

RICHARD SILBERGLITT

EDUCATION

1968 Ph.D., Solid State Physics, University of Pennsylvania
1964 M.S., Solid State Physics, University of Pennsylvania
1963 B.S. with high honor, Physics, Stevens Institute of Technology

EXPERIENCE

SENIOR PHYSICAL SCIENTIST

RAND

February 2000 – Present

Dr. Silberglitt has developed, led and contributed to RAND studies in advanced technology areas including energy, materials, manufacturing, and nanotechnology for civilian, military, and intelligence agencies. He was a principal contributor to the analysis RAND performed for the National Intelligence Council (NIC)'s Global Trends 2015 study, which was published as the broadly circulated RAND monograph report, *The Global Technology Revolution* (MR-1307-NIC, 2001). He led an update of this work to analyze the impacts of converging trends in biotechnology, nanotechnology, information technology, and materials science and engineering out to 2020, in support of the NIC 2020 report, *Mapping the Global Future*. That study was published by RAND as the monograph *The Global Technology Revolution 2020, Executive Summary* (MG-450-NIC, 2006) and the accompanying technical report, *The Global Technology Revolution 2020, In Depth Analyses* (TR-303-NIC, 2006), on which he has lectured widely in the U.S. and Asia. This led to a foresight study for two development groups near Tianjin, China that were published in English and Chinese in 2009 (MG-776-TBNA/TEDA, TR-649-TBNA/TEDA, and TR-649.1-TBNA/TEDA).

Dr. Silberglitt is an active contributor to the international foresight community, having led foresight studies in the U.S., Southeast Asia, and Brazil. He served as Chair of the International Advisory Board of the APEC Center for Technology Foresight, and has lectured widely on foresight in the U.S. and abroad, including the International Foresight Academy. His work has been presented at the Technology Foresight Assessment conference of the European Commission's Joint Research Centre, and selected for publication in international foresight journals.

Dr. Silberglitt led a comprehensive study of nano-enabled technologies that culminated in an investment roadmap for a U.S. Government client. Based on these works, he contributed an encyclopedia article on nanomaterials and co-authored with RAND colleagues a chapter on biodefense for a biomedical nanotechnology volume. Dr. Silberglitt is also the co-developer of a RAND R&D portfolio analysis and management framework ("PortMan") that was developed for the Department of Energy and has been demonstrated for the Office of Naval Research (RAND MG-271-NAVY, 2004) and has formed the basis for a RAND portfolio management initiative for the U.S. Army (MG-761-A, 2009, MG-979-A, 2011, MG-1187-A, 2012, RB-9678-A, 2012),

National Security Agency, National Institute of Justice, and other agencies. Other projects that he has led include:

- A technology futures workshop with broad representation of law enforcement practitioners and academics that developed alternative visions of law enforcement looking out two decades.
- An analysis for the Director of Department of Defense Laboratories of the patent portfolios of the 60+ Defense Laboratory Enterprise laboratories that showed in which technical areas individual laboratories were leading, in sync with, or following all inventors filing patent applications in those areas.
- A study for the Office of the Deputy Assistant Secretary of Defense for Research and Engineering that developed policy options for addressing concerns associated with the dependence of soldier-portable batteries on a supply chain based in Asia.
- A study for the National Intelligence Council of supply chain issues associated with materials that are critical inputs to manufacturing that showed critical materials are not restricted to the widely publicized rare earth metals. The results were published in the RAND report, Critical Materials: Present Danger to U.S. Manufacturing (RR-133-NIC, 2013) and were the subject of Dr. Silbergliitt's Congressional testimony in May, 2015.
- The High Temperature Superconductivity (HTS) Study in the Science and Technology Policy Institute, which analyzed the characteristics of power technologies based upon HTS and evaluated their potential to meet the demands of the evolving electric power grid, with emphasis on transmission constraints.
- A project to quantify the benefits on reliability and available transfer capacity of HTS cable substitutions in specific portions of the U.S. utility grid through contingency analyses performed using computer simulations of power flows.
- A project to identify and prioritize materials research needs to obtain the performance targets of the nine most energy-intensive industries for the U.S. Department of Energy Office of Industrial Technologies (OIT).
- A project to define the linkages between the OIT industry technical roadmaps, and programs and projects addressing research needs described in these roadmaps.
- An assessment of energy scenarios and their implications for energy policy
- A case study of Intelligent Manufacturing Systems (IMS), an industry-led international consortium

