Note 5 for additional information).

(c) Adjustments in 2016 primarily included the updated allocation of the purchase price for Universal Studios Japan in our Theme Parks segment (see Note 5 for additional information) and the reclassification of certain operations and businesses from Corporate and Other to our Cable Communications segment.

Goodwill is calculated as the excess of the consideration transferred over the identifiable net assets acquired in a business combination and represents the future economic benefits expected to arise from anticipated synergies and intangible assets acquired that do not qualify for separate recognition, including assembled workforce, noncontractual relationships and other agreements. We assess the recoverability of our goodwill annually, or more frequently whenever events or substantive changes in circumstances indicate that the carrying amount of a reporting unit may exceed its fair value. We test goodwill for impairment at the reporting unit level. To determine our reporting units, we evaluate the components one level below the segment level and we aggregate the components if they have similar economic characteristics. As a result of this assessment, our reporting units are the same as our five reportable segments. We evaluate the determination of our reporting units used to test for impairment periodically or whenever events or substantive changes in circumstances occur. The assessment of recoverability may first consider qualitative factors to determine whether the existence of events or circumstances leads to a determination that it is more likely than not that the fair value of a reporting unit is less than its carrying amount. A quantitative assessment is performed if the qualitative assessment results in a more-likely-than-not determination or if a qualitative assessment is not performed. The quantitative assessment considers whether the carrying amount of a reporting unit exceeds its fair value, in which case an impairment charge is recorded to the extent the carrying amount of the reporting unit's goodwill exceeds its implied fair value. Unless presented separately, the impairment charge is included as a component of amortization expense. We did not recognize any impairment charges in any of the periods presented.

Table of Contents**Comcast Corporation****Intangible Assets**

<b>Total</b>		<b>\$ 87,651</b>	<b>\$ (11,013)</b>	<b>\$ 86,178</b>	<b>\$ (9,868)</b>

**Indefinite-Lived Intangible Assets**

Indefinite-lived intangible assets consist primarily of our cable franchise rights. Our cable franchise rights represent the values we attributed to agreements with state and local authorities that allow access to homes and businesses in cable service areas acquired in business combinations. We do not amortize our cable franchise rights because we have determined that they meet the definition of indefinite-lived intangible assets since there are no legal, regulatory, contractual, competitive, economic or other factors which limit the period over which these rights will contribute to our cash flows. We reassess this determination periodically or whenever events or substantive changes in circumstances occur. Costs we incur in negotiating and renewing cable franchise agreements are included in other intangible assets and are generally amortized on a straight-line basis over the term of the franchise agreement.

We assess the recoverability of our cable franchise rights and other indefinite-lived intangible assets annually, or more frequently whenever events or substantive changes in circumstances indicate that the assets might be impaired. Our three Cable Communications divisions represent the unit of account we use to test for impairment of our cable franchise rights. We evaluate the unit of account used to test for impairment of our cable franchise rights and other indefinite-lived intangible assets periodically or whenever events or substantive changes in circumstances occur to ensure impairment testing is performed at an appropriate level. The assessment of recoverability may first consider qualitative factors to determine whether it is more likely than not that the fair value of an indefinite-lived intangible asset is less than its carrying amount. A quantitative assessment is performed if the qualitative assessment results in a more-likely-than-not determination or if a qualitative assessment is not performed. When performing a quantitative assessment, we estimate the fair value of our cable franchise rights and other indefinite-lived intangible assets primarily based on a discounted cash flow analysis that involves significant judgment. When analyzing the fair values indicated under the discounted cash flow models, we also consider multiples of operating income before depreciation and amortization generated by the underlying assets, current market transactions, and profitability information. If the fair value of our cable franchise rights or other indefinite-lived intangible assets was less than the carrying amount, we would recognize an impairment charge for the difference between the estimated fair value and the carrying value of the assets. Unless presented separately, the impairment charge is included as a component of amortization expense. We did not recognize any material impairment charges in any of the periods presented.

Table of Contents**Comcast Corporation**

## Finite-Lived Intangible Assets

## Estimated Amortization Expense of Finite-Lived Intangible Assets

(in millions)	
2017	\$ 2,077
2018	\$ 1,828
2019	\$ 1,475
2020	\$ 1,168
2021	\$ 939

Finite-lived intangible assets are subject to amortization and consist primarily of customer relationships acquired in business combinations, software, cable franchise renewal costs, contractual operating rights and intellectual property rights. Our finite-lived intangible assets are amortized primarily on a straight-line basis over their estimated useful life or the term of the associated agreement.

We capitalize direct development costs associated with internal-use software, including external direct costs of material and services and payroll costs for employees devoting time to these software projects. We also capitalize costs associated with the purchase of software licenses. We include these costs in other intangible assets and generally amortize them on a straight-line basis over a period not to exceed five years. We expense maintenance and training costs, as well as costs incurred during the preliminary stage of a project, as they are incurred. We capitalize initial operating system software costs and amortize them over the life of the associated hardware.

We evaluate the recoverability of our finite-lived intangible assets whenever events or substantive changes in circumstances indicate that the carrying amount may not be recoverable. The evaluation is based on the cash flows generated by the underlying asset groups, including estimated future operating results, trends or other determinants of fair value. If the total of the expected future undiscounted cash flows were less than the carrying amount of the asset group, we would recognize an impairment charge to the extent the carrying amount of the asset group exceeded its estimated fair value. Unless presented separately, the impairment charge is included as a component of amortization expense.

**Note 10: Long-Term Debt**

## Long-Term Debt Outstanding

December 31 (in millions)	Weighted-Average Interest Rate as of December 31, 2016	2016	2015

### Comcast Corporation

- (a) The December 31, 2016 and 2015 amounts consist of ¥382 billion and ¥400 billion, respectively, of Universal Studios Japan term loans translated using the exchange rates as of these dates.
- (b) The December 31, 2016 and 2015 amounts include £625 million of 5.50% notes due 2029, which translated to \$771 million and \$921 million, respectively, using the exchange rates as of these dates.
- (c) Includes the effects of our derivative financial instruments.

As of December 31, 2016 and 2015, our debt had an estimated fair value of \$66.3 billion and \$58.0 billion, respectively. The estimated fair value of our publicly traded debt is primarily based on Level 1 inputs that use quoted market values for the debt. The estimated fair value of debt for which there are no quoted market prices is based on Level 2 inputs that use interest rates available to us for debt with similar terms and remaining maturities. See Note 19 for additional information on our cross-guarantee structure.

#### Debt Instruments

##### Revolving Bank Credit Facilities

In May 2016, we entered into a new \$7 billion revolving credit facility due 2021 with a syndicate of banks ("Comcast revolving credit facility") that may be used for general corporate purposes. We may increase the commitment under the Comcast revolving credit facility up to a total of \$10 billion, as well as extend the

## Table of Contents

### Comcast Corporation

expiration date to a date no later than 2023, subject to approval of the lenders. In addition, NBCUniversal Enterprise entered into a new \$1.5 billion revolving credit facility due 2021 with a syndicate of banks ("NBCUniversal Enterprise revolving credit facility") that may be used for general corporate purposes. We may increase the commitment under the NBCUniversal Enterprise revolving credit facility up to a total of \$2 billion, as well as extend the expiration date to a date no later than 2023, subject to approval of the lenders. The new revolving credit facilities replaced Comcast's \$6.25 billion and NBCUniversal Enterprise's \$1.35 billion revolving credit facilities, which were terminated in connection with the execution of the new revolving credit facilities. The interest rates on the new revolving credit facilities consist of a base rate plus a borrowing margin that is determined based on Comcast's credit rating. As of December 31, 2016, the borrowing margin for borrowings based on the London Interbank Offered Rate was 1.00%. Similar to the Comcast and NBCUniversal Enterprise prior revolving credit facilities, each of the new revolving credit facilities require that we maintain certain financial ratios based on their respective debt and operating income before depreciation and amortization, as defined in the credit facility. We were in compliance with all financial covenants for all periods presented.

As of December 31, 2016, amounts available under our consolidated credit facilities, net of amounts outstanding under our commercial paper programs and outstanding letters of credit, totaled \$5.5 billion, which included \$460 million available under the NBCUniversal Enterprise revolving credit facility.

#### Commercial Paper Programs

Our commercial paper programs provide a lower-cost source of borrowing to fund our short-term working capital requirements. The maximum borrowing capacity under the Comcast commercial paper program is \$6.25 billion. We support this commercial paper program with unused capacity under the Comcast revolving credit facility. The maximum borrowing capacity under the NBCUniversal Enterprise commercial paper program is \$1.35 billion. We support this commercial paper program with unused capacity under the NBCUniversal Enterprise revolving credit facility.

#### Term Loans

Our term loans consist of the Universal Studios Japan term loans, which have a final maturity of November 2020. These term loans contain financial and operating covenants and are secured by the assets of Universal Studios Japan and the equity interests of the other investors. We do not guarantee these term loans and they are otherwise nonrecourse to us.

#### Letters of Credit

As of December 31, 2016, we and certain of our subsidiaries had unused irrevocable standby letters of credit totaling \$443 million to cover potential fundings under various agreements.

### Note 11: Postretirement, Pension and Other Employee Benefit Plans

#### Postretirement Benefit Plans

Year ended December 31 (in millions)	2016	2015	2014
Benefit obligation	\$ 538	\$ 820	\$ 837
Plan funded status and recorded benefit obligation	\$ (538)	\$ (820)	\$ (837)
Portion of benefit obligation not yet recognized in benefits expense	\$ (372)	\$ (33)	\$ 46
Benefits expense	\$ 70	\$ 75	\$ 59
Discount rate	4.07-4.56%	4.70-4.73%	4.25%

We sponsor various benefit plans that provide postretirement benefits to eligible employees based on years of service. The Comcast Postretirement Healthcare Stipend Program (the "stipend plan") provides an annual stipend for

## Table of Contents

### **Comcast Corporation**

reimbursement of healthcare costs to each eligible employee based on years of service. Under the stipend plan, we are not exposed to the increasing costs of healthcare because the benefits are fixed at a predetermined amount. In December 2016, the stipend plan was amended primarily to reduce the benefits of active employees who retire after December 31, 2017. The plan amendments reduced our benefit obligation in 2016 by \$361 million.

NBCUniversal's postretirement medical and life insurance plans provide continuous coverage to employees eligible to receive such benefits. A small number of eligible employees also participate in legacy plans of acquired companies.

All of our postretirement benefit plans are unfunded and substantially all of our postretirement benefit obligations are recorded to noncurrent liabilities. The expense we recognize for our postretirement benefit plans is determined using certain assumptions, including the discount rate.

### **Pension Plans**

NBCUniversal sponsors various qualified and nonqualified defined benefit pension plans for domestic employees. Since the future benefits have been frozen since the beginning of 2013, we did not recognize service costs related to the pension plans for all periods presented. The benefits expense we recognized for our defined benefit plans was not material for all periods presented. In addition to the defined benefit plans it sponsors, NBCUniversal is also obligated to reimburse General Electric ("GE") for future benefit payments to those participants who were vested in the supplemental pension plan sponsored by GE at the time of the NBCUniversal transaction in 2011. These pension plans are currently unfunded and we recorded a benefit obligation of \$314 million and \$309 million as of December 31, 2016 and 2015, respectively, which consists primarily of our obligations to reimburse GE.

### **Other Employee Benefits**

#### **Deferred Compensation Plans**

We maintain unfunded, nonqualified deferred compensation plans for certain members of management and nonemployee directors (each, a "participant"). The amount of compensation deferred by each participant is based on participant elections. Participant accounts, except for those in the NBCUniversal plan, are credited with income primarily based on a fixed annual rate. Participants in the NBCUniversal plan designate one or more valuation funds, independently established funds or indices that are used to determine the amount of investment gain or loss in the participant's account. Participants are eligible to receive distributions from their account based on elected deferral periods that are consistent with the plans and applicable tax law.

The table below presents the benefit obligation and interest expense for our deferred compensation plans.

Year ended December 31 (in millions)	2016	2015	2014
Benefit obligation	\$ 2,164	\$ 2,038	\$ 1,774
Interest expense	\$ 178	\$ 171	\$ 149

We have purchased life insurance policies to recover a portion of the future payments related to our deferred compensation plans. As of December 31, 2016 and 2015, the cash surrender value of these policies, which is recorded to other noncurrent assets, was \$709 million and \$658 million, respectively.

#### **Retirement Investment Plans**

We sponsor several 401(k) defined contribution retirement plans that allow eligible employees to contribute a portion of their compensation through payroll deductions in accordance with specified plan guidelines. We make contributions to the plans that include matching a percentage of the employees' contributions up to certain limits. In 2016, 2015 and 2014, expenses related to these plans totaled \$446 million, \$416 million and \$379 million, respectively.

## Table of Contents

### **Comcast Corporation**

#### **Multiemployer Benefit Plans**

We participate in various multiemployer benefit plans, including pension and postretirement benefit plans, that cover some of our employees and temporary employees who are represented by labor unions. We also participate in other multiemployer benefit plans that provide health and welfare and retirement savings benefits to active and retired participants. We make periodic contributions to these plans in accordance with the terms of applicable collective bargaining agreements and laws but do not sponsor or administer these plans. We do not participate in any multiemployer benefit plans for which we consider our contributions to be individually significant, and the largest plans in which we participate are funded at a level of 80% or greater.

In 2016, 2015 and 2014, the total contributions we made to multiemployer pension plans were \$84 million, \$77 million and \$58 million, respectively. In 2016, 2015 and 2014, the total contributions we made to multiemployer postretirement and other benefit plans were \$136 million, \$119 million and \$125 million, respectively.

If we cease to be obligated to make contributions or were to otherwise withdraw from participation in any of these plans, applicable law would require us to fund our allocable share of the unfunded vested benefits, which is known as a withdrawal liability. In addition, actions taken by other participating employers may lead to adverse changes in the financial condition of one of these plans, which could result in an increase in our withdrawal liability.

#### **Severance Benefits**

We provide severance benefits to certain former employees. A liability is recorded when payment is probable, the amount is reasonably estimable, and the obligation relates to rights that have vested or accumulated. In 2016, 2015 and 2014, we recorded severance costs of \$315 million, \$181 million and \$152 million, respectively. Severance costs in 2016 included \$61 million of severance costs associated with the acquisition of DreamWorks Animation.

### **Note 12: Equity**

---

#### **Common Stock**

In the aggregate, holders of our Class A common stock have 66 <sup>2</sup>/<sub>3</sub>% of the voting power of our common stock and holders of our Class B common stock have 33 <sup>1</sup>/<sub>3</sub>% of the voting power of our common stock. Each share of our Class B common stock is entitled to 15 votes. The number of votes held by each share of our Class A common stock depends on the number of shares of Class A and Class B common stock outstanding at any given time. The 33 <sup>1</sup>/<sub>3</sub>% aggregate voting power of our Class B common stock cannot be diluted by additional issuances of any other class of common stock. Our Class B common stock is convertible, share for share, into Class A common stock, subject to certain restrictions.

#### **Class A Special Common Stock Reclassification**

In December 2015, our shareholders approved a proposal to amend and restate our Amended and Restated Certificate of Incorporation in order to reclassify each issued share of our Class A Special common stock into one share of our Class A common stock. This reclassification became effective as of the close of business on December 11, 2015, at which time our Class A Special common stock was no longer outstanding and ceased trading on the NASDAQ under the symbol CMCSK and instead became listed on the NASDAQ under the symbol CMCSA. There was no impact on basic and diluted EPS or the carrying value of total common stock as presented in our consolidated balance sheet because it was a one-for-one stock exchange.

Table of Contents**Comcast Corporation**

Employee stock purchase plans	28	25	23
Total	\$ 507	\$ 455	\$ 414

## Table of Contents

### Comcast Corporation

As of December 31, 2016, we had unrecognized pretax compensation expense of \$712 million related to nonvested RSUs and unrecognized pretax compensation expense of \$375 million related to nonvested stock options that will be recognized over a weighted-average period of approximately 1.7 years and 1.8 years, respectively. In 2016, 2015 and 2014, we recorded increases to additional paid-in capital of \$233 million, \$311 million and \$299 million, respectively, which were the result of tax benefits associated with our share-based compensation plans.

#### Stock Options and Restricted Share Units

As of December 31, 2016, unless otherwise stated (in millions, except per share data)	Stock Options	RSUs
Awards granted during 2016	21	8
Weighted-average exercise price of awards granted during 2016	\$ 60.01	
Stock options outstanding and nonvested RSUs	95	22
Weighted-average exercise price of stock options outstanding	\$ 42.60	
Weighted-average fair value at grant date of nonvested RSUs		\$ 52.11

As of December 31, 2016, substantially all of our stock options outstanding were net settled stock options. Net settled stock options, as opposed to stock options exercised with a cash payment, result in fewer shares being issued and no cash proceeds being received by us when the options are exercised. Our share-based compensation primarily consists of awards of RSUs and stock options to certain employees and directors as part of our approach to long-term incentive compensation. Awards generally vest over a period of 5 years and in the case of stock options, have a 10 year term. Additionally, through our employee stock purchase plans, employees are able to purchase shares of Comcast common stock at a discount through payroll deductions.

The cost associated with our share-based compensation is based on an award's estimated fair value at the date of grant and is recognized over the period in which any related services are provided. RSUs are valued based on the closing price of our common stock on the date of grant and are discounted for the lack of dividends, if any, during the vesting period. We use the Black-Scholes option pricing model to estimate the fair value of stock option awards. The table below presents the weighted-average fair value on the date of grant of RSUs and stock options awarded under our various plans and the related weighted-average valuation assumptions.

Year ended December 31	2016	2015	2014
RSUs fair value	\$ 60.03	\$ 58.81	\$ 47.91
Stock options fair value	\$ 11.55	\$ 11.78	\$ 11.11
Stock Option Valuation Assumptions:			
Dividend yield	1.8%	1.7%	1.8%
Expected volatility	23.0%	23.0%	24.0%
Risk-free interest rate	1.5%	1.6%	2.2%
Expected option life (in years)	6.1	6.0	6.5

Table of Contents**Comcast Corporation****Note 14: Income Taxes**

## Components of Income Tax Expense

Year ended December 31 (in millions)	2016	2015	2014
<b>Current Expense (Benefit):</b>			
Federal	\$ 3,190	\$ 3,210	\$ 2,392
State	480	570	174
Foreign	194	221	142
	<b>3,864</b>	<b>4,001</b>	<b>2,708</b>
<b>Deferred Expense (Benefit):</b>			
Federal	1,192	890	1,000
State	154	66	173
Foreign	98	2	(8)
	<b>1,444</b>	<b>958</b>	<b>1,165</b>
<b>Income tax expense</b>	<b>\$ 5,308</b>	<b>\$ 4,959</b>	<b>\$ 3,873</b>

Our income tax expense differs from the federal statutory amount because of the effect of the items detailed in the table below.

Year ended December 31 (in millions)	2016	2015	2014
Federal tax at statutory rate	\$ 5,024	\$ 4,680	\$ 4,363
State income taxes, net of federal benefit	373	326	329
Foreign income taxes, net of federal credit	65	13	—
Nontaxable income attributable to noncontrolling interests	(128)	(69)	(62)
Adjustments to uncertain and effectively settled tax positions, net	24	15	(408)
Accrued interest on uncertain and effectively settled tax positions, net	17	73	(235)
Other	(67)	(79)	(114)
<b>Income tax expense</b>	<b>\$ 5,308</b>	<b>\$ 4,959</b>	<b>\$ 3,873</b>

We base our provision for income taxes on our current period income, changes in our deferred income tax assets and liabilities, income tax rates, changes in estimates of our uncertain tax positions, and tax planning opportunities available in the jurisdictions in which we operate. We recognize deferred tax assets and liabilities when there are temporary differences between the financial reporting basis and tax basis of our assets and liabilities and for the expected benefits of using net operating loss carryforwards. When a change in the tax rate or tax law has an impact on deferred taxes, we apply the change based on the years in which the temporary differences are expected to reverse. We record the change in our consolidated financial statements in the period of enactment.

The determination of the income tax consequences of a business combination includes identifying the tax basis of assets and liabilities acquired and any contingencies associated with uncertain tax positions assumed or resulting from the business combination. Deferred tax assets and liabilities related to temporary differences of an acquired entity are recorded as of the date of the business combination and are based on our estimate of the ultimate tax basis that will be accepted by the various tax authorities. We record liabilities for contingencies associated with prior tax returns filed by the acquired entity based on criteria set forth in the appropriate accounting guidance. We adjust the deferred tax accounts and the liabilities periodically to reflect any revised estimated tax basis and any estimated settlements with the various tax authorities. The effects of these adjustments are recorded to income tax expense.

## Table of Contents

### Comcast Corporation

From time to time, we engage in transactions in which the tax consequences may be subject to uncertainty. In these cases, we evaluate our tax position using the recognition threshold and the measurement attribute in accordance with the accounting guidance related to uncertain tax positions. Examples of these transactions include business acquisitions and dispositions, including consideration paid or received in connection with these transactions, certain financing transactions, and the allocation of income among state and local tax jurisdictions. Significant judgment is required in assessing and estimating the tax consequences of these transactions. We determine whether it is more likely than not that a tax position will be sustained on examination, including the resolution of any related appeals or litigation processes, based on the technical merits of the position. A tax position that meets the more-likely-than-not recognition threshold is measured to determine the amount of benefit to be recognized in our consolidated financial statements. We classify interest and penalties, if any, associated with our uncertain tax positions as a component of income tax expense.

### NBCUniversal

For U.S. federal income tax purposes, NBCUniversal Holdings is treated as a partnership and NBCUniversal is disregarded as an entity separate from NBCUniversal Holdings. Accordingly, for U.S. federal and state income tax purposes, the income of NBCUniversal Holdings and NBCUniversal is included in tax returns filed by us and our subsidiaries. Therefore, neither NBCUniversal Holdings nor NBCUniversal and its subsidiaries incur any material current or deferred domestic income taxes.

We are indemnified by GE for any income tax liability attributable to the NBCUniversal contributed businesses for periods prior to the close of the NBCUniversal transaction in January 2011 and also for any income tax liability attributable to NBCUniversal Enterprise for periods prior to the date of the NBCUniversal redemption transaction in March 2013. We have indemnified GE for any income tax liability attributable to the businesses we contributed to NBCUniversal for periods prior to the close of the NBCUniversal transaction.

Current and deferred foreign income taxes are incurred by NBCUniversal's foreign subsidiaries. In 2016, 2015 and 2014, NBCUniversal had foreign income before taxes of \$871 million, \$704 million and \$385 million, respectively, on which foreign income tax expense was recorded. We recorded U.S. income tax expense on our allocable share of our subsidiaries' income before domestic and foreign taxes, which was reduced by a U.S. tax credit equal to our allocable share of our subsidiaries' foreign income tax expense.

### Components of Net Deferred Tax Liability

December 31 (in millions)	2016	2015
<b>Deferred Tax Assets:</b>		
Net operating loss carryforwards	\$ 544	\$ 551
Differences between book and tax basis of investments	—	101
Nondeductible accruals and other	3,789	3,704
Less: Valuation allowance	266	342
	<b>4,067</b>	<b>4,014</b>

Differences between book and tax basis of investments	144	—
Differences between book and tax basis of indexed debt securities	375	457
Differences between book and tax basis of foreign subsidiaries and undistributed foreign earnings	960	731
	<b>38,880</b>	<b>37,580</b>
<b>Net deferred tax liability</b>	<b>\$ 34,813</b>	<b>\$ 33,566</b>

## Table of Contents

### Comcast Corporation

Changes in our net deferred tax liability in 2016 that were not recorded as deferred income tax expense are primarily related to an increase of \$158 million associated with items included in other comprehensive income (loss), a decrease of \$226 million related to acquisitions and a decrease of \$129 million associated with our purchase of a noncontrolling interest. Our net deferred tax liability includes \$23 billion related to cable franchise rights that will remain unchanged unless we recognize an impairment or dispose of a cable franchise or there is a change in the tax law.

As of December 31, 2016, we had federal net operating loss carryforwards of \$598 million, including losses of DreamWorks Animation, and various state net operating loss carryforwards that expire in periods through 2036. As of December 31, 2016, we also had foreign net operating loss carryforwards of \$431 million that are related to the foreign operations of NBCUniversal, the majority of which expire in periods through 2026. The determination of the realization of the state and foreign net operating loss carryforwards is dependent on our subsidiaries' taxable income or loss, apportionment percentages, redetermination from taxing authorities, and state and foreign laws that can change from year to year and impact the amount of such carryforwards. We recognize a valuation allowance if we determine it is more likely than not that some portion, or all, of a deferred tax asset will not be realized. As of December 31, 2016 and 2015, our valuation allowance was primarily related to state and foreign net operating loss carryforwards.

### Uncertain Tax Positions

Our uncertain tax positions as of December 31, 2016 totaled \$1.1 billion, which exclude the federal benefits on state tax positions that were recorded as deferred income taxes. Included in our uncertain tax positions was \$181 million related to tax positions of NBCUniversal and NBCUniversal Enterprise for which we have been indemnified by GE. If we were to recognize the tax benefit for our uncertain tax positions in the future, \$600 million would impact our effective tax rate and the remaining amount would increase our deferred income tax liability. The amount and timing of the recognition of any such tax benefit is dependent on the completion of examinations of our tax filings by the various tax authorities and the expiration of statutes of limitations. In 2014, we reduced our accruals for uncertain tax positions and the related accrued interest on these tax positions and, as a result, our income tax expense decreased by \$759 million. It is reasonably possible that certain tax contests could be resolved within the next 12 months that may result in a decrease in our effective tax rate.

### Reconciliation of Unrecognized Tax Benefits

(in millions)	2016	2015	2014
Balance, January 1	\$ 1,136	\$ 1,171	\$ 1,701
Additions based on tax positions related to the current year	74	67	63
Additions based on tax positions related to prior years	67	98	111
Additions from acquired subsidiaries	13	—	—
Reductions for tax positions of prior years	(62)	(84)	(220)
Reductions due to expiration of statutes of limitations	(44)	(41)	(448)
Settlements with tax authorities	(81)	(75)	(36)
Balance, December 31	\$ 1,103	\$ 1,136	\$ 1,171

As of December 31, 2016 and 2015, our accrued interest associated with uncertain tax positions was \$483 million and \$510 million, respectively. As of December 31, 2016 and 2015, \$39 million and \$49 million, respectively, of these amounts were related to tax positions of NBCUniversal and NBCUniversal Enterprise for which we have been indemnified by GE.

During 2016, the IRS completed its examination of our income tax returns for the year 2014. Various states are examining our tax returns, with most of the periods relating to tax years 2000 and forward. The tax years of our state tax returns currently under examination vary by state.

Table of Contents**Comcast Corporation****Note 15: Supplemental Financial Information**

## Receivables

December 31 (in millions)	2016	2015
Receivables, gross	\$ 8,622	\$ 7,595
Less: Allowance for returns and customer incentives	417	473
Less: Allowance for doubtful accounts	250	226
Receivables, net	\$ 7,955	\$ 6,896

In addition to the amounts in the table above, as of December 31, 2016 and 2015, noncurrent receivables of \$939 million and \$721 million, respectively, are included in other noncurrent assets, net that primarily relate to the licensing of our television and film productions to third parties.

## Cash Payments for Interest and Income Taxes

Year ended December 31 (in millions)	2016	2015	2014
Interest	\$ 2,565	\$ 2,443	\$ 2,389
Income taxes	\$ 3,693	\$ 3,726	\$ 3,668

**Noncash Investing and Financing Activities**

## During 2016:

- we acquired \$1.3 billion of property and equipment and intangible assets that were accrued but unpaid
- we recorded a liability of \$653 million for a quarterly cash dividend of \$0.275 per common share paid in January 2017
- we recorded a liability for capital contributions for an investment that were accrued in December and paid in January 2017 (see Note 7 for additional information)

## During 2015:

- we acquired \$1.1 billion of property and equipment and intangible assets that were accrued but unpaid
- we recorded a liability of \$612 million for a quarterly cash dividend of \$0.25 per common share paid in January 2016
- we assumed liabilities related to the Universal Studios Japan transaction (see Note 5 for additional information)
- we used \$517 million of equity securities to settle a portion of our obligations under prepaid forward sale agreements

## During 2014:

- we acquired \$797 million of property and equipment and intangible assets that were accrued but unpaid
- we recorded a liability of \$572 million for a quarterly cash dividend of \$0.225 per common share paid in January 2015
- we used \$3.2 billion of equity securities to settle a portion of our obligations under prepaid forward sale agreements

## Table of Contents

### Comcast Corporation

#### Note 16: Commitments and Contingencies

##### Commitments

NBCUniversal enters into long-term commitments with third parties in the ordinary course of its business, including commitments to acquire film and television programming, obligations under various creative talent agreements, and various other television-related commitments. Many of NBCUniversal's employees, including writers, directors, actors, technical and production personnel, and others, as well as some of its on-air and creative talent, are covered by collective bargaining agreements or works councils. As of December 31, 2016, the total number of NBCUniversal full-time, part-time and hourly employees on its payroll covered by collective bargaining agreements was 8,500 full-time equivalent employees. Approximately 15% of these full-time equivalent employees were covered by collective bargaining agreements that have expired or are scheduled to expire during 2017.

We, through Comcast Spectacor, have employment agreements with both players and coaches of the Philadelphia Flyers. Certain of these employment agreements, which provide for payments that are guaranteed regardless of employee injury or termination, are covered by disability insurance if certain conditions are met.

The table below summarizes our minimum annual programming and talent commitments and our minimum annual rental commitments for office space, equipment and transponder service agreements under operating leases. Programming and talent commitments include acquired film and television programming, including U.S. broadcast rights to the Olympic Games through 2032, *Sunday Night Football* through the 2022-23 season, *Thursday Night Football* through the 2017-18 season, certain NASCAR events through 2024 and other programming commitments, as well as various contracts with creative talent.

As of December 31, 2016 (in millions)	Programming and Talent Commitments	Operating Leases
2017	\$ 5,222	\$ 517
2018	\$ 4,879	\$ 485
2019	\$ 3,503	\$ 433
2020	\$ 4,587	\$ 378
2021	\$ 3,177	\$ 321
Thereafter	\$ 20,847	\$ 1,873

The table below presents our rental expense charged to operations.

Year ended December 31 (in millions)	2016	2015	2014
Rental expense	\$ 744	\$ 608	\$ 580

##### Contractual Obligation

We are party to a contractual obligation that involves an interest held by a third party in the revenue of certain theme parks. The arrangement provides the counterparty with the right to periodic payments associated with current period revenue and, beginning in June 2017, the option to require NBCUniversal to purchase the interest for cash in an amount based on a contractual formula. The contractual formula is based on an average of specified historical theme park revenue at the time of exercise, which amount could be significantly higher than our carrying value. As of December 31, 2016, our carrying value was \$1.1 billion, and if the option had been exercisable as of December 31, 2016, the estimated value of the contractual obligation would have been approximately \$1.4 billion, based on inputs to the contractual formula as of that date.

##### Contingent Consideration

In June 2015, we settled a contingent consideration liability related to the acquisition of NBCUniversal, which was based upon future net tax benefits realized by us that would affect future payments to GE, for a payment

## Table of Contents

### **Comcast Corporation**

of \$450 million, which is included as a financing activity in our consolidated statement of cash flows. The settlement resulted in a gain of \$240 million, which was recorded to other income (expense), net in our consolidated statement of income.

#### **Redeemable Subsidiary Preferred Stock**

NBCUniversal Enterprise is a holding company that we control and consolidate whose principal assets are its interests in NBCUniversal Holdings. The NBCUniversal Enterprise preferred stock pays dividends at a fixed rate of 5.25% per annum. The holders have the right to cause NBCUniversal Enterprise to redeem their shares at a price equal to the liquidation preference plus accrued but unpaid dividends for a 30 day period beginning on March 19, 2020 and thereafter on every third anniversary of such date (each such date, a "put date"). Shares of preferred stock can be called for redemption by NBCUniversal Enterprise at a price equal to the liquidation preference plus accrued but unpaid dividends one year following the put date applicable to such shares. Because certain of these redemption provisions are outside of our control, the NBCUniversal Enterprise preferred stock is presented outside of equity under the caption "redeemable noncontrolling interests and redeemable subsidiary preferred stock" in our consolidated balance sheet. Its initial value was based on the liquidation preference of the preferred stock and is adjusted for accrued but unpaid dividends. As of December 31, 2016 and 2015, the fair value of the NBCUniversal Enterprise redeemable subsidiary preferred stock was \$741 million and \$758 million, respectively. The estimated fair values are based on Level 2 inputs that use pricing models whose inputs are derived primarily from or corroborated by observable market data through correlation or other means for substantially the full term of the financial instrument.

#### **Contingencies**

We are a defendant in several unrelated lawsuits claiming infringement of various patents relating to various aspects of our businesses. In certain of these cases other industry participants are also defendants, and also in certain of these cases we expect that any potential liability would be in part or in whole the responsibility of our equipment and technology vendors under applicable contractual indemnification provisions. We are also subject to other legal proceedings and claims that arise in the ordinary course of our business. While the amount of ultimate liability with respect to such actions is not expected to materially affect our results of operations, cash flows or financial position, any litigation resulting from any such legal proceedings or claims could be time-consuming and injure our reputation.

Table of Contents**Comcast Corporation****Note 17: Financial Data by Business Segment**

We present our operations in one reportable business segment for Cable Communications and four reportable business segments for NBCUniversal. The Cable Networks, Broadcast Television, Filmed Entertainment and Theme Parks segments comprise the NBCUniversal businesses and are collectively referred to as the NBCUniversal segments. Our financial data by reportable business segment is presented in the tables below. We do not present a measure of total assets for our reportable business segments as this information is not used by management to allocate resources and capital.

<b>Comcast Consolidated</b>	<b>\$ 68,775</b>	<b>\$ 22,923</b>	<b>\$ 8,019</b>	<b>\$ 14,904</b>	<b>\$ 7,420</b>	<b>\$ 1,122</b>

(a) For the years ended December 31, 2016, 2015 and 2014, Cable Communications segment revenue was derived from the following sources:

	2016	2015	2014
Residential:			
Video	44.7%	45.9%	47.1%
High-speed Internet	27.0%	26.6%	25.6%
Voice	7.1%	7.7%	8.3%
Business services	11.0%	10.1%	9.0%
Advertising	5.0%	4.9%	5.4%
Other	5.2%	4.8%	4.6%
<b>Total</b>	<b>100%</b>	<b>100%</b>	<b>100%</b>

Subscription revenue received from customers who purchase bundled services at a discounted rate is allocated proportionally to each service based on the individual service's price on a stand-alone basis.

For each of 2016, 2015 and 2014, 2.8% of Cable Communications revenue was derived from franchise and other regulatory fees.

- (b) Beginning in 2016, certain operations and businesses, including several strategic business initiatives, that were previously presented in Corporate and Other are now presented in our Cable Communications segment to reflect a change in our management reporting presentation. For segment reporting purposes, we have adjusted all periods presented to reflect this change.
- (c) The revenue and operating costs and expenses associated with our broadcast of the 2016 Rio Olympics and 2014 Sochi Olympics were reported in our Cable Networks and Broadcast Television segments. The revenue and operating costs and expenses associated with our broadcast of the 2015 Super Bowl were reported in our Broadcast Television segment.
- (d) NBCUniversal Headquarters and Other activities include costs associated with overhead, allocations, personnel costs and headquarter initiatives.
- (e) Included in Eliminations are transactions that our segments enter into with one another. The most common types of transactions are the following:
- our Cable Networks segment generates revenue by selling programming to our Cable Communications segment, which represents a substantial majority of the revenue elimination amount
  - our Broadcast Television segment generates revenue from the fees received under retransmission consent agreements with our Cable Communications segment
  - our Cable Communications segment generates revenue by selling advertising and by selling the use of satellite feeds to our Cable Networks segment
  - our Filmed Entertainment and Broadcast Television segments generate revenue by licensing content to our Cable Networks segment
- (f) Revenue from customers located outside of the United States, primarily in Europe and Asia, in 2016, 2015 and 2014 was \$6.5 billion, \$5.8 billion and \$4.4 billion, respectively. No single customer accounted for a significant amount of revenue in any period.
- (g) We use operating income (loss) before depreciation and amortization, excluding impairment charges related to fixed and intangible assets and gains or losses from the sale of assets, if any, as the measure of profit or loss for our operating segments. This measure eliminates the significant level of noncash depreciation and amortization expense that results from the capital-intensive nature of certain of our busi-

## Table of Contents

### Comcast Corporation

nesses and from intangible assets recognized in business combinations. Additionally, it is unaffected by our capital structure or investment activities. We use this measure to evaluate our consolidated operating performance and the operating performance of our operating segments and to allocate resources and capital to our operating segments. It is also a significant performance measure in our annual incentive compensation programs. We believe that this measure is useful to investors because it is one of the bases for comparing our operating performance with that of other companies in our industries, although our measure may not be directly comparable to similar measures used by other companies. This measure should not be considered a substitute for operating income (loss), net income (loss) attributable to Comcast Corporation, net cash provided by operating activities, or other measures of performance or liquidity we have reported in accordance with GAAP.

### Note 18: Quarterly Financial Information (Unaudited)

(in millions, except per share data)	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	Total Year
<b>2016</b>					
Revenue	\$ 18,790	\$ 19,269	\$ 21,319	\$ 21,025	\$ 80,403

<b>2015</b>					
Revenue	\$ 17,853	\$ 18,743	\$ 18,669	\$ 19,245	\$ 74,510
Operating income	\$ 3,890	\$ 4,105	\$ 4,001	\$ 4,002	\$ 15,998
Net income attributable to Comcast Corporation	\$ 2,059	\$ 2,137	\$ 1,996	\$ 1,971	\$ 8,163
Basic earnings per common share attributable to Comcast Corporation shareholders	\$ 0.82	\$ 0.85	\$ 0.81	\$ 0.80	\$ 3.28
Diluted earnings per common share attributable to Comcast Corporation shareholders	\$ 0.81	\$ 0.84	\$ 0.80	\$ 0.79	\$ 3.24
Dividends declared per common share	\$ 0.25	\$ 0.25	\$ 0.25	\$ 0.25	\$ 1.00

(a) In the fourth quarter of 2016, net income attributable to Comcast Corporation included \$225 million, \$143 million net of tax, recognized in connection with the settlement of amounts owed to us under an agency agreement that had provided for, among other things, Verizon Wireless' sale of our cable services.

### Note 19: Condensed Consolidating Financial Information

Comcast ("Comcast Parent"), Comcast Cable Communications, LLC ("CCCL Parent") and NBCUniversal ("NBCUniversal Media Parent") have fully and unconditionally guaranteed each other's debt securities, including the Comcast revolving credit facility. The principal amount of debt securities within the guarantee structure total \$52.9 billion, of which \$12.3 billion will mature within the next five years.

Comcast Parent and CCCL Parent also fully and unconditionally guarantee NBCUniversal Enterprise's \$3.3 billion principal amount of senior notes, revolving credit facility and commercial paper program. NBCUniversal Media Parent does not guarantee the NBCUniversal Enterprise senior notes, revolving credit facility or commercial paper program.

Comcast Parent provides an unconditional subordinated guarantee of the \$185 million principal amount currently outstanding of Comcast Holdings' ZONES due October 2029. Neither CCCL Parent nor NBCUniversal Media Parent guarantee the Comcast Holdings' ZONES due October 2029. None of Comcast Parent, CCCL Parent nor NBCUniversal Media Parent guarantee the \$62 million principal amount currently outstanding of Comcast Holdings' ZONES due November 2029 or the \$3.3 billion of Universal Studios Japan term loans.

### CAUTIONARY NOTE REGARDING FORWARD-LOOKING STATEMENTS

Some statements in this Annual Report on Form 10-K for the fiscal year ended December 31, 2016 (this "Annual Report") are known as "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933, as amended (the "Securities Act"), and Section 21E of the Securities Exchange Act of 1934, as amended (the "Exchange Act"). These forward-looking statements include, but are not limited to, statements about our plans, objectives, expectations and intentions and other statements contained in this Annual Report that are not historical facts. When used in this Annual Report, the words "expects," "anticipates," "intends," "plans," "believes," "seeks," "estimates," "should," "could," "may," "will" and similar expressions are generally intended to identify forward-looking statements. Because these forward-looking statements involve known and unknown risks and uncertainties, there are important factors that could cause actual results, events or developments to differ materially from those expressed or implied by these forward-looking statements, including factors discussed under "Item 1A. Risk Factors" and other parts of this Annual Report and the factors set forth below:

- the timing and ability to complete the Merger (as defined below) with Consolidated Communications Holdings, Inc.;
- the outcome of legal and regulatory proceedings that have been, or may be, instituted following the announcement of our entering into the Merger Agreement (as defined below);
- risks that the Merger disrupts current plans and operations including potential impairments to our ability to retain and motivate key personnel;
- the possibility that the Merger is not consummated, including, but not limited to, due to the failure to satisfy the closing conditions;
- the diversion of management's attention from ongoing business operations and opportunities as a result of the Merger;
- the amounts of costs, fees, and expenses relating to the Merger;
- future performance generally and our share price as a result thereof;
- changes in strategic direction, including as a result of mergers, acquisitions or dispositions;
- restrictions imposed by the agreements governing our indebtedness;
- our ability to satisfy certain financial covenants included in the agreements governing our indebtedness;
- financing sources and availability, and future interest expense;
- our ability to repay or refinance our indebtedness;
- our ability to fund substantial capital expenditures;
- anticipated business development activities and future capital expenditures;
- the effects of regulation and enforcement, including changes in federal and state regulatory policies, procedures and their enforcement mechanisms including but not limited to the availability and levels of regulatory support payments and penalties associated with performance;
- our ability to satisfy our Connect America Fund ("CAF") Phase II obligations;
- adverse changes in economic and industry conditions, and any resulting financial or operational impact, in the markets we serve;
- labor matters, including workforce levels, our workforce reduction initiatives, labor negotiations and any resulting financial or operational impact;
- material technological developments and changes in the communications industry, including declines in access lines;
- disruption of our third party suppliers' provisioning of critical products or services;
- change in preference and use by customers of alternative technologies;
- the effects of competition on our business and market share;
- our ability to overcome changes to or pressure on pricing and their impact on our profitability;
- intellectual property infringement claims by third parties;
- failure of, or attack on, our information technology infrastructure;
- risks related to our reported financial information and operating results;
- availability of net operating loss ("NOL") carryforwards to offset anticipated tax liabilities;
- the impact of changes in assumptions on our ability to meet obligations to our company-sponsored qualified pension plans and other post-employment benefit plans;
- the impact of lump sum payments under certain of our company-sponsored qualified pension plans on future pension

contributions;

- the effects of severe weather events, such as hurricanes, storms, tornadoes and floods, terrorist attacks, cyber-attacks or other natural or man-made disasters; and
- changes in accounting assumptions that regulatory agencies, including the Securities and Exchange Commission (the "SEC"), may require or that result from changes in the accounting rules or their application, which could result in an impact on earnings.

You should not place undue reliance on such forward-looking statements, which are based on the information currently available to us and speak only as of the date on which this Annual Report is filed with the SEC. We undertake no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events, changes in our expectations or otherwise, except as required by law. However, your attention is directed to any further disclosures made on related subjects in our subsequent reports filed with the SEC on Forms 10-K, 10-Q and 8-K.

## PART I

### ITEM 1. BUSINESS

*Except as otherwise required by the context, references in this Annual Report to:*

- *"FairPoint Communications" refers to FairPoint Communications, Inc., excluding its subsidiaries.*
- *"FairPoint", the "Company", "we", "us" or "our" refer to the combined business of FairPoint Communications, Inc. and all of its subsidiaries after giving effect to the merger on March 31, 2008 with Northern New England Spinco Inc., a subsidiary of Verizon Communications Inc. ("Verizon"), which transaction is referred to herein as the "Spinco Merger".*
- *"Northern New England operations" refers to the local exchange business acquired from Verizon and certain of its subsidiaries after giving effect to the Spinco Merger.*
- *"Telecom Group" refers to FairPoint, exclusive of our acquired Northern New England operations.*
- *"Verizon New England" refers to the local exchange business of Verizon New England Inc. in Maine, New Hampshire and Vermont and the customers of Verizon and its subsidiaries' (other than Celco Partnership) related long distance and Internet service provider business in those states prior to the Spinco Merger.*
- *"Consolidated" refers to Consolidated Communications Holdings, Inc., a Delaware corporation.*

#### Our Business

We are a leading provider of advanced communications services to business, wholesale and residential customers within our service territories. We offer our customers a suite of advanced services including Ethernet, Session Initiation Protocol Trunking ("SIP-Trunking"), hosted Primary Branch Exchange ("hosted PBX"), managed services, data center colocation services, high capacity data transport and other IP-based services over our fiber-based network, in addition to Internet access, high-speed data ("HSD") and local and long distance voice services. Our service territory spans 17 states where we are the incumbent communications provider primarily serving rural communities and small urban markets. Many of our local exchange carriers ("LECs") have served their respective communities for more than 80 years. As of December 31, 2016, we operated with approximately 306,600 broadband subscribers, approximately 15,700 Ethernet circuits and approximately 366,100 residential voice lines.

We own and operate an extensive fiber-based Ethernet network with more than 22,000 miles of fiber optic cable, including approximately 18,000 miles of fiber optic cable in Maine, New Hampshire and Vermont, giving us capacity to support more HSD services and extend our fiber reach into more communities across the region. The IP/Multiple Protocol Label Switched ("IP/MPLS") network architecture of our fiber-based network allows us to provide Ethernet, transport and other IP-based services with the highest level of reliability at a lower cost of service. This fiber-based Ethernet network also supplies critical infrastructure for wireless carriers serving the region as their bandwidth needs increase, driven by mobile data from smartphones, tablets and other wireless devices. As of December 31, 2016, we provide cellular transport, also known as backhaul, through over 1,900 mobile Ethernet backhaul connections. We have fiber connectivity to approximately 1,300 cellular communications towers in our service footprint.

We were incorporated in New York in 1991 and reincorporated in Delaware in 1993 and grew through acquisitions. In March 2008, we completed the acquisition of the Northern New England operations from Verizon through the Spinco Merger. This acquisition significantly expanded our geographic platform in Maine, New Hampshire and Vermont.

#### Transformation of our Business

We have transformed our network and are aligning our communications services to meet changing customer preferences and communications requirements. Over the past few years, we have made significant capital investments in our fiber-based Ethernet network to expand our business service offerings to meet the growing data needs of our business customers and to increase broadband speeds and capacity in our consumer markets. We have also focused our sales and marketing efforts on these advanced data solutions. Specifically, we built and launched high capacity Ethernet services to allow us to meet the capacity needs of our business customers as well as supply high capacity infrastructure to our wholesale customers.

Business and wholesale customers have a growing demand for bandwidth and are converting from services such as Asynchronous Transfer Mode ("ATM") and Frame Relay and dedicated transport using T-1s to Ethernet-based products. Businesses are also looking to take advantage of the flexibility of voice services via Voice over Internet Protocol ("VoIP"). Residential customer trends have shown an increasing adoption and demand for higher speed broadband services while traditional voice services are giving way to wireless and alternative carriers. Our plan is to continue to add advanced data products and services that meet our

business and wholesale customers' needs while providing higher speed HSD options, attractive pricing features, appealing bundle offers and excellent customer service to our residential customer segment.

We have been successful in meeting the needs of our wireless carrier customers through our Fiber to the Tower ("FTTT") initiative. We have seen an increase in fiber backhaul from wireless carriers since late 2010 and now have approximately 1,300 cell towers served with fiber across our footprint. Our extensive fiber network of approximately 18,000 miles of fiber optic cable in Maine, New Hampshire and Vermont is a competitive advantage in delivering FTTT services.

We believe ongoing regulatory reforms in Maine, New Hampshire and Vermont will serve to promote fair competition among communications services providers in that region. We continue to believe that there is a significant organic growth opportunity within these business markets given our extensive fiber network and IP-based product suite combined with our relatively low business market share in these areas.

### **Proposed Merger with Consolidated Communications Holdings, Inc.**

On December 3, 2016, FairPoint Communications entered into an Agreement and Plan of Merger (the "Merger Agreement") with Consolidated and Falcon Merger Sub, Inc., a newly formed Delaware corporation and wholly-owned subsidiary of Consolidated ("Merger Sub"), which provides for, among other things, a business combination whereby Merger Sub will merge with and into FairPoint Communications, with FairPoint Communications as the surviving entity (the "Merger"). As a result of the Merger, the separate corporate existence of Merger Sub will cease, and FairPoint Communications will survive as a wholly owned subsidiary of Consolidated. Consolidated is a leading business and broadband communications provider throughout its 11-state service area.

If the Merger is completed, under the terms of the Merger Agreement, stockholders of FairPoint Communications will receive 0.7300 shares of common stock of Consolidated for each share of FairPoint Communications common stock that they own immediately before this transaction. The Merger is expected to close around the middle of 2017 and is subject to standard closing conditions, including federal and state regulatory approvals and the approval of both Consolidated's and FairPoint Communications' stockholders.

### **Generation of Revenue**

We offer a broad portfolio of services to meet the communications and technology needs of our customers, including bundling of services designed to simplify our customers' purchasing and management processes. Our basic offerings are outlined below.

See "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" and "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report for more information regarding our revenue sources and financial results.

### **Data and Internet Services**

We believe data and Internet services are the cornerstone of our growth strategy for our business customers who require more advanced data solutions and our wholesale customers who experience capacity demands from their end users for higher speed services. We offer an extensive array of high capacity data services including: optical, Ethernet, IP services, Ethernet virtual circuit technology for cellular backhaul and private line special access services. We work with large businesses and carriers to deliver network capacity to meet their specific needs, including migrating networks from time division multiplexing to Ethernet-based high capacity circuits. Our portfolio also includes hosted PBX service over our Ethernet network. This service provides a cloud based voice offering for business customers. The service leverages our softswitch platform and uses a set of approved vendors for on-site hardware and maintenance support. Hosted PBX service allows us to continue to expand the services we offer to business customers, while leveraging our Ethernet network.

We offer internet access to both consumer and business customers through a variety of technologies leveraging both copper and fiber infrastructure, including digital subscriber line ("DSL"), dedicated fiber and lit buildings throughout our footprint. Certain of these services provide speeds up to 1 gigabit per second. In select markets, we also offer cable modem internet service, "Fiber to the Home" and wireless internet access.

Our data center colocation services offer businesses and public entities a physically secure, reliable location equipped with network connections to manage off-site disaster recovery, computing, storage and other IT equipment. Our customer data centers are strictly controlled, secured environments with the necessary power, cooling and connectivity resiliency to provide customer business continuity. These data centers enable organizations to quickly and cost-effectively scale and consolidate their IT systems to meet demand without incurring construction or excess staffing costs while maintaining control over management of both equipment and data.

## *Voice Services*

**Local Calling Services.** Local calling services enable the local customer to originate and receive an unlimited number of calls within a defined "exchange" area. Local calling services include basic local lines and local private lines. We provide local calling services to residential and business customers, generally for a fixed monthly charge and service charges for special calling features. In a LEC's territory, the amount that we can charge a customer for local service is generally determined by proceedings involving the appropriate state regulatory authorities.

**Long Distance Services.** We offer dedicated long distance services within our service areas on our network and through resale agreements with national interexchange carriers.

**9-1-1 Services.** We are a full service 9-1-1 provider and in the past three years have installed and now maintain two turn-key, state of the art statewide next-generation emergency 9-1-1 systems. These systems, located in Maine and Vermont, have processed over a million calls relying on the caller's location information for routing. Next-generation emergency 9-1-1 systems are an improvement over traditional 9-1-1 and provide the foundation to handle future communication modes such as texting and video.

## *Access*

**Network Transport Services.** We offer network transport services to wholesale customers for their use in connecting end users to the interexchange networks of the wholesale customer. These network transport services include high speed digital services, which are primarily Ethernet-based services provisioned over fiber and copper facilities, and special access services, which are primarily DS-1 and DS-3 services.

**Network Switched Access Service.** Network switched access service enables long distance companies to utilize our local network to originate or terminate intrastate and interstate communications. Network switched access charges relate to long distance, or toll calls, that typically involve more than one company in the provision of telephone service, as well as to the termination of interexchange private line services. Since toll calls and private line services are generally billed to the customer originating the call or ordering the private line service, a mechanism is required to compensate each company providing services relating to the service. This mechanism is the access charge and we bill access charges to long distance companies and other customers for the use of our facilities to access the customer, as described below. Network switched access compensation is subject to the Federal Communications Commission ("FCC") CAF/intercarrier compensation ("ICC") Order (referred to hereafter as the "CAF/ICC Order"), as described below in "Regulatory and Legislative." Under the rules adopted in 2011, network switched access revenues are expected to continue to decline, but on a more predictable basis with fewer disputes.

