

Adam Woodworth
CEO, Wing Aviation LLC

Adam Woodworth is the CEO of Wing Aviation LLC. He previously served for four years as Wing's CTO before being appointed to run the company in 2022. Adam joined Wing in 2014 as a hardware engineer and has seen tremendous growth in the organization, managing production and engineering teams along the way.

In 2017, Adam was selected to co-lead the organization (then known as Project Wing) with James Ryan Burgess, as the team prepared to graduate from X, Alphabet's Moonshot factory, becoming an Alphabet subsidiary in 2018. Together, they helped Wing establish the largest residential drone delivery operation in the world, with commercial services in Australia, Europe, and the United States.

Adam has a deep passion for aviation, graduating from the Massachusetts Institute of Technology with a Bachelor's degree in Aeronautics and Astronautics in 2007. Adam started his career as an aircraft designer at the Aurora Flight Sciences Research & Development Center where he worked from 2007 to 2014, designing and building one-of-a-kind airplanes. Over the last 15 years, he has designed dozens of aircraft, operated across the globe, and established himself as an expert in the drone industry. Adam laid many of the building blocks of Wing's technical foundation, and served in roles across product, technology and engineering.

Aviation has permeated his professional and personal life since childhood. In his time outside of the day-to-day management of Wing, Adam enjoys building and flying all manner of model airplanes.