VICE PRESIDENT, MATERIALS PROCESSING/MATERIALS ADVISOR
FM TECHNOLOGIES, INC.
July 1993 – January 2000

Dr. Silbergliitt had responsibility for conceiving, initiating, directing and executing materials R&D and technology development projects, including those aimed at the use of directed energy techniques such as microwaves and pulsed electron beams to join ceramics and ceramic composites to themselves and metals. He led a research group that explored the application of microwave processing technology to industrial applications such as the fabrication of ceramic heat exchanger and radiant burner tube assemblies, the processing of ceramic composites, and the development of microwave regenerated diesel engine particulate traps. He was also responsible for the materials aspects of projects involving coatings to increase voltage breakdown thresholds of metals, ferroelectric cathodes for

high-current, high-repetition-rate electron guns, and pulsed electron beam surface modification.

Dr. Silberglitt interacted extensively with scientists, engineers and program managers in the user industries, as well as universities and National Laboratories, to identify and pursue materials technology development opportunities with the potential to improve U.S. industrial productivity.

COMPANY SENIOR SCIENTIST
TECHNOLOGY ASSESSMENT AND TRANSFER, INC.
March 1990 - July 1993

Dr. Silberglitt had responsibility for technical oversight and guidance of corporate R&D programs and identification and development of new R&D and technology transfer initiatives. Areas of interest included advanced coatings technology, high temperature superconductivity, oxy-acetylene torch deposition of wear-resistant diamond films, and on-demand reusable heat packs for consumer and medical applications.

Dr. Silberglitt also managed projects dealing with materials and energy technologies that have the potential to increase U.S. industrial productivity and competitiveness. This included research on the joining of ceramic materials using microwave energy, including oxides, carbides, nitrides and composites. This research led to the development of new instrumentation and techniques for the processing of ceramics and ceramic composites with microwave heating.

SENIOR SCIENTIST/SECTION MANAGER
QUESTECH, INC.
April 1987 - March 1990

As Senior Scientist in the Office of Advanced Programs, Dr. Silberglitt managed contract and proposal efforts and provided Red Team expertise in a wide variety of high technology areas, including energy conservation, materials science and engineering, industrial modernization, high power microwaves, and electronic warfare. He led a materials research initiative to commercialize a technique for the joining of ceramic materials using microwave energy that was developed and patented under his direction by a QuesTech subsidiary, DHR, Inc. He also provided consulting support to the Department of Energy (DOE) ECUT Program to identify, evaluate and prioritize innovative research in materials and tribology.

As Section Manager in the Intelligence and Electronic Warfare Division, Dr. Silberglitt was responsible for a group engaged in scientific and engineering analysis of intelligence collection systems covering the entire electromagnetic spectrum, including radar, millimeter wave, optical and electro-optical devices. His staff also provided technical and management support to the U.S. Army Center for Night Vision and Electro-optics at

Fort Belvoir, VA. Projects under Dr. Silberglitt's direction ranged in value from \$250,000 to \$3 million.

SENIOR SCIENTIST/PRINCIPAL/VICE PRESIDENT

DHR, INC.