**Interstate Access Charges.** We generate interstate access revenue when an interstate long distance call is originated by a customer in one of our exchanges to a customer in another state, or when such a call is terminated to a customer in one of our exchanges. We also generate interstate access revenue when an interexchange carrier orders special access to connect interexchange private line services, such as HSD services, to a customer in one of our local exchanges. We bill interstate access charges in the same manner as we bill intrastate access charges as described below; however, interstate access charges are regulated and approved by the FCC instead of the state regulatory authority.

**Intrastate Access Charges.** We generate intrastate access revenue when an intrastate long distance call involving an interexchange carrier is originated by a customer in one of our exchanges to a customer in another exchange in the same state, or when such a call is terminated to a customer in one of our local exchanges. We also generate intrastate access revenue when an interexchange carrier orders special access to connect interexchange private line services to a customer in one of our local exchanges. The interexchange carrier pays us an intrastate access fee for either terminating or originating the communication. We bill access charges relating to such service through our carrier access billing system and receive the access payment from the interexchange carrier. Access charges for intrastate services are regulated and approved by the state regulatory authority and are also subject to the rate transitions ordered by the FCC in its CAF/ICC order.

## *Regulatory Funding*

We receive certain federal and state government funding that we classify as regulatory funding, which is further described in "Regulatory and Legislative" below, including: CAF Phase II support effective January 1, 2015 to build and operate broadband services; CAF Phase II transition funding (scheduled to phase down over three years); CAF Phase I frozen support (for Kansas and Colorado in 2015 and until a reverse auction is completed); CAF funding under the CAF/ICC Order and universal service fund support from certain states in which we operate.

From time to time we advocate for modifications or interpretations of state and federal regulations that could provide additional support funding to us for serving high cost areas. We do not know if any additional revenue will result from these advocacy efforts

or, if so, when or how much additional revenue may be available.

### ***Other Services***

We seek to capitalize on our LECs' local presence and network infrastructure by offering enhanced services to customers, including special purpose projects on behalf of third parties, video services (including cable television and video-over-DSL) and directory services, among others.

***Special Purpose Projects.*** Upon request from customers, we provide project-based implementation support services. These services are provided on a time and materials basis at the customer location as part of a larger FairPoint solution. This capability allows us to better serve our customers and assist in filling resource gaps they may encounter when implementing new communications plans.

### ***Our Markets***

We operate 83% of our total residential voice lines in Maine, New Hampshire and Vermont. We also provide local service in portions of Alabama, Colorado, Florida, Georgia, Illinois, Kansas, Massachusetts, Missouri, New York, Ohio, Oklahoma, Pennsylvania, Virginia and Washington. Within these 17 states, most of our LECs operate as the incumbent local exchange carrier ("ILEC").

### **Sales and Marketing**

With approximately 18,000 miles of fiber optic cable and 93% of our central offices enabled for Ethernet services we offer the largest such network in northern New England. Combined with our copper network, our infrastructure reaches approximately 95% of businesses in Maine, New Hampshire and Vermont. By investing in a dense, high-performing, scalable network, FairPoint has bandwidth and transport capacity to support enhanced applications, including fiber-based mobile and cloud-based communications, such as small cell wireless backhaul technology, VoIP, data storage, managed services and disaster recovery. Our marketing approach emphasizes the benefits of our advanced network while utilizing customer-oriented, locally-focused messages that resonate by community and by customer segment.

Our focus on the individual communities we serve in our 17 state footprint stems from the expertise of approximately 2,500 employees who predominantly work and live in the markets where we provide service, as well as our belief that many customers in our territory prefer to do business locally. We view our visible local presence as a competitive differentiator because it enables a prompt and locally relevant approach to opportunities and challenges in sales and service, operations, and marketing. As a result, we often leverage the heritage of the LECs in our service areas and the brand recognition that our long history of service provides.

We tailor our marketing offers, messaging and tactics to be effective and efficient for each customer audience using both call center and direct sales channels. Residential customers, who make up the largest part of our customer base, are directed to customer sales and service call centers based in the markets we serve. As we seek continued growth in business services, we leverage local call centers for sales and service efficiency among our small-office and home-office clientele, as well as a direct sales force that is trained to develop advanced, customized voice and data solutions. The direct sales force that focuses on small and medium businesses dedicates representatives to exclusive geographic territories and encourages involvement in the local business community during and after hours. The direct sales force that focuses on large and enterprise business utilizes both a geographic territory assignment and a named account program. The government, education and wholesale teams utilize a named account approach, focusing on specific new and existing customers.

We maintain teams of local sales support staff and experienced sales engineers who can design the right solution for each organization and guide new customers during the pre- and post-sales process. Support teams are customized based on account size and product set, and dedicated representatives are on call to answer questions, troubleshoot if necessary, and serve as a conduit to much broader resources, options and support, including our in-market Network Operations Center. We also place an emphasis on customer satisfaction and retention, with certain representatives focusing on maintaining existing customer relationships.

### **Information Technology and Support Systems**

We have a customer-focused approach to information technology ("IT") which allows for efficient business operations and supports revenue growth. Our approach is to simplify and standardize processes in order to optimize the benefits of our back-office and operation support systems. Specifically, our "simplify and optimize" initiative targets the reduction of redundant and manual processes to reduce cycle times, improve efficiency and deliver enhanced customer service.

Our back-office and operations support systems are a combination of integrated off-the-shelf packages that have been customized to support our operations. Both our Northern New England and Telecom Group access billing operations are supported by outsourced third-party platforms.

Our systems are supported by a combination of employees and contractors. Our internal IT group supports data center operations, data network operations, internal help desk, desktop support and phases of the systems development life cycle. We use professional services firms for the majority of software development and maintenance.

### **Network Architecture and Technology**

Rapid and significant changes in technology continue in the communications industry. Our success depends, in part, on our ability to anticipate and adapt to technological changes. With this in mind, we continue to evolve and expand our advanced fiber-based Ethernet network in our Northern New England operations, which is an IP/MPLS network operating on a fiber transport infrastructure that has approximately 18,000 miles of fiber optic cable. This network is the largest IP/MPLS based network in northern New England. We have made significant investments in our fiber optic network to expand our business service offerings to meet the growing needs of our customers and to increase broadband speeds and capacity in our consumer markets. We expect to continue to invest in expanding the reach of our fiber network to connect directly to customers' premises, cellular towers and data centers. We monitor the fiber-based Ethernet network utilization and augment capacity as needed to avoid network problems. We believe this network architecture will enable us to efficiently respond to these technological changes.

Our fiber-based network transport systems in our Northern New England operations and our Telecom Group are a combination of Synchronous Optical Network, Dense Wave Division Multiplexing and Ethernet transport capable of satisfying customer demand for high speed bandwidth transport services. This system supports advanced services, including carrier Ethernet services and legacy data products, such as Frame Relay and ATM, facilitating delivery of advanced services as demand warrants.

In our LEC markets, DSL-enabled access technology has been deployed to provide significant broadband capacity to our customers. As of December 31, 2016, all of our central offices are capable of providing broadband services through DSL technology, cable modem and/or wireless broadband.

Our LEC network consists of 93 host central offices and 412 remote central offices, all with digital switches. Approximately 99% of our central offices are served by fiber optic facilities, which we own. The primary interconnection with other incumbent carriers is also fiber optic. Our outside plant consists of both fiber optic and copper distribution networks.

### **Competition**

The communications industry is comprised of companies involved in the transmission of voice, data and video communications over various media and through various types of technologies. The competitive environment continues to intensify as consumers and businesses are provided more options for a variety of services, pricing and service quality. Presently, there are four predominant types of local telephone service providers, or carriers, in the communications industry: ILECs, CLECs, cable companies and wireless carriers. ILECs, which the majority of our 32 LECs operate as, were the traditional monopoly providers of the local telephone service prior to the passage of the Telecommunications Act of 1996 (the "1996 Act"). A CLEC is a competitor to local telephone companies that has been granted permission by a state regulatory commission to offer local telephone service in an area already served by an ILEC. CLECs typically offer voice and data services to their customers. Cable companies are the traditional video distribution providers in the market and are now selling packages of voice and data services along with their video services. Wireless competitors also have a significant presence in most markets, offering local and long distance voice services, along with mobile data offerings. As a result, competition in local exchange service areas for voice and data services has increased and is expected to continue to increase from these competitors.

Overall, we face intense competition from a variety of sources for our voice and data services in most of the areas we now serve, many of whom have greater resources and access to capital, and we expect that such competition will continue to intensify in the future. This competition has had an adverse impact on our access lines, broadband subscribers and revenues.

Regulations and technology change quickly in the communications industry, and these changes have historically had, and are expected to continue in the future to have, a significant impact on competitive dynamics. For instance, the ubiquity of wireless networks, coupled with technology changes, such as VoIP and data-driven devices (e.g., smartphones and computer tablets), is creating increased competition and technology substitution, a trend we expect will continue for the foreseeable future. Public monies in the form of stimulus funds to build broadband networks are also providing a new source of competition for us. In addition, many of our competitors have access to larger workforces or have substantially greater name-brand recognition and financial, technological and other resources than we do. Moreover, some of our competitors, including wireline, wireless and cable, have formed and may continue to form strategic alliances to offer bundled services in our service areas.

We estimate that, as of December 31, 2016, most of the customers that we serve have access to voice, network transport, video services and Internet services through a cable company. Increasingly, both CLECs and cable companies have begun to penetrate the market for high capacity circuits for large businesses and carriers, including interexchange and wireless providers.

In most of our service areas, we face competition from wireless carriers for voice and mobile data services. A large portion of households in the United States have moved to a wireless only model. Wireless carriers, particularly those that provide unlimited wireless service plans with no additional fees for long distance, offer customers a substitution service for our access lines and are becoming an increasing threat to our local voice line business. In addition, wireless companies continue to expand their high-speed Internet offerings, which have resulted in more intense competition for our high-speed Internet customers. Additionally, traditional wireline applications, such as home security systems, are now moving to IP-based models, leveraging an Internet connection in place of a traditional phone line. Although there are unique benefits of our wireline phone service, such as land lines remaining active in the event of a home power outage, we expect continued migration to IP-based and wireless voice services.

We are actively addressing our competitive environment with a multi-faceted approach to increase our market share. This approach is comprised of acquisition programs and new product introductions, retention programs, win-back and upsell initiatives.

Our relatively low current market share provides us the opportunity to both win back business customers who have left for another carrier as well as acquire new business. In order to better address the needs of our customers and prospects, we segment them across specific channels. Our focus for residential customers is to drive increasing penetration of high speed data customers. We are upgrading our access infrastructure to provide higher speed internet access services via high capacity copper and fiber facilities to more customers and communities each year. We are focusing on promotional programs that allow us to differentiate from cable operators, including price lock and multi-year discount programs. We believe bundled services continue to provide value to customers and, as such, we package our services in a range of price points.

In the business and government segments, our fiber-based network with approximately 18,000 miles of fiber, allows us to deliver Ethernet and fiber based data services typically ranging from 1 megabit per second to 1 gigabit per second. Along with our high capacity data services, we offer competitively priced voice services through VoIP or time division multiplexing ("TDM"). Our three contiguous state footprint in northern New England, allows businesses with multi-state locations to work with one local vendor. Our geographic coverage and extensive fiber network is an attractive feature for our wholesale customers, such as wireless carriers seeking cell tower backhaul services, and national carriers seeking middle and last mile solutions.

We have a multi-channel retention team, responsible for developing and executing customer retention programs across all areas of FairPoint. In addition, we have initiated proactive programs to address customers coming off of promotions and term contracts. Through early intervention, we expect to reduce churn and retain customers longer.

See "Regulatory and Legislative" below and "Item 1A. Risk Factors" included elsewhere in this Annual Report for more information regarding the competition that we face.

## **Employees**

As of December 31, 2016, we employed approximately 2,500 employees, approximately 1,500 of whom were covered by 13 collective bargaining agreements. Our agreements with the International Brotherhood of Electrical Workers ("IBEW") and the Communications Workers of America ("CWA") in northern New England covering approximately 1,300 employees in the aggregate expire in August 2018.

## **Intellectual Property**

We believe we own or have the right to use all of the intellectual property that is necessary for the operation of our business as we currently conduct it.

## **Regulatory and Legislative**

We are generally subject to common carrier regulation primarily by federal and state governmental agencies. At the federal level, the FCC generally exercises jurisdiction over common carriers, such as us, to the extent those carriers provide, originate or terminate interstate or international communications. State regulatory commissions generally exercise jurisdiction over common carriers to the extent those carriers provide, originate or terminate intrastate telecommunications. In addition, pursuant to the Telecommunications Act of 1996, which amended the Communications Act of 1934 (as amended, the "Communications Act"), state and federal regulators share responsibility for implementing and enforcing the domestic pro-competitive policies introduced by that legislation.

We are required to comply with the Communications Act, which requires, among other things, that common carriers offer communications services at just and reasonable rates and on terms and conditions that are not unreasonably discriminatory. The Communications Act also contains requirements intended to promote competition in the provision of local services and lead to deregulation as markets become more competitive.

The FCC's CAF/ICC Order (as defined herein and sometimes referred to in the industry as the "Transformation Order") modified regulation for us beginning January 1, 2012. Effective January 1, 2012, the FCC eliminated the rural/non-rural distinction among ILECs and treats ILECs as either price cap or rate-of-return. Effective January 1, 2012, all of our ILECs are treated as price cap companies for CAF purposes, including the Telecom Group rate-of-return companies. However, the Telecom Group rate-of-return companies continue to be treated as rate-of-return for regulation of interstate switched and special access services. In addition, the FCC has preempted certain state regulation over our ILECs, including capping all state originating and terminating switched access charges and reducing terminating state switched access charges beginning July 1, 2012, in a two-year transition to make state switched access charges equal to interstate switched access charges. Starting July 1, 2014, all terminating usage rates have begun to transition to zero over the following four to seven years. As usage rates decrease under the FCC transition rules, resulting in decreased intercarrier compensation, carriers are allowed to increase end user access recovery charges to offset a substantial portion of the revenue losses. The impact of these changes for 2016 is described further below. However, in the long run, we are uncertain of the ultimate impact as federal and state regulations continue to evolve.

#### *Overview of FCC CAF/ICC Order to Reform Universal Service and Intercarrier Compensation*

On March 16, 2010, the FCC submitted the National Broadband Plan ("NBP") to the United States Congress. The NBP is a plan to bring high-speed Internet services to the entire country, including remote and high-cost areas. In accordance with the NBP, the FCC commenced several rulemakings that concern, among other things, reforming high-cost and low-income programs to promote universal service to make those funds more efficient while promoting broadband communications in areas that otherwise would be unserved and to address changes to interstate access charges and other forms of ICC.

On November 18, 2011, the FCC released its comprehensive landmark order to modify the nationwide system of universal support and the ICC system (the "CAF/ICC Order"). In this order, the FCC replaced all existing USF for price cap carriers with its CAF. The intent of CAF is to bring high-speed affordable broadband services to all Americans. The CAF/ICC Order fundamentally reforms the ICC process that governs how communications companies bill one another for exchanging traffic, gradually phasing down these charges.

In conjunction with the CAF/ICC Order, the FCC adopted a Notice of Proposed Rulemaking to deal with related matters, including but not limited to: (i) the actual cost model to be adopted for CAF Phase II funding, (ii) treatment of originating access charges, (iii) modifications to CAF for rate-of-return ILECs, (iv) development of CAF Phase II for mobility, (v) CAF Phase II competitive bidding rules, (vi) remote areas funding and (vii) IP to IP interconnection issues. In its Order released December 18, 2014, the FCC stated its intention to extend its offer of CAF Phase II support to price cap carriers in early 2015 and to implement the CAF Phase II program for price cap carriers during 2015. On April 29, 2015, the FCC released a Public Notice extending the offer of CAF Phase II funding to price cap carriers, as described in more detail below. As of year-end 2016, the FCC has issued competitive bidding guidelines but has not finalized rules for the competitive bidding process. It is not known how these rules may impact us.

**CAF Phase I and Phase II Support.** Pursuant to the CAF/ICC Order, beginning in 2012, we started receiving monthly CAF Phase I frozen support, which is based on and equal to all forms of USF high-cost support we received during 2011. This support was considered transitional funding while the FCC developed its CAF Phase II program. FCC rules required that if we continued receiving CAF Phase I frozen support beyond 2012, which we have, we would have specific broadband spending obligations starting in 2013, which we did and have met. According to the FCC rules, in 2013, we were required to spend, and did spend, one-third of the frozen support to "build and operate broadband-capable networks used to offer the provider's own retail broadband service in areas substantially unserved by an unsubsidized competitor." According to the FCC rules, in 2014, we were required to spend, and did spend, two-thirds of the frozen support to "build and operate broadband-capable networks used to offer the provider's own retail broadband service in areas substantially unserved by an unsubsidized competitor." For the CAF Phase I frozen support we receive, this spending obligation increased to 100% of the frozen support received in 2015 and subsequent years to "build and operate broadband-capable networks used to offer the provider's own retail broadband service in areas substantially unserved by an unsubsidized competitor." We were in compliance with the 2016 spending obligation and expect to be in compliance in 2017.

In a Public Notice released on April 29, 2015, the FCC extended an offer of CAF Phase II support to price cap carriers to fund the building and operation of voice and broadband-capable services in their service territories. In this Public Notice, the FCC offered \$38.2 million of annual funding to us for six years in return for providing broadband services to a specified number of locations in eligible census blocks specified by the FCC. This compares with \$39.3 million in annual CAF Phase I frozen funding that we received in 2014. On August 18, 2015, we announced our acceptance of \$37.4 million in annual CAF Phase II support, which was effective retroactive to January 1, 2015. This includes support in all our operating states except Colorado and Kansas where we declined the offered CAF Phase II support.

The specific obligations associated with CAF Phase II funding include the obligation to serve approximately 105,000 locations in approximately 16,000 census blocks by December 31, 2020 (with interim milestones of 40%, 60% and 80% completion by

December 2017, 2018 and 2019, respectively); to provide broadband service to those locations with speeds of 10 megabits per second down and 1 megabit per second up; to achieve latency of less than 100 milliseconds; to provide data of at least 100 gigabytes per month; and to offer pricing reasonably comparable to pricing in urban areas.

For the two states where we declined CAF Phase II support, we will continue to receive CAF Phase I frozen support until such time as the FCC conducts a competitive bidding process. We expect the FCC to conduct the competitive bidding process during 2017. The FCC has determined that price cap carriers declining CAF Phase II support can participate in the competitive bidding process along with any other interested carriers. As of December 31, 2016, the FCC has not yet adopted final rules governing the competitive bidding process.

In addition, there is a three year transition for price cap carriers that choose to accept model-based support in states where the accepted support is less than the CAF Phase I frozen support. The determination of transition funding is made at the state level. From January 1, 2015 to July 31, 2015, and as prescribed by the FCC, such carriers received 100% of the difference between the annualized amount of CAF Phase II support that they accepted and the amount of CAF Phase I frozen support that they received in 2014. Beginning August 1, 2015, transitional funding stepped down to 75% of that amount and on August 1, 2016 transitional funding stepped down to 50% of the difference. On August 1, 2017 transitional funding steps down to 25% of the difference. Transitional support will terminate as of July 31, 2018, after which time carriers will receive only CAF Phase II support.

As prescribed by the FCC's transitional plan and the transitional funding calculation, we have recognized or expect to recognize transitional funding, in addition to the \$37.4 million annual CAF Phase II funding, based on the following schedule:

- January 1, 2015 - July 31, 2015: \$824,000 per month in transitional funding
- August 1, 2015 - July 31, 2016: \$618,000 per month in transitional funding
- August 1, 2016 - July 31, 2017: \$412,000 per month in transitional funding
- August 1, 2017 - July 31, 2018: \$206,000 per month in transitional funding
- August 1, 2018 and after: no transitional funding

**FCC Rules for ICC Process.** The CAF/ICC Order reformed rules associated with local, state toll and interstate toll traffic exchanged among communications carriers including ILECs, CLECs, cable companies, wireless carriers and VoIP providers. The revised rules, the majority of which were effective beginning July 1, 2012, establish separate rules for price cap carriers and rate-of-return carriers. Although the FCC order treats our rate-of-return carriers (including companies operating under average schedules) as price cap carriers for CAF funding, it treats them as rate-of-return carriers for purposes of ICC reform. For both price cap and rate-of-return carriers, the FCC established a multi-year transition of terminating traffic compensation to "bill and keep", or zero compensation. For both price cap and rate-of-return carriers, the FCC required carriers to establish fiscal year 2011 ("FY2011") baseline compensation, which was the amount of relevant compensation billed during the period beginning October 1, 2010 and ending September 30, 2011, and collected by March 31, 2012. This FY2011 revenue was used as a starting point for revenue for the transitional period, which is six years for price cap operations and nine years for rate-of-return operations. For each FairPoint ILEC, the FY2011 baseline revenue is reduced by a specified percent during each year of the transition, resulting in a target revenue for each tariff year of the transitional period. At the same time, the FCC rules require reductions in ICC rates for specified services and jurisdictions. As the recoverable revenue declines and the rates decline, any target revenue which will not be covered by ICC revenue can be recovered, in part, from end users through an access recovery charge ("ARC"). Price cap ILECs are permitted to implement monthly end user ARCs with five annual increases of no more than \$0.50 for residential/single-line business consumers, for a total monthly ARC of no more than \$2.50 in the fifth year; and no more than \$1.00 (per month) per line for multi-line business customers, for a total of \$5.00 (per month) per line in the fifth year, provided that: (1) any such residential increases would not result in regulated residential end user rates that exceed the \$30.00 residential rate ceiling; and (2) any multi-line business customer's total subscriber line charge ("SLC") plus ARC does not exceed \$12.20. Rate-of-return ILECs are permitted to implement monthly end user ARCs with six annual increases of no more than \$0.50 (per month) for residential/single-line business consumers, for a total ARC of no more than \$3.00 in the sixth year; and no more than \$1.00 (per month) per line for multi-line business customers for a total of \$6.00 (per month) per line in the sixth year, provided that: (1) such increases would not result in regulated residential end user rates that exceed the \$30.00 Residential Rate Ceiling; and (2) any multi-line business customer's total SLC plus ARC does not exceed \$12.20. We began billing the ARC charges for our price cap and rate of return companies in July 2012 as outlined by the rules above. If the combination of ICC and ARC revenue is not sufficient to cover the targeted revenue, then additional funding will be provided by the CAF in certain circumstances, though there is no guarantee that the ILEC will be made whole.

#### *Access Charges*

Our local exchange subsidiaries receive compensation from long distance communications providers for the use of our subsidiaries' network to originate and terminate state and interstate interexchange traffic. With respect to interstate traffic, the FCC regulates the prices we may charge for this purpose, referred to as access charges, as a combination of flat monthly charges paid by end users, usage sensitive charges paid by long distance carriers and recurring monthly charges for use of dedicated facilities paid by long distance carriers. Intrastate access charges are regulated by the state commissions. The amount of access charge

revenue that we will receive is subject to change. The FCC has adopted, in its CAF/ICC Order, a plan to resolve certain billing disputes related to ICC and to transition all terminating state and interstate ICC to zero over a six or nine year period for price cap and rate-of-return companies, respectively.

The FCC's CAF/ICC Order significantly changes the existing rates for access charges, which, combined with the increase in competition, have generally caused the aggregate amount of switched access charges paid by long distance carriers to decrease over time. The FCC, in a separate proceeding, is considering whether to modify price cap rules as they apply to special access and whether to restrict some of the pricing flexibility enjoyed by price cap ILECs, which includes some of our Northern New England operations. We cannot predict what changes, if any, the FCC may eventually adopt and the effect that any of these changes may have on our business.

### *Universal Service Regulation*

**Universal Service Fund Support.** We benefit indirectly from support to low-income users under the Lifeline and Linkup universal service programs. Effective April 1, 2012, the Linkup program was eliminated for all low-income subscribers except for Native Americans. Currently Linkup pays 100% of the non-recurring installation charges, not to exceed \$100.00, associated with establishment of local telecommunications service for qualified subscribers in Tribal areas. Also effective April 1, 2012, there were major reforms to the Lifeline program. Prior to the changes, Lifeline credits were based on four tiers of support. The first three tiers of federal support were replaced by a flat credit of \$9.25 per month. The fourth tier, which relates to Native Americans, is unchanged. In addition, the FCC established revised eligibility criteria effective April 1, 2012. The revised eligibility criteria established in 2012 resulted in a reduction in lines eligible for Lifeline credits. The FCC order required the Universal Service Administration Company to establish a national database, now known as the National Lifeline Accountability Database (NLAD), which is used to eliminate duplicate funding. The elimination of duplicate support could result in fewer customers choosing us for Lifeline service, with the potential that a portion of our Lifeline customers may prefer to use other carriers for this service.

**Universal Service Contributions.** Federal universal service programs are currently funded through a surcharge on interstate and international end user telecommunications revenues. Declining long distance revenues, the popularity of service bundles that include local and long distance services, and the growth in size of the fund, due primarily to increased funding to competitive ETCs, all prompted the FCC to consider alternative means for collecting this funding. As an interim step, the FCC has ordered that providers of certain VoIP services must contribute to federal universal service funding. The FCC also increased the percentage of revenues subject to federal universal service contribution obligations that wireless providers may use as their methodology for funding universal service. We cannot predict whether the FCC or Congress will require modification to any of the universal service contribution rules, or the ultimate impact that any such modification might have on us or our customers.

### *Local Service Competition*

The 1996 Act provides, in general, for the removal of barriers to market entry in order to promote competition in the provision of local communications and information services. As a result, competition in our local exchange service areas will continue to increase from CLECs, wireless providers, cable companies, Internet service providers, electric companies and other providers of network services. Many of these competitors have a significant market presence and brand recognition, which could lead to more competition and a greater challenge to our future revenue growth.

Under the 1996 Act, all LECs, including both ILECs and CLECs, are required to: (i) allow others to resell their services, (ii) ensure that customers can keep their telephone numbers when changing carriers, referred to as local number portability, (iii) ensure that competitors' customers can use the same number of digits when dialing and receive nondiscriminatory access to telephone numbers, operator service, directory assistance and directory listing, (iv) ensure competitive access to telephone poles, ducts, conduits and rights of way and (v) compensate competitors for the cost of completing calls to competitors' customers from the other carrier's customers.

In addition to these obligations, ILECs are subject to additional requirements to: (i) interconnect their facilities and equipment with any requesting telecommunications carrier at any technically feasible point, (ii) unbundle and provide nondiscriminatory access to certain network elements, referred to as unbundled network elements ("UNEs"), including some types of local loops and transport facilities, at regulated rates and on nondiscriminatory terms and conditions, to competing carriers that would be "impaired" without them, (iii) offer their retail services for resale at wholesale rates, (iv) provide reasonable notice of changes in the information necessary for transmission and routing of services over the ILEC's facilities or in the information necessary for interoperability and (v) provide, at rates, terms and conditions that are just, reasonable and nondiscriminatory, for the physical co-location of equipment necessary for interconnection or access to UNEs at the ILEC's premises. Competitors are required to compensate the ILEC for the cost of providing these services. On December 28, 2015, the FCC granted forbearance from some UNE requirements, finding that ILECs may no longer be required to offer bundled access to a 64-kps-voice channel when they replace copper loops with fiber. This is intended to facilitate copper replacement but we cannot predict whether we will benefit from this rule change.

Our Telecom Group rural operations are exempt from the ILEC requirements until the applicable rural carrier receives a bona fide request for these additional services and the applicable state authority determines that the request is not unduly economically burdensome, is technically feasible and is consistent with the universal service objectives set forth in the 1996 Act. This exemption is effective for all of the Telecom Group operations, except in Florida where the legislature has determined that all ILECs are required to provide the additional services as prescribed in the 1996 Act. Loss of a rural exemption by one or more of the Telecom Group operating companies could be achieved if the state commission grants such a petition filed by a competitor. Loss of the rural exemption would potentially expose the operation to additional local competition.

### *Long Distance Operations*

The FCC has required that ILECs that provide interstate long distance services originating from their local exchange service territories must do so in accordance with "non-structural separation" rules. These rules have required that our long distance affiliates (i) maintain separate books of account, (ii) not own transmission or switching facilities jointly with the local exchange affiliate and (iii) acquire any services from their affiliated LEC at tariffed rates, terms and conditions. Our Northern New England operations, which are Bell Operating Companies, are subject to a different set of rules allowing them to offer both long distance and local exchange services in the regions where they operate as Bell Operating Companies, subject to certain conditions with which we comply. Not all of our competitors must comply with these requirements. Therefore, these requirements may put us at a competitive disadvantage in the interstate long distance market.

### *Other Obligations under Federal Law*

We are subject to a number of other statutory and regulatory obligations at the federal level. For example, the Communications Assistance for Law Enforcement Act ("CALEA") requires telecommunications carriers to modify equipment, facilities and services to allow for authorized electronic surveillance based on either industry or FCC standards. Under CALEA and other federal laws, we may be required to provide law enforcement officials with call records, content or call identifying information, pursuant to an appropriate warrant or subpoena.

The FCC limits how carriers may use or disclose customer proprietary network information ("CPNI") and specifies what carriers must do to safeguard CPNI provided to third parties. Congress, as well as some state legislatures, has enacted legislation to criminalize the unauthorized sale of call detail records and to further restrict the manner in which carriers make such information available.

The Communications Act requires all ILECs to provide competing providers of telecommunications services access to poles, ducts, conduits and rights-of-way at regulated rates. In December 2015, the FCC decided to forbear from enforcing this requirement with respect to newly deployed entrance facility conduit on commercial property. We must continue providing access where we have existing facilities.

In addition, if we seek in the future to acquire companies that hold FCC authorizations, in most instances we will be required to seek approval from the FCC prior to completing those acquisitions. Similarly, if we seek to dispose of facilities or discontinue services, in most cases we must obtain prior FCC approval. The FCC has broad authority to condition, modify, cancel, terminate or revoke operating authority for failure to comply with applicable federal laws or rules, regulations and policies of the FCC. Fines or other penalties also may be imposed for such violations.

### *Broadband and Internet Regulation*

A Verizon petition asking the FCC to forbear from applying common carrier regulation to certain broadband services sold by LECs primarily to larger business customers was deemed granted by operation of law on March 19, 2006 when the FCC did not deny the petition by the statutory deadline. The U.S. Court of Appeals for the District of Columbia Circuit has rejected a challenge to that outcome. The forbearance deemed granted to Verizon has been extended to our Northern New England operations by the FCC in its order approving the Spinco Merger. In October 2007, the FCC stated its intention to define more precisely the scope of forbearance obtained by Verizon, but it has not yet done so. On October 4, 2011, tw telecom, inc. filed a petition with the FCC asking it to reverse the forbearance granted to Verizon by operation of law on March 19, 2006. Comments have been filed in this proceeding by us and other parties. A similar petition was filed by a group of competing LECs on November 2, 2012 and comments have been filed with the FCC. The FCC may issue an order on either or both of these petitions at any time. We do not know how this will be resolved or the impact it may have on the Company if the FCC should reverse, eliminate or modify the forbearance granted to Verizon in 2006.

The FCC has imposed particular regulatory obligations on IP-based telephony. It has concluded that interconnected VoIP providers must comply with CALEA; provide enhanced 9-1-1 emergency calling capabilities; comply with certain disability access requirements; comply with the FCC's rules protecting the privacy of customer information; provide local number portability; and pay regulatory fees. The FCC has preempted some state regulation of VoIP.

There have been on-going discussions among policy makers concerning "net neutrality." The FCC released a statement of net neutrality principles favoring customer choice of content and services available over broadband networks. It has adopted open Internet access rules applicable to all broadband Internet access providers. On January 14, 2014, the United States Circuit Court of Appeals for the District of Columbia (the "D.C. Circuit") vacated portions of the FCC's December 21, 2010 Report and Order in the Matter of Preserving the Open Internet (GN Docket 09-191) (the "Open Internet Order"). In its decision, the D.C. Circuit vacated the FCC's anti-blocking and anti-discrimination rule related to Internet Service Providers, finding the FCC had failed to explain the basis of its authority in the Open Internet Order.

The FCC adopted new regulations governing "Broadband Internet Access Services" at its February 26, 2015 Open Meeting (the "Order"). "Broadband Internet access service" is now classified as a "telecommunications service" under Title II of the Communications Act. The Order prohibits "unjust and unreasonable practices" by broadband Internet access providers. The Order prohibits broadband Internet access providers from blocking access to legal content, applications, services and non-harmful devices. It prohibits broadband Internet access providers from impairing or degrading lawful Internet traffic on the basis of content, applications, services or non-harmful devices. It also prohibits broadband Internet access providers from favoring some lawful Internet traffic over other lawful traffic in exchange for consideration and from prioritizing their own content or services over those of unaffiliated entities. Other than paid prioritization which is prohibited, broadband Internet access providers are allowed to engage in reasonable network management practices. Broadband services that do not flow over the public Internet are exempt from these rules. The Order allows consumer complaints to be brought to the FCC under Title II of the Communications Act. The Title II classification could bolster universal service support for broadband services by classifying broadband services as telecommunications services and therefore subject to universal service fees assessed on telecommunications services.

In addition, several bills have been introduced in Congress to modify the FCC's rules or restrict the FCC's authority to regulate net neutrality and broadband Internet access services.

We cannot predict what impact, if any, new laws or rules may have on our business, financial condition, results of operations, liquidity or the market price of our outstanding securities or if Congress will enact legislation otherwise addressing net neutrality issues.

### ***State Regulation***

The local service rates and intrastate access charges of substantially all of our telephone subsidiaries are regulated by state regulatory commissions which typically have the power to grant and revoke authority for authorizing companies to provide telecommunications services. In some states, our intrastate long distance rates are also subject to state regulation. States typically regulate local service quality, billing practices and other aspects of our business as well. As described above, intrastate access charges are subject to the transition plan established in the recent CAF/ICC Order.

Most state commissions have traditionally regulated LEC pricing through cost-based rate-of-return regulation. In recent years, however, state legislatures and regulatory commissions in most of the states in which our telephone companies operate have either reduced the regulation of LECs or have announced their intention to do so and we expect this trend will continue. Such relief may take the form of mandatory deregulation of particular services or rates; or it may consist of optional alternative forms of regulation ("AFOR"), which may involve price caps or other flexible pricing arrangements. Some of these deregulatory measures are described in greater detail below. We believe that some AFOR plans allow us to offer new and competitive services faster than under the traditional regulatory regimes.

### ***Regulatory and Legislative for Vermont***

Effective April 6, 2016, we entered into an Incentive Regulation Plan ("IRP") governing our Vermont service territory within our Northern New England operations. The IRP includes retail service quality reporting requirements. The new IRP is similar to our previous IRP which expired on April 5, 2016 and we believe the IRP has allowed our Northern New England operations' retail rates in Vermont to compete with those competitive carriers under a relatively level regulatory scheme, while preserving certain regulatory protections for consumers seeking basic voice services in areas where competition may not be adequate. This IRP allows the same regulatory flexibility in our Telecom Group retail operations in Vermont and is scheduled to expire on December 31, 2019. On August 10, 2015, we concluded a retail service quality investigation by entering into a Memorandum of Understanding ("MOU") between us and the Vermont Department of Public Service ("VDPS"), which was approved by the Vermont Public Service Board ("VPSB") on December 18, 2015. In accordance with the August 10, 2015 MOU and the December 18, 2015 VPSB Order, on February 16, 2016, we requested the VPSB to open a new investigation to evaluate the appropriateness of certain service quality metrics and to determine whether customer service quality metrics should apply in the future to customers with access to an alternative telecommunications provider. This investigation is in progress and any outcome from this investigation will be incorporated into the new IRP, if necessary.

On July 15, 2016, the VPSB opened a rulemaking proceeding to consider amending VPSB Rule 3.706(D)(1) regarding the rental calculation for pole attachments. The rulemaking is in its early stages, and neither a schedule nor scope of this rulemaking has been determined.

### ***Regulatory and Legislative for Maine***

Under the Maine Public Utilities Commission ("MPUC") rules (Chapter 201), which went into effect August 1, 2014, the MPUC may open an investigation regarding the failure to meet any of the established SQI benchmarks and has the authority to impose penalties. The MPUC opened an investigation into our failure to meet some third quarter 2014 SQI benchmarks and subsequently opened an investigation into the fourth quarter of 2014 and then with respect to each of the quarterly periods in 2015. On March 29, 2016, the MPUC consolidated the investigations of the six quarters into one investigation. On September 14, 2016, a hearing examiner for the MPUC issued a report recommending that the MPUC find that FairPoint had failed to meet SQI benchmarks for the period under review and impose a \$500,000 penalty as allowed by statute, and provided until October 7, 2016 for comments or exceptions to be filed by interested parties. This recommendation did not constitute MPUC action. The Company promptly filed a motion to implement adjudicatory procedures prior to entry of any final order. After the Company's motion to implement adjudicatory procedures was briefed by the parties, the Hearing Examiner issued an order on November 30, 2016 granting the Company's motion in part and permanently withdrawing the Examiner's September 14, 2016 report. A case schedule was established by the Hearing Examiner, and a hearing is currently scheduled to begin May 11, 2017.

During 2014, we filed a rate case with the MPUC seeking increases in rates for POLR customers and seeking Maine Universal Service Fund ("MUSF") support for unrecovered costs associated with our obligation to provide POLR service to high cost areas. The MPUC allowed increases to the end user POLR rates, but denied MUSF support to us.

On April 13, 2016, LD 466, An Act to Increase Competition and Ensure Robust information and Telecommunications Market, was passed into law and became effective on July 28, 2016. The new law removes the regulation on POLR service in the most competitive municipalities on a phased in approach. The seven largest municipalities were deregulated effective August 28, 2016 (the POLR rate is grandfathered for one year), followed by five communities every six months until reaching a total of 22. These 22 municipalities represent approximately one third of the population and POLR customers. LD 466 provides a path forward for additional municipalities to be deregulated upon petitioning the PUC. Also included in the law is the removal of POLR tariffs statewide.

Reporting of service quality will be required only in the areas of the state where POLR is still required and will be filed and treated as confidential. The number of SQI reporting metrics has been reduced and the benchmarks are less stringent than under previous Commission rules. The Commission is empowered to investigate failures to meet a service quality requirement. If the Commission concludes after investigation that the failure to meet a service quality requirement is due to factors within the control of the price cap ILEC, the Commission shall, by order, impose such steps as the Commission determines necessary to meet the requirement. If the provider fails to comply with the order, the Commission shall impose a penalty in an amount sufficient to ensure compliance with that order.

### ***Local Government Authorizations***

We may be required to obtain from municipal authorities permits for street opening and construction or operating franchises to install and expand facilities in certain communities. If we more fully enter into video markets, municipal franchises may be required for us to operate as a cable television provider. Some of these franchises may require the payment of franchise fees. We have historically obtained municipal franchises as required. In some areas, we will not need to obtain permits or franchises because the subcontractors or electric utilities with which we will have contracts already possess the requisite authorizations to construct or expand our networks. In association with the American Recovery and Reinvestment Act of 2009 and other federal government programs, there may be an increase in our requirements associated with road move requests pursuant to new funding for roads. It is not certain whether funding will be available to us for this potential obligation.

### ***Environmental Regulations***

Like all other local telephone companies, our 32 LECs are subject to federal, state and local laws and regulations governing the use, storage, disposal of and exposure to hazardous materials, the release of pollutants into the environment and the remediation of contamination. As an owner of real property, we may be subject to environmental laws that impose liability for the entire cost of cleanup at contaminated sites, regardless of fault or the lawfulness of the activity that resulted in contamination. We believe, however, that our operations are in substantial compliance with applicable environmental laws and regulations.

**Reorganization**

On October 26, 2009, the Company and substantially all of its direct and indirect subsidiaries filed voluntary petitions for relief under chapter 11 of title 11 of the United States Code. These cases were jointly administered under the caption *In re FairPoint Communications, Inc.* in the United States Bankruptcy Court for the Southern District of New York. On January 24, 2011, the Company substantially consummated its reorganization through a series of transactions contemplated by its Third Amended Joint Plan of Reorganization Under Chapter 11 of the United States Code (the "Plan").

**Other Information**

We make available free of charge on our website, [www.fairpoint.com](http://www.fairpoint.com), our reports on Forms 10-K, 10-Q and 8-K and all amendments to such reports as soon as reasonably practicable after we electronically file such material with, or furnish such material to, the SEC. Our filings with the SEC are available to the public over the Internet at the SEC's website at [www.sec.gov](http://www.sec.gov), or at the SEC's Public Reference Room located at 100 F Street, N.E., Washington, DC 20549. Please call the SEC at 1-800-SEC-0330 for further information on the operation of the Public Reference Room.

**ITEM 1A. RISK FACTORS**

Any of the following risks could materially adversely affect our business, consolidated financial condition, results of operations, liquidity and/or the market price of our outstanding securities. The risks described below are not the only risks facing us. Additional risks and uncertainties not currently known to us or that we currently consider immaterial may also materially and adversely affect our business operations.

**Risks Related to the Merger with Consolidated Communications Holdings, Inc.**

*The announcement and pendency of the Merger may have a material adverse effect on our business.*

Uncertainty about the effect of the Merger on our employees, suppliers, customers and other parties may have a material adverse effect on our business. Although we intend to take steps designed to reduce any adverse effects, these uncertainties could impair our ability to retain and motivate key personnel and could cause customers, suppliers and others that deal with us to defer entering into contracts, or making other decisions, concerning doing business with us or seek to change existing business relationships with us. The pursuit of the Merger and the preparation for the integration may place a significant burden on our management and internal resources. In addition, we have diverted, and will continue to divert, significant management resources towards the completion of the Merger. The diversion of management's attention away from day-to-day business concerns and any difficulties encountered in the transition and integration process could adversely affect our financial results. In addition, the Merger Agreement restricts us from taking certain actions without the consent of Consolidated. These uncertainties and restrictions could disrupt or adversely affect our business and prevent us from pursuing otherwise attractive business opportunities that may arise prior to the completion of the Merger or termination of the Merger Agreement.

FairPoint Communications, the members of our board of directors, Consolidated and Merger Sub have been named as defendants in a lawsuit brought by a purported stockholder of FairPoint Communications challenging the Merger and seeking, among other things, to enjoin the defendants from consummating the Merger on the agreed-upon terms or to rescind the Merger if it is completed, in addition to damages. Additional lawsuits challenging the Merger may be filed, which may name us and/or our board of directors as defendants. We cannot assure you as to the outcome of such lawsuits, including the amount of costs associated with defending any such claim or any other liabilities that may be incurred in connection with the litigation of any such claim. One of the conditions to the closing of the Merger is the absence of any order, injunction or other legal restraint by a court or other governmental entity of competent jurisdiction that prevents the consummation of the Merger. Accordingly, if any plaintiff in any lawsuit is successful in obtaining an injunction prohibiting the parties from completing the Merger on the agreed-upon terms, such an injunction may delay the consummation of the Merger in the expected timeframe, or may prevent the Merger from being consummated altogether. Whether or not any plaintiff's claim is successful, this type of litigation may result in significant costs and diverts management's attention and resources, which could adversely affect the operation of our business.

*There may be unexpected delays in the completion of the Merger, or the Merger may not be completed at all.*

The Merger is currently expected to close around the middle of 2017, assuming that all of the conditions in the Merger Agreement are satisfied or waived. Certain events may delay the completion of the Merger or result in a termination of the Merger Agreement. Some of these events are outside the control of either party. In particular, completion of the Merger requires approval by

the stockholders of each of FairPoint Communications and Consolidated. If the required vote of the stockholders of FairPoint Communications is not obtained at the FairPoint Communications stockholder meeting (including any adjournments or

postponements thereof) at which the Merger has been voted upon, either we or Consolidated may terminate the Merger Agreement. In addition, if the required vote of the stockholders of Consolidated is not obtained by September 30, 2017, then either we or Consolidated may terminate the Merger Agreement. We may incur significant additional costs in connection with any delay in completing the Merger or the termination of the Merger Agreement, in addition to significant transaction costs, including legal, financial advisory, accounting and other costs we have already incurred.

We can neither assure you that the conditions to the completion of the Merger will be satisfied or waived or that any adverse change, effect, event, circumstance, occurrence or state of facts that could give rise to the termination of the Merger Agreement will not occur, and we cannot provide any assurances as to whether or when the Merger will be completed.

*Failure to complete the Merger in a timely manner or at all could negatively affect our stock price and future business and financial results.*

Delays in completing the Merger or the failure to complete the Merger at all could negatively affect our future business and financial results, and, in that event, the market price of our common stock may decline significantly, particularly to the extent that the current market price reflects a market assumption that the Merger will be completed. If the Merger is not completed for any reason, we will be subject to several risks, including the diversion of management focus and resources from operational matters and other strategic opportunities while working to implement the Merger, any of which could materially adversely affect our business, financial condition, results of operations and the value of our stock price. A failed transaction may result in negative publicity and a negative impression of us in the investment community. Further, any disruptions to our business resulting from the announcement and pendency of the Merger, including any adverse changes in our relationships with our customers, suppliers and employees, could continue or accelerate in the event of a failed transaction. In addition, if we do not complete the Merger, we may be required to pay a termination fee of \$18.9 million under certain circumstances set forth in the Merger Agreement.

In addition, we have incurred, and will continue to incur, significant costs, expenses and fees for professional services and other transition costs in connection with the Merger. We will be required to pay such costs relating to the transaction whether or not the Merger is consummated.

*The completion of the Merger is subject to the receipt of consents, approvals, and clearances from regulatory entities, which may impose conditions that could have an adverse effect on us or could cause either Consolidated or FairPoint Communications to abandon the Merger.*

The Merger requires certain consents, approval, and clearances from regulatory entities, including approval from the FCC and approval of regulatory authorities in a number of the states in which we and Consolidated operate. Regulatory entities may oppose the Merger or impose certain requirements or obligations as conditions for their approval or in connection with their review, which may be materially adverse to us, Consolidated, or the combined company. Regulatory approvals of the Merger may not be obtained on a timely basis or at all, and such approvals may include conditions that could delay the completion of the Merger, could lessen or eliminate the anticipated potential benefits of the Merger, or could result in the abandonment of the Merger.

*We will incur significant transaction and Merger-related transition costs.*

We have incurred and expect that we will continue to incur significant costs in connection with completing the Merger and integrating the operations of the two companies. Some of these costs are payable regardless of whether the transaction is completed. If the Merger is not completed, we will not receive any benefit from these expenditures.

#### **Risks Related to our Common Stock and Our Substantial Indebtedness**

*The price of our common stock may be volatile and may fluctuate substantially, which could negatively affect holders of our common stock.*

The market price of our common stock may fluctuate widely as a result of various factors including, but not limited to, period-to-period fluctuations in our operating results, the volume of sales of our common stock, the limited number of holders of our common stock and the resulting limited liquidity in our common stock, dilution, developments in the communications industry, the failure of securities analysts to cover our common stock, changes in financial estimates by securities analysts, short interests in our common stock, competitive factors, regulatory developments, labor disruptions, economic and other external factors, general market conditions and market conditions affecting the stock of communications companies in general. Communications companies have, in the past, experienced extreme volatility in the trading prices and volumes of their securities, which has often been unrelated to operating performance. High levels of market volatility may have a significant adverse effect on the market price of our common stock. In

addition, in the past, securities class action litigation has often been instituted against companies following periods of volatility in their stock prices. This type of litigation could result in substantial costs and divert management's attention and

resources, which could have a material adverse impact on our business, financial condition, results of operations, liquidity and/or the market price of our common stock.

*We have substantial indebtedness which could have a negative impact on our financing options and liquidity position and prevent us from fulfilling our financial obligations.*

As of December 31, 2016, our total gross indebtedness was approximately \$918.5 million (including \$2.5 million of capital leases) and \$61.1 million was available for borrowing under the Revolving Facility (as defined in "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations—Liquidity and Capital Resources—Debt"), net of \$13.9 million outstanding letters of credit. See "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations—Liquidity and Capital Resources—Debt" included elsewhere in this Annual Report for more information, including maturities. Our substantial indebtedness could have important consequences including:

- making it more difficult for us to satisfy our financial obligations;
- requiring us to dedicate a significant portion of our cash flow from operations to paying the principal of and interest on our indebtedness, thereby limiting the availability of our cash flow to fund future capital expenditures, working capital and other corporate purposes;
- limiting our ability to obtain additional financing in the future for working capital, capital expenditures or acquisitions;
- limiting the amount of dividends we could pay to our stockholders;
- limiting our ability to refinance our indebtedness on terms acceptable to us or at all;
- restricting us from engaging in strategic transactions or causing us to make non-strategic divestitures;
- limiting our flexibility in planning for, or reacting to, changes in our business and the communications industry generally;
- placing us at a competitive disadvantage compared with competitors that have a less significant debt burden; and
- making us more vulnerable to economic downturns and limiting our ability to withstand competitive pressures.

Our ability to continue to fund our debt service requirements and to reduce our indebtedness may be affected by general economic, financial market, competitive, legislative and regulatory factors, among other things. An inability to fund our debt service requirements, reduce our indebtedness or satisfy debt covenant requirements could have a material adverse effect on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

In addition, our borrowings under our Credit Agreement (as defined in "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations—Liquidity and Capital Resources—Debt") bear interest at a variable rate based on a British Bankers Association LIBOR rate ("LIBOR"), subject to a floor of 1.25%. We have entered into interest rate swap agreements that effectively fix the interest rate on a combined notional amount of \$170.0 million of these borrowings; these agreements were effective September 30, 2015. If the relevant LIBOR increases above the level of the floor, the interest payments on our variable rate debt will increase and adversely affect our cash flow. Conversely, while LIBOR remains below 1.25%, we may incur interest costs above market rates. While our interest rate swap agreements and any future agreements we enter into may limit our exposure to higher interest rates, these agreements may not offer complete protection from this risk.

*We may incur significant additional amounts of debt, which could further exacerbate the current risks associated with our substantial indebtedness.*

We may incur substantial additional indebtedness in the future. Although the indenture governing our 8.75% senior secured notes due 2019 (the "Indenture") and our Credit Agreement contain restrictions on the incurrence of additional indebtedness, these restrictions are subject to a number of significant qualifications and exceptions and, under certain circumstances, the amount of indebtedness that could be incurred in compliance with these restrictions could be substantial. If new debt is added to our existing debt levels, the related risks that we now face could increase.

*To operate and expand our business, service our indebtedness and meet our other cash needs, we will require a significant amount of cash, which may not be available to us. We may not be able to generate sufficient cash to repay or refinance our indebtedness at maturity or otherwise or to fund our operations, and may be forced to take other actions to satisfy such obligations, which may not be successful.*

Our ability to make payments on, or repay or refinance, our indebtedness, to fund our operations and to fund planned capital expenditures, unanticipated capital expenditures and other cash needs will depend largely upon our financial condition and operating performance, including our ability to execute on our business plan. Our future operating performance, to a certain extent, is subject to general economic, financial, competitive, legislative, regulatory and other factors, such as any pension contributions required by the Employee Retirement Income Security Act of 1974, as amended ("ERISA"), that are beyond our control. For example, the

minimum amount of pension contributions that we are required to make, which may be substantial, are determined under ERISA.

Our ability to borrow additional amounts, including under the Revolving Facility, if necessary to meet our cash needs, will depend on our ability to remain in compliance with the covenants contained in our debt agreements. If our operating results are not adequate to meet the financial ratio tests in our debt agreements or if we are unable to generate sufficient cash to service our debt requirements, we will be required to restructure or refinance our existing indebtedness, which we may not be able to accomplish under such circumstances on commercially reasonable terms or at all. If we are unable to refinance our debt or obtain new financing under these circumstances, we may have to consider other options, including without limitation:

- sales of assets;
- reduction or delay of capital expenditures, strategic acquisitions, investments and alliances;
- obtaining additional capital; or
- negotiations with our lenders to restructure or refinance the applicable debt.

Our ability to restructure or refinance our indebtedness may depend on the condition of the capital markets and our financial condition at such time, and any such restructuring and/or refinancing may come with higher interest rates and more onerous covenants. These alternative measures may not be successful and may not permit us to meet our scheduled debt service obligations.

