

Aric Dreher, P.E.

General Manager

Founded in 1949, Cianbro is one of the United States' largest 100 percent employee-owned construction and construction services companies. Cianbro operates in more than 40 states and employs more than 4,000 team members. In addition to Infrastructure, Cianbro also works in the Building, Industrial & Manufacturing, and Power & Energy markets.

Cianbro is very proud of its many accomplishments, such as ranking among Engineering News-Record's Top 400 Contractors. In addition, Associated Builders and Contractors recently ranked Cianbro 11th in the Infrastructure Market out of the Top Infrastructure Contractors. ABC has also distinguished Cianbro as one of its Top Performers, an Accredited Quality Contractor, and on March 16, Cianbro was one of 16 companies to receive the prestigious Pinnacle Award for Health and Safety, the highest distinction bestowed upon the best of the best in the country.

Cianbro takes pride in delivering world-class construction and construction services on complex civil infrastructure projects. Cianbro is known nationally as a leader in integrated design, procurement, and construction to repair, replace, or develop assets such as fixed and movable bridges, water and waste-water projects, and marine fixed structures.

Aric oversees all operations in Cianbro's Infrastructure Market, bringing more than 20 years of construction experience to each project, with a specific passion for and expertise in marine construction. Throughout his career, Aric has taken on various roles within the industry, from estimator to field engineer, superintendent, project manager, and general manager. Aric, who earned his degree in civil engineering from the University of Pittsburgh, has proven experience working with clients and design teams during pre-construction development to analyze constructability, means and methods, and schedule delivery.

During construction, Aric's engaged and hands-on approach to supporting the client and project teams sparks innovation, continuous improvement, and expedited project delivery. At Cianbro, he's led teams on some of the company's most innovative and challenging infrastructure projects, including the phased development of The Wharf in Washington, D.C., construction of the 175-foot-tall Capital Wheel overlooking the Potomac River, the U.S. Naval Academy's Nimitz Library pile cap repairs and McNair Road Bridge replacement, and substantial repair work on the Pearl Harbor Memorial Bridge and Thames River Bridge in Connecticut.