September 1977 - April 1987

As Vice President, Dr. Silberglitt managed all energy and materials work, encompassing laboratory research, technology assessment, technology transfer, and program evaluation and support. Clients included the Department of Energy and all of its National Laboratories, as well as major private sector firms such as electric utilities and materials suppliers and developers. He was responsible for programs amounting in value to \$1.6 million. His group supported the following DOE Offices: Basic Energy Sciences, Advanced Conservation Research, Energy Conversion and Utilization Technologies, and Technical Coordination.

As Principal, Dr. Silberglitt conceived and managed several large technology and research evaluation projects that required the coordination of technical inputs from experts in academia, industry and Government. This included a National Laboratory review of innovative research concepts aimed at achieving revolutionary advances in energy efficiency and the review and assessment of all DoD research in materials and tribology, leading to identification of energy conservation research opportunities. In addition, Dr. Silberglitt managed detailed reviews and evaluations of materials research opportunities and requirements for improving solar thermal and photovoltaic energy systems, which were recognized professionally through invitations to contribute chapters to the landmark MIT Press review of Solar Energy and to present a paper at the 1984 ASM Conference on Materials for Advanced Energy Systems.

As Principal and Senior Scientist, Dr. Silberglitt initiated, provided technical guidance to, and had lead corporate responsibility for technology development projects in: subsurface radar for detection and location of oil leaks in underground electric transmission lines; and daylighting of buildings using a Luminescent Solar Concentrator (LSC). A laboratory prototype of the subsurface radar was successfully field tested in New York City, and a patent was issued to QuesTech on the LSC daylighting system. Dr. Silberglitt also initiated and directed a materials research program that led to a patented technique for the joining of ceramics using microwave energy, and conducted numerous materials research evaluations, including state-of-the-art evaluations of superalloys, ceramics, and composites, and a technology transfer effort for Oak Ridge National Laboratory on long-range ordered alloys and nickel aluminides. During this time he also served on review panels for the National Bureau of Standards (now NIST) and the Solar Energy Research Institute, and presented invited papers and organized sessions at conferences sponsored by ASM, IEEE, ASME and ASCE.

SENIOR STAFF OFFICER

NATIONAL ACADEMY OF SCIENCES

January 1976 - December 1977

Dr. Silberglitt managed the Risk/Impact Panel of the Committee on Nuclear and Alternative Energy Systems, which established a data base on risks and impacts of energy production and use, chose and developed methods for comprehensive risk/impact assessment and intercomparison, and supported resource groups concerned with emissions and their health, environmental, and sociopolitical effects. He also helped the Director of this \$3 million study to coordinate and integrate the analyses of panels concerned with energy supply, demand, and econometric modeling and to construct a consistent set of energy scenarios for the 1975-2010 time frame that formed the basis for the NAS recommendations, as described in "Energy in Transition, 1985-2010," Freeman, New York (1979).

PROGRAM OFFICER
DIVISION OF MATERIALS RESEARCH
NATIONAL SCIENCE FOUNDATION
August 1971 - January 1976

As Assistant and Associate Program Director for Solid State Physics, Dr. Silberglitt directed a sponsored research program with a value of \$9M, including areas such as superconductivity, catalysis, surface science, structure of materials, and electronic and optical properties of solids. His activities encompassed proposal review (300-400 per year), materials research assessment, preparation of program planning and budgeting documentation, and decision making using an extensive peer review system drawn from the entire condensed matter science research community. Dr. Silberglitt also conducted independent research during this time. He developed theories describing the dynamic magnetic properties of insulating ferromagnets and the effect of lattice dynamics and stoichiometry on superconductors. The latter model was applied to the tungsten bronzes, non-stoichiometric materials with a perovskite structure similar to that of the high temperature superconducting ceramic oxides. An invited paper on this work was presented at an international conference.

RESEARCH ASSOCIATE
PHYSICS DEPARTMENT
BROOKHAVEN NATIONAL LABORATORY
September 1969 - August 1971

Dr. Silberglitt performed theoretical research in magnetism and lattice dynamics. He also helped design and perform a neutron scattering experiment that verified the theory of two-spin-wave interactions in a Heisenberg-type ferromagnet. He directed the thesis research of a student at the State University of New York at Stony Brook and supervised the research of a visiting Postdoctoral Associate from Grenoble, France.