An inability to generate sufficient cash from operations to repay or refinance our indebtedness at maturity or otherwise or to fund our operations could have a material adverse impact on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

***Our debt agreements contain restrictions that limit our flexibility in operating our business.***

The Credit Agreement and the Indenture contain various covenants that limit our ability to engage in specified types of transactions. These covenants, under certain circumstances, limit us and our restricted subsidiaries' ability to, among other things:

- incur additional indebtedness;
- pay dividends on, repurchase or make distributions in respect of our capital stock or make other restricted payments;
- make certain investments;
- sell certain assets;
- create or incur liens;
- enter into sale and leaseback transactions;
- consolidate, merge, sell or otherwise dispose of all or substantially all of our assets; and
- enter into certain transactions with our affiliates.

A breach of any of these covenants could result in a default under the Credit Agreement or the Indenture. In addition, any debt agreements we enter into in the future may further limit our ability to enter into certain types of transactions. A breach of any of these covenants could result in a default under one or more of these agreements, including as a result of cross default provisions. Such default may allow the creditors to accelerate the related debt and may result in the acceleration of any other debt to which a cross-acceleration or cross-default provision applies.

In addition, the restrictive covenants in the Credit Agreement require us to maintain specified financial ratios and to satisfy other financial condition tests. Our ability to meet those financial ratios and tests depends on our ongoing financial and operating performance, which, in turn, is subject to economic conditions and to financial, market, and competitive factors, many of which are beyond our control. See "Item 7. Management's Discussion and Analysis of Financial Conditions and Results of Operations — Liquidity and Capital Resources" included elsewhere in this Annual Report for more information regarding the Credit Agreement and the Indenture.

***FairPoint Communications is a holding company and depends upon the cash flows of its operating subsidiaries to service its indebtedness and meet its other cash flow needs.***

FairPoint Communications is a holding company and conducts no operations. Accordingly, its cash flow and its ability to make payments on, or repay or refinance, its indebtedness and to fund planned capital expenditures and other cash needs will depend largely upon the cash flows of its operating subsidiaries and the distribution of cash by those subsidiaries to it through repayment of loans, dividends, management fees or otherwise. Distributions to FairPoint Communications from its subsidiaries will depend on their respective operating results and will be subject to restrictions under, among other things:

- the laws of their jurisdiction of organization;
- the rules and regulations of state and federal regulatory authorities;
- agreements of those subsidiaries, including agreements governing their indebtedness, if any; and
- regulatory orders.

FairPoint Communications' subsidiaries have no obligation, contingent or otherwise, to make funds available, whether in the form of loans, dividends or other distributions, to it. Any inability to receive distributions from its subsidiaries could have a material adverse impact on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

*Limitations on our ability to use NOL carryforwards, and other factors requiring us to pay cash to satisfy our tax liabilities in future periods, may affect our ability to fund our operations, make capital expenditures and repay our indebtedness.*

Effective December 31, 2011, our NOLs were substantially reduced by the recognition of gains on the discharge of certain debt pursuant to the Plan. In addition, our emergence from bankruptcy resulted in an ownership change for federal income tax purposes under Section 382 of the Internal Revenue Code of 1986, as amended (the "Code"). This followed previous ownership changes resulting from our initial public offering in February 2005, which resulted in an "ownership change" within the meaning of the United States federal income tax laws addressing NOL carryforwards, alternative minimum tax credits and other similar tax attributes. Moreover, the Spinco Merger resulted in a further ownership change for these purposes. As a result of these ownership changes, there are specific limitations on our ability to use these NOL carryforwards and other tax attributes from periods prior to our emergence from bankruptcy. Furthermore, additional limitations on the use of NOLs could arise in the future if a 50% or more change in ownership as defined under the Code were to occur. Although we do not expect that these limitations will materially affect our United States federal and state income tax liability in the near term, it is possible in the future if we were to generate taxable income in excess of the limitation on usage of NOL carryforwards that these limitations could limit our ability to utilize the carryforwards and, therefore, result in an increase in our United States federal and state income tax payments over the amount we otherwise would have, had we not experienced an ownership change. In addition, in the future we will be required to pay cash to satisfy our tax liabilities when all of our NOL carryforwards have been used or have expired. Limitations on our usage of NOL carryforwards, and other factors requiring us to pay cash taxes, would reduce the amount available to fund our operations, make capital expenditures and service our indebtedness in the future, which could have a material adverse impact on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

*Concentration of ownership among stockholders may prevent new or current investors from influencing significant corporate decisions.*

Based on Schedules 13D and 13G filed by the respective holders, as of February 27, 2017, there are some institutional holders who own 5% or more of our outstanding common stock. As a result, these stockholders may be able to exercise significant control over all matters requiring stockholder approval, including the Merger, the election of directors, amendment of our certificate of incorporation and approval of corporate transactions and could gain significant control over our management and policies as a result thereof.

*Future sales or the possibility of future sales of a substantial amount of our common stock may depress the price of our common stock.*

Future sales, or the availability for sale in the public market, of substantial amounts of our common stock could adversely affect the prevailing market price of our common stock and could impair our ability to raise capital through future sales of equity securities. The market price of our common stock could decline as a result of sales of a large number of shares of our common stock in the market or the perception that these sales could occur. These sales, or the possibility that these sales may occur, may also make it more difficult for us to obtain additional capital by selling equity securities in the future at a time and at a price that we consider appropriate.

As of February 27, 2017, we had 27,266,570 shares of common stock outstanding. All such shares are freely traded except for any shares of our common stock that may be held or acquired by our directors, executive officers, employee insiders and other affiliates, as that term is defined in the Securities Act, which will be restricted securities under the Securities Act. Restricted securities may not be sold in the public market unless the sale is registered under the Securities Act or an exemption from registration is available. In addition, Angelo Gordon & Co., L.P. ("Angelo Gordon") and entities advised by Angelo Gordon have certain registration rights with respect to the common stock they hold or may acquire in the future.

We may issue shares of our common stock, or other securities, from time to time as consideration for future acquisitions and investments. In the event any such acquisition or investment is significant, the number of shares of our common stock, or the

number or aggregate principal amount, as the case may be, of other securities that we may issue may in turn be significant. We may also grant registration rights covering these shares or other securities in connection with any such acquisitions and investments.

### **Risks Related to Our Business**

*We provide services to customers over access lines, and since we have been losing access lines, if our efforts to mitigate this decline and transition to alternative revenue is not successful, our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities may be materially adversely affected.*

We, along with the communications industry in general, have experienced a decline in access lines and network access revenues and will be further unfavorably impacted in the long-term by the FCC's recent CAF/ICC Order on intercarrier compensation. See "Risks Relating to Our Regulatory Environment" for specific risks associated with the impact of regulatory reform. We generate revenue primarily by delivering voice and data services over access lines. During the years ended December 31, 2016 and 2015, we continued to experience access line loss. These losses resulted mainly from competition, including competition from bundled offerings by cable companies, the use of alternate technologies, including wireless, as well as challenging economic conditions and the offering of DSL services.

We expect to continue to experience net access line losses. Our strategy of providing broadband and advanced data services, such as Ethernet over fiber and copper plant, may not be sufficient to offset the revenue impact of continued access line loss. Our inability to retain access lines and successfully offset such losses with alternative revenue could adversely affect our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

*We provide access services to other communications companies, and if these companies were to find alternative means of providing services, become insolvent or experience substantial financial difficulties, our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities may be materially adversely affected.*

We originate and terminate calls on behalf of long distance carriers and other interexchange carriers over our network in exchange for payment of switched access charges. Interstate and intrastate access charges represented approximately 29% of our total revenues during the twelve months ended December 31, 2016. Terminating switched access rates are scheduled to decline under the FCC's recent CAF/ICC Order. See "Risks Relating to Our Regulatory Environment" for specific risks associated with the impact of regulatory reform. We may not be successful in offsetting these declines through regulatory replacement mechanisms or operational means. Further, should one or more of these carriers find alternative means of providing services, loss of revenues from these carriers could have a material adverse impact on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities. In addition, should one or more of the carriers that we do business with become insolvent or experience substantial financial difficulties, our inability to timely collect access charges from them could have a material adverse impact on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

*We are subject to competition that may materially adversely impact our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.*

We face intense competition from a variety of sources for our voice, network transport and Internet services in nearly all of the areas we now serve. Regulations and technology change quickly in the communications industry and changes in these factors historically have had, and in the future may have, a significant impact on competitive dynamics. In most of our service areas, we currently face competition from wireless carriers for voice services and increasingly for Internet services. As technology and economies of scale have improved, competition from wireless carriers has increased and is expected to further increase. We also face increasing competition from wireline and cable television companies for our voice and Internet services. We estimate that most of the customers that we serve have access to voice, network transport and Internet services through a cable television company. Wireline and cable television companies have the ability to bundle their services, which has and is expected to continue to intensify the competition we face from these providers. VoIP providers, Internet service providers and satellite companies also compete with our services and such competition has increased and is expected to continue to increase in the future. In addition, many of our competitors have access to a larger workforce and have substantially greater name-brand recognition and financial, technological and other resources including, in the case of cable television providers, free advertising on their video services.

In addition, consolidation and strategic alliances within the communications industry and the development of new technologies have had and may continue to have an effect on our competitive position. We cannot predict the number of competitors that will emerge, particularly in light of possible regulatory or legislative actions that could facilitate or impede market entry, but increased competition from existing and new entities could have a material adverse effect on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

Competition may lead to loss of revenues and profitability as a result of numerous factors, including:

- loss of customers (given the likelihood that when we lose customers for local service, we will also lose them for all related services);
- reduced network usage by existing customers who may use alternative providers for voice and data services;
- reductions in the prices we charge to meet competition; and
- increases in marketing expenditures and discount and promotional campaigns to incent customers to choose our services.

*Price increases or price retention for certain products and customers may result in an acceleration of access line losses or an unanticipated decline in our growth-oriented products, which may materially adversely affect our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.*

From time to time, we expect to implement price increases for certain products and customers. Although we intend for the price increase to provide a net revenue benefit, it is possible that customers will disconnect at a faster rate than they otherwise would have, which could negate the benefit of the price increase. Additionally, a weaker economic environment can result in increased demand by our customers for price reductions at the same or better level of service. In some of our more competitive markets, we may need to offer more favorable terms to our customers for contract renewal, which could result in reduced profitability. Despite continuous efforts by our sales force to retain customers, we cannot provide assurance that we will be able to renew customers dissatisfied with our contract renewal terms.

*We may not be able to successfully integrate new technologies, respond effectively to customer requirements or provide new services.*

Rapid and significant changes in technology and new service introductions occur frequently in the communications industry and industry standards evolve continually, including but not limited to a transition in the industry from primarily voice products to data services. We cannot predict the effect of these changes on our competitive position, profitability or the industry. Technological developments may reduce the competitiveness of our networks and require unbudgeted upgrades or the procurement of additional products that could be expensive and time consuming. In addition, new products and services arising out of technological developments may reduce the attractiveness of our existing services. If we fail to adapt successfully to technological changes or obsolescence or fail to obtain access to important new technologies, we could lose customers and be limited in our ability to attract new customers and sell new services to our existing customers, which could have a material adverse impact on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

*The geographic concentration of our operations in Maine, New Hampshire and Vermont make our business susceptible to local economic and regulatory conditions and consumer trends, and an economic downturn, recession or unfavorable regulatory action in any of those states may materially adversely affect our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.*

Our service territory spans 17 states. As of December 31, 2016, 83% of our total residential voice lines were located in Maine, New Hampshire and Vermont (including certain of our Telecom Group service companies). As a result of this geographic concentration, our financial results will depend significantly upon economic conditions and consumer trends in these markets. Deterioration in economic conditions in any of these markets could result in a further decrease in demand for our services and resulting loss of access line equivalents which could have a material adverse effect on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

In certain areas of our service territory, the need for our services is seasonal (including either winter or summer), which may result in revenue fluctuations quarter over quarter. While we attempt to forestall seasonal disconnects or seasonal suspends, some revenue fluctuations continue to occur and once a customer disconnects or suspends, he or she may not return as a customer.

In addition, if state regulators or legislators in Maine, New Hampshire or Vermont were to take an action that is adverse to our operations in those states, we could suffer greater harm from that action than we would from action in other states because of the concentration of our operations in those states.

*We may need to defend ourselves against claims that we infringe upon others' intellectual property rights or may need to seek third-party licenses to expand our product offerings.*

From time to time, we receive notices from third parties or are named in lawsuits filed by third parties claiming we have infringed or are infringing upon their intellectual property rights. We may receive similar notices or be involved in similar lawsuits in the future. Responding to these claims may require us to expend significant time and money defending our use of affected technology, may require us to enter into licensing agreements requiring license payments that we would not otherwise have to pay

or may require us to pay damages. If we are required to take one or more of these actions, our operating expenses may increase. In addition, in responding to these claims, we may be required to stop selling or redesign one or more of our products or services, which could significantly and adversely affect the way we conduct business.

Similarly, from time to time, we may need to obtain the right to use certain patents or other intellectual property from third parties to be able to offer new products and services. If we cannot license or otherwise obtain rights to use any required technology from a third party on reasonable terms, our ability to offer new products and services may be restricted, made more costly or delayed.

*We depend on third party providers for certain of our billing functions, IT services, including network support and improvements, and for the provision of our long distance and bandwidth services.*

We have agreements with outside service providers to perform a portion of our billing functions and for our provision of long distance and bandwidth services. We also rely on certain third parties for IT services, including network support and improvements.

If these service providers are unable to adequately perform such services or if one of them experiences a significant degradation or failure with respect to such services, it could result in disruptions in our billing, IT systems and/or long distance and bandwidth services. Service failures could also result in internal controls deficiencies, which could adversely impact our overall control assessment of internal control in accordance with the Sarbanes-Oxley Act of 2002. Furthermore, if these agreements are terminated for any reason, we may be unable to find an alternative service provider in a timely manner or on terms acceptable to us, and may be unable ourselves to perform the services they provide.

With respect to the agreements governing our long distance and bandwidth services, these agreements are based, in part, on our estimate of future supply and demand and may contain minimum volume commitments. If we overestimate demand, we may be forced to pay for services we do not need. If we underestimate demand, we may need to acquire additional capacity on a short-term basis at unfavorable prices, assuming additional capacity is available. If additional capacity is not available, we may not be able to meet this demand. In addition, if we cannot meet any minimum volume commitments, we may be subject to underutilization charges, termination charges or rate increases.

If any of the foregoing events occur with respect to our third-party providers, our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities could be materially adversely affected.

*A network disruption could cause delays or interruptions of service, including for 9-1-1 service, which could cause us to lose customers, engage in litigation, incur fines or otherwise adversely impact our business.*

To be successful, we will need to continue to provide our customers with reliable and uninterrupted service over our expanded network. Disruptions in our service could occur as a result of events that are beyond our control. Some of the risks to our network and infrastructure include:

- physical damage to our transmission network including poles, cable and access lines;
- widespread power surges or outages;
- software defects in critical systems;
- capacity limitations resulting from changes in our customers' usage patterns;
- human error; and
- damage intentionally inflicted upon the network or our other infrastructure.

From time to time, in the ordinary course of business, we have experienced and in the future may experience short disruptions in our service due to factors such as cable damage, inclement weather and service failures of our third-party service providers. We could experience more significant disruptions in the future. In addition, certain portions of our network may lack adequate redundancy to allow for expedient recovery of service to affected customers. Disruptions may cause interruptions in service or reduced capacity for customers, either of which could cause us to lose customers, engage in litigation and incur fines and/or expenses or capital expenditures, which could have a material adverse impact on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

*Any failure or inadequacy of our IT infrastructure could harm our business.*

A major failure or inadequacy of our IT infrastructure could harm our business. The capacity, reliability and security of our internal IT hardware and software infrastructure are important to the operation of our current and future business, which would suffer in the event of major system failures. Our inability to expand or upgrade our IT hardware and software infrastructure could

have adverse consequences, which could include the delayed implementation of new service offerings, increased acquisition integration costs, service or billing interruptions, the issuance of service quality credits, and the diversion of development resources. If any of the foregoing events occur with respect to our IT infrastructure, our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities could be materially adversely affected.

*Increases in broadband usage may cause network capacity limitations, resulting in service disruptions, reduced capacity or slower transmission speeds for customers.*

Video streaming services and peer-to-peer file sharing applications use significantly more bandwidth than traditional Internet activity such as web browsing and email. As use of these newer services continues to grow, our high-speed Internet customers will likely use much more bandwidth than in the past. If this occurs, we could be required to make significant capital expenditures to increase network capacity in order to avoid service disruptions, service degradation or slower transmission speeds for our customers. Alternatively, we may choose to implement network management practices to reduce the network capacity available to bandwidth-intensive activities during certain times in areas experiencing congestion, which could negatively affect our ability to retain and attract customers in affected markets. While we believe demand for these services may drive high-speed Internet customers to pay for faster broadband speeds, we may not be able to recover the costs of the necessary network investments. This could result in an adverse impact to our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

*A cyber-attack that bypasses our IT and/or network security systems causing an IT and/or network security breach may lead to unauthorized use or disabling of our network, theft of customer data, unauthorized use or publication of our intellectual property and/or confidential business information and could harm our competitive position or otherwise adversely affect our business.*

Attempts by others to gain unauthorized access to organizations' IT systems or network elements are becoming more sophisticated and are sometimes successful. These attempts include covertly introducing malware to companies' computers and networks, impersonating authorized users, or "hacking" into systems. We seek to detect and investigate all security incidents and to prevent their recurrence, but, in some cases, we might be unaware of an incident or its magnitude and effect. Significant network security failures could result in the theft, loss, damage, unauthorized use or publication of our intellectual property and/or confidential business information; the theft, loss, damage, unauthorized use or publication of our customers' personally identifiable information, intellectual property and/or confidential business information; the unauthorized use or disabling of our network elements; or damage to our reputation among customers and the public. These consequences could harm our competitive position, subject us to additional regulatory scrutiny, expose us to litigation, reduce the value of our investment in research and development and other strategic initiatives or otherwise adversely affect our business. To the extent that any security breach results in inappropriate disclosure of our customers' or licensees' confidential information, we may incur liability as a result.

*Natural catastrophes or terrorism may damage our network or adversely affect the financial markets.*

A major earthquake, hurricane, tornado, winter storm, flood, fire, terrorist attack, cyber-attack or other similar disruption could damage our network, network operations centers, call centers, data centers, central offices, corporate headquarters or other facilities. Such an event could interrupt our services, adversely affect service quality, overwhelm customer support and ultimately harm our business and reputation. Although we have implemented measures that are designed to mitigate the effects of such events, we cannot predict all of the potential impacts of such events. We maintain insurance coverage for some of these events; however, the potential liabilities associated with these events could exceed the insurance coverage we maintain. Our inability to operate our networks or operate key systems as a result of such events, even for a limited period of time, may result in significant expenses or loss of customers and associated revenue.

Even if the major event does not directly impact us, these events could more broadly cause consumer confidence and spending to decrease or result in increased volatility in the United States and world financial markets and economy, which would adversely affect our business.

***Our actual operating results may differ significantly from our guidance.***

From time to time, we have released and may continue to release guidance regarding our future performance that represents our management's best estimates as of the date the guidance is provided. This guidance, which consists of forward-looking statements, is prepared by our management and is qualified by, and subject to, the assumptions and the other information contained or referred to in the release. Our guidance is not prepared with a view toward compliance with the published guidelines of the American Institute of Certified Public Accountants, and neither our independent registered public accounting firm nor any other independent expert or outside party compiles or examines the guidance and, accordingly, no such person expresses any opinion or any other form of assurance with respect thereto.

Guidance is based upon a number of assumptions and estimates that, while presented with numerical specificity, are inherently subject to significant business, economic and competitive uncertainties and contingencies, many of which are beyond our control and are based upon specific assumptions with respect to future business decisions, some of which will change. We generally state possible outcomes as high and low ranges which are intended to provide a sensitivity analysis as variables are changed but are not intended to represent our actual results which could fall outside of the suggested ranges. The principal reason that we release this data is to provide a basis for our management to discuss our business outlook with analysts and investors. Notwithstanding this, we do not accept any responsibility for any projections or reports published by any such outside analysts or investors.

Guidance is necessarily speculative in nature, and it can be expected that some or all of the assumptions or the guidance furnished by us will not materialize or will vary significantly from actual results. Accordingly, our guidance is only an estimate of what management believes is realizable as of the date the guidance is provided. Actual results may differ from the guidance and the differences may be material. Investors should also recognize that the reliability of any forecasted financial data diminishes the farther in the future that the data is forecast. In light of the foregoing, users of this guidance are urged to put the guidance in context and not to place undue reliance on any such guidance.

Any inability to successfully implement our operating strategy or the occurrence of any of the events or circumstances discussed therein could result in the actual operating results being different than the guidance, and such differences may be material.

***Our success will depend on our ability to attract and retain qualified management and other personnel.***

Our success depends upon the talents and efforts of our senior management team. The loss of any member of our senior management team, due to retirement or otherwise, and the inability to attract and retain highly qualified technical and management personnel in the future, could have a material adverse effect on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

***Our ability to successfully manage reductions in our workforce could have a material adverse impact on our results of operations.***

Reductions in our workforce could adversely impact our ability to operate effectively and, therefore, could adversely impact our customer service, result in higher regulatory penalties and/or reduce our ability to achieve our operational goals.

***A significant portion of our workforce is represented by labor unions and therefore subject to collective bargaining agreements. If disputes arise, or if we are unable to successfully renegotiate these agreements at an appropriate time or on terms acceptable to us, workers subject to these agreements could engage in work stoppages or other concerted activities, which could materially adversely impact our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.***

As of December 31, 2016, approximately 1,500 of our approximately 2,500 employees were covered by 13 collective bargaining agreements. After ratification of the collective bargaining agreements on February 22, 2015, our agreements with the IBEW and the CWA in northern New England expire in August 2018. Disputes with regard to the terms of any of these agreements or our potential inability to negotiate acceptable contracts with these unions in the future as our current contracts expire could result in, among other things, strikes, work stoppages or other slowdowns by the affected workers. We have experienced work stoppages in the past upon the expiration of collective bargaining agreements. If represented workers were to engage in future work stoppages or other concerted activities, we could experience a significant disruption of our operations, including network disruptions, IT failures, service backlog, internal control failures and/or regulatory compliance issues, and/or higher ongoing labor costs, either of which could have a material adverse effect on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities. Additionally, future renegotiation of labor agreements or the provisions of such labor agreements could adversely impact our service reliability and significantly increase our costs for healthcare, wages and other benefits, which could have a material adverse impact on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

*The amount we are required to contribute to our qualified pension plans and post-employment benefit plans is impacted by several factors that are beyond our control and changes in those factors may result in a significant increase in future cash contributions.*

We sponsor two qualified defined benefit pension plans covering certain employees that will provide them benefit payments, if eligible, after their retirement. These qualified pension plans are subject to funding requirements determined under ERISA and the Code. Required pension contributions may be impacted by several factors, including fluctuations in the discount rate used to calculate the funding target, unfavorable differences in actual experience relative to the assumptions used to determine the liabilities in these plans, the performance of the pension plan asset portfolio and the number of retirees in the qualified pension plan covering non-represented employees who elect to receive lump sum distributions. Unfavorable fluctuations or adverse changes in any of these factors are beyond our control and may diminish the funded status of our pension plans, thereby significantly increasing the contributions we are required to make under ERISA and the Code.

The represented employees pension plan was closed to new participants and benefits under the prior formula were frozen as of October 14, 2014. Future benefit accruals for service on and after February 22, 2015 are at 50% of prior rates and are capped at 30 years of total credited service. Of our projected benefit obligation for our pension plans, approximately 9% reflects the non-represented employees.

Non-represented employees covered by the non-represented employees pension plan have the option to elect to receive their accrued vested benefit in the form of a lump sum payment. Represented employees covered by the represented employees pension plan are no longer able to elect to receive their accrued vested benefit in the form of a lump sum effective with the expiration of the collective bargaining agreements with the IBEW and the CWA on August 2, 2014. As the discount rate used to calculate lump sum payments are currently lower than the discount rate used to calculate the actuarial liabilities in the non-represented employee pension plan, the value of a lump sum payment exceeds the actuarial liability for the participant, which creates an actuarial loss in the pension plan for non-represented employees when paid. As such, a lump sum payment depletes the plan's assets more than the corresponding reduction in the plan's liability, which thereby reduces the funded status of the plan. If a significant number of eligible non-represented employees retire and elect to receive their accrued vested benefit in the form of a lump sum payment, which is beyond our control, the qualified pension plan covering these participants may experience a significant reduction in its funded status, which could materially increase future required contributions. During the year ended December 31, 2016, we recognized \$0.6 million in plan settlement expense as the cumulative amount of lump sums paid during 2016 exceeded the expected service and interest cost for 2016.

During the year ended December 31, 2016, we experienced income on qualified pension plan assets totaling approximately 7.5%. However, during the year ended December 31, 2015, we experienced actual losses on qualified pension plan assets totaling approximately 1.9%. The actuarially-determined funded status of our pension plans is dependent on the market value of the assets held by each plan. As such, a significant decline in the market value of the pension plans' assets could result in us having to make additional contributions to these plans.

Legislation enacted in 2014 changed the method for determining the discount rate used for calculating a qualified pension plan's unfunded liability for ERISA and Code purposes, which improved our pension plans' funded status on an ERISA basis. There are no assurances of any future legislation to provide similar relief or to extend the benefits of relief provided by this legislation. See "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations—Liquidity and Capital Resources—Pension Contributions and Post-Employment Benefit Plan Expenditures" included elsewhere in this Annual Report.

We also sponsor a post-employment benefit plan that provides medical, dental and life insurance benefits to eligible non-represented employees and former represented employees and, in some instances, to their spouses and families. The level of contributions required from us under these plans is dependent on the number of eligible retirees that elect coverage under the plan and the level and cost of health services used by those eligible retirees, each of which are beyond our control. Inflation in medical and dental costs in the future will increase future contributions. Effective August 28, 2014, active represented employees are no longer eligible for this post-employment benefit plan. Upon ratification of the collective bargaining agreements on February 22, 2015 and for 30 months thereafter, active represented employees who retire and meet the eligibility requirements and their spouses are eligible to receive certain monthly reimbursements of medical insurance premiums for healthcare plans until the retired employee reaches age 65 or dies. As a result of these factors, the payments we are required to make in relation to the above may also increase.

Increasing cash requirements to fund benefits under our qualified pension and post-employment benefit plans and the represented employee limited reimbursement arrangement may impact our liquidity position and limit our operational flexibility. These future cash requirements could have a material adverse impact on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

See note (11) "Employee Benefit Plans" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report for further information.

*Our long-lived assets and non-amortizable intangible assets may become impaired in the future.*

At December 31, 2016, in addition to our net property, plant and equipment of \$1,024.4 million, we have net amortizable intangible assets of \$34.3 million and non-amortizable intangible assets of \$41.6 million. Amortizable long-lived assets must be reviewed for impairment whenever indicators of impairment exist. Non-amortizable long-lived assets are required to be reviewed for impairment on an annual basis or more frequently whenever indicators of impairment exist. Indicators of impairment could include, but are not limited to:

- an inability to perform at levels that were forecasted;
- a permanent decline in market capitalization;
- implementation of restructuring plans;
- changes in industry trends; and/or
- unfavorable changes in our capital structure, cost of debt, interest rates or capital expenditures levels.

Situations such as these could result in an impairment that would require a material non-cash charge to our results of operations and could have a material adverse effect on our consolidated results of operations.

*Our operations require substantial capital expenditures.*

We require significant capital expenditures to maintain, upgrade and enhance our network facilities and operations. While we have historically been able to fund capital expenditures from cash generated from operations and borrowings under the Revolving Facility, the other risk factors described in this section could materially reduce cash available from operations or significantly increase our capital expenditure requirements, and these outcomes may result in our inability to fund the necessary level of capital expenditures to maintain, upgrade or enhance our network. This could adversely affect our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

*We are exposed to risks relating to evaluations of internal control systems required by Section 404 of the Sarbanes-Oxley Act.*

As a public reporting company, we are required to comply with the Sarbanes-Oxley Act and the related rules and regulations of the SEC, including accelerated reporting requirements and expanded disclosures regarding evaluations of internal control systems. With respect to internal control over financial reporting, standards established by the Public Company Accounting Oversight Board define a material weakness as a deficiency, or a combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of our annual or interim financial statements will not be prevented or detected on a timely basis. If our management identifies one or more material weaknesses in internal control over financial reporting in the future in accordance with the annual assessments and quarterly evaluations required by the Sarbanes-Oxley Act, we will be unable to assert that our internal controls are effective which could result in sanctions or investigation by regulatory authorities. In addition, any such material weakness could result in material misstatements in our financial statements, prevent us from providing timely financial statements or meeting our reporting requirements both with the SEC and under our debt obligations and cause investors to lose confidence in our reported financial information.

**Risks Relating to Our Regulatory Environment**

*"Net neutrality" and broadband Internet access service legislation or regulation could limit our ability to operate our broadband business profitably and to manage our broadband facilities efficiently.*

In order to continue to provide quality high-speed data service at attractive prices and to offer new services, we believe we need the continued flexibility to respond to changing consumer uses and demands, to manage bandwidth usage efficiently and to continue to invest in our networks. In 2010, the FCC adopted "net neutrality" regulations that curtailed our operational flexibility. A federal appeals court vacated these rules in January 2014, after which the FCC adopted new regulations governing "Broadband Internet Access Services" at its February 26, 2015 Open Meeting (the "Order"). "Broadband Internet access service" will now be classified as a "telecommunications service" under Title II of the Communications Act. The Order prohibits "unjust and unreasonable practices" by broadband Internet access providers. The Order prohibits broadband Internet access providers from blocking access to legal content, applications, services and non-harmful devices. It prohibits broadband Internet access providers from impairing or degrading lawful Internet traffic on the basis of content, applications, services or non-harmful devices. It also prohibits broadband Internet access

providers from favoring some lawful Internet traffic over other lawful traffic in exchange for consideration and from prioritizing their own content or services over those of unaffiliated entities. Other than paid prioritization

which is prohibited, broadband Internet access providers are allowed to engage in reasonable network management practices, though it is not currently known what such practices will be defined to include. Broadband services that do not flow over the public Internet are exempt from these rules. The Order allows consumer complaints to be brought to the FCC under Title II of the Communications Act.

We cannot predict what impact, if any, these rules may have on our business, financial condition, results of operations, liquidity or the market price of our outstanding securities or whether Congress will modify these rules through pending legislative proposals.

*We are subject to significant regulation that could change in a manner adverse to us.*

We operate in a heavily regulated industry. Laws and regulations applicable to us and our competitors may be, and have been, challenged in the courts and could be changed by Congress or regulators. In addition, the following factors could have a significant impact on us:

***Risk of loss or reduction in revenues associated with regulated filings, rules or tariffs.*** A portion of our revenues comes from intrastate and interstate network access charges, which are paid to us by interexchange carriers for originating and terminating communications traffic. See "Item I. Business—Regulatory and Legislative" included elsewhere in this Annual Report.

As described in "Item I. Business—Regulatory and Legislative," we have accepted most of the CAF Phase II support offered to us during 2015. We risk not being able to fulfill the obligations of the CAF Phase II program, which includes specific location requirements and technical obligations associated with speed, latency, data provision and pricing. These requirements and obligations may prove costly to implement. Failure to timely implement our CAF Phase II obligations by the interim milestones (40%, 60% and 80% of locations built out by December, 2017, 2018 and 2019, respectively) may result in a portion of funds being delayed at each interim milestone. Failure to build out at least 50% of locations required by an interim milestone may result in a loss of all funds and therefore this continuing revenue stream.

The CAF/ICC Order fundamentally reforms the ICC system that governs how communications companies bill one another for terminating traffic, gradually phasing out these charges. Additional reforms have been proposed. The reforms adopted by the FCC in its order will significantly change the access charge system and, if not offset by a revenue replacement mechanism, could potentially result in a significant decrease in or elimination of access charges. Regulatory developments of this type could materially adversely affect our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

***Risk of re-regulation of wholesale network services provided to retail and wholesale customers.*** Pursuant to forbearance from the regulation of high-speed interstate services that was deemed granted to Verizon in 2006 and transferred to us by the FCC in its order approving the Spinco Merger, we offer high-speed interstate services on a deregulated basis. The FCC has initiated a proceeding to investigate potential changes to the regulation of special access services. Several parties filed petitions in 2011 and 2012 asking the FCC to reverse the 2006 forbearance granted to Verizon. The FCC has issued a comprehensive data request to gather granular information from all providers of special access-like high speed services and this data request was completed in February 2015. The purpose of the data request is to provide the FCC with information that can be used to evaluate competition for special access-like services. It is not clear what actions, if any, the FCC will take in these proceedings. Orders resulting from these proceedings could adversely affect pricing and regulation of these services.

The FCC also is considering changes to its rules governing who contributes to the USF support mechanisms, and on what basis. Any changes in the FCC's rules governing the manner in which entities contribute to the USF could have a material adverse effect on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

***Risk of loss of statutory exemption from burdensome interconnection rules imposed on ILECs.*** Our rural LECs generally are exempt from the more burdensome requirements of the 1996 Act governing the rights of competitors to interconnect to ILEC networks and to utilize discrete network elements of the incumbent's network at favorable rates. To the extent state regulators decide that it is in the public interest to extend some or all of these requirements to our rural LECs, we may be required to provide UNEs to competitors in our rural telephone company areas. As a result, more competitors could enter our traditional telephone markets than are currently expected, which could have a material adverse effect on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

***Risks posed by costs of regulatory compliance.*** Regulations create significant compliance and administrative costs for us. Our subsidiaries that provide intrastate services are generally subject to certification, tariff filing and other ongoing regulatory requirements by state regulators. Our interstate and intrastate access services are currently provided in accordance with tariffs filed with the FCC and state regulatory authorities, respectively. Challenges in the future to our tariffs by regulators or third parties or delays in obtaining certifications and regulatory approvals could cause us to incur substantial legal and administrative expenses,

and, if successful, these challenges could adversely affect the rates that we are able to charge our customers, which could have a material adverse effect on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

Our acceptance of CAF Phase II funding through the FCC's universal service program requires that we satisfy specific broadband service obligations in locations approved by the FCC within deadlines established by the FCC. If we fail to meet these deadlines, or our broadband service fails to satisfy FCC performance standards, we could be subject to penalties, refunds and other enforcement action by the FCC. In the two states where we declined CAF Phase II support, we cannot predict whether competitors will win a competitive bid for support in our service territories.

In addition, our Northern New England operations are subject to regulations not applicable to our rural operations, including but not limited to requirements relating to interconnection, the provision of UNEs, and the other market-opening obligations set forth in the 1996 Act. In approving the transfer of authorizations to us in the Spincor Merger, the FCC determined that our non-rural operations would be subject to the same regulatory requirements that currently apply to Bell Operating Companies. The FCC also stated that we would be entitled to the same regulatory relief that Verizon New England had obtained in the region. Any changes made in connection with these obligations or relief could increase our non-rural operations' costs or otherwise have a material adverse effect on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities. Moreover, we cannot predict the precise manner in which the FCC will apply the Bell Operating Company regulatory framework to us.

Our business also may be affected by legislation and regulation imposing new or greater obligations related to open Internet access, assisting law enforcement, bolstering homeland security, pole attachments, minimizing environmental impacts, protecting customer privacy or addressing other issues that affect our business. We cannot predict whether or to what extent the FCC might modify its rules or what compliance with those new rules might cost. Similarly, we cannot predict whether or to what extent federal or state legislators or regulators might impose new network access, security, environmental or other obligations on our business.

***Risk of losses from rate reduction.*** Our LECs that operate pursuant to intrastate rate-of-return regulation are subject to state regulatory authority over their intrastate telecommunications service rates. State review of these rates could lead to rate reductions, which in turn could have a material adverse effect on our business, financial condition, results of operations, liquidity and/or the market price of our outstanding securities.

For a more thorough discussion of the regulatory issues that may affect our business, see "Item 1. Business—Regulatory and Legislative" included elsewhere in this Annual Report.

**ITEM 1B. UNRESOLVED STAFF COMMENTS**

Not applicable.

**ITEM 2. PROPERTIES**

We own or lease all of the properties material to our business. Our headquarters is located in Charlotte, North Carolina, in a leased facility. We also have administrative offices, maintenance facilities, rolling stock, central office and remote switching platforms, and transport and distribution network facilities in each of the 17 states in which we operate our LECs. Our facilities are generally located in or near the communities served by our LECs. Auxiliary battery or other non-utility power sources are located at each central office to provide uninterrupted service in the event of an electrical power failure. Transport and distribution network facilities include fiber optic backbone and copper wire distribution facilities, which connect customers to remote switch locations or to the central office and to points of presence or interconnection with the long distance carriers. These facilities are located on land pursuant to permits, easements or other agreements. Our rolling stock includes service vehicles, construction equipment and other required maintenance equipment.

We believe each of our respective properties is suitable and adequate for the business conducted thereon, is being appropriately used consistent with past practice and has sufficient capacity for the present intended purposes.

**ITEM 3. LEGAL PROCEEDINGS**

See the information under (i) "Legal Proceedings" in note (18) "Commitments and Contingencies" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" and (ii) "Class Action Complaint" in note (20) "Subsequent Events" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report, which we incorporate herein by reference.

From time to time, we are also subject to other legal and regulatory proceedings in the ordinary course of business. While management presently believes that the ultimate outcome of these proceedings, individually and in the aggregate, will not materially harm our financial position, cash flows, or overall trends in results of operations, legal proceedings are inherently uncertain, and unfavorable rulings could, individually or in aggregate, have a material adverse effect on our business, financial condition, or operating results.

**ITEM 4. MINE SAFETY DISCLOSURES**

Not applicable.

## PART II

**ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES****General Market Information, Holders and Dividends**

Our common stock is listed on the Nasdaq Capital Market (the "Nasdaq") under the symbol "FRP" and began trading on January 25, 2011.

The following table sets forth, for the periods indicated, the high and low sales prices per share of our common stock as reported on the Nasdaq. The stock price information is based on published financial sources.

<b>Year Ended December 31, 2016</b>	<b>High</b>	<b>Low</b>
First quarter	\$ 16.29	\$ 12.69
Second quarter	15.53	12.81
Third quarter	16.40	13.04
Fourth quarter	19.60	14.66

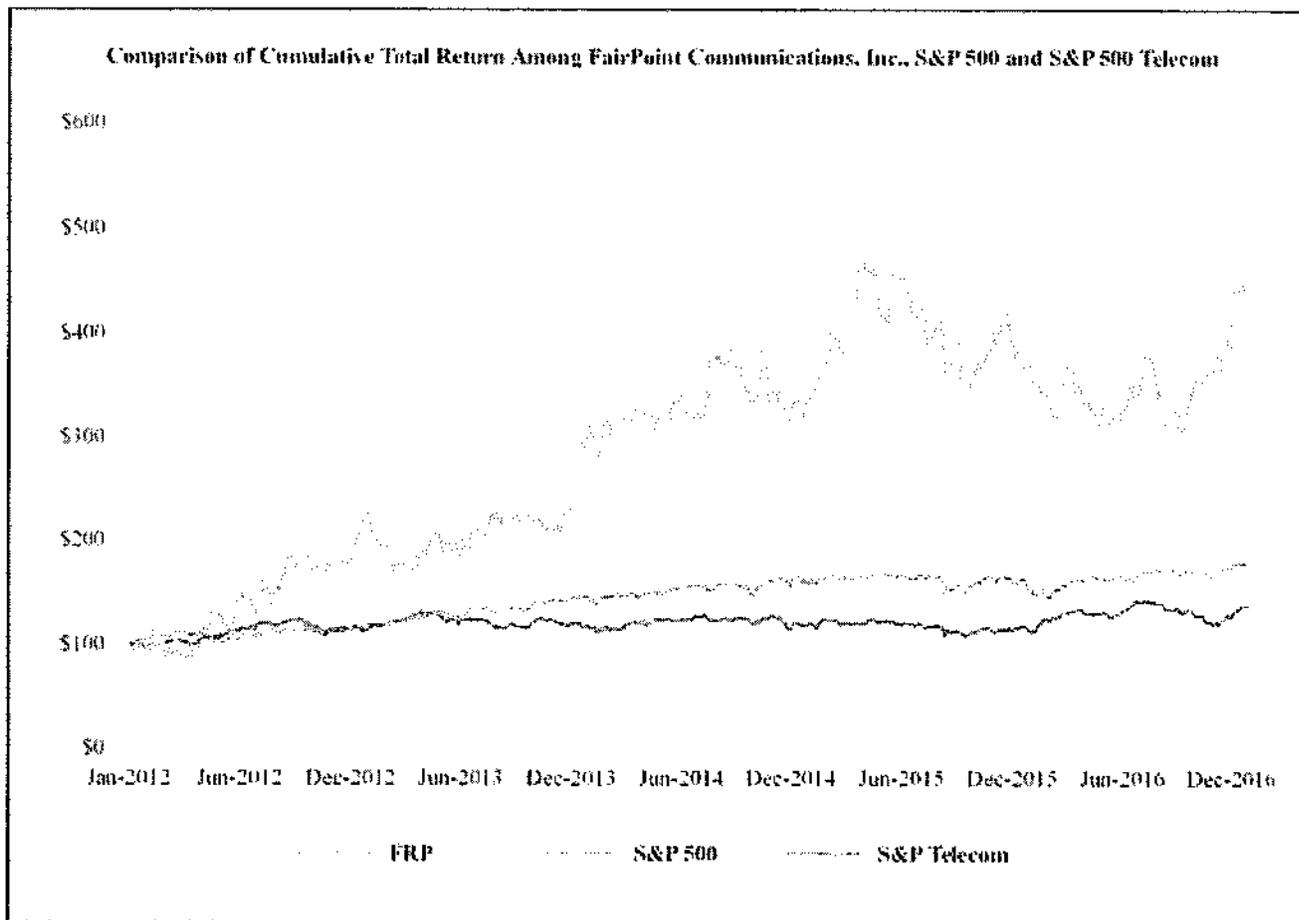

<b>Year Ended December 31, 2015</b>	<b>High</b>	<b>Low</b>
First quarter	\$ 18.08	\$ 13.51
Second quarter	20.98	17.24
Third quarter	19.07	14.93
Fourth quarter	18.87	14.56

No dividends were declared on any class of our common stock during the fiscal years 2016 or 2015. We currently do not pay any cash dividends on shares of our common stock and have no plans to pay cash dividends. Any determination to pay dividends in the future will be at the discretion of our board of directors and will depend upon limitations imposed by our results of operations, financial condition, contractual restrictions relating to indebtedness, restrictions imposed by applicable law and other factors our board of directors may deem relevant at the time.

As of February 27, 2017, there were approximately 174 holders of record of our common stock.

**Performance Graph**

Set forth below is a line graph comparing the cumulative total stockholder return on shares of our common stock against (i) the cumulative total return of all companies listed on the S&P 500 and (ii) the cumulative total return of the S&P 500 Telecom sector. The period compared commences on January 1, 2012 and ends on December 31, 2016. This graph assumes that \$100 was invested on January 1, 2012 in our common stock and in each of the market index and the sector index at the closing price for FairPoint Communications and the respective indices, and that all cash distributions were reinvested.

**Securities Authorized for Issuance under Equity Compensation Plans**

The table below provides information as of December 31, 2016 concerning securities authorized for issuance under our equity compensation plans. As of December 31, 2016, the FairPoint Communications, Inc. Amended and Restated 2010 Long Term Incentive Plan (the "Long Term Incentive Plan") was the only equity compensation plan under which securities of FairPoint Communications were authorized for issuance. The Board of Directors of the Company approved the Long Term Incentive Plan on March 14, 2014 and the stockholders of the Company approved it on May 12, 2014. The Long Term Incentive Plan, prior to its amendment and restatement, was approved by the United States Bankruptcy Court for the Southern District of New York in connection with our emergence from bankruptcy. For a description of the material features of the Long Term Incentive Plan, see note (16) "Stock-Based Compensation" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report.

Plan Category	(a) Number of securities to be issued upon exercise of outstanding options, warrants and rights <sup>(1)</sup>	(b) Weighted average exercise price of outstanding options, warrants and rights	(c) Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected in column (a)) <sup>(2)</sup>
Equity compensation plans approved by our stockholders	2,171,470	\$ 15.87	1,423,409
<b>Total</b>	<b>2,171,470</b>	<b>\$ 15.87</b>	<b>1,423,409</b>

- (1) Includes 2,171,470 options to purchase shares of common stock under the Long Term Incentive Plan, of which 1,184,859 options were issued prior to the amendment and restatement of the Long Term Incentive Plan on May 12, 2014 with a weighted average exercise price of \$16.88.
- (2) Each stock option granted reduces the availability under the Long Term Incentive Plan by one share. Prior to the amendment and restatement of the Long Term Incentive Plan on May 12, 2014, each restricted stock award granted reduced the availability under the Long Term Incentive Plan by one share. On or after May 12, 2014, each restricted stock award granted reduces the availability by 1.35 shares. Upon the exercise of each stock option or vesting of each restricted share award, one new share of common stock will be issued.

### Repurchase of Equity Securities

Under the Long Term Incentive Plan, employees may elect to have us withhold shares to satisfy minimum statutory federal, state and local tax withholding obligations arising from the vesting of restricted stock. When we withhold these shares, we are required to remit to the appropriate taxing authorities the market price of the shares withheld, which could be deemed a purchase of shares by us on the date of withholding.

### ITEM 6. SELECTED FINANCIAL DATA

The summary financial data presented below represents portions of our consolidated financial statements and are not complete. The following financial information should be read in conjunction with "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" and our consolidated financial statements and notes thereto contained in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report. Historical results are not necessarily indicative of future performance or results of operations. Amounts are in thousands, except operating metrics, per share data and units.

	Years Ended December 31,				
	2016	2015	2014	2013	2012
<b>Results of Continuing Operations:</b>					
Revenues	\$ 824,443	\$ 859,465	\$ 901,396	\$ 939,354	\$ 973,649
Operating expenses	595,098	689,873	994,670	1,052,540	1,155,632
Income/(loss) from operations	229,345	169,592	(93,274)	(113,186)	(181,983)

(1) Cash excludes aggregate restricted cash of \$0.7 million, \$0.7 million, \$0.6 million, \$1.2 million and \$7.5 million at December 31, 2016, 2015, 2014, 2013 and 2012, respectively.

## ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following discussion should be read in conjunction with our consolidated financial statements and the notes thereto in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report. The following discussion includes certain forward-looking statements. For a discussion of important factors, including the continuing development of our business, actions of regulatory authorities and competitors and other factors which could cause actual results to differ materially from the results referred to in the forward-looking statements, see "Item 1A. Risk Factors" and "Cautionary Note Regarding Forward-Looking Statements" included elsewhere in this Annual Report. Our discussion and analysis of financial condition and results of operations are presented in the following sections:

- Overview
- Executive Summary
- Proposed Merger with Consolidated Communications Holdings, Inc.
- Labor Matters
- Regulatory and Legislative
- Basis of Presentation
- Results of Operations
- Non-GAAP Financial Measures
- Liquidity and Capital Resources
- Off-Balance Sheet Arrangements
- Summary of Contractual Obligations
- Critical Accounting Policies and Estimates
- New Accounting Standards
- Inflation

### Overview

We are a leading provider of advanced communications services to business, wholesale and residential customers within our service territories. We offer our customers a suite of advanced services including Ethernet, SIP-Trunking, hosted PBX, managed services, data center colocation services, high capacity data transport and other IP-based services over our fiber-based network, in addition to Internet access, HSD and local and long distance voice services. Our service territory spans 17 states where we are the incumbent communications provider primarily serving rural communities and small urban markets. Many of our LECs have served their respective communities for more than 80 years. As of December 31, 2016, we operated with approximately 306,600 broadband subscribers, approximately 15,700 Ethernet circuits and approximately 366,100 residential voice lines.

We own and operate an extensive fiber-based Ethernet network with more than 22,000 miles of fiber optic cable, including approximately 18,000 miles of fiber optic cable in Maine, New Hampshire and Vermont, giving us capacity to support more HSD services and extend our fiber reach into more communities across the region. The IP/MPLS network architecture of our fiber-based network allows us to provide Ethernet, transport and other IP-based services with the highest level of reliability at a lower cost of service. This fiber-based Ethernet network also supplies critical infrastructure for wireless carriers serving the region as their bandwidth needs increase, driven by mobile data from smartphones, tablets and other wireless devices. As of December 31, 2016, we provide cellular transport, also known as backhaul, through over 1,900 mobile Ethernet backhaul connections. We have fiber connectivity to approximately 1,300 cellular communications towers in our service footprint.

### Executive Summary

Our mission is to empower businesses, consumers and communities with advanced data, IT and voice services by leveraging our network, technology and operational expertise to exceed their expectations. Our vision includes operating and technology platforms that will meet our customers' technology needs by providing them with reliable and secure connections and ready access to what matters most to them.

Our executive management team is focused on utilizing our network assets, our outstanding operating platform and our proven ability to develop and deploy market-driven products to build brand awareness, aid in generating new revenue and sustain existing revenue. We will enhance our network to bring new services and more robust technologies to our markets, enable effective and secure technology to ensure our product and service offerings remain competitive, and provide excellent customer service to create a loyal customer base, all while maintaining a sharp focus on managing costs.

Our objective is to transform our revenue by continuing to add advanced data products and services such as Ethernet, high capacity data transport and other IP-based services over our fiber-based network in addition to HSD services, to minimize our dependence on voice access lines. Communications companies, including us, continue to experience a decline in access lines due to increased competition from wireless carriers, cable television operators and CLECs and increased availability of alternative communications services, including wireless and voice over IP ("VoIP"). We will continue our efforts to retain customers to mitigate the loss of voice access lines through bundled packages, including video and other value added services. We believe access lines as a measure of the business are increasingly less meaningful measures of trend and are being replaced by revenue generating broadband subscribers and Ethernet circuits.

Over the past few years, we have made significant capital investments in our fiber-based Ethernet network to expand our business service offerings to meet the growing data needs of our customers and to increase broadband speeds and capacity in our consumer markets. We have also focused our sales and marketing efforts on these advanced data solutions. Specifically, within the last few years, we built and launched high capacity Ethernet services to allow us to meet the capacity needs of our business customers as well as supply high capacity infrastructure to our wholesale customers. In the past year, Ethernet demand has remained strong amid increased price pressure. We continue to see a market trend, largely led by cable companies, of reduced Ethernet prices to business and wholesale customers. We continue to see growth in Ethernet units and speeds amid declining prices in the market. Ethernet high-capacity transport data services are our flagship product and are laying the foundation not only for new business but also for additional IP-based advanced services in the future.

We believe that our extensive fiber network, with more than 22,000 miles of fiber optic cable, including approximately 18,000 miles of fiber optic cable in northern New England and approximately 1,300 cellular communications towers currently served with fiber, puts us in an excellent position to serve the cellular backhaul needs in our markets. We further believe the bandwidth needs of cellular backhaul will grow with the continued adoption of bandwidth-intensive technology. As a result, we expect to see wireless carriers developing new technologies as demand increases on existing fiber-connected towers, including the use of "small cell" architecture. By satisfying additional demand for bandwidth, both traditionally and through new and evolving technology, we expect to partially offset the decline we have seen, and expect to continue to see, in legacy wholesale offerings, including TDM transport services, DS1s, DS3s and wholesale switched access.

Coupled with recent regulatory reform in the states of Maine, New Hampshire and Vermont that will serve to promote fair competition among communications service providers in the region, we believe that there is a significant organic growth opportunity within the business and wholesale markets given our extensive fiber network and IP-based product suite, combined with our relative low market share in these areas.

#### **Proposed Merger with Consolidated Communications Holdings, Inc.**

On December 3, 2016, FairPoint Communications entered into the Merger Agreement with Consolidated and Merger Sub, which provides for, among other things, a business combination whereby Merger Sub will merge with and into FairPoint Communications, with FairPoint Communications as the surviving entity. As a result of the Merger, the separate corporate existence of Merger Sub will cease, and FairPoint Communications will survive as a wholly owned subsidiary of Consolidated. Consolidated is a leading business and broadband communications provider throughout its 11-state service area.

