

David Wagner is Professor of Computer Science at the University of California at Berkeley, with expertise in the areas of computer security and electronic voting. He has published over 100 peer-reviewed papers in the scientific literature and has co-authored two books on encryption and computer security. His research has analyzed and contributed to the security of cellular networks, wireless networks, electronic voting systems, and other widely deployed systems. Prof. Wagner serves as a member of the Election Assistance Commission's Technical Guidance Development Committee. In 2007, he helped lead a comprehensive review commissioned by California Secretary of State Debra Bowen to examine three California e-voting systems, and he has participated in several other state-sponsored voting system investigations.