LECTURER IN PHYSICS

UNIVERSITY OF CALIFORNIA, SANTA BARBARA
August 1968 - August 1969

Dr. Silberglitt taught three courses in elementary physics and conducted theoretical research in magnetism, lattice dynamics, and Green's functions, leading to numerous publications in refereed physics journals, invited and contributed presentations at U.S. and international technical meetings, and invited seminars at over 25 universities and research institutes in the U.S. and abroad.

PROFESSIONAL AFFILIATIONS

American Physical Society
American Ceramic Society
Materials Research Society

PROFESSIONAL ACTIVITIES

Invited Lecturer, “Microwave Joining of Ceramics,” Golden Gate Materials Technology Conference, American Welding Society, February 1993
Symposium Organizer and Co-Chair, “Joining of Advanced Inorganic Materials,” Materials Research Society Spring Meeting, April 1993
Course Instructor, “Microwave Technology in Chemistry and Ceramics,” International Microwave Power Institute, July 1994 and July 1995
Symposium Organizer and Co-Chair, “Microwave Processing of Materials,” American Physical Society March Meeting, March 1995
Symposium Organizer and Co-Chair, “Microwaves: Theory and Application in Materials Processing III,” American Ceramic Society Annual Meeting, May 1995
Symposium Organizer and Co-Chair, “Emerging Technologies,” First World Congress on Microwave and RF Processing,” January 1997
Panel Member, “Applications of Superconducting Transmission & Distribution Technologies,” IEEE Power Engineering Society Winter Meeting, January 2002
Guest Lecturer on “The Global Technology Revolution,” Industrial College of the Armed Forces, National Defense University, February 2002
Member of Chemical Industry Vision 2020 Nanomaterials Roadmap Team, September 2002
Speaker on “Current Issues in Energy and Nanotechnology,” 2003-2004 AAAS Science and Technology Fellows Orientation, September 2003
Member of Expert Review Panel for DOE Energy Efficiency and Renewable Energy Peer Review Guide, January 2004
Speaker on “Nanomaterials: Trends, Opportunities, and Issues,” 2004-2005 AAAS Science and Technology Fellows Orientation, September 2004
Panelist, International Forum on Technology Foresight and National Innovation Strategies, Seoul, Korea, November, 2005
Keynote Speaker, APEC Workshop on Emerging Technologies: The Global Challenges of Convergence, Bangkok, Thailand, December, 2005
Invited Speaker, Conference on Emerging Technologies—Opportunities for New Businesses, Bangkok, Thailand, December, 2005
Faculty for Nanotechnology Conclave, 2006, sponsored by the Indo-US Science and Technology Forum and the Confederation of Indian Industry, New Delhi, India, February, 2006
Invited Lecturer, 11th PDMA Strategic & Operational Portfolio Management Conference, February, 2006
Invited Lecturer, Science and Technology Policy Forum of the Korean Science and Technology Policy Institute (STEPI) “Vision 2030” Initiative, Seoul, Korea, November, 2006
Invited Speaker, Scenario Workshop, Converging Technologies to Combat Emerging Infectious Diseases (APEC-wide Foresight Project), Phang-Nga, Thailand, February, 2007

Invited Lecturer, Workshop on Future Technologies for the Warfighter, Air Command and Staff College, Maxwell AFB, AL, April, 2007

Invited Speaker, NCMS-AMT Manufacturing Technology Forum, Baltimore, MD, August, 2007

Invited Speaker and Panelist, Third International Conference on Foresight, Tokyo, Japan, November, 2007

Invited Speaker, International Conference on Emerging and Disruptive Technologies, Singapore, September, 2009