If the Merger is completed, under the terms of the Merger Agreement, stockholders of FairPoint Communications will receive 0.7300 shares of common stock of Consolidated for each share of FairPoint Communications common stock that they own immediately before this transaction. The Merger is expected to close around the middle of 2017 and is subject to standard closing conditions, including federal and state regulatory approvals and the approval of both Consolidated's and FairPoint Communications' stockholders. The required waiting period under the HSR Act was terminated on January 11, 2017.

For the year ended December 31, 2016, we recognized \$4.5 million of merger related expenses, primarily for legal and financial advisory costs.

The award agreements under the Long Term Incentive Plan provide that upon the occurrence of a change in control, unvested benefits will be accelerated and vest in full.

## Labor Matters

Two of our collective bargaining agreements in northern New England were ratified on February 22, 2015 by their respective unions. Members of these two labor unions initiated a work stoppage on October 17, 2014 and returned to work on February 25, 2015. The respective collective bargaining agreements expire in August 2018. For the year ended December 31, 2015, we recognized \$48.9 million of labor negotiation related expenses, primarily for contracted services, contingent workforce expenses (including training) and legal, communications and public relations expenses.

See notes (11) "Employee Benefit Plans" and (12) "Income Taxes" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report for further information, as well as "Results of Operations" herein.

## Regulatory and Legislative

We are generally subject to common carrier regulation primarily by federal and state governmental agencies. At the federal level, the FCC generally exercises jurisdiction over common carriers, such as us, to the extent those carriers provide, originate or terminate interstate or international communications. State regulatory commissions generally exercise jurisdiction over common carriers to the extent those carriers provide, originate or terminate intrastate telecommunications. In addition, pursuant to the Communications Act, state and federal regulators share responsibility for implementing and enforcing the domestic pro-competitive policies introduced by that legislation.

We are required to comply with the Communications Act which requires, among other things, that common carriers offer communications services at just and reasonable rates and on terms and conditions that are not unreasonably discriminatory. The Communications Act also contains requirements intended to promote competition in the provision of local services and lead to deregulation as markets become more competitive.

For a detailed description of the federal and state regulatory environment in which we operate and the FCC's recently promulgated CAF/ICC Order and other recent regulatory changes, as well as the effects and potential effects of such regulation on us, see "Item 1. Business—Regulatory and Legislative" included elsewhere in this Annual Report. The impact of these changes for 2016 is described further below. However, in the long run, we are uncertain of the ultimate impact as federal and state regulations continue to evolve.

## Basis of Presentation

We view our business of providing data, voice and communications services to business, wholesale and residential customers as one reportable segment.

## Results of Operations

The following table sets forth our consolidated operating results reflected in our consolidated statements of operations for the years ended December 31, 2016, 2015 and 2014, respectively. The comparisons of financial results are not necessarily indicative of future results (in thousands, except for operating metrics):

	Years Ended December 31,		
	2016	2015	2014
<b>Revenues:</b>			
Voice services	\$ 297,441	\$ 323,412	\$ 362,491
Access	239,761	256,617	267,938
Data and Internet services	187,268	178,620	175,490
Regulatory funding	51,411	53,818	45,556
Other	48,562	46,998	49,921
<b>Total revenues</b>	<b>824,443</b>	<b>859,465</b>	<b>901,396</b>
<b>Operating expenses:</b>			
Cost of services and sales, excluding depreciation and amortization	389,316	430,308	440,979
Other post-employment benefit and pension (benefit)/expense	(213,760)	(170,338)	75,282
Selling, general and administrative expense, excluding depreciation and amortization	197,239	206,046	257,627
Depreciation and amortization	222,303	223,819	220,678
Reorganization related expense	—	38	104
<b>Total operating expenses</b>	<b>595,098</b>	<b>689,873</b>	<b>994,670</b>
<b>Income/(loss) from operations</b>	<b>229,345</b>	<b>169,592</b>	<b>(93,274)</b>
<b>Other income/(expense):</b>			
Interest expense	(82,697)	(80,718)	(80,371)
Other, net	296	485	7,548
<b>Total other expense</b>	<b>(82,401)</b>	<b>(80,233)</b>	<b>(72,823)</b>
<b>Income/(loss) before income taxes</b>	<b>146,944</b>	<b>89,359</b>	<b>(166,097)</b>
Income tax (expense)/benefit	(42,849)	1,057	29,778
<b>Net income/(loss)</b>	<b>\$ 104,095</b>	<b>\$ 90,416</b>	<b>\$ (136,319)</b>

Select Operating Metrics:	As of December 31,		
	2016	2015	2014
Broadband subscribers	306,624	311,130	319,915
Ethernet circuits	15,691	14,507	12,614
Residential voice lines	366,111	409,852	466,682

### Voice Services Revenues

We receive revenues through the provision of local calling services to business and residential customers, generally for a fixed monthly charge and service charges for special calling features. We also generate revenue through long distance services within our service areas on our network and through resale agreements with national interexchange carriers. For the years ended December 31, 2016, 2015 and 2014, residential voice lines in service decreased 10.7%, 12.2% and 11.4% year-over-year, respectively, which directly impacts local voice services revenues and our opportunity to provide long distance services to our customers, resulting in a decrease of minutes of use. The decline in residential voice lines in 2015 and 2014 may have been partially due to the impact of the strike on service levels. Evolving competition, including reduced voice pricing from cable competitors as well as cellular adoption, has contributed to the decrease in residential voice lines. There are very few areas within our northern New England footprint where cable voice service and cellular are not alternatives for our customers. In addition, business voice services revenue also declined in part

because of reduced access lines as businesses shifted from traditional voice products to our Ethernet or other advanced services. We expect the trend of decline in voice lines in service, and thereby a decline in aggregate voice services revenue, to continue as customers continue to turn to the use of alternative communication services as a result of ever-increasing competition.

Effective June 1, 2015, the Performance Assurance Plan ("PAP") that was previously adopted in each of the states of Maine, New Hampshire and Vermont was retired and we began measuring and reporting certain wholesale local service performance results pursuant to the terms of a simplified measurement plan. The new plan, called the Wholesale Performance Plan ("WPP"), was developed collaboratively with CLECs over several years and was approved by the Maine, New Hampshire and Vermont regulatory commissions. Under the WPP, we are subject to significantly fewer performance criteria and our annual service penalty

exposure was reduced from a maximum of \$87 million to a maximum of \$12 million (\$4.75 million in each of Maine and New Hampshire and \$2.5 million in Vermont). A portion of the service credits resulting from these commitments were recorded to voice services revenues; however, the majority were recorded to access revenues.

The following table reflects the primary drivers of year-over-year changes in voice services revenues (dollars in millions):

	Year ended December 31, 2016 vs. December 31, 2015		Year ended December 31, 2015 vs. December 31, 2014			
	Increase (Decrease)	%	Increase (Decrease)	%		
Local voice services revenues, excluding:	\$	(20.6)	\$	(30.8)		
Long distance services revenues		(5.6)		(8.4)		
Increase in accrual of PAP/WPP service credits <sup>(1)</sup>		0.2		0.1		
<b>Total change in voice services revenues</b>	<b>\$</b>	<b>(26.0)</b>	<b>(8)%</b>	<b>\$</b>	<b>(39.1)</b>	<b>(11)%</b>

(1) There was an insignificant amount of PAP/WPP service credits during the year ended December 31, 2016. During the years ended December 31, 2015 and 2014, PAP/WPP service credits resulted in a decrease of \$0.2 million and \$0.3 million, respectively, to local voice services revenues.

### Access Revenues

We receive revenues for the provision of network access through carrier Ethernet based products and legacy access products to end user customers and long distance and other competing carriers who use our local exchange facilities to provide interexchange services to their customers. Network access can be provided to carriers and end users that buy dedicated local and interexchange capacity to support their private networks (i.e. special access) or it can be derived from fixed and usage-based charges paid by carriers for access to our local network (i.e. switched access).

Carriers are migrating from legacy access products, such as DS1, DS3, frame relay, ATM and private line, to carrier Ethernet based products. During the years ended December 31, 2016, 2015 and 2014, wholesale Ethernet circuits grew by 12.3%, 17.1% and 44.4% year-over-year, respectively. These carrier Ethernet based products are more sustainable, but generally, at the outset, have lower average revenue per user of broadband capacity than the legacy products they are replacing, resulting in a decline in access revenues. We expect the decline in access revenues to continue with customer migration. This decline in legacy access products is expected to be partially offset with the increasing need for bandwidth, including cellular backhaul and demand for carrier Ethernet based products, both of which are expected to increase over time. With the entry of cable competitors into the wholesale market, we continue to experience an increased decline in access lines due to this new competition. However, our extensive fiber-based Ethernet network with more than 22,000 miles of fiber optic cable (of which approximately 18,000 miles are in Maine, New Hampshire and Vermont), including approximately 1,300 cellular communications towers currently served with fiber, puts us in a position to grow our revenue base as demand for cellular backhaul and other Ethernet services expands. We also construct new fiber routes to cellular communications towers when the business case presents itself. Additionally, we continue to evaluate new services to provide to carriers, including the selective use of dark fiber and professional services, to continue to meet carrier access needs.

As described above, we adopted a separate PAP for certain services provided on a wholesale basis to CLECs in each of the states of Maine, New Hampshire and Vermont, pursuant to which we are required to issue service credits in the event we are unable to meet the provisions of the respective PAP. These PAPs were retired effective June 1, 2015 and replaced with the WPP. Our maximum exposure to wholesale service credits has been reduced through the implementation of the WPP. The service credits are allocated to access revenues or voice services revenues based on services provided to the wholesale carrier.

In June 2014, Maine established a new POLR SQI standard, which may subject us to future SQI penalties.

The following table reflects the primary drivers of year-over-year changes in access revenues (dollars in millions):

	Year ended December 31, 2016 vs. December 31, 2015		Year ended December 31, 2015 vs. December 31, 2014			
	Increase (Decrease)	%	Increase (Decrease)	%		
Carrier Ethernet services <sup>(1)</sup>	\$	1.6	\$	9.3		
Legacy access services <sup>(2)</sup>		(19.3)		(20.8)		
Decrease in accrual of PAP/WPP service credits <sup>(3)</sup>		0.8		0.2		
<b>Total change in access revenues</b>	<b>\$</b>	<b>(16.9)</b>	<b>(7)%</b>	<b>\$</b>	<b>(11.3)</b>	<b>(4)%</b>

(1) We offer carrier Ethernet services throughout our market to our business and wholesale customers, which include Ethernet virtual circuit technology for cellular backhaul. As of December 31, 2016, we provide cellular transport on our fiber-

based Ethernet network through over 1,900 fiber-to-the-tower connections compared to over 1,900 and 1,700 as of December 31, 2015 and 2014, respectively.

- (2) Legacy access services include products such as DS1, DS3, frame relay, ATM and private line.
- (3) During the years ended December 31, 2016, 2015 and 2014, PAP/WPP service credits resulted in a decrease of \$0.2 million, \$1.0 million and \$1.2 million to access revenues, respectively.

### *Data and Internet Services Revenues*

We receive revenues from monthly recurring charges for the provision of data and Internet services to residential and business customers through DSL technology, fiber-to-the-home technology, retail Ethernet, Internet dial-up, high speed cable modem and wireless broadband.

We have invested in our broadband network to extend the reach and capacity of the network to customers who did not previously have access to data and Internet products and to offer more competitive services to existing customers, including retail Ethernet products. During the years ended December 31, 2016, 2015 and 2014, retail Ethernet circuits grew by 2.8%, 12.4%, and 20.5% respectively. Our broadband subscribers decreased by 1.4%, 2.7% and 2.5% during the years ended December 31, 2016, 2015 and 2014, respectively, which directly impacts data and Internet services revenues. We expect to continue our investment in our broadband network to further grow data and Internet services revenues in the coming years.

The following table reflects the primary drivers of year-over-year changes in data and Internet services revenues (dollars in millions):

	Year ended December 31, 2016 vs. December 31, 2015		Year ended December 31, 2015 vs. December 31, 2014	
	Increase (Decrease)	%	Increase (Decrease)	%
Retail Ethernet services <sup>(1)</sup>	\$ 0.6		\$ 4.9	
Other data and Internet technology based services <sup>(2)</sup>	8.0		(1.8)	
<b>Total change in data and Internet services revenues</b>	<b>\$ 8.6</b>	<b>5%</b>	<b>\$ 3.1</b>	<b>2%</b>

- (1) Retail Ethernet services revenue is comprised of data services provided through E-LAN, E-LINE and E-DIA technology on our fiber-based Ethernet network. During the years ended December 31, 2016, 2015 and 2014, we recognized \$43.0 million, \$42.4 million and \$37.5 million, respectively, of retail Ethernet revenues.

- (2) Includes all other services such as DSL, dial-up, high speed cable modem and wireless broadband.

### *Regulatory Funding Revenues*

We receive certain federal and state government funding that we classify as regulatory funding, which is further described in "Regulatory and Legislative" herein, including: CAF Phase II support effective January 1, 2015 to build and operate broadband services; CAF Phase II transition funding; CAF Phase I frozen support (for Kansas and Colorado and until a reverse auction is completed); CAF funding under the CAF/ICC Order; and universal service fund support from certain states in which we operate. During the years ended December 31, 2016, 2015 and 2014, we recognized \$51.4 million, \$53.8 million and \$45.6 million, respectively, of regulatory funding revenues. The year-over-year changes are primarily due to the timing of CAF Phase II transitional revenue. CAF Phase II support revenue does not include any funding for Colorado and Kansas. We expect the amount of regulatory funding revenue to decline as the amount of CAF Phase II transition funding decreases in 2016 and is phased out through 2018.

### Other Services Revenues

We receive revenues from other services, including special purpose projects on behalf of third parties, video services (including cable television and video-over-DSL), billing and collection, directory services, the sale and maintenance of customer premise equipment and certain other miscellaneous revenues. Other services revenues also include revenue we receive from late payment charges to end users and interexchange carriers. Due to the composition of other services revenues, it is difficult to predict future trends.

The following table reflects the primary drivers of year-over-year changes in other services revenues (dollars in millions):

	Year ended December 31, 2016 vs. December 31, 2015		Year ended December 31, 2015 vs. December 31, 2014	
	Increase (Decrease)	%	Increase (Decrease)	%
Special purpose projects <sup>(1)</sup>	\$ 0.4		\$ (3.8)	
Late payment fees <sup>(2)</sup>	—		0.4	
Other <sup>(3)</sup>	1.2		0.5	
<b>Total change in other services revenues</b>	<b>\$ 1.6</b>	<b>3%</b>	<b>\$ (2.9)</b>	<b>(6)%</b>

- (1) Special purpose projects are completed on behalf of third party requests.
- (2) Late payment fees are related to customers who have not paid their bills in a timely manner.
- (3) Other revenues were primarily attributable to revenue from value added reseller of unified communications, data networking and cabling infrastructure solutions, in addition to fluctuations in directory services, billing and collections and in various other miscellaneous services revenues.

**Supplementary revenue information.** In addition to the revenue information discussed above, we are providing the following additional strategic revenue categorization information. Management believes that providing this additional revenue information will afford better visibility into our revenue trends as a result of product and service evolution within our industry. Management believes these metrics will enhance investors' ability to evaluate our business and assist investors in their understanding of the changing composition of our revenue (in millions).

	Years Ended December 31,		
	2016	2015	2014
<b>Growth (1)</b>			
Broadband (1a)	\$ 141.8	\$ 135.6	\$ 138.7
Ethernet (1b)	98.1	95.9	81.6
Hosted and Advanced Services (1c)	17.9	13.4	12.5
<b>Subtotal Growth</b>	<b>257.8</b>	<b>244.9</b>	<b>232.8</b>
<i>Growth as a % of Total Revenue</i>	<i>31.3%</i>	<i>28.5%</i>	<i>25.8%</i>
<b>Convertible (2)</b>			
Non-Ethernet Special Access (2a)	66.6	79.9	94.7
Business Voice (2b)	119.0	127.7	134.1
Other Convertible (2c)	20.5	23.9	28.9
<b>Subtotal Convertible</b>	<b>206.1</b>	<b>231.5</b>	<b>257.7</b>
<i>Convertible as a % of Total Revenue</i>	<i>25.0%</i>	<i>26.9%</i>	<i>28.6%</i>
<b>Legacy (3)</b>			
Residential Voice (3a)	212.1	226.0	245.6
Switched Access and Other (3b)	65.9	74.7	83.7
<b>Subtotal Legacy</b>	<b>278.0</b>	<b>300.7</b>	<b>329.3</b>
<i>Legacy as a % of Total Revenue</i>	<i>33.7%</i>	<i>35.0%</i>	<i>36.5%</i>
<b>Regulatory funding (4)</b>			
	51.4	53.8	45.5
<i>Regulatory funding as a % of Total Revenue</i>	<i>6.2%</i>	<i>6.3%</i>	<i>5.0%</i>
<b>Miscellaneous (5)</b>			
	31.1	28.6	36.1
<i>Miscellaneous as a % of Total Revenue</i>	<i>3.8%</i>	<i>3.3%</i>	<i>4.1%</i>
<b>Total Revenue</b>	<b>\$ 824.4</b>	<b>\$ 859.5</b>	<b>\$ 901.4</b>

(1) Growth revenue is comprised of products and services that are generally viewed as in-demand by communications consumers over the medium- to long-term and are expected to increase over time.

a) Broadband revenue is comprised of both residential and business customers delivered through DSL, ADSL, VDSL or other similar services.

b) Ethernet revenue includes Ethernet over copper ("EOC") or Ethernet over fiber ("EOF") services delivered to end-users or to wholesalers, who then sell to their end-users.

c) Hosted and Advanced Services includes VoIP and other digital voice services including unified messaging and other IP features as well as revenue generated from our various advanced services including our value added reseller of unified communications, data networking and cabling infrastructure solutions, the next-generation emergency 9-1-1 contracts in several of our service territories as well as data center and managed services.

(2) Convertible revenues are revenues that could move from TDM-based technologies to Ethernet or other advanced services.

a) Non-Ethernet Special Access includes high-capacity circuits. The revenues are primarily comprised of business revenue from T1's, DS3's and SONET products.

b) Business Voice is traditional voice, long distance, ISDN and Centrex services for a business customer.

c) Other Convertible primarily includes Unbundled Network Element ("UNE"), Asynchronous Transfer Mode ("ATM"), Frame Relay, ISDN, Analog Private Line and Internet services such as dial-up.

(3) Legacy revenues are TDM-based voice related consumer revenue largely related to residential customers.

a) Residential Voice is comprised of TDM voice services to residential customers.

b) Switched Access and Other primarily includes Switched Transport, Local Switching, NECA pooling elements and colocation of miscellaneous equipment.

(4) Refer to the definition of "Regulatory Funding Revenues" above.

(5) Miscellaneous is comprised of special purpose projects, late payment fees from our customers and pole rental revenues among other various service revenues.

The primary drivers of the year-over-year changes in the strategic revenue categorization for the year ended December 31, 2016 compared to 2015 were:

- Growth revenue increased \$12.9 million as we experienced growth in broadband revenue as speed upgrades and rate increases helped offset a decline in broadband subscribers as well as increased hosted and advanced services revenue and increased Ethernet revenue due to customer growth.
- Convertible revenue decreased \$25.4 million as customers continued to migrate from non-Ethernet circuits and businesses shifted from traditional voice products to VoIP and hosted products.
- Legacy revenue decreased \$22.7 million resulting from a decline in voice access lines due to fewer lines in service and lower legacy switched access revenue versus a year ago.
- Regulatory funding revenue decreased \$2.4 million primarily due to the timing of CAF Phase II transitional revenue.
- Miscellaneous revenue increased \$2.5 million due to lower PAP/WPP service credits, revenue assurance activities and higher special purpose projects.

The primary drivers of the year-over-year changes in the strategic revenue categorization for the year ended December 31, 2015 compared to 2014 were:

- Growth revenue increased \$12.1 million as we experienced growth in Ethernet while price increases for broadband services and speed upgrades helped offset a decline in broadband subscribers.
- Convertible revenue decreased \$26.2 million as customers migrated from non-Ethernet circuits and businesses shifted from traditional voice products to VoIP and hosted products.
- Legacy revenue decreased \$28.6 million resulting from the loss of voice access lines versus a year ago combined with lower long distance usage.
- Regulatory funding revenue increased \$8.3 million due to our acceptance of CAF Phase II and the corresponding transitional revenue of \$8.8 million associated with that program.
- Miscellaneous revenue decreased \$7.5 million due to higher special purpose projects in the first quarter of 2014 and revenue assurance.

### Cost of Services and Sales

Cost of services and sales includes the following costs directly attributable to a service or product: salaries and wages, benefits (including stock based compensation, but excluding the net periodic benefit cost of other post-employment benefit plans and qualified pension plans), materials and supplies, contracted services, network access and transport costs, customer provisioning costs, computer systems support and cost of products sold. Aggregate customer care costs, which include billing and service provisioning, are allocated between cost of services and sales and selling, general and administrative expenses. We expect the cost of services and sales to fluctuate with revenue and decrease due to lower employee expenses from a reduction in headcount, partially offset by expected merger related expenses in 2017, including increased stock-based compensation expense described in "Proposed Merger with Consolidated Communications Holdings, Inc." herein.

The following table reflects the primary drivers of year-over-year changes in cost of services and sales (dollars in millions):

	Year ended December 31, 2016 vs. December 31, 2015		Year ended December 31, 2015 vs. December 31, 2014	
	Increase (Decrease)	%	Increase (Decrease)	%
Employee expense <sup>(1)</sup>	\$ 2.8		\$ (1.7)	
Labor negotiation related expense <sup>(2)</sup>	(40.3)		1.9	
Severance expense <sup>(3)</sup>	1.0		1.7	
Network and access expense <sup>(4)</sup>	0.9		(10.9)	
Other <sup>(5)</sup>	(5.4)		(1.7)	
<b>Total change in cost of services and sales</b>	<b>\$ (41.0)</b>	<b>(10)%</b>	<b>\$ (10.7)</b>	<b>(2)%</b>

(1) For the years ended December 31, 2016, 2015 and 2014, we recognized \$163.5 million, \$160.7 million and \$162.4 million, respectively, of employee expense as cost of services and sales. The increase for 2016 compared to 2015 is primarily due to the work stoppage described in "Labor Matters" herein partially offset by a reduction in headcount. The decrease for 2015 compared to 2014 is primarily due to the work stoppage described in "Labor Matters" herein as well as a reduction in headcount, partially offset by a decrease in capitalized labor associated with a reduction in labor intensive capital projects in 2015 versus 2014.

(2) Labor negotiation related expense is related primarily to contracted services incurred during the years ended December 31,

2015 and 2014 as a result of the work stoppage described in "Labor Matters" herein.

- (3) For the years ended December 31, 2016, 2015 and 2014, we recognized \$3.7 million, \$2.7 million and \$1.0 million of severance expense, respectively, attributed to the reduction in our workforce.
- (4) Network and access expense continues to decrease primarily due to lower revenue as well as cost management efforts.
- (5) Other cost of services and sales has decreased primarily due to lower provisioning and lower back-office expenses.

#### *Other Post-Employment Benefit and Pension (Benefit)/Expense*

We expect other post-employment benefit and pension (benefit)/expense to increase in 2017 compared to 2016 since the prior service credit was fully amortized during 2016.

The following table reflects the primary drivers of year-over-year changes in other post-employment benefit and pension (benefit)/expense (dollars in millions):

	Year ended December 31, 2016 vs. December 31, 2015		Year ended December 31, 2015 vs. December 31, 2014	
	Increase (Decrease)	%	Increase (Decrease)	%
Other post-employment benefits expense/(benefit) <sup>(1)</sup>	\$ (43.7)		\$ (236.1)	
Pension expense <sup>(2)</sup>	0.3		(9.5)	
<b>Total change in other post-employment benefit and pension (benefit)/expense</b>	<b>\$ (43.4)</b>	<b>25%</b>	<b>\$ (245.6)</b>	<b>(326)%</b>

- (1) The decrease in the 2016 net periodic benefit cost compared to 2015 for our other post-employment benefit plans is primarily attributable to the decrease in amortization expense of the net actuarial loss of \$31.6 million and additional amortization of the net prior service credits of \$4.0 million as well as decreases in service and interest costs resulting from the lower benefit obligation.

The decrease in the 2015 net periodic benefit cost compared to 2014 for our other post-employment benefit plans is primarily attributable to the benefit recognized from amortization of net prior service credits of \$304.6 million partially offset by the amortization expense of the net actuarial loss of \$113.4 million in 2015, a decrease in interest cost resulting from the lower obligation and a decrease in service cost due to elimination of benefits for active represented employees.

At December 31, 2015, we recognized actuarial losses of \$32.8 million, which resulted in a decrease in the amount of actuarial losses being amortized in 2016 compared to 2015. At December 31, 2014, we recognized actuarial losses of \$148.4 million, which resulted in an increase in the amount of actuarial losses being amortized in 2015 compared to 2014. The actuarial gains/losses can be attributed primarily to the change in discount rates.

See note (11) "Employee Benefit Plans" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report for further information on our other post-employment benefit plans.

- (2) The increase in the 2016 net periodic benefit cost compared to 2015 for our qualified pension plans is primarily attributable to a plan curtailment recognized in the third quarter of 2015 as a result of a workforce reduction partially offset by a decrease in service cost, a decrease in the amortization of actuarial losses and an increase in return on assets.

The decrease in the 2015 net periodic benefit cost compared to 2014 for our qualified pension plans is primarily attributable to a decrease in service cost, amortization of prior service credit and a plan curtailment recognized in the third quarter of 2015 as a result of a workforce reduction partially offset by an increase in amortization of actuarial losses. The prior service credit is related to pension bands that were frozen under the terms of the collective bargaining agreements.

The decrease in service cost in 2016 compared to 2015 resulted from a reduction in the projected benefit obligation. The reduction in the projected benefit obligation used to measure service cost in 2016 and 2015 is primarily the result of the collective bargaining agreements described in "Labor Matters" herein.

At December 31, 2015, we recognized actuarial gains of \$31.7 million, which resulted in a decrease in the amount of actuarial losses being amortized in 2016 compared to 2015. At December 31, 2014, we recognized actuarial losses of \$66.7 million, which resulted in an increase in the amount of actuarial losses being amortized in 2015 compared to 2014. The actuarial gains/losses can be attributed primarily to the change in discount rates and the gains/losses incurred on payment of significant lump sums in each of those years.

See note (11) "Employee Benefit Plans" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report for further information on our company-sponsored qualified pension plans.

### ***Selling, General and Administrative Expense***

Selling, general and administrative ("SG&A") expense includes salaries and wages and benefits (including stock based compensation, but excluding the net periodic benefit cost of other post-employment benefit plans and qualified pension plans) not directly attributable to a service or product, bad debt charges, taxes other than income, advertising and sales commission costs, customer billing, call center and information technology costs, professional service fees and rent for administrative space. We expect SG&A expense to increase primarily due to expected merger related expenses in 2017, including increased stock-based compensation expense described in "Proposed Merger with Consolidated Communications Holdings, Inc." herein.

The following table reflects the primary drivers of year-over-year changes in SG&A expense (dollars in millions):

	Year ended December 31, 2016 vs. December 31, 2015		Year ended December 31, 2015 vs. December 31, 2014	
	Increase (Decrease)	%	Increase (Decrease)	%
Employee expense <sup>(1)</sup>	\$ 0.1		\$ (9.1)	
Labor negotiation related expense <sup>(2)</sup>	(7.8)		(26.0)	
Operating taxes	(0.2)		(5.7)	
Bad debt expense <sup>(3)</sup>	(5.2)		(3.4)	
Severance expense <sup>(4)</sup>	(0.2)		0.3	
Merger related expense <sup>(5)</sup>	4.5		—	
Other <sup>(6)</sup>	—		(7.7)	
<b>Total change in SG&amp;A expense</b>	<b>\$ (8.8)</b>	<b>(4)%</b>	<b>\$ (51.6)</b>	<b>(20)%</b>

- (1) For the years ended December 31, 2016, 2015 and 2014, we recognized \$101.9 million, \$101.8 million and \$110.9 million, respectively, of employee expense in SG&A expense. The increase in 2016 compared to 2015 is primarily due to the work stoppage described in "Labor Matters" herein partially offset by a reduction in headcount. The decrease in 2015 compared to 2014 is primarily attributable to the work stoppage described in "Labor Matters" herein and reduction in headcount.
- (2) Labor negotiation related expense is primarily related to contingent workforce expenses as well as communications and public relations, legal and training expenses during the years ended December 31, 2015 and 2014.
- (3) For the years ended December 31, 2016, 2015 and 2014, we recognized \$0.6 million, \$5.8 million and \$9.2 million of bad debt expense, respectively.
- (4) For the years ended December 31, 2016, 2015 and 2014, we recognized \$1.1 million, \$1.3 million and \$1.0 million of severance expense, respectively.
- (5) Merger related expense is primarily related to legal and financial advisory costs during the year ended December 31, 2016 in connection with the Merger described in "Proposed Merger with Consolidated Communications Holdings, Inc." herein.
- (6) The change in other expenses is primarily due to the timing of spending for contracted services and advertising costs.

### ***Depreciation and Amortization***

Depreciation and amortization includes depreciation of our communications network and equipment and amortization of intangible assets. We require significant capital expenditures to maintain, upgrade and enhance our network facilities and operations. We expect our capital expenditures and depreciation expense to remain consistent in the coming years. We expect amortization expense to remain consistent throughout the remainder of our intangible assets' useful lives.

For the years ended December 31, 2016, 2015 and 2014, we recognized \$211.3 million, \$212.8 million and \$209.7 million of depreciation expense, respectively. The decrease in depreciation expense for the year ended December 31, 2016 compared to December 31, 2015 was primarily due to higher retirements than additions. The increase in depreciation expense for the year ended December 31, 2015 compared to December 31, 2014 was primarily due to higher additions than retirements. We recognized \$11.0 million, \$11.0 million and \$11.0 million of amortization expense in the years ended December 31, 2016, 2015 and 2014, respectively.

### Interest Expense

The following table reflects a summary of interest expense recorded during the years ended December 31, 2016, 2015 and 2014, respectively (in millions):

	Years Ended December 31,		
	2016	2015	2014
Credit Agreement Loans (as defined hereinafter)	\$ 48.7	\$ 49.0	\$ 49.5
Notes (as defined hereinafter)	26.3	26.3	26.3
Amortization of debt issue costs	1.2	1.2	1.1
Amortization of debt discount	3.3	3.1	2.9
Interest rate swap agreements	2.4	0.6	—
Other interest expense	0.8	0.5	0.6
<b>Total interest expense</b>	<b>\$ 82.7</b>	<b>\$ 80.7</b>	<b>\$ 80.4</b>

Interest expense increased \$2.0 million (2.5%) in the year ended December 31, 2016 compared to the year ended December 31, 2015 primarily due to interest rate swap agreements, with an effective date of September 30, 2015. Interest expense increased \$0.3 million (0.4%) in the year ended December 31, 2015 compared to the year ended December 31, 2014.

For further information regarding the Credit Agreement Loans and the Notes, see "Liquidity and Capital Resources—Debt" herein and note (8) "Long-term Debt" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report.

### Other Income, Net

Other income generally includes non-operating gains and losses. During the years ended December 31, 2016, 2015 and 2014, net other income was \$0.3 million, \$0.5 million and \$7.5 million, respectively.

As required by the Plan, the FairPoint Litigation Trust (the "Trust") was created and the Company transferred to the Trust the "Litigation Trust Claims", as defined in the FairPoint Litigation Trust Agreement among the Company, its subsidiaries and the trustee. The Trust thereafter settled the "Litigation Trust Claims" against Verizon Communications Inc. During 2014, we received payment from the settlement proceeds and recorded one-time, non-operating income of \$6.7 million.

### Income Taxes

The Company recorded tax expense on the pre-tax net income for the year ended December 31, 2016 of \$42.8 million and a tax benefit on the pre-tax net income/(loss) for the years ended December 31, 2015 and 2014 of \$1.1 million and \$29.8 million, respectively, which equates to an effective tax rate of 29.2%, (1.2)% and 17.9%, respectively. For 2016, the effective tax rate differs from the 35% federal statutory rate primarily due to a tax benefit associated with a decrease in the valuation allowance offset by tax expense related to state taxes. For 2015, the effective tax rate differs from the statutory rate primarily due to a decrease in the valuation allowance as well as a tax benefit related to state taxes. A tax benefit recorded on pre-tax income for the year ended December 31, 2015 resulted in a negative effective tax rate. For 2014, the effective tax rate differs from the statutory rate primarily due an increase to the valuation allowance offset by a tax benefit related to state taxes.

For further information, see note (12) "Income Taxes" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report.

## Non-GAAP Financial Measures

We report our financial results in accordance with accounting principles generally accepted in the United States of America ("GAAP"). The table below includes certain non-GAAP financial measures and the adjustments to the most directly comparable GAAP measure used to determine the non-GAAP measures. Management believes that the non-GAAP measures may be useful to investors in understanding period-to-period operating performance and in identifying historical and prospective trends that may not otherwise be apparent when relying solely on GAAP financial measures. In addition, management believes the non-GAAP measures are useful for investors because they enable them to view performance in a manner similar to the method used by the Company's management. Management believes earnings before interest, taxes, depreciation and amortization ("EBITDA"), as adjusted to exclude the effect of items that are further described below ("Adjusted EBITDA"), provides a useful measure of covenant compliance and Unlevered Free Cash Flow (as defined below) may be useful to investors in assessing the Company's ability to generate cash and meet its debt service requirements. The maintenance covenants contained in the Company's credit facility are based on Consolidated EBITDA, which is consistent with the calculation of Adjusted EBITDA below.

For purposes of calculating Adjusted EBITDA (in accordance with the definition of Consolidated EBITDA in our Credit Agreement), costs, expenses and charges related to the renegotiation of labor contracts including, but not limited to, expenses for third-party vendors and losses related to disruption of operations (including any associated penalties under service level agreements and regulatory performance plans) are permitted to be excluded from the calculation. We believe this includes, among others, the costs paid to third-parties for the contingent workforce and service quality penalties due to the disruption of operations. On October 17, 2014, two of our labor unions in northern New England initiated a work stoppage and returned to work on February 25, 2015. As a result, significant union employee and vehicle and other related expenses related to northern New England were not incurred between October 17, 2014 and February 24, 2015 (the "work stoppage period"). Therefore, to assist in the evaluation of the Company's operating performance without the impact of the work stoppage, we estimated the union employee and vehicle and other related expenses using historical data for the work stoppage period that we believe would have been incurred absent the work stoppage ("Estimated Avoided Costs"). Estimated Avoided Costs is a pro forma estimate only. Actual costs absent the strike may have been different. In 2014 and 2015, had our incumbent workforce been in place, actual labor costs during the work stoppage period may have been higher than the \$33 million and \$27 million, respectively, recorded as Estimated Avoided Costs due to significant winter storm activity that increased our service demands; however, those incremental storm-related costs would have been an allowed add back to Adjusted EBITDA under the Credit Agreement. Estimated employee expenses avoided during the work stoppage period include salaries and wages, bonus, overtime, capitalized labor, benefits, payroll taxes, travel expenses and other employee related costs based on a trailing 12-month average calculated per striking employee per day during the work stoppage period less any actual expense incurred. Estimated vehicle fuel and maintenance expense savings, which resulted from the contingent workforce utilizing their own vehicles, for the work stoppage period were estimated based on a trailing 12-month average of historical costs less actual expense incurred. Management believes "Adjusted EBITDA minus Estimated Avoided Costs" and "Unlevered Free Cash Flow minus Estimated Avoided Costs" may be useful to investors in understanding our operating performance without the impact of the two unions' work stoppage in northern New England as described elsewhere in this Annual Report.

The non-GAAP financial measures, as used herein, are not necessarily comparable to similarly titled measures of other companies. Furthermore, these non-GAAP measures have limitations as analytical tools and should not be considered in isolation from, or as an alternative to, net income or loss, operating income, cash flow or other combined income or cash flow data prepared in accordance with GAAP. Because of these limitations, Adjusted EBITDA, Adjusted EBITDA minus Estimated Avoided Costs, Unlevered Free Cash Flow and Unlevered Free Cash Flow minus Estimated Avoided Costs should not be considered as measures of discretionary cash available to invest in business growth or reduce indebtedness. The Company compensates for these limitations by relying primarily on its GAAP results and using the non-GAAP measures only supplementally.

A reconciliation of Adjusted EBITDA, Adjusted EBITDA minus Estimated Avoided Costs, Unlevered Free Cash Flow and Unlevered Free Cash Flow minus Estimated Avoided Costs to net income/(loss) is provided in the table below (in thousands):

	Years Ended December 31,		
	2016	2015	2014
Net income/(loss)	\$ 104,095	\$ 90,416	\$ (136,319)
Income tax expense/(benefit)	42,849	(1,057)	(29,778)
Interest expense	82,697	80,718	80,371
Depreciation and amortization	222,303	223,819	220,678
Pension expense (1a)	8,967	8,635	18,144
Other post-employment benefits expense/(benefit) (1a)	(222,727)	(178,973)	57,138
Compensated absences (1b)	(350)	(1,645)	2,848
Severance	4,863	4,014	2,005
Reorganization costs (1c)	—	38	104
Storm expenses (1d)	—	—	145
Other non-cash items, net (1e)	6,830	8,197	2,537
Labor negotiation related expense (1f)	—	48,933	73,590
All other allowed adjustments, net (1f)	4,312	(170)	(889)
Adjusted EBITDA (1) (4)	253,839	282,925	290,574
Estimated Avoided Costs (3)	—	(27,000)	(33,000)
<b>Adjusted EBITDA minus Estimated Avoided Costs</b>	<b>\$ 253,839</b>	<b>\$ 255,925</b>	<b>\$ 257,574</b>
Adjusted EBITDA (1) (4)	\$ 253,839	\$ 282,925	\$ 290,574
Pension contributions	(15,475)	(14,168)	(28,266)
Other post-employment benefits payments	(5,715)	(5,597)	(5,808)
Capital expenditures	(117,050)	(116,159)	(119,489)
Unlevered Free Cash Flow (2)	115,599	147,001	137,011
Estimated Avoided Costs (3)	—	(27,000)	(33,000)
<b>Unlevered Free Cash Flow minus Estimated Avoided Costs</b>	<b>\$ 115,599</b>	<b>\$ 120,001</b>	<b>\$ 104,011</b>

(1) For purposes of calculating Adjusted EBITDA (in accordance with the definition of Consolidated EBITDA in the Credit Agreement), the Company adjusts net income/(loss) for interest, income taxes, depreciation and amortization, in addition to:

- (a) the add-back of aggregate pension and other post-employment benefits expense,
- (b) the add-back (or subtraction) of the adjustment to the compensated absences accrual to eliminate the impact of changes in the accrual,
- (c) the add-back of costs related to the reorganization, including professional fees for advisors and consultants,
- (d) the add-back of costs and expenses, including those imposed by regulatory authorities, with respect to casualty events, acts of God or force majeure to the extent they are not reimbursed from proceeds of insurance,
- (e) the add-back of other non-cash items, including stock compensation expense, except to the extent they will require a cash payment in a future period, and
- (f) the add-back (or subtraction) of other items, including facility and office closures, expenses related to permitted transactions, labor negotiation related expenses (including losses related to disruption of operations), non-cash gains/losses and non-operating dividend and interest income and other extraordinary gains/losses.

(2) Unlevered Free Cash Flow refers to Adjusted EBITDA (calculated in accordance with the definition of Consolidated EBITDA in the Credit Agreement) minus capital expenditures, cash pension contributions and other post-employment benefits cash payments.

(3) See paragraphs preceding the table above for information regarding the calculation of this non-GAAP measure.

(4) On October 16, 2014, we received payment from the Trust settlement proceeds and recorded one-time, non-operating income of \$6.7 million, which is included in the calculation of Adjusted EBITDA. For further information regarding this payment, see "Results of Operations—Other Income" included herein.

## Liquidity and Capital Resources

### Overview

Our current and future liquidity is dependent upon our operating results. We expect that our primary sources of liquidity will be net cash provided by operating activities, cash on hand and funds available under the Revolving Facility. Our short-term and long-term liquidity needs arise primarily from:

- (i) interest and principal payments on our indebtedness;
- (ii) capital expenditures;
- (iii) working capital requirements as may be needed to support and grow our business; and
- (iv) contributions to our qualified pension plans and payments under our other post-employment benefit plans.

Based on our current and anticipated levels of operations and conditions in our markets, we believe that cash on hand, the Revolving Facility and net cash provided by operating activities will enable us to meet our working capital, capital expenditure, debt service and other funding requirements for at least the next 12 months. We were in compliance with the maintenance covenants contained in the Credit Agreement (as defined hereinafter in "Debt—February 2013 Refinancing") through the end of 2016 and expect to remain in compliance for 2017.

### Cash Flows

Cash at December 31, 2016 totaled \$34.9 million compared to \$26.6 million at December 31, 2015, excluding restricted cash of \$0.7 million and \$0.7 million, respectively. During 2016, cash flows from operations of \$134.3 million, which included outflows due to the scheduled semi-annual interest payments on the Notes and the payment of 2015 annual performance bonuses, were partially offset by cash outflows largely associated with \$117.1 million of capital expenditures. During 2015, cash flows from operations of \$112.0 million, which included outflows due to the scheduled semi-annual interest payments on the Notes and the payment of 2014 annual performance bonuses, were partially offset by cash outflows largely associated with \$116.2 million of capital expenditures.

The following table sets forth our consolidated cash flow results reflected in our consolidated statements of cash flows (in millions):

Net cash flows provided by (used in):	Years Ended December 31,		
	2016	2015	2014
Operating activities	\$ 134.3	\$ 112.0	\$ 121.1
Investing activities	(118.5)	(115.9)	(118.4)
Financing activities	(7.4)	(7.1)	(7.8)
<b>Net increase/(decrease) in cash</b>	<b>\$ 8.4</b>	<b>\$ (11.0)</b>	<b>\$ (5.1)</b>

**Operating activities.** Net cash provided by operating activities is our primary source of funds. Net cash provided by operating activities for 2016 increased \$22.3 million compared to 2015, primarily due to lower labor negotiation related expenses, lower operating expenses, partially offset by a reduction in revenues.

Net cash provided by operating activities for 2015 decreased \$9.1 million compared to 2014, primarily due to increased labor negotiation related expenses and a reduction in revenues partially offset by lower operating expenses as well as lower cash pension contributions.

**Investing activities.** Net cash used in investing activities for 2016 increased \$2.6 million compared to 2015. Capital expenditures were \$117.1 million, \$116.2 million and \$119.5 million for the years ended December 31, 2016, 2015 and 2014, respectively. In addition, we completed an immaterial business acquisition during 2016. Net cash used in investing activities for 2015 decreased \$2.5 million compared to 2014.

**Financing activities.** Net cash used in financing activities for 2016 increased \$0.3 million compared to 2015, primarily due to increased repayments of capital lease obligations. Net cash used in financing activities for 2015 decreased \$0.7 million compared to 2014, primarily due to a reduction in repayments of capital lease obligations.

### Pension Contributions and Post-Employment Benefit Plan Expenditures

During the year ended December 31, 2016, we contributed \$16.5 million to our Company sponsored qualified defined benefit pension plans and funded benefit payments of \$5.7 million under our post-employment benefit plans.

On August 8, 2014, the Highway and Transportation Funding Act (the "Act") was signed into law. This Act contained a pension funding stabilization provision which allows pension plan sponsors to use higher discount rate assumptions when determining the funded status and, accordingly, the funding obligations for its pension plans.

The provisions of the Act resulted in our 2016 minimum required pension plan contribution being lower than it would have been in the absence of this stabilization provision. We believe that the intent of the stabilization provision is to alter the timing of pension plan contributions, not to reduce the long-term funding of pension plans. Accordingly, the relief we will receive as a result of the stabilization provision may be temporary in nature in that our near-term minimum required contributions will be less than they otherwise would have been without the passage of this Act and will increase in the medium to long-term.

In 2017, we expect our aggregate cash pension contributions and cash post-employment benefit payments to be approximately \$24 million. See "Item 1A. Risk Factors—The amount we are required to contribute to our qualified pension plans and post-employment benefit plans is impacted by several factors that are beyond our control and changes in those factors may result in a significant increase in future cash contributions."

### *Capital Expenditures*

We require significant capital expenditures to maintain, upgrade and enhance our network facilities and operations. In 2016, our net capital expenditures totaled \$117.1 million, compared to \$116.2 million in 2015. We anticipate that we will fund future capital expenditures through cash flows from operations and cash on hand (including amounts available under the Revolving Facility). In 2017, capital expenditures are expected to be between \$110 million to \$115 million. Our capital expenditures in the coming years will be impacted by our CAF Phase II elections as further described in "Regulatory and Legislative" herein.

### *Debt*

**February 2013 Refinancing.** On February 14, 2013 (the "Refinancing Closing Date"), we completed the refinancing of our old credit agreement (the "Refinancing"). In connection with the Refinancing, we (i) issued \$300.0 million aggregate principal amount of 8.75% senior secured notes due in 2019 (the "Notes") in a private offering exempt from registration under the Securities Act pursuant to an indenture that we entered into on the Refinancing Closing Date (the "Indenture") and (ii) entered into a new credit agreement (the "Credit Agreement"), dated as of the Refinancing Closing Date. The Credit Agreement provides for a \$75.0 million revolving credit facility, including a sub-facility for the issuance of up to \$40.0 million in letters of credit (the "Revolving Facility"), and a \$640.0 million term loan facility (the "Term Loan" and, together with the Revolving Facility, the "Credit Agreement Loans"). On the Refinancing Closing Date, we used the proceeds of the Notes offering, together with \$640.0 million of borrowings under the Term Loan and cash on hand to (i) repay principal of \$946.5 million outstanding on the old term loan, plus approximately \$7.7 million of accrued interest and (ii) pay approximately \$32.6 million of fees, expenses and other costs related to the Refinancing.

**The Credit Agreement.** In connection with the Refinancing, we entered into the Credit Agreement, which provides for the \$75.0 million Revolving Facility, including a sub-facility for the issuance of up to \$40.0 million in letters of credit, and the \$640.0 million Term Loan. The principal amount of the Term Loan and commitments under the Revolving Facility may be increased by an aggregate amount up to \$200.0 million, subject to certain terms and conditions specified in the Credit Agreement. The Term Loan will mature on February 14, 2019 and the Revolving Facility will mature on February 14, 2018, subject in each case to extensions pursuant to the terms of the Credit Agreement. As of December 31, 2016, we had \$61.1 million, net of \$13.9 million of outstanding letters of credit, available for borrowing under the Revolving Facility.

**Interest Rates and Fees.** Interest on borrowings under the Credit Agreement Loans accrue at an annual rate equal to either LIBOR or the base rate, in each case plus an applicable margin. LIBOR is the per annum rate for an interest period of one, two, three or six months (at our election), with a minimum LIBOR floor of 1.25% for the Term Loan. The base rate for any date is the per annum rate equal to the greatest of (x) the federal funds effective rate plus 0.50%, (y) the rate of interest publicly quoted from time to time by The Wall Street Journal as the United States "Prime Rate" and (z) LIBOR with an interest period of one month plus 1.00%. The applicable margin for the Term Loan is (a) 6.25% per annum with respect to term loans bearing interest based on LIBOR or (b) 5.25% per annum with respect to term loans bearing interest based on the base rate. The applicable rate for the Revolving Facility is, initially, (a) 5.50% with respect to revolving loans bearing interest based on LIBOR or (b) 4.50% per annum with respect to revolving loans bearing interest based on the base rate, in each case subject to adjustment based on our consolidated total leverage ratio, as defined in the Credit Agreement. We are required to pay a quarterly letter of credit fee on the average daily amount available to be drawn under letters of credit issued under the Revolving Facility equal to the applicable rate for revolving loans bearing interest based on LIBOR plus a fronting fee of 0.125% per annum on the average daily amount available to be drawn under such letters of credit. In addition, we are required to pay a quarterly commitment fee on the average daily unused portion of the Revolving Facility, which is 0.50% initially, subject to reduction to 0.375% based on our consolidated total leverage ratio. In the third quarter of 2013, we entered into interest rate swap agreements with a combined notional amount of \$170.0 million with three counterparties that are effective for a two year period beginning on September 30, 2015 and maturing on September

30, 2017. Each respective swap agreement requires us to pay a fixed rate of 2.665% and provides that we will receive a variable rate based on the three month LIBOR rate, subject to a minimum LIBOR floor of 1.25%. Amounts payable by or due to us will be net settled with the respective counterparties on the last business day of each fiscal quarter, commencing December 31, 2015. For further information regarding these agreements, see note (9) "Interest Rate Swap Agreements" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report.

*Security Guarantors.* All obligations under the Credit Agreement, together with certain designated hedging obligations and cash management obligations, are unconditionally guaranteed on a senior secured basis by certain subsidiaries of FairPoint Communications (the "Subsidiary Guarantors") and secured by a first-priority lien on substantially all personal property of FairPoint Communications and the Subsidiary Guarantors, subject to certain exclusions set forth in the related security documents, pari passu with the lien securing the obligations under the Notes.

*Mandatory Repayments.* We are required to make quarterly repayments of the Term Loan in a principal amount equal to \$1.6 million during the term of the Credit Agreement, with such repayments being reduced based on the application of mandatory and optional prepayments of the Term Loan made from time to time. In addition, mandatory repayments are due under the Credit Agreement with (i) a percentage, initially equal to 50% and subject to reduction to 25% in subsequent fiscal years based on our consolidated total leverage ratio, of our excess cash flow, as defined in the Credit Agreement, (ii) the net cash proceeds of certain asset dispositions, insurance proceeds and condemnation awards and (iii) issuances of debt not permitted to be incurred under the Credit Agreement. No premium is required in connection with prepayments. We did not make any optional or mandatory prepayments under the Credit Agreement, excluding mandatory quarterly repayments discussed above, during the years ended December 31, 2016 and 2015. In addition, we were not required to make an excess cash flow payment for fiscal year 2016.

*Covenants.* The Credit Agreement contains customary representations and warranties and affirmative and negative covenants for a transaction of this type, including two financial maintenance covenants: (i) a consolidated interest coverage ratio and (ii) a consolidated total leverage ratio. The Credit Agreement also contains a covenant limiting the maximum amount of capital expenditures that we and our subsidiaries may make in any fiscal year.

*Events of Default.* The Credit Agreement also contains customary events of default.

*The Notes.* On the Refinancing Closing Date, we issued \$300.0 million in aggregate principal amount of the Notes pursuant to the Indenture in a private offering exempt from registration under the Securities Act.

The terms of the Notes are governed by the Indenture. The Notes are senior secured obligations of FairPoint Communications and are guaranteed by the Subsidiary Guarantors. The Notes and the guarantees thereof are secured by a first-priority lien on substantially all personal property of FairPoint Communications and the Subsidiary Guarantors, subject to certain exclusions set forth in the related security documents, pari passu with the lien securing the obligations under the Credit Agreement. The Notes will mature on August 15, 2019 and accrue interest at a rate of 8.75% per annum, which is payable semi-annually in arrears on February 15 and August 15 of each year.

Notes redeemed after February 15, 2016 and prior to February 15, 2017 may be redeemed at 104.375% of the aggregate principal amount; Notes redeemed on or after February 15, 2017 and prior to February 15, 2018 may be redeemed at 102.188% of the aggregate principal amount; and Notes redeemed on or after February 15, 2018 may be redeemed at their par value.

The holders of the Notes have the ability to require us to repurchase all or any part of the Notes if we experience certain kinds of changes in control or engage in certain asset sales, in each case at the repurchase prices and subject to the terms and conditions set forth in the Indenture.

The Indenture contains certain covenants which are customary with respect to non-investment grade debt securities, including limitations on our ability to incur additional indebtedness, pay dividends on or make other distributions or repurchase our capital stock, make certain investments, enter into certain types of transactions with affiliates, create liens and sell certain assets or merge with or into other companies. These covenants are subject to a number of important limitations and exceptions.

The Indenture also provides for customary events of default, including cross defaults to other specified debt of FairPoint Communications and certain of its subsidiaries.

#### **Off-Balance Sheet Arrangements**

As of December 31, 2016 and December 31, 2015 we had \$13.9 million and \$14.2 million, respectively, in outstanding letters of credit under the Revolving Facility and \$4.1 million and \$4.0 million, respectively, of surety bonds. We do not have any other off-balance sheet arrangements other than our operating lease obligations, which are not reflected on our balance sheet. See "—Summary of Contractual Obligations" for further detail.

