EDTR HUMKE

PROTECTING THE INTERNET AND CONSUMERS

THROUGH CONGRESSIONAL ACTION

WEDNESDAY, JANUARY 21, 2015

House of Representatives,

Subcommittee on Communications

and Technology,

Committee on Energy and Commerce,

Washington, D.C.

The subcommittee met, pursuant to notice, at 10:05 a.m., in Room 2123, Rayburn House Office Building, Hon. Greg Walden [chairman of the subcommittee] presiding.

Present: Representatives Walden, Latta, Barton, Shimkus, Blackburn, Lance, Guthrie, Olson, Pompeo, Kinszinger, Bilirakis,

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Johnson, Long, Ellmers, Collins, Cramer, Upton (ex officio), Eshoo, Doyle, Welch, Yarmuth, Clarke, Loeb sack, Rush, DeGette, Butterfield, Matsui, McNerney, Lujan, and Pallone (ex officio).

Staff Present: Gary Andres, Staff Director; Ray Baum, Senior Policy Advisor/Director of Coalitions; Sean Bonyun, Communications Director; Leighton Brown, Press Assistant; Rebecca Card, Staff Assistant; Karen Christian, General Counsel; Andy Duberstein, Deputy Press Secretary; Gene Fullano, Detailee, Telecom; Kelsey Guyselmann, Counsel, Telecom; Grace Koh, Counsel, Telecom; Tim Pataki, Professional Staff Member; David Redl, Counsel, Telecom; Charlotte Savercool, Legislative Clerk; Macey Sevcik, Press Assistant; David Goldman, Minority Chief Counsel for Communications and Technology Subcommittee; Margaret McCarthy, Minority Professional Staff Member; and Ryan Skukowski, Minority Legislative Assistant.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Walden. I will call to order the subcommittee on Communications and Technology.

Good morning and welcome to our subcommittees' first hearing for the 114th Congress. I can think of no issue within our jurisdiction that is more important to consider at this time than the future of the Internet and our responsibility as legislators to set Internet policy for the country. That is why we put forward draft legislation to provide consumers the protections they deserve while not choking off investment and innovation.

We have shared this draft with my colleagues on both sides of the aisle. We have made it available publicly and we have invited our witnesses today to give us their views on this draft proposal, and I thank all of our witnesses for their participation.

We have a very important choice to make between letting three very smart and capable but unelected people at the FCC, a majority of the commission, use a statute written for another era to cobble together a regulatory scheme and undoubtedly will end up in court for years in litigation, providing no protections but much uncertainty. Or, we can do our job and craft a new law for this century through the open and transparent legislative process that we are beginning today.

We have come together before in this subcommittee and full committee to craft communications legislation that, frankly, is now pretty good law, and we must do it again. It is the only way to bring

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

clarity and certainty to Internet governance.

Now, a little less than 4 years ago the FCC was in court defending its first attempt to regulate the network management practices of an ISP. Since then the commission has gone to court twice in defense of net neutrality and twice the courts have rejected the FCC's rules. While the court seems to have given FCC lawyers a third time is the charm roadmap for how to craft rules under the current act, the commission is preparing to invoke net neutrality's nuclear option: Reclassification under the set of aging and inept rules developed for 19th Century railroads and then adapted for the age of the monopoly, telephone.

We don't have to settle for that. We have a duty to those who use the Internet, those who manage the Internet, and those who build the Internet to provide legal certainty, consumer protection, and clarity for investment. What we are offering today is a solution that will bring to an end the loop of litigation and legal gymnastics that has flowed from FCC attempts to shoehorn the policy it wants to fit the authority that it has.

Our discussion draft is largely based on the 2010 Open Internet Order, adopted by former FCC chairman Julius Genachowski, and it draws from the legislative proposal put forward by former Energy and Commerce Committee Chairman Henry Waxman.

Now, some pundits have raised concerns that the draft bill

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

curtails the newfound authority that the courts have read into Section 706 of the Telecommunications Act. 706 was added in 1996, and it instructs the FCC to promote the deployment of broadband networks. Until recently, it was understood that Section 706 meant that the FCC should use its existing authority to promote broadband deployment, and it worked.

However, last year the courts for the first time interpreted Section 706 to permit the FCC to take nearly any, and I underscore any, action to promote broadband so long as it is not inconsistent with the rest of the act. Did you catch that? It give them nearly any authority at the FCC. This is a broad expansion of what was intended under 706.

Now, while some take comfort that it is a limited majority at the FCC will do what they want, I just pose the question: What happens when an FCC not to their liking grabs the regulatory throttle.

Let me put a finer point on this. That means at Amazon, Etsy and every other Internet-based company should be prepared to meet its new regulator. If you would like an idea of what you are in for, just look no further than your fellow witnesses, Mr. Powell and Ms. Baker, former regulators who currently represent the regulated. It is time to update this law. It is time for a fresh approach from we who are elected to write the law and to set the Nation's communications policy.

My priority is to protect consumers and the Internet we all rely upon. My priority is to encourage its expansion to the hills and

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

valleys of our vast Nation that lack connectivity and to various segments of our population that are underserved and are too often ignored. Together we have taken on complicated communications challenges and produced good legislative solutions. We have stood up to powerful special interests and stood with the American people, and we must do so again.

The draft legislative proposal represents our good-faith effort to end the net neutrality debate before it goes to court again. Our committee will not ignore our responsibility. As some of my colleagues know, we have been working on the principles and draft legislation literally for months. We have listened to supporters, opponents, and neutral parties too. We will take the advice and counsel from our witnesses today into full consideration, and then we won't let the old Washington gridlock stand in the way of us doing our job, for the voters demand it and they deserve it.

And with that I recognize the gentlelady from California, the ranking member of the subcommittee, Ms. Eshoo, for her opening statement.

[The prepared statement of Mr. Walden follows:]

***** COMMITTEE INSERT *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Ms. Eshoo. Thank you, Mr. Chairman.

Today's hearing renews a critical discussion in the new Congress about the Internet. Should it be truly open and equal? Should consumers, competition and choice drive our deliberations? Should privacy and the disabled be protected? Should every region, city, town, and reservation, be they rural or urban, have equal access to broadband speeds capable of leveraging innovative online content and services?

I have reviewed the majority's proposal very carefully, and I commend you for finally acknowledging that we do in fact have problems with online blocking, throttling and paid prioritization. We agree that bright-line rules should apply to both fixed and mobile broadband services.

What is abundantly clear in the majority's proposal is to purposely tie the hands of the FCC by prohibiting them from reclassifying broadband under Title II. The proposal creates a huge loophole called specialized services. On the one hand, the proposal says it will prohibit fast lanes, but under specialized services, a loosely defined term, broadband providers can give themselves prioritized service and the FCC will have no power to define this.

If our goal is to have a system that guarantees equal access of an open Internet to everyone, and it should, who is going to carry out and oversee this.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

This proposal carries an enormous bias against enforcement, which in turn doesn't give consumers a leg to stand on.

The proposal does harm to the efforts made to bring broadband to rural areas. It could unintentionally harm the 911 system, limit the FCC's authority to promote access by the disabled to communication services, and it could restrict access by competitors to utility poles.

The proposal also attempts to address specific forms of discrimination, but who today knows with any certainty what tomorrow's forms of discrimination will be. The proposal takes away the authority of the FCC to address them. I don't think your constituents or mine are clamoring for a bill of rights for various companies. They want the guarantee of an open accessible Internet. Four million people spoke out to the FCC, and I think our goal should match theirs. We should protect ordinary consumers, promote innovation, create real competition, and advance start-ups, and when we do, our constituents should be 100 percent confident that these things are going to be carried out, that there is going to be a cop on the beat.

An open Internet is not only critical to America's future, it is essential for every American to learn, to educate, to conduct commerce, to build businesses and create jobs, to innovate, to expand our economy, and to promote democracy. It will strengthen the middle class and it will bring more into it.

What paths we take will determine much of our future. In an

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

attempt to eliminate bad practices, we should not be tempted to establish rules that will create new bad practices. I think that this would be a march to folly.

Mr. Walden. The gentlelady yield back the balance of her time?

Ms. Eshoo. The balance of my time I yield to Mr. Doyle. I am sorry.

[The prepared statement of Ms. Eshoo follows:]

***** COMMITTEE INSERT *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Walden. Mr. Doyle is recognized.

Mr. Doyle. Thank you, Mr. Chairman for holding this hearing.

This draft legislation represents a step forward by my colleagues. That being said, the bill still falls short. It permanently revokes and severely weakens the commission's ability to address serious issues in promoting broadband competition, encouraging broadband deployment, and protecting consumers and their privacies.

Mr. Chairman, technology policy needs to be flexible, not prescriptive. It needs to be adaptive and able to change to meet our future needs.

The principles included in the draft bill are very similar to what the FCC proposed in its 2010 rules, but since then we have seen battles between Netflix and ISPs over interconnection, renewed efforts by cities to build out their own broadband infrastructure and create jobs, and a continuing need for strong consumer protection.

The last 5 years have been a lifetime in the technology world, and we need rules that can adapt to the pace of innovation and the new challenges that it brings.

I yield back.

Mr. Walden. Gentleman yields back the balance of the time.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

[The prepared statement of Mr. Doyle follows:]

***** COMMITTEE INSERT *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Walden. And we will now go to the chairman of the full committee, the gentleman from Michigan, Mr. Upton.

The Chairman. Thank you, Mr. Chairman.

You know, this committee is known for working together to tackle the tough issues; a tradition of getting the job done where each side gives a little bit in order to make things better for the American public.

But one issue that has divided us for too long is how best to ensure an open Internet rooted in bedrock principles of freedom and access for consumers and innovators alike.

While I certainly believe that free markets address these issues, the FCC seems to believe regulatory action is necessary, and one of the only tools at its disposal is to apply rules from the Roosevelt era to shape the Internet of the 21st Century.

Given the choice between enacting prudent legislation or leaving the FCC to tackle this with tools unfit for the task, we choose to take action.

Last week Chairman Walden, Thune and I put forward draft legislation that would codify FCC's authority to enforce the bright-line rules of the Internet road. Legislation protects consumers and innovators, ensuring America remains the preeminent global leader of the Internet era. Our proposal prohibits Internet service providers from blocking content, selectively changing the

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

quality of traffic based on where it came from or what it is or prioritizing certain traffic based on payment.

It requires providers to be open and transparent with consumers, allowing them to make the most informed choice about their service.

We have also included safeguards to close potential loopholes and prevent mischief. This should all sound very familiar to my Democratic colleagues because they are the rules many of you and the President have been calling for for some time.

The FCC has spent years trying to craft rules that achieve those same goals. In fact, much of this bill's language is taken from past FCC attempts, but limits on the commission's authority have resulted in years, many years, of litigation and certainly uncertainty.

Consumers and industry deserve better. Consumers deserve certainty to know that they are protected by clear rules. Providers need certainty so that they can move forward with their business models, because without that certainty, innovation and investment suffer and consumers lose.

Our thoughtful solution provides a path forward that doesn't involve the endless threat of litigation or the baggage of laws created for a monopoly era telephone service. Only Congress can give the commission the tools that it needs to protect consumers and innovation in the Internet era and beyond.

This draft legislation provides a sustainable, responsible path

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

to appropriately and effectively address the concerns from the left and the right. It puts to bed one of the most contentious issues that we face and allows us to move forward in our goal of modernizing the Nation's communication laws.

Our Com Act update process can bring bipartisan change, direct communication laws, but we first have to come together and resolve this near-decade-long debate over the future of the Internet.

Yield the balance of my time to Mr. Barton.

[The prepared statement of The Chairman follows:]

***** COMMITTEE INSERT *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Barton. Thank you. I thank the chairman.

I was heartened by some of the comments that Mr. Doyle made in his remarks.

Last night after the President's State of the Union, I came back to my office and did a little video that we put on my FaceBook page, we put on YouTube. We put -- also I believe we put it on Twitter. I have a nine-year-old son that has an iPad, an iPod, an Xbox, a PlayStation 4, his own cell phone, knows how to use the Internet better than I do. He is spoiled. Well, that is his mother. That is his mother. I am -- she has bought him all these things, actually.

No. That is not true, but, anyway, my point is, to paraphrase President Reagan, in his first campaign in 1980, he asked the American people: Are you better off today than you were 4 years ago? When you look at the Internet, I think you could ask the consumers: Are you better off today than you were 4 years ago? And the answer would be: Yes. They are. I see advertisements every day. There is one playing down in Texas right now. Give me your bill, we will cut it in half. You know? I am not going to name who is offering that, but you all would know it if I said it.

The Internet is not a monopoly like the telephone companies were or the utilities were in the 1930s. It is one of the most vibrant markets in the world. The chairman's draft is an attempt to keep it that vibrant marketplace. Some of the people that are at this table

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

helped develop the policies that make that possible. We should support the chairman, work with the minority and try to come up with a bill that keeps it a vibrant market.

And I don't have any time, but I am supposed to yield to Mr. Latta. So if the chairman would give him at least a minute, I would ask unanimous consent that Mr. Latta has a minute.

Mr. Walden. Is there any objection? If not, we will recognize Mr. Latta for a minute out of courtesy.

[The prepared statement of Mr. Barton follows:]

***** COMMITTEE INSERT *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Latta. Well, thank you, very much.

And thank you, Mr. Barton, and thank you, Mr. Chairman. I appreciate that, and thanks to our witnesses for being here today.

The FCC has indicated it intends to soon move forward with an order to reclassify broadband Internet services under Title II of the Communications Act. I firmly believe that this course of action will bring legal uncertainty, slow innovation and investment, and ultimately negatively affect the American consumers.

Even those who support reclassification recognize these challenges, but would attempt to circumvent these limits by forbearing sections of the law, a plan that would only seem to magnify legal uncertainty and further postpone innovation.

It is evident that upending the longstanding precedent of a light-touch regulatory framework that governs the Internet would add uncertainty and unnecessary regulation on broadband providers and would restrict their ability to continue investing in faster networks that consumers demand. That is why I support the discussion draft put forward by the chairman and Chairman Thune in the Senate.

And with that, Mr. Chairman, I appreciate the unanimous consent.

Mr. Walden. And the gentleman returns the balance of his time.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

[The prepared statement of Mr. Latta follows:]

***** COMMITTEE INSERT *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Walden. Before I proceed to Mr. Pallone, who I believe this is your first hearing in Energy and Commerce as the ranking member of the full committee. So we welcome you for that.

We will add, with unanimous consent, an extra minute to your side of the aisle, and I have been told too that apparently during the open statements the mics literally on this side were -- they could hear it streaming on the Internet. Apparently not on your side. So I think we have got that corrected now. It was an attempt to throttle Mr. Doyle. It was not supposed to catch Anna along the way, but, anyway, I think we have got that -- we are operating on that.

Mr. Doyle. I think this has something to do with the deflated footballs, Mr. Chairman.

Mr. Walden. That Ohio State -- no. I am not going there. It has been painful enough. I appreciate the green room.

All right. With that, we will get serious again, and I recognize the gentleman from New Jersey for 6 minutes.

Mr. Pallone. Thank you, Mr. Chairman.

Let me start by stressing the importance of network neutrality. It is the surprisingly simple concept that consumers, not big corporate interests, should control what they access when they go online, and it represents the idea that small businesses should be able to compete on a level playing field.

Internet access has become a critical part of all of our lives.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

It is how we apply for a job. It is how we help our kids with our homework. It is how we grow our businesses. And that is why 4 million Americans reached out to the FCC demanding strong net neutrality protections, and those 4 million people expect that we here in Washington will pay attention.

So I am heartened that my Republican colleagues now agree that we all benefit from clear rules of the road enforced by the FCC, and I welcome their interest in bipartisan legislation so long as it is truly bipartisan from the start.

Mr. Chairman, I don't want to undermine the FCC's authority, as I think you suggested, and I certainly don't think that that will serve to protect consumers. The FCC must continue to serve an important role in the broadband age. It must remain the vigilant cop on the beat standing ready to act, whether it is to protect consumer privacy, to encourage accessibility for American's with disabilities, or to promote broadband deployment to rural areas. And just as important, it must maintain the flexibility to keep up with new technology.

So while we in Congress continue our work, I do expect the FCC to continue its work. These are complicated issues with complex answers. It has taken the FCC nearly 13 months to craft new rules that respond to the needs of the American public, and Congress cannot be expected to work it all out in 13 days.

So I urge the FCC to continue to move forward as we begin this

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

legislative effort. It has been over a year since the court wiped out the core net neutrality rules. So it has been over a year since consumers and innovators last had strong network neutrality protections, and that is simply long. The time for the FCC to act is certainly now.

I look forward to working with my colleagues and with the commission to ensure that the Internet remains an open platform for commerce, innovation, and self-expression for generations to come.

Now I would like to yield -- I know I got an extra minute -- so I would like to yield two minutes to Ms. Matsui, and then the rest of the time, which is almost two minutes, to Mr. Rush.

[The prepared statement of Mr. Pallone follows:]

***** COMMITTEE INSERT *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Ms. Matsui. Thank you.

I thank the ranking member for yielding me time, the chair for holding this hearing, and the witnesses for being here today.

The American people have spoken clearly on how important the Internet is to daily lives and our economy, and I have personally heard from hundreds of my constituents who write, call, or come up to me to share their thoughts, and I heard the message loud and clear when I hosted a field hearing in Sacramento last September on net neutrality.

I must say, it is remarkable how the debate has shifted on net neutrality. I am really glad that my Republican colleagues now agree that there are real threats to Internet openness, but I am concerned about the unintended consequences of the current draft bill. In particular, it could undermine the FCC's efforts to transition USF to broadband, putting at risk broadband deployment and adoption advances in urban and rural areas.

That said, I do believe that there is a role for Congress, and that is why I introduced a bill with Senator Leahy to instruct the FCC to write rules that ban pay prioritization or so-called Internet fast lanes. The bill has two components. It bans paid prioritization agreements, and it does not take away from the commission's authority.

By contrast, the Republican bill attempts to ban paid prioritization agreements. I am very concerned that the overly broad definition of specialized services in the bill could serve as a loophole

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

for paid prioritization schemes and create a two-tiered Internet system.