Keynote Speaker, 40th Anniversary Symposium, Returning Prosperity to America's Heartland, Northern Illinois University Center for Governmental Studies, DeKalb, Illinois, December, 2009

Invited Speaker, Symposium on Challenges and Strategies of the Future, Korean Institute for Science and Technology Evaluation and Planning (KISTEP), Seoul, Korea, August, 2010

Invited Speaker, Foresight International Seminar: From Theory to Practice, Brasilia, Brazil, December, 2010

Invited Lecturer and Focus Group Facilitator, International Focus Group Meetings on "Integrated Foresight for Sustainable Economic Development and Eco-Resilience in ASEAN Countries," Nakorn Prathom, Thailand, January, 2013; Jakarta, Indonesia and Hanoi, Vietnam, April, 2013.

Invited Lecturer, Top International Think-tank Symposium for Jiangsu Development, Nanjing, China, December, 2013.

Invited Panelist, Futures Analysis Seminar, Australian Defence College, Weston, Australia, December, 2013.

Visiting Scholar, Center for Strategic Studies and Management (CGEE), Brasilia, Brazil, June, 2014

Invited Lecturer, Technology Foresight Training: National Key Technologies and Technology Readiness Levels, Bangkok, Thailand, November, 2014.

Invited Witness, U.S. Senate Energy and Natural Resources Committee Hearing on S. 883, The American Mineral Security Act of 2015, May 12, 2015.

Member of Advisory Board, Department of Mathematics, New Jersey Institute of Technology, Newark, NJ 1996-present.

Member of the International Advisory Board of the APEC Center for Technology Foresight, Bangkok, Thailand, 2006-2014 (Chair 2010-2014).

Professor, Pardee RAND Graduate School, 2012-present.

PATENTS

Mako, F. M., Silberglitt, R and Len, L. K, "Pulsed Electron Beam Joining of Materials," U. S. Patent No. 5,599,468 (February 4, 1997).

Ahmad, I., Paquette, E.L. and Silberglitt, R., "Microwave Energy-Assisted Chemical Vapor Infiltration," U.S. Patent No. 5,238,710 (August 24, 1993).

Peter, W. and Silberglitt, R., "Suppression of Voltage Breakdown and Field Emission From Surfaces," U.S. Patent Application submitted October, 1996.

Mako, F. M. and Silberglitt, R., "Means for Microwave Regeneration of Diesel Engine Particulate Filter," U.S. Patent Application submitted April, 1995.

REPORTS

- "Critical Materials, U.S. Import Dependence, and Recommended Actions," Richard Silberglitt, Congressional Testimony, RAND CT-432 (2015).
- "Using Future Internet Technologies to Strengthen Criminal Justice," John S. Hollywood, Dulani Woods, Richard Silberglitt, Brian A. Jackson, RAND RR-928-NIJ (2015).
- "Visions of Law Enforcement Technology in the Period 2024-2034: Report of the Law Enforcement Futuring Workshop," Richard Silberglitt, Brian G. Chow, John S. Hollywood, Dulani Woods, Mikhail Zaydman, Brian A. Jackson, RAND RR-908-NIJ (2015).
- "Fostering Innovation in Institutional and Community Corrections," Brian A. Jackson, Joe Russo, John S. Hollywood, Dulani Woods, Richard Silberglitt, George B. Drake, John S. Shaffer, Mikhail Zaydman, Brian G. Chow, RAND RR820-NIJ (2015).