### Summary of Contractual Obligations

The following table discloses aggregate information about our contractual obligations as of December 31, 2016 and the periods in which payments are due (in thousands):

Contractual Obligations	Payments due by period				
	Total	Less than 1 year	1-3 years	3-5 years	More than 5 years
Long-term debt obligations, including current maturities <sup>(a)</sup>	\$ 916,000	\$ 6,400	\$ 909,600	\$ —	\$ —
Interest payments on long-term debt obligations <sup>(b)</sup>	170,375	75,763	94,612	—	—
Capital lease obligations, including current maturities	3,034	1,279	1,475	280	—
Operating lease obligations	17,759	6,644	7,519	2,857	739
Purchase obligations <sup>(c)</sup>	19,524	13,471	5,822	231	—
Other long-term liabilities <sup>(d)</sup>	269,070	25,569	20,833	15,715	206,953
<b>Total contractual obligations</b>	<b>\$ 1,395,762</b>	<b>\$ 129,126</b>	<b>\$ 1,039,861</b>	<b>\$ 19,083</b>	<b>\$ 207,692</b>

- (a) Long-term debt obligations exclude outstanding letters of credit totaling \$13.9 million under the Revolving Facility at December 31, 2016. For more information, *see* note (8) "Long-term Debt" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report.
- (b) Interest payments represent cash payments on the long-term debt, including payments associated with interest rate swaps, while excluding amortization of capitalized debt issuance costs.
- (c) Purchase obligations represent commitments for maintenance and support of network equipment and software, which we consider to be material.
- (d) Other long-term liabilities primarily include our qualified pension and post-employment benefit obligations, and deferred tax liabilities. For more information, *see* notes (11) "Employee Benefit Plans" and (12) "Income Taxes" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report. In addition,
- (i) The balance excludes \$3.8 million of reserves for uncertain tax positions, including interest and penalties, that were included in deferred tax liabilities at December 31, 2016 for which we are unable to make a reasonably reliable estimate as to when cash settlements with taxing authorities will occur;
  - (ii) The balance includes the current portion of our post-employment benefit obligations of \$7.1 million presented in the current portion of other accrued liabilities at December 31, 2016; and
  - (iii) Our 2017 pension contribution is expected to be approximately \$18 million and has been reflected as due in less than one year. Our actual contribution could differ from this estimation. Due to uncertainties in the pension funding calculation, the amount and timing of any other pension contributions are unknown and therefore the remaining accrued pension obligation has been reflected as due in more than 5 years.

### Critical Accounting Policies and Estimates

As disclosed in note (2) "Significant Accounting Policies" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report, the preparation of our financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions about future events that affect the amounts reported in our consolidated financial statements and accompanying notes. Actual results could differ significantly from those estimates. We believe that the following discussion addresses our most critical accounting policies, which are those that are most important to the portrayal of our financial condition and results of operations and require management's most difficult, subjective and complex judgments. Our critical accounting policies as of December 31, 2016 are as follows:

- Revenue recognition;
- Allowance for doubtful accounts;
- Accounting for qualified pension and other post-employment benefits;
- Accounting for income taxes;
- Depreciation of property, plant and equipment;
- Stock-based compensation; and

- Valuation of long-lived assets and indefinite-lived intangible assets.

**Revenue Recognition.** We recognize service revenues based upon usage of our local exchange network and facilities and contract fees. Fixed fees for voice services, Internet services and certain other services are recognized in the month the service is provided. Revenue from other services that are not fixed fee or that exceed contracted amounts is recognized when those services are provided. Non-recurring customer activation fees, along with the related costs up to, but not exceeding, the activation fees, are deferred and amortized over the customer relationship period. SQI penalties and certain PAP/WPP service credits are recorded as a reduction to revenue.

We recognize certain revenues pursuant to various cost recovery programs from state and federal USF, CAF/ICC and from revenue sharing agreements with other LECs administered by the National Exchange Carrier Association ("NECA"). Revenues are calculated based on our investment in our network and other network operations and support costs. We have historically collected revenues recognized through this program; however, adjustments to estimated revenues in future periods are possible. These adjustments could be necessitated by adverse regulatory developments with respect to these subsidies and revenue sharing arrangements, changes in the allowable rates of return, the determination of recoverable costs and/or decreases in the availability of funds in the programs due to increased participation by other carriers.

We make estimated adjustments, as necessary, to revenue and accounts receivable for billing errors, including certain disputed amounts. If circumstances related to these adjustments change or our knowledge evolves, our estimate of the recoverability of our accounts receivable could be further reduced from the levels provided in our consolidated financial statements.

**Allowance for Doubtful Accounts.** In evaluating the collectability of our accounts receivable, we assess a number of factors, including a specific customer's or carrier's ability to meet its financial obligations to us, the length of time the receivable has been past due and historical collection experience. Based on these assessments, we record both specific and general reserves for uncollectible accounts receivable to reduce the related accounts receivable to the amount we ultimately expect to collect from customers and carriers. If circumstances change or economic conditions worsen such that our past collection experience is no longer relevant, our estimate of the recoverability of our accounts receivable could be further reduced from the levels reflected in our accompanying consolidated balance sheet.

**Accounting for Qualified Pension and Other Post-employment Benefits.** Certain of our employees participate in our qualified pension plans and other post-employment benefit plans. In the aggregate, the projected benefit obligations of the qualified pension plans exceed the fair value of their respective assets and the post-employment benefit plans do not have plan assets, resulting in expense. Significant qualified pension and other post-employment benefit plan assumptions, including the discount rate used, the long-term rate-of-return on plan assets, and medical cost trend rates are periodically updated and impact the amount of benefit plan income, expense, assets and obligations reflected in our consolidated financial statements. The actuarial assumptions we used in determining our qualified pension and post-employment benefit plans obligations may differ materially from actual results due to changing market and economic conditions, higher or lower withdrawal rates or longer or shorter life spans of participants. While we believe that the assumptions used are appropriate, differences in actual experience or changes in assumptions might materially affect our financial position or results of operations.

Our qualified pension and post-employment benefit liabilities are highly sensitive to changes in the discount rate. We currently estimate that a movement of 1% in the discount rate would change our December 31, 2016 qualified pension plan benefit obligations by approximately 17%. We currently estimate that a 1% fluctuation in the discount rate would change our December 31, 2016 post-employment benefit obligations by approximately 12%.

The post-employment benefit obligations are also highly sensitive to the medical trend rate assumption. A 1% increase in the medical trend rate assumed for post-employment benefits at December 31, 2016 would result in an increase in the post-employment benefit obligations of approximately \$10.1 million and a 1% decrease in the medical trend rate assumed at December 31, 2016 would result in a decrease in the post-employment benefit obligations of approximately \$8.4 million.

For additional information on our qualified pension and post-employment benefit plans, see note (11) "Employee Benefit Plans" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report.

**Accounting for Income Taxes.** Income taxes are accounted for under the asset and liability method. Deferred tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases and operating loss and tax credit carryforwards. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. The effect on deferred tax assets and liabilities of a change in tax rates is recognized in income in the period that includes the enactment date.

In assessing the realizability of deferred tax assets, management considers whether it is more likely than not that some portion or all of the deferred tax assets will not be realized. The ultimate realization of deferred tax assets is dependent upon the generation of future taxable income during the periods in which those temporary differences become deductible. Management

determines its estimates of future taxable income based upon the scheduled reversal of deferred tax liabilities and tax planning strategies. The Company establishes valuation allowances for deferred tax assets when it is estimated to be more likely than not that the tax assets will not be realized.

FairPoint Communications files a consolidated income tax return with its subsidiaries. All intercompany transactions and accounts have been eliminated in consolidation.

**Depreciation of Property, Plant and Equipment.** We recognize depreciation on property, plant and equipment principally on the composite group remaining life method and straight-line composite rates. This method provides for the recognition of the cost of the remaining net investment in telephone plant, less anticipated net salvage value (if any), over the remaining asset lives. When an asset is retired, the original cost, net of salvage value, is charged against accumulated depreciation and no immediate gain or loss is recognized on the disposition of the asset. Under this method, we review depreciable lives periodically and may revise depreciation rates when appropriate. The Company utilizes straight-line depreciation for its non-telephone property, plant and equipment.

Periodically, the Company reviews the estimated remaining useful lives of its group asset categories to address continuing changes in technology, competition and the Company's overall reduction in capital spending and increased focus on more efficient utilization of its existing assets.

**Stock-based Compensation.** Compensation expense for share-based awards made to employees and directors are recognized based on the estimated fair value of each award over the award's vesting period. We estimate the fair value of share-based payment awards on the date of grant using one of the following: an option-pricing model for stock options; the closing market value of our stock for restricted stock and non-market performance share awards; and the Monte Carlo valuation model for market performance share awards. We expense the value of the portion of the award that is ultimately expected to vest over the requisite service period in the statement of operations. We assess the probability of achievement of the performance conditions for the non-market performance share awards at each period-end.

We utilize the Black-Scholes option pricing model to calculate the fair value of our stock option grants and the Monte Carlo valuation method to estimate the fair value of the market portion of the performance share awards. The key assumptions used include the expected life of the stock option, the expected dividend rate, the risk-free interest rate, expected volatility and potential total shareholder return outcomes. The expected life of the stock options granted represents the period of time that the options are expected to be outstanding. The risk-free interest rates are based on United States Treasury yields in effect at the date of grant consistent with the expected life. The expected volatility used in the Black-Scholes option pricing model reflects our historical volatility. Our assumptions of these key inputs, in addition to our assumption made about the portion of the awards that will ultimately vest, requires subjective judgment.

For additional information on share-based awards, including key assumptions used in calculating the grant date fair values, see note (16) "Stock-Based Compensation" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report.

**Valuation of Long-lived Assets and Indefinite-lived Intangible Assets.** We review our long-lived assets, which include our amortizable intangible assets, for impairment whenever events or changes in circumstances indicate that the carrying value may not be recoverable. In addition, we review non-amortizable intangible assets for impairment on at least an annual basis as of the first day of the fourth quarter of each year, or more frequently whenever indicators of impairment exist. Indicators of impairment could include, but are not limited to:

- an inability to perform at levels that were forecasted;
- a decline in planned revenues;
- a permanent decline in market capitalization;
- implementation of restructuring plans;
- changes in industry trends; and/or
- unfavorable changes in our capital structure, cost of debt, interest rates or capital expenditures levels.

Our only material non-amortizable intangible asset is the FairPoint trade name. An annual quantitative impairment analysis was performed on October 1, 2016. We assess the fair value of our trade name utilizing the relief from royalty method. If the carrying amount of our trade name exceeds its estimated fair value, the asset is considered impaired. For this annual impairment review, we made certain assumptions including an estimated royalty rate, long-term growth rate, effective tax rate and discount rate and applied these assumptions to projected future cash flows, exclusive of cash flows associated with wholesale and other revenues not generated through brand recognition. As of October 1, 2016, the estimated fair value exceeded the carrying value;

therefore, an impairment was not necessary. However, future changes in one or more of our assumptions discussed above may result in the recognition of an impairment loss.

For additional information on our FairPoint trade name, see note (6) "Other Intangible Assets" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report.

#### **New Accounting Standards**

For details of recent Accounting Standards Updates and our evaluation of their adoption on our consolidated financial statements, see note (4) "Recent Accounting Pronouncements" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report.

#### **Inflation**

There are cost of living adjustment clauses in certain of the collective bargaining agreements covering our labor union employees. Considerable fluctuations in cost of living due to inflation could result in an adverse effect on our operations.

### **ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK**

We are exposed to market risk in the normal course of our business operations due to ongoing investing and funding activities, including those associated with the variable interest rate in our Credit Agreement and our qualified pension plan assets. Market risk refers to the potential change in fair value of a financial instrument as a result of fluctuations in interest rates, fixed income securities and equity prices. We do not hold or issue derivative instruments, derivative commodity instruments or other financial instruments for trading or speculative purposes. Our primary market risk exposures are interest rate risk and investment risk as follows:

**Interest Rate Risk - Long-Term Debt.** We are exposed to interest rate risk, primarily as it relates to the variable interest rates we are charged under credit agreements to which we are a party. As of December 31, 2016, our interest rate risk exposure was attributable to the Credit Agreement, which includes the Term Loan and the Revolving Facility, each of which is subject to variable interest rates. We use our variable rate debt, in addition to fixed rate debt, to finance our operations and capital expenditures and believe it is prudent to limit the variability of our interest payments on our variable rate debt. To meet this objective, from time to time, we may enter into interest rate derivative agreements to manage fluctuations in cash flows resulting from interest rate risk.

As of December 31, 2016, we were party to interest rate swap agreements in connection with borrowings under the Credit Agreement covering a combined notional amount of \$170.0 million. These agreements were effective on September 30, 2015. Accordingly, on December 31, 2016, only \$446.0 million principal balance of the Term Loan was subject to interest rate risk. Interest payments on the Term Loan are subject to a LIBOR floor of 1.25%. As a result, while LIBOR remains below 1.25%, we incur interest at above market rates. To the extent that LIBOR remains below 1.25%, we are buffered from the full financial impact of interest rate risk; however, as LIBOR rises, a change in interest rates could materially affect our consolidated financial statements. For example, with the principal balance of the Term Loan as of December 31, 2016, a 1% increase in the interest rate above the LIBOR floor of 1.25% would unfavorably impact interest expense and pre-tax earnings by approximately \$4.5 million on an annual basis.

For further information regarding the Credit Agreement, see "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations—Liquidity and Capital Resources," and note (8) "Long-Term Debt" and note (9) "Interest Rate Swap Agreements" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report.

**Interest Rate and Investment Risk - Pension Plans.** We are exposed to risks related to the fair value of our pension plan assets and the discount rate used to value our pension plan liabilities and the amount of lump-sum payments made to certain participants. Our pension plan assets consist of a portfolio of fixed income securities, equity securities and cash. Changes in the fair value of this portfolio can occur due to changes in interest rates and the general economy. In addition, interest rates are a primary factor in the determination of our actuarially determined liabilities and, if applicable, the amount of the accrued benefit paid in the form of a lump-sum to a pension plan retiree when requested. Our qualified pension plan assets have historically funded a large portion of the benefits paid under our qualified pension plans. Lower returns on plan assets, decreases in the fair value of plan assets and lower discount rates could negatively impact the funded status of our pension plans and we may be required to make larger contributions to our pension plans than currently anticipated. Due to uncertainties in the pension funding calculation, the amount and timing of pension contributions are unknown other than as disclosed in this Annual Report. For activity in our qualified pension plan assets, see note (11) "Employee Benefit Plans" to our consolidated financial statements in "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report.

Notes to Consolidated Financial Statements	67

### Report of Management on Internal Control Over Financial Reporting

We, the management of FairPoint Communications, Inc., are responsible for establishing and maintaining adequate internal control over financial reporting of the Company. Management has evaluated internal control over financial reporting of the Company as of December 31, 2016 using the criteria for effective internal control established in *Internal Control-Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

Based on such evaluation, management determined that the Company's internal control over financial reporting was effective as of December 31, 2016.

BDO USA, LLP, our independent registered public accounting firm who audited the financial statements included in this Annual Report, has issued an attestation report on the Company's internal control over financial reporting. This report appears on the following page.

The Board of Directors and Stockholders  
FairPoint Communications, Inc.  
Charlotte, North Carolina

We have audited FairPoint Communications, Inc. and subsidiaries' internal control over financial reporting as of December 31, 2016, based on criteria established in Internal Control - Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (the COSO criteria). FairPoint Communications, Inc. and subsidiaries' management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Report of Management on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, FairPoint Communications, Inc. and subsidiaries maintained, in all material respects, effective internal control over financial reporting as of December 31, 2016, based on the COSO criteria.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheet of FairPoint Communications, Inc. and subsidiaries as of December 31, 2016, and the related consolidated statements of operations, comprehensive income (loss), stockholders' deficit, and cash flows for the year then ended and our report dated March 6, 2017 expressed an unqualified opinion thereon.

**Report of Independent Registered Public Accounting Firm**

The Board of Directors and Stockholders  
FairPoint Communications, Inc.  
Charlotte, North Carolina

We have audited the accompanying consolidated balance sheet of FairPoint Communications, Inc. and subsidiaries as of December 31, 2016 and the related consolidated statements of operations, comprehensive income (loss), stockholders' deficit, and cash flows for the year then ended. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audit.

We conducted our audit in accordance with the auditing standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of FairPoint Communications, Inc. and subsidiaries at December 31, 2016, and the consolidated results of their operations and their cash flows for the year then ended, in conformity with accounting principles generally accepted in the United States of America.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), FairPoint Communications, Inc. and subsidiaries' internal control over financial reporting as of December 31, 2016, based on criteria established in Internal Control - Integrated Framework (2013) issued by Committee of Sponsoring Organizations of the Treadway Commission (the COSO criteria) and our report dated March 6, 2017 expressed an unqualified opinion thereon.

**Report of Independent Registered Public Accounting Firm**

The Board of Directors and Stockholders of FairPoint Communications, Inc. and subsidiaries

We have audited the accompanying consolidated balance sheet of FairPoint Communications, Inc. and subsidiaries as of December 31, 2015, and the related consolidated statements of operations, comprehensive income (loss), stockholders' deficit and cash flows for each of the two years in the period ended December 31, 2015. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the consolidated financial position of FairPoint Communications, Inc. and subsidiaries at December 31, 2015, and the consolidated results of their operations and their cash flows for each of the two years in the period ended December 31, 2015, in conformity with U.S. generally accepted accounting principles.

**FAIRPOINT COMMUNICATIONS, INC. AND SUBSIDIARIES**  
**Notes to Consolidated Financial Statements**

*Except as otherwise required by the context, references in notes to the consolidated financial statements to:*

- *"FairPoint Communications" refers to FairPoint Communications, Inc., excluding its subsidiaries.*
- *"FairPoint" or the "Company" refer to the combined business of FairPoint Communications, Inc. and all of its subsidiaries after giving effect to the merger on March 31, 2008 with Northern New England Spinco Inc., a subsidiary of Verizon Communications Inc. ("Verizon"), which transaction is referred to herein as the "Spinco Merger".*
- *"Northern New England operations" refers to the local exchange business acquired from Verizon and certain of its subsidiaries after giving effect to the Spinco Merger.*
- *"Telecom Group" refers to FairPoint, exclusive of the acquired Northern New England operations.*

## **(1) Organization and Principles of Consolidation**

### *Organization*

FairPoint is a leading provider of advanced communications services to business, wholesale and residential customers within its service territories. FairPoint offers its customers a suite of advanced data services such as Ethernet, high capacity data transport and other IP-based services over an extensive fiber network with more than 22,000 miles of fiber optic cable, including approximately 18,000 miles of fiber optic cable in Maine, New Hampshire and Vermont, in addition to Internet access, high-speed data ("HSD") and local and long distance voice services. As of December 31, 2016, FairPoint's service territory spanned 17 states where it is the incumbent communications provider, primarily serving rural communities and small urban markets. Many of its local exchange carriers ("LECs") have served their respective communities for more than 80 years. As of December 31, 2016, the Company operated with approximately 306,600 broadband subscribers, approximately 15,700 Ethernet circuits and approximately 366,100 residential voice lines.

### *Principles of Consolidation*

The consolidated financial statements include all majority-owned subsidiaries of the Company. Partially owned equity affiliates are accounted for under the cost method or equity method when the Company demonstrates significant influence, but does not have a controlling financial interest. Intercompany accounts and transactions have been eliminated upon consolidation.

## **(2) Significant Accounting Policies**

### *(a) Presentation and Use of Estimates*

The accompanying consolidated financial statements have been prepared in accordance with generally accepted accounting principles in the United States of America ("U.S. GAAP"), which require management to make estimates and assumptions that affect reported amounts and disclosures. Actual results could differ from those estimates. The consolidated financial statements reflect all adjustments that, in the opinion of management, are necessary for a fair presentation of results of operations and financial condition for the interim periods shown, including normal recurring accruals and other items.

The Company reclassified "Claims payable and estimated claims accrual" to "Other accrued liabilities" in the December 31, 2015 consolidated balance sheet to be consistent with current period presentation.

Examples of significant estimates include the allowance for doubtful accounts, revenue reserves, the depreciation of property, plant and equipment, valuation of intangible assets, qualified pension and other post-employment benefit plan assumptions, stock-based compensation and income taxes.

### *(b) Revenue Recognition*

Revenues are recognized as services are rendered and are primarily derived from the usage of the Company's networks and facilities or under revenue-sharing arrangements with other communications carriers. Revenues are primarily derived from: voice services, access (including pooling), certain Connect America Fund ("CAF") receipts, Internet and broadband services and other miscellaneous services. Local access charges are billed to local end users under tariffs approved by each state's Public Utilities Commission ("PUC") or by rates, terms and conditions determined by the Company. Access revenues are derived for the intrastate jurisdiction by billing access charges to interexchange carriers and to other LECs. These charges are billed based on toll or access tariffs approved by the local state's PUC. Access charges for the interstate jurisdiction are billed in accordance with tariffs filed

by the National Exchange Carrier Association ("NECA") or by the individual company and approved by the Federal Communications Commission (the "FCC"). On July 14, 2016, the FCC adopted a Declaratory Order that classifies switched access services provided by Incumbent LECs as non-dominant services. This change in classification will not impact rates or revenues as the rates continue to be subject to rules established for all access providers pursuant to the Intercarrier Compensation transition rules adopted in 2011.

Revenues are determined on a bill-and-keep basis or a pooling basis. If on a bill-and-keep basis, the Company bills the charges to the customer and keeps the revenue. If the Company participates in a pooling environment (interstate or intrastate), the revenue from the covered services is contributed to a revenue pool. The revenue is then distributed to individual companies based on their company-specific revenue requirement or similar distribution methods. This distribution is based on individual state PUCs' (intrastate) or the FCC's (interstate) approved settlement mechanisms, separation rules and rates of return. Distribution from these pools can change relative to changes made to expenses, plant investment or rate-of-return. Some companies participate in federal and certain state universal service programs that are pooling in nature but are regulated by rules separate from those described above. These rules vary by state. Revenues earned through the various pooling arrangements are initially recorded based on the Company's estimates.

On November 18, 2011, the FCC released its comprehensive landmark order to modify the nationwide system of universal support and the CAF/intercarrier compensation ("ICC") system (the "CAF/ICC Order"). Rule changes associated with the FCC's CAF/ICC Order impact the NECA interstate pooling, in that a portion of the Company's interstate Universal Service Fund ("USF") revenues, which are administered through the NECA pools and which prior to January 1, 2012 were based on costs, are now based on rules from the FCC's CAF/ICC Order, including CAF Phase II support where FairPoint accepted CAF Phase II support, continued CAF Phase I frozen support where FairPoint did not accept CAF Phase II support and CAF/ICC rules in states where FairPoint is eligible for such support under the ICC Transition Rules for price cap and rate-of-return carriers. FairPoint accepted CAF Phase II support in all states except Kansas and Colorado. The CAF Phase II revenue is being recognized on a straight-line basis, ratably over the six-year period in which the funding will be received. The accepted transition funding is being recognized monthly as received over the three-year transition period ending in July 2018. The Company is required to meet certain interim milestones over the six-year period of CAF Phase II and the Company performs a quarterly assessment of its progress.

Revenue from long distance switched retail and wholesale services can be recurring due to coverage under an unlimited calling plan or can be usage sensitive. In either case, they are billed in arrears and recognized when earned. Internet and data services revenues are substantially all recurring revenues and are billed one month in advance and deferred until earned.

As of December 31, 2016 and 2015, unearned revenue of \$18.2 million and \$19.9 million, respectively, was included in other accrued liabilities and unearned revenue of \$4.8 million and \$7.6 million, respectively, was included in other long-term liabilities on the consolidated balance sheets.

The majority of the Company's other miscellaneous services revenue is generated from ancillary special projects at the request of third parties, video services, directory services and late payment charges to end users and wholesale carriers. The Company generally requires customers to pay for ancillary special projects in advance. As of December 31, 2016 and 2015, customer deposits of \$3.3 million and \$2.1 million, respectively, were included in other accrued liabilities on the consolidated balance sheets. Once the ancillary special project is completed or substantially complete and all project costs have been accumulated for proper accounting recognition, the advance payment is recognized as revenue with any overpayments refunded to the customer, as appropriate. The Company recognizes revenue upon the provision of video services in certain markets by reselling DirecTV and providing cable and IP television video-over-digital subscriber line services. The Company also publishes telephone directories in some of its Telecom Group markets and recognizes revenues associated with these publications evenly over the time period covered by the directory, which is typically twelve months. The Company bills late payment fees to customers who have not paid their bills in a timely manner. In general, late payment fee revenue is recognized based on collection of these charges.

Non-recurring customer activation fees, along with the related costs up to, but not exceeding, the activation fees, are deferred and amortized over the customer relationship period.

Under the Maine Public Utilities Commission ("MPUC") rules (Chapter 201), which went into effect August 1, 2014, the MPUC may open an investigation regarding the failure to meet any of the established SQI benchmarks and has the authority to impose penalties. The MPUC opened an investigation into the Company's failure to meet some third quarter 2014 SQI benchmarks and subsequently opened an investigation into the fourth quarter of 2014 and then with respect to each of the quarterly periods in 2015. On March 29, 2016, the MPUC consolidated the investigations of the six quarters into one investigation. On September 14, 2016, a hearing examiner for the MPUC issued a report recommending that the MPUC find that FairPoint had failed to meet SQI benchmarks for the period under review and impose a \$500,000 penalty as allowed by statute, and provided until October 7, 2016 for comments or exceptions to be filed by interested parties. This recommendation did not constitute MPUC action. The Company promptly filed a motion to implement adjudicatory procedures prior to entry of any final order. After the Company's motion to implement adjudicatory procedures was briefed by the parties, the Hearing Examiner issued an order on November 30, 2016 granting the Company's motion in part and permanently withdrawing the Examiner's September 14, 2016 report. A case schedule

was established by the Hearing Examiner, and a hearing is currently scheduled to begin May 11, 2017. Subsequent legislation in Maine has superseded the SQI benchmarks applied in the examiner's report. Effective with the new legislation, the reporting of service quality will be required only in the areas of the state where Provider of Last Resort ("POLR") is still required and will be filed and treated as confidential. The number of SQI reporting metrics has been reduced and the benchmarks are less stringent than under previous Commission rules.

The Company also adopted a separate performance assurance plan ("PAP") for certain services provided on a wholesale basis to competitive local exchange carriers ("CLECs") in each of the states of Maine, New Hampshire and Vermont. Pursuant to the PAPs, FairPoint was required to provide service credits in the event the Company was unable to meet the provisions of the respective PAP. Effective June 1, 2015, the PAP was retired and the Company began measuring and reporting certain wholesale local service performance results pursuant to the terms of a simplified measurement plan. The new plan, called the Wholesale Performance Plan ("WPP"), was developed collaboratively with CLECs over several years and was approved by the Maine, New Hampshire and Vermont regulatory commissions. Under the WPP, the Company is subject to significantly fewer performance criteria and its annual service credit exposure was reduced.

In evaluating the presentation of taxes and surcharges, such as USF charges, sales, use, value added and some excise taxes, the Company determines whether it is the primary obligor or principal taxpayer. In jurisdictions where the Company deems that it is the principal taxpayer, the Company records these taxes and surcharges on a gross basis and include them in its revenues and costs of services and sales. In jurisdictions where the Company determines that it is a pass through agent for the government authority, it records the taxes on a net basis through the consolidated balance sheets.

Customer arrangements that include both equipment and services are evaluated to determine whether the elements are separable. If the elements are deemed separable and separate earnings processes exist, the revenue associated with each element is allocated to each element based on the relative estimated selling price of the separate elements. The Company has estimated the selling prices of each element by reference to vendor-specific objective evidence of selling prices when the elements are sold separately. The revenue associated with each element is then recognized as earned.

Management makes estimated adjustments, as necessary, to revenue and accounts receivable for billing errors, including certain disputed amounts.

#### *(c) Cash and Cash Equivalents*

The Company considers all highly liquid investments purchased with an original maturity of three months or less to be cash equivalents.

#### *(d) Accounts Receivable*

Accounts receivable are recorded at the invoiced amount and do not bear interest. The allowance for doubtful accounts is recorded as a contra-asset of accounts receivable and represents the Company's best estimate of probable credit losses in the Company's existing accounts receivable. The Company establishes an allowance for doubtful accounts based upon factors surrounding the credit risk of specific customers, historical trends, and other information. Accounts receivable balances are reviewed on an aged basis and account balances are written off against the allowance after all means of collection have been exhausted and the potential for recovery is considered remote.

The following is activity in the Company's allowance for doubtful accounts receivable for the years ended December 31, 2016, 2015 and 2014 (in thousands):

	Years Ended December 31,					
	2016		2015		2014	
Balance, beginning of period	\$	8,333	\$	9,894	\$	13,142
Provision charged to expense		577		5,793		9,218
Provision charged to other accounts <sup>(a)</sup>		—		(18)		(43)
Amounts written off, net of recoveries		(5,273)		(7,336)		(12,423)
<b>Balance, end of period</b>	<b>\$</b>	<b>3,637</b>	<b>\$</b>	<b>8,333</b>	<b>\$</b>	<b>9,894</b>

(a) Provision charged to other accounts includes accruals charged to accounts payable for anticipated uncollectible charges on purchase of accounts receivable from others which were billed by the Company.

***(e) Credit Risk***

The financial instruments which potentially subject the Company to concentrations of credit risk consist principally of cash and gross accounts receivable existing at December 31, 2016. The Company places its cash with high-quality financial institutions. Concentrations of credit risk with respect to accounts receivable are principally related to trade receivables from other interexchange carriers and are otherwise limited to the Company's large number of customers in several states.

The Company sponsors qualified pension plans for certain employees. Plan assets associated with these qualified pension plans are held by third party trustees and investments are comprised principally of debt and equity securities. The fair value of these plan assets is dependent on the financial condition of those entities issuing the debt and equity securities. A significant decline in the fair value of plan assets could result in additional Company contributions to the qualified pension plans in order to meet funding requirements under the Employee Retirement Income Security Act of 1974, as amended ("ERISA"). For additional information regarding the plan assets of the Company's qualified pension plans, including the December 31, 2016 balance at risk, see note (11) "Employee Benefit Plans" herein.

***(f) Property, Plant and Equipment***

Given that a majority of the Company's property, plant and equipment is plant used in the Company's wireline and fiber-based Ethernet networks, depreciation is principally based on the composite group remaining life method and straight-line composite rates. This methodology provides for the recognition of the cost of the remaining net investment in telephone plant, property and equipment less anticipated positive net salvage value, over the remaining asset lives. When depreciable telephone plant is replaced or retired, the carrying amount of such plant is deducted from the respective accounts and charged to accumulated depreciation. No gain or loss is generally recognized on disposition of assets. Use of this methodology requires the periodic revision of depreciation rates. In the evaluation of asset lives, multiple factors are considered, including, but not limited to, the ongoing network deployment, technology upgrades and enhancements, planned retirements and the adequacy of reserves. The Company utilizes straight-line depreciation for its non-telephone property, plant and equipment.

Periodically, the Company reviews the estimated remaining useful lives of its group asset categories to address continuing changes in technology, competition and the Company's overall reduction in capital spending and increased focus on more efficient utilization of its existing assets.

Network software purchased or developed in connection with related plant assets is capitalized. The Company also capitalizes interest associated with the acquisition or construction of network related assets. Capitalized interest is reported as part of the cost of the network related assets and as a reduction in interest expense. See "(i) Computer Software and Interest Costs" herein for additional information.

***(g) Long-Lived Assets***

Property, plant and equipment and intangible assets subject to amortization are reviewed for impairment whenever events or changes in circumstances indicate that their carrying amounts may not be recoverable. An impairment charge is recognized for the amount, if any, by which the carrying value of the asset exceeds its fair value.

As of December 31, 2016, the Company performed its routine review of impairment triggering events and concluded that it does not believe a triggering event has occurred with respect to property, plant and equipment and intangible assets subject to amortization.

***(h) Asset Retirement Obligations***

The Company records the estimated fair value of an asset retirement obligation when incurred. The associated asset retirement costs are capitalized as part of the carrying amount of the long-lived asset and depreciated over the asset's estimated useful life. The Company has asset retirement obligations related to battery, fuel tank and chemically-treated pole disposal as well as soil remediation at leased facilities. Considerable management judgment is required in estimating these obligations. Important assumptions include estimates of retirement costs, the timing of the future retirement activities and the likelihood or retirement provisions being enforced. Changes in these assumptions based on future information could result in adjustments to estimated liabilities.

***(i) Computer Software and Interest Costs***

The Company capitalizes certain costs incurred in connection with developing or obtaining internal use software which has a useful life in excess of one year. Capitalized costs include direct development costs associated with internal use software, including direct labor costs and external costs of materials and services.

Subsequent additions, modifications or upgrades to internal-use software are capitalized only to the extent that they allow the software to perform a task it previously did not perform. Software maintenance and training costs are expensed in the period in which they are incurred.

In addition, the Company capitalizes the interest cost associated with the period of time over which the Company's internal use software is developed or obtained.

During the years ended December 31, 2016, 2015 and 2014, the Company recorded the following with regards to software costs (in thousands):

	Years Ended December 31,		
	2016	2015	2014
Capitalized software costs	\$ 10,282	\$ 22,768	\$ 17,984
Capitalized interest costs	\$ 148	\$ 99	\$ 70
Amortization expense on capitalized software	\$ 16,610	\$ 14,669	\$ 11,415

A summary of capitalized software is shown below (in thousands):

	December 31, 2016	December 31, 2015
Gross carrying amount	\$ 167,986	\$ 176,778
Less: accumulated amortization	(128,758)	(131,031)
<b>Net capitalized software</b>	<b>\$ 39,228</b>	<b>\$ 45,747</b>

Estimated future amortization on capitalized software for each of the five years subsequent to December 31, 2016 are as follows (in thousands):

Year ending December 31,		
2017	\$	14,856
2018	\$	11,670
2019	\$	7,731
2020	\$	4,528
2021	\$	443

#### (j) Impairment of Other Intangible Assets

**Indefinite-lived Intangible Asset.** Non-amortizable intangible assets are assessed for impairment at least annually. The Company performs its annual impairment test as of the first day of the fourth fiscal quarter of each year and assesses the fair value of the trade name based on the relief from royalty method. If the carrying amount of the trade name exceeds its estimated fair value, the asset is considered impaired.

For its non-amortizable intangible asset impairment assessments of the FairPoint trade name, the Company makes certain assumptions including an estimated royalty rate, a long-term growth rate, an effective tax rate and a discount rate, and applies these assumptions to projected future cash flows, exclusive of cash flows associated with wholesale revenues and other revenues not generated through brand recognition. As of October 1, 2016, the estimated fair value exceeded the carrying value in the Company's quantitative analysis; therefore, an impairment was not necessary. However, future changes in one or more of the assumptions discussed above may result in the recognition of an impairment loss.

**Amortizable Intangible Assets.** Amortizable intangible assets must be reviewed for impairment as part of long-lived assets whenever indicators of impairment exist. See "(g) Long-Lived Assets" herein for additional information.

#### (k) Accounting for Income Taxes

Income taxes are accounted for under the asset and liability method. Deferred tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases and operating loss and tax credit carryforwards. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or

settled. The effect on deferred tax assets and liabilities of a change in tax rates is recognized in income in the period that includes the enactment date.

In assessing the realizability of deferred tax assets, management considers whether it is more likely than not that some portion or all of the deferred tax assets will not be realized. The ultimate realization of deferred tax assets is dependent upon the generation of future taxable income during the periods in which those temporary differences become deductible. Management determines its estimates of future taxable income based upon the scheduled reversal of deferred tax liabilities and tax planning strategies. The Company establishes valuation allowances for deferred tax assets when it is estimated to be more likely than not that the tax assets will not be realized.

FairPoint Communications files a consolidated income tax return with its subsidiaries. All intercompany transactions and accounts have been eliminated in consolidation.

**(l) Stock-Based Compensation**

The Company accounts for employee awards which are expected to vest. Stock-based compensation cost is measured at the grant date, based on the fair value of the award, and is recognized as expense on a straight-line basis over the requisite service period, which generally begins on the date the award is granted through the date the award vests.

**(m) Employee Benefit Plans**

The Company recognizes the overfunded or underfunded status of its qualified defined benefit plans and post-employment benefit plans as either an asset or liability, respectively, on the consolidated balance sheets. Actuarial gains and losses that arise during the year are recognized as a component of comprehensive income/(loss), net of applicable income taxes, and included in accumulated other comprehensive income. These gains and losses are amortized over future years as a component of the net periodic benefit cost.

**(n) Operating Segments**

Management views its business of providing data, video and voice communications services to residential, wholesale and business customers as one operating segment. The Company's services consist of retail and wholesale communications and data services, including voice and HSD in 17 states. The Company's chief operating decision maker assesses operating performance and allocates resources based on the consolidated results.

**(o) Other Liabilities**

**Accrued Bonuses.** As of December 31, 2016 and 2015, accrued bonuses of \$12.7 million and \$12.6 million, respectively, were included in accrued payroll and related liabilities on the consolidated balance sheets.

**(p) Advertising Costs**

Advertising costs are expensed as they are incurred. During the years ended December 31, 2016, 2015 and 2014, advertising costs were \$6.5 million, \$6.6 million and \$9.8 million, respectively.

**(q) Interest Rate Swap Agreements**

In the third quarter of 2013, the Company entered into interest rate swap agreements. For further information regarding these interest rate swap agreements, *see* note (9) "Interest Rate Swap Agreements." The interest rate swap agreements, at their inception, qualified for and were designated as cash flow hedging instruments. The Company records its interest rate swaps on the consolidated balance sheets at fair value. The effective portion of changes in fair value are recorded in accumulated other comprehensive income and are subsequently reclassified into earnings in the period that the hedged forecasted transaction affects earnings. Any ineffective portion is recognized in earnings. Both at inception and on a quarterly basis, the Company performs an effectiveness test.

**(3) Proposed Merger with Consolidated Communications Holdings, Inc.**

On December 3, 2016, FairPoint Communications entered into an Agreement and Plan of Merger (the "Merger Agreement") with Consolidated Communications Holdings, Inc. ("Consolidated"), a Delaware Corporation, and Falcon Merger Sub, Inc., a newly formed Delaware corporation and wholly-owned subsidiary of Consolidated ("Merger Sub"), which provides for, among other things, a business combination whereby Merger Sub will merge with and into FairPoint Communications, with FairPoint Communications as the surviving entity (the "Merger"). As a result of the Merger, the separate corporate existence of Merger Sub will cease, and FairPoint Communications will survive as a wholly owned subsidiary of Consolidated. Consolidated is a leading business and broadband communications provider throughout its 11-state service area.

If the Merger is completed, under the terms of the Merger Agreement, stockholders of FairPoint Communications will receive 0.7300 shares of common stock of Consolidated for each share of FairPoint Communications common stock that they own immediately before this transaction. If the Merger is not completed, FairPoint Communications may be required to pay a termination fee of \$18.9 million under certain circumstances set forth in the Merger Agreement. The Merger is expected to close around the middle of 2017 and is subject to standard closing conditions, including federal and state regulatory approvals and the approval of both Consolidated's and FairPoint Communications' stockholders.

For the year ended December 31, 2016, the Company recognized \$4.5 million of merger related expenses, primarily for legal and financial advisory costs included in selling, general and administrative expense, excluding depreciation and amortization, on the consolidated statement of operations.

The award agreements granted under the FairPoint Communications, Inc. Amended and Restated 2010 Long Term Incentive Plan (the "Long Term Incentive Plan") provide that upon the occurrence of a change in control, unvested benefits will be accelerated and vest in full.

#### (4) Recent Accounting Pronouncements

In May 2014, the Financial Accounting Standards Board ("FASB") issued Accounting Standards Update ("ASU") 2014-09, Revenue from Contracts with Customers, which is designed to clarify the principles used to recognize revenue for entities. The core principle of ASU 2014-09 is that a company should recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the company expects to be entitled in exchange for those goods or services. In addition, ASU 2014-09 requires enhanced disclosures about the nature, amount, timing and uncertainty of revenue and cash flows arising from contracts with customers. While ASU 2014-09 is primarily associated with guidance for revenue from contracts with customers, it also includes new accounting principles related to deferral and amortization of contract acquisition and fulfillment costs. In 2016, the Company performed an assessment of its revenues, acquisition and fulfillment costs from contracts to understand any potential differences to its current accounting policies and business processes. The Company expects to have an impact concerning the deferral of acquisition costs as its current policy is to expense these costs as incurred. At this time, the Company continues to assess and determine data and system requirements necessary to quantify the impacts of this standard as well as to develop and provide the enhanced disclosures required by the new guidance.

In July 2015, the FASB approved a one-year deferral of the effective date of ASU 2014-09. Subsequently, the FASB has issued several additional ASUs to clarify the implementation guidance on principal versus agent considerations, identifying performance obligations, assessing collectability, presentation of sales taxes and other similar taxes collected from customers, non-cash considerations, contract modifications and completed contracts at transition. The new pronouncements will be effective for annual and interim periods beginning on or after December 15, 2017. The Company intends to adopt the new standard effective January 1, 2018.

The standard allows for two methods of adoption: (1) "full retrospective" adoption, meaning the standard is applied to all periods presented, or (2) "modified retrospective" adoption, meaning the cumulative effect of applying ASU 2014-09 is recognized as an adjustment to the fiscal year 2018 opening retained earnings balance. Currently, the Company is evaluating the available adoption methods and plans to select an adoption method in the second half of 2017.

In August 2014, the FASB issued ASU 2014-15, Disclosure of Uncertainties about an Entity's Ability to Continue as a Going Concern, which requires management to evaluate whether there is substantial doubt about an entity's ability to continue as a going concern and to provide related footnote disclosures in certain circumstances. ASU 2014-15 is effective for annual periods beginning after December 15, 2016. The Company adopted this pronouncement for its year ended December 31, 2016 and it did not have a material impact on its consolidated financial statements.

In February 2016, the FASB issued ASU 2016-02, Leases, whereby, lessees will be required to recognize for all leases at the commencement date a lease liability, which is a lessee's obligation to make lease payments arising from a lease, measured on a discounted basis; and a right-of-use asset, which is an asset that represents the lessee's right to use, or control the use of, a specified asset for the lease term. Under the new guidance, lessor accounting is largely unchanged. A modified retrospective transition approach for leases existing at, or entered into after, the beginning of the earliest comparative period presented in the financial statements must be applied. The modified retrospective approach would not require any transition accounting for leases that expired before the earliest comparative period presented. Companies may not apply a full retrospective transition approach. ASU 2016-02 is effective for annual and interim periods beginning after December 15, 2018. Early application is permitted. The Company is evaluating the potential impact of this pronouncement.

In March 2016, the FASB issued ASU 2016-09, Improvements to Employee Share-Based Payment Accounting, which simplifies several aspects of the accounting for share-based payment award transactions, including, but not limited to: (a) income

tax consequences; (b) classification of awards as either equity or liabilities; and (c) classification on the statement of cash flows. ASU 2016-09 is effective for annual and interim periods beginning after December 15, 2016. The Company does not believe the adoption of this pronouncement will have a material impact on its consolidated financial statements.

In November 2016, the FASB issued ASU 2016-18, *Statement of Cash Flows: Restricted Cash*, which requires a statement of cash flows to explain the change during the period in the total of cash, cash equivalents, and amounts generally described as restricted cash or restricted cash equivalents. Amounts generally described as restricted cash and restricted cash equivalents should be included with cash and cash equivalents when reconciling the beginning-of-period and end-of-period total amounts shown on the statement of cash flows. ASU 2016-18 is effective for fiscal years beginning after December 15, 2017 and interim periods within those fiscal years, and early adoption is permitted, including in an interim period. If early adopted in an interim period, any adjustments should be reflected as of the beginning of the fiscal year that includes that interim period. ASU 2016-18 is to be applied through a retrospective transition method to each period presented. The Company does not believe that the adoption of this pronouncement will have a significant impact on its consolidated statements of cash flows.

#### (5) Dividends

The Company currently does not pay a dividend on its common stock and has no plans to pay dividends.

#### (6) Other Intangible Assets

##### *Indefinite-lived Intangible Assets*

At December 31, 2016 and 2015, the Company's trade name is recorded at \$39.2 million. In addition, the Company completed an immaterial business acquisition during 2016 and recorded goodwill of \$2.5 million. On October 1, 2016 and October 1, 2015, the Company performed its annual non-amortizable intangible asset quantitative analysis and concluded that there was no impairment at that time. As of December 31, 2016, the Company performed its routine review of impairment indicators and concluded that it did not believe a triggering event had occurred.

##### *Other Amortizable Intangible Assets*

The Company's amortizable intangible assets are as follows (in thousands):

	December 31, 2016	December 31, 2015
Customer lists ( <i>weighted average 9.0 years</i> ):		
Gross carrying amount	\$ 99,410	\$ 99,000
Less: accumulated amortization	(65,312)	(54,290)
Net customer lists	\$ 34,098	\$ 44,710
Other net amortizable intangible assets	\$ 184	\$ —
<b>Total amortizable intangible assets</b>	<b>\$ 34,282</b>	<b>\$ 44,710</b>

Amortization expense of the Company's amortizable intangible assets was \$11.0 million, \$11.0 million and \$11.0 million for the years ended December 31, 2016, 2015 and 2014, respectively, and is expected to be approximately \$11.1 million in 2017, 2018, 2019, respectively, \$0.8 million in 2020 and \$0.1 million in 2021.

**(7) Property, Plant and Equipment**

A summary of property, plant and equipment is shown below (in thousands):

	Estimated Life (in years)	December 31, 2016	December 31, 2015
Land	—	\$ 35,217	\$ 35,632
Buildings	40	215,897	211,115
Central office equipment	7 – 10	662,042	635,208
Outside communications plant	15 – 35	1,191,142	1,161,042
Furniture, vehicles and other work equipment	5 – 15	257,337	258,749
Plant under construction	—	99,568	81,096
Other	—	16,029	17,144
<b>Total property, plant and equipment</b>		<b>2,477,232</b>	<b>2,399,986</b>
Less: Accumulated depreciation		(1,452,880)	(1,281,205)
<b>Net property, plant and equipment</b>		<b>\$ 1,024,352</b>	<b>\$ 1,118,781</b>

Depreciation expense, excluding amortization of intangible assets, for the years ended December 31, 2016, 2015 and 2014 was \$211.3 million, \$212.8 million and \$209.7 million, respectively. Depreciation expense includes amortization of assets recorded under capital leases.

The Company recorded \$0.6 million of asset retirement obligations during the year ended December 31, 2015. Net accretion expense, revisions in cash flow estimates and liability settlements were insignificant during the year. The Company's asset retirement obligations are included as a component of other accrued liabilities or other long-term liabilities in the consolidated balance sheets based on the expected timing of the obligation. As of December 31, 2016, the Company's asset retirement liability of \$4.8 million consisted of \$0.3 million in other accrued liabilities and \$4.5 million in other long-term liabilities. As of December 31, 2015, the Company's asset retirement liability of \$4.9 million consisted of \$0.8 million in other accrued liabilities and \$4.1 million in other long-term liabilities.

**(8) Long-term Debt**

Long-term debt for the Company at December 31, 2016 and 2015 is shown below (in thousands):

	December 31, 2016	December 31, 2015
Term Loan, due 2019 <i>(weighted average rate of 7.50%)</i>	\$ 616,000	\$ 622,400
Discount on Term Loan <sup>(a)</sup>	(7,834)	(11,138)
Debt issuance costs	(3,396)	(4,717)
Notes, 8.75%, due 2019	300,000	300,000
<b>Total long-term debt</b>	<b>904,770</b>	<b>906,545</b>
Less: current portion	(6,400)	(6,400)
<b>Total long-term debt, net of current portion</b>	<b>\$ 898,370</b>	<b>\$ 900,145</b>

(a) The \$7.8 million and \$11.1 million discount on the Term Loan (as defined below) as of December 31, 2016 and 2015, respectively, is being amortized using the effective interest method over the life of the Term Loan.

As of December 31, 2016, the Company had \$61.1 million, net of \$13.9 million outstanding letters of credit, available for additional borrowing under the Revolving Facility (as defined below).

The approximate aggregate maturities of long-term debt, excluding the debt discount on the Term Loan, for each of the three years subsequent to December 31, 2016 are as follows (in thousands):

Year ending December 31,	Balance Due
2017	\$ 6,400

2018		6,400
2019		903,200
<b>Total long-term debt, including current portion</b>	<b>\$</b>	<b>916,000</b>

**Refinancing.** On February 14, 2013 (the "Refinancing Closing Date"), FairPoint Communications refinanced its old credit agreement (the "Refinancing"). In connection with the Refinancing, FairPoint Communications (i) issued \$300.0 million aggregate principal amount of its 8.75% senior secured notes due 2019 (the "Notes") in a private offering exempt from registration under the Securities Act pursuant to an indenture (the "Indenture") that FairPoint Communications entered into on the Refinancing Closing Date with certain of its subsidiaries that guarantee the indebtedness under the Credit Agreement (as defined herein) (the "Subsidiary Guarantors") and U.S. Bank National Association, as trustee and collateral agent, and (ii) entered into a credit agreement (the "Credit Agreement"), dated as of the Refinancing Closing Date, with the lenders party thereto from time to time and Morgan Stanley Senior Funding, Inc., as administrative agent and letter of credit issuer. The Credit Agreement provides for a \$75.0 million revolving credit facility (the "Revolving Facility"), which has a sub-facility providing for the issuance of up to \$40.0 million in letters of credit, and a \$640.0 million term loan facility (the "Term Loan" and, together with the Revolving Facility, the "Credit Agreement Loans"). On the Refinancing Closing Date, FairPoint Communications used the proceeds of the Notes offering, together with \$640.0 million of borrowings under the Term Loan and cash on hand to (i) repay principal of \$946.5 million outstanding on the old term loan, plus approximately \$7.7 million of accrued interest and (ii) pay approximately \$32.6 million of fees, expenses and other costs related to the Refinancing.

**The Credit Agreement.** The principal amount of the Term Loan and commitments under the Revolving Facility may be increased by an aggregate amount of up to \$200.0 million, subject to certain terms and conditions specified in the Credit Agreement. The Term Loan will mature on February 14, 2019 and the Revolving Facility will mature on February 14, 2018, subject in each case to extensions pursuant to the terms of the Credit Agreement.

**Interest Rates and Fees.** Interest on borrowings under the Credit Agreement Loans accrue at an annual rate equal to either a British Bankers Association London Inter-Bank Offered Rate ("LIBOR") or the base rate, in each case plus an applicable margin. LIBOR is a per annum rate for dollar deposits with an interest period of one, two, three or six months (at FairPoint Communication's election), subject to a minimum LIBOR floor of 1.25% for the Term Loan. The base rate is the per annum rate equal to the greatest of (x) the federal funds effective rate plus 0.50%, (y) the rate of interest publicly quoted from time to time by The Wall Street Journal as the United States "Prime Rate" and (z) LIBOR with an interest period of one month plus 1.00%. The applicable margin for the Term Loan is (a) 6.25% per annum with respect to term loans bearing interest based on LIBOR or (b) 5.25% per annum with respect to term loans bearing interest based on the base rate. The applicable interest rate for the Revolving Facility is, initially, (a) 5.50% with respect to revolving loans bearing interest based on LIBOR or (b) 4.50% per annum with respect to revolving loans bearing interest based on the base rate, in each case subject to adjustment based on FairPoint Communication's consolidated total leverage ratio, as defined in the Credit Agreement. FairPoint Communications is required to pay a quarterly letter of credit fee on the average daily amount available to be drawn under letters of credit issued under the Revolving Facility equal to the applicable interest rate for revolving loans bearing interest based on LIBOR, plus a fronting fee of 0.125% per annum on the average daily amount available to be drawn under such letters of credit. In addition, FairPoint Communications is required to pay a quarterly commitment fee on the average daily unused portion of the New Revolving Facility, which is 0.50% initially, subject to reduction to 0.375% based on FairPoint Communication's consolidated total leverage ratio.