The Internet is dynamic. We don't know what tomorrow will bring us. The FCC needs flexibility to tailor rules to adapt to changes in the marketplace.

As Congress considers legislation, it is important that the FCC does not slow down or delay its vote.

I look forward to continuing to work with my colleagues in a truly bipartisan fashion to reinstate strong net neutrality rules.

And I yield to Congressman Rush.

[The prepared statement of Ms. Matsui follows:]

***** COMMITTEE INSERT *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Rush. I want to thank the gentlelady for yielding.

I want to thank the ranking member for yielding also.

For two decades now, the beltway battle over how to best ensure a free and open Internet has been fought and persisted without a clear victor or a clear verdict. All of this uncertainty harms America's broadband consumers, chronically and disproportionately disconnected segments of our society and our local and State and Federal Governments, and even our Nation's economy. Certainly it also affects broadband network and edge providers as well, but make no mistake about it. It is the consumers who stand to be the biggest losers of all.

Many consumers weighed in with Congress for the strongest pro-consumer rules possible. These broadband consumers and users have said that they love and depend greatly on their broadband services, and that they want for their services to be provided on a competitive level, competitive rates, and competitive terms. But they also said to Washington, to us here in Washington, with passion and with fervor that they do not trust that their broadband providers will honor those terms due to selfish and anti-competitive motives.

This, Mr. Chairman, should serve as a powerful reminder to us that the issues arising out of this controversy are propelled by bipartisan concerns and are amenable to bipartisan resolution and compromise. These issues greatly concern all broadband consumers and citizens in our society regardless of political affiliation or leaning.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

We have all seen and heard, however, that this matter is too important for this committee and for Congress to stand by or for it to consider and mark up only a majority Republican draft. Accordingly, Mr. Chairman, it is my intention to introduce open Internet legislation in the not-too-distant future.

I would hope to work with my colleagues on both sides of the aisle with aspiration that whatever legislation is hammered out, that it will be clearly surely nothing but bipartisan.

Mr. Chairman and Ranking Member Pallone, I yield back.

Mr. Walden. Gentleman yields backs the balance of the time, and that takes care of our colleagues for opening statements.

[The prepared statement of Mr. Rush follows:]

***** COMMITTEE INSERT *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Walden. We now go to our distinguished panel of witnesses.

And we are going to start out with Michael Powell, president and CEO, National Cable & Telecommunications Association and former chairman of the Federal Communications Commission, and, Mr. Powell, we are delighted to have you back before our subcommittee, and we look forward to your testimony.

Please go ahead.

STATEMENTS OF MICHAEL POWELL, PRESIDENT AND CEO, NATIONAL CABLE & TELECOMMUNICATIONS ASSOCIATION; CHAD DICKERSON, CEO, ETSY; PAUL MISENER, VICE PRESIDENT OF GLOBAL PUBLIC POLICY, AMAZON.COM; JESSICA GONZALEZ, EXECUTIVE VICE PRESIDENT AND GENERAL COUNSEL, NATIONAL HISPANIC MEDIA COALITION; NICOL TURNER-LEE, VICE PRESIDENT AND CHIEF RESEARCH AND POLICY OFFICER, MINORITY MEDIA AND TELECOMMUNICATIONS COUNCIL; AND MEREDITH ATTWELL BAKER, PRESIDENT AND CEO, CTIA-THE WIRELESS ASSOCIATION

STATEMENT OF MICHAEL POWELL

Mr. Powell. Good morning Mr --

Mr. Walden. Will you make sure your microphone is on.

Mr. Powell. Particular welcome to the new members of the committee. Nothing like starting with something easy.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

It is a fundamental constitutional principle that Congress establishes the law and federal agencies implement it. The net neutrality debate raises critical institutional policy and practical problems that only Congress can fully address.

The open Internet struggle has been long and tortuous precisely because Congress has not established a clear foundation for the FCC to act. The commission has turned itself in knots for over 10 years trying to adopt a simple set of Internet regulations. Twice the courts have rebuked the commission for exceeding its Congressional tether, even where it found merit in the rules themselves.

If Congressional authority is the problem, then surely Congressional action is the solution. In the absence of such action, the commission is poised to earnestly try again with another approach, prompting a third round of litigation with an uncertain outcome.

Congress has the power and the responsibility to end this roller coaster which is damaging to everyone other than lawyers and advocates.

It should further concern this institution that the Title II approach being pursued is establishing an FCC role and regulatory framework over the Internet that Congress has yet to fully consider and consciously adopt itself.

Congress adopted Title II 80 years ago to address the parameters of telephone regulation. The technologies were radically different. The prevailing philosophy favored monopoly rather than competition.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Consumers were passive recipients of service rather than active publishers and creators. The telephone era did not have giant Internet companies using and influencing services and network demand and consumer applications. Networks were specialized for a single purpose, unlike the convergence of today.

Has Congress, or, for that matter, anyone, fully thought through whether this antiquated analog framework should govern our digital future? We have no doubt that Congress soon will seek to advance legislation to rewrite our telecom laws, but we stand now at the precipice of having that decision made for Congress rather than by Congress in the name of net neutrality, with potentially far-reaching unintended consequences. Five unelected regulators should not have the final word on these serious questions. The institution that represents 320 million Americans should decide them.

By changing the status quo and invoking Title II to govern Internet affairs, the commission would affect a major and dramatic shift in national broadband policy, with sweeping domestic and international consequences. Countries like Russia, China, and Iran have consistently sought to subject Internet access to telephone regulation and give the state greater authority over infrastructure. They will cheer the news the U.S. abandoned its leadership and moral authority as a bulwark against government-controlled over the Internet.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

The bevy of legal and practical problems with Title II counsel for Congressional intervention. For one, the strong desire to ban prioritization is precarious under Title II, which bans unjust and unreasonable practices. Under decades of Title II precedent, carriers have been able to charge for providing service without violating this requirement, and while the FCC surely will attempt to declare all priority charges unreasonable, it will face serious headwinds from well-established precedent. Only statutorily banned prioritization rules will avoid this risk.

Other unintended problems are also sure to follow. One agency's actions will narrow the jurisdiction of another. For example, if the FCC declares broadband is telecom service, the Federal Trade Commission's authority over such actions will be diminished.

Another unintended problem is the reclassification can result in new fees on Internet service, raising broadband bills for consumers and hurting our national efforts at adoption.

Americans have an ambitious national broadband goal. There is a strong national desire to reach more Americans in more places. It will take nearly \$350 billion by the FCC's own estimate to reach all of Americans with 100 megabits per second, and now we dream of gigabit speeds. No one can consciously claim that Title II will advance the flow of private capital necessary to meet these ambitions.

For some, Title II's sharp edges can be smoothed by forbearance,

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

cutting away the dated and choking weeds of onerous regulation and leaving the fruit needed to protect consumers, but one person's weeds are another person's fruit, and the continuous and vigorous battle over this, should it be included -- and excluded, is itself a massive regulatory undertaking fraught with uncertainty and litigation risk.

Uniquely, Congress has the power to eliminate all of this legal uncertainty, and working together in good faith and consensus, we believe a cooperative effort will yield positive results. We support legislation -- we support bipartisan legislation and are open to working with all members of the committee to reach a satisfactory resolution.

Thank you, Mr. Chairman.

Mr. Walden. Thank the gentleman for his testimony.

[The prepared statement of Mr. Powell follows:]

***** INSERT 1-1 *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Walden. We are now going to go to Mr. Chad Dickerson, the CEO of Etsy.

Mr. Dickerson, we are delighted to have you before the committee. Please make sure your microphone is on, and we look forward to your testimony, sir.

STATEMENT OF CHAD DICKERSON

Mr. Dickerson. Great. Thank you.

Thank you, Chairman Walden, Ranking Member Eshoo, and members of the subcommittee for the opportunity to testify on this important issue.

As the CEO of a rapidly growing Internet company -- technology company, I am here today because the Internet, along with the millions of businesses who depend on it, is under threat.

Etsy is an online marketplace where you can buy handmade and vintage goods from artists, designers, and collectors around the world. We have democratized access to entrepreneurship for over 1.2 million sellers, 88 percent of whom are women who collectively sold \$1.35 billion worth of goods in 2013. Most are sole proprietors who work from home, they live in all 50 states, and they depend on Etsy income to pay their bills and support their families. Eighteen percent of those sellers support themselves full time on Etsy.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

To build and run the global platform that supports these Internet micro businesses, Etsy has raised more than \$91 million in capital, and we employ over 600 people worldwide. Without the incredible power of the free and open Internet, we would not be where we are today.

Like many start-ups, we had humble beginnings. We started out of a Brooklyn apartment; went from idea to launching in just a few months. No one had to ask permission to launch Etsy or pay for the privilege of reaching consumers through Etsy at the same speeds as other companies. We proved ourselves on the open market, and this is the entrepreneurial environment that we hope to preserve, like you.

Without clear bright-line rules that preserve a level playing field online, millions of start-ups will suffer. Etsy is a low-margin business. We charge just 20 cents to list an item, and take only 3 1/2 percent of every transaction. We couldn't afford to pay for priority access to consumers, yet we know that delays of even milliseconds have a direct and long-term impact on revenue. So this isn't just about high bandwidth services like video, it is about every company that depends on the Internet to reach consumers.

Without strong rules to prevent discrimination online, we would be either forced to raise our fees to have the same quality of services our competitors or accept the revenue loss that comes with delayed load times. This would hurt the micro businesses who depend on our platform the most.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Etsy's users understand what is at stake. That is why 30,000 of them join millions of Internet users to urge Congress and the FCC to protect the open Internet.

In her comments to the FCC, Tina, an Etsy seller from Spring Valley, Illinois, captured the sentiments of many micro businesses when she wrote, "We rely on all my sales to make ends meet. Any change in those and it is the difference between balanced meals for my children and cereal for dinner."

We applaud Congress for recognizing that strong net neutrality rules are essential for innovation online. The discussion draft for legislative addresses many of our concerns, and we are encouraged to see bipartisan agreement on many points. In particular, we support the outright ban on paid prioritization, blocking, and throttling. We agree that transparency must underpin strong rules, and we are encouraged to see that the rules would apply to mobile. Given that the majority of Etsy's traffic now comes from mobile sources, it is essential that the same rules apply whether you use your phone or your laptop to access the Internet.

At the same time, we are concerned that the proposal does not ban all types of discrimination online, leaving loopholes that could be easily exploited. For example, under this bill, broadband companies could prioritize their own services over others. Even more concerning, the legislation would remove the FCC's authority to address

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

new unanticipated types of discrimination. I have worked in this industry my whole adult life, and I know how quickly technologies change. So how can we be sure that this bill anticipates every possible form of discrimination.

We also have serious concerns that by revoking the FCC's authority under Section 706, the bill would undermine the agency's ability to promote rapid broadband deployment across the country, particularly in rural areas where the Internet allows entrepreneurs to reach a global marketplace. For example, Linda, an Etsy seller from Buchanan, Michigan, said, "A free Internet is so important to me because as someone who moved to a rural area from an urban center, I rely on fair and open access to the Internet to grow my small Web-based business."

Finally, while we understand that this legislation is narrowly focused on the last mile connection, the door to that last mile is just as important. This bill doesn't prevent broadband companies from creating choke points at the entrance to the last mile, nor does it grant the FCC the authority to regulate this issue, often referred to as interconnection, leaving a loophole that would allow broadband companies to circumvent this legislation, despite its good intentions.

Our position today is the same as it has been all along. We encourage the government to establish clear bright-line rules that ban paid prioritization, application-specific discrimination, access fees, and blocking online, and to apply those rules equally to fixed

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

and mobile broadband, and at the point of interconnection with last-mile providers.

We believe the FCC has all the authority it needs to implement such rules, and that Congress has an important role to play as well, particularly in helping to address the litigation risks that will inevitably follow FCC action.

We welcome the opportunity to work with you to protect to open Internet once and for all.

Thank you.

Mr. Walden. Mr. Dickerson, thank you very much for your testimony.

[The prepared statement of Mr. Dickerson follows:]

***** INSERT 1-2 *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Walden. We will now go to Paul Misener who is vice president of Global Public Policy for Amazon.com, a slightly larger platform for sales.

Mr. Misener, please go ahead.

It is good to have you back before the subcommittee.

STATEMENT OF PAUL MISENER

Mr. Misener. Thank you very much, Mr. Chairman. It is good to be back.

Thank you, Ranking Member Eshoo, for your attention to this very important issue, for holding this hearing, and for inviting me back.

Amazon has long supported maintaining the fundamental openness of the Internet which has been so beneficial to consumers and for innovation. Now there is widespread acceptance of the need for government action to ensure that Internet openness. Now policymakers need only decide how to ensure that the Internet openness of net neutrality is maintained and effective.

At Amazon, our consistent business practice is to start with customers and work backwards. That is, we begin projects by determining what customers want and how we can innovate for them. Here, in the context of net neutrality public policy, we have done the same. We take our position from our customers', that is consumers',

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

point of view. Consumers want to keep the fundamental openness of the Internet and the choice it provides. Consumers will recognize if their net neutrality is taken from them. If their net neutrality is taken, they won't care how or, for example, where in the network infrastructure it is taken.

We believe that the FCC has ample existing statutory authority to maintain net neutrality, but of course, obviously, Congress has the power to set new policies for net neutrality, either entirely through a new statute or through a mix of new and existing statutory authority.

Amazon remains very grateful for Congress' continuing attention to net neutrality. The topic certainly is worth your vigilant oversight, but thank you, Mr. Chairman, especially for creating and sharing your discussion draft bill, and for providing me the opportunity to begin discussing it today.

The principles of net neutrality contained in the discussion draft are excellent. For example, the draft clearly acknowledges that throttling and paid prioritization must be banned; that net neutrality protections must apply to wireless as well as to wire line; and that providers must disclose their practices.

Of course, for these excellent principles of Internet openness to be meaningful to consumers, they need to be effective. In at least three instances, however, the discussion draft could be interpreted to undermine that effectiveness. So the bill should be modified

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

accordingly.

First, in subsection (d), while requiring consumer choice, the bill would explicitly exempt specialized services from that requirement. This could create a huge loophole if, for example, specialized services involved the prioritization of some content in services, just like the proscribed paid prioritization. Consumer choice is baked into the Internet. Nothing would protect consumer choice more than protecting the open Internet from interference by broadband and Internet access service providers.

Second, in subsection (f), the discussion draft bill would permit broadband Internet access providers to engage in reasonable network management, but any claim of reasonable network management should be viewed suspiciously if in practice it undermines prohibitions of blocking, throttling, prioritization, et cetera.

Third, the discussion draft bill is unclear or silent on an important point of clarification: Which parts of the broadband Internet access service providers network are covered by the net neutrality protections.

As indicated earlier, a consumer will not care where in her service providers network any interference with net neutrality occurs, only whether it occurs.

In sum, these three areas of the discussion draft bill should be modified in order to ensure that the Internet openness of net neutrality

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

is maintained and effective.

In addition, the discussion draft should be modified to provide adequate legal detail and certainty to consumers and businesses in the Internet ecosystem. Like all businesses, Internet companies need confidence in the state of law and regulation in order to innovate and invest in products and services on behalf of their customers. Details, including the factors that would be considered during formal complaint procedures are essential for businesses and consumers to have the confidence to make informed choices about investments and purchases.

We believe that the FCC should be empowered to create adequate legal certainty and detail through effective enforcement tools and notice in comment rule making, but the discussion draft bill in subsection (b) says the FCC may not expand Internet openness obligations beyond the obligations established in the bill. If the intention here is to establish a ceiling for these obligations, that certainly is Congress' prerogative and a reasonable expectation which we would support a provision like this if the bill only went so far.

However, with such a ceiling in place, it is not necessary to rescind the FCC's authority under Title II of the Communications Act, which, as in subsection (e), which could leave the agency helpless to address improper behavior as well within its authority under the ceiling and would leave consumers and businesses in the Internet ecosystem without adequate certainty about the FCC's enforcement

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

powers.

Also in part, because subsection (b) could be directing the FCC to establish formal complain procedures, this provision could be interpreted to bar the commission from notice and comment rulemaking in this area, and if that is the intent, we oppose it. Directing the FCC not to expand statutorily established obligations is one thing, but we believe it would be a mistake to prohibit the commission from providing, through notice and comment rulemaking, adequate legal detail and certainty to customers, consumers, and businesses below that ceiling.

In conclusion, Mr. Chairman, I look forward to working with you and your committee and the FCC to ensure that the Internet openness of net neutrality is maintained and effective, and, of course, I welcome your questions.

Mr. Walden. Mr. Misener, thank you very much, and we look forward to working with you as well.

I think we have got ways to address a lot of what you pointed out and may actually already have, but we will look forward to working with you.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

[The prepared statement of Mr. Misener follows:]

***** INSERT 1-3 *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Walden. Next we go to Jessica Gonzalez, executive vice president, general counsel of the National Hispanic Media Coalition. Ms. Gonzalez, we are delighted to have you here at our subcommittee as well. We look forward to your testimony.

STATEMENT OF JESSICA GONZALEZ

Ms. Gonzalez. Thank you, Mr. Chairman, for having me back, Ranking Member Eshoo, and all the members of the subcommittee.

The open Internet, as we have heard already today, is a crucial tool for all people to engage in our democracy, participate in our economy, become better educated, and share their stories. I am pleased that members on both sides of the aisle recognize the pervasive threat that blocking, throttling, and paid prioritization pose to the American people and our economy, because the open Internet truly is a bipartisan issue.

I am not on this panel to represent vast industries. I am here to speak for the millions of Americans who follow this issue with a level of awareness that is actually very uncommon for inside the beltway telecom policy.

Over the past year, I have been surprised to align on this issue with everyone from my conservative in-laws in the Deep South to my liberal friends on the West Coast, none of whom are particularly

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

well-steeped in Federal policy, particularly not telecom policy, but they get this because it personally affects their lives.

And although NHMC supports Congressional attention to this matter to best protect consumers, I respectfully urge Congress to allow the FCC to exercise its Title II authority, complete its rulemaking process, and enact light-touch open Internet rules.

This is the most certain path to ensure that individuals and businesses are protected without delay. It would allow the expert agency flexibility to respond to innovation and changes in the marketplace.