- “High-Priority Information Technology Needs for Law Enforcement,” John S. Hollywood, John E. Boon, Jr., Richard Silberglitt, Brian G. Chow, Brian A. Jackson, RAND RR737-NIJ (2015).
- “Identification and Analysis of Technology Emergence Using Patent Classification,” Christopher A. Eusebi and Richard Silberglitt, RAND RR-629-OSD (2014).
- “Soldier-Portable Battery Supply: Foreign Dependence and Policy Options,” Richard Silberglitt, James T. Bartis, and Kyle Brady, RAND RR-500-OSD (2014).
- “Critical Materials: Present Danger to U.S. Manufacturing,” Richard Silberglitt, James T. Bartis, Brian G. Chow, David L. An, and Kyle Brady, RAND RR-133-NIC (2013).
- “Toward Affordable Systems III: Portfolio Analysis and Management for Army Engineering and Manufacturing Development Programs,” Brian G. Chow, Richard Silberglitt, Caroline Reilly, Scott Hiromoto, and Christine Panis, RAND MG-1187-A (2012).
- “Facilitating Innovation in the JCREW 3.3 Technology Insertion and Refresh Process,” Brian G. Chow and Richard Silberglitt, RAND MG-1084-NAVY (2011).
- “Analysis of Technology Innovator Industrial Base for JCREW 3.3,” Frank Camm, Richard Silberglitt, Steven Berner, Brian G. Chow, Bruce J. Held, Gregory S. Jones, Jonathan Vaccaro, Caroline Reilly, RAND MG-998-NAVY (2011).
- “Toward Affordable Systems II: Portfolio Analysis and Management for Army Science and Technology Programs Under Uncertainties,” Brian G. Chow, Richard Silberglitt, Scott Hiromoto, Caroline Reilly, and Christine Panis, RAND MG-979-A (2011).
- “A Delicate Balance,” Eric Landree, Richard Silberglitt, Brian G. Chow, Lance Sherry, Michael S. Tseng, RAND MG-939-NSA (2009).
- “Toward Affordable Systems: Portfolio Analysis and Management for Army Science and Technology Programs,” Brian G. Chow, Richard Silberglitt, and Scott Hiromoto, RAND MG-761-A (2009).
- “The Global Technology Revolution China, Executive Summary: Emerging Technology Opportunities for the Tianjin Binhai New Area (TBNA) and the Tianjin Economic-Technological Development Area (TEDA),” Richard Silberglitt and Anny Wong, RAND MG-776-TBNA/TEDA (English and Chinese) (2009).
- “The Global Technology Revolution China, In-Depth Analyses: Emerging Technology Opportunities for the Tianjin Binhai New Area (TBNA) and the Tianjin Economic-Technological Development Area (TEDA),” Richard Silberglitt and Anny Wong, RAND TR-649-TBNA/TEDA (English) (2009).
- “The Global Technology Revolution China, In-Depth Analyses: Emerging Technology Opportunities for the Tianjin Binhai New Area (TBNA) and the Tianjin Economic-Technological Development Area (TEDA),” Richard Silberglitt and Anny Wong, RAND TR-649/1-TBNA/TEDA (Chinese) (2009).
- “The Global Technology Revolution 2020, Executive Summary: Bio/Nano/Materials/Information Technology Trends, Drivers, Barriers, and Social Implications,” Richard Silberglitt, Philip S. Antón, David R. Howell, and Anny Wong, RAND MG-475-NIC (2006).
- “The Global Technology Revolution 2020, In-Depth Analyses: Bio/Nano/Materials/Information Technology Trends, Drivers, Barriers, and Social Implications,” Richard Silberglitt, Philip S. Antón, David R. Howell, and Anny Wong, RAND TR-303-NIC (2006).

“Portfolio Analysis and Management for Naval Research and Development,” Richard Silbergliitt, Lance Sherry, Carolyn Wong, Michael Tseng, Emile Etteedgui, Aaron Watts, and Geoffrey Stothard, RAND MG-271-NAVY (2004).

“Research Priorities of the Supporting Industries Program: Linking Industrial R&D Needs,” Richard Silbergliitt, David R. Howell, and Lance Sherry, RAND DB-420-DOE (2003).

“A Decision Framework for Prioritizing Industrial Materials Research and Development,” Richard Silbergliitt and Lance Sherry, RAND MR-1558-NREL (2002).

