

INVESTIGATIVE SOFTWARE

SocioSpyder gathers open source information from many popular social media platforms, while minimizing the footprint left by investigative teams.

With SocioSpyder an analyst is able to:

- Download and retain social media content on-demand or autonomously.
- Apply annotations and visualizations to stored data, then share with investigative teams.
- Save as you see on screen or export in a variety of formats for use in other systems.

SocioSpyder is offered as a Desktop or Enterprise offering to meet client requirements and scale.

DESKTOP APPLICATION

SocioSpyder Desktop Edition provides a single analyst or small investigative team a flexible OSINT collection solution.

- Minimal infrastructure required. Run from any PC that has internet access.
- Natural front end for OSINT investigative process, enabling discovery, target, triage, and analysis of data.
- Export, analyze, and enrich data through manual integration with wider systems.

ENTERPRISE SOLUTION

SocioSpyder Enterprise Edition offers a scalable OSINT solution to large investigative teams.

- Centrally manage activities to reduce duplicated collection and concurrent account use.
- Securely host your own data, with role based access and logging, and no storage at endpoint PCs.
- Export, analyze, and enrich data through automatic integration with wider systems.