**Security/Guarantors.** All obligations under the Credit Agreement, together with certain designated hedging obligations and cash management obligations, are unconditionally guaranteed on a senior secured basis by certain subsidiaries of FairPoint Communications (the "Subsidiary Guarantors") and secured by a first-priority lien on substantially all personal property of FairPoint Communications and the Subsidiary Guarantors, subject to certain exclusions set forth in the related security documents, pari passu with the lien securing the obligations under the Notes.

**Mandatory Repayments.** FairPoint Communications is required to make quarterly repayments of the Term Loan in a principal amount of \$1.6 million during the term of the Credit Agreement. In addition, mandatory repayments are required under the Credit Agreement with (i) a percentage, initially equal to 50% and subject to reduction to 25% based on FairPoint Communication's consolidated total leverage ratio, of FairPoint Communication's excess cash flow, as defined in the Credit Agreement, (ii) the net cash proceeds of certain asset dispositions, insurance proceeds and condemnation awards and (iii) issuances of debt not permitted to be incurred under the Credit Agreement. No premium is required in connection with repayments.

**Covenants.** The Credit Agreement contains customary representations and warranties and affirmative and negative covenants for a transaction of this type, including two financial maintenance covenants: (i) a consolidated interest coverage ratio and (ii) a consolidated total leverage ratio. The Credit Agreement also contains a covenant limiting the amount of capital expenditures that FairPoint Communications and its subsidiaries may make in any fiscal year. As of December 31, 2016, FairPoint Communications was in compliance with all covenants under the Credit Agreement.

**Events of Default.** The Credit Agreement also contains customary events of default.

**The Notes.** On the Refinancing Closing Date, FairPoint Communications issued \$300.0 million of the Notes pursuant to the Indenture in a private offering exempt from registration under the Securities Act.

The terms of the Notes are governed by the Indenture. The Notes are senior secured obligations of FairPoint Communications and are guaranteed by the Subsidiary Guarantors. The Notes and the guarantees thereof are secured by a first-priority lien on substantially all personal property of FairPoint Communications and the Subsidiary Guarantors, subject to certain exclusions set forth in the related security documents, pari passu with the lien securing the obligations under the Credit Agreement. The Notes will mature on August 15, 2019 and accrue interest at a rate of 8.75% per annum, which is payable semi-annually in arrears on February 15 and August 15 of each year.

Notes redeemed after February 15, 2016 and prior to February 15, 2017 may be redeemed at 104.375% of the aggregate principal amount; Notes redeemed on or after February 15, 2017 and prior to February 15, 2018 may be redeemed at 102.188% of the aggregate principal amount; and Notes redeemed on or after February 15, 2018 may be redeemed at their par value.

The holders of the Notes have the ability to require FairPoint Communications to repurchase all or any part of the Notes if FairPoint Communications experiences certain kinds of changes in control or engages in certain asset sales, in each case at the repurchase prices and subject to the terms and conditions set forth in the Indenture.

The Indenture contains certain covenants which are customary with respect to non-investment grade debt securities, including limitations on FairPoint Communication's ability to incur additional indebtedness, pay dividends on or make other distributions or repurchase FairPoint Communication's capital stock, make certain investments, enter into certain types of transactions with affiliates, create liens and sell certain assets or merge with or into other companies. These covenants are subject to a number of important limitations and exceptions. As of December 31, 2016, FairPoint Communications was in compliance with all covenants under the Indenture.

The Indenture also provides for customary events of default, including cross defaults to other specified debt of FairPoint Communications and certain of its subsidiaries.

#### (9) Interest Rate Swap Agreements

The Company uses interest rate swap agreements to protect the Company against future adverse fluctuations in interest rates by reducing its exposure to variability in cash flows relating to interest payments on a portion of its outstanding debt. The Company's interest rate swaps, which are designated as cash flow hedges, involve the receipt of variable amounts from counterparties in exchange for the Company making fixed-rate payments over the effective term of the agreements without exchange of the underlying notional amount. The Company does not hold or issue any derivative financial instruments for speculative trading purposes.

In the third quarter of 2013, the Company entered into interest rate swap agreements with a combined notional amount of \$170.0 million with three counterparties that are effective for a two year period. Such swaps became effective on September 30, 2015 and mature on September 30, 2017. Each respective swap agreement requires the Company to pay a fixed rate of 2.665% and provides that the Company will receive a variable rate based on the three month LIBOR rate subject to a minimum LIBOR floor of 1.25%. Amounts payable by or due to the Company are net settled with the respective counterparties on the last business day of each fiscal quarter.

The effect of the Company's interest rate swap agreements on the consolidated balance sheets at December 31, 2016 and 2015 is shown below (in thousands):

	As of December 31, 2016	
	Balance Sheet Location	Fair Value
Derivatives designated as hedging instruments:		
Interest rate swaps, Current	Other accrued liabilities	\$ 1,762
	As of December 31, 2015	
	Balance Sheet Location	Fair Value
Derivatives designated as hedging instruments:		
Interest rate swaps, Current	Other accrued liabilities	\$ 2,375
Interest rate swaps, Long-term	Other long-term liabilities	\$ 1,232

The gross effect of the Company's interest rate swap agreements on the consolidated statements of comprehensive income/(loss) for the years ended December 31, 2016, 2015 and 2014 is shown below (in thousands):

	Amount Recognized in Interest Expense (Pre-Tax)			Amount of Loss/(Gain) Recognized in Other Comprehensive Income on Derivative (Effective Portion) (Pre-Tax)		
	Year Ended December 31, 2016	Year Ended December 31, 2015	Year Ended December 31, 2014	Year Ended December 31, 2016	Year Ended December 31, 2015	Year Ended December 31, 2014
Interest rate swaps	\$ 2,446	\$ —	\$ —	\$ (1,845)	\$ 865	\$ 1,737

Amounts reported in accumulated other comprehensive income related to interest rate swaps will be reclassified to interest expense as interest payments are made on the Term Loan. The Company estimates that approximately \$1.8 million will be reclassified as an increase to interest expense in the next 12 months.

Each interest rate swap agreement contains a provision whereby if the Company defaults on any of its indebtedness, the Company may also be declared in default under the interest rate swap agreements.

#### (10) Fair Value

In determining fair value, the Company uses a hierarchy for inputs used in measuring fair value that maximizes the use of observable inputs and minimizes the use of unobservable inputs by requiring that the most observable inputs be used when available. The hierarchy is broken down into three levels based on the reliability of inputs as follows:

- Level 1 - Valuations based on quoted prices in active markets for identical assets or liabilities that the Company has the ability to access.
- Level 2 - Valuations based on quoted prices for similar instruments in active markets or quoted prices in markets that are not active or for which all significant inputs are observable, either directly or indirectly.
- Level 3 - Valuations based on inputs that are unobservable and significant to the overall fair value measurement.

The Company's non-financial assets and liabilities, including its long-lived assets and indefinite-lived intangible assets, are measured and subsequently adjusted, if necessary, to fair value on a non-recurring basis. The Company periodically performs routine reviews of triggering events and/or an impairment test, as applicable. Based on these procedures, the Company did not require an adjustment to fair value to be recorded to these assets in 2016 or 2015.

The Company's financial instruments, other than interest rate swap agreements and long-term debt, consist primarily of cash, restricted cash, accounts receivable and accounts payable. The carrying amounts of these financial instruments are estimated to approximate fair value due to the relatively short period of time to maturity for these instruments. As of December 31, 2016, interest rate swap agreements are carried at their fair value and measured on a recurring basis as follows (in thousands):

	Fair Value Measurements Using		
	Level 1	Level 2	Level 3
Interest rate swaps, Current <sup>(a)</sup>	\$ —	\$ 1,762	\$ —

As of December 31, 2015, interest rate swap agreements are carried at their fair value and measured on a recurring basis as follows (in thousands):

	Fair Value Measurements Using		
	Level 1	Level 2	Level 3
Interest rate swaps, Current <sup>(a)</sup>	\$ —	\$ 2,375	\$ —
Interest rate swaps, Long-term <sup>(a)</sup>	\$ —	\$ 1,232	\$ —

- (a) The fair value is determined using valuation models which rely on the expected LIBOR based yield curve and estimates of counterparty and the Company's non-performance risk. Because each of these inputs are directly observable or can be corroborated by observable market data, the Company has categorized these interest rate swaps as Level 2 within the fair value hierarchy.

The estimated fair values of the Company's long-term debt as of December 31, 2016 and 2015 are as follows (in thousands):

	December 31, 2016		December 31, 2015	
	Carrying Amount	Fair Value <sup>(a)</sup>	Carrying Amount	Fair Value <sup>(a)</sup>
Term Loan, due 2019 <sup>(b)</sup>	\$ 608,166	\$ 620,620	\$ 611,262	\$ 616,954
Notes, 8.75%, due 2019	300,000	312,375	300,000	295,500
Total	\$ 908,166	\$ 932,995	\$ 911,262	\$ 912,454

- (a) The Company estimated fair value based on market prices of the Company's debt securities at the balance sheet dates, which falls within Level 2 of the fair value hierarchy.
- (b) The carrying amount of the Term Loan is net of the unamortized discount of \$7.8 million and \$11.1 million as of December 31, 2016 and 2015, respectively.

For a discussion of the fair value measurement of the Company's pension plan assets, *see* note (11) "Employee Benefit Plans—Plan Assets, Obligations and Funded Status—Qualified Pension Plan Assets".

### (11) Employee Benefit Plans

The Company sponsors noncontributory qualified defined benefit pension plans ("qualified pension plans") and post-employment benefit plans which provide certain cash payments and medical, dental and life insurance benefits to eligible retired employees and their beneficiaries and covered dependents. The qualified pension plans and certain post-employment benefit plans were created as part of the acquisition of the Northern New England operations from Verizon and mirrored the prior Verizon plans.

The qualified pension plan available to represented employees was closed to new participants and benefits under the prior formula were frozen as of October 14, 2014. For existing participants, future benefit accruals for service on and after February 22, 2015 are at 50% of prior rates and are capped at 30 years of total credited service. The qualified pension plan available to non-represented employees remains frozen.

The post-employment benefit plan provides medical, dental and life insurance benefits to eligible non-represented employees and former represented employees and, in some instances, to their spouses and families. Effective August 28, 2014, active represented employees are no longer eligible for this post-employment benefit plan. Upon ratification of the collective bargaining agreements on February 22, 2015 and for 30 months thereafter, active represented employees who retire and meet the eligibility requirements and their spouses are eligible to receive certain monthly reimbursements of medical insurance premiums until the retired employee reaches age 65 or dies, at which time the benefit will cease for the spouse as well.

The Company makes contributions to the qualified pension plans to meet minimum funding requirements under the Employee Retirement Income Security Act of 1974, as amended ("ERISA"), and has the ability to elect to make additional discretionary contributions. The other post-employment benefit plans are unfunded and the Company funds the benefits that are paid. Annually, and as necessary, the Company remeasures the net liabilities of its qualified pension and other post-employment benefit plans.

*Plan Assets, Obligations and Funded Status*

A summary of plan assets, projected benefit obligation and funded status of the plans are as follows for the years ended December 31, 2016 and 2015 (in thousands):

	<b>Qualified Pension Plans</b>	
	<b>Year Ended December 31, 2016</b>	<b>Year Ended December 31, 2015</b>
Fair value of plan assets:		
Beginning fair value of plan assets	\$ 197,062	\$ 195,410
Actual return on plan assets	15,745	(3,677)
Plan settlements	(2,510)	(4,472)
Employer contributions	16,501	14,980
Benefits paid	(3,898)	(5,179)
<b>Ending fair value of plan assets</b>	<b>222,900</b>	<b>197,062</b>
Projected benefit obligation:		
Beginning projected benefit obligation	\$ 347,624	\$ 408,216
Service cost	6,880	8,391
Interest cost	15,079	14,879
Plan amendment <sup>(a)</sup>	—	(40,049)
Plan settlements	(2,510)	(4,472)
Plan curtailment	—	(2,426)
Benefits paid	(3,898)	(5,179)
Actuarial loss	(6,358)	(31,736)
<b>Ending projected benefit obligation</b>	<b>356,817</b>	<b>347,624</b>
<b>Funded status</b>	<b>\$ (133,917)</b>	<b>\$ (150,562)</b>
Accumulated benefit obligation	\$ 356,807	\$ 347,619
<b>Net amount recognized in long-term liabilities in the consolidated balance sheets</b>	<b>\$ (133,917)</b>	<b>\$ (150,562)</b>
Amounts recognized in accumulated other comprehensive income:		
Prior service credit	\$ 29,867	\$ 32,909
Net actuarial loss	(93,953)	(106,704)
<b>Net amount recognized in accumulated other comprehensive income</b>	<b>\$ (64,086)</b>	<b>\$ (73,795)</b>

- (a) In the first quarter of 2015, the Company recognized a prior service credit for a negative plan amendment at remeasurement of the represented employees pension plan related to the elimination of prospective future increase in pension bands that were reduced under the terms of the collective bargaining agreements.

	Post-employment Benefit Plans	
	Year Ended December 31, 2016	Year Ended December 31, 2015
Fair value of plan assets:		
Beginning fair value of plan assets	\$ —	\$ —
Employer contributions	5,715	5,597
Benefits paid	(5,715)	(5,597)
<b>Ending fair value of plan assets</b>	<b>—</b>	<b>—</b>
Projected benefit obligation:		
Beginning projected benefit obligation	\$ 100,154	\$ 741,372
Service cost	121	4,541
Interest cost	3,927	7,688
Plan amendments <sup>(a)</sup>	—	(609,619)
Plan curtailment	—	(5,409)
Benefits paid	(5,715)	(5,597)
Actuarial loss	(3,720)	(32,822)
<b>Ending projected benefit obligation</b>	<b>94,767</b>	<b>100,154</b>
<b>Funded status</b>	<b>\$ (94,767)</b>	<b>\$ (100,154)</b>
Amounts recognized in the consolidated balance sheets:		
Current liabilities	\$ (7,138)	\$ (6,112)
Long-term liabilities	(87,629)	(94,042)
<b>Net amount recognized in the consolidated balance sheets</b>	<b>\$ (94,767)</b>	<b>\$ (100,154)</b>
Amounts recognized in accumulated other comprehensive income:		
Net prior service credit	\$ 41,690	\$ 350,322
Net actuarial loss	\$ (16,508)	\$ (102,085)
<b>Net amount recognized in accumulated other comprehensive income</b>	<b>\$ 25,182</b>	<b>\$ 248,237</b>

- (a) In the first quarter of 2015, the Company recognized a net prior service credit for a negative plan amendment at remeasurement of the post-employment benefit plan for represented employees primarily related to the elimination of the post-employment benefits for active represented employees under the terms of the collective bargaining agreements.

**Qualified Pension Plan Assets.** The investment objective for the qualified pension plan assets is to achieve a rate of return sufficient to match or exceed the long-term growth rate of the plan liability, using investment vehicles that are consistent with the duration of each plan's liability. The investment objective also targets minimizing the risk of loss of principal. The Company's strategy emphasizes a long-term equity orientation, global diversification and financial and operating risk controls. Both active and passive management investment approaches are employed depending on perceived market efficiencies and various other factors. Diversification targets of 65% equity securities and 35% fixed income securities for the represented employees plan seeks to minimize the concentration of market risk. For the qualified pension plan for the non-represented employees, the diversification target is 45% equity securities and 55% fixed income securities and is invested using primarily a liability driven investment strategy. The asset allocation at December 31, 2016 for the Company's qualified pension plan assets was as follows:

	Non-Represented Employees Plan	Represented Employees Plan	Total Qualified Pension Plans
Cash and cash equivalents <sup>(a)</sup>	3.5%	5.4%	5.2%
Equity securities	42.0%	60.3%	58.3%

Fixed income securities	54.5%	34.3%	36.5%
<b>Plan asset portfolio allocation at December 31, 2016</b>	<b>100.0%</b>	<b>100.0%</b>	<b>100.0%</b>

- (a) Cash and cash equivalents at December 31, 2016 include amounts pending settlement from the purchase or sale of equity or fixed income securities.

The fair values for the qualified pension plan assets by asset category at December 31, 2016 are as follows (in thousands):

	Total	Level 1	Level 2	Level 3
Cash and cash equivalents	\$ 11,619	\$ 11,619	\$ —	\$ —
Equity securities	129,937	129,937	—	—
Fixed income securities	81,344	53,206	28,138	—
<b>Fair value of plan assets at December 31, 2016</b>	<b>\$ 222,900</b>	<b>\$ 194,762</b>	<b>\$ 28,138</b>	<b>\$ —</b>

The fair values for the qualified pension plan assets by asset category at December 31, 2015 were as follows (in thousands):

	Total	Level 1	Level 2	Level 3
Cash and cash equivalents	\$ 1,223	\$ 1,223	\$ —	\$ —
Equity securities	138,684	79,512	59,172	—
Fixed income securities	57,155	30,856	26,299	—
<b>Fair value of plan assets at December 31, 2015</b>	<b>\$ 197,062</b>	<b>\$ 111,591</b>	<b>\$ 85,471</b>	<b>\$ —</b>

Cash and cash equivalents include short-term investment funds, primarily in diversified portfolios of investment grade money market instruments and are valued using quoted market prices, and thus classified within Level 1 of the fair value hierarchy, as outlined in note (10) "Fair Value".

Equity securities include direct holdings of equity securities and units held in mutual funds that invest in equity securities of domestic and international corporations in a variety of industry sectors. The direct holdings and units held in publicly traded mutual funds are valued using quoted market prices and are classified within Level 1 of the fair value hierarchy. Fair values for units held in mutual funds that invest in equity securities that are not publicly traded are based on observable prices and are classified within Level 2 of the fair value hierarchy. The fair values of hedged equity funds are estimated using net asset value per share of the investments. The Company has the ability to redeem these investments at net asset value on a limited basis and thus has classified hedged equity funds within Level 3 of the fair value hierarchy. The Company liquidated its positions in all its hedged equity funds per the terms of its investment agreements with such hedge equity funds in 2015.

Fixed income securities are investments in corporate bonds, treasury securities, other debt instruments and mutual funds that invest in these instruments. These securities are expected to provide significant diversification benefits, in terms of asset volatility and pension funding volatility, in the portfolio and a stable source of income. Units held in corporate bonds, treasury securities and publicly traded mutual funds that invest in fixed income securities are valued using quoted market prices and are classified within Level 1 of the fair value hierarchy. Fair values of mutual funds that invest in fixed income securities that are not publicly traded are based on observable prices and are classified within Level 2 of the fair value hierarchy.

A reconciliation of the beginning and ending balance of plan assets that are measured at fair value using significant unobservable inputs (Level 3) for the year ended December 31, 2015 is as follows (in thousands):

	Hedged Equity Funds
Balance at December 31, 2014	\$ 351
Purchases, sales and settlements, net	(351)
<b>Balance at December 31, 2015</b>	<b>\$ —</b>

**Net Periodic Benefit Cost.** The Company capitalizes a portion of net periodic benefit cost in conjunction with its use of internal labor resources utilized on capital projects. During the years ended December 31, 2016, 2015 and 2014, the Company recognized settlement charges in the qualified pension plan that covers non-represented employees. The settlements were incurred when the cumulative amount of lump sums paid to participants in the respective years exceeded the expected service and interest cost for the respective years. Components of the net periodic benefit cost related to the Company's qualified pension plans and other post-employment benefit plans for the years ended December 31, 2016, 2015 and 2014 are as follows (in thousands):

	Qualified Pension Plans		
	Year Ended December 31, 2016	Year Ended December 31, 2015	Year Ended December 31, 2014
Service cost	\$ 6,880	\$ 8,391	\$ 14,760
Interest cost	15,079	14,879	15,367
Expected return on plan assets	(15,363)	(14,635)	(13,525)
Amortization of prior service credit	(3,042)	(2,933)	—
Amortization of actuarial loss	5,383	6,718	2,054
Plan curtailment <sup>(a)</sup>	—	(4,207)	—
Plan settlement	629	1,022	671
<b>Net periodic benefit cost</b>	<b>9,566</b>	<b>9,235</b>	<b>19,327</b>
Less capitalized portion	(599)	(600)	(1,184)
<b>Other post-employment benefit and pension (benefit)/expense</b>	<b>\$ 8,967</b>	<b>\$ 8,635</b>	<b>\$ 18,143</b>

(a) The Company recognized a curtailment gain as the result of a workforce reduction in July 2015.

	Post-employment Benefit Plans		
	Year Ended December 31, 2016	Year Ended December 31, 2015	Year Ended December 31, 2014
Service cost	\$ 121	\$ 4,541	\$ 24,969
Interest cost	3,927	7,688	29,908
Amortization of prior service credit	(308,632)	(304,626)	(948)
Amortization of actuarial loss	81,857	113,424	6,654
<b>Net periodic benefit cost</b>	<b>(222,727)</b>	<b>(178,973)</b>	<b>60,583</b>
Less capitalized portion	—	—	(3,444)
<b>Other post-employment benefit and pension (benefit)/expense</b>	<b>\$ (222,727)</b>	<b>\$ (178,973)</b>	<b>\$ 57,139</b>

**Other Comprehensive Income.** Other pre-tax changes in plan assets and benefit obligations recognized in other comprehensive income are as follows for the years ended December 31, 2016, 2015 and 2014, respectively, (in thousands):

	Qualified Pension Plans		
	Year Ended December 31, 2016	Year Ended December 31, 2015	Year Ended December 31, 2014
Amounts recognized in other comprehensive income:			
Prior service credit	\$ —	\$ (40,049)	\$ —
Net (gain)/loss arising during the period	(6,739)	(13,424)	72,670
Amortization of prior service credit	3,042	2,933	—
Amortization of net actuarial loss	(5,383)	(6,718)	(2,725)
Plan curtailment	—	1,781	—
Plan settlement	(629)	(1,022)	—
<b>Total amount recognized in other comprehensive income</b>	<b>\$ (9,709)</b>	<b>\$ (56,499)</b>	<b>\$ 69,945</b>

Estimated amounts that will be amortized from accumulated other comprehensive income in the next fiscal year:

Prior service credit	\$ 3,042
Net actuarial loss	(4,772)
<b>Total amount estimated to be amortized from accumulated other comprehensive income in the next fiscal year</b>	<b>\$ (1,730)</b>

	Post-employment Benefit Plans		
	Year Ended December 31, 2016	Year Ended December 31, 2015	Year Ended December 31, 2014
Amounts recognized in other comprehensive income:			
Prior service credit	\$ —	\$ (619,454)	\$ (46,277)
Prior service cost	—	9,835	—
Plan curtailment	—	(5,409)	—
Net (gain)/loss arising during the period	(3,720)	(32,822)	148,434
Amortization of prior service credit	308,632	304,626	948
Amortization of net actuarial loss	(81,857)	(113,424)	(6,654)
<b>Total amount recognized in other comprehensive income</b>	<b>\$ 223,055</b>	<b>\$ (456,648)</b>	<b>\$ 96,451</b>

Estimated amounts that will be amortized from accumulated other comprehensive income in the next fiscal year:

Net prior service credit	\$ 1,819
Net actuarial loss	(1,083)
<b>Total amount estimated to be amortized from accumulated other comprehensive income in the next fiscal year</b>	<b>\$ 736</b>

### Assumptions

The determination of the net liability and the net periodic benefit cost recognized for the qualified pension plans and post-employment benefit plans by the Company are, in part, based on assumptions made by management. These assumptions include, among others, the discount rate applied to estimated future cash flows of the plans, the expected return on assets held by the qualified pension plans, certain demographic characteristics of the participants, such as expected retirement and mortality rates, and future inflation in healthcare costs. The Company also has an assumption regarding increases in the amount of post-employment benefit plans expenditures to be paid by the Company, based upon the past practice of such increases being provided to participants. These assumptions are reviewed at least annually for changes with the Company's independent actuaries.

**Projected Benefit Obligation Assumptions.** The weighted average assumptions used in determining projected benefit obligations are as follows:

	December 31, 2016	December 31, 2015
Qualified Pension Plans:		
Discount rate	4.49%	4.44%
Rate of compensation increase <sup>(a)</sup>	3.00%	3.00%
Post-employment Benefit Plans:		
Discount rate	4.20%	4.15%
Rate of compensation increase <sup>(a)</sup>	N/A	N/A

- (a) The rate of future increases in compensation assumption only applies to the plans for represented employees as plans for non-represented employees are frozen.

**Net Periodic Benefit Cost Assumptions.** The weighted average assumptions used in determining net periodic cost are as follows:

	Years Ended December 31,		
	2016	2015	2014
Qualified Pension Plans:			
Discount rate	4.48%	4.39%	4.92%
Expected return on plan assets <sup>(a)</sup>	7.34%	7.31%	7.66%
Rate of compensation increase <sup>(b)</sup>	3.00%	3.00%	3.00%
Post-employment Benefit Plans:			
Discount rate	4.18%	3.54%	4.98%
Rate of compensation increase <sup>(b)</sup>	N/A	N/A	4.00%
Healthcare cost trend rate <sup>(c)</sup>	7.40%	7.70%	7.90%
Rate that the cost trend rates ultimately declines to	4.50%	4.50%	4.50%
Year that the rates reach the terminal rate	2037	2030	2030

- (a) The expected return on plan assets is the long-term rate-of-return the Company expects to earn on the plan assets. In developing the expected return on plan asset assumption, the Company evaluated historical investment performance, the plans' asset allocation strategies and return forecasts for each asset class and input from its advisors. Projected returns by such advisors were based on broad equity and fixed income indices. The expected return on plan assets is reviewed annually in conjunction with other plan assumptions and, if considered necessary, revised to reflect changes in the financial markets and the investment strategy. The investment strategy and target allocations of the qualified pension plans previously disclosed in "—Plan Assets, Obligations and Funded Status—Qualified Pension Plan Assets" herein were utilized.
- (b) The rate of future increases in compensation assumption only applies to the plans for represented employees as plans for non-represented employees are frozen.
- (c) The rate of healthcare cost trend assumption for 2016 and 2015 applies to the other post-employment benefit plan for management and existing represented retirees.

**Post-employment Benefit Plans Sensitivity.** A 1% change in the medical trend rate assumed for post-employment benefits at December 31, 2016 would have the following effects (in thousands):

	Increase (Decrease)
1% increase in the medical trend rate:	
Effect on total service cost and interest cost components	\$ 420
Effect on benefit obligation	\$ 10,122
1% decrease in the medical trend rate:	
Effect on total service cost and interest cost components	\$ (349)

Effect on benefit obligation

\$

(8,423)

---

### Estimated Future Contributions and Benefit Payments

Legislation enacted in 2014 changed the method in determining the discount rate used for calculating a qualified pension plan's unfunded liability. This act contained a pension funding stabilization provision which allows pension plan sponsors to use higher interest rate assumptions when determining funded status and funding obligations. As a result, the Company's 2016 and 2015 minimum required pension plan contributions are significantly lower than it would have been in the absence of this stabilization provision.

Estimated future employer contributions and benefit payments as of December 31, 2016 are as follows (in thousands):

	Qualified Pension Plans	Post-employment Benefit Plans
Expected employer contributions for fiscal year 2017	\$ 18,431	\$ 7,138
Expected benefit payments for fiscal years:		
2017	\$ 8,558	\$ 7,138
2018	9,919	6,686
2019	11,473	6,637
2020	11,846	6,455
2021	13,135	6,267
2022-2026	84,859	27,230

### 401(k) Savings Plans

As of December 31, 2016, the Company and its subsidiaries sponsor a voluntary 401(k) savings plans that cover all eligible Telecom Group employees and northern New England management employees, and a voluntary 401(k) savings plan that covers all eligible northern New England represented employees (collectively, "the 401(k) Plans"). Each 401(k) Plan year, the Company contributes an amount of matching contributions to the 401(k) Plans determined by the Company at its discretion for management employees and based on collective bargaining agreements for all other employees. For the 401(k) Plan years ended December 31, 2016, 2015 and 2014, the Company generally matched 100% of each employee's contribution up to 5% of compensation. Total Company contributions to all 401(k) Plans were \$8.9 million, \$8.8 million and \$9.5 million for the years ended December 31, 2016, 2015 and 2014, respectively.

### (12) Income Taxes

#### Income Tax (Expense)/Benefit

Income tax (expense)/benefit for the years ended December 31, 2016, 2015, 2014, respectively, consists of the following components (in thousands):

	Years Ended December 31,		
	2016	2015	2014
Current:			
Federal	\$ —	\$ —	\$ —
State and local	(240)	(203)	(86)
<b>Total current income tax expense</b>	<b>(240)</b>	<b>(203)</b>	<b>(86)</b>
Deferred:			
Federal	(35,179)	(1,501)	25,081
State and local	(7,430)	2,761	4,783
<b>Total deferred income tax (expense)/benefit</b>	<b>(42,609)</b>	<b>1,260</b>	<b>29,864</b>
<b>Total income tax (expense)/benefit</b>	<b>\$ (42,849)</b>	<b>\$ 1,057</b>	<b>\$ 29,778</b>

For the year ended December 31, 2016, the tax expense on \$146.9 million of pre-tax net income equates to an effective tax rate of 29.2%. The rate differs from the 35% federal statutory rate primarily due to a tax benefit associated with a decrease in the valuation allowance offset by a tax expense related to state taxes.

For the year ended December 31, 2015, the tax benefit on \$89.4 million of pre-tax net income equates to an effective tax rate of (1.2)%. The rate differs from the 35% federal statutory rate primarily due to a tax benefit associated with a decrease in the valuation allowance as well as a tax benefit related to state taxes.

For the year ended December 31, 2014, the tax benefit on \$166.1 million of pre-tax loss equates to an effective tax rate of 17.9%. The rate differs from the 35% federal statutory rate primarily due to tax expense associated with an increase in the valuation allowance offset by a tax benefit related to state taxes.

A reconciliation of the Company's statutory tax rate to its effective tax rate is presented below (in percentages):

	Years Ended December 31,		
	2016	2015	2014
<b>Statutory federal income tax/(benefit) rate<sup>(1)</sup></b>	<b>35.0 %</b>	<b>35.0 %</b>	<b>(35.0)%</b>
State income tax benefit, net of federal income tax	3.3	(1.9)	(2.1)
Other, net	0.7	0.2	0.3
Valuation allowance (benefit)/expense	(9.8)	(34.5)	18.9
<b>Effective income tax rate</b>	<b>29.2 %</b>	<b>(1.2)%</b>	<b>(17.9)%</b>

(1) The statutory federal income tax is an expense in 2016 and 2015 due to pre-tax net income for those years and the statutory federal income tax is a benefit in 2014 due to pre-tax net losses for the year ended December 31, 2014.

The effective tax rate reflected in accumulated other comprehensive income for the year ended December 31, 2016 is 23.2%. This effective tax rate is due to a tax benefit on other net comprehensive loss partially offset by tax expense associated with an increase in the valuation allowance.

#### Deferred Income Taxes

The tax effects of temporary differences that give rise to significant portions of the deferred tax assets and deferred tax liabilities as of December 31, 2016 and 2015 are presented below (in thousands):

	December 31, 2016	December 31, 2015
Deferred tax assets:		
Federal and state tax loss carryforwards	\$ 106,928	\$ 103,981
Employee benefits	107,152	115,531
Allowance for doubtful accounts	1,454	3,342
Alternative minimum tax and other state credits	4,299	5,094
Capitalized restructuring costs	2,326	2,739
Deferred revenue	3,636	4,414
Other, net	4,673	8,059
<b>Total gross deferred tax assets</b>	<b>230,468</b>	<b>243,160</b>
Deferred tax liabilities:		
Property, plant, and equipment	183,575	212,906
Goodwill and other intangible assets	26,184	29,588
Other, net	7,274	10,613
<b>Total gross deferred tax liabilities</b>	<b>217,033</b>	<b>253,107</b>
<b>Net deferred tax assets (liabilities) before valuation allowance</b>	<b>13,435</b>	<b>(9,947)</b>
Valuation allowance	(41,451)	(25,128)
<b>Net deferred tax liabilities</b>	<b>\$ (28,016)</b>	<b>\$ (35,075)</b>

At December 31, 2016, the Company had gross federal NOL carryforwards of \$285.0 million. The Company's remaining federal NOL carryforwards will expire from 2019 to 2036. At December 31, 2016, the Company had a net, after attribute reduction, state NOL deferred tax asset of \$11.6 million. The Company's remaining state NOL carryforwards will expire from 2017 to 2036. The amount that expired in 2016 was negligible. At December 31, 2016, the Company had a negligible alternative minimum tax credit carryover and had \$4.3 million in state credit carryovers. Telecom Group completed an initial public offering on February 8, 2005, which resulted

in an "ownership change" within the meaning of the United States of America federal income tax laws addressing NOL carryforwards, alternative minimum tax credits and other similar tax attributes. The Spinco Merger and the

Company's emergence from Chapter 11 protection also resulted in ownership changes. As a result of these ownership changes, there are specific limitations on the Company's ability to use its NOL carryforwards and other tax attributes. The Company believes it can use the NOLs even with these restrictions in place.

**Valuation Allowance.** At December 31, 2016 and 2015, the Company established a valuation allowance against its deferred tax assets of \$41.5 million and \$25.1 million, respectively, which consists of a \$29.2 million and \$14.7 million federal allowance, respectively, and a \$12.3 million and \$10.4 million state allowance, respectively. During 2016, an increase in the Company's valuation allowance of \$35.5 million was allocated to accumulated other comprehensive income in the consolidated balance sheet. During 2015, a decrease in the Company's valuation allowance of \$195.5 million was allocated to accumulated other comprehensive income in the consolidated balance sheet. During 2014, an increase in the Company's valuation allowance of \$58.3 million was allocated to accumulated other comprehensive income in the consolidated balance sheet.

The following is activity in the Company's valuation allowance for the years ended December 31, 2016, 2015 and 2014, respectively (in thousands):

	Years Ended December 31,		
	2016	2015	2014
<b>Balance, beginning of period</b>	\$ (25,128)	\$ (259,857)	\$ (166,773)
(Increase) decrease allocated to other comprehensive income	(35,511)	195,540	(58,254)
(Increase) decrease allocated to continuing operations	19,188	39,189	(34,830)
<b>Balance, end of period</b>	\$ (41,451)	\$ (25,128)	\$ (259,857)

**Unrecognized Tax Benefits.** As of December 31, 2016, the Company's total unrecognized tax benefits were \$4.0 million, which were recorded as a reduction of the Company's federal and state NOL carryforwards. The total unrecognized tax benefits that, if recognized, would affect the effective tax rate were \$3.8 million. The Company does not expect a significant increase or decrease in its unrecognized tax benefits during the next twelve months. A reconciliation of the beginning and ending amount of unrecognized tax benefits is as follows (in thousands):

<b>Balance as of December 31, 2014</b>	\$	4,035
Additions for tax positions of prior years		12
<b>Balance as of December 31, 2015</b>	\$	4,047
Additions for tax positions of prior years		—
<b>Balance as of December 31, 2016</b>	\$	4,047

The Company recognizes any interest and penalties accrued related to unrecognized tax benefits in income tax expense. During the year ended December 31, 2014, the Company made payments of interest and penalties in the amount of \$0.1 million. During the years ended December 31, 2016 and December 31, 2015, the Company did not make any payments of interest and penalties. There was nothing accrued in the consolidated balance sheets for the payment of interest and penalties at December 31, 2016 and 2015, respectively, as the remaining unrecognized tax benefits would only serve to reduce the Company's current federal and state NOL carryforwards, if ultimately recognized.

#### **Income Tax Returns**

The Company and its eligible subsidiaries file consolidated income tax returns in the United States of America federal jurisdiction and certain consolidated, combined and separate entity tax returns, as required, with various state and local governments. Based solely on statutes of limitations, the Company would not be subject to United States of America federal, state and local, or non-United States of America income tax examinations by tax authorities for years prior to 2012. However, tax years prior to 2012 may be subject to examination by federal or state taxing authorities if the Company's NOL carryovers from those years are utilized in the future. As of December 31, 2016 and 2015, the Company does not have any significant jurisdictional tax audits.

**(13) Accumulated Other Comprehensive Income**

Components of accumulated other comprehensive income, net of income tax, were as follows (in thousands):

	December 31, 2016	December 31, 2015
Accumulated other comprehensive income, net of taxes:		
Fair value of interest rate swaps	\$ (1,054)	\$ (2,160)
Qualified pension and other post-employment benefit plans	22,590	186,152
<b>Total accumulated other comprehensive income, net of taxes</b>	<b>\$ 21,536</b>	<b>\$ 183,992</b>

Other comprehensive income for the years ended December 31, 2016 and 2015, respectively, includes changes in the fair value of the Company's cash flow hedges, actuarial losses and prior service credits related to the qualified pension and other post-employment benefit plans arising during the respective periods and amortization of these actuarial losses and prior service credits. For further detail of amounts recognized in other comprehensive income related to the cash flow hedges, *see* note (9) "Interest Rate Swap Agreements" herein. For further detail of amounts recognized in other comprehensive income related to the qualified pension and other post-employment benefit plans, *see* note (11) "Employee Benefit Plans—Plan Assets, Obligations and Funded Status—Other Comprehensive Income" herein.

The following table provides a reconciliation of adjustments reclassified from accumulated other comprehensive income to the consolidated statement of operations (in thousands):

	Year Ended December 31, 2016
<b>Employee benefits:</b>	
Amortization of actuarial loss (.65 years to 11.47 years) <sup>(a)</sup>	\$ 87,240
Amortization of net prior service credit (.87 years to 23.91 years) <sup>(a)</sup>	(311,674)
Plan settlement <sup>(b)</sup>	629
Total employee benefits reclassified from accumulated other comprehensive income	(223,805)
Tax benefit <sup>(b)</sup>	52,214
Total employee benefits reclassified from accumulated other comprehensive income, net	\$ (171,591)
<b>Interest rate swaps:</b>	
Interest rate swaps reclassified from accumulated other comprehensive income <sup>(c)</sup>	\$ 2,446
Tax expense <sup>(b)</sup>	\$ (979)
Total interest rate swaps reclassified from accumulated other comprehensive income, net	\$ 1,467
<b>Total amounts reclassified from accumulated other comprehensive income, net</b>	<b>\$ (170,124)</b>

(a) These accumulated other comprehensive income components are included in the computation of net periodic benefit cost. *See* note (11) "Employee Benefit Plans" for details.

(b) *See* note (12) "Income Taxes" for details.

(c) These accumulated other comprehensive income components are included in interest expense. *See* note (9) "Interest Rate Swap Agreements" for details.

**(14) Earnings Per Share**

Basic earnings per share of the Company is computed by dividing net income/(loss) by the weighted average number of shares of common stock outstanding for the period. Except when the effect would be anti-dilutive, the diluted earnings per share calculation using the treasury stock method includes the impact of stock units, shares of non-vested restricted stock and shares that could be issued under outstanding stock options.

Weighted average number of common shares used for basic earnings per share excludes weighted average shares of non-vested restricted stock of 199,222, 232,274 and 235,462 for the years ended December 31, 2016, 2015 and 2014, respectively. Non-vested restricted stock is included in common shares issued and outstanding in the consolidated balance sheets.

Potentially dilutive shares exclude warrants and stock options in accordance with the treasury stock method primarily due to exercise prices exceeding the average market value. Since the Company incurred a loss for the year ended December 31, 2014, all potentially dilutive securities are anti-dilutive and, therefore, are excluded from the determination of diluted earnings per share.

The following table provides a reconciliation of the common shares used for basic earnings per share and diluted earnings per share:

	Years Ended December 31,		
	2016	2015	2014
Weighted average number of common shares used for basic earnings per share	26,854,396	26,652,240	26,449,408
Effect of potential dilutive shares	265,041	320,639	—
<b>Weighted average number of common shares and potential dilutive shares used for diluted earnings per share</b>	<b>27,119,437</b>	<b>26,972,879</b>	<b>26,449,408</b>
Weighted average number of anti-dilutive shares outstanding at period-end that are excluded from the above reconciliation	3,916,342	4,141,096	4,463,364

#### (15) Stockholders' Deficit

At December 31, 2016, 37,500,000 shares of common stock were authorized and 27,074,398 shares of common stock (including shares of non-vested restricted stock) and 3,582,402 warrants, each eligible to purchase one share of common stock, were outstanding.

The initial exercise price applicable to the warrants is \$48.81 per share of common stock. The exercise price applicable to the warrants is subject to adjustment upon the occurrence of certain events described in the warrant agreement. The warrants may be exercised at any time on or before January 24, 2018.

#### (16) Stock-Based Compensation

Stock-based compensation expense recognized in the financial statements is as follows (in thousands):

	Years Ended December 31,		
	2016	2015	2014
Amounts charged against income, before income tax benefit	\$ 6,291	\$ 6,357	\$ 4,274
Amount of related income tax benefit recognized in income	(2,516)	(2,529)	(1,714)
<b>Total net income/loss impact</b>	<b>\$ 3,775</b>	<b>\$ 3,828</b>	<b>\$ 2,560</b>

At December 31, 2016, the Company had \$5.6 million of stock-based compensation cost related to non-vested awards that will be recognized over a weighted average period of 1.75 years, all of which is related to awards granted under the Long Term Incentive Plan.

#### *Long Term Incentive Plan*

The Long Term Incentive Plan provides for grants of up to 5,674,277 shares of common stock awards, of which stock options, restricted stock awards and performance share awards and other types of equity awards can be granted. As of December 31, 2016, there are 1,423,409 shares available for grant under the Long Term Incentive Plan. Each stock option granted reduces the availability under the Long Term Incentive Plan by one share. Prior to the approval of the amendment and restatement of the Long Term Incentive Plan by the Company's stockholders on May 12, 2014, each restricted stock award granted reduced the availability under the Long Term Incentive Plan by one share and on or after May 12, 2014 each restricted stock award granted reduces the availability by 1.35 shares. Upon the exercise of each stock option or vesting of each restricted share award, one new share of common stock will be issued.

For the years ended December 31, 2016, 2015 and 2014, the Company granted shares of restricted stock and stock options with one of the following vesting terms: (i) vest immediately; (ii) vest 100% on the first anniversary; (iii) vest over three equal annual installments, with one-third vesting on the first anniversary of the grant date and one-third on the second and third anniversaries thereafter or (iv) vest 25% immediately and 25% on the first, second and third anniversaries thereafter. In addition,

for the year ended December 31, 2016, the Company granted performance share awards that vest at the end of a three-year performance period based upon achievement of certain market (total shareholder return) and non-market (growth revenue) performance measures.

**Stock Options.** Stock options have a term of 10 years from the date of grant; however, vested stock options will generally expire 90 days after an employee's termination with the Company, unless the Company is in a blackout period. Stock option activity under the Long Term Incentive Plan is summarized as follows:

	Options Outstanding	Weighted Average Exercise Price Per Share	Weighted Average Remaining Contractual Life (in years)
<b>Outstanding at December 31, 2013</b>	<b>1,399,123</b>	<b>\$ 16.74</b>	
Granted <sup>(a)</sup>	462,374	13.31	
Exercised	(51,050)	6.28	
Forfeited	(2,005)	4.31	
Expired	(33,597)	23.65	
<b>Outstanding at December 31, 2014</b>	<b>1,774,845</b>	<b>\$ 16.03</b>	
Granted <sup>(a)</sup>	620,843	14.74	
Exercised <sup>(b)</sup>	(210,638)	10.07	
Forfeited	(83,495)	13.41	
Expired	(70,943)	24.07	
<b>Outstanding at December 31, 2015</b>	<b>2,030,612</b>	<b>\$ 16.08</b>	
Granted <sup>(a)</sup>	531,975	14.57	
Exercised <sup>(b)</sup>	(178,650)	10.27	
Forfeited	(96,592)	14.35	
Expired	(115,875)	23.58	
<b>Outstanding at December 31, 2016</b>	<b>2,171,470</b>	<b>\$ 15.87</b>	<b>6.5</b>
<b>Exercisable at December 31, 2016 <sup>(c)</sup></b>	<b>1,492,405</b>	<b>\$ 16.49</b>	<b>5.6</b>
<b>Vested and Expected to Vest at December 31, 2016 <sup>(d)</sup></b>	<b>2,148,754</b>	<b>\$ 15.88</b>	<b>6.5</b>

(a) During the years ended December 31, 2016, 2015 and 2014, the weighted average grant date fair value of stock options granted was \$4.3 million, \$5.4 million and \$3.2 million, respectively. For purposes of determining compensation expense, the grant date fair value per share of the stock options was estimated using the Black-Scholes option pricing model which requires the use of various assumptions including the expected life of the option, expected dividend rate, expected volatility and risk-free interest rate. Key assumptions used for determining the fair value of stock options granted were as follows:

	Years Ended December 31,		
	2016	2015	2014
Expected life <sup>(1)</sup>	5.5 - 6.5 years	5.5 - 6.5 years	5.5 - 6.5 years
Expected dividend <sup>(2)</sup>	—	—	—
Expected volatility <sup>(3)</sup>	55.1%	59.6%	51.0%
Risk-free interest rate <sup>(4)</sup>	1.40% - 1.76%	1.35% - 2.02%	1.63% - 2.19%

(1) The 5.5-year and 6.5-year expected lives (estimated period of time outstanding) of stock options granted were estimated using the 'Simplified Method' which utilizes the midpoint between the vesting date and the end of the contractual term. This method was utilized for the stock options due to the lack of historical exercise behavior of the Company's employees.

(2) For all stock options granted during 2016, 2015 and 2014, no dividends are planned to be paid over the contractual term of the stock options resulting in the use of a zero expected dividend rate.

(3) The expected volatility rate is based on the observed historical volatilities of the Company's common stock and

observed historical and implied volatilities of comparable companies, which were adjusted to account for the various differences between the comparable companies and the Company.

- (4) The risk-free interest rate is specific to the date of grant and is based on the United States Treasury constant maturity market yield in effect at the time of the grant.
- (b) During the years ended December 31, 2016 and 2015, the total intrinsic value of stock options that were exercised was \$0.9 million and \$1.7 million, respectively.
- (c) Based upon a fair market value of the common stock as of December 30, 2016 of \$18.70 per share, the stock options that are exercisable have an aggregate intrinsic value (equal to the value of in-the-money stock options above their respective exercise price) of \$6.5 million.
- (d) Based upon a fair market value of the common stock as of December 30, 2016 of \$18.70 per share, the stock options that have vested and are expected to vest have an aggregate intrinsic value (equal to the value of in-the-money stock options above their respective exercise price) of \$9.2 million.

Based upon the respective grant fair value, the aggregate fair value of stock options that vested during the years ended December 31, 2016, 2015, and 2014 was \$3.2 million, \$2.7 million, and \$2.9 million, respectively.

*Time-Based Restricted Stock Awards.* Restricted stock award activity under the Long Term Incentive Plan is summarized as follows:

	Awards Outstanding	Weighted Average Grant Date Fair Value Per Share
<b>Non-vested at December 31, 2013</b>	<b>264,655</b>	<b>\$ 12.64</b>
Granted <sup>(a)</sup>	216,586	13.21
Vested <sup>(b)</sup>	(249,205)	13.58
<b>Non-vested at December 31, 2014</b>	<b>232,036</b>	<b>\$ 12.15</b>
Granted <sup>(a)</sup>	161,011	15.06
Vested <sup>(b)</sup>	(156,445)	12.52
Forfeited	(10,550)	\$ 12.21
<b>Non-vested at December 31, 2015</b>	<b>226,052</b>	<b>\$ 13.97</b>
Granted <sup>(a)</sup>	175,735	14.68
Vested <sup>(b)</sup>	(158,469)	13.89
Forfeited	(47,350)	14.42
<b>Non-vested at December 31, 2016</b>	<b>195,968</b>	<b>\$ 14.56</b>

- (a) The grant date fair value per share of the restricted stock awards under the Long Term Incentive Plan was calculated as the fair market value per share of the common stock on the date of grant. During the years ended December 31, 2016, 2015 and 2014, the weighted average grant date fair value of restricted stock awards granted was \$2.6 million, \$2.4 million, and \$2.9 million, respectively.
- (b) Based upon the respective grant date fair value, the aggregate fair value of restricted stock which vested during the years ended December 31, 2016, 2015 and 2014 was \$2.2 million, \$2.0 million and \$3.4 million, respectively.

*Performance Share Awards.* Performance share awards activity under the Long Term Incentive Plan is summarized as follows:

	Awards Outstanding	Weighted Average Grant Date Fair Value Per Share
<b>Non-vested at December 31, 2014</b>	<b>—</b>	<b>\$ —</b>
Granted <sup>(a)</sup>	149,500	12.87
Forfeited	(18,443)	12.82
<b>Non-vested at December 31, 2015</b>	<b>131,057</b>	<b>\$ 12.87</b>
Granted <sup>(a)</sup>	126,000	11.88
Forfeited	(38,278)	12.38
<b>Non-vested at December 31, 2016</b>	<b>218,779</b>	<b>\$ 12.39</b>

- (a) During the years ended December 31, 2016 and 2015, the weighted average grant date fair value of performance share

awards granted was \$1.5 million and \$1.9 million, respectively. The grant date fair value of the non-market portion of the performance share awards was calculated as the fair market value of the common stock on the date of grant. For

purposes of determining compensation expense for the market portion of the performance share awards, the grant date fair value was estimated using the Monte Carlo valuation model.

## (17) Business Concentrations

### *Geographic*

As of December 31, 2016, 83% of the Company's residential voice lines were located in Maine, New Hampshire and Vermont. As a result of this geographic concentration, the Company's financial results will depend significantly upon economic conditions in these markets. A deterioration or recession in any of these markets could result in a decrease in demand for the Company's services and a resulting loss of access line equivalents which could have a material adverse effect on the Company's business, financial condition, results of operations, liquidity and/or the market price of the Company's outstanding securities.

In addition, if state regulators in Maine, New Hampshire or Vermont were to take an action that is adverse to the Company's operations in those states, the Company could suffer greater harm from that action by state regulators than it would from action in other states because of the concentration of operations in those states.

### *Labor*

As of December 31, 2016, the Company employed approximately 2,500 employees, approximately 1,500, or 60%, of whom were covered by 13 collective bargaining agreements.

## (18) Commitments and Contingencies

### *(a) Leases*

The Company currently leases real estate and network equipment under capital and operating leases expiring through the year ending 2039. The Company accounts for leases using the straight-line method, which amortizes contracted total payments evenly over the lease term.

Future minimum lease payments under capital leases and non-cancelable operating leases as of December 31, 2016 are as follows (in thousands):

	<u>Capital Leases</u>	<u>Operating Leases</u>
Year ending December 31:		
2017	\$ 1,279	\$ 6,644
2018	921	4,607
2019	554	2,912
2020	224	1,895
2021	56	962
Thereafter	—	739
<b>Total minimum lease payments</b>	<b>\$ 3,034</b>	<b>\$ 17,759</b>
Less: interest and executory cost	(496)	
<b>Present value of minimum lease payments</b>	<b>2,538</b>	
Less: current installments	(1,227)	
<b>Long-term obligations at December 31, 2016</b>	<b>\$ 1,311</b>	

Total rent expense primarily for real estate, vehicles and office equipment was \$9.4 million, \$9.4 million and \$9.8 million for the years ended December 31, 2016, 2015 and 2014, respectively.

The Company does not have any leases with contingent rental payments or any leases with contingency renewal, purchase options, or escalation clauses.

### *(b) Legal Proceedings*

From time to time, the Company is party to various other legal and regulatory proceedings in the ordinary course of business. The Company is a defendant in approximately 16 lawsuits filed by two long distance communications companies, who as plaintiffs

have collectively filed over 60 lawsuits arising from switched access charges for calls originating and terminating within the same wireless major trading area. These cases have all been consolidated and transferred to federal district court (the "Court") in Dallas.

Texas. The defendants filed joint motions to dismiss these actions. On November 17, 2015, the Court granted the defendants' motions dismissing the plaintiffs' federal law based claims with prejudice. The state law based claims were allowed to be amended and refiled. The Court denied the plaintiffs' request for an immediate appeal of the dismissal of the federal law based claims. Counterclaims against the plaintiffs for the failure to pay these access charges have been filed by the Company. The Company and some of the co-defendants have filed lawsuits against a third long distance communications company for the failure to pay this same type of access charge. These additional lawsuits have also been consolidated and transferred to the Court. Additional motions have been filed by the plaintiffs and defendants, which are still pending. At this time, an estimate of the impact, if any, of these claims cannot be made.

See also "Class Action Complaint" under note (20) "Subsequent Events" herein.

While management presently believes that the ultimate outcome of these proceedings, individually and in the aggregate, will not materially harm the Company's financial position, cash flows, or overall trends in results of operations, legal proceedings are inherently uncertain, and unfavorable rulings could, individually or in aggregate, have a material adverse effect on the Company's business, financial condition, or operating results.