The FCC has wide support from nearly 7 million Americans that submitted comments or signed petitions, as well as hundreds of public interest, civil rights, and consumer advocacy organizations and leaders.

The discussion draft of legislative on the table today would represent a seismic policy shift with repercussions far beyond the open Internet debate. It has drawn robust criticism for four main reasons.

First, it would strip the country's expert communications agency of authority to protect consumers on the communications platform of the 21st Century, upending consumer protections that Americans have come to expect and this subcommittee has supported for decades; privacy, network reliability, access to 911 services, disability access, just to name a few. It effectively freezes the FCC in time,

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

only allowing it to ever confront a handful of harmful practices that we have contemplated based on market conditions and technology that exists today.

Second, it would pour cement on FCC efforts to close the digital divide, such as rural broadband subsidies and modernization of lifeline which could bring greater broadband affordability to the working poor. Today nearly one in three American people still lack home broadband access. The vast majority of these people are rural, poor, brown, black, or a combination thereof.

At the same time, standardized testing in American public schools is moving to digital formats. It is critically important that we do no harm with legislation that would undermine serious efforts to achieve the now indivisible goals of digital and educational equality.

Third, as compared to FCC rules crafted under Title II, it would offer consumers limited and inferior protections. The draft legislation does not ban unreasonable discrimination and creates an exception for specialized services that threatens to swallow the rules.

Fourth, it would create market uncertainty by relying on a flawed adjudication process. Consumers and aggrieved parties would have the burden to identify, report, and litigate violations, but most of us are likely to lack the technical expertise to identify the violations, the source, or have the legal expertise to pursue enforcement, or both.

Those who oppose reclassification point to four concerns. My

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

written testimony goes into greater detail about those arguments, but let me summarize.

There is no evidence that Title II would harm investment or innovation, hamper broadband adoption, lead to higher taxes or fees or welcome protracted litigation. In fact, the hard evidence, including statements from the ISPs themselves, suggest just the opposite.

The open Internet has allowed Americans to engage in our democracy at a whole new level. Tea party activists, dreamers, organizers of Black Lives Matter are all excellent examples of regular people who have harnessed the power of the open Internet to disseminate their messages and engage in the political process. This is democracy and free speech at work, and it is a virtue deserving of the strongest protections.

Thank you very much for having me here today. I look forward to questions.

Mr. Walden. Delighted to have you back. Thanks for your comments on the legislative and the issue at hand.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

[The prepared statement of Ms. Gonzalez follows:]

***** INSERT 1-4 *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Walden. We will now turn to Dr. Nicol Turner-Lee, the vice president and chief research and policy officer for Minority Media and Telecommunications Council.

Dr. Turner-Lee, delighted to have you here as well. Please go ahead with your testimony.

STATEMENT OF NICOL TURNER-LEE

Ms. Turner-Lee. Thank you very much, Chairman Walden, Ranking Member Eshoo, and distinguished members of the committee.

And I do have to say, as vice president and chief research and policy officer, that we just changed our name today at nine a.m. to the Multicultural Media Telecom and Internet Council. So --

Mr. Walden. We reserve the right to revise and extend our remarks.

Ms. Turner-Lee. And at MMTIC, still acronym is the same, we actually support and work to represent, for those of you that are unaware, organizations that consist of the NAACP, The National Urban League, Rainbow Push Coalition, AAJC, among others, so as my colleague Ms. Gonzalez has recognized, we also stand on the side of people who are on the other side of the digital divide.

And I think that is pretty important on the topic of open Internet because we have been actively engaged in this debate as historically

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

disadvantaged communities embark on a journey towards first class digital citizenship and all of the opportunities. So we welcome and applaud the draft legislation addressing the President's values.

I want to use my time to bring three issues to the committee's attention today. My statement is on record in much more detail, but my time is best spent on these points.

I first would like to highlight the unique benefits that an open Internet brings to people of color and vulnerable populations who we represent, and encourage the committee's consideration of legislation that promotes an open Internet, and finally I would like to offer two friendly recommendations designed to strengthen and ensure that the legislation realizes the value of all consumers who want to acknowledge the promise of digital equality.

I want to affirm the words of Ranking Member Eshoo that broadband access, adoption, and digital literacy are civil right prerequisites. Broadband allows people to gain new skills, secure jobs, obtain quality education, and receive greater access to healthcare.

Today, however, too many Americans still do not benefit from all that broadband enables. The rate of broadband adoption among vulnerable populations is disproportionately low, contributing to a persistent digital divide. Despite growth in minority home, broadband adoption rates among African Americans and Hispanics are still lower than whites. African Americans over 65, for example, still exhibit

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

especially low rates. Fort-five percent of African American seniors are Internet users, yet 30 percent only have broadband at home, compared to 63 percent and 51 percent respectively for white seniors.

Non-users overall cite a perceived lack of relevance, affordability, and the lack of a device, in that order, as their prime reasons for not being online.

So closing the digital divide should and must be an important goal for policymakers, and steering the right course of action to promote and protect an open Internet is one of the ways to get there.

I want to acknowledge that Congress has had a proud history of recognizing structural injustices in our society and acting to correct them.

In the 1860s Congress framed and passed the 13th, 14th, and 15th Amendments which enabled slavery-extended protection and enfranchised millions of Americans for the first time.

In the 1960s, Congress enacted the Civil Rights Act of 1964, the Voting Rights Act of 1965, and the Fair Housing Act of 1968, all due in great measure to the Reverend Martin Luther King whose birthday we just celebrated.

Today Congress has the opportunity to show that leadership again. By enacting a legislative solution that preserves the open Internet we all enjoy, Congress can extend the promise of justice, equality, and democracy to all and avoid a legal quagmire that will lead to an

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

unending uncertainty for our economy and citizens.

I agree with Jessica Gonzalez that an open Internet stimulates demand for broadband which in turn stimulates investment in infrastructure and innovation. At MMTC, we know firsthand in this, and it is our belief that increased investment in broadband also improves access and adoption to the types of innovations we like to drive in our communities, but of course the way that we get there is going to have an impact.

For the past 20 years, administration and FCC chairs from both political parties have charted a successful regulatory platform for the Internet, and communities of color have benefitted. Look at the state of wireless adoption among people of color.

Under the current regulatory framework, nearly 75 percent of African Americans and nearly 70 percent of Hispanic cell phone owners use their devices to access the Internet more than the overall population, and people of color have embraced it as a tool of empowerment. Under the current rules, we have actually seen the type of collective mobilization in Ferguson, Missouri, New York City, and Columbus, Ohio. These stats to drive policymakers to continue the progress that is already being made.

But unfortunately meaningful open Internet rules have failed in the FCC. Last year the D.C. Circuit Court struck down key portions of the commission's open Internet order, and notwithstanding the

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

current regulatory framework that has allowed broadband to flourish and adoption to take hold, the FCC is now considering the imposition of Title II regulation, which we believe as national civil rights organizations is ill-suited to the current realities.

Imposing such heavy-handed framework on the Internet would only serve to stifle broadband deployment, discourage investment, and harm innovation. It would also place uncertainty for consumers through regressive taxation on universal service and potential ambiguity on consumer enforcements.

Some have argued that the adverse effects of Title II regulation through judicious application of forbearance authority is the right way. We think that misses the point. If the commission could exercise its forbearance authority in productive matter, it still would take years to sort out and appropriately calibrate a set of rules, and this uncertainty will continue to drive us away from the attention of those issues that our community needs the most, the modernization of our schools, universal service reform in other areas.

So in closing, it is for those reasons that our groups have actually asked that we steer away from a tight regulatory framework to something that has more flexibility to allow the ecosystem to continue to grow, and we think the proposed legislative is close in actually getting there.

I would like to just close again with two additional

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

recommendations for Congress to ponder in this debate as we look at this issue.

First, Congress should address the harmful practice of digital red lining. Digital red lining is the refusal to build and serve lower income communities on the same terms as wealthier communities. In essence, it imposes digital segregation. Sadly, as the experience of our country shows, segregation harms and degrades all of us, and this is no less true in the digital age. Congress should empower the FCC to prohibit digital red lining and we urge in this legislation that Congress also look at how to prevent that because currently this is a problem.

Second, Congress should ensure that its open Internet rules will be enforced. MMTC has recommended to the commission the creation of an accessible, affordable, and expedited procedure for the reporting and resolution of complaints.

One approach would be to use the consumer friendly complaint process under the Title VII framework of the Civil Rights Act of 1964. Under Title VII, a complainant receiving the expedited ruling from EEOC and does not need to hire a lawyer or write a complicated filing, whether the precise details of implementing a similar mechanism in the communications context, the core principle here remains the same.

Consumers, particularly individuals from vulnerable populations, deserve, as it has been mentioned, an accessible,

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

affordable, and expedited procedure for ensuring that their government protects them, and this must apply at whatever solution that we seek.

My friends, the time is now to get past the morass of a debate that has been lingering for more than a decade, and with Congress' discussion and guidance on this issue, we at MMTC think we can make it happen, and we look forward to working with Congress to do such so that we can get to the issues that mean the most for our communities, universal service, public safety, and assuring that we actually allow the Internet to grow to the next level of innovation to solve our social problems.

Thank you very much.

Mr. Walden. Dr. Turner-Lee, thank you for your testimony and your suggestions.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

[The prepared statement of Ms. Turner-Lee follows:]

***** INSERT 1-5 *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Walden. We will now turn to our final witness this morning, Meredith Atwell Baker, president and CEO of CTIA, The Wireless Association.

Ms. Baker, glad to have you back before the subcommittee as well. Look forward to your comments.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

RPTR JOHNSON

EDTR CRYSTAL

[11:02 a.m.]

STATEMENT OF MEREDITH ATWELL BAKER

Ms. Baker. Chairman Walden, Ranking Member Eshoo, and members of the subcommittee, thank you for inviting me to share the wireless industry's perspective on the importance of an open Internet. At the outset I want to be clear, America's wireless industry fully supports an open Internet. Wireless users demand it in a marketplace where competition has never been more vigorous. In the past 20 years, the wireless industry has grown from a luxury product to a key driver of economic growth. We all benefit from faster speeds, more services, and lower prices.

The U.S. is the global leader in wireless by any metric, and it is at the forefront of mobile innovation in health, automotive, and payment fields. Central to that growth was Congress's foresight in establishing Section 332, a mobile-specific regulatory framework outside of Title II. Congress has the opportunity to provide the same stability for broadband.

We greatly appreciate this committee's work to develop a

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

regulatory foundation for future innovation with commonsense net neutrality provisions. The draft is an excellent start and offers a viable path to preserve an open Internet with enforceable requirements. Properly crafted legislation will guarantee the protections the President has called for, while allowing broadband providers to continue to invest billions, create jobs, and innovate products.

We do not ask that wireless be exempt from any new laws, only that any new requirements reflect our industry, our technology, and our inherent differences. I want to highlight three key differences.

First, mobile services are technically different and depend upon limited spectrum resources. This requires substantial network management, millisecond by millisecond, to deliver service to consumers. Remarkably, there is more bandwidth in a single strand of fiber than in all of the spectrum allocated to commercial mobile services.

Second, we are competitively different. More than 8 out of 10 Americans can choose from 4 or more mobile broadband providers. This is fierce competition, and it is driving new services, offerings, and differentiation that benefits consumers.

Third, we are evolutionarily different. 4G networks are less than 5 years old, and the future is bright, with advancements like LTE Broadcast, 5G services, and connected life applications. It is vital that any legislation is sufficiently flexible to preserve the

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

competition, differentiation, and innovation mobile consumers enjoy today.

While we are optimistic that the process on the Hill will enhance the wireless experience for all Americans, we have significant reservations with the FCC's proposed path of Title II. The application of Title II in any form to wireless broadband would harm consumers and our economy. Title II is designed for another technology in another era, an era in which competition was largely nonexistent, if at all, and innovation came slowly, if at all.

Given our industry's great success with mobile broadband outside of Title II, we have significant concerns with how Title II and its 682 pages of regulation would apply to the dynamic mobile broadband space. If the Commission proceeds with Title II, as opposed to the 706 path the court contemplated a year ago, the wireless industry will have no choice but to look to the courts. Given the clear language of Section 332, we have every confidence that we would prevail, but it is not our preferred course.

Under Section 332, mobile broadband is legally different too. In 1993, Congress exempted future nonvoice mobile services, like mobile broadband, from common carriage regulation. It did so unambiguously.

Given our industry's great success with mobile broadband outside of Title II, we have significant concerns of how Title II and its 682 pages of regulation would apply. The Commission and the courts have

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

repeatedly found that wireless broadband is not a common carriage service. The FCC lacks the statutory authority to change course, and litigation would harm consumers, with a year or more of uncertainty and delay. As leaders across the globe are trying to replicate our mobile success and embrace 5G, this is the wrong time to inject uncertainty and delay into our Nation's efforts. We risk falling behind when the stakes have never been higher and our connected life and global competitiveness are more within reach.

The better approach would be for Congress to act and end this debate. Doing so would free us to turn to pressing bipartisan issues like spectrum reform and Comm Act modernization. By acting, Congress can help ensure that the United States remains the most dynamic and innovative mobile ecosystem. Thank you for the opportunity to appear on today's panel, and I look forward to your questions.

Mr. Walden. Ms. Baker, thank you for being here.

[The prepared statement of Ms. Baker follows:]

***** INSERT 2-1 *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Walden. And thanks to all of our witnesses. You have blessed us with some really good thought starters. And some of you like what we are doing, some of you don't. All of you, I think we can all agree on the principles at stake here. It is a matter of how we get here.

I have got a couple of questions I want to ask. I will lead off.

To follow up on your testimony, Ms. Baker, regarding Section 332, and I am not trying to mimic our former chairman, Mr. Dingell, but in the essence of time I have a couple of yes-and-no questions that really would be helpful. And I would start with Mr. Powell and just work down.

Yes or no, do you agree with Ms. Baker that mobile would not be covered under the FCC's existing authority when it comes to applying these new net neutrality standards? Mr. Powell? Turn on the microphone there.

Mr. Powell. I forgot whether it is phrased as yes or no, but we believe that the FCC could reach wireless by reclassifying much as they are proposing to do with respect to fixed broadband.

Mr. Walden. So you think they could get there, even though 332 has a different view of that.

Mr. Powell. Not without risk, but we do believe that they could.

Mr. Walden. All right.

Mr. Dickerson.

Mr. Dickerson. I am not an attorney.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Walden. That is two of us. But I stayed in a Holiday Inn, so I can legislate.

Mr. Dickerson. I think the most important thing for us is that in our minds there is no difference between mobile and broadband.

Mr. Walden. So you want them both covered?

Mr. Dickerson. Both covered in any regulations.

Mr. Walden. Right. On these protections. Okay.

Mr. Misener?

Mr. Misener. I agree with Chairman Powell's assessment, legal assessment. I also agree that consumers view these interchangeably --

Mr. Walden. Right.

Mr. Misener. -- and it should be the same policy for both.

Mr. Walden. So you think it is legally sustainable.

Ms. Gonzalez.

Ms. Gonzalez. I agree. It is legally sustainable.

Mr. Walden. All right. Ms. Turner-Lee.

Ms. Turner-Lee. I am not an attorney, but we think that Title II would actually stifle the expansion of mobile. So we think that is a bad idea.

Mr. Walden. Ms. Baker, one more time from you.

Ms. Baker. Mobile broadband has never been under Title II because of the explicit expression of Congress, so it is not sustainable.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Walden. So there might be an opportunity for litigation here, you think. This is my point. We have got some really talented people, some are attorneys, some are not. Some are backed up by really smart attorneys as well. There is division right here on this panel. This is where I think certainty matters and legislating matters.

Yes or no, have you actually seen what the FCC is proposing?

Mr. Powell.

Mr. Powell. No.

Mr. Walden. Mr. Dickerson.

Mr. Dickerson. We have seen principles.

Mr. Walden. No, I mean have you seen the language?

Mr. Dickerson. No.

Mr. Walden. Got it.

Mr. Misener.

Mr. Misener. No.

Ms. Gonzalez. They don't typically release the order. But I have heard a great deal about what is in.

Mr. Walden. Oh, you have. But you haven't read it?

Ms. Gonzalez. Haven't read it, no.

Mr. Walden. Okay.

Ms. Turner-Lee. Don't know nothing.

Mr. Walden. Ms. Baker.

Ms. Baker. No.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Walden. All right. And does anybody anticipate they will see it before they vote on it?

Mr. Powell. No.

Mr. Dickerson. I am sorry, could you repeat that question?

Mr. Walden. Does anybody anticipate actually being able to see the language before the commissioners are called upon to vote on it?

Mr. Powell. No.

Mr. Walden. Mr. Dickerson.

Mr. Dickerson. We have found the FCC process so far to be quite open, so we believe it is quite possible that we could.

Mr. Walden. All right.

Mr. Misener.

Mr. Misener. No.

Mr. Walden. Ms. Gonzalez.

Ms. Gonzalez. Not sure if we would see it.

Mr. Walden. Right.

Ms. Turner-Lee. Probably not.

Ms. Baker. No.

Mr. Walden. We have two former commissioners, both of whom said very unlikely, nope, that you will actually see it. That is why I think it is a better process. You will actually get it see it through a legislative, transparent, open environment. Text is posted. You all have given us great input as we move forward.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

There is a disagreement, I will say, at least this is what I am hearing, regarding the application of universal service fund fees. If I heard different testimony correctly, some believe that the FCC's order would allow it, some believe it wouldn't. Some think our bill would preclude it, some wouldn't. My question to you is, when it comes to universal service fees, under what we know of the FCC's order, what they are proposing, would the Internet now be subject to USF levy?

Mr. Powell.

Mr. Powell. Yes. The way it works in short is that Congress requires an assessment of universal service from any telecommunication services provider. If the FCC reclassifies broadband, it will immediately be in that classification and subject to that assessment. There is an argument that the Commission could theoretically forebear from that, but in the absence of that action it would absolutely result in increased charges on federal universal service.

Mr. Walden. All right. There is also an argument out there in the public, some agree, some disagree, that if the FCC goes down a Title II path and declares that the Internet is a public utility under Title II, that that nearly totally eliminates the Federal Trade Commission's authority, because they don't have authority on regulated common carriers. Correct?

