RE: Support for the Securing Permitting for Energy and Environmental Development Act (SPEED) Act

Dear Chairman Westerman and Representative Golden:

Quanta Services is a leading provider of specialized infrastructure solutions for the utility, renewable energy, communications, and underground infrastructure industries. As the largest employer of skilled craft labor in the U.S., we are committed to building and maintaining the infrastructure essential for reliable, resilient, and affordable energy. We are writing today to express our strong support for the recently introduced SPEED Act and to commend the Committee for advancing a thoughtful, solutions-oriented approach to modernizing America's permitting framework.

Meeting rising energy demand and supporting domestic manufacturing growth requires a permitting process that is predictable, efficient, and timely. Currently, outdated requirements, bureaucratic hurdles, and prolonged litigation often delay or halt the expansion or repair of critical infrastructure. Quanta has faced these challenges directly on major projects like the Mountain Valley Pipeline and SunZia Transmission Project, where procedural inefficiencies and legal setbacks have driven up costs, disrupted operations, and delayed essential economic benefits for impacted communities. A legislative solution to these challenges is long overdue.

We applaud the reforms in the SPEED Act and believe they are essential to ensuring that energy infrastructure projects can be built on time, on budget, and in a manner that supports economic growth, grid reliability, and job creation. We are proud to support this legislation, and we encourage swift consideration and passage.

Sincerely,

Vanessa Tutos
Vice President, Government Affairs
Quanta Services