**(c) Restricted Cash**

As of December 31, 2016 and 2015, the Company had \$0.7 million and \$0.7 million, respectively, of restricted cash, which is restricted for regulatory purposes and is included in long-term restricted cash on the consolidated balance sheets.

**(19) Quarterly Financial Information (Unaudited)**

The quarterly information presented below represents selected quarterly financial results for the quarters ended March 31, June 30, September 30, and December 31, 2016 and 2015 (in thousands, except per share data).

2016	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
Revenue	\$ 206,816	\$ 206,557	\$ 207,141	\$ 203,929
Other post-employment benefit and pension (benefit)/expense (1)	(53,228)	(53,486)	(67,428)	(39,618)
Net income (2)	18,568	29,315	40,207	16,005
Income/(loss) per share:				
Basic	\$ 0.69	\$ 1.09	\$ 1.50	\$ 0.60
Diluted	\$ 0.68	\$ 1.08	\$ 1.48	\$ 0.59

2015	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
Revenue	\$ 213,974	\$ 214,098	\$ 221,569	\$ 209,824
Other post-employment benefit and pension (benefit)/expense (1)	(6,898)	(52,460)	(57,568)	(53,412)
Net income/(loss) (2)	(45,213)	40,265	53,054	42,310
Loss per share:				
Basic	\$ (1.70)	\$ 1.51	\$ 1.99	\$ 1.59
Diluted	\$ (1.70)	\$ 1.49	\$ 1.96	\$ 1.56

(1) Presented for comparative purposes.

(2) The Company generated net income beginning in the second quarter of 2015 largely due to the remeasurement of the employee benefit plans in the first quarter of 2015 as described further in note (11) "Employee Benefit Plans."

**(20) Subsequent Events*****Class Action Complaint***

On February 7, 2017, an alleged class action complaint was filed by a purported stockholder of FairPoint Communications in the United States District Court for the Western District of North Carolina (Case No. 3:17-cv-51) against FairPoint Communications, its directors, Consolidated and Merger Sub. Among other things, the complaint alleges that the disclosures in the Form S-4 Registration Statement filed by Consolidated with the Securities and Exchange Commission on January 26, 2017 in connection with the Merger are materially incomplete and misleading in violation of Sections 14(a) and 20(a) of the Exchange Act. The plaintiff seeks to enjoin the defendants from consummating the Merger on the agreed-upon terms or alternatively, to rescind the Merger in the event the defendants consummate the Merger, in addition to damages and attorney fees and costs. FairPoint Communications and the other defendants have not yet filed an answer or other responsive pleading to the complaint.

**ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE**

None.

**ITEM 9A. CONTROLS AND PROCEDURES*****(a) Evaluation of Disclosure Controls and Procedures***

As of the end of the period covered by this Annual Report, we carried out an evaluation under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, of the effectiveness of our "disclosure controls and procedures" (as defined in Rule 13a-15(e) of the Exchange Act). Disclosure controls and procedures are controls and other procedures of an issuer that are designed to ensure that information required to be disclosed by the issuer in the reports that it files or submits under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the rules and forms of the SEC.

Based upon this evaluation, our principal executive officer and principal financial officer have concluded that our disclosure controls and procedures were effective as of December 31, 2016.

***(b) Changes in Internal Control Over Financial Reporting***

There have been no changes in our internal control over financial reporting during the quarter ended December 31, 2016 that have materially affected or are reasonably likely to materially affect our internal control over financial reporting.

See "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report for the Report of Management on Internal Control over Financial Reporting and the Report of Independent Registered Public Accounting Firm on Internal Control over Financial Reporting, each of which is incorporated herein by reference.

**ITEM 9B. OTHER INFORMATION**

Not applicable.

## PART III

## ITEM 10. DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE

*Directors*

The following table sets forth the names and ages of our directors, with the exception of Mr. Sunu, as of December 31, 2016.

<u>Name</u>	<u>Age</u>
Peter D. Aquino	55
Dennis J. Austin	72
Peter C. Gingold	43
Edward D. Horowitz	69
Michael J. Mahoney	66
Michael K. Robinson	59
David L. Treadwell	62
Wayne Wilson	67

*Peter D. Aquino*—Mr. Aquino has served as President and CEO of Internap Corporation ("Internap") (NASDAQ: INAP) since September 2016. Mr. Aquino held leadership positions in both public and private companies, specializing in turnarounds, start-ups and emerging markets. He is the founder of Broad Valley Capital, LLC, focused on companies needing both telecommunications expertise and capital. Mr. Aquino previously served as the Executive Chairman of Primus Telecom Group, Inc. ("PTGI") (NYSE: PTGI) until April 30, 2013, transitioning from chairman and CEO after nearly a three-year assignment with the international telecommunications company. Prior to PTGI, Mr. Aquino was the President and CEO of RCN Corporation (formerly NASDAQ: RCNI) from December 2004 until its go-private sale in August 2010. Mr. Aquino formerly served as chairman of the United Way Worldwide - U.S. Board of Trustees through 2015 and as a board member of TiVo, Inc. (NASDAQ: TIVO) through 2016. Mr. Aquino currently serves as a board member of Internap and Lumos Networks Corp. (NASDAQ: LMOS). Mr. Aquino is a graduate of Montclair State College in New Jersey and has a Masters of Business Administration from George Washington University in Washington, DC.

We believe Mr. Aquino's qualifications to serve on our board include his leadership background in the communications industry, including his experience from both an operational and financial perspective and his service as a member of the board of directors of two other publicly-traded companies.

*Dennis J. Austin*—Mr. Austin has served as an independent telecommunications consultant since 2002. Mr. Austin previously served as a consultant at BearingPoint, formerly KPMG Consulting and formerly KPMG LLP, from 1995 to 2002 and as vice president at San Francisco Consulting Group ("SFCG") from 1985 to 1995. Prior to joining SFCG, Mr. Austin was vice president of engineering with Dataspeed Inc. from 1983 to 1985 and director of switch engineering, network planning and design at GTE Sprint from 1977 to 1983. Prior to joining GTE Sprint, Mr. Austin served as a member of the technical staff with Bell Telephone Laboratories from 1966 to 1977. Mr. Austin holds a Ph.D. in electrical engineering from Stanford University.

We believe Mr. Austin's qualifications to serve on our board include his significant consulting and leadership experience in the telecommunications industry, as well as his strong technical and product background.

*Peter C. Gingold*—Mr. Gingold joined Angelo, Gordon & Co. ("Angelo Gordon") in May of 2007 as a vice president and became a director of Angelo Gordon in February 2011, in each case focusing in distressed and leverage credit. Mr. Gingold became a managing director of Angelo Gordon in February 2014. Mr. Gingold's background includes significant management experience across several operational roles, positions as an investment banker and functions related to corporate development and strategy. Mr. Gingold currently serves as a board member of C&D Technologies, Inc. He holds a Bachelor of Science degree from Cornell University and a Master of Business Administration degree from the Columbia Business School.

We believe Mr. Gingold's qualifications to serve on our board include his extensive understanding of equity and debt capital markets, as well as his current and past positions on the boards or as a board observer of other companies.

*Edward D. Horowitz*—Mr. Horowitz currently serves as our chair of the board of directors. Mr. Horowitz is chairman of EdsLink LLC, a New York City based venture capital firm, which he founded in 2000 and is also a director of Globecom Systems Inc. and the First Responder Network Authority. He served as co-CEO of Encompass Digital Media, a global operator of satellite teleports and

digital content management from January 2013 through March 2014 and on its board from 2010 through 2014. Mr. Horowitz served as president and CEO of SES-Americom, a communications satellite operator and as a member of the executive

committee of its parent company, SES (SESG, Lux.) from 2005 to 2008. Before founding EdsLink LLC, Mr. Horowitz was executive vice president of Advanced Development at Citigroup from 1997 through 2000 and was the founder and chairman of e-Citi. Prior to joining Citigroup, from 1989 to 1997, Mr. Horowitz was a senior vice president of Viacom Inc. and a member of its operating committee. Mr. Horowitz is a trustee of the New York Hall of Science and the American Management Association. He received a Bachelor of Science degree in physics from the City College of New York and a Master of Business Administration degree from the Columbia Business School.

We believe Mr. Horowitz's qualifications to serve on our board include his breadth of leadership experience in the communications industry, as well as his current and past service on the boards of other companies.

*Michael J. Mahoney*—Mr. Mahoney previously served as president and CEO of Commonwealth Telephone Enterprises, Inc. ("Commonwealth Telephone") from 2000 to 2007. Prior to joining Commonwealth Telephone, Mr. Mahoney served as president and chief operating officer of RCN Corporation from 1997 to 2000 and as president and chief operating officer of C-TEC Corporation from 1993 to 1997. Mr. Mahoney currently serves as a director of Level 3 Communications, Inc. (NYSE: LVL3). He received a Bachelor of Science degree in accounting from Villanova University.

We believe Mr. Mahoney's qualifications to serve on our board include his extensive management, operational and financial experience in telecommunications and specifically in businesses similar to ours, his significant regulatory experience and expertise and his service as a director of another publicly-traded company.

*Michael K. Robinson*—Mr. Robinson has served as president and CEO since 2005, and as a director since 2009, of Broadview Networks, Inc. ("Broadview"). Broadview executed a pre-packaged Chapter 11 restructuring in the third quarter of 2012 and exited bankruptcy in November 2012. Mr. Robinson previously served as executive vice president and chief financial officer ("CFO") of US LEC (which is now part of Windstream Corporation) from 1998 to 2005. Prior to 1998, Mr. Robinson spent 10 years as an executive at Alcatel (now Alcatel-Lucent). Mr. Robinson also serves as a director of Lumos Networks Corp. (NASDAQ: LMOS). Mr. Robinson received a bachelor's degree in Business and Economics from Emory & Henry College and a Master of Business Administration degree from Wake Forest University.

We believe Mr. Robinson's prior experience in telecommunications, from an operational, strategic and financial perspective, adds significant perspective to the changing market for communication services.

*David L. Treadwell*—Mr. Treadwell has been a director of FairPoint since 2011 and serves on a number of other boards in various industries. Mr. Treadwell currently serves on the board of directors of two other publicly traded companies: Flagstar Bancorp, Inc. (NYSE: FBC) and Visteon Corporation (NYSE: VC). He also serves as chairman of the following privately held firms: Revere Industries, LLC, AGY, LLC, WinCorp LLC, U.S. Well Services LLC and Grow Michigan, LLC. Mr. Treadwell also serves on the board of directors of C&D Technologies, Inc. He previously served as president and CEO of EP Management Corporation, formerly known as EaglePicher Corporation, from 2006 through 2011. Mr. Treadwell was EaglePicher Corporation's chief operating officer from 2005 to 2006. Prior to that, he served as CEO of Oxford Automotive, Inc. in 2004 to 2005 through its restructuring. Mr. Treadwell received a Bachelor of Business Administration degree from the University of Michigan, Ann Arbor.

We believe Mr. Treadwell's qualifications to serve on our board include his strong operational and leadership skills and his previous experience outside of the telecommunications industry, as well as his previous experience as a turn-around agent for businesses seeking strategic alternatives.

*Wayne Wilson*—Mr. Wilson, a New Hampshire resident, has been an independent business advisor since 2002. From 1995 to 2002, Mr. Wilson served in various roles as president, chief operating officer and CFO of PC Connection, Inc., a Fortune 1000 direct marketer of information technology products and services. From 1986 to 1995, Mr. Wilson was a partner in the assurance and advisory services practice of Deloitte & Touche LLP. He previously served as a director of ARIAD Pharmaceuticals, Inc. (NASDAQ: ARIA), Edgewater Technology, Inc. (NASDAQ: EDGW), Hologic, Inc. (NASDAQ: HOLX) and Cytoc Corporation. Mr. Wilson received a Bachelor of Arts degree in political science from Duke University and a Master of Business Administration degree from the University of North Carolina at Chapel Hill. He is a certified public accountant in New Hampshire and North Carolina.

We believe Mr. Wilson's qualifications to serve on our board include his strong accounting and finance understanding gained from years as a certified public accountant in industry and with a major public accounting firm. This allows him to provide leadership to our audit committee. Mr. Wilson's qualifications also include his experience as a director on the boards of multiple publicly-traded companies. Mr. Wilson also fulfills the regulatory requirement that at least one member of our board reside in northern New England, as Mr. Wilson is a resident of New Hampshire.

## Executive Officers

The following table sets forth the names and positions of our current executive officers and their ages as of December 31, 2016.

Name	Age	Position
Paul H. Sunu	60	Director and Chief Executive Officer
Karen D. Turner	48	Executive Vice President and Chief Financial Officer
Bruce F. Metge	60	Executive Vice President and Chief Legal Officer
Peter G. Nixon	64	Executive Vice President, Revenue and External Affairs
John J. Lunny	53	Executive Vice President and Chief Technology Officer
Steven G. Rush	59	Executive Vice President, Northern New England Operations
John T. Hogshire	55	Senior Vice President and Controller

The following sets forth selected biographical information for our executive officers.

*Paul H. Sunu*—Mr. Sunu has served as our CEO since August 2010, prior to which he was CFO of Hargray Communications Group, Inc., a position he had held since 2008. Mr. Sunu was CFO of Hawaiian Telecom Communications, Inc. from 2007 to 2008 and a managing director and CFO of Madison River Communications Corp. from 1996 to 2007. He currently serves as the vice-chairman of the board of directors of Electric Lightwave Communications, Inc. and is a former board member of Madison River Communications Corp., Hawaiian Telecom Communications, Inc. and Centennial Communications Corp. He received a Bachelor of Arts degree in public administration from the University of Illinois and a J.D. from the University of Illinois College of Law.

We believe Mr. Sunu's role as our CEO makes him uniquely qualified to serve on our board, as he brings the day to day knowledge of our business to the board and shares his strategic vision with the board as it provides oversight and policy direction for the Company.

*Karen D. Turner*. In August 2016, Ms. Turner was appointed as our Executive Vice President and Chief Financial Officer. In this role, Ms. Turner oversees our financial, human resources and risk management functions. Ms. Turner was recently Executive Vice President, Operational Support from January 2016 until August 2016 and prior to that, was Senior Vice President, Strategy and Business Support from December 2014 until January 2016. Ms. Turner joined us in May 2014 as Vice President, Strategy and Business Support and served in that role until December 2014. Prior to joining FairPoint, Ms. Turner previously served as Vice President of Global Business Finance from 2011 to 2014 and Corporate Controller from 2008 to 2011 at INC Research, LLC. Ms. Turner has more than 20 years of experience in finance, accounting, operational support and administration.

*Bruce F. Metge*. In September 2016, Mr. Metge was appointed as our Executive Vice President and Chief Legal Officer. Mr. Metge brings to FairPoint more than 35 years of legal experience having served as General Counsel for several public and private companies and in private practice. He most recently served as General Counsel for Hillcrest Laboratories, Inc., a firm specializing in complex motion sensing software used throughout the world in television monitors, virtual reality and telecommunication devices. Prior to Hillcrest, Metge worked as General Counsel and Chief Compliance Officer for Catalyst Health Solutions, Inc., a publicly traded administrator of the prescription drug component of overall health benefit programs, and previous to that, he was a Partner at Mintz, Levin, Cohn, Ferris, Glovsky and Popeo, P.C. He has a bachelor's degree in Public Policy from Duke University and a J.D. from Northwestern University School of Law. He has bar memberships in the District of Columbia, Illinois and Massachusetts.

*Peter G. Nixon*. In January 2016, Mr. Nixon was appointed as our Executive Vice President, Revenue and External Affairs. Mr. Nixon is responsible for revenue, regulatory and governmental affairs activities. Previously, since July 2011, Mr. Nixon served as Executive Vice President, External Affairs and Operational Support. From July 2007 to July 2011 Mr. Nixon served as our President. Prior to July 2007, Mr. Nixon had served as our Chief Operating Officer since November 2002. Previously, Mr. Nixon was our Senior Vice President of Corporate Development from February 2002 to November 2002 and President of our Telecom Group from April 2001 to February 2002. Prior to this, Mr. Nixon served as President of our Eastern Region, Telecom Group from June 1999 to April 2001 and President of Chautauqua and Erie Telephone Corporation, which we refer to as C&E, from July 1997, when we acquired C&E, to June 1999. From April 1989 to June 1997, Mr. Nixon served as Executive Vice President of C&E. From April 1978 to March 1989, Mr. Nixon served as Vice President of Operations for C&E. Mr. Nixon served as the past chairman of the New York State Telecommunications Association from June 1996 to June 1998.

*John J. Lunny*. In August 2015, Mr. Lunny was appointed as our Executive Vice President and Chief Technology Officer. Mr. Lunny is responsible for voice and data network architecture, data center operations, IT, engineering and provisioning, as well as project management and product development. Mr. Lunny has 27 years of network operations, engineering and service delivery experience in the communications industry. He joined us in 2008 as director of sales engineering and was promoted to vice president

of network planning in 2009, Senior Vice President of Planning and Engineering in 2010 and Senior Vice President and Chief Technology Officer before moving into his current position in 2015. Prior to joining us, Mr. Lunny was senior director of service delivery at Comcast Business Services and before that he spent 13 years at Level 3 Communications, Inc. in operations, where he took on roles of increasing responsibility and became vice president of operations for the northeast region. Mr. Lunny also worked in sales engineering and operations at Reliance CommTec / Lorain Power. He began his career in Network Operations for AT&T.

*Steven G. Rush.* In August 2015, Mr. Rush was appointed as our Executive Vice President, Northern New England Operations. Mr. Rush is responsible for operational leadership of our northern New England properties. Mr. Rush was most recently Senior Vice President, Northern New England Operations and prior to December 2014 he was Senior Vice President, Customer Care and Network Assurance for us. Prior to joining us in 2007, Mr. Rush was Vice President of the Technical Network for INFONXX. Mr. Rush spent 26 years with AT&T in roles of increasing responsibility and tackled many challenges including mobilizing and coordinating restoral of the telecommunications network serving the New York Stock Exchange following the events of September 11, 2001. In his last role with AT&T, he was Vice President of Network Operations. He began his career as a Fire Control Technician in the U.S. Navy specializing in the Advanced Electronics and Electricity division.

*John T. Hogshire.* In April 2014, Mr. Hogshire was appointed as our Senior Vice President and Controller. Previously, Mr. Hogshire served as our Vice President and Controller from September 2010 to April 2014. Mr. Hogshire previously served as the Director of Accounting for Aviat Networks from July 2008 to September 2010, as a Consultant with Aviat Networks from January 2008 to July 2008 and as Vice President—Controller of Madison River Communications Corp. from December 1998 to July 2007.

#### **Section 16(a) Beneficial Ownership Reporting Compliance**

Section 16(a) of the Securities Exchange Act of 1934 requires our officers and directors, and persons who own, or are part of a group that owns, more than 10% of a registered class of our equity securities, to file reports of ownership and changes in ownership with the SEC and NASDAQ. Officers, directors and beneficial owners of more than 10% of our common stock are required by regulation of the SEC to furnish us with copies of all Section 16(a) forms they file.

Based solely on our review of Forms 3, 4 and 5 and amendments thereto available to us and other information obtained from our directors, officers and beneficial owners of more than 10% of our common stock or otherwise available to us, we believe that no director, officer or beneficial owner of more than 10% of our common stock failed to file on a timely basis reports required pursuant to Section 16(a) of the Exchange Act for fiscal year 2016.

#### **Codes of Ethics**

##### *Code of Business Conduct and Ethics*

We have adopted a code of business conduct and ethics that applies to all of our employees, including our principal executive officer, principal financial officer and principal accounting officer. This code of business conduct and ethics is designed to comply with the SEC regulations and the NASDAQ listing standards related to codes of conduct and ethics and is posted on our corporate website at [www.fairpoint.com](http://www.fairpoint.com) on the "Investor Relations" page, under the "Corporate Governance" caption. A copy of our code of business conduct and ethics, which was updated in November 2015, is available free of charge upon request directed to our secretary at: Secretary, FairPoint Communications, Inc., 521 East Morehead Street, Suite 500, Charlotte, North Carolina 28202.

##### *Code of Ethics for Financial Professionals*

We have also adopted a code of ethics for financial professionals as required by the SEC under Section 406 of the Sarbanes—Oxley Act of 2002. This code sets forth written standards that are designed to deter wrongdoing and to promote honest and ethical conduct by our senior financial officers, including our CEO, and is a supplement to our code of business conduct and ethics. In addition to applying to our CEO, CFO, Chief Accounting Officer and Treasurer, this code applies to all of the other persons employed by us who have significant responsibility for preparing or overseeing the preparation of our financial statements and the other financial data included in our periodic reports filed with the SEC and in other public communications made by us that are designated from time to time by our CFO as senior financial professionals. Our code of ethics for financial professionals is posted on our corporate website at [www.fairpoint.com](http://www.fairpoint.com) on the "Investor Relations" page, under the "Corporate Governance" caption. A copy of our code of ethics for financial professionals is available free of charge upon request directed to our secretary at: Secretary, FairPoint Communications, Inc., 521 East Morehead Street, Suite 500, Charlotte, North Carolina 28202.

## Corporate Governance

### *Nomination of Directors*

There have been no material changes to the procedures by which shareholders may recommend nominees to our board of directors.

### *Audit Committee*

Our board of directors has a separately designated standing audit committee. Our audit committee members are: Wayne Wilson (chair), Peter D. Aquino, Dennis J. Austin and Michael K. Robinson. Messrs. Wilson and Robinson are qualified as audit committee financial experts within the meaning of item 407(d)(5)(ii) of Regulation S-K under the Securities Exchange Act of 1934 (the "Exchange Act") and our board of directors has determined that they have the requisite accounting and related financial management expertise within the meaning of the listing standards of the NASDAQ. Messrs. Wilson and Robinson satisfy the independence criteria and each have the qualifications set forth in the listing standards of the NASDAQ and the applicable provisions of the Exchange Act. The SEC has determined that the audit committee financial expert designation does not impose on any person with that designation any duties, obligations or liability that are greater than the duties, obligations or liability imposed on such person as a member of the audit committee of the board of directors in the absence of such designation.

## ITEM 11. EXECUTIVE COMPENSATION

Our executive compensation is presented in the following sections:

- Compensation Discussion and Analysis
- 2016 Summary Compensation Table
- Grants of Plan-Based Awards for 2016
- Outstanding Equity Awards at December 31, 2016
- Option Exercises and Stock Vested for 2016
- Potential Payments Upon Termination or Change in Control
- Director Compensation
- Compensation Committee Interlocks and Insider Participation
- Compensation Committee Report

### Compensation Discussion and Analysis

#### General Principles and Procedures

##### *Executive Summary*

Our executive compensation program is designed to attract, motivate and retain top executives and managerial talent and to reward our executives and managers for delivering results that will build sustainable growth and value for our shareholders over the long-term. We believe our compensation program aligns the interests of our executives with those of our shareholders by tying short- and long-term incentive compensation directly to the Company's achievement of short- and long-term performance goals. In determining certain aspects of executive compensation for fiscal year 2016, the compensation committee considered the sustained, overwhelming shareholder support our "say-on-pay" advisory votes have received since 2012 and the continued alignment of executive compensation with shareholder interests.

The Company's named executive officers ("NEOs") included in the tables that follow this Compensation Discussion and Analysis for 2016 are:

- Paul H. Sunu, Director and Chief Executive Officer
- Karen D. Turner, Executive Vice President and Chief Financial Officer (Ms. Turner was appointed to this position effective August 3, 2016)
- Ajay Sabherwal, former Executive Vice President and Chief Financial Officer (Mr. Sabherwal resigned effective August 3, 2016)
- Peter G. Nixon, Executive Vice President, Revenue and External Affairs

- John J. Lunny, Executive Vice President and Chief Technology Officer

- Steven G. Rush, Executive Vice President, Northern New England Operations
- Anthony A. Tomae, former Executive Vice President and Chief Revenue Officer (Mr. Tomae's employment was terminated without cause effective January 29, 2016)

### *2016 Executive Compensation Highlights*

The key compensation decisions and factors affecting the compensation of our NEOs for 2016 were as follows:

- Base salary increases, which are further described on page 106.
- Performance-based annual bonuses earned during 2016 and will be paid in 2017 based on achievement of corporate and individual performance goals as described on pages 107-108.
- Equity awards with grant date values between 88% and 179% of base salary as described on pages 108-109.

### *2016 Performance Highlights*

The direct alignment of our compensation program with Company performance helped produce the following 2016 business highlights:

- (1) *Enhanced Operational Performance.* We continue to focus on delivering exceptional customer service while at the same time, cultivating, improving and enhancing our people and processes. Our trouble loads have continued to decline and mean time to repair has improved as we continue to implement improvements in our operations.
- (2) *Delivered Solid Financial Performance.* For 2016, we achieved our financial guidance and ended the year with what we believe is a strong cash position through diligent and effective cost management.
- (3) *Enhanced Network.* We have strategically invested in our network to extend service availability and improve offered broadband speeds. We are on track to meet the requirements under the CAF Phase II Program. Additionally, we continue to expand our network through "edge out" strategies including purchase and construction of unique fiber extensions during 2016.
- (4) *Continued Transformation of Revenue Mix.* We lowered our revenue losses during 2016 and increased growth revenues to 31% of total revenue. We continued our focus on advanced services, while developing new products and capabilities to serve more effectively small and medium sized businesses which are an important element of many of our markets. We accelerated our product development pipeline through the acquisition of a Maine based value added reseller of unified communications, data networking and cabling infrastructure solutions. Additionally, with more than 22,000 miles of fiber, we experienced an 8% increase in Ethernet circuits in 2016 compared to 2015.
- (5) *Exploration of Strategic Alternatives.* On December 3, 2016, FairPoint Communications entered into the Merger Agreement with Consolidated. The combined company will have enhanced scale, including presence in 24 states and ownership of over 35,000 miles of fiber. The Merger is expected to close around the middle of 2017. Additional details, including reasons for the Merger and conditions to close, as well as compensation that may be payable to our executive officers in connection with the Merger, are disclosed in our definitive proxy statement filed with the SEC on February 27, 2017.

### *Compensation Philosophy and Objectives*

Our overriding objective is to achieve and sustain significant increases in shareholder value. Our executive compensation program has been designed to support this objective with a clear link between pay and corporate and individual performance while discouraging executives from taking excessive risks. We structure our compensation plans to provide target compensation levels and opportunities that are competitive with the median target opportunities for comparable positions among the companies in our peer group. This approach is also aimed at ensuring our ability to attract, retain and motivate the executives, managers and professionals who are critical to our short- and long-term success. A significant portion of our executives' compensation is "performance-based" in the form of both short- and long-term incentives that are intended to motivate balanced decision making by our executives while also aligning their interests with those of our shareholders.

### *Shareholder Engagement*

Our board encourages shareholder feedback and believes that fostering relationships with shareholders is an important objective. Our engagement team, which is comprised of senior leaders and members of the board, interacts with shareholders on a regular basis through face-to-face meetings, participation in industry conferences, phone calls and email.

Since our last annual meeting, our engagement team has conducted face-to-face meetings with shareholders that, combined, represented in excess of 50% of our outstanding common stock. These forums allow for an open dialogue on our financial performance, community involvement, governance practices, compensation programs and industry trends. Feedback received from shareholders is routinely shared with the chair of the board.

At our 2016 annual meeting, we received strong support of our executive compensation programs, with the "say-on-pay" proposal receiving votes in favor of approximately 99% of those cast. We will continue to engage with shareholders on executive compensation and other pertinent matters.

#### *Governance and Oversight of our Executive Compensation Program*

Our executive compensation program is governed and administered by the compensation committee of the board of directors. The compensation committee is comprised of independent, non-employee members of the board.

The compensation committee's overall responsibilities include approving our compensation philosophy, policies and plans; reviewing and approving corporate goals and objectives relevant to the compensation for our CEO and other executive officers; evaluating the CEO's performance in light of these goals; setting the compensation of our CEO; and after considering the recommendation of our CEO, approving the compensation of our other executives, including the other NEOs. Our CEO does not participate in discussions or decision-making regarding his own compensation but does make recommendations to the compensation committee regarding the compensation of the other NEOs as well as other senior executives. However, the ultimate decisions are made by the compensation committee. The compensation committee also has oversight responsibility for our management development and succession planning efforts.

The compensation committee retains an independent executive compensation consulting firm, Lyons, Benenson & Company Inc. ("LB&Co."), to assist and advise the compensation committee on all aspects of our executive compensation program. LB&Co. provides no other services to us. The services of LB&Co. include:

- Advising on the compensation philosophy and the compensation committee charter;
- Assessing risk in connection with compensation programs;
- Developing and analyzing the appropriateness of our peer group;
- Providing and analyzing competitive market compensation data;
- Analyzing the effectiveness of our executive compensation plans and making recommendations, as appropriate;
- Assisting in the design of employment and severance agreements, as applicable;
- Evaluating how well our compensation program adheres to our stated objectives and philosophy; and
- Providing data, advice and counsel on director compensation.

Harvey Benenson, the Managing Director of LB&Co., generally attends all meetings of the compensation committee. Certain of our directors, including Mr. Sunu, serve or have served on the boards of other companies, including their compensation committees, for which LB&Co. has provided or provides compensation consulting services. The compensation committee assessed the independence of LB&Co. pursuant to SEC rules and concluded that no conflict of interest exists that prevents LB&Co. from providing independent consulting services to the compensation committee.

#### *Peer Group*

The compensation committee uses executive compensation data from a peer group of companies to assist the compensation committee with analyzing the effectiveness and competitiveness of our executive compensation program. The peer group is designed to reflect the current competitive environment for our products, services and executive talent, as well as the competitive environment we expect to face in the future. In structuring the peer group, we focused on companies of comparable scope with notable performance accomplishments. Using data from the public filings of a large number of companies, we narrowed the peer group to 12 companies by applying the following selection criteria:

- Relevant industry classification (based on our global industry classification standard), business description and services provided;
- With some exceptions based on industry relevance, comparable size, with revenues between \$400 million and \$5.77 billion; and
- Levels of achievement in certain performance metrics, such as three-year revenue growth, three-year earnings before interest, taxes, depreciation and amortization ("EBITDA") growth and three-year free cash flow growth.

The companies included in the peer group in 2015 were: Akamai Technologies, Inc.; AOL Inc.; Cablevision Systems Corporation; Charter Communications, Inc.; Cincinnati Bell Inc.; Consolidated Communications Holdings, Inc.; EarthLink Holdings Corp.; Frontier Communications Corporation; Hawaiian Telcom Holdco, Inc.; j2 Global, Inc.; Level 3 Communications, Inc.; Premiere Global Services, Inc.; SBA Communications Corporation; Vonage Holdings Corp. and Windstream Corporation.

The following companies were removed from our peer group in 2016:

Company Name	Reason for Removal
AOL Inc.	No longer publicly traded
Cablevision Systems Corporation	Above revenue range
Charter Communications, Inc.	Above revenue range
Level 3 Communications, Inc.	Above revenue range
Premiere Global Services, Inc.	No longer publicly traded

General Communication, Inc. and Cogent Communications Holdings, Inc. were added to our peer group in 2016 using the selection criteria described above.

As a result of these changes, the companies included in the peer group in 2016 were: Akamai Technologies, Inc.; Cincinnati Bell Inc.; Cogent Communications Holdings, Inc.; Consolidated Communications Holdings, Inc.; EarthLink Holdings Corp.; Frontier Communications Corporation; General Communication, Inc.; Hawaiian Telcom Holdco, Inc.; j2 Global, Inc.; SBA Communications Corporation; Vonage Holdings Corp. and Windstream Corporation.

The compensation committee believes this peer group is both reflective of where we are positioned currently as well as where we aspire to be in the future. The compensation committee recognizes that certain of the companies included in the peer group are considerably larger than us. These companies have been included because of their relevance to the industry and their offerings and because we draw from the same talent pool for employees. The compensation committee is mindful of differences in size and scope when using peer group data.

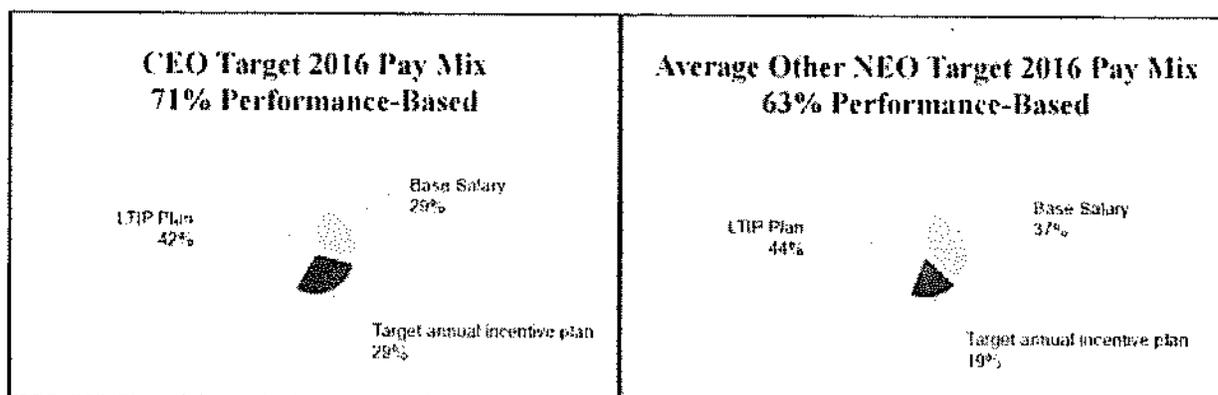

#### Specific Principles for Determining Executive Compensation

##### *Assessing the Competitiveness of Our Compensation Program*

The compensation committee benchmarks executive compensation levels annually. We strive to ensure that the target total compensation opportunity for each of our executives is competitive relative to comparable positions with the peer group companies. Specifically, base salaries, annual incentives and equity based incentives are all targeted at the peer group median. Both our annual and long-term incentives are structured, however, to deliver actual total compensation that may exceed the market median when the underlying performance upon which those incentives are based exceeds median performance.

##### *Total Compensation Mix*

As reflected in the following charts, a significant portion, 71% and 63%, respectively, of our CEO's and the average of other NEOs' target total compensation opportunity was performance-based using 2016 annual base salary, 2016 target annual incentive plan and 2016 LTIP Plan (as defined hereinafter) grants as illustrated below.

### Paying for Performance

We are committed to the principle of paying for performance. Our compensation program is designed such that a significant portion of the total compensation opportunity of our executives is based on achievement of financial measures as illustrated below. For the 2016 annual incentive payout, actual achievement of \$265.1 million for Pre-Bonus Adjusted EBITDA (as defined hereinafter), or 116.9% of target, resulted in payout at 38.0% for that measure compared to a target payout of 32.5%. The actual achievement of \$42.1 million for Pre-Bonus Free Cash Flow (as defined hereinafter), or 125.0% of target, resulted in payout at 40.6% for that measure compared to a target payout of 32.5%.

2016 Pre-Bonus Adjusted EBITDA (in millions)				2016 Pre-Bonus Free Cash Flow (in millions)			
		\$265.1				\$42.1	
\$246.3	\$260.4		\$274.5	\$22.5	\$35.1		\$49.1
Threshold	Target	Actual	Maximum	Threshold	Target	Actual	Maximum

The table below identifies and explains the reason for each component and the method for determining amounts earned under our executive compensation program.

Element	Reason and Method for Element
Base Salary	Base salary represents "fair" pay for the performance of duties and responsibilities. The compensation committee determines the level of base salary based on compensation benchmarking, the different levels of responsibility that exist within the Company, each executive's level of experience within the communications industry and individual performance at the Company.
Annual Incentives	Under the annual incentive plan, executives may earn annual cash incentives based on short-term corporate and individual performance. The incentive opportunity motivates executives to achieve the performance objectives and goals that are consistent with our plans and budgets and that strengthen our ability to compete effectively.
Long Term Incentives/Equity Awards	The FairPoint Communications, Inc. Amended and Restated 2010 Long Term Incentive Plan (the "LTIP Plan") effective May 12, 2014 allows executives to receive stock-based awards that link the executives' interests with those of our shareholders. The value of the awards is based on the Company's performance over multi-year periods to retain and motivate key executives and encourage them to operate the Company's business with a view towards creating long-term shareholder value.
Retirement and Welfare Benefits	We maintain a 401(k) retirement savings plan. In 2016, this plan included an employer matching contribution up to an amount equal to 5% of each participant's compensation. Additionally, we provide, on equal terms for all employees, group term life insurance, group health insurance and short- and long-term disability insurance.
Post-employment, Severance and Change-in-Control Benefits	We provide severance benefits to certain NEOs at levels that we consider conservative yet competitive when compared to those offered by our peers. We believe that such benefits are necessary and appropriate in order to attract and retain qualified NEOs.  The severance benefits for these executives are generally paid if the executives are terminated without cause or they resign with good reason. In addition to cash severance payments that would be due upon a qualifying termination, each terminated executive is entitled to continued welfare benefits for a limited period after termination.

### Share Ownership Guidelines

Our executive officers are subject to share ownership guidelines to better align their interests with those of our shareholders by requiring the executives to acquire and maintain meaningful equity positions in the Company. Under the guidelines, each executive officer is required to own shares of our common stock with a value equal to a multiple of the executive officer's base salary as indicated in the table below. Executive officers are required to meet these guidelines within the later of five years of the date of adoption of these guidelines (by June 4, 2018) or of such individual becoming subject to them.

Position	Base Salary Multiple
Chief Executive Officer	4.00X
Executive Vice Presidents	2.25X

For executive officers, the failure to timely meet or, in certain circumstances, to show sustained progress toward timely meeting the goals set forth in the share ownership guidelines could result in a reduction of future equity grants and/or payment of future annual and/or cash incentive payouts in the form of equity, at the discretion of the compensation committee.

### No Hedging/No Pledging Provisions

Our insider trading policy prohibits the executive officers from using any strategies or products (such as derivative securities or short-selling techniques) to hedge against potential changes in the value of our common stock, prohibits the holding of our securities in a margin account and prohibits any executive officer from pledging our securities as collateral for a loan.

### Incentive Recoupment Policy

The compensation committee has adopted a clawback policy that requires an executive officer to repay us a compensation payment or award previously made to the officer if the following conditions are met:

- (1) the payment was predicated upon achieving certain financial results that were required to be reported under the securities laws that were subsequently the subject of a restatement of our financial statements filed with the SEC due to our material noncompliance with any financial reporting requirement under the securities laws;
- (2) the compensation committee determines the officer engaged in fraud and/or intentional misconduct that caused or substantially caused the need for the restatement; and
- (3) a lower payment would have been made to the officer based upon the restated financial results.

### Executive Compensation Decisions for 2016

#### Base Salary

The table below shows the annual base salary rate increases from 2015 to 2016 for each NEO:

Executive <sup>(1)</sup>	Annual Base Salary Rate <sup>(2)</sup>		% of Base Salary Increase
	2016	2015	
Mr. Sunu	\$830,000	\$830,000	—%
Ms. Turner	\$375,000	\$263,000	43%
Mr. Nixon	\$353,000	\$342,000	3%
Mr. Lunny	\$300,000	\$288,300	4%
Mr. Rush	\$285,000	\$273,000	4%

- (1) Mr. Tomae's employment was terminated without cause effective January 29, 2016 and Mr. Sabherwal resigned his employment effective August 3, 2016.
- (2) The annual base salary rate for 2016 was effective on July 1, 2016 with the exception of Ms. Turner, which was effective August 3, 2016 upon her appointment to Chief Financial Officer. Base salary reflected in the *Realized Compensation* table and the *Summary Compensation* table is based on the respective NEO's compensation reported on IRS Form W-2.

### Annual Incentive Compensation Awards

NEOs earn annual incentive compensation based on the achievement of financial and non-financial goals established by the compensation committee each year. For 2016, the financial goals were measured by the Company's Pre-Bonus Consolidated EBITDA and Pre-Bonus Free Cash Flow and the non-financial goals included seven service quality measures. In setting the 2016 financial goals, the compensation committee considered the industry-wide trends that are negatively impacting revenue (primarily for voice-related products). The target goals for 2016 were set based on the expected business plan with stretch goals added to achieve maximum payout.

The compensation committee believes achievement of these goals is critically important to the Company's business and strategy and will increase the value of the Company.

The compensation committee adopted the following challenging financial targets for the 2016 annual incentive compensation awards (\$ in millions):

	Weight	Performance Measures	Threshold (25% payout)	Target (100% payout)	Maximum (150% payout)	2016 Actual Results	2016 Results Relative to Target
Financial Measures	32.5%	Pre-Bonus Consolidated EBITDA <sup>(1)</sup>	\$ 246.3	\$ 260.4	\$ 274.5	\$ 265.1	116.9% of target
	32.5%	Pre-Bonus Free Cash Flow <sup>(1)</sup>	\$ 22.5	\$ 35.1	\$ 49.1	\$ 42.1	125.0% of target

- (1) Pre-Bonus Consolidated EBITDA and Pre-Bonus Free Cash Flow are non-GAAP financial measures used by management to measure operational and financial performance. For purposes of calculating Pre-Bonus Consolidated EBITDA, the Company adjusts net income/(loss) for interest, income taxes, depreciation and amortization, in addition to: a) the add-back of aggregate pension and other post-employment benefits ("OPEB") expense, b) the add-back (or subtraction) of the adjustment to the compensated absences accrual to eliminate the impact of changes in the accrual, c) the add-back of costs related to the reorganization, including professional fees for advisors and consultants, d) other adjustments, such as the add-back of costs and expenses, including those imposed by regulatory authorities, with respect to casualty events, acts of God or force majeure to the extent they are not reimbursed from proceeds of insurance; other non-cash items, except to the extent they will require a cash payment in a future period, including impairment charges; and other items, including facility and office closures, expenses related to permitted transactions, labor negotiation related expenses (including losses related to disruption of operations), non-cash gains/losses, non-operating dividend and interest income and other extraordinary gains/losses and e) the add-back of any bonus expense to the extent any bonuses were earned. Pre-Bonus Free Cash Flow adjusts Pre-Bonus Consolidated EBITDA for pension contributions, OPEB payments and capital expenditures.

In addition, 5% and 30% of each officer's 2016 annual incentive award was based on the officer's achieving specified service quality targets and individual or departmental goals or milestones related to the officer's areas of responsibility, respectively. The specified service quality targets included: call center abandonment rate, installation appointments not met for Company reasons, mean time to repair service affecting abnormal events, whole performance credits and productivity and quality metrics. The goals or milestones include certain financial and human resources milestones, revenue and sales force development milestones, technology milestones and operational improvement milestones. In order for any bonuses to be paid for 2016, the Company had to achieve threshold performance under both of the financial objectives (Pre-Bonus Consolidated EBITDA and Pre-Bonus Free Cash Flow) set by the compensation committee.

The table below shows the 2016 target bonus opportunity percentages, performance goals and weightings for our NEOs:

Executive	Bonus Target (% of 2016 Annual Base Salary)	Performance Criteria
Mr. Sunu	100%	(i) 32.5%—Pre-Bonus Consolidated EBITDA; (ii) 32.5%—Pre-Bonus Free Cash Flow; (iii) 5%—the Company achieving specified service quality measures and (iv) 30%—the Company meeting certain objectives set by the board of directors.
Messrs. Nixon, Lunny and Rush and Ms. Turner	50%	(i) 32.5%—Pre-Bonus Consolidated EBITDA; (ii) 32.5%—Pre-Bonus Free Cash Flow; (iii) 5%—the Company achieving specified service quality measures and (iv) 30%—the executive officer achieving certain individual or departmental goals or milestones.
Messrs. Sabherwal and Tomae*	N/A	N/A

\*Mr. Tomae's employment was terminated without cause effective January 29, 2016 and Mr. Sabherwal resigned his employment effective August 3, 2016.

The following table shows the 2016 annual incentive earned by the NEOs based on the financial and service quality results achieved, the relative weighting of each corporate performance objective (as shown above) and each NEO's individual performance rating:

Executive	Performance Achievement			Annual Incentive Payout	
	Financial Measures	Service Quality Measures	Individual Goals	\$	As a % of Target
Mr. Sunu	78.62%	4.95%	30.00%	960,800	113.57%
Ms. Turner	78.62%	4.95%	30.00%	179,100	113.57%
Mr. Nixon	78.62%	4.95%	30.00%	201,100	113.57%
Mr. Lunny	78.62%	4.95%	30.00%	167,100	113.57%
Mr. Rush	78.62%	4.95%	30.00%	161,400	113.57%
Messrs. Sabherwal and Tomae*	N/A	N/A	N/A	N/A	N/A

\*Mr. Tomae's employment was terminated without cause effective January 29, 2016 and Mr. Sabherwal resigned his employment effective August 3, 2016.

#### 2016 Equity Compensation Awards

The compensation committee awards long-term, equity based awards to executives to reward the NEOs for their performance and to retain and motivate them and encourage them to create long-term shareholder value. The compensation committee approved the following equity compensation awards to our NEOs:

Executive <sup>(1)</sup>	Number of Shares of Restricted Stock	Number of Stock Options	Number of Performance Shares	Grant Date Value (\$)	Grant Date Value (% of Base Salary)
Mr. Sunu	31,000	54,000	27,000	\$1,216,221	147%
Ms. Turner	22,000	37,000	6,000	\$671,251	179%
Mr. Sabherwal	11,000	19,000	9,000	\$423,356	101%
Mr. Nixon	9,000	16,000	8,000	\$357,625	101%
Mr. Lunny	6,000	13,000	6,000	\$265,229	88%
Mr. Rush	6,000	13,000	6,000	\$265,229	93%
Mr. Tomae	N/A	N/A	N/A	N/A	N/A

(1) The grant date for these awards was January 22, 2016, except the following grants awarded on August 15, 2016 to Ms. Turner upon her appointment to Chief Financial Officer: 15,000 shares of restricted stock and 25,000 stock options. Mr. Tomae's employment was terminated without cause effective January 29, 2016.

The amount of equity awards for 2016 were determined by the compensation committee in its discretion, taking into account the CEO's recommendations other than with respect to the amounts awarded to the CEO. The equity grant included a mix of stock options, restricted stock and performance shares. The options and restricted stock granted on January 22, 2016 are time-vested,

with 25% vesting on the grant date and the remainder vesting in three equal annual installments, commencing on the first anniversary date of the grant. The options and restricted stock granted on August 15, 2016 to Ms. Turner are time-vested, vesting in three equal annual installments, commencing on the first anniversary date of the grant. The performance shares will be earned, at the end of a three-year performance period, based upon (i) the Company's achievement of a growth revenue performance goal and (ii) the total shareholder return to our shareholders compared to the total shareholder return achieved by the companies in a telecommunications industry group. One share of our common stock will be distributed to the participant for each whole performance share earned by the participant.

#### Employment Agreements

##### *Paul H. Sunu*

On April 9, 2013, the Company entered into an amended and restated employment agreement with Mr. Sunu, as amended on August 14, 2015 (the "Sunu Employment Agreement"). Mr. Sunu's term of employment is through August 31, 2017, unless terminated sooner or renewed as provided in the Sunu Employment Agreement. In addition, under the Sunu Employment Agreement, Mr. Sunu is nominated annually to the board of directors of the Company (and has served and will so serve, if elected).

Mr. Sunu is eligible to participate in the benefits programs generally available to the Company's other senior executives, including the LTIP Plan, as determined at the discretion of the compensation committee of the board of directors and subject to the terms of such plan. In any year that the compensation committee determines to make a grant or grants under the LTIP Plan, the grant date value of any award to Mr. Sunu is anticipated to be no less than 1.5 times the annual base salary payable to him in effect at such time. Under the Sunu Employment Agreement, Mr. Sunu is eligible to participate in the Company's annual incentive plan and earn a performance-based bonus thereunder for annual performance periods. Mr. Sunu's target level bonus under the annual incentive plan is 100% of the base salary payable to him during the applicable performance period and Mr. Sunu is eligible for a maximum bonus under such plan of up to 150% of his base salary.

Under the Sunu Employment Agreement, either party may terminate Mr. Sunu's employment at any time. Information about his potential severance pay and benefits appears under "*Potential Payments Upon Termination or Change in Control*."

##### *Karen D. Turner, Ajay Sabherwal, Peter G. Nixon, John J. Lunny and Steven G. Rush*

The Company entered into employment agreements with Ms. Turner (on November 20, 2014, as amended on August 14, 2015 and November 21, 2016); Mr. Sabherwal (on January 22, 2013, as amended on August 14, 2015 and May 16, 2016); Mr. Nixon (on January 22, 2013, as amended on August 14, 2015 and May 16, 2016); Mr. Lunny (on July 1, 2014, as amended on August 14, 2015 and November 21, 2016) and Mr. Rush (on August 10, 2015, as amended on June 1, 2016).

Pursuant to the respective employment agreements, each current executive will serve in their respective positions (with such title subject to change from time to time as determined by the board of directors) with the Company through December 31, 2019, subject to earlier termination or extension as set forth in the employment agreements with the exception of Mr. Rush, whose employment with the Company is through August 10, 2018. Following such period of employment (or the applicable extension term, if any), the current executive will continue on an at will basis until such time as the Company provides a written notice of termination in accordance with the terms of his or her employment agreement.

The current executives are eligible to participate in the annual incentive plan and are eligible to earn a performance-based bonus thereunder. The current executives are also eligible to participate in the benefits programs and other plans made available generally to the Company's other senior executives, including but not limited to the LTIP Plan.

Information about the potential severance pay and benefits associated with these employment agreements appears under "*Potential Payments Upon Termination or Change in Control*" herein with the exception of Mr. Sabherwal. Mr. Sabherwal resigned his employment effective August 3, 2016.

##### *Anthony A. Tomae*

The Company entered into an employment agreement with Mr. Tomae on November 15, 2012. Mr. Tomae's employment agreement set forth the terms and conditions of his employment as Executive Vice President and Chief Revenue Officer of the Company for a three-year term ending on November 15, 2015, subject to extension as set forth in his employment agreement. On August 14, 2015, the Company amended Mr. Tomae's employment agreement, which extended the term of the agreement through December 31, 2016. Following the term of employment (or the applicable extension term, if any), Mr. Tomae was to have remained employed on an at-will basis until such time as the Company provided a written notice of termination in accordance with the terms of his employment agreement.

Mr. Tomae's employment with the Company terminated without cause effective January 29, 2016. Further information about his severance pay and benefits appear "*Potential Payments Upon Termination or Change in Control*" herein.

### *Tax Considerations*

Section 162(m) of the Code generally disallows a tax deduction to public corporations for taxable compensation, other than performance-based compensation, over \$1.0 million paid for any fiscal year to any of the Company's NEOs (excluding the Chief Financial Officer) as of the end of any fiscal year. The Company's policy is to qualify its executive program and plans for deductibility under Section 162(m) to the extent the compensation committee determines such action to be appropriate.

While the compensation committee's general policy is to preserve the deductibility of compensation paid to the NEOs, the compensation committee nevertheless authorizes payments that might not be deductible if it believes that they are in the best interests of the Company and its shareholders.

### Realized Compensation

The SEC's calculation of total compensation, as shown in the *Summary Compensation* table, includes several items that are driven by accounting assumptions. In some cases, the actual compensation realized by the NEOs may be very different than what is reported in the *Summary Compensation* table and compensation reported may not be realized for many years, if at all. Furthermore, realized compensation for a NEO for any given year may be greater or less than the compensation reported in the *Summary Compensation* table for that year depending on fluctuations in stock prices on the grant and vesting dates, differences in equity grant values from year to year and SEC reporting requirements, as described below.

The primary difference between the table below (the "*Realized Compensation* table") and the *Summary Compensation* table is the method used to value restricted stock awards, stock options and performance shares. SEC rules require that the entire grant date fair value of all restricted stock awards (calculated as the fair market value of the common stock on the date of grant), stock options (estimated using the Black-Scholes option pricing model, as outlined in footnote (1) of the *Summary Compensation* table) and performance shares (calculated as the fair market value of the common stock on the date of grant based upon the probable outcome of performance conditions) be reported in the *Summary Compensation* table during the year in which they were granted. As a result, a significant portion of the total compensation amounts reported in the *Summary Compensation* table relates to restricted stock awards and performance shares that have not vested and stock options that have not been exercised during the year. In contrast, the *Realized Compensation* table below includes only the value of restricted stock awards that vested (calculated as the fair market value of the common stock on the date of vesting) and stock options that were exercised (calculated as the difference between the exercise price and the market value of the common stock on the date of exercise) during the applicable fiscal year. In addition, the *Realized Compensation* table below does not include any items from the "All Other Compensation" column of the *Summary Compensation* table, which include (1) matching contributions made by the Company to its 401(k) retirement savings plan, (2) contributions made by the Company to the term life insurance plan it sponsors and (3) relocation expense reimbursement, since in each case for subsections (1), (2) and (3) there is no cash compensation received by the NEO for these benefits, as well as (4) severance expenses, because this is not compensation received during the course of employment with the Company.