Mr. Powell, can you speak to that?

Mr. Powell. That is correct. Under the Clayton Act Section 5,

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

the FTC is prohibited from exercising its authority over privacy, data security, and a number of other things against telecommunication services providers. They are obviously a champion of privacy today, and have broad-reaching authority to do so. That would be disenfranchised by this decision.

Mr. Walden. All right.

Mr. Misener, finally, you raised concerns in your testimony about specialized services -- you are not the only one -- that exemption in our draft legislation. Now, both the FCC and the President have said a specialized services exemption is necessary, and the language in our draft tracks the FCC's proposals. Has there about been a net neutrality rule proposed that does not acknowledge the need for specialized services?

Mr. Misener. I can't say that there hasn't been one, but what we are concerned about, if that becomes a substitute for paid prioritization.

Mr. Walden. Right.

Mr. Misener. So that is the concern. Whether someone has proposed it elsewhere, I don't know.

I will point out, however, in light of one of the prior comments by Chairman Powell, that he is viewing Title II as a binary thing, either it is all there or it is not. The Commission did forebear from Title II across the board. It need not have back in 2002. And so it could

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

be partially unforeborn, as it were, and done very judiciously. So I think we can be much more precise about what this means and not view it as an all-or-nothing solution.

Mr. Walden. You could also have another Commission that decides to change all that too. So that gets to our issue of certainty.

I have gone over my time. I now recognize the gentlelady from California, Ms. Eshoo.

Ms. Eshoo. Thank you, Mr. Chairman.

I want to thank all the witnesses. I think that you have done a marvelous job through your testimony today to highlight what you like and what you don't, where you agree and where you don't. And I think that you have done it very well, and I am grateful to you for it.

I just want to make a comment before I begin with my questions. It is thrown around -- and it is a heavy charge, because everyone cares about this -- and that is that if we go, we move in a certain direction, that the private sector will stop investing. That is a big chill for me and for everyone else. But there isn't anything to substantiate that. I mean, when you look at the wireless auction, billions of dollars have come in. And when we began that effort, Chairman Walden, myself, and the subcommittee, people laughed, and they said you are not going to raise a dime out of this. Forty-five billion dollars so far. Well, I don't know about anyone else, I think \$45 billion is a lot of money. That is a lot of investment. That is worth something.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

And the CFO of Verizon said, we will keep investing whether there is Title II or not. The CTO of Sprint. I don't think these are insignificant comments.

So I think it is important for the record, if someone makes that charge, then it should be backed up for us, because we need facts and the evidence that comes with the facts. I think that that would be most helpful to us.

I want to go to Mr. Dickerson. I should say to everyone, today is the first time I met Mr. Etsy. But get a life, Anna, I met him on C-SPAN. He was part of a conference, the Washington ideas conference, and I was so taken with how he presented himself, what he knew, and what his company has been able to do, I said let's invite him in and be a witness.

So thank you for being here. And thank you for all the jobs that you have created.

The proposed bill doesn't prevent a broadband provider from prioritizing content from one of its own affiliates. So my question to you is, if a broadband provider were to prioritize an affiliate's content, what effect would that have on Etsy? And most importantly, everyone that deals with you is a company. They have created a new company. What kind of an effect would that have?

Mr. Dickerson. Yes. One thing that you may not know about me, I was actually chief technology officer before I was CEO. So I know

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

a lot about technology. And one of the things that we know is that for commerce sites, for business sites, and I define this broadly from Etsy to Amazon to Google, that the speed of your Web site is absolutely directly correlated with revenue. So if things are slower, revenue drops. If things are faster, revenue goes up.

So in a world of paid prioritization, if smaller companies like Etsy were disadvantaged against larger companies, then you could see the larger companies see advantages purely based on speed. Higher revenues. And this would hurt the Etsy sellers who are receiving lower speeds than some of the other competitors.

Ms. Eshoo. Could it put them out of business?

Mr. Dickerson. Put them out of business. And as I said in my remarks, we have sellers who are making money using the Internet in rural areas and elsewhere, and they are using this money to feed their families, pay for school, do all the things that they need to do in their lives.

Ms. Eshoo. Let me go to Mr. Misener. Under the proposed legislation the problem of interconnection abuse is not only ignored, but the FCC is prevented from doing anything about it in the future. Now, do you believe that if interconnection isn't explicitly addressed, how would your business and the ability to serve your customers, what would happen?

Mr. Misener. Thank you, Ms. Eshoo, very much. I am not so clear

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

in the bill whether it is precluded or whether it is not. Some people believe very strongly it is precluded. I think it is silent and it needs to be explicit that it is included for the very reason I stated in my testimony, which is consumers shouldn't care. A customer of Amazon should not care where in a network operator's network discrimination is occurring, only that it is occurring. And to leave that out is a major gap in the legislation, and I would like to see that filled.

Ms. Eshoo. Good.

Let's see. I am over time. Mr. Chairman, I failed to ask for a unanimous consent request to include in the record a letter dated January 20 from the mayors of New York and San Francisco, and the letter urges the FCC to adopt the strongest possible open Internet rules using Title II. And I also ask that letters from the National Association of Realtors and a group of racial justice organizations be included in the record. Both letters reiterate that the legislative process should not hold up the FCC from moving forward with strong, legally enforceable open Internet rules.

Mr. Latta. [Presiding.] Without objection.

[The information follows:]

***** COMMITTEE INSERT *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Ms. Eshoo. Thank you, Mr. Chairman. Yield back.

Mr. Latta. The chair recognizes himself for 5 minutes. And, again, thanks to our panel for being here today. And as the gentlelady just said, it has been a very interesting discussion today.

Mr. Powell, if I could start with a question for you. I found your testimony very interesting about when we are dealing with regulations in this town, about trying to put round pegs in square holes and all the different things that folks out there are facing. But for many of us, we have very diverse districts. We represent suburban, urban, rural. But with many of the cable operators that I have in my area there have been concerns that the prospect of Title II regulation may require them to overhaul their billing practices, change their pole attachment rates, require them to review all of the customer privacy terms and conditions, and subject them to new enforcement rules. For many of these small companies, this would stifle future investment. Balancing potential harms with the new regulatory burdens doesn't seem to be equitable to those small providers. Should small providers be exempt from any network neutrality rules?

Mr. Powell. First of all, I would say that we as an industry, and I would think that my small members would concur, are quite supportive of both the concept of open Internet and the government's interest in developing strong and sustainable rules. It is simply a false choice to suggest that we are opposed to the core and substantive

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

effort to do so.

What we are concerned about is in the effort to do so we will employ a comprehensive, complex regulatory regime that will substantially raise the costs of being in the ISP business. Cost management is a critical concern for small businesses, much more than even the larger. And on the margins of uneconomic regions that have difficulty, like rural America, anything that adds to the costs of deploying that infrastructure in those places will dampen both the ability and the enthusiasm to reach the hardest parts of the country.

Mr. Latta. Thank you.

Ms. Baker, if I could turn to your testimony, also you had some discussion about rural America in it, under your section under the significant risk of Title II. And you mentioned that if the Commission proceeds down that path that litigation would inevitably have more delays and uncertainties out there, and that also interesting that the harm may be particularly acute for rural customers, as a collection of regional providers explained that "applying an outdated and backward-looking Title II common-carriage regime to our services...would stifle innovation and investment and would do a disservice to rural America." Could you elaborate on that disservice to rural America?

Ms. Baker. Of course. Our association this year is chaired by Ron Smith, who is president and CEO of Bluegrass Cellular from Kentucky,

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

and we brought our rural carriers in to visit with the FCC. They don't have armies of regulatory lawyers to go and comply with transparency and other burdens. Mobile broadband has never been under Title II. The uncertainty has already stifled their deployment. They are worried. They do not know what Title II brings.

And, additionally, the wireless industry is extremely competitive. They need to differentiate to serve their communities. They need to make sure that they can compete with different concepts, and they are not sure what Title II will bring them in that respect.

So the lawyers and what Title II would bring is unknown. Competition and differentiation are important to our rural carriers. And I think that is at risk under Title II.

Mr. Latta. Let me ask you this, because when I am out in my district and talk to folks, especially if you are a small business way out in an area that might not have very good coverage. They are concerned, in fact I just talked with somebody not too long ago, about 2 weeks ago, that they have a problem with being able to connect with their consumers, that people are trying to contact them. So are you saying that you would see like build out and things like that for some of these folks would be hampered because of that, because of Title II?

Ms. Baker. Build out and advanced services.

Mr. Latta. Okay. Thank you.

Mr. Powell, if I could go back to your testimony, you go into great

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

detail about how the current light touch regulatory structure has spurred a rapidly evolving and successful broadband ecosystem. Will Title II regulations do anything to encourage continued growth as we have seen over the past 15 years? And would the reclassification encourage incumbent providers to upgrade networks or new companies to enter the market?

Mr. Powell. I think, all hyperbole aside, the issue isn't whether people will invest. Of course they will. They have businesses to run. The real question is, will it be at a diminished and dampened level compared to the velocity and the ambitions that the country has? We hear the President and other people talk about wanting the Nation to achieve world class, top broadband speed and status. We want gigabit to every American, we want every American to have access to the Internet, and we are impatient about that.

Networks are rebuilt every 18 to 24 months to the tune of \$30 billion to \$50 billion annually. To get to gigabit speeds, we are talking about hundreds of billions of dollars required over some amount of time. It is simply common sense to understand increasing regulatory costs, increasing uncertainty certainly will slow the magnitude or the velocity or the timing or the pace of those evolutions. And I am sure even in companies like Mr. Etsy's or Amazon they have just as much of an imperative of having a continued high growth evolution of network capacity as the primary input to the businesses they provide.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

So we do believe both the increased costs associated with the regulatory environment, the cost of borrowing that will go up when now the rate of return is based on being a regulatory industry rather than a lightly regulated one, and the years of uncertainty to truly finalize and settle and stabilize the rules will probably have a negative and depressive effect. All you have to do is look at the recession, when companies had plenty of capital but were unwilling to deploy or hire or invest because of the uncertainties that surrounded the market during the depths of the recession to have an example of how this works.

Mr. Latta. Thank you very much.

And my time has expired. And the chair recognizes Mr. Pallone for 5 minutes.

Mr. Pallone. Mr. Chairman, I yield to Ms. Eshoo.

Ms. Eshoo. I thank the gentleman.

I just want to state for the record something that is very important given what Ms. Baker said. Wireless voice has been, as you know, a former commissioner of the FCC, under Title II since 1993. So I think everyone needs to have an appreciation of that, and I don't think the testimony reflected that.

Thank you.

Mr. Pallone. Thank you.

Ms. Gonzalez, I think we both agree that putting net neutrality protections into law would be a win for consumers. But how might

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

consumers lose if Congress were to enact the draft bill that we are discussing today?

Ms. Gonzalez. Thank you, Congressman Pallone, for the question. I think with what is on the table today there are serious threats. This undermines FCC efforts to bridge the digital divide. Particularly concerned with rural subsidies and efforts to reform the lifeline program, which could have the potential to bring affordable broadband to the working poor. It undermines privacy, truth in billing, all kinds of consumer protections that we as Americans have come to expect and rely on, and it calls into question the FCC's ability to continue protecting us on the communications platform of the 21st century.

Mr. Pallone. Thank you.

Now, my Republican colleagues characterize their draft bill as consistent with the FCC's 2010 net neutrality rules. Do you agree that the draft bill provides the same level of protection as the 2010 rules?

Ms. Gonzalez. I think it is true there are some rules that look like the 2010 rules. There are a number of distinctions that I laid out in my testimony, but I think the critical distinction is that it strips the FCC of any flexibility to oversee consumer protection and ensure that there are not harmful, discriminatory practices on the Internet. And so that is the concern. It essentially freezes the FCC in time so that it cannot address any harms that fall outside of the principles laid out in the draft legislation, nor can it address any

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

new harms that present themselves as technology and the marketplace evolve.

Mr. Pallone. Thank you.

Mr. Powell, we have heard the argument today that Title II will stifle innovation and investment. In fact, I think the chairman called it the nuclear option. How would we evaluate this argument in light of the fact that cable companies' stock prices are up since President Obama announced his support for Title II?

Mr. Powell. Well, public stock prices are a complex question. I am no market expert. But a careful examination historically over periods of regulatory intervention versus periods of light regulation will demonstrate a clear pattern. In the wake of the 1992 act, when cable rates were regulated, investment was depressed for several years until the prospect of the 1996 act, which deregulated those rates again and they soared. In 2001 and 2002, when the decisions to regulate broadband as an information service were put in place, it unleashed a radical increase in investment, totaling \$1 trillion over the course of the year.

I sincerely believe that the market believes in the assertions and promises that Title II will not include rate regulation, it will not include the whole bevy of onerous regulations that exist. But unless that is clearly identified in an unequivocal way, I don't think it is priced into the market, and very likely would be if anything

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

changed.

Mr. Pallone. Maybe the economy is just getting so good that --

Mr. Powell. Could be that too.

Mr. Pallone. We are just seeing it soar these days based on what the President said last night.

One more question. Most broadband providers, including your member companies, say they are already in compliance with network neutrality, and what they are really afraid of is the rate regulation by the FCC, but both the President and the FCC have said they support forbearance from regulation of consumer prices. So, Mr. Powell, if we all agree rate regulation should be off the table, couldn't Congress narrowly address that issue in legislation, and couldn't there be unintended consequences from placing the kind of broad restrictions on the FCC's authority that are in the draft bill?

Mr. Powell. Thank you, sir. I would say two things. First of all, rate regulation is the most dangerous of all of the provisions, but I wouldn't concede that of the thousands of regulations in Title II that alone is the sole focus of our concern. We do appreciate the President saying that rate regulation should be forborne from, and Chairman Wheeler's assertions.

But simultaneously, we have heard Chairman Wheeler talk about the adoption of Sections 201, 202, and 208. Section 201 is the statutory provision where rate regulation is derived. It says that to ensure

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

that practices for charging will be just and reasonable. That is the basis and the historical basis of the Commission's rate regulation.

So we don't yet have any confidence that the words are matching the direction of the order and whether the government will make clear that rate regulation is off the table or merely say they have the power to rate regulate but for now are choosing not to.

Mr. Pallone. Thank you.

Thank you, Mr. Chairman.

Mr. Walden. [Presiding.] Thank the gentleman.

I will now recognize the gentleman from Illinois, Mr. Shimkus.

Mr. Shimkus. Thank you, Mr. Chairman.

My good friend Congresswoman Eshoo kind of had a shot across the bow at former Commissioner Baker, now president or chairman or czar of CTIA, and so I thought I would give her a chance to maybe respond to the statement made by my friend Anna.

Ms. Baker. Thank you. I appreciate that.

Ranking Member Eshoo is correct. First of all, we know the current framework is working. We have \$112 billion of investment in the wireless industry in the last 4 years. But let's go to 1993, when Congress was enacting Section 332 and deregulating wireless. They did it two ways. They did two buckets. They did CMRS, which was mobile voice, and they did that subjected to limited Title II requirements. They separately created a second bucket, which is called PMRS, and that

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

was for all new services, like mobile broadband, and they specifically exempt the FCC from applying Title II requirements on mobile -- well, new services, which mobile broadband is a new service. FCC has always acted in accordance with that, and the court has always upheld that mobile broadband is not regulated by Title II and cannot be, according to the explicit language of Congress.

Mr. Shimkus. Great. Thank you.

And I know my colleagues have given some credit to the chairman of the subcommittee on movement. I mean, I am a paid prioritization guy. So that is where I come from in this debate. And I have always been the point that if you are going to make the \$30 billion of investment every 18 months to upgrade the pipes, you have to have revenue to do that or you have to have a business model to do that.

My whole position in this has not been limited and government control of the existing pipes, but encouragement of the expansion of more. But that was then, this is now, we are in a new world order where I think we have now looked at the debate and said -- and businesses have done that too -- and said, hey, we need to get this monkey off our back, we need to get some rules and some certainty. Businesses always talks about certainty.

So, again, credit to the chairman by saying, okay, well, let's go back to the previous debates, look at what was put out in front by our colleagues, where can we find middle ground? And I believe that

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

is the product that Chairman Walden has set forth, now with great consternation from my friends on the other side.

So I am with the chairman. I think we can move forward and set some certainty. But I am a legislator. Right? This process we want to legislate, we want to define in law, and then allow the executive branch, or in this case the FCC, to implement the law. Because as, again, Chairman Walden said, if another FCC comes and is established by some other President, it could get turned topsy-turvy again.

So I just wanted to just in the big point just give some credit about how even Chairman Walden is bringing some of us kicking and screaming along with him on this policy.

Mr. Walden. Boy, can he kick.

Ms. Eshoo. Would the gentleman yield just for a second?

Mr. Shimkus. Yeah, I would.

Ms. Eshoo. I am Catholic, and for Catholics, we understand confession. So thank you.

Mr. Shimkus. I still believe in the paid prioritization and incentivizing build-out. I am not sure we get there this way. And that is my concern.

Mr. Walden. I appreciate it. Would the gentleman yield?

Mr. Shimkus. I would.

Mr. Walden. I appreciate that. And remember part of what drives us to legislation. First of all, we would want the FCC, before they

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

go off and regulate something that everybody has testified has worked pretty darn well, right, I mean what we have today has been light touch regulation. That is how it has been built out. There is no overwhelming evidence of clear market failure that would drive to deep regulatory control from Washington top down. That is where some of us have been, why do we have to go down this path?

What is before us today, though, is the President is now turning the FCC into his open puppeteer here, you know, and saying here is what you have to do, which goes beyond where the FCC chairman said he thought he should go, or what was right for the market. He is being pushed. And then he said, we are going to act at the FCC by February 26. And by the way, none of us here is going to necessarily see that order. That is part of our reform effort, by the way, which we passed out of the House, where we would have more transparency in the process.

So they are moving. We don't know precisely what that is going to look like. We would rather give certainty because of this issue that Ms. Baker has outlined regarding mobile devices, because Mr. Etsy and Mr. Misener, as you know, we are all going to a mobile world. And yet the statute under 332 is pretty clear, that authority doesn't exist at the FCC. Now, they may try to go there, and there is dispute whether you can get there and sort of hook something around. You are going to be in court. Consumers aren't going to get certainty. The marketplace isn't going to have certainty. And for the third or fourth

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

time, the lawyers are going to get rich. And, Mr. Dickerson, you and I aren't lawyers. So all we are going to do is get to pay the bill here.