“Industrial Materials for the Future R&D Strategies: A Case Study of Boiler Materials for the Pulp and Paper Industry,” David R. Howell, Richard Silbergliitt, and Douglas Norland, NREL/TP-620-32106 RAND MR-1583-NREL (2002).

“Strengthening the Grid: Effect of High-Temperature Superconducting Power Technologies on Reliability, Power Transfer Capacity, and Energy Use,” Richard Silbergliitt, Emile Etteedgui, and Anders Hove, RAND MR-1531-DOE (2002).

“Linking Effectively: Learning Lessons from Successful Collaboration in Science and Technology,” Caroline S. Wagner, Linda Staheli, Richard Silbergliitt, Anny Wong, and James Kadtke, RAND DB-345-OSTP (2002)

"Industrial Materials for the Future (IMF) R&D Priorities," Richard Silbergliitt and Jonathan Mitchell, RAND DB-364-NREL (2001).

"The Global Technology Revolution: Bio/Nano/Materials Trends and Their Synergies with Information Technology by 2015," Philip S. Anton, Richard Silbergliitt, and James Schneider, RAND MR-1307-NIC (2001).

“Investigation of Ferroelectric Materials Optimized for Electron Emission,” Final Report, U.S. National Science Foundation SBIR Program, August 1999.

"Research on Microwave Joining of SiC," Final Report, Los Alamos National Laboratory, September 1998.

"Fabrication of Closed End SiC Tubes to SiC/SiC Composite Plates," Final Report, Knolls Atomic Power Laboratory, October 1997.

"Pulsed Induction Joining of Sapphire to Metal for Gyrotron Windows," Final Report, U.S. Department of Energy SBIR Program, April 1997.

"Pulsed Electron Beam (PEB) Ceramic to Metal Bonding," Final Report, U.S. Advanced Research Projects Agency SBIR Program, September 1996.

"Research on Microwave Joining of SiC," Final Report, Los Alamos National Laboratory, July 1995.

"Sapphire-Metal Joining for Low-Loss Gyrotron Windows," Final Report, U.S. Department of Energy SBIR Program, June 1995.

"Pulsed Electron Beam (PEB) Fabrication of Smart Materials," Final Report, U.S. Advanced Research Projects Agency TRP/SBIR Program, April 1995.

"Fabrication of Ceramic Core/Composite Skin Structures," Final Report. U.S. Department of Transportation TRP/SBIR Program, March 1995.

"Microwave Joining of SiC for Fabrication of Ceramic Heat Exchanger Assemblies," Final Report. U.S. Department of Energy SBIR Program, July 1993.

"Microwave Regeneration of Diesel Particulate Traps," Report. Cummins Engine Company, June 1993.

"Research on Microwave Joining of SiC," Final Report. Los Alamos National Laboratory, June 1993.

"Deployment Mechanisms Technology," Final Report. Universal Technology Corporation, February 1991.

"The Instrumentation Sourcebook: A Compendium of Instruments and Techniques for Energy Research." Report. DOE Fossil Energy Office of Technical Coordination, February 1986.

"Energy Conservation Potential of Surface Modification Technologies." Report. PNL5538 Battelle Pacific Northwest Laboratory, September 1985.

"Electromagnetic Joining of Ceramics: Laboratory Proof of Concept (Interim Report)." Oak Ridge National Laboratory, August 1985.

"Subsurface Radar Mapping and Transmission Line Leak Location System." Report. Consolidated Edison of New York, July 1985.

"Tribology Research Opportunities Resulting from DoD Research Activities." Report. DOE Office of Energy Systems Research, June 1984.

"Assessment of the Feasibility of Joining Ceramic Materials Using Electromagnetic Radiation." Report. Oak Ridge National Laboratory, April 1984.

"Energy Conservation Materials Research Opportunities Resulting from DoD Research Activities." Report. DOE Office of Energy Systems Research, April 1984.