The *Realized Compensation* table below supplements the *Summary Compensation* table and shows compensation actually realized by each NEO in 2016, 2015 and 2014, as described above.

Executive	Year	Salary <sup>(1)</sup> \$	Bonus <sup>(1)</sup> \$	Non-Equity Incentive Plan Compensation <sup>(2)</sup> \$	Stock Awards <sup>(3)</sup> \$	Option Awards <sup>(4)</sup> \$	Total \$
Mr. Sunu	2016	845,962	—	960,800	609,675	—	2,416,437
	2015	830,000	500,000	893,100	504,510	—	2,727,610
	2014	815,000	—	407,500	706,320	—	1,928,820
Ms. Turner <sup>(5)</sup>	2016	315,442	—	179,100	74,394	—	568,936

(1) Base salary and bonus as reported on the respective NEO's W-2 and as presented in the *Summary Compensation* table.

(2) For 2016, represents the performance-based compensation under the annual incentive plan earned during 2016 and will be paid in 2017, as presented in the *Summary Compensation* table.

(3) The value of restricted stock that vested during the year, as reported on the respective NEO's W-2 and as presented in the table "*Option Exercises and Stock Vested for 2016*" herein (the "*Option Exercises and Stock Vested for 2016*" table").

(4) The value of stock options exercised during the year, as reported on the respective NEO's W-2 and as presented in the *Option Exercises and Stock Vested for 2016* table.

(5) Ms. Turner began employment with the Company on April 7, 2014 and she was appointed as Chief Financial Officer effective August 3, 2016.

(6) Mr. Sabherwal resigned his employment effective August 3, 2016.

(7) Mr. Tomae's employment was terminated without cause effective January 29, 2016.

## 2016 Summary Compensation Table

The table below summarizes the total compensation paid or earned by each of the NEOs for the fiscal years ended December 31, 2016, 2015 and 2014.

Name and Principal Position	Year	Salary \$	Bonus \$	Stock Awards <sup>(1)</sup> \$	Option Awards <sup>(1)</sup> \$	Non-Equity Incentive Plan Compensation <sup>(2)</sup> \$	All Other Compensation <sup>(3)</sup> \$	Total \$
Paul H. Sunu <sup>(4)</sup> Director and Chief Executive Officer	2016	845,962	—	779,048	437,173	960,800	15,722	3,038,705
	2015	830,000	500,000	905,704	569,160	893,100	15,722	3,713,686
	2014	815,000	—	738,080	583,075	407,500	15,664	2,559,319
Karen D. Turner <sup>(5)</sup> Executive Vice President and Chief Financial Officer	2016	315,442	—	385,364	285,887	179,100	14,227	1,180,020

John J. Lunny Executive Vice President and Chief Technology Officer	2016	294,202	—	159,984	105,245	167,100	13,050	739,581
	2015	283,060	—	218,896	135,723	146,600	14,215	798,494
	2014	261,580	—	171,340	131,706	65,400	11,935	641,961
Steven G. Rush <sup>(7)</sup> Executive Vice President, Northern New England Operations	2016	284,296	—	159,984	105,245	161,400	34,122	745,047
	2015	266,846	—	197,424	128,718	143,600	60,175	796,763
	2014	243,797	8,000	—	150,913	61,000	46,384	510,094
Anthony A. Tonnae <sup>(8)</sup> Former Executive Vice President and Chief Revenue Officer	2016	46,579	—	—	—	—	1,005,394	1,051,973
	2015	343,000	—	272,382	166,370	184,500	14,522	980,774
	2014	337,200	—	263,600	198,931	84,300	14,323	898,354

- (1) The amounts shown are the grant date fair value of the stock and option awards, adjusted to eliminate the effect of any forfeiture assumption in calculating stock compensation, computed in accordance with the Compensation—Stock Compensation Topic of the Accounting Standards Codification ("ASC"). In the case of performance shares, the grant date fair value is based upon the probable outcome of the performance conditions.

The grant date fair value per share of the restricted stock awards was calculated as the fair market value per share of the common stock on the date of grant.

The performance shares are based upon (i) the Company's achievement of a growth revenue performance goal (non-market portion) and (ii) the total shareholder return to our shareholders compared to the total shareholder return achieved by the companies in a telecommunications industry group (market portion). The grant date fair value of the non-market portion of the performance shares was calculated as the fair market value per share of the common stock on the date of grant. For purposes of determining compensation expense for the market portion of the performance shares, the grant date fair value was estimated using the Monte Carlo valuation model.

The grant date fair value per share of the stock options was estimated using the Black-Scholes option pricing model which requires the use of various assumptions including the expected life of the option, expected dividend rate, expected volatility and risk-free interest rate. Key assumptions used for determining the fair value of the stock options granted during 2016, 2015 and 2014 were as follows:

	Year Ended December 31, 2016	Year Ended December 31, 2015	Year Ended December 31, 2014
Expected life <sup>(a)</sup>	5.5 - 6.5 years	5.5 - 6.5 years	5.5 - 6.5 years
Expected dividend <sup>(b)</sup>	—	—	—

Expected volatility <sup>(c)</sup>	55.1%	59.6%	51%
Risk-free interest rate <sup>(d)</sup>	1.40% - 1.76%	1.35% - 1.66%	1.63% - 2.29%

---

- (a) The expected lives (estimated period of time outstanding) of stock options granted were estimated using the 'Simplified Method' which utilizes the midpoint between the vesting date and the end of the contractual term. This method was utilized for the stock options due to the lack of historical exercise behavior of the Company's employees.
- (b) For all stock options granted during 2016, 2015 and 2014, no dividends are planned to be paid over the contractual term of the stock options resulting in the use of a zero expected dividend rate.
- (c) The expected volatility rate is based on the observed historical volatilities of our common stock and observed historical and implied volatilities of comparable companies, which were adjusted to account for the various differences between the comparable companies and us.
- (d) The risk-free interest rate is specific to the date of grant and is based on the United States Treasury constant maturity market yields in effect at the time of the grant.

(2) These awards were granted pursuant to the annual incentive plan. The 2016 amounts will be paid in March 2017. See "*Annual Incentive Compensation Awards*" for additional information.

(3) The amount shown for 2016 reflects the following for each NEO:

Name	401(k) <sup>(a)</sup>	Term life <sup>(b)</sup>	Relocation Expense Reimbursement <sup>(c)</sup>	Severance <sup>(d)</sup>	Total All Other Compensation
Mr. Sunu	\$ 13,250	\$ 2,472	\$ —	\$ —	\$ 15,722
Ms. Turner	13,250	977	—	—	14,227
Mr. Sabherwal	13,250	931	—	—	14,181
Mr. Nixon	13,250	1,268	—	—	14,518
Mr. Lunny	11,981	1,069	—	—	13,050
Mr. Rush	12,640	1,012	20,470	—	34,122
Mr. Tomae	11,554	147	—	993,693	1,005,394

(a) Reflects matching contributions made by the Company to its 401(k) retirement savings plan for each NEO.

(b) Contributions made by the Company to the term life insurance plans it sponsors for all eligible employees (including our NEOs).

(c) Relocation expenses reimbursed by the Company.

(d) As described further in "*Employment Agreements*", Mr. Tomae received a separation payment in 2016.

- (4) Mr. Sunu received a \$500,000 signing bonus during 2015 in connection with the extension of his employment agreement. Mr. Sunu does not receive any compensation for serving on our board of directors.
- (5) Ms. Turner began employment with the Company on April 7, 2014 and she was appointed as Chief Financial Officer effective August 3, 2016.
- (6) Mr. Sabherwal resigned his employment effective August 3, 2016.
- (7) Mr. Rush received an \$8,000 bonus during 2014.
- (8) Mr. Tomae's employment was terminated without cause effective January 29, 2016.

	1/22/2016 <sup>(4)</sup>	—	—	—	—	—	—	6,000	—	—	N/A	88,680

- (1) Mr. Tomae's employment was terminated without cause effective January 29, 2016.
- (2) See "—Annual Incentive Compensation Awards" and the *Summary Compensation* table for additional information. Amounts represent potential payouts under the annual incentive plan based on a percentage of 2016 annual base salary assuming achievement of the financial and service quality targets as follows: 25% for threshold, 100% for target and 150% for maximum. The actual amounts earned under the annual incentive plan for 2016 for Messrs. Sunu, Nixon, Lunny and Rush and Ms. Turner will be paid in March 2017 and are indicated in the *Summary Compensation* table. Mr. Sabherwal resigned his employment effective August 3, 2016.
- (3) These performance shares were granted under the LTIP Plan and will be earned, at the end of a three-year performance period, based upon (i) the Company's achievement of a growth revenue performance goal and (ii) the total shareholder return to our shareholders compared to the total shareholder return achieved by the companies in a telecommunications industry group.
- (4) These restricted stock awards and stock options were granted under the LTIP Plan and are time-vested. 25% vested on the grant date with the remainder vesting in equal installments on January 23, 2017, January 22, 2018 and January 22, 2019.

- (5) These restricted stock awards and stock options were granted under the LTIP Plan and are time-vested in equal installments on August 15, 2017, August 15, 2018 and August 15, 2019.
- (6) Exercise price of stock options is calculated as the average of the low and high market value of our common stock on the date of grant.
- (7) Reflects the grant date fair value of stock and option awards based on the number of awards included in the grant and the fair value of the awards at the date of grant, as determined in accordance with the Compensation—Stock Compensation Topic of the ASC. In the case of restricted stock this amount is equal to the number of restricted shares issued multiplied by the market value of our common stock on the date of grant. In the case of performance shares, the grant date fair value is based upon the probable outcome of the performance conditions. See note (1) to the *Summary Compensation* table for more information on the assumptions used.

Mr. Tomasi <sup>(a)</sup>	1/22/2015	—	—	—	—	—	2,500	46,750	

(1) No unvested stock options or stock awards were outstanding at December 31, 2016 for Mr. Sabherwal.

(2) These stock options were granted under the LTIP Plan. See "—Grants of Plan-Based Awards for 2016" for vesting details of the January 22, 2016 and August 15, 2016 grants. The stock options shown for the January 22, 2015, January 22, 2014, January 22, 2013, January 24, 2012 and January 24, 2011 grants are time-vested. 25% vested on the grant date with the remainder vesting in three annual installments of 25%, commencing on or about the first anniversary date of the grant, except 3,000 stock options for Mr. Nixon granted on January 22, 2013 that vested 100% on the grant date. The stock options shown for the May 12, 2014 grant are time-vested, vesting in three equal annual installments, commencing on the first anniversary date of the grant.

- (3) The exercise price is calculated as the average of the low and high market value of our common stock on the date of grant.
- (4) These stock awards were granted under the LTIP Plan. See "*Grants of Plan-Based Awards for 2016*" for vesting details of the January 22, 2016 and August 15, 2016 grants. The stock awards shown for the January 22, 2015 and January 22,

2014 grants are time-vested. 25% vested on the grant date with the remainder vesting in three annual installments of 25%, commencing on or about the first anniversary date of the grant. The stock awards shown for the May 12, 2014 grant are time-vested, vesting in three equal annual installments, commencing on the first anniversary date of the grant.

- (5) Computed by multiplying the number of unvested shares by \$18.70, the market closing price of our common stock on December 30, 2016.
- (6) These performance share awards were granted under the LTIP Plan. See "*Grants of Plan-Based Awards for 2016*" for vesting details of the January 22, 2016 grant. The performance share awards shown for the January 22, 2015 grant will be earned, at the end of a three-year performance period, based upon (i) the Company's achievement of a growth revenue performance goal and (ii) the total shareholder return to our shareholders compared to the total shareholder return achieved by the companies in a telecommunications industry group.
- (7) Computed by multiplying the number of unvested shares by \$18.70, the market closing price of our common stock on December 30, 2016.
- (8) In accordance with the performance share awards pursuant to the LTIP Plan, Mr. Tomae's outstanding performance awards on his termination date were prorated to reflect the number of performance shares earned during the performance period while the remaining performance shares were forfeited on his termination date.

### Option Exercises and Stock Vested for 2016

Executive	Option Awards		Stock Awards	
	Number of Shares Acquired on Exercise (#)	Value Realized on Exercise <sup>(1)</sup> (\$)	Number of Shares Acquired on Vesting (#)	Value Realized on Vesting <sup>(2)</sup> (\$)
Mr. Sunu	—	—	41,250	609,675
Ms. Turner	—	—	5,083	74,394
Mr. Sabherwal	86,900	392,014	14,125	208,768
Mr. Nixon	—	—	12,275	181,425
Mr. Lunny	—	—	7,000	103,460
Mr. Rush	—	—	3,500	51,730
Mr. Tomae	79,250	464,640	10,175	150,387

- (1) Value realized by Mr. Sabherwal is computed by multiplying the number of shares acquired upon exercise by the difference between the market price of the underlying securities on the exercise date (\$14.99) and the strike price of the stock options (15,500 at \$4.56; 33,500 at \$9.36; 21,750 at \$13.29; 11,400 at \$14.73 and 4,750 at \$14.61). Value realized by Mr. Tomae is computed by multiplying the number of shares acquired upon exercise by the difference between the market price of the underlying securities on the exercise date (\$15.61) and the strike price of the stock options (26,000 at \$5.29; 22,000 at \$9.36; 21,750 at \$13.29 and 9,500 at \$14.73).
- (2) Value realized is computed by multiplying the number of shares acquired upon vesting by the market price of the underlying securities on the vesting date of January 22, 2016 at \$14.78 for all shares except 1,333 shares for Ms. Turner which vested on May 12, 2016 at \$14.23.

### Potential Payments Upon Termination or Change in Control

As of December 31, 2016, we had employment agreements with Messrs. Sunu, Nixon, Lunny and Rush and Ms. Turner. The employment agreements provide benefits to our NEOs in the event their employment is terminated under certain circumstances as summarized below. In addition, as described below, we had an employment agreement with Mr. Tomae, whose employment terminated without cause effective January 29, 2016, pursuant to which Mr. Tomae received certain benefits upon such termination.

On December 3, 2016, FairPoint Communications entered into the Merger Agreement with Consolidated. Additional details, including reasons for the Merger and conditions to close as well as compensation that may be payable to our executive officers in connection with the Merger, are disclosed in our definitive proxy statement filed with the SEC on February 27, 2017.

## *Employment Agreements*

### *Paul H. Sunu*

Under the Sunu Employment Agreement, in the event (a) the Company terminates Mr. Sunu's employment without cause (as defined in the Sunu Employment Agreement), (b) the term of employment under the Employment Agreement expires following the Company's delivery of a non-extension notice or (c) Mr. Sunu resigns his employment for good reason (as defined in the Sunu Employment Agreement), Mr. Sunu is entitled to receive (i) any accrued but unpaid base salary through the date of the termination, any unpaid annual incentive plan bonus (in respect of any completed fiscal year that has ended prior to the date of the termination of Mr. Sunu's employment), any unpaid or unreimbursed expenses and any benefits to be provided under the Company's employee benefits plans upon a termination of employment; and (ii) an amount equal to the sum of (A) two times the amount of Mr. Sunu's then-current base salary, (B) two times the amount of his average annual incentive plan bonus; and (C) the cost of continued health and disability insurance coverage for Mr. Sunu and his covered dependents for a period of 24 months. Mr. Sunu will also be entitled to any (x) amounts payable under the LTIP Plan (in accordance with its terms) and (y) a pro rata portion of the annual incentive plan bonus for the year in which the termination occurred. The amount of Mr. Sunu's average annual incentive plan bonus will be determined based on Mr. Sunu's actual annual incentive plan bonus in the two years immediately preceding the year in which termination occurs.

In addition, upon termination of his employment under the circumstances described in (a), (b) and (c) of the preceding paragraph, Mr. Sunu is entitled to immediate accelerated vesting of (i) the next tranche of any time-based equity award that would have otherwise vested except for the termination or receipt of a non-extension notice and (ii) any performance-based equity award, if, in the discretion of the compensation committee, the performance vesting criteria have been met as of the date of termination, prorated for the time employed during the performance period prior to the date of termination or receipt of a non-extension notice. The benefits and payments described in this and the preceding paragraph are subject to adjustment in the event that Mr. Sunu's employment is terminated by the Company without cause (other than due to his death or disability) within 12 months before or 12 months after a change in control (as defined in the Sunu Employment Agreement). The amount of Mr. Sunu's bonus upon termination related to a change in control will be the greater of (B) of the preceding paragraph or two times his target annual incentive plan bonus for the year in which the termination occurred. Also upon the occurrence of a change in control, Mr. Sunu's unvested benefits under the LTIP Plan are accelerated and vest in full.

Pursuant to the Sunu Employment Agreement, in the event that Mr. Sunu's employment is terminated (a) by the Company with cause, (b) by Mr. Sunu without good reason or (c) upon the expiration of the term of employment following delivery by Mr. Sunu to the Company of a non-extension notice, Mr. Sunu is entitled to (x) any accrued but unpaid base salary through the date of the termination of Mr. Sunu's employment, (y) any unpaid or unreimbursed expenses and (z) any benefits to be provided under the Company's employee benefits plans (in accordance with the terms of such plans). Mr. Sunu will also be entitled to amounts payable under the LTIP Plan (in accordance with its terms). However, Mr. Sunu will be entitled to receive the payments and benefits as provided by the Sunu Employment Agreement for termination by Mr. Sunu for good reason, subject to the same conditions as those under such circumstances, in the event that Mr. Sunu provides the Company with notice of his termination of employment without good reason during the 13th month following the consummation of a change in control.

In the event that Mr. Sunu's employment is terminated due to death or disability, Mr. Sunu or his estate or his beneficiaries, as the case may be, are entitled to (i) any accrued but unpaid base salary through the date of the termination of Mr. Sunu's employment, (ii) any unpaid annual incentive plan bonus (in respect of any completed fiscal year that has ended prior to the date of the termination of Mr. Sunu's employment), (iii) any unpaid or unreimbursed expenses, (iv) any benefits to be provided under the Company's employee benefits plans (in accordance with such plans), (v) amounts payable under the LTIP Plan (in accordance with its terms) and (vi) an amount equal to the sum of (x) Mr. Sunu's then-current base salary, (y) Mr. Sunu's annual incentive plan bonus for the immediately preceding fiscal year and (z) the cost of continued health and disability insurance coverage for Mr. Sunu and his covered dependents during the 12-month period following the date of such termination.

The payment of any amount or provision of any benefit, subject to certain exceptions set forth in the Sunu Employment Agreement, is conditioned upon Mr. Sunu's execution and delivery to the Company of a release of all claims against, among other parties, the Company and its subsidiaries, in connection with those termination circumstances under the Sunu Employment Agreement requiring a release. In addition, Mr. Sunu's entitlement to payments and benefits upon termination under the Sunu Employment Agreement is subject to his compliance with a non-interference agreement with the Company, pursuant to which Mr. Sunu agrees to, among other things, certain non-competition and non-solicitation provisions for 24 months following the termination of his employment with the Company.

### *Karen D. Turner, Peter G. Nixon, John J. Lunny and Steven G. Rush*

Under the respective employment agreements with each of the above named executives, either party may terminate the executive's employment at any time. In the event (i) the Company terminates the executive's employment without cause (as defined in the employment agreements) prior to the expiration of the term of employment, (ii) the Company delivers a termination notice

to the executive in accordance with the provisions of his or her employment agreement or (iii) the executive resigns his or her employment for good reason (as defined in the employment agreements), the executive will receive: (x) any accrued but unpaid base salary through the date of the termination, any unpaid annual incentive plan bonus (in respect of any completed fiscal year that has ended prior to the date of the termination of the executive's employment), any unpaid or unreimbursed expenses, any benefits to be provided under the Company's employee benefits plans upon a termination of employment and any amounts payable under the LTIP Plan; and (y) an amount equal to the sum of (A) two times the amount of the executive's then-current base salary, (B) two times the amount of his or her average annual incentive plan bonus for the immediately preceding two fiscal years where such average is determined by reference to the actual annual bonus paid to the executive for the immediately two preceding fiscal years; and (C) the cost of continued health and disability insurance coverage for the executive and his or her covered dependents for a period of 24 months following such termination or resignation, as applicable. In the case of (iii) above, the executive is also entitled to accelerated vesting of the next tranche of awards payable under the LTIP Plan. The employment agreements do not require the Company to provide any tax gross-up on the benefits paid under the employment agreements.

In the event the Company terminates the executive's employment without cause (as defined in the employment agreements) or the Company delivers a termination notice to the executive, in either case after the expiration of the term of employment, the executive will receive: (i) any accrued but unpaid base salary through the date of the termination, (ii) any unpaid or unreimbursed expenses, (iii) any benefits to be provided under the Company's employee benefits plans and (iv) any amounts payable under the LTIP Plan. However, if such termination occurs within six months of a change in control, the executive is also entitled to any unpaid annual incentive plan bonus (in respect of any completed fiscal year that has ended prior to the date of the termination of the executive's employment) and each of the payments and benefits described in (A) and (C) in the immediately preceding paragraph. The amount of the executive's bonus upon termination related to a change in control will be the greater of (B) in the preceding paragraph or two times his or her target annual incentive plan bonus for the year in which the termination occurred.

In the event that the executive's employment is terminated due to death or disability, the executive or his or her estate or his or her beneficiaries, as the case may be, is entitled to (i) any accrued but unpaid base salary through the date of the termination of the executive's employment, (ii) any unpaid annual incentive plan bonus (in respect of any completed fiscal year that has ended prior to the date of the termination of the executive's employment), (iii) any unpaid or unreimbursed expenses, (iv) any benefits to be provided under the Company's employee benefits plans (in accordance with such plans) and (v) any amounts payable under the LTIP Plan.

In the event that the executive's employment is terminated (i) by the Company with cause, (ii) by the executive without good reason or (iii) upon the delivery by the executive to the Company of a termination notice pursuant to the terms of his or her employment agreement, the executive is entitled to any accrued but unpaid base salary through the date of the termination of the executive's employment, any unpaid or unreimbursed expenses, any benefits to be provided under the Company's employee benefits plans upon a termination of employment (in accordance with the terms of such plans) and any amounts payable under the LTIP Plan.

Upon the occurrence of a change in control, all of the executives' unvested benefits under the LTIP Plan are accelerated and vest in full.

The executive's entitlement to payments and benefits under his or her employment agreement is subject to his or her compliance with a non-interference agreement with the Company, pursuant to which the executive agrees to, among other things, certain non-competition and non-solicitation provisions for 12 months following his or her employment with the Company.

In addition, in the event that (i) the executive's employment is terminated due to death or disability, (ii) the Company terminates the executive's employment without cause, (iii) the Company delivers a termination notice prior to the expiration of the executive's term of employment pursuant to the provisions of the employment agreement, or (iv) the executive terminates his or her employment with good reason in accordance with his or her employment agreement, the payment of any amount or provision of any benefit in connection therewith is conditioned upon the executive's execution and delivery to the Company of a release of all claims, subject to certain exceptions set forth in the employment agreements.

#### *Anthony A. Tomae*

Mr. Tomae's employment with the Company terminated without cause effective January 29, 2016. The benefits and payments provided to him in connection with such termination were provided pursuant to his employment agreement with the Company dated as of November 15, 2012, as amended on August 14, 2015.

In accordance with his employment agreement, Mr. Tomae received a separation payment which consisted of: (x) his accrued, but unpaid, base salary through the date of termination, unpaid or unreimbursed expenses and accrued and unpaid vacation pay as provided under the Company's employee benefits plans upon a termination of employment; and (y) an amount equal to the sum of (A) two times the amount of Mr. Tomae's then-current base salary, (B) two times the amount of his average annual incentive plan bonus for 2014 and 2015 where the average was determined by reference to the actual annual bonus paid to Mr. Tomae and (C) the cost of continued health and disability insurance coverage for Mr. Tomae for a period of 24 months following his termination.

In accordance with his employment agreement, the Company did not provide any tax gross-up on the benefits paid under the agreement.

Upon the occurrence of a change in control, Mr. Tomae's unvested benefits under the LTIP Plan are accelerated and vest in full.

Mr. Tomae's entitlement to payments and benefits under his employment agreement were subject to his compliance with a non-interference agreement with the Company, pursuant to which Mr. Tomae agreed to, among other things, certain non-competition and non-solicitation provisions for twelve months following his employment with the Company and a general release of claims.

*Potential Post-Employment Payments Table*

The following table shows cash compensation and other benefits that would have been provided under the employment agreements with the CEO if his employment had terminated on December 31, 2016 under conditions that would trigger payments.

<u>Reason for Payment</u>	<u>Base Salary<sup>(1)</sup> (S)</u>	<u>Non-Equity Incentive Plan<sup>(2)</sup> (S)</u>	<u>Acceleration and Continuation of Equity Awards<sup>(3)</sup> (S)</u>	<u>Continuation of Medical/Welfare Benefits<sup>(4)</sup> (S)</u>	<u>Total Termination Benefits (S)</u>
<b>Mr. Sunu</b>					
Involuntary termination with cause or voluntary termination without good reason	—	—	—	—	—
Death or disability	830,000	893,100	1,778,998	17,585	3,519,683
Expiration following non-extension notice	1,660,000	1,300,600	492,433	35,171	3,488,204
Termination without cause or voluntary termination with good reason	1,660,000	1,300,600	1,311,498	35,171	4,307,269
Termination after change in control	1,660,000	1,660,000	2,452,608	35,171	5,807,779

- (1) Other than for Mr. Sunu's death or disability, the base salary paid upon termination under the applicable scenario is calculated as two times the 2016 base salary. In the event of Mr. Sunu's death or disability, the base salary paid upon termination is equal to his 2016 base salary.
- (2) Other than for Mr. Sunu's death or disability, the incentive paid upon termination under the applicable scenario is calculated as two times the average of the annual incentive paid for the immediately two preceding fiscal years (fiscal years 2015 and 2014), except in the case of termination due to a change in control, which is the greater of the average annual incentive paid for the immediately two preceding fiscal years or two times the annual incentive target. In the event of Mr. Sunu's death or disability, the incentive is equal to his annual incentive paid for the immediately preceding fiscal year (fiscal year 2015).
- (3) The amounts are calculated based on the closing price of \$18.70 on December 30, 2016 under the applicable scenario. In the event of Mr. Sunu's death or disability, the amount is calculated for full vesting of stock awards, the next tranche for option awards and a prorated amount for performance share awards pursuant to the LTIP Plan. In the event of Mr. Sunu's receipt of a non-extension notice, the amount is calculated for a prorated amount for performance awards. In the event of Mr. Sunu's termination without cause or voluntary termination with good reason, the amount is calculated for the next tranche of stock and option awards and a prorated amount for performance awards. In the case of termination related to a change in control, the amount is calculated for full vesting of all unvested awards.
- (4) Other than for Mr. Sunu's death or disability, the cost of continued health and disability insurance coverage paid upon termination under the applicable scenario is calculated at the present value of 24 months of benefits. In the event of Mr. Sunu's death or disability, the amount is calculated at the present value of 12 months of benefits.

The following table shows cash compensation and other benefits that would have been provided under the employment agreements with the other NEOs, other than Mr. Tomae, if their employment had terminated on December 31, 2016 under conditions that would trigger payments. The information set forth in the table below with respect to Mr. Tomae shows the cash compensation and other benefits provided to him in connection with the termination of his employment with the Company without cause effective January 29, 2016.

Reason for Payment	Base Salary <sup>(1)</sup> (\$)	Non-Equity Incentive Plan <sup>(2)</sup> (\$)	Acceleration and Continuation of Equity Awards <sup>(3)</sup> (\$)	Continuation of Medical/Welfare Benefits <sup>(4)</sup> (\$)	Total Termination Benefits (\$)
<b>Ms. Turner</b>					
Involuntary termination with cause or voluntary termination without good reason	—	—	—	—	—
Death or disability	—	—	665,668	—	665,668
Termination without cause	750,000	178,100	420,195	30,659	1,378,954
Voluntary termination with good reason	750,000	178,100	263,618	30,659	1,222,377
Termination after change in control	750,000	375,000	892,998	30,659	2,048,657
<b>Mr. Nixon</b>

Voluntary termination with good reason	706,000	268,100	246,309	35,171	1,255,580
Termination after change in control	706,000	353,000	739,674	35,171	1,833,845
<b>Mr. Lunny</b>					
Involuntary termination with cause or voluntary termination without good reason	—	—	—	—	—
Death or disability	—	—	402,153	—	402,153
Termination without cause	600,000	212,000	159,776	45,250	1,017,026
Voluntary termination with good reason	600,000	212,000	185,544	45,250	1,042,794
Termination after change in control	600,000	300,000	559,438	45,250	1,504,688
<b>Mr. Rush</b>					
Involuntary termination with cause or voluntary termination without good reason	—	—	—	—	—
Death or disability	—	—	328,787	—	328,787
Termination without cause	570,000	204,600	153,543	50,058	978,201
Voluntary termination with good reason	570,000	204,600	123,087	50,058	947,745
Termination after change in control	570,000	285,000	482,162	50,058	1,387,220
<b>Mr. Tomae<sup>(5)</sup></b>					
Termination without cause	686,000	268,800	46,750	38,893	1,040,443

- (1) The base salary paid upon termination under the applicable scenario is calculated as two times the 2016 base salary.
- (2) The incentive paid upon termination under the applicable scenario is calculated as two times the average of the annual incentive paid for the immediately two preceding fiscal years (fiscal years 2015 and 2014), except in the case of termination due to a change in control, which is the greater of the average annual incentive paid for the immediately two preceding fiscal years or two times the annual incentive target.
- (3) The amounts are calculated based on the closing price of \$18.70 on December 30, 2016 under the applicable scenario. In the event of death or disability, the amount is calculated for full vesting of stock awards, the next tranche for option awards and a prorated amount for performance share awards pursuant to the LTIP Plan. In the event of voluntary termination with good reason, the amount is calculated for the next tranche of stock and option awards. The amount is calculated for the next tranche for January 22, 2016 stock and option awards and the next two tranches for August 15, 2016 stock and option awards in order to obtain at least 50% vesting as well as a prorated amount for performance share awards in the event of termination without cause pursuant to the LTIP Plan. In the case of termination related to a change in control, the amount is calculated for full vesting of all unvested awards.

- (4) The cost of continued health and disability insurance coverage paid upon termination under the applicable scenario is calculated at the present value of 24 months of benefits.
- (5) Mr. Tomae's employment with the Company terminated without cause effective January 29, 2016. The base salary, non-equity incentive plan and the continuation of health and disability insurance coverage reflects the actual payment and benefits received by Mr. Tomae upon his termination. The acceleration and continuation of equity awards amount is calculated based on the closing price of \$18.70 on December 30, 2016. In accordance with the performance share awards pursuant to the LTIP Plan, Mr. Tomae's outstanding performance awards on his termination date were prorated to reflect the number of performance shares earned during the performance period while the remaining performance shares were forfeited on his termination date.

### Director Compensation

We use a combination of cash and stock-based incentive compensation to attract and retain qualified candidates to serve on our board of directors. In setting director compensation, we consider the significant amount of time that directors spend in fulfilling their duties to us as well as the skill level required by the members of our board of directors. Our employee director, Mr. Sunu, does not receive any compensation for serving on our board of directors.

#### *2016 Compensation*

*Cash Compensation.* With the exception of Mr. Gingold, who elected to forgo all compensation, our non-employee directors were paid the following cash fees in 2016: (i) an annual fee of \$75,000 for serving as a non-employee director; (ii) a \$40,000 annual cash retainer for serving as the chair of the board of directors; (iii) a \$30,000 annual cash retainer for serving as the chair of the audit committee; (iv) a \$20,000 annual cash retainer for serving as the chair of the compensation committee (prorated for a partial year's service in the case of Messrs. Horowitz and Treadwell), the corporate governance and nominating committee (prorated for a partial year's service in the case of Messrs. Treadwell and Horowitz) and the regulatory committee; and (v) annual committee member fees of \$15,000 for serving on the audit committee (prorated for a partial year's service in the case of Mr. Mahoney) and \$7,500 for serving on the compensation committee (prorated for a partial year's service in the case of Messrs. Horowitz, Mahoney and Treadwell). All annual fees were paid in quarterly installments.

*Equity Compensation.* Again, with the exception of Mr. Gingold, who elected to forgo all compensation, on January 22, 2016, each of our non-employee directors received an award of approximately \$150,000 in the form of restricted stock and stock options under the LTIP Plan. These awards vested 100% on the first anniversary of the grant date, January 23, 2017.

#### *Share Ownership Guidelines*

Our directors are subject to share ownership guidelines to better align their interests with those of our shareholders by requiring directors to acquire and maintain meaningful equity positions in the Company. Under the guidelines, each director is required to own shares of our common stock with a value equal to at least three times their annual base cash retainer. Directors are required to meet these guidelines within the later of five years of the date of adoption of these guidelines (by June 3, 2018) or of such individual becoming subject to them. If a director does not meet the required ownership guidelines within the specified period, he may receive all of his future board compensation in equity until the goal is met.

#### *No Hedging/No Pledging Provisions*

Our insider trading policy prohibits the directors from using any strategies or products (such as derivative securities or short-selling techniques) to hedge against the potential changes in the value of our common stock, prohibits the holding of our securities in a margin account and prohibits any director from pledging our securities as collateral for a loan.

## 2016 Director Summary Compensation Table

Name	Fees Earned or Paid in Cash <sup>(1)</sup> (S)	Stock Awards <sup>(2)</sup> (S)	Option Awards <sup>(3)</sup> (S)	Total (S)
Peter D. Aquino	90,000	105,012	44,992	240,004
Dennis J. Austin	90,000	105,012	44,992	240,004
Peter C. Gingold <sup>(4)</sup>	—	—	—	—
Edward D. Horowitz	138,750	105,012	44,992	288,754
Michael J. Mahoney	106,250	105,012	44,992	256,254
Michael K. Robinson	90,000	105,012	44,992	240,004
David L. Treadwell	98,750	105,012	44,992	248,754
Wayne Wilson	105,000	105,012	44,992	255,004

- (1) See the discussion preceding this table for the general method used to determine each non-employee director's cash compensation. For fiscal 2016, the particular components paid as cash compensation in excess of each non-employee director's \$75,000 annual retainer were as follows: Mr. Aquino (\$15,000 as member of the audit committee); Mr. Austin (\$15,000 as member of the audit committee); Mr. Horowitz (\$40,000 as chair of the board of directors, \$10,000 as chair of the corporate governance and nominating committee effective June 1, 2016, \$10,000 as chair of the compensation committee through May 31, 2016 and \$3,750 as member of the compensation committee effective June 1, 2016); Mr. Mahoney (\$20,000 as chair of the regulatory committee, \$7,500 as member of the audit committee through May 31, 2016 and \$3,750 as member of the compensation committee effective June 1, 2016); Mr. Robinson (\$15,000 as member of the audit committee); Mr. Treadwell (\$10,000 as chair of the compensation committee effective June 1, 2016, \$10,000 as chair of the corporate governance and nominating committee through May 31, 2016, and \$3,750 as member of the compensation committee through May 31, 2016) and Mr. Wilson (\$30,000 as chair of the audit committee).
- (2) Reflects the grant date fair value based on the number of awards included in the grant and the fair value of the awards at the date of grant, as determined in accordance with the Compensation—Stock Compensation Topic of the ASC. This amount is equal to the number of shares of restricted stock issued multiplied by the market value of our common stock on the date of grant. On January 22, 2016, each director, with the exception of Mr. Gingold, was granted 7,105 shares of restricted stock with a market value of \$14.78 per share that vested on January 23, 2017.
- (3) Reflects the grant date fair value based on the number of awards included in the grant and the fair value of the awards at the date of grant, as determined in accordance with the Compensation—Stock Compensation Topic of the ASC. See note (1) to the *Summary Compensation* table for more information on the assumptions used. On January 22, 2016, each director, with the exception of Mr. Gingold, was granted 6,025 options with a grant date fair value of \$7.47 per share that vested on January 23, 2017.
- (4) Mr. Gingold waived the receipt of all compensation.

**Compensation Committee Interlocks and Insider Participation**

The compensation committee of the board of directors for 2016 was comprised of Mr. Treadwell, Mr. Gingold, Mr. Horowitz and Mr. Mahoney (effective June 1, 2016). None of the members of the board of directors who sat on the compensation committee in 2016 was employed by us as an officer or employee during or prior to 2016 or had any interlocking relationships requiring disclosure under applicable rules and regulations. No executive officer of the Company served as a member of the compensation committee of another entity, one of whose executive officers served on our board of directors in 2016.

**Compensation Committee Report\***

The compensation committee of the board of directors oversees the executive compensation program for the Company's CEO and other executive officers, including those named in "*Compensation Discussion and Analysis—2016 Summary Compensation Table*" in this Annual Report. The executive officers named in that table are referred to collectively as the named executive officers (the "NEOs").

The compensation committee is generally responsible for strategic decisions relating to the overall compensation structure and program applicable to the Company's executives and senior management. The program currently includes: base salaries, cash-based annual incentive compensation and equity-based long-term incentives. The compensation committee, jointly with the corporate governance and nominating committee, is responsible for the compensation program of our non-employee directors, which program is currently comprised of cash fees and equity.

On behalf of the shareholders, the compensation committee has carefully monitored the Company's executive compensation program. We believe that the Compensation Discussion and Analysis contained in this Annual Report and the related tables that follow will show an executive compensation program that is designed to maximize long-term shareholder value and provide the NEOs with incentives for superior corporate and individual performance and encourage them to remain with the Company.

The compensation committee has reviewed and discussed the Compensation Discussion and Analysis with management, and, based on such review and discussions, recommended to the board of directors that it be included in this Annual Report.

Shareholders are invited to express their views to the board of directors regarding executive compensation as well as other matters as described in this Annual Report. See "Board of Directors and Committees of the Board of Directors—Policies Relating to our Board of Directors—Communications with Board of Directors" in this Annual Report.

*Submitted by the compensation committee of the board of directors:*

*David L. Treadwell (Chair)*

*Edward D. Horowitz*

*Peter C. Gingold*

*Michael J. Mahoney*

\* The material in this report shall not be deemed to be "soliciting material", or to be "filed" with the SEC or subject to the liabilities of Section 18 of the Exchange Act, and is not incorporated by reference in any filing of the Company under the Securities Act of 1933 or the Exchange Act, whether made before or after the date hereof and regardless of any general incorporation language in any such filing.

## **ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS**

The information required by Item 201(d) of Regulation S-K is incorporated herein by reference to "Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities—Securities Authorized for Issuance under Equity Compensation Plans" included elsewhere in this Annual Report.

### **Security Ownership of Certain Beneficial Owners and Management**

The following table sets forth information regarding beneficial ownership of our common stock as of February 27, 2017. The information (other than with respect to our current directors and executives) is based on a review of statements filed prior to February 27, 2017 with the SEC pursuant to Sections 13(d), 13(f), 13(g) and 16 of the Exchange Act with respect to our common stock. The following table includes beneficial ownership for:

- each NEO;
- all other executive officers as a group;
- each director;
- all executive officers and directors as a group; and
- each person known to us to be the beneficial owner of 5% or more of the outstanding shares of our common stock based on such person's most recently filed Schedule 13D or Schedule 13G.

The address of each director and executive officer listed is c/o FairPoint Communications, Inc., 521 East Morehead Street, Suite 500, Charlotte, NC 28202.

The amounts and percentages of common stock beneficially owned are reported on the basis of regulations of the SEC governing the determination of beneficial ownership of securities. Under the rules of the SEC, a person is deemed to be a "beneficial owner" of a security if that person has or shares "voting power", which includes the power to vote or to direct the voting of such security, or "investment power", which includes the power to dispose of or direct the disposition of such security. A person is also deemed to be a beneficial owner of any securities of which that person has a right to acquire beneficial ownership within 60 days. All persons listed have sole voting and investment power with respect to their shares unless otherwise indicated.

Name	Common Stock Beneficially Owned <sup>(1)</sup>	
	Number	Percent of Class

- (1) Unless otherwise indicated below, the persons and entities named in the table have sole voting and sole investment power with respect to all shares beneficially owned by them, subject to community property laws where applicable. The percentage of beneficial ownership is based on 27,266,570 shares of our common stock outstanding as of February 27, 2017.
- (2) With respect to shares Mr. Sunu beneficially owned: (i) includes 427,750 shares of our common stock issuable upon exercise of stock options that are either currently exercisable or become exercisable during the next 60 days, (ii) includes 43,000 shares of restricted stock awarded under the LTIP Plan and (iii) includes 272,486 shares of common stock.
- (3) With respect to shares Ms. Turner beneficially owned: (i) includes 21,025 shares of our common stock issuable upon exercise of stock options that are either currently exercisable or become exercisable during the next 60 days, (ii) includes 28,583 shares of restricted stock awarded under the LTIP Plan and (iii) includes 12,122 shares of common stock.
- (4) With respect to shares Mr. Nixon beneficially owned: (i) includes 120,130 shares of our common stock issuable upon exercise of stock options that are either currently exercisable or become exercisable during the next 60 days, (ii) includes 13,625 shares of restricted stock awarded under the LTIP Plan and (iii) includes 65,887 shares of common stock.
- (5) With respect to shares Mr. Lunny beneficially owned: (i) includes 43,350 shares of our common stock issuable upon exercise of stock options that are either currently exercisable or become exercisable during the next 60 days, (ii) includes 11,250 shares of restricted stock awarded under the LTIP Plan and (iii) includes 27,005 shares of common stock.
- (6) With respect to shares Mr. Rush beneficially owned: (i) includes 63,075 shares of our common stock issuable upon exercise of stock options that are either currently exercisable or become exercisable during the next 60 days, (ii) includes 11,000 shares of restricted stock awarded under the LTIP Plan and (iii) includes 8,844 shares of common stock.

- (7) Mr. Sabherwal resigned his employment with the Company effective August 3, 2016. With respect to shares beneficially owned, includes 69,355 shares of common stock as of his termination date, the latest date for which information is available to the Company.

- (8) Mr. Tomae's employment with the Company terminated without cause effective January 29, 2016. With respect to shares beneficially owned, includes 49,608 shares of common stock as of his termination date, the latest date for which information is available to the Company.
- (9) With respect to shares beneficially owned: (i) includes 37,850 shares of our common stock issuable upon exercise of stock options that are either currently exercisable or become exercisable during the next 60 days, (ii) includes 21,000 shares of restricted stock awarded under the LTIP Plan and (iii) includes 1,409 shares of common stock.
- (10) With respect to shares Mr. Aquino beneficially owned: (i) includes 15,842 shares of our common stock issuable upon exercise of stock options that are either currently exercisable or become exercisable during the next 60 days, (ii) includes 7,500 shares of restricted stock awarded under the LTIP Plan and (iii) includes 19,610 shares of common stock.
- (11) With respect to shares Mr. Austin beneficially owned: (i) includes 47,643 shares of our common stock issuable upon exercise of stock options that are either currently exercisable or become exercisable during the next 60 days, (ii) includes 7,500 shares of restricted stock awarded under the LTIP Plan and (iii) includes 51,655 shares of common stock.
- (12) Mr. Gingold has elected to waive all compensation and otherwise owns no shares of common stock.
- (13) With respect to shares Mr. Horowitz beneficially owned: (i) includes 47,643 shares of our common stock issuable upon exercise of stock options that are either currently exercisable or become exercisable during the next 60 days, (ii) includes 7,500 shares of restricted stock awarded under the LTIP Plan and (iii) includes 62,155 shares of common stock.
- (14) With respect to shares Mr. Mahoney beneficially owned: (i) includes 47,643 shares of our common stock issuable upon exercise of stock options that are either currently exercisable or become exercisable during the next 60 days, (ii) includes 7,500 shares of restricted stock awarded under the LTIP Plan and (iii) includes 49,655 shares of common stock.
- (15) With respect to shares Mr. Robinson beneficially owned: (i) includes 47,643 shares of our common stock issuable upon exercise of stock options that are either currently exercisable or become exercisable during the next 60 days, (ii) includes 7,500 shares of restricted stock awarded under the LTIP Plan and (iii) includes 49,655 shares of common stock.
- (16) With respect to shares Mr. Treadwell beneficially owned: (i) includes 47,643 shares of our common stock issuable upon exercise of stock options that are either currently exercisable or become exercisable during the next 60 days, (ii) includes 7,500 shares of restricted stock awarded under the LTIP Plan and (iii) includes 68,655 shares of common stock.
- (17) With respect to shares Mr. Wilson beneficially owned: (i) includes 47,643 shares of our common stock issuable upon exercise of stock options that are either currently exercisable or become exercisable during the next 60 days, (ii) includes 7,500 shares of restricted stock awarded under the LTIP Plan and (iii) includes 49,655 shares of common stock.
- (18) With respect to shares beneficially owned: (i) includes 1,014,880 shares of our common stock issuable upon exercise of stock options that are either currently exercisable or become exercisable during the next 60 days, (ii) includes 180,958 shares of restricted stock awarded under the LTIP Plan and (iii) includes 738,793 shares of common stock. Does not include shares beneficially owned by Mr. Sabherwal or Mr. Tomae because they are no longer current executive officers.
- (19) Based solely on information contained in the Schedule 13D filed with the SEC on May 20, 2011 by Angelo, Gordon & Co., L.P. (address: 245 Park Avenue, 26<sup>th</sup> Floor, New York, New York 10167) and the number of outstanding shares of our common stock on February 27, 2017. The Angelo, Gordon & Co., L.P. Schedule 13D reported sole voting power and sole dispositive power of 5,128,325 shares.
- (20) Based solely on information contained in the Schedule 13G filed on February 10, 2017 with the SEC as of December 31, 2016 by The Vanguard Group (address: 100 Vanguard Boulevard, Malvern, Pennsylvania 19355) and the number of outstanding shares of our common stock on February 27, 2017. The Vanguard Group Schedule 13G reported an aggregate amount beneficially owned by each reporting person of 2,312,969 shares.
- (21) Based solely on information contained in the Schedule 13G filed on December 5, 2016 with the SEC as of December 5, 2016 by Maglan Capital LP (address: 25 West 39th Street, 2nd Floor, New York, New York 10018) and the number of outstanding shares of our common stock on February 27, 2017. The Maglan Capital LP Schedule 13G reported shared voting power and shared dispositive power of 2,062,812 shares.
- (22) Based solely on information contained in the Schedule 13G filed on January 30, 2017 with the SEC as of December 31, 2016 by BlackRock, Inc. (address: 55 East 52nd Street, New York, New York 10055) and the number of outstanding shares of our

common stock on February 27, 2017. The BlackRock, Inc. Schedule 13G reported an aggregate amount beneficially owned by each reporting person of 1,594,606 shares.

- (23) Based solely on information contained in the Schedule 13G filed on February 14, 2017 with the SEC as of December 15, 2016 by Renaissance Technologies LLC (address: 800 Third Avenue, New York, New York 10022) and the number

of outstanding shares of our common stock on February 27, 2017. The Renaissance Technologies LLC Schedule 13G reported an aggregate amount beneficially owned by each reporting person of 1,477,800 shares.

- (24) Based solely on information contained in the Schedule 13G filed on February 13, 2017 with the SEC as of December 31, 2016 by Vanguard World Funds (address: 100 Vanguard Boulevard, Malvern, Pennsylvania 19355) and the number of outstanding shares of our common stock on February 27, 2017. The Vanguard World Funds Schedule 13G reported sole voting power of 1,426,565 shares.

## ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS, AND DIRECTOR INDEPENDENCE

### Certain Relationships and Related Transactions

Our code of business conduct and ethics, which is posted on our website at [www.fairpoint.com](http://www.fairpoint.com), prohibits directors and executive officers from engaging in transactions on behalf of us with a family member or with a company with which they are or their family member is a significant owner or associated or employed in a significant role. Our audit committee must review and approve in advance all material related party transactions or business or professional relationships. All instances involving potential related party transactions or business or professional relationships must be reported to our legal department which will assess the materiality of the transaction or relationship and elevate the matter to the audit committee as appropriate. Any dealings with a related party must be conducted in such a way as to avoid preferential treatment and assure that the terms obtained by us are no less favorable than could be obtained from unrelated parties on an arm's-length basis. Directors and officers are not permitted to enter into, develop or continue any such material transaction or relationship without obtaining prior approval from the audit committee.

Michael K. Robinson, a member of our board of directors, serves as the CEO of Broadview. From time to time, Broadview purchases services from us in the ordinary course of business. In 2016, we provided wholesale services, specifically the resale of access on our network and unbundled network elements, as well as full end-to-end circuit platforms, to Broadview, totaling approximately \$1.0 million in the aggregate. This amount is less than 1% of Broadview's gross revenue for 2016. Such services were provided on an arm's-length basis.

### Director Independence

The board of directors considered transactions and relationships between each director or any member of his or her immediate family and the Company and its subsidiaries and affiliates. Our board of directors has determined that, other than Paul H. Sunu, all of our directors are independent under the criteria for independence set forth in the listing standards of the Nasdaq and accordingly are independent directors with no material relationship to us other than being a director or shareholder of FairPoint. Therefore, we satisfy the Nasdaq requirement that a majority of our board of directors be comprised of independent directors.

## ITEM 14. PRINCIPAL ACCOUNTING FEES AND SERVICES

The following table sets forth the aggregate fees paid or payable relating to services rendered for our fiscal years ended December 31, 2016 and 2015:

	Year Ended December 31, 2016	Year Ended December 31, 2015
Audit Fees (1)	\$ 1,070,000	\$ 1,985,000
Audit-related Fees (2)	—	135,000
All Other Fees (3)	—	2,000
<b>Total</b>	<b>\$ 1,070,000</b>	<b>\$ 2,122,000</b>

- (1) Audit fees include amounts related to annual financial statement audit work and quarterly financial statement reviews. These amounts also include the review of documents filed with the SEC, accounting consultations related to the annual audit and preparation of letters for underwriters and other requesting parties as well as fees associated with the joint proxy statement/prospectus in connection with the Merger.
- (2) Audit-related fees consist of amounts related to the Statement on Standards for Attestation Engagements No. 16 examination of our data center colocation services.
- (3) All Other Fees consist of amounts billed to us related to an online research tool for 2015.

*Audit Committee Pre-Approval Policy*

In accordance with our audit committee pre-approval policy, all audit and non-audit services performed for us by our independent accountants were pre-approved by our audit committee.

Our audit committee's pre-approval policy provides that our independent registered public accounting firm shall not provide services that have the potential to impair or appear to impair the independence of the audit role. The pre-approval policy requires our independent registered public accounting firm to provide an annual engagement letter to our audit committee outlining the scope of the audit services proposed to be performed during the fiscal year. Upon the audit committee's acceptance of and agreement with such engagement letter, the services within the scope of the proposed audit services shall be deemed pre-approved pursuant to the policy.

The pre-approval policy provides for categorical pre-approval of specified audit and permissible non-audit services and requires the specific pre-approval by the audit committee, prior to engagement, of such services, other than audit services covered by the annual engagement letter. In addition, services to be provided by our independent registered public accounting firm that are not within the category of pre-approved services must be approved by the audit committee prior to engagement, regardless of the service being requested or the dollar amount involved.

Requests or applications for services that require specific separate approval by the audit committee are required to be submitted to the audit committee by both management and the independent registered public accounting firm and must include a detailed description of the services to be provided and a joint statement confirming that the provision of the proposed services does not impair the independence of the independent registered public accounting firm.

The audit committee may delegate pre-approval authority to one or more of its members. The member or members to whom such authority is delegated shall report any pre-approval decisions to the audit committee at its next scheduled meeting. The audit committee is prohibited from delegating to management its responsibilities to pre-approve services to be performed by our independent registered public accounting firm.

**PART IV****ITEM 15. EXHIBITS, FINANCIAL STATEMENT SCHEDULES***(a) Financial Statements*

The financial statements filed as part of this Annual Report are listed in the index to the financial statements under "Item 8. Financial Statements and Supplementary Data" included elsewhere in this Annual Report, which index to the financial statements is incorporated herein by reference.