So I would prefer to get the committee together, do what we do as a committee, find a common ground here. And that is why we started with the 2010 order, we started with a lot of the work that the Democrats, frankly, had done with Mr. Waxman. If you go through section by section you will see that here. And then we just want to give pause to the market. So, anyway, I have overextended your time.

Mr. Shimkus. I yield back the balance of my time.

Mr. Walden. Thank you.

Where do we go now? We go now to Mr. Doyle, who hopefully will be streamed on the Internet on this version of his comments.

Mr. Doyle. Thank you, Mr. Chairman.

Let me start by saying I am very concerned about the way in which this bill strips the FCC of its authority under Section 706 and prevents the FCC from giving new entrants access to key infrastructure under Title II. The FCC needs access to every tool in its arsenal to promote and encourage the build-out of advanced broadband infrastructure. Municipal broadband and new entrants in the marketplace, like Google Fiber, they are driving U.S. innovation and driving ISPs to offer faster, cheaper services by bringing much-needed competition to the broadband market. These build-outs also create jobs across the

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

country, and it is often in areas where ISPs have opted not to make the investments themselves.

I want to ask Mr. Misener and Mr. Dickerson, both of your companies offer innovative and high-bandwidth applications. Mr. Misener, I understand that Amazon has recently begun streaming in 4K. Are either of you concerned that the draft bill does not include any mention of peering or interconnection, particularly given how congestion at points of interconnection has recently been used to leverage payments from edge providers?

Mr. Dickerson. I will speak first. We are absolutely concerned that interconnection is not included. I agree with what Mr. Misener said earlier, we think very much about our customer experience and their experience of the Internet. So regardless of whether the choke point may happen upstream or in the last mile doesn't matter. So interconnection is very important to us.

Mr. Doyle. Mr. Misener.

Mr. Misener. I share that view on behalf of our customers. It is one thing that customers just simply should not need to care about. Where throttling or discrimination or paid prioritization takes place in a network they shouldn't care. Frankly, they shouldn't need to care much about where in the statute their rights are protected, where net neutrality is extended. It could be done in Congress, it could be done at the Commission, a mix of the two. And I would suggest that consumers

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

really don't care, they just want their net neutrality.

Mr. Doyle. Thank you.

Ms. Gonzalez, do you want to add to that?

Ms. Gonzalez. Thank you, Congressman Doyle. I think we should consider anything that impacts a consumer's ability to access what they want to access on the Internet. The discussion draft strips the FCC of authority to even investigate this issue, and that is very concerning.

Mr. Walden. Would the gentleman just on that point? Because I don't believe our draft does that.

Mr. Doyle. As long as you give me all my time back.

Mr. Walden. I will give you all your time back. I don't believe our discussion draft does that, and would welcome that opportunity. An on the interconnection piece, we leave that authority with the FCC. We don't do away with that here. So although it is absent in the bill, it still is resident at the Commission. So that interconnection piece we felt was taken care of. We would be happy to have a further discussion. I yield back.

Mr. Doyle. Thank you, Mr. Chairman.

Mr. Misener and Mr. Dickerson, the draft bill also provides this carveout for so-called specialized services, yet it doesn't allow the FCC to define what constitutes a specialized service. Can you envision this language being used by an ISP to sell preferred treatment or

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

advantaging one competitor over another or even they themselves providing specialized services that unfairly compete in the marketplace?

Mr. Dickerson. Absolutely. I think the lack of specificity in the language could allow for many applications that could be tantamount to discrimination. So, yes.

Mr. Doyle. Mr. Misener.

Mr. Misener. Mr. Doyle, certainly it would permit it respect to affiliated content. So the network provider itself could engage in the provision of specialized services, which would look a lot like paid prioritization, only it is just a matter of ownership as opposed to payment by a third party. So, yes, we are very concerned.

Mr. Doyle. Thank you.

I just want to add on to what Ms. Eshoo was saying too about we read several news reports that senior executives from major companies that are represented by Chairman Powell and Ms. Baker have made statements about Title II, which, Mr. Chairman, I would like to enter into the record.

The first is one now that Comcast, Charter, and Time Warner, all members of Chairman Powell's organization, and I quote, Charter Chief Executive Tom Rutledge added that so long as the Federal Communications Commission waived parts of Title II that weren't relevant, a step that net neutrality advocates support, it would be an acceptable outcome.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Similar statements made by Comcast and Time Warner Cable.

Stephen Bye, the chief technology officer of Sprint, a member of Ms. Baker's organization, said Sprint will continue to invest in data networks regardless of whether they are regulated by Title II, Section 706, or some other light touch regulatory regime. And Francis Shammo, the CFO of Verizon, said, "I mean to be real clear, I mean this does not influence the way we invest. I mean we are going to continue to invest in our networks and our platforms, both in Wireless and Wireline FiOS where we need to. So nothing will influence that."

So I would like to enter these three into the record, Mr. Chairman.

Mr. Walden. Without objection.

[The information follows:]

***** COMMITTEE INSERT *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Doyle. I thank you, and I yield back.

Mr. Walden. The gentleman yields back.

We now turn to Mr. Guthrie for 5 minutes. Oh, wait a minute, Mr. Barton is back. I am sorry.

Mr. Barton. I need to get reconnected, Mr. Chairman.

Mr. Walden. All right. Then he will yield. And I think next is Mr. Guthrie.

Mr. Guthrie. Thank you very much. It is a privilege to be here.

And sorry, on this committee we have so many subcommittees going on with interesting testimony. I was out just a few minutes ago. And I understand, Ms. Baker, you mentioned Bluegrass Cellular, which is in my district. And we are very proud to have a very interesting concept and a successful rural carrier. And I understand you also talked about issues facing small rural carriers. But in the context of evaluating what constitutes reasonable network management, how are congestion issues different for wireless networks, particularly in small rural carriers?

Ms. Baker. Well, that is a great question. I did talk about Bluegrass Cellular. They are our chairman this year. And they are deeply concerned. They have issued a letter in the record at the FCC. I am happy to offer it into the record here about their concerns for rural carriers. So with no objection? So there we go.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

[The information follows:]

***** COMMITTEE INSERT *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Ms. Baker. As far as the technical capacity and the reasonable network management standard, we have to be very careful. If, say, Mr. Latta and Chairman Walden were reliving the national football championship and ranking woman Eshoo were tweeting, and you were taking your email, if you were all on the same service provider, you would all be on the same cell. If we had a bunch of 16-year-olds walking through doing a tour of what Congress looks like, that is a millisecond by millisecond management that has to happen by our carriers. That is the same cell. It is constrained. One strand of fiber is the same capacity of the entire electromagnetic spectrum.

So there is an awful lot of network management that goes on. These people, if you were a CTO of one of these smaller carriers, you are updating any sort of things that can help you handle this data capacity, just amazing upload. You say \$45 billion in the spectrum auction. Well, it is no surprise because the data that we use has increased by 730 percent.

Mr. Guthrie. Was that the same as congestion issues and interference issues? Is that different?

Ms. Baker. Yes.

Mr. Guthrie. And how are they different?

Ms. Baker. The data is increasing, so the congestion is increasing. So we are all using more data. So it is more and more congested, and we have to manage our network more and more.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Guthrie. It is all about interference, interference issues.

Ms. Baker. Interference is if we are all using the same, if it is raining outside, if more people come onto our cell site, then we have to manage it, we have to make sure that it is optimized so that all of us have the best user experience.

Mr. Guthrie. Well, thanks. And thanks for mentioning Bluegrass Cellular. It is a great business.

And, Mr. Powell, I have a question. I know this issue was touched here earlier, but I wanted your input. The FCC, do they need to act in February? I mean, everyone wants the Internet to remain open and vibrant, but is there some particular reason the FCC shouldn't wait and see whether Congress can enact a bipartisan bill?

Mr. Powell. It is really the decision of the Commission and the chairman, you know. That is the schedule he establishes. He has that authority under the statute. I do believe that the Commission should always be respectful of the legislative process and provide both the expertise it needs to make a decision. But I also do respect their separate and different authorities, and they set their own timelines.

Mr. Guthrie. So when you were chairman in 2002, when cable modem service was determined to be an information service, in comments to the FCC the NCTA indicated that, quote, "The record shows that today's increasingly sophisticated broadband services fall even more squarely within the definition of information service than ever before,"

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

unquote. And could you explain this from the perspective and understanding of technology that you had before you in 2002 to the NCTA comments expressed to the FCC last year?

Mr. Powell. I will try my best. I think one thing to note is the draft legislation, as I understand it, rather than disenfranchising the FCC of authority, is classifying a service the same way this Commission has classified that service for over 12 years, through both Republican and Democratic administrations, including most recently in 2010 by President Obama's first chairman of the FCC, who also agreed it was an information service. The Commission has been operating under that definition since the very beginning of broadband. That is not new.

It is important to remember this isn't completely discretionary. Congress creates classes of service and defines them. It defines what a telecom service is and it defines what an information service is. When broadband first emerged, and I was privileged to see it come onto the scene when I was at the Commission, there was an open question as to whether the nature of that new integrated Internet service was either a telecommunication service or an information service under our precedents. It was our judgment that the factual characteristics, the nature of the service, the way that it was used was much more faithful to the definition that Congress set out for information services than the one they set out for telephone services. That went all the way

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

to the United States Supreme Court, who agreed with the Commission's judgment.

The Commission now is proposing to try to reinterpret the facts and apply it to the other definition. Certainly they have prerogative to try. But the facts are fundamentally the same as they were in 2002, and that will be a very serious source of litigation risk for the Commission when it fundamentally changes its mind about the factual nature of the underlying service.

Mr. Guthrie. Thank you. My time has expired.

Mr. Walden. The gentleman's time has expired.

We will now go to Mr. Welch for his 5 minutes.

Mr. Welch. Thank you, Mr. Chairman. A couple of points and then a few questions.

Number one, I thank you and the ranking member. This is an excellent hearing.

Number two, we are way ahead of where we were last year. I mean, this draft bill does contain I think real responses to the over 3 million comments that were offered to the FCC. So that is terrific.

Third, I think the FCC itself, Chairman Wheeler, has been extremely responsive. And I have had confidence that his experience in the industry, as well as on the public sector side, makes him someone who we can have confidence with respect to light touch regulation.

But number four, and this is the heart of it for me, whatever we

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

do, my concern is for access to the Internet and the cost. And three out of four Americans, and this is especially true in rural America, really only have one provider. So they have no competition in many parts of the country.

So this question of what do we do has been answered affirmatively about trying to maintain net neutrality in this legislation, but there has been injected into it a major new issue, which is new, and that is, do we take away jurisdiction from the FCC? And that is a fundamental question that requires, I think, an enormous amount of attention before we make a decision to go forward.

Mr. Powell, I appreciate the point you made about uncertainty, because if you are making big investment decisions, obviously knowing what the rules of the road are, are important to you. But the uncertainty goes both ways. If you have legislation, it is very hard to change it. Let's be real. We know that. If you have a regulatory policy, it is there, and if it is done right it can respond to issues.

So I want to go to a couple of things that Mr. Misener said, because I appreciated how specific you were. In the legislation there is talk about specialized services without definition, reasonable network management without definition in the legislation, and third, which parts of the broadband are protected by network connection. And under this legislation, if there were a problem in any one of those three areas, who would resolve the dispute or provide the remedy to

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

somebody adversely affected?

Mr. Misener. Thank you, Mr. Welch.

It is unclear. I mean, there is a direction in the bill to establish an ex post adjudicatory process, which sounds nice in practice, but it certainly does not provide the kind of certainty and detail that most businesses and consumers seek.

Mr. Welch. So, Mr. Powell, who would resolve those issues? I mean, there is not a dispute here that there is not a definition in our legislation. We could all anticipate there will be disputes. How would they be resolved?

Mr. Powell. First thing I think is really important to note is the Commission, under judicial precedent, has the right and the obligation to interpret the words of Congress. What specialized services means or any other term of Congress would absolutely be within the Commission's power to interpret and enforce as they best understood it.

Mr. Welch. So let me just understand, because that is important, I think, to me at least, what you just said. If there were a dispute, you are saying the FCC would have jurisdiction even though we are taking jurisdiction away from the FCC in this legislation?

Mr. Powell. The draft, as I read it, certainly contemplates the FCC enforcing the provisions.

Mr. Welch. Okay. This is serious, because we know this question

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

is coming. Let's say Amazon had a dispute. Where would they go to resolve it? Would they go to their legislator or would they go to the FCC?

Mr. Powell. Surely, they would complain to the Federal Communications Commission, who as I understand is fully empowered to resolve that complaint under the provisions laid out by Congress, as they do with every other complaint in their regulatory jurisdiction.

Mr. Welch. Okay. Thank you, Mr. Powell.

Mr. Powell. You are welcome.

Mr. Welch. Ms. Baker, one of the questions that I have is most of the open Internet talk centers around over the last mile between the Internet service provider and the end consumer. But aren't there very real competitive concerns and potential consumer impacts that arise in the exchange of data between the ISPs and networks too? And how can we ensure under this legislation that the interconnection continues to happen for smaller competitive carriers in the telecommunication marketplace?

Ms. Baker. That actually might be a better question for Chairman Powell. We have been very focused on the mobile industry and the technical parameters that are around the mobile industry and the competitive factors on the mobile industry. You mentioned competition and only one provider. In the mobile industry, 8 out of 10 Americans have a choice of 4 or more providers, 94 percent have 3 or more

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

providers. So it is a very different issue, so you may want to redirect your question.

Mr. Welch. Okay. I think my time has expired. So thank you. I yield back.

Mr. Walden. The gentleman's time has expired.

I would like unanimous consent to submit for the record a letter to Ms. Marlene H. Dortch, Secretary, Federal Communications Commission, from various companies, Bluegrass Cellular and others. Without objection, it will be entered into the record.

[The information follows:]

***** COMMITTEE INSERT *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Walden. We will now turn to the gentleman from Texas, Mr. Barton, for 5 minutes.

Mr. Barton. Thank you, Mr. Chairman.

I am going to ask just kind of a general information question. The gentleman at the end of the table down there, Mr. Powell, I used to know a Michael Powell, but he had some hair.

Mr. Walden. He reached perfection. He is my role model.

Mr. Powell. That was at the beginning of net neutrality.

Mr. Barton. Is this the same Michael Powell who used to be important, used to be the chairman of the FCC?

Mr. Walden. If the gentleman would yield, yes, I believe that is the case, and he has reached folic perfection.

Mr. Barton. Okay. I just wanted to make sure before I asked him a question.

Now, Mr. Powell, now that I know who you are -- and I am kidding, I know you -- I wouldn't kid you if I didn't know you pretty well.

But he is blushing, Mr. Chairman. Let the record show.

When you were chairman of the FCC, did your Commission give any thought to regulating the Internet under Title II?

Mr. Powell. No. As I said, this was a question of first impression when broadband was in essence invented. And that question was presented to the Commission of, how should it be properly classified under congressional law? So we did weigh whether to regulate it as

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

a telecommunication provider under Title II or whether to regulate it as an information services provider under Title I. The Commission voted to do the latter.

Mr. Barton. Are you aware of any academic or industry study that claims the Internet is a natural monopoly?

Mr. Powell. I am not aware of any study. And in fact I think one of the most substantial decisions made by this body in 1996, when it passed the Telecomm Act, was to abandon that thesis of regulatory policy that the markets are not natural monopolies, they should be subject to competitive forces, and it shouldn't be regulated as such. I mean, I think that is one of the things that concerns us about the historical use of Title II. Built in and woven throughout that body of law is the assumption that the market is served most efficiently by a monopoly, a state-sanctioned monopoly, as AT&T once was for a very, very long time.

Mr. Barton. Assuming, and I think it is a correct assumption, that the Internet is not a natural monopoly, that it is in fact a competitive market, given your knowledge, both in your prior capacity as chairman of the FCC and your current capacity as an industry leader, do you view any participant on the provider, the base provider part of the market to have what would be called monopoly market power?

Mr. Powell. No, not during my tenure. And I disagree that is the case today. You know, as an old antitrust lawyer, we know that

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

you don't count noses, you look at what the effects are in the market. Has capacity expanded? Capacity has expanded 1,500 percent in a decade. Has the market continued to invest? It invested over a trillion dollars in that decade. Have prices gone up to monopoly rent levels? Prices have stayed flat and declined on a per megabit basis. I don't think any antitrust scholar or Justice Department could conclude that it is an unhealthy, uncompetitive market based on the actual characteristics of the market that they use to measure that question.

Mr. Barton. Well, if it is not a natural monopoly and there is no participant in the provider sector of the market that has monopoly market power, then it stands to reason that the committee draft is correct that we should explicitly say you shall not regulate or oversee the Internet under Title II. Do you agree with that?

Mr. Powell. As I have testified consistently, I do think the cost and damage to Americans' ambitions in broadband and Title II far outweigh its benefits. I think that if the narrow task before us is to create solid, bulletproof, legally sustainable net neutrality rules, which we accept, we believe that can be done without resorting to that hammer.

Mr. Barton. Okay.

Mr. Chairman, I want to thank the former chairman for those comments. I do believe that it is wise to put this out as a draft.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

I think there are some very valid questions -- and my friends on the minority are asking some of those questions -- about how to perfect the language. I have some concerns myself about certain parts of the draft. But as a base principle, the fact that we should not regulate the Internet under Title II, I think is beyond question. And if we start from that premise, I think the discussion draft is an excellent document, and we can iron out the details through these hearings and if you take it to subcommittee markup in the markup itself.

With that, I yield back.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

RPTR YORK

EDTR HUMKE

[12:02 p.m.]

Mr. Walden. I thank the gentleman.

We will now turn to the gentleman from Kentucky, Mr. Yarmuth. Welcome aboard, and --

Mr. Yarmuth. Thank you very much, Mr. Chairman, and I want to thank the panel. It has been a very enlightening conversation, and I am new to this entire area. So I am learning a lot as we go.

