

Hsiang et al, *Science*, 2013.
44 of 46 quantitative studies find that
climate affects violence

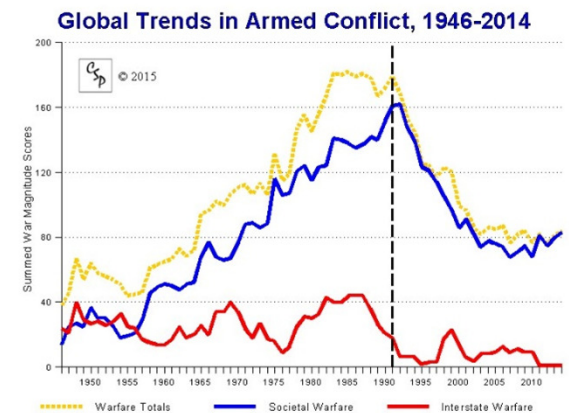

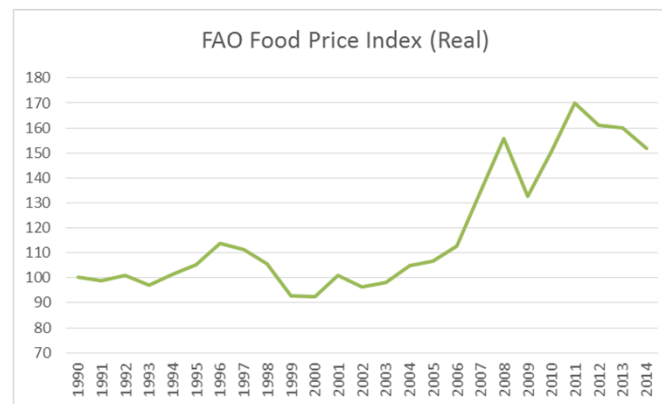

The climatic conditions that elevate
security risk are more frequent now

- We see the impacts in historical record
- We see the climate stresses on the rise
- We see background risk factors also rising
- We already see a more dangerous world

Other risk factors on the rise
Number of countries neither strongly
Democratic nor strongly autocratic; food prices

The danger we expect is already visible
