The Honorable Bruce Westerman
Chair
House Natural Resources Committee
1324 Longworth House Office Building
Washington, D.C. 20515

The Honorable Jared Huffman
Ranking Member
House Natural Resources Committee
1332 Longworth House Office Building
Washington, D.C. 20515

Dear Chair Westerman, Ranking Member Huffman,

On behalf of our 179 organizations and our millions of members and supporters, we strongly oppose H.R. 9436, introduced by Representatives Jared Golden and Mike Lawler. The bill would extend by seven years the unprecedented extinction rider included in the FY2023 Consolidated Appropriations Act, once again delaying critical protections for North Atlantic Right Whales and allowing continued entanglement in fishing gear to push the species closer to extinction.

The Right Whale extinction rider prevented the National Marine Fisheries Service from issuing a more protective rule to further reduce the risk of entanglement and death in the U.S. lobster fishery until December 31, 2028 — despite multiple court decisions holding that, based on scientific evidence, the agency failed to provide the whale with sufficient protections from entanglement-related mortality. During this legislative rider-moratorium period, [55 whales have been documented dead or injured](#) or in poor health. Of these, 31 were confirmed as entanglements in fishing gear.

H.R. 9436 would push management off another seven years, further driving the Right Whale towards extinction. Based on [NOAA's most recent population estimate](#), fewer than 400 Right Whales remain, with a critically low number of 70 breeding females. Entanglement in vertical fishing lines remains one of the two primary causes of serious injury and death, and unfortunately the evidence is now clear that [fishing gear from Maine does in fact entangle whales](#). Every year that passes without removing those lines from the water brings the Right Whale closer to extinction.

Instead of risking the extinction of this critically endangered species, Congress should focus its efforts on achieving win-win conservation solutions. On-demand (“pop-up”) fishing gear works. In Massachusetts, a fisherman tested the same gear in early 2025 and [reported a 100% success rate](#) using this gear. Since 2020, [more than 1,000,000 lbs of seafood have been safely harvested in the U.S. and Canada using on-demand gear](#). The gear has been successfully hauled more than [13,000 times in the Northeast US alone, including Maine waters, with a 90% success rate](#).

Fishermen using on-demand gear as part of an Exempted Fishing Permit greatly improved gear performance through modifications based on areas fished. In addition, fishermen reported on-demand gear moved less in harsh oceanographic conditions as compared to traditional gear and was more likely to be retrieved if gear was displaced, reducing potential gear loss. Improved safety measures include app upgrades for a Man-Over-Board (MOB) emergency release and an alarm system to alert mobile gear of areas where on-demand sets are located. A cloud-based system of digital gear marking provides both fixed and mobile gear users of location data without disclosing propriety information, reducing gear conflict risks.

Congress should provide lobster fishermen in Federal waters the necessary support to fully incentivize adoption of on-demand fishing gear over the next 5-7 years with input and collaboration from the fishing community and states. Federal and state agencies have the resources to fully fund the adoption of these innovative and effective technologies that protect Right Whales, and indeed all of the large baleen whales on both coasts from entanglements. [NOAA is currently authorized](#) to disburse \$400 million annually to fishermen for fisheries disasters and investing a fraction of this funding could dramatically reduce entanglements of whales in the future. Through this funding and additional engagement, lawmakers can support fishing communities instead of prolonging the status quo.

We urge you to oppose H.R. 9436 and any other effort to extend the existing rider, while providing funding that benefits both Right Whale recovery and fishing communities.

Sincerely,
