

Matthew Kinsella is the Chief Executive Officer of Infleqtion, leading the company's strategy and execution across quantum computing and quantum sensing. He joined Infleqtion full time as CEO in April 2024 after serving as the company's first investor in 2018 and a long-standing board member, bringing an operator-investor approach to scaling the business and accelerating market adoption.

Under Matt's leadership, Infleqtion has entered a new phase of corporate and market maturity, including taking the company public and developing a historic quantum-in-space partnership that will expand the frontier for deploying quantum capabilities. He has extended Infleqtion's ecosystem through numerous partnerships in quantum, strengthening collaboration pathways for real-world applications. In addition, Infleqtion became the first company to showcase logical qubits working in a commercial application context, an important milestone as the industry moves toward more scalable, fault-tolerant systems.

Before joining Infleqtion, Kinsella was a Managing Director at Maverick Ventures, where he spent nearly two decades investing in early- and growth-stage companies, partnering with entrepreneurs, and supporting multiple successful exits. He is also an active voice in the broader tech community, having hosted the pre-game show at NVIDIA's GTC and frequently commenting on quantum technology and its path to deployment.