And one of the things that intrigues me about this entire field is that we have a field that is changing as rapidly as anything probably in history has changed, and we talked -- some of the members have talked about the difference between 1996 and now and how the world has changed.

But it is not just the technology that has changed, it is also the industries have changed in the sense that this is kind of an amorphous corporate structure that is out there now too. There is a lot of consolidation going on. There are companies getting into all various areas of the business so that at one point they are acting like a common carrier, at another point they are acting as a content provider and so forth.

So, Mr. Powell, you have mentioned before the distinction between information services and telecommunication services in the law. Is

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

that a meaningful distinction today?

Mr. Powell. I think over time it shouldn't be, meaning, you know, this is, I think, the case for this institution which I think it is already committed to taking on the responsibility to write a new act. We are entering into a world in which a bit is a bit. Data networks follow radically different characteristics than the ones that informed those judgments when these laws were written in the 1930s or the 1990s, and I do think that is a continuing problem.

I think net neutrality is actually just one of the first highly contentious issues related to ambiguity, and it won't be the last, and what concerns me is that I think Title II is even more inapplicable to modern functions and modern networks, and I think we will be ironing out, if that is the governing body, for years to come how it is properly applied to networks that do not behave in the ways that existed when those judgements were made.

Mr. Yarmuth. Right. Thank you.

Ms. Baker, you say in your testimony this similar conversation, mobile broadband is different, and I agree with you that network neutrality rules need to be flexible enough to take into account the technological differences between networks.

The draft, though, we are discussing today would restrict the FCC's ability to interpret the net neutrality rules once they are enacted.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

How can the FCC give wireless carriers the flexibility they need without the authority to modify or clarify the network neutrality rules?

Ms. Baker. I think the draft is a great start. I think we -- as we evolve I think we need to work on the definitions and make sure that we have the proper definition for reasonable network management. Currently it acknowledges the technological differences. I think that is important. We will have to watch all the definitions, but I think we have got a great start, and look forward to working with all of you on it.

Mr. Yarmuth. Thank you.

The 1996 act created a partnership between the states and the Federal Government, and each had important telecommunications oversight and responsibilities. Our partners in state governments and public utility commissions are often closer to the ground and can respond quickly to consumer complaints.

As we are considering this legislation, I want to address this to Ms. Gonzalez, should we be thinking about the consumer protection role of the states as well?

Ms. Gonzalez. Absolutely. In fact, there has been a lot of talk recently about the FCC acting to protect local choice in broadband. In particular, there is an effort to ensure that states do not restrict local communities from building their own broadband networks. I have

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

concern that the draft legislation, as it stands today, would disempower the commission from addressing that very serious issue of local choice for consumers.

Mr. Yarmuth. And while I have your attention, we have been talking about the competitive situation with broadband. In my community there is basically one system, and so there is really no incentive for them to provide great quality service or consumer service.

Are you concerned about the ramifications for consumer protection if we go down this route literally that is in the draft bill?

Ms. Gonzalez. Yes. Absolutely. I think it calls into question the FCC's role in protecting consumers and there may be some competition that might not be an actual monopoly, but I think if you ask people around the kitchen table do they feel like they have choice in particularly their home broadband connections, I think the vast majority of consumers feel kind of trapped.

Mr. Yarmuth. Yeah. I agree.

I just want to say one thing. It is certainly my preference for Congress to act in all of these areas, but I have very serious concerns, again, the way the world is moving, Congress at its optimum efficiency moves at about 10 miles an hour, and the world is moving at 100, and I think in this field and many, many others it is becoming very, very difficult for us to make long-term policy decisions because the future

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

is so uncertain, and we talk about providing certainty, there is not a lot of certainty out in the world just because the world is changing so fast.

So, anyway, editorial comment.

Thank you very much. I yield back.

Mr. Walden. Gentleman yields back.

We now go to the gentleman from Texas, Mr. Olson, for five minutes.

Mr. Olson. Mr. Chairman, as you know, today is my first hearing as a member of this subcommittee, and I think I am thrilled to be here.

All kidding aside, Ms. Baker, it is always refreshing to have someone who went to school in Houston, Texas, as a panelist.

As you know, ma'am, the last major update to the Communications Act occurred 19 years ago. Giving the importance of the Internet to our economy, our social fabric, does it make sense for Congress to take a fresh look at how to tackle Internet openness rather than try to invoke statutory provisions that are decades old?

Ms. Baker. Absolutely, and we are very committed to work with you on that.

Mr. Olson. Thank you.

One question for all the panelists. We all agree that these proposed changes by the FCC rule to Title II will bring about legislation. I think we can all agree with that.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

My question is that is going to make for a lot of uncertainty. How long will that last? When it is decided by the courts, how long? Any idea? A year? 2 years? 5 years? A decade? Mr. Powell?

Mr. Powell. Well it is always hard to say without looking back historically, but when my commission first adopted the definition of information services, it was three to four years before there was complete resolution of a litigation case because of the ruling of the Supreme Court.

The commission now is proposing to do fundamentally the same thing, a brand-new untested definitional change coupled, by the way, with new and untested other applications of forbearance and other things.

So we are talking about potentially a litigation process that typically would run 3 to 5 years depending on its complexity, depending on the parties, and depending on the court system.

Mr. Olson. Does that assume applications that decisions come out longer than 3 to 5 years, or is that sort of the whole window?

Mr. Powell. Well, the problem is if any part of the order is overturned by a court, then there is remands to the commission. That will take, you know, that could be a whole new commission. This commission will only be in power for the next 2 years. It could be remanded to the next administrations commission. This thing could start all over again. It is not a complete exaggeration to say 10 years

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

from now we could still be sitting here.

Mr. Olson. Mr. Dickerson, your comments, sir. How long?

Mr. Dickerson. Yes. Well, first of all, we don't see the FCC action in Congressional action as mutually exclusive. I think, obviously, Mr. Powell has a lot of experience in these areas. So I don't want to contradict sort of his legal expertise and the process expertise.

I think that Congress -- I am very encouraged by many of the principles in the bill. I have stated the issues that I am concerned about. I think the Congressional action can -- if the bill is amended in the ways that we have described could provide much more certainty and work along with FCC regulations.

I wanted to really quickly while I have the floor amend an earlier comment. I wanted to clarify that I will not see the draft FCC order before they vote, and I apologize for that mistake.

Thank you.

Mr. Olson. Duly noted.

Mr. Misener, how about the courts? How long?

Mr. Misener. Well, all litigation is optional, and so it might be up to the litigants whether they pursue it. If we get a great FCC order that everyone loves, maybe no one will sue. Some parties have suggested that they are going to sue regardless. It is not we, it is they. It is a choice of theirs.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Olson. Ms. Gonzalez, how long?

Ms. Gonzalez. I think the risk of litigation comes with an FCC order as well as with the proposed legislation. I think no matter what there will be legal action to clarify definitional issues in the legislative draft, and so while all of us, especially those of us who are lawyers who don't make a lot of money on these issues would like to see, you know, as little litigation as possible, I think it is unavoidable regardless of the path.

Mr. Olson. How about 3 to 5 years like Chairman Powell said? Do you think that is the window of this uncertainty?

Ms. Gonzalez. I think the draft legislation opens up the opportunity for case-by-case adjudications of various definitional issues that the FCC would have to resolve, and so it could even be longer --

Mr. Olson. Thank you.

Fairly quick, ma'am, because Ms. Baker is waiting.

Ms. Turner-Lee. Yeah. I would actually say that I think the draft legislation would actually reduce the amount of time and that we will experience litigation --

Mr. Olson. Okay.

Ms. Turner-Lee. -- if we go towards that. And I also think the draft legislation would give the Congress as well as the FCC some room to look at some of the areas of the bill because out of the 11 principles

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

there is probably one that it sounds like needs to be debated, and that is the Section 706 authority piece, but I think Congress would act much quicker than the type of litigation that we would actual have, and we would avoid the consequences of Title II.

Mr. Olson. Ms. Baker?

Ms. Baker. So the 2010 rules were not published for a while. There is various kind of procedural ways that the FCC can extend that time before they publish them. Once they were published, they were turned back last year. We are now at the FCC revisiting those.

Certainly the best way to act for certainty is for Congress to act. So it depends on how you count it. That is 2010. It is 2015. They will promote some more rules that will also -- depending if they really go Title II, they will be litigated. That will be another window of several years of litigation and uncertainty.

Mr. Olson. Thank you.

My time has expired.

Mr. Walden. Thank the gentleman for his participation.

I ask unanimous consent that we enter into the record a statement on the Verizon Policy Blog from Fran Shammo, the vice -- or Verizon executive vice president, chief financial officer, which deals with this issue of investment, and in which Fran says, "Experience in other countries shows that over-regulation decreases network investment. If the U.S. ends up with permanent regulations inflicting Title II's

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

1930-era rules and broadband Internet access, the same thing will happen in the U.S. and investment broadband networks will go down." So it was a clarifying statement from December 11th.

Ms. Eshoo. Somebody is scolding him.

Mr. Walden. I don't have any knowledge of that since this was December 11th, but would enter that into the record.

Without opposition, so ordered.

[The information follows:]

***** COMMITTEE INSERT *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Walden. We will go now to Mr. Loeb sack.

Welcome aboard the subcommittee. As you can see, we don't deal with many controversial issues here.

Mr. Loeb sack. I am happy to jump into this one as the very first issue that I am dealing with, despite the admonition from Mr. Powell about the difficulty of this subject.

I want to thank the ranking member as well for this wonderful hearing today. I have learned a lot. This is the first hearing that I have had on this subcommittee. I am on the larger committee as well, and if I might, Mr. Chairman, I would like at the outset to request submission for the record a letter from the Internet Association offering their analysis and concerns of the draft bill that we are discussing.

Mr. Chair, I would like to submit --

Mr. Walden. Without objection.

[The information follows:]

***** COMMITTEE INSERT *****

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Loebsack. Thank you.

I come from Iowa. I have 24 counties in my Congressional district. It is a much more diverse district than folks on either coast of the United States might imagine. No offense to folks on either coast, especially our chair and ranking member here, but we have got a lot of issues in a district like mine. It is a very big area.

What I would like to start off with is a question to you, Ms. Baker. Those statistics that you cited, something about 8 out of 10 folks have 4 choices or -- can you cite those statistics again?

Ms. Baker. 8 out of 10 Americans have a choice of more mobile broadband providers, and 94 percent have a choice of three or more.

Mr. Loebsack. And do you know where the 20 percent and the 6 percent reside? Do you have any idea at all?

Ms. Baker. I am certain we can get you a map.

Mr. Loebsack. That would be wonderful. I would really appreciate it. I would suspect, although I don't know for sure, that it is probably in rural areas where those folks reside.

This is my ninth year in Congress. My first year on this committee, but I have been getting around my district for the last 8 years, and this is a huge issue that has come up, the access on the part of rural areas to broadband, to cellular service, to all the things that we are talking about here. That is why I am so excited to be on this subcommittee. It was my first choice so I could do what I can

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

for the folks in my district, and I want to thank all of you.

Mr. Dickerson, in particular, I knew nothing about Etsy until my daughter requested a gift certificate as a Christmas present, and I immediately went online and found out what a wonderful service you offer. So thank you for you being here as well.

Mr. Dickerson. Thank you.

Mr. Loebsack. I support net neutrality, obviously. I am interested in working with both sides of the aisle so we can craft some kind of legislation to bring this up to where we ought to be in 2015, fully recognizing that we really will never as legislators understand all the issues down the road because things are going to be changing all the time.

We are going to do the best we can, and I do appreciate the majority bringing a bill to the floor -- or bringing a draft to us at this point so we can spend a lot of time working on this, but as I said, the rural areas are really probably my major concern as a Congressman, and I would like to ask, Ms. Gonzalez and perhaps Dr. Turner-Lee and maybe the rest of you as time permits what effects might this proposed legislation have on our rural consumers, especially the Universal Service Fund programs, universal programs, service programs, which were already mentioned briefly?

Ms. Gonzalez. Thank you.

Thank you, Congressman for the question.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

This is one of my deep concerns with the draft legislation as it stands. Stripping the FCC of Title II and 706 authority, calls into question the ability of the commission to continue ongoing processes that help subsidize expansion of broadband in rural areas as well as programs that could make it more affordable for those rural folks that do have a connection but can't afford to connect.

We are really concerned about, you know, people in rural areas going -- you know, driving down the road to wherever they can get a wireless signal to do their homework or -- you know, we really -- we need to ensure that this bill does no harm to efforts to, you know, increase digital inclusion. It is an important imperative for education as well.

Mr. Loebsack. Thank you.

Dr. Turner-Lee?

Ms. Turner-Lee. Thank you, Congressman.

I actually want to say that I think that the bill, if you flip it on the other side, has the promise if we were to look carefully at Section 706 authority over Title II to actually increase the further deployment and adoption in rural communities. I think part of the reason why the FCC has the authority of 706 is to get at the very issue that you are talking about, and I think by looking at the bill in a way where that is a point of debate because it is a discussion draft will actually allow us to be careful in the legislative path that we

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

do take.

I mean, if we take Title II -- we have already heard from the association leaders about the high capital investment in communities overall, but the communities like rural and the communities that we are concerned with at MMTC will be the last on the list if capital is depressed among our communities.

So I think we need to be real careful about that. In the study that I did in 2010 of the national broadband map, there was very little coverage of census tracts that were the lowest in their areas in their states and communities, and it has been since 2010 under the light-touch regulatory environment that we have seen a lot of growth, particularly with wireless as an onramp for some of these communities as well.

So I would caution against throwing the baby out with the bath water with the legislative proposal and to come to the table to really think about what ways can Section 706 perhaps -- and we have offered some solutions that we are willing to work and sit down with Congressional members, the staff to talk about, but how can you actually leverage that point in there so that to the earlier point of the Congressman we don't spend a lot of time wasted where we can't get to the debate of universal service deployment and other things that you do care about and we do too.

Mr. Loebsack. I see my time has expired, Mr. Chair, but I would like a response from the others if that is possible for the record --

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Walden. Sure.

Mr. Loebsack. -- moving forward.

Thank you so much.

Mr. Walden. Or if they can give it to you really quickly.

Mr. Loebsack. Yeah.

Mr. Dickerson. I could go very quickly. In my opening remarks, I said that Etsy is a democratizing force for entrepreneurship. Democratizing entrepreneurship means providing rural broadband so that people are not disadvantaged by where they live on whether or not they can take advantage of this great platform that we have.

So we are concerned that legislation, by revoking the FCC's authority, could really undermine efforts to promote adoption in rural areas, broadband adoption.

Mr. Loebsack. All right. Thank you.

Mr. Powell. I think the thing I would emphasize quickly is the biggest problem of reaching rural America, which should be a sacred obligation of all telecom policy is because the costs are highly uneconomical for entry.

Mr. Loebsack. I understand that.

Mr. Powell. And so you have to balance off FCC power with ensuring that we are not raising the cost of providing services and further disincenting infrastructure builders from coming into those communities, and that is the other worry about moving to a regime that

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

could raise those costs.

Mr. Loebsack. Any other --

Mr. Walden. Any others real quickly?

Mr. Misener, go ahead.

Mr. Misener. Thank you.

It is hard for me to believe that investment requires blocking, throttling, not disclosing, engaging in paid prioritization.

Mr. Loebsack. Thank you.

Mr. Walden. All of which would be banned under our draft.
Correct?

Mr. Misener. Question whether it is enforceably banned, and question whether network operators can get out of it by offering specialized services or claiming reasonable network management.

So there are a lot of questions, but clearly those good things, that what I call excellent principles, should be protected.

Mr. Walden. And, remember, you still have the FTC in the background unless it goes Title II.

Ms. Gonzalez.

Ms. Gonzalez. To response directly to Dr. Turner-Lee, currently the Universal Service Fund is located in Title II in Section 254, and so 706 isn't enough for us to get there, and we want assurances that the commission continue ongoing and upcoming processes to expand access.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Loebsack. Thank you.

Mr. Walden. Dr. Turner-Lee?

Ms. Turner-Lee. In response to Ms. Gonzalez -- we are going down the line.

I mean, I think that in terms of Title II clearly you are correct in terms of the assurances that are there, but then it comes with everything else, and I think that everything else is what we are actually concerned about in our communities if you do go back to the conversation about rate regulation, et cetera.

You know, for the communities that we represent, they are not even at the beginning of the finish line of this, and we have a lot more work to do, and I think we need to be really cautious about the regulatory action that is taken given the fact that there are 30 million people that still do not have broadband access, and Congressman, many of them in your area, and I think the fact that we have been at this conversation and we keep going into this whirlwind continues to disadvantage the people that we represent that needs to get about the business of other issues, and so respectfully, Ms. Gonzalez, I think you are right, but I think, the same token, I think Title II is just much too excessive to actually get the things that we want.

Mr. Loebsack. Got it.

Mr. Walden. Ms. Baker.

Ms. Baker. Schools and libraries and rural programs exist as

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

broadband is classified under Title I. I think they would continue. I think it is a good discussion to have. We have a Comm Act rewrite that is going forward. So I think it is important and we all realize it is important and we can continue the conversation.

Mr. Loebsack. Thank you.

Thank you, Mr. Chair.

Mr. Walden. You are welcome.

I thought it would be helpful too for the whole committee to hear everybody get a shot at it, and, Mr. Loebsack, if you would like to meet with Mr. Cramer and me afterwards, we can show you what a real rural district looks like.

We are now going to go to the gentleman from Florida who has joined our subcommittee, Mr. Bilirakis, for five minutes.

Mr. Bilirakis. Thank you, Mr. Chairman.

It is an honor to serve on this subcommittee. It has been a terrific hearing. Thank you so very much. I have a couple questions here.

First for Mr. Powell. After speaking with a medium-sized broadband provider in my district, they were concerned that during this push for a reclassification the FCC has not conducted a single study on the impact that reclassification would have on small- and medium-sized operators.

What are your thoughts on the ability of small-and medium-sized

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

ISPs to handle the increased burden of internet regulation?

Mr. Powell. I think it is fair to say they are deeply concerned. I would emphasize that the FCC has a legal obligation on the Regulatory Flexibility Act to take special consideration of small businesses in the cost benefit analysis of their decisions.

