

A photograph of a water treatment demonstration station. It features three stainless steel basins arranged in a row. Each basin has a chrome faucet on the wall above it. The first faucet on the left is open, with a stream of clear water falling into the basin. The second faucet in the middle is closed. The third faucet on the right is also closed. A white sign is mounted on the wall above the first basin, and another smaller white sign is above the second basin. The background shows a white wall with some electrical panels and a window looking out onto a building.
