

Jennifer Huang Bouey is a senior policy researcher and Tang Chair in China Policy Studies at the RAND Corporation. As an epidemiologist with training in clinical medicine and quantitative methods, Bouey's research centers on global health strategies and social determinants of health. Prior to joining RAND, she taught qualitative and quantitative research methods at Georgetown University and led multiple studies on the health risks and health care access barriers among immigrants, rural-to-urban migrants, sexual minorities, and people at high-risk for HIV in the United States and China. Between 2015 and 2018, she organized an international multi-disciplined research workgroup on issues that are critical to the United States' and China's global health security interests, including pandemic preparedness, global health governance, and health risks among south-to-south migrants. Bouey served on study sections at the NIDA, NIMH, and Fogarty Center of the National Institute of Health, and as an expert reviewer for the China Natural Science Foundation, Hong Kong AIDS Council, and Hong Kong Government Research Fund. She also served as a consultant to the World Bank, Clinton HIV/AIDS Initiative, the Save the Children Federation, Inc., and China's National Centers for Disease Control. Bouey received her M.P.H. and Ph.D. in epidemiology from the George Washington University and her M.D. from the Peking University School of Medicine.