Our members have filed with the commission raising grave concerns that they have not complied with the RFA as part of that analysis. That is an ongoing conversation with the commission, but yet another potential vulnerability in the rules that will come out from the commission.

Mr. Bilirakis. Thank you, sir.

Ms. Turner-Lee, and I know you touched upon this, but maybe you want to elaborate a little bit, I have a couple areas in my district, Lacoochee and Trilby, as many members do, where even today Internet adoption is significantly behind the rest of the country and they are struggling to get reliable broadband up and running.

Can you explain why Title II reclassification could disproportionately impact and further harm communities with lower broadband adoption already?

Ms. Turner-Lee. Yes. Thank you, Congressman.

So in my testimony and on record I actually put more statistics in there to actually talk about the fact that relevance actually leads when it comes to the reasons why people do not get online. The cost

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

of broadband as well as the type of device actually come after why do I need to use this tool, and I think for all of us in this room, if we want to equalize democracy, as it was said earlier, we need to get people online to they can realize the full value.

The challenge with Title II, to your question, is, you know, again, as I have said, that we still have to get everybody to the starting point before we get to the finish line, and trying to manage around some of the hypothetical harms of what the Internet can do really does a disservice, and under monopoly-era telephone service we can only talk and hear. Under broadband, we can talk, hear, discuss, engage, see and do other things.

If a community is of color, we want to solve social problems that are chronic like chronic disease or the lack of educational resources, et cetera. The possibilities and aspirations of the Internet are so great, and why would we try to restrict and regulate something that is really just still in its infancy, and for our communities, again, relevance is the issue.

We have got to move people of color, more vulnerable populations like the poor and the disabled and seniors and the folks that do not speak English as first language to the Internet for the power of government resources so they can move from an inline economy to an online economy. We have got to move them into places where we can solve those problems much like in Florida where people are not taking

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

advantage of the new technology, and having a restrictive Title II stance, I think, has its impacts outside of chilling investment and deployment.

Mr. Bilirakis. Thank you so very much.

Mr. Powell, will Title II regulation do anything to encourage incumbents to upgrade networks or new companies to enter the market?

Mr. Powell. Well, I would like to take the latter part of your question because I think this is a serious overlooked aspect of Title II. It is a major disincentive for a new competitor to enter the market, and all you need to do to look for evidence is some of the examples that are held up as sterling new entry like Google Fiber. Google Fiber entered the market, by the way, it only entered the market in a handful of selected cities, it elected to provide broadband service and it elected to provide video service but refused to offer telephone service.

It refused in its own public statements in saying it chose not to provide telephone service because of the regulatory compliance costs associated with being a telephone company. In fact, the President of the United States was in Iowa recently, in Cedar Falls, talking about the municipal broadband company that provides a very fast Internet service. That company also provides broadband and video service. To date, provides no telephone or telecommunication service in part because of the regulatory cost incentives.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Title II fundamentally assumes an incumbent state-sanctioned monopoly, and it tends to provide a regime that is very hostile to entering and providing a new and competitive alternative.

Mr. Bilirakis. Thank you very much.

I yield back, Mr. Chairman.

Ms. Gonzalez. Gentleman yields back his time.

We now go to the gentlelady from California, Matsui, for five minutes.

Ms. Matsui. Thank you very much, Mr. Chairman, ranking member, for hold this hearing today.

You know, the Internet is very dynamic, and I must say this hearing has also been dynamic and lively, and has been much appreciated, I know, by the members here.

You know, a year ago no one was talking about paid prioritization. Now people are talking a lot about it. It is also called Internet fast lanes. Now, it is central now to the net neutrality debate, and that is why I had introduced a bill with Senator Leahy to ban paid prioritization or so-called Internet fast lanes.

Now, the reason why I bring this up is because this is where the consumer gets involved. The consumer understands this, and when I had my hearing and at home when I talk with people, they understand. They don't like the idea of having to pay extra to access the content of programs they want to see or view online, and this is pretty clear,

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

and I talk to some of the anchor institutions, schools and libraries, and they also feel that they can't afford to cut deals. Neither get the start-ups cut deals with each ISP to compete. So this is very central to what we are talking about today. So our policy has to be very clear about how it impacts the consumer.

Ms. Baker and Mr. Powell, do your associations support a ban on paid prioritizations? And I would like a yes or no.

Mr. Powell. Yes.

Ms. Baker. Yes.

Ms. Matsui. Thank you.

Ms. Gonzalez, and I would like Mr. Misener to comment on this too, from a consumer point of view, does the bill truly ban all forms of paid prioritization, and if not, why? We have been talking around this, but can you please expand on this, and also Mr. Misener?

Ms. Gonzalez. Sure. So I think as many have raised, there is a question around the definition or lack thereof of -- or the vague definition of specialized services and whether or not that creates a giant loophole that could severely diminish the rule that was intended to ban paid prioritization. I think it is also worthwhile to consider issues of discrimination on the Internet that fall outside paid prioritization, and there are quite a few.

Ms. Matsui. Okay. Mr. Misener?

Mr. Misener. Thank you.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

I think in addition to the concern about specialized services which, by the way, isn't just possibly a loophole for, quote, "paid prioritization by third parties," but rather by affiliated companies engaged in more or less the same behavior. You can imagine a Internet broadband access provider also having an affiliated content business which gets special treatment. It wouldn't be paid prioritization in the sense that they were getting paid by a third party, but it would be prioritizing traffic based on the ownership rather than a payment.

The other two areas of concern are ones that we have discussed previously. One is keeping the reasonable network management carveout as narrow as possible, and we should again view that askance if it does seem to favor some content over others.

And, lastly, of course, this business about where in the network these things could occur. It needs to be clear in the bill that it is throughout the broadband Internet access service provider's network.

Ms. Matsui. Do you feel that this bill is a good starting point? How do you feel about this?

Mr. Misener. Are you asking me?

Ms. Matsui. Yes.

Mr. Misener. Yes. I do. I do. I think it is a novel approach where a set of principles, and which I have called excellent principles, are clearly defined and then capped with a ceiling. If that actually

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

works, it is a great start, but our corners expressed today are that how they would actually -- how that ceiling with the great principles would actually work, but if it works, that is a great start.

Ms. Matsui. Ms. Gonzalez, you feel the same way?

Ms. Gonzalez. I am certainly pleased that members on both sides of the aisle agree that that net neutrality is a serious problem and we need to address it through government action in some way or another.

I have serious reservations about the draft legislation as it stands, mostly given the level of authority that it would strip of the commission right now and the lack of inclusion of a ban on unreasonable discrimination on the Internet.

Ms. Matsui. Okay. Well, you know, I strongly believe that we have to get this right, either at the FCC or Congress. It is far too important.

You think about the Internet affects everything that we do in our lives, and this is -- and I think that this is -- the first thing I think is a starting point is 100 percent ban on paid prioritization, and we have to figure out how to do that, and there can't be any loopholes. I mean, you are talking about some loopholes already. So we have to start addressing that.

If we can't get that right, we are moving backwards. Our consumers will know that we are moving backwards, and we are really stifling competition when you think about that too. I have heard from

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

many start-ups who really feel that they were able to start their businesses, but in fact if we don't play this right and ban paid prioritization, we will go backwards, and we cannot -- if we don't ban it, institute strong net neutrality protections for consumers and innovation.

So I truly believe that this is our opportunity, and this is a wonderful hearing to begin the discussion.

So I yield back. Thank you.

Mr. Walden. Thank the gentlelady for her comments.

And we will look forward to working with Mr. Misener, and we appreciated your comments as well as we try and -- that is obviously not our intent to ban it and then come back and create a loophole and allow it to go through. So I appreciate your willingness to work with us on that.

We are going to go now to the gentleman from Ohio, Mr. Johnson. New member of our subcommittee and delighted to have you part of the team.

Mr. Johnson. And winner of the national championship, Mr. Chairman.

Mr. Walden. And the gentleman's time has expired. Let's go --

Mr. Johnson. No. In all seriousness, Mr. Chairman, it is an honor to be on the subcommittee. Under your leadership, I look forward to the work that we will --

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Walden. No amount of sucking up is going to get you out of that one. Okay?

Mr. Johnson. All right. I will buy you a new red tie later.

To the panelists, thank you folks for being here. I have about 30-plus years of private sector and DOD experience in information technology, and so I am very familiar with the issues that we are dealing with and the criticality of those issues.

You know, I can remember back in the 1970s when I first got started in information technology and telecommunications, we went through generations of technological upgrades about every 10 years. There was a generation from the 1970s to the 1980s and then the 1980s to the 1990s and about the mid-1990s leading into the 2000s it began to accelerate to where we are today. I mean, many of the devices that we all use on a daily basis, many of them weren't even here even 5 years ago.

Today we see technological turnover about every quarter almost. As soon as one model comes out, the next one comes in. And so technological innovation requires the right conditions, and more government means less flexibility and fewer opportunities to grow. I think it was President Ronald Reagan that said, "The answer to our problems is never more government."

If you look at what the telecom industry needs, in order to be successful it needs to be nimble in order to innovate, which it can't do if a heavy hand of government prevents it from doing so. Windows

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

of opportunity in our industry -- in the industry of telecommunications, they only open for a very, very short period of time, and innovators must have the certainty that if they jump into the fray and if they put big investments on the next great big thing, that they are going to be able to take advantage and get a return on their investment.

So, these issues that we are talking about today are extremely important, I know I represent a very rural district. We have talked about how important this is to some of those areas, and I appreciate those comments.

Mr. Powell, in NCTA's comments to the FCC in the open Internet docket, it is stated that Title II reclassification, and I quote, "Would dampen the very infrastructure investment the commission seeks to foster." These comments go on to indicate that the reclassification, again, quote, "Would require providers to divert substantial time and resources to design and implement numerous systems and processes necessary to comply with the various requirements and obligations of Title II."

Can you quantify in any way the time and resources that you are describing in those comments?

Mr. Powell. Well, I think it would be difficult to put a number on it without agreeing to what the scope is we would have to comply with it, and I think, you know, as we have all recognized, you know,

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

it depends on what you are going to be subject to and what you are not. I mean, there are 1,000 Title II regulations. How many of them will apply, to what depth they apply, and what your obligation is on them is a huge open question.

Mr. Johnson. Is it safe to say, though, that this type of diversion of time and resources will have the effect of chilling innovation?

Mr. Powell. You know, if people want a better understanding of this, they would go read the history of what the biggest regulatory problems were in the 1960s, 1970s, and 1980s with telephone companies. There was an enormous dissatisfaction that they were not investing, that they were not innovating.

What was the last telephone innovation you recall in the area of wired phones? Was it the pink princess phone or the blue one? I mean, there was a real disincentive belief, and it has been the government's policy, both at the FCC and Congress, to be retreating from those regulatory tools for decades in order to spur more investment and innovation into those industries, and it really was that retreat that helped foster and explode the wireless --

Mr. Johnson. Right.

Mr. Powell. -- industry, the cable industry as a competitor to broadcast and a whole host of other industries with the revision of those policies.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

So I think there is plenty of examples of the way that Title II or that kind of regulatory model disincentivizes and if you need one last example, go look at the experience in Europe, who when we defined it as an information service, they pursued the equivalent of Title II regulation. Their ministers today are calling for an end to that regulatory environment and an adoption of the U.S. model because of the depressing effects on innovation and investment and --

Mr. Johnson. Like I said, more government is never the answer to the problem.

Ms. Baker, do you have a thought on that as well?

Ms. Baker. Sure. I would follow up on his example with Europe, because as we talk investment, if we want to put some hard numbers to it, we in the wireless industry don't have it because we have never been under title II, but a real world example is Europe, and from 2011 to 2013 we put 73 percent more CAPX in investment than Europe. Our networks are 30 times faster, and we have three times more LTE, which is the 4G platform than the rest of -- than Europe.

So we don't know how much this would chill. We don't know -- certainly we are going to continue to innovate. We are going to continue to invest. The question is how much. Maybe not as much, and I would say that when we looked towards the future, we look towards specialized services such as the connected car and what mobile health services are going to offer, and we are going to need to have smarter,

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

faster, stronger networks to perform our connected life activities.

It is going to be really exciting, but we want to make sure that we continue the framework that has shown such great investment and such great opportunity that we are leading the world.

Mr. Johnson. Mr. Chairman, the case has just been made why it is so critically important that we do this right. Innovation, particularly in this industry, gives us the tools that we need to get our economy thriving once again, and we need to make sure we do this the right way.

And I yield back.

Mr. Walden. Appreciate that.

Appreciate the gentleman's experience. We are glad to have you on the subcommittee.

We will turn now to the gentleman from California, Mr. McNerney, for 5 minutes.

Mr. McNerney. Well, Mr. Chairman, I am thrilled to be back on this subcommittee, and I want to thank you for holding this hearing and for trying to get ahead of this issue by issuing the draft legislation.

I also -- you heard our deep concern about the reduction of the enforcement authority both from the Democrats on the panel and from many of our panelists.

Mr. Chairman, I would love to be able to vote for the final

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

package, and I hope that we can work together to find something that would work.

Mr. Powell, I certainly sympathize with your concerns about overregulation raising cost to the providers. However, I also have concern about the enforcement authority raising the cost of -- reducing enforcement authority raising the cost for end users.

But my first question has to do with the forbearance of the Title II requirements. Mr. Wheeler has indicated that he is willing to forbear, and even if he does this, the current concern is that the legislation may inhibit the FCC's ability to react and adjust to technological advances.

Do you share that concern that the legislation would inhibit the FCC's ability to react?

Mr. Powell. Well, I think the FCC has way more to react and interpret than is being suggested. The FCC, with any Congressional act, has the first instance in responsibility to interpret those provisions and enforce them across a wide range of activity. Even in the context of specialized service, if the effect of something someone was doing was to block or ban or throttle, I am absolutely confident the commission could reach that behavior even under this statute.

The complexities of forbearance are substantial. Everybody, including the chairman, have professed an interest in doing so. If one were to pull out the record, many of the advocates arguing that

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

this is easy to do and will be a light touch are all on record with laundry lists of other provisions that should not be forborne from. Groups like Public Knowledge and others have long lists of additional requirements that should be maintained.

There are also serious questions about --

Mr. McNerney. Do you think that the FCC is more agile than the Congress in addressing these complex issues?

Mr. Powell. Not always, to be perfectly honest. The commission and Title II have been no bastion of efficiency over time. Regulatory proceedings rarely take less than a year. They often are quite exhaustive and take a lot of time. Sometimes that is because they struggle to find clear direction from Congress as to how to act. The clearer that direction and the more direct it is, the more expeditious the process works, even with FCC implementation.

Mr. McNerney. Well, we have a chance to pass legislation here, I believe, but it may be a 2015 piece of legislation that is in effect for 10 years. So we have to get this right and give the FCC the flexibility it needs to carry out those intents. At least that is my opinion.

Miss Gonzalez, would you briefly summarize for us the types of litigation risk the FCC will likely face under the approach provided by the draft legislation.

Ms. Gonzalez. So I think there is quite a few factual

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

determinations. One of -- I mean, if we are talking about procedural risks that the legislation poses, I think it puts the burden on consumers to, first of all, assess whether or not they have had their net neutrality rights violated, and then to figure out how to bring that before the commission, and it is somewhat complicated adjudication process that requires lawyers that even many of the start-ups that do have some resources, more resources than consumers at least, have said they would be unlikely to be able to engage in because they have limited legal counsel.

But beyond that, after those decisions are issued, there could be follow-up litigation because this creates a situation where we would have to get to the details on a case-by-case basis which could not just be one lawsuit that would likely come from the FCC order, but a series of lawsuits.

Mr. Walden. Would the gentleman yield? I just -- trying to get clarification.

Mr. McNerney. I don't want to lose too much time here.

Mr. Walden. I will give you a little extra with unanimous consent, but how does that -- how is what we are proposing here directing the FCC to put in place appeals mechanism so consumers can appeal differ from how it works across any other agency in the government? I am confused.

Don't we want citizens to have that ability to file a complete

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

and appeal and --

Ms. Gonzalez. We want them to have the ability, but we also want the Internet service providers to have the burden to show that they are not discriminating.

So it is really about how we are shifting the burden, and it is really difficult for -- there is actually not a lot of us consumers activists doing this work, and so it is really difficult for consumers to carry the burden alone.

Mr. Walden. We will continue this conversation.

Ms. Gonzalez. Sure. I would be happy to continue the conversation.

Mr. Walden. And I will go back to the gentleman because I --

Mr. McNerney. Thank you.

Mr. Dickerson, do you think that the FCC has a role to play to ensure robust broadband competition?

Mr. Dickerson. Absolutely, and one of our concerns with the draft legislation is the revocation of authority of the FCC to do that.

Mr. McNerney. Okay. Miss Gonzalez, do you think the broadband market is sufficiently competitive to protect consumers on its own?

Ms. Gonzalez. Not at this time.

Mr. McNerney. Okay. Thank you.

I will yield back, Mr. Chairman.

Mr. Walden. The gentleman yields back the balance of his time.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

We go now to the gentleman from Missouri, Mr. Long, for 5 minutes.

Mr. Long. Thank you, Mr. Chairman.

And, Mr. Powell, a minute ago you were talking about technology and the old land lines and telephone development, our choices were pink princess phone or a blue princess phone, and I had to think, my 20-year-old daughters -- 20-something, they are in their 20s, what they would do if I handed them a rotary dial phone today and said: Here. You need to make a telephone call. I question whether they would be able to do that.

And I saw a cartoon the other day of a young man in 1983, and he probably weighed 120 pounds, and he had a desktop computer, like we all had, about that size, and it showed 2015 and his computer was now this size, and he weighed about the same thing I do today. So while his computer got smaller and he got larger, that is kind of what -- with this, I am given a reminder or reminded about the story that Steve Forbes used to tell that if the cell phone development was left to the United States Government, what we would have -- because in that same year, 1983, first phone I had was a brick phone and made by Motorola.

It weighed two pounds, and in 1983 it cost \$3,995. This phone didn't cost me \$3,995, and Steve Forbes told the story something to the effect of if it was left to the government to develop cell phone technology today, that same 2-pound phone would weigh 4 pounds and it would cost \$7,995. So I think that innovation is a pretty good thing,

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

and the government, the more it stays out of it, the better we would be.

