

**Candice Hasenyager, P.E.**

Director

State of Utah

Division of Water Resources

Candice Hasenyager currently serves as the Utah Division of Water Resources Director. The division plays a central role in planning, developing, and managing the state's water resources to support long-term water reliability for Utah's growing population, agricultural needs, and natural ecosystems. Prior to her appointment as director, Hasenyager worked on water resources planning, surface water modeling, hydrology studies and municipal water demand projections. She played a critical role in advancing water policy, including the development of the Recommended State Water Strategy, state water planning, conservation programs, and addressing issues related to the Great Salt Lake. Hasenyager continued to take on increasingly challenging projects with vigor and strategic vision, always focused on supporting the division's mission to "plan, conserve, develop and protect Utah's water resources."

Driven by a desire to make a broader impact, Hasenyager is an Alternate Commissioner for the Upper Colorado River Commission, a Utah Council Member for the Western States Water Council, a Utah forum member on the Colorado River Salinity Control Forum and actively participates on other state boards and councils.

Hasenyager feels strongly about helping find balanced solutions to ensure Utah families have a reliable water supply, that agriculture and businesses can be successful, and that the environment can prosper. She graduated from the University of Utah with a Bachelor of Science and Master of Science in Civil Engineering.