We have had a long hearing here today. Had a full table of witnesses. Lot of my colleagues have spoken before me as they are prone to do in these things. Usually the time it gets around to me I am one of the wrap-up guys. The time it gets around to me a lot of the questions have already been asked, and so normally I like to kind of cut to the chase at this point and just get to the meat of the issue.

And, Mr. Powell, sticking with you here, the consensus is that the Internet should be open and vibrant. Everybody agrees to that. But isn't the controversy really about the extent of the FCC's authority to ensure that it remains open and vibrant, whether the authority should be derived from Title II or Section 706, doesn't it make sense for Congress to make that call?

Mr. Powell. Well, yes, sir. I think we have to recognize that it is not for the FCC or any regulatory agency to create its own jurisdiction. It is for it to act on the jurisdiction provided to it by this institution. There is no question that the reason this has been a tortuous and long debate for a decade is because the ambiguity surrounding the commission's authority to adopt a set of rules that, as you can tell from this panel, have almost near unanimous consent around the substantive rules we are attempting to achieve.

The only thing that is being argued about is what authoritative

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

basis that is executed on, and every time the commission attempts to do that on its own it is going to face, necessarily, litigation, complexity, and challenge around that.

That is within the power of this institution to pre-terminate, end, and settle once and for all, and I think that is why we are so supportive of your efforts to find bipartisan conclusion.

Mr. Long. Well, the Title II proponents tell us not to worry about the onerous provisions of title II because the FCC can simply forbear from applying them.

Is there anything simple about forbearance and couldn't numerous individual legal battles occur regarding what the commission has and hasn't decided to forbear upon the net neutrality once the order is released?

Mr. Powell. Asking me, sir?

Mr. Long. Yeah.

Mr. Powell. I think people -- not a lot of understanding of how forbearance works. First of all, there is an institutional risk here. It is a pretty hostile thing to say that a regulatory agency should sweep away broadly an act of Congress without Congress directing it to do so. If you get sweeping forbearance, which we are desperately relying that we will get, is the commission doing something in an untested untried way that essentially eliminates statutorily passed, Presidentially signed legislation, and that poses significant legal

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

risk.

The other challenge with forbearance is the commission must make very specific findings for every rule that it forebears from, and it will attempt to do that in a global way we hope, but there is a real risk that the courts will say: You are not permitted to do that. You are not permitted to just brush away a whole title. You have to explain with micro detail why each of these rules doesn't meet the standards Congress set out for you. If that ends up being the law, we are talking about a real morass of a process to go through rule by rule and make a separate and independent forbearance finding.

For example, the commission in the past in forbearance proceedings has often said that it has to do it by market. So the forbearance definition says is the market competitive? Well, what is the market? The market in Missouri is arguably different than the market in New York City. There have been times when the commission has said it can only assess that question on a specific market basis. If that turns out to be required, now we are talking about a voluminous set of calculations about whether a rule can no longer be implemented or not.

It is easy to believe the commission is just some plenary authority free to make these judgments as it sees fit, but it is bound very strictly by the tools that this institution sets out, and while certainly it can try, and I understand its sincerity, and we are

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

committed to trying to get the best resolution, it is fraught with complexity that can easily be cut through by this institution.

Mr. Long. Okay. Thank you.

I was going to save a little time to yield back to the chairman and let him tell us everything good about the Oregon Ducks and how good they are going to be next year, but I think I am out of time.

Mr. Walden. But I could yield you more for that purpose.

We will turn now to the gentleman from Illinois, Mr. Rush.

Mr. Rush. I want to thank you, Mr. Chairman, for this first-class hearing, and I want to thank the panelists for being an all-star panel of witnesses.

Mr. Chairman, I want to ask the panel if they would answer this question in the Dingell-esque fashion, this first question, with a yes or no answer.

Do you think that the FCC is on a collision course with the D.C. Circuit again if it exercises its Section 706 authority to reclassify broadband Internet access as a common carrier service under its rules? Yes or no beginning with Chairman Powell.

Mr. Powell. Yes, sir, I do.

Mr. Dickerson. Yes.

Mr. Misener. If the network operators choose to make it so, yes.

Ms. Gonzalez. Is the question whether they will go to the D.C. circuit or whether the D.C. Circuit will uphold the decision or not?

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Rush. Will they be on a collision course?

Ms. Gonzalez. I think it is certain to go to litigation. I do believe that the D.C. Circuit will uphold the Title II if it is done well.

Ms. Turner-Lee. Yes to a collision course.

Ms. Baker. Yes.

Mr. Rush. All right.

Chairman Powell, you have hit on this, but I want to ask you again in more of a forthright manner.

Do you have any concerns that under the Republican draft Congress will be restating its intent to say that Section 706 is not a direct grant of statutory authority?

Mr. Powell. Let me say that I think that is a question for Congress, but representing my industry, we do not have problems with the commission retaining some 706 authority and breathing room to address changing circumstances as the D.C. Circuit found.

I found the D.C. Circuit interpretation of 706 questionable; highly in conflict with past rulings of the commission and Congressional intent, but the D.C. Circuit ruled that that is what it meant, and I think we would rather live with the FCC administering that provision than Title II.

Mr. Rush. Thank you.

I want to move on to Dr. Turner-Lee.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Are you concerned that the FCC would not be able to deploy broadband services and invest in network facilities that provide service to low-income rural and minority communities under this proposed bill?

Ms. Turner-Lee. Under the current bill, I think, as it has been said, if there were some additional discussion around the provision of Section 706 authority as we have all talked about, I actually think, Congressman, to your question, that it would be a win/win for what we are looking for in terms of broadband deployment for low income consumers as well as rural communities as well.

As I said earlier, it would also be a great way to look at a proclamation against digital red lining that has the potential to back stop and limit progress of what we have been trying to do when it comes to ubiquitous deployment among communities.

I honestly want to just keep reiterating that, you know, adoption still is at the top of this debate, and it continues to get swept under the rug when we talk about these issues, and so we are looking for some type of parody. In the legislative proposal, I think that that should stay top of mind as well as the legitimate consumer concerns that need to be dealt with. Even in the case of specialized services, consumer demand is driving everything.

So I think it is important to keep that as the bill is discussed and debated, top of mind, Congressman, but I think to your point we

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

have to avoid that collision course that you just mentioned, and we are on that pathway if we don't put in the right effects to actually make sure that we don't do that.

Mr. Rush. Miss Gonzalez, I wanted to ask this question. I only have 30 seconds -- well, 37 seconds. The chairman might be graceful and give me a couple of more seconds.

The Republicans draft would authorize the FCC to hear and adjudicate complaints brought by individuals against their Internet broadband provider on a case-by-case basis.

Should these complaints and outcomes be germane to FCC consideration on whether certain merger transactions would promote the public interest?

Ms. Gonzalez. I am sorry, Mr. Congressman. Is the question whether or not this would serve the public interest to allow the commission to adjudicate on a case-by-case basis?

Mr. Rush. No. If in fact the commission -- should they consider that certain merger transactions in association with these complaints brought by individuals, would the FCC take -- should the FCC consider these complaints germane to its decisions regarding --

Ms. Gonzalez. On mergers?

Mr. Rush. Yes.

Ms. Gonzalez. Well, I think when it considers complaints, it has to look at the ecosystem in general to determine whether or not there

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

is competition. I think merger determinations are in separate dockets, and rightly so.

But certainly when considering what kind of protections we need, we need to look at the marketplace and whether or not there is competition in the merger. You know, mergers and acquisitions and the level of competition certainly is relevant.

Mr. Rush. Thank you.

Mr. Chairman, I just have -- if I can ask for an additional 45 seconds.

Mr. Walden. If you go fast.

Mr. Rush. Okay. As you all know, the cash cow of competition around the passage of the 1996 Telecommunications Act was really a long-distance voice. That is where the profits and traffic volumes were. Congress gave the FCC and state commissions authority to allow competitors to enter in their local phone markets through resale and interconnection. That was the regulatory, and we saw billions and billions of dollars and investments follow into that sector, but times have changed.

Congress knew about the Internet then, but only a few peoples around the world knew what a game changer the Internet would become. By the turn of the decade, it had become more apparent that the cash cows of communications were not long-distance voice but instead wireless voice and later broadband data.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Mr. Powell stated that over the course of a number of proceedings, the FCC found that broadband Internet access services are more like information services than telecommunications services. And perhaps Congress should have stepped back in and reconsidered these definitions, but we did not.

And, Mr. Chairman, I think that we are on our way with this hearing and with additional hearings trying to settle the question of do broadband Internet services now fit the criteria for telecommunications services more than information services?

And with that I yield back.

Mr. Walden. Thank the gentleman.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

RPTR JOHNSON

EDTR CRYSTAL

[1:00 p.m.]

Mr. Walden. Thank the gentleman.

I will now go to the gentleman from New York, new member of our subcommittee, Mr. Collins.

Mr. Collins. Thank you, Mr. Chairman.

I want to thank all the witnesses. As a new member, we are playing catch up a bit, and your testimony has been very valuable.

My question is for Ms. Baker. I know wireline and wireless, they are two different worlds, and you represent the wireless world. And the language in our bill does talk about reasonable network management. I would think that is the attempt to give you and the wireless some flexibility, because you are in different worlds.

I also seem to understand your industry is adamantly opposed to Title II. So we are here and we are talking and we understand there is difference. Could you expand a little bit on the reasonable network management language, which all of us embrace but may be difficult to interpret, and let me know how you see it impacting the wireless world?

Ms. Baker. Thanks for the question.

Yes, the wireless industry is different for a number of different reasons. The number one that I think we all have our arms around is

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

the technical parameters. We operate on the spectrum, which is limited capacity, which is shared, and it is moving. So we need dynamic management millisecond to millisecond, and it changes all the time depending on who is sharing the spectrum. And it is going to change from today to 45 days from now, because someone is going to come up with a more efficient way, and we are going to upgrade our networks.

But they are not just technically different, they are also competitively different, and so our guys need to be able to differentiate different services so that they can compete more effectively against each other. We are worried what happens in Title II is that we might become one size fits all, and that is not what we want the wireless industry. We want the wireless industry to remain dynamic and competitive and continue to innovate and differentiate themselves.

We are also very new, so we are worried with the Title II world that we would not be able to introduce some of the exciting things that are coming from the wireless platform. I talk about connected life, meaning mobile health, connected cars, some of the innovations in education.

So we want to make sure that our future in wireless, we are the world's leader in 4G, and we want to make sure that we are the world's leader in 5G. We think this bill is a great start. The definition of reasonable network management includes technology. We will work

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

with the committee on other definitions. But we are encouraged from the action here because we think the FCC is headed down the wrong path.

Mr. Collins. That is very helpful, because I am glad to hear you are embracing what we are doing, especially that language, and that you feel your industry can live with that language. And certainly I think the committee would be very open as this moves forward. And I just know that there has been that discussion, because they are two different worlds. Very happy, again, to hear your support of this critical legislation.

With time running late, Mr. Chairman, I will yield back the balance of my time.

Mr. Walden. The gentleman has yielded back the balance of his time.

It looks like we will go to our final member at the dais, Mr. Cramer of North Dakota. Thanks for sticking with us, and thanks for being on the subcommittee.

Mr. Cramer. Thank you, Mr. Chairman, for the opportunity. And as you know, I spent nearly 10 years in North Dakota regulating various industries. And the more telecom cases that came before us, the less I was enthused about it, because it just seemed like every case that came before us was about a new technology that required less regulation, not more.

Nonetheless, I was happy to carry out really several cases, some

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

landmark. I think we did one of the early ETCs for a wireless company. We did an early VoIP interconnection case with a rural telco. We did a very contentious cable company seeking facilities-based ILEC in the Bakken. I don't know that any of them were unanimous. I am proud to say I was on the prevailing side, and all of them were held up in court, both federal and state court. That said, I don't feel as smart as I used to today for some reason. So I appreciate everybody.

I also have to say that I was amused by Ms. Eshoo's admonition of Catholic confession with Mr. Shimkus, but I noticed that he said he came kicking and screaming, which is far short of repentance, I will tell you.

Ms. Eshoo. It is part of it.

Mr. Cramer. I appreciate, Chairman Powell, your reference to the omission of the RFA in this by the Commission, because this is a far too common omission by several regulatory agencies in recent years, and it was one that hadn't come to my attention yet. But you are right, I think a lot of issues could be solved much better, much more to the liking of investment opportunity if we were applying the RFA appropriately.

I am also interested in this issue of specialized services. And maybe this will demonstrate my ignorance a little bit. But if we are on the one hand arguing that we should give and we trust the FCC's use of flexibility in determining forbearance, why wouldn't we trust their

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

flexibility in determining specialized services under this draft? And is there some way we can tighten that up if it concerns people? If somebody wanted to take that one on.

Mr. Misener.

Mr. Misener. Yeah, thank you for the question, Congressman. I do believe the FCC, as the specialized agency, ought to be empowered to help flesh out rules, provide through notice and comment rulemaking the detail and certainty that both businesses and consumers need, under, again, that ceiling set by Congress. So if the bill goes forward, the ceiling is fine, but the commission ought to have the authority beneath it.

Mr. Cramer. Did you want to take a stab at that, Mr. Powell?

Mr. Powell. Well, I just wanted to quickly say, in this denigration of specialized services this Commission has repeatedly held that there is room for specialized services, even in its 2010 rules, because it believed there were really serious consumer-benefiting characteristics to that.

The reason specialized services is an issue is we use the same network for the provision of proprietary services that we built and privately financed and own a network to deliver. A huge amount of that capacity is reserved and used for the services we are in the business of selling. There is an effort, subtle or otherwise, to confiscate the entire platform for public Internet use.

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

What the FCC recognized was some portion of that infrastructure will always rightfully be available to the incumbent who built the network to deliver the services and innovate for their consumers in the provision of the services they are in business to provide. You have to provide for an allowance for specialized services lest you are creating a taking of property in its totality.

Now, if Mr. Misener is correct, can we talk about how you define it or what the FCC's flexibility in interpreting it? I have absolutely no problem with that.

Mr. Cramer. Dr. Turner-Lee.

Ms. Turner-Lee. Thank you. And Congressman, if I may, I will just add on real quickly to the other comments.

I think there is a conversation that can be had about specialized services, particularly if you go back to much of my testimony about adoption and relevance. If we look at the case of zero rating programs, for example, for low-income minority communities that are not engaged, there is some space to actually have some discussion on how those could be used for a public interest. I think it comes back to a legitimate consumer concern, and questions related to who is to say today that tomorrow we won't be looking at telemedicine delivery and our ability to get our health records in real time not being important to us.

I think there is some room for conversation, and with the FCC as the expert agency to help us guide that discussion as to what is

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

important to consumers.

Mr. Cramer. Well, and that brings me to another point that, again, maybe I am not understanding clearly, but we have heard a lot of bemoaning of the 706 authority, Title II authority being stripped away, and that somehow that leaves the FCC powerless, and we haven't talked a lot about their ancillary authority, which is there to deal with a lot of these issues. And the ones that aren't there, we are here. I mean, Congress, there is a new one every couple of years. I feel like for too many years Congress has sort of just let the agencies become Congress. And I think that is the balance we are trying to strike. And I don't know if somebody has a few seconds to add to that.

Mr. Gonzalez. I can respond to that, Mr. Congressman.

Mr. Cramer. Sure.

Mr. Gonzalez. The reason we are concerned about the stripping of the 706 and the Title II is because of court cases in the past, you know, four decades that have really stripped the FCC of much of its ancillary authority and have whittled it away over the years. And so that to us feels like a less certain solution.

Mr. Cramer. Chairman Powell, has the Commission's ancillary authority been stripped away?

Mr. Powell. There are two quick things that I think are important. Number one, the Commission has authorities that come from a range of statutes. It is not exclusively governed by just the

This is a preliminary, unedited transcript. The statements within may be inaccurate, incomplete, or misattributed to the speaker. A link to the final, official transcript will be posted on the Committee's website as soon as it is available.

Telecommunication Act. The Commission has been very aggressive in the protection of disability access for communities because this body passed the CCVA, which authorizes them to apply disability protections to Internet services, and is aggressively doing so. The Commission has authority under CALEA to protect surveillance and other kinds of issues. There is a whole host of authorities. And some, yes, are ancillary. The Commission, I would argue, has lost ancillary when it has abused that power. It has also frequently used ancillary effectively to do any number of social-positive regulations.

Mr. Cramer. I thank you all. This has been fascinating.

Thank you, Mr. Chairman.

Mr. Walden. Thank you, Mr. Cramer.

I think that brings to a close the participation by our members. I have a series of letters that I ask unanimous consent be added in, letters and op-eds and things. One from Joel White, executive director of Health IT Now Coalition, opposing Title II; Bradley Merrill Thompson, general counsel, mHealth Regulatory Coalition; and Robert B. McCray, president and CEO, Wireless-Life Services Alliance. Without objection, we will put that one in.

Mr. Walden. An opinion piece by our former colleague Rick Boucher on net neutrality being low hanging fruit for Congress, and urging action. Without objection, we will put that in the record.

Mr. Walden. From the Telecommunications Industry Association opposing Title II and supporting legislative action from Scott Belcher, chief executive officer, Telecommunications Industry Association. A letter from the Application Developers Alliance, Mr. Jon Potter, president, Application Developers Alliance, agreeing regarding legislation applied in the debate. And then there is a coalition of economic groups, from TechFreedom to Americans for Tax Reform, and a whole bunch of others, and individuals representing educational institutions and elsewhere, in support of our legislative initiatives in whole or part. So without objection, we will put that in the record as well.

Mr. Walden. And, again, we want to thank all of our witnesses, and especially grant some forbearance to the two that have to go now on to the Senate and repeat this. We thank you for your endurance and your participation. To all the witnesses, we are very sincere about following up with you sooner rather than later on language to deal with these issues. The principles that we have outlined in the legislation we feel strongly about. We are not in the business of creating loopholes to go around something we feel strongly about. So we look forward to collaborating with you on that, on the appeals process, and these various things.

So thank you all. And we stand adjourned.

[Whereupon, at 1:12 p.m., the subcommittee was adjourned.]
